## SÉRIE DES MANUSCRITS BRUTS

# Données brutes des sédiments de lac de la région du Saguenay

Jean Choinière

Ce document est une reproduction fidèle du manuscrit tel que soumis par l'auteur sauf pour une mise en page sommaire destinée à assurer une qualité convenable de reproduction.

Ce document présente la liste des résultats d'analyse et des coordonnées UTM des échantillons de sédiments de fond de lac prélevés par SOQUEM dans la région du Saguenay. Les cartes géochimiques de ces résultats à l'échelle 1:500 000 ont été publiées en même temps que le présent document sous le numéro d'identification: DP 86-21.

La liste des résultats a été séparée en deux secteurs: est et ouest. La limite entre ceux-ci passe par le centre du lac St-Jean, un peu à l'est de la longitude 72°00'. Les échantillons du secteur est sont répartis de la page 1 à 113 et ils sont regroupés à l'intérieur des coupures 1:50 000 du SNRC. Les échantillons du secteur ouest sont répartis de la page B1 à B45 et ils sont regroupés eux aussi à l'intérieur des coupures 1:50 000 du SNRC.

SECTEUR EST

p. 1 à 113
