Appendix P

Colorado Medical Assistance Program
Prior Authorization Procedures, Coverage Policies and Drug Utilization Criteria
Health First Colorado Pharmacy Benefit
For Physicians and Pharmacists

Drug products requiring a prior authorization for the Health First Colorado pharmacy benefit are listed in this document. Prior authorization criteria are based on FDA product labeling, CMS approved compendia, clinical practice guidelines, and peer-reviewed medical literature.

Prior Authorization Procedures:

• Prior authorizations may be called or faxed to the helpdesk at:

Phone: 1-800-424-5725 Fax: 1-888-424-5881

- Products qualify for a 3-day emergency supply in an emergency situation. In this case, call the helpdesk for an override.
- Prior authorization (PA) forms are available by visiting https://www.colorado.gov/hcpf/pharmacy-resources .
- PA forms can be signed by anyone who has authority under Colorado law to prescribe the medication. Assistants of authorized persons cannot sign the PA form.
- Physicians or assistants who are acting as the agents of the physicians may request a PA by phone.
- Pharmacists from long-term-care pharmacies and infusion pharmacy must obtain a signature from someone who is authorized to prescribe drugs before they submit PA forms.
- Pharmacists from long-term-care pharmacies and infusion pharmacies can request a PA by phone if specified in the criteria.
- Please note that initiating therapy with a requested drug product, including non-preferred drugs, prior to a PA request being reviewed and approved does not necessitate approval of the PA request. This includes initiating therapy by administration in the inpatient setting, by using office samples, or by any other means.
- All PA requests are coded online into the PA system.

Early Refill Limitations:

• Non-controlled prescriptions may be refilled after 75% of previous fill is used. Controlled substance prescriptions (DEA Schedule 2 through 5) may be refilled after 85% of the previous fill is used. Synagis may be refilled after 92.5% of the previous fill is used.

Medical Supply Products and Medications:

- All supplies, including insulin needles, food supplements and diabetic supplies are not covered under the pharmacy benefit, but are covered as medical supply items through the Durable Medical Equipment (DME) benefit.
- If a medical benefit requires a PA, the PA request can be submitted through the provider application available at http://www.coloradopar.com/
- DME questions should be directed to Gainwell Technologies (Formerly DXC Technology) 1-844-235- 2387. Only policy questions regarding Durable Medical Equipment should be directed to the state at 303-866-3406.

Physician Administered Drugs and Medical Billing:

• Physician administered drugs (PADs) include any medication or medication formulation that is administered intravenously or requires administration by a healthcare professional (including cases where FDA package labeling for a medication specifies that administration should be performed by or under the direct supervision of a healthcare professional). PAD criteria listed on Appendix P apply specifically to drug products when billed through the Health First Colorado pharmacy benefit. Only PADs administered by a healthcare professional in the member's home or in a long-term care facility should be billed through the Health First Colorado pharmacy benefit (see "Physician Administered Drugs" section below). PADs administered by a healthcare professional in the office, clinic, dialysis unit, or outpatient hospital settings should be billed through the Health First Colorado medical benefit using the standard buy-and-bill process and following procedures outlined in the PAD Billing Manual (found on the PAD Resources Page at https://www.colorado.gov/hcpf/physician-administered-drugs).

MAXIMUM DOSING	Doses over 4000mg/day are not qualified for emergency 3 day supply approval	
ADAKVEO	ADAKVEO (crizanlizumab-tmca) may be approved for members meeting the	One year
(crizanlizumab-tmca)	following criteria: • Medication is being administered in the member's home or in a	
	long-term care facility by a healthcare professional AND	
	Medication is being used to reduce the frequency of vasoocclusive	
	crises (VOCs) in adults and pediatric patients aged 16 years and	
	older with sickle cell disease.	
	Maximum dose: Adakveo 5mg/kg every 2 weeks (IV Infusion)	
ALBUMIN	Albumin products may be approved if meeting the following criteria:	One year
	Medication is given in the member's home or in a long-term care facility AND	one year
	Administration is for one of the following FDA-approved indications:	
	Hypoproteinemia	
	BurnsShock due to:	
	Burns	
	■ Trauma	
	Surgery Infaction	
	InfectionErythrocyte resuspension	
	Acute nephrosis	
	o Renal dialysis	
	HyperbilirubinemiaErythroblastosis fetalis	
	O Elythrobiasiosis icialis	
ALDURAZYME (laronidase)	ALDURAZYME (laronidase) may be approved for members meeting the following criteria:	One year
	Aldurazyme (laronidase) is being administered in a long-term care facility or in a member's home by a healthcare professional AND	
	Member is 6 months of age or older AND	
	Member does not have acute febrile or respiratory illness AND	
	 Member does not have progressive/irreversible severe cognitive impairment AND 	
	Member has a diagnosis of Mucopolysaccharidosis, Type 1 confirmed by	
	one of the following:	j

- Detection of pathogenic mutations in the IDUA gene by molecular genetic testing OR
- Detection of deficient activity of the α-L-iduronidase lysosomal enzyme

AND

- Member has a diagnosis of one of the following subtypes:
 - Diagnosis of Hurler (severe) or Hurler-Scheie (attenuated) forms of disease OR
 - O Diagnosis of Scheie (attenuated) form of disease with moderate to severe symptoms

AND

- Alurazyme (laronidase) is being prescribed by or in consultation with a provider who specializes in inherited metabolic disorders AND
- Member has a documented baseline value for urinary glycosaminoglycan (uGAG) AND
- Member has a documented baseline value for one of the following based on age:
 - Members ≥ 6 years of age: percent predicted forced vital capacity (FVC) and/or 6- minute walk test OR
 - Members 6 months to 6 years of age: cardiac status, upper airway obstruction during sleep, growth velocity, mental development, FVC, and/or 6-minute walk test

Reauthorization Criteria:

After one year, member may receive approval to continue therapy if meeting the following:

- Has documented reduction in uGAG levels AND
- Has demonstrated stability or improvement in one of the following based on age:
 - Members ≥ 6 years of age: stability or improvement in percent predicted FVC and/or 6-minute walk test OR
 - Members 6 months to less than 6 years of age: stability or improvement in cardiac status, upper airway obstruction during sleep, growth velocity, mental development, FVC and/or 6-minute walk test

Max dose: 0.58 mg/kg as a 3 to 4-hour infusion weekly.

ALINIA (nitazoxanide)

ALINIA (nitazoxanide) may be approved if meeting the following criteria:

- ALINIA is being prescribed for diarrhea caused by Giardia lamblia or Cryptosporidium parvum AND
- Member is 1 year of age or older AND
- If treating diarrhea due to C. parvum in members with Human Immunodeficiency Virus (HIV) infection, the member is receiving antiretroviral therapy AND
- Prescription meets the following FDA-labeled dosing:

Age	Dosage of Nitazoxanide	Duration
(years)		
1-3	5 mL (100mg) oral suspension every 12 hours with food	
4-11	10 mL (200mg) oral suspension every 12 hours with food	3 days
>11	500mg orally every 12 hours with food	

COLORADO MEDICAID F	PROGRAM APPENDICES	
	Note: The tablet product formulation is currently not reported as an active drug in the Medicaid Drug Rebate Program (MDRP) and will not be covered until such a time that there is change made to rebate status for this product.	
ALLERGY EXTRACT PRODUCTS (Oral)	GRASTEK (timothy grass pollen allergen extract): Must be between 5 and 65 years old. Must not be pregnant or nursing. Must be prescribed by an allergist. Must have a documented diagnosis to ONLY timothy grass pollen allergen extract or the Pooideae family (meadow fescue, orchard, perennial rye, Kentucky blue, and red top grasses) confirmed by positive skin test or IgE antibodies. Must have tried and failed allergy shots for reasons other than needle phobia. Failure is defined as: lack of efficacy, allergy, intolerable side effects, or significant drugdrug interaction. Must be willing to administer epinephrine in case of severe allergic reaction. Must be started 12 weeks prior to the season if giving only seasonally. May be taken daily for up to 3 consecutive years. Must NOT have: Severe, unstable or uncontrolled asthma Had an allergic reaction in the past that included trouble breathing, dizziness or fainting, rapid or weak heartbeat Ever had difficulty with breathing due to swelling of the throat or upper airway after using any sublingual immunotherapy before Been diagnosed with cosinophilic esophagitis Allergic to any of the inactive ingredients contained in Grastek which include gelatin, mannitol, and sodium hydroxide A medical condition that may reduce the ability to survive a serious allergic reaction including but not limited to: markedly compromised lung function, unstable angina, recent myocardial infarction, significant arrhythmia, and uncontrolled hypertension. Taking medications that can potentiate or inhibit the effect of epinephrine including but not limited to: beta-adrenergic blockers, alpha-adrenergic blockers, ergot alkaloids, tricyclic antidepressants, levothyroxine, monoamine oxidase inhibitors, certain antihistamines, cardiac glycosides, and diuretics. Be taken with other immunotherapy (oral or injectable) ORALAIR (sweet vernal, orchard, perennial rye, timothy, kentucky blue grass mixed pollens allergen extract): Must be between 5 and 65 years old. Must not be pregnant or	One year
L]

- Severe, unstable or uncontrolled asthma
- Had an allergic reaction in the past that included trouble breathing, dizziness or fainting, rapid or weak heartbeat
- Ever had difficulty with breathing due to swelling of the throat or upper airway after using any sublingual immunotherapy before
- Been diagnosed with eosinophilic esophagitis
- Allergic to any of the inactive ingredients contained in Oralair which include mannitol, microcrystalline cellulose, croscarmellose sodium, colloidal anhydrous silica, magnesium stearate, and lactose monohydrate.
- A medical condition that may reduce the ability to survive a serious allergic reaction including but not limited to: markedly compromised lung function, unstable angina, recent myocardial infarction, significant arrhythmia, and uncontrolled hypertension.
- Taking medications that can potentiate or inhibit the effect of epinephrine
 including but not limited to: beta-adrenergic blockers, alpha-adrenergic blockers,
 ergot alkaloids, tricyclic antidepressants, levothyroxine, monoamine oxidase
 inhibitors, certain antihistamines, cardiac glycosides, and diuretics.
- Be taken with other immunotherapy (oral or injectable)

RAGWITEK (short ragweed pollen allergen extract):

Must be between 18 and 65 years old.

Must be started 12 weeks prior to the season and only prescribed seasonally.

Must not be pregnant or nursing.

Must be prescribed by an allergist.

Must have a documented diagnosis to ONLY short ragweed pollen allergen extract or the Ambrosia family (giant, false, and western ragweed) confirmed by positive skin test or IgE antibodies.

Must have tried and failed allergy shots for reasons other than needle phobia. Failure is defined as: lack of efficacy, allergy, intolerable side effects, or significant drugdrug interaction.

Must be willing to administer epinephrine in case of a severe allergic reaction. Must take first dose in physician's office.

Must NOT have:

- Severe, unstable or uncontrolled asthma
- Had an allergic reaction in the past that included trouble breathing, dizziness or fainting, rapid or weak heartbeat
- Ever had difficulty with breathing due to swelling of the throat or upper airway after using any sublingual immunotherapy before
- Been diagnosed with eosinophilic esophagitis
- Allergic to any of the inactive ingredients contained in Ragwitek which include gelatin, mannitol, and sodium hydroxide
- A medical condition that may reduce the ability to survive a serious allergic reaction including but not limited to: markedly compromised lung function, unstable angina, recent myocardial infarction, significant arrhythmia, and uncontrolled hypertension.
- Taking medications that can potentiate or inhibit the effect of epinephrine
 including but not limited to: beta-adrenergic blockers, alpha-adrenergic blockers,
 ergot alkaloids, tricyclic antidepressants, levothyroxine, monoamine oxidase
 inhibitors, certain antihistamines, cardiac glycosides, and diuretics.
- Be taken with other immunotherapy (oral or injectable)

ALPHA-1 PROTEINASE INHIBITORS

FDA approved indication if given in the member's home or in a long-term care facility:

Lifetime

BACTROBAN (mupirocin) Cream and Nasal Ointment	Bactroban Cream (mupirocin calcium cream) must be prescribed for the treatment of secondarily infected traumatic skin lesions (up to 10 cm in length or 100 cm ² in	Cream: One year
AVEED (testosterone undecanoate)	 Aveed® (testosterone undecanoate) prior authorization may be approved for members who are receiving the injection in their home or in a long-term care facility and have met all of the following criteria: Male patient ≥ 18 years of age AND Has a documented diagnosis of hypogonadotropic or primary hypogonadism (Patients with other diagnoses will require a manual review) AND Has two documented low serum testosterone levels below the lower limit of normal range for testing laboratory prior to initiation of therapy AND Does not have a diagnosis of breast or prostate cancer AND Does not have a palpable prostate nodule or prostate-specific antigen (PSA) > 4ng/mL AND Has normal liver function tests prior to initiation of therapy AND Has trail and failure of two preferred agents from PDL class "Androgenic Agents," one trial must be testosterone cypionate injection. 	One year
Abilify Maintena, Aristada, Geodon injection, Invega Sustenna, Invega Trinza, Perseris ER, Risperdal Consta, Zyprexa Relprevy	Oral atypical antipsychotic criteria can be found on the preferred drug list.	
ATYPICAL ANTIPSYCHOTIC	 Member has a diagnosis of iron deficient anemia AND Oral preparations are ineffective or cannot be used AND Medication is being administered in a long-term care facility or in the member's home by a home healthcare provider Note: For coverage criteria for OTC ferrous sulfate and ferrous gluconate, refer to "OTC Products" section. A prior authorization may be approved for when the medication is administered in a long-term care facility or in a member's home by a healthcare professional. 	One year
ANTI-ANEMIA MEDICATIONS	Oral prescription iron products may be approved for members with a diagnosis of iron deficient anemia (applies to products available by prescription only) Injectable anti-anemia agents (such as Infed®, Ferrlecit®, Venofer®, Dexferrum®) may be approved for members meeting the following criteria:	Lifetime
ANOREXIANTS	Zemaira: Chronic augmentation and maintenance therapy in members with Alpha- 1 Proteinase Inhibitor deficiency with clinically evident emphysema Weight loss medications are not a covered benefit. Adipex P (phentermine) Belviq (lorcaserin) Contrave (naltrexone/bupropion) Lomaira (phentermine) Phentermine Qsymia (phentermine/topiramate ER) Saxenda (liraglutide) Xenical (Orlistat)	Weight loss drugs are not a covered benefit.
COLONADO MEDICAID P	 Aralast: Chronic augmentation therapy in members having congenital deficiency of Alpha –1 Proteinase Inhibitor with clinically evident emphysema Prolastin: Emphysema associated with Alpha-1 Antitrypsin Deficiency 	

COLORADO MEDICAID P	ROGRAM APPENDICES	
	total area), impetigo, infected eczema or folliculitis caused by susceptible strains of Staphylococcus aureus and Streptococcus pyogenes. Bactroban Nasal Ointment (mupirocin calcium) must be prescribed for the eradication of nasal colonization with methicillin-resistant Staphylococcus aureus in adult patients and health care workers as part of a comprehensive infection control program to reduce the risk of infection among patients at high risk of methicillin-resistant S. aureus infection during institutional outbreaks of infections with this pathogen.	Nasal Ointment: Lifetime
BARBITURATES Coverage for Medicare dual- eligible members	Dual-eligible Medicare-Medicaid Beneficiaries: Beginning on January 1, 2013 Colorado Medicaid will no longer cover barbiturates for Medicare-Medicaid enrollees (dual-eligible members). For Medicaid primary members, barbiturates will be approved for use in epilepsy, cancer, chronic mental health disorder, sedation, treatment of insomnia, tension headache, muscle contraction headache and treatment of raised intracranial pressure. All other uses will require manual review	(3 months for neonatal narcotic abstinence syndrome)
BENLYSTA (belimumab)	 Benlysta (belimumab) prior authorization may be approved only when documentation has been received indicating that the drug is being administered in the member's home or long-term care facility. The member must also meet the following criteria: Member is age ≥ 5 years with active, autoantibody-positive systemic lupus erythematosus (SLE) and receiving standard therapy OR member is an adult with active lupus nephritis who are receiving standard therapy AND Member has incomplete response to standard therapy from at least two of the following therapeutic classes: antimalarials, immunosuppressants and glucocorticoids; AND Member maintains standard therapy while on BENLYSTA (belimumab). 	One year
BENZODIAZEPINES Dual-eligible Medicare- Medicaid Beneficiaries	Dual-eligible Medicare-Medicaid Beneficiaries: Benzodiazepines will no longer be a Medicaid benefit for Medicare-Medicaid enrollees (dual-eligible members). The claims are no longer excluded from Medicare part D coverage and therefore must be billed to Medicare part D. Colorado Medicaid will no longer cover these medications for these members beginning on January 1, 2013.	One year
BONE RESORPTION SUPPRESSION AND RELATED AGENTS (Injectable Formulations) Boniva, Aredia, Miacalcin, Zemplar, Hectorol, Zometa, Reclast, Pamidronate, Prolia, Ganite	A prior authorization will only be approved as a pharmacy benefit when the medication is administered in a long-term care facility or in a member's home. Prolia® (denosumab) will be approved if the member Meets the following criteria: • Member is in a long term care facility or home health (this medication is required to be administered by a healthcare professional) AND • Member has one of the following diagnoses: ○ Postmenopausal osteoporosis with high fracture risk ○ Osteoporosis ○ Bone loss in men receiving androgen deprivation therapy in prostate cancer ○ Bone loss in women receiving adjuvant aromatase inhibitor therapy for breast cancer AND • Member has serum calcium greater than 8.5mg/dL AND • Member is taking calcium 1000 mg daily and at least 400 IU vitamin D daily AND • Has trial and failure of preferred bisphosphonate for one year AND (Failure is defined as: lack of efficacy, allergy, intolerable side effects, or significant drug-drug interaction) • Member meets ANY of the following criteria: ○ has a history of an osteoporotic vertebral or hip fracture	One year

COLORADO MEDICAID I	PROGRAM APPENDICES	
	 has a pre-treatment T-score of < -2.5 has a pre-treatment T-score of < -1 but > -2.5 AND either of the following: Pre-treatment FRAX score of > 20% for any major fracture Pre-treatment FRAX score of > 3% for hip fracture 	
	Maximum dose of Prolia is 60mg every 6 months	
BLOOD PRODUCTS	 FDA approved indications if given in the member's home or in a long-term care facility: Plasma protein fraction; shock due to burns, trauma, surgery; hypoproteinemia; adult respiratory distress syndrome; cardiopulmonary bypass; liver failure; renal dialysis; or hemophilia. 	Lifetime
BOTULINUM TOXIN Botox, Dysport, Myobloc, Xeomin	Botulinium toxin agents may receive approval if meeting the following criteria:	One year
BOWEL PREPERATION AGENTS	Not approved for Cosmetic Purposes For the following Bowel Preparation Agents, members will require a prior authorization for quantities exceeding 2 units in 30 days. Colyte Gavilyte-C Gavilyte-H Gavilyte-N Gialax Golytely® Moviprep Peg-Prep Suprep Sutab Trilyte	30 days
BRAND FAVORED	See "Brand Favored Product List" on the Pharmacy Resources webpage at	
MEDICATIONS	https://www.colorado.gov/pacific/hcpf/pharmacy-resources .	
BUPRENORPHINE-CONTAINING PRODUCTS (used for opioid use disorder/opioid dependency*)	 Bunavail® (buprenorphine/naloxone) buccal film will be approved for members who meet all of the following criteria: Approval will be granted if the prescriber meets the qualification criteria under the Drug Addiction Treatment Act (DATA) of 2000 and has been issued a unique DEA identification number by the DEA, indicating that he or she is qualified under the DATA to prescribe Subutex® or Suboxone® AND The member has a diagnosis of opioid dependence AND The member is 16 years of age or older AND No claims data show concomitant use of opiates in the preceding 30 days unless the physician attests the member is no longer using opioids AND The member must have tried and failed, intolerant to, or has contraindication to generic buprenorphine/naloxone SL tablets or Suboxone® films. 	One year
	 Buprenorphine/Naloxone sublingual film will be approved if the all of following criteria are met: Effective 10/01/19: Brand Suboxone[®] sublingual film is covered as a favored product, and for members meeting all of the following criteria (or members with current prior authorization approval on file), claims for brand Suboxone[®] sublingual film will pay with submission of DAW code 0, 1, or 9. Prior authorization for generic buprenorphine/naloxone sublingual film will require 	

prescriber verification that there is clinical necessity for use of the generic product in addition to meeting all of the following:

- The prescriber is authorized to prescribe Suboxone AND
- The member has an opioid dependency AND
- The member is not currently receiving an opioid or opioid combination product unless the physician attests the member is no longer using opioids AND
- Will not be approved for the treatment of pain AND
- Opioid claims will not be allowed for members with a claim for Suboxone in the preceding 30 days AND
- Will not be approved for more than 24mg of buprenorphine/day

Buprenorphine/Naloxone sublingual tablet will be approved if all of the following criteria are met:

- The prescriber is authorized to prescribe buprenorphine/naloxone AND
- The member has an opioid dependency AND
- The member is not currently receiving an opioid or opioid combination product unless the physician attests the member is no longer using opioids AND
- Will not be approved for the treatment of pain AND
- Opioid claims will not be allowed for members with a claim for Suboxone in the preceding 30 days AND
- Will not be approved for more than 24mg of buprenorphine/day

Sublocade[®] (buprenorphine extended-release) injection will be approved for members who meet all of the following criteria:

- Sublocade is being administered in a long-term care facility or in a member's home by a home healthcare provider (all other claims must be submitted through the medical benefit) AND
- Sublocade is being dispensed directly to the home healthcare professional (medication should not be dispensed directly to the member) AND
- Provider attests to member's enrollment in a complete treatment program including counseling and psychosocial support AND
- Member must have documented diagnosis of moderate to severe opioid use disorder AND
- Member must have initiated therapy with a transmucosal buprenorphinecontaining product, and had dose adjustment for a minimum of 7 days AND
- Maximum dose is 300 mg injection every month

Suboxone® sublingual film (brand name) will be approved if all of the following criteria are met:

- The prescriber is authorized to prescribe Suboxone AND
- The member has an opioid dependency AND
- The member is not currently receiving an opioid or opioid combination product unless the physician attests the member is no longer using opioids AND
- Will not be approved for the treatment of pain AND
- Opioid claims will not be allowed for members with a claim for Suboxone in the preceding 30 days AND
- Will not be approved for more than 24mg of buprenorphine/day

Subutex[®] (buprenorphine) sublingual tablet will be approved if all of the following criteria are met:

- The prescriber is authorized to prescribe Subutex AND
- The member has an opioid dependency AND
- The member is pregnant or the member is allergic to Naloxone AND
- Subutex will not be approved for the treatment of pain AND

COLONADO MILDICAID	FROGRAM	
	Subutex will not be approved for more than 24mg/day	
	Zubsolv [®] (buprenorphine/naloxone) sublingual tablet will be approved if all of the following criteria are met:	
	 Approval will be granted if the prescriber meets the qualification criteria under the Drug Addiction Treatment Act (DATA) of 2000 and has been issued a unique DEA identification number by the DEA, indicating that he or she is qualified under the DATA to prescribe Subutex or Suboxone AND 	
	The member has a diagnosis of opioid dependence AND	
	The member is 16 years of age or older AND	
	No claims data show concomitant use of opiates in the preceding 30 days unless	
	the physician attests the member is no longer using opioids AND	
	• The member must have tried and failed, intolerant to, or has a contraindication to generic buprenorphine/naloxone SL tablets or Suboxone films.	
	*Buprenorphine products indicated for treating pain are located on the preferred drug list (PDL)	
CERDELGA (eliglustat)	Cerdelga® (eliglustat) may be approved if all the following criteria are met:	One year
	Member has a diagnosis of Gaucher disease type 1 AND	
	Documentation has been provided to the Department that the member is a CYP2D6 extensive, intermediate, or poor metabolizer as detected by an FDA	
	 cleared test AND Members who are CYP2D6 intermediate or poor metabolizers are not taking a strong CYP3A inhibitor (e.g, indinavir, nelfinavir, ritonavir, saquinavir, suboxone, erythromycin, clarithromycin, telithromycin, posaconazole, itraconazole, ketoconazole, nefazodone) AND 	
	 Members who are CYP2D6 extensive or intermediate metabolizers are not receiving strong or moderate CYP2D6 inhibitors (e.g., sertraline, duloxetine, quinidine, paroxetine, fluoxetine, buproprion, terbinafine) AND a strong or moderate CYP3A inhibitor (e.g., indinavir, nelfinavir, ritonavir, saquinavir, suboxone, erythromycin, clarithromycin, telithromycin, posaconazole, itraconazole, ketoconazole, fluconazole, nefazodone, verapamil, diltiazem) 	
	Quantity Limits: Max 60 tablets/30 days	
CHLOROQUINE	Effective 03/24/20: Prior authorization may be approved for FDA-labeled indication, dose, age, and role in therapy as outlined in product package labeling.	Chronic conditions:
		Acute conditions: Duration of acute use
CLIENT OVERUTILIZATION PROGRAM (COUP)	Effective 9/14/19, pharmacy claims for members enrolled in Health First Colorado's COUP (Client Overutilization Program) program may deny for these members when filling prescriptions at a pharmacy that is not their designated COUP lock-in pharmacy or filling a medication prescribed by a provider that is not their designated COUP lock-in prescriber.	
	Health First Colorado Reginal Accountable Entity (RAE) organizations work with members enrolled in COUP to assist with coordinating care and improving services provided to these members. Members and providers should contact the member's RAE organization for questions regarding the COUP program.* Contact information for Health First Colorado RAE regions can be found at https://www.colorado.gov/pacific/hcpf/accphase2 .	
		L

COLORADO MEDICAID P	ROGRAM APPENDICES	
	Additional information regarding the COUP program and enrollment criteria can be accessed at https://www.colorado.gov/pacific/hcpf/client-overutilization-program .	
	*For questions regarding pharmacy claims denials that are unable to be addressed during normal RAE organizational business hours (M-F 8:00 AM – 4:00 PM	
	Mountain Standard Time), members and providers may contact the Magellan Helpdesk at 1-800-424-5725.	
CONTRACEPTIVE TWELVE-MONTH SUPPLY	Prescription Contraceptive Products (oral and topical): Initial fills may be dispensed for up to a three-month supply to establish tolerance (lack of adverse events). If the prescribed medication is tolerated for at least three months of therapy, subsequent fills of that medication will be eligible to be filled for up to a twelve-month supply.	One year
	Effective 01/20/2020, brand Nuvaring is covered as favored product and claims for brand will pay with submission of DAW code 0, 1, or 9. Generic equivalent etonorgetstral/ethinyl estradiol vaginal ring products require prior authorization and may be approved based on prescriber verification that there is clinical necessity of use of the generic product.	
COLCIL AND COLD	Depot and IUD formulations are billed through the medical benefit.	Ongo
(Prescription Products)	Effective 03/19/20*, select prescription cough and cold products are covered for members of all ages without prior authorization. Eligible products include: • Non-controlled prescription cough and cold medications • Prescription guaifenesin with codeine oral solution formulations	One year
	Coverage of all other prescription cough and cold medications (not identified above) will be subject to meeting the following criteria: • For members < 21 years of age, no prior authorization is required OR • For members ≥ 21 years of age, prior authorization may be approved with diagnosis of a chronic condition (such as COPD or asthma).	
	For members with dual Medicare eligibility, pharmacy claims for prescription cough and cold medications prescribed for <u>chronic conditions</u> should be billed to Medicare. Prescription cough and cold medications prescribed for dual Medicare eligible members for <u>acute conditions</u> are covered through the Health First Colorado pharmacy benefit with completion of prior authorization verifying use for acute illness.	
	Note: For OTC cough and cold product coverage, see "OTC Products" section.	
	*Until such time changes are implemented in the claims system, pharmacies may call the Magellan helpdesk at 1-800-424-5725 for prior authorization overrides for eligible products.	
DALIRESP (roflumilast)	 DALIRESP (roflumilast) tablets will be approved for members that meet the following criteria: Member has a diagnosis for severe COPD with history of COPD exacerbations (2 or more per year) and chronic bronchitis AND Member must be greater than 18 years of age AND Member must have failed a trial of two of the following: long-acting beta2 agonist, preferred anticholinergic/anticholinergic combination, or preferred 	One year
	 agoinst, preferred anticholinergic/anticholinergic combination, of preferred inhaled anticholinergic/anticholinergic combinations due to lack of efficacy, allergy, intolerable side effects or significant drug-drug interaction AND Member must not have moderate to severe liver disease (Child Pugh B or C). 	

	Note: this medication is not a bronchodilator and cannot be used for acute bronchospasms	
DARAPRIM	DARAPRIM (pyrimethamine) may be approved if all the following criteria are met:	8 weeks
(pyrimethamine)	DARAI RIM (pyrimethalinine) may be approved it all the following criteria are met.	o weeks
(pyrimethamme)		
	Member is being treated for toxoplasmic encephalitis or congenital	
	toxoplasmosis or receiving prophylaxis for congenital toxoplasmosis AND	
	Daraprim is prescribed in conjunction with an infectious disease specialist AND	
	Member does not have megaloblastic anemia due to folate deficiency AND	
	• For prophylaxis, member has experienced intolerance to prior treatment with	
	trimethoprim-sulfamethoxazole (TMP-SMX) meeting one of the following:	
	Member has been re-challenged with trimethoprim-sulfamethoxazole (TMP-	
	SMX) using a desensitization protocol and is still unable to tolerate	
	 Member has evidence of life threatening-reaction to trimethoprim- 	
	sulfamethoxazole (TMP-SMX) in the past (e.g. toxic epidermal necrolysis	
	(TEN), Stevens-Johnson syndrome)	
	OR	
	Member is being treated for acute malaria due to susceptible strains of plasmodia	
	AND	
	Member has tried and had an inadequate response or intolerant to two other	
	malaria treatment regimens (such as but not limited to atovaquone/proguanil,	
	Coartem, chloroquine, hydroxychloroquine, chloroquine plus Primaquine,	
	quinine plus clindamycin, quinidine plus doxycycline) AND	
	Daraprim is prescribed in conjunction with an infectious disease specialist with	
	travel/tropical medicine expertise AND	
	Member does not have megaloblastic anemia due to folate deficiency	
	Note: The Center for Disease Control does not recommend Daraprim for the	
	prevention or the treatment of malaria	
DESI DRUGS	DESI drugs (Drugs designated by the Food and Drug Administration as Less Than	
	Effective Drug Efficacy Study Implementation medications) are not a covered	
	benefit.	
DIFICID (fidoxomicin)	DIFICID (fidoxomicin) may be approved if all the following criteria are met:	1 month
	• Member is age ≥ 6 months AND	
	Member has a documented diagnosis (including any applicable labs and/or tests)	
	for Clostridium difficile-associated diarrhea AND	
	Prescribed by or in conjunction with a gastroenterologist or an infectious disease	
	specialist AND	
	Member has failed at least a 10 day treatment course of oral vancomycin. Fig. 1. Since the first state of the first state	
	Failure is defined as lack of efficacy, allergy, intolerable side effects, or	
	significant drug-drug interaction.	
	Maximum quantity:	
	20 tablets per 30 days	
	136 mL per 10 days	
	130 mb per 10 days	
DIHYDROERGOTAMINE	MIGRANAL and dihydroergotamine product formulations will be approved if	One year
PRODUCTS	member meets ALL of the following criteria:	
	Member is not currently taking a potent CYP 3A4 inhibitor (for	
	example, protease inhibitor, macrolide antibiotic) AND	
	Member does not have uncontrolled hypertension or ischemic heart	
	disease AND	
	Product is being prescribed for cluster headache (vial only) or acute	
	migraine treatment (vial and nasal spray) AND	

	 Intranasal dihydroergotamine generic and Migranal® will be approved with adequate trial and/or failure of dihydroergotamine vial (Failure is defined as: lack of efficacy with 10 day trial, allergy, intolerable side effects or significant drug-drug interactions) AND If dihydroergotamine product is being prescribed for acute migraine treatment, member has adequate trial and/or failure of 2 triptan agents (for example sumatriptan, naratriptan)and 1 NSAID medication. Failure is defined as lack of efficacy with 10 day trial, allergy, intolerable side effects or significant drug-drug interactions. OR If dihydroergotamine product is being prescribed for cluster headaches, member has adequate trial and/or failure of 2 triptan agents. Failure is defined as: lack of efficacy with 10 day trial, allergy, intolerable side effects or significant drug-drug interactions. 	
	Grandfathering: Members currently utilizing Migranal or a dihydroergotamine formulation (based on recent claims history) may receive one year approval to continue therapy with that medication. Maximum Dosing: Dihydroergotamine nasal spray and Migranal: 16mg per 28 days Dihydroergotamine vial: 24mg per 28 days	
DOPTELET (avatrombopag)	 DOPTELET (avatrombopag) prior authorization may be approved for members meeting the following criteria: Member is 18 years of age or older AND Member has a confirmed diagnosis of thrombocytopenia with chronic liver disease who is scheduled to undergo an elective procedure AND Member has trial and failure of Mulpleta (lusutrombopag). Failure is defined as a lack of efficacy, allergy, intolerable side effects, or significant drug-drug interactions. Quantity Limit: 5 day supply per procedure OR Member is 18 years of age or older AND Member has a documented diagnosis of chronic immune thrombocytopenia AND Member has trial and failure of Promacta (eltrombopag). Failure is defined as a lack of efficacy, allergy, intolerable side effects, or significant drugdrug interactions. Quantity Limit: 40mg daily 	One year
DOXEPIN TOPICAL PRODUCTS	Prudoxin® and generic doxepin 5% cream may be approved if the member meets the following criteria: • Member is 18 years of age or older AND • Member has a diagnosis of moderate pruritis with atopic dermatitis or lichen simplex chronicus AND • Member has trial and failure‡ of one prescription-strength topical corticosteroid AND one topical immunomodulator product (see PDL for preferred products)	One year

Zonalon[®] may be approved if member has trial and failed‡ either doxepin 5% cream or Prudoxin[®] and meets all of the following criteria.

- Member has a diagnosis of moderate pruritis with atopic dermatitis or lichen simplex chronicus AND
- Member has trial and failure; of one prescription-strength topical corticosteroid AND one topical immunomodulator product (see PDL for preferred products)

Quantity Limit for Topical Doxepin Products:

8 days-supply per 30 day period

‡Failure is defined as: lack of efficacy of a three-month trial, allergy, intolerable side effects or significant drug-drug interaction

DUPIXENT (dupilumab)

Dupixent[®] (dupilumab) may be approved for members meeting the following criteria:

*Atopic Dermatitis:

- Member is 6 years of age or older AND
- Member has a diagnosis of moderate to severe chronic atopic dermatitis AND
- Member has baseline Investigator Global Assessment (IGA) score for atopic dermatitis severity of at least 3 (Scored 0-4, 4 being most severe) OR moderate erythema and moderate papulation/infiltration AND
- Member has been educated by provider regarding the elimination of exacerbating factors including aeroallergens, food allergens, and contact allergens AND
- Member has been educated by provider regarding the appropriate use of emollients and moisturizers for promotion of skin hydration AND
- Member has trialed and failed‡ the following agents:
 - Two medium potency to very-high potency topical corticosteroids [such as mometasone furoate, betamethasone dipropionate, or fluocinonide (see PDL for list of preferred products)] AND
 - Two topical calcineurin inhibitors (see PDL for list of preferred products) AND
- Must be prescribed by or in conjunction with a dermatologist, allergist/immunologist, or rheumatologist AND
- Initial authorization will be for 18 weeks. Continuation will be authorized for 12 months with prescriber attestation to 16-week IGA score showing improvement by at least 2 points OR clinically significant improvement with Dupixent® regimen.

*Asthma:

- Member is 12 years of age or older AND
- Member has a diagnosis of moderate to severe asthma (on medium to high dose inhaled corticosteroid and a long-acting beta agonist) with eosinophilic phenotype OR <u>oral</u> corticosteroid dependent asthma AND
- Member has had at least one asthma exacerbation in the past year requiring systemic corticosteroids or emergency department visit or hospitalization OR dependence on daily oral corticosteroid therapy

Initial: See criteria

Continued: One year

- PLUS regular use of high dose inhaled corticosteroid PLUS an additional controller medication AND
- Medication is being prescribed as add-on therapy to existing regimen AND
- Medication is being prescribed by or in conjunction with a rheumatologist, allergist, or pulmonologist AND
- For indication of moderate to severe asthma with eosinophilic phenotype:
 - baseline lung function (FEV₁) is provided and baseline eosinophils are greater than 300 cells/mcL AND
 - Initial authorization will be for 12 weeks. Continued authorization will require prescriber attestation of improvement in FEV₁ of 25% from baseline and will be for 12 months
- For indication of oral corticosteroid dependent asthma:
 - o Dosing of the oral corticosteroid is provided AND
 - Initial authorization will be 24 weeks. Continued authorization will require prescriber attestation of a reduction of oral corticosteroid by at least 50% and will be for 12 months

*Chronic Rhinosinusitis with Nasal Polyposis:

- If member has a diagnosis of asthma or atopic dermatitis, they must meet listed criteria for that indication
- Member is 18 years of age or older AND
- Medication is being prescribed as an add-on maintenance treatment in adult patients with inadequately controlled chronic rhinosinusitis with nasal polyposis (CRSwNP) AND
- Member has a baseline bilateral endoscopic nasal polyps score (NPS; scale 0-8) AND nasal congestion/obstruction score (NC; scale 0-3) averaged over 28-day period AND
- Member has trialed and failed‡ therapy with three intranasal corticosteroids (see PDL Class) AND
- Medication is being prescribed by or in conjunction with a rheumatologist, allergist, ear/nose/throat specialist or pulmonologist AND
- Dose of Dupixent (dupilumab) 300mg every 2 weeks is used AND
- Initial authorization will be for 24 weeks, for additional approval member must meet the following criteria:
 - NC and NPS scores are provided and show a 20% reduction in symptoms AND
 - Member continues to use primary therapies such as intranasal corticosteroids

Quantity Limit: 2 syringes every 28 days after initial 14 days of therapy (first dose is twice the regular scheduled dose)

*For members that have a diagnosis of asthma and/or atopic dermatitis in addition to another indicated diagnosis for Dupixent (dupilumab), the member must meet criteria listed above for the respective diagnosis.

	‡Failure is defined as a lack of efficacy with one month trial, allergy, intolerable side	
	effects, contraindication to, or significant drug-drug interactions.	
EGRIFTA (tesamorelin	Egrifta® or Egrifta SV® will be approved if all the following criteria is met:	6 months
acetate)	Must be prescribed in consultation with a physician who specializes in	
	HIV/AIDS AND	
	Member is 18 years of age or older AND	
	Member has a diagnosis of HIV-related lipodystrophy with excess abdominal fat	
	meeting the following criteria:	
	o Male member must have a waist circumference of at least 95cm (37.4in) and	
	a waist to hip ratio of at least 0.94 OR	
	 Female member must have a waist circumference of at least 94cm (37in) and a waist to hip ratio of at least 0.88 AND 	
	o Baseline waist circumference and waist to hip ratio must be provided	
	 Member is currently receiving highly active antiretroviral therapy including 	
	protease inhibitors, nucleoside reverse transcriptase inhibitor, or non-nucleoside	
	reverse transcriptase inhibitors AND	
	Member does not have a diagnosis of hypophysectomy, hypopituitarism, pituitary	
	surgery, head irradiation or head trauma AND	
	Member does not have any active malignancy or history of malignancy AND	
	For women of childbearing potential, member must have a negative pregnancy	
	test within one month of therapy initiation	
ELESTRIN GEL	A prior authorization will only be approved if a member has tried and failed on	One year
(estradiol)	generic oral estradiol therapy and diagnosed with moderate-to-severe vasomotor	
	symptoms (hot flashes) associated with menopause. (Failure is defined as: lack of	
	efficacy, allergy, intolerable side effects or significant drug-drug interactions)	
EMFLAZA (deflazacort)	Emflaza® may be approved if all the following criteria are met:	One year
	Member is at least 2 years of age or older AND Member has discreased of Dyshama myscallar distribution by and a decommented.	
	Member has diagnosis of Duchenne muscular dystrophy and a documented mutation in the dystrophin gene AND	
	 Member must have documented (per claims history or provider notes) adequate 	
	trial and/or failure to prednisone therapy, adequate trial duration is at least three	
	month. (Failure is defined as a lack of efficacy, allergy, intolerable side effects,	
	contraindication to, or significant drug-drug interactions) AND	
	The medication is prescribed by or in consultation with a physician who	
	specializes in the treatment of Duchenne muscular dystrophy and/or	
	neuromuscular disorders. AND	
	• Serum creatinine kinase activity at least 10 times the upper limit of normal at	
	some stage in their illness AND	
	Absence of active infection including tuberculosis and hepatitis B virus	
	Maximum does of 0.0mg/kg doily for tablets and suspension, may be rounded up.	
	Maximum dose of 0.9mg/kg daily for tablets and suspension, may be rounded up to nearest ml	
	to nearest ini	
EMVERM (mebendazole)	Emverm ® will be approved for members that meet the following criteria:	See Table
, , , , , , , , , , , , , , , , , , ,	Member is 2 years or older AND	
	Member has a diagnosis of one of the following: Ancylostoma duodenale or	
	Necator americanus (hookworm), Ascariasis (roundworm), Enterobiasis	
	(pinworm), or Trichuriasis (whipworm) AND	
	Member has failed a trial of albendazole for FDA approved indication and	
	duration (Table 1) (Failure is defined as lack of efficacy, allergy, intolerable side	
	effects or significant drug-drug interactions) AND	
	For diagnoses other than pinworm, Emverm is being prescribed by an infectious disease specialist AND.	
	disease specialist AND Formula members have a pagetive prognency test AND	
	Female members have a negative pregnancy test AND	

Table 1: Emverm F	DA Approved Do	osing and Duration in Adult	ts and Children	T
Diagnosis	Dose	Duration	Quantity Limits	
Ancylostoma duodenale or Necator americanus (hookworm)	100 mg twice daily	3 consecutive days, may be repeated in 3 weeks in needed.	6 tablets/member	
Ascariasis (roundworm)	100 mg twice daily	3 consecutive days, may be repeated in 3 weeks if needed.	6 tablets/member	
Enterobiasis (pinworm)	100 mg once	May give second dose in three weeks if needed.	2 tablets/member	
Trichuriasis (whipworm)	100 mg twice daily	3 consecutive days, may be repeated in 3 weeks in needed.	6 tablets/member	
(NMOSD) that i antibodies AND • Member has a pation of the option of th	ocumented diagn ncludes a positiv ast medical histo euritis	of age) AND to sis of neuromyelitis options of a serologic test for anti-aquity of at least one of the follogic	uaporin-4 (AQP4)

COLORADO MILDICAID P	NOGINAIVI AFFEIDICES	
	 Any live or live-attenuated vaccines will be administered at least 4 weeks prior to initiation of ENSPRYNG AND Any non-live vaccines will be administered at least 2 weeks prior to initiation of ENSPRYNG (whenever possible) AND ENSPRYNG is prescribed by or in conjunction with a neurologist. Reauthorization Criteria: After receiving initial six month approval, EYNSPRYNG (satralizumab-mwge) may be approved for one year if the following criteria: Member has shown no adverse effects to ENGSPYNG treatment at a maintenance dose of 120 mg subcutaneously every 4 weeks AND Member does not have any active infections (including localized infections) AND Member does not have an AST or ALT level greater than 1.5 times the upper limit of normal AND Provider confirms that neutrophil counts are currently within normal limits and will continue to be monitored at clinically determined intervals during ENSPRYNG therapy. Maximum dose: 120 mg subcutaneously every 2 weeks for three doses, followed by 120 mg subcutaneously every 4 weeks maintenance dose. 	
ENTRESTO (sacubitril/valsartan) ERECTILE DYSFUNCTION OR SEXUAL DYSFUNCTION PRODUCTS Caverject, Cialis, Edex, Imvexxy, Levitra, Muse, Viagra, Addyi, Osphena, Premarin Cream, Sildenafil, Tadalafil (generic Cialis), Staxyn, Stendra, Xiaflex, Yohimbine	 ENTRESTO (sacubitril/valsartan) may be approved for members if the following criteria has been met: Member has a diagnosis of heart failure with reduced ejection fraction and NYHA Class II to IV AND Member is NOT currently on ACE-inhibitor or Angiotensin Receptor Blocking agent AND Member does not have history of angioedema related to previous ACE inhibitor or ARB therapy Medications prescribed for use for erectile dysfunction or other sexual dysfunction diagnoses are not covered. Yohimbine prior authorization may be approved for use as a mydriatic agent or a vasodilator (not related to erectile dysfunction). Prior authorizations for use of yohimbine for erectile dysfunction will not be approved. Sildenafil prior authorization may be approved for off-label use for Raynaud's disease. 	Not covered Do not qualify for emergency 3 day supply
ERGOMAR (ergotamine tartrate)	 Ergomar® (ergotamine tartrate) sublingual tablet may be approved for members meeting the following criteria: Ergomar (ergotamine tartrate) is being prescribed to prevent or treat vascular headache (migraine, migraine variants or so-called "histaminic cephalalgia") AND Member has a negative pregnancy test within 30 days of receipt of Ergomar AND Member is not taking a potent CYP 3A4 inhibitor (ritonavir, nelfinavir, indinavir, erythromycin, clarithromycin and troleandomycin) AND 	One year

COLONADO MEDICAID I	AFFEIDICES	
	 Member has adequate trial and/or failure of 2 triptan agents (see PDL class) AND Member has adequate trial and/or failure of 2 NSAIDs (see PDL class) AND Member has adequate trial and/or failure of dihydroergotamine vial. Failure is defined as lack of efficacy with 10 day trial, allergy, intolerable side effects or significant drug-drug interactions. Maximum quantity: 20 tablets per 28 days (40mg per 28 days) Note: Cafergot (ergotamine/caffeine) tablet is covered without prior authorization. 	
ESBRIET (pirenidone)	Esbriet® may be approved if the following criteria are met:	One year
	 Member has been diagnosed with idiopathic pulmonary fibrosis AND Is being prescribed by or in conjunction with a pulmonologist AND Member is 18 years or older AND Member has baseline ALT, AST, and bilirubin prior to starting therapy AND Member does not have severe (Child Pugh C) hepatic impairment, severe renal impairment (Crcl<30 ml/min), or end stage renal disease requiring dialysis AND Female members of reproductive potential must have been counseled regarding risk to the fetus AND Member is not receiving a strong CYP1A2 inducer (e.g, carbamazepine, 	·
EUCRISA (crisaborole)	phenytoin, rifampin) Eucrisa® may be approved if the following criteria are met:	One year
	 Member is at least 3 months of age and older AND Member has a diagnosis of mild to moderate atopic dermatitis AND Member has a history of failure, contraindication, or intolerance to at least two medium- to high-potency topical corticosteroid for a minimum of 2 weeks, or is not a candidate for topical corticosteroids AND Member must have trialed and/or failed pimecrolimus and tacrolimus. Failure is defined as a lack of efficacy, allergy, intolerable side effects, contraindication to, or significant drug-drug interactions. AND Must be prescribed by or in conjunction with a dermatologist or allergist/immunologist. 	one year
EVRYSDI (risdiplam)	EVRYSDI (risdiplam) may be approved if the following criteria are met:	15 months
	 Member is between 2 months of age and 25 years old AND Member has documented diagnosis of 5q-autosomal recessive spinal muscular atrophy (SMA) by genetic testing and SMN1 mutation (two or more SMN2 gene copies must be specified) AND Treating and prescribing provider(s) is a neurologist or pediatrician experienced in treatment of SMA AND The prescriber attests that the member will be assessed by at least one of the following exam scales at baseline and during subsequent office visits: Hammersmith Infant Neurological Examination Module 2 (HINE2) Children's Hospital of Philadelphia Infant Test of Neuromuscular Disorders (CHOP-INTEND) Hammersmith Functional Motor Scale Expanded (HFMSE) Bayley Scales of Infant and Toddler Development, Third Edition (BSID-III) Motor Function Measure (MFM-32) Revised Upper Limb Module (RULM) Prior to the start of EVRYSDI treatment, the provider attests that the member 	
	meets all of the following:	

- o Female members of childbearing potential have a documented negative pregnancy test within 2 weeks of initiating EVRYSDI therapy **AND**
- Female members of childbearing potential have been instructed to use effective contraception during treatment with EVRYSDI and for at least 1 month after discontinuing treatment AND
- Male members have been advised prior to initiation of therapy that their fertility may be compromised while being treated with EVRYSDI AND
- Baseline liver function panel has been drawn and does not indicate hepatic impairment (EVRYSDI is extensively metabolized by the liver)
 AND
- Drug-drug interactions including (but not limited to) MATE substrates such as metformin, cimetidine, and acyclovir, have been screened for, addressed if needed, and will be continually monitored

AND

- The following criteria are met:
 - The member is not on a treatment plan that includes concomitant or previous treatment with ZOLGENSMA (onasemnogene abeparvovecxioi) AND
 - The member is not receiving concomitant treatment with SPINRAZA (nusinersen) OR the member was treated with SPINRAZA previously and had to discontinue use due to lack of efficacy, allergy, intolerable side effects, or a contraindication to receiving intrathecal injections AND
 - The member's weight is provided and meets recommended daily dosing:

Age and Body Weight	Recommended Daily Dosage
2 months to less than 2 years of age	0.2 mg/kg
2 years and older, weighing less than 20 kg	0.25 mg/kg
2 years and older, weighing 20 kg or more	5 mg

Reauthorization criteria: After 15 months, members may receive approval to continue therapy if the following criteria are met:

- The member has shown no adverse events to EVRYSDI treatment AND
- The member has demonstrated response to treatment by showing significant clinical improvement or no decline documented using quantitative scores using the same exam scale(s) used prior to initiating EVRYSDI treatment (please see number 4 of initial authorization criteria). Improvement of SMA-related symptoms must be compared to the baseline assessment and motor function must be measured against the degenerative effects of SMA AND
- The prescriber provides the following information:
 - A brief explanation, including the provider name, must be submitted if a
 provider other than the one who initially performed the motor exam
 completes any follow-up exam(s) AND
 - A brief explanation must be submitted if an exam scale other than the scale used for initial authorization is used for reassessment **AND**
 - The member does not have hepatic impairment AND
 - Member weight is provided and meets recommended daily dosing:

Age and Body Weight	Recommended Daily Dosage
2 months to less than 2 years of age	0.2 mg/kg

	Max Dose: 80mg daily	
FLUORIDE PRODUCTS	Prescription fluoride products:	One year
	 Prescription fluoride products will be approved for members less than 21 years of age without a prior authorization. 	
	• For members 21 years of age or older approval will be granted if using well water or living in an under-fluoridated area designated by the CDC*.	
	 Approval for members not meeting these criteria will require a letter of necessity and will be individually reviewed. 	
	OTC fluoride products:	
	 The following OTC fluoride products are eligible for prior authorization approval for all members using well water or living in an under-fluoridated area designated by the CDC*: fluoride chewable tablets, ludent fluoride chewable tablets, sodium fluoride 0.5mg/mL drops 	
	Approval for members not meeting these criteria will require a letter of necessity and will be individually reviewed.	
	*Information and reports regarding water fluoridation can be found on the CDC website at:	
	$\underline{\text{https://nccd.cdc.gov/DOH_MWF/Default/CountyList.aspx?state=Coloradateid=8\&stateabbr=CO\&reportLevel=2}.$	
FUZEON (enfuvirtide)	If administered in the physician's office or delivered to physician's office, physician must bill as a medical claim on the 1500 claim form (no PA required). If administered in the member's home or in a long-term care facility, a prior authorization is required and must meet the criteria below for approval.	Six months
	Based on clinical trial data, ENF should be used as part of an <i>optimized</i> background regimen for treatment-experienced members: • For treatment-experienced members with evidence of HIV-1 replication, treatment should include at least one antiretroviral agent with demonstrated HIV-1 susceptibility on the basis of genotypic/phenotypic <i>resistance</i> assays, and <i>two</i> "active" antiretroviral agents. • Members must have limited treatment options among currently	
	commercially available agents. • Members must be 18 years of age or older with advanced HIV-1 infection, and	
	not responding to approved antiretroviral therapy. • Members must have a CD4 lymphocyte count less than 100 cells/mm3 and a viral load greater than 10,000 copies/ml (measurement within the last 90 days).	

·		
	Past adherence must be demonstrated based on:	
	Attendance at scheduled appointments, and/or	
	Prior antiretroviral regimen adherence, and/or	
	Utilization data from pharmacy showing member's use of medications as	
	prescribed	
	 Ability to reconstitute and self-administer ENF therapy. 	
	Ability to reconstitute and sen-administer ENT dictapy.	
	A424 1	
	At 24 weeks, members must experience at least ≥ 1 log ₁₀ decrease in HIV RNA or	
	have HIV RNA below quantifiable limits to continue treatment with ENF.	
	Members are not eligible if antiretroviral treatment-naive and/or infected with HIV-2.	
	Pre-approval is necessary	
	Practitioner must either be Board Certified in Infectious Disease, or be an HIV	
	experienced practitioner. Verification must be produced with the prior approval	
	documents.	
	These guidelines may be modified on the basis of other payer formularies and/or	
	the emergence of new data.	
GALAFOLD	GALAFOLD (migalastat hydrochloride) prior authorization may be approved for	One year
(migalastat hydrochloride)	members meeting the following criteria:	
(gu.u)	Member is ≥ 12 years of age AND	
	The medication is being prescribed by or in consultation with a neurologist AND	
	 Member has a confirmed diagnosis of Fabry's disease with an amenable 	
	galactose alpha gene (GLA) variant per in vitro assay data. (Amenable GLA	
	variants are those determined by a clinical genetics professional as pathologic or	
	likely pathologic) AND

1	Cancer	

COLORADO MEDICAID P	ROGRAM APPENDICES	
	 Epilepsy HIV/AIDS The Department has determined that the brand name product is lower cost than the therapeutically equivalent generic Prior authorization for use of a brand name drug product that has a therapeutically equivalent generic (and does not meet exceptions above) may also be approved if: The prescriber is of the opinion that a transition to the generic equivalent of the brand name drug would be unacceptably disruptive to the patient's stabilized drug regimen The patient is started on the generic equivalent drug but is unable to continue treatment on the generic drug as determined by the prescriber 	
GLYCATE (glycopyrollate)	Glycate® (glycopyrollate) may be approved for members meeting the following criteria: Member is 18 years of age or older AND Member has a diagnosis of peptic ulcer disease AND Member does not have any of the following conditions: Glaucoma Obstructive uropathy (such as bladder neck obstruction due to prostatic hypertrophy) Obstructive disease of the gastrointestinal tract (such as achalasia, pyloroduodenal stenosis, etc.) Paralytic ileus Intestinal atony of the elderly or debilitated patient Unstable cardiovascular status in acute hemorrhage Severe ulcerative colitis Toxic megacolon complicating ulcerative colitis Myasthenia gravis AND Member has tried and failed at least two proton pump inhibitors (failure is defined as lack of efficacy with 4 week trial, allergy, intolerable side effects, or significant drug-drug interaction) AND Glycate (glycopyrollate) is being used as adjunctive therapy AND Glycate (glycopyrollate) is being prescribed by or in consultation by a gastroenterologist	One year
HETLIOZ (tasimelteon)	 Hetlioz (tasimelteon) may be approved for members meeting the following criteria: Have a documented diagnosis of non-24-hour sleep wake disorder (non-24 or N24) by a sleep specialist AND Member is completely blind 	One year
HIGH COST CLAIMS	Pharmacy claims exceeding \$19,999.00 may be approved following pharmacist review if the product meets current criteria (on the PDL/Appendix P when listed) OR if not listed, must meet the following per FDA product package labeling: • Diagnosis for labeled indication AND • Based on prescribed indication, prescription meets the following per label: • Dosing • Strength • Dosage form • Quantity • Days Supply AND • If product is an IV formulation or product labeling indicates that the medication should be administered by a healthcare professional, must meet	

COLONADO MEDICAID		T
	approval criteria for physician administered drugs (see "Physician Administered Drugs" section).	
Homozygous Familial Hypercholesterolemia (HoFH)	 Juxtapid® (lomitapide) Prior authorization may be approved if all of the following criteria are met: Member is 18 years of age or older; Member has documented diagnosis of homozygous familial hypercholesterolemia (HoFH); Member has failed therapy with high dose statin therapy (e.g. atorvastatin 40mg or higher, Crestor 20mg or higher) The prescribing physician is enrolled in the Juxtapid REMS program. 	One year
	 Kynamro® (mipomersen) may be approved for members meeting all of the following criteria: Confirmed diagnosis of homozygous familial hypercholesterolemia (HoFH) as determined by either a or b a. Laboratory tests confirming diagnosis of HoFH:	
	 Is being prescribed by a physician specializing in metabolic lipid disorders AND The prescriber is enrolled in the REMS program AND Is not being used as monotherapy AND Has baseline liver function (AST, ALT, ALK, and total bilirubin) AND Does not have moderate or severe hepatic impairment or active liver disease. 	
HORIZANT (gabapentil enacarbil)	 Horizant® may be approved for members who have a diagnosis of Restless Leg Syndrome and who meet the following criteria: Member has failed a one month trial of Mirapex® (pramipexole) and Requip® (ropinorole) AND Member has had a positive therapeutic response to generic gabapentin but incomplete response due to duration of action. 	One year
	 Max quantity: 30 tablets/30 days Horizant® will be approved for members who have a diagnosis of Post Herpetic Neuralgia and who meet the following criteria: Member has failed a one month trial of tricyclic antidepressant, pregabalin and gabapentin Max quantity: 60 tablets / 30 days 	
HORMONE THERAPY	Depo Provera (medroxyprogesterone)/ Lunelle (estradiol cipionate/medroxyprogesterone) FDA approved indication if given in a long-term care facility or in the members home: • Females: Contraception, uterine bleeding, amenorrhea, endometrial cancer • Males: Sexual aggression / Pedophilia – Only Depo-Provera will be approved	One year

COLORADO MEDICAID	PROGRAM APPENDICES	
HP ACTHAR (corticotropin)	Not approved for administration in the physician's office – these must be billed through medical. Implanon (etonogestrel) See PHYSICIAN ADMINISTERED DRUGS. Not a covered pharmacy benefit who implanted in the clinic or hospital outpatient center. Nexplanon (etonogestrel) See PHYSICIAN ADMINISTERED DRUGS. Not a covered pharmacy benefit when implanted in the clinic or hospital outpatient center. HP Acthar® may be approved for members that meet the following criteria: Member has a diagnosis of Infantile Spasms (West Syndrome) and meets a the criteria below: Member is < 2 years of age Member has electroencephalogram documenting diagnosis Acthar is being used as monotherapy Member does not have suspected congenital infection Prescribed by or in consultation with a neurologist or epileptological or prescribed by or in consultation with a neurologist or epileptological or prescribed by a demonstration of the property of the prop	en t 4 week supply st r tte y, art
	Table 1. FDA Recommended Dosing for HP Acthar Diagnosis Infantile Spasms under Age of 2 75 units/m² IM twice daily for two weeks;	1
HINENIC FONG	Quantity Limits: 4 week supply	
HUNTINGTON'S CHOREA / TARDIVE DYSKINESIA AGENTS	 Austedo® (deutetrabenazine) may be approved if all the following criteria have been met: Member is 18 years and older with chorea secondary to Huntington's Disease C Tardive Dyskinesia AND 	One year unless AIMS follow-up required

	7.1.1.1.1.1.1.1.1.1.1.1.1.1.1.1.1.1.1.1	
	For chorea secondary to Huntington's Disease: member must have trialed and/or failed tetrabenazine, adequate trial duration is 1 month (Failure is defined as a lack of efficacy, allergy, intolerable side effects, contraindication to, or significant drug-drug interactions) OR For tardive dyskinesia a baseline AIMS AND 12 week AIMS are required. If the 12 week AIMS does not show improvement from baseline, the prior authorization will no longer be approved Member does not have untreated depression, suicidal thoughts, or a history of suicide attempt AND Member has been informed of the risks of depression and suicidality AND Maximum dose 48mg/day, 120 tablets per month Xenazine® (tetrabenazine) may be approved if all the following criteria have been met: Member is 18 years and older with chorea secondary to Huntington's Disease AND Member does not have a history of suicide or untreated depression AND Member has been informed of the risks of depression and suicidality AND Member does not have a history of suicide or untreated depression AND Member does not have a history include or untreated depression AND Member does not have severe hepatic impairment Maximum dose 50mg/day, 60 tablets per month Ingrezza® (valbenazine) may be approved if all the following criteria have been	
	Ingrezza® (valbenazine) may be approved if all the following criteria have been met:	
	Member is 18 years or older AND	
	 Member has been diagnosed with tardive dyskinesia clinically AND Has a baseline Abnormal Involuntary Movement Scale (AIMS) AND 	
	If there is no improvement at 6 weeks of therapy per AIMS, the medication will be discontinued	
	Quantity limit of 60 capsules per 30 days	
HYDROXYCHLOROQUINE	Effective 03/24/20: Prior authorization may be approved for FDA-labeled indication, dose, age, and role in therapy as outlined in product package labeling.	Chronic conditions: One year
		Acute conditions: Duration of acute use
ILUMYA (tildrakizumab-asmn)	 Ilumya® prior authorization may be approved for members meeting all of the following criteria: Medication is being administered in the member's home or in a long-term care facility by a healthcare professional AND Member is 18 years of age or older and has diagnosis of moderate to severe plaque psoriasis who are candidates for systemic therapy or phototherapy AND Member does not have guttate, erythrodermic, or pustular psoriasis AND Provider attests to: Baseline Provider Global Assessment (PGA) score for plaque psoriasis severity of at least 3 (Scored 0-4, 4 being most severe) OR Baseline Psoriasis Area and Severity Index (PASI) score of 12 or greater 	Initial: 12 weeks Continued: One year
	AND	

COLORADO MEDICAID P	ROGRAM APPENDICES	
	 Medication is being prescribed by or in conjunction with a rheumatologist, allergist, or dermatologist AND Member has tried and failed‡ ALL preferred agents in the "Targeted Immune Modulators" PDL drug class that are FDA-labeled for use for the same prescribed indication AND Initial authorization will be for 12 weeks Continued authorization for 12 months will require prescriber attestation to PGA score reduction of 2 or more points OR PASI score reduction of 75% OR prescriber attestation to clinically meaningful improvement with Ilumya® regimen. Claims for medications administered in a clinic or medical office are billed through the Health First Colorado medical benefit. 	
JADENU and EXJADE (deferasirox)	Jadenu® and Exjade® may be approved for members that meet the following criteria: • Must be prescribed in conjunction with a hematologist or oncologist AND • Member's weight must be provided AND • Member has a diagnosis for chronic iron overload due to blood transfusion AND • Member is 2 years of age or older AND • Member has consistently high serum ferritin levels > 1000 mcg/L (demonstrated by at least 2 values in the prior three months	One year
	Member has a diagnosis for chronic iron overload due to non-transfusion dependent thalassemia syndromes AND Member is 10 years of age or older AND Member has liver iron levels > 5 mg iron per gram of dry weight and serum ferritin levels > 300 mcg/L document in the prior three months Members must also meet the following additional criteria for all Jadenu and Exjade approvals: Member does not have advanced malignancies and/or high-risk myelodysplastic syndromes AND Member has a creatinine clearance > 40 ml/min AND Member has a platelet count > 50 x 109/L Maximum Dosing: Maximum dose of Jadenu® is 28mg/kg/day Maximum dose of Exjade® is 40mg/kg/day	
KALYDECO (ivacaftor)	 Kalydeco® may be approved if all of the following criteria are met: Member has been diagnosed with cystic fibrosis AND Member is an adult or pediatric patient 4 months of age or older AND Documentation has been provided to indicate one of the following gene mutation: in the CFTR gene: G551D, G1244E, G1349D, G178R, G551S, S1251N, S1255P, S549N, R117H, S549R or another FDA approved gene mutation.* AND Documentation has been provided that baseline ALT and AST have been accessed and are within 2x normal limits (AST and ALT should be examined every 3 months for the first year and annually after that). 	One year

COLORADO MEDICAID F	PROGRAM APPENDICES	
	* If the member's genotype is unknown, an FDA-cleared CF mutation test should be used to detect the presence of a CFTR mutation followed by verification with bi-directional sequencing when recommended by the mutation test instructions for use.	
	Kalydeco® will only be approved at doses no more than 150 mg twice daily. Prior Authorizations need to be obtained yearly.	
	Kalydeco® will not be approved for members who are concurrently receiving rifampin, rifabutin, phenobarbital, carbamazepine, phenytoin, or St. John's Wort.	
KUVAN (sapropterin dihydrochloride)	 Kuvan® may be approved if all the following criteria are met: Member is > 1 month old AND 	Initial approval
	 Member has been diagnosed with hyperphenylalaninemia due to tetrahydrobiopterin responsive phenylketonuria AND Prescriber is a metabolic specialist AND Phenylalanine levels must be greater than 6 mg/dL for neonates through 12 years of age OR Phenylalanine levels must be greater than 10 mg/dL for members between 13 to 	one month
	 17 OR Phenylalanine levels must be greater than 15 mg/dL for members 18 years and older AND 	
	Must be in conjunction with dietary restriction of phenylalanine	
	 Initial approval will be for 1 month. Authorization may be extended if: Members on the 10mg/kg/day dose whose blood phenylalanine levels have not decreased from baseline after 1 month of treatment should increase to 20mg/kg/day. These members will be approved for another 1 month trial at the higher dose. Members on the 20mg/kg/day dose whose blood phenylalanine levels have not decreased from baseline after 1 month are considered non-responders, and treatment will be discontinued. Members responding to therapy receive additional authorization at 1-year intervals. 	
LHRH/GnRH Luteinizing Hormone Releasing Hormone/Gonadotropin Releasing Hormone	All claims for medications administered in a hospital, clinic, or physician's office are to be billed through the medical benefit. Claims billed through the pharmacy benefit may only receive approval if the medication is being administered in the member's home by a home health agency/provider or administered in a long-term care facility (see "Physician Administered Drugs" section).	One year
	Prior authorization may be approved for FDA-labeled indications only.	
	 Eligard® (leuprolide): Palliative treatment of advanced prostate cancer Fensolvi® (leuprolide acetate): Central precocious puberty Lupaneta Pack® (leuprolide and norethindrone): Endometriosis 	
	 Lupron® (leuprolide): Prostate cancer, endometriosis, uterine leiomyomata (fibroids), precocious puberty. Lupron may be approved for gender dysphoria based on the following criteria: The member has a diagnosis of gender dysphoria which is made by a mental health professional with experience in treating gender dysphoria. Where available, the mental health professional should ideally have training in child and adolescent developmental psychology AND The member should have at least 6 months of counseling and psychometric testing for gender identity prior to initiation of Lupron AND 	

COLORADO MEDICAID P	ROGRAM APPENDICES	
	 The prescribing provider has training in puberty suppression using a gonadotropin releasing hormone agonist AND Lupron may not be started until girls and boys exhibit physical changes of puberty (confirmed by levels of estradiol and testosterone, respectively) and no earlier than Tanner stages 2-3 (bilateral breast budding or doubling to tripling testicular size to 4-8 cc). Duration of treatment: Lupron will be covered to a maximum of 16 years of age for gender dysphoria. Synarel® (nafarelin): Endometriosis, precocious puberty Trelstar® (triptorelin): Palliative treatment of advanced prostate cancer Triptodur® (triptorelin): Palliative treatment of advanced prostate cancer, precocious puberty 	
LIPIDS/AMINO ACIDS/PLASMA PROTEINS	Approval will be given if administered in the member's home or in a long-term care facility. If given in the hospital or physician's office, the claim must be billed as a medical expense.	Lifetime
LUCEMYRA (lofexidine)	 Lucemyra® may receive prior authorization approval for members meeting all of the following criteria: Member is 18 years of age or older AND Lucemyra® is prescribed for mitigation of opioid withdrawal symptoms to facilitate abrupt opioid discontinuation AND Member is not pregnant or nursing AND Member is not experiencing withdrawal symptoms from substances other than opioids AND Member is not currently taking monoamine oxidase inhibitors or allergic to imidazole drugs AND Member does not have an abnormal cardiovascular exam prior to treatment:	14 days
LUMIZYME (alglucosidase alfa)	 Lumizyme (alglucosidase alfa) may be approved for members meeting all of the following criteria: Medication is being administered in the member's home or in a long-term care facility by a healthcare professional AND Member has diagnosis of Pompe disease (acid α-glucosidase [GAA] deficiency). Maximum dose: Lumizyme 20mg/kg every 2 weeks (IV Infusion) 	One year

	AFFEINDICES	
MAKENA	Makena® may be approved for members that meet the following criteria:	See
(hydroxyprogesterone	The drug is being administered in the home or in long-term care setting	criteria
caproate)	Member has a Singleton pregnancy and a history of singleton spontaneous preterm birth	
	Therapy is being initiated between 16 weeks gestation and 20 weeks 6 days	
	gestation and continued through 36 weeks 6 days gestation or delivery (whichever occurs first)	
	Dose is administered by a healthcare professional.	
	Maximum Dosing:	
	Makena vial: 250mg IM once weekly Makena autoinjector: 275mg SubQ once weekly	
MALARIA	Prior authorization is required for claims exceeding a 30-day supply for medications	See
PROPHYLAXIS EXCEEDING THIRTY	used for malaria prophylaxis (e.g. atovaquone/proguanil, chloroquine, doxycycline, mefloquine, primaquine, tafenoquine) and may be approved for members meeting the	criteria
DAYS	following:	
	Prescriber verification that the member is traveling to a malaria endemic area for a period of time that requires duration of therapy exceeding thirty	
	days.	
	 Prescriber verification of member's duration of stay in the malaria endemic area and the total days needed for the malaria prophylaxis medication regimen. 	
	regimen.	
	Note: The Centers for Disease Control and Prevention recommendations for malaria	
	prophylaxis therapy based on country of travel are available at www.cdc.gov	
MIFEPRISTONE and	Mifeprex® (mifepristone) is excluded from coverage under the pharmacy benefit.	One year
MISOPROSTOL		
	Korlym [®] (mifepristone) – Prior authorization may be approved for members	
	meeting the following:	
	Mifepristone is not being prescribed for use related to termination of	
	pregnancy AND Mifepristone is being prescribed for use for hyperglycemia secondary to	
	 Mifepristone is being prescribed for use for hyperglycemia secondary to hypercortisolism in adult patients with Cushing's Syndrome who have type 2 diabetes or glucose intolerance and have failed or are not candidates for surgery. 	
	Cytotec ® (misoprostol) – (<i>Effective 07/18/19</i>) Prior authorization may be approved for members meeting the following:	
	Misoprostol is not being prescribed for use related to termination of pregnancy AND	
	Misoprostol is being prescribed for use as prophylaxis for reducing risk of	
	NSAID-induced gastric ulcers in patients at high risk of complications from	
	gastric ulceration OR is being prescribed for use for off-label indications	
	supported by clinical compendia and peer-reviewed medical literature.	
	Note: See PDL for coverage information for misoprostol/NSAID combination products.	
MIGERGOT (ergotamine/caffeine)	Migergot® (ergotamine/caffeine) suppository may be approved for members meeting the following criteria:	One year
(8 · ·································	Migergot (ergotamine/caffeine) suppository is being prescribed to prevent or	
	treat vascular headache (migraine, migraine variants or so-called "histaminic	
	cephalalgia") AND	
	Member has a negative pregnancy test within 30 days of receipt of Ergomar	
	AND	

COLORADO MEDICAID P	ROGRAM APPENDICES	
MOXATAG (amoxicillin)	 Member is not taking a potent CYP 3A4 inhibitor (ritonavir, nelfinavir, indinavir, erythromycin, clarithromycin and troleandomycin) AND Member has adequate trial and/or failure of 2 triptan agents (see PDL class) AND Member has adequate trial and/or failure of 2 NSAIDs (see PDL class) AND Member has adequate trial and/or failure of dihydroergotamine vial. Failure is defined as lack of efficacy with 10 day trial, allergy, intolerable side effects or significant drug-drug interactions. Maximum quantity: 20 suppositories per 28 days Note: Cafergot (ergotamine/caffeine) tablet is covered without prior authorization. A prior authorization will only be approved if a member has an allergic/intolerance to 	One year
Wioning (unionemia)	inactive ingredients in immediate release amoxicillin.	One year
MULPLETA (lusutrombopag)	 Mulpleta® (lusutrombopag) prior authorization may be approved for members meeting the following criteria: Member is 18 years of age or older AND Member has a confirmed diagnosis of thrombocytopenia with chronic liver disease who is scheduled to undergo an elective procedure AND Member has trialed and failed both dexamethasone and methylprednisolone (Failure is defined as a lack of efficacy, allergy, intolerable side effects, or significant drug-drug interactions) AND Mulpleta is being prescribed by or in consultation with a hematologist, hepatologist, or gastroenterologist AND Member has a baseline platelet count no more than 2 days before procedure. AND Mulpleta (lusutrombopag) will not be administered with a thrombopoietic agent or spleen tyrosine kinase inhibitor (such as Promacta (eltrombopag), Nplate (romiplostim), or Tavalisse (fotamatinib) Quantity limit: 7 day supply per procedure 	One year
MYALEPT (metreleptin)	 Myalept® may be approved if all of the following criteria are met: Prescriber is an endocrinologist who is enrolled in the Myalept REMS program AND Member has a diagnosis of congenital or acquired generalized lipodystrophy AND Member does not have HIV-related lipodystrophy AND Member has a diagnosis of leptin deficiency AND Member has been diagnosed with poorly controlled diabetes (HgA1c > 7) and/or hypertriglyceridemia (> 500 mg/dl) AND Member has tried and failed two standard therapies for diabetes and/or hypertriglyceridemia 	Six Months
NAGLAZYME (galsulfase)	 Naglazyme® (galsulfase) may be approved for members meeting the following criteria: Naglazyme (galsulfase) is being administered in a long-term care facility or in a member's home by a healthcare professional AND Member is 5 years of age or older AND Member has a confirmed diagnosis of Mucopolysaccharidosis, Type VI confirmed by the following: 	One year

- o Detection of pathogenic mutations in the ARSB gene by molecular genetic testing OR
- Arylsulfatase B (ASB) enzyme activity of <10% of the lower limit of normal in cultured fibroblasts or isolated leukocytes AND
- Member has normal enzyme activity of a different sulfatase (excluding members with Multiple Sulfatase Deficiency) AND
- o Member has an elevated urinary glycosaminoglycan (uGAG) level above the upper limit of normal as defined by the reference laboratory

AND

- Member has a documented baseline 12-minute walk test (12-MWT), 3-minute stair climb test, and/or pulmonary function tests (such as FEV1) AND
- Member has a documented baseline value for uGAG AND
- Naglazyme (galsulfase) is being prescribed by or in consultation with a provider who specializes in inherited metabolic disorders

Reauthorization Criteria:

After one year, member may receive approval to continue therapy if meeting the following:

- Has documented reduction in uGAG levels AND
- Has demonstrated stability or improvement in one of the following:
 - o 12-minute walk test OR
 - o 3-minute stair climb test OR
 - o Pulmonary function testing (such as FEV1)

Max dose: 1 mg/kg as a 4-hour infusion weekly

NALOXONE and NALTREXONE

Narcan® (naloxone) intranasal does not require prior authorization.

Revia® (naltrexone) tablet does not require prior authorization.

Naloxone vial/prefilled syringe:

- <u>does not</u> require prior authorization.
- The atomizer device for use with naloxone can be obtained by the pharmacy billing as a DME claim code A4210. The unit limit is 1 atomizer per vial/syringe dispensed up to a total of 15 per year. A prior authorization is not required.

Vivitrol[®] (naltrexone ER) injection:

- Prior authorization for claims submitted under the pharmacy benefit may be approved when Vivitrol is administered by a healthcare professional in the member's home or in a long-term care facility. All other Vivitrol claims must be billed through the medical benefit.
- Effective 01/01/2019, pharmacies that have entered into a collaborative practice agreement with one or more physicians for administration of Vivitrol may receive reimbursement for enrolled pharmacists to administer Vivitrol with appropriate claim submission through the Health First Colorado medical benefit (claims for pharmacist administration of Vivitrol are not covered under the pharmacy benefit). Additional information regarding pharmacist enrollment and medical claims billing can be found at https://www.colorado.gov/hcpf/otc-immunizations.

Evzio® (naloxone) autoinjector – Product is not Medicaid rebate eligible per current status in Medicaid Drug Rebate Program (MDRP); product excluded

	TOO IN THE PROPERTY OF THE PRO	1
	*For buprenorphine/naloxone products, see "Buprenorphine-containing Products" section	
NAYZILAM (midazolam)	Nayzilam® (midazolam) may be approved for members meeting the following criteria: • Member is 12 years of age or older AND • Nayzilam is being prescribed for the acute treatment of intermittent, stereotypic episodes of frequent seizure activity (i.e., seizure clusters, acute repetitive seizures) that are distinct from a patient's usual seizure pattern and medical records are provided supporting this diagnosis AND • Member is stable on regimen of antiepileptic medications AND • Medication is being prescribed by or in conjunction with the same provider/provider team who manages the member's anti-epileptic regimen AND • Member is educated on appropriate identification of seizure cluster and Nayzilam (midazolam) administration not exceeding 2 doses per seizure cluster. Maximum dose: 4 nasal spray units per year unless used / damaged / lost Members are limited to one prior authorization approval on file for Valtoco (diazepam) and Nayzilam (midazolam). Grandfathering: If member is currently receiving Nayzilam (midazolam) intranasal, they may receive prior authorization approval to continue.	One Year
NEWLY APPROVED PRODUCTS AND CHANGE IN PRODUCT PRIOR AUTHORIZATION STATUS	Newly marketed or approved products that fall within a PDL drug class will be subject to non-preferred prior authorization criteria for the drug class and will be included as part of the next regularly scheduled P&T Committee and DUR Board reviews for that class. Newly marketed or approved products that fall within a drug category on appendix P (such as "Blood Products" or "Atypical Antipsychotic Injectables") will be subject to prior authorization criteria listed for medications in that drug category on Appendix P. For change in prior authorization status for a product that is not included in a PDL drug class or on Appendix P, notice will be given regarding DUR Board review of prior authorization criteria for the product as part of the posted DUR Board meeting agenda located at https://www.colorado.gov/pacific/hcpf/drug-utilization-review-board and posted at least 30 days prior to the DUR Board meeting during which the product is scheduled to be reviewed. Until such time that DUR Board review is conducted, products may receive prior authorization approval based on FDA-labeled indication, dose, age, and role in therapy as outlined in product package labeling. IV formulations or products where labeled use indicates that the medication should be administered by a healthcare professional will also be subject to meeting criteria for physician administered drugs (see "Physician Administered Drugs" section)	
NORTHERA (droxidopa)	physician administered drugs (see "Physician Administered Drugs" section). Northera® (droxidopa) will be approved if all the following is met: • Member has a diagnosis of symptomatic neurogenic orthostatic hypotension (NOH) as defined by one of the following when an upright position is assumed or when using a head-up tilt table testing at an angle of at least 60 degrees. • At least a 20 mmHg fall is systolic pressure • At least a 10 mmHg fall in diastolic pressure AND	3 months

		T
NUCALA (mepolizumab) NUEDEXTA (dextromethorphan /quinidine)	NOH caused by one of the following: Primary autonomic failure (e.g., Parkinson's disease, multiple system atrophy, and pure autonomic failure Dopamine beta-hydroxylase deficiency Non-diabetic autonomic neuropathy AND Member does not have orthostatic hypotension due to other causes (e.g., heart failure, fluid restriction, malignanacy) AND Members has tried at least three of the following non-pharmacological interventions: Discontinuation of drugs which can cause orthostatic hypotension [e.g., diuretics, antihypertensive medications (primarily sympathetic blockers), anti-anginal drugs (nitrates, excluding SL symptom treatment formulations), alpha-adrenergic antagonists, and antidepressants] Raising the head of the bed 10 to 20 degrees Compression stockings Increased salt and water intake, if appropriate Avoiding precipitating factors (e.g., overexertion in hot weather, arising too quickly from supine to sitting or standing) AND Northera (droxidopa) is being prescribed by either a cardiologist, neurologist, or nephrologist AND Member has failed a 30 day trail, has a contraindication, or intolerance to both Florinef (fludrocortisone) and ProAmatine (midodrine). A prior authorization will only be approved as a pharmacy benefit when the medication is administered in a long-term care facility. Medications administered in a physician's office must be billed as a medical expense. Because this medication has a FDA-labeled boxed warning requiring the administration under the supervision of a physician, a prior authorization will not be approved if administered in a member's home. Nuedexta (dextromethorphan/quinidine) may be approved for members who meet the following criteria: Nuedexta is being prescribed for diagnosis of pseudobulbar affect caused by an underlying neurologic condition (such as MS, ALS, or other underlying neurologic condition) AND Member has a Center for Neurologic Study-Lability Scale (CNS-LS) score of 13 or higher AND	One year Initial Approval: 3 months Continuation Approval: One year
	AND	
	nephrologist AND	
	Florinef (fludrocortisone) and ProAmatine (midodrine).	
	medication is administered in a long-term care facility. Medications administered in a physician's office must be billed as a medical expense. Because this medication has a FDA-labeled boxed warning requiring the administration under the supervision of a physician, a prior authorization will not be approved if administered in a member's home.	·
(dextromethorphan	following criteria:	Approval:
/quinidine)	 underlying neurologic condition (such as MS, ALS, or other underlying neurologic condition) AND Member has a Center for Neurologic Study-Lability Scale (CNS-LS) score of 13 or higher AND Member has at least 10 episodes of inappropriate laughing or crying per day 	Approval:

	Renewal: members currently stabilized on this medication may continue to receive it with a documented diagnosis of pseudobulbar affect and evidence of efficacy	
	(documentation of decrease in pseudobulbar episodes by 50% from baseline)	
OCREVUS (ocrelizumab)	Ocrevus® (ocrelizumab) may be approved if the following criteria are met:	One year
	 Ocrevus is being administered in a LTCF or in the member's home AND If prescribed for Relapsing Forms of Multiple Sclerosis (MS) Member is 18 years of age or older AND Member has a relapsing form of multiple sclerosis AND Member has experienced one relapse within the prior year or two relapses within the prior two years AND Member has trial and failure of three of the following agents:	
	 One of the following on MRI: presence of any new spinal lesions, cerebellar or brain stem lesions, or change in brain atrophy On clinical exam, signs and symptoms consistent with functional limitations that last one month or longer AND Ocrevus is prescribed by a neurologist or is prescribed in conjunction with a neurologist AND If prescribed for Primary Progressive Multiple Sclerosis Member is 18 years of age or older AND Member is not concomitantly taking: Avonex (interferon beta-1a), Rebif (interferon beta 1-a), Betaseron/Extavia (interferon beta-1b), Plegridy (peginterferon beta1a), Copaxone/Glatopa (glatiramer acetate), Aubagio (teriflunomide tablets), Gilenya (fingolimod capsules), Tecfidera (dimethyl fumarate delayed-release capsules), Tysabri (Natalizumab) or Lemtrada (alemtuzumab) AND Member does not have active hepatitis B infection AND Ocrevus is prescribed by a neurologist or is prescribed in conjunction with a neurologist 	
	Maximum maintenance dose: 600mg every 6 months	
OFEV (nintedanib)	 Ofev (nintedanib) may be approved if all of the following criteria are met: Member has been diagnosed with idiopathic pulmonary fibrosis, chronic fibrosing interstitial lung disease with a progressive phenotype, or systemic sclerosis-associated interstitial lung disease (SSC-ILD) AND Is being prescribed by or in conjunction with a pulmonologist AND Member is 18 years or older AND Member has baseline ALT, AST, and bilirubin prior to starting therapy AND Member does not have moderate (Child Pugh B) or severe (Child Pugh C) hepatic impairment AND Female members of reproductive potential must have been counseled regarding risk to the fetus and to avoid becoming pregnant while receiving treatment with Ofev and to use adequate contraception during treatment and at least 3 months after the last dose of Ofev AND Member is not taking a P-gp or CYP3A4 inducer (e.g, rifampin, carbamazepine, phenytoin, St. John's Wort) 	One year

	Quantity Limits: 60 tablets/30 days	
ORILISSA (elagolix)	Orilissa® (elagolix) may be approved for members meeting the following criteria:	One year
	 Member is a premenopausal woman 18-49 years of age AND 	
	Orilissa® is not being prescribed for dyspareunia or any other sexual	6 months
	function related indication AND	for moderate
	Member has a definitive diagnosis of endometriosis as noted by surgical	hepatic
	histology of lesions AND	impairment
	 Member has failed a 6-month trial of contraceptive agents (progestins, combined contraceptives, medroxyprogesterone acetate, levonorgestrel 	(Child
	IUD). Failure is defined as lack of efficacy, allergy, intolerable side	Pugh Class B)
	effects, significant drug-drug interaction, or contraindication to therapy	B)
	AND	
	Member has failed a 1 month trial of NSAIDs. Failure is defined as lack	
	of efficacy, allergy, intolerable side effects, significant drug-drug	
	interaction, or contraindication to therapy AND	
	 Member has failed a 3 month trial with a GnRH agonist (such as 	
	leuprolide). Failure is defined as lack of efficacy, allergy, intolerable	
	side effects, significant drug-drug interaction, or contraindication to	
	therapy AND	
	• Member is not pregnant, breast feeding, planning a pregnancy within the next 24 months, or less than 6 months post-partum, post-abortion, or	
	post-pregnancy AND	
	Member has been instructed that only non-hormonal contraceptives	
	should be used during therapy and for at least 1 week following	
	discontinuation AND	
	 Member does not have osteoporosis or severe hepatic impairment 	
	(Child-Pugh Class C) AND	
	Member is not concomitantly taking a OATP 1B1 inhibitor (such as	
	gemfibrozil, cyclosporine, ritonavir, rifampin).	
	Orilissa® Maximum Dose: 150mg tablet daily, or 200mg tablet twice daily	
	Orilissa® limited to a maximum treatment duration of 6 months for members with	
	moderate hepatic impairment (Child-Pugh Class B)	
ORKAMBI	Orkambi® (lumacaftor/ivacaftor) may be approved for members if the following	One year
(lumacaftor/ivacaftor)	criteria has been met:	
	Member must have diagnosis of cystic fibrosis with genetic testing performed to	
	confirm that member is homozygous for the F508del mutation in the CFTR gene	
	AND	
	Member is 6 years of age or older AND	
	Member is being treated by a pulmonologist AND	
	• Member has < 5 times upper limit of normal (ULN) AST/ALT or < 3 times ULN	
	AST/ALT if concurrently has > 2 times ULN bilirubin at time of initiation AND	
	Member has serum transaminase and bilirubin measured before initiation and	
ORIAHNN	every 3 months during the first year of treatment ORIAHNN (elagolix, estradiol, norethindrone acetate) prior authorization may be	Ono woon
(elagolix, estradiol,	approved for members meeting the following criteria:	One year
norethindrone acetate)	 Member is a woman 18 years of age or older AND 	
 ,	 Member has a confirmed diagnosis of heavy menstrual bleeding associated 	
	with uterine leiomyomas (fibroids) AND	
	Member has tried and failed treatment with an estrogen-progestin	
	contraceptive (oral tablets, vaginal ring, transdermal patch) OR a progestin-	

releasing intrauterine device (IUD). Failure is defined as lack of efficacy, allergy, intolerable side effects, significant drug-drug interaction, or contraindication to therapy AND The medication is prescribed by or in consultation with an obstetrician/gynecologist AND

- Member does not have a high risk of arterial, venous thrombotic, or thromboembolic disorder, including:
 - Women over 35 years of age who smoke **OR**
 - Women with a past or current history of the following:
 - DVT, PE, or cerebrovascular disease (such as cerebrovascular disease, coronary artery disease, peripheral vascular disease) **OR**
 - Thrombogenic valvular or thrombogenic rhythm diseases of the heart (such as subacute bacterial endocarditis with valvular disease, or atrial fibrillation)
 - Inherited or acquired hypercoagulopathies OR
 - Uncontrolled hypertension **OR**
 - Headaches with focal neurological symptoms OR migraine headaches with aura if over age 35

AND

- Member is not pregnant AND
- Member does not have known osteoporosis AND
- Member does not have current or history of breast cancer or other hormonally-sensitive malignancies AND
- Member does not have known liver impairment or disease AND
- Member is not concomitantly taking not an OATP 1B1 inhibitor (such as gemfibrozil, ritonavir, rifampin, cyclosporine) AND
- Member has been counseled that that Oriahnn does not prevent pregnancy
- Member has been instructed that only non-hormonal contraceptives should be used during Oriahnn therapy and for at least 1 week following discontinuation AND
- Prescriber acknowledges that assessment of bone mineral density (BMD) by dual-energy X-ray absorptiometry (DXA) is recommended at baseline and periodically thereafter, and discontinuation of Oriahnn should be considered if the risk associated with bone loss exceeds the potential benefit of treatment.

Reauthorization: Members with current one-year prior authorization approval on file may receive additional one-year prior authorization approval to continue therapy. Total duration for prior authorization approvals is limited to 2 years (or two one-year approvals).

Maximum dose: 2 capsules daily (AM and PM daily doses supplied in blister pack)

OTC PRODUCTS*

The following OTC products do not require a prior authorization for coverage:

One year

- Oral emergency contraceptive products
- Polyethylene glycol powder laxatives
- Docusate (oral) Effective 03/01/19
- Bisocodyl (oral and suppository) Effective 03/01/19
- Children's liquid and chewable acetaminophen for ages 2-11
- Children's liquid and chewable ibuprofen for ages 6 months 11 years

- Children's dextromethorphan suspension for ages 4-11 years
 - Nicotine replacement therapies (OTC patch, gum, and lozenge)

The following OTC products may be covered with a prior authorization:

- L-methylfolate may be approved for members with depression who are currently taking an antidepressant and are partial or non-responders
- Nicomide may be approved for the treatment of acne
- Cranberry tablets may be approved for urinary tract infections
- Cough and Cold Products may be approved for members with a diagnosis of a chronic respiratory condition for which these medications may be prescribed or based on medical necessity supported by clinical practice recommendations
- Guaifenesin 600mg LA may be approved for members having an abnormal amount of sputum
- Bisacodyl enema may be approved following adequate trial and/or failure with a bisocodyl oral formulation and bisocodyl suppository (Failure is defined as lack of efficacy with 10 day trial, allergy, intolerable side effects, or significant drugdrug interactions). Effective 03/01/19
- Docusate enema may be approved following adequate trial and with a docusate oral formulation (Failure is defined as lack of efficacy with 10 day trial, allergy, intolerable side effects, or significant drug-drug interactions). Effective 03/01/19
- Ferrous sulfate and ferrous gluconate may be approved with diagnosis iron deficient anemia OR iron deficiency verified by low serum ferritin. Effective 03/01/19
- Members with erythema bullosum (EB) may be approved to receive OTC medications (any Medicaid rebate-eligible OTC medications)

Other OTC product coverage information:

- Diabetic needles and supplies are covered under the DME benefit
- Broncho saline: See Sodium Chloride section
- Fluoride supplements: See Fluoride Products section
- OTC Proton Pump Inhibitors: See PDL
- OTC Combination Antihistamine/Decongestant Products: See PDL
- Long Term Care Facilities (LTCFs): Various OTC drugs and supplies for LTCF residents shall be furnished by the facility, within the per diem rate, at no charge to the resident pursuant to 10 CCR 2505-10 Skilled Nursing Facility: 8.440 NURSING FACILITY BENEFITS. These OTC drugs and supplies, known as products on a "floor stock list", are not covered or eligible for prior authorization under the pharmacy benefit for LTCF members.
- * Coverage criteria outlined in this section apply to prescriptions written by non-pharmacist prescribers. For coverage relating to pharmacist prescribers please see "Pharmacist Prescriptions" section.

OXANDRIN (oxandrolone)

Oxandrin[®] (oxandrolone) may be approved if meeting all of the following criteria:

- Medication is being prescribed for one of the following indications:
 - As adjunctive therapy to promote weight gain after weight loss following extensive surgery, chronic infections, severe trauma, and without definite pathophysiologic reasons to fail to gain or maintain normal weight
 - To offset the protein catabolism associated with prolonged administration of corticosteroids
 - For the relief of bone pain frequently accompanying osteoporosis **AND**
- Member does not have any of the following medical conditions:
 - Hypercalcemia
 - Known or suspected carcinoma of the prostate or the male breast

Effective 01/01/2021 Revised 02/03/2021

One Year

Reauthorization: Member may receive reauthorization approval for 1 year if meeting the following: • Palforzia continues to be used in conjunction with a peanut-avoidant diet AND • Member continues to tolerate the prescribed daily doses of Palforzia AND • Member continues to tolerate the prescribed daily doses of Palforzia AND • Member continues to tolerate the prescribed epinephrine available for immediate use at all times AND	One year

COLONADO MILDICAID I	AFFEIDICES	
	 Member does not have eosinophilic esophagitis or other eosinophilic gastrointestinal disease AND Member does not have a mast cell disorder including mastocytosis, urticarial pigmentosa, and/or hereditary/idiopathic angioedema AND Member has not experienced any treatment-restricting adverse effects (such as repeated systemic allergic reaction and/or severe anaphylaxis) Maximum dose (maintenance): 300 mg daily 	
DALVNZIO		Ongwaar
PALYNZIQ (pegvaliase-pqpz)	PALYNZIQ (pegvaliase-pgpz) prior authorization may be approved for members meeting the following criteria: • Member is at 18 years of age or older AND • Member has a diagnosis of phenylketonuria (PKU) AND • Member has a blood phenylalanine concentration > 600 mcmol/L AND • Member is not receiving Palynziq in combination with Kuvan (sapropterin dihydrochloride) AND • Member is actively on a phenylalanine-restricted diet AND • Member will have a phenylalanine blood level measured at baseline prior to initiation and every four weeks until a maintenance dose is established AND • Prescriber acknowledges that first dose is being administered under the supervision of a healthcare provider equipped to manage anaphylaxis AND • Prescriber acknowledges that any doses administered in the doctor's office or clinic are to be billed to the Health First Colorado medical benefit through the standard buy-and-bill process. Reauthorization: Member may receive reauthorization approval for 1 year if meeting the following: • Member is showing signs of continuing improvement, as evidenced by one of the following: • Blood phenylalanine level decrease of at least 20% from pretreatment baseline OR • Reduction of blood phenylalanine below 600 mcmol/L at current dose or maximum dose after 16 weeks of treatment.	One year
PCSK9 INHIBITORS Praluent, Repatha	Maximum dose: 40 mg per day PCSK9 inhibitors may be approved for members that meet the following criteria: Medication is prescribed for one of the following diagnoses: Praluent® (alirocumab): heterozygous familial hypercholesterolemia or clinical atherosclerotic cardiovascular disease Repatha® (evolocumab): heterozygous familial hypercholesterolemia or homozygous familial hypercholesterolemia or clinical atherosclerotic cardiovascular disease (defined below)	Initial Approval: 3 months Continuation Approval: One year
	Conditions Which Define Clinical Atherosclerotic Cardiovascular Disease Acute Coronary Syndrome History of Myocardial Infarction Stable or Unstable Angina Coronary or other Arterial Revascularization Stroke Transient Ischemic Attach Peripheral Arterial Disease of Atherosclerotic Origin	

- PCSK9 inhibitor therapy is prescribed by, or in consultation with, one of the following providers:
 - o Cardiologist
 - Certified Lipid Specialist
 - o Endocrinologist AND
- Member is concurrently adherent (>80% of the past 180 days) on maximally tolerated dose (see table below) of statin therapy (must include atorvastatin and rosuvastatin). If intolerant to a statin due to side effects, member must have a one month documented trial with at least two other statins. For members with a past or current incidence of rhabdomyolysis, one month failure is not required AND
- Member must be concurrently treated (in addition to maximally tolerated statin) with ezetimibe AND have a treated LDL ≥ 70 mg/dl for a clinical history of ASCVD or LDL ≥ 100 mg/dl if familial hypercholesterolemia AND
- PA will be granted for 3 months initially. Additional one year approval for continuation will be granted with provider attestation of safety and efficacy with initial medication therapy

Atorvastatin 80mg
Fluvastatin 80 mg
Lovastatin 80 mg
Pravastatin 80 mg
Rosuvastatin 40 mg
Simvastatin 40 mg (80 mg not used in practice)

PHARMACIST PRESCRIPTIONS

The following OTC products will be covered with a written prescription by a pharmacist:

- Oral emergency contraceptive products
- Nicotine replacement therapy products including:
 - O Nicotine gum (up to 200 units/fill)
 - Nicotine patch (up to 30 patches/30days)
 - Nicotine lozenge (up to 288 units/fill)
- Children's dextromethorphan suspension for members age 4-11 years (up to 150 ml per 30 days)
- Children's liquid and chewable acetaminophen for members age 2-11 years (up to 240 ml per 30 days)
- Children's liquid and chewable ibuprofen for members age 6 months 11 years (up to 240 mL per 30 days)

PHYSICIAN ADMINISTERED DRUGS

Medications administered in a doctor's office, clinic, outpatient hospital, or dialysis unit are only to be billed by those facilities through the Health First Colorado medical benefit using the standard buy-and-bill process and following procedures outlined in the PAD Billing Manual (located at https://www.colorado.gov/hcpf/physician-administered-drugs).

Physician administered drugs include any medication or medication formulation that is administered intravenously or requires administration by a healthcare professional (including cases where FDA package labeling for a medication specifies that administration should be performed by or under the direct supervision of a healthcare professional) and may only be billed through the pharmacy benefit when given in a long-term care facility or when administered in the member's home by a healthcare professional or home health service. Prior authorization for physician administered drugs requires documentation of the following (in addition to meeting any other prior authorization criteria if listed):

- For drugs administered in the member's home by a home health agency or healthcare professional (home health administered):
 - 1. Name of home health agency or healthcare professional

COLORADO MEDICAID F		
	 2. Phone number 3. Date and authorization number for home health authorization on file (when applicable for home health agencies) For drugs administered in a long-term care facility: Name of long-term care facility Phone number of long-term care facility 	
PRETOMANID	 PRETOMANID prior authorization may be approved for members meeting the following criteria: Member is an adult (≥ 18 years of age) AND Member has a confirmed diagnosis of multidrug resistant tuberculosis AND Pretomanid is prescribed by or in conjunction with an infectious disease specialist AND Pretomanid is prescribed in combination with bedaquiline and linezolid by directly observed therapy (DOT) AND Prescriber acknowledges member readiness and anticipated compliance with undergoing directly observed therapy (DOT) AND Prescriber acknowledges that Pretomanid doses administered by a healthcare provider in a hospital, doctor's office, or clinic are to be billed through the Health First Colorado medical benefit through the standard buy-and-bill process. 	One year
PREVYMIS (letermovir)	Prevymis® (letermovir) may be approved for members that meet the following criteria: • Member is a CMV-seropositive transplant recipient and meets ALL of the following: AND • Member is 18 years or older. • Member has received an allogeneic hematopoietic stem cell transplant. • Member does not have severe hepatic impairment (Child-Pugh Class C). • Member is not receiving pitavastatin or simvastatin co-administered with cyclosporine. • Member is not receiving pimozide or ergot alkaloids. • Prevymis® is being prescribed by or in consultation with an oncologist, hematologist, infectious disease specialist, or transplant specialist. AND • Provider agrees to monitor for CMV reactivation. AND • Prevymis® dose does not exceed 480 mg orally or dose does not exceed 240mg if co-administered with cyclosporine. AND • If request is for IV injectable Prevymis®, must provide medical justification why the patient cannot use oral therapy. AND • If request is for IV injectable Prevymis®, must be administered in a long-term care facility or in a member's home by a home healthcare provider Length of Approval: Prevymis® will only be approved for 100 days Renewal: Authorization may be reviewed every 100 days to confirm that current medical necessity criteria are met and that the medication is effective (e.g. no evidence of CMV viremia).	100 days
PROCYSBI (cysteamine)	Approval will be granted if the member is 2 years of age or older AND Has a diagnosis of nephropathic cystinosis AND documentation is provided to the Department that treatment with cysteamine IR (Cystagon®) was ineffective, not tolerated, or is contraindicated.	One year

PROMACTA	Promacta ® (eltrombopag) prior authorization may be approved for members	One year*
(eltrombopag)	meeting criteria for the following diagnoses:	
	Chronic immune idiopathic thrombocytopenia purpura:	
	• Confirmed diagnosis of chronic (> 3 months) immune idiopathic	
	thrombocytopenia purpura AND	
	Must be prescribed by a hematologist AND	
	 Member is at risk (documented) of spontaneous bleed as demonstrated by the following labs: AND 	
	o Platelet count less than 20,000/mm3 or	
	 Platelet count less than 30,000/mm3 accompanied by signs and symptoms of bleeding 	
	• In the past 6 months, member has tried and failed (failure is defined as lack of	
	efficacy, allergy, intolerable side effects or significant drug-drug interactions)	
	systemic corticosteroids (e.g. prednisone 1 to 2 mg/kg for 2 to 4 weeks, or pulse	
	dexamethasone 40 mg daily for 4 days), immunoglobulin replacement, or splenectomy.	
	Thrombocytopenia associated with hepatitis C:	
	Member must have confirmed diagnosis of chronic hepatitis C associated thrombocytopenia AND	
	• Must be prescribed by a gastroenterologist, infectious disease specialist,	
	transplant specialist or hematologist AND	
	 Member has clinically documented thrombocytopenia defined as platelets < 60,000 microL AND 	
	Patients' degree of thrombocytopenia prevents the initiation of interferon-based therapy or limits the ability to maintain interferon-based therapy	
	Severe aplastic anemia:	
	Member must have confirmed diagnosis of severe aplastic anemia AND	
	Must be prescribed by a hematologist AND	
	Member must have had a documented insufficient response to	
	immunosuppressive therapy [antithymocyte globulin (ATG)] alone or in combination with cyclosporine and/or a corticosteroid	
	*All initial prior authorization approvals will be granted for 12 months. Further	
	approvals for a maximum of 6 months require lab results and documentation for	
	efficacy.	
PROMETHAZINE	A Prior authorization is required for all routes of administration for members under	One weer
I KUME I HAZINE	the age of two. Children under the age of two should not use Promethazine.	One year
	Promethazine is contraindicated in such patients because of the potential for fatal	
	respiratory depression.	
	Not qualified for emergency 3 day supply PA	
PROPECIA (finasteride)	Not covered for hair loss	One year
	Not qualified for emergency 3 day supply PA	
PULMOZYME (dornase		
alfa)	Pulmozyme® (dornase alfa) may be approved for members that meet the following criteria:	

COLORADO MEDICAID P	RUGRAIVI APPENDICES	
	 Member has a diagnosis of cystic fibrosis AND Member is five years of age or older For children < 5 years of age, Pulmozyme will be approved if the member has severe lung disease as documented by bronchoscopy or CT scan Pulmozyme twice daily will only be approved if patient has tried and failed an adequate trial of once daily dosing for one month All prior authorization renewals are reviewed on an annual basis to determine the Medical Necessity for continuation of therapy. Authorization may be extended at 1-year intervals based upon documentation from the prescriber that the member continues to benefit from Pulmozyme therapy. Quantity Limits: 30 ampules (2.5 mg/2.5 ml) per month 	
QBREXZA (glycopyrronium)	QBREXZA (glycopyrronium) prior authorization may be approved for members meeting the following criteria: • Member is 9 years of age or older AND • Member has a diagnosis of primary by nothing agents are proved for members.	Initial: 3 months Continued:
	 Member has a diagnosis of primary hyperhidrosis occurring more than once weekly and symptoms cease at night AND Member has a documented Hyperhidrosis Disease Severity Scale (HDSS) score of 3 or 4 AND There is documentation that the axillary hyperhidrosis is severe, intractable and disabling in nature as documented by at least one of the following: Significant disruption of professional and/or social life as a result of excessive sweating OR The condition is causing persistent or chronic cutaneous conditions (such as skin maceration, dermatitis, fungal infections, secondary microbial infections) AND Prescriber has considered a trial of OTC topical antiperspirants (such as 20% aluminum chloride hexahydrate,15% aluminum chloride hexahydrate, or 6.25% aluminum chloride hexahydrate) Initial approval: 3 months Reauthorization: Member may receive reauthorization approval for 1 year if meeting the following: Member has documented improvement of at least two points in Hyperhidrosis Disease Severity Scale (HDSS) score following initiation 	One year
	(or ongoing use) of Qbrexza regimen. Maximum dose: 1 cloth per day	
RADICAVA (edaravone)	 Radicava® (edaravone) may be approved for members that meet the following criteria: RADICAVA is being administered in a long-term care facility or in a member's home by a home healthcare provider AND Member has a "definite" or "probable" diagnosis of amyotrophic lateral sclerosis (ALS) based on medical history and diagnostic testing which may include imaging and nerve conduction conditions studies AND 	6 months
	 Member meets ALL of the following: Member has a diagnosis of ALS for 2 or less years (for new starts only). 	

	74 LINDIGES	1
RANITIDINE	 Diagnosis has been established by or with the assistance of a neurologist with expertise in ALS using El Escorial or Airlie House diagnostic criteria (ALSFRS-R). Member has normal respiratory function as defined as having a percent-predicated forced vital capacity of greater than or equal to 80%. The ALSFRS-R score is greater than or equal to 2 for all items in the criteria. Member does not have severe renal impairment (CrCl< 30 ml/min) or end stage renal disease Member does not have moderate or severe hepatic impairment (Child-Pugh Class C) AND RADICAVA is prescribed by or in consultation with a neurologist. Length of Approval: 6 months. Quantity Limits: For patients initiating therapy, approval will include 28 bags per 28 days (initial dose) for the first month and 20 bags per 28 days for the remainder of the 6 months. Renewal: Authorization may be reviewed every six months to confirm that current medical necessity criteria are met and that the medication is effective per improvement in ALSFRS-R score. Prescription ranitidine capsule and liquid formulations require prior authorization. 	One year
Capsule/Solution	Ranitidine capsule: Require the prescribing provider to certify that capsules are medically necessary and that the member cannot use the tablets. Ranitidine liquid: A prior authorization will be approved for members with a feeding tube or who have difficulty swallowing. A prior authorization is not required for children under 12 years of age.	One year
RAVICTI (glycerol phenylbutyrate)	 Ravicti (glycerol phenylbutyrate) will only be approved for members meeting the following criteria: Member must have a documented diagnosis of urea cycle disorder (UCD) Member must be on a dietary protein restriction (verified by supporting documentation) Member must have tried and failed Buphenyl as evidenced by uncontrolled hyperammonia over the past 365 days Medication must be prescribed by a physician experienced in the management of UCD (e.g., geneticist) 	One year
REBATE DISPUTE DRUGS	Medical necessity. Not qualified for emergency 3 day supply PA	One year
REVCOVI (elapegademase-lvlr)	REVCOVI (elepegademase-lvlr) may be approved for members meeting the following criteria: If adenosine deaminase severe combined immune deficiency (ADA-SCID). Maximum dose: Revcovi 0.4mg/kg per week (based on ideal body weight, IM administration)	One year
RUZURGI (amifampridine)	Ruzurgi (amifampridine) may be approved for members meeting the following criteria: • Member is 6 to less than 17 years of age AND • Member has a diagnosis of Lambert-Eaton myasthenic syndrome (LEMS)	One year

	Maximum dose: 100mg daily	
SANDOSTATIN (octreotide)	Approved for acromegaly; carcinoid tumors; and vasoactive intestinal peptide tumors.	Lifetime
SILENOR (doxepin tablet)	 Silenor (doxepin) tablets may be approved if a member meets ONE of the following criteria: Contraindication to preferred oral sedative hypnotics (see preferred drug list "Sedative Hypnotic" class for list of preferred products) OR Prescriber attests to the medical necessity for use of doxepin dose < 10 mg OR Member age is greater than 65 years 	One year
SIVEXTRO (tedizolid)	 Sivextro may be approved for members ≥ 12 years of age if all of the following criteria are met: Member has diagnosis of acute bacterial skin and skin structure infection (ABSSSI) caused by one of the following Gram-positive microorganisms: Staphylococcus aureus (including methicillin-resistant [MRSA] and methicillin-susceptible [MSSA] isolates), Streptococcus pyogenes, Streptococcus agalactiae, Streptococcus anginosus Group (including Streptococcus anginosus, Streptococcus intermedius, and Streptococcus constellatus), and Enterococcus faecalis. AND Member has adequate trial and/or failure of linezolid 600mg twice daily for 10 days. Failure is defined as: lack of efficacy with 10 day trial, allergy, intolerable side effects or significant drug-drug interactions 	Six months
	Maximum dosing: 200mg daily for 6 days total duration	
SODIUM CHLORIDE (Inhalation)	Broncho Saline <u>is not</u> covered under the pharmacy benefit.	N/A
	Sodium chloride (inhalation use) must be billed through medical.	
SOLARAZE 3% GEL	A prior authorization will only be approved if the member has a diagnosis of Actinic	One year
(diclofenac sodium)	Keratoses (AK).	0
SOLIRIS (eculizumab)	 Soliris (ecluizumab) may be approved for members meeting all of the following criteria: Medication is being administered in the member's home or in a long-term care 	One year
	 facility by a healthcare professional AND Member is diagnosed with either Paroxysmal Nocturnal Hemoglobinuria (PNH), Atypical Hemolytic Uremic Syndrome (aHUS), Generalized Mysthenia Gravis (gMG), or Neuromyleitis Optica Spectrum Disorder (NMOSD) AND Member does not have a systemic infection AND Member must be administered a meningococcal vaccine at least two weeks prior to initiation of Soliris therapy and revaccinated according to current medical guidelines for vaccine use AND Prescriber is enrolled in the Soliris (eculizumab) Risk Evaluation and Mitigation Strategy (REMS) program AND Medication is prescribed by or in conjunction with a hematologist for PNH and by or in conjunction with a hematologist or nephrologist for aHUS and by or in conjunction with a neurologist for gMG or NMOSD AND Member meets criteria listed below based on specific diagnosis: 	
	Member is 18 years of age or older AND	

- Diagnosis of PHN must be accompanied by detection of PNH clones by flow cytometry diagnostic testing AND
- Member demonstrate the presence of at least 2 different glycosylphosphatidylinositol (GPI) protein deficiencies (e.g. CD55, CD59, etc.) within at least 2 different cell lines (granulocytes, monocytes, erythrocytes) AND
- Member has one of the following indications for therapy:
 - o Presence of a thrombotic event
 - Presence of organ damage secondary to chronic hemolysis
 - Patient is pregnant and potential benefit outweighs potential fetal risk
 - Patient is transfusion dependent
 - O Patient has high LDH activity (defined as ≥ 1.5 x ULN) with clinical symptoms

AND

- Member has documented baseline values for one or more of the following:
 - Serum lactate dehydrogenase (LDH)
 - o Hemoglobin level
 - o Packed RBC transfusion requirement

Atypical Hemolytic Uremic Syndrome

- Member is 2 months or older AND
- Thrombotic Thrombocytopenic Purpura (TTP) has been ruled out by evaluating ADAMTS13 level (ADAMTS-13 activity level > 10%); AND
- Shiga toxin E. coli related hemolytic uremic syndrome (STEC-HUS) has been ruled out; AND
- Other causes have been ruled out such as coexisting diseases or conditions (e.g. bone marrow transplantation, solid organ transplantation, malignancy, autoimmune disorder, drug-induced, malignant hypertension, HIV infection, etc.), Streptococcus pneumonia or Influenza A (H1N1) infection, or cobalamin deficiency AND
- Documented baseline values for one or more of the following:
 - o Serum lactate dehydrogenase (LDH)
 - o Serum creatinine/eGFR
 - o Platelet count
 - o Plasma exchange/infusion requirement

Generalized Myasthenia Gravis

- Member is 18 years or older AND
- Patient has Myasthenia Gravis Foundation of America (MGFA)
 Clinical Classification of Class II to IV disease; AND
- Patient has a positive serologic test for anti-acetylcholine receptor (AchR) antibodies; AND
- Physician has assessed the baseline Quantitative Myasthenia Gravis (QMG) score; AND
- Patient has a MG-Activities of Daily Living (MG-ADL) total score of ≥6; AND

COLORADO MEDICAID P	ROGRAIVI APPENDICES	
COLORADO MEDICAID P	Patient has failed treatment over at least 1 year with at least 2 immunosuppressive therapies (e.g. azathioprine, cyclosporine, mycophenolate, etc), or has failed at least 1 immunosuppressive therapy and required chronic plasmapheresis or plasma exchange (PE) or intravenous immunoglobulin (IVIG) Neuromyelitis Optica Spectrum Disorder Member is 18 years or older AND Member has a past medical history of one of the following: Optic neuritis Acute myelitis Acute myelitis Acute brainstem syndrome; episode of otherwise unexplained hiccups or nausea and vomiting Acute brainstem syndrome Symptomatic narcolepsy or acute diencephalic clinical syndrome with NMOSD-typical diencephalic MRI lesions Symptomatic cerebral syndrome with NMOSD-typical brain lesions AND Member has a positive serologic test for anti-aquaporin-4 immunoglobulin G (AQP4-IgG)/NMP-IgG antibodies; AND Diagnosis of multiple sclerosis or other diagnoses have been ruled out AND Member has not failed a previous course of Soliris (eculizumab) therapy AND Member has a history of failure, contraindication, or intolerance to rituximab therapy AND Member has at least one of the following: History of at least two relapses during the previous 12 months prior to initiating Soliris (eculizumab) History of at least three relapses during the previous 24 months, at least one relapse occurring within the past 12 months prior to initiating Soliris (eculizumab) AND Member is not receiving Soliris in combination with any of the following: Disease modifying therapies for the treatment of multiple	
	<u> </u>	
	Maximum dose: 900mg weekly for 4 weeks induction followed by 1200mg every 2 weeks maintenance dose	
SOLOSEC (secnidazole)	Solosec® (secnidazole) may be approved for members meeting the following criteria: • Solosec® is being prescribed for bacterial vaginosis in an adult female member AND • Member has adequately trialed and failed an oral OR topical formulation of metronidazole (Failure is defined as lack of efficacy of a 7 day trial, allergy, intolerable side effects, significant drug-drug interaction, or contraindication to therapy) AND	One year

COLORADO MEDICAID P	ROGRAM APPENDICES	
	Member has adequately trialed and failed an oral OR topical formulation of clindamycin (Failure is defined as lack of efficacy of a 7 day trial, allergy, intolerable side effects, significant drug-drug interaction, or contraindication to therapy) Solosec® Maximum Quantity: 1 packet of 2 grams per 30 days	
STRENSIQ (asfotase alfa)	 Strensiq® (asfotase alfa) may be approved if all of the following criteria are met: Member has a diagnosis of either perinatal/infantile- OR juvenile-onset hypophosphatasia (HPP) based on all of the following a. Member was ≤ 18 years of age at onset b. Member has/had clinical manifestations consistent with hypophosphatasia at the age of onset prior to age 18 (e.g. vitamin B6-dependent seizures, skeletal abnormalities: such as rachitic chest deformity leading to respiratory problems or bowed arms/legs, "failure to thrive"). c. Member has/had radiographic imaging to support the diagnosis of hypophosphatasia at the age of onset prior to age 18 (e.g. infantile rickets, alveolar bone loss, craniosynostosis) d. Member has one of the following: elevated urine concentration of phosphoethanolamine (PEA), elevated serum concentration of pyridoxal 5'-phosphate (PLP) in the absence of vitamin supplements within one week prior to the test, or elevated urinary inorganic pyrophosphate (PPi) AND e. Molecular genetic test has been completed confirming mutations in the ALPL gene that encodes the tissue nonspecific isoenzyme of ALP (TNSALP) within 30 days of initiation. If genetic test is negative, approval will not be granted past 30 days. f. Prescriber is a specialist in the area of the members disease (such as an endocrinologist) 	Six months
SYMDEKO (tezacaftor/ivacaftor and ivacaftor)	 Symdeko® (tezacaftor/ivacaftor and ivacaftor) may be approved for members that meet the following criteria: The member has a diagnosis of cystic fibrosis AND The member is 6 years of age or older AND The member has one of the following mutations: Homozygous for the F508del mutation in the CFTR gene 2 OR Heterozygous for the F508del mutation in the CFTR gene and one of the following mutations: E56K, P67L, R74W, D110E, D110H, R117C, E193K, L206W, R347H, R352Q, A455E, D1270N, D579G, 711+3A-G, E831X, S945L, S977F, F1052V, K1060T, A1067T, R1070W, F1074L, D1152H, 3272-26A-G, 2789+5G-A, 3849-10kbC-T, or another FDA approved gene mutation AND Member has ALT, AST, and bilirubin at baseline and tested every 3 months for the first year AND Member has a baseline ophthalmological examination and periodic follow-up exams for cataracts AND Must be prescribed by or in consultation with a pulmonologist or gastroenterologist AND Member is not receiving dual therapy with another cystic fibrosis transmembrane conductance regulator (CFTR) potentiator AND 	One year

COLORADO MEDICAID F	PROGRAM APPENDICES	
	Member has had 2 negative respiratory cultures for any of the following organisms: Burkholeria cenocepacia, Burkholderia dolosa, or Mycobacterium abscessus in the past 12 months.	
SYNAGIS (palivizumab)	Pharmacy prior authorization requests for Synagis must be submitted by fax using the Synagis prior authorization form found at https://www.colorado.gov/hcpf/provider-forms . Medical prior authorization requests must be submitted at http://coloradopar.com/ . Synagis season will begin November 16, 2020 and end April 16, 2021. Prior authorization may be requested beginning November 2, 2020. Synagis given in a doctor's office, hospital or dialysis unit is to be billed directly by those facilities as a medical benefit. Synagis may only be a pharmacy benefit if the medication is administered in the member's home or long-term care facility.	Maximum of 5 doses per season
	 Key Points No more than 5 doses per season. 5 doses provide more than 6 months of protective serum concentration. Synagis is not recommended for controlling outbreaks of health care-associated disease. Synagis is not recommend for prevention of health care-associated RSV disease. Infants born later in the season may require less than 5 doses to complete therapy to the end of the season. Monthly prophylaxis should be discontinued in any child who experiences a breakthrough RSV hospitalization. Synagis is not recommended to prevent wheezing, nosocomial disease, or treatment of RSV Synagis is not routinely recommended for patients with a diagnosis of Down syndrome unless they also have a qualifying indication listed below. In the first year of life Synagis is recommended: For infants born before 29w 0d gestation. For infants born before 32w 0d AND with chronic lung disease (CLD) of prematurity AND requirements of >21% oxygen for at least 28 days after birth. For infants with hemodynamically significant heart disease (acyanotic heart disease who are receiving medication to control congestive heart failure (CHF) and will require cardiac surgical procedures or infants with moderate to severe pulmonary hypertension) AND born within 12 months of onset of the RSV season. For infants with cyanotic heart defects AND in consultation with a pediatric cardiologist AND requirements of >21% oxygen for at least 28 days after birth AND continue to require medical intervention (supplemental oxygen, chronic corticosteroid, or diuretic therapy) If an infant has neuromuscular disease or pulmonary abnormality AND is unable to clear secretions from the upper airways An infant has neuromuscular disease or pulmonary abnormality AND is unable to clear secretions from the upper airways	

to require medical intervention (supplemental oxygen, chronic corticosteroid, or diuretic therapy) b. A child who will be profoundly immunocompromised during the RSV season (solid organ or hematopoietic stem cell transplantation, receiving chemotherapy) c. Children with manifestations of severe lung disease (previous hospitalization for pulmonary exacerbation in the first year of life or abnormalities of chest radiography or chest computed tomography that persist when stable) OR weight for length less than the 10th percentile. d. Children who undergo cardiac transplantation during the RSV season. Syprine® (trientine) may be approved if all of the following criteria are met: • Must be prescribed in conjunction with a gastroenterologist, hepatologist, or liver transplant specialist. AND • Member has a diagnosis of Wilson's Disease meeting at least one of the following criteria: o Hepatic parenchymal copper content of ≥250µg/g dry weight o Presence of Kayser-Fleischer Ring in cornea Serum ceruloplasmin level <50mg/L o Basal 24-hour urinary excretion of copper ≥100µg (1.6 µmoles) o Genetic testing results indicating mutation in ATP7B gene AND • Member has failed a three-month trial or is intolerant to penicillamine. Failure is defined as a lack of efficacy, allergy, intolerable side effects, contraindication to, or significant drug-drug interactions AND • Member has failed a three-month trial or is intolerant to generic trientine. Failure is defined as a lack of efficacy, allergy, intolerable side effects, contraindication to, or significant drug-drug interactions. TAMIFLU (oseltamivir) capsules Fifective 10/15/2019: Claims for brand Tamiflu® capsules require prior authorization approval (see section "Brand Name Medications and Generic Mandate" for brand product overage details). Generic equivalent oseltamivir formulations do not require prior authorization. TAVALISSE (fostamatinib) prior authorization may be approved for members meeting the following criteria: • Member is 18 years of age or old	One year
 Must be prescribed in conjunction with a gastroenterologist, hepatologist, or liver transplant specialist. AND Member has a diagnosis of Wilson's Disease meeting at least one of the following criteria: Hepatic parenchymal copper content of ≥250µg/g dry weight Presence of Kayser-Fleischer Ring in cornea Serum ceruloplasmin level <50mg/L Basal 24-hour urinary excretion of copper >100µg (1.6 µmoles) Genetic testing results indicating mutation in ATP7B gene	one year
defined as a lack of efficacy, allergy, intolerable side effects, contraindication to, or significant drug-drug interactions AND • Member has failed a three-month trial or is intolerant to generic trientine. Failure is defined as a lack of efficacy, allergy, intolerable side effects, contraindication to, or significant drug-drug interactions. TAMIFLU (oseltamivir) capsules Effective 10/15/2019: Claims for brand Tamiflu® capsules require prior authorization approval (see section "Brand Name Medications and Generic Mandate" for brand product coverage details). Generic equivalent oseltamivir formulations do not require prior authorization. TAVALISSE (fostamatinib) Tavalisse® (fostamatinib) prior authorization may be approved for members meeting the following criteria:	
capsules approval (see section "Brand Name Medications and Generic Mandate" for brand product coverage details). Generic equivalent oseltamivir formulations do not require prior authorization. TAVALISSE (fostamatinib) prior authorization may be approved for members meeting the following criteria:	
capsules approval (see section "Brand Name Medications and Generic Mandate" for brand product coverage details). Generic equivalent oseltamivir formulations do not require prior authorization. TAVALISSE (fostamatinib) prior authorization may be approved for members meeting the following criteria:	
(fostamatinib) the following criteria:	
(fostamatinib) the following criteria:	Initial
Member is 18 years of age or older AND	Approval:
	3 months
Member has a documented diagnosis of chronic immune thrombocytopenia AND Member has trialed and failed at least ONE of the following therapies (Failure is defined as a lack of efficacy, allergy, intolerable side effects, or significant drug-drug interactions):	Continuation Approval: One year

COLORADO MEDICAID I	PROGRAM APPENDICES	
	Initial prior authorization approval will be for 3 months. Continuation may be approved with verification of documented platelet response (platelet count ≥50x109/L) Quantity Limit: 60 tablets per 30 days	
TARGETED IMMUNE	Actemra (tocilizumab) IV injection may be approved if meeting the following	One year
TARGETED IMMUNE MODULATORS (IV and physician-administered products)	Actemra (tocilizumab) IV injection may be approved if meeting the following criteria: • Actemra is being prescribed for an FDA-labeled indication (per product package labeling) AND • Member has trialed and failed ALL preferred agents in the "Targeted Immune Modulators" PDL drug class that are FDA-labeled for use for the same prescribed indication (failure is defined as lack of efficacy of a three-month trial, contraindication to therapy, allergy, intolerable side effects or significant drug-drug interaction) AND • Actemra IV injection is being administered by a healthcare professional in the member's home or in a long-term care facility Entyvio (vedolizumab) may be approved for members who are receiving infusion in their home or in a long-term care facility and who meet the following criteria: • Medication is being used in an adult member with ulcerative colitis or Crohn's disease AND • For diagnosis of Crohn's disease, have trialed and failed‡ Humira and Cimzia OR for a diagnosis of ulcerative colitis, have trialed and failed‡ Humira and Simponi AND • Member has had an inadequate response with, intolerance to, or demonstrated a dependence on corticosteroids AND • Member is not receiving Entyvio in combination with Humira, Simponi, or Tysabri AND • Medication is initiated and titrated per FDA-labeled dosing for Crohn's Disease and Ulcerative Colitis up to a maximum of 300mg IV infusion every 8 weeks Inflectra (infliximab dyyb) may be approved with trial & failure‡ of Renflexis (infliximab abda) AND if meeting all of the following criteria: • Medication is being administered in the member's home or in a long-term care facility AND • Member has one of the following diagnoses: • Crohn's disease and is 6 years or older • Rheumatoid arthritis in adults • Juvenile idiopathic arthritis • Paque psoriasis in adults • Ankylosing spondylitis in adults • Juvenile idiopathic arthritis • Plaque psoriasis in adults	One year (for Stelara, see criteria)
	 Orencia (abatacept) – may be approved for members who are receiving the infusion in their home or in long-term care and who meet one of the following: Member has a diagnosis of moderate to severe rheumatoid arthritis or polyarticular juvenile idiopathic arthritis AND has trialed and failed[‡] all 	

preferred agents in the "Targeted Immune Modulators" PDL drug class that are FDA-labeled for use for the prescribed indication OR

 Member is an adult with a diagnosis of psoriatic arthritis AND has trialed and failed[‡] Humira or Enbrel AND Xeljanz IR AND Taltz or Otezla.

Remicade (infliximab) may be approved with trial & failure[†] of Renflexis (infliximab abda) AND if meeting all of the following criteria:

- Medication is being administered in the member's home or in a long-term care facility AND
- Member has one of the following diagnoses:
 - o Crohn's disease and is 6 years or older
 - Ulcerative colitis and is 6 years or older
 - o Rheumatoid arthritis and is 4 years or older
 - o Psoriatic arthritis in adults
 - o Ankylosing spondylitis in adults
 - o Juvenile idiopathic arthritis
 - Plaque psoriasis in adults

AND

 Member has tried and failed[‡] ALL preferred agents in the "Targeted Immune Modulators" PDL drug class that are FDA-labeled for use for the same prescribed indication.

Renflexis (infliximab abda) may be approved if meeting all of the following criteria:

- Medication is being administered in the member's home or long-term care facility AND
- Member has one of the following diagnoses:
 - o Crohn's disease and is 6 years or older
 - O Ulcerative colitis and is 6 years or older
 - Rheumatoid arthritis and is 4 years or older
 - o Psoriatic arthritis in adults
 - Ankylosing spondylitis in adults
 - o Juvenile idiopathic arthritis
 - > Plaque psoriasis in adults

AND

 Member has tried and failed[‡] all preferred agents in the "Targeted Immune Modulators" PDL drug class that are FDA-labeled for use for the prescribed indication.

Rituxan (rituximab) IV and subcutaneous - will be approved for administration in a long-term care facility or in a member's home by a home healthcare provider AND for members who meet one of the following:

- Have diagnosis of moderate to severe rheumatoid arthritis AND have tried and failed both Enbrel and Humira OR
- Have diagnosis of chronic lymphocytic leukemia OR
- Have a diagnosis of Non-Hodgkins Lymphoma

Stelara (ustekinumab) **IV injection** may be approved if meeting the following criteria:

- Stelara is being prescribed for an FDA-labeled indication (per product package labeling) AND
- Member has trialed and failed[‡] ALL preferred agents in the "Targeted Immune Modulators" PDL drug class that are FDAlabeled for use for the same prescribed indication AND

	 Stelara IV injection is being administered by a healthcare professional in the member's home or in a long-term care facility AND Initial prior authorization approval may be given for 16 weeks. Prior authorization for one year may be approved for continuation of therapy based on clinical response. Simponi (golimumab) IV injection may be approved if meeting the following criteria: Simponi IV injection is being administered by a healthcare professional in the member's home or in a long-term care facility AND Member has tried and failed[‡] all preferred agents in the "Targeted Immune Modulators" PDL drug class that are FDA-labeled for use for the prescribed indication. ‡Failure is defined as: lack of efficacy, allergy, intolerable side effects, or significant drug-drug interaction. Note that trial and failure of Xeljanz IR will not be required when prescribed for ulcerative colitis for members ≥ 50 years of age that have an additional CV risk factor. 	
THIOLA EC (tiopronin DR)	 Thiola EC® (tiopronin DR) may be approved for members meeting the following criteria: Member is an adult or pediatric weighing 20kg or more AND Member has severe homozygous cystinuria AND Member has increased fluid intake and diet modifications have been implemented for the prevention of cysteine stone formation AND Member has trial and failure of urinary alkalization agent (such as potassium citrate or potassium bicarbonate) AND Member has trial and failure of Thiola IR (tiopronin). Failure is defined as lack of efficacy with 14 day trial, allergy, intolerable side effects or significant drugdrug interactions. Maximum dose: Thiola EC 1500mg per day 	One year
THROMBOLYTIC ENZYMES	Approved for IV Catheter Clearance or Occluded AV Cannula if given in member's home or long term care facility.	One year
TOBACCO CESSATION	Effective 11/01/18 prior authorization will not be required for tobacco cessation medications including nicotine gum, nicotine patch, nicotine lozenge, nicotine inhaler (Nicotrol®), varenicline (Chantix®), and bupropion SR (Zyban®). Smoking and tobacco cessation resources are available at no charge to members or providers through the Colorado QuitLine found at coquitline.org or by calling 1-800-QUIT-NOW.	
TRIKAFTA (elexacaftor, tezacaftor, ivacaftor)	 Trikafta® may be approved for members meeting the following criteria: Member is 12 years of age or older AND Member has at least one F508del mutation in the cystic fibrosis transmembrane conductance regulator (CTFR) gene or a mutation in the CFTR gene that is responsive based on in vitro data AND Member continues to receive standard of care CF therapies (such as bronchodilators, inhaled antibiotics, dornase alfa, and hypertonic saline) AND 	One year

COLONADO MILDICAID I	AFFENDICES	
	 Member must have liver function tests checked within 3 months without abnormal results (ALT, AST, ALP, or GGT ≥ 3 × ULN, or total bilirubin ≥2 × ULN) AND Baseline Forced Expiratory Volume (FEV1) must be collected 	
	Maximum Dose: 84 tablets per 28 days	
TPN PRODUCTS	Approval will be given if included as part of TPN therapy administered in the member's home or in a long-term care facility by a home healthcare provider. If given in the hospital or physician's office, the claim must be billed as a medical expense.	Lifetime
TYBOST (cobicistat)	Tybost ® may be approved for members meeting the following criteria:	One year
	Member has a diagnosis of HIV-1 AND	
	Member is currently being treated with atazanavir or darunavir only AND	
	 Member is not taking cobicistat-containing drugs, or ritonavir-containing drugs AND 	
	 Member has failed treatment with ritonavir (failure defined as intolerable side effect, allergy, or lack of efficacy). 	
TYSABRI (natalizumab)	 TYSABRI (natalizumab) will be approved for initial therapy if the following criteria are met: Tysabri is being administered in a long-term care facility or in home-health setting AND Medication is not currently being used in combination with immunosuppresants (azathioprine, 6-mercaptopurine, methotrexate) or TNF-alpha inhibitors (adalimumab, certolizumab pegol, infliximab) AND 	One year
	 If prescribed for induction of remission of moderate to severe Crohn's disease The patient is ≥ 18 years of age AND Member has tried and failed Aminosalicylates AND Member has tried and failed Corticosteroids AND Member has tried and failed immunomodulators AND Member has tried and failed two TNF-alpha inhibitors (e.g. adalimumab, certolizumab pegol, infliximab) AND Tysabri is prescribed by or in consultation with a gastroenterologist. 	
	 If prescribed for relapsing remitting multiple sclerosis (RRMS) The patient is ≥ 18 years of age; AND Member has trial and failure of three of the following agents: Avonex (interferon beta-1a), Rebif (interferon beta 1-a), Betaseron/Extavia (interferon beta-1b), Plegridy (peginterferon beta 1a), Copaxone/Glatopa (glatiramer acetate), Aubagio (teriflunomide tablets), Gilenya (fingolimod capsules), Tecfidera (dimethyl fumarate delayed-release capsules), Ocrevus (ocrelizumab) or Lemtrada (alemtuzumab). Failure will be defined as intolerable side effects, drug-drug interaction, or lack of efficacy indicated by one of the following:	
III TOMIDIC	ITHA and a single (and the same and the same	0
ULTOMIRIS	Ultomiris [®] (ravulizumab) may be approved for members meeting the following	One year
(ravulizumab)	criteria:	

COLORADO MEDICAID F	110010101	AFFEINDICES		
	Medication is being administered in the medical facility by a healthcare professional AND Member has a diagnosis of either parts of atypical hemolytic uremic syndrom Maximum dose: Ultomiris 3.6g every 8 weeks.	exysmal nocturnal hemoglobinuria (PNH) me (aHUS).		
VACCINES	Pharmacies that have entered into a collaborative practice agreement with one or more physicians may receive reimbursement (with claim submission through the Health First Colorado medical benefit) for enrolled pharmacists to administer the following vaccines (claims for pharmacist administration of vaccines are not covered under the pharmacy benefit): Covid-19 Influenza Pneumococcal Shingles Tdap			
	Additional information regarding pharmacist enrollment and vaccine medical claims billing can be found at https://www.colorado.gov/hcpf/otc-immunizations . Vivotif oral typhoid vaccine may be approved under the pharmacy benefit for outpatient administration.			
	All other vaccines must be billed on Colorado 1500 form as a medical expense unless administered in a long-term care facility. Pharmacy claims for vaccines administered in a long-term care facility may receive prior authorization approval with verification that the member is residing in a long-term care facility. Not qualified for emergency 3 day supply PA			
VALCYTE (valganciclovir hydrochloride)	Effective 10/15/19: Brand Valcyte® solution is no longer covered as a favored product (see section "Brand Name Medications and Generic Mandate" for brand product coverage details). Valcyte® will be approved for members with diagnosis of Cytomegalovirus (CMV) retinitis AND acquired immunodeficiency Syndrome (AIDS) per dosing guidelines below OR			
	For members that require prophylactic treatment for CMV post kidney, heart or kidney-pancreas transplant per dosing guidelines below OR For members ≤ 16 years of age that are at high risk of CMV infection and need prophylactic treatment post heart or kidney transplant per dosing guidelines below			
	Treatment of CMV retinitis Induction: 900 mg (two 250 mg tablets) twice a day for 21 days Maintenance: 900 mg once a day			
	Prevention of CMV disease in heart or kidney-pancreas patients	900 mg once a day within 10 days of transplantation 100 days post-transplantation		

	Prevention of CMV disease in kidney	900 mg once a day within 10 days of transplantation until 200 days post-		
	transplant patients	transplantation until 200 days post-		
		Pediatric Dosage
