

HPE MSR2000 Router Series

Key features

- Up to 1 Mpps forwarding; converged high-performance routing, switching, security, voice, and mobility
- Embedded security features with hardware-based encryption, firewall, Network Address Translation (NAT), and Virtual Private Networks (VPNs)
- Industry-leading breadth of LAN and WAN connectivity, up to 24/48 GE switching ports integrated
- No additional licensing complexity; no cost for advanced features
- Zero-touch solution, with single-pane-of-glass management

Product overview

The HPE MSR2000 Router Series, the next generation of router from Hewlett Packard Enterprise (HPE), is a component of the HPE FlexBranch solution, which is a part of the comprehensive HPE FlexNetwork architecture. These routers feature a modular design that delivers unmatched application services for small- to medium-sized branch offices. This gives your IT personnel the benefit of reduced complexity, and simplified configuration, deployment, and management.

The MSR2000 series provides an agile, flexible network infrastructure that enables you to quickly adapt to your changing business requirements while delivering integrated concurrent services on a single, easy-to-manage platform.

Features and benefits

Performance

Excellent forwarding performance
 Provides forwarding performance up to 1 Mpps (672 Mb/s); meets the bandwidth-intensive application demands of enterprise businesses

• Powerful security capacity

The MSR2000 series is available with standard or high encryption, an embedded hardware encryption accelerator to improve encryption performance; IPSec encryption throughput can be up to 400 Mb/s with a maximum of 1,000 IPSec VPN tunnels

Product architecture

SDN/OpenFlow

OpenFlow is the communications interface defined between the control and forwarding layers of a Software-Defined Networking (SDN) architecture. OpenFlow separates the data forwarding and routing decision functions. It keeps the flow-based forwarding function and employs a separate controller to make routing decisions. OpenFlow matches packets against one or more flow tables. MSR support OpenFlow 1.3.1

- Ideal multiservice platform
 Provides WAN router, Ethernet switch, 3G and 4G WAN, stateful firewall, VPN, and SIP or voice gateway on MSRs
- Advanced hardware architecture
 Supports multicore processors, Gigabit switching, and PCle bus. Dual internal power supplies (AC or DC) supported on MSR2004-48 for higher reliability and flexibility
- New operating system version
 Ships with new Comware v7 Operating System delivering the latest in virtualization and routing

Connectivity

• Virtual eXtensible LAN (VXLAN)

VXLAN is an IP-based network, using the "MAC in UDP" package of Layer VPN technology. VXLAN can be based on an existing ISP or enterprise IP networks for decentralized physical site provides Layer 2 communication, and can provide service isolation for different tenants

• Virtual Private LAN Service (VPLS)

VPLS delivers a point-to-multipoint L2VPN service over an MPLS or IP backbone. The backbone is transparent to the customer sites, which can communicate with each other as if they were on the same LAN. The following protocols support on MSRs, RFC4447, RFC4761, and RFC4762, BFD detection in VPLS, Support hierarchical HOPE (H-VPLS), MAC address recovery in H-VPLS to speed up convergence

- Network Mobility (NEMO)
- NEMO enables a node to retain the same IP address and maintain application connectivity when the node travels across networks. It allows location-independent routing of IP datagrams on the Internet
- High-density port connectivity
 Provides 24 or 48 Giga LAN switching ports on board (all switching ports can be configured as routed ports), up to four interface module slots, and up to 30 module options
- Multiple WAN interfaces

Provides a traditional link with E1, T1, Serial, ADSL over POTs, ADSL over ISDN, G.SHDSL, Asynchronous Transfer Mode (ATM), and ISDN links; high-density Fast or Giga Ethernet access modules; mobility access with 3G (WCDMA/HSPA)/4G LTE SIC module, and 3G/4G USB modems

Page 3

• Packet storm protection

Protects against broadcast, multicast, or unicast storms with user-defined thresholds

Loopback

Supports internal loopback testing for maintenance purposes and an increase in availability; loopback detection protects against incorrect cabling or network configurations and can be enabled on a per-port or per-VLAN basis for added flexibility

• 3G/4G LTE access support

Provides 3G/4G LTE wireless access for primary or backup connectivity via a 3G/4G LTE SIC modules certified on various cellular networks; optional carrier 3G/4G LTE USB modems are available

• USB interface

Uses USB memory disk to download and upload configuration and OS image files; supports an external USB 3G/4G modem for a 3G/4G WAN uplink

• Flexible port selection

Provides a combination of fiber and copper interface modules, 100/1000BASE-X support, and 10/100/1000BASE-T auto-speed detection plus auto duplex and MDI/MDI-X

Layer 2 switching

• Spanning Tree Protocol (STP)

Supports standard IEEE 802.1D STP, IEEE 802.1w Rapid Spanning Tree Protocol (RSTP) for faster convergence, and IEEE 802.1s Multiple Spanning Tree Protocol (MSTP)

 Internet Group Management Protocol (IGMP) and Multicast Listener Discovery (MLD) protocol snooping

Control and manage the flooding of multicast packets in a Layer 2 network

Port mirroring

Duplicates port traffic (ingress and egress) to a local or remote monitoring port

• \/I ANs

Supports IEEE 802.1Q-based VLANs

• sFlow®

Allows traffic sampling

• Define port as switched or routed

Supports command switch to easily change switched ports to routed (maximum four Fast Ethernet ports)

Layer 3 routing

• Static IPv4 routing

Provides simple manually configured IPv4 routing

• Routing Information Protocol (RIP)

Uses a distance vector algorithm with User Datagram Protocol (UDP) packets for route determination; supports RIPv1 and RIPv2 routing; includes loop protection

• Open Shortest Path First (OSPF)

Delivers faster convergence; uses this link-state routing Interior Gateway Protocol (IGP), which supports ECMP, NSSA, and MD5 authentication for increased security and graceful restart for faster failure recovery

• Border Gateway Protocol 4 (BGP-4)

Delivers an implementation of the Exterior Gateway Protocol (EGP) utilizing path vectors; uses TCP for enhanced reliability for the route discovery process; reduces bandwidth consumption by advertising only incremental updates; supports extensive policies for increased flexibility; scales to very large networks

Intermediate system to intermediate system (IS-IS)
 Uses a path vector Interior Gateway Protocol (IGP), which is defined by the ISO organization for IS-IS routing and extended by IETF RFC 1195 to operate in both TCP/IP and the OSI reference model (Integrated IS-IS)

• Static IPv6 routing

Provides simple manually configured IPv6 routing

• Dual IP stack

Maintains separate stacks for IPv4 and IPv6 to ease the transition from an IPv4-only network to an IPv6-only network design

- Routing Information Protocol next generation (RIPng) Extends RIPv2 to support IPv6 addressing
- OSPFv3

Provides OSPF support for IPv6

• BGP+

Extends BGP-4 to support Multiprotocol BGP (MBGP), including support for IPv6 addressing

• IS-IS for IPv6

Extends IS-IS to support IPv6 addressing

IPv6 tunneling

Allows IPv6 packets to traverse IPv4-only networks by encapsulating the IPv6 packet into a standard IPv4 packet; supports manually configured, 6 to 4, and Intra-Site Automatic Tunnel Addressing Protocol (ISATAP) tunnels; is an important element for the transition from IPv4 to IPv6

• Multiprotocol Label Switching (MPLS)

Uses BGP to advertise routes across Label Switched Paths (LSPs), but uses simple labels to forward packets from any Layer 2 or Layer 3 protocol, which reduces complexity and increases performance; supports graceful restart for reduced failure impact; supports LSP tunneling and multilevel stacks

• Multiprotocol Label Switching (MPLS) Layer 3 VPN

Allows Layer 3 VPNs across a provider network; uses Multiprotocol BGP (MBGP) to establish private routes for increased security; supports RFC 2547bis multiple autonomous system VPNs for added flexibility; supports IPv6 MPLS VPN

Multiprotocol Label Switching (MPLS) Layer 2 VPN

Establishes simple Layer 2 point-to-point VPNs across a provider network using only MPLS Label Distribution Protocol (LDP); requires no routing and therefore decreases complexity, increases performance, and allows VPNs of non-routable protocols; uses no routing information for increased security; supports Circuit Cross Connect (CCC), Static Virtual Circuits (SVCs), Martini draft, and Kompella draft technologies

Routing policy

Allows custom filters for increased performance and security; supports access control lists (ACLs), IP prefix, AS paths, community lists, and aggregate policies

Layer 3 services

• NAT-PT

Network Address Translation-Protocol Translation (NAT-PT) enables communication between IPv4 and IPv6 nodes by translating between IPv4 and IPv6 packets. It performs IP address translation, and according to different protocols, performs semantic translation for packets. This technology is only suitable for communication between a pure IPv4 node and a pure IPv6 node

• WAN Optimization

MSR performs optimization using TFO and a combination of DRE, Lempel-Ziv (LZ) compression to provide the bandwidth optimization for file service and web applications. The policy engine module determines which traffic can be optimized and which optimization action should be taken. A pair of WAN optimization equipment can discover each other automatically and complete the negotiation to establish a TCP optimization session

Address Resolution Protocol (ARP)

Determines the MAC address of another IP host in the same subnet; supports static ARPs; gratuitous ARP allows detection of duplicate IP addresses; proxy ARP allows normal ARP operation between subnets or when subnets are separated by a Layer 2 network

- User Datagram Protocol (UDP) helper
 Redirects UDP broadcasts to specific IP subnets to prevent server spoofing
- Dynamic Host Configuration Protocol (DHCP)
 Simplifies the management of large IP networks and supports client and server; DHCP Relay enables DHCP operation across subnets

Quality of service (QoS)

• Nested QoS

Provides a built-in QoS engine that supports nested QoS (same as hierarchical QoS) and can implement a hierarchical scheduling mechanism based on ports, user groups, users, and user services

Traffic policing

Supports Committed Access Rate (CAR) and line rate

- Congestion management Supports FIFO, PQ, CQ, WFQ, CBQ, and RTPQ
- Weighted random early detection (WRED)/random early detection (RED)

 Delivers congestion avoidance capabilities through the use of queue management algorithms
- Other QoS technologies
 Supports traffic shaping, MPLS QoS, MP QoS/LFI, and Control Plane Policing (CoPP)

Security

• IPS

Built-in Intrusion Prevention System (IPS) detects and protects the branch office from security threats. Optional HPE integration filters for client-side, branch protection from exploits and vulnerabilities

• Enhanced stateful firewall

Application layer protocol inspection, Transport layer protocol inspection, ICMP error message check, and TCP SYN check. Support more L4 and L7 protocols like TCP, UDP, UDP-Lite, ICMPv4/ICMPv6, SCTP, DCCP, RAWIP, HTTP, FTP, SMTP, DNS, SIP, H.323, SCCP

• Zone based firewall

Zone based policy firewall changes the firewall configuration from the older interface-based model to a more flexible, more easily understood zone-based model. Interfaces are assigned to zones, and inspection policy is applied to traffic moving between the zones. Inter-zone policies offer considerable flexibility and granularity, so different inspection policies can be applied to multiple host groups connected to the same router interface

• Auto Discover VPN (ADVPN)

Collects, maintains, and distributes dynamic public addresses through the VPN Address Management (VAM) protocol, making VPN establishment available between enterprise branches that use dynamic addresses to access the public network; compared to traditional VPN technologies, ADVPN technology is more flexible and has richer features, such as NAT traversal of ADVPN packets, AAA identity authentication, IPSec protection of data packets, and multiple VPN domains

• IPSec VPN

Supports DES, Triple DES (3DES), and Advanced Encryption Standard (AES) 128/192/256 encryption, and MD5 and SHA-1 authentication

Access control list (ACL)

Supports powerful ACLs for both IPv4 and IPv6; ACLs are used for filtering traffic to prevent unauthorized users from accessing the network, or for controlling network traffic to save resources; rules can either deny or permit traffic to be forwarded; rules can be based on a Layer 2 header or a Layer 3 protocol header; rules can be set to operate on specific dates or times

- Terminal Access Controller Access-Control System (TACACS+)
 Delivers an authentication tool using TCP with encryption of the full authentication request, providing additional security
- Unicast Reverse Path Forwarding (URPF)
 Allows normal packets to be forwarded correctly, but discards the attaching packet due to lack of reverse path route or incorrect inbound interface; prevents source spoofing and distributed attacks
- Network login
 Allows authentication of multiple users per port

RADIUS

Eases security access administration by utilizing a user and password authentication server

Network address translation (NAT)
 Supports one-to-one NAT, many-to-many NAT, and NAT control, enabling NAPT to support
multiple connections; supports blacklist in NAT, a limit on the number of connections, session logs,
and multi-instances

• Secure shell (SSHv2)

Uses external servers to securely login to a remote device; with authentication and encryption, it protects against IP spoofing and plain text password interception; increases the security of Secure File Transfer Protocol (SFTP) transfers

Attack detection and protection
Responding to network attacks and threats by MSR Comware, support max connection limitation,
single-packet attacks protection, scanning attack protection, flood attack protection, TCP and
ICMP Attack Protection and so on

Convergence

- Internet Group Management Protocol (IGMP)
 Utilizes Any-Source Multicast (ASM) or Source-Specific Multicast (SSM) to manage IPv4 multicast networks; supports IGMPv1, v2, and v3
- Protocol Independent Multicast (PIM)
 Defines modes of Internet IPv4 and IPv6 multicasting to allow one-to-many and many-to-many transmission of information; supports PIM Dense Mode (DM), Sparse Mode (SM), and Source-Specific Mode (SSM)
- Multicast Source Discovery Protocol (MSDP)
 Allows multiple PIM-SM domains to interoperate; is used for inter-domain multicast applications
- Multicast Border Gateway Protocol (MBGP)
 Allows multicast traffic to be forwarded across BGP networks and kept separate from unicast traffic

Integration

- Embedded Netstream
 Improves traffic distribution using powerful scheduling algorithms, including Layer 4 to 7 services;
 monitors the health status of servers and firewalls
- Embedded VPN and stateful firewall
 Provides enhanced stateful packet inspection and filtering; delivers advanced VPN services with
 Triple DES (3DES) and Advanced Encryption Standard (AES) encryption at high performance
 and low latency, URL filtering, and application prioritization and enhancement
- SIP trunking

 Delivers multiple concurrent calls on one link; the carrier authenticates only the link, rather than carrying each SIP call on the link

Resiliency and high availability

- Intelligent Resilient Framework (IRF)
 IRF allows the customer build an IRF stack, namely a logical device, by interconnecting multiple
 devices through stack ports. The customer can manage all the devices in the IRF stack by managing
 the logical device, which is cost-effective like a box-type device, and scalable and highly reliable
 like a chassis-type distributed device
- Backup center
 Acts as a part of the management and backup function to provide backup for device interfaces;
 delivers reliability by switching traffic over to a backup interface when the primary one fails

Virtual Router Redundancy Protocol (VRRP)
 Allows groups of two routers to dynamically back each other up to create highly available routed environments; supports VRRP load balancing

• Embedded Automation Architecture (EAA)

Monitors the internal event and status of system hardware and software, identifying potential problems as early as possible; collects field information and attempts to automatically repair the issues; based on the user configuration, onsite information will be sent to technical support

Bidirectional Forwarding Detection (BFD)
 Detects quickly the failures of the bidirectional forwarding paths between two devices for upper-layer protocols such as routing protocols and MPLS

Management

- HPE Intelligent Management Center (IMC)
 Integrates fault management, element configuration, and network monitoring from a central vantage point; built-in support for third-party devices enables network administrators to centrally manage all network elements with a variety of automated tasks including discovery extensions.
- vantage point; built-in support for third-party devices enables network administrators to centrally manage all network elements with a variety of automated tasks, including discovery, categorization, baseline configurations, and software images; the software also provides configuration comparison tools, version tracking, change alerts, and more
- Industry-standard CLI with a hierarchical structure Reduces training time and expenses, and increases productivity in multivendor installations
- Management security
 Restricts access to critical configuration commands; offers multiple privilege levels with password protection; ACLs provide Telnet and Simple Network Management Protocol (SNMP) access; local and remote syslog capabilities allow logging of all access
- SNMPv1, v2, and v3
 Provide complete support of SNMP; provide full support of industry-standard Management
 Information Base (MIB) plus private extensions; SNMPv3 supports increased security using encryption
- Remote monitoring (RMON)
 Uses standard SNMP to monitor essential network functions; supports events, alarm, history, and statistics group plus a private alarm extension group
- FTP, TFTP, and SFTP support

 Offer different mechanisms for configuration updates; FTP allows bidirectional transfers over
 a TCP/IP network; trivial FTP (TFTP) is a simpler method using User Datagram Protocol (UDP);
 Secure File Transfer Protocol (SFTP) runs over an SSH tunnel to provide additional security
- Debug and sampler utility Supports ping and traceroute for both IPv4 and IPv6
- Network Time Protocol (NTP)
 Synchronizes timekeeping among distributed time servers and clients; keeps timekeeping consistent among all clock-dependent devices within the network so that the devices can provide diverse applications based on the consistent time

• Information center

Provides a central repository for system and network information; aggregates all logs, traps, and debugging information generated by the system and maintains them in order of severity; outputs the network information to multiple channels based on user-defined rules

 Management interface control
 Provides management access through modem port and terminal interface; provides access through terminal interface, Telnet, or SSH

• Network Quality Analyzer (NQA)

Analyzes network performance and service quality by sending test packets, and provides network performance and service quality parameters such as jitter, TCP, or FTP connection delays; allows network manager to determine overall network performance and diagnose and locate network congestion points or failures

- Role-based security
 Delivers role-based access control (RBAC); supports 16 user levels (0~15)
- Standards-based authentication support for LDAP Integrates seamlessly into existing authentication services

Ease of deployment

• Zero-touch deployment Supports TR-069, USB disk auto deployment, and 3G SMS auto deployment

Additional information

OPEX savings

Simplifies and streamlines deployment, management, and training through the use of a common operating system, thereby cutting costs as well as reducing the risk of human errors associated with having to manage multiple operating systems across different platforms and network layers

• Faster time to market

Allows new and custom features to be brought rapidly to market through engineering efficiencies, delivering better initial and ongoing stability

• Green initiative support Provides support for RoHS and WEEE regulations

Investment protection

• Reuse of existing SIC modules Supports existing SIC modules, transceivers, and cables for investment protection

Warranty and support

• 1-year Warranty

See **hpe.com/networking/warrantysummary** for warranty and support information included with your product purchase.

• Software releases

To find software for your product, refer to **hpe.com/networking/support**; for details on the software releases available with your product purchase, refer to

HPE MSR2000 Router Series accessories

Router Modules	HPE MSR 4-port Gig-T Switch SIC Module (JG739A)
	HPE MSR 4-port Gig-T PoE Switch SIC Module (JG740A)
	HPE MSR 4-port 10/100Base-T Switch SIC Module (JD573B)
	HPE MSR 1-port 10/100Base-T SIC Module (JD545B)
	HPE MSR 1-port 100Base-X SIC Module (JF280A)
	HPE MSR 1-port GbE Combo SIC Module (JG738A)
	HPE MSR 2-port FXO SIC Module (JD558A)
	HPE MSR 2-port FXS SIC Module (JD560A)
	HPE MSR 2-port FXS/1-port FXO SIC Module (JD632A)
	HPE MSR 2-port ISDN-S/T Voice SIC Module (JF821A)
	HPE MSR 1-port E1/CE1/PRI SIC Module (JG604A)
	HPE MSR 1-port E1/Fractional E1 (75ohm) SIC Module (JD634B)
	HPE MSR 2-port E1/Fractional E1 (75ohm) SIC Module (JF842A)
	HPE MSR 1-port T1/Fractional T1 SIC Module (JD538A)
	HPE MSR 1-port Enhanced Serial SIC Module (JD557A)
	HPE MSR 2-port Enhanced Sync/Async Serial SIC Module (JG736A)
	HPE MSR 4-port Enhanced Sync/Async Serial SIC Module (JG737A)
	HPE MSR 1-port ISDN-S/T SIC Module (JD571A)
	HPE MSR 8-port Async Serial SIC Module (JF281A)
	HPE MSR 16-port Async Serial SIC Module (JG186A)
	HPE Flex Network MSR 4G LTE SIC Module for LTE 700/1700/2100 MHz CDMA UMTS/HSPA+/HSPA/EDGE/GPRS/GSM (JG742B)
	HPE MSR 4G LTE SIC Module for ATT/LTE 700/1700/2100 MHz and UMTS/HSPA+/HSPA/EDGE/GRPS/GSM (JG743A)
	HPE MSR 4G LTE SIC Module for Global/LTE 800/900/1800/2100/2600MHz UMTS/HSPA+/HSPA/EDGE/GRPS/GSM (JG744B)
	HPE MSR HSPA+/WCDMA SIC Module (JG929A)
	HPE MSR 1-port E1/T1 Voice SIC Module (JH240A)
License	HPE IPS Activation for MSR2000 E-LTU (JH225AAE)
	HPE DV Essential IPS Filter Service for MSR2000 1yr E-LTU (JH229AAE)
HPE MSR2003 AC Router (JG411A)	HPE MSR 9-port 10/100Base-T Switch DSIC Module (JD574B)
	HPE MSR 4-port FXS/1-port FXO DSIC Module (JG189A)
	HPE MSR 1-port 8-wire G.SHDSL (RJ45) DSIC Module (JG191A)
HPE MSR2004-48 Router (JG735A)	HPE X351 150W 100-240VAC to 12VDC Power Supply (JG745A)
	HPE X351 150W -48/-60VDC to 12VDC Power Supply (JG746A)
