

Unicenter[®] CA-Explore[®] Performance Management for CICS

Online User Guide

Release 7.0

Computer Associates[®]

K01100-1E

This documentation and related computer software program (hereinafter referred to as the "Documentation") is for the end user's informational purposes only and is subject to change or withdrawal by Computer Associates International, Inc. ("CA") at any time.

This documentation may not be copied, transferred, reproduced, disclosed or duplicated, in whole or in part, without the prior written consent of CA. This documentation is proprietary information of CA and protected by the copyright laws of the United States and international treaties.

Notwithstanding the foregoing, licensed users may print a reasonable number of copies of this documentation for their own internal use, provided that all CA copyright notices and legends are affixed to each reproduced copy. Only authorized employees, consultants, or agents of the user who are bound by the confidentiality provisions of the license for the software are permitted to have access to such copies.

This right to print copies is limited to the period during which the license for the product remains in full force and effect. Should the license terminate for any reason, it shall be the user's responsibility to return to CA the reproduced copies or to certify to CA that same have been destroyed.

To the extent permitted by applicable law, CA provides this documentation "as is" without warranty of any kind, including without limitation, any implied warranties of merchantability, fitness for a particular purpose or noninfringement. In no event will CA be liable to the end user or any third party for any loss or damage, direct or indirect, from the use of this documentation, including without limitation, lost profits, business interruption, goodwill, or lost data, even if CA is expressly advised of such loss or damage.

The use of any product referenced in this documentation and this documentation is governed by the end user's applicable license agreement.

The manufacturer of this documentation is Computer Associates International, Inc.

Provided with "Restricted Rights" as set forth in 48 C.F.R. Section 12.212, 48 C.F.R. Sections 52.227-19(c)(1) and (2) or DFARS Section 252.227-7013(c)(1)(ii) or applicable successor provisions.

Using Unicenter CA-Explore Performance Management for CICS

This publication describes how to access and use the features and functions of Unicenter® CA-Explore® Performance Management for CICS (Unicenter CA-Explore for CICS). Included are detailed instructions for completing the tasks you perform most frequently. These tasks include the following:

- Logging on to Unicenter CA-Explore for CICS
- Accessing the Main menu
- Selecting functions and entering commands
- Moving among panels
- Using scrolling features
- Refreshing the data on a panel
- Exiting your Unicenter CA-Explore for CICS session
- Using mainframe help
- Using panel display color features
- Modifying submenus
- Using generic characters to limit panel-data displays

In addition to users of Unicenter CA-Explore for CICS, others who may find this guide helpful are:

- Personnel responsible for the implementation and maintenance of Unicenter CA-Explore for CICS
- Systems programmers involved in implementing basic Unicenter CA-Explore for CICS capabilities and customizing additional capabilities

Note (1): This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

Note (2): Any reference in this document to SQL should be translated to DB2. The term SQL has been retained intentionally for backward compatibility.

Logging On To Unicenter CA-Explore for CICS

When Log On Is Required

If external security is active and you are not using *eTrust™ CA-Top Secret® 3.0* (*eTrust CA-Top Secret*), you must log on to Unicenter CA-Explore for CICS. The following illustration shows the Unicenter CA-Explore for CICS Logon panel that is displayed when external security is active, or when logon otherwise is required:

```
Unicenter CA-Explore 7.0 0204  DEVCICS4  EXPCCICS  FAQS          2003/06/30 11:35:25
==>                                                                    LOGON

Please Enter The Following:

Userid

Password

F1=Help      F2=System    F3=Return    F4=Flashback  F5=Top        F6=Bottom
F7=Backward  F8=Forward   F9=Auto      F10=          F11=          F12=Exit
```

When Log On Is Not Required

If external security is not active, or logon is not required, the Logon panel will not be displayed automatically. However, you can still log on using either of the following methods:

- Enter **LOGON** on the command line of any Unicenter CA-Explore for CICS panel. The Logon panel is displayed.
- Enter **LOGON** on the command line in the following format:

```
LOGON [userid [password]]
```

Either method assigns a user ID to the session and activates the user profile for that ID.

Accessing the Main Menu

Unicenter CA-Explore for CICS features a menu-driven online interface. The Unicenter CA-Explore for CICS Main menu provides initial access to that interface.

The Main menu displays groups of functions, as indicated by group headings. Each group contains a list of the commands.

The sections that follow explain how to access the Main menu from the following environments:

- VTAM
- BTAM
- CICS
- FAQs/ASO for VSE

For procedures to access submenus and change the options that appear on a submenu, see the section Accessing Command Submenus later in this chapter.

From VTAM

Note: To access Unicenter CA-Explore for CICS using VTAM, a VTAM application ID must be specified in the configuration member table. For more information, see the Unicenter CA-Explore for CICS *Getting Started* guide.

The command you should use to access Unicenter CA-Explore for CICS from VTAM depends on the format used at your site, as follows:

Format	Command
PL1	LOGON APPLID(EXPDVTAM) LOGMODE(<i>xxxxxxxx</i>) DATA(<i>jobname</i>) DATA(REGIONID)
BAL	LOGON APPLID=EXPDVTAM LOGMODE= <i>xxxxxxxx</i> DATA= <i>jobname</i> DATA=REGIONID

From BTAM

Note: You can use configuration options to define up to ten terminals to be dedicated BTAM terminals on which Unicenter CA-Explore for CICS will run. The addresses of the dedicated terminals must also be reserved for dedicated BTAM terminals. By default, five BTAM terminals are defined with logical unit numbers SYS005 through SYS009. See the chapter titled “Configuration Options” for information about defining dedicated BTAM terminals.

From CICS

Note: Before you can access Unicenter CA-Explore for CICS using the EXPC transaction, the following prerequisites must be met:

Prerequisite	For CICS Version
A CICS PCT entry must be defined for EXPC with the initial program ECDIEXPC.	CICS 2.3
A CICS PCT entry must be defined for EXPW with the initial program ECDIEXPW.	CICS 2.3
A CICS PCT entry must be defined for EXPS with the initial program ECDIEXPS.	
A CICS PCT entry must be defined for EXPI with the initial program ECDIEXPT.	
A CICS PCT entry must be defined for EXPI with the initial program ECDIINIT.	
PPT entries for ECDIEXPC, ECDIEXPS, ECDIEXPT, ECDIEXPW, and ECDIINIT must be defined.	CICS 2.3
A CICS transaction must be defined for EXPC with the initial program ECTIEXPC. TASKDATA Key must be set to CICS.	TS 1.1
A CICS transaction must be defined for EXPS with the initial program ECTIEXPS.	
A CICS transaction must be defined for EXPT with the initial program ECTIEXPT.	
A CICS transaction must be defined for EXPI with the initial program ECTIINIT.	
A CICS transaction must be defined for EXPW with the initial program ECITEXPW. The program language is assembler. TASKDATA Key must be set to CICS.	CICS and TS 1.1
A program entry for ECTIEXPC must be defined. The program language is assembler. Set EXECKey to CICS.	TS 1.1
Program entries for ECTIEXPS, ECTIEXPT, and ECTIINIT must be defined. The program language is assembler.	
A program entry for ECTIEXPW must be defined. The program language is assembler. Set EXECKey to CICS.	TS 1.1

Once prerequisites have been satisfied, use the CICS transaction EXPC to access Unicenter CA-Explore for CICS from CICS.

Procedure	For CICS Version
If Unicenter CA-Explore for CICS is not active within the current CICS, you will access the first active region defined in the Unicenter CA-Explore for CICS monitor initialization table.	CICS 2.3
Use the CICS transaction CEDA to define the transaction and program definitions in a group named EXPCTS, as explained above. Add the EXPCTS group to your startup list. A sample program, EXPCTS.Z is in the installation library.	TS 1.1

If You Have eTrust CA-Top Secret for CICS

If you are running *eTrust CA-Top Secret for CICS*, you will be automatically signed on to Unicenter CA-Explore for CICS if the following conditions apply:

- The SECURITY configuration option is set to YES.
- You are accessing Unicenter CA-Explore for CICS from a terminal you have already used to sign on using *eTrust CA-Top Secret for CICS*.

In this situation, Unicenter CA-Explore for CICS polls *eTrust CA-Top Secret for CICS* for the user ID signed on to the terminal, and uses that user ID to identify the user. If access is granted, Unicenter CA-Explore for CICS bypasses its Logon panel and displays the Main menu. This feature eliminates the maintenance of two user IDs and two passwords. It also prevents users from signing on to Unicenter CA-Explore for CICS under other user IDs, thus possibly gaining access to commands for which they are not authorized.

For information about securing Unicenter CA-Explore for CICS commands, see the chapter titled "Security."

From FAQs/ASO for VSE

Note: To access Unicenter CA-Explore for CICS from FAQs/ASO for VSE, the Unicenter CA-Explore for CICS resident library must be included in the LIBDEF search chain for the FAQs/ASO partition.

You can access Unicenter CA-Explore for CICS from FAQs/ASO for VSE using any of the following methods:

- Enter **EXPC** on the command line of any FAQs/ASO for VSE panel to access the first active region defined in the Unicenter CA-Explore for CICS monitor initialization table.
- Enter the number corresponding to the Unicenter CA-Explore for CICS option on the command line of the FAQs/ASO for VSE DCM Main menu.
- On the FAQs/ASO for VSE DCM Main menu, cursor-select the Unicenter CA-Explore for CICS option.

Selecting Functions and Entering Commands

The Main menu provides access to the primary functions of Unicenter CA-Explore for CICS. The following table describes these functions:

Use This Function	To
Current Activity	Determine the status of your system.
File Activity	Monitor file information.
System Facilities	Display storage data, perform VSE functions, and display information about system utilities.
System Configuration	Display information about Unicenter CA-Explore for CICS and monitor or modify how it is set to operate.
Historical Data	Analyze historical data.
Product Interfaces	Use CA product interfaces.

Accessing Command Submenus

You can use one of the following methods to access any submenu:

- Cursor-select a command from a function group on the Main menu. Commands that display submenus begin with a forward slash (/).
- Type the letter **S** (for **SELECT**) in the space provided to the left of a command on the Main menu.
- Enter a command on the command line of any Unicenter CA-Explore for CICS panel. For example, type **/STATUS** on the command line to display the **STATUS** submenu.

Using Margin Commands

A margin command is a one-letter entry you can type in the left margin next to an item in a panel to display a new panel containing additional information about that item.

For example, if you are viewing items in the DEFAULT Flashback Summary panel, and you want to see the ANALYSIS Flashback Detail information for a specific item, you can type an **A** (for ANALYSIS) in the space provided to the left of that item, as shown in this panel example, and then press Enter:

Margin commands can vary from one panel to another. To select an item, you can, in most cases, simply move the cursor to the left of an item and press Enter, or type *any* character to the left of the item and press Enter.

In this guide, margin commands that must be uniquely entered on a panel are specifically noted in the panel description under the topic heading, Margin Commands.

Using F Keys for Display Controls

The function of each F key is displayed at the bottom of every Unicenter CA-Explore for CICS panel. The following table lists the F keys, their command equivalents, and their functions:

F Key	Command Equivalent	Function
F1	Help	Displays online help for the current panel.
F2	System	Displays the MIT Table Entries panel.
F3	Return	Returns to the previous panel. When used from the Main menu, exits Unicenter CA-Explore for CICS.
F4	Flshback	Displays the DEFAULT Historical Flashback panel.
F5	Top	Displays the first screen of data on a display.
F6	Bottom	Displays the last screen of data on a display.
F7	Backward	Scrolls the data displayed back one screen.
F8	Forward	Scrolls the data displayed forward one screen.
F9	Auto	Turns on automatic redisplay.
F10		Varies for each panel.
F11		Performs no function.
F12	Exit	Exits Unicenter CA-Explore for CICS immediately.

Other F-key functions and commands are explained in sections labeled F Keys following the panels to which they apply.

To execute an F key, do one of the following:

- Press the F key on your keyboard.
- Cursor-select the F key from the line at the bottom of the panel.
- On the command line after the arrow prompt (===>), type **PF n** , where n is the F-key number.

Moving Among Panels

You can move between Unicenter CA-Explore for CICS panels by selecting menu options, pressing F keys, or entering commands.

To access a panel with more information, do one of the following:

- Move the cursor to the input field next to the item you want more information about and press Enter. Again, this is referred to as *cursor-selection*.
- Type a margin command (a single letter) in the input field next to the item you want more information about and press Enter. The default margin command used to access detail panels is S (Select).

To return to a previous panel, press F3 (Return).

Using Scrolling Features

You can scroll data by entering a command on the command line, and pressing either an F key or the ENTER key, as described in the sections that follow.

To scroll forward or backward by the number of lines defined as the default, press F8 or F7 while leaving the command line blank.

Scrolling Forward

The following table shows how to scroll a data display forward. You need only type the capitalized portion of the command on the command line, as shown in the table:

Enter This On The Command Line	Press This Key	To Scroll
Bottom	Enter	Forward to the last full screen of the display, with the last line at the bottom
	F6	Forward to the last full screen of the display, with the last line at the bottom
<i>nnnn</i>	F8	Forward <i>nnnn</i> lines
Half	F8	Forward half a screen
Data	F8	Forward to next screen
Page	F8	Forward one page
Max	F8	Forward to the end of the display
PF8	Enter	Forward the default amount
	F8	Forward the default amount
Down <i>nn</i>	Enter	Forward <i>nn</i> lines
FORWARD <i>nn</i>	Enter	Forward <i>nn</i> lines

Scrolling Backward

The following table shows how to scroll a data display backward. You need only type the capitalized portion of the command on the command line, as shown in the table:

Enter This On The Command Line	Press This Key	To Scroll
Top	Enter	To the first line
	F5	To the first line
<i>nnnn</i>	F7	Backward <i>nnnn</i> lines
Half	F7	Backward half a screen
Data	F7	Backward to the previous screen
Page	F7	Backward one page
Max	F7	Backward to the top of the display
PF7	Enter	Backward the default amount
	F7	Backward the default amount
Up <i>nn</i>	Enter	Backward <i>nn</i> lines
BACKward <i>nn</i>	Enter	Backward <i>nn</i> lines

Scrolling Laterally

The following table shows how to scroll a data display to the right or left. You need only type the capitalized portion of the command on the command line, as shown in the table:

Enter This On The Command Line	Press This Key	To Scroll
	F10	Left the default amount
	F11	Right the default amount
Right <i>nn</i>	Enter	Right <i>nn</i> lines
Left <i>nn</i>	Enter	Left <i>nn</i> lines

Setting the Default Scroll Area

To set the default scroll panel area for the current session, enter one of the commands shown in the table that follows, or set the value on the PROFILE panel. See the chapter titled “/CONFIG Menu Options” for more information. The default scrolling value is DATA.

Enter This Command	To Set The Default Scroll Amount
SCROLL PAGE	To one full panel of data
SCROLL HALF	To one half panel of data
SCROLL DATA	So that the current last line of the panel is the first line on the next panel of data (this is the default)
SCROLL <i>nnn</i>	To <i>nnn</i> lines

Refreshing the Data on a Panel

You can refresh the data displayed on a panel manually or automatically.

To manually refresh the data displayed on a panel, press Enter.

You can use the AUTO command to automatically refresh displayed data at a specified interval. (For information about setting the interval, see the description of the PROFILE panel in the chapter titled “/CONFIG Menu Options.”) Five seconds is the default.

To turn on automatic redisplay, do one of the following:

- Enter **AUTO** on the command line.
- Press F9 (Auto On) while viewing any Unicenter CA-Explore for CICS panel.

To stop automatic redisplay, do one of the following:

- Enter **AUTO OFF** on the command line.
- Press F9 (Auto Off) while viewing any Unicenter CA-Explore for CICS panel.

Exiting Your Unicenter CA-Explore for CICS Session

To return to your home environment, do one of the following:

- On the command line of any Unicenter CA-Explore for CICS panel, enter **EXIT** or **END**.
- From any Unicenter CA-Explore for CICS panel, press PF12 (Exit). If the configuration parameter **CLEAR-KEY-EXITS=YES** has been specified, press the **CLEAR** key to exit.
- From the Unicenter CA-Explore for CICS Main menu, press F3 (Return).

Using Mainframe Help

Unicenter CA-Explore for CICS provides a complete mainframe help facility. Help panels are maintained as source library members and are cataloged as part of installation.

Accessing Mainframe Help for a Field

Field-level help provides the following features:

- Explains the data in the field.
- Identifies which control block maintains the field.
- Identifies who maintains data in the control block.
- Identifies which format is used for the data (character, hexadecimal, and so forth.).
- Indicates whether the data is extracted, accumulated, or calculated.
- If the data is calculated, displays the formula used to perform the calculation.
- Displays additional information, such as related configuration options or commands.

To access the mainframe help for a specific field on a Unicenter CA-Explore for CICS panel, position the cursor anywhere in the field and press F1.

Accessing Mainframe Help for a Panel

To access the mainframe help for a panel, do one of the following:

- On the command line of any Unicenter CA-Explore for CICS panel, enter **HELP** followed by the topic for which you want help.
- Press F1 on the panel for which you want help.
- Enter **H** next to any option listed on a Unicenter CA-Explore for CICS menu.

Accessing All Available Mainframe Help

To access all available mainframe help, do one of the following:

- Enter **TOPICS** on the command line to display a complete list of topics for which mainframe help is available. Cursor-select any topic.
- Cursor-select the **HELP** option on the Unicenter CA-Explore for CICS Main menu.

Exiting Mainframe Help

To exit the help facility, press F3 (Return) until the initial panel or menu appears.

Creating and Maintaining Mainframe Help

You can make the following changes to the mainframe help facility:

- Change the information that appears on online help panels.
- Create new help panels and help topics.
- Change the color of text anywhere on the panel.
- Change highlighting mode anywhere on the panel.

Modifying a Help Panel

Follow the steps below to change the information that appears on an existing help panel:

Step	Action
1.	Access the member of the Unicenter CA-Explore for CICS product library you want to modify. The member name is the same as the help topic name that appears in the upper left corner of help panels as <code>HELP=topicname</code> . Help member names are appended with <code>.H</code> .
2.	Edit the text of the member to make the changes you want. To change the color or intensity of any subsequent text on a line, insert the appropriate code at the start of the line or within the line. See the section <i>Specifying Color and Highlighting in Help Members</i> later in this chapter for explanations of the codes.
3.	Save the changes. Changes take effect immediately.

Creating a Help Panel

Follow the steps below to create a new help panel:

Step	Action
1.	Create a new member in the Unicenter CA-Explore for CICS product library. Give the member the name you want to be the help topic name, and append .H to the name. See the next section, Adding a Help Topic to the TOPICS Panel, for the procedure for adding the new topic to the TOPICS panel.
2.	Edit the member to include the information you want to be displayed on the help panel. To specify the color or intensity of any subsequent text on a line, insert the appropriate code at the start of the line or within the line. See the section Specifying Color and Highlighting in Help Members later in this chapter for explanations of the codes.
3.	Save the changes. Changes take effect immediately.

Adding a Help Topic to the TOPICS Panel

Follow the steps below to add a help topic to the TOPICS panel:

Step	Action
1.	Access member \$HELP.P in the Unicenter CA-Explore for CICS installation library.
2.	Edit the member to include the new help topic. The topic must be the same as the name of the member containing the information for the topic. Insert the new topic in alphabetical order, on its own row, beginning in column one.
3.	Save the changes. Changes take effect immediately.

Specifying Color and Highlighting in Help Members

The table below describes the following:

- Codes used to specify the color in which subsequent text on a line is displayed.
- Codes used to specify low or high intensity display mode for lines on help panels. Note that highlighting codes can be used at the start of a line only.

No spaces or other delimiters are required between the codes and subsequent text. More than one code can be used on each line.

The member USERHELP in the Unicenter CA-Explore for CICS product library shows examples of how these codes are used.

To Display Subsequent Text On A Line In This Color	Use This Code At The Start Of The Line (Cols. 1 and 2)	Or Use This Code In The Middle Of The Line (Any Col. 3-80)
Blue	.B	&
Red	.R	!
Yellow	.Y	~
Green	.G	\
White	.W	`
Turquoise	.T	?
Low intensity	.L	\
High intensity	.H	`

The following is a portion of the help member for the help topic MRO. If you display the online help for the MRO command, you can see how the codes in this sample member affect the online display.

```
|...+....1....+....2....+....3....+....4....+....5....+....6....+....7...
.Y                               Unicenter CA-Explore for CICS Command Help

.TCommand      =\MRO
.TFunction     =\Display MRO (Multi-Region Operation) Statistics
.TMenu        =\TABLES

.BSyntax:\MRO {netname}

.GThe`MRO\panel provides full availability to statistics pertaining to all
.Gconnected regions in the MRO complex (both local and remote). This applies
.Gto LU connections as well as IRC and ISC connections.

.GBy default, all systems will be displayed. The display can be limited to
.Ga specific system by entering the netname of that system as part of the
.Gcommand (Ex. MRO PRODCICS).
```

Using Panel Display Color Features

Unicenter CA-Explore for CICS provides the enhanced display modes of color and extended highlighting. The color enhancement features and the commands used to activate these features are listed in the following table. You can enter these commands on the command line of any Unicenter CA-Explore for CICS panel.

To Activate This Feature	Use This Command
Color and extended highlighting	COLOR ON (activates both color and extended highlighting)
Color only	COLOR ONLY
Extended Highlighting	HILIGHT ON
Monochrome	MONO (no extended data streams)

See the chapter titled “Function Commands” for more information about the color and highlighting functions. Refer also to the Help facility.

Customizing Submenus

You can change the options that appear on any Unicenter CA-Explore for CICS submenu. You can move an option to any submenu; however, an option can appear on only one submenu.

Use either of the following methods to assign options to submenus:

- To temporarily change submenu options, use the CMDMENU command. These changes remain in effect only until Unicenter CA-Explore for CICS is terminated. See the chapter titled “Function Commands” for more information.
- To change submenu options permanently, use command option override members. See the chapter titled “Command Option Overrides” for more information.

Customizing the /USER Submenu

You can customize the /USER submenu to include any command options, such as those you use frequently. By default, no command options are assigned to the /USER submenu.

Using Generic Characters to Limit Panel Data Displays (Masking)

You can use generic characters, or *wildcards*, in some Unicenter CA-Explore for CICS command parameters to limit the scope of the information displayed by the command. The generic characters, asterisk (*), plus sign (+), and not sign (¬), let you limit (or *mask*) data displayed in a panel to only those resources having common characters in their names.

Using the REGIONs command as an example, specifying REGION DE* limits the data display to regions having names that begin with DE.

The following sections show how to use the generic characters as wildcards.

Using the Asterisk (*) as a Wildcard

You can use the asterisk (*) to mask one or more characters in a string. Use the asterisk to display:

- All items
- Items with one or more characters in common

The following table shows examples of the asterisk used as a wildcard:

If You Enter	Then The Panel Will Display Information About
*	All items
D*	Items whose names begin with D
D*V	Items whose names begin with D and end with V

Using the Plus Sign (+) as a Wildcard

The plus sign (+) masks single characters one to one. Use the plus sign to display items sharing one or more characters in specific positions within their names.

The following table shows examples of the plus sign used as a wildcard:

If You Enter	Then The Panel Will Display Information About
+++	All items with three-character names
D+V	Items with three-character names beginning with D and ending with V
D++V	Items with four-character names beginning with D and ending with V

Using the Not Sign (¬) as a Wildcard

Use the not sign (¬) to display items **not** containing one or more of characters you specify. The following table shows examples of the not sign used as a wildcard:

If You Enter	Then The Panel Will Display Information About
¬ EV*	All items not beginning with EV
¬ VTA*	All items not beginning with VTA

Function Commands

This chapter explains how to use the system-wide function commands. You can enter any of these commands from any Unicenter CA-Explore for CICS panel.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

Command Descriptions

The following table is a summary of the function commands, which are described in detail in this chapter:

Command	Function
ADDSsess	Adds a logical Unicenter CA-Explore for CICS session to the current session.
ALIGN	Sets the default alignment of virtual storage displays.
ALTER	Turns the full screen ALTER mode on or off.
AUTO	Turns the automatic redisplay feature on or off.
AUTOTIME	Defines the delay time for automatic redisplay of panels.
BWZ	Suppresses data containing a zero value.
CAPS	Turns uppercase translation on or off.
CAPTURE	Activates or deactivates the capture facility.
CEMT	Sends CICS CEMT commands to be processed.
CLRSTACK	Clears the display stack.
CMDMENU	Assigns a command to appear as an option on a submenu.
COLOr	Turns color display mode on or off.
DELETEQ	Deletes a temporary storage queue.

Command	Function
DGENTBL	Displays the results of the GENTABLE command (CICS 2.3 only).
EQUate	Defines a symbol that can be entered on a storage display panel to display storage at the address defined for the symbol.
FREEZE	Stops CICS from executing.
GENTABLE	Adds, replaces, or deletes CICS table manager entries (CICS 2.3 only).
HARDCopy	Writes screens to the terminal or the SYSLST file.
HILight	Turns the extended highlighting display mode on or off.
IDUMP	Dumps storage information you specify.
MAPUTIL	Loads or deletes map definitions.
MIXED	Turns uppercase translation off.
MONITOR	Monitors a Unicenter CA-Explore for CICS partition.
MONO	Sets display mode to monochrome.
MSCROLL	Sets the default memory scroll value.
PFKEYS	Turns the F-key display lines on or off.
PLOTBAR	Sets the default bar style to be used on plots.
POP	Pops the top display address from the stack of previously-displayed addresses.
PRINT	Writes screens to the SYSLST file.
PURGEAID	Purges an Authorized Initiate Descriptor (AID). (CICS 2.3 only)
PURGEICE	Purges an Interval Control Element (ICE).
PUSH	Pushes the current display address onto the stack of previously-displayed addresses.
RESUME	Issues a resume for a CICS transaction (CICS 2.3 only).
SATISFY	Notifies FAQs/ASO or FAQs/PCS that conditions have been met to satisfy an event.
SCALE	Turns the scale line on or off.
SCREEN	Sets the screen size.
SCROLL	Sets the default scroll value.

Command	Function
SEGMENT	Segments output to the SYSLST file.
SNAP	Snap dumps virtual storage to the SYSLST file.
SORT	Sorts the displayed data.
SUSPEND	Suspends a CICS transaction (CICS 2.3 only).
SWITCH	Selects a Unicenter CA-Explore for CICS partition for monitoring.
SYSLST	Writes text you specify to the SYSLST file.
TRANKILL	Cancel a CICS transaction.
VSE	Issues VSE console commands from Unicenter CA-Explore for CICS.

ADDSESS Command

The ADDSESS command adds a logical session to the current Unicenter CA-Explore for CICS session, and makes the new logical session the current session. Each session will acquire 24K of 24-bit partition GETVIS. Adding many sessions may deplete your 24-bit partition GETVIS storage.

By opening multiple Unicenter CA-Explore for CICS sessions, you can monitor multiple CICS partitions. Once multiple sessions are open, you can toggle from session to session by pressing F13.

Command Syntax

```
ADDSESS
```

Use

You should add sessions from your initial Unicenter CA-Explore for CICS session only. To exit a session, press F12 or the Clear Key if you specified CLEAR-KEY-EXITS=YES. You can press F3 to exit a session once you are in the main menu.

Related Configuration Option

The MULTI-SESSION-JUMP-KEY configuration option specifies the F key used to jump from one logical session to another. F13 is assigned by default.

Related Commands

- MONITOR
- SESSIONS
- SWITCH

ALIGN Command

The ALIGN command sets the default alignment for virtual storage displays.

Command Syntax and Operands

```
ALIGN {Inquire}  
      {None}  
      {Halfword|Fullword|Doubleword|Page}
```

Operand	Description
Inquire	Displays the current default alignment.
None	Sets the default alignment to none.
Halfword	Sets the default alignment to a half word.
Fullword	Sets the default alignment to a full word.
Doubleword	Sets the default alignment to a double word.
Page	Sets the default alignment to a page.

Alternate Method of Setting Display Alignment

You can also display or alter the default alignment for virtual storage displays by using the PROFILE command.

Related Configuration Option

DISPLAY-ALIGN

Related Commands

- PROFILE
- DISPLAY

ALTER Command

The ALTER command activates or deactivates the full-screen zap function. When the full-screen zap function is active, you can alter the contents of storage on a storage display panel.

WARNING! *Leaving the full-screen zap function in active mode could result in accidental alteration of storage. After completing storage changes, enter ALTER OFF to deactivate the full-screen zap function.*

Command Syntax and Operands

ALTER [ON|OFF]

Operand	Description
ON	Activates the full-screen zap function.
OFF	Deactivates the full-screen zap function.

This is a toggle command. If you omit the operand ON or OFF, the ALTER command turns the full-screen zap function on when off, or turns the full-screen zap function off when on.

AUTO Command

The AUTO command performs the following functions:

- Activates or deactivates the automatic redisplay feature.
- Begins or terminates execution of the command list you specify or the command list defined in your user profile. If you do not specify a command list when entering the command and none is defined in your user profile, no command list is started.

When automatic redisplay is on, data on panels is automatically refreshed at intervals defined by using the AUTO-REFRESH-TIME command. The default interval is 5 seconds.

Command Syntax and Operands

AUTO [ON] [*cmdlist*] | [OFF]

Operand	Description
ON	Activates the automatic redisplay feature. When you activate automatic redisplay, execution of a command list begins.
<i>cmdlist</i>	Identifies a command list. If you do not specify a command list, the command list specified in your user profile is used. See the chapter “/CONFIG Menu Options” for more information about using the PROFILE panel to define your user profile. To display a list of available command lists, enter CMDLIST on the command line of any Unicenter CA-Explore for CICS panel.
OFF	Deactivates the automatic redisplay feature.

This is a toggle command. If you omit the operand ON or OFF, the AUTO command turns automatic redisplay on when off, or turns automatic display off when on. If an invalid operand is entered, the AUTO command functions as though no operand was specified.

Use

The AUTO command is not supported if you access Unicenter CA-Explore for CICS from FAQs/ASO for VSE. To set a maximum duration for automatic redisplay, use the PROFILE command. If you set the maximum duration to zero, no time limit is set.

When automatic display is on, an A appears to the right of the current command in the upper right portion of the screen.

F-Key

Press F9 on any Unicenter CA-Explore for CICS panel to turn automatic display off when on or on when off.

Related Configuration Option

AUTO-REFRESH-TIME

Related Commands

- AUTOTIME
- PROFILE
- CMDLIST

AUTOTIME Command

The AUTOTIME command specifies the number of seconds to delay for automatic redisplay of panels.

Command Syntax and Operands

AUTOTIME *hhmmss*

Operand	Description
<i>hhmmss</i>	Indicates the length of time to delay for screen redisplay in hours, minutes, and seconds. You can omit leading zeros. You must specify at least three (3) seconds. The default is five (5) seconds.

Use

To change the auto redisplay time, you can use either the AUTOTIME or PROFILE command.

Related Configuration Option

AUTO-REFRESH-TIME

Related Commands

- AUTO
- PROFILE

BWZ Command

The BWZ (Blank When Zero) command is used to control the display of resource data on most Flashback panels when the data contains a zero value.

Command Syntax and Operands

```
BWZ [ON|OFF]
      [Yes|No]
      [Inquire]
```

Operand	Description
ON	Suppresses data containing a zero value.
OFF	Displays data containing a zero value.
Yes	Suppresses data containing a zero value.
No	Displays data containing a zero value.
Inquire	Displays the status of the command.

This is a toggle command. If you omit the operand ON or OFF, the BWZ command turns data suppression on when off, or turns data suppression off when on. If you enter an invalid operand, the BWZ command functions as though no operands had been entered.

Related Command

FLSHBACK

CAPS Command

The CAPS command turns uppercase translation on or off.

Command Syntax and Operands

CAPS [ON|OFF]

Operand	Description
ON	Turns uppercase translation on (displays all letters in uppercase).
OFF	Turns uppercase translation off.

Related Configuration Option

CAPS

Related Command

MIXED

CAPTURE Command

The CAPTURE command activates or deactivates the capture facility, which saves screens so they can be redisplayed.

Command Syntax and Operands

CAPTURE [ON|OFF]

Operand	Description
ON	Activates the capture facility so that all panels you display are saved for redisplay.
OFF	Deactivates the capture facility.

This is a toggle command. If you omit the operand ON or OFF, the CAPTURE command turns the capture facility on when off, or turns the capture facility off when on.

Use

When the capture facility is on, a C appears to the right of the current command in the upper right portion of the screen. Screens are continuously saved until you use the CAPTURE command to deactivate the capture facility.

Related Command

REPLAY

CEMT Command

The CEMT command sends CICS CEMT commands to be processed.

Command Syntax and Operands

CEMT *arguments*

Operand	Description
<i>arguments</i>	Specifies any valid CEMT transaction command.

Use

To display the result of the CEMT command, use the DCEMT command.

Related Command

DCEMT

CLRSTACK Command

The CLRSTACK command deletes all addresses from the stack of previously displayed addresses.

Command Syntax

CLRSTACK

Related Commands

- DISPLAY
- POP
- PUSH
- STACK

CMDMENU Command

The CMDMENU command causes a Unicenter CA-Explore for CICS command to be displayed as an option on a submenu. This command is used to temporarily customize the Unicenter CA-Explore for CICS menu system.

Changes made using CMDMENU affect all users and remain in effect only until Unicenter CA-Explore for CICS is terminated. To make permanent changes, you can modify command option override members. See the chapter “Command Option Overrides” for more information.

Command Syntax and Operands

CMDMENU *command submenu*

Operand	Description
<i>command</i>	Identifies the command to be assigned as a submenu option. Specify the full command name; you cannot specify the short form of a command.
<i>submenu</i>	Identifies the submenu to which the command is to be assigned as an option. Include the forward slash (/) in the submenu name. The following are valid submenus: /CONFIG /DBASE /DISPLAY /EXPLORE /FILES /HELP /HISTORY /CAPROD /PROBLEM /STATUS /STORAGE /TABLES /USER /UTILITY /VSE

COLOr Command

The COLOr command turns the color and extended highlighting display modes on or off.

Command Syntax and Operands

COLOr [ON|OFF|ONLY]

Operand	Description
ON	Turns the color and extended highlighting display modes on.
OFF	Turns the color display mode off without changing the extended highlighting mode.
ONLY	Turns the color display mode on and turns the extended highlighting mode off.

If an invalid operand is entered, COLOr functions as though no operand has been entered, and color and extended highlighting default to ON.

Related Commands

- MONO
- HILight

DGENTBL Command (CICS 2.3 Only)

The DGENTBL command displays the results of the GENTABLE command.

Command Syntax

DGENTBL

Related Commands

GENTABLE

DELETEQ Command

The DELETEQ command deletes a temporary storage queue.

Command Syntax and Operands

DELETEQ {*queueid*|'*hexchar*'}

Operand	Description
<i>queueid</i>	Identifies the temporary storage queue you want to delete. If the <i>queueid</i> contains lower case characters, you must use the <i>hexchar</i> format to specify the <i>queueid</i> .
<i>hexchar</i>	Specifies the hexadecimal ID of the temporary storage queue you want to delete. You must enclose the value in single quotation marks.

EQUate Command

The EQUate command assigns a symbol name to a virtual storage address. The symbol name can then be entered on any Unicenter CA-Explore for CICS virtual storage panel to display the contents of storage at the address assigned to the symbol.

Command Syntax and Operands

```
EQUate symbolname [address]*] [length] [USing map]
```

Operand	Description
<i>symbolname</i>	Identifies the name of the symbol to be defined.
<i>address</i>	Specifies the address to be assigned to the specified symbol name. If the EQUate command is entered on a storage display panel and no address is specified, the address of the storage currently displayed is assigned.
*	Specifies that the starting address of the current display be assigned to the symbol name. If, for example, you enter an EQUate command with the * operand while you are on a DISPLAY panel displaying storage starting at address 003AB000, the address assigned to the symbol will be 003AB000.
<i>length</i>	Specifies the length of storage associated to the displayed.
<i>map</i>	Identifies the name of a map or DSECT control block to be displayed.

Use

Symbols can be used to mark memory locations while following storage chains.

Related Commands

- DISPLAY
- LISTMAPS
- MAP
- SYMBOLS

FREEZE Command

The FREEZE command stops CICS execution. Stopping CICS allows you to examine CICS storage without it changing.

WARNING! Use this command with extreme caution.

If you freeze the CICS partition and then issue the FREEZE OFF command, transactions may abend because of time constraints. If you issue the FREEZE ON command in a CICS 2.3 or TS 1.1 session, you will stop CICS from processing any transactions, and your Unicenter CA-Explore for CICS session will not respond. This means that you must access Unicenter CA-Explore for CICS from a non-CICS interface to issue the FREEZE OFF command.

Command Syntax and Operands

```
FREEZE {ON|OFF}
```

Operand	Description
ON	Stops CICS from executing.
OFF	Allows CICS to execute.

Use

You can set a threshold that, when triggered, issues the FREEZE command. See the chapter “Performance Thresholds” for an explanation of how to set thresholds.

GENTABLE Command (CICS 2.3 Only)

The GENTABLE command dynamically adds, replaces, or deletes CICS table manager entries. All changes are logged to the console.

Command Syntax and Operands

```
GENTABLE function {PPT program [language|Asm]}  
          {PCT tran program [profile|DFHCICST]}
```

Operand	Description
<i>function</i>	Specifies one of the following functions: Add Adds CICS table manager entries. Replace Replaces the CICS table manager entry for the specified program or transaction. Delete Deletes CICS table manager entries.
PPT	Indicates that the Program Processing Table is to be modified.
<i>program</i>	Identifies the name of the program.
<i>language</i>	Specifies one of the following languages: Asm Assembler C370 C 370 Cob COBOL Rpg RPG Pli PLI Map BMS MAP The default is Asm.
PCT	Indicates that the Program Control Table is to be modified.
<i>tran</i>	Specifies the name of the transaction.
<i>program</i>	Specifies the name of the program.
<i>profile</i>	Specifies the name of the user profile. The default is DFHCICST.

Use

To display the response from the GENTABLE command, use the DGENTBL command.

Related Command

DGENTBL

HARDCopy Command

The HARDCopy command controls whether screens are written to both the terminal and the SYSLST file or to the terminal only.

Command Syntax and Operands

HARDCopy [ON|OFF]

Operand	Description
ON	Writes screens to the terminal and to the SYSLST file.
OFF	Writes screens only to the terminal.

This is a toggle command. If you omit the operand ON or OFF, the HARDCopy command toggles between writing screens to both the terminal and the SYSLST file, and writing screens to the terminal only.

Use

Before you print a screen that contains reverse video graphics, you must set your terminal to monochrome display mode using the MONO command.

When the HARDCopy command is on, an H appears to the right of the current command in the upper right portion of the screen. Screens are continuously printed until you issue the HARDCopy OFF command.

Related Commands

- PRINT
- SEGMENT
- SNAP
- SYSLST

HLight Command

The HLight command turns the extended highlighting display mode on or off.

Command Syntax and Operands

HLight [ON|OFF|ONLY]

Operand	Description
ON	Turns extended highlighting on, but does not affect the color setting.
OFF	Turns extended highlighting off, but does not affect the color setting.
ONLY	Turns extended highlighting on and turns color off.

Related Commands

- COLOr
- MONO

IDUMP Command

The IDUMP command dumps storage information you specify and writes the output to SYSLST.

Command Syntax and Operands

```
IDUMP {USERPART}{,SUPERVIS}{,SUPERCBS}{,SVA}{,SGETVIS}{,DGETVIS}
      {ALL}
```

Operand	Description
USERPART	Dumps the user partition storage area.
SUPERVIS	Dumps the supervisor storage area.
SUPERCBS	Dumps the supervisor control blocks.
SVA	Dumps the SVA storage area.
SGETVIS	Dumps the system GETVIS storage area.
DGETVIS	Dumps the dynamic GETVIS storage area.
ALL	Dumps all of the above storage areas.

If no operands are specified, the user-partition storage area and the supervisor control blocks are dumped (USERPART and SUPERCBS).

WARNING! Use *this command with extreme caution.*

It will take a substantial amount of time to complete, and the display timer will drop your terminal session in CICS.

Related Configuration Options

- DUMP-DYNAMIC-GETVIS
- DUMP-EXTENDED
- DUMP-IGNORE-JCL
- DUMP-SEGMENT
- DUMP-SUPERVISOR
- DUMP-SUPERVISOR-CBS
- DUMP-SVA
- DUMP-SYSTEM-GETVIS
- DUMP-USER-PARTITION

MAPUTIL Command

The MAPUTIL command loads or deletes map definitions.

Command Syntax and Operands

```
MAPUTIL {LOAD member}  
        {LOADList member}  
        {DELeTe map member}
```

Operand	Description
LOAD	Loads the specified member containing map definitions.
<i>member</i>	Specifies the name of a member containing map definitions.
LOADList	Loads the specified member containing a list of members that contain map definitions.
DELeTe	Deletes the definition for the specified map from the specified member.
<i>map member</i>	Specifies the name of a map.

Related Configuration Options

- MAPS-INITIALIZE
- MAPS-MEMBER

Related Commands

- DISPLAY
- LISTMAP
- MAP
- SYMBOLS

MIXED Command

The MIXED command turns uppercase screen translation off.

Command Syntax

MIXED

Related Configuration Option

CAPS

Related Command

CAPS

MONITOR Command

The MONITOR command selects a Unicenter CA-Explore for CICS partition for monitoring. When you have multiple logical Unicenter CA-Explore for CICS sessions open, you can issue this command to select the partition you want to monitor in the current logical session.

Unlike the SWITCH command, the MONITOR command does not close the session from which you enter the command.

Command Syntax and Operand

MONITOR [*jobname*]

Operand	Description
<i>jobname</i>	Specifies the CICS jobname of the partition you want to monitor, as defined in the monitor initialization table.

Use

A list of available partitions is displayed on the SYSTEM panel.

Related Command

SYSTEM

MONO Command

The MONO command turns the color and extended highlighting display modes off.

Command Syntax

MONO

Related Commands

- COLOr
- HILight

MSCROLL Command

The MSCROLL command sets the default memory scroll value.

Command Syntax and Operand

MSCROLL *hex*

Operand	Description
<i>hex</i>	Specifies the hexadecimal value of the default memory scroll value.

Use

You can also display or alter the default memory scroll value using the PROFILE command.

Example

MSCROLL 1000

Related Configuration Option

SCROLL-MEMORY

Related Commands

- DISPLAY
- PROFILE

PFKEYS Command

The PFKEYS command turns the F-key display lines on or off.

Command Syntax and Operands

PFKEYS [ON|OFF]

Operand	Description
ON	Turns the F-key display lines on.
OFF	Turns the F-key display lines off.

This is a toggle command. If you omit the operand ON or OFF, the PFKEYS command turns the F-key display lines on when off, or turns the F-key display lines off when on.

PLOTBAR Command

The PLOTBAR command sets the default bar style to be used on plots.

Command Syntax and Operands

PLOTBAR {Overlay|Stacked|Points}

Operand	Description
Overlay	Displays bars in an overlay style.
Stacked	Displays bars in stacked style.
Points	Displays point values only.

POP Command

The POP command pops the top display address from the stack of previously-displayed addresses.

Syntax

POP

Related Commands

- PUSH
- STACK

PRINT Command

The PRINT command writes the current screen to the SYSLST file.

Command Syntax

PRINT

Use

In order to print a screen that contains reverse video graphics, you must set your terminal to monochrome display mode using the MONO command.

Related Commands

- HARDCopy
- MONO
- SEGMENT
- SNAP
- SYSLST

PURGEAID Command (CICS 2.3 Only)

The PURGEAID command purges the Authorized Initiate Descriptor (AID) that you specify. This is a CICS 2.3 only command.

Command Syntax and Operands

```
PURGEAID id ['hexchar']
```

Operand	Description
<i>id</i>	Specifies the ID of the AID you want to purge.
<i>'hexchar'</i>	Specifies the hexadecimal ID of the AID you want to purge. You must enclose the value in single quotation marks.

PURGEICE Command

The PURGEICE command purges the Interval Control Element (ICE) you specify.

Command Syntax and Operands

```
PURGEICE id [transid] [sysid]
```

Operand	Description
<i>id</i>	Specifies the ID of the ICE you want to purge.
<i>transid</i>	Specifies the transaction ID of the ICE you want to purge.
<i>sysid</i>	Specifies the system ID of the ICE you want to purge.

PUSH Command

The PUSH command pushes the current display address onto the stack of previously-displayed addresses.

Command Syntax

PUSH

Related Commands

- POP
- STACK

RESUME Command (CICS 2.3 Only)

The RESUME command issues a resume for a CICS transaction.

Command Syntax and Operands

```
RESUME {transid task#}  
      {.transid task#}
```

Operand	Description
<i>transid</i>	Specifies the transaction ID of the CICS transaction you want to resume. Use this operand when the transaction is defined as uppercase to the system.
<i>.transid</i>	Specifies the transaction ID of the CICS transaction you want to resume. Use this operand when the transaction is defined as lowercase to the system.
<i>task#</i>	Specifies the task number of the transaction.

Related Command

SUSPEND

SATISFY Command

The SATISFY command notifies FAQs/ASO or FAQs/PCS that Unicenter CA-Explore for CICS has determined that conditions have been met to satisfy FAQs requirements for an event. You can use this command to manually notify FAQs that conditions have been met to satisfy an event.

Unicenter CA-Explore for CICS can automatically notify FAQs of satisfied conditions for an event using thresholds. See “Performance Thresholds” for more information about setting Unicenter CA-Explore for CICS thresholds.

Command Syntax and Operands

SATISFY *event* [*prod*]

Operand	Description
<i>event</i>	Specifies the name of the event whose conditions have been satisfied.
<i>prod</i>	Specifies the name of the product that determined the event conditions have been satisfied. If you do not specify a product name, the default value EXPC is used, indicating that Unicenter CA-Explore for CICS determined that conditions have been satisfied.

SCALE Command

The SCALE command turns the scale line on or off.

Command Syntax and Operands

SCALE [ON|OFF]

Operand	Description
ON	Turns the scale line on.
OFF	Turns the scale line off.

This is a toggle command. If you omit the operand ON or OFF, the SCALE command turns the scale line on when off, or turns the scale line off when on.

Example

The scale line appears as shown at the top of the following figure:

```

.....+.....1.....+.....2.....+.....3.....+.....4.....+.....5.....+.....6.....+.....7.....+
  Name      Id  Type  Status  Master  Applid
_  EXPC500  MA  Master  Active  EXPC500  EXPCVTM5
_  CICS21A  2A  Slave  Active  EXPC500  NO
_  CICS21B  2B  Slave  Active  EXPC500  NO
    
```

SCREEN Command

The SCREEN command sets the screen size.

Command Syntax and Operands

```
SCREEN {PRImary|ALTErnate}
```

Operand	Description
PRImary	Sets the screen size to the primary screen size.
ALTErnate	Sets the screen size to the alternate screen size.

Use

You can select the maximum available screen size during logon by specifying the configuration option SCREEN-SIZE-MAX=YES.

The following screen sizes are supported:

- Mod 2 - 24 x 80
- Mod 3 - 32 x 80
- Mod 4 - 43 x 80
- Mod 5 - 27 x 132

Related Configuration Option

SCREEN-SIZE-MAX

SCROLL Command

The SCROLL command sets the default scroll value, which determines the amount of data scrolled when you press F7 or F8.

Command Syntax and Operands

```
SCROLL {Page|Half|Data|nnnn}
```

Operand	Description
Page	Sets the scroll value to one full page.
Half	Sets the scroll value to one half page.
Data	Sets the scroll value so that the bottom line displayed becomes the top line.
<i>nnnn</i>	Sets the scroll value to <i>nnnn</i> lines.

Use

The current default scroll value is displayed in the upper right corner of the PROFILE panel. Your position within a scrollable screen is provided in the format *current:last/maximum*.

For example, when 1:18/35 is displayed, the first line of data displayed is number 1, the last line is number 18, and the total number of available lines is 35.

SEGMENT Command

The SEGMENT command segments the output in the SYSLST file.

Command Syntax

```
SEGMENT
```

Related Commands

- HARDCopy
- PRINT
- SNAP
- SYSLST

SNAP Command

The SNAP command dumps the number of bytes of virtual storage specified by the SNAP-SIZE configuration option to the SYSLST file.

Command Syntax and Operands

```
SNAP {address} [hexlength]  
      {*}
```

Operand	Description
<i>address</i>	Specifies the address in virtual storage to be dumped to the SYSLST file. If omitted, the value defaults to that specified in the SNAP-SIZE configuration option. The default value for the SNAP-SIZE option is hexadecimal value 400.
<i>hexlength</i>	Specifies the length of storage to dump, in hexadecimal.
*	Specifies the current address in virtual storage is to be dumped.

Related Configuration Option

SNAP-SIZE

Related Commands

- HARDCopy
- PRINT
- SEGMENT
- SYSLST

SORT Command

The SORT command sorts the data being displayed.

Command Syntax and Operands

SORT [*argument* [Ascending|Descending]]

Operand	Description
<i>argument</i>	Specifies any valid sort argument.
Ascending	Causes arguments to be sorted in ascending order.
Descending	Causes arguments to be sorted in descending order.

If no operands are specified, a list of valid sort arguments will be displayed on the message line.

SUSPEND Command (CICS 2.3 Only)

The SUSPEND command suspends a CICS transaction. You can use this command only if the SUSPEND-ALLOWED configuration option is set to YES.

For Unicenter CA-Explore for CICS to suspend a task, the transaction must be using command-level or macro-level calls.

WARNING! *Suspending transactions can produce unexpected results due to the nature of the interface with the operating system. Though problems are rare due to the safeguards provided, be aware of the risk involved in suspending tasks.*

Command Syntax and Operands

```
SUSPEND {transid task#}  
        {.transid task#}
```

Operand	Description
<i>transid</i>	Specifies the transaction ID of the CICS transaction you want to suspend. Use this operand when the transaction is defined as uppercase to the system.
<i>.transid</i>	Specifies the transaction ID of the CICS transaction you want to suspend. Use this operand when the transaction is defined as lowercase to the system.
<i>task#</i>	Specifies the task number of the transaction.

Related Configuration Option

SUSPEND-ALLOWED

Related Command

RESUME

SWITCH Command

The SWITCH command selects a Unicenter CA-Explore for CICS partition to monitor. This command closes the Unicenter CA-Explore for CICS session from which it is issued and opens a new session monitoring the partition you specify.

Command Syntax and Operands

```
SWITCH [jobname|partitionid]
```

Operand	Description
<i>jobname</i>	Specifies the jobname of CICS in the partition you want to monitor, as defined in the monitor initialization table.
<i>partitionid</i>	Specifies the ID of the partition you want to monitor.

Use

You should use the MONITOR command instead of the SWITCH command to select partitions to monitor if you have opened multiple sessions using the ADDSESS command. Unlike the SWITCH command, the MONITOR command does not close the session from which it is issued.

A list of available partitions is displayed on the SYSTEM panel.

Related Command

SYSTEM

SYSLST Command

The SYSLST command writes the line of text you specify to the SYSLST file.

Command Syntax and Operands

SYSLST *text*

Operand	Description
<i>text</i>	Specifies the text to be written to the SYSLST file.

Related Commands

- HARDCopy
- PRINT
- SEGMENT
- SNAP

TRANKILL Command

The TRANKILL command cancels a CICS transaction.

For Unicenter CA-Explore for CICS to cancel a task, the transaction must be using command-level or macro-level calls.

WARNING! *Canceling transactions can produce unexpected results due to the nature of the interface with the operating system. Though safeguards are provided and problems are rare, be aware of the risk involved in canceling tasks.*

Command Syntax and Operands

```
TRANKILL {transid task# [SOS]}  
         {.transid task# [SOS]}
```

Operand	Description
<i>transid</i>	Specifies the transaction ID of the CICS transaction you want to cancel. Use this operand when the transaction is defined as uppercase to the system.
<i>.transid</i>	Specifies the transaction ID of the CICS transaction you want to cancel. Use this operand when the transaction is defined as lowercase to the system.
<i>task#</i>	Specifies the task number of the transaction.
SOS	Turns on the short-on-storage indicator bit in CICS.

VSE Command

The VSE command lets you issue VSE console commands from any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

```
VSE command
```

Operand	Description
<i>command</i>	Specifies any valid VSE console command to be issued.

Related Command

CONSOLE

/PROBLEM Menu Options

This chapter describes the /PROBLEM menu, which you can use to display such information as global system activity, queue element areas, and the CICS trace table.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

/PROBLEM Menu

The /PROBLEM menu lists the commands that you can issue to display information collected by Unicenter CA-Explore for CICS about the following:

Information About	For CICS Version
The Program Check Abend Trace table	CICS 2.3
Kernel Error Data table	TS 1.1
Global System Activity	CICS 2.3 and TS 1.1
Queue Element Areas	CICS 2.3 and TS 1.1
The CICS Trace table	CICS 2.3 and TS 1.1
All CICS Partitions (in summary form)	CICS 2.3 and TS 1.1

The name of the panel the command displays is listed next to each command on the menu. You can issue these commands either by cursor-selecting them on the /PROBLEM menu, or by entering them on the command line of any Unicenter CA-Explore for CICS panel.

Menu Access

- Cursor-select the /PROBLEM option on the Unicenter CA-Explore for CICS Main menu.
- Type any character (except H) in the space provided to the left of the command and press Enter.

Command Access

Enter **/PR** or **/PROBLEM** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Menu With CICS 2.3

```

Panel Display Options

To display a panel listed on the /PROBLEM menu, enter the appropriate command for your version, as shown in the following table:

This Command	Displays	Default Sort Argument	For CICS Version
ABENDs	Information from the Program Check Abend Trace table	ID	CICS 2.3
ABENDs	Information from the Kernel Error Data table	None	TS 1.1
GLOBAL	Global system information	None	CICS 2.3 and TS 1.1
QEAS	Information about a resource enqueued by a task	None	CICS 2.3 and TS 1.1
TRTable	Information about CICS trace table entries	None	CICS 2.3 and TS 1.1
XMONITOR	A summary of the condition of all CICS regions	NAME	CICS 2.3 and TS 1.1

ABENDS Panel

The ABENDS panel displays information from the appropriate table for your version:

Table	For CICS Version
Program Check Abend Trace table	CICS 2.3
Kernel Abend Error table	TS 1.1

Menu Access

On the /PROBLEM menu, cursor-select the ABENDS option.

Command Access

Enter **ABEND** or **ABENDS** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel With CICS 2.3

Panel Field Descriptions

The following table describes the fields on your panel as appropriate for your version.

Field	Description	For CICS Version
Num	Abend entry number	CICS 2.3 and TS 1.1
Id	Identifier: PC (program check) or AB (abend)	CICS 2.3
Task#	Task number	CICS 2.3
TCA-Addr	Address of the TCA	CICS 2.3
Stack	Address of current LIFO stack entry	CICS 2.3
TRT-Addr	Address of current trace table entry	CICS 2.3
ID	Trace ID	CICS 2.3
Req	Trace request number	CICS 2.3
EC-Mode PSW	The value in the program status word when the task abended	CICS 2.3 and TS 1.1

Field	Description	For CICS Version
Interrupt	Interrupt information, as follows: <ul style="list-style-type: none">■ The first four characters indicate the instruction length.■ The final four characters indicate the interrupt code.	CICS 2.3
Abend Time	Time of Abend	TS 1.1
Task	Task number	TS 1.1
Err-Code	Abend error codes	TS 1.1
Program	Name of CICS module	TS 1.1
Offset	Offset into CICS module	TS 1.1

Note: TS 1.1 collects abend information in the Kernel Abend Error table. CICS tracks the last CICS module that was in control when the abend occurred. It will not show the name of the program that caused the abend. One abend can generate multiple entries in the table. The entries for DHAPLI1 may contain the PSW of the abending program. Be sure to check the PSW to aid you in finding the abending program. This table helps you to determine the frequency of errors, and what transactions are abending.

Whenever an abend occurs in TS 1.1, entries are placed in the Kernel Error table. Not all abends result in the cancellation of a transaction that produces an error message or a transaction dump. If an application has an active HANDLE ABEND condition, any abend condition that follows is processed by the application, not by CICS. The application may decide to continue processing, or issue its own abend code.

An example describes where the program logic issues a HANDLE ABEND, and then does a RECEIVE MAP. If the user presses a PA, PF, Clear or Enter key without entering any data on the screen, then a MAPFAIL condition occurs. This MAPFAIL condition drives the AEI9 abend, but because the application code issued the HANDLE ABEND, CICS turns control over to the application, whose logic determines the next step. The application logic may decide to continue processing, knowing that the AEI9 abend can be ignored. A better way to handle this situation would be to use the MAPFAIL condition, rather than the HANDLE ABEND.

In addition to information about abend situations that cancelled transactions, the Kernel Error table contains information about abend conditions that are being overridden by application code. This information can help you examine such applications to see if there is a better way to process the particular abend condition within the program logic. By changing questionable coding practices, your CICS applications become less prone to errors.

Margin Command

Command	Description
S	Displays the ABENDS Detail panel for the abend you select.

ABENDS Detail Panel

The ABENDS Detail panel displays detailed register, instruction, and offset information about a selected abend.

Access

On the ABENDS panel, cursor-select an abend.

Sample Panel With CICS 2.3

Panel Field Descriptions

The fields on the first line on the ABENDS Detail panel have the same meanings as the fields on the ABENDS panel for the appropriate Unicenter CA-Explore for CICS version. The remaining information fields on the ABENDS Detail panel have the following meanings:

Field	Description
Registers at time of abend	Contents of registers at the time the abend occurred.
Instructions via PSW <i>xxxxxxx</i> Module <i>yyyyyyyy</i> Offset <i>zzzzzzzz</i>	Program instructions surrounding the PSW. <i>xxxxxxx</i> is the program status word, Module <i>yyyyyyyy</i> is the module name, and Offset <i>zzzzzzzz</i> is the offset into the module. The data displayed on the panel is the data loaded at a certain location, which might not be the data that was loaded when the abend occurred.

GLOBAL Panel

The GLOBAL panel displays CICS summary information.

Menu Access

On the /PROBLEM menu, cursor-select the GLOBAL option.

Command Access

Enter **GLOBAL** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel With CICS 2.3

Panel Field Descriptions

Field	Description	For CICS Version
Jobname	Jobname of CICS	CICS 2.3 and TS 1.1
ID	Partition ID in which the job is running	CICS 2.3 and TS 1.1
CICS	CICS version, release, and modification level	CICS 2.3 and TS 1.1
CPU-Time	Total CPU time used by the job	CICS 2.3 and TS 1.1
Run-Time	Length of time the job has been running	CICS 2.3 and TS 1.1

Panel Field Descriptions: Task Summary

Field	Description	For CICS Version
Trans	Number of transactions executed <ul style="list-style-type: none"> ■ CICS 2.3 - the sum of all transaction use counts from PCT entries ■ TS 1.1 - the value in the Dispatcher Domain control blocks 	CICS 2.3 and TS 1.1
Tranrate	Average number of transactions per second	CICS 2.3 and TS 1.1
CPU/Tran	Average CPU time used per transaction	CICS 2.3 and TS 1.1
MXT Task	Maximum task value (overtime value to alter it)	CICS 2.3 and TS 1.1
AMXT Task	Active maximum task value (overtime value to alter it)	CICS 2.3
Current	Current number of active tasks	CICS 2.3 and TS 1.1
Pgm Checks	Number of program checks that have occurred	CICS 2.3 and TS 1.1
Stg Dumps	Number of storage dumps	CICS 2.3 and TS 1.1
Stg Viols	Number of storage violations that have occurred	CICS 2.3 and TS 1.1
Runaways	Number of runaway tasks abended with AICA	CICS 2.3 and TS 1.1

Panel Field Descriptions: I/O Summary

Field	Description	For CICS Version
I/O	Total number of SIOs issued	CICS 2.3 and TS 1.1
I/O Sec	Average number of SIOs issued per second	CICS 2.3 and TS 1.1
I/O Tran	Average number of SIOs issued per transaction	CICS 2.3 and TS 1.1

Panel Field Descriptions: System Summary

Field	Description	For CICS Version
VSE CPU	Percentage of current CPU active. Must have Unicenter CA-Explore for VSE for this field to be anything but zero (0).	CICS 2.3 and TS 1.1
CICS CPU	Percentage of current CPU active by CICS	CICS 2.3 and TS 1.1

Panel Field Descriptions: Storage Summary

Field	Description	For CICS Version
DSA Size	Total storage allocated to DSA	CICS 2.3
DSA Size	Total storage allocated to all eight DSAs	TS 1.1
Page Size	Size of one DSA page	CICS 2.3 and TS 1.1
DSA Used	Current percentage of DSA used	CICS 2.3
DSA Used	Current percentage of all eight DSAs used	TS 1.1
Cushion Size	Number of bytes allocated to storage cushion	CICS 2.3
Cushion Size	Number of bytes allocated to storage cushions in all DSAs	TS 1.1
Cushion Rel	Number of times the storage cushion has been used	CICS 2.3 and TS 1.1
Compressions	Number of storage compressions	CICS 2.3
Pgms Removed	Number of programs removed by DPSC (Dynamic Program Storage Compression)	TS 1.1
Queued	Number of tasks queued waiting for storage	CICS 2.3 and TS 1.1
Max Queued	Maximum number of tasks waiting for storage	CICS 2.3 and TS 1.1
Total Queued	Total number of tasks queued	CICS 2.3 and TS 1.1
Stg Recovery	Number of times storage recovery has been invoked	CICS 2.3 and TS 1.1

Panel Field Descriptions: ICV Summary

You can overwrite any of the following fields to alter them:

Field	Description	For CICS Version
Stall	Stall purge time in seconds (CICS DFHSIT parameter ICVS).	CICS 2.3 and TS 1.1
Runaway	Runaway task time limit in seconds (CICS DFHSIT parameter ICVR).	CICS 2.3 and TS 1.1
Time	Wait time when CICS has no work (CICS DFHSIT parameter ICV). Control is passed to the operating system. This field specifies the number of seconds CICS will wait before checking for work again.	CICS 2.3 and TS 1.1
Terminal	Terminal scan delay (CICS DFHSIT parameter ICVTSD).	CICS 2.3 and TS 1.1

Panel Field Descriptions: GETVIS 24 Summary

Field	Description	For CICS Version
GETVIS Size	Size of region GETVIS	CICS 2.3 and TS 1.1
GETVIS Used	Amount of GETVIS currently used by the region	CICS 2.3 and TS 1.1
Available	Amount of available GETVIS	CICS 2.3 and TS 1.1
Max Block	Size of largest contiguous block of available GETVIS	CICS 2.3 and TS 1.1

QEAS Panel

The QEAS panel displays information about a resource enqueued by a task. CICS suspends other tasks requesting the same resource.

The chain of queue elements shows the following:

- Which resources are being enqueued
- Which tasks are waiting for each enqueued resource

Menu Access

On the /PROBLEM menu, cursor-select the QEAS option.

Command Access

Enter **QEAS** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel With CICS 2.3

Panel Field Descriptions

Field	Description	For CICS Version
Owning	ID and task number of the transaction that owns the resource	CICS 2.3 and TS 1.1
Waiting	ID and task number of the transaction waiting for the resource	CICS 2.3 and TS 1.1
Len	Length of the enqueued argument	CICS 2.3 and TS 1.1
Argument	The resource that is being enqueued, in character format	CICS 2.3 and TS 1.1
Argument-Hex	The resource that is being enqueued, in hexadecimal format	CICS 2.3 and TS 1.1
LUW-Cnt	Use count for LUW enqueues	TS 1.1
Tsk-Cnt	Use count for task enqueues	TS 1.1

TRTABLE Panel

The TRTABLE panel displays different entries, depending upon the Unicenter CA-Explore for CICS version you are using.

For CICS Version	Trace Entries
CICS 2.3	The TRTABLE panel displays the previous 512 trace entries. Entries are displayed only if CICS TRACE is activated.
TS 1.1	<p>The TRTABLE panel displays up to five trace table blocks; approximately 20K of trace entries. Entries display only if CICS TRACE is activated. Trace entries are variable length. Because of this, only the short form of the trace entry is displayed.</p> <p><i>Caution: The code that displays the trace table is over 800K in size. When you first use this command, the program is loaded into 24-bit GETVIS storage. Please make sure you have enough 24-bit GETVIS storage before you use this command.</i></p>

Menu Access

On the /PROBLEM menu, cursor-select the TRTABLE option.

Command Access

Enter **TRT** or **TRTABLE** on the command line of any Unicenter CA-Explore for CICS panel.

Sort Arguments (CICS 2.3 Only)

The TRTABLE panel has the following sort arguments:

- CHARs
- FIELDA
- FIELDS
- ID
- REQuest
- RESource
- TASK#
- TIME

Panel Field Descriptions

Field	Description	For CICS Version
Time of day	Time of trace entry.	CICS 2.3 and TS 1.1
Id	Trace entry type or ID.	CICS 2.3
Reqd	Trace request and required identification.	CICS 2.3
Task#	CICS task number for the task that caused the entry.	CICS 2.3 and TS 1.1
T	TCB Index.	TS 1.1
Field A	Trace data field 1 (displayable hex format).	CICS 2.3
Field B	Trace data field 2 (displayable hex format).	CICS 2.3
Description	Trace entry description as generated by CICS.	CICS 2.3
Trace ID	Indicates the trace point in CICS code. The first two characters are the domain index. The last four characters identify the trace point within the domain.	TS 1.1
Gate	The CICS module where the trace point is located.	TS 1.1
Interpretation String	Interpretation information for the trace entry.	TS 1.1

Displaying Additional Fields

Press F10 to display the following fields on the TRTABLE panel:

Field	Description	For CICS Version
Reg 14	Return address	CICS 2.3
Parameter List	Parameters passed in the trace.	TS 1.1
Chars	Character format of both fields A and B	CICS 2.3
Resource	Resource name for which entry is directed	CICS 2.3
Interval	Interval between trace entries	CICS 2.3 and TS 1.1

F-Key Description

F Key	Description	For CICS Version
F10	Toggles between pages of the TRTABLE panel	CICS 2.3 and TS 1.1

XMONITOR Panel

The XMONITOR panel displays a summary of the condition of all Unicenter CA-Explore for CICS partitions. This panel lets you quickly identify problem areas for troubleshooting.

Menu Access

On the /PROBLEM menu, cursor-select the XMONITOR option.

Command Access

Enter **XMON** or **XMONITOR** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel

```

Panel Field Descriptions

Field	Description
Name	Name of the system being monitored
Type	Type of system being monitored
PartId	ID of the partition in which the system is running
Time	Time at which the information about the system was last updated
Count	Number of detail entries monitored
Status	Current status of the system, as follows: <ul style="list-style-type: none"> Ok All values collected for the system are within defined threshold limits. Warning At least one value exceeded the defined warning percentage of the threshold limit. This means the value is approaching the limit, not that the threshold limit has been exceeded. Problem At least one value has exceeded the defined threshold limit.

Margin Commands

Command	Description
S	Displays the XMONITOR Detail panel for the region you select.
M	Changes Unicenter CA-Explore for CICS logical sessions to display monitoring for the selected region. The session from which you selected the region remains active.
X	Switches monitoring to the selected region. The session from which you selected the region is terminated.

XMONITOR Detail Panel

The XMONITOR Detail panel displays detailed information about the region you selected from the XMONITOR panel.

Data for system variables on this panel is updated at system intervals (every 30 seconds). The number of exceptions is the number of exceptions during the last system interval.

Access

On the XMONITOR panel, cursor-select a region, or type S in the space provided to the left of a region.

Sample Panel

```

Panel Field Descriptions

The fields on the first line of the XMONITOR Detail panel have the same meanings as the fields on the XMONITOR panel. The remaining information fields on the XMONITOR Detail panel have the following meanings:

Field	Description
Resource	Name of the resource being monitored
Value	Current value for the resource
Limit	Defined threshold limit value
Status	Current status of the resource, as follows:
Ok	The value is within the defined threshold limit.
Warning	The value exceeds the defined warning percentage of the threshold limit. This means the value is approaching the limit, not that the threshold limit has been exceeded.
Problem	The value exceeds the defined threshold limit.

/STATUS Menu Options

This chapter explains the /STATUS menu, which you can use to display information such as transaction activity and response time, degradation analysis, and maximum task values.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

/STATUS Menu

The /STATUS menu lists the commands that you can issue to display information collected by Unicenter CA-Explore for CICS about the following:

- Transaction activity and response time
- Degradation analysis
- Maximum task values
- Online comparison plots
- Terminal response times
- The monitor information table
- Active and suspended transactions
- Transaction summary information
- The status of resources you have defined

The name of the panel the command displays is listed next to each command on the menu. You can issue these commands either by cursor-selecting them on the /STATUS menu or by entering them on the command line of any Unicenter CA-Explore for CICS panel.

Menu Access

- On the Unicenter CA-Explore for CICS Main menu, cursor-select the /STATUS option.
- Type any character (except H) in the space provided to the left of the command and press Enter.

Command Access

Enter /STA or /STATUS on the command line of any Unicenter CA-Explore for CICS panel.

Sample Menu

```

```

Panel Display Options

To display a panel listed on the /STATUS menu, enter the appropriate command, as listed in the following table. These commands are described in detail beginning in the next section.

This Command	Displays	Default Sort Argument
ACTIVITY	Graphs of transaction activity and life time	none
ANALysis	Degradation analysis of your CICS system	none
MXT	Maximum task values	none
PLOT	Online comparison plots	none
RESPTime	Response time information	none
SYSTEM	Information on the partitions defined in the Unicenter CA-Explore for CICS monitor initialization table (MIT)	ENTRY
TASks	Information about active and suspended tasks	none
TSUMmary	Summary information about transactions	none
VSTATus	Information about the status of resources you have defined	VARIABLE

ACTIVITY Panel

The ACTIVITY panel displays the number of transactions executed throughout the day and their average lifetimes.

Menu Access

On the /STATUS menu, cursor-select the ACTIVITY option.

Command Access

Enter **ACTIVITY** on the command line of any Unicenter CA-Explore for CICS panel.

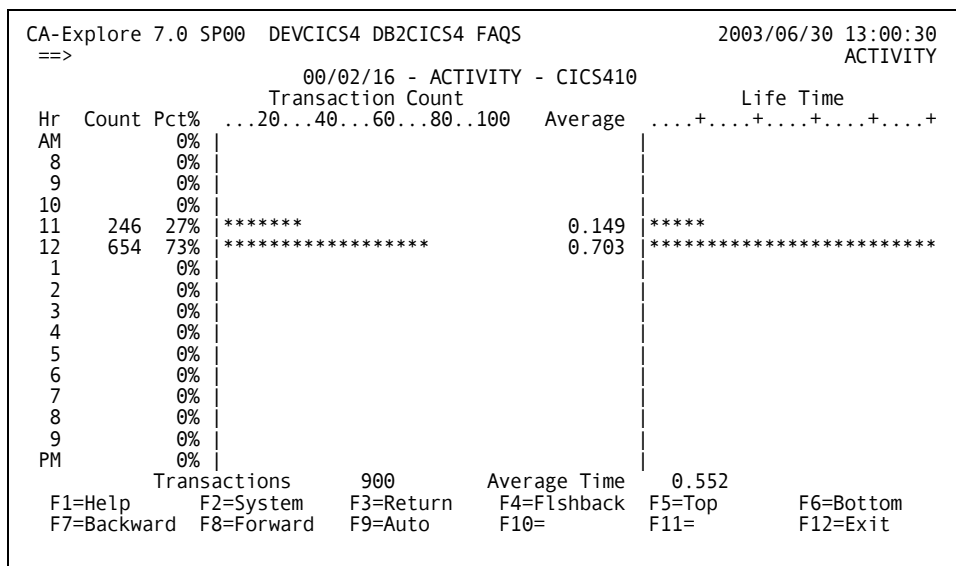

Command Syntax and Operands

ACTIVITY [ALL | *jobname* | GRAPh]

Operand	Description
ALL	Display transactions for all monitored partitions.
<i>jobname</i>	Display transactions for selected monitored CICS partition.
GRAPh	Show data in plot format.

If you are in a CICS partition and do not specify the *jobname* operand, information about the current CICS partition is displayed. If you are in the master partition and do not specify the *jobname* operand, information about all CICS partitions is displayed.

Sample Panel

Panel Field Descriptions

Field	Description
Hr	Hour during which transactions were counted, as follows: AM Hours from 12:00 a.m. through 7:59 a.m., collectively 8-9 Hours from 8:00 a.m. through 9:59 p.m., individually PM Hours from 10:00 p.m. through 11:59 p.m., collectively At midnight, all values are reset.
Count	Number of transactions executed during the period.
Pct%	Percentage of total transactions executed during the period, in numeric form.
Transaction Count	Percentage of total transactions executed during the period, in graph form.
Average	Average lifetime of the transactions executed during the period, in numeric form.
Life Time	Average lifetime of the transactions executed during the period, in graph form. The scale for the lifetime graph is the average response time for the period relative to the maximum average lifetime.

Configuration Option

ACTIVITY-HOUR1

ACTIVITY Panel (Graph Option)

The ACTIVITY Graph Option panel displays graphs of the transaction use and transaction lifetime of transactions executed throughout the day.

Command Access

Do **one** of the following:

- Enter **GRAPH** on the command line of the ACTIVITY panel.
- Enter **ACTIVITY** on the command line, and specify the **GRAPH** operand on the command line of any Unicenter CA-Explore for CICS panel.

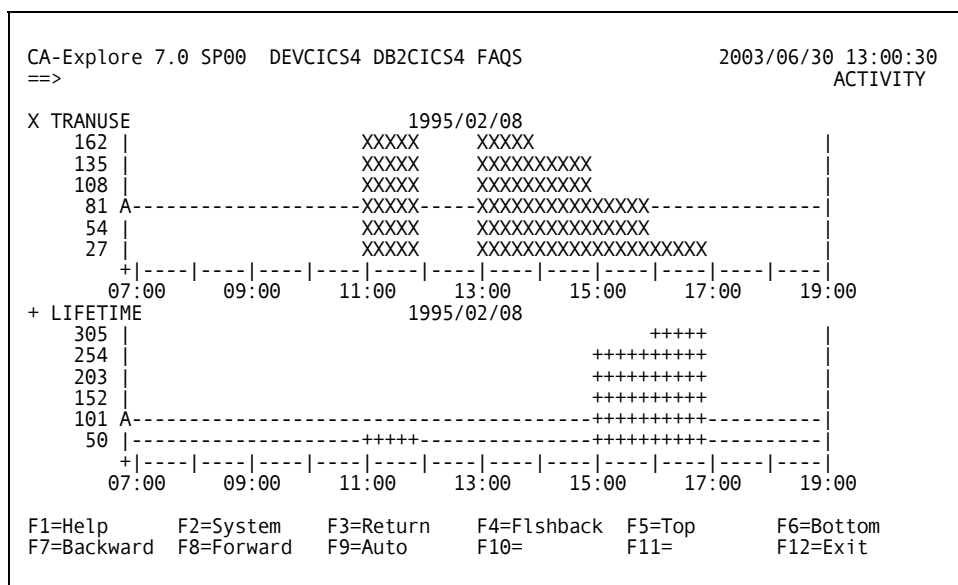

Command Syntax and Operands

ACTIVITY [*partition*|ALL] GRAPH

Operand	Description
<i>partition</i>	Name of monitored CICS partition
ALL	All partitions

If you are in a CICS partition and do not specify the *partition* operand, information about the current partition is displayed. If you are using the batch master and do not specify the *partition* operand, information about all partitions is displayed.

Sample Panel

ANALYSIS Degradation Panel

The ANALYSIS panel displays a summary of the time spent by CICS on various resources. You can use this information to determine where CICS is wasting time.

Menu Access

On the /STATUS menu, cursor-select the ANALYSIS option.

Command Access

Enter ANAL or ANALYSIS on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel

Panel Field Descriptions

Field	Description
Resource	Resource type. The following are some of the resource types that appear in this field:
Lifetime	Transaction lifetime; that is, the difference between the time the transaction is put on the DCA (DCA entry mode) and the time the TCA (storage) is freed.
File I/O	Time that the transaction waits for file requests. This time is only for datasets in the FCT.
Program	Time that the transaction spent executing program code. A program can link to other programs, and the time the additional programs are active is included in this statistic. Therefore, the program time can be greater than the lifetime. However if the program performs a XCTL each time it links to another program, the times are listed separately.
Term I/O	Time spent when the transaction forces a terminal wait. Normally, a pseudo-conversational transaction sends a BMS map. The terminal I/O is scheduled after the transaction ends. You can force the BMS map to be written immediately, or if the task is conversational, you can force the terminal I/O to occur. In this case, terminal I/O is the time spent to handle the I/O.
Resource	Time spent waiting for an internal CICS resource. If a transaction needs a resource and must wait for it to become available, CICS places the transaction on the active DCA chain with a dispatch control indicator (DCI) of X'88'. A transaction is put in this state if it is waiting for strings, for buffers, or for a program to be loaded into the DSA.
Suspend	Time spent suspended
Wait	Time that a transaction must wait for ECBs to be posted. Intrapartition dataset I/O time and DFHTEMP I/O are included.
WTR	The time the transaction spent on the active DCA chain waiting to run
CPU	CPU time used by user code or by CICS code
DL/I	Time in DL/I code

Field	Description
Resource (continued)	<p>Storsusp Time suspended because of an inability to satisfy a storage request.</p> <p>Cmptime CICS trace collection time.</p> <p>Expctime Average time (in seconds) spent in Unicenter CA-Explore for CICS code.</p> <p>Count Number of transactions used for analysis (number of transactions written to history files by Unicenter CA-Explore for CICS). Note that this number will be less than the total number of transactions detected by Unicenter CA-Explore for CICS.</p>
Time	Total time, in seconds, for all transactions monitored.
Average	Average time for each transaction monitored, except <i>Count</i> , which is the number of transactions monitored. An entry in this field is equal to the entry in the Time field divided by the count (number of transactions used for analysis).
Pct	<p>Percentage of lifetime spent in the corresponding activity. This information is also presented in graph form.</p> <p><i>N/A</i> indicates that no percentage was calculated because the time spent in this activity is included in statistics for another activity for which a percentage has been calculated.</p> <p>On color monitors, the colors used in the graph have the following meanings:</p> <p>Green Executing</p> <p>Yellow Waiting</p> <p>Red Waiting to run</p> <p>The graph for Lifetime always appears in blue.</p>

toggling the Display Between Periods

You can toggle your panel display between statistical periods:

F Key	Description
F10	Toggles between a display of statistics for the current 30-second system interval and a display of statistics for the entire period since Unicenter CA-Explore for CICS was initialized.

MXT Panel

The MXT panel displays the maximum task values.

Menu Access

On the /STATUS menu, cursor-select the MXT option.

Command Access

Enter **MXT** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel With CICS 2.3

Panel Field Descriptions

Field	Description	For CICS Version
MXT	Maximum number of tasks that are allowed to be in the system at one time. Overtime this value to change it.	CICS 2.3 and TS 1.1
CURR	Number of tasks currently active and the percentage of maximum tasks allowed the number represents. The percentage is also shown in graph form.	CICS 2.3 and TS 1.1
HIGH	High-water mark of active tasks and the percentage of maximum tasks allowed the number represents. The percentage is also shown in graph form.	CICS 2.3 and TS 1.1
@MXT	Number of times that the number of tasks reached the maximum allowed.	CICS 2.3 and TS 1.1
AMXT	Active maximum task value (overtime this value to change it).	CICS 2.3
HIGH	High-water mark of active tasks and the percentage of active maximum tasks the number represents. The percentage is also shown in graph form.	CICS 2.3

Field	Description	For CICS Version
Class	Transaction class.	CICS 2.3
Txnclass	Transaction class	TS 1.1
Max	Maximum task value for the given class (overtyping the value to change it).	CICS 2.3 and TS 1.1
At-Max	Number of times at maximum task value.	CICS 2.3 and TS 1.1
High	High-water mark of tasks in the given class.	CICS 2.3 and TS 1.1
Curr	Current number of tasks in the given class.	CICS 2.3 and TS 1.1
Active	Number of active tasks in class	CICS 2.3
State1	Current number of tasks in state 1 (not contributing to the MXT count).	CICS 2.3
Mxt-Qd	Total Tasks queued waiting for class maximum	TS 1.1
State2	Current number of tasks in state 2 (contributing to the MXT count).	CICS 2.3
Purged	Number of tasks purged while waiting for class maximum	TS 1.1

Interpreting Max Task

CICS 2.3 flags all new tasks entering the system as being at Max Task before they are dispatched for the first time, and the system is not at Max Task. Therefore, especially in a busy system, the Wait Reason for some tasks on the TASKS panel could be Max Task, but the MXT field on the MXT panel could indicate that the system was never at Max Task.

Defining Transactions Classes

When you define a transaction, you specify the TRANCLASS for the transaction. Transactions defined without a transaction class run without scheduling restraints associated with transaction classes. Transaction classes differ between CICS versions:

- CICS 2.3 has 10 transaction classes, 1-10. When you define a transaction, you select none or one of the 10 transaction classes.
- TS 1.1 has an unlimited number of TRANCLASSES.

PLOT Panel

The PLOT panel displays up to four plots, each showing two variables. To display the variable being plotted, enter **VAR** or **VARIABLE**.

Menu Access

On the /STATUS menu, cursor-select the PLOT option.

Command Access

Enter **PLOT** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

```
PLOT [ALL]
      [LIST plotlist [VIEW]]
      [SAVE [plotlist]]
```

Operand	Description
ALL	Indicates that you want to select all plot quadrants. If you do not specify ALL, Unicenter CA-Explore for CICS displays a plot definition screen.
LIST	Indicates that you want Unicenter CA-Explore for CICS to display a plot definition screen with a pre-defined plot list.
<i>plotlist</i>	Indicates the name of the pre-defined plot list that you want to display or the name of the plot list that you want to save.
VIEW	Indicates that you want Unicenter CA-Explore for CICS to display a plot with a pre-defined plot list.
SAVE	Saves the currently displayed plot definition.

F Key Descriptions

F Key	Description
F7	Scrolls back in time one interval
F8	Scrolls forward in time one interval
F10	Toggles to the View PLOT panel

Related Configuration Option

PLOTLIST-DEFAULT

Plot Sizes

Each plot can contain one or two variables. A 24 x 80 panel can use the following plot sizes:

- x 60 - Full panel
- x 20 - Half panel vertical
- x 60 - Half panel horizontal
- x 20 - Quarter panel

Enlarging a Plot

On a panel displaying multiple plots, you can enlarge one of the plots to a full panel plot. To do so, place the cursor in the field to the left of the plot date (on the top line of the plot to be enlarged), and press Enter.

Displaying a Flashback Panel from a Full-Panel Plot

To display the DEFAULT Flashback panel from a full-panel plot, select a time by positioning the cursor within the plot and pressing Enter.

Using Color Highlighting

The following table lists the display modes and their associated graph legends:

Command Setting	Variable 1	Variable 2	Overlap
Color/Extended Highlight	Blue/Reverse	Yellow/Reverse	Green/Reverse
Color only	Blue/*	Yellow/*	Green/*
Highlight only	Reverse	*	Reverse/*
Monochromatic	X	+	*

RESPTIME Panel

The RESPTIME panel displays information about transaction response time.

Menu Access

On the /STATUS menu, cursor-select the RESPTIME option.

Command Access

Enter **RESPT** or **RESPTIME** on the command line of any Unicenter CA-Explore for CICS panel.

RESPTIME-VALUE n Configuration Option

The response time values can be changed in the configuration overrides member \$CNFIG xx , where xx is the system ID of the partition. See the chapter titled "Configuration Options" for information about setting the RESPTIME-VALUE1 through RESPTIME-VALUE7 options. The last value, +10.0, can be excluded from calculations by setting the value of configuration option RESPTIME-IGNORE8 to YES. YES is the default.

Panel Field Descriptions

Field	Description
Time	Time bracket for transaction response time
Count	Number of transactions within the response time bracket
Pct%	Percentage of transactions within the response time bracket
CURRENT	Bar graph of the percentage of transactions within the response time bracket
CUMULATIVE	Cumulative percentage of transactions (percentage in the current response time bracket plus percentages in all preceding response time brackets)
Transactions	Total number of CICS transactions having terminals associated with them
Average Response	Average response time of sampled transactions
Maximum Response	Maximum response time of sampled transactions

The following information is provided for the last 30-second interval:

Field	Description
CPU% system	Percentage of CPU used by VSE
CPU% job	Percentage of CPU used by the job
CPU/Trans	Average amount of CPU used per transaction
Trans/Sec	Average number of transactions per second during the interval
IO/Sec	Average number of I/Os per second during the interval

SYSTEM Panel

The SYSTEM panel displays information about CICS partitions defined in the MIT (monitor information table).

Menu Access

On the /STATUS menu, cursor-select the SYSTEM option.

F-Key Access

Press PF2 from any Unicenter CA-Explore for CICS panel.

Command Access

Enter **SYSTEM** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

SYSTEM [*jobname*]

Operand	Description
<i>jobname</i>	String specifying the CICS job name about which information is to be displayed. You can include generic characters in the string. See the chapter titled "Using Unicenter CA-Explore Performance Management for CICS" for more information.

If you do not specify the *jobname* parameter, the SYSTEM command displays information about all jobs.

Sort Arguments

- APPLid
- COMMAND
- ID
- MASTER
- NAME

Panel Field Descriptions

Field	Description
Name	Jobname of the partition defined in the MIT.
Id	Unicenter CA-Explore for CICS partition ID.
Type	Type of partition: Master or CICS.
Status	Status of partition: Active or Noact (inactive).
Master	Name of master Unicenter CA-Explore for CICS partition for this partition.
Applid	VTAM application ID of Unicenter CA-Explore for CICS for the partition, or BTAM, or NO if there is no terminal driver.
EXPCARC	Percentage of the Unicenter CA-Explore for CICS archive file that is full.
PID	Partition ID.
DATA	Data collection is on (active) or OFF (inactive) for the specified partition. Only Active partitions will have a value here. If the partition is the master partition and the data collection is OFF then no data collection will occur for any of the active CICS partitions.

Displaying Additional Fields

You can display these additional fields by pressing the F10 key:

Field	Description
Count	Number of transactions executed since Unicenter CA-Explore for CICS was initialized
CPU-Time	Total CPU time used
CPU/Tran	Average amount of CPU time used per transaction
LifeTime	Average lifetime per transaction
I/Os	Total number of start I/Os
Tran	Transaction currently executing
Task #	Task number of the transaction currently executing
Terminal	Terminal on which the transaction is executing
OPID	Operator signed on to the terminal

Margin Commands

Command	Description
X	Switches monitoring to the selected partition. The session from which you selected the partition is terminated. This command should be used if you do not have multiple sessions open. If you have multiple sessions open, use the M margin command. Using the X command opens a new session and displays the Main menu.
P	Plots average transaction use and average response time by hour for the partition you select. For related information, see the description of the ACTIVITY command earlier in this chapter.
A	Plots the activity for the partition you select.
M	Changes Unicenter CA-Explore for CICS logical sessions to display monitoring for the selected partition. The session from which you selected the partition remains active. This command should only be used if you have multiple sessions open. Otherwise, use the X margin command. Using the M margin command opens a new session and displays the Main menu.

Command	Description
N	Turns off data collection for the partition. If the partition is the master partition, then no data collection will occur for all active CICS partitions.
Y	Turns data collection back on for the specified partition. If the specified partition is the master partition, then data collection will occur for all active partitions.
T	Displays the current transactions running in the selected partition. If you are in a CICS 2.3 session, you can only display active transactions from a CICS 2.3 partition. If you are in a TS 1.1 session, you can only display active transactions from a TS 1.1 partition.

SYSTEM Detail Panel

The SYSTEM panel lists information about the currently active partition.

Access

On the SYSTEM panel, cursor-select a partition.

Sample Panel

Panel Field Descriptions

Field	Description	For CICS Version
S	Status of the task, as follows:	
A	Active	CICS 2.3
H	Held (not yet dispatched)	CICS 2.3
S	Suspended	CICS 2.3
N	Non-executable	TS 1.1
P	Purged	TS 1.1
D	Dispatchable	TS 1.1
R	Running	TS 1.1
S	Suspend	TS 1.1
E	Resumed early	TS 1.1
R	Reset	TS 1.1
?	Unknown	TS 1.1

Field	Description	For CICS Version
Tran	Transaction ID	CICS 2.3 and TS 1.1
Task#	Task number	CICS 2.3 and TS 1.1
Term	Terminal ID	CICS 2.3 and TS 1.1
Program	Initial program run by the transaction	CICS 2.3 and TS 1.1
Wait Reason	Wait reason	CICS 2.3
Wait Type	Type of wait	TS 1.1
Name	Wait name	TS 1.1
SVM	Service module control identification	CICS 2.3

Field	Description	For CICS Version
DCI	<p data-bbox="690 321 1003 348">Dispatch control indicator:</p> <p data-bbox="690 373 873 401">Running Tasks:</p> <p data-bbox="737 426 1024 453">00 This task is running.</p> <p data-bbox="690 478 922 506">Dispatchable Tasks:</p> <p data-bbox="690 531 1089 579">Only tasks with a DCI of X'20' are dispatchable:</p> <p data-bbox="737 604 959 632">20 Waiting to run</p> <p data-bbox="690 657 987 684">Non-Dispatchable Tasks:</p> <p data-bbox="690 709 1198 821">If DCI is not 20, the task is not dispatchable. Field	Description	For CICS Version
DCI (continued)	40 Waiting for ECBLIST 41 Waiting for page I/O 42 Task in SRB mode 43 I/O event wait 44 Dispatcher wait 80 Waiting for ECB 88 CICS system event 89 Waiting for the lock manager The byte following the DCI indicates why the task is not dispatchable (X'20'). The following secondary dispatch codes are used: 01 Waiting for enqueue 03 Synchronization dequeue all 04 Suspended 05 Conditional enqueue 07 Conditional attach DCI codes match IBM codes. For more about these codes, see the IBM manual <i>CICS/VSE Problem Determination Guide</i> .	CICS 2.3
TYP	OC OLDC wait EX External wait OWOLDW wait SU Suspend wait ?? Unknown type of wait	TS 1.1
CPU	Amount of CPU time, in seconds, used by the transaction	CICS 2.3 and TS 1.1
LifeTime	Current lifetime of transaction	CICS 2.3 and TS 1.1

Interpreting Max Task

Max Task	For CICS Version
CICS 2.3 flags all new tasks entering the system as being at Max Task before they are dispatched for the first time, but the system is not at Max Task. Therefore, especially in a busy system, the Wait Reason for some tasks on the TASKS panel could be Max Task, but the MXT field on the MXT Panel could read that the system was never at Max Task.	CICS 2.3

Displaying Additional Fields

You can display these additional fields by pressing the F10 key:

Field	Description	For CICS Version
Transaction Origin	Information on task's origin, such as original transaction and task numbers	CICS 2.3
@ of DCA	DCA address	CICS 2.3
@ of DTA	DTA address.	TS 1.1
@ of TCA	TCA address	CICS 2.3
Unit of Work ID	Current unit of work, if applicable	CICS 2.3
File I/O	Number of file I/Os for the transaction	CICS 2.3 and TS 1.1
CPU	CPU usage for the transaction	CICS 2.3 and TS 1.1
Storage	Storage usage for the transaction	CICS 2.3 and TS 1.1
Transaction Origin	CICS partition, transaction name, and number for the transaction	CICS 2.3 and TS 1.1
PRI	Transaction priority for the transaction	CICS 2.3 and TS 1.1
DCI	Dispatch Control Indicator (DCI) for the transaction	CICS 2.3
TYP	Wait type for the transaction	TS 1.1

Margin Commands

Command	Description	For CICS Version
F	Displays flashback data for the selected transaction.	CICS 2.3 and TS 1.1
P	Issues the command CEMT SET TASK(<i>nnnnn</i>) FORCEPURGE.	CICS 2.3 and TS 1.1

TASKS Detail Panel

The TASKS Detail panel displays detailed information about active and suspended tasks.

Access

On the TASKS panel, cursor-select an entry.

Sample Panel With CICS 2.3

Panel Field Descriptions

The fields on the first line of the TASKS Detail panel have the same meanings as the fields on the TASKS panel. The remaining information fields have the following meanings:

Field	Description	For CICS Version
Start Date	Date the task started.	CICS 2.3 and TS 1.1
Start Time	Time the task started.	CICS 2.3 and TS 1.1
Resource fields	<p>These fields, located below the Start Time field, indicate resource type. If a value is highlighted, the clock for that resource type is active. The following are some of the resource types that might appear in this field:</p> <p>Lifetime Transaction lifetime, the time difference between the transaction start time and end time.</p> <p>CPU CPU time allocated to the transaction when executing user code or CICS code.</p> <p>File I/O Time that the transaction waits for file requests. This time is only for datasets in the FCT.</p> <p>Program Time spent executing program code.</p>	CICS 2.3 and TS 1.1

Field	Description	For CICS Version
Resource fields (continued)	<p>Resource</p> <p>Time spent waiting on an internal CICS resource. If a transaction needs a resource and must wait for it to become available, CICS places the transaction on the active DCA chain with a dispatch control indicator (DCI) of X'88'. A transaction is put in this state if it is waiting for strings, for buffers or for a program to be loaded into the DSA.</p> <p>Suspend</p> <p>Time spent suspended.</p> <p>Terminal I/O</p> <p>Time spent when the transaction forces a terminal wait. Normally, a pseudo-conversational transaction sends a BMS map. The terminal I/O is scheduled after the transaction ends. You can force the BMS map to be written immediately, or if it is a conversational task, then the terminal I/O must be forced to occur. In this case, terminal I/O time is the time spent to handle the I/O.</p> <p>Wait</p> <p>Time that a transaction must wait for ECBs to be posted. Intrapartition dataset I/O time and DFHTEMP I/O is included.</p> <p>WTR</p> <p>Time the transaction spent on the active DCA chain waiting to run.</p> <p>EXPCTIME</p> <p>Average time (in seconds) spent in Unicenter CA-Explore for CICS code.</p>	CICS 2.3 and TS 1.1

Field	Description	For CICS Version
TCA System	Address of the system TCA control block.	CICS 2.3 and TS 1.1
TCA User	Address of the user TCA control block.	CICS 2.3 and TS 1.1
DCA address	Address of the DCA control block.	CICS 2.3
DTA address	Address of the DTA control block.	TS 1.1
ECB address	Address of an ECB (event control block) being waited on by a transaction.	CICS 2.3 and TS 1.1
EXPC MTCA	Address of the Unicenter CA-Explore for CICS Monitor Tasks Control Area.	CICS 2.3 and TS 1.1
DSA Storage	Amount of DSA user storage in use.	CICS 2.3 and TS 1.1
Program	Last CICS program used.	CICS 2.3 and TS 1.1
File	Last file used.	CICS 2.3 and TS 1.1
Temp Store	Last temporary storage queue used.	CICS 2.3 and TS 1.1
Tdata	Last transient data queue used.	CICS 2.3 and TS 1.1
Umbrella	Umbrella name, if applicable.	CICS 2.3 and TS 1.1
Unit of Work ID	CICS unit of work ID.	CICS 2.3 and TS 1.1
Token Value	CICS-assigned value (subset of Unit of Work).	CICS 2.3 and TS 1.1
SEQ#	CICS-assigned sequence number (subset of Unit of Work).	CICS 2.3 and TS 1.1

TSUMMARY Panel

The TSUMMARY panel displays summary information about transactions.

Menu Access

On the /STATUS menu, cursor-select the TSUMMARY option.

Command Access

Enter **TSUM** or **TSUMMARY** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

TSUMmary [*tran*|ALL]

Operand	Description
<i>tran</i>	Identifies the transaction for which you want summary information.
ALL	Indicates that you want summary information for all transactions.

If you do not use the *tran* operand to specify the transactions for which you want summary information, the TSUMmary command displays summary information for all transactions.

Sample Panel

CA-Explore 7.0 SP00 DEVCICS4 DB2CICS4 FAQS						2003/06/30 13:00:30	
==>						TSUMMARY	
Transaction Summary						1:16/31-DATA	
Total 3:08:04

F7=Backward	F8=Forward	F9=Auto	F10=	F11=	F12=Exit		

Panel Field Descriptions

Field	Description
Tran	Transaction name
Count	Number of transactions within the interval
Rate	Current transaction rate for the interval
Lifetime	Average lifetime of a transaction during the interval
WTR	Average wait-to-run time of a transaction during the interval
File I/O	Average file I/O time of a transaction during the interval
Resptime	Average response time of a transaction during the interval
CPUtime	Average CPU time of a transaction during the interval

toggling the Display Between Periods

You can toggle your panel display between statistical periods:

F Key	Description
F10	Toggles between current interval statistics, total statistics since initialization, and last interval statistics

VSTATUS Panel

The VSTATUS panel displays information about the resources you specify in the variable status collection table members.

Menu Access

On the /STATUS menu, cursor-select the VSTATUS option.

Command Access

Enter **VSTAT** or **VSTATUS** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

```
VSTATUS [variable] [RSCE1 resource1] [RSCE2 resource2]
ADD [variable] [resource] [resource]
```

Operand	Description
<i>variable</i>	String specifying variables to be displayed. You can include generic characters in the string. See the chapter titled “Using Unicenter CA-Explore Performance Management for CICS” for more information. Unicenter CA-Explore for CICS collects variable status data only for variables specified in the variable status-collection table member. See the chapter titled “Variable Status Data Collection” for more information.
RSCE1 <i>resource1</i>	Displays data for the resource you specify for <i>resource1</i> . Replace <i>resource1</i> with a string specifying the resource for which you want to display information. You can include generic characters.
RSCE2 <i>resource2</i>	Displays data for a second resource you specify for <i>resource2</i> . Replace <i>resource2</i> with a string specifying the resource for which you want to display information. You can include generic characters.
ADD	Dynamically adds the <i>variable</i> specified to the VSTATUS panel. This change is temporary, and the variable will appear on the panel only until Unicenter CA-Explore for CICS is reinitialized. Replace <i>resource</i> with strings specifying the resources for which you want to display information. You can include generic characters.

Note: Data for system variables on the VSTATUS panel is updated at system intervals (every 30 seconds). Data for other variables is updated dynamically as events occur.

If you do not specify any operands, all variables for all resources are displayed.

Examples

```
VSTAT CPUTIME RSCE1 C*
VSTAT RESPTIME RSCE2 DFC*
```

Panel Field Descriptions

Field	Description
Variable	Variable name. The variable names that appear are those specified in the variable status collection table member. For more information, see the chapter titled "Variable Status Data Collection."
Current	Average value of the variable over the last two interval increments. Each increment is 1/60th of the interval.
Minimum	Minimum average for one increment during an interval. Each increment is 1/60th of the interval.
Maximum	Maximum average for one increment during an interval. Each increment is 1/60th of the interval.
Warning	Threshold warning value. The value is defined using the Pct field on the THRESHOL panel or in a threshold table member. See the chapter titled "Performance Thresholds" for more information.
Limit	Threshold limit value.

Displaying Additional Fields

You can display these additional fields by pressing the F10 key:

Field	Description
Average	Average value of variable during the interval.
00 - 100	Displays the percentages of the individual statistics collected during the last hour that were at 10 percent increments of the maximum value.

Margin Commands

Command	Description
D	Displays a distribution plot of the percentages of the individual statistics collected during the past hour that were at 10 percent increments of the maximum value.
P or <u>S</u>	Displays a plot of the last available hour's data for the variable you select.

VSTATUS Plot Detail Panel

The VSTATUS Plot Detail panel displays a plot of the last available hour's worth of data for the variable you selected.

Panel Access

On the VSTATUS panel, cursor-select an entry.

Command Access

Enter **VSTAT** or **VSTATUS** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

```
VSTATus USING variable [resource1] [resource2] [AND variable [resource1]
[resource2]] [MAXy [MAX] | [AVE] | [nnn]] [SPLIT] | [COMBINE]]
```

Note: When using this command from the VSTATUS panel, it is not necessary to include **VSTATUS** as part of the command. For example, you can enter **USING CPUTIME** on the VSTATUS panel to display a plot showing data for the CPUTIME.

Operand	Description
USING	Displays the first plot. If a second plot is not defined using AND, a single full-panel plot is displayed.
<i>variable</i>	String specifying the variable for which data is to be plotted.
<i>resource1</i>	String specifying a resource for which data is to be plotted.
<i>resource2</i>	String specifying a second resource for which data is to be plotted.
AND	Displays a second plot. If two plots are defined, a two-panel plot is displayed.
MAXy	Specifies the maximum value of the scale for one of the plots. If you specify a value of 1 for <i>y</i> , the USING variable is used to define the maximum scale value for the plot; if you specify a value of 2 for <i>y</i> , the AND variable is used to define the maximum scale value for the plot.
MAX	Sets the maximum scale value to the maximum value of the plot.

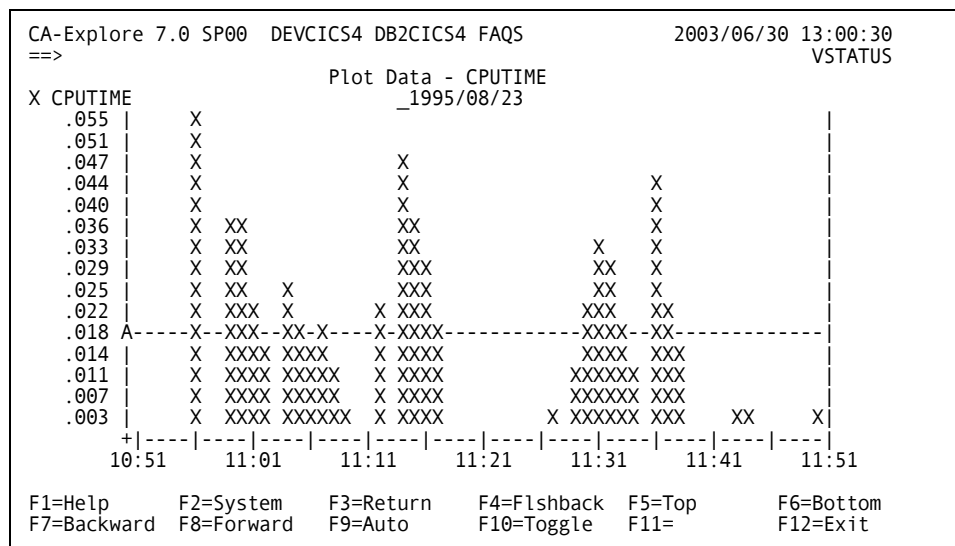

Operand	Description
AVE	Sets the maximum scale value to the average value of the plot.
<i>nnn</i>	Sets the maximum scale value to the numerical value you specify.
SPLIT	Plots the two variables in two separate plots.
COMBINE	Plots the two variables in one plot.

The default maximum scale value is MAX. If you specify two variables, SPLIT is the default.

Examples

```
VSTAT USING CPUTIME AND TRANUSE
VSTAT USING CPUTIME CEDA AND TRANUSE CEDA COMBINE
VSTAT USING CPUTIME C* AND TRANUSE C*
VSTAT USING CPUTIME MAX .050
VSTAT USING RESPTIME AND TRANUSE MAX1 1.000 MAX2 30 SPLIT
```

Sample Panel

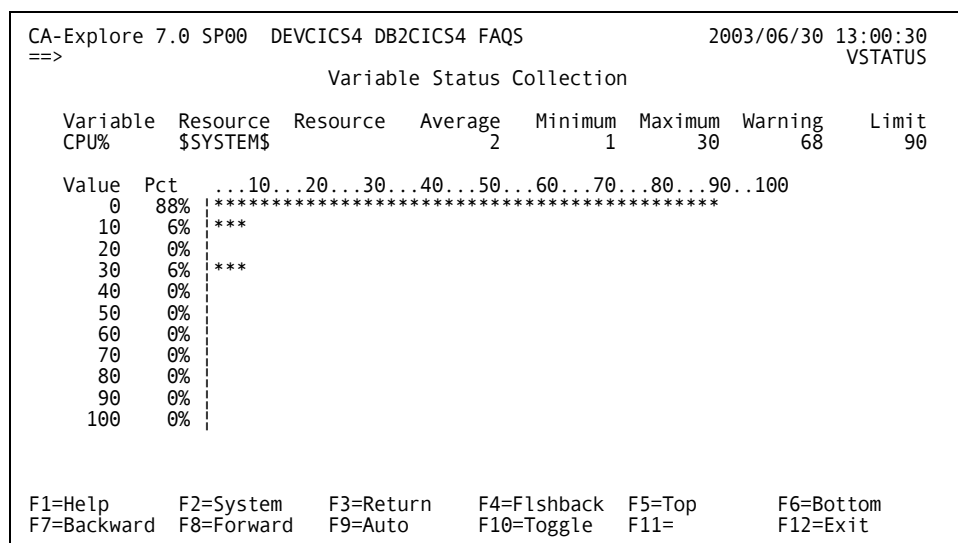

VSTATUS Distribution Detail Panel

The VSTATUS Distribution Detail panel displays a plot of the percentage of the individual statistics collected that were at each value listed. The values are 0 and 100 percent of the maximum value collected and each 10 percent increment in between.

Access

On the VSTATUS panel, enter **D** in the blank field beside the desired entry.

Sample Panel

Panel Field Descriptions

The information fields on the first row of this panel have the same meanings as the corresponding fields on the VSTATUS panel. This panel also includes the following fields:

Field	Description
Value	The maximum value collected during the past hour in 10 percent increments
Pct	Percentage of the values collected during the past hour that were of the value specified by the Value field, displayed in both numeric and graph form

/STORAGE Menu Options

This chapter explains the /STORAGE menu, which you can use to display such information as temporary auxiliary storage statistics, dynamic storage areas (DSAs), free area queue elements (FAQEs) for CICS 2.3, and maps.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

/STORAGE Menu

The /STORAGE menu lists the commands you can issue to display information collected by Unicenter CA-Explore for CICS about the following:

- Temporary auxiliary storage statistics
- The one DSA in CICS 2.3, or the eight DSAs in TS 1.1
- FAQEs (for CICS 2.3 only)
- The GETVIS page allocation maps
- Maps
- Control block mapping
- The VSE region map
- CICS subpools
- CICS table entries
- Temporary storage queues

Menu Access

- On the Unicenter CA-Explore for CICS Main menu, cursor-select the /STORAGE option.
- Type any character (except H) in the space provided to the left of the command and press Enter.

Command Access

Enter **/STO** or **/STORAGE** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Menu With CICS 2.3

Panel Display Options

To display a panel listed on the /STORAGE menu, cursor-select the option from the menu, or enter the corresponding command as shown in the following table:

This Command	Displays	Default Sort Argument	For CICS Version
AUXstor	Temporary auxiliary storage statistics	None	CICS 2.3 and TS 1.1
DSA	Information about the dynamic storage area	None	CICS 2.3 and TS 1.1
FAQE	Information about free area queue elements	None	CICS 2.3
GETVIS24	Map of allocated and unallocated GETVIS storage	None	CICS 2.3 and TS 1.1
GETVIS31	Map of allocated and unallocated GETVIS storage	None	CICS 2.3 and TS 1.1
LISTMAPs	List of maps	MAPNAME	CICS 2.3 and TS 1.1
MAP	Information about control block mapping	OFFSET	CICS 2.3 and TS 1.1
MAPVse	Information about the VSE virtual storage region map	ADDRESS	CICS 2.3 and TS 1.1
SUBPools	Information about CICS subpools	GETVIS24	CICS 2.3 and TS 1.1
TABLEs	Information about CICS tables	INACTIVE	CICS 2.3 and TS 1.1
TEMPstor	Temporary storage statistics	None	CICS 2.3 and TS 1.1
TSQStats	Temporary storage queue statistics	QUEUE	CICS 2.3 and TS 1.1
TSQueues	Temporary storage queues	QUEUE	CICS 2.3 and TS 1.1

AUXSTOR Panel

The AUXSTOR panel displays temporary auxiliary storage statistics.

Menu Access

On the /STORAGE menu, cursor-select the AUXSTOR option.

Command Access

Enter **AUX** or **AUXSTOR** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel

Panel Field Descriptions

The following tables describe the fields on the AUXSTOR panel.

Panel Field Descriptions: Control Intervals

Field	Description
Total CIs	Total number of control intervals
CISIZE	Control interval size
Available/CI	Number of available control intervals
Segments/CI	Number of segments per control interval
Bytes/Segments	Number of bytes per segment
Allocated	Number of allocated control intervals
Allocated High	Maximum number of allocated control intervals
Recoverable	Number of recoverable control intervals
Reads	Number of reads from auxiliary storage
Writes	Number of writes to auxiliary storage
Writes Force	Number of writes forced by recovery to auxiliary storage
Writes Format	Number of writes format to auxiliary storage

Panel Field Descriptions: Statistics

Field	Description
GETS - Aux	Number of GETs from auxiliary storage
GETS - Main	Number of GETs from main storage
Items In Longest Queue	Number of items in longest queue in temporary storage
Longest Aux Record Len	Length of longest auxiliary record
Buffers	Current, maximum, and total number of buffers in auxiliary storage
Write Buffers	Current, maximum, and total number of write buffers in auxiliary storage
Buffer Waits	Current, maximum, and total number of buffer waits in auxiliary storage
Strings	Current, maximum, and total number of strings in auxiliary storage
String Waits	Current, maximum, and total number of string waits in auxiliary storage
Queues	Current, maximum, and total number of queues in auxiliary storage

DSA Panel With CICS 2.3

The DSA panel displays information about the one DSA for CICS 2.3.

Note: Because the DSA panels with CICS 2.3 and TS 1.1 differ significantly, they are described in separate sections in this chapter. This section describes the DSA panel for CICS 2.3.

Menu Access

On the /STORAGE menu, cursor-select the DSA option.

Command Access

Enter **DSA** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

DSA [BYTES|PAGES]

Operand	Description
BYTES	Displays DSA statistics in bytes
PAGES	Displays DSA statistics in pages

Sample Panel

Panel Field Descriptions

Field	Description
DSA	Total number of bytes allocated to the DSA. If you specified the PAGES operand when you entered the DSA command, this field is replaced by the DSA Pages field.
DSA Pages	Total number of pages allocated to the DSA. If you did not specify the PAGES operand when you entered the DSA command, this field is replaced by the DSA field.
Available	Number of bytes (or pages, if the DSA Pages field is displayed) currently available.
Used	Number of bytes (or pages, if the DSA Pages field is displayed) currently in use.
Cushion	Number of bytes (or pages, if the DSA Pages field is displayed) allocated as the storage cushion.
Max Block	Size of the largest contiguous block of storage, in bytes.
Size	Size of each page, in bytes.
Queued	Number of transactions queued due to shortage of DSA.
Compress	Number of storage compressions.

Field	Description														
Subpool	Name of CICS storage subpool for which DSA storage is used. The type of storage requested determines the subpool obtained. The six subpools and their corresponding storage types are as follows:														
	<table border="1"> <thead> <tr> <th>Subpool</th> <th>Storage Types</th> </tr> </thead> <tbody> <tr> <td>01 Control (C)</td> <td>DCA, QEA, ICE, and AID storage</td> </tr> <tr> <td>02 Teleproc (T)</td> <td>TIOA storage</td> </tr> <tr> <td>04 Task (K)</td> <td>TCA and other transaction storage areas</td> </tr> <tr> <td>05 Shared (S)</td> <td>COMMAREA, temporary storage control blocks, and TCTTEs for dynamically acquired terminals</td> </tr> <tr> <td>06 VTAM RPL (V)</td> <td>VTAM RPLs</td> </tr> <tr> <td>08 Program (P)</td> <td>Nonresident program and BMS map storage</td> </tr> </tbody> </table>	Subpool	Storage Types	01 Control (C)	DCA, QEA, ICE, and AID storage	02 Teleproc (T)	TIOA storage	04 Task (K)	TCA and other transaction storage areas	05 Shared (S)	COMMAREA, temporary storage control blocks, and TCTTEs for dynamically acquired terminals	06 VTAM RPL (V)	VTAM RPLs	08 Program (P)	Nonresident program and BMS map storage
Subpool	Storage Types														
01 Control (C)	DCA, QEA, ICE, and AID storage														
02 Teleproc (T)	TIOA storage														
04 Task (K)	TCA and other transaction storage areas														
05 Shared (S)	COMMAREA, temporary storage control blocks, and TCTTEs for dynamically acquired terminals														
06 VTAM RPL (V)	VTAM RPLs														
08 Program (P)	Nonresident program and BMS map storage														
FAQE	Number of free area queue elements found in the subpool.														
Pages	Number of pages allocated to the subpool.														
Pct	Percentage of the total the subpool contributes. This information is also presented in graph form.														
DSA Used	Total number of pages used in the DSA.														
Address	Detailed graphic information about each DSA page and the subpool to which it is allocated. Each DSA page is represented by either a period (.) indicating that it is unassigned, or a letter indicating its subpool. The meanings of the letters used are given in the subpool information field, with the exception of the letter R, which represents program pages marked for deletion.														

DSA Panel (with TS 1.1)

The DSA panel displays information about the eight dynamic storage areas for TS 1.1.

Note: Because the DSA panels with CICS 2.3 and TS 1.1 differ significantly, they are described in separate sections. This section describes the DSA panel for TS 1.1.

Menu Access

On the /STORAGE menu, cursor-select the DSA option.

Command Access

Enter **DSA** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax

DSA

Panel Field Descriptions (Sample Panel 2)

Field	Description
DSA Size	Size of the DSA in bytes
Free	Number of free bytes in the DSA
Used	Percentage of DSA used
Lo Free	Low water mark of free bytes
Hi Free	High water mark of free bytes
Cushion	Number of bytes for the DSA cushion
Released	Number of times a cushion has been released
Suspends	Number of storage requests suspended because of an SOS condition
TSK SUSP	Number of tasks suspended due to an SOS condition
HWM TSKQ	High water mark of suspended tasks due to an SOS condition
Stg Viol	Number of storage violations in DSA
SOS	Number of times a short-on-storage condition has occurred and if the condition is still active
Time SOS	Amount of time short-on-storage conditions existed
Last SOS	Time of day the last short-on-storage condition occurred.
Dynamic Storage Area Subpool map	Subpool map for the DSA

FAQE Panel (CICS 2.3 only)

The FAQE panel displays information about free area queue elements (FAQEs).

Menu Access

On the /STORAGE menu, cursor-select the FAQE option.

Command Access

Enter **FAQE** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

FAQE [CONTRol] [TELEproc] [SHARed] [RPL] [ALL]

Operand	Description
CONTRol	Displays the control subpool
TELEproc	Displays the teleprocessing subpool
SHARed	Displays the shared subpools
RPL	Displays the RPL subpools
ALL	Displays information from all subpools

If you do not specify an operand, all subpools are displayed.

Panel Field Descriptions

Field	Description
Subpool	ID and name of CICS subpool where the FAQE resides
Page	DSA page where the FAQE resides
Address	FAQE storage address
Length	Size of the FAQE, in bytes

Panel Field Descriptions

The first two lines of the GETVIS panel display the following information:

Field	Description
Region	Region for which GETVIS storage allocations are displayed. The map of allocations applies to the region that is highlighted in this field.
Size	Size of the GETVIS storage region.
Alloc	Amount of GETVIS storage that has been allocated.
Free	Amount of free GETVIS storage.
Max	Size of the largest contiguous block of free GETVIS storage.

The remainder of the panel displays a coded map of GETVIS storage allocation for the region highlighted in the Region field. The storage address is displayed at the left side of the panel, and the offset into storage is displayed at the top of the panel. Each character indicates a 1024-byte page of GETVIS storage. The characters have the following meanings:

Character	Amount of Page Allocated
@	The page is completely allocated.
0	The page is not completely allocated, but one or more 128-byte segments are allocated.
blank	No allocations have been made within the page.

LISTMAPS Panel

The LISTMAPS panel displays a list of maps loaded during initialization of Unicenter CA-Explore for CICS.

Menu Access

On the /STORAGE menu, cursor-select the LISTMAPS option.

Command Access

Enter **LISTMAP** or **LISTMAPS** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel

Panel Field Descriptions

Field	Description
Mapname	Name of the map.
Maplen	Length of the control block.
Symaddr	Address of a symbol defined with the same name.
Region	Name of the VSE storage region, such as the supervisor area, associated with the map.
Member	Name of the Unicenter CA-Explore for CICS product library member used to load the map at initialization. These members are appended with <i>.M</i> and must be listed in the member specified by the MAPS-MEMBER configuration option. See the chapter titled “Configuration Options” for more information.

MAP Panel

The MAP panel displays information about control block mapping.

Menu Access

On the /STORAGE menu, cursor-select the MAP option.

Command Access

Enter **MAP** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

MAP *mapname* [*address*]*] [LABEL *label*]

Field	Description
<i>mapname</i>	String specifying maps to be displayed
<i>address</i>	String specifying the address of a symbol defined with the same name as the map
*	Specifies that the address of the currently displayed storage is to be used as the address of a symbol defined with the same name as the map
<i>label</i>	Specifies a label associated with the map

Example

MAP SYSCOM 410

Sample Panel

Panel Field Descriptions

Field	Description
Address	Storage address of the field in the map
Offset	Offset of the field into the map
Label	Label name assigned to the field in the map
Opcod	Assembler opcode
Operands	Operands associated with the opcode
Hexadecimal or Character	Hexadecimal or character representation of data

Toggling the Display Between Hexadecimal and Character Representations

You can toggle your panel display between hexadecimal and character representation:

F Key	Description
F10	Toggles between a display that shows a hexadecimal representation of data and a display that shows a character representation of data.

Panel Field Descriptions

The following tables describe the fields on the TEMPSTOR panel:

Panel Field Descriptions: Records

Field	Description
PUT	Number of PUT records requests
PUTQ	Number of PUTQ records requests
PUT(Q) Main	Number of PUTQ records to main storage requests
PUT(Q) Aux	Number of PUTQ records to auxiliary storage requests
PUT(Q) Total	Number of PUTQ records to main and auxiliary storage requests
Record Sets	Number of record sets

Panel Field Descriptions: Exceptions

Field	Description
Suspensions	Number of times tasks were suspended because of an inability to satisfy a temporary storage request
Compressions	Number of times a control interval in AUX DS (auxiliary storage dataset) had to be compressed
I/O Errors	Number of errors against AUX DS (auxiliary storage dataset)
PUTS > CISIZE	Number of PUTs greater than the control interval size

Panel Field Descriptions: Segments

Field	Description
Total	Total number of segments
Free	Number of free segments
Used	Number of used segments
Bytes/Segment	Number of bytes per segment

Panel Field Descriptions: Control Intervals

Field	Description
Total	Total number of control intervals
Bytes	Number of bytes in a control interval
Available/CI	Number of available bytes in a control interval
Segments/CI	Number of segments in a control interval

Panel Field Descriptions: Table Sizes

Field	Description	For CICS Version
Unit Table	Number of entries in a unit table	CICS 2.3
Entries/TSGID	Number of entries per temporary storage group identification (TSGID)	CICS 2.3 and TS 1.1
Buffers	Number of auxiliary storage buffers	CICS 2.3 and TS 1.1
Strings	Number of auxiliary storage strings	CICS 2.3 and TS 1.1

Panel Field Descriptions: Virtual Storage

Field	Description
Maximum	Maximum amount of virtual storage used
Current	Current amount of virtual storage used

TSQSTATS Panel

The TSQStats panel displays temporary storage queue statistics.

Menu Access

On the /STATUS menu, cursor-select the TSQSTATS option.

Command Access

Enter **TSQS** or **TSQSTATS** on the command line of any Unicenter CA-Explore for CICS panel.

/TABLES Menu Options

This chapter explains the /TABLES menu, which you can use to display information about subjects such as the AID chain, and CICS communication areas.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

/TABLES Menu

The /TABLES menu lists the commands that you can issue to display information about the following:

- The authorized initiate descriptor (AID) chain
- CICS communication areas
- Exit program blocks
- Interval Control Elements (ICE) chain
- Journal statistics
- Multi-partition operation
- The Program Processing table (PPT)
- Transient dataset activity
- The Terminal Control table
- Table Manager directory entries
- The Program Control table

Menu Access

- On the Unicenter CA-Explore for CICS Main menu, cursor-select the /TABLES option.
- Type any character (except H) in the space provided to the left of the command and press Enter.

Command Access

Enter /TA or /TABLES on the command line of any Unicenter CA-Explore for CICS panel.

Sample Menu

```
CA-Explore for CICS 7.0 0204 DEVCICS4 DB2CICS CICS      2003/06/30 13:44:22
==>                                                    /TABLES
                CA-Explore for CICS Menu - /TABLES      1:11/11-DATA

                Command   Description
                - AID      Authorized Initiate Descriptor Chain
                - COMMAREA  CICS Communication Areas
                - EPB       Exit Program Blocks
                - ICE       Interval Control Elements
                - JOURNAL   Journal Statistics
                - MRO       Multiregion Operation
                - PROGRAMS  Program Processing Table

```

What Are AIDs?

The AID command displays the AID chain. An AID exists because a terminal was unavailable to a transaction when a time-dependent event, ICE expired, or when an intra-partition dataset reached the trigger level. This may be due to another transaction actively using the requested terminal, or the terminal may be out of service.

Transactions can be automatically started by one of two methods:

- A time-dependent event causes the transaction to be started.
- An intra-partition transient dataset triggers the transaction.

CICS checks whether a terminal is required by the transaction. If not, the transaction begins to execute. If a terminal is required, CICS checks to see if the terminal is available and in service. If a terminal is available and in service, CICS acquires the terminal and the transaction begins to execute. If the terminal is out of service or in use, CICS creates an AID to keep track of the request for later use.

When a terminal becomes available, CICS starts the transaction and removes the AID from the system. If the requested terminal never becomes available, the AID stays on the chain.

By displaying the AID chain, you can identify potential problems in the CICS partition. For example, if entries continue to stay on the list or if the list continues to grow, you may have several out-of-service terminals. Other typical problems are paper jams, empty forms, power failures, and phone line problems.

Panel Field Descriptions

Field	Description
Tran	Name of the transaction that will be started when its associated terminal becomes available
Term	ID of the terminal on which the transaction will be started
TCTTE Address	Address of the CICS TCTTE control block associated with the AID
Id	Unique ID given to the AID by the application program or CICS
Type	The type of request that created the AID

Field	Description
Status	<p>Status bytes for the AID. This field displays, in hexadecimal, both the AID type and status.</p> <p>The first two digits indicate the AID type, as follows:</p> <p><u>Status Byte 1: AID Type</u></p> <ul style="list-style-type: none">04 TR/TS remote delete08 ISC schedule10 TDP schedule20 WAIT (ICE only)30 POST (ICE only)40 ICP initiate50 ICP PUT data80 BMS schedule <p>The second two digits indicate the AID status, as follows:</p> <p><u>Status Byte 2: AID Status</u></p> <ul style="list-style-type: none">01 ASK initiated (AID only)02 Waiting for a remote terminal04 Waiting for a remote transaction08 Shipped to TOR10 Waiting for a remote schedule20 Remote AID is to be canceled40 Mode name is valid80 AID is for private allocation

COMMAREA Panel

The COMMAREA panel displays information about communication areas.

Menu Access

On the /TABLES menu, cursor-select the COMMAREA option.

Command Access

Enter **COMMAREA** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

COMMAREA [*terminal*]

Field	Description
<i>terminal</i>	String specifying terminals to be displayed. You can include generic characters in the string, as described in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS."

Sample Panel

CA-Explore for CICS 7.0 0204 DEVCICS4 DB2CICS4 FAQ5						2003/06/30 13:44:46

Panel Field Descriptions

Field	Description
Term	CICS terminal name
Netname	VTAM logical unit (LU) name
Tran	Current transaction ID
Task#	Current transaction number
Next	Next transaction ID
Opid	CICS operator ID
Userid	User ID
Commarea	Address of communication area
Length	Length of communication area, in bytes

Margin Commands

Command	Description
<u>S</u>	Displays detailed information for the selected terminal
P	Purges the selected terminal
F	Forces purges the selected terminal
A	Acquires the selected terminal
R	Releases the selected terminal
I	Puts the selected terminal in service
O	Puts the selected terminal out of service

COMMAREA Detail Panel

The COMMAREA Detail panel displays detailed information about the communication areas you select from the COMMAREA panel.

Access

On the COMMAREA panel, cursor-select a terminal.

Sample Panel

```

Panel Field Descriptions

The fields on the first line of the COMMAREA Detail panel have the same meanings as the fields on the COMMAREA panel. The following tables describe the remaining fields on the COMMAREA Detail panel.

Panel Field Descriptions: Operation Data

Field	Description
TCA Addr	Address of the TCA
User Area	Address of the user area
User Len	Length of the user area, in bytes

Panel Field Descriptions: Screen Size

Field	Description
Default	Default number of rows and columns on the terminal
Alternate	Alternate number of rows and columns on the terminal

Panel Field Descriptions: Storage In Use

Field	Description
Terminal	Amount of storage in use by the terminal
Comm Area	Address of the communication area
Comm Len	Length of the communication area, in bytes

Panel Field Descriptions: Terminal Statistics

Field	Description
Transactions	Number of transactions issued from the terminal since the terminal has been active
Invalid Trans	Number of invalid transactions involving the terminal
Inputs	Number of inputs from the terminal
Outputs	Number of outputs to the terminal
Errors	Number of errors involving the terminal

Panel Field Descriptions: Definitions

Field	Description
Cursor	Address where the cursor was positioned at the last input
AID Key	AID key that was last pressed
Alarm	Whether the terminal supports the alarm function
ExtDS	Whether the terminal supports extended data stream
Color	Whether the terminal supports color
Hilight	Whether the terminal supports highlighting
Uctran	Whether the terminal supports uppercase translation

EPB Panel

The EPB panel displays information about exit program blocks.

Menu Access

On the /TABLES menu, cursor-select the EPB option.

Command Access

Enter **EPB** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

EPB [*exitpgm*]

Operand	Description
<i>exitpgm</i>	String specifying the exit programs for which you want to display information. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS."

Sample Panel

CA-Explore for CICS 7.0 0204 DEVCICS4 DB2CICS4 FAQs							2003/06/30 13:44:46

F7=Backward			F8=Forward		F9=Auto		F10=		F11=
									F6=Bottom
									F12=Exit

Panel Field Descriptions

Field	Description
Exitpgm	Exit program name
Address	Exit program address
Module	Load module name
Flags	One or more of the following: L Program loaded by user; do not delete when disabled. S Exit program is started. D Exit program is disabled.
Gbl-Addr	Address of global area
GblLen	Length of global area, in bytes
Gcount	Number of times global area was used
Acount	Number of times EPB was activated
Icount	Number of times EPB was invoked
Tcount	Tie count

ICE Panel

The ICE panel displays the ICE (interval control element) chain, which represents time-dependent events. An event can initiate a new transaction, make a transaction wait for a specified time interval, notify a transaction that a time interval has passed, or pass data to a started transaction. To keep track of the event, CICS creates an ICE and places it on the ICE chain in time-out sequence.

Menu Access

On the /TABLES menu, cursor-select the ICE option.

Command Access

Enter **ICE** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel

```

```

Panel Field Descriptions

Field	Description
Tran	ID of the original transaction or of the one to be started when the ICE expires
Term	Terminal ID (shown only for ICEs that require acquisition of a terminal) or address of the TCA if this ICE request is used to delay an executing transaction
Exp-Time	ICE expiration time
Address	Storage location of the ICE control block in the CICS partition
ECB-Addr	Address of ECB to be posted when the ICE expires
Id	Unique internal identification string assigned to the ICE by either a transaction or CICS
Type	ICE creation method: <ul style="list-style-type: none"> WAIT Delays the transaction POST Posts the transaction when a specified interval has elapsed INITIATE Starts the transaction PUT Starts the transaction and passes data via temporary storage

Field	Description
Status	<p>Status bytes found in the ICE. This field displays, in hexadecimal, both the ICE type and status.</p> <p>The first two digits indicate the ICE type, as follows:</p> <p><u>Status Byte 1: ICE Type</u></p> <ul style="list-style-type: none">04 TR/TS remote delete08 ISC schedule10 TDP schedule20 WAIT (ICE only)30 POST (ICE only)40 ICP initiate50 ICP PUT data80 BMS schedule <p>The second two digits indicate the ICE status, as follows:</p> <p><u>Status Byte 2: ICE Status</u></p> <ul style="list-style-type: none">01 On chain bit (ICE only)02 A DWE08 Expiration TIME (ICE only)10 Canceled by other task20 Expired on entry80 Expired normallyF0 Expired mask

JOURNAL Panel

The JOURNAL panel displays journal statistics.

Menu Access

On the /TABLES menu, cursor-select the JOURNAL option.

Command Access

Enter **JOURNAL** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel

F7=Backward  F8=Forward   F9=Auto      F10=         F11=        F12=Exit
```

Panel Field Descriptions

Field	Description
ID	Journal ID
JCTTE	Address of the JCTTE or journal entry in the JCT
LOG-REC	Number of logical records written to the log dataset
BLK-CNT	Number of blocks written to the log dataset
BUFULL	Number of times the buffer was full when a journal request was issued
%-BFULL	Percentage of times the buffer was full when written
SHFTUP	(CICS 2.3 only) Number of times the buffer was written before it was full due to the SHFSIZ value.
AVEBLK	Average buffer size written to the dataset
BLKSIZ	Size of journal buffer
SHFSIZ	Value, in decimal, that specifies how full a journal buffer is allowed to be before the buffer can be written

MRO Panel

The MRO panel provides information about TCT remote system entries.

Menu Access

On the /TABLES menu, cursor-select the MRO option.

Command Access

Enter **MRO** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

MRO [*netname*]

Operand	Description
<i>netname</i>	String specifying the VTAM application IDs of the CICS partitions for which you want to display information. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS."

Sample Panel

```

CA-Explore for CICS 7.0 0204 DEVCICS4 DB2CICS4 FAQ5      2003/06/30 13:44:46
==>
                                TCT Remote System Entries      1:2/2-DATA

Options: (S)elect
F1=Help   F2=System  F3=Return  F4=Flshback  F5=Top      F6=Bottom
F7=Backward F8=Forward F9=Auto    F10=         F11=        F12=Exit

```

Panel Field Descriptions

Field	Description
Netname	VTAM application ID of the CICS partition
SysID	Internal CICS ID for routing purposes. This is the SYSIDNT parameter coded on the TCT TYPE=SYSTEM macro.
Sys-Type	Type of system entry being defined. The type is used to establish connections between partitions and control routing. The description is derived by checking these settings found in the TCSETYPE field: <ul style="list-style-type: none"> Full-Sys Full system entries Local Local only; no links Indirect Indirect system entries
LUtype	Method of communications defined for the connection between the CICS partitions, as follows: <ul style="list-style-type: none"> blank Local-only partitions MRO Inter-partition communication (IRC) LU6 Intersystem communication (ISC) using the 6.1 protocol LUC ISC using the 6.2 protocol
Aid's	Number of AIDs in the chain
NS-Aid	Number of nonspecific AIDs
Bids	Number of current requests for session connections
2ndUse	Number of secondary sessions currently being used

MRO Detail Panel

The MRO Detail panel displays detailed TCT remote system entry information for a selected CICS partition on the MRO panel.

Access

On the MRO panel, cursor-select a CICS partition.

Sample Panel: Local System

Panel Field Descriptions

The fields on the first line of the MRO Detail panel have the same meanings as the fields on the MRO panel. The following tables describe the remaining fields on the MRO Detail panel.

Note: Not all fields will appear, depending on the partition you select from the MRO panel.

Panel Field Descriptions: High Water Marks

Field	Description
Max Alloc Queued	High water mark of outstanding requests to allocate a pair of sessions
Secondaries Used	High-water mark of secondary sessions used
Maximum Bids	High-water mark of session bid requests

Panel Field Descriptions: Accumulators

Field	Description
ATI by Primary	Number of ATIs satisfied by primary sessions
ATI by Seconds	Number of ATIs satisfied by secondary sessions
Bids Sent	Total number of bids sent

Panel Field Descriptions: Auto-Install Statistics

Field	Description
Rejects	Number of requests rejected due to user or error condition
Deletes	Number of terminal deletes issued
Attempts	Number of terminal defines issued
Peak Requests	High-water mark of concurrent requests
Peak Incidence	Number of times the maximum number of concurrent requests was reached

Panel Field Descriptions: ISC Link Statistics

Field	Description
Alloc for Link	Number of allocates issued for a link connection
Alloc Queued	Number of allocation requests that had to be queued
Failing Link	Number of allocates that failed due to a link being active
Failing Other	Number of allocates that failed due to other network or protocol errors
FC Requests	Total number of file control requests shipped
IC Requests	Total number of interval control requests shipped
TD Requests	Total number of transient data requests shipped
TS Requests	Total number of temporary storage requests shipped
DLI Requests	Total number of DL/I requests shipped
Term Shr Reqs	Total number of requests exchanged for terminal sharing between multiple partitions

Panel Field Descriptions: IRC Statistics

Note: IRC statistics are not provided for local entries.

Field	Description
Primary Sessions	Number of primary half-sessions specified
Seconds Sessions	Number of secondary half-sessions specified
Max Threads	High-water mark of concurrent IRC threads in use at one time
Total Threads	Total number of IRC threads used
Curr Threads	Number of IRC threads currently in use

PROGRAMS Panel

The Programs panel displays information from the Program Processing table (PPT) for CICS 2.3, or data from several control blocks for TS 1.1.

Menu Access

On the /TABLES menu, cursor-select the PROGRAMS option.

Command Access

Enter **PROG** or **PROGRAMS** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

PROGams [ACTIVE|ALL] [INCORe|RESident] [*program*]

Operand	Description
ACTIVE	Display programs used at least once. ACTIVE is the default operand.
ALL	Display all programs defined in the PPT.
INCORe	Display programs currently in memory but not resident.
RESident	Display resident programs.
<i>program</i>	String specifying the programs to be displayed. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS."

Sort Arguments

Panel Field Descriptions

Field	Description	For CICS Version
Program	Program name	CICS 2.3 and TS 1.1
Lng	Program language	CICS 2.3 and TS 1.1
Rcnt	Number of transactions currently using the program	CICS 2.3 and TS 1.1
Fetch	Number of times the program has been fetched	CICS 2.3 and TS 1.1
Use-Cnt	Number of times the program has been used	CICS 2.3
Usage	Number of times the program has been used	TS 1.1
Pgm-Size	Program size in bytes	CICS 2.3 and TS 1.1
NewC	Number of new copies	TS 1.1
Comps	Number of compressions	TS 1.1
Lfetch	Number of times fetched.	TS 1.1

Field	Description	For CICS Version
FTCHTIME	Fetch time	TS 1.1
Pgs	Number of pages allocated to hold the program	CICS 2.3
Waste %	Number and percentage of bytes wasted in the last page	CICS 2.3
Address	CICS storage address of entry. If <i>RES</i> appears beside the address, the program is permanently resident. If the word Disabled appears instead of an address, the program is disabled.	CICS 2.3
Load	Indicates the address of the program in memory	TS 1.1
Entry	Indicates the entry point for the program.	TS 1.1
DSA	The name of the DSA where the program resides	TS 1.1
CEDF	Indicates whether the program can be tested with CEDF	TS 1.1
ExecKey	Indicates either the CICS key or the USER key, which is the execution mode	TS 1.1
DataLoc	Indicates where data is located, either below or above the 16Mb line, or anywhere	TS 1.1

Margin Commands

Command	Description
N	Refreshes the program address in the PPT and marks it as nonresident.
E	Enables the program.
D	Disables the program so that it is not available for use. Programs beginning with DFH cannot be disabled.

TDATA Panel

The TDATA panel displays information about transient dataset activity.

Menu Access

On the /TABLES menu, cursor-select the TDATA option.

Command Access

Enter **TDATA** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

TDATA [ACTIVE|ALL] [*dct*]

Operand	Description
ACTIVE	Displays information about active DCT entries.
ALL	Displays information about all DCT entries.
<i>dct</i>	String specifying the DCT entries about which information is to be displayed. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS."

Sample Panel

```

Panel Field Descriptions

Field	Description
DCT	Destination identification as defined in the DCT
Type	Destination type, as follows: REMT Remote destination EXTR Extrapartition destination INTR Intrapartition destination INDR Indirect destination
INDR	Destination ID for entries with a destination type of INDR
Count	Number of requests made to entry
Qcount	Number of entries in the destination queue
Trig	ID of the transaction to be started when the trigger level is reached
TrigLv	Trigger level value
SYSID	System ID for entries with a destination type of REMT
Address	CICS storage address of entry

TERMS Panel

The TERMS panel displays information from the Terminal Control table.

Menu Access

On the /TABLES menu, cursor-select the TERMS option.

Command Access

Enter **TERM** or **TERMS** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

TERMS [ACTIVE|ALL] [*terminal*]

Operand	Description
ACTIVE	Displays information about active terminals in the TCT.
ALL	Displays information about all terminals in the TCT.
<i>terminal</i>	String specifying the names of the terminals about which information is to be displayed. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS."

Sample Panel

F7=Backward  F8=Forward  F9=Auto     F10=         F11=        F12=Exit
```

Panel Field Descriptions

Field	Description
Term	CICS terminal name
Netname	VTAM LU logical unit name
Tran	Current transaction ID
Task#	Current transaction number
Next	Next transaction ID
Opid	CICS operator ID
Userid	User ID
Count	Number of transactions used by terminal
Pri	Terminal priority
Type	Terminal access method
Status	Description of terminal status, as follows: Dummy TCTTE Read Only Permanent Out Term Quiescing Receive Only Auto Tran Init Term Attended Out of Service Console If the status is displayed in high intensity or in reverse video enclosed in a red box, an error has been recorded against that terminal. See the TERMS Detail panel for an error count.

Margin Commands

Command	Description
S	Displays detailed information about the selected terminal.
P	Purges the selected terminal.
F	Force purges the selected terminal.
A	Acquires the selected terminal.
R	Releases the selected terminal.
I	Puts the selected terminal in service.
O	Puts the selected terminal out of service.

TERMS Detail Panel

The TERMS Detail panel displays detailed information about a selected entry from the Terminal Control table.

Access

On the TERMS panel, cursor-select an entry.

Sample Panel

Panel Field Descriptions

The fields on the first line of the TERMS Detail panel have the same meanings as the fields on the TERMS panel. The remaining fields on the TERMS Detail panel have the following meanings:

Panel Field Descriptions: Operation Data

Field	Description
TCA Addr	Address of the TCA
User Area	Address of the user area
User Len	Length of the user area

Panel Field Descriptions: Screen Size

Field	Description
Default	Default number of rows and columns on this terminal
Alternate	Alternate number of rows and columns on this terminal

Panel Field Descriptions: Storage In Use

Field	Description
Terminal	Amount of storage in use by the terminal
Comm Area	Address of the communication area
Comm Len	Length of the communication area

Panel Field Descriptions: Terminal Statistics

Field	Description
Transactions	Number of transactions involving this terminal
Invalid Trans	Number of invalid transactions involving this terminal
Inputs	Number of inputs from this terminal
Outputs	Number of outputs to this terminal
Errors	Number of errors involving this terminal

Panel Field Descriptions: Definitions

Field	Description
Cursor	Address of last input
AID Key	Hexadecimal value of the AID key that was pressed
Alarm	Whether the terminal supports the alarm function
ExtDS	Whether the terminal supports extended data stream
Color	Whether the terminal supports color
Hilight	Whether the terminal supports highlighting
Uctran	Whether the terminal supports uppercase translation

TMDIR Panel

The TMDIR panel displays Table Manager directory entry information.

Menu Access

On the /TABLES menu, cursor-select the TMDIR option.

Command Access

Enter **TMDIR** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

TMDIR [ALL] [*type*] [*key*]

Operand	Description	For CICS Version
ALL	Displays information about all Table Manager entry types.	CICS 2.3 and TS 1.1
<i>type</i>	Identifies one or more of the following Table Manager entry types whose information you want to display:	
PCTS	Program Control Table entries	CICS 2.3
PPTS	Program Processing Table entries	CICS 2.3
PFTS	Profile Table entries	CICS 2.3
FCTS	File Control Table entries	CICS 2.3 and TS 1.1
DCTS	Destination Control Table entries	CICS 2.3 and TS 1.1
TCTE	Terminal Control Table entries	CICS 2.3 and TS 1.1
TCTN	Terminal Control Table network entries	CICS 2.3 and TS 1.1
TCTS	Terminal Control Table system entries	CICS 2.3 and TS 1.1
<i>key</i>	String specifying the directory element keys about which information is to be displayed. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS."	CICS 2.3 and TS 1.1

Sample Panel With CICS 2.3

	TCTE Terminal Control Table entries	CICS 2.3 and TS 1.1
	TCTN Terminal Control Table network entries	CICS 2.3 and TS 1.1
	TCTS Terminal Control Table system entries	CICS 2.3 and TS 1.1
Key	Directory element key	CICS 2.3 and TS 1.1
Directory	Directory element address	CICS 2.3 and TS 1.1
Entry	Table element address	CICS 2.3 and TS 1.1
Info	Directory element status, as follows:	CICS 2.3 and TS 1.1
	Free Element is free	
	Quiesced Element is quiesced	
	Fix Table element storage is fixed	
	Prot Table element is protected	
	Add Uncommitted add	
	Del Delete requested	

Margin Commands

Command	Description
D	Displays the contents of storage at the address of the directory entry you select
E	Displays the contents of storage at the address of the table element entry you select

TRANS Panel

The TRANS panel displays information from the Program Control table (PPT) for CICS 2.3, or data from several control blocks for TS 1.1.

Menu Access

On the /TABLES menu, cursor-select the TRANS option.

Command Access

Enter **TRAN** or **TRANS** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

TRANS [ACTIVE|ALL] [*tran*]

Operand	Description
ACTIVE	Displays information about active transactions defined in the PCT
ALL	Displays information about all transactions defined in the PCT
<i>tran</i>	String specifying the transactions about which information is to be displayed. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS."

Sort Arguments

Argument	For CICS Version
PRIority	CICS 2.3 and TS 1.1
PROGram	CICS 2.3 and TS 1.1
SPURGE	CICS 2.3
TRAN	CICS 2.3 and TS 1.1
TWAsize	CICS 2.3 and TS 1.1
USE	CICS 2.3
VIOL	CICS 2.3

Panel Field Descriptions

Field	Description	For CICS Version
Tran	CICS transaction code	CICS 2.3 and TS 1.1
Program	Program associated with the transaction code	CICS 2.3 and TS 1.1
Pri	Priority assigned to transaction. Overtyp e this value to change it.	CICS 2.3 and TS 1.1
Used	Number of times the transaction was used.	CICS 2.3 and TS 1.1
TWA	Transaction work area size.	CICS 2.3 and TS 1.1
PUR	Number of times the task was stall purged.	CICS 2.3
Viol	Number of storage violations.	CICS 2.3 and TS 1.1
EIP	YES indicates that a command level interface is being used. Otherwise, this field is blank.	CICS 2.3

Field	Description	For CICS Version
STP	YES indicates that the transaction can be purged. If the transaction cannot be purged, this field is blank.	CICS 2.3
TRACE	STD Standard tracing SPC Special SPR Superseded	TS 1.1
RTV	Timeout value for terminal reads for conversational transactions.	CICS 2.3
DLTV	Deadlock timeout value for deadly embrace of updates.	CICS 2.3 and TS 1.1
Remote	CICS transaction code from the remote CICS partition.	CICS 2.3 and TS 1.1
SYSID	Remote CICS system ID where the transaction is to be routed.	CICS 2.3 and TS 1.1
Status	Shows Enabled or Disabled.	CICS 2.3
Stat	Show Enab or Disa.	TS 1.1
AICA	Show ON or OFF. ON indicates that the transaction is using the system runaway time for AICA control. OFF indicates that the transaction is not using the system runaway time for AICA control.	TS 1.1

Margin Commands

Command	Description
E	Enables the transaction so that it is available for use.
D	Disables the transaction so that it is not available for use.
Y	(TS 1.1 only) Tells CICS TS 1.1 to use the system runaway time for AICA control. If AICA control is OFF and you turn it on, CICS TS will use the system runaway value for AICA control, rather than the value defined in the transaction RUNAWAY value.
N	(TS 1.1 only) Turns off AICA control for this transaction. This overrides the RUNAWAY value in the transaction definition.

/FILES Menu Options

This chapter explains the /FILES menu, which lists commands you can use to display information about subjects such as File Control Table entries, LSR buffer, pool, and string performance, and VSAM performance.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

/FILES Menu

The /FILES menu lists commands you can use to display information about File Control Table entries, LSR buffer, pool, and string performance, and VSAM performance.

Menu Access

- On the Unicenter CA-Explore for CICS Main menu, cursor-select the /FILES option.
- Type any character (except H) in the space provided to the left of the command and press Enter.

Command Access

Enter **/FI** or **/FILES** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Menu

```

F7=Backward  F8=Forward   F9=Auto    F10=        F11=       F12=Exit

```

Panel Display Options

To display a panel listed on the /FILES menu, cursor-select the option from the menu or enter the corresponding command as listed in the following table:

This Command	Displays	Default Sort Argument
DATATbl	File information from data tables	FILENAME
FILES	File control entries	REQUESTS
LSRBuff	Information about LSR buffer usage	POOL
LSRPool	LSRPOOL buffer performance ratings	DREQS
LSRSTAts	LSR pool resource statistics	POOL
LSRSTRng	Information about LSR string performance	POOL
VSAM	VSAM performance statistics	REQS
VSAMSTAT	VSAM interval statistics	REQS

DATATBL Panel

The DATATBL panel displays data table entries.

Menu Access

On the /FILES menu, cursor-select the DATATBL option.

Command Access

Enter **DATAT** or **DATATBL** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

DATATbl [*filename*]

Operand	Description
<i>filename</i>	String specifying the filename for which you want to display data table information

Sample Panel

```

```

Panel Field Descriptions

The fields on the first line of the DATATBL Detail panel have the same meanings those on the DATATBL panel. The following table describes the remaining fields on the DATATBL Detail panel:

Field	Description
Peak Records	The most records ever contained in the data table. This number is displayed as a count, as a percentage, and graphically. If this number approaches MAX or is much smaller than MAX, consider changing your data table options in the FCT.
Initial Records	The first records contained in the data table. This number is displayed as a count, as a percentage, and graphically.
Added Via API	Number of records added since the data table loaded.
Read Requests	Successful read attempts to read data from the data table.
Reads Not Found	Number of reads in which data was not found in the data table.
Rejected - Full	Number of adds attempted that failed because the data table was full.
Rejected - Exit	Number of adds suppressed by the XDTA user exit.
Updates Processed	Successful updates of records contained in the data table.
Deletes Processed	Successful deletes of records contained in the data table.

Note: If you compare the FCT detail display for a data table to the data table detail display for the same data table, you will notice that reads and browses in the FCT detail screen will not match the same fields in the data table detail screen. According to IBM, any action that causes an update to a CICS-controlled data table causes both the data table fields and the corresponding FCT entry fields to be updated. However, reads and browses do not update the data table, so read and browse fields in the FCT are not changed.

Because of differences in processing between CICS 2.3 and CICS TS, there will be differences in reads on data table displays. Under CICS TS, browse requests are added to the read request count.

FILES Panel

The FILES panel displays File Control Table entries.

Menu Access

On the /FILES menu, cursor-select the FILES option.

Command Access

Enter **FILES** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

FILES [*filename*]

Operand	Description
<i>filename</i>	String specifying the filenames about which information is to be displayed. You can include generic characters in the string, as explained in the introductory chapter titled "Using Unicenter CA-Explore Performance Management for CICS." If you do not specify a filename, all filenames will be displayed.

Sample Panel

Panel Field Descriptions

The first line of fields on this panel is the same as those on the FILES panel. The additional fields on the FILES Detail panel have the following meanings:

Field	Description
Requests	Types of requests: Add Add request Browse Browse request Delete Delete request Read Read request Read Upd Read for update request Update Update request
Count	Number of requests of each type
PCT	Percentage of the total number of requests that each type accounted for, presented in both numeric and graph form
Active String Count	Types of active string counts: Upper String Count Limit – Maximum number of strings allowed. This value is defined by STRNO. Upd/Add String Cnt Limit – The maximum number of strings allowed for update and add functions. This value will be 80 percent of the STRNO value for non-VSAM files; otherwise, the value will equal STRNO value. Strings Required For Upd – Number of strings required to perform one update. Buffers - Data – Number of buffers for the data portion of the file, defined by the BUFND parameter in the FCT (file control table). If the value is for an LSR, it is the number for the entire LSR. Buffers - Index – Number of buffers for the index portion of the file, defined by the BUFNI parameter in the FCT. If the file is an LSR, the value is always 1, and this field will be blank.
Record Length	Maximum length of the record
Key Length	Length of the key
Key Position	Position of the key

Field	Description
Security Level	Level of security
Record Format	Format of the record
Dataset Name	Dataset name of the file. Remote files will not show any information in this field.
Buffer Waits	Current, high, and total number of buffer waits for the file
String Waits	Current, high, and total number of string waits for the file
Data Table Max Records	Maximum number of records allowed in the data table, as defined in the FCT. These fields are for data tables only.
Data Table Initial Size	Initial amount of GETVIS storage allocated for the data table, as defined in the FCT. These fields are for data tables only.

Note: If you compare the FCT detail display for a data table to the data table detail display for the same data table, you will notice that reads and browses in the FCT detail screen will not match the same fields in the data table detail screen. According to IBM, any action that causes an update to a CICS-controlled data table causes both the data table fields and the corresponding FCT entry fields to be updated. However, reads and browses do not update the data table, so read and browse fields in the FCT are not changed.

Because of differences in processing between CICS 2.3 and CICS TS, there will be differences in reads on data table displays. Under CICS TS, browse requests are added to the read request count.

LSRBUFF Panel

The LSRBUFF panel displays information about LSR buffer performance.

Menu Access

On the /FILES menu, cursor-select the LSRBUFF option.

Command Access

Enter **LSRB** or **LSRBUFF** on the command line of any Unicenter CA-Explore for CICS panel.

Sort Arguments

```

Panel Field Descriptions

Field	Description
Filename	Name of the file.
Type	Type of dataset organization: KSDS, RRDS, or ESDS.
Reqs	Number of I/O requests.
DExcp	The total number of EXCPs against the data portion of the dataset.
DBPR	Buffer performance rating for the data portion of the dataset, shown in both numeric and graph form. The rating equals the number of requests divided by the number of EXCPs against the data portion of the dataset. The lines on the bar graph to the right of the DBPR field are sized relative to the highest DBPR.
IExcp	The total number of EXCPs against the index portion of the dataset.
IBPR	Buffer performance rating for the index portion of the dataset, shown in both numeric and graph form. The rating equals the number of requests divided by the number of EXCPs against the index portion of the dataset. The lines on the bar graph to the right of the IBPR field are sized relative to the highest IBPR.

Margin Command

Command	Description
S	Displays detailed information for the file you select, including VSAM statistics, LSRPOOL buffer statistics, and CICS LSRPOOL information

LSRPOOL Filename Detail Panel

The LSRPOOL Filename Detail panel displays LSR buffer performance ratings based on the entry you select from the LSRPOOL Filename panel.

Access

On the LSRPOOL Filename panel, cursor-select a file.

Sample Panel

```

```

Panel Field Descriptions

The fields on the first line on the LSRPOOL Filename Detail panel are the same as those on the LSRPOOL Filename panel. The additional fields on the LSRPOOL Filename Detail panel have the following meanings:

Field	Description
BUFSIZ	Size of the buffer for the LSR pool. If -I follows the entry, the buffer size is for index records. If -D follows the entry, the buffer size is for data records. If -* follows the entry, the buffer size is for index and data records.
COUNT	Number of buffers for the LSR pool.
LKASID	Number of look aside reads.
PCT%	Percentage of all reads that are look aside reads.
READS	Number of read requests.
UWRITE	Number of user writes.
NWRITE	Number of non-user writes.
Records	Number of records in the data and index portions of the file.
Reads	Number of read requests in the data and index portions of the file.
Updates	Number of update requests in the data and index portions of the file.
Inserts	Number of insert requests in the data and index portions of the file.
Deletes	Number of delete requests in the data and index portions of the file.
Current	Current number of strings and waits in the LSR pool.
Maximum	Maximum number of strings and waits in use at once.
Total	Total number of strings and waits.
Keylen	Maximum key length of any file in the pool.
Percent	Maximum percentage of resources required by the VSAM files that are to be shared. This percentage is defined in the DFHFCT TYPE=SHRCTL RSCLMT parameter. If BUFND= and BUFNI= are defined and the file is an LSR, this number is not used.

LSRSTATS Panel

The LSRSTATS panel displays LSR pool resource statistics.

Menu Access

On the /FILES menu, cursor-select the LSRSTATS option.

Command Access

Enter **LSRSTA** or **LSRSTATS** on the command line of any Unicenter CA-Explore for CICS panel.

Sort Arguments

- COUNT
- LKASID
- NWRITE
- PCT%
- POOL
- READS
- SIZE

Panel Field Descriptions

The top line of fields on the VSAM detail panel is the same as that on the VSAM panel. In addition, this panel has the following fields:

Field	Description
Retrieves	Total number of retrieves for the data and index portions of the file
Updates	Total number of updates for the data and index portions of the file
Inserts	Total number of inserts for the data and index portions of the file
Deletes	Total number of deletes for the data and index portions of the file
Records	Total number of records in the data and index portions of the file
Key Length	Key length of the records in the data and index portions of the file
Relative Key Position	Relative key position within the record for the data and index portions of the file
Max Record Length	Maximum record length allowed for the data and index portions of the file
Free Bytes In Dataset	Amount of free space, in bytes, in the data and index portions of the file
CI Size	Size of the control interval for the data and index portions of the file
Free Bytes/CI	Number of free bytes per control interval for the data and index portions of the file
Free Bytes/CI%	Percentage of free bytes per control interval for the data and index portions of the file
CI/CA	Number of control intervals within a control area (defined at file allocation)
Free CIs/CA	Number of free control intervals within a control area

Field	Description
Free CIs/CA%	Percentage of free control intervals within a control area
CI Splits	Number of control interval splits
CA Splits	Number of control area splits
Strings	Number of strings
Buffers	Number of buffers
Extents	Number of extents
Index Levels	Number of index levels

VSAM Data Extents Panel

The VSAM Data Extents panel displays data extent and index extent information.

Access

On the VSAM panel, enter an X in the input field next to a filename.

Sample Panel

```

```

Panel Field Descriptions

The information fields on the VSAM Data Extents panel have the following meanings. These fields appear twice on the panel, once for data extents and once for index extents.

Field	Description
Volume	Volume name where extent is allocated
LEXT	Cylinder (or block for FBA devices) that represents the low end (starting point) of the file extent
HEXT	Cylinder (or block for FBA devices) that represents the high end (ending point) of the file extent
Low-RBA	Low RBA (relative block address)
High-RBA	High RBA

VSAMSTAT Panel

The VSAMSTAT panel displays VSAM statistics for the current system interval, as defined by the SYSTEM-INTERVAL configuration option. The data displayed is extracted from VSAM control blocks.

Menu Access

On the /FILES menu, cursor-select the VSAMSTAT option.

Command Access

Enter **VSAMSTAT** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

```
VSAMSTAT [ACTIVE] [filename]
          [ ALL ]
```

Operand	Description
ACTIVE	Displays all VSAM files that had activity within the last system interval.
ALL	Displays all VSAM files.
<i>filename</i>	String specifying the names of the files to be displayed. You can include generic characters in the string, as explained in the introductory chapter titled "Using Unicenter CA-Explore Performance Management for CICS."

Sort Arguments

Panel Field Descriptions

The fields at the top of this panel are the same as fields on the VSAMSTAT panel. The remaining information fields have the following meanings. Current statistics are for the previous system interval. Totals are for the period since Unicenter CA-Explore for CICS was last initialized.

Field	Description
Requests	Current and total number of requests to the dataset
Retrieves	Current and total number of retrieves from the dataset
Updates	Current and total number of updates to the dataset
Inserts	Current and total number of inserts to the dataset
Deletes	Current and total number of deletes to the dataset
Extends	Current and total number of times the dataset was extended
Data EXCPs	Current and total number of data EXCPs to the dataset
Index EXCPs	Current and total number of index EXCPs to the dataset

/DBASE Menu Options

This chapter explains the /DBASE menu, which lists the commands you can issue to display DL/I database information.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

/DBASE Menu

The /DBASE menu lists the commands you can issue to display DL/I database information.

Menu Access

- On the Unicenter CA-Explore for CICS Main menu, cursor-select the /DBASE option.
- Type any character (except H) in the space provided to the left of the command and press Enter.

Command Access

Enter `/DB` or `/DBASE` on the command line of any Unicenter CA-Explore for CICS panel.

==>
      CA-Explore for CICS Menu - /DBASE                1:6/6-DATA

      Command      Description
      - DLIBUFF    DL/I Buffers
      - DLIDBD     DL/I DBD Directory Entries
      - DLIPSB     DL/I PSB Directory Entries
      - DLISTATS   DL/I Resource Statistics
      - DLITASKS   DL/I Tasks
      - SQLLINKS   DB2 Links

F1=Help   F2=System  F3=Return  F4=Flshback  F5=Top      F6=Bottom
F7=Backward F8=Forward  F9=Auto    F10=         F11=        F12=Exit

```

Panel Display Options

To display a panel listed on the /DBASE menu, cursor-select the option from the menu or enter the corresponding command as listed in the following table. If the word None is listed in the Default Sort Argument column, the panel displayed by the command is not sorted according to any default criteria.

This Command	Displays	Default Sort Argument
DLIBuff	DL/I buffers	ADDRESS
DLIDBD	DL/I DBD directory entries	NUMBER
DLIPSB	DL/I PSB directory entries	NAME
DLISTATs	DL/I resource statistics	NAME
DLITaskS	DL/I tasks	None
SQLLINKS	DB2 information	None

DLIBUFF Panel

The DLIBUFF panel displays information about DL/I buffers.

Menu Access

On the /DBASE menu, cursor-select the DLIBUFF option.

Command Access

Enter **DLIB** or **DLIBUFF** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel

```
CA-Explore for CICS 7.0 0204 DEVCICS4 DB2CICS4 FAQ5      2003/06/30 13:58:50
==>                                                    DLIBUFF
                                                    1:16/160-DATA
DL/I Buffers
Buffer   DBD-num DBD name  Wait Status
00456800                No   Empty
00456A00                No   Empty
F1=Help   F2=System  F3=Return  F4=Flshback  F5=Top      F6=Bottom
F7=Backward F8=Forward F9=Auto    F10=         F11=        F12=Exit
```

Panel Field Descriptions

Field	Description
Buffer	Buffer address
DBD-num	Number of the associated DBD
DBD name	Name of the DBD
Wait	YES or NO, indicating whether a task is waiting on the buffer
Status	Status of the buffer, as follows: Write chain Write Read Empty Waiting for write Perm write error Existing CI ID enq Pending CI ID enq

DLIDBD Panel

The DLIDBDpanel displays DL/I DBD physical directory entries, but not the logical DBDs.

Menu Access

On the /DBASE menu, cursor-select the DLIDBD option.

Command Access

Enter **DLIDBD** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

DLIDBD [*dbdname*]

Operand	Description
<i>dbdname</i>	String specifying the DBD name to be displayed. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS." If you do not specify a DBD name, all entries are displayed.

Sample Panel

CA-Explore For CICS 7.0 SP00				VSECQA2	CICSQA2	FAQS	2004/04/23 14:04:03

F7=Backward	F8=Forward	F9=Auto	F10=	F11=	F12=Exit		

Panel Field Descriptions

Field	Description
DBD Name	Name of the DBD
Number	DBD number assigned by DL/I
Stat	The current status of the DBD relative to CICS: STOP – Indicates this database is currently closed and unavailable to CICS STRT – Indicates this database is currently open and available to CICS
Users	The number of users currently scheduled for this DBD

DLIPSB Panel

The DLIPSB panel displays DL/I PSB directory entries.

Menu Access

On the /DBASE menu, cursor-select the DLIPSB option.

Command Access

Enter **DLIPSB** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

DLIPSB [*psbname*]

Operand	Description
<i>psbname</i>	String specifying the PSB directory entries to be displayed. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS." If you do not specify a PSB directory entry, all entries will be displayed.

F7=Backward  F8=Forward  F9=Auto     F10=         F11=        F12=Exit
```

Panel Field Descriptions

Field	Description
PSBNAME	Name of the PSB
Size	Size of the PSB
Usage	The usage type of the PSB: Logical – Indicates this PSB retrieves a logical database. Physical – Indicates this PSB retrieves a physical database.

DLISTATS Panel

The DLISTATS panel displays DL/I resource statistics.

Menu Access

On the /DBASE menu, cursor-select the DLISTATS option.

Command Access

Enter **DLISTAT** or **DLISTATS** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

DLISTATS [*name*]

Operand	Description
<i>name</i>	String specifying the names of the resources for which you want DL/I resource statistics to be displayed. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS." If you do not specify a resource name, DL/I resource statistics for all resources will be displayed.

Sample Panel

CA-Explore for CICS 7.0 0204 DEVCICS4 DB2CICS4 FAQs							2003/06/30 13:58:50			
==>							DLISTATS			
DL/I Resource Statistics							1:4/4-DATA			
Name	GU	GN	GNP	GHU	GHN	GHNP	ISRT	DLET	REPL	CHKP
CUDMST	9		19							
DRB040@P	72	49	87	2		18			20

ICB030@P	6		12							
F1=Help	F2=System	F3=Return	F4=Flashback	F5=Top	F6=Bottom					
F7=Backward	F8=Forward	F9=Auto	F10=	F11=	F12=Exit					

Panel Field Descriptions

Field	Description
Name	Name of the DBD or PSB resource for which statistics are displayed
GU	Number of GET uniques
GN	Number of GET nexts
GNP	Number of GET nexts in parents
GHU	Number of GET hold uniques
GHN	Number of GET hold nexts
GHNP	Number of GET hold nexts in parents
ISRT	Number of insert requests
DLET	Number of delete requests
REPL	Number of replace requests
CHKP	Number of checkpoint requests

Note: Unicenter CA-Explore for CICS gathers statistics on the number of requests issued by CICS transactions. If, for example, a transaction issues an insert (ISRT) request that adds multiple segments, Unicenter CA-Explore for CICS will show only one ISRT request. Similarly, if a transaction issues a delete (DLET) request that deletes multiple segments, Unicenter CA-Explore for CICS will show only one DLET request.

DLTASKS Panel

The DLTASKS panel displays DL/I tasks.

Menu Access

On the /DBASE menu, cursor-select the DLTASKS option.

Command Access

Enter **DLIT** or **DLTASKS** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel

```

Panel Field Descriptions

The fields on the first line of this panel are the same as those on the DLTASKS panel. The additional fields on the DLTASKS Detail panel have the following meanings.

Panel Field Descriptions: Request Summary

Field	Description
GU	Number of GET uniques
GN	Number of GET nexts
GNP	Number of GET next in parents
GHU	Number of GET hold uniques
GHN	Number of GET hold nexts
GHNP	Number of GET hold next in parents
INSERT	Number of inserts
DELETE	Number of deletes
REPLACE	Number of replaces
CHKP	Number of checkpoints

Panel Field Descriptions: Parameter List

Field	Description
Call	Type of request being made
PCB/PSB	Value of the PCB/PSB field in the parameter list and what the value points to
I/O AREA	Value of the I/O AREA field in the parameter list and what the value points to
SSA	Value of the SSA field in the parameter list and what the value points to

SQLLINKS Panel (DB2)

The SQLLINKS panel displays information about DB2 (formerly SQL) links. For backward compatibility, the option SQLLINKS is retained for this release.

Menu Access

On the /DBASE menu, cursor-select the SQLLINKS option.

Command Access

Enter **SQLLINKS** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel

Panel Field Descriptions

The fields on the first line of this panel are the same as those on the SQLLINKS panel. The additional fields on the SQLLINKS Detail panel have the following meanings.

Panel Field Descriptions: Request Summary

Field	Description
Links	Shows current and total links
Average	Shows average time for current and total links
Max-Time	Shows maximum time in current and total links
Requests	Shows current and total link requests
Average	Shows average time in current and total requests
Max-Time	Shows maximum time spent for current and total link requests
Tran	Displays the name of the current transaction
Terminal	Displays the name of the terminal for the current transaction
Program	Displays the name of the current programming
Module	Displays the name of the current DB2 module
Current	Shows the percentage of the current links busy
Total	Shows the percentage of the total links busy

/DISPLAY Menu Options

This chapter explains the /DISPLAY menu, which lists commands you can use to select and display various contents of virtual storage.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

/DISPLAY Menu

The /DISPLAY menu lists the commands you can use to select and display the current contents of virtual storage. Options enable you to select the following for display:

- Virtual storage at the address you specify
- Authorized function control block
- CICS common system area (CSA)
- CICS common work area (CWA)
- Storage for a specified entry in the Destination Control Table (DCT)
- DSA page (CICS 2.3 only)
- Storage for a specified entry in the File Control Table (FCT)
- Storage at the last address you displayed
- CICS page allocation maps MAP1 and MAP2 (CICS 2.3 only)
- CICS optional features list
- CICS page allocation map (PAM) (CICS 2.3 only)
- Storage for a specified entry in the Program Control Table (PCT) (CICS 2.3 only)
- Storage for a specified entry in the Profile Table (PFT)
- Storage for a specified entry in the Program Processing Table (PPT)
- A specified program in the PPT

- System Initialization Table (SIT)
- Storage displays you have saved using the PUSH command
- The Unicenter CA-Explore for CICS symbol table containing user-defined symbols
- Terminal Control Table (TCT)
- Storage for the first system entry in the TCT
- Storage for the terminal entry in the TCT you specify
- CICS trace table header (CICS 2.3 only)

Menu Access

- On the Unicenter CA-Explore for CICS Main menu, cursor-select the /DISPLAY option.
- Type any character (except H) in the space provided to the left of the command and press Enter.

Command Access

Enter **/DI** or **/DISPLAY** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Menu

The following is the first panel of the /DISPLAY menu. Use F keys to scroll to other panels of this menu.

```
CA-Explore for CICS 7.0 SP00 XXXXXX XXXXXX CICS          2004/01/14 12:00:14

F7=Backward  F8=Forward  F9=Auto   F10=          F11=       F12=Exit
```

Panel Display Options

To display a panel listed on the /DISPLAY menu, cursor-select the option from the menu, or enter the corresponding command as shown in the following table:

This Command	Displays
AFCB	The contents of the Authorized Function Control Block (AFCB)
AFCS	The contents of the Authorized Function Control System (AFCS) (for TS 1.1 only)
CSA	The contents of the CICS common system area (CSA)
CWA	The contents of the CICS common work area (CWA)
DCT	The contents of storage for a specified entry in the Destination Control Table (DCT)
DISplay	The contents of virtual storage at the address you specify
DSAPAGE	The contents of storage at the top of the DSA page you specify (for CICS 2.3 only)
FCT	The contents of storage for a specified entry in the File Control Table (FCT)
LAST	The contents of storage at the last address you displayed
MAP1	The contents of CICS page allocation MAP1 (for CICS 2.3 only)
MAP2	The contents of CICS page allocation MAP2 (for CICS 2.3 only)
OPFLA	The contents of the CICS optional features list
PAM	The contents of the CICS page allocation map (PAM) (for CICS 2.3 only)
PCT	The contents of storage for a specified entry in the Program Control Table (PCT) (for CICS 2.3 only)

This Command	Displays
PFT	The contents of storage for a specified entry in the Profile Table (PFT)
PPT	The contents of storage for a specified entry in the Program Processing Table (PPT)
PPTPROG	The contents of a specified program in the PPT
SIT	The contents of the System Initialization Table
STACK	The contents of storage displays you have saved using the PUSH command
SYMBOLs	The Unicenter CA-Explore for CICS symbol table, which contains the addresses and partitions to which you have assigned symbols
TCT	The contents of the Terminal Control Table (TCT)
TCTSE	The contents of storage for the first system entry in the TCT
TCTTE	The contents of storage for the terminal entry in the TCT you specify
TRACEHdr	The contents of the CICS trace table header (for CICS 2.3 only)

Storage Displays

This section describes the options on the /DISPLAY menu that display the contents of virtual storage. Only the DISPLAY panel is described in detail. Panels displayed by the remaining options are described only in how they differ from the DISPLAY panel.

DISPLAY Panel

The DISPLAY panel displays the contents of virtual storage at the address you specify.

The following terms are used in descriptions of storage displays, and the commands you can use to change the storage displayed:

Term	Description
Base address	The <i>base address</i> serves as a point of reference relative to other addresses. On storage display panels, the base address is shown in the Address= field. You can scroll through the display, or use various commands to display different parts of storage, without changing the base address. The base address will not change unless you issue a command to change it.
Current address	The <i>current address</i> is the starting address of the portion of storage that is currently displayed. On storage display panels, the current address is shown directly beneath the Address field heading. As you scroll through the display or display different parts of storage, the current address changes to the starting address of the portion of storage currently displayed.

Menu Access

On the /DISPLAY menu, cursor-select the DISPLAY option.

Command Access

Enter **DIS** or **DISPLAY** on the command line of any Unicenter CA-Explore for CICS panel.

Once you are on any storage display panel, you can enter any of the DISPLAY command operands without entering the command DISPLAY.

When you are not on a storage display panel, you must enter DISPLAY before the DISPLAY command operands.

Examples

The following table lists ways to enter the DISPLAY command from any storage display panel. Assume that the base address and current address are both 00006000 before each command is entered. Also, assume that the value in storage location 00006004 is 00000400. The resulting base address, current address, and offset from the base address are shown for each example.

Example	New Base Address	New Current Address	Offset
+100	00006000	00006100	+100
*+100	00006100	00006100	+0
@4	00000400	00000400	+0
6000	00006000	00006000	+0

- SYMBOLs

Command Syntax and Operands

DISplay [*address*] [*parm*]

Operand	Description
<i>address</i>	Sets the base address to the address you specify and displays the contents of storage beginning at the base address, unless you specify a value for <i>parm</i> that changes the storage contents displayed.
<i>parm</i>	Displays or sets any of the following address operands you specify: <ul style="list-style-type: none"> * Sets the current address to the base address and displays the contents of storage beginning at the base address. *0 Sets the base address to the current address. The display of storage contents does not change. *+offset Sets the base address to the current base address plus the amount specified by <i>offset</i> and displays the contents of storage beginning at the new base address. *-offset Sets the base address to the current base address minus the amount specified by <i>offset</i> and displays the contents of storage beginning at the new base address. @offset Use this operand in a 31-bit addressing environment. Sets the base address to the value stored in memory at the location of the current base address plus the offset specified by <i>offset</i>. The contents of storage beginning at the new base address are also displayed. You can specify only a positive offset.

Operand	Description
<i>parm</i> (continued)	%offset Use this operand in a 24-bit addressing environment. Sets the base address to the value stored in memory at the location of the current base address plus the offset specified by <i>offset</i> . The contents of storage beginning at the new base address are also displayed. You can specify only a positive offset.
	+offset Adds the value specified by <i>offset</i> to the current address and displays storage beginning at the new current address.
	-offset Subtracts the value specified by <i>offset</i> from the current address and displays storage beginning at the new current address.

Panel Field Descriptions

Field	Description
Address=	Base address, in hexadecimal. This address serves as a point of reference relative to other addresses. You can scroll through the display or use various commands to display different parts of storage without changing the base address. This address will not change unless you issue a command to change it.
Alter=	Alter mode. On indicates that fullpanel zap is active and you can overwrite the contents of storage to change it. Off indicates that fullpanel zap is inactive.
Area=	VSE storage partition. If the storage is in DSA, this field is displayed as follows, where <i>page</i> is the CICS DSA page number of the current address being displayed and <i>subpool</i> is the CICS subpool ID of the current address: <i>Area= PrivPart (DSA: page, subpool)</i>
Jobname=	Jobname of the address space that is being displayed.
Program=	Program that contains the displayed storage.
Address	Current address, in hexadecimal. This address is the starting address of the portion of storage currently displayed.
Offset	Offset of the current address from the base address.

F-Key Descriptions

F-Key	Description
F7	Sets the current address to the current address minus 256 bytes.
F8	Sets the current address to the current address plus 256 bytes.
F10	Sets the base address to the value at the address on which the cursor is positioned. The contents of storage beginning at the new base address are displayed.

Other Storage Display Commands

The commands described in this section display the contents of virtual storage at various locations.

Menu Access

On the /DISPLAY menu, cursor-select the option for the desired panel.

Command Access

Enter the appropriate command and any operands on the command line of any Unicenter CA-Explore for CICS panel.

Panel Field Descriptions

The fields on all of the panels displayed by the commands in this section are identical to those shown on the DISPLAY panel, which is described in the previous section.

AFCB Panel

The AFCB command displays the Authorized Function Control Block (AFCB).

AFCS Panel

The AFCS command displays the Authorized Function Control System (AFCS).

CSA Panel

The CSA command displays the CICS common system area (CSA), which is the main control block of CICS. It contains the pointers to all other tables, chains, and areas, either directly or indirectly. The extension to the CSA is the options features list (OPFL).

In CICS 2.3, the CSA is the main anchor for all processing and pointers. In CICS TS 1.1, the CSA exists, but its use is limited. The CSA is read-protected and will cause a transaction to abend if the CSA is referenced.

To locate the CSA in a dump, either

- Use register 13, which points to the CSA
- Use the authorized function control block (AFCB)
- Locate the character string AICA at the front of the partition. The next word is the beginning of the CSA

CWA Panel

The CWA command displays the CICS common work area (CWA). It is located directly following the CICS common system area. However, the CWA is not used by CICS.

The length of the CWA is defined by the parameter WRKAREA= in the SITCWA (CWA System Initialization Table). Its default size is 512 bytes. Its maximum size is 3584 bytes. At startup, CICS initializes the CWA to binary zeros.

DCT Panel

The DCT command displays the contents of storage for the specified entry in the DCT (Destination Control Table).

Command Syntax and Operands

DCT [*dctentry*]

Operand	Description
<i>dctentry</i>	Name of the desired entry in the DCT

If you do not specify the *dctentry* operand, the first DCT entry in the table is displayed.

DSAPAGE Panel (CICS 2.3 Only)

The DSAPAGE command displays the contents of the DSA page you specify.

Command Syntax and Operands

DSAPAGE [*pagenumber*]

Operand	Description
<i>pagenumber</i>	Page number of a dynamic storage area page

If you do not specify the *pagenumber* operand, the content of page 1 is displayed.

FCT Panel

The FCT command displays the contents of the specified entry in the FCT (File Control Table).

Command Syntax and Operands

FCT [*filename*]

Operand	Description
<i>filename</i>	Filename specifying the desired entry in the FCT

If you do not specify the *filename* operand, storage content for the first entry in the FCT is displayed.

MAP1 Panel (CICS 2.3 Only)

The MAP1 command displays the contents of the CICS PAM MAP1.

The address of the page allocation map MAP1 can be found in the PAM at offset (X'7C' - PAMMAPST). The number of bytes in MAP1 is equal to the number of pages in dynamic storage (PAMPGNUM). Each byte in MAP1 corresponds to a page in storage. The byte's value is the subpool ID.

The subpools and their corresponding storage types are as follows:

Subpool	Storage Types
01 Control	DCA, QEA, ICE, and AID storage
02 Teleproc	TIOA storage
04 Isolated	TCA and other transaction storage areas
05 Shared	COMMAREA, temporary storage control blocks, and TCTTEs for dynamically acquired terminals
06VTAM RPL	VTAM RPLs
08 Program	Nonresident program storage and BMS map storage

MAP2 Panel (CICS 2.3 Only)

The MAP2 command displays the contents of the CICS PAM MAP2.

You can find the address of the page allocation map MAP2 in the PAM by adding the address of MAP1 to the number of pages in dynamic storage.

OPFLA Panel

The OPFLA command displays the CICS optional features list.

PAM Panel (CICS 2.3 Only)

The PAM command displays the contents of the CICS PAM.

The address of the PAM is in the CSA at offset (X'98' - CSAPAMA).

PCT Panel (CICS 2.3 Only)

The PCT command displays the contents of storage for the specified entry in the PCT (Program Control Table).

Command Syntax and Operands

PCT [*transid*]

Operand	Description
<i>transid</i>	Transaction ID specified in the PCT

If you do not specify the *transid* operand, storage content for the first entry in the PCT is displayed.

PFT Panel

The PFT command displays the contents of storage for the specified entry in the PFT (Profile Table).

Command Syntax and Operands

PFT [*profile*]

Operand	Description
<i>profile</i>	Profile specified in the PFT

If you do not specify the *profile* operand, storage content for the first entry in the PFT is displayed.

PPT Panel

The PPT command displays the contents of storage for the specified entry in the PPT (Program Processing Table).

Command Syntax and Operands

PPT [*program*]

Operand	Description
<i>program</i>	Program name specified in the PPT for CICS 2.3 or the PPTE in CICS TS 1.1

If you do not specify the *program* operand, storage content for the first entry in the PPT is displayed.

Related Command

PPTPROG

PPTPROG Panel

The PPTPROG command displays the contents of storage at the entry point of the specified program in the PPT.

Command Syntax and Operands

PPTPROG [*program*]

Operand	Description
<i>program</i>	Program name specified in the PPT or PPTE (TS 1.1)

If you do not specify the *program* operand, storage content for the first entry in the PPT is displayed.

Related Command

PPT

SIT Panel

The SIT command displays the contents of the system initialization table.

The address of the System Initialization Table is located at offset (X'8C' - CSASITBA).

TCT Panel

The TCT command displays the contents of the TCT (Terminal Control Table).

The address of the TCT is located in the CSA at offset (X'128' - CSATCTBA).

TCTSE Panel

The TCTSE command displays the contents of the first system entry in the TCT.

TCTTE Panel

The TCTTE command displays the contents of the specified terminal entry in the TCT.

Command Syntax and Operands

TCTTE [*terminal*]

Operand	Description
<i>terminal</i>	Terminal name specified in the TCT

If you do not specify the *terminal* operand, the first terminal entry in the TCT is displayed.

TRACEHDR Panel (CICS 2.3 Only)

The TRACEHDR command displays the contents of the CICS trace table header.

The address of the trace table header is located in the CSA at offset (x'11C' CSATRTBA).

The following table lists trace entry information:

Offset	Length	Description
+00	4	Address of the current or latest trace entry
+04	4	Address of the first trace entry
+08	4	Address of the last trace entry
+0E	2	Number of trace entries

SYMBOLS Panel

The SYMBOLS panel displays the defined symbols and their addresses and partitions.

Any symbol can be entered on the command line of a storage display panel to display storage at the address defined for the symbol.

Menu Access

On the /DISPLAY menu, cursor-select the SYMBOLS option.

Command Access

Enter **SYMBOL** or **SYMBOLS** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel

```

```

Panel Field Descriptions

Field	Description
Symbol	Name of the defined symbol
Address	Address in storage assigned for the symbol
Length	Length of storage associated with the symbol
Mapname	Name of the map associated with the symbol
Region	VSE storage region

Margin Command

Command	Description
<u>S</u>	Displays the contents of storage at the address defined for the symbol selected
M	Maps the symbol selected

Defining Symbols

You can add symbols to the table of defined symbols using the EQUate command. See the chapter titled “Function Commands” for an explanation of how to use the EQUate command.

Saving and Redisplaying Storage Displays

This section describes the following menu:

- The STACK command, which displays a list of the addresses in the stack
- The LAST command, which displays the contents of storage at the last address you displayed
- The PUSH command, which adds addresses to a stack of display addresses
- The POP command, which pops the top display address from the stack
- The CLRSTACK command, which clears all addresses from the stack

STACK Panel

The STACK command displays the stack of virtual storage addresses you have displayed, including any you saved using the PUSH command.

Menu Access

On the /DISPLAY menu, cursor-select the STACK option.

Command Access

Enter **STACK** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel

```

F7=Backward  F8=Forward    F9=Auto      F10=         F11=         F12=Exit
    
```

Panel Field Descriptions

Field	Description
Address	Original display address
Current	Current display address
Partition	VSE storage partition

Margin Command

Command	Description
<u>S</u>	Displays the contents of storage at the address selected

Related Configuration Option

The DISPLAY-STACK configuration option defines the number of addresses displayed. The default is 32.

LAST Panel

The LAST command displays the contents of storage at the last address you displayed.

PUSH Panel

The PUSH command adds the address of the current storage display to the stack of display addresses.

The PUSH command is a function command and does not appear on any Unicenter CA-Explore for CICS menu.

Command Syntax

PUSH

POP Panel

The POP command pops the top display address from the stack and displays the contents of storage at that address.

The POP command is a function command and does not appear on any Unicenter CA-Explore for CICS menu.

Command Syntax

POP

CLRSTACK Panel

The CLRSTACK command clears the display stack.

The CLRSTACK command is a function command and does not appear on any Unicenter CA-Explore for CICS menu.

Command Syntax

CLRSTACK

/VSE Menu Options

This chapter explains the /VSE menu, which you can use to access the VSE system console display and display information about VSE dynamic classes, job activity, load modules, and so on.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

/VSE Menu

The /VSE menu lists the commands that you can issue to perform the following actions:

- Access the VSE system console display
- Display information about VSE dynamic classes
- Display information about job activity
- Display information about loaded modules
- Display a list of the products defined to the system
- Display subtask information by TCB
- Display information about SVA loaded modules
- Display information about VSE task IDs

Menu Access

- On the Unicenter CA-Explore for CICS Main menu, cursor-select the /VSE option.
- Type any character (except H) in the space provided to the left of the command and press Enter.

Command Access

Enter **/VS** or **/VSE** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Menu

```

F12=Exit

```

Panel Display Options

To display a panel listed on the **/VSE** menu, cursor-select the option from the menu or enter the corresponding command as shown in the following table:

This Command	Displays	Default Sort Argument
CONSOLE	VSE system console display	None
DYNCLASS	Information about VSE dynamic classes	None
JOBS	Information about job activity	ID
LOADLIST	Information about loaded modules	MODULE
PRODUCTS	A list of the products defined to the system	COMPANY
SUBTASKS	Subtask information by TCB	None
SVALIST	Information about SVA loaded modules	MODULE
TIDLIST	Information about VSE task IDs	None

CONSOLE Panel

The CONSOLE panel displays the VSE system console.

Menu Access

On the /VSE menu, cursor-select the CONSOLE option.

Command Access

Enter **CONS** or **CONSOLE** on any Unicenter CA-Explore for CICS panel.

Sample Panel

Panel Field Descriptions

Field	Description
Class	Job class
Status	Class status: Active, Disabled, or WaitWork
Max	Maximum number of partitions within the class
Alloc	Storage allocation value for the class
Size	Size of the class's partition, in bytes
SP-GETV	Size of dynamic space GETVIS, in bytes
LUBS	Number of programmer logical units
Profile	Name of the partition's profile (ASI procedure)

JOBS Panel

The JOBS panel displays information about jobs that are currently executing.

Menu Access

On the /VSE menu, cursor-select the JOBS option.

Command Access

Enter the JOBS command on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

JOBs [*jobname*]

Operand	Description
<i>jobname</i>	String specifying the jobs about which information is to be displayed. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS." If you do not specify a jobname, all jobnames are displayed.

Sort Arguments

- CPU
- DURATION
- ID
- JOBNAME
- PHASE
- SIOS
- SIZE
- VIRT-BEG
- VIRT-END

Panel Field Descriptions

The fields on the first line of this panel are the same as those on the JOBS panel. The additional fields on the JOBS Detail panel have the following meanings:

Field	Description
Id	Task ID of the subtask. If the ID is displayed in yellow or an asterisk (*) follows the ID, the partition has a reply outstanding.
Subtask	Name of the subtask.
TIB	Address of the task information block for the subtask.
TCB	Address of the task control block for the subtask.
PSW	Current value of the program status word for the subtask.
Status	Status value for the subtask (TIBRGID).

LOADLIST Panel

The LOADLIST panel displays information about loaded modules.

Menu Access

On the /VSE menu, cursor-select the LOADLIST option.

Command Access

Enter the LOADLIST command on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

LOADLIST [*module*]

Operand	Description
<i>module</i>	String specifying the modules about which information is to be displayed. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS." If you do not specify a module, all modules are displayed.

Sort Arguments

- ADDRESS
- ENTRY
- LENGTH
- MODULE

```

Panel Field Descriptions

Field	Description
Module	Program name
Address	Address of program in storage
Entry	Program entry point
Length	Program length, in bytes (hexadecimal)
Count	Number of times the program has been loaded
Region	Name of a VSE storage region

PRODUCTs Panel

The PRODUCTS panel displays information about products defined to the system.

Menu Access

On the /VSE menu, cursor-select the PRODUCTS option.

Command Access

Enter **PRODUCT** or **PRODUCTS** on any Unicenter CA-Explore for CICS panel.

Sample Panel

Panel Field Descriptions

Field	Description
Id	VSE task ID number assigned to the task. If the ID is displayed in yellow or an asterisk (*) follows the ID, the task has a reply outstanding.
Subtask	Subtask associated with the task.
PCB	Address of the task program control block.
TIB	Address of the task information block.
TCB	Address of the task control block.
PSW	The task's program status word.
Status	Status code for the task, followed by the translation of the code.

/UTILITY Menu Options

This chapter explains the /UTILITY menu, which you can use to display CEMT responses and information about each execution of the GENTABLE command.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

/UTILITY Menu

The /UTILITY menu lists the commands that you can issue to display the following:

- CEMT responses
- Parameters entered for each execution of the GENTABLE command and the result of each execution in CICS 2.3 only.

Menu Access

- On the Unicenter CA-Explore for CICS Main menu, cursor-select the /UTILITY option.
- Type any character (except H) in the space provided to the left of the command and press Enter.

Command Access

Enter **/UT** or **/UTILITY** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Menu for CICS 2.3

F7=Backward  F8=Forward    F9=Auto      F10=         F11=         F12=Exit
```

Panel Display Options

To display a panel listed on the /UTILITY menu, cursor-select the option from the menu or enter the corresponding command as listed in the following table.

This Command	Displays	Default Sort Argument	For CICS Version
DCEMT	CEMT responses	None	CICS 2.3 and TS 1.1
DGENTBL	Parameters entered for each execution of the GENTABLE command and the result of each execution	None	CICS 2.3

DCEMT Panel

The DCEMT panel displays CEMT commands issued since Unicenter CA-Explore for CICS was initialized. Commands not yet processed by CICS appear in white on color displays or are highlighted on monochrome displays. You can display or delete the information returned from a processed CEMT command, or cancel an unprocessed command on this panel.

Menu Access

On the /UTILITY menu, cursor-select the DCEMT option.

Command Access

Enter **DCEMT** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Screen

F7=Backward  F8=Forward    F9=Auto      F10=         F11=         F12=Exit

```

Panel Field Descriptions

Field	Description
Command	Name of the requested command

Margin Commands

Command	Description
<u>S</u>	Displays information returned from the requested command. If you select more than one entry, only the first entry is displayed; the other entries are ignored. You need to select each entry that you want to display one line at a time.
D	Deletes information returned from the requested command. If you select more than one entry, only the first entry is deleted; the other selected entries are not deleted. You must delete one entry at a time.

DCEMT Detail Panel

The DCEMT Detail panel displays the information returned from the command you select from the DCEMT panel. When you display the results of a CEMT command, only 1928 characters of the response are displayed. As a result, depending on the type of request issued the entire response may not be displayed.

Access

On the DCEMT panel, cursor-select an entry.

/CONFIG Menu Options

This chapter explains the /CONFIG menu, which you can use to display or update command lists and configuration options, or to display information about screen attributes, options, user profiles, thresholds, and so on.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

/CONFIG Menu

The /CONFIG menu lists the commands you can issue to display the following:

- Information about screen attributes
- Panels used to create, display, delete, or update command lists
- Information about Unicenter CA-Explore for CICS configuration options and a summary of the current settings of options
- Monitor options
- A list of all predefined plot lists
- Your user profile
- Information about Unicenter CA-Explore for CICS thresholds
- A panel used to display, add, or change umbrella transaction definitions

Menu Access

- On the Unicenter CA-Explore for CICS Main menu, cursor-select the /CONFIG option.
- Type any character (except H) in the space provided to the left of the command and press Enter.

Command Access

Enter **/CO** or **/CONFIG** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Menu

```

```

Panel Display Options

To display a panel listed on the **/CONFIG** menu, cursor-select the option from the menu or enter the corresponding command as listed in the following table:

Command	Function
ATTRIB	Displays information about screen attributes
CMDList	Creates, displays, deletes, or updates command lists
CONFig	Displays or updates configuration options
OPTIONS	Displays all options and their current settings
PLOTList	Displays the predefined plot lists
PROFILE	Displays information about user profiles
THRESHol	Displays threshold information
UMBRElla	Displays information about umbrella transactions, or adds or changes umbrella transaction definitions

ATTRIB Panel

The ATTRIB panel displays information about screen attributes.

Menu Access

On the /CONFIG menu, cursor-select the ATTRIB option.

Command Access

Enter **ATTRIB** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel

CMDLIST Panel

The CMDLIST panel lets you create, display, delete, or update Unicenter CA-Explore for CICS command lists. You can use command lists to automatically display Unicenter CA-Explore for CICS panels in sequence.

Menu Access

On the /CONFIG menu, cursor-select the CMDLIST option.

Command Access

Enter **CMDL** or **CMDLIST** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

CMDList [*cmdlist*]

Operand	Description
<i>cmdlist</i>	String specifying the command lists to be displayed. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS." If you do not specify a command list, all lists are displayed.

Sample Panel

Panel Field Descriptions

Field	Description
Name	Name of the command list
Transfer	One of the following: <ul style="list-style-type: none"> ■ The name of a command list to transfer control to when the end of the command list is reached ■ A blank to indicate that the same command list will be repeated ■ NO or STOP to indicate that the command list will not be repeated or to start another command list
Description	Description of the command list

Margin Commands

Command	Description
<u>S</u>	Displays the commands defined for the selected command list
A	Engages automatic redisplay mode for selected command list
D	Deletes the selected command list

Creating a New Command List

To create a new command list, enter **NEW *cmdlist*** on the command line at the top of the panel, where *cmdlist* is the name to be assigned to the command list. If you do not specify a command list name and you are logged on, your user ID is used. If you are not logged on, your terminal ID will be used as the command list name. A blank CMDLIST Detail panel is displayed, on which you can define the new command list.

Another way to create a new command list is to overwrite the Name field on any CMDLIST Detail panel. The command list whose name you overwrite is not renamed, but a new command list is created. You can then alter and save the new command list definition.

CMDLIST Detail Panel

The CMDLIST Detail panel displays the commands that make up a command list.

Access

On the CMDLIST panel, cursor-select a command list name.

Sample Panel

Panel Field Descriptions

The following table describes the fields on the CMDLIST Detail panel. You can overwrite any of these fields to change the command list.

Field	Description
Name	Name of the command list. Changing the Name field does not rename the command list; it creates a new command list.
Transfer	One of the following: <ul style="list-style-type: none"> ■ The name of a command list to be invoked when the first command list has executed. This allows several command lists to be chained together. ■ A blank field, indicating that the command list is to re-invoke itself. ■ NO or STOP, indicating that the command list is to be invoked only once.
Description	Description of the command list.
Commands	Commands in the command list. The commands are executed in order beginning with the first command in the left column, then the first command in the right column, then the second command in the left column, and so on.

Saving a Command List

Do either of the following to save a command list:

- Press F10 on the CMDLIST Detail panel
- Enter **SAVE** on the command line of the CMDLIST Detail panel

Deleting a Command List

Enter **DELETE** on the command line of the CMDLIST Detail panel for the command list you want to delete, or enter the **D** margin command next to the command list on the CMDLIST panel.

CONFIG Panel

The CONFIG panel allows you to display and update configuration options.

The options you set from this panel remain in effect until Unicenter CA-Explore for CICS is reinitialized. Permanent configuration options can be set in configuration option override members.

For a detailed description of each configuration option and an explanation of how to set options, see the chapter titled "Configuration Options." See the section Making Current Configuration Option Settings Permanent later in this guide for an explanation of how to make the current configuration option settings permanent by writing them to the configuration override member.

Menu Access

On the /CONFIG menu, cursor-select the CONFIG option.

Command Access

Enter **CONF** or **CONFIG** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

CONFig [*name*] [SYS|USER|CICS|DATA|NOCHG|MSTR]

Operand	Description
<i>name</i>	String specifying the configuration options to be displayed. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS." If you do not specify the options to be displayed, all configuration options are displayed.
SYS	Display all Unicenter CA-Explore for CICS configuration option settings.
USER	Display only user profile settings.
CICS	Display only settings of configuration options that require CICS to be active.
DATA	Display only settings of configuration options related to data collection.
NOCHG	Display only settings of configuration options that cannot be changed after Unicenter CA-Explore for CICS initializes.
MSTR	Display only settings of configuration options that are valid only in a master region.

Panel Field Descriptions

Field	Description
Name	Name of the configuration option. On color monitors, the name is displayed in turquoise if the option has been changed since Unicenter CA-Explore for CICS was initialized.
Value	Current value of the configuration option. Options that you can change are displayed in yellow.
Type	Input parameter type: Character Alphanumeric Char/Num Either alphanumeric or numeric Hex Hexadecimal HH:MM:SS Hours, minutes, and seconds Numeric Numeric Yes/No Either Yes or No
CICS	A value of CICS indicates that the option is valid only in a CICS region.
Data	A value of Data indicates that the option is a data collection option.
NoChg	A value of NoChg indicates that the option value can be changed in configuration override members only. See the chapter titled "Configuration Options" for information about changing the values of these options.
Mstr	If an entry appears in this field, the option is valid only in a master region.
Mod	Yes appears if the option has been changed since Unicenter CA-Explore for CICS was initialized, or if the current option setting is different from the default value.

Making Current Configuration Option Settings Permanent

You can use the CONFIG UPDATE command to save the current configuration option settings to the configuration override member when Unicenter CA-Explore for CICS is shut down.

Command Syntax and Operands

```
CONFIG UPDATE [member]
```

Operand	Description
<i>member</i>	Name of the configuration override member to be updated with the configuration option settings in effect at shutdown. If you do not specify a member name, member \$CNFIGxx.P is updated, where xx is the ID for the region.

CONFIG User Panel

The CONFIG USER panel allows you to display user profile settings.

The options you set from this panel remain in effect until you change them.

Menu Access

There is no menu access to this panel.

Command Access

Enter **CONF USER** or **CONFIG USER** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax

CONFig USER

Panel Field Descriptions

The tables that follow describe fields in the following panel columns:

- Monitor Summary
- Auto Command Summary
- Program Storage Summary

Panel Field Descriptions: Monitor Summary

Field	Description
Start Time	Time of day when primary monitoring begins
End Time	Time of day when primary monitoring ends
Primary	Percentage of monitoring between primary start and end times
Secondary	Percentage of monitoring outside primary start and end times
System Interval	Interval in minutes in which system data is collected
Run Time	Elapsed time that monitor has been active

Panel Field Descriptions: Auto Command Summary

Field	Description
Refresh Time	Time delay in automatic redisplay mode. The minimum is 3 seconds.
Max Duration	Maximum time automatic redisplay will operate, 0-99999 minutes. The value 0 indicates an unlimited time frame.
Initial	Initial command to be executed
Option	Initial command option

Panel Field Descriptions: Program Storage Summary

Field	Description
GETVIS24	Maximum amount of program storage to be used below the 16M line, and current amount of program storage in use
GETVIS31	Maximum amount of program storage to be used above the 16M line, and current amount of program storage in use
Compress	Whether Unicenter CA-Explore for CICS program storage compression is active

Panel Field Descriptions

Field	Description
Name	Name of the plot list
Description	Description of the plot list

Panel Field Descriptions: Input Fields

The input fields in the body of the PLOTLIST panel let you change the following information:

Field	Description
Name	Name of the plot list. Typing over the Name field does not rename the plot list; it creates a new plot list.
Description	Description of the plot list. Type over this description to change it.

Margin Commands

Command	Description
<u>S</u>	Displays the PLOTLIST Detail panel for the plot list you select and allows changes.
D	Deletes the plot list you select.
P	Plots variables specified in the plot list you select.

Creating a New Plot List

To create a new plot list, enter **NEW *plotlist*** on the command line at the top of the panel, where *plotlist* is the name to be assigned to the plot list. If you do not specify a plot list name and you are logged on, your user ID is used. If you are not logged on, your terminal ID is used as the plot list name. A blank PLOTLIST Detail panel is displayed, on which you can define the new plot list.

Another way to create a new plot list is to overwrite the Name field on any PLOTLIST Detail panel. The plot list whose name you overwrite is not renamed, but a new plot list is created. You can then save the new plot list definition.

PLOTLIST Detail Panel

The PLOTLIST Detail panel displays plot definitions in the plot list you selected from the PLOTLIST panel.

Access

On the PLOTLIST panel, cursor-select a plot list.

Sample Panel

```

```

Panel Field Descriptions: Input Fields

The following input fields on the PLOTLIST Detail panel let you define plots:

Field	Description
X	<p>Specifies whether a plot on the plot list is to be displayed and what form the plot will take. Leave this field blank to prevent a plot from being displayed. Specify S to display the plot when the plot list is displayed.</p> <p>If only a single plot is to be displayed, it is displayed as a full-panel plot by default. If two plots are to be displayed, both are displayed as horizontal plots. If three or four plots are to be displayed, all are displayed as quarter-panel plots.</p> <p>You can change the default form of plots displayed on two-plot and three-plot displays by specifying one of the following:</p> <p>H On a two-plot display, both plots will be in horizontal form. On a three-plot display, the first plot on the list is displayed in horizontal form (regardless of which plot on the list has H specified).</p> <p>V On a two-plot display, both plots will be in vertical form. On a three-plot display, the last plot on the list is displayed in vertical form (regardless of which plot on the list has V specified).</p> <p>Specify either H or V only once on each PLOTLIST Detail panel. If you specify both H and V on the same PLOTLIST Detail panel, only the last H or V takes effect.</p>
Name	Name of the plot list. Changing the Name field does not rename the plot list; it creates a new plot list.
Variable	The variable corresponding to the data to be plotted. Enter COMMAND VARIABLE on the command line to display a list of variables.
Scale	<p>Maximum scale value. Enter one of the following:</p> <p>MAX Sets the maximum scale value to the highest value found. MAX is the default.</p> <p>AVE Sets the maximum scale value to average the value found.</p> <p><i>nnn</i> Sets the maximum scale value to the specified value.</p>

Saving a Plot List

Do either of the following to save a plot list:

- Press F10 on the PLOTLIST Detail panel
- Enter **SAVE** on the command line of the PLOTLIST Detail panel

Deleting a Plot List

To delete a plot list, enter **DELETE** on the command line of the PLOTLIST Detail panel for the plot list you want to delete, or enter the **D** margin command next to the plot list on the PLOTLIST panel.

PROFILE Panel

The PROFILE panel lists the option settings for the user logged on to the current session on the terminal on which the PROFILE panel is accessed. If you are not logged on to Unicenter CA-Explore for CICS, the PROFILE panel displays the default option settings (as defined by configuration options).

Changing Profile Settings

The first time a user accesses Unicenter CA-Explore for CICS, the option settings default to the values defined by Unicenter CA-Explore for CICS configuration options. You can overtype some settings on this panel to modify the profile. Changes you make are saved when you log off.

If you are not logged on to Unicenter CA-Explore for CICS, changes you make to the PROFILE panel are not saved when you log off; changed settings will remain active only during the current session.

Menu Access

On the /CONFIG menu, cursor-select the PROFILE option.

Command Access

Enter **PROFILE** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel

```

Panel Field Descriptions: User Info

You cannot change the fields in this section of the panel.

Field	Description
Userid	ID of the user who is logged on to the session in which the PROFILE panel is accessed
Terminal	Terminal ID of the terminal being used
Region	Current region being monitored
Session	Environment from which Unicenter CA-Explore for CICS was accessed
VSE ID	Name of the VSE machine (if under VM)

Panel Field Descriptions: Auto Command Summary

You can change the values in the following fields by overtyping the existing value. To save the new profile settings, press Enter before exiting this panel.

Field	Description
Refresh Time	Time delay in automatic redisplay mode.
Max Duration	Maximum time automatic redisplay will operate (0 - 99999 minutes). The value 0 indicates unlimited time.
Command List	Default command list to be executed.

Panel Field Descriptions: Scrolling

You can change the values in the following fields by overtyping the existing value. You need to type only the characters shown in uppercase. To save the new profile settings, press Enter before exiting the panel.

Field	Description
Scroll	Default scrolling value. Specify Page, Half, Data, or <i>nnnn</i> (you must overtype all four characters of the existing value if you use <i>nnnn</i> to specify a number of lines). Refer to the description of the SCROLL command in the chapter titled "Function Commands" for more information on changing scrolling values for the duration of the current session only.
Caps	Display Unicenter CA-Explore for CICS panels in uppercase letter only. Specify Yes or No.
PFkeys	Display F-key lines. Specify Yes or No.
Display	Display the default scrolling value on Unicenter CA-Explore for CICS panels. Specify Yes or No.
Mscroll	Default memory scrolling value, in hexadecimal.
Align	Default alignment for virtual storage displays. Specify None, Halfword, Fullword, Doubleword, or Page. Refer to the description of the ALIGN command in the chapter titled "Function Commands" for information about changing the default alignment value for the current session only.

Panel Field Descriptions: Terminal

You can change the values in the Color and Hilight fields by overtyping the existing value. You need to type only the characters shown in uppercase. To save the new profile settings, press Enter before exiting the panel.

Field	Description
Color	Display color. Specify Yes or No.
Hilight	Display extended highlighting. Specify Yes or No.
Primary	Primary panel size.
Alternate	Alternate panel size.

THRESHOL Panel

The THRESHOL panel displays Unicenter CA-Explore for CICS threshold information. See the chapter titled “Performance Thresholds” for information on setting thresholds.

To define a threshold, see Defining a New Threshold later in this section. To make the current configuration option settings permanent, see Making Current Configuration Option Settings Permanent later in this section, where you will find a description of how to make the current threshold settings permanent by writing them to threshold override members.

Menu Access

On the /CONFIG menu, cursor-select the THRESHOL option.

Command Access

Enter **THRES** or **THRESHOL** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

THREShol [*name*] [ACTIVE] [TRIGger] [SYStem]

Operand	Description
<i>name</i>	String specifying the thresholds be displayed. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS." If you do not specify the thresholds to be displayed, all thresholds are displayed.
ACTIVE	Displays only active thresholds, which have defined limits greater than zero.
TRIGger	Displays all triggered thresholds. Thresholds displayed can include those not currently active. Inactive thresholds have defined limits equal to zero.
SYStem	Displays system thresholds.

Sort Arguments

- CLASS
- EVENT
- LIMIT
- RESOURCE
- THRESHold
- TYPE

Panel Field Descriptions

Field	Description
Name	Threshold name.
Resource	Resource to be monitored for the threshold. System thresholds have a resource defined as \$SYSTEM\$. A transaction ID appears in this field for other types of thresholds. The second Resource field specifies a second resource to be monitored. This field can be a terminal ID, a filename, or other resource, depending on the threshold.
Limit	Threshold limit value. If the Class is Time, the limit value is in milliseconds. A limit value of zero deactivates the threshold.
Pct	Percentage of the threshold limit value at which you want a warning to be issued. On color monitors, the warning condition is indicated when the color in which the threshold is displayed changes to yellow; on monochrome monitors, the word Warning appears. A warning indicates that a percentage of the threshold limit value has been reached, not that the threshold has been triggered.
Count	Number of times the threshold was triggered.

Field	Description
Class	Threshold class, as follows:
	Count The limit is a number of occurrences.
	Time The limit is a length of time.
	Pct The limit is a percentage.
	% The limit is a percentage.
	Rate The limit is a rate per second.
Type	Threshold type, as follows:
	Upper Upper limit: the threshold is triggered when the Limit value is exceeded.
	Lower Lower limit: the threshold is triggered when a value below the Limit value is detected.
Int	When the threshold is to be checked, as follows:
	END Check threshold at task end.
	DYN Check threshold dynamically each time a transaction is dispatched.
	SYS Check at system intervals, as defined by the SYSTEM-INTERVAL configuration option.
Can	Whether to cancel or suspend the task if the threshold is triggered, as follows:
	Yes Cancel the task.
	No Do not cancel the task.
	Sus Suspend the task.
Msg	Whether to issue a message if the threshold is triggered, as follows:
	Yes Issue a message to the console.
	No Do not issue a message.
Log	Whether to log the threshold if it is triggered, as follows:
	Yes Log the threshold to the archive and flashback files.
	No Do not log the threshold.

Displaying Additional Fields

Additional fields you can display by pressing F10 are as follows:

Field	Description
Post	Action to take if the threshold is triggered, as follows: Yes Post an event to FAQs/ASO or FAQs/PCS. The default event name is the threshold name. No Take no action. Cmd Issue the command specified in the Event field.
Event	Name of the event to process if the threshold is triggered. If the value in the Post field is Yes, the event is posted to FAQs/ASO or FAQs/PCS. The default event name is the threshold name. If the value in the Post field is Cmd, the value in the Event field is issued as a command. The following are the valid commands that can appear in this field: EXPCAUXT Activates auxiliary tracing for the transaction. FREEZE Stops execution of CICS. TASKSUSP Suspends the transaction.
Value	Value last triggering the threshold.
Count	Number of times the threshold has been triggered.
Time	Time the threshold was last triggered.
Term	Terminal last triggering the threshold.
Tran	Transaction last triggering the threshold.
Task#	Task number last triggering the threshold.

Related Configuration Options

- THRESHOLD-MEMBER
- THRESHOLD-SYSTEM

Related Command

VARIABLES

Defining a New Threshold

You can use the THRESHol command to define a new threshold to be added to the THRESHOL panel.

Thresholds added in this way take effect immediately, but are temporary. When Unicenter CA-Explore for CICS is reinitialized, the thresholds defined in threshold override members are used.

Command Syntax and Operands

```
THRESHol ADD name [resource1 resource2 limit pct type int]
```

Operand	Description
<i>name</i>	Name of the threshold to be added. Enter VAR on the command line, or see the appendix "Variables" for descriptions of all Unicenter CA-Explore for CICS variables.
<i>resource1</i>	A string specifying a resource to be monitored for the threshold. If the threshold is checked at system intervals, specify \$SYSTEM\$. Otherwise, specify a transaction ID. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS."
<i>resource2</i>	A string specifying a second resource to be monitored for the threshold. The resource can be a terminal ID, filename, or some other resource, depending on the threshold. For example, you could specify a filename if you are defining the FILEREQS threshold. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS."
<i>limit</i>	Limit for the threshold. Specify a count, time in seconds (up to three decimal places), percent, or number per second at which you want the threshold to be triggered. A limit of zero (0) disables the threshold.

Operand	Description
<i>pct</i>	Percentage of the threshold value at which a warning condition is to be indicated. The warning condition is indicated when the threshold is displayed in yellow on a color monitor; on monochrome monitors, the word <i>Warning</i> appears. A warning indicates that a percentage of the threshold limit value has been reached, not that the threshold has been triggered.
<i>type</i>	Type of threshold limit. Specify UPPER to indicate that the threshold will trigger when resource usage exceeds the limit, or specify LOWER to indicate that the threshold will trigger when resource usage falls below the limit.
<i>int</i>	Interval at which resources are checked for the threshold. Specify END to check the resource at the end of tasks, DYN to check the resource when the transaction is dispatched, or SYS to check the resource at system intervals.

When you issue this command from the THRESHOL panel, it is not necessary to enter **THRESHol** as part of the command.

Examples

The following are examples of the THRESHol ADD command entered on the THRESHOL panel:

```
ADD CPUTIME CEDA * .750 75 UPPER END
ADD CPUTIME CEMT
```

The following are examples of the THRESHol ADD command entered on panels other than the THRESHOL panel:

```
THRES ADD RESPTIME C*
THRES ADD FILEREQS C* DFH* 150
```

Making Current Threshold Settings Permanent

You can use the THRESHo1 UPDATE command to save the current threshold settings to the threshold override member at shutdown.

Command Syntax and Operands

THRESHo1 UPDATE [*member*]

Operand	Description
<i>member</i>	Name of the threshold override member to be updated with the threshold settings in effect at shutdown. If you do not specify a member name, the member name specified by the THRESHOLD-UPDATE-MEMBER configuration option is used. If no member is defined by that configuration option, the member specified by the THRESHOLD-MEMBER configuration option is used. If the member name specified in the configuration option is <i>name??</i> , the member named <i>nameid.P</i> is used, where <i>name</i> is the same as in the configuration option and <i>id</i> is the ID for the region.

UMBRELLA Panel

The UMBRELLA panel displays Unicenter CA-Explore for CICS umbrella transaction definitions. You can also use the UMBRElla command to add or change umbrella transaction definitions.

You can direct Unicenter CA-Explore for CICS to sample long-running transactions or to gather statistics at terminal-write time for conversational tasks.

If you are using a fourth-generation language transaction, such as CSP, you can direct Unicenter CA-Explore for CICS to display statistics by application name rather than the fourth-generation language name.

You can also use the Unicenter CA-Explore for CICS monitor exit interface to collect information about a transaction from fourth-generation language transactions. See the chapter titled "Using the Unicenter CA-Explore for CICS Monitor Exit Interface" for more information.

Note: The configuration option UMBRELLA-GENERIC must be set to Yes before you can use generic transaction names.

Menu Access

On the /CONFIG menu, cursor-select the UMBRELLA option.

Command Access

Enter **UMBR** or **UMBRELLA** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

UMBRElla *tran*

Operand	Description
<i>tran</i>	String specifying the umbrella transactions to be displayed. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS." If you do not specify an umbrella transaction to be displayed, all umbrella transactions are displayed.

Sample Panel

F7=Backward	F8=Forward	F9=Auto	F10=
			F5=Top
			F11=
			F6=Bottom
			F12=Exit

Panel Field Descriptions

Field	Description
Tran	Transaction ID. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS."
Time	The sampling time, in minutes, used with the Sample option.
<i>options</i>	One or more of the following umbrella options: BYPASS Directs Unicenter CA-Explore for CICS to stop collection of statistics for the specified transaction. Converse The task is conversational. Unicenter CA-Explore for CICS collects statistics at terminal-write time. EXCLUDE Unicenter CA-Explore for CICS does not collect statistics for the task. LONGPGM The task is defined as the longest running program. Unicenter CA-Explore for CICS collects statistics under the name of the longest running program. NOBYPASS Directs Unicenter CA-Explore for CICS not to bypass collection of statistics for the specified transaction. NOCONV The transaction is not conversational. NOLOG Directs Unicenter CA-Explore for CICS to collect statistics, but not to log data.

Field	Description
<i>options</i> (continued)	<p>NONE Indicates that Unicenter CA-Explore for CICS is to use no umbrella options.</p> <p>Sample Unicenter CA-Explore for CICS collects statistics by sampling the task. The sampling time is displayed in the Time field.</p> <p>USER The transaction uses the umbrella interface provided with Unicenter CA-Explore for CICS. The program ID provided by the user trace call replaces the transaction ID.</p> <p>XCTL For this task, Unicenter CA-Explore for CICS segments task information when control transfers between programs.</p> <p>The following umbrella option may also be displayed. For this option, Unicenter CA-Explore for CICS collects statistics by application ID:</p> <p>CSP The task is a Cross System Product task.</p>

Adding or Changing Umbrella Transaction Definitions

Enter **UMBR** or **UMBRELLA** using the following syntax on the command line of any Unicenter CA-Explore for CICS panel to add or change an umbrella transaction definition.

Command Syntax and Operands

UMBRella {ADD|CHG} *tran options*

Operand	Description
ADD	Adds the umbrella transaction specified by the <i>tran</i> operand, with any options specified. Additions are temporary and last only until Unicenter CA-Explore for CICS is reinitialized.
CHG	Changes the options of the umbrella transaction specified by the <i>tran</i> operand to those specified by the <i>options</i> operand. Additions are temporary and last only until Unicenter CA-Explore for CICS is reinitialized.
<i>tran</i>	String specifying the umbrella transactions to be added or changed. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS."
<i>options</i>	Specifies options for an added or changed UMBRELLA transaction. Specify one or more of the following options: <ul style="list-style-type: none"> BYPASS Stops collecting statistics for the specified transaction. CICSPGM Sets the umbrella name to the name of the initial CICS program. CONV Defines the task as a conversational transaction. Unicenter CA-Explore for CICS collects statistics at terminal-write time. CSP Defines transaction as a Cross System Product transaction. Unicenter CA-Explore for CICS collects statistics by application ID. EXCLUDE Stops recording statistics in the archive and flashback files for the specified transaction. Statistics are collected, but not written to the archive and flashback files.

Operand	Description
<i>options</i> (continued)	<p>LONGPGM Defines the task as the longest running program. Unicenter CA-Explore for CICS collects the statistics under the name of the longest running program.</p> <p>NOBYPASS Do not bypass collecting statistics for the specified transaction.</p> <p>NOCONV Defines the transaction as non-conversational.</p> <p>NOLOG Collect statistics, but do not log data.</p> <p>NONE Use no umbrella options.</p> <p>SAMP <i>time</i> Defines tasks for which statistics are collected by sampling. Replace <i>time</i> with the sampling time in minutes following the SAMPLE option.</p> <p>USER Specifies that the transaction uses the umbrella interface provided with Unicenter CA-Explore for CICS. The program ID provided by the user trace call will replace the transaction ID.</p> <p>XCTL Segment transaction collection at each transfer of control between programs.</p>

/EXPLORE Menu Options

This chapter explains the /EXPLORE menu, which you can use to display information about Unicenter CA-Explore for CICS modules, active sessions, users, and so on.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

/EXPLORE Menu

The /EXPLORE menu lists the commands you can issue to display the following:

- Character sets that can be displayed on a terminal
- Information about Unicenter CA-Explore for CICS modules
- Information about Unicenter CA-Explore for CICS performance data collection
- Information about all logical Unicenter CA-Explore for CICS sessions allocated to an active session
- Information about Unicenter CA-Explore for CICS users

Menu Access

- On the Unicenter CA-Explore for CICS Main menu, cursor-select the /EXPLORE option.
- Type any character (except H) in the space provided to the left of the command and press Enter.

Command Access

Enter **/EX** or **/EXPLORE** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Menu

```

```

Panel Display Options

To display a panel listed on the **/EXPLORE** menu, cursor-select the option from the menu or enter the corresponding command as shown in the following table:

Command	Displays
DISPCHAR	Character sets that can be used on a terminal
EXPCMODs	Information about all Unicenter CA-Explore for CICS modules
PERFDATA	Information about Unicenter CA-Explore for CICS data collection
SESSions	Information about all logical sessions allocated to an active session
USERS	User information

EXPCMODS Panel

The EXPCMODS panel lists information about all Unicenter CA-Explore for CICS modules.

Menu Access

On the Unicenter CA-Explore for CICS menu, cursor-select the EXPCMODS option.

Command Access

Enter the EXPCMODs command on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

EXPCMODs [*module*]

Operand	Description
<i>module</i>	String specifying the names of the modules to be displayed. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS." If you do not specify the names of modules to be displayed, all modules are displayed.

/HELP Menu Options

This chapter explains the HELP menu, which you can use to display such information as descriptions of commands and data collection variables.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

/HELP Menu

The /HELP menu lists the commands you can issue to display the following:

- Descriptions of available Unicenter CA-Explore for CICS commands
- A list of Unicenter CA-Explore for CICS terminal messages
- A list of Unicenter CA-Explore for CICS help topics
- Descriptions of data collection variables

Menu Access

- On the Unicenter CA-Explore for CICS Main menu, cursor-select the /HELP option.
- Type any character (except H) in the space provided to the left of the command and press Enter.

Command Access

Enter **/HE** or **/HELP** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Menu

Panel Display Options

To display a panel listed on the /HELP menu, cursor-select the option from the menu or enter the corresponding command as listed in the following table:

Command	Displays
COMMANDS	All Unicenter CA-Explore for CICS commands
MESSAGES	All Unicenter CA-Explore for CICS message numbers and text
TOPICS	A list of help topics
VARIABLE	Information about Unicenter CA-Explore for CICS variables

COMMANDS Panel

The COMMANDS panel lists all of the Unicenter CA-Explore for CICS commands, their respective subsystems, and their functions.

Menu Access

On the /HELP menu, cursor-select the COMMANDS option.

Command Access

Enter **COMMAND** or **COMMANDS** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

COMMANDS [*command*] [CHANGE]

Operand	Description
<i>command</i>	String specifying the commands you want information about. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS."
CHANGE	Allows default sort arguments to be changed temporarily. The default sort argument can be changed permanently in a command option override member. See the chapter titled "Command Option Overrides" for more information.

If you do not specify a command, the COMMANDS command displays a list of all commands.

Panel Field Descriptions

Field	Description
Command	Unicenter CA-Explore for CICS command.
Subsys	Unicenter CA-Explore for CICS subsystem of the command functions within.
Sortarg	For commands with more than one sort argument, the default sort argument, if any.
Sec	Yes indicates that the command is secure; blank indicates that it is not secure.
Ln	Number of characters you must enter for Unicenter CA-Explore for CICS to recognize the command as valid. The number 8 indicates that you must enter all characters of the command. Required characters are shown in uppercase in the Command field.
Description	Command's function.

Margin Commands

Command	Description
<u>S</u>	Executes the selected command
H	Displays help for the selected command

MESSAGES Panel

The MESSAGES panel lists Unicenter CA-Explore for CICS messages, sorted by message number.

This panel displays all messages Unicenter CA-Explore for CICS can issue, not messages that have been issued.

Menu Access

On the /HELP menu, cursor-select the MESSAGES option.

Command Access

Enter **MESSAGE** or **MESSAGES** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel

TOPICS Panel

The TOPICS panel lists topics for which help information is available. For more information about using online help, see the chapter titled “Using Unicenter CA-Explore Performance Management for CICS.”

Menu Access

You can access the TOPICS panel from menus in either of the following ways:

- On the /HELP menu, cursor-select the TOPICS option.
- On the Main Menu, select the Help option.

Command Access

Enter **TOPIC** or **TOPICS** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel

Accessing Help for a Topic

Do one of the following to obtain help for a topic:

- Cursor-select a topic to display help information on that topic.
- Enter **HELP** *topic* on the command line of any Unicenter CA-Explore for CICS panel, where *topic* is the name of the topic.

VARIABLE Panel

The VARIABLE panel displays information about Unicenter CA-Explore for CICS variables.

Menu Access

On the /HELP menu, cursor-select the VARIABLE option.

Command Access

Type **VAR** or **VARIABLE** command on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

VARiable [*variable*]

Operand	Description
<i>variable</i>	String specifying the variables to be displayed. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS."

If you do not specify the variables to be displayed, the VARiable command displays information about all variables.

Sort Arguments

- NAME
- TYPE
- VARiable

Description	Description of variable

/HISTORY Menu Options

This chapter explains the /HISTORY menu, which allows you to access information about transactions, screen captures, CICS statistics, and system information for a specific job.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

/HISTORY Menu

The /HISTORY menu lists the commands you can issue to display the following:

- Transaction summary and detail information
- A list of panels captured when the screen capture facility is on
- Summaries of CICS statistics
- Panels showing summary and detail system information about a specific jobname

Menu Access

- On the Unicenter CA-Explore for CICS Main menu, cursor-select the /HISTORY option
- Type any character (except H) in the space provided to the left of the command and press Enter.

Command Access

Enter **/HI** or **/HISTORY** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Menu

```

Menu Display Options

To display a panel listed on the /HISTORY menu, cursor-select the option from the menu, or enter the corresponding command as shown in the following table:

This Command	Displays	Default Sort Argument
FLSHBACK	Transaction summary or detailed information on a specific transaction. The period covered by this data depends on the size of your flashback file and on the types of data you are logging. (See the section Accessing Flashback Summary Panels.)	None
REPLAY	A list of panels captured when the screen capture facility is on. (See the section REPLAY Panel.)	None
REVIEW	Summaries of CICS statistics. (See the section REVIEW Panel.)	None
SYSDATA	Panels showing summary system information or detailed information on a specific jobname. (See the section System Data Collection Panels.)	None

Historical Flashback Summary Panels: FLSHBACK

Flashback summary panels display transaction summary information from the Unicenter CA-Explore for CICS flashback file.

Each summary panel has a corresponding *detail* panel. Detail panels are described in the section Flashback Detail Panels.

Menu Access

On the /HISTORY menu, cursor-select the FLSHBACK option.

Command Access

Enter **FLSHBACK** on the command line of any Unicenter CA-Explore for CICS menu.

Moving Among Flashback Summary Panels

Both the menu and command access methods display the Historical DEFAULT Flashback summary panel (see the section DEFAULT Flashback Panel). Use the following methods to move among flashback summary panels:

- To toggle through summary panels, press F10 or F11.
- To display a specific summary panel, type the name of that panel over the name of the current panel (directly below the Historical Flashback title line) and press Enter.

Each summary panel has a corresponding detail panel. To access a detail panel for a specific summary panel, do one of the following:

- Cursor-select a specific transaction on the summary panel.
- Type the name of the detail panel you want to display over the name of the current panel (directly below the Historical Flashback title line) and press Enter.

Detail panels are described in the section Flashback Detail Panels.

Panel Display Options

The following table lists the flashback summary panels in the order they appear when you use the F10 toggle key.

This Panel	Displays
DEFAULT	Basic information about transactions
ANALYSIS	Percentage of a transaction's lifetime spent executing and spent waiting
CLOCKS	Resource timings
COUNTERS	Various usage counts
THRESHOL	Threshold counts
PROGRAMS	Program usage
DSA	Amount of DSA storage used, by type
FILE	File requests, I/O timings, and file type
FILETIME	Request, I/O timings, and wait timings
FILECNT	Request count by type
FILEWAIT	Wait counts
DLITIME	DL/I requests, I/O timings, and file types
DLIIO	DL/I I/O requests and timings
DLICNT	DL/I request counts by type
SQL	SQL requests, I/O timings and resources
TEMPSTOR	Temporary storage requests and timings
TEMPCNT	Temporary storage requests by type
TDATA	Transient data requests and timings
COMMAND	Command-level requests
EXITRSCE	Exit resource requests and timings
IRC	Inter-region communication requests and timings
ISC	Intersystem communication requests and timings
JOURNAL	Journal requests and timings
SECURITY	External security requests and timings
TABLEMGR	CICS table manager requests and timings

This Panel	Displays
USEREXIT	User exit requests and timings
WAITS	CICS waits by subsystem
UMBRELLA	Umbrella transaction names
OVERHEAD	CICS transaction overhead
TIMES	Start and end times for transactions

Panel Descriptions

Many of the Unicenter CA-Explore for CICS panels pictured in the following sections display the same information and input fields. The information and input fields that are common to all Flashback Summary panels are described only in the next section, DEFAULT Flashback Panel. Fields that are unique to a given panel are described in the topic for that particular panel.

DEFAULT Flashback Summary Panel

The DEFAULT Flashback panel displays historical data for the specified date and time that has been captured and stored in the flashback file.

If you enter the FLSHBACK command, omitting date or time operands, the most recent records are displayed, beginning with records for the current date and time at the bottom of the panel.

Command Syntax and Operands

FLSHBACK [*fromdate* [*fromtime*]] [*todate* [*totime*]]

Operand	Description
<i>fromdate</i>	Specifies the beginning date for the range of data to be displayed. Specify in the format <i>yyymmdd</i> .
<i>fromtime</i>	Specifies the beginning time for the range of data to be displayed. Specify in the format <i>hhmmss</i> .
<i>todate</i>	Specifies the ending date for the range of data to be displayed. Specify in the same format you specified for the DATE-FORMAT configuration option.
<i>totime</i>	Specifies the ending time for the range of data to be displayed. Specify in the same format you specified for the DATE-FORMAT configuration option.

Panel Field Descriptions

The information fields on the DEFAULT Flashback panel have the following meanings. Fields having values of zero, or less than 0.001, are displayed as blanks.

Field	Description
Date	Date that the transaction executed.
From:	Earliest date and time of data available for display. This field is located in the upper right corner of the display.
To:	Latest date and time of data available for display. This field is located in the upper right corner of the display.
Jobname	<p>The top Jobname field will show one of the following:</p> <ul style="list-style-type: none"> ■ An asterisk (*), if you are monitoring a region that is not running CICS (for example, a batch master region) ■ A jobname, if you are currently monitoring a specific CICS region <p>The lower jobname field displays the jobname to which the data on the rest of the line applies.</p>
Time	Transaction end time.
Tran	Transaction ID.
Task#	Transaction number.
Userid	User ID that invoked the task.
LU-Name	VTAM logical unit name or, if the VTAM logical unit name does not exist, the CICS terminal ID.
CPU	Transaction CPU time, in seconds.
Resp	Terminal response time, in seconds.
Abnd	Abend code.
Thrs	Number of thresholds triggered by the transaction.

Input Fields

The input fields on the DEFAULT Flashback panel let you change the following information:

Field	Description
Jobname	Specify the CICS jobname to be displayed. You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS."
DEFAULT	Name of the current flashback panel. You can access another flashback panel by typing its name over the word DEFAULT.
From	<p>Specify the date and time of the first record to be displayed. The starting date and time cannot be earlier than the date and time shown in the From: field in the upper right corner of the panel.</p> <p>You must enter the date in the same format as the mask displayed. For example, if the mask is YYMMDD, to display records beginning on February 14, 2002, enter 020214.</p>
To	<p>Specify the date and time of the last record to be displayed. The ending date and time cannot be later than the date and time shown in the To: field in the upper right corner of the display.</p> <p>You must enter the time in the same format as the mask displayed.</p>

Field	Description
Selection Criteria	You can enter one or more of the following in the selection criteria field to limit the records displayed to those meeting the criteria you specify:
TRAN=	Transaction ID
TERM=	Terminal ID
USERID=	User ID
FILE=	File name
PROGRAM=	Program name
CLASS=	Category class: Short, Medium, Long, or Noterminal
VAR=	A variable name for which you want to display records. You must use LO=, HI=, or both to specify the range of records to be displayed. To display a list of Unicenter CA-Explore for CICS variables, enter VARIABLE on the command line, or see the appendix titled "Variables."
LO=	Low range of selected variable
HI=	High range of selected variable
SYS=	Indicates whether to display the following system transactions: TCP, KCP, JJJ, III. To display all of these transactions, specify Y. Default is N.
LCTRAN=	Transaction ID, specified in lowercase letters. Except for CLASS=, VAR=, and SYS=, you can include generic characters in the string, as described in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS."

Margin Commands

Command	Displays
S	A detailed flashback panel for the selected transaction; the detail flashback panel is of the same type as the flashback panel on which the margin command is issued.
A	The ANALYSIS Flashback Detail panel for the selected transaction.
C	The CLOCKS Flashback Detail panel for the selected transaction.
T	The THRESHOL Flashback Detail panel for the selected transaction.
P	The PROGRAMS Flashback Detail panel for the selected transaction.
F	The FILE Flashback Detail panel for the selected transaction.
W	The WAITS Flashback Detail panel for the selected transaction.
U	The UMBRELLA Flashback Detail panel for the selected transaction.
O	The OVERHEAD Flashback Detail panel for the selected transaction.

F-Key Descriptions

F-Key	Command	Function
F5	Continue	Continues reading data after time-limit pause has occurred.
F10	Toggle Forward	Toggles forward through each of the flashback panels listed in the table described in the previous section.
F11	Toggle Backward	Toggles backward through each of the flashback panels listed in the table described in the previous section.

ANALYSIS Flashback Summary Panel

The ANALYSIS Flashback panel displays transaction lifetime, the percentage of the lifetime the transaction was executing, and the percentage of time the transaction was waiting.

Access

You can access the ANALYSIS Flashback panel in any of the following ways:

- On any flashback panel, type **ANAL** or **ANALYSIS** over the name of the current panel (directly below the Historical Flashback title line) and press Enter.
- On any flashback panel, press F10 or F11 until you toggle to the ANALYSIS version of the panel.

```

Cursor-select any transaction to display the ANALYSIS Flashback Detail panel for the transaction.

Panel Field Descriptions

The information and input fields common to all flashback panels are described only in the earlier section, DEFAULT Flashback Panel. The ANALYSIS Flashback panel also has the following fields:

Field	Description
LifeTime	Transaction lifetime, which is the difference between the time the transaction is put on the DCA (DCA entry mode) and the time the TCA (storage) is freed
Wait	Percentage of time spent waiting
Exec	Percentage of time spent executing

Graph Information

The following information is presented on the right side of the panel as a percentage:

This Percentage	Is Indicated By
Waiting to Run (WTR%)	Red or -
WAIT%	Yellow or *

Margin Commands

The input fields to the left of the Jobname fields accept the margin commands described earlier for the DEFAULT Flashback panel.

CLOCKS Flashback Summary Panel

The CLOCKS Flashback panel displays resource timings.

Access

You can access the CLOCKS Flashback panel in any of the following ways:

- On any flashback panel, type **CLO** or **CLOCKS** over the name of the current panel (directly below the Historical Flashback title line) and press Enter.
- On any flashback panel, press F10 or F11 until you toggle to the CLOCKS version of the panel.

Cursor-select any transaction to display the THRESHOL Flashback Detail panel for the transaction.

Panel Field Descriptions

Fields common to all flashback panels are described only in the earlier section, DEFAULT Flashback Panel. The THRESHOL Flashback panel also has the following additional field:

Field	Description
Count	Number of thresholds triggered by each job

Margin Commands

The input fields to the left of the Jobname fields accept the margin commands described earlier for the DEFAULT Flashback panel.

Historical Flashback Detail Panels

At task termination, a detailed account of transaction activity is written to the flashback file. The size of the flashback file determines the number of detail records that are available for viewing.

Access

To access a flashback detail panel for a specific summary panel, do one of the following:

- Cursor-select a specific transaction on the summary panel.
- Type the name of the panel you want to display over the name of the current panel (directly below the Historical Flashback title line) and press Enter.
- Press F10 or F11 to toggle through the detail panels until you reach the desired detail panel.

DEFAULT Flashback Detail Panel

The DEFAULT Flashback Detail panel displays detailed activity data about the selected transaction.

Access

- On the DEFAULT Flashback panel, cursor-select a transaction.
- On any flashback panel, enter **D** next to a transaction.
- On any flashback detail panel, type **DEFAULT** over the name of the current panel (directly below the Historical Flashback title line) and press Enter.
- On any flashback detail panel, press F10 or F11 until you toggle to the DEFAULT Detail version of the panel.

Panel Field Descriptions

Fields common to all flashback panels are described earlier in the section DEFAULT Flashback Panel. The DEFAULT Flashback Detail panel also has the following fields:

Field	Description
Resource	Name of resource
Count	Number of entries for resource
Start Time	Time at which the transaction started
End Time	Time at which the transaction ended
Umbrella	Umbrella name and type
Applid	CICS application ID
Region Id	Region ID defined in MIT
Terminal	ID of terminal
AID Key	AID key that was pressed to initiate the transaction
Operator	ID of operator
Class	Class of transaction
Abend	Abend code, if any

ANALYSIS Flashback Detail Panel

The ANALYSIS Flashback Detail panel displays a detailed record of degradation analysis.

Access

You can access the ANALYSIS Flashback Detail panel in any of the following ways:

- On the ANALYSIS Flashback panel, cursor-select a transaction.
- On any flashback panel, enter **A** next to a transaction.
- On any flashback detail panel, type **ANALYSIS** over the name of the current panel (directly below the Historical Flashback title line) and press Enter.
- On any flashback detail panel, press F10 or F11 until you toggle to the ANALYSIS version of the panel.

Panel Field Descriptions

Fields common to all flashback panels are described only in the earlier section, DEFAULT Flashback Panel. The ANALYSIS Flashback Detail panel also has the following fields:

Field	Description
Resource	Resource type. The following are some of the resource types that might appear in this field:
COUNT	Number of transactions used for analysis.
CPU	CPU time allocated to the transaction when in user or CICS time.
DL/I	Time in DL/I code.
EXPTIME	The average time (in seconds) spent in Unicenter CA-Explore for CICS code.
FILE I/O	Time that the transaction waits for file requests. This time is only for those datasets in the FCT.
LIFETIME	Transaction lifetime, which is the difference between the time the transaction is put on the DCA (DCA entry mode) and the time the TCA (storage) is freed.
MAX RESP	Maximum response time.
PROGRAM	Time spent executing program code.
RESOURCE	Time spent waiting for an internal CICS resource. If a transaction needs a resource and must wait for it to become available, CICS will place the transaction on the active DCA chain with a dispatch control indicator (DCI) of X'88'. If a program needs to be loaded into the DSA, this will cause the transaction to be put in this wait state. If a transaction must wait for strings or buffers, it will be put in this state.
SUSPEND	Time spent suspended.
STORSUSP	Time suspended because of an inability to satisfy a storage request.

Field	Description
Resource (continued)	<p>TERM I/O Time spent when the transaction forces a terminal wait. Normally, a pseudo-conversional TRANS sends a BMS map. The TERM I/O is scheduled after the transaction ends. You can force the BMS map to be written immediately, or if it is a conversional task, then TERM/IO must be forced to occur. In this case, TERM I/O time is the time spent to handle the I/O.</p> <p>TOT RESP Total response time.</p> <p>WAIT Time that a transaction must wait for ECBs to be posted; intrapartition dataset I/O time and DFHTEMP I/O is included.</p> <p>WTR The time the transaction spent on the active DCA chain waiting to run.</p>
Time	Time in seconds that resource was used
Pct	<p>Percentage of use, shown in both numeric and graph form. On color monitors, the colors used in the graph have the following meanings:</p> <p>Green Executing</p> <p>Yellow Waiting</p> <p>Red Waiting to run</p> <p>The graph for Lifetime always appears in blue.</p>

CLOCKS Flashback Detail Panel

The CLOCKS Flashback Detail panel displays a detailed record of resource timings.

Access

You can access the CLOCKS Flashback Detail panel in any of the following ways:

- On the CLOCKS Flashback panel, cursor-select a transaction.
- On any flashback panel, enter **C** next to a transaction.
- On any flashback detail panel, type **CLOCKS** over the name of the current panel (directly below the Historical Flashback title line) and press Enter.
- On any flashback detail panel, press F10 or F11 until you toggle to the CLOCKS version of the panel.

F7=Backward F8=Forward F9=Auto    F10=Togl Fwd  F11=Togl Bwd F12=Exit
    
```

Panel Field Descriptions

Fields common to all flashback panels are described only in the earlier section, DEFAULT Flashback Panel. The COUNTERS Flashback Detail panel also has the following fields:

Field	Description
Dispatch	Dispatch count.
Susp	Suspend count.
Getmains	GETMAIN count
Storage	Storage used.
StgViol	Number of storage violations.
Resource	Name of the resource. Resources correspond to Unicenter CA-Explore for CICS variables. Only resources with a count greater than zero are displayed.
Count	Usage count.

THRESHOL Flashback Detail Panel

The THRESHOL Flashback Detail panel displays a detailed record of threshold information.

Access

You can access the THRESHOL Flashback Detail panel in any of the following ways:

- On the THRESHOL Flashback panel, cursor-select a transaction.
- On any flashback panel, enter **T** next to a transaction.
- On any flashback detail panel, type **THReshol** over the name of the current panel (directly below the Historical Flashback title line) and press Enter.
- On any flashback detail panel, press F10 or F11 until you toggle to the THRESHOL version of the panel.

```

Panel Field Descriptions

Fields common to all flashback panels are described only in the earlier section, DEFAULT Flashback Panel. The THRESHOLD Flashback Detail panel also has the following fields:

Field	Description
Threshold	Name of threshold that was triggered
Count	Number of times the threshold was triggered
Limit	The threshold's limit
Value	Value that triggered the threshold
Date	Date that the threshold was triggered
Time	Time that the threshold was triggered

PROGRAMS Flashback Detail Panel

The PROGRAMS Flashback Detail panel displays a detailed record of program usage.

Access

You can access the PROGRAMS Flashback Detail panel in any of the following ways:

- On the PROGRAMS Flashback panel, cursor-select a transaction.
- On any flashback panel, enter **P** next to a transaction.
- On any flashback detail panel, type **PRO**grams over the name of the current panel (directly below the Historical Flashback title line) and press Enter.
- On any flashback detail panel, press F10 or F11 until you toggle to the PROGRAMS version of the panel.

Panel Field Descriptions

Fields common to all flashback panels are described only in the earlier section, DEFAULT Flashback Panel. The PROGRAMS Flashback Detail panel also has the following fields:

Field	Description
Resource	Program name
Count	Program use count
Time	Total request time
Average	Average request time
High	Maximum request time
Level	Level at which the program was accessed
Fetch	Number of times the program was fetched

Usage Field Entries

One or more of the following descriptions of the program can be displayed in the Usage field:

Field	Description
ABND	Program abended.
FETCH	Program was fetched.
LINK	Program was linked from another program.
LOAD	Program was loaded.
XCTL	Program was transferred from another CICS program.

DSA Flashback Detail Panel

The DSA Flashback Detail panel displays a detailed record of the amount of DSA storage used, by subpool type.

Access

You can access the DSA Flashback Detail panel in any of the following ways:

- On the DSA Flashback panel, cursor-select a transaction.
- On any flashback detail panel, type **DSA** over the name of the current panel (directly below the Historical Flashback title line) and press Enter.
- On any flashback detail panel, press F10 or F11 until you toggle to the DSA version of the panel.

Panel Field Descriptions

Fields common to all flashback panels are described only in the earlier section, DEFAULT Flashback Panel. The FILE Flashback Detail panel also has the following fields:

Field	Description
Filename	Filename defined in FCT.
Count	Number of requests.
Time	Difference between the time the FCP entry trace ID is processed and the time the FCP exit trace ID is processed.
Average	Average request time.
High	Maximum request time.
Type	File type.
Program	Name of the program that made the requests.
Volume	Name of the volume on which the file resides. If this field contains N/A, it is the result of a transaction not accessing the file with a standard CICS command level request. As a result, Unicenter CA-Explore for CICS cannot determine the name of the volume. Some CICS-supplied transactions do not use the standard method of accessing files.

FILETIME Flashback Detail Panel

The FILETIME Flashback Detail panel displays a detailed record of file request, I/O, and wait times.

Access

You can access the FILETIME Flashback Detail panel in any of the following ways:

- On the FILETIME Flashback panel, cursor-select a transaction.
- On any flashback detail panel, type **FILETIME** over the name of the current panel (directly below the Historical Flashback title line) and press Enter.
- On any flashback detail panel, press F10 or F11 until you toggle to the FILETIME version of the panel.

F7=Backward		F8=Forward		F9=Auto		F10=Togl Fwd		F11=Togl Bwd		F12=Exit	

Panel Field Descriptions

Fields common to all flashback panels are described only in the earlier section, DEFAULT Flashback Panel. The DLICNT Flashback Detail panel also has the following fields:

Field	Description
Resource	Name of DL/I Resource: DBD, PSB, function, or program
Reqs	Number of requests
GU	Number of GET unique requests
GHU	Number of GET hold unique requests
GN	Number of GET nexts
GNP	Number of GET nexts in parent
GHN	Number of GET hold nexts
GHNP	Number of GET hold nexts in parent
ISRT	Number of insert requests
DLET	Number of delete requests
REPL	Number of update requests
CHKP	Number of checkpoint requests

Note: Unicenter CA-Explore for CICS gathers statistics on the number of requests issued by CICS transactions. If, for example, a transaction issues an insert (ISRT) request that adds multiple segments, Unicenter CA-Explore for CICS will show only one ISRT request. Similarly, if a transaction issues a delete (DLET) request that deletes multiple segments, Unicenter CA-Explore for CICS will show only one DLET request.

TEMPSTOR Flashback Detail Panel

The TEMPSTOR Flashback Detail panel displays a detailed record of temporary storage requests and timings.

Access

You can access the TEMPSTOR Flashback Detail panel in any of the following ways:

- On the TEMPSTOR Flashback panel, cursor-select a transaction.
- On any flashback detail panel, type **TEMPSTOR** over the name of the current panel (directly below the Historical Flashback title line) and press Enter.
- On any flashback detail panel, press F10 or F11 until you toggle to the TEMPSTOR version of the panel.

Panel Field Descriptions

Fields common to all flashback panels are described only in the earlier section, DEFAULT Flashback Panel. The TEMPSTOR Flashback Detail panel also has the following fields:

Field	Description
Queue	Temporary storage queue name
Count	Queue use count
Time	Total request time
Average	Average request time
High	Maximum request time
I/O-Wait	I/O wait time
SuspTime	Suspend time

TEMPCNT Flashback Detail Panel

The TEMPCNT Flashback Detail panel displays a detailed record of temporary storage requests by type.

Access

You can access the TEMPCNT Flashback Detail panel in any of the following ways:

- On the TEMPCNT Flashback panel, cursor-select a transaction.
- On any flashback detail panel, type **TEMPCNT** over the name of the current panel (directly below the Historical Flashback title line) and press Enter.
- On any flashback detail panel, press F10 or F11 until you toggle to the TEMPCNT version of the panel.

Panel Field Descriptions

Fields common to all flashback panels are described only in the earlier section, DEFAULT Flashback Panel. The OVERHEAD Flashback Detail panel also has the following fields:

Field	Description
Cputime	CPU time allocated to transaction when in user code or CICS code
Lifetime	Transaction lifetime, which is the time difference between the start and end of the transaction
EXPtime	Average time spent in Unicenter CA-Explore for CICS code, in seconds
CMP	Percent of lifetime spent in CICS trace collection time
EXPC	Percent of lifetime spent in Unicenter CA-Explore for CICS code

Field	Description
Resource	Resource type. Some of the resource types that may appear are: <p>COUNT Number of transactions used for analysis.</p> <p>CPU CPU time allocated to transaction when in user or CICS time.</p> <p>DL/I Time in DL/I code.</p> <p>EXPCTIME Average time (in seconds) spent in Unicenter CA-Explore for CICS code.</p> <p>FILE I/O Time that the transaction waits for file requests. This time is only for those datasets in the FCT.</p> <p>LIFETIME Transaction lifetime, which is the time difference between the transaction start time and end time.</p> <p>MAX RESP Maximum response time.</p> <p>PROGRAM Time spent executing program code.</p> <p>RESOURCE Time spent waiting on an internal CICS resource. If a transaction needs a resource and must wait for it to become available, CICS places the transaction on the active DCA chain with a dispatch control indicator (DCI) of X'88'. If a program needs to be loaded into the DSA, this puts the transaction in this wait state. If a transaction must wait on strings or buffers, it is put in this state.</p> <p>SUSPEND Time spent suspended.</p>

Field	Description
Resource (continued)	<p>STORSUSP Time suspended because of an inability to satisfy a storage request.</p> <p>TERM I/O Time spent when the transaction forces a terminal wait. Normally, a pseudo-conversational TRANS sends a BMS map. The TERM I/O is scheduled after the transaction ends. You can force the BMS map to be written immediately, or if it is a conversational task, then TERM I/O must be forced to occur. In this case, TERM I/O time is the time spent to handle the I/O.</p> <p>TOT RESP Total response time.</p> <p>WAIT Time a transaction must wait for ECBs to be posted. Includes intrapartition dataset I/O time and DFHTEMP I/O.</p> <p>WTR Time transaction spent on the active DCA chain waiting to run.</p>
Time	Amount of time spent in resource.
Pct	Percent of lifetime spent in resource, shown in both numeric and graph form.

TIMES Flashback Detail Panel

The TIMES Flashback Detail panel displays transaction start and end times.

Access

You can access the TIMES Flashback Detail panel in any of the following ways:

- On the TIMES Flashback panel, cursor-select a transaction.
- On any flashback detail panel, type **TIMES** over the name of the current panel (directly below the Historical Flashback title line) and press Enter.
- On any flashback detail panel, press F10 or F11 until you toggle to the TIMES version of the panel.

Panel Field Descriptions

Fields common to all flashback panels are described only in the earlier section, DEFAULT Flashback Panel. The TIMES Flashback Detail panel also has the following fields:

Field	Description
Start	Transaction start time, which is the time at which the transaction was put on the DCA (DCA entry mode).
End	Transaction end time, which is the time at which the TCA (storage) was freed.
Lifetime	Transaction lifetime, which is the difference between the transaction's start and end times.
Resptime	The transaction response time.
WTRtime	The transaction waiting-to-run time.

Field	Description
Resource	COUNT Number of transactions used for analysis.
	CPU CPU time allocated to the transaction when in user or CICS time.
	DL/I Time in DL/I code.
	EXPCTIME Average time (in seconds) spent in Unicenter CA-Explore for CICS code.
	FILE I/O Time that the transaction waits for file requests. This time is only for those datasets in the FCT.
	LIFETIME Transaction lifetime, which is the time difference between the transaction start time and end time.
	MAX RESP Maximum response time.
	PROGRAM Time spent executing program code.
	RESOURCE Time spent waiting on an internal CICS resource. If a transaction needs a resource and must wait for it to become available, CICS will place the transaction on the active DCA chain with a dispatch control indicator (DCI) of X'88'. If a program needs to be loaded into the DSA, this will cause the transaction to be put in this wait state. If a transaction must wait on strings or buffers, it will be put in this state.
	SUSPEND Time spent suspended.
	STORSUSP Time suspended because of an inability to satisfy a storage request.

Field	Description
Resource (continued)	<p>TERM I/O Time spent when the transaction forces a terminal wait. Normally, a pseudo-conversational TRANS sends a BMS map. The TERM I/O is scheduled after the transaction ends. You can force the BMS map to be written immediately, or if it is a conversational task, then TERM I/O must be forced to occur. In this case, TERM I/O time is the time spent to handle the I/O.</p> <p>TOT RESP Total response time.</p> <p>WAIT Time that a transaction must wait for ECBs to be posted. Intrapartition dataset I/O time and DFHTEMP I/O is included.</p> <p>WTR Time the transaction spent on the active DCA chain waiting to run.</p>
Time	Amount of time spent in resource.
Pct	Percent of lifetime spent in resource, shown in both numeric and graph form.

Captured Panels Display: REPLAY

The REPLAY panel displays a list of panels captured when the screen capture facility is on. See the chapter titled "Function Commands" for a description of the CAPTURE command, which controls the screen capture facility.

You can select a captured panel from the REPLAY panel to redisplay it.

Menu Access

On the /HISTORY menu, cursor-select the REPLAY option

Command Access

Enter **REPLAY** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

REPLAY [*jobname*]

Operand	Description
<i>jobname</i>	String specifying the names of jobs associated with the captured panels to be displayed. You can include generic characters in the string, as explained in the chapter titled "Using CA-Unicenter Performance Management for CICS." If you do not specify a jobname, all the recaptured screens are displayed.

Sort Arguments

- JOBname
- DATE

Sample Panel

```

```

Panel Field Descriptions

Field	Description
Jobname	Name of the job associated with the captured panel
Date	Date when the panel was captured
Time	Time when the panel was captured
User	ID of the user who captured the panel or, if the user was not logged on, the ID of the terminal
Scrn-Size	Screen size
Command	Command used to display the panel

Margin Commands

Command	Displays
D	The captured panel you select

Deleting a Captured Panel

Enter **DELETE** on a panel selected from the **REPLAY** panel.

Field-level Help

The F1 Help key, which opens field-level help, is activated for the main **REPLAY** panel, but not for the captured screens.

Statistical Review Summaries: REVIEW

The **REVIEW** panel summarizes CICS statistics on a daily basis. One entry is logged for each day of activity while Unicenter CA-Explore for CICS is active.

Menu Access

On the **/HISTORY** menu, cursor-select the **REVIEW** option

Command Access

Enter **REVI** or **REVIEW** on the command line of any Unicenter CA-Explore for CICS panel.

Command Syntax and Operands

REVIEW [ALL|*jobname*] [HOUR *nn*]

Operand	Displays
ALL	All entries, regardless of jobname.
<i>jobname</i>	Only entries with the jobname you specify.
<i>nn</i>	Only entries created within the hour you specify. Replace <i>nn</i> with the hour of the 12-hour display. Valid values are 1 through 11 (1 a.m. through 11 a.m.).

If you are in a CICS region and do not specify a jobname, information about the current job is displayed. If you are using the batch master and do not specify a jobname, information for all jobs is displayed.

```

Panel Field Descriptions

Field	Description
Jobname	Name of Unicenter CA-Explore for CICS jobs
Date	Date of the activity
Trans	Number of transactions executed
CPU-Time	Average CPU time of a transaction
LifeTime	Average transaction lifetime
RespTime	Average transaction response time
Thresh	Number of Unicenter CA-Explore for CICS thresholds triggered
Abends	Number of abends
Comp	Number of storage compressions for CICS 2.3, or "n/a" for TS 1.1 (see note)
S-O-S	Number of short-on-storage conditions

Note: The number of Storage Compressions for CICS Transaction Server (TS) systems is not displayed by Unicenter CA-Explore for CICS. CICS TS is more proactive in recovering storage on a regular basis than CICS 2.3, which triggered storage compressions based on critical situations. CICS TS uses an algorithm to perform this self-tuning activity by progressively deleting currently unused programs, and slowing the attachment of new tasks. The objective of this process in CICS TS (referred to as Dynamic Program Storage Compression) is to spread the cost of managing storage and reduce the large overhead of a full-program compression (as in CICS 2.3). Since this dynamic loading/reloading of programs is handled with a VSE subtask, other user transactions may run in parallel with this process. For this reason, the number of times CICS TS enters DPSC is of much less value than its counterpart in CICS 2.3. For more information, see the IBM Manual *CICS Transaction Server for VSE/ESA Performance Guide*.

Displaying Additional Fields

Additional fields you can display using F10 are as follows:

Field	Description
I/O-Time	Average file I/O service time
I/Os	Number of file I/O requests
Splits	Number of CI/CA splits

Margin Commands

Command	Description
S	Displays detailed information for the date you select.
D	Deletes the detailed information for the date you select. This is valid only on the summary panel, and not the detail panel.

F-Key Description

F Key	Description
F10	Toggles between the following two sets of fields: <ul style="list-style-type: none"> ■ Thresh, Abends, Comp, and S-O-S ■ I/O Time, I/Os, and Splits

Related Configuration Options

- REVIEW-HOUR1
- REVIEW-TIME

Statistical Review Details

The REVIEW Detail panel displays detailed information for the date you select on the REVIEW panel, summarized by hour.

Access

On the REVIEW Summary panel, cursor-select a date.

System Data Collection Summaries: SYSDATA

System data collection summary panels display summary information about a specific jobname.

Each summary panel has a corresponding *detail* panel. Detail panels are described in the section System Data Collection Detail Panels.

Menu Access

On the /HISTORY menu, cursor-select the SYSDATA option.

Command Access

Enter **SYSDATA** on the command line of any Unicenter CA-Explore for CICS menu.

Moving Among System Data Collection Panels

Both the menu and command access methods display the System Data Collection INTERVAL summary panel (see the section INTERVAL System Data Collection Panel). Use the following methods to move among system data collection summary panels:

- To toggle through summary panels, press F10 or F11.
- To display a specific summary panel, type the name of that panel over the name of the current panel (directly below the System Data Collection title line) and press Enter.

Each summary panel has a corresponding detail panel. To access a detail panel for a specific summary panel, do one of the following:

- Cursor-select a specific jobname on the summary panel.
- Type the name of the detail panel you want to display over the name of the current panel (directly below the System Data Collection title line) and press Enter.

Detail panels are described in the section System Data Collection Detail Panels.

Panel Display Options

The following table lists the system data collection summary panels in the order they appear when you use the F10 toggle key.

This Panel	Displays
INTERVAL	System data collected during specified intervals
STORAGE	Storage usage information for a specified interval
DSA	DSA usage information for a specified interval
DSAPOOLS	DSA usage information for a specified interval
GETVIS24	Information about usage of GETVIS storage below the 16MB line for a specified interval
GETVIS31	Information about usage of GETVIS storage above the 16MB line for a specified interval
VSAM	VSAM file information
THRESHOL	Triggered threshold information
ANALYSIS	Transaction degradation analysis information for a specified interval

Panel Field Descriptions

The following table describes the fields that are common to all system data collection summary panels:

Field	Description
Date	Date that the job was executed.
From	Earliest date and time available for display. This field is located in the upper right corner of the display.
To	Latest date and time available for display. This field is located in the upper right corner of the display.
Jobname	CICS jobname.
Date	Transaction end date.
Time	Transaction end time.

Input Fields

The following table describes the input fields that are common to all system data collection summary panels:

Field	Description
Jobname	Specify the CICS jobname to be displayed. You can include generic characters in the string. This field is located in the upper left corner of the display.
Panelname	Name of the current system data collection panel, located directly beneath the System Data Collection title line. You can access another system data collection panel by entering its name in this field.
From	Specify the date and time of the first record to be displayed. This field is located in the upper left corner of the display. The starting date and time cannot be earlier than the date and time shown in the From: field in the upper right corner of the display.
To	Specify the date and time of the last record to be displayed. This field is located in the upper left corner of the display. The starting date and time cannot be later than the date and time shown in the To: field in the upper right corner of the display.

Panel Descriptions

Many of the panels contained in the sections that follow display the same information and input fields. The fields that are common to all System Data Collection panels are described only in the System Data Collection Panels section. Fields that are unique to a given panel are described in the topic for that particular panel.

INTERVAL System Data Collection Panel

The INTERVAL System Data Collection panel displays system data collected during specified intervals.

Access

You can access the INTERVAL System Data Collection panel in any of the following ways:

- On the /HISTORY menu, cursor-select the SYSDATA option.
- Enter **SYSDATA** on the command line of any Unicenter CA-Explore for CICS panel.
- On any system data collection summary panel, type **INTERVAL** over the name of the current panel (directly below the System Data Collection title line) and press Enter.
- On any system data collection summary panel, press F10 or F11 until you reach the INTERVAL version of the panel.

```

Panel Field Descriptions

The fields that are common to all system data collection summary panels are described earlier in the System Data Collection Summary Panels section. The INTERVAL System Data Collection also has the following fields:

Field	Description
Trans	Number of transactions during the interval
CPUtime	CPU time used during the interval
SIOS	Number of start I/Os during the interval
DSACMP	Number of DSA compressions during the interval for CICS 2.3, or "n/a" (not applicable) for TS 1.1 (see note)
Thresh	Number of threshold exceptions during the interval
Interval	Length of the interval

Note: The number of Storage Compressions for CICS Transaction Server (TS) systems is not displayed by Unicenter CA-Explore for CICS. CICS TS is more proactive in recovering storage on a regular basis than CICS 2.3, which triggered storage compressions based on critical situations. CICS TS uses an algorithm to perform this self-tuning activity by progressively deleting currently unused programs, and slowing the attachment of new tasks. The objective of this process in CICS TS (referred to as Dynamic Program Storage Compression) is to spread the cost of managing storage and reduce the large overhead of a full-program compression (as in CICS 2.3). Since this dynamic loading/reloading of programs is handled with a VSE subtask, other user transactions may run in parallel with this process. For this reason, the number of times CICS TS enters DPSC is of much less value than its counterpart in CICS 2.3. For more information, see the IBM Manual *CICS Transaction Server for VSE/ESA Performance Guide*.

Input Fields

The input fields common to all system data collection panels are described earlier in the System Data Collection Panel section.

STORAGE System Data Collection Panel

The STORAGE System Data Collection panel displays information about usage of various storage areas during a specified interval.

Access

You can access the STORAGE System Data Collection panel in either of the following ways:

- On any system data collection panel, type **STORAGE** over the name of the current panel (directly below the System Data Collection title line) and press Enter.
- On any system data collection panel, press F10 or F11 until you reach to the STORAGE version of the panel.

Panel Field Descriptions

The fields that are common to all system data collection summary panels are described earlier in the System Data Collection Summary Panels section. The STORAGE panel also includes the following fields:

Field	Description
DSA%	Percentage of the DSA that is full or in use
DSA-Max	Size of the largest contiguous block of DSA storage, in bytes
GETV24%	Percentage of GETVIS storage below the 16MB line that is full or in use
GETV24M	Size of the largest contiguous block of GETVIS storage below the 16MB line, in bytes
GETV31%	Percentage of GETVIS storage above the 16MB line that is full or in use
GETV31M	Size of the largest contiguous block of GETVIS storage above the 16MB line, in bytes

Input Fields

Input fields that are common to all system data collection summary panels are described earlier in the System Data Collection Panel section.

DSA System Data Collection Panel

The DSA System Data Collection panel displays information about DSA usage during a specified interval.

Access

You can access the DSA System Data Collection panel in either of the following ways:

- On any system data collection summary panel, type **DSA** over the name of the current panel (directly below the System Data Collection title line) and press Enter.
- On any system data collection summary panel, press F10 or F11 until you toggle to the DSA version of the panel.

Sample Panel for CICS 2.3

Panel Field Descriptions

The fields that are common to all system data collection summary panels are described earlier in the System Data Collection Summary Panels section. The DSA System Data Collection panel also has the following fields:

Field	Description	For CICS Version
DSA%	Percentage of DSA used	CICS 2.3
Size	Size of the dynamic storage area, in bytes	CICS 2.3
Free	Amount of DSA that is free or available, in bytes	CICS 2.3
Comp	Number of DSA compressions during the interval, or "n/a" (not applicable) for TS 1.1 (see note)	CICS 2.3
UDSA	Number of bytes allocated from the UDSA, User DSA, below the 16Mb line	TS 1.1
CDSA	Number of bytes allocated from the CDSA, CICS DSA, below the 16 Mb line	TS 1.1

Note: The number of Storage Compressions for CICS Transaction Server (TS) systems is not displayed by CA-Explore for CICS. CICS TS is more proactive in recovering storage on a regular basis than CICS 2.3, which triggered storage compressions based on critical situations. CICS TS uses an algorithm to perform this self-tuning activity by progressively deleting currently unused programs, and slowing the attachment of new tasks. The objective of this process in CICS TS (referred to as Dynamic Program Storage Compression) is to spread the cost of managing storage and reduce the large overhead of a full-program compression (as in CICS 2.3). Since this dynamic loading/reloading of programs is handled with a VSE subtask, other user transactions may run in parallel with this process. For this reason, the number of times CICS TS enters DPSC is of much less value than its counterpart in CICS 2.3. For more information, see the IBM Manual *CICS Transaction Server for VSE/ESA Performance Guide*.

Input Fields

Input fields that are common to all system data collection summary panels are described earlier in the System Data Collection Panel section.

DSAPOOLS System Data Collection Panel

The DSAPOOLS System Data Collection panel displays information about DSA usage during a specified interval.

Access

You can access the DSAPOOLS System Data Collection panel in either of the following ways:

- On any system data collection summary panel, type **DSAPOOLS** over the name of the current panel (directly below the System Data Collection title line) and press Enter.
- On any system data collection summary panel, press F10 or F11 until you toggle to the DSAPOOLS version of the panel.

Sample Panel for CICS 2.3

Panel Field Descriptions

The fields that are common to all system data collection summary panels are described earlier in the System Data Collection Summary Panels section. The DSAPOOLS System Data Collection panel also has the following fields:

Field	Description	For CICS Version
Cntl	Total storage allocated from the control subpool	CICS 2.3
Tele	Total storage allocated from the teleprocessing subpool	CICS 2.3
Task	Total storage allocated from the task subpool	CICS 2.3
Shr	Total storage allocated from the shared subpool	CICS 2.3
RPL	Total storage allocated from the RPL subpool	CICS 2.3
Pgm	Total storage allocated from the program subpool	CICS 2.3
SDSA	Shared storage below the 16Mb line	TS 1.1
RDSA	Read only storage below the 16Mb line	TS 1.1
EUDSA	User storage above the 16Mb line	TS 1.1
ECDSA	CICS storage above the 16Mb line	TS 1.1
ESDSA	Shared storage above the 16Mb line	TS 1.1
ERDSA	Read only storage above the 16Mb line	TS 1.1

Input Fields

Input fields that are common to all system data collection summary panels are described earlier in the System Data Collection Panel section.

GETVIS24 System Data Collection Panel

The GETVIS24 System Data Collection panel displays information about GETVIS storage usage below the 16MB line during the specified interval.

Access

You can access the GETVIS24 System Data Collection panel in either of the following ways:

- On any system data collection summary panel, type **GETVIS24** over the name of the current panel (directly below the System Data Collection title line) and press Enter.
- On any system data collection summary panel, press F10 or F11 until you toggle to the GETVIS24 version of the panel.

Panel Field Descriptions

The fields that are common to all system data collection summary panels are described earlier in the System Data Collection Summary Panels section. The VSAM System Data Collection panel also has the following fields:

Field	Description
Count	Number of files used

Input Fields

Input fields that are common to all system data collection summary panels are described earlier in the System Data Collection Panel section.

THRESHOL System Data Collection Panel

The THRESHOL System Data Collection panel displays information about triggered thresholds.

Access

You can access the THRESHOL System Data Collection panel in any of the following ways:

- On the /HISTORY menu, cursor-select the SYSDATA option.
- Enter **SYSDATA** on the command line of any Unicenter CA-Explore for CICS panel.
- On any system data collection summary panel, type **THRESHOL** over the name of the current panel (directly below the System Data Collection title line) and press Enter.
- On any system data collection summary panel, press F10 or F11 until you toggle to the THRESHOL version of the panel.

Sample Panel

Panel Field Descriptions

The fields that are common to all system data collection summary panels are described earlier in the System Data Collection Summary Panels section. The THRESHOL System Data Collection panel also has the following fields:

Field	Description
Name	Threshold name
Resource	Resource to be monitored for the threshold. System thresholds have a resource defined as \$SYSTEM\$. A transaction ID appears in this field for other types of thresholds.
Resource	A second resource to be monitored. This field can be a terminal ID, a filename, or other resource, depending on the threshold.
Value	Threshold value.
Limit	Threshold trigger limit value.

Input Fields

Input fields that are common to all system data collection summary panels are described earlier in the System Data Collection Panel section.

ANALYSIS System Data Collection Panel

The ANALYSIS System Data Collection panel displays transaction degradation analysis information for a specified interval.

Access

You can access the ANALYSIS System Data Collection panel in either of the following ways:

- On any system data collection summary panel, type **ANALYSIS** over the name of the current panel (directly below the System Data Collection title line) and press Enter.
- On any system data collection summary panel, press F10 or F11 until you toggle to the ANALYSIS version of the panel.

Panel Field Descriptions

The fields that are common to all system data collection summary panels are described earlier in the System Data Collection Summary Panels section. The ANALYSIS System Data Collection panel also has the following fields:

Field	Description
Trans	Number of transactions during the interval
Life	Average lifetime of transactions during the interval
Pgm	Average duration of programs during the interval
File	Average duration of file I/Os during the interval
WTR	Average waiting to run time during the interval
CPU	Average CPU time during the interval

Input Fields

Input fields that are common to all system data collection summary panels are described earlier in the System Data Collection Panel section.

System Data Collection Details

System data collection detail panels display detailed information about a specific jobname.

Access

To access a System Data Collection detail panel for a specific summary panel, do one of the following:

- Cursor-select a specific jobname on the summary panel.
- Type the name of the panel you want to display over the name of the current panel (directly below the System Data Collection title line) and press Enter.
- Press F10 or F11 to toggle through the detail panels until you reach the desired detail panel.

INTERVAL System Data Collection Detail Panel

The INTERVAL System Data Collection Detail panel displays detailed information about an interval for a jobname selected from the INTERVAL System Data Collection panel.

Access

- On the INTERVAL System Data Collection panel, cursor-select a jobname record.
- On any system data collection detail panel, type **INTERVAL** over the name of the current panel (directly below the System Data Collection title line) and press Enter.
- On any system data collection detail panel, press F10 or F11 until you reach the INTERVAL version of the panel.

The information fields on the first row of this panel have the same meanings as the corresponding fields on the GETVIS24 System Data Collection panel. This panel also includes the following fields:

Field	Description
Resource	Name of a resource
Value	Value for the resource

GETVIS31 System Data Collection Detail Panel

The GETVIS31 System Data Collection Detail panel displays detailed information about GETVIS storage usage above the 16MB line for a job selected from the GETVIS31 System Data Collection panel.

Access

- On the GETVIS31 System Data Collection panel, cursor-select a jobname record.
- On any system data collection detail panel, type **GETVIS31** over the name of the current panel (directly below the System Data Collection title line) and press Enter.
- On any system data collection detail panel, press F10 or F11 until you reach the GETVIS31 version of the panel.

Panel Field Descriptions

The information fields on the first row of this panel have the same meanings as the corresponding fields on the GETVIS31 System Data Collection panel. This panel also includes the following fields:

Field	Description
Resource	Name of a resource
Value	Value for the resource

VSAM System Data Collection Detail Panel

The VSAM System Data Collection Detail panel displays detailed VSAM file information for a job selected from the VSAM System Data Collection panel.

Access

- On the VSAM System Data Collection panel, cursor-select a jobname record.
- On any system data collection detail panel, type **VSAM** over the name of the current panel (directly below the System Data Collection title line) and press Enter.
- On any system data collection detail panel, press F10 or F11 until you reach the VSAM version of the panel.

Panel Field Descriptions

The information fields on the first row of this panel have the same meanings as the corresponding fields on the THRESHOL System Data Collection panel. This panel also includes the following fields:

Field	Description
Task#	Task number of the transaction that triggered the threshold (end-of-task and dynamic thresholds only)
Terminal	ID of the terminal that triggered the threshold (end-of-task and dynamic thresholds only)
Userid	ID of the user that triggered the threshold (end-of-task and dynamic thresholds only)

ANALYSIS System Data Collection Detail Panel

The ANALYSIS System Data Collection Detail panel displays detailed transaction degradation analysis information for a job selected from the ANALYSIS System Data Collection panel.

Access

- On the ANALYSIS System Data Collection panel, cursor-select a jobname record.
- On any system data collection detail panel, type **ANALYSIS** over the name of the current panel (directly below the System Data Collection title line) and press Enter.
- On any system data collection detail panel, press F10 or F11 until you reach the ANALYSIS version of the panel.

Panel Field Descriptions

The information fields on the first row of this panel have the same meanings as the corresponding fields on the ANALYSIS System Data Collection panel. This panel also includes the following fields:

Field	Description
Resource	Resource type – The following are some of the resource types that appear in this field: Count Number of transactions used for analysis (number of transactions written to history files by Unicenter CA-Explore for CICS). Note that this number will be less than the total number of transactions detected by Unicenter CA-Explore for CICS. CPU CPU time used by user code or by CICS code. DL/I Time in DL/I code. Expctime Average time (in seconds) spent in Unicenter CA-Explore for CICS code. File I/O Time that the transaction waits for file requests. This time is only for datasets in the FCT. Lifetime Transaction lifetime; that is, the difference between the time the transaction is put on the DCA (DCA entry mode) and the time the TCA (storage) is freed. Program Time that the transaction spent executing program code.

Field	Description
Resource (continued)	<p>Resource</p> <p>Time spent waiting for an internal CICS resource. If a transaction needs a resource and must wait for it to become available, CICS places the transaction on the active DCA chain with a dispatch control indicator (DCI) of X'88'. A transaction is put in this state if it is waiting for strings, for buffers, or for a program to be loaded into the DSA.</p> <p>Suspend Time spent suspended.</p> <p>Storsusp Time suspended because of an inability to satisfy a storage request.</p> <p>Term I/O Time spent when the transaction forces a terminal wait. Normally, a pseudo-conversational transaction sends a BMS map. The terminal I/O is scheduled after the transaction ends. You can force the BMS map to be written immediately, or if it is a conversational task, then the terminal I/O must be forced to occur. In this case, terminal I/O is the time spent to handle the I/O.</p> <p>Wait Time that a transaction must wait for ECBs to be posted. Intrapartition dataset I/O time and DFHTEMP I/O are included.</p> <p>WTR Time the transaction spent on the active DCA chain waiting to run.</p>
Time	Total time, in seconds, for all transactions monitored.
Average	Average time for each transaction monitored, except Count, which is the number of transactions monitored. An entry in this field is equal to the entry in the Time field divided by the count (number of transactions used for analysis).
Pct	Percentage of lifetime spent in the corresponding activity. This information is also presented in graph form.

/CAPROD Menu Options

This chapter explains how to use the /CAPROD menu to access other CA products installed on your system.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

/CAPROD Menu

The /CAPROD menu lists the commands you can issue to access other CA products from Unicenter CA-Explore for CICS. You can issue these commands either by cursor-selecting them from this menu or by entering them on the command line of any Unicenter CA-Explore for CICS panel.

Menu Access

- On the Unicenter CA-Explore for CICS Main menu, cursor-select the /CAPROD option.
- Type any character (except H) in the space provided to the left of the command and press Enter.

Command Access

Enter **/CA** or **/CAPROD** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel

```
CA-Explore for CICS 7.0 SP00 DEVCICS4 DB2CICS CICS      2003/08/21 16:45:15
==>
                                CA-Explore for CICS Menu - /CAPROD      1:2/2-DATA

                                Command   Description
                                _ DCMPROD   Data Center Management Products
                                _ EVSE     CA-Explore for VSE

F1=Help      F2=System   F3=Return   F4=Flshback F5=Top      F6=Bottom
F7=Backward  F8=Forward  F9=Auto     F10=        F11=        F12=Exit
```

Panel Display Options

To display a panel listed on the **/CAPROD** menu, cursor-select the option from the menu or enter the corresponding command as shown in the following table:

Enter This Command	Or Select This Option	To Access
DCMPROD	Data Center Management Products	A panel from which you can access the CA products installed at your site
EVSE	CA-Explore for VSE	Unicenter CA-Explore for VSE

Configuration Options

The product option settings you specify determine how Unicenter CA-Explore for CICS monitors your CICS system. This chapter explains how you use configuration options to tailor Unicenter CA-Explore for CICS to monitor CICS for your site.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

Creating Configuration Override Members

You store the values of configuration options in configuration *override members* in the Unicenter CA-Explore for CICS product library. You can create one configuration override member to use for all CICS partitions, or a unique configuration override member to use for each CICS partition.

The options set in a configuration override member take effect when Unicenter CA-Explore for CICS is initialized, and remain in effect unless changed using the CONFIG panel. Refer to the chapter titled “/CONFIG Menu Options” for an explanation of the CONFIG panel.

Before attempting to create override members, see Changing Configuration Options later in this section.

Using One Configuration Override Member for All CICS Partitions

By default, Unicenter CA-Explore for CICS uses the configuration option settings in the configuration override member \$CNFIG.P. If you have only one CICS partition, or you are running multiple partitions and want to use the same Unicenter CA-Explore for CICS configuration for all, customize the configuration option values in member \$CNFIG.P.

Customizing Configuration Override Members for Different CICS Partitions

All partitions for which you do not create a new configuration override member use the configuration option settings in \$CNFIG.P. Use the following steps to create a unique configuration override member for a CICS partition:

1. Copy \$CNFIG.P to create a new member in the Unicenter CA-Explore for CICS product library. Name this new member \$CNFIG id .P, where id is the partition ID specified in member \$MIT.P by the parameter REGID= id .

For example, the configuration override member for the partition with a partition ID of M1 would be named \$CNFIGM1.P.

2. Change the option values in the new configuration override member. See Changing Configuration Options later in this section.

The following table describes the contents of Unicenter CA-Explore for CICS product library members that are related to product configuration:

Member	Contains
\$CNFIG.P	You must change this configuration option during installation.
\$CNFIG id .P	<p>Unique configuration options for a specific partition (where id is the partition ID) as specified in the MIT (monitor initialization table).</p> <p>Using the steps provided earlier in this chapter, create one \$CNFIG$id$.P member for each partition to which you do not want to apply the default options contained in \$CNFIG.P.</p>
\$CNFIG00.P	<p>This is a copybook with all product configuration options set to default values. You can copy individual options from this to member \$CNFIG.P to set the default configuration for Unicenter CA-Explore for CICS, or to member \$CNFIG$id$.P (where id is a partition ID) to specify unique options for a specific partition.</p> <p>Unicenter CA-Explore for CICS does not read this member at initialization. The purpose of \$CNFIG00.P is to provide a source from which you can copy options that you want to change. You should copy an option from this member to \$CNFIG.P or \$CNFIGid.P only if you want to specify a non-default value to override the default setting at initialization.</p>
\$CNFIGXX.P	Detailed descriptions of all configuration options

Changing Configuration Options

You do not need to change any configuration options for Unicenter CA-Explore for CICS to run properly. Unicenter CA-Explore for CICS is shipped with default settings that allow Unicenter CA-Explore for CICS to be fully functional at initialization.

You should change other options only if you want Unicenter CA-Explore for CICS to function differently from the default configuration.

Determining Whether to Change Configuration Options

Initially, you should use Unicenter CA-Explore for CICS with its default configuration settings, or set configuration options so that Unicenter CA-Explore for CICS collects statistics for all resources you are interested in monitoring. Be aware that collecting data for a resource increases product overhead and storage requirements for the Unicenter CA-Explore for CICS flashback and archive files.

After using Unicenter CA-Explore for CICS for a predetermined time, you can determine whether collecting data for various resources is worth the storage required. The canned report CICS.PERFORMANCE.RECORD.ANALYSIS.STAT lists all transactions processed, and shows which components of Unicenter CA-Explore for CICS performance records are being used by each. If this report shows that a large amount of data has been collected for a resource that you seldom monitor, you might decide to stop collecting data for that resource in order to lessen the amount of storage required for the flashback and archive files.

For more information about running canned reports and a sample of the canned report CICS.PERFORMANCE.RECORD.ANALYSIS.STAT, see the Unicenter CA-Explore for CICS *History Reporting Guide*.

Changing Configuration Options Temporarily

To temporarily change configuration options, use the CONFIG panel. The configuration options you specify from this panel remain in effect until Unicenter CA-Explore for CICS is reinitialized.

To make current configuration option settings permanent, you write them to a configuration override member using the CONFIG UPDATE command.

See the chapter titled “/CONFIG Menu Options” for descriptions of the CONFIG panel and the CONFIG UPDATE command.

Changing Configuration Options Permanently

If you want to specify a non-default value for a configuration option, copy the option from member \$CNFIG00.P into the appropriate configuration option override member, and then change the value for the option to the value you want.

Sample Configuration Override Member

* Name	Type	CICS	Data	NoChg	Mstr
ACTIVITY-HOUR1=8	Numeric			Nochg	
ALARM-DISABLE=No	Yes/No				
ALTER-MESSAGES=Yes	Yes/No

Member Field Descriptions

The following table describes the fields in a configuration override member:

Field	Description
Name	Configuration option name, followed by an equal sign (=) and the value set for the option. The value is the only thing you can change for an option; all other fields in configuration members are informational.
Type	Type of value (i.e., numeric) or the actual value (i.e., YES/NO) to be specified for the option.
CICS	CICS must be running in the partition for the option to be activated. These options will not take effect in the master partition.
Data	If Data appears in this field, the option is a data collection option.
NoChg	If NoChg appears in this field, the option cannot be changed using the online interface after Unicenter CA-Explore for CICS is initialized.
Mstr	If Mstr appears in this field, the option is valid only in a master partition, as defined in the Unicenter CA-Explore for CICS monitor initialization table.

Configuration Option Descriptions

The following table lists and describes all of the Unicenter CA-Explore for CICS configuration options:

Option	Default	Description						
ACTIVITY-HOUR1	8	<p>Specify the first hour of captured data (transaction counts and transaction lifetimes) to be displayed by the ACTIVITY command. The minimum value is 0; the maximum is 14.</p> <p>Sixteen buckets of data are available:</p> <table> <tr> <td>Bucket 1</td> <td>12:00 A.M. through HOUR1 - 1 hour</td> </tr> <tr> <td>Buckets 2-15</td> <td>HOUR1 through HOUR1 + 13 hours</td> </tr> <tr> <td>Bucket 16</td> <td>HOUR1 + 14 hours through 11:59 P.M.</td> </tr> </table> <p>Example: If you want to see data for the day shift (8 A.M. to 5 P.M.), define the activity hour as 8. The ACTIVITY panel would then show a bucket called AM, which would include all data from midnight to 7:59 A.M. The following 14 buckets would contain data for each hour from 8 A.M. to 9:59 P.M., starting with a bucket for 8 A.M. to 8:59 A.M. The last bucket on the panel, called PM, includes all data from 10 P.M. through 11:59 P.M.</p>	Bucket 1	12:00 A.M. through HOUR1 - 1 hour	Buckets 2-15	HOUR1 through HOUR1 + 13 hours	Bucket 16	HOUR1 + 14 hours through 11:59 P.M.
Bucket 1	12:00 A.M. through HOUR1 - 1 hour							
Buckets 2-15	HOUR1 through HOUR1 + 13 hours							
Bucket 16	HOUR1 + 14 hours through 11:59 P.M.							
ALARM-DISABLE	NO	<p>Specify one of the following to define whether an alarm will sound when an Unicenter CA-Explore for CICS message is written to a terminal:</p> <table> <tr> <td>YES</td> <td>Sound an alarm when a message is written to a terminal.</td> </tr> <tr> <td>NO</td> <td>Do not sound an alarm when a message is written to a terminal.</td> </tr> </table>	YES	Sound an alarm when a message is written to a terminal.	NO	Do not sound an alarm when a message is written to a terminal.		
YES	Sound an alarm when a message is written to a terminal.							
NO	Do not sound an alarm when a message is written to a terminal.							
ALTER-MESSAGES	YES	<p>Specify one of the following to define whether a message is to be written to the console when a user alters storage.</p> <table> <tr> <td>YES</td> <td>Write a message to the console.</td> </tr> <tr> <td>NO</td> <td>Do not write to the console.</td> </tr> </table>	YES	Write a message to the console.	NO	Do not write to the console.		
YES	Write a message to the console.							
NO	Do not write to the console.							
ARCHIVE-FULL-MESSAGE	30	<p>When the Unicenter CA-Explore for CICS archive file becomes full, message EXPC224W is written to the console at intervals specified by this option. Specify the number of minutes you want to pass between occurrences of message EXPC224W.</p>						

Option	Default	Description
AUTO-DURATION	60	<p>Specify the number of minutes before the automatic redisplay function shuts off. The minimum value is 0; the maximum is 99999. Specifying 0 causes automatic redisplay to remain on indefinitely.</p> <p>A user can activate the automatic redisplay function to run indefinitely. This option lets you reduce the unnecessary overhead of automatic redisplay at unattended terminals.</p>
AUTO-REFRESH-TIME	5	<p>Specify the number of seconds to delay while the automatic redisplay function is active. This option sets the default redisplay time for all users.</p> <p>Individual users can specify alternate redisplay times for their own sessions.</p>
BTAM-TERMINAL-COUNT	5	<p>Specify the number of dedicated BTAM terminals that are to be used by Unicenter CA-Explore for CICS. The minimum value is 0; the maximum is 10.</p>
BTAM-TERMINAL-01	5	<p>Specify the address to be used for each dedicated BTAM terminal to be used by Unicenter CA-Explore for CICS. The minimum value is 0; the maximum value is 255. If you specify 0, the terminal will not be used.</p>
BTAM-TERMINAL-02	6	
BTAM-TERMINAL-03	7	
BTAM-TERMINAL-04	8	
BTAM-TERMINAL-05	9	
BTAM-TERMINAL-06	0	
BTAM-TERMINAL-07	0	
BTAM-TERMINAL-08	0	
BTAM-TERMINAL-09	0	
BTAM-TERMINAL-10	0	
CAPS	NO	<p>Specify one of the following to define whether panel displays are to be uppercase only for all users. Individual users can specify whether uppercase translation will be in effect for their own sessions.</p> <p>YES Display panels in all uppercase for all users.</p> <p>NO Do not display panels in all uppercase for all users.</p>
CLEAR-KEY-EXITS	NO	<p>Specify if you want the CLEAR key to exit from Unicenter CA-Explore for CICS. The F12 Key is the exit key as well.</p> <p>YES Exits from Unicenter CA-Explore for CICS session</p> <p>NO Do not do anything when you press the CLEAR key.</p>

Option	Default	Description
COMMAND-CONFIRMATION	YES	<p>Specify one of the following to specify whether users will be prompted to confirm command functions initiated by margin commands:</p> <p>YES Activate command confirmation.</p> <p>NO Deactivate command confirmation.</p>
COMMAND-MEMBER	\$CMD	<p>Specify the name of a member containing a list of command option overrides. This member can also be used to modify the default sort arguments for each command. If security is used, specify that the command is secured in this member. See the chapter titled “Command Option Overrides” for more information.</p> <p>If you specify the member name in the form name??, Unicenter CA-Explore for CICS will automatically replace ?? with the ID of each partition. For example, if you specify COMMAND-MEMBER=\$CMD??, Unicenter CA-Explore for CICS will automatically use member \$CMDA1.P to define command option overrides for partition A1, member \$CMDA2.P for partition A2, and so on. If a member with the name generated by Unicenter CA-Explore for CICS does not exist for a partition, member \$CMD.P is used by default.</p>
COMMAND-MESSAGES	NO	<p>Specify one of the following to define whether a message is to be written to the console when a command option or sort argument is set or modified:</p> <p>YES Write a message to the console when a command option or sort argument is set or modified.</p> <p>NO Do not write a message to the console when a command option or sort argument is set or modified.</p>
COMPRESS-DATA	YES	<p>Specify one of the following to define whether Unicenter CA-Explore for CICS is to compress the data written to the archive and flashback files. Compressing the data reduces the amount of DASD storage required to store collected data. You do not need to decompress data before using the Unicenter CA-Explore for CICS report writer or utilities.</p> <p>YES Compress data written to the archive and flashback files.</p> <p>NO Do not compress data written to the archive and flashback files.</p>

Option	Default	Description
CONFIG-UPDATE	NO	<p>Specify one of the following to define whether the configuration override member is to be updated at shutdown:</p> <p>YES Update the configuration override member at shutdown. Configuration settings at the time of shutdown will be written to the configuration override member and become permanent.</p> <p>NO Do not update the configuration override member at shutdown.</p>
CONVERT-MS-HHMMSS	1	Specify the limit in minutes after which the format of fields that display clock time is to change from seconds (<i>nnn.nn</i> seconds) to hours, minutes, and seconds (<i>hhmmss</i>). The minimum value is 1; the maximum is 15.
CPU-LONG	.180	<p>Specify the minimum number of seconds, in up to three decimal places, of CPU time a transaction must use to be classified as long.</p> <p>CPU classifications are used for reporting purposes only. Define these classifications based on your site requirements. Use the CPU-MEDIUM and CPU-SHORT options to define medium and short transactions.</p>
CPU-MEDIUM	.060	<p>Specify the maximum number of seconds of CPU time a transaction may use to be classified as medium, with up to three decimal places.</p> <p>Note: A transaction must use an amount of CPU time between the values of CPU-SHORT and CPU-MEDIUM to be classified as medium. Transactions using CPU time equal to or less than the value defined by CPU-SHORT are classified as short.</p> <p>CPU classifications are used for reporting purposes only. Define these classifications based on your installation's requirements.</p> <p>Use the CPU-LONG and CPU-SHORT options to define long and short transactions.</p>

Option	Default	Description
CPU-REAL	YES	<p>Specify one of the following to define the method to be used by Unicenter CA-Explore for CICS to calculate CPU time for each transaction:</p> <p>YES Use real VSE CPU clock time to determine the amount of CPU time used for each transaction.</p> <p>NO Use wall-clock time to determine the amount of CPU time used for each transaction.</p>
CPU-SHORT	.020	<p>Specify the maximum number of seconds of CPU time a transaction can use to be classified as short, with up to three decimal places.</p> <p>CPU classifications are used for reporting purposes only. Define these classifications based on your installation's requirements.</p> <p>Use the CPU-LONG and CPU-MEDIUM options to define long and medium transactions.</p>
DATE-FORMAT	YY/MM/DD	<p>Specify one of the following date formats to be used within Unicenter CA-Explore for CICS:</p> <p>YY/MM/DD Year/Month/Day</p> <p>MM/DD/YY Month/Day/Year</p> <p>DD/MM/YY Day/Month/Year</p> <p>YY-MM-DD Year-Month-Day</p> <p>MM-DD-YY Month-Day-Year</p> <p>DD-MM-YY Day-Month-Year</p> <p>YY.MM.DD Year.Month.Day</p> <p>MM.DD.YY Month.Day.Year</p> <p>DD.MM.YY Day.Month.Year</p>

Option	Default	Description
DUMP-DYNAMIC-GETVIS	NO	<p>Specify one of the following to define whether the IDUMP command can be used to dump the dynamic GETVIS storage area if an abend or program check occurs within Unicenter CA-Explore for CICS:</p> <p>YES Let users dump the dynamic GETVIS storage area.</p> <p>NO Do not let users dump the dynamic GETVIS storage area.</p> <p>The option DUMP-EXTENDED must be set to YES for this option to take effect.</p>
DUMP-EXTENDED	YES	<p>Specify one of the following to define whether the IDUMP command can be used to dump additional system information:</p> <p>YES Allow users to dump additional system information.</p> <p>NO Do not allow users to dump additional system information.</p> <p>This option must be set to YES for the following configuration options to take effect:</p> <p>DUMP-DYNAMIC-GETVIS DUMP-IGNORE-JCL DUMP-SUPERVISOR DUMP-SUPERVISOR-CBS DUMP-SVA DUMP-SYSTEM-GETVIS DUMP-USER-PARTITION</p>
DUMP-IGNORE-JCL	YES	<p>Specify one of the following to define whether the IDUMP command can be used to dump storage even if the JCL has an option (NODUMP) requesting that no dump be taken:</p> <p>YES Allow users to dump storage even if the JCL includes the NODUMP option.</p> <p>NO Do not allow users to dump storage if the JCL includes the NODUMP option.</p> <p>The option DUMP-EXTENDED must be set to YES for this option to take effect.</p>

Option	Default	Description
DUMP-SEGMENT	YES	<p>Specify one of the following to define whether the IDUMP command can be used to segment output after a dump:</p> <p>YES Allow users to segment output after a dump.</p> <p>NO Do not allow users to segment output after a dump.</p> <p>The option DUMP-EXTENDED must be set to YES for this option to take effect.</p>
DUMP-SUPERVISOR	NO	<p>Specify one of the following to define whether the IDUMP command can be used to dump the supervisor storage area if an abend or program check occurs within Unicenter CA-Explore for CICS:</p> <p>YES Allow users to dump the supervisor storage area.</p> <p>NO Do not allow users to dump the supervisor storage area.</p> <p>The option DUMP-EXTENDED must be set to YES for this option to take effect.</p>
DUMP-SUPERVISOR-CBS	YES	<p>Specify one of the following to define whether the IDUMP command can be used to dump the SUPERVISOR control blocks if an abend or program check occurs within Unicenter CA-Explore for CICS:</p> <p>YES Allow users to dump the SUPERVISOR control blocks.</p> <p>NO Do not allow users to dump the SUPERVISOR control blocks.</p> <p>The option DUMP-EXTENDED must be set to YES for this option to take effect.</p>

Option	Default	Description
DUMP-SVA	NO	<p>Specify one of the following to define whether the IDUMP command can be used to dump the SVA storage area if an abend or program check occurs within Unicenter CA-Explore for CICS:</p> <p>YES Allow users to dump the SVA storage area.</p> <p>NO Do not allow users to dump the SVA storage area.</p> <p>The option DUMP-EXTENDED must be set to YES for this option to take effect.</p>
DUMP-SYSTEM-GETVIS	NO	<p>Specify one of the following to define whether the IDUMP command can be used to dump the SYSTEM GETVIS storage area if an abend or program check occurs within Unicenter CA-Explore for CICS:</p> <p>YES Allow users to dump the SYSTEM GETVIS storage area.</p> <p>NO Do not allow users to dump the SYSTEM GETVIS storage area.</p> <p>The option DUMP-EXTENDED must be set to YES for this option to take effect.</p>
DUMP-USER-PARTITION	NO	<p>Specify one of the following to define whether the IDUMP command can be used to dump the USER PARTITION storage area if an abend or program check occurs within Unicenter CA-Explore for CICS:</p> <p>YES Allow users to dump the USER PARTITION storage area.</p> <p>NO Do not allow users to dump the USER PARTITION storage area.</p> <p>The option DUMP-EXTENDED must be set to YES for this option to take effect.</p>

Option	Default	Description
EXPC594-IGNORE	NO	Specify one of the following to define whether to suppress the 'EXPC594 Security Error' message. YES The message will be suppressed. NO The message will not be suppressed, and will appear on the VSE console.
EXPC596-IGNORE	NO	Specify one of the following to define whether to suppress the 'EXPC596 Undefined Resource' message. YES The message will be suppressed. NO The message will not be suppressed, and will appear on the VSE console.
EXPC-QUIESCED	NO	Specify YES to quiesce Unicenter CA-Explore for CICS. Unicenter CA-Explore for CICS must be recycled for this parameter to take affect.
EXPCARC-INTERVAL-DATA	YES	Specify one of the following to define whether INTERVAL data records collected by the system data collection function are to be written to the Unicenter CA-Explore for CICS archive file: YES Write INTERVAL data records to the archive file. NO Do not write INTERVAL data records to the archive file.
EXPCARC-PERFORMANCE-PRI	YES	Specify one of the following: YES Log detailed transaction records to the archive file during primary monitoring. These are performance records. NO Do not log detailed transaction records to the archive file during primary monitoring. No performance information will be available.

Option	Default	Description
EXPCARC- PERFORMANCE-SEC	YES	Specify one of the following:
		YES Log detailed transaction records to the archive file during secondary monitoring. These are performance records.
		NO Do not log detailed transaction records to the archive file during secondary monitoring. No performance information will be available.
EXPCARC-THRESHOLD	YES	Specify one of the following:
		YES Log threshold records to the archive file at system intervals. This is a system record.
		NO Do not log threshold records to the archive file.
EXPCARC-VSAM	YES	Specify one of the following:
		YES Log VSAM file statistic records to the archive file at system intervals. This is a system record.
		NO Do not log VSAM file statistic records to the archive file.
EXPCFBK-INTERVAL- DATA	YES	Specify one of the following to define whether INTERVAL data records collected by the system data collection function are to be written to the Unicenter CA-Explore for CICS flashback file:
		YES Write INTERVAL data records to the flashback file.
		NO Do not write INTERVAL data records to the flashback file.
EXPCFBK- PERFORMANCE-PRI	YES	Specify one of the following:
		YES Log detailed transaction records to the flashback file during primary monitoring. These are performance records.
		NO Do not log detailed transaction records to the flashback file during primary monitoring. No performance information will be available.

Option	Default	Description
EXPCFBK- PERFORMANCE-PRI	YES	Specify one of the following: YES Log detailed transaction records to the flashback file during secondary monitoring. These are performance records. NO Do not log detailed transaction records to the flashback file during secondary monitoring. No performance information will be available.
EXPCFBK-THRESHOLD	YES	Specify one of the following: YES Log threshold records to the flashback file at system intervals. This is a system record. NO Do not log threshold records to the flashback file.
EXPCFBK-VSAM	YES	Specify one of the following: YES Log VSAM file statistic records to the flashback file at system intervals. This is a system record. NO Do not log VSAM file statistic records to the flashback file.

Option	Default	Description
FLASHBACK-SCREEN	0	Specify one of the following values to define the default panel to be displayed by the FLASHBACK command: 0 DEFAULT 1 ANALYSIS 2 CLOCKS 3 COUNTERS 4 THRESHOL 5 PROGRAMS 6 STORAGE 7 FILE 8 FILETIME 9 FILECNT 10 FILEWAIT 11 DLITIME 12 DLIIO 13 DLICNT15 15 TEMPSTOR 16 TEMPCNT 17 TDATA 18 COMMAND 19 EXITRSCS 20 IRC 21 ISC 22 JOURNAL 23 SECURITY 24 TABLEMGR 25 USEREXIT 26 WAITS 27 UMBRELLA 28 OVERHEAD 29 TIMES

Option	Default	Description
INITIAL-COMMAND	MENU	Specify the initial command to be executed upon entry to Unicenter CA-Explore for CICS. If external security is being used, this option is overridden and the LOGON panel is the first panel displayed.
INITIAL-OPTION	None	Specify the operands, if any, to be included with the command specified by the INITIAL-COMMAND option.
I/O-LONG	48	<p>Specify the minimum number of I/Os that must be made by a transaction for it to be classified as a long transaction. The minimum value is 1.</p> <p>I/O classifications are used for reporting purposes only. Define these classifications based on your installation requirements.</p> <p>Use the I/O-MEDIUM and I/O-SHORT options to define the medium and short I/O classifications.</p>
I/O-MEDIUM	10	<p>Specify the maximum number of I/Os that must be made by a transaction for it to be classified as a medium transaction. The minimum value is 1.</p> <p>Note: The number of I/Os a transaction makes must be between the values of I/O-SHORT and I/O-MEDIUM for the transaction to be classified as medium. Transactions making a number of I/Os equal to or less than the value defined by I/O-SHORT are classified as short.</p> <p>I/O classifications are used for reporting purposes only. Define these classifications based on your installation's requirements.</p> <p>Use the I/O-LONG and I/O-SHORT options to define the long and short I/O classifications.</p>

Option	Default	Description
I/O-SHORT	5	<p>Specify the maximum number of I/Os that must be made by a transaction for it to be classified as a short transaction. The minimum value is 1.</p> <p>I/O classifications are used for reporting purposes only. Define these classifications based on your installation's requirements.</p> <p>Use the I/O-LONG and I/O-MEDIUM options to define the long and medium I/O classifications.</p>
LOGON-REQUIRED	NO	<p>Specify one of the following to define whether users are to be required to log on to Unicenter CA-Explore for CICS using a user ID. This option does not force users to enter a password (see the SECURITY option); rather, it is used to associate a user ID with a session or to use a predefined profile.</p> <p>YES Require users to log on to Unicenter CA-Explore for CICS using a user ID.</p> <p>NO Do not require users to log on to Unicenter CA-Explore for CICS using a user ID.</p>
MAPS-INITIALIZE	YES	<p>Specify one of the following to define whether a list of DSECTs or control block maps is loaded at initialization:</p> <p>YES Load a list of DSECTs or control block maps at initialization.</p> <p>NO Do not load a list of DSECTs or control block maps at initialization.</p> <p>These maps are used to display storage in a control block format. Control block maps or DSECTs can be loaded dynamically online using the MAPUTIL command.</p>

Option	Default	Description
MAPS-MEMBER	\$MAPS	<p>Specify the name of a member containing a list of members that will load DSECTs or control block maps at initialization.</p> <p>The members listed in the member specified by this option refer to members named <i>member.M</i> in the Unicenter CA-Explore for CICS product library. At initialization, each member loads DSECTs or control block maps.</p> <p>If you specify the member name in the form <i>name??</i>, Unicenter CA-Explore for CICS will automatically replace ?? with the ID of each partition. For example, if you specify MAPS-MEMBER=\$MAPS??, Unicenter CA-Explore for CICS will automatically use member \$MAPSA1.P to define security for partition A1, member \$MAPSA2.P for partition 2, and so on. If a member with the name generated by Unicenter CA-Explore for CICS does not exist for a partition, member \$MAPS.P is used by default.</p> <p>The recommended maps to put in the MAPS-MEMBER member are listed next.</p> <p>If you are setting up the member for a CICS/TS system on VSE/ESA 2.4, use the following default maps:</p> <pre data-bbox="704 1024 1211 1094"> MVSE24 /* VSE/ESA 2.4 Control Blocks MCICS41 /* CICS/TS Control Blocks MAPSEXPC /* EXPC 6.8 Control Blocks </pre> <p>If you are setting up the member for a CICS 2.3 system on VSE/ESA 2.4, use the following maps:</p> <pre data-bbox="704 1192 1211 1262"> MVSE24 /* VSE/ESA 2.4 Control Blocks MCICS23 /* CICS 2.3 Control Blocks MAPSEXPC /* EXPC 6.8 Control Blocks </pre> <p>If you are setting up the member for a CICS 2.3 system on VSE/ESA 2.3, use the following maps:</p> <pre data-bbox="704 1360 1211 1430"> MVSE24 /* VSE/ESA 2.3 Control Blocks MCICS23 /* CICS 2.3 Control Blocks MAPSEXPC /* EXPC 6.8 Control Blocks </pre> <p>You can add these maps to the member so you can map other control blocks for VTAM, VSAM, and DLI:</p> <pre data-bbox="704 1528 1130 1598"> MAPSVSAM /* VSAM Control Blocks MAPSVTAM /* VTAM Control Blocks MAPSDLI /* DL/I Control Blocks </pre>

Option	Default	Description																																				
MULTI-SESSIONS	YES	<p>Specify one of the following to define whether multiple logical sessions can be active on one physical terminal:</p> <p>YES Allow multiple sessions to be active on one physical terminal.</p> <p>NO Do not allow multiple sessions on a physical terminal.</p> <p>Logical sessions are created using the ADDSESS command. The default-session toggle key is F13. Use the MULTI-SESSION-JUMP-KEY option to change this default.</p>																																				
MULTI-SESSIONS-JUMP-KEY	C1	<p>Specify one of the following hexadecimal numbers to define an F key to toggle between multiple logical sessions created using the ADDSESS command:</p> <table border="1"> <thead> <tr> <th>Hex</th> <th>Key</th> <th>Hex</th> <th>Key</th> </tr> </thead> <tbody> <tr> <td>C1</td> <td>F13</td> <td>C9</td> <td>F24</td> </tr> <tr> <td>C2</td> <td>F14</td> <td>4A</td> <td>F21</td> </tr> <tr> <td>C3</td> <td>F15</td> <td>4B</td> <td>F22</td> </tr> <tr> <td>C4</td> <td>F16</td> <td>4C</td> <td>F23</td> </tr> <tr> <td>C5</td> <td>F17</td> <td>6C</td> <td>PA1</td> </tr> <tr> <td>C6</td> <td>F18</td> <td>6E</td> <td>PA2</td> </tr> <tr> <td>C7</td> <td>F19</td> <td>6B</td> <td>PA2</td> </tr> <tr> <td>C8</td> <td>F20</td> <td></td> <td></td> </tr> </tbody> </table> <p>This option requires that the FOLD-PFKEYS option be set to NO and the MULTI-SESSIONS option be set to YES.</p>	Hex	Key	Hex	Key	C1	F13	C9	F24	C2	F14	4A	F21	C3	F15	4B	F22	C4	F16	4C	F23	C5	F17	6C	PA1	C6	F18	6E	PA2	C7	F19	6B	PA2	C8	F20

C6	F18	6E	PA2																																			
C7	F19	6B	PA2																																			
C8	F20																																					
PERFORMANCE-COLLECTION	YES	<p>Specify one of the following:</p> <p>YES Collect performance data about each transaction.</p> <p>NO Do not collect data at the transaction level.</p> <p>About 48K plus 1.5K per concurrent transaction of GETVIS storage is used.</p>																																				
PERFORMANCE-DATA-DB2	NO	<p>Specify one of the following:</p> <p>YES Collect DB2 data about each transaction.</p> <p>NO Do not collect DB2 data at the transaction level.</p>																																				

Option	Default	Description
PERFORMANCE-DATA-DLIFUNC	YES	<p>Specify one of the following:</p> <p>YES Include data collected by function calls in detailed transaction data about DL/I. The collected information is displayed on historical flashback panels. The PERFORMANCE-COLLECTION option must be set to YES for this option to take effect.</p> <p>NO Do not include data collected by function calls in detailed data about DL/I.</p>
PERFORMANCE-DATA-DSA	YES	<p>Specify one of the following:</p> <p>YES Collect detailed transaction data about individual dynamic storage area subpools. The information collected is displayed on the DSA Historical Flashback panel.</p> <p>NO Do not collect detailed transaction data about individual dynamic storage area subpools.</p> <p>The PERFORMANCE-COLLECTION option must be set to YES for this option to take effect.</p>
PERFORMANCE-DATA-EIP	NO	<p>Specify one of the following:</p> <p>YES Collect detailed transaction data about command level call usage. Data will be collected by CICS subsystem, such as TCP or SCP.</p> <p>NO Do not collect detailed transaction data about command-level call usage.</p> <p>The PERFORMANCE-COLLECTION option must be set to YES for this option to take effect.</p>

Option	Default	Description
PERFORMANCE-DATA-EIPCALL	NO	<p>Specify one of the following:</p> <p>YES Collect detailed transaction data about command level call usage. The CICS subsystem collects the data, but the data is broken down into types of calls within each subsystem.</p> <p>NO Do not collect detailed transaction data about command-level call usage.</p> <p>The PERFORMANCE-COLLECTION option and the PERFORMANCE-DATA-EIP option must both be set to YES for this option to take effect.</p>
PERFORMANCE-DATA-EIP	YES	<p>Specify one of the following:</p> <p>YES Collect detailed transaction data about file usage.</p> <p>NO Do not collect detailed transaction data about file usage.</p> <p>The PERFORMANCE-COLLECTION option must be set to YES for this option to take effect.</p>
PERFORMANCE-DATA-JCP	YES	<p>Specify one of the following:</p> <p>YES Collect detailed transaction data about journal usage.</p> <p>NO Do not collect detailed transaction data about journal usage.</p> <p>The PERFORMANCE-COLLECTION option must be set to YES for this option to take effect.</p>
PERFORMANCE-DATA-PCP	YES	<p>Specify one of the following:</p> <p>YES Collect detailed transaction data about program usage.</p> <p>NO Do not collect detailed transaction data about program usage.</p> <p>The PERFORMANCE-COLLECTION option must be set to YES for this option to take effect.</p>

Option	Default	Description
PERFORMANCE-DATA-TCP	YES	<p>Specify one of the following:</p> <p>YES Collect detailed transaction data about terminal usage.</p> <p>NO Do not collect detailed transaction data about terminal usage.</p> <p>The PERFORMANCE-COLLECTION option must be set to YES for this option to take effect.</p>
PERFORMANCE-DATA-TDP	YES	<p>Specify one of the following:</p> <p>YES Collect detailed transaction data about transient data usage.</p> <p>NO Do not collect detailed transaction data about transient data usage.</p> <p>The PERFORMANCE-COLLECTION option must be set to YES for this option to take effect.</p>
PERFORMANCE-DATA-EIP	YES	<p>Specify one of the following:</p> <p>YES Collect detailed transaction data about temporary storage usage.</p> <p>NO Do not collect detailed transaction data about temporary storage usage.</p> <p>The PERFORMANCE-COLLECTION option must be set to YES for this option to take effect.</p>
PERFORMANCE-DATA-WAITS	YES	<p>Specify one of the following:</p> <p>YES Collect detailed transaction data about waits by CICS subsystems. The information collected is displayed on the WAITS Flashback Detail panel.</p> <p>NO Do not collect detailed transaction data about waits by CICS subsystems.</p> <p>The PERFORMANCE-COLLECTION option must be set to YES for this option to take effect.</p>
PERFORMANCE-LOG-CMDLEVEL	YES	<p>Specify one of the following:</p> <p>YES Log command level performance data to the archive and flashback files.</p> <p>NO Do not log command level performance data to the archive and flashback files.</p>

Option	Default	Description
PERFORMANCE-LOG-DLI	YES	Specify one of the following:
		YES Log DL/I performance data to the archive and flashback files.
PERFORMANCE-LOG-DSA	YES	Specify one of the following:
		YES Log storage performance data to the archive and flashback files.
PERFORMANCE-LOG-EXITRSCE	YES	Specify one of the following:
		YES Log exit resource-performance data to the archive and flashback files.
PERFORMANCE-LOG-FILES	YES	Specify one of the following:
		YES Log file performance data to the archive and flashback files.
PERFORMANCE-LOG-JOURNAL	YES	Specify one of the following:
		YES Log journaling performance data to the archive and flashback files.
PERFORMANCE-LOG-PROGRAMS	YES	Specify one of the following:
		YES Log program performance data to the archive and flashback files.
PERFORMANCE-LOG-SECURITY	YES	Specify one of the following:
		YES Log security performance data to the archive and flashback files.

Option	Default	Description
PERFORMANCE-LOG-TABLEMGR	YES	Specify one of the following: YES Log table-manager performance data to the archive and flashback files. NO Do not log table manager data to the archive and flashback files.
PERFORMANCE-LOG-TEMPSTOR	YES	Specify one of the following: YES Log temporary storage performance data to the archive and flashback files. NO Do not log temporary storage performance data to the archive and flashback files.
PERFORMANCE-LOG-THRESHOL	YES	Specify one of the following: YES Log threshold performance data to the archive and flashback files. NO Do not log threshold performance data to the archive and flashback files.
PERFORMANCE-LOG-TRANDATA	YES	Specify one of the following: YES Log transaction performance data to the archive and flashback files. NO Do not log transaction performance data to the archive and flashback files.
PERFORMANCE-LOG-USEREXIT	YES	Specify one of the following: YES Log user-exit performance data to the archive and flashback files. NO Do not log user-exit performance data to the archive and flashback files.
PERFORMANCE-LOG-WAITS	YES	Specify one of the following: YES Log wait performance data to the archive and flashback files. NO Do not log wait performance data to the archive and flashback files.

Option	Default	Description
PERFORMANCE-PRI-START	00:00:00	<p>Specify the start time for the primary detailed transaction monitoring period. The PERFORMANCE-PRI-END option defines the end of the primary detailed transaction-monitoring period. The period outside of the primary collection period is the secondary detailed transaction-monitoring period.</p> <p>The minimum value you can specify is 00:00:00; the maximum is 23:59:59.</p> <p>Use the PERFORMANCE-PRI-PCT and PERFORMANCE-SEC-PCT options to define the percentage of data collection during primary and secondary collection periods.</p> <p>For example, to monitor only the period from 8 A.M. to 5 P.M., you would specify the following option settings:</p> <pre>PERFORMANCE-PRI-BEGIN=08:00:00 PERFORMANCE-PRI-END=17:00:00 PERFORMANCE-PRI-PCT=100 PERFORMANCE-SEC-PCT=0</pre>
PERFORMANCE-PRI-END	24:00:00	<p>Specify the end time for the primary detailed transaction-monitoring period. The PERFORMANCE-PRI-BEGIN option defines the start of the primary detailed transaction-monitoring period. The period outside of the primary collection period is the secondary detailed transaction-monitoring period.</p> <p>The minimum value you can specify is 00:00:01; the maximum is 23:59:59.</p> <p>Use the PERFORMANCE-PRI-PCT and PERFORMANCE-SEC-PCT options to define the percentage of data collection during primary and secondary collection periods.</p> <p>For example, to monitor only the period from 8 A.M. to 5 P.M., you would specify the following option settings:</p> <pre>PERFORMANCE-PRI-BEGIN=08:00:00 PERFORMANCE-PRI-END=17:00:00 PERFORMANCE-PRI-PCT=100 PERFORMANCE-SEC-PCT=0</pre>

Option	Default	Description
PERFORMANCE-PRI-PCT	100	<p>Specify the percentage of detailed transaction data collection to be performed during the primary detailed transaction monitoring period. The primary monitoring period is defined using the PERFORMANCE-PRI-BEGIN and PERFORMANCE-PRI-END options.</p> <p>The minimum value you can specify is 0; the maximum is 100.</p> <p>Example: Suppose the performance interval is 5 minutes. If you specify PERFORMANCE-PRI-PCT=70, then the following will occur:</p> <ul style="list-style-type: none"> ■ During the first 3.5 minutes (70 percent) of each 5-minute performance interval, information is collected and logged. ■ During the remaining 1.5 minutes (30 percent), the system is monitored for thresholds only.
PERFORMANCE-SEC-PCT	100	<p>Specify the percentage of detailed transaction data collection to be performed during the secondary detailed transaction monitoring period. This is the period outside the range of time defined by the PERFORMANCE-PRI-BEGIN and PERFORMANCE-PRI-END options.</p> <p>The minimum value you can specify is 0; the maximum is 100.</p> <p>Example: Suppose the performance interval is 5 minutes. If you specify PERFORMANCE-SEC-PCT=80, then the following will occur:</p> <ul style="list-style-type: none"> ■ During the first 4 minutes (80 percent) of each 5-minute performance interval, information is collected and logged. ■ During the remaining 2 minutes (20 percent), the system is monitored for thresholds only.

Option	Default	Description
PF01-COMMAND	HELP	For each PF nn -COMMAND option (where nn is the number of an F key), specify a command to override the default value assigned to the F key. For each PF nn -OPTION option, specify an operand of the command assigned to the F key.
PF01-OPTION	None	
PF02-COMMAND	None	
PF02-OPTION	None	
PF04-COMMAND	FLSHBACK	
PF04-OPTION	None	
PF09-COMMAND	AUTO	
PF09-OPTION	None	
PF11-COMMAND	None	
PF11-OPTION	None	
PF12-COMMAND	SYSTEM	
PF12-OPTION	None	
PF13-COMMAND	Same as default settings for corresponding keys F1 through F12	For each option PF nn -COMMAND (where nn is the number of an F key), specify a command to be assigned to the F key.
PF13-OPTION		For each option PF nn -OPTION, specify an option to be added to the command assigned to the F key. You can assign commands and options for each of the F keys F13 through F24.
.		
.		
.		
PF24-COMMAND		
PF24-OPTION		
PLOTLIST-DEFAULT	DEFAULTS	Specify the default plot list for all users. This plot list is used to build plot parameters if a plot list is not specified with the PLOT command.
PROGRAM-COMPRESSION	YES	Specify one of the following to define whether the Unicenter CA-Explore for CICS program storage manager is to compress storage to maintain the limit specified with the PROGRAM-STORAGE option. Compressing storage will reduce the amount of GETVIS used. YES Compress storage to maintain the limit specified with the PROGRAM-STORAGE option. NO Do not compress storage to maintain the limit specified with the PROGRAM-STORAGE option.
PROGRAM-FETCH-PCT	25	Specify the percentage of time that a program must be fetched to run. The percentage is calculated by multiplying the number of fetches by 100 and dividing the result by the number of times the program is used. This option sets a limit that is used by the PROGRAMS command, which displays information about programs that exceed this limit. The minimum value for this option is 0; the maximum is 100.

Option	Default	Description
PROGRAM-WASTE-PCT	90	Specify the percentage of storage that is not used in the last page of program storage for each program. This option sets a limit that is used by the PROGRAMS command, which displays information about those programs that exceed this limit.
PROGRAM-STORAGE-GETVIS24	0	Specify the number of bytes of 24-bit GETVIS that Unicenter CA-Explore for CICS can use for program storage. The minimum value is 0. The option PROGRAM-COMPRESSION must be set to YES for this option to take effect.
PROGRAM-STORAGE-GETVIS31	1024000	Specify the number of bytes of 31-bit GETVIS that Unicenter CA-Explore for CICS can use for program storage. The minimum value is 0. The option PROGRAM-COMPRESSION must be set to YES for this option to take effect.
RESPTIME-IGNORE8	YES	RESPTIME-IGNORE8 is the label of the response time group (bucket) assigned to hold all response times greater than the value defined by RESPTIME-VALUE7. Specify YES to exclude all transactions with response times greater than the value of RESPTIME-VALUE7 from being used to calculate average response times. Specify NO to include transactions with response times greater than the value of RESPTIME-VALUE7 in calculating average response times.
RESPTIME-VALUE1	0.5	Specify values to define seven response time groups (or buckets). The command RESPTIME can be used to display the number and percentage of transactions with response times falling within each range. Specify the value in seconds, with up to one decimal place.
RESPTIME-VALUE2	1.0	
RESPTIME-VALUE3	2.0	
RESPTIME-VALUE4	3.0	
RESPTIME-VALUE5	4.0	
RESPTIME-VALUE6	5.0	
RESPTIME-VALUE7	10.0	
REVIEW-TIME	15	Specify the interval, in minutes, at which statistics displayed by the REVIEW command are to be updated.
SCREEN-SIZE-MAX	YES	Specify one of the following to define whether Unicenter CA-Explore for CICS is to dynamically choose the largest screen size available for a terminal when an alternate screen size is available: YES Display the largest screen size available. NO Do not display the largest screen size available.

Option	Default	Description
SCROLL-VALUE	DATA	<p>Specify one of the following to indicate the default number of lines to be scrolled for all users:</p> <p>HALF Scroll 1/2 page.</p> <p>DATA Scroll one page less one line.</p> <p>PAGE Scroll one page.</p> <p><i>nnnn</i> Scroll <i>nnnn</i> lines. The minimum value is 1.</p> <p>Each user can override this default for his or her session.</p>
SECURE-COMMANDS	NO	<p>Specify one of the following to define whether external security is to be invoked to authorize the use of secured commands:</p> <p>YES Invoke external security to authorize use of secured commands.</p> <p>NO Do not invoke external security to authorize use of secured commands.</p> <p>Note: This option requires that the SECURITY option be set to YES.</p>
SECURE-MEMBER	\$SCTY	<p>Specify the name of the Unicenter CA-Explore for CICS product library member to be used to build the internal security table call to authorize logons and command usage. A default security table (\$SCTY.P) is provided. This option requires that the SECURITY option be set to YES.</p> <p>If you specify the member name in the form name??, Unicenter CA-Explore for CICS will automatically replace ?? with the ID of each partition. For example, if you specify SECURE-MEMBER=\$SCTY??, Unicenter CA-Explore for CICS will automatically use member \$SCTYA1.P to define security for partition A1, member \$SCTYA2.P for partition A2, and so on. If a member with the name generated by Unicenter CA-Explore for CICS does not exist for a partition, member \$SCTY.P is used by default.</p>
SECURE-MODULE	ECDISCTY	<p>Specify the name of the default external security module. This module is called to validate security functions.</p> <p>If you use ALERT for VSE as the external security monitor, the name of the security module must be ECDIALRT.</p>

Option	Default	Description
SECURITY	NO	<p>Specify one of the following to define whether users attempting to log on to Unicenter CA-Explore for CICS must enter a user ID and a password to be verified by an external security product:</p> <p>YES Require users to enter a user ID and a password when logging on to Unicenter CA-Explore for CICS. If you have ALERT for CICS, see the chapter titled “Using Unicenter CA-Explore Performance Management for CICS” for more information.</p> <p>NO Do not require users to enter a user ID and a password to log on to Unicenter CA-Explore for CICS.</p>
SNAP-SIZE	1024	Specify the number of bytes of storage to be dumped when the SNAP command is issued. The minimum value is 256.
SYSTEM-DATA-COLLECTION	YES	<p>Specify one of the following:</p> <p>YES Activate collection of system data. System data is collected at the interval defined by the SYSTEM-INTERVAL-ROCS option.</p> <p>NO Do not activate collection of system data.</p>
SYSTEM-INTERVAL	10	<p>Specify the number of minutes in the system data collection interval. System data is collected once during each interval.</p> <p>Valid values are 1, 2, 3, 4, 5, 10, 15, 20, 30, and 60.</p> <p>If SYSTEM-INTERVAL- is YES, specify 5.</p>
SYSTEM-INTERVAL-DATA	YES	<p>Specify one of the following:</p> <p>YES Activate collection of system interval data for the partition.</p> <p>NO Do not activate collection of system interval data.</p>
SYSTEM-INTERVAL-ROCS	NO	<p>Specify one of the following to pass system interval data to CICS data collection agent. This option requires that the SYSTEM-INTERVAL option be set to 5 and that the SYSTEM-DATA-COLLECTION option be set to YES.</p> <p>YES Pass system interval data to CICS data collection agent.</p> <p>NO Do not pass data to CICS data collection agent.</p>

Option	Default	Description
SYSTEM-TASKS-EXCLUDE	NO	Specify the interval in minutes, from 0 to 15, at which the CICS system transactions (KCP, TCP, and so on) are to be sampled. To prevent logging the CICS system transactions, specify 0 (zero).
SYSTEM-TASK-SAMPLE	5	Specify the interval, in minutes, at which the CICS system transactions (KCP, TCP, and so on) are to be sampled. To prevent logging the CICS system transactions, specify 0.
SYSTEM-VSAM	YES	Specify one of the following: YES Activate collection of system data about VSAM files. Data collected is displayed on the VSAMSTATS panel. If the option SYSTEM-DATA-COLLECTION is set to YES, this data is also displayed on the VSAM System Data Collection panel and is logged to the archive and flashback files. NO Do not activate collection of system data about VSAM files. GETVIS Considerations: <ul style="list-style-type: none"> ■ 4K plus 76 bytes per active file opened of GETVIS is required ■ The maximum number of files is 1016 ■ Each 1K block can store 248 entries
THRESHOLD-DYNAMIC	YES	Specify one of the following: YES Process dynamic task thresholds. Dynamic thresholds are checked each time a task is dispatched. NO Do not process dynamic task thresholds.

Option	Default	Description
THRESHOLD-LOAD-ZERO	NO	<p>At initialization, Unicenter CA-Explore for CICS loads the thresholds defined in the threshold source member for each partition. This option lets you specify whether to load thresholds with a limit value equal to zero. Each entry loaded into GETVIS storage takes 128 bytes, and overhead is required to check each entry. Specify one of the following:</p> <p>YES Load thresholds with a limit value equal to zero.</p> <p>NO <i>Do not</i> load thresholds with a limit value equal to zero.</p> <p>If you want some thresholds loaded even if their limit value is zero, create a threshold source member with all the thresholds you want to be loaded (including those with limit values of zero) and specify YES for this option.</p>
THRESHOLD-MEMBER	\$THRSH	<p>Specify the name of the source member that lists the thresholds to be monitored.</p> <p>Each threshold entry having a limit other than 0 uses 128 bytes of GETVIS storage to be loaded.</p> <p>Note: If you specify the member name in the form name??, Unicenter CA-Explore for CICS will automatically replace ?? with the ID of each partition. For example, if you specify THRESHOLD-MEMBER=\$THRSH??, Unicenter CA-Explore for CICS will automatically use member \$THRSHA1.P to define ARTM functions for partition A1, member \$THRSHA2.P for partition A2, and so on. If a member with the name generated by Unicenter CA-Explore for CICS does not exist for a partition, member \$THRSH.P is used by default.</p>
THRESHOLD-SYSTEM	YES	<p>Specify one of the following:</p> <p>YES Process system thresholds. Thresholds are checked every 30 seconds.</p> <p>NO Do not process system thresholds.</p>
THRESHOLD-TASK-END	YES	<p>Specify one of the following:</p> <p>YES Process end-of-task thresholds. End-of-task thresholds, including dynamic thresholds, are checked at task termination.</p> <p>NO Do not process end-of-task thresholds.</p>

Option	Default	Description
THRESHOLD-UPDATE	NO	Specify one of the following to define whether the threshold override member is to be updated at shutdown: YES Update the threshold override member at shutdown. Threshold settings at the time of shutdown will be written to the threshold override member and become permanent. NO Do not update the threshold override member at shutdown.
THRESHOLD-UPDATE-MEMBER	\$THRSH??	Specify the name of the Unicenter CA-Explore for CICS product library to be updated by the THRESHOLD UPDATE command if a member name is not specified with the command. If you do not specify a member name for this option, the member specified by the THRESHOLD-MEMBER option is used by default.
TRANKILL-CODE	GSIK	Specify the abend code to be used when a transaction is canceled through Unicenter CA-Explore for CICS.
TRANSACTION-SUMMARY	YES	Transaction summary information data is to be collected.
TRANSACTION-SUMMARY-INTV	1	Specifies the time interval, in seconds, for the collection of transaction summary information. This option requires TRANSACTION-SUMMARY=YES.
TSQUEUE-STATISTICS	YES	Specify one of the following to define whether temporary storage information is to be collected showing creation information about each queue: YES Collect temporary storage information showing creation information about each queue. NO Do not collect temporary storage information showing creation information about queues.
UMBRELLA-MAX-COUNT	125	Specify the maximum number of umbrella transactions that can be defined.

Option	Default	Description
UMBRELLA-MEMBER	\$UMBRELA	<p>Specify the name of the source member that lists the umbrella transactions to be monitored.</p> <p>If you specify the member name in the form name??, Unicenter CA-Explore for CICS will automatically replace ?? with the ID of each partition. For example, if you specify UMBRELLA-MEMBER=\$UMBRE??, Unicenter CA-Explore for CICS will automatically use member \$UMBREA1.P to define ARTM functions for partition A1, member \$UMBREA2.P for partition A2, and so on. If a member with the name generated by Unicenter CA-Explore for CICS does not exist for a partition, member \$UMBRELA.P is used by default.</p>
UMBRELLA-TRAN-GENERIC	NO	<p>Specify one of the following:</p> <p>YES Allow umbrella transactions to be specified using generic characters. Umbrella transactions are displayed on the UMBRELLA panel.</p> <p>NO Do not allow umbrella transactions to be specified using generic characters.</p>
VSE-ID	None	<p>Specify the name of the VSE machine on which Unicenter CA-Explore for CICS with VSE is running. If the machine is running under VM, this value is extracted automatically. If the machine is running native, Unicenter CA-Explore for CICS with VSE uses the value specified.</p>
VSTATUS-COLLECTION	YES	<p>Specify one of the following:</p> <p>YES Activate real-time data collection. Real-time information will be collected for tabular or graphical presentation. The VSTATUS command can be used to display this information.</p> <p>NO Do not activate real-time data collection.</p> <p>Each VSTATUS entry takes 512 bytes of GETVIS storage for plot definition. Data is collected for the interval defined by the VSTATUS-TOTAL-INTERVAL option.</p>

Option	Default	Description
VSTATUS-MEMBER	\$VSTATUS	<p>Specify the name of the variable status collection member containing a list of variable and resource names. Unicenter CA-Explore for CICS will use the list in this member to determine the data to be collected.</p> <p>Each VSTATUS entry takes 512 bytes of GETVIS storage for plot definition. Data is collected for the preceding hour, in one-minute intervals.</p> <p>Note: If you specify the member name in the form name??, Unicenter CA-Explore for CICS will automatically replace ?? with the ID of each partition. For example, if you specify VSTATUS-MEMBER=\$VSTAT??, Unicenter CA-Explore for CICS will automatically use member \$VSTATA1.P to define variables and resources for partition A1, member \$VSTATA2.P for partition A2, and so on. If a member with the name generated by Unicenter CA-Explore for CICS does not exist for a partition, member \$VSTAT.P is used by default.</p>
VSTATUS-TOTAL-INTERVAL	1	<p>Specify the variable status data collection interval, in hours. Data for each interval is presented in 60 segments, regardless of the length of the interval. For example, if the interval is 1 hour, each segment is 1 minute; if the interval is 4 hours, each segment is 4 minutes.</p> <p>The amount of storage and overhead required is the same regardless of the length of the interval.</p>
VTAM-APPLID	None	<p>Specify the name of the VTAM applid used to communicate with Unicenter CA-Explore for CICS with VSE from other Unicenter CA-Explore for CICS partitions or other CA products.</p> <p>Note: This parameter used to be defined in the MIT.</p>
XMONITOR-ACTIVE	YES	<p>Specify one of the following:</p> <p>YES Activate the XMONITOR function, which monitors all partitions for problems. The XMONITOR panel displays the status of all partitions in the system.</p> <p>NO Do not activate the XMONITOR function.</p>

Option	Default	Description
XMONITOR-GLOBAL-ALARM	NO	<p>Specify one of the following to define where messages indicating that a problem has been detected will appear. Problem conditions exist when a threshold limit is violated or when the warning percentage of a threshold is exceeded.</p> <p>YES Issue a message on all panels when a problem is detected.</p> <p>NO Issue a message on only the XMONITOR panel when a problem is detected.</p>
XMONITOR-MEMBER	\$XMON	<p>Specify the name of the member containing a list of variables to be monitored by the XMONITOR function.</p> <p>If you specify the member name in the form name??, Unicenter CA-Explore for CICS will automatically replace ?? with the ID of each partition. For example, if you specify XMONITOR-MEMBER=\$XMON??, Unicenter CA-Explore for CICS will automatically use member \$XMONA1.P to define variables for partition A1, member \$XMONA2.P for partition A2, and so on. If a member with the name generated by Unicenter CA-Explore for CICS does not exist for a partition, member \$XMON.P is used by default.</p>

Performance Thresholds

A performance threshold is a level of usage of a resource. You set a threshold parameter to indicate the level you do not want usage to exceed or fall below. This chapter explains how to set thresholds for system resources to better monitor performance.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

Understanding Thresholds

Thresholds are divided into the following types:

- End-of-task
- Dynamic task
- System

Any variable can be used as a threshold. See the appendix “Variables” for descriptions of all variables.

You can specify a threshold value as a maximum or minimum level of usage. When a resource’s level of usage exceeds the maximum, or falls below the minimum value you set, the threshold is triggered. When a threshold is triggered, the following events occur:

- The THRESHOL panel displays when, how many times, and at what level of usage a resource triggered the threshold.
- A record is logged to the flashback and archive files (optional).
- A message is sent to the operator console (optional).

Using Threshold Override Members

When setting thresholds, you can:

- Set permanent thresholds in one or more threshold override members in the Unicenter CA-Explore for CICS product library.
- Create multiple threshold override members to set different thresholds for each CICS partition.
- Use one threshold override member for all CICS partitions. The member \$THRSH.P is the default threshold table member. This threshold table can be shared by all CICS partitions.

Creating Override Members for Multiple CICS Partitions

You can create threshold override members to define different thresholds for each partition. Any partition for which you do not create a specific threshold override member uses the threshold settings specified in \$THRSH.P.

To create separate override members, use the following steps:

Step	Action
1	<p>Copy and rename \$THRSH.P to create a new member in the Unicenter CA-Explore for CICS product library.</p> <p>If you have a separate configuration option member for each partition, the name of the threshold override member for a partition must be the same as the name defined by the THRESHOLD-MEMBER option in the configuration option member for that partition.</p> <p>If you have a single configuration option member that defines options for all partitions, the following rules apply:</p> <ul style="list-style-type: none"> ■ If the THRESHOLD-MEMBER configuration option is set to <i>name??</i>, the name of the threshold override member must be in the form <i>nameid.P</i>, where <i>name</i> is the same in both places and <i>id</i> is the ID of the partition to which the threshold override member applies. For example, if the configuration option is THRESHOLD-MEMBER=\$THRSH??, then the name of the threshold override member for partition A4 must be \$THRSHA4.P. ■ If the THRESHOLD-MEMBER option is set to <i>name??</i> and a threshold override member with the name <i>nameid.P</i> is not found for a partition, threshold override member \$THRSH.P is used.
2	Set threshold definitions for the partition.
3	Save the new member. The new threshold definitions will take effect when Unicenter CA-Explore for CICS is reinitialized.

Monitoring Thresholds

You can monitor, on any of the following panels, which thresholds have been triggered:

- **THRESHOL panel** – Displays the number of times each threshold has been triggered and the resource and threshold value that last triggered it. This panel also shows the thresholds that are currently in effect. See the next section for more information.
- **THRESHOL Historical Flashback panel** – Displays information from the threshold records in the flashback files. See the chapter titled “/HISTORY Menu Options” for a description of the panel.
- **XMONITOR panel** – Displays a summary of the status of all systems, including a field that indicates whether any thresholds are approaching the limit or have been triggered. See the chapter titled “/PROBLEM Menu Options” for a description of the panel.

Using the THRESHOL Panel

The THRESHOL panel displays the threshold definitions currently in effect. If no thresholds have been changed since Unicenter CA-Explore for CICS was initialized, the thresholds shown are the same as those set in the threshold override member.

Menu Access

Cursor-select the THRESHOL option from the Unicenter CA-Explore for CICS Main menu.

Command Access

Enter **THRESHOL** on the command line of any Unicenter CA-Explore for CICS panel.

Sample Panel

```

Panel Field Descriptions

Field	Description										
Name	Threshold name.										
Resource	<p>Resource to be monitored for the threshold. System thresholds have a resource defined as \$SYSTEM\$. A transaction ID appears in this field for other types of thresholds.</p> <p>The second Resource field specifies a second resource to be monitored. This field can be a terminal ID, a filename, or other resource, depending on the threshold.</p>										
Limit	Threshold limit value. If the Class shows the word Time, the limit value is in milliseconds. A limit value of zero deactivates the threshold. Overtyping this value to change it.										
Pct	Percentage of the threshold limit value at which you want a warning to be issued. On color monitors, the warning condition is indicated when the color in which the threshold is displayed changes to yellow; on monochrome monitors, the word Warning appears. A warning indicates that a percentage of the threshold limit value has been reached, <i>not</i> that the threshold has been triggered. Overtyping this value to change it.										
Count	Number of times the threshold was triggered.										
Class	<p>Threshold class, as follows:</p> <table border="0"> <tr> <td>Count</td> <td>The limit is a number of occurrences.</td> </tr> <tr> <td>Time</td> <td>The limit is a length of time.</td> </tr> <tr> <td>Pct</td> <td>The limit is a percentage.</td> </tr> <tr> <td>%</td> <td>The limit is a percentage.</td> </tr> <tr> <td>Rate</td> <td>The limit is a rate per second.</td> </tr> </table>	Count	The limit is a number of occurrences.	Time	The limit is a length of time.	Pct	The limit is a percentage.	%	The limit is a percentage.	Rate	The limit is a rate per second.
Count	The limit is a number of occurrences.										
Time	The limit is a length of time.										
Pct	The limit is a percentage.										
%	The limit is a percentage.										
Rate	The limit is a rate per second.										
Type	<p>Threshold type, as follows:</p> <table border="0"> <tr> <td>Upper</td> <td>Upper limit: the threshold is triggered when the Limit value is exceeded.</td> </tr> <tr> <td>Lower</td> <td>Lower limit: the threshold is triggered when a value below the Limit value is detected.</td> </tr> </table>	Upper	Upper limit: the threshold is triggered when the Limit value is exceeded.	Lower	Lower limit: the threshold is triggered when a value below the Limit value is detected.						
Upper	Upper limit: the threshold is triggered when the Limit value is exceeded.										
Lower	Lower limit: the threshold is triggered when a value below the Limit value is detected.										

Field	Description
Int	When the threshold is to be checked, as follows: END Check threshold at task end. DYN Check threshold dynamically each time a transaction is dispatched. SYS Check at system intervals, as defined by the SYSTEM-INTERVAL configuration option. Overtyp e this value to change it.
Can	Whether to cancel or suspend the task if the threshold is triggered, as follows: Yes Cancel the task. No Do not cancel the task. Sus Suspend the task. Overtyp e this value to change it.
Msg	Whether to issue a message if the threshold is triggered, as follows: Yes Issue a message to the console. No Do not issue a message. Overtyp e this value to change it.
Log	Whether to log the threshold if it is triggered, as follows: Yes Log the threshold to the archive and flashback files. No Do not log the threshold. Overtyp e this value to change it.

Displaying Additional Fields

Additional fields you can display by pressing F10 are as follows:

Field	Description
Post	Action to take if the threshold is triggered, as follows: Yes Post an event to FAQs/ASO or FAQs/PCS. The default event name is the threshold name. No Take no action. Cmd Issue the command specified in the Event field.
Event	Name of the event to process if the threshold is triggered. If the value in the Post field is <i>Yes</i> , the event is posted to FAQs/ASO or FAQs/PCS. The default event name is the threshold name. If the value in the Post field is <i>Cmd</i> , the value in the Event field is issued as a command. The following are the valid commands that can appear in this field: FREEZE Stops execution of CICS. TASKSUSP Suspends the transaction (CICS 2.3 only).
Value	Value last triggering the threshold
Resource	Resource last triggering the threshold
Count	Number of times the threshold has been triggered
Time	Time the threshold was last triggered
Term	Terminal last triggering the threshold
Tran	Transaction last triggering the threshold
Task#	Task number last triggering the threshold

Setting Thresholds

You can set performance thresholds using any or all of the following:

- **Threshold override members** – These members are in the Unicenter CA-Explore for CICS product library. The thresholds you set here are permanent.
- **THRESHOL panel** – The thresholds you set here remain in effect until Unicenter CA-Explore for CICS is reinitialized.
- **THRESHol ADD command** – The thresholds you set here remain in effect until Unicenter CA-Explore for CICS is reinitialized.

The thresholds you set in the threshold table member take effect when Unicenter CA-Explore for CICS is reinitialized.

Note: The thresholds you set from the THRESHOL panel, or by using the THRESHol ADD command, take effect immediately. However, when Unicenter CA-Explore for CICS is reinitialized, the thresholds defined in the threshold table member again take effect.

Procedure for Setting Thresholds

The information you enter to set thresholds in the threshold table member is the same type of information you enter to set thresholds from the THRESHOL panel. Except where indicated, the instructions given here apply to both the threshold table member and the THRESHOL panel.

See the chapter titled “/CONFIG Menu Options” for instructions on using the THRESHol ADD command to define a new threshold.

To set a threshold on the THRESHOL panel or in a threshold override member, take the steps shown in the following table:

Step	Action
1	<p>Access either the threshold source member or the THRESHOL panel. You must use the threshold source member if you want to</p> <ul style="list-style-type: none"> ■ Set permanent thresholds ■ Duplicate threshold parameters for individual resources
2	<p>Do one of the following:</p> <ul style="list-style-type: none"> ■ If you want to set a threshold for a specific resource, enter the resource's identifier in the Resource input field. ■ If you want the threshold to apply to all resources of that threshold type, leave the Resource field blank. <p>In the first resource field, system thresholds have a resource defined as \$SYSTEM\$. For other types of thresholds, specify a transaction ID.</p> <p>In the second Resource field, specify a second resource to be monitored. This field can be a terminal ID, a filename, or other resource, depending on the threshold.</p> <p>You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS."</p> <p>Resource fields cannot be changed on the THRESHOL panel.</p>
3	<p>In the Limit input field, enter the count, time (with up to three decimal places), percent, or rate per second at which you want the threshold to be triggered. A limit of zero disables the threshold.</p>
4	<p>In the Pct field, enter the percentage of the threshold value at which you want a warning to be issued. On color monitors, the warning condition is indicated when the threshold is displayed in yellow; on monochrome monitors, the word Warning appears. A warning indicates that a percentage of the threshold limit value has been reached, not that the threshold has been triggered.</p>
5	<p>In the Type input field, enter UPPER or LOWER to indicate whether the threshold should be triggered when resource usage exceeds or falls below the limit you specified.</p> <p>This field cannot be changed on the THRESHOL panel.</p>

Step	Action
6	In the Int input field, enter END to check the threshold at the end of the task, DYN to check the threshold when the transaction is dispatched, or SYS to check the threshold at system intervals.
7	In the Can input field, enter YES or NO to indicate whether the transaction should be canceled when the threshold is triggered, or enter SUS to indicate the transaction should be suspended when the threshold is triggered. If you specify YES , you must specify DYN in the Int field.
8	In the Msg input field, enter YES or NO to indicate whether a message should be sent to the operator console when the threshold is triggered.
9	In the Log input field, enter YES or NO to indicate whether a record should be logged to the archive and flashback files when the threshold is triggered.
10	In the Post input field, enter YES or NO to indicate whether an event should be posted to FAQs/ASO or FAQs/PCS when the threshold is triggered, or enter CMD to issue the command specified in the Event field when the threshold is triggered.
11	<p>In the Event field, specify the name of the event to process if the threshold is triggered. If the value in the Post field is <i>Yes</i>, the event is posted to FAQs/ASO or FAQs/PCS. The default event name is the threshold name.</p> <p>If the value in the Post field is <i>Cmd</i>, specify a value that is to be issued as a command. The following are the valid commands that can appear in this field:</p> <p>FREEZE Stops execution of CICS.</p> <p>TASKSUSP Suspends the transaction (CICS 2.3 only).</p>
12	In the threshold source member, delete unused thresholds to reduce Unicenter CA-Explore for CICS overhead. You can copy parameters from the \$THRSH member in the Unicenter CA-Explore for CICS product library.

The following table shows the purpose of each of the threshold input fields:

This Field	Is Used To Indicate
Resource	If applicable, a specific transaction or resource identifier.
Limit	The count, time (in milliseconds), or rate (times per second) at which resource usage triggers the threshold.
Pct	Percentage of the threshold limit value at which you want a warning to be issued. On color monitors, the warning condition is indicated when the threshold is displayed in yellow; on monochrome monitors, the word Warning appears. A warning indicates that a percentage of the threshold limit value has been reached, not that the threshold has been triggered.
Type	Whether the value specified by Limit is an upper or lower limit.
Int	Whether the resource is to be checked at the end of the task, dynamically, or at system intervals.
Can	Whether the task is to be canceled or suspended when the threshold is triggered.
Msg	Whether a message should be sent to the operator console when the threshold is triggered.
Log	Whether a threshold record should be logged to the archive and flashback files when the threshold is triggered.
Post	Whether an event is to be posted to FAQs/ASO or FAQs/PCS or the Unicenter CA-Explore for CICS command specified in the Event field is to be executed.
Event	The name of the event to be posted to FAQs/ASO or FAQs/PCS or the Unicenter CA-Explore for CICS command to be issued when the threshold is triggered

Sample Threshold Table Member

The following panel shows a portion of the threshold table member:

```

.....1.....2.....3.....4.....5.....6.....7.....*
..NAME.. RESOURCE RESOURCE ...LIMIT PCT TYPE CLASS INT CA MSG LOG POST EVENT...
ABENDS * * 1 75 UPPER COUNT END NO YES YES NO ABENDS
ATTACH * * 0 75 UPPER COUNT END NO NO YES NO ATTACH
BMSWAIT * * 0 75 UPPER COUNT END NO YES NO BMSWAIT
BYTESR * * 0 75 UPPER COUNT END NO NO YES NO BYTESR
BYTESW * * 0 75 UPPER COUNT END NO NO YES NO BYTESW
CICSWAIT * * 0 75 UPPER COUNT END NO YES NO CICSWAIT
CMDUSE * * 0 75 UPPER COUNT END NO NO YES NO CMDUSE
CPUTIME * * 0.000 75 UPPER TIME END NO NO YES NO CPUTIME
DCPWAIT * * 0 75 UPPER COUNT END NO YES NO DCPWAIT
DCTUSE * * 0 75 UPPER COUNT END NO NO YES NO DCTUSE
DEQUEUE * * 0 75 UPPER COUNT END NO NO YES NO DEQUEUE
DETACH * * 0 75 UPPER COUNT END NO NO YES NO DETACH
DISPATCH * * 0 75 UPPER COUNT END NO NO YES NO DISPATCH
    
```

Table Member Field Descriptions

The following table lists the field name, column, column length, and values designated for thresholds in the threshold table:

Field	Columns	Length	Values
NAME	01-08	08	Any threshold name
RESOURCE	10-17	08	Resource to be monitored for the threshold. System thresholds have a resource defined as \$SYSTEM\$. A transaction ID appears in this field for other types of thresholds.
RESOURCE	19-26	08	A second resource to be monitored. This field can be a terminal ID, a filename, or other resource, depending on the threshold.
LIMIT	28-35	08	Threshold limit value. If the Class shows the word Time, the limit value is in milliseconds. A limit value of zero deactivates the threshold.

Field	Columns	Length	Values
PCT	37-39	03	Percentage of the threshold limit value at which you want a warning to be issued. On color monitors, the warning condition is indicated when the color in which the threshold is displayed changes to yellow; on monochrome monitors, the word Warning appears. A warning indicates that the specified percentage of the threshold limit value has been reached, not that the threshold has been triggered.
TYPE	41-45	05	UPPER The limit is an upper limit; the threshold is triggered when the Limit value is exceeded.
			LOWER The limit is a lower limit; the threshold is triggered when a value below the Limit value is detected.
CLASS	47-51	05	COUNT The limit specifies a number of occurrences during a system interval (defined by the SYSTEM-INTERVAL configuration option).
			TIME The limit specifies a length of time.
			RATE The limit specifies a rate per second.
			PERCENT or % The limit specifies a percentage.

Field	Columns	Length	Values	
INT	53-55	03	END	Check the threshold at task end.
			DYN	Check the threshold when tasks are dispatched.
			SYS	Check the threshold at system intervals, as defined by the SYSTEM-INTERVAL configuration option.
CA	57-58	02	YES	Cancel the task if the threshold is triggered.
			NO	Do not cancel the task if the threshold is triggered.
			SUS	Suspend the task if the threshold is triggered.
MSG	60-62	03	YES	Issue a message to the console if the threshold is triggered.
			NO	Do not issue a message to the console if a threshold is triggered.
LOG	64-66	03	YES	Log the threshold to the archive and flashback files if the threshold is triggered.
			NO	Do not log the threshold.

Field	Columns	Length	Values
POST	68-70	03	<p>YES Post the event specified in the EVENT field to FAQs/ASO or FAQs/PCS if the threshold is triggered (default is threshold name).</p> <p>NO Take no action if the threshold is triggered.</p> <p>CMD Issue the command specified in the EVENT field.</p>
EVENT	73-80	08	<p>Name of the event to process if the threshold is triggered. If the value in the Post field is Yes, the event is posted to FAQs/ASO or FAQs/PCS. The default event name is the threshold name.</p> <p>If the value in the Post field is Cmd, the value in the EVENT field is issued as a command. The following are the valid commands that can appear in this field:</p> <p>FREEZE Stops execution of CICS.</p> <p>TASKSUSP Suspends the transaction (CICS 2.3 only).</p>

Examples

End-of-Task Thresholds

The following threshold is triggered when the CPU usage for a transaction is greater than 250 milliseconds:

```
..NAME.. RESOURCE RESOURCE ...LIMIT PCT TYPE CLASS INT CA MSG LOG POST EVENT...
CPUTIME                0.250 75 UPPER TIME END NO NO YES NO CPUTIME
```

The following threshold is triggered when the number of file requests exceeds 100:

```
..NAME.. RESOURCE RESOURCE ...LIMIT PCT TYPE CLASS INT CA MSG LOG POST EVENT...
FILEREQS                100 75 UPPER COUNT END NO YES YES NO FILEREQS
```

System Threshold Settings

The following threshold is triggered when CPU usage exceeds 500 milliseconds:

```
..NAME.. RESOURCE RESOURCE ...LIMIT PCT TYPE CLASS INT CA MSG LOG POST EVENT...
CPURATE $SYSTEM$        0.500 75 UPPER TIME SYS NO YES YES NO CPURATE
```

The following threshold is triggered when dynamic storage area usage exceeds 90 percent:

```
..NAME.. RESOURCE RESOURCE ...LIMIT PCT TYPE CLASS INT CA MSG LOG POST EVENT...
DSAFULL $SYSTEM$        90 75 UPPER PCT SYS NO YES YES NO DSAFULL
```

This threshold is triggered when the I/O rate exceeds 50 per second:

```
..NAME.. RESOURCE RESOURCE ...LIMIT PCT TYPE CLASS INT CA MSG LOG POST EVENT...
IORATE $SYSTEM$        50.000 75 UPPER RATE SYS NO YES YES NO IORATE
```

Variable Status Data Collection

The variables you specify in Unicenter CA-Explore for CICS variable status collection table members determine the variable status data Unicenter CA-Explore for CICS collects. This chapter explains how to specify those variables.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

You can display collected data on the VSTATUS panel. Using this panel, you can also temporarily change the variable status data that is collected; the variables you specify from this panel remain in effect until Unicenter CA-Explore for CICS is reinitialized. See the chapter titled “/STATUS Menu Options” for an explanation of the VSTATUS panel.

Using Variable Status Collection Table Members

The type of data Unicenter CA-Explore for CICS collects for building online plots is determined by the values of the variables in variable status collection table members in the Unicenter CA-Explore for CICS product library. All variables that can be specified in variable status collection table members are listed in the appendix “Variables.”

You can specify the variable status data Unicenter CA-Explore for CICS collects by modifying these members. By creating multiple variable status collection table members, you can have Unicenter CA-Explore for CICS collect different data for each CICS partition.

The member \$VSTATUS.P is the default variable status collection table member. This table member can be shared by all CICS partitions.

You can create separate variable status collection table members for each partition to define different settings for each. All partitions for which you do not create a specific variable status collection table member use the settings specified in \$VSTATUS.P. To create separate table members, use the following steps:

Step	Action
1	<p>Copy and rename \$VSTATUS.P to create a new member in the Unicenter CA-Explore for CICS product library.</p> <p>If you have a separate configuration option member for each partition, the name of the variable status collection table member for a partition must be the same as the name defined by the VSTATUS-MEMBER option in the configuration option member for that partition.</p> <p>If you have a single configuration option member that defines options for all partitions, the following rules apply:</p> <ul style="list-style-type: none">■ If the VSTATUS-MEMBER configuration option is set to <i>name??</i>, the name of the variable status collection table member must be in the form <i>nameid.P</i>, where <i>name</i> is the same in both places and <i>id</i> is the ID of the partition to which the variable status collection table member applies. For example, if the configuration option is VSTATUS-MEMBER=\$VSTAT??. then the name of the variable status collection table member for partition A4 must be \$VSTATA4.P.■ If the VSTATUS-MEMBER option is set to <i>name??</i> and a variable status collection table member with the name <i>nameid.P</i> is not found for a partition, member \$VSTATUS.P is used.
2	Set the variable status collection definitions for the partition.
3	Save the new member. The new variable status collection definitions will take effect when Unicenter CA-Explore for CICS is reinitialized.

Sample Variable Status Collection Table Member

A sample Unicenter CA-Explore for CICS product library member \$VSTATUS.P, the default variable status collection table, is shown next.

```

*                                     *
*                               CA-Explore for CICS                       *
*                                     *
*                               Variable Status Collection Table           *
*                                     *
* This is the default variable status collection member that will         *
* be used to create a list of resources that CA-Explore for CICS will    *
* perform more detailed collection on.                                    *
*                                     *
* This member may be copied and/or renamed. A different member          *
* may be used for each CA-Explore for CICS region.                      *
* This is NOT required.                                                 *
*                                     *
* The default member name that will be used is $VSTATUS.                 *
*                                     *
* This name can be overridden by changing the configuration option       *
* VSTATUS-MEMBER= in the configuration overrides member.                *
*-----*
* Variable Status Collection Table                                       *
* Additional entries can be added to specify specific resources.         *
* Multiple entries can exist for each variable name.                     *
* Resources can be specified in generic terms.                           *
* Entries in this table are NOT column specific.                         *

Modifying Variable Status Collection Table Members

You can display collected data on the VSTATUS panel and, from this panel, temporarily change the variable status data Unicenter CA-Explore for CICS collects; the variables you specify from this panel remain in effect until Unicenter CA-Explore for CICS is reinitialized. See the chapter titled “/STATUS Menu Options” for an explanation of the VSTATUS panel.

You can tailor variable status collection table members by doing the following:

- Add variables corresponding to the variable collection data you want Unicenter CA-Explore for CICS to collect.
- Delete existing variables for which you do not want data collected.
- Specify individual resources or, using generic characters, groups of resources to which a variable is to apply. The following section explains how to specify the resources to be associated with a variable.

Use the RESOURCE column in variable status collection table members to specify individual or groups of resources for which variable status data is to be collected. You can identify multiple resources for each variable name. You can use generic characters, or *wildcards*, in the resource definition to limit the scope of the information displayed by the command. The generic characters, asterisk (*), plus sign (+), and not sign (-), let you limit (or *mask*) data to only those resources having common characters in their names. See the chapter titled “Using Unicenter CA-Explore Performance Management for CICS” for instructions.

Overhead Considerations

The number of variables you specify in variable status collection table members affects the amount of overhead and storage required by Unicenter CA-Explore for CICS. You should **not** specify all valid variables in a variable status collection table member.

Command Options Overrides

Unicenter CA-Explore for CICS reads command options override members in the Unicenter CA-Explore for CICS product library to determine:

- Which Unicenter CA-Explore for CICS commands are to be secured
- Which operands are to be executed by default with Unicenter CA-Explore for CICS commands

This chapter explains how to specify command option overrides in the Unicenter CA-Explore for CICS product library.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

Specifying Command Options Overrides

You can create different command options override members for each CICS partition to define unique command options for each partition.

The Unicenter CA-Explore for CICS product library member \$CMD.P is the default command options override member. This member can be shared by all CICS partitions.

All partitions for which you do not create a specific variable status collection table member use the settings specified in \$CMD.P.

Take the following steps to create a separate command options override member for a CICS partition:

Step	Action
1	<p>Copy and rename \$CMD.P to create a new member in the Unicenter CA-Explore for CICS product library.</p> <p>If you have a separate configuration option member for each partition, the name of the command options override member for a partition must be the same as the name defined by the COMMAND-MEMBER option in the configuration option member for that partition.</p> <p>If you have a single configuration option member that defines options for all partitions, the following rules apply:</p> <ul style="list-style-type: none"> ■ If the COMMAND-MEMBER configuration option is set to <i>name??</i>, the name of the command options override member must be in the form <i>nameid.P</i>, where <i>name</i> is the same in both places and <i>id</i> is the ID of the partition to which the command options override member applies. For example, if the configuration option is COMMAND-MEMBER=\$CMD??, then the name of the command options override member for partition 4 must be \$CMD04.P. ■ If the COMMAND-MEMBER option is set to <i>name??</i> and a command options override member with the name <i>nameid.P</i> is not found for a partition, member \$CMD.P is used.
2	Define the command options for the partition.
3	Save the new member. The new command options definitions will take effect when Unicenter CA-Explore for CICS is reinitialized.

The following is a sample command options override member:

```

*****
*
*           CA-EXPLORE for CICS           *
*           Command Option Overrides     *
*
* This member is used to define and alter the options associated *
* with each CA-EXPLORE for CICS command. *
* This member may be copied and/or renamed. A different member may *
* be used for each EXPLORE for CICS partition. This is NOT required. *
* The default member name that will be used is $CMD. *
* This name can be overridden by changing the configuration option *
* COMMAND-MEMBER=xxxxxxx in the configuration overrides member. *
*
* Configuration Options associated with this member: *
*
* SECURITY=NO *
* SECURE-COMMANDS=YES *
* COMMAND-MEMBER=$CMD *
* COMMAND-MESSAGES=YES *
*
* *** Warning *** *
*
* Until external logon and command security has been *
* established, the configuration options should be set as follows: *
* SECURITY=NO *
* SECURE-COMMANDS=NO *
* COMMAND-MEMBER=$CMD *
* COMMAND-MESSAGES=YES *
*
* By adding a command to this table, the default options of that *
* command can be overridden. *
*
* Define only 1 command per line, followed by its options. *
*
* Options: *
*
* SECURITY - External security *
* NOSECURE - No external security *
* NOLIST - Do not display command on any menus *
* DISABLE - Disable use of command *
* SORTARG argument - Default command sort argument *
*
* The following list of commands is only a suggested list of *
* commands that should be secured. *
*****
ALTER SECURITY
CAPTURE SECURITY
CEMT SECURITY

JOBS SORTARG ID

```

Modifying Command Options Override Members

WARNING! *Until external logon and command security have been established, the configuration options should remain set to the default values established by \$CMD.P.*

You can modify your command options override members by adding or deleting commands and command options. Specify only a single command per line, followed by its options.

The following options can be specified:

Option	Description
SECURITY	Apply external security for the command. A list of commands for which security is recommended is given in the member \$CMD.P. Note: If you use CA-ALERT to provide security, you do not need to maintain \$CMD.P. For additional information, see the chapter titled "Security."
NOSECURE	Do not apply external security for the command. Note: If you use CA-ALERT to provide security, you do not need to maintain \$CMD.P. For additional information, see the chapter titled "Security."
NOLIST	Do not display command on any menus.
DISABLE	Disable use of the command.
<i>SORTARG value</i>	Set the default command sort argument to the specified value.
<i>MENU menuname</i>	Assigns the command to appear on the menu specified by <i>menuname</i> .

XMONITOR Variables

The global monitoring variables you specify determine the global monitoring data Unicenter CA-Explore for CICS collects. This chapter explains how to specify variables in Unicenter CA-Explore for CICS global monitor table members.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

Identifying the Data to Be Collected

The type of data Unicenter CA-Explore for CICS collects for display on the XMONITOR panel is determined by the values of the variables in global monitor table members in the Unicenter CA-Explore for CICS product library.

You can specify the data Unicenter CA-Explore for CICS collects by modifying these members. By creating multiple global monitor table members, you can have Unicenter CA-Explore for CICS collect different data for each CICS partition.

You can display collected data on the XMONITOR panel, which includes summary information about the status of all partitions monitored by Unicenter CA-Explore for CICS. The XMONITOR panel is described in the chapter titled “/PROBLEM Menu Options.”

All variables that can be specified in global monitor table members are listed in the appendix “Variables.”

Using One Global Monitor Table Member for All CICS Partitions

The member \$XMON.P is the default global monitor table member. This table member can be shared by all CICS partitions.

All partitions for which you do not create a specific global monitor table member use the settings specified in \$XMON.P.

Creating Global Monitor Table Members for Multiple CICS Partitions

You can create separate global monitor table members for each partition to collect different data for each partition. Any partition for which you do not create a separate table member uses the member \$XMON.P.

To create separate table members, take the following steps:

Step	Action
1	<p>Copy and rename \$XMON.P to create a new member in the Unicenter CA-Explore for CICS product library. How you should name the new member depends on whether you have a separate configuration table member for each partition.</p> <p>If you have a separate configuration table member for each partition, give the global monitor table member any name. The name must be specified by the XMONITOR-MEMBER option in the configuration table member for that partition.</p> <p>If you have a single configuration table member that defines options for all partitions, set the XMONITOR-MEMBER configuration option to <i>name??</i>, and name the global monitor table member <i>nameid</i>. <i>name</i> must be the same in both places, and <i>id</i> is the ID of the partition to which the global monitor table member applies. For example, if XMONITOR-MEMBER=\$XMON??., then the name of the global monitor table member for partition M4 must be \$XMONM4.P.</p>
2	<p>Set the global monitor data collection definitions for the partition. See the next section, Modifying Global Monitor Table Members, for information about modifying these definitions.</p>
3	<p>Save the new member. The new global monitor data collection definitions will take effect when Unicenter CA-Explore for CICS is reinitialized.</p>

The Unicenter CA-Explore for CICS product library member \$XMON.P, shown below, is the default global monitor table:

```

*-----*
*                               *
*               Unicenter CA"Explore           *
*                               *
*               Extended Condition Monitor      *
*                               *
*-----*
*Name... Resource Resource Command.....
RESPTIME * * RESPTIME

GETVIS31 $SYSTEM$ * GETVIS31
TRANCPU $SYSTEM$ * TASKS
TRANFILE $SYSTEM$ * SYSDATA ANALYSIS
TRANLIFE $SYSTEM$ * SYSDATA ANALYSIS
TRANPROG $SYSTEM$ * SYSDATA ANALYSIS
TRANSUSP $SYSTEM$ * SYSDATA ANALYSIS
TRANTERM $SYSTEM$ * SYSDATA ANALYSIS
TRANWAIT $SYSTEM$ * SYSDATA ANALYSIS
    
```

Modifying Global Monitor Table Members

Follow the steps below to specify the global monitor data you want Unicenter CA-Explore for CICS to collect.

Step	Action
1	In the Name field, specify the variable corresponding to the data you want Unicenter CA-Explore for CICS to collect. If the variable is not a system variable, you must also specify it in the variable status collection table member \$VSTAT, as explained in the chapter titled "Specifying Variable Status Data Collection." See the appendix "Variables" for descriptions of all variables.
2	<p>If you want data to be collected for all resources, leave the Resource fields blank.</p> <p>If you want data to be collected for a specific resource, enter the resource's identifier in the Resource fields, as follows:</p> <ul style="list-style-type: none"> ■ For system variables, specify \$SYSTEM\$ in the first Resource field. ■ For other types of variables, specify a transaction ID in the first Resource field. In the second Resource field, specify a resource to which monitoring is to be limited. This field can be a terminal ID, a filename, or other resource, depending on the variable. <p>You can include generic characters in the string, as explained in the chapter titled "Using Unicenter CA-Explore Performance Management for CICS."</p>
3	In the Command field, specify the command to be executed when the variable is cursor-selected on the XMONITOR Detail panel. Cursor-selecting a variable on the XMONITOR Detail panel automatically executes the command and displays its associated panel.

Overhead Considerations

The number of variables you specify in global monitor table members affects the amount of overhead and storage required by Unicenter CA-Explore for CICS. You should not specify all valid variables in a global monitor table member.

You can provide security for Unicenter CA-Explore for CICS in the following ways:

- You can use the Unicenter CA-Explore for CICS internal security table members to control access to Unicenter CA-Explore for CICS and command privileges.
- If you are using *eTrust CA-Top Secret* and CICS 2.3 or TS 1.1, you can use *eTrust CA-Top Secret* to define and maintain all security.

This chapter explains how to define internal security using Unicenter CA-Explore for CICS security table members. It also explains how to define external security via *eTrust CA-Top Secret* when using CICS 2.3, and *eTrust CA-Top Secret* in CICS Transaction Server 1.1.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

Defining Internal Security

The security parameters you specify in internal security table members define the following types of privileges:

- **Access to Unicenter CA-Explore for CICS** – You can specify the IDs of users who can access Unicenter CA-Explore for CICS, and define passwords these users must enter to access Unicenter CA-Explore for CICS.
- **Command access privileges** – You can specify which commands Unicenter CA-Explore for CICS users can execute.

The following configuration options must be set to YES for internal security to be enforced:

- SECURE-COMMANDS=
- SECURITY=

In addition, the SECURE-MEMBER= configuration option must be set to the name of the Unicenter CA-Explore for CICS residence member containing the security parameters to be enforced.

Any command secured using the procedures described in this chapter must also be defined in member \$CMD.P in the Unicenter CA-Explore for CICS product library using the SECURITY parameter. See the chapter titled “Command Options Overrides” for information about modifying \$CMD.P.

Using Internal Security Table Members

Internal security for Unicenter CA-Explore for CICS is determined by the parameters you define in internal security table members in the Unicenter CA-Explore for CICS product library.

You can define user IDs, passwords, and command access privileges by modifying these members. By creating multiple internal security table members, you can have Unicenter CA-Explore for CICS enforce different security for each CICS partition.

The member \$SCTY.P is the default internal security table member. This table member can be shared by all CICS partitions.

All partitions for which you do not create a specific internal security table member use the settings specified in \$SCTY.P.

You can create separate internal security table members for each partition to enforce different security for each partition. Any partition for which you do not create a separate table member uses the member \$SCTY.P.

To create separate table members, take the following steps:

Step	Action
1	<p>Copy and rename \$SCTY.P to create a new member in the Unicenter CA-Explore for CICS product library. How you should name the new member depends on whether you have a separate configuration table member for each partition.</p> <p>If you have a separate configuration table member for each partition, give the internal security table member any name. The name must be specified by the SECURE-MEMBER option in the configuration table member for that partition.</p> <p>If you have a single configuration table member that defines options for all partitions, set the SECURE-MEMBER configuration option to <i>name??</i> and name the internal security table member <i>nameid</i>. <i>name</i> must be the same in both places, and <i>id</i> is the ID of the partition to which the internal security table member applies. For example, if SECURE-MEMBER=\$SCTY??, then the name of the internal security table member for partition A4 must be \$SCTYA4.P</p>
2	<p>Set the internal security parameters for the partition. See the section Modifying Internal Security Table Members for information about modifying these parameters.</p>
3	<p>Save the new member. The new internal security parameters will take effect when Unicenter CA-Explore for CICS is reinitialized.</p>

Sample Internal Security Table Member

The Unicenter CA-Explore for CICS product library member \$SCTY.P, shown below, is the default internal security table:

```

*-----*
*
*                               Unicenter CA-Explore                               *
*
*                               Security Table                                   *
*
* This security table member is only used when running CA-EXPLORE
* for CICS internal security. The configuration options must be
* as follows to run internal security:
*
*   SECURE-COMMANDS=YES
*   SECURE-MODULE=ECDISCTY
*   SECURITY=YES
*   SECURITY-MEMBER=$SCTY
*
*-----*
* Parameter 01 - Type      - USER - Userid, Password entry
* Parameter 02 - Jobname  - Jobname
* Parameter 03 - Userid   - Userid
* Parameter 04 - Password - Password
* Parameter 05 - Access   - Access - Yes, None
*
*-----*
*TYPE  JOBNAME  USERID  PASSWORD  ACCESS
USER   *        USER0001  PASS0001  Yes
USER   *        USER0002  PASS0002  Yes
USER   *        USER0003  PASS0003  Yes
USER   *        USER0004  PASS0004  None
*
* Parameter 01 - Type      - COMMAND - Command authorization entry
* Parameter 02 - Jobname  - Jobname
* Parameter 03 - Userid   - Userid
* Parameter 04 - Command  - Command name
* Parameter 05 - Access   - Access - Yes, None
*
*-----*
*TYPE  JOBNAME  USERID  COMMAND  ACCESS
COMMAND *        USER0001  *        Yes
COMMAND *        USER0002  CONFIG   Yes
COMMAND *        USER0003  *        Yes
COMMAND *        USER0003  CONFIG   None

```

Modifying Internal Security Table Members

You can specify parameters to define the following two types of access:

- Access to Unicenter CA-Explore for CICS
- Command access privileges

You can include generic characters in some parameters in internal security members, as explained in the chapter titled “Using Unicenter CA-Explore Performance Management for CICS.”

Parameters in which you can use generic characters are identified in the following sections.

When there are two or more contradictory security definitions, the Unicenter CA-Explore for CICS internal security function always enforces the most specific security definition.

For example, the following definitions allow USER0001 to execute all Unicenter CA-Explore for CICS commands except for the CONFIG command, and allow all users except USER0003 to execute the ALTER command:

*TYPE	JOBNAME	USERID	COMMAND	ACCESS
COMMAND	*	USER0001	*	Yes
COMMAND	*	USER0001	CONFIG	None
COMMAND	*	*	ALTER	Yes
COMMAND	*	USER0003	ALTER	None

Defining Access to Unicenter CA-Explore for CICS

Take the following steps to define users who can access Unicenter CA-Explore for CICS:

Step	Action
1	In the TYPE field, enter USER .
2	In the JOBNAME field, enter the jobname of the partition for which you are defining access. The jobname must be specified in the Unicenter CA-Explore for CICS product library member \$MIT. You can use generic characters in the JOBNAME field.
3	In the USERID field, specify the ID of the user for whom you are defining access to Unicenter CA-Explore for CICS.
4	In the PASSWORD field, specify the password the user must enter to access Unicenter CA-Explore for CICS.
5	In the ACCESS field, specify one of the following: Yes Allow the user to access Unicenter CA-Explore for CICS. None Do not allow the user to access Unicenter CA-Explore for CICS.

Defining Command Access Privileges

Follow the steps below to define Unicenter CA-Explore for CICS command access privileges:

Step	Action				
1	In the TYPE field, enter COMMAND .				
2	<p>In the JOBNAME field, enter the jobname of the partition for which you are defining access. The jobname must be specified in the Unicenter CA-Explore for CICS product library member \$MIT.</p> <p>You can include generic characters in the JOBNAME field.</p>				
3	<p>In the USERID field, specify the ID of the user for whom you are defining command access.</p> <p>You can include generic characters in the USERID field.</p>				
4	<p>In the COMMAND field, specify the command for which you are defining access privileges.</p> <p>You can include generic characters in the COMMAND field.</p>				
5	<p>In the ACCESS field, allows the user to specify one of the following:</p> <table><tbody><tr><td>Yes</td><td>Execute the command specified in the COMMAND field.</td></tr><tr><td>None</td><td>Do not execute the command specified in the COMMAND field.</td></tr></tbody></table>	Yes	Execute the command specified in the COMMAND field.	None	Do not execute the command specified in the COMMAND field.
Yes	Execute the command specified in the COMMAND field.				
None	Do not execute the command specified in the COMMAND field.				

Defining External Security via eTrust CA-Top Secret

If you are using *eTrust CA-Top Secret* for CICS 2.3 or TS 1.1, you can move all security definition and maintenance from Unicenter CA-Explore for CICS to *eTrust CA-Top Secret*, including the validation of logons to Unicenter CA-Explore for CICS from outside of CICS.

eTrust CA-Top Secret performs the following security functions:

- Validates signon to Unicenter CA-Explore for CICS from external sources such as VTAM, FAQs, and Unicenter CA-Explore for VSE
- Controls the use of the following Unicenter CA-Explore for CICS commands:
 - ALTER
 - CAPTURE
 - CEMT
 - CONFIG
 - DELETEQ
 - FREEZE
 - GENTABLE
 - SECURITY
 - SEGMENT
 - SETLOGON
- Optionally, controls the use of other Unicenter CA-Explore for CICS commands that you identify

To provide security for a Unicenter CA-Explore for CICS command via eTrust CA-Top Secret, follow these steps:

Step 1

Define the CA-Explore/CICS facility.

The Unicenter CA-Explore for CICS partition functions as a *facility* in eTrust CA-Top Secret. The FACILITY definition is used to define specific execution environments for Unicenter CA-Explore for CICS, such as identifying the product as a multi-user partition, and preventing abends due to a single user security violation.

The following example shows the commands required to define the Unicenter CA-Explore for CICS facility. These commands should be added to your TSS PARM file:

```

+-----+
* FACILITY(USERx=NAME=EXPCMAST) *
* FACILITY(EXPCMAST=ID=xx) *
* FACILITY(EXPCMAST=PGM=pgmname) *
* FACILITY(EXPCMAST=MULTIUSER,MODE=IMPL,NOABEND,RES) *
+-----+

```

Where:

- Userx Specifies the predefined dummy facility that you will reconfigure for Unicenter CA-Explore for CICS. Replace *x* with a number from 0 to 221.

For values over 99, see the chapter titled “How to Add a New Facility” in the *eTrust CA-Top Secret User Guide* for the corresponding two-character alphanumeric code.
- EXPCMAST Is the name you will give to the Unicenter CA-Explore for CICS facility. This is an arbitrary name, and any other name of up to eight characters is valid. If you choose another name, the subsequent examples must be adjusted accordingly.
- ID=*x* Is a one- or two-character alphanumeric value that represents the facility for reporting purposes. This value is predefined in the Facilities Matrix table, and corresponds to the USER*x* definition. As examples, for USER1 use ID=1, for USER99 use ID=99.

For values over 99, see the chapter titled “How to Add a New Facility” in the *eTrust CA-Top Secret User Guide* for the corresponding two-character alphanumeric code.

Userx	Specifies the predefined dummy facility that you will reconfigure for Unicenter CA-Explore for CICS. Replace <i>x</i> with a number from 0 to 221. For values over 99, see the chapter titled “How to Add a New Facility” in the <i>eTrust CA-Top Secret User Guide</i> for the corresponding two-character alphanumeric code.
PGM= <i>pgmname</i>	Defines the program name. This will be ECTIGEN if you are running TS 1.1, or ECDIGEN if you are only running CICS 2.3.
MODE=IMPL	Defines the security mode.
MULTIUSER	Identifies the Unicenter CA-Explore for CICS partition as a multi-user address space.
NOABEND	Specifies that the Unicenter CA-Explore for CICS partition does not abend if one user causes a security violation.

Step 2

Define the CA-Explore/CICS ACID.

The following TSS CREATE command will create an ACID for the Unicenter CA-Explore for CICS partition and associate this ACID with the facility you created in the previous step:

```

+-----+
*   TSS CREATE(EXPC) NAME('CA-Explore/CICS') FAC(STC,BATCH) - *
*   TYPE(USER) PASS(NOPW) DEPT(deptname) MASTFAC(EXPCMAST)   *
+-----+

```

Where:

EXPC	Is the name you will give to the Unicenter CA-Explore for CICS ACID. This is an arbitrary name, and any other name of up to eight characters is valid. If you choose another name, the subsequent examples must be adjusted accordingly.
NAME	Associates the ACID with a name for further identification.
FAC(STC,BATCH)	Allows access to the facilities BATCH and STC.

TYPE(USER)	EXPC is defined as a USER ACID.
PASS(NOPW)	Indicates that the Unicenter CA-Explore for CICS ACID does not require a password.
DEPT(<i>deptname</i>)	Assigns the EXPC ACID to an owning department.
MASTFAC(EXPCMAST)	Identifies the Master facility for the Unicenter CA-Explore for CICS online ACID. This is the facility ID you defined previously.

Once you have defined the ACID, you can add it to the //ID statement in the JCL for your Unicenter CA-Explore for CICS Master partition, as in this example:

```
//ID USER=EXPC
```

Step 3

Define the Unicenter CA-Explore for CICS resource class.

Unicenter CA-Explore for CICS commands can be secured using the resource class EXPCCMD. The following command will add the EXPCCMD resource class to the eTrust CA-Top Secret Resource Descriptor table:

```
+-----+
*TSS ADD(RDT) RESCLASS(EXPCCMD) RESCODE(XX) -
*   ACLST(READ WRITE)
+-----+
```

Where:

RESCLASS(EXPCCMD)	Defines the new resource class. This must be EXPCCMD.
RESCODE(XX)	Adds the two-digit hexadecimal code in the range of 01 and 3F. Choose a code you have not previously used.
ACLST(READ WRITE)	Defines the available access levels.

Step 4

Secure Unicenter CA-Explore for CICS resources.

Once the EXPCCMD resource class has been defined, you can begin to add the resources you wish to protect to your eTrust CA-Top Secret database. For example:

```
+-----+
*  TSS ADD(deptname) EXPCCMD(/CONFIG)      *
*  TSS ADD(deptname) EXPCCMD(CONFIG)        *
*  TSS ADD(deptname) EXPCCMD(CAPTURE)      *
+-----+
```

Where:

- | | |
|------------------|---|
| EXPCCMD(/CONFIG) | Protects the Unicenter CA-Explore for CICS Configuration menu. |
| EXPCCMD(CONFIG) | Protects the Unicenter CA-Explore for CICS Configuration panel. |
| EXPCCMD(CAPTURE) | Protects the Unicenter CA-Explore for CICS CAPTURE command. |

Step 5**Grant permissions to access Unicenter CA-Explore for CICS resources.**

Before users can access Unicenter CA-Explore for CICS, they must first be authorized to access the facility you defined earlier. The following command is required for each Unicenter CA-Explore for CICS user:

```
+-----+
*  TSS ADD(username) FAC(EXPCMAST)      *
+-----+
```

Where:

FAC(EXPCMAST) Is the name you gave to the Unicenter CA-Explore for CICS facility.

You can then grant resource authorizations to individual users or profiles, as shown in the following example:

```
+-----+
*  TSS PERMIT(user) EXPCCMD(/CONFIG) ACCESS(READ)      * (1)
*  TSS PERMIT(user) EXPCCMD(CONFIG) ACCESS(READ)      * (2)
*  TSS PERMIT(user) EXPCCMD(CAPTURE) ACCESS(READ)    * (3)
+-----+
```

Where:

- (1) Allows the user to access the Unicenter CA-Explore for CICS Configuration menu.
- (2) Allows the user to access the Unicenter CA-Explore for CICS Configuration panel.
- (3) Allows the user to issue the Unicenter CA-Explore for CICS CAPTURE command.

Partition Monitoring

This chapter explains how to specify which partitions Unicenter CA-Explore for CICS is to monitor in the monitor initialization table (member \$MIT of the Unicenter CA-Explore for CICS product library).

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

Using Monitoring Commands

Once you have specified partitions in the monitor initialization table, you can monitor a specific partition online using the following commands, which are described in the chapter titled “Function Commands.”

Command	Description
SYSTEM	Displays the SYSTEM panel, from which you can select a partition to monitor.
MONITOR	Selects a specified partition to monitor without terminating other logical monitoring sessions.
SWITCH	Terminates the monitoring session from which the command is issued and switches to a session monitoring the specified partition.
ADDSSESS	Starts additional logical sessions in which partitions can be monitored.

MIT Requirements

- There can be only one monitor initialization table member.
- The monitor initialization table must be named \$MIT and reside in the Unicenter CA-Explore for CICS product library.

Modifying the Monitor Initialization Table

The dedicated partition in which the Unicenter CA-Explore for CICS online interface and logging programs run is called the master logging partition. Each CICS partition that Unicenter CA-Explore for CICS monitors is referred to as a CICS partition. CICS partitions pass data to the master logging partition, which logs the data to the archive and flashback files.

Follow the steps below to specify the partitions you want Unicenter CA-Explore for CICS to monitor:

Step	Action				
1	Access the monitor initialization table, which is contained in the member \$MIT.P in the Unicenter CA-Explore for CICS product library. Do not change the name of the monitor initialization table.				
2	<p>Using the following format, add a line to the MIT that identifies the master logging partition:</p> <pre>master_jobname id master_jobname</pre> <p>Replace the parameters in this line as follows:</p> <table> <tr> <td><i>master_jobname</i></td> <td>Specify the Unicenter CA-Explore for CICS jobname as it appears on the DOS jobcard.</td> </tr> <tr> <td><i>id</i></td> <td>Specify a two-character partition ID. You can use any characters as long as the ID is unique.</td> </tr> </table> <p>Example: The sample MIT on the next page identifies EXPDCICS as the master logging partition with a partition ID of M1. EXPDVTAM is specified as the VTAM application ID with which the online interface is to be accessed.</p>	<i>master_jobname</i>	Specify the Unicenter CA-Explore for CICS jobname as it appears on the DOS jobcard.	<i>id</i>	Specify a two-character partition ID. You can use any characters as long as the ID is unique.
<i>master_jobname</i>	Specify the Unicenter CA-Explore for CICS jobname as it appears on the DOS jobcard.				
<i>id</i>	Specify a two-character partition ID. You can use any characters as long as the ID is unique.				

Monitor Exit Interface

This chapter explains the MEI, and the interface macro XMEXPC, which provides the interface to the Unicenter CA-Explore for CICS monitor exit.

Note: This chapter discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

About the MEI

The Unicenter CA-Explore for CICS Monitor Exit Interface (MEI) lets you customize your applications to pass information to Unicenter CA-Explore for CICS. Adding interface calls to existing packages running in CICS provides more data collection information about the transaction. Information passed to Unicenter CA-Explore for CICS is collected for individual transactions.

The MEI lets you perform the following functions:

- Identify umbrella transaction names.
- Set program usage information.
- Identify the start of any event to be timed.
- Identify the end of any event to be timed.
- Store data in the requested field.

XMEXPC, a macro used as the interface to the monitor exit, is provided with Unicenter CA-Explore for CICS and is described in the remainder of this chapter.

Sample exits for the following applications are supplied on the distribution tape:

The Sample Exit For This Application	Is Found In Member
DATAComm	DCCTXPR.A
NATURAL	NATCICS.A
SAP	MEISAP*.A
SUPRA/SQL	EXPCEXIT.A

Using the XMEXPC Interface Macro

The XMEXPC macro is provided with Unicenter CA-Explore for CICS. The XMEXPC macro provides an interface to the Unicenter CA-Explore for CICS monitor exit. Add the XMEXPC macro to your existing packages to perform the functions described in the section Functions of the XMEXPC Macro.

The XMEXPC Macro Template

The following template for the XMEXPC macro shows the parameters that can be used with XMEXPC:

```

.....1.....2.....3.....4.....5.....6.
label    XMEXPC FUNC=,
          REQUEST=,
          TRAN=,
          TYPE=,
          PROGRAM=,
          EVENT=,
          RSCE=,
          WORK=,
          REG=14,
          OK=,
          WARNING=,
          ERROR=
    
```

XMEXPC Macro Parameters

The parameters of the XMEXPC macro have the following functions:

Parameter	Description
Label	Any valid assembler label.
FUNC=	Function of the macro call. Functions are described in the Functions of the XMEXPC Macro section.
REQUEST=	Request code.
TRAN=	Umbrella transaction name.
TYPE=	Umbrella transaction type.
PROGRAM=	Program name.
EVENT=	Event name.
RSCE=	Resource name.
WORK=	Work area. Work area can be reused if multiple MEI calls are being made. An inline work area is generated if you specify WORK=*. Using an inline work area will force the program to be non-reentrant.
REG=	Work register used to initialize the parameter list.
OK=	Branch label if return code equals 0.
WARNING=	Branch label if return code is 4.
ERROR=	Branch label if return code is not equal to 0.

Registers Used by XMEXPC

The XMEXPC macro uses the following registers:

Register	Function
R1	Parameter list
R13	72-byte register save area, provided with CICS command-level programming
R14	Return address
R15	Branch register and return code

Functions of the XMEXPC Macro

The XMEXPC macro has the following functions, which are described further on the following pages:

This Function	Calls The MEI To
UMBRELLA_NAME	Provide the performance collection manager an umbrella transaction name and optionally an umbrella type to associate with the transaction.
PROGRAM_USAGE	Provide the performance collection manager the name of a program that is being used. This function provides the ability to track program usage within other products, such as fourth-generation products.
START_CLOCK	Request the performance collection manager to start the timing of an event or function. After the timed event or function is complete, a STOP_CLOCK function call must be issued. The START-CLOCK function can be nested.
STOP_CLOCK	Request the performance collection manager to stop the timing of an event or function. Each STOP_CLOCK function must be preceded by a START-CLOCK function call.
SET_FIELD	Provide the performance collection manager with data to be stored in the requested field.

UMBRELLA_NAME Function

The following is a template of the XMEXPC macro UMBRELLA_NAME function code. Add this code to a package to provide the Unicenter CA-Explore for CICS performance collection manager an umbrella transaction name and optionally an umbrella type to associate with the transaction.

```
.....1.....2.....3.....4.....5.....6.
label    XMEXPC FUNC=UMBRELLA_NAME,
          TRAN=umbtran,
          TYPE=umbtype,
          WORK=workarea,
          OK=label_ok,
          WARNING=label_warning,
          ERROR=label_error

umbtran  DC    CL8'TRANABCD'
umbtype  DC    CL8'TYPETEST'
workarea DC    XL32'00'
```

Parameter Descriptions

Parameter	Description	Required?
TRAN=	Replace <i>umbtran</i> with a field containing an eight-character umbrella transaction name.	Yes
TYPE=	Replace <i>umbtype</i> with a field containing an eight-character umbrella transaction type.	No
WORK=	Replace <i>workarea</i> with the name of the work area to be used. Specify 32 bytes, full-word aligned. If you specify WORK=*, an inline work area is generated. Using an inline work area will force the program to be non-reentrant.	Yes
OK=	Replace <i>label_ok</i> with the branch label to be used if the return code equals 0.	No
WARNING=	Replace <i>label_warning</i> with the branch label to be used if the return code equals 4.	No
ERROR=	Replace <i>label_error</i> with the branch label to be used if the return code is not equal to 0.	No

PROGRAM_USAGE Function

The following is a template of the XMEXPC macro PROGRAM_USAGE function code. Add this code to a package to provide the Unicenter CA-Explore for CICS performance collection manager the name of a program that is being used. This function provides the ability to track program usage within other products such as fourth-generation products.

```

.....1.....2.....3.....4.....5.....6.
label    XMEXPC  FUNC=PROGRAM_USAGE,
          PROGRAM=pgmname,
          WORK=workarea,
          OK=label_ok,
          WARNING=label_warning,
          ERROR=label_error
pgmname  DC     CL8'PROGABCD'
workarea DC     XL32'00'
```

Parameter Descriptions

Parameter	Description	Required?
PROGRAM=	Replace <i>pgmname</i> with a field containing an eight-character program name.	Yes
WORK=	Replace <i>workarea</i> with the name of the work area to be used. Specify 32 bytes, full-word aligned. If you specify WORK=*, an inline work area is generated. Using an inline work area will force the program to be non-reentrant.	Yes
OK=	Replace <i>label_ok</i> with the branch label to be used if the return code equals 0.	No
WARNING=	Replace <i>label_warning</i> with the branch label to be used if the return code equals 4.	No
ERROR=	Replace <i>label_error</i> with the branch label to be used if the return code is not equal to 0.	No

START_CLOCK Function

The following is a template of the XMEXPC macro START_CLOCK function code. Add this code to a package to request that the Unicenter CA-Explore for CICS performance collection manager start the timing of an event or function. After the timed event or function is complete, a STOP_CLOCK function call must be issued.

```

.....1.....2.....3.....4.....5.....6.
label    XMEXPC  FUNC=START_CLOCK,
          REQUEST=reqcode,
          EVENT=event,
          WORK=workarea,
          OK=label_ok,
          WARNING=label_warning,
          ERROR=label_error

reqcode  DC      F'1'
event    DC      CL8'EVENT001'
workarea DC      XL32'00'
```

Parameter Descriptions

Parameter	Description	Required?
REQUEST=	Replace <i>reqcode</i> with one of the request codes described below.	No
EVENT=	Replace <i>event</i> with a field containing an eight-character event name.	Yes
WORK=	Replace <i>workarea</i> with the name of the work area to be used. Specify 32 bytes, full-word aligned. If you specify WORK=*, an inline work area is generated. Using an inline work area will force the program to be non-reentrant.	Yes
OK=	Replace <i>label_ok</i> with the branch label to be used if the return code equals 0.	No
WARNING=	Replace <i>label_warning</i> with the branch label to be used if the return code equals 4.	No
ERROR=	Replace <i>label_error</i> with the branch label to be used if the return code is not equal to 0.	No

Request Codes

Use one of the following request codes with the START_CLOCK macro code:

Fullword Code	Symbolic Code	Description
=F'1'	UPDATE	Increment the UPDATE counter.
=F'2'	READ	Increment the READ counter.
=F'3'	READUPD	Increment the READUPD counter.
=F'4'	ADD	Increment the ADD counter.
=F'5'	DELETE	Increment the DELETE counter.
=F'6'	BROWSE	Increment the BROWSE counter.

STOP_CLOCK Function

The following is a template of the XMEXPC macro STOP_CLOCK function code. Add this code to a package to request that the Unicenter CA-Explore for CICS performance collection manager stop the timing of an event or function. The STOP_CLOCK function must be preceded by a START_CLOCK function call.

```

.....+.....1.....+.....2.....+.....3.....+.....4.....+.....5.....+.....6.
label    XMEXPC  FUNC=STOP_CLOCK,
          EVENT=event,
          WORK=workarea,
          OK=label_ok,
          WARNING=label_warning,
          ERROR=label_error
event    DC      CL8'EVENT001'
workarea DC      XL32'00'
```

Parameter Descriptions

Parameter	Description	Required?
EVENT=	Replace <i>event</i> with a field containing an eight-character event name. The event name must be the same as the event name used in the START_CLOCK function call corresponding to this STOP_CLOCK function call.	Yes
WORK=	Replace <i>workarea</i> with the name of the work area to be used. Specify 32 bytes, full-word aligned. If you specify WORK=*, an inline work area is generated. Using an inline work area will force the program to be non-reentrant.	Yes
OK=	Replace <i>label_ok</i> with the branch label to be used if the return code equals 0.	No
WARNING=	Replace <i>label_warning</i> with the branch label to be used if the return code equals 4.	No
ERROR=	Replace <i>label_error</i> with the branch label to be used if the return code is not equal to 0.	No

SET_FIELD Function

The following is a template of the XMEXPC macro SET_FIELD function code. Add this code to a package to provide the Unicenter CA-Explore for CICS performance collection manager with data to be stored in the specified field.

```

.....1.....2.....3.....4.....5.....6.
label    XMEXPC FUNC=SET_FIELD,
          REQUEST=setfreq,
          RSCE=field,
          WORK=workarea,
          OK=label_ok,
          WARNING=label_warning,
          ERROR=label_error
setfreq  DC    F'1'
field    DC    CL8'ABCDEFGH'
workarea DC    XL32'00'

```

Parameter Descriptions

Parameter	Description	Required?
REQUEST=	Replace <i>setfreq</i> with one of the request codes described below.	Yes
RSCE=	Replace <i>field</i> with a resource name. See the description of request codes below for the field length.	Yes
WORK=	Replace <i>workarea</i> with the name of the work area to be used. Specify 32 bytes, full-word aligned. If you specify WORK=*, an inline work area is generated. Using an inline work area will force the program to be non-reentrant.	Yes
OK=	Replace <i>label_ok</i> with the branch label to be used if the return code equals 0.	No
WARNING=	Replace <i>label_warning</i> with the branch label to be used if the return code equals 4.	No
ERROR=	Replace <i>label_error</i> with the branch label to be used if the return code is not equal to 0.	No

Request Codes

Use one of the following request codes with the SET_FIELD macro code:

Fullword Code	Symbolic Code	Field Length	Description
=F'1'	USERID	8	User ID field
=F'2'	OPID	3	Operator ID field
=F'3'	UMBTRAN	8	Umbrella transaction name
=F'4'	TERMINAL	4	CICS terminal name
=F'5'	VTAMLU	8	VTAM LU name
=F'6'	UMBTYP	8	Umbrella transaction type

Sample Monitor Exit Interface

The following is a sample XMEXPC macro interface call. This sample macro is provided in member EXPDME1.A in the Unicenter CA-Explore for CICS product library.

```

Variables

You can use the variables described in this appendix to:

- Define data to be collected and displayed on the VSTATUS panel.
- Define thresholds.
- Define plot displays.
- Specify data to be displayed on historical flashback panels.
- Display status information on the XMONITOR Detail panel.

This appendix describes the variables you can use to tailor Unicenter CA-Explore for CICS for your system.

Note: This appendix discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

Looking at Variable Types

Type	Description
Count	Average number of occurrences per interval
Time	Average time per interval
Count	Number of occurrences per interval you have defined, or number of occurrences for the entire period since monitoring started
Rate	Count per second
Percent	Current percentage

System Variables

System variables can be used as system thresholds. The following table describes the Unicenter CA-Explore for CICS system variables. **Yes** in the **Unicenter CA-Explore for VSE Required?** column indicates the variable is valid only when Unicenter CA-Explore for VSE is also running.

Variable	Type	Description	Unicenter CA-Explore for VSE Required?
AUXTCNT v	Count	Unicenter CA-Explore for CICS auxiliary trace count	No
CDSA	Count	CICS DSA CURRENT PAGES USED	No
CDSA%	Percent	CICS DSA CURRENT PERCENT USED	No
CPU%	Percent	System - CPU percent busy	Yes
CPU%JOB	Percent	Percentage of CPU used by the job	No
CPURATE	Time	CPU rate per second	No
DASDIO	Time	Average DASD I/O service time	Yes
DISKIO	Count	Partition total disk I/O	Yes
DSA-01	Count	Current pages used in DSA subpool 01	No
DSA-02	Count	Current pages used in DSA subpool 02	No
DSA-04	Count	Current pages used in DSA subpool 04	No
DSA-05	Count	Current pages used in DSA subpool 05	No
DSA-06	Count	Current Pages used in DSA subpool 06	No
DSA-07	Count	Current pages used in DSA subpool 07	No
DSA-08	Count	Current pages used in DSA subpool 08	No

Variable	Type	Description	Unicenter CA-Explore for VSE Required?
DSA%	Percent	Dynamic storage area percent used	No
DSA24%	Percent	Dynamic storage area in 24 byte area percent used. CICS TS only	No
DSA31%	Percent	Dynamic storage area in 31 byte area percent used. CICS TS only	No
DSACOMP	Count	Number of dynamic storage area compressions	No Valid only if using CICS 2.3.
DSAFULL	Percent	Percentage of dynamic storage area used	No
ECDSA	Count	EXTENDED CDSA CURRENT PAGES USED	No
ECDSA%	Percent	EXTENDED CDSA CURRENT PERCENT USED	No
ERDSA	Count	EXTENDED RDSA CURRENT PAGES USED	No
ERDSA%	Percent	EXTENDED RDSA CURRENT PERCENT USED	No
ESDSA	Count	EXTENDED SDSA CURRENT PAGES USED	No
ESDSA%	Percent	EXTENDED SDSA CURRENT PERCENT USED	No
EUDSA	Count	EXTENDED UDSA CURRENT PAGES USED	No
EUDSA%	Percent	EXTENDED UDSA CURRENT PERCENT USED	No

Variable	Type	Description	Unicenter CA-Explore for VSE Required?
EXPCARC	Percent	Percentage of the Unicenter CA-Explore for CICS archive file that is full	No
GETVIS	Count	GETVIS available, in kilobytes	No
GETVIS24	Count	GETVIS available below the 16M line, in kilobytes	No
GETV24%	Percent	Percent of 24-bit GETVIS in use	No
GETVIS31	Count	GETVIS available above the 16M line, in kilobytes	No
GETV31%	Percent	Percent of 31-bit GETVIS in use	No
IORATE	Rate	I/O rate per second	No
LTAFREE	Count	Number of partition LTA frees	Yes
LTALOAD	Count	Number of partition LTA loads	Yes
MXTTASK	Count	Number of times at CICS MAX TASK condition	No
OTHERIO	Count	Total number of unclassified I/Os for the partition	Yes
PAGEIN	Count	Partition page-in count	Yes
PAGEOUT	Count	Partition page-out count	Yes
PAGFAULT	Count	Number of page faults for the partition	Yes
PSUBPOOL	Count	Partition GETVIS for the subpool, in kilobytes	No
RDSA	Count	READ-ONLY DSA CURRENT PAGES USED	No
RDSA%	Percent	READ-ONLY DSA CURRENT PERCENT USED	No

Variable	Type	Description	Unicenter CA-Explore for VSE Required?
SDSA	Count	SHARED DSA CURRENT PAGES USED	No
SDSA%	Percent	SHARED DSA CURRENT PERCENT USED	No
SOS	Count	Number of times at short-on-storage condition	No
SPURGE	Count	Number of times at stall purge condition	No
STORCUSH	Count	Number of times storage cushion released	No
TAPEIO	Count	Number of tape I/Os for the partition	Yes
TRANCPU	Time	Average CPU time of a transaction	No
TRANDLI	Time	Average DL/I time of a transaction	No
TRANEXPC	Time	Average EXPC time of a transaction	No
TRANFILE	Time	Average file I/O time of a transaction	No
TRANLIFE	Time	Average lifetime of a transaction	No
TRANPROG	Time	Average program time of a transaction	No
TRANRATE	Rate	Number of transactions per second	No
TRANRSCE	Time	Average resource time of a transaction	No
TRANSOS	Time	Average storage suspend time of a transaction	No
TRANSUSP	Time	Average suspend time of a transaction	No

Variable	Type	Description	Unicenter CA-Explore for VSE Required?
TRANTERM	Time	Average terminal I/O time of a transaction	No
TRANWAIT	Time	Average wait time of a transaction	No
TRANWTR	Time	Average waiting-to-run time of a transaction	No
TSUMCNT	Count	Transaction summary - count	No
TSUMCPU	Time	Transaction summary - CPUTIME	No
TSUMFILE	Time	Transaction summary - file time	No
TSUMLIFE	Time	Transaction summary - lifetime	No
TSUMRATE	Count	Transaction summary - rate per minute	No
TSUMRESP	Time	Transaction summary - response time	No
TSUMWTR	Time	Transaction summary - wait-to-run time	No
UDSA	Count	USER DSA CURRENT PAGES USED	No
UDSA%	Percent	USER DSA CURRENT PERCENT USED	No
VMPFAULT	Count	Number of VM pseudo page faults for the partition	Yes
VSAMFILE	Count	VSAM ACB count	No
VSAMLSR	Count	VSAM OPEN LSR ACB count	No
VSAMOPEN	Count	VSAM OPEN ACB count	No
VSECPUT	Time	System - CPU timer interval duration	Yes
VSECPUW	Time	System - CPU wait time	Yes

Variable	Type	Description	Unicenter CA-Explore for VSE Required?
VSEDISK	Count	System - Disk I/Os issued	Yes
VSEPAGF	Count	System - Page faults	Yes
VSEPAGIN	Count	System - Page-in SIOs	Yes
VSEPAGO	Count	System - Page-out SIOs	Yes
VSERPAVL	Count	System - Real page frames available	Yes
VSERPUSD	Count	System - Real pages used	Yes
VSESIO	Count	System - Total SIOs issued	Yes
VSESVC	Count	System - SVCs issued	Yes
VSEVMPF	Count	VM pseudo page faults	Yes

Transaction Variables

Transaction variables can be used as end-of-task thresholds or as dynamic thresholds. The following table describes the Unicenter CA-Explore for CICS transaction variables:

Variable	Type	Description
ABENDS	Count	Abend count
ATTACH	Count	Attaches
BMSWAIT	Count	BMS waits
BYTESR	Count	Bytes read
BYTESW	Count	Bytes written
CICSWAIT	Count	CICS waits
CMDLERRS	Count	Command level request errors
CMDLREQS	Count	Command level requests
CMDLTIME	Time	Command level request time
CMDUSE	Count	Command level use
CPUTIME	Time	CPU time

Variable	Type	Description
DCPWAIT	Count	DCP waits
DCTUSE	Count	Transient data used
DELAY	Time	ARTM delay time
DEQUEUE	Count	Dequeues
DETACH	Count	Detaches
DISPATCH	Count	Dispatches
DLIDEL	Count	DL/I DELETE requests
DLIGHN	Count	DL/I GET HOLD NEXT requests
DLIGHNP	Count	CL/I GET HOLD NEXT in parent requests
DLIGHU	Count	DL/I GET HOLD FOR UPDATE requests
DLIGN	Count	DL/I GET NEXT requests
DLIGNP	Count	DL/I GET NEXT in parent requests
DLIGU	Count	DL/I GET unique requests
DLIIONS	Count	DL/I I/O requests not satisfied
DLIISRT	Count	DL/I INSERT requests
DLIITIME	Time	DL/I I/O time
DLIREPL	Count	DL/I REPLACE requests
DLIREQS	Count	DL/I requests
DLIRTIME	Time	DL/I request time
DLITIME	Time	DL/I time
DLIUSE	Count	DL/I files used
DLIWAIT	Count	DL/I waits
EIPWAIT	Count	EIP waits
ENQUEUE	Count	Enqueues
EXPCTIME	Time	Unicenter CA-Explore for CICS collection time
FCPWAIT	Count	FCP waits
FILEADDS	Count	FILE INSERT requests
FILEAMCT	Count	File access method requests
FILEBRWS	Count	FILE BROWSE requests
FILEBUFW	Time	File buffer wait time

Variable	Type	Description
FILEDEL	Count	File delete requests
FILEDTBL	Count	File data table requests
FILEIOTM	Time	File I/O time
FILEPSTR	Count	File waits on pseudo strings
FILEPSUW	Time	File pseudo string wait time
FILEREAD	Count	File read requests
FILEREQS	Count	File requests
FILERUPD	Count	File read for update requests
FILESPLT	Count	File CI/CA splits
FILESSTR	Count	File waits on shared strings
FILESTRW	Time	File string wait time
FILETIME	Time	File request time
FILEUPD	Count	File write requests
FILEUSE	Count	Files used
FILEWBUF	Count	File waits on buffers
FILEWCIS	Count	File waits on CI/CA splits
FILEWEXC	Count	File waits on exclusive control
FILEWSTR	Count	File waits on strings
FREEMAIN	Count	FREEMAINs
GETMAIN	Count	GETMAINs
ICPWAIT	Count	ICP waits
IOTIME	Time	I/O time
IRCREADS	Count	Inter-region communications reads
IRCREQS	Count	Inter-region communications requests
IRCTIME	Time	Inter-region communications request time
IRCWRITE	Count	Inter-region communications writes
ISCREQS	Count	Intersystem communications requests
ISCTIME	Time	Intersystem communications request time
JCPWAIT	Count	JCP waits
JRNLREQS	Count	Journal requests

Variable	Type	Description
JRNLTIME	Time	Journal request time
JRNLUSE	Count	Journals used
LIFETIME	Time	Transaction lifetime
MONXTIME	Time	Unicenter CA-Explore for CICS monitor exit time
MROWAIT	Count	MRO waits
MULTWAIT	Count	Multiple waits
OPERPRI	Count	Operator priority
PCPWAIT	Count	PCP waits
PGMTIME	Time	Program time
PRIORITY	Count	Task priority
PROGFTCH	Count	Program fetches
PROGREQS	Count	Program requests
PROGTIME	Time	Program request time
PROGUSE	Count	Programs used
READS	Count	Reads
RESPHIGH	Time	Maximum terminal response time
RESPTIME	Time	Average terminal response time
RESPTOT	Time	Total terminal response time
RESUME	Count	Resumes
RSCEREQS	Count	Exit resource requests
RSCERTIM	Time	Exit resource request time
RSCETIME	Time	Resource time
RSCEUSE	Count	Exit resources used
SCPWAIT	Count	SCP waits
SHRCOUNT	Count	Share count
SOSWAIT	Count	Short-on-storage waits
SQLERRS	Count	Number of DB2 errors
SQLLHELD	Count	Number of DB2 links allocated
SQLLWAIT	Count	Number of DB2 wait for links

Variable	Type	Description
SQLREQS	Count	Number of DB2 requests
STGCURR	Count	Current storage usage
STGHCUR	Count	High water mark of current storage
STGHIGH	Count	High water mark of storage requests
STGVIOL	Count	Storage violations
STORAGE	Count	Total bytes of storage
STORSUSP	Time	Storage suspend time
STORUSE	Count	Storage types used
SUSPEND	Count	Suspends
SUSPTIME	Time	Suspend time
SYSWAIT	Count	System waits
TARGET	Time	ARTM target time
TCPWAIT	Count	TCP waits
TDATREAD	Count	Transient data read
TDATREQS	Count	Transient data requests
TDATTIME	Time	Transient data request time
TDATWRIT	Count	Transient data writes
TDPWAIT	Count	TDP waits
TEMPIWCT	Count	Temporary storage I/O wait count
TEMPIWTM	Time	Temporary storage I/O wait time
TEMPPUTA	Count	Temporary storage PUT AUX requests
TEMPPUTM	Count	Temporary storage PUT MAIN requests
TEMPPUTQ	Count	Temporary storage PUTQ requests
TEMPREAD	Count	Temporary storage READ requests
TEMPREQS	Count	Temporary storage requests
TEMPRTIM	Time	Temporary storage request time
TEMPRTOT	Count	Temporary storage total bytes read
TEMPSTIM	Time	Temporary storage suspend time
TEMPSUCT	Count	Temporary storage suspend count
TEMPUSE	Count	Temporary storage used

Variable	Type	Description
TEMPWTOT	Count	Temporary storage total bytes written
TERMPRI	Count	Terminal priority
TERMTIME	Time	Terminal I/O time
THRSUSE	Count	Thresholds triggered
TMGRREQS	Count	Table manager request time
TMSGTIME	Time	Table manager request time
TRANPRI	Count	Transaction priority
TRANUSE	Count	Number of transactions
TRPWAIT	Count	TRP waits
TSPWAIT	Count	TSP waits
UEXITUSE	Count	User exits used
USERREQS	Count	User exit requests
USERTIME	Time	User exit request time
WAITREQS	Count	Extended wait requests
WAITRTIM	Time	Extended wait request time
WAITS	Count	Single waits
WAITTIME	Time	Wait time
WRITES	Count	Writes
WTRTIME	Time	Waiting-to-run time
WTSWAIT	Count	Write waits
XSECREQS	Count	External security requests
XSECTIME	Time	External security request time
XSECUSE	Count	External security calls

Commands

This appendix provides an alphabetical reference of all Unicenter CA-Explore for CICS commands.

Note: This appendix discusses the uses of Unicenter CA-Explore for CICS with CICS Version 2.3 (CICS 2.3) and CICS Transaction Server Version 1.1 (TS 1.1). Unless a distinction is noted, the information applies to both versions.

Table of Commands

The following table lists all commands that can be issued to Unicenter CA-Explore for CICS. (Commands are also shown on the COMMANDS panel.)

Command	Default Submenu or Subsystem	Function
ABENDs	/PROBLEM	Displays Program Check Abend Trace Table information.
ACTIVITY	/STATUS	Displays transaction activity and response time.
ADDSSESS	FUNCTION	Adds a logical session.
AFCB	/DISPLAY	Displays the authorized function control block.
AID	/TABLES	Displays authorized initiate descriptor chain.
ALIGN	FUNCTION	Alters default alignment for virtual storage displays.
ALTER	FUNCTION	Activates or deactivates full panel ALTER mode.
ANALysis	/STATUS	Displays a summary of the time spent by CICS on various resources.

Command	Default Submenu or Subsystem	Function
ARTM	/CONFIG	Displays automated response time management information.
ATTRIB	/CONFIG	Displays user-defined screen attributes.
AUTO	FUNCTION	Activates or deactivates automatic redisplay mode.
AUTOTIME	FUNCTION	Specifies the number of seconds to delay for panel redisplay.
AUXstor	/STORAGE	Displays temporary storage auxiliary statistics.
BWZ	FUNCTION	Controls whether data fields that contain zeroes are displayed as blanks.
CAPS	FUNCTION	Turns uppercase translation on or off.
CAPTURE	FUNCTION	Activates or deactivates the capture facility.
CEMT	FUNCTION	Sends CEMT commands to be processed.
CLRSTACK	FUNCTION	Clears the display stack.
CMDList	/CONFIG	Creates, displays, deletes, or updates command lists.
CMDMENU	FUNCTION	Assigns a command to appear on the menu you specify.
COLOr	FUNCTION	Turns color and extended highlighting modes on or off.
COMMANDS	/HELP	Lists commands available in Unicenter CA-Explore for CICS.
COMMAREA	/TABLES	Displays information about CICS communication areas.
CONFig	/CONFIG	Displays and updates Unicenter CA-Explore for CICS configuration options.
CONSOLE	/VSE	Displays the VSE system console.
CSA	/DISPLAY	Displays the CICS common system area.
CWA	/DISPLAY	Displays the CICS common work area.

Command	Default Submenu or Subsystem	Function
DATATbl	/FILES	Displays data table statistics.
DCEMT	/UTILITY	Displays CEMT responses.
DCMPROD	/CAPROD	Displays CA's Data Center Management products.
DCT	/DISPLAY	Sets the current display address to the specified DCT entry.
DELETEQ	FUNCTION	Deletes a temporary storage queue.
DGENTBL	/UTILITY	Displays GENTABLE responses (CICS 2.3 only).
DISPCHAR	/CA-EXPLORE	Displays character sets.
DISplay	/DISPLAY	Displays the contents of virtual storage at a specified address.
DLIBuff	/DBASE	Displays DL/I buffers.
DLIDBD	/DBASE	Displays DL/I DBD directory entries.
DLIPSB	/DBASE	Displays DL/I PSB directory entries.
DLISTATs	/DBASE	Displays DL/I resource statistics.
DLITasks	/DBASE	Displays DL/I tasks.
DSA	/STORAGE	Displays information about the dynamic storage areas.
DSAPAGE	/DISPLAY	Sets the current display address to top of specified DSA page.
DYNClass	/VSE	Displays VSE dynamic class characteristics.
EPB	/TABLES	Displays exit program block information.
EQUate	FUNCTION	Defines a symbol that can be entered on a storage display panel to display storage at the address defined for the symbol.
EVSE	/CAPROD	Accesses Unicenter CA-Explore for VSE.
EXIT	FUNCTION	Exits Unicenter CA-Explore for CICS and returns to your home environment.

Command	Default Submenu or Subsystem	Function
EXPCMODs	/CA-EXPLORE	Lists all Unicenter CA-Explore for CICS modules.
FAQE	/STORAGE	Displays free area queue element information (CICS 2.3 only).
FCT	/DISPLAY	Sets the current display address to the specified FCT entry.
FILES	/FILES	Displays File Control Table entries.
FLSHBack	/HISTORY	Displays flashback information on transactions.
FREEZE	FUNCTION	Temporarily stops the execution of CICS.
GENTABLE	FUNCTION	Dynamically allocates CICS table entries (CICS 2.3 only).
GETVIS24	/STORAGE	Displays a map of allocated and unallocated GETVIS storage below the 16M line.
GETVIS31	/STORAGE	Displays a map of allocated and unallocated GETVIS storage above the 16M line.
GLOBAL	/PROBLEM	Displays global system information.
HARDCopy	FUNCTION	Prints hard copies of panels.
HELP	None	Displays help information.
HILight	FUNCTION	Turns the extended highlighting mode on or off.
ICE	/TABLES	Displays the interval control element chain.
IDUMP	FUNCTION	Dumps storage information you specify.
JOBs	/VSE	Displays job partitions.
JOURNAL	/TABLES	Displays journal statistics.
LAST	/DISPLAY	Sets the current address to the last address displayed.

Command	Default Submenu or Subsystem	Function
LISTMAPs	/STORAGE	Displays a list of maps loaded by Unicenter CA-Explore for CICS at initialization.
LOADLIST	/VSE	Displays a list of loaded modules.
LOGON	None	Allows you to log on to Unicenter CA-Explore for CICS.
LSRBuff	/FILES	Displays information about LSR buffer usage.
LSRPool	/FILES	Displays the LSR pool performance ratings.
LSRStats	/FILES	Displays LSR pool resource statistics.
LSRSTRng	/FILES	Displays information about LSR string usage.
MAP	/STORAGE	Displays information about control block mapping.
MAP1	/DISPLAY	Displays the CICS page allocation map MAP1 (CICS 2.3 only).
MAP2	/DISPLAY	Displays the CICS page allocation map MAP2 (CICS 2.3 only).
MAPUTIL	FUNCTION	Dynamically loads or deletes map definitions.
MAPVse	/STORAGE	Displays VSE region map information.
MESSAGEs	/HELP	Displays Unicenter CA-Explore for CICS terminal messages.
MIXED	FUNCTION	Turns uppercase translation off, allowing mixed case displays.
MONITOR	None	Monitor a Unicenter CA-Explore for CICS region.
MONO	FUNCTION	Sets display mode to monochrome.
MRO	/TABLES	Displays multi-region operation information.
MSCROLL	FUNCTION	Alters the default memory scroll value.

Command	Default Submenu or Subsystem	Function
MXT	/STATUS	Displays maximum task values.
OPFLA	/DISPLAY	Displays the CICS optional features list.
OPTIONS	/CONFIG	Lists all options and their settings.
PAM	/DISPLAY	Displays the CICS page allocation map (CICS 2.3 only).
PCT	/DISPLAY	Sets the current display address to the specified PCT entry (CICS 2.3 only).
PERFDATA	/EXPLORE	Displays performance data collection information.
PFKEYS	FUNCTION	Turns F-key display lines on or off.
PFT	/DISPLAY	Sets the current display address to the specified profile entry.
PLOT	/HISTORY	Displays multiple comparison plots.
PLOTBAR	FUNCTION	Sets the default plot bar style.
PLOTList	/CONFIG	Displays a menu of all predefined plot lists.
POP	FUNCTION	Pops top display address from the stack.
PPT	/DISPLAY	Sets the current display address to the specified PPT entry.
PPTPROG	/DISPLAY	Displays the specified CICS PPT program.
PRINT	FUNCTION	Prints panels.
PRODUCTs	/VSE	Displays a list of products defined to the system.
PROFILE	/CONFIG	Displays user profile information.
PROGrams	/TABLES	Displays Program Processing Table information.
PURGEAID	FUNCTION	Purges Authorized Initiate Descriptor (AID).
PURGEICE	FUNCTION	Purges Interval Control Element (ICE).
PUSH	FUNCTION	Pushes current display address onto the stack.

Command	Default Submenu or Subsystem	Function
QEAS	/PROBLEM	Displays a resource enqueued by a task.
REPLAY	/HISTORY	Redisplays captured panels.
RESPTIME	/STATUS	Displays terminal response time information.
RESUME	FUNCTION	Issues a resume for a CICS transaction (CICS 2.3 only).
REVIEW	/HISTORY	Displays a daily summary of CICS statistics.
SATISFY	FUNCTION	Notifies FAQS/ASO or FAQS/PCS that conditions have been met to satisfy an event.
SCALE	FUNCTION	Turns display of the scale line on or off.
SCREEN	FUNCTION	Sets panel size.
SCROLL	FUNCTION	Sets the default scrolling value.
SEGMENT	FUNCTION	Segments output to the SYSLST file.
SESSIONS	/EXPLORE	Creates a Unicenter CA-Explore for CICS terminal session.
SIT	/DISPLAY	Displays the System Initialization Table.
SNAP	FUNCTION	Snap dumps bytes of virtual storage.
SORT	FUNCTION	Sorts the data being displayed.
SQLLINKS	/DBASE	Displays DB2 link information.
STACK	/DISPLAY	Displays addresses on the stack.
SUBPOOLS	/STORAGE	Displays information about partition GETVIS subpools.
SUBTASKS	/VSE	Displays subtask information by TCB.
SUSPEND	FUNCTION	Suspends a CICS transaction (CICS 2.3 only).
SVALIST	/VSE	Displays a list of the modules loaded in the SVA.
SWITCH	FUNCTION	Selects a Unicenter CA-Explore for CICS region for monitoring.

Command	Default Submenu or Subsystem	Function
SYMBOLs	/DISPLAY	Displays the defined symbols and their addresses and regions.
SYSDATA	/HISTORY	Displays summary system information or detailed information on a specific jobname.
SYSLST	FUNCTION	Writes text to the SYSLST file.
SYSTEM	/STATUS	Displays information on regions defined in the monitor information table.
TABLEs	/STORAGE	Displays the number of entries in each CICS table and the amount of storage allocated for each table
TASKs	/STATUS	Displays information about active and suspended transactions.
TCT	/DISPLAY	Displays the Terminal Control Table.
TCTSE	/DISPLAY	Sets the current display address to the specified system entry in the TCT.
TCTTE	/DISPLAY	Sets the current display address to the specified terminal entry in the TCT.
TDATA	/TABLES	Displays transient dataset activity.
TEMPstor	/STORAGE	Displays temporary storage statistics.
TERMs	/TABLES	Displays information from the Terminal Control Table.
THRESHol	/CONFIG	Displays threshold information.
TIDlist	/VSE	Displays information about VSE task IDs.
TMDIR	/TABLES	Displays table manager directory entry information.
TOPICs	/HELP	Displays Unicenter CA-Explore for CICS help topics.
TRACEHdr	/DISPLAY	Displays the CICS Trace Table header (CICS 2.3 only).
TRANKILL	FUNCTION	Cancels a CICS transaction.

Command	Default Submenu or Subsystem	Function
TRANs	/TABLES	Displays information from the Program Control Table.
TRTable	/PROBLEM	Displays the previous 512 CICS trace entries in CICS 2.3 or the latest trace buffers in TS 1.1.
TSQStats	/STORAGE	Displays temporary storage queue statistics.
TSQueues	/STORAGE	Displays temporary storage queues.
TSUMmary	/STATUS	Displays transaction summary information.
UMBrella	/CONFIG	Displays the umbrella transactions.
USERS	/CA-EXPLORE	Displays information about Unicenter CA-Explore for CICS users.
VARiable	/HELP	Displays information about Unicenter CA-Explore for CICS variables.
VSAM	/FILES	Displays VSAM performance statistics.
VSAMSTAT	/FILES	Displays VSAM interval statistics.
VSE	FUNCTION	Issues VSE console commands.
VSTATus	/STATUS	Displays real-time variable values.
XMONitor	/PROBLEM	Displays a summary of the condition of all systems.
