THERE'S NEVER BEEN A BETTER TIME to embrace digitisation

Digital transformation is creating boundless opportunities

Digitising your business is a real challenge. To navigate your digital transformation journey, you need to make some smart moves. The key is building an agile and mobile network, and an integrated threat defence, so you are poised to take advantage of a new world of opportunity that digital transformation enables.

Now is the time to embrace digitisation with effective security as a critical foundation!

Why Cisco?

Fast and highly secure wireless access that prioritises business-critical applications and optimises Wi-Fi connectivity.

Simple to use and scales as your business grows.

The best Mobile Enterprise experience from Cisco innovations and the Apple partnership.

Begin Your Digital Journey Today. Turn Over To Checkout Our Special Offers.

Cisco Wireless Access Point and Security Solution Promotion

FAST, SIMPLE AND HIGHLY SECURE SOLUTION

For companies that need fast, simple and highly secure wireless solution, while maintaining cost efficiencies.

AUTOMATED AND HIGHLY SECURE SOLUTION

For companies that need to automate and proactively remediate wireless surges and threats to optimise user experience.

SELF-OPTIMISING AND SCALABLE SOLUTION

For companies that need their network to automatically adapt to business needs and maximise wireless performance with multi-layer protection that scales as business grow.

CISCO ASA WITH FIREPOWER SERVICES OFFER

Buy selected Cisco ASA Firewall bundles with 1 year license of FirePOWER™ services and receive 2 bonus years of FirePOWER services licenses*

Model: Cisco ASA5506-X with FirePOWER Services and Advanced Malware Protection (AMP)

Model: Cisco ASA5508-X with FirePOWER Services and Advanced Malware Protection (AMP)

Model: Cisco ASA5516-X with FirePOWER Services and Advanced Malware Protection (AMP)

CISCO AIRONET ACCESS POINT AND WIRELESS CONTROLLER OFFER

Enjoy special pricing when you buy Cisco 802.11ac Wave 2 Access Points (AP)# and wireless LAN controller (WLC)

Model: Cisco Aironet® 1830 or 1850 Series AP with Cisco Mobility Express

Model: Cisco Aironet 2800 Series AP with Flexible Radio Assignment and Cisco 5520 Series WLC

Model: Cisco Aironet 3800 Series with Multigigabit technology and Flexible Radio Assignment and Cisco 5520 Series WLC

Lightbulb icon: No matter it is cloud-managed with Cisco Meraki or on-premise managed with Cisco Aironet, Cisco Wireless integrated with Cisco security solutions provide you with a highly secure network that is robust, reliable and simple to deploy.

CISCO MERAKI CLOUD MANAGED OFFER

Get a complimentary Cisco Meraki access point (AP)** when you attend a Meraki webinar at <https://meraki.cisco.com/webinars?region=as&ref=28PshaS>

Model: Cisco Meraki® MR32 with 802.11ac Wave 1

Cisco Meraki Security Appliances
Cisco Meraki MX64 unified threat management (UTM) + Advanced Malware Protection (AMP)

Model: Cisco Meraki MR42 with 802.11ac Wave 2

Cisco Meraki Security Appliances
Cisco Meraki MX84 unified threat management (UTM) + Advanced Malware Protection (AMP)

Model: Cisco Meraki MR53 with 802.11ac Wave 2 and Multigigabit technology

Cisco Meraki Security Appliances
Cisco Meraki MX100 Unified Threat Management (UTM) + Advanced Malware Protection (AMP)

Cisco 802.11ac wave 2 Access Points include Cisco Aironet 3800, 2800, 1850, 1830, 1810, 1810w, and 1560 Series.
*FirePOWER Services include Application Visibility and Control (AVC), Next-Generation IPS (NGIPS), Advanced Malware Protection (AMP), and URL Filtering.
** Eligible countries in APJ region: Australia, New Zealand, Japan, Singapore and Thailand. Terms and conditions apply at <https://meraki.cisco.com/freep>.
Terms and Conditions
All promotional offers are valid only for customers located within the Asia Pacific and Japan region (excluding Greater China) and until October 30, 2016.

What's New

Enterprise networks today are required to be secure, reliable, and connectable seamlessly anywhere, any-time, for any user, and on any device. This catalog introduces the lineup of new products designed to deliver enterprise networks that help steer small- and medium-sized companies toward business success.

 Please contact your authorized Cisco partner, authorized Cisco distributor or Cisco reseller for details on the release date.

Switches

Cisco Catalyst 3650 Series "Multigigabit" Switches

The Cisco Catalyst 3650 Series adds new **Multigigabit models** to the existing family of switches. These switches allow you to achieve bandwidth speeds from 1 Gbps through 10 Gbps over traditional Category 5e (Cat 5e) cabling or above, making it possible to construct wired LAN networks with sufficient performance to support the super high-speed wireless LAN using IEEE 802.11ac, without replacing the existing cabling infrastructure. In addition, the multigigabit ports on select switches support **Cisco Universal Power over Ethernet (Cisco UPOE)**, which is increasingly important for next-generation workspaces and Internet of Things (IoT) ecosystems.

Cisco Catalyst 3650 Series
Multigigabit Model  P20
P21

Wireless

Support 11ac Wave 2 in Small to Medium Outdoor Networks

Ideal for applications requiring rugged outdoor Wi-Fi coverage, the **Cisco Aironet 1560 Series** offer the latest IEEE 802.11ac Wave 2 radio standard in a compact, aesthetically pleasing, easy-to-deploy package. These outdoor access points offer flexible deployment options for service providers, enterprise networks, and public safety networks that need the fastest links possible for mobile, outdoor clients (smart-phones, tablets, and laptops) and wireless backhaul. With options for internal or external antennas, Cisco Aironet 1560 Series give network operators the flexibility to balance their desired wireless coverage with their need for easy deployment.

Cisco Aironet 1560 Series  P36

Meraki

11ac Wave 2 and Multigigabit Technology

Meraki has introduced a line of Cloud-Managed Wireless and Switches products that are designed to complement one another with multigigabit links. Multigigabit ethernet is a new technology based on the work of the NBASE-T alliance that allows customers to use existing twisted-pair ethernet to drive speeds well beyond 1 Gbps. And as with all Meraki products, these can be easily added to existing networks, and are extremely simple to manage via the Meraki Cloud.

Featuring the latest generation of WLAN technology, the **Cisco Meraki MR53** incorporates 4-stream 4 x 4 IEEE 802.11ac Wave 2 radios that support multi-user MIMO (MU-MIMO) and 160 MHz channels, and offers a combined dual-radio aggregate frame rate of 2.5 Gbps, with up to 1,733 Mbps in the 5 GHz band and 800 Mbps in the 2.4 GHz band. This access point has an integrated multigigabit uplink that ensures maximum capacity for this high performance IEEE 802.11ac Wave 2 hardware configuration.

Cisco Meraki MR53  P59

Designed as an addition to the Cisco Meraki MS350 flagship layer 3 stackable access switch family, the **Cisco Meraki MS350-24X** has 24 ports, 8 of which are multigigabit capable and can support speeds of 1 Gbps, 2.5 Gbps, 5 Gbps, and 10 Gbps on supported cable types. This switch perfectly complements the Cisco Meraki MR53, which is multigigabit capable.

Cisco Meraki MS350-24X  P59

Small Business

New Models of Stackable 10 Gigabit Managed Switches

The **Cisco Small Business 350X Series Stackable Managed Switches** and the **Cisco Small Business 550X Series Stackable Managed Switches** are an ideal line of stackable managed switches for small business, that provides the rich capabilities you need to support a more demanding network environment, at a very affordable price. Now additional new models provide 24 or 48 ports of Gigabit Ethernet and Fast Ethernet connectivity with 10 Gigabit uplinks, and also support **60W PoE** on selected ports to power compact switches, high-power wireless access points, or connected lighting.

Cisco Small Business 350X Series
Stackable Managed Switches  P62

Cisco Small Business 550X Series
Stackable Managed Switches  P63

Stop More Threats with the Threat-Focused NGFW

The Cisco Firepower NGFW is the industry's first fully integrated, threat-focused next-gen firewall with unified management. It includes Application Visibility and Control (AVC), optional Firepower next-gen IPS (NGIPS), Cisco Advanced Malware Protection (AMP), and URL Filtering. Cisco Firepower NGFW provides advanced threat protection before, during, and after attacks.

Industry's First Fully Integrated, Threat-Focused NGFW

Most next-generation firewalls (NGFWs) focus heavily on enabling application control, but little on their threat defense capabilities. To compensate, some NGFWs will try to supplement their first-generation intrusion prevention with a series of non-integrated add-on products. However, this approach does little to protect your business against the risks posed by sophisticated attackers and advanced malware. Further, once you do get infected, they offer no assistance in scoping the infection, containing it, and remediating quickly.

What you need is an integrated, threat-centric next-generation firewall. One that not only delivers granular application control, but also provides effective security against the threats posed by sophisticated and evasive malware attacks.

The **Cisco Firepower Next-Generation Firewall (NGFW)** is the industry's first fully integrated, threat-focused NGFW. It delivers comprehensive, unified policy management of firewall functions, application control, threat prevention, and advanced malware protection from the network to the endpoint.

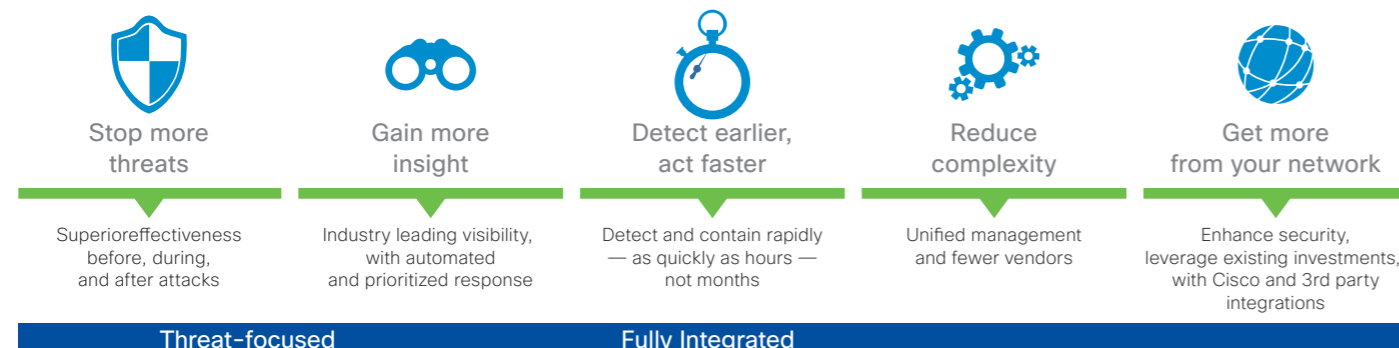

Protect Your Organization Before, During, and After an Attack

The Cisco Firepower NGFW includes the industry's most widely deployed stateful firewall and provides granular control over more than 4,000 commercial applications. Its single management interface delivers unified visibility from the network to the endpoint. Cisco Firepower NGFW enables comprehensive policy management that controls access, stops attacks, defends against malware and provides integrated tools to track, contain and recover from attacks that do get through.

The Cisco Firepower NGFW is unique in the industry because it is the only next-generation firewall that:

- **Stop more threats:** Contain known and unknown malware with leading Cisco AMP and sandboxing. Get application firewalling (AVC) for 4,000 commercial applications, plus additional custom applications.
- **Gain more insight:** Gain superior visibility into your environment with Cisco Firepower NGIPS. Automated risk rankings and impact flags identify priorities for your team.
- **Detect earlier, act faster:** The Cisco Annual Security Report identifies a 100-day median time from infection to detection, across enterprises. Cisco reduces this time to less than a day.
- **Reduce complexity:** Get unified management and automated threat correlation across tightly integrated security functions, including application firewalling, NGIPS, and AMP.
- **Get more from your network:** Enhance security, and take advantage of your existing investments, with optional integration of other Cisco and third-party networking and security solutions.

■ What Cisco Firepower NGFW enables

Feature Highlights & Platform Support

Cisco Firepower NGFW can be deployed on **Cisco ASA 5500-FTD-X Series** and **Cisco Firepower 4100/9300 Series** appliances to provide a performance and density optimized NGFW security platform for small business, branch office, enterprise, Internet edge, data center, and other high-performance environments.

■ Cisco ASA 5500-FTD-X Series

The Cisco ASA 5500-FTD-X Series is a family of eight threat-focused NGFW security platforms. Their maximum throughput ranges from 750 Mbps to 4 Gbps, addressing use cases from the small or branch office to the Internet edge. They deliver superior threat defense in a cost-effective footprint.

■ Cisco Firepower 4100 Series

The Cisco Firepower 4100 Series is a family of four threat-focused NGFW security platforms. Their maximum throughput ranges from 20 to more than 60 Gbps, addressing use cases from the Internet edge to the data center. They deliver superior threat defense, at faster speeds, with a smaller footprint.

■ Cisco Firepower 9300 Series

The Cisco Firepower 9300 Series is a scalable (beyond 1 Tbps), carrier-grade, modular platform designed for service providers, high-performance computing centers, data centers, campuses, high-frequency trading environments, and more that require low (less than 5-microsecond offload) latency and exceptional throughput. They support flow-offloading, programmatic orchestration, and management of security services with RESTful APIs. It is also available in NEBS-compliant configurations.

Cisco Firepower NGFW appliances use the **Cisco Firepower Threat Defense (FTD)** software image. Alternatively, these appliances can support the **Cisco Adaptive Security Appliance (ASA)** software image. The **Cisco Firepower Management Center** (formerly FireSIGHT) provides unified management of the Cisco Firepower NGFW, as well as Cisco Firepower NGIPS and Cisco AMP.

For details on **Cisco Firepower Next-Generation Firewall (NGFW)**, visit the following Web site:

The World's Highest-Performance Access Points

Not all 11ac-compatible access points are created equal. The new Cisco Aironet 2800/3800 Series access points are highly versatile and deliver the most functionality of any access points in the industry.

11ac Wave 2 and Beyond

The **Cisco Aironet 2800/3800 Series** access points (APs) supports IEEE 802.11ac (11ac), providing a theoretical connection rate of up to **5.2 Gbps**—that's roughly 4x the rates offered by today's high-end 11ac access points. These APs offer not only all the benefits of 11ac Wave 2 but also Cisco innovations for high density environments.

Flexible Radio Assignment & Dual 5-GHz

Allows the APs to intelligently determine the operating mode of serving radios based on the RF environment. The APs can operate in the following modes:

- **2.4-GHz and 5-GHz mode:** One radio serves clients in 2.4-GHz mode, while the other serves clients in 5-GHz mode.
- **Dual 5-GHz mode:** Both radios inside the AP operate on the 5-GHz band, allowing an industry-leading 5.2 Gbps (2 x 2.6 Gbps) over-the-air speed while increasing client capacity.
- **Wireless Security Monitoring and 5-GHz mode:** One radio serves 5-GHz clients while the other is scanning the full spectrum for attackers, RF interference, and rogue devices.
- **Wireless Service Assurance mode:** One radio serves 5-GHz clients, while the other proactively monitors the wireless network to help ensure the highest overall performance.
- **Enhanced Location mode:** One radio serves 5-GHz clients, while the other improves the client location accuracy.

Multigigabit (mGig) Ethernet support (Aironet 3800)

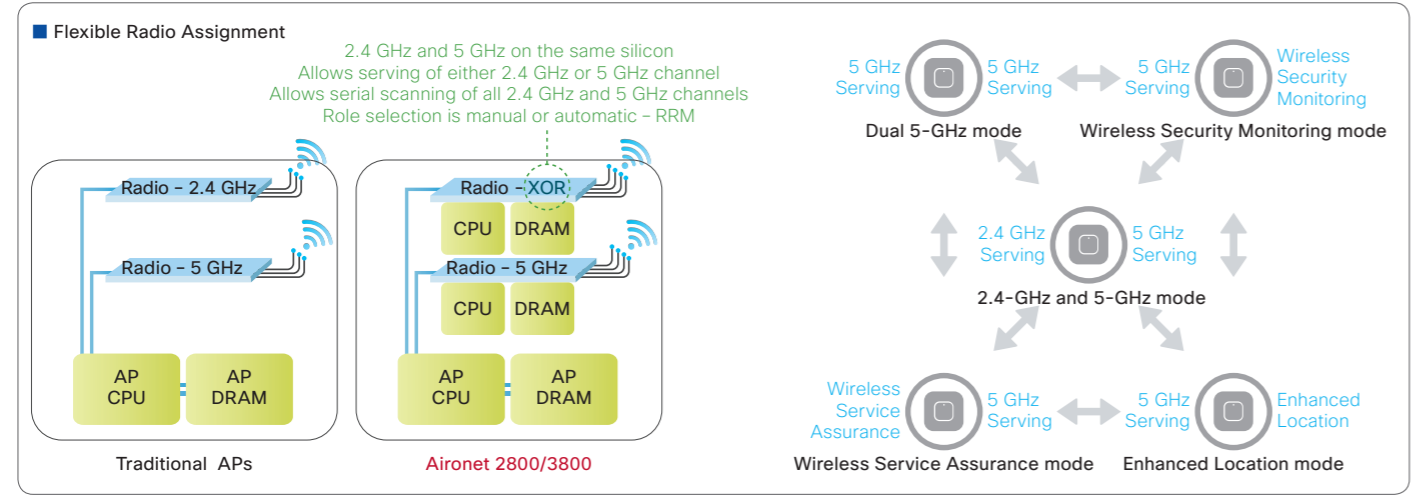

Providing multiple gigabit uplink speeds of 2.5 Gbps and 5 Gbps in addition to 100-Mbps and 1-Gbps speeds. All speeds are supported on Category 5e cabling for an industry first, as well as 10GBASE-T cabling.

Zero Impact Application Visibility and Control (AVC)

Uses dedicated hardware acceleration to improve the performance of line-speed applications such as Cisco AVC.

Smart Antenna Connector

An intelligent second physical antenna connector is included on models with an external antenna. This connector provides advanced network design flexibility for high-density and large open-area environments such as auditoriums, convention centers, libraries, cafeteria, and arenas/stadiums, allowing two sets of antennas to be connected and active on a single AP.

The World's Highest-Performance Access Points

Offers All the Benefits of 11ac Wave 2

- Highest Wi-Fi Performance Ever: Higher Data Rate, Wider Channels
- Better End Device Efficiency: Simultaneous Data Delivery, Better Battery Life

Plus Cisco Innovations for High Density Environments

- Flexible Radio Assignment (NEW)
- mGig¹ (NEW)
- Modularity¹ (UPDATE)
- ClientLink (UPDATE)
- Turbo Performance

Self-Optimizing Network

- CleanAir (UPDATE)
- Zero Impact AVC (NEW)
- Flexible DFS

Optimized Mobile User Experience

- Smart Antenna Connector² (NEW)
- Enhanced Location³ (UPDATE)
- Optimized Roaming

The Best of Both Worlds

Whether you go with on-premises, cloud-managed, or hybrid, with Cisco you can build a network solution that is ideal for your application strategy, your IT staff's capabilities, and your business requirements.

How to Choose between On-premises and Cloud-managed Solutions

Now Cisco offers both on-premises and cloud-managed solutions for network infrastructure;

- On-premises: Catalyst, Aironet, ISR/ASA
- Cloud-managed: Meraki

Which solution should we use? Here are questions to help you choose between on-premises and cloud-managed solutions.

1 Where will your applications live?

If you're not comfortable with moving applications to the cloud for the next 3 to 5 years or are restricted due to security and privacy guidelines, an on-premises solution may be the way to go.

On the other hand, if you want to simplify and centralize overall network management, if you're ready to move applications to the cloud, or if you have already set up some cloud services, Cisco Meraki cloud-managed solution might be best.

2 Do you have local IT support in most locations or are you struggling to scale your staff?

On-premises - If your IT staff consists of technical experts who want a highly customizable network, consider an onpremises solution.

Cloud-managed - If your IT staff is small or stretched thin and is looking for ways to simplify deployments, consider a cloud-managed approach.

3 How do you buy IT solutions?

If you prefer to budget each project independently in a CapEx model, go with an on-premises deployment. If you'd rather pay for licenses and services over time in a renewable model through a subscription or OpEx-based approach, cloud management is best.

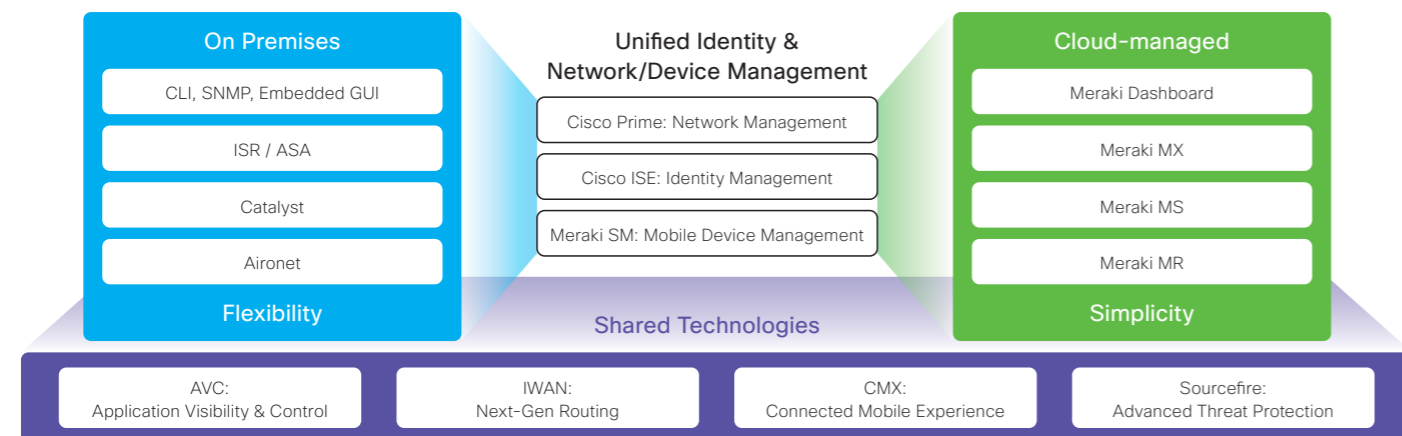

4 How are you supporting mobile devices?

On-premises networks can be great when you need advanced features, whereas cloud-managed networks offer quick setup and visibility.

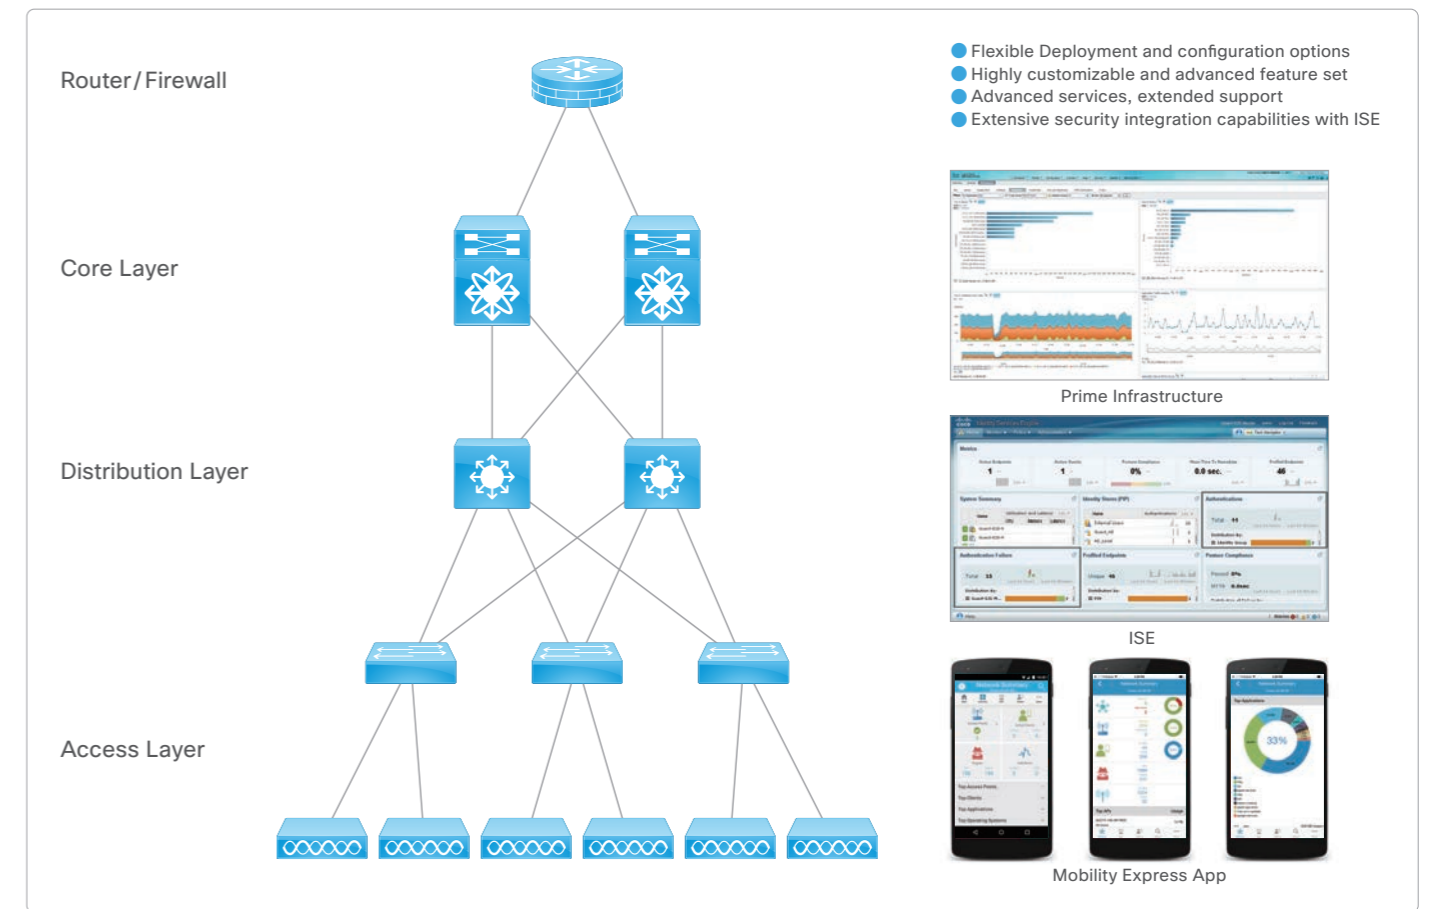

- | | |
|---------------------------|--------------------------|
| <i>On-premises;</i> | <i>Cloud-managed;</i> |
| ● Intelligent caching | ● Turnkey installation |
| ● Optimization techniques | ● Networkwide visibility |
| ● Customized deployments | ● Management simplicity |

5 What matters to you most?

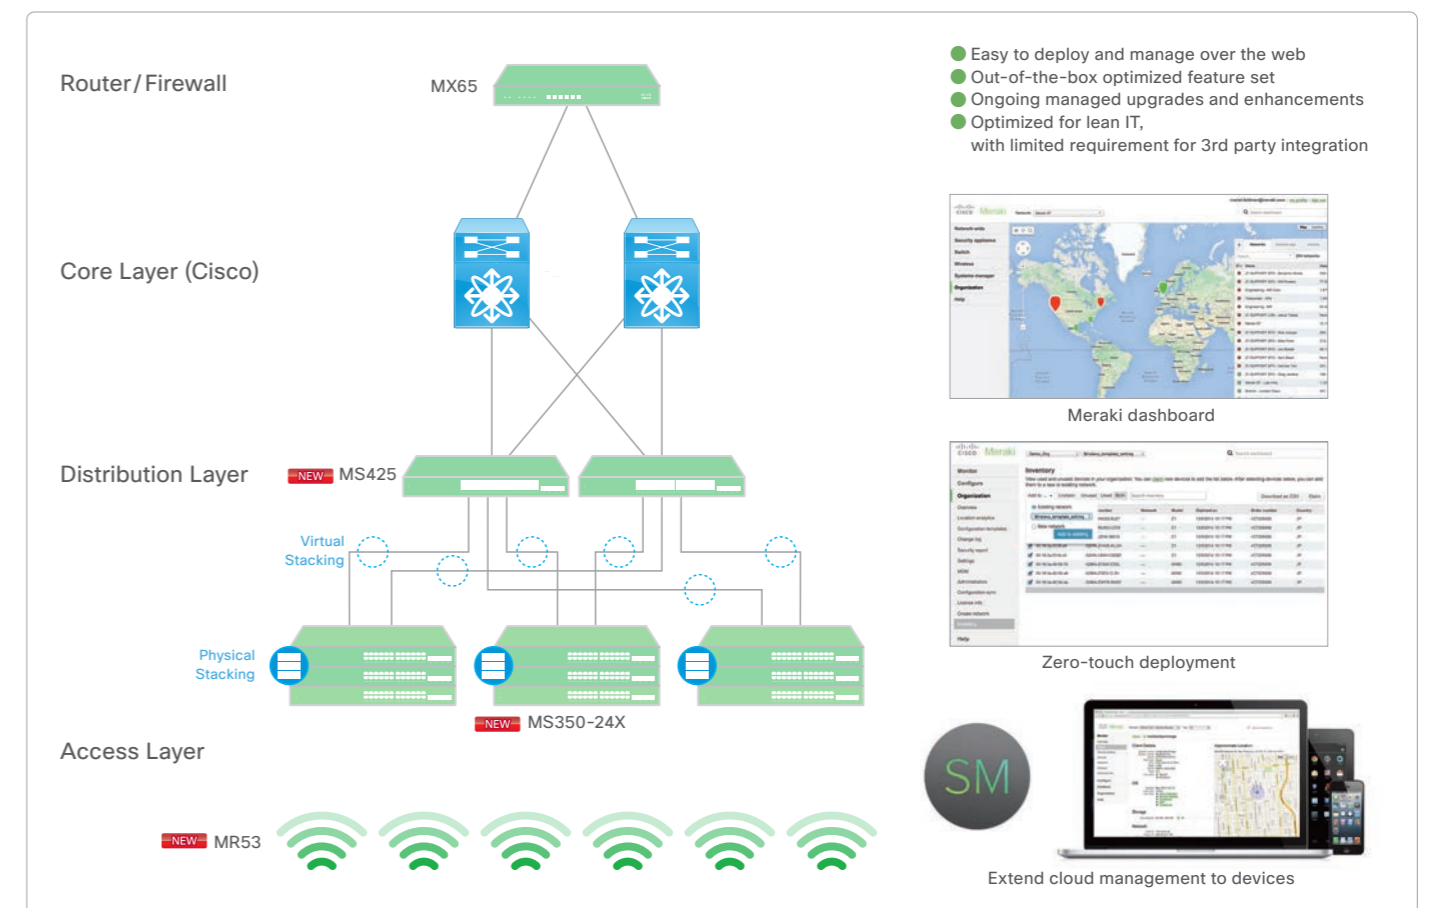

- | | |
|----------------------------|----------------------------|
| <i>On-premises;</i> | <i>Cloud-managed;</i> |
| ● Advanced features | ● Ease of use |
| ● Dynamic service rollouts | ● Security and reliability |
| ● Deep visibility | ● Out-of-the-box |

Typical Deployment of On-premises: Network as a Platform

Typical Deployment of Cloud-managed: Network as a Service

New Switch Selection Decision Tree

Cisco IOS on Cisco Catalyst Switches

Cisco Catalyst Switches incorporate the **Cisco IOS (Internetwork Operating System)**, which is a high-performance network infrastructure software. **LAN Lite** and **LAN Base** feature sets provide the L2 level features, and **IP Lite, IP Base, IP Services, Advanced IP Services, Enterprise Services, and Advanced Enterprise Services** feature sets provide the L3 level features, respectively.

Cisco IOS provided with the Cisco Catalyst 3560-CX/3650/3850/4500-X/4500E Series is delivered in a single universal image. The universal image contains the entire Cisco IOS feature set that can be activated via a software license. A software image needed to be installed in order to use the new functions on previous Cisco Catalyst Switches. However, on the Cisco Catalyst 3560-CX/3650/3850/4500-X/4500E Series Switches, advanced functions can be activated immediately using the Cisco IOS Upgrade License.

*1 Cisco Catalyst 2960-XR Series only. *2 Cisco Catalyst 3650/3850 Series are to be supported in future software release. *3 Cisco Catalyst 2960-CX/2960-X Series are not supported. *4 Cisco Catalyst 3560-CX Series are not supported. *5 Cisco Catalyst 3650/3850 Series are not supported. *6 Cisco Catalyst 3560/3850 Series only. *7 Cisco Catalyst 4500E Series only.

Cisco Catalyst 2960-CX Series

The compact switches are Layer 2 switches that are purpose built to enhance scalability and reduce costs through cable consolidation. Extend enterprise-class services to wherever you want, far from the wiring closet. They provide advanced networking features for security and management, equivalent to **Cisco Catalyst 2960-X Series**.

- Highlights**
- Stylish, compact, fan-less design and silent in operation.
 - Deep-sleep mode: average 60 %, max 80 % on power saving.
 - Operating temperature advantage: -5 °C to 45°C.
 - Various mounting options: under a desk, on a shelf, on a wall, on a DIN rail or even in a rack using mounting brackets.
 - IT simplicity: zero-touch deployments & maintenance, Plug-n-Play (PnP).
 - Traffic visibility: support **Cisco NetFlow-Lite** up to Layer 4, supported both on all downlink and uplink ports.

*1 Magnet and Mounting Tray (CMPCT-MGNT-TRAY=) is required. Optional new Power Adapter Bracket (PWR-ADPT-BRKT=) is available. *2 Rack Mounting Brackets (RCKMNT-19-CMPCT=/RCKMNT-23-CMPCT=) is required. Optional new Power Adapter Bracket (PWR-ADPT-BRKT=) is available.

Cisco Catalyst 3560-CX Series

The compact switches are Layer 3 switches that are purpose built to enhance scalability and reduce costs through cable consolidation. Extend enterprise-class services to wherever you want, far from the wiring closet. They provide advanced networking features for security and management, equivalent to **Cisco Catalyst 3650/3850 Series**.

- Highlights**
- Stylish, compact, fan-less design and silent in operation.
 - Deep-sleep mode: average 60 %, max 80 % on power saving, 3.8 Watt only for a 8 port switch in deep-sleep mode.
 - Operating temperature advantage: -5 °C to 45°C.
 - Various mounting options: under a desk, on a shelf, on a wall, on a DIN rail or even in a rack using mounting brackets.
 - IT simplicity: zero-touch deployments & maintenance, Plug-n-Play (PnP).
 - Traffic visibility: support **Cisco NetFlow-Lite** up to Layer 4, supported both on all downlink and uplink ports.
 - PoE pass-through: industry's first UPOE powered switch that can pass through up to 146 W to power up the devices connected to the switch (**WS-C3560CX-8PT-S**)
 - new DC-DC powering option for usage in trains, buses, etc.

Cisco Catalyst 2960-Plus Series

L2 fixed-configuration switches equipped Fast Ethernet downlink ports. Based on the Fast Ethernet models of the Cisco Catalyst 2960 Series, these switches have twice the memory capacity and support the new Cisco IOS 15.0(2)SE and higher.

- Highlights
 - Equipped with Cisco IOS LAN Base Image (Excludes LAN Lite models)
 - Equipped with PoE power supplying downlink ports (PSE models)

Cisco Catalyst 2960-X Series

Stackable L2/L3 fixed-configuration switches equipped Gigabit Ethernet downlink ports. A flexible and redundant power supply configuration is achieved via a stack function and mounting of multiple power supply modules or a redundant power supply system.

- Highlights
 - Equipped with Cisco IOS Universal Image (Supports LAN Lite/LAN Base/IP Lite)^{*1}
 - Supports Layer 3 functions including HSRP and VRRP (IP Lite model)
 - Equipped with PoE+ power supplying downlink ports (PSE model)
 - Equipped with full PoE powering power supply (WS-C2960X-48FPS-L/WS-C2960X-48FPD-L/WS-C2960XR-48FPS-I/WS-C2960XR-48FPD-I)
 - Supports multiple Power Supply Modules (IP Lite model)
 - Supports Cisco FlexStack Plus (LAN Base/IP Lite models)

*1 Upgrade is not supported. *2 Cisco FlexStack Plus module (C2960X-STACK) is required.

Cisco FlexStack Plus module

When equipped with the optional Cisco FlexStack Plus Module (C2960X-STACK), the LAN Base/IP Lite models of the Cisco Catalyst 2960-X Series support connection of up to eight switches in a stack at 80 Gbps.

Cisco FlexStack Plus is backward-compatible with Cisco FlexStack. Up to four switches can be connected in a stack at 40 Gbps when (and only when) the LAN Base model of the Cisco Catalyst 2960-X Series is combined with the LAN Base model of the Cisco Catalyst 2960-SF/S Series.

2960-XR IP Lite	-	-	●

■ Cisco FlexStack Plus Module

SKU	C2960X-STACK
Compatible IOS	LAN Base/IP Lite
Maximum Number of Devices	8
Stack Bandwidth	80 Gbps
Architecture	Hardware drop table
Dynamic Ring Load-balancing	-
Stack Convergence	100 milliseconds

Cisco Catalyst 3650 Series

Stackable L2/L3 fixed-configuration switches that offer the wireless controller function. These switches incorporate a 160 Gbps stack function and support multiple Power Supply Modules to achieve a flexible redundant configuration. They also provide common intelligent services for both wired/wireless LAN networks, such as QoS and security.

- **Highlights**
- Equipped with Cisco IOS XE Universal Image (Supports **LAN Base/IP Base/IP Services**)
- Equipped with the **Unified Access Data Plane (UADP)** ASIC
- Built-in controller function capable of managing up to 50 wireless access points (Supports **IP Base/IP Services**)
- Equipped with **Cisco Catalyst Multigigabit Technology (mGig)**-enabled downlink ports (some models)
- Equipped with PoE+/UPOE power supplying downlink ports (UPOE ports are only incorporated on some PSE models)
- Equipped with MACsec-enabled downlink/uplink ports (**IP Base/IP Services** models)
- Supports **Cisco StackWise-160**
- **Mini model** less than 12 inches deep (**WS-C3650-24PDM/WS-C3650-48FQM**)

Cisco Catalyst 3850 Series

Next-generation stackable L2/L3 fixed-configuration switches featuring a wireless controller function. These switches feature the industry's fastest 480 Gbps stack function, support for multiple Power Supply Modules and innovative power-sharing function to achieve a flexible and advanced redundant configuration. They also provide common intelligent services for both wired/wireless LAN networks, such as QoS and security.

Highlights

- Equipped with Cisco IOS XE Universal Image (Supports LAN Base/IP Base/IP Services)
- Equipped with the Unified Access Data Plane (UADP) ASIC
- Built-in controller function capable of managing up to 100 wireless access points (Supports IP Base/IP Services)
- Equipped with Cisco Catalyst Multigigabit Technology (mGig)-enabled downlink ports (some models)
- Equipped with PoE+/UPOE power supplying downlink ports (UPOE ports are only incorporated on some PSE models)
- Equipped with MACsec-enabled downlink ports (IP Base/IP Services models)
- MACsec-enabled uplink ports (Optional, IP Base/IP Services models)
- Supports Cisco StackPower¹
- Supports Cisco StackWise-480¹

Cisco Catalyst Multigigabit Technology (mGig)

Challenges for Wired LAN Posed by 11ac "Gigabit Wireless LAN"

IEEE 802.11ac is a super high-speed wireless standard that delivers a theoretical maximum throughput of up to 6.9 Gbps. Wireless LAN is literally entering the "Gigabit era", but the migration to 11ac is presenting wired LAN with "old and new" challenges. In other words, these are the same old challenges that were experienced during the migration from 11a/g to 11n. During the migration from 11a/g to 11n, it was obvious that Fast Ethernet switches (max 100 Mbps) had insufficient capacity to server as access switches for accommodating the access points. Similarly today, it is obvious that 1-Gigabit Ethernet switches (1 GE, max 1000 Mbps) have insufficient capacity when migrating from 11n to 11ac. Specifically:

- A bottleneck will occur if the uplink port of the access switches accommodating multiple 11ac compatible access points is 1 GE.
- A bottleneck will occur if the downlink port of the access switches accommodating 11ac Wave compatible access points is 1 GE.

Therefore, as was during the migration from 11a/g to 11n, replacement of access switches is therefore indispensable in order to unleash the full potential of 11ac.

The only current IEEE standard that is faster than 1 GE is 10 Gigabit Ethernet (10 GE) with copper or optical fiber cables. However, there are some difficulties associated with the deployment of 10 GE-compatible switches.

- Cable re-installation is required in many cases: Category 5e accounts for 46 % and Category 6 accounts for 28 % of the copper cables currently installed in corporations around the world, respectively. 10 GE via copper is not supported for Category 5e cables and is limited to a length of 55 meters for Category 6 cables. Installations of optical fiber cables and copper wire cables both require huge costs.
- Current 10 GE does not support PoE: Power supply units and power cables would be required for the access points.

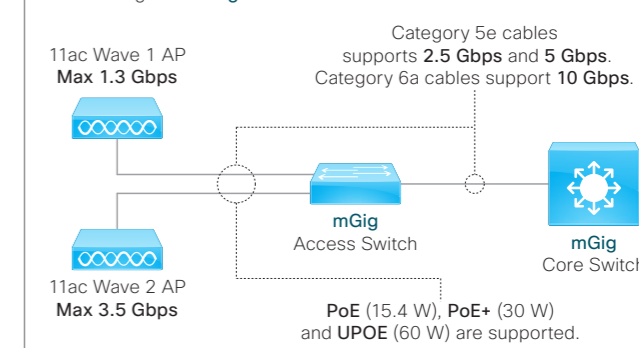

Cisco Catalyst Multigigabit Technology (mGig)

Cisco's innovative Cisco Catalyst Multigigabit Technology (mGig) has been developed to address all of these challenges posed by the deployment of 11ac. Largely, mGig offers the following three advantages:

- Multi-speed: Category 5e cables support 100 Mbps, 1 Gbps, 2.5 Gbps and 5 Gbps; and category 6a cables support 10 Gbps, respectively.
- Cable type: A wide variety of cable types are supported including Category 5e, Category 6, and Category 6a.
- PoE: PoE (15.4 W), PoE+ (30 W), and UPOE (60 W) are supported unlike the current 10 GE.

mGig is based on the technology of the NBASE-T Alliance established by Cisco in October 2014. A large number of vendors are participating in the NBASE-T Alliance; and IEEE standardization is currently being promoted for 2.5GBASE-T for 5GBASE-T.

Advantages of mGig

Cisco Catalyst 4500E Series

L2/L3 modular switches equipped with a 3/6/7/10-slot chassis. These switches can be configured with components that offer intergenerational upward and backward compatibility, including Chassis, Supervisor Engine and Line Card. Their outstanding cost performance will ensure the protection of investment over long periods.

- Highlights**
 - Broad range of interface options for 10/100/1000 and mGig on copper and 1 G/10 G on Fiber
 - Equipped with Cisco IOS XE Universal Image (Supports LAN Base/IP Base/Enterprise Services)
 - Equipped with the Unified Access Data Plane (UADP) ASIC (WS-X45-SUP8-E)
 - Built-in controller function capable of managing up to 100 wireless access points (Supports IP Base/Enterprise Services on WS-X45-SUP8-E)
 - Supports Cisco VSS (Switching capacity of up to 1.6 Tbps)
 - Supports Cisco TrustSec (MACsec/SGT/SGACL)
 - Switching capacity of up to 928 Gbps (WS-X45-SUP8-E)
 - Bandwidth of up to 48 Gbps per slot
 - IPv4 throughput of up to 250 Mpps (WS-X45-SUP7-E/WS-X45-SUP8-E)
 - IPv6 throughput of up to 125 Mpps (WS-X45-SUP7-E/WS-X45-SUP8-E)
 - Equipped with Cisco Catalyst Multigigabit Technology (mGig)-enabled down-link ports (WS-X4748-12X48U+E)

Cisco Catalyst 4500-X Series

L3 fixed-configuration switches equipped with SFP+ module slots. These switches deliver best-in-class scalability, simplified network virtualization, and integrated network services for space-constrained environments in campus networks. These switches can be expanded to accommodate SFP+ module slots using optional Network Modules.

- Highlights**
 - Equipped with Cisco IOS XE Universal Image (Supports IP Base/Enterprise Services)
 - Support for SDN/OpenFlow 1.3
 - Supports Cisco VSS (Switching capacity of up to 1.6 Tbps)
 - Cisco TrustSec-enabled hardware (MACsec/SGT/SGACL)
 - Switching capacity of up to 800 Gbps
 - IPv4 throughput of up to 250 Mpps
 - IPv6 throughput of up to 125 Mpps
 - Network module equipped with 8 SFP+ ports (Optional)

*1 Network Module for the Cisco Catalyst 4500-X Series is required.

Cisco Virtual Switching System (VSS)

Cisco Virtual Switching System (VSS) is a cluster technology for operating two Cisco Catalyst Switches as one virtual logical switch. Both the Data Plane and Switch Fabric functionalities of the switches comprising a cluster will operate at 100% performance. It is therefore possible to configure a single logical switch capable of delivering 200% better performance than native Cisco Catalyst Switches. This technology also offers the following benefits in addition to performance improvement:

- Simple topology (No-loop network with no need for STP)
 - Single routing instance
 - Network manageability
- Since two physical switches are operated as one logical switch, there is no need for a redundancy protocol such as STP between the physical switches.
- The second physical switch will continue to operate in the event when one of the physical switches fails. There will be no service interruption due to switching of networks and/or reconstruction of routing tables.
- The workload of the network administrator will be reduced as he/she only needs

to configure and manage one logical switch instead of two physical switches. Cisco Virtual Switching System (VSS) is supported on the Cisco Catalyst 4500-X/4500E/6500/6800 Series.

Cisco Catalyst 6500 Series

L3 modular switches equipped with a 3/4/6/7/13-slot chassis. These switches deliver the industry's top-level performance that is suitable for deployment in the core layer, providing integration with a variety of network services including wireless and security and an unmatched level of investment protection.

- **Highlights**
 - Equipped with Cisco IOS (Supports **IP Base/IP Services/Advanced IP Services/Advanced Enterprise Services**)
 - Supports **Cisco VSS** (Switching capacity of up to 4 Tbps)
 - Supports **Cisco TrustSec** (MACsec/SGT/SGACL)
 - Switching capacity of up to 2.08 Tbps
 - Bandwidth of up to 80 Gbps per slot
 - IPv4 throughput of up to 720 Mpps (**WS-C6513-E**)
 - IPv6 throughput of up to 390 Mpps (**WS-C6513-E**)
 - Supports various Services Modules (Wireless Services Module 2, ASA Services Module, etc.)

*1 SFP+ Converter (CVR-X2-SFP10G) is required to mount SFP+ module.
 *2 QSFP Active Optical breakout Cable (QSFP-4X10G-AOCxM) or QSFP Converter (CVR-4SFP10G-QSFP on roadmap) is required to mount QSFP module.
 *3 Power Entry Module (PEM-20A-AC+) is required.

Cisco Catalyst 6800 Series

L3 switches optimized for 10/40/100 Gigabit Ethernet. The product lineup includes the fixed-configuration **Cisco Catalyst 6840-X/6880-X Series**, the modular **Cisco Catalyst 6807-XL**.

- **Highlights**
 - Equipped with Cisco IOS (Supports **IP Base/IP Services/Advanced IP Services/Advanced Enterprise Services**)¹
 - Supports **Cisco VSS** (**C6807-XL**) has a switching capacity of up to 22.8 Tbps)
 - Supports **Cisco TrustSec** (MACsec/SGT/SGACL)
 - Switching capacity of up to 11.4 Tbps (**C6807-XL**)
 - Bandwidth of up to 880 Gbps per slot (**C6807-XL**)
 - IPv4 throughput of up to 300 Mpps (**C6880-X**)
 - IPv6 throughput of up to 150 Mpps (**C6880-X**)
 - Equipped with 2 Native uplink ports of 40 G QSFP (**C6824-X-LE-40G/C6840-X-LE-40G**)

*1 LAN Lite model does not support stacking. *2 IP Lite model is not supported. *3 Mini models only. *4 Cisco Catalyst 6880-Series and Cisco Catalyst 6807-XL are not supported. *5 Cisco Catalyst 6880-X is not supported.

Ports

Cisco Catalyst Switches support the following interface ports for uplink and downlink connections:

- Fast Ethernet port (FE)
- Gigabit Ethernet port (GE)
- Multigigabit Ethernet port (mGig)
- SFP module slot (SFP)
- Dual-Purpose port (GE/SFP)
- 10GBASE-T port (10GB-T)
- X2 module slot (X2)
- SFP+ module slots (SFP/SFP+)
- CFP module slot (CFP)
- QSFP module slot (QSFP)

The bracketed notations are abbreviations used in the specification comparison tables in this catalog. A dual-purpose port is an interface combining a Gigabit Ethernet port with an SFP module slot and is notated as GE/SFP (Either one can be activated independently). Similarly, SFP+ module slots are notated as SFP/SFP+ due to their compatibility with SFP. SFP/SFP+ modules can be mounted to X2, CFP, or QSFP module slots using an appropriate converter.

In most cases, the supported port interfaces and number of ports of each product can be determined from their SKU (Refer to page 14 for details).

Ports Supported by Fixed-Configuration Cisco Catalyst Switches (e.g.)

- **Uplink**
 - Gigabit Ethernet port (GE)
 - SFP module slot (SFP)
 - Dual-Purpose port (GE/SFP)
 - 10GBASE-T port (10 GB-T)
 - SFP+ module slot (SFP/SFP+)
 - QSFP module slot (QSFP)

- **Downlink**
 - Fast Ethernet port (FE)
 - Gigabit Ethernet port (GE)
 - Multigigabit Ethernet port (mGig)
 - SFP module slot (SFP)
 - SFP+ module slot (SFP/SFP+)

Wireless

Wireless Access Points / Controllers

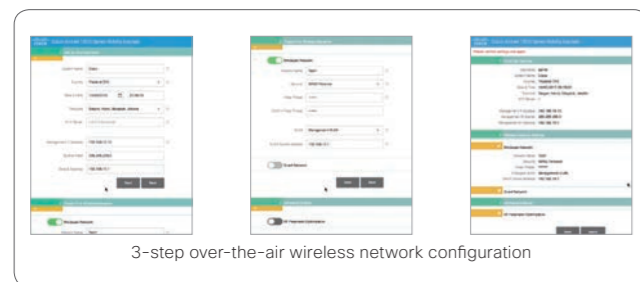

Cisco Mobility Express Solution

The **Cisco Mobility Express Solution** is specifically designed to help small and medium-sized networks easily and cost-effectively deliver enterprise-class wireless access to employees and customers. Cisco Mobility Express Solution is an on-premise, managed Wi-Fi solution that:

- Provides an easy, over-the-air interface for deployment in under **10 minutes**
- Is ideal for small and medium-sized deployments of up to **25 access points** and **500 clients**
- Is supported on **Cisco Aironet 1830/1850/2800/3800/1560 Series**^{*1}
- Can control other access points, such as Cisco Aironet 1700/2700/3700 Series

In the Cisco Mobility Express Solution, one access point (AP), running the Cisco Mobility Express wireless controller, is designated as the **master AP**. Other access points, referred to as **subordinate APs**, associate to this master AP. The master AP operates as a **wireless controller**, to manage and control the subordinate APs, and also operates as an access point to serve clients. The subordinate APs behave as normal lightweight access points to serve clients.

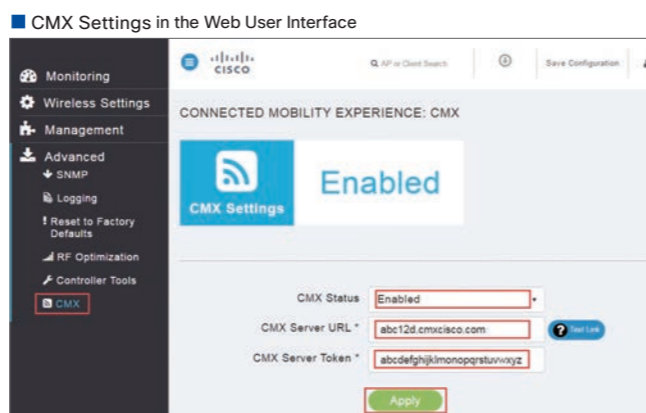

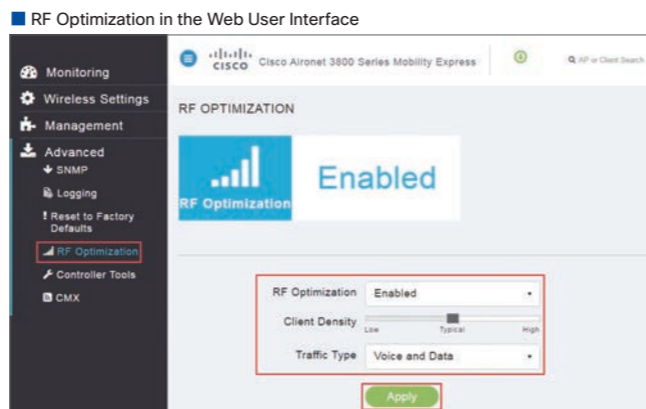

3-step over-the-air wireless network configuration

Cisco Mobility Express Software for Cisco Wireless Release 8.3 NEW

In the **Cisco Wireless Release 8.3**, the following new features and functionalities have been introduced to the Cisco Mobility Express Software:

- **Cisco CMX Cloud:** Enjoy CMX Connect for guest access & Presence Analytics with Cisco Mobility Express by the simple configuration both on Cisco Mobility Express Web UI and CMX in the cloud.
- **Automatic Redirect to the Initial Configuration Wizard:** No need to type 192.168.1.1 IP in the browser to access and set up Cisco Mobility Express.
- **Internal DHCP Server:** No external DHCP server required.
- **NTP Server Pools & OpenDNS:** Three NTP server pools are automatically configured and resolved using OpenDNS.
- **RF Optimization in the Web User Interface:** RF Optimization added on Web UI and parameters can be modified if RF characteristics change.
- **SNMP v3 in the Web UI:** SNMP v2c/v3 are supported in Web UI, also configurable from CLI including v1.
- **Online Software Update:** software download directly from cisco.com to APs. No need to download locally and unzipped, or to configure TFTP parameters.
- **Automatic Addition of APs to Mobility Express Network:** AP will automatically download code from cisco.com and join the network. No manual intervention is needed.
- **Force Mobility Express Failover:** In the Web UI, "Make me Controller" starts the controller function on the selected subordinate AP.
- **Enhanced Resiliency with Standalone Mode on 11ac Wave 2 APs:** Standalone mode will be supported on 11ac Wave 2 APs as well as 11ac Wave 1 APs. Even if master AP went offline, clients connected to these APs will stay connected and will continue to switch data locally.
- **Customized Guest Portal:** Custom Portal and Social login is supported by CMX Connect.

*1 Cisco Aironet 1560 Series are to be supported in future software release.

IEEE 802.11ac

IEEE 802.11ac (11ac) is the successor of IEEE 802.11n (11n), which is the current mainstream wireless standard. It outperforms typical 1 GE wired LAN with a maximum throughput of 6.9 Gbps, compared against the theoretical maximum throughput of 600 Mbps of 11n. 11ac achieves higher communication speeds by strengthening the following three elements:

- Higher density modulation method: Increased from 64QAM to 256QAM (11n)
- Expansion of channel bonding: Increased from 40 MHz max. (11n) to 80 MHz max. (11ac Wave 1) or up to 160 MHz (11ac Wave 2)
- Further evolved MIMO (Multiple Input Multiple Output): Increased the maximum number of data streams in 11n from 4 to 8 and upgraded the simultaneous communication capability from 1:1 to 1:n (Multi-User MIMO)

Among Cisco's Access Points, the **Cisco Aironet 1700/1810/1810W/1830 Series**, the **Cisco Aironet 1560/1570/2700/3700 Series**, the **Cisco Aironet 1850 Series**, and the **Cisco Aironet 2800/3800 Series** are compatible with 11ac, delivering theoretical maximum throughputs of 867 Mbps, 1.3 Gbps, 1.7 Gbps and 2.6 Gbps, respectively.

IEEE 802.11n/ac Specification Comparison

Standard/Number of Data Streams	Theoretical Maximum Throughput				
	20 MHz	40 MHz	80 MHz	160 MHz	
IEEE 802.11n	1 stream	72 Mbps	150 Mbps	-	-
	2 streams	144 Mbps	300 Mbps	-	-
	3 streams	216 Mbps	450 Mbps	-	-
	4 streams	288 Mbps	600 Mbps	-	-
IEEE 802.11ac	1 stream	-	200 Mbps	433 Mbps	866 Mbps
	2 streams	-	400 Mbps	866 Mbps	1733 Mbps
	3 streams	-	600 Mbps	1299 Mbps	2600 Mbps
	4 streams	-	800 Mbps	1733 Mbps	3466 Mbps
	5 streams	-	1000 Mbps	2166 Mbps	4333 Mbps
	6 streams	-	1200 Mbps	2599 Mbps	5200 Mbps
	7 streams	-	1400 Mbps	3033 Mbps	6066 Mbps
	8 streams	-	1600 Mbps	3466 Mbps	6933 Mbps

Cisco High Density Experience (HDX) Technology

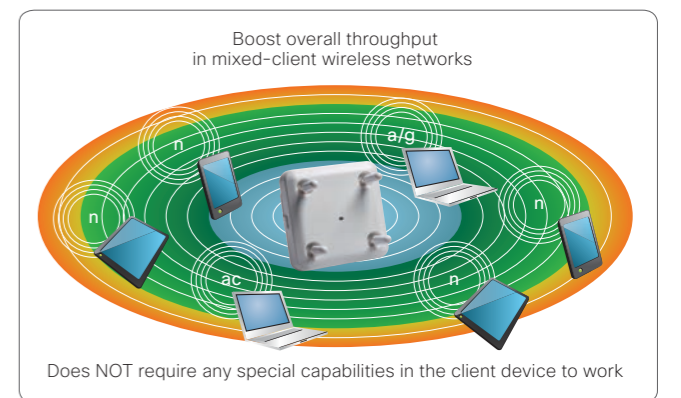

With the introduction of IEEE 802.11ac (11ac) technology, networks are only going to get more crowded. We have enhanced **Cisco High Density Experience (HDX)** suite of solutions, which automatically manages the airwaves and improves Wi-Fi performance. Available on the **Cisco Aironet 2700/2800/3700/3800 Series** Indoor Access Points and the **Cisco Aironet 1560/1570 Series** Outdoor Access Point, HDX is regularly updated with new features that alleviate high-density network strain and improve user experiences as 11ac and other trends load the airwaves with more traffic.

- **Flexible Radio Assignment & Dual 5-GHz[†]:** Allows the access points to intelligently determine the operating mode of serving radios based on the RF environment. The Dual 5-GHz mode enables both radios to operate in 5-GHz client serving mode, allowing an industry-leading **5.2 Gbps** (2 x 2.6 Gbps) over-the-air speed while increasing client capacity.
- **Turbo performance:** Dedicating CPU & RAM to each radio, allows access points to scale to 60 clients or more, with each client running media-rich video or interactive traffic, without any performance degradation.

- **Cisco ClientLink for 11ac:** improves downlink performance to all mobile devices, including one-, two-, and three-spatial-stream devices on 11a/b/g/n/ac while improving battery life on mobile devices such as smartphones and tablets.
- **Cisco CleanAir for 11ac:** enhanced with 80-, and 160-MHz channel support, provides proactive, high-speed spectrum intelligence to combat performance problems due to wireless interference.
- **Optimized Roaming:** Helps ensure that client devices associate with the access point in their coverage range that offers the fastest data rate available.
- **Dynamic Bandwidth Selection:** Automatically selects the optimal channel width for each radio. For example: If radar is detected on part, but not all, of the frequency, the access point can narrow the serving channel rather than moving entirely to a new frequency, enhancing spectrum efficiency.
- **Zero Impact AVC^{††}:** Uses dedicated hardware acceleration to improve the performance of line-speed applications such as Cisco Application Visibility and Control (AVC).

Cisco ClientLink for 11ac

In a mixed environment with low-speed clients (e.g. 11a/g clients) and high-speed clients (e.g. 11n/ac clients), the communication performance of the entire wireless LAN network will be dragged down by the slower clients. The **Cisco ClientLink** technology implemented on Cisco Aironet Access Points uses the signal processing expansion function, which is embedded in the chipset, to analyze the uplink communication signals from the client and strengthen/optimize the downlink communication signals to enhance the communication performance of low-speed clients. **Cisco ClientLink 3.0/4.0** implemented on the **Cisco Aironet 1560/1570/2700/2800/3700/3800 Series** use the third or fourth antenna of the access points to also enhance the communication performance of 11n/ac-compatible clients supporting up to three data streams, including the iPhone, iPad and latest laptops.

Cisco CleanAir for 11ac

Cisco CleanAir is an innovative technology for the Controller-based Wireless Solution that enables construction of self-recovering, self-optimizing wireless LAN environments. In conventional technologies, the network administrators were required to move around carrying a sensor-equipped laptop in order to identify the source of radio interference. In Cisco CleanAir, Cisco Aironet Access Points with built-in ASIC (a dedicated custom chip) serve the roles of a measuring instrument and an analyzer for the wireless environment; and the data obtained from the Cisco Aironet Access Points are presented in

a visualized manner. This enables network administrators to identify the cause of a problem and fix it promptly and efficiently. This technology also offers the wireless resource management function which alleviates problems by automatically optimizing the frequency band after detecting a radio interference. **Cisco Aironet 1570/2700/3700 Series** support the 80 MHz channel bandwidth of 11ac Wave 1, and **Cisco Aironet 1560/2800/3800 Series** support the 160 MHz channel bandwidth of 11ac Wave 2.

*1 Cisco Aironet 2800/3800 Series only.

Cisco Connected Mobile Experiences (CMX) Solutions

Cisco Connected Mobile Experiences (CMX) is a revolutionary solution that collects and analyzes the location of wireless LAN (Wi-Fi) devices such as smartphones and tablets for business utilization. This solution supports the monetization of wireless LAN in a wide range of sectors including retail, services, transportation, healthcare, education, and government offices. This solution already has an excellent deployment track record overseas. And in Asia Pacific, positive results have been obtained in demonstration

experiments conducted at events such as Interop Tokyo 2013/2014; and its commercial deployment is already in the pipeline. Cisco CMX provides the services described below.

For details on Cisco CMX, visit the following Web site:

<http://www.cisco.com/go/cmxc>

Location Analysis

This function anonymously detects and traces Wi-Fi device signals to obtain, aggregate and visualize the number of Wi-Fi users and their movement for analysis.

In the Copenhagen Airport case study, for example, this function enabled analysis of the general movement route and staying area/time of travelers (i.e. Wi-Fi users) during their departure and arrival, enabling better understanding of their different behavior patterns. This has enabled optimization of personnel allocation based on crowding and adjustment of the facility layout for improved customer convenience, helping to deliver services that guarantee high levels of customer satisfaction in a cost-effective manner. This function has also facilitated effective attraction of customers through optimization of the advertisement layout, contributing to bursting the earnings of duty free shops and tenant stores.

Customer Engagement

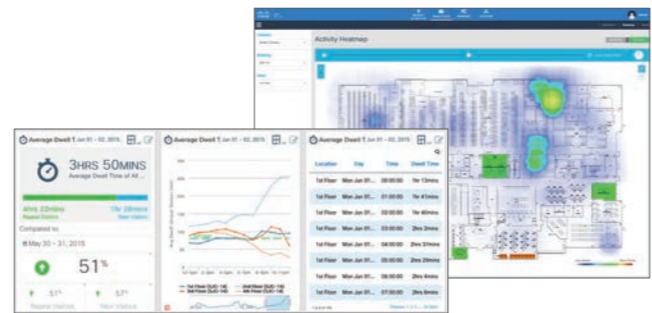

The ability to capture new and keep existing customers by delivering more value is essential to continued growth in all industries. Cisco CMX allows customers mobile users to connect through your onsite wireless LAN. It opens a direct channel of communication that lets you better understand and deliver what your guests want. When you more effectively engage your mobile users, you can:

- Increase loyalty of existing customers and attract new customers by providing them with a personalized experience
- Heighten the guest experience by providing wireless access and key information during their journey
- Increase brand exposure through social media check-in and feed streaming
- Increase visitor satisfaction by helping them make decisions more aligned with their needs

Cisco CMX for Facebook Wi-Fi

Cisco has also begun a new Cisco CMX service called **Cisco CMX for Facebook Wi-Fi** in collaboration with Facebook. In hotels and shops that are deploying this service, Wi-Fi users can use free wireless LAN by checking in with the facility using the facility's wireless network. This solution not

Offering a Variety of Analysis Methods including Traffic Line Information and Residence Time

Venue Efficiency

By helping you better understand how your visitors actually behave while at your site, Cisco CMX helps you make the best use of your floor plan. With this improved insight, you can:

- Determine the most trafficked locations to position advertisements, products or services
- Adjust venue layout to optimize traffic flow in periods of high use
- Staff service locations to accommodate visitor flows and time of day
- Evaluate impact of floor plan adjustments

For your customers and your business, the Cisco CMX solution can deliver the right information at the right time.

only improves user convenience but also offers a variety of business benefits including better customer recognition thanks to the increased number of check-ins and marketing based on the customer information collected anonymously by Facebook.

- Detecting all Wi-Fi devices (the "devices") in the venue and providing analytics on their presence, including dwell times, new vs. repeat visitors, and peak times
- Providing an easy-to-use guest-access solution for visitors through a custom portal using various authentication methods including social, self-registration, and Short Message Service (SMS)
- Engaging visitors directly on the guest portal page or mobile app with location-based content

Wireless Product Line

Cisco Aironet Access Points

Indoor Access Points

All indoor models of the **Cisco Aironet Access Points** are compatible with the IEEE 802.11 standards including IEEE 802.11a/b/g/n and the latest standard IEEE 802.11ac which provides throughput up to 2.6 Gbps (some models are IEEE 802.11ac-compatible). A wide lineup of models are available including: (1) Lightweight compact models featuring a streamlined body with built-in antenna and integrated LAN/power cable using PoE (Power over Ethernet) for stylish installation without spoiling the aesthetics of the office; (2) Heavy-duty models with a wide selection of external antennas and featuring a rigid metal chassis to support a wide range of operating temperatures for use in factories, warehouses and stores where environmental requirements are strict; and (3) High-performance models for telecommuters and satellite offices offering the same level of security and network services as the headquarters office.

➔ See page 34 to 35 for details.

Outdoor Access Points

The outdoor models of the **Cisco Aironet Access Points** deliver high-speed and stable wireless LAN environments in various locations such as in a massive city-size area, inside a company building, a factory ground, or a mining field. Featuring a chassis with IEC IP67 waterproof and NEMA Type 4X certified outdoor dust/rust resistance, a wide lineup of outdoor models is available to meet the diversifying customer needs in the harshest of environments. Available models include the lightweight compact model with a polished exterior design that blends into the surrounding environment, the PoE power supplying model capable of powering surveillance cameras, and the model with built-in cable modem for utilizing the existing cable network.

➔ See page 36 for details.

Cisco Wireless Controllers

Cisco Wireless Controller is a platform that enables centralized management of multiple Cisco Aironet Access Points including remote bases. This platform automates the configuration management required for deploying/adding Cisco Aironet Access Points to reduce the workload of the network administrator, as well as provide the control functions needed to establish a stable wireless LAN environment. The control functions include load balancing of Cisco Aironet Access Points and prompt and dynamic response to changes in the wireless environment.

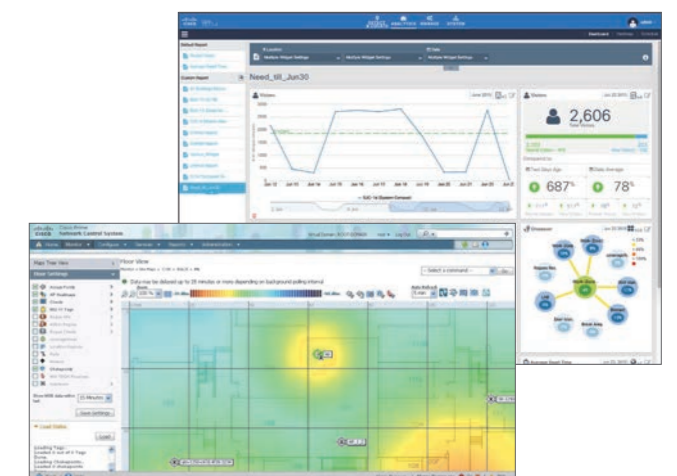

➔ See page 39 to 40 for details.

Mobility Services & Network Management Tools

Cisco Mobility Services Engine (MSE), which delivers a wide range of mobility services such as collecting the location of mobile devices, and **Cisco Prime Infrastructure**, that is designed to dramatically simplify network operations by providing management of wired and wireless network seamlessly, these are two critical components of **Cisco CleanAir**.

➔ See page 41 for details.

■ Cisco Aironet Indoor Access Points

All models of **Cisco Aironet Indoor Access Points** are compatible with the IEEE 802.11n standard; and some models are also compatible with IEEE 802.11ac delivering high-speed and stable wireless LAN environments with a theoretical maximum throughput of between 300 Mbps and 2.6 Gbps. A broad selection of models is available for various installation environments and network requirements.

- Built-in antenna model: These models feature a streamlined body and an integrated LAN/power cable using PoE (Power over Ethernet) for a stylish installation that blends into the office environment.
- External antenna model: These models feature a rigid metal chassis and support a wide range of operating temperatures for use in factories, warehouses and stores where environmental requirements are very strict. A wide selection of antennas are available for these models to suit different installation environments (Refer to page 37-38 for details on the **Cisco Aironet Antennas**).

There are two types of models for Cisco Aironet Indoor Access Points: **Standalone** (or **Mobility Express**) and **Controller-based** models. The Controller-based models are designed to operate in linkage with the **Cisco Wireless Controller**.

■ Highlights

- IEEE 802.11n-compatible (All models)
- IEEE 802.11ac Wave 1-compatible (**Cisco Aironet 1700/2700/3700 Series**)
- IEEE 802.11ac Wave 2-compatible (**Cisco Aironet 1810/1810W/1830/1850/2800/3800 Series**)
- Supports 2.4 GHz/5 GHz dual-band (All models)
- Supports **Cisco CleanAir Express** (Controller-based models of the **Cisco Aironet 1700 Series**)
- Supports **Cisco CleanAir** (Controller-based models of **Cisco Aironet 2700/2800/3700/3800 Series**, refer to page 31 for details on the technology)
- Supports **Cisco OfficeExtend** (Controller-based models, excluding some models)
- Supports **Cisco ClientLink** (excluding some models, refer to page 31 for details on the technology)
- Supports **Cisco BandSelect** (Controller-based models, excluding some models)

■ Cisco Hyperlocation Solution for the Cisco Aironet 3700 Series

SKU	Description
AIR-RM3010L-x-K9=	Hyperlocation Module with Advance Security.
AIR-ANT-LOC-01=	Hyperlocation Antenna, Model 1, Attached Omni.

*1 The Cisco Aironet Power Supply Option is required when not using PoE receiving (Refer to page 38 for details). *2 A dedicated WAN port is included.

*3 Migration to the standalone model is supported via software. *4 PoE power supplying GE x 1 is included. *5 Cisco CleanAir Express is supported in Cisco AireOS 8.0 or higher.

*6 AUX x 1 is included. *7 Some features are disabled when powered via PoE (see datasheet). *8 Supported in Cisco Mobility Express software.

*9 Aironet 2802E - Dimensions (Height x Width x Depth): 6.35 x 22.00 x 22.28 cm, Weight: 2.10 kg.

*10 Aironet 3802E and 3802P - Dimensions (Height x Width x Depth): 6.65 x 22.00 x 22.05 cm, Weight: 2.10 kg.

Outdoor Access Points

Cisco Aironet Outdoor Access Points

The Cisco Aironet Outdoor Access Points deliver high-speed and stable wireless LAN environments in various locations such as in a massive city-size area, inside a company building, a factory ground, or a mining field. Featuring a chassis with IEC IP67 waterproof and NEMA Type 4X certified outdoor dust/rust resistance, a wide lineup of outdoor models is available to meet the diversifying customer needs in the harshest of environments.

- Built-in antenna models: Cisco Aironet 1532I, Cisco Aironet 1562I/D, and Cisco Aironet 1572IC have a polished exterior design that blends into the surrounding environment.
- External antenna models: A wide selection of antennas are available for Cisco Aironet 1532E, Cisco Aironet 1562E/PS, and Cisco Aironet 1572EAC/EC to suit different installation environments (Refer to page 37-38 for details on the Cisco Aironet Antennas).
- Built-in cable modem models: Cisco Aironet 1572IC/EC incorporate a cable modem that is compatible with DOCSIS 3.0 (24x8), an international standard for communication services via coaxial cables used for cable television, etc.

Highlights

- IEC IP67 waterproof (All models)
- NEMA Type 4X certified outdoor dust/rust resistance (All models)
- Designed for harsh outdoor environments (All models)
- Supports built-in SFP module slot (Cisco Aironet 1560/1570 Series)
- Supports GPS (Cisco Aironet 1570 Series) ^{*1}
- IEEE 802.11n compatible (All models)
- IEEE 802.11ac Wave 1-compatible (Cisco Aironet 1570 Series)
- IEEE 802.11ac Wave 2-compatible (Cisco Aironet 1560 Series)
- Supports 2.4 GHz/5 GHz dual-band (All models)
- Supports 4.9-GHz public safety band (Cisco Aironet 1562PS)
- Supports Cisco CleanAir (Cisco Aironet 1560/1570 Series, Refer to page 31 for details on the technology)
- Supports ClientLink (Cisco Aironet 1560/1570 Series, Refer to page 31 for details on the technology)
- Supports Cisco BandSelect (All models)
- Supports Cisco High Density Experience (HDX) (Cisco Aironet 1560/1570 Series)

Model Name	Dimensions (Height x Width x Depth)	Maximum Weight
Cisco Aironet 1532I	22.86 x 17.78 x 10.16 cm	2.27 kg

 *2 Full features are supported when powered via PoE+, AIR-PWRINJ4= or AIR-PWR-B= (The AIR-PWRINJ5 supports PoE receiving only).
 *3 Cisco Aironet 1562: Full features are supported when powered via UPOE, AIR-PWRINJ-60RGD1/2= or AIR-PWRADPT-RGD1= (The AIR-PWRINJ6 supports PoE+ receiving only).
 *4 Cisco Aironet 1572/Cn is not supported.

Number of Managed Access Points → More

Cisco Wireless Controllers is a platform that enables controller-based management of multiple Cisco Aironet Access Points including remote bases. An extensive lineup of products includes expansion modules for integrating services to the Cisco Catalyst 6500 Series, software products for VMware ESX/ESXi and Linux Kernel-based Virtual Machine (KVM), and dedicated hardware appliances. A flexi-

ble licensing system is adopted for the number of managed access points, making it one of the most cost-effective solutions in the industry. The required number of managed access points can be selected based on the network requirements at the time of deployment; and the number of managed access points can be expanded flexibly based on the post-deployment network requirements.

Mobility Services & Network Management Tools

Cisco Mobility Services Engine (MSE)

Cisco Mobility Services Engine (MSE) is a platform that provides a wide range of mobility services including Cisco CleanAir, Cisco Base Location Services, Cisco Connected Mobile Experiences (CMX), and Cisco Wireless Intrusion Prevention System (wIPS). This platform is implemented as a software product on VMware ESX/ESXi or as a hardware appliance.

■ Cisco Connected Mobile Experiences (CMX) release 10 License

● Cisco CMX Base License

Provides the ability to determine the location of Wi-Fi clients, Bluetooth low energy (BLE) beacons, devices, and RFID tags, CMX Connect, third-party integration using standard REST APIs.

● Cisco CMX Advanced License

Provides all the CMX Base services and CMX Analytics, CMX Presence Analytics

● Cisco wIPS Monitor Mode License

Provides wIPS for Cisco Aironet Access Points in monitor mode (will be available in a future release).

● Cisco wIPS Enhanced Local Mode License

Provides wIPS for Cisco Aironet Access Points in local mode (will be available in a future release).

■ Cisco Connected Mobile Experiences (CMX) release 10

Cisco CMX 10 is a platform that enhances the Cisco wireless LAN by:

- Calculating the location of all wireless devices in a venue, including mobile devices, tags, rogue access points, and wireless interferers.
- Generating advanced location analytics (CMX Analytics).
- Providing a visitor wireless onboarding platform (CMX Connect).
- Calculating the location of Bluetooth Low Energy (BLE) beacons.

Cisco Wireless Controller Software

Unlike traditional products, the Cisco Catalyst 3650/3850 Series and the Supervisor Engine 8-E for Cisco Catalyst 4500E Series incorporate the Cisco IOS XE based wireless controller software. Rich features of the Cisco IOS include:

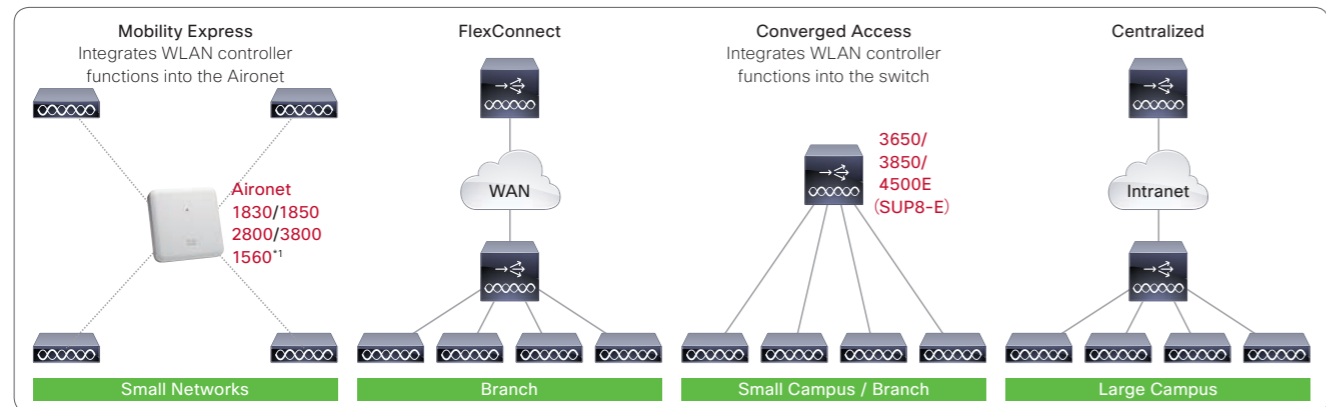

Flexible NetFlow, advanced QoS and dACL (downloadable Access Control List) can be provided for wireless LAN networks as well.

■ Cisco Wireless Controller Software Specification Comparison

	AirOS	IOS-XE
Resilience	Client SSO, AP SSO, N+1, High-availability option SKU	AP SSO, Multiple LAG, High-availability option SKU
QoS	Alloy QoS	High level of QoS (MQC)
Security	Dynamic ACLs, SGA (SXP)	dACL

Service	Bonjour, AVC, Static Netflow	Flexible Netflow, AVC
Command Line Interface	Secure FTP	Cisco IOS CLI, Secure Shell, EEM/TCL/TK

Deployment Modes

Cisco's wireless solutions can be broadly classified into Standalone systems that operate Cisco Aironet Access Points individually and Controller-based systems that centrally manage multiple Cisco Aironet Access Points using a Cisco Wireless Controller. Multiple expansion modes are also supported in Controller-based systems.

The Mesh Mode, FlexConnect + Mesh Mode, OfficeExtend Mode, Monitor Mode, Rogue Detector Mode, and Sniffer Mode are also supported.

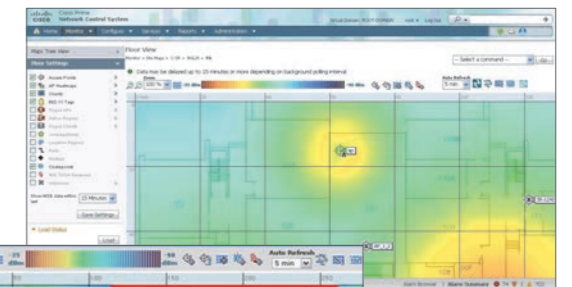

■ Cisco Wireless Controller Deployment Mode Compatibility Comparison

Cisco Prime Infrastructure

Cisco Prime Infrastructure is an integrated management platform that enables comprehensive management of the entire network including wired/wireless LAN at the headquarters and branches. This platform not only enables devices comprising wired/wireless LAN networks to be managed as physical assets but also enables the networks to be managed from the user service level perspective, based on the rich information collected from the devices.

Routers

Integrated Services Routers

Line-up of Cisco ISR

Previously, even the small-scale bases were required to install a wide range of devices including switches, wireless access points and WAN optimization appliances. **Cisco Integrated Services Routers (ISR)** are "super routers" that are capable of integrating the network services provided by these multiple devices into a single platform. These routers are not only capable of inte-

grating multiple services but also have the flexibility to add new services as required via license activation and/or addition of expansion modules. Adoption of these routers results in simpler network configuration, helping to reduce the device costs as well as operation and maintenance costs.

Selection of Cisco ISR

Routers with higher performance and expandability should be selected for traffic-intensive data centers than the bases. **Cisco ISR** not only allows selection of bundle models according to the services required at the data cen-

ters or bases, but also respond flexibly to changes in the business needs by means of license activation of **Cisco IOS** technologies and addition of expansion modules.

Sample inter-base network configuration: small-scale network

Sample inter-base network configuration: Medium-scale network

Benefits of Migrating to Cisco ISR 4000 Series

The Cisco ISR 4000 Series build on 20 years of branch-office routers, adding services and horsepower for the needs of modern branch offices and allowing businesses to:

- Quickly open new remote offices or easily add additional services
- Operate an entire branch office with a single box
- Give IT departments more time for innovation by automating repetitive tasks and orchestrating security and application services

The **Cisco ISR 4000 Series** address the problems that modern branch offices face, without giving up any of the existing services of previous-generation Cisco ISRs. It also brings virtualization to networking so that IT can adopt services faster and repurpose resources as needs change. And it delivers additional computing power for local application survivability, data backup, and local analytics processing.

The new architecture of the Cisco ISR 4000 Series delivers up to 2 Gbps in a converged platform, typically 4 to 10 times faster than the previous-generation ISRs. The WAN and application optimization services of the Cisco ISR 4000 Series include **Cisco Application Visibility and Control (AVC)**, allowing IT to assess capacity planning; and **Cisco Performance Routing Version 3 (PFR v3)**, which automatically sends traffic across the best connection for current network conditions. Not only does this architecture allow a branch office to run the network with a single box, it also allows use of that box to converge network, computing, and storage resources in the same platform. The virtualization technology available both embedded within the Cisco ISR 4000 Series and through additional data center-class server modules (**Cisco UCS E Series Servers**) offers new levels of converged capability.

Series Comparison

Branch Network Needs	Features	Cisco ISR 1800/2800/3800 Series	Cisco ISR 1900/2900/3900 Series	Cisco ISR 4000 Series	Benefits
Scale with high performance	Maximum throughput	Up to 50 Mbps	Up to 350 Mbps	Up to 2 Gbps	4 to 10 times performance increase for the same price as the ISR G2
	Separate data, control, and services planes	-	-	●	Minimal performance impact as network services are added and throughput increases
	Integrated service container	-	-	●	No need for additional branch appliances; add network services using pluggable virtual machines
	Integrated compute with Cisco UCS E-Series Servers	-	●	●	Local compute resources for applications, data backup, and analytics
Uncompromised user experience	Cisco IOS XE Operating System	-	-	●	Higher availability for network services with multicore processing
	Cisco Application Visibility and Control (AVC)	-	●	●	Visibility into 1000+ applications for capacity planning and prioritization
	Intelligent path selection (PFR v3)	-	●	●	Improve application experience and lower costs with path selection using real-time analytics
Security	WAN optimization (WAAS and Akamai)	-	●	●	Improve application performance and offload WAN with Layer 4-7 optimization and intelligent caching
	Sourcefire Intrusion Detection System (IDS)	-	●	●	Industry-leading advanced threat defense
	Cloud Web Security with Advanced Malware Protection (AMP)	-	●	●	Scale secure direct Internet access with consistent policy enforcement
Reduced costs and increased business agility	Multicore hardware VPN acceleration	-	-	●	High-performance encryption for secure WAN
	Pay-as-you-grow performance and services	-	-	●	Ability to buy what you need today and upgrade anytime without complete equipment upgrades
	Cisco ONE Software Suites	-	●	●	Predictable OpEx spend, license portability, and investment protection
	Intelligent WAN app with Cisco APIC Enterprise Module	-	●	●	Automated provisioning for faster deployment

Cisco ISR 800 Series

Fixed-configuration Integrated Services Routers suitable for deployment in small-sized bases, home offices and Machine-to-Machine (M2M) environments. In addition to the routing service, a wide variety of services including switching, wireless security, unified communication, and WAN optimization can be integrated using a single router unit.

Highlights

- Equipped with Cisco IOS Universal Image (Compatible with IP Base/Advanced Security/Advanced IP Services)
- Built-in managed switch
- Built-in IEEE 802.11n-compatible wireless access point (C881W-x-K9)
- Supports 4G LTE wireless WAN (C819G-4G-GA-K9/C819HG-4G-G-K9/C899G-LTE-GA-K9)

Machine-to-Machine (M2M)

Machine-to-Machine (M2M) is a technology that aggregates the intercommunications between machines without human intervention. This technology is already used in a wide range of devices such as vending machines, surveillance systems and sensor-equipped measuring instruments; and its adoption is expected to continue at an accelerated pace. The most important elements for network devices offering the M2M technology are compactness, mobility and durability.

In the case of vending machines, for example, the network device needs to be compact to allow installation inside the machines. Mobility is also important as it is cheaper to use the mobile 4G network than installing a wired broadband line for each vending machine. Depending on the installation location, the network device must also have the durability to withstand the high temperatures in summer.

Cisco 819H/G/HG has been developed to address these issues. Both models feature a palm-sized compact chassis and are compatible with 4G LTE 2.0 wire-

less LAN. Furthermore, Cisco 819H/HG can operate in temperatures between -23 and +60 deg C and in up to 95% humidity and have superior vibration and impact resistance to withstand industrial use. A wide variety of mounting options are supported including DIN rail, floor and wall mounting.

Cisco ISR 1900/2900/3900 Series

Modular Integrated Services Routers suitable for deployment in small- to large-sized bases. In addition to the routing service, these routers can integrate a wide variety of services including switching, wireless security, unified communication, WAN optimization and service virtualization.

Highlights

- Equipped with Cisco IOS Universal Image (Compatible with IP Base/SEC/UC/APP)
- Field replaceable Cisco Services Performance Engine (SPE) motherboard (Cisco ISR 3900 Series)
- Equipped with multi-core CPU and large-capacity memory
- Various network services are integrated via Expansion Modules (EHWIC/SM slots)
- Supports the Cisco UCS E Series Server
- Built-in IEEE 802.11n-compatible wireless access point (CISCO1941W-x/K9)

^{*1} Expansion Module is required. ^{*2} Feature Licenses are required. ^{*3} Cisco IOS SEC License is required. ^{*4} ACS-1900-RM-19 is required. ^{*5} SFP module slot or dual-purpose port is included. ^{*6} Feature Licenses or Expansion Modules are required. ^{*7} Feature Licenses, etc. are required according to the Cisco IOS UC License and configuration.

Cisco Wide Area Application Services (WAAS)

What is Cisco WAAS?

Cisco Wide Area Application Services (WAAS) is an effective solution for achieving optimization of inter-office WAN and application acceleration. This solution addresses the WAN-specific issues such as delays to enhance the TCP-based application performance.

■ **Same Level of Application Performance as LAN Connection**
Cisco WAAS enables applications to be used via WAN with the same level of performance as via LAN.

- Optimized throughput: Enhances the WAN environment even further by improving the behavior of the transport protocol.
- More efficient bandwidth: Minimizes the sending/receiving of redundant data patterns using DRE (Data Redundancy Elimination) and compression technology.
- Application speedup: Achieves efficient utilization of bandwidth by eliminating delays using technologies such as read-ahead, protocol proxy and caching.

■ **Full Support for Citrix XenDesktop and XenApp**
VDI (Virtual Desktop Infrastructure) solutions that are becoming increasingly popular to address the challenges in the fields of business flexibility and sustainability as well as compliance/security requirements. However, since the communications from a client to a virtual desktop (i.e. server) are achieved via a network, network delay and bandwidth limit need to be considered carefully (especially via WAN).
Cisco WAAS has obtained Citrix's compatibility certification for their VDI solutions Citrix XenDesktop and XenApp and delivers the following benefits.

- Enhances the virtual desktop performance on WAN by up to 70 %
- Increases the number of simultaneous Citrix client connections by up to twice without the costly upgrade of the WAN bandwidth.
- Up to 60 % reduction of the WAN bandwidth requirements
- Up to 98 % optimization of the printing via WAN
- Supports Citrix MSI (Multi Stream ICA)

For details on **Cisco WAAS**, visit the following Web site:

<http://www.cisco.com/go/waas>

Cisco WAAS Product Portfolio

Cisco WAAS is available in various types to suit different purposes and scales. These products can be used to achieve WAN optimization and application

acceleration in a variety of operating environments, resulting in enhanced corporate productivity.

- Cisco WAAS Express** Software products suitable for bases, integrated into Cisco IOS on the Cisco ISR 800/1900/2900/3900 Series, and activated by Cisco IOS Feature License or Cisco IOS APP license.
- Cisco ISR WAAS** Software products suitable for bases or data centers/headquarters, integrated into Cisco IOS XE on the Cisco ISR 4000 Series, and activated by Cisco IOS APP License.
- Cisco vWAAS** Software products suitable for bases or data centers/headquarters, implemented on VMware ESX/ESXi which is supported by Cisco UCS E Series Servers and Cisco UCS C Series Rack Servers.
- Cisco WAAS Appliances** Hardware appliances suitable for bases or data centers/headquarters.

Cisco Intelligent WAN (IWAN) with Akamai Connect

Cisco Intelligent WAN (IWAN) with Akamai Connect is a suite of integrated WAN optimization, application acceleration, and intelligent caching features in Cisco ISRs running Application Experience services.

The solution extends the well-known **Akamai Intelligent Platform** with HTTP caching across the last mile into the branch office, turbo charging the application optimization features of the **Cisco IWAN**. Akamai Connect caching integrates with Cisco IWAN features such as **Application Visibility and Control (AVC)**, **Cisco Performance Routing (PFR)**, and **Cisco Wide Area Application Services (WAAS)**. It is available across the **Cisco ISR** portfolio and **Cisco WAAS Appliances**, allowing you to deploy full-service branch-office operations.

Users can access bandwidth-intensive applications instantly, over any network, regardless of where the application is hosted — data center, private cloud, public cloud, or the Internet.

■ **Mobile Assisted Selling Application Benchmark Results in Seconds (s)**

	Without Akamai Connect	With Akamai Connect 1st Hit	With Akamai Connect 2nd Hit
ERP App	57 s	18 s	2 s
Repair App	70 s	28 s	< 1 s
Catalog App	28 s	13 s	< 1 s

■ **Training/Digital Signage Application Benchmark Results in Pixels (p) and Seconds (s)**

	Without Akamai Connect	With Akamai Connect
Default Quality	144 p	720 p (HD Automatic)
Time to Load (720 p HD)	14 s	Instant

■ **Cisco IWAN with Akamai Connect License**

SKU	Description
SL-200-AKC	License for up to 200 WAAS connections

■ **Cisco WAAS Central Manager**
Cisco WAAS Central Manager is a mandatory management tool for all Cisco WAAS implementations. Generally, Cisco WAAS Central Manager is either implemented to a single Cisco WAAS Appliance in the data center or headquarters accommodating the data and application servers, or as Cisco Virtual WAAS (vWAAS) on the VMware ESX/ESXi server. Cisco WAAS Central Manager can be used to centrally manage a wide range of Cisco WAAS devices distributed across multiple bases, including the Cisco

800/1900/2900/3900 Series with activated Cisco WAAS Express, Cisco ISR 4000 Series with activated Cisco ISR WAAS, and Cisco WAAS Appliances, and so on. An intuitive GUI provides access to functions such as deployment and real-time monitoring of Cisco WAAS devices, fault management and logging, as well as the custom reporting function for creating scheduled reports for up to 2,500 Cisco WAAS devices in the Cisco WAAS topology.

^{*1} Maximum DRAM supported by the platform is required. ^{*2} MEM-294-8GB is required. ^{*3} MEM-594-12GB is required. ^{*4} MEM-694-24GB is required. ^{*5} Cisco AppNav 10 GE Bundle (WAVE-APNV-10GE) is required. ^{*6} Cisco AppNav GE or SFP Module is required. ^{*7} Performance indicators based on Cisco WAAS software release 5.1. ^{*8} The maximum number of managed devices is reduced by 20 % in an environment containing routers equipped with Cisco WAAS Express. ^{*9} Incorporated on WAVE-294-K9 by default.

Security

Next-Generation Firewalls / Advanced Malware Protection

Why Cisco?

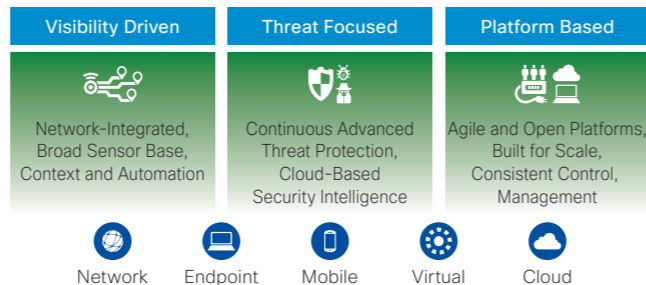

Today's threat landscape is nothing like that of 10 years ago. Simple attacks that caused containable damage have given way to modern, sophisticated, and well-funded cybercrime operations capable of disrupting and causing major loss to organizations and national infrastructure. These are difficult to detect, can remain in networks for long periods of time, and amass resources to launch attacks elsewhere.

Legacy protection methods that exclusively rely on detection and blocking are no longer adequate. It's time for a new security model that addresses the full attack continuum: before, during and after an attack.

To erect the new security model, focus on three strategic imperatives:

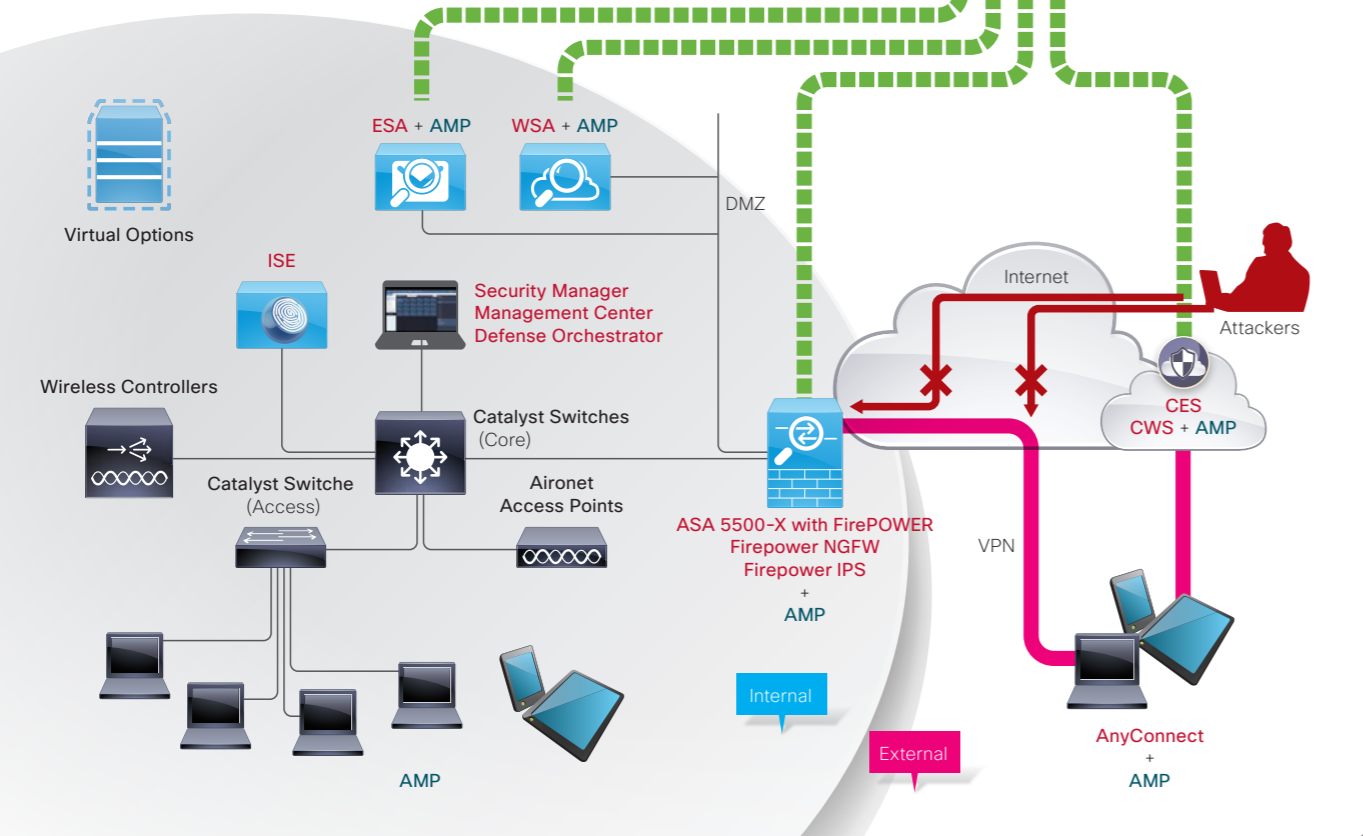

- **Visibility driven:** Get global intelligence and context for deeper insights and better decisions.
- **Threat focused:** Detect, understand, and stop threats across the entire attack continuum
- **Platform based:** Reduce fragmentation by using a platform-based approach to protect the network, devices, and the cloud.

Across-the-board protection (spanning the attack continuum) requires the integration of technologies with different areas of focus. The Cisco security portfolio, offers a comprehensive range of threat-centric cybersecurity solutions that fight advanced malware, targeted attacks, and APTs. These visibility-driven, threat-focused, and platform-based solutions offer the industry's broadest set of enforcement and remediation options at attack vectors where threats manifest.

For details on Cisco Security, visit the following Web site:

<http://www.cisco.com/go/security>

Next-Generation Firewalls

Cisco Firepower Next-Generation Firewall (NGFW)

Firewall Throughput

→ High

The **Cisco Firepower Next-Generation Firewall (NGFW)** is the industry's first fully integrated, threat-focused next-generation firewall with unified management. It includes **Application Visibility and Control (AVC)**, optional **Firepower Next-Generation IPS (NGIPS)**, **Cisco Advanced Malware Protection (AMP)**, and **URL Filtering**. Cisco Firepower NGFW provides advanced threat protection before, during, and after attacks.

For details on **Cisco Firepower Next-Generation Firewall (NGFW)**, visit the following Web site:

<http://www.cisco.com/go/ngfw>

- **Stop more threats:** Contain known and unknown malware with leading Cisco AMP and sandboxing. Get application firewalling (AVC) for 4,000 commercial applications, plus additional custom applications.
- **Gain more insight:** Gain superior visibility into your environment with Cisco Firepower NGIPS. Automated risk rankings and impact flags identify priorities for your team.
- **Detect earlier, act faster:** The Cisco Annual Security Report identifies a 100-day median time from infection to detection, across enterprises. Cisco reduces this time to less than a day.
- **Reduce complexity:** Get unified management and automated threat correlation across tightly integrated security functions, including application firewalling, NGIPS, and AMP.
- **Get more from your network:** Enhance security, and take advantage of your existing investments, with optional integration of other Cisco and third-party networking and security solutions.

Cisco Firepower Threat Defense License

The Cisco Firepower Next-Generation Firewall (NGFW) ship with a base license for Application Visibility and Control (AVC). Optional subscriptions for Firepower Next-Generation IPS (NGIPS), Cisco Advanced Malware Protection (AMP), and URL Filtering can be added to the base configuration for advanced functionality.

The default AVC function provides application identification and control of more than 4,000 applications, detected and classified by risk and business relevance.

■ Cisco Firepower Threat Defense License Comparison

Licenses	Characters Included in SKU	Next-Generation IPS (NGIPS)	Advanced Malware Protection (AMP)	URL Filtering (URL)
NGIPS License	T	●	-	-
AMP License	AMP	-	●	-
URL License	URL	-	-	●
NGIPS & AMP License	TM	●	●	-
NGIPS & URL License	TC	●	-	●
NGIPS & AMP & URL License	TMC	●	●	●

One-year, 3-year, and 5-year subscriptions for each Firepower service are available.

- **NGIPS:** Provides highly effective threat prevention and full contextual awareness of users, infrastructure, applications, and content to detect multivector threats and automate defense response.
- **AMP:** Delivers inline network protection against sophisticated malware and Cisco Threat Grid sandboxing.
- **URL Filtering:** Adds the capability to filter more than 280 million top-level domains by risk level and more than 82 categories.

Cisco Firepower Management Center

Number of Managed Sensors → More

The **Cisco Firepower Management Center** is the administrative nerve center for a number of Cisco security products running on a number of different platforms. It provides complete and unified management of firewalls, application control, intrusion prevention, URL filtering, and advanced malware protection. The Management Center is the centralized point for event and policy management for the following solutions:

- Cisco Firepower Next-Generation Firewall (NGFW)
- Cisco ASA with FirePOWER Services
- Cisco Firepower Next-Generation IPS (NGIPS)
- Cisco FirePOWER Threat Defense for ISR
- Cisco Advanced Malware Protection (AMP)

Advanced Malware Protection (AMP)

Cisco Advanced Malware Protection (AMP) for Endpoints

The **Cisco Advanced Malware Protection (AMP) for Endpoints** is an intelligent, enterprise-class advanced malware analysis and protection solution that uses a telemetry model that uses big data, continuous analysis, and advanced analytics to detect, track, analyze, control, and block advanced malware outbreaks across all endpoints: Windows PCs, Macs, Linux, mobile devices, and virtual systems.

Cisco AMP for Endpoints is managed through an easy-to-use, web-based console. It is deployed through AMP's lightweight endpoint connector, with no performance impact on users - analysis is done in the cloud, not on the endpoint.

The solution is offered as a subscription on endpoints, including coverage for Windows, Macs, Linux, and mobile devices. If your organization has high privacy requirements that restrict using a public cloud, the **Cisco AMP Private Cloud Virtual Appliance** is an on-premises, air-gapped option.

Cisco Meraki

100% Cloud Managed Networking

The Cisco Meraki portfolio of networking devices are centrally managed from the cloud. This feature-rich, easy-to-use cloud architecture enables customers to solve new business problems and reduce operating costs.

- Manage entire network from a single dashboard
- Control users, applications, and devices
- No controller or management hardware to install and maintain
- Secure (PCI and HIPAA-compliant) cloud infrastructure
- Scales from small sites to million-user deployments

Cisco Meraki Cloud Managed Products

Cloud Managed Wireless

- Indoor and outdoor access point models
- IEEE 802.11ac and 802.11n with ultra-high performance, up to 2.5 Gbps
- Integrated wireless security and guest access
- Third radio dedicated to security and RF optimization (indoor models)
- Ideal for high-density campuses, branches, teleworkers, and rugged/outdoor environments
- Built-in traffic shaping, location analytics, group policies—all configurable with just a few mouse clicks

Cloud Managed Switches

- GE access switches and 40 GE aggregation switches
- Centrally managed with monitoring and alerts
- Ultra reliable and includes lifetime warranty
- Optimized for voice and video traffic with PoE+ available on all ports

Cloud Managed Security Appliances

- Complete networking, security, and application control
- Centrally managed from the cloud
- Includes firewall, auto VPN, WAN optimization, and branch routing
- Six models scale from small branches to campuses

Mobility Management

- Network-wide visibility and control
- No on-site controller hardware
- Automatic monitoring and alerts
- Seamless over-the-web upgrades

For details on Cisco Meraki, visit the following Web site:
<http://www.cisco.com/go/meraki>

Mobility Management Promotion

Meraki Systems Manager provides cloud-based over-the-air centralized management, diagnostics, monitoring, and security of the mobile devices managed by your organization. Manage distributed deployments of all of your devices with Systems Manager — without an on-site appliance. Man-

aged devices connect securely to Meraki's cloud, enabling you to locate devices, deploy software and apps, deliver content, enforce security policies, and monitor all your devices through an intuitive and powerful web-based dashboard.

Receive up to 100 devices of Meraki EMM for free with any Cisco purchase

No license required until network reaches 100+ devices, then licenses are required per device

Use Cases

Features Most Used by Our Customers

	Retail	Education	Corporate Office
MX Security	Site-to-Site VPN	Content Filtering	IPS with Sourcefire Advanced Malware Protection (AMP)

MR Wireless	Cloud CMX Analytics	High-Density WiFi	BYOD Policies
SM Mobility	Tablet Management	Application Management	Security Policy Enforcement

Introduction to Cisco Meraki MX Cloud Managed Security Appliance Series

Cisco Meraki MX Cloud Managed Security Appliance Series are ideal for organizations with large numbers of distributed sites. Since the MX is 100% cloud managed, installation and remote management is simple. The MX has a comprehensive suite of network services, eliminating the need for multiple appliances. These services include Layer 7 application firewall, content filtering, web search filtering, intrusion prevention, web caching, Intelligent WAN with multiple uplinks and 4G failover.

Key Features

- Cloud Based Management and Monitoring
- Built-in centralized management
- Zero-touch provisioning, ideal for branches
- Auto VPN (Site-to-Site VPN)
- Two-click setup
- Automatic failover to MPLS, 4G, or 2nd WAN link
- Data center redundancy
- Best-in-class Layer 7 Security
- SourceFire-based IPS
- Advanced Malware Protection (AMP)
- BrightCloud URL filtering with 85 categories
- Web (Google/Bing) SafeSearch
- MaxMind based Geo-IP security
- Intelligent WAN (IWAN)
- Traffic load balancing and automatic link failover
- Performance and policy based routing
- Supports 3G/4G USB modems
- Application Traffic Shaping
- Prioritize business critical apps like VoIP and video
- Reduce Internet costs
- Web caching for faster Internet access

Key Hardware Specifications

	MX64	MX65	MX84	MX100	MX400	MX600
Recommended Users	50	50	200	500	2,000	10,000

Selection Guide

- MX64/MX65: Up to 50 users
- Retail locations or small branches
- Cost-conscious end customer
- Customers who want a wired-wireless combo (MX64W/MX65W)
- MX84: Up to 100 users
- 1 TB built-in HDD for web caching
- MX100: Up to 500 users
- Large branches or mid-size K-12 campuses
- Needs more than 4 ports or SFP (fiber) connectivity
- MX400: Up to 2,000 users
- Mid-size campus deployments
- VPN concentrator for large deployments
- MX600: More than 2,000 users
- Large campus deployments
- Customers who need 4 TB for web caching
- VPN concentrator for very large deployments

Small Business

Services

Cisco Small Business Switches

Cisco Small Business Switches provide nonblocking, wire-speed switching for 10-, 100-, and 1000-Mbps network clients. These switches can be used to replace the current workgroup hub or switch and to deliver full 1- and 10-Gbps speeds to high-requirement workstations as necessary while continuing to serve other clients at their current speeds.

The switches can also be used to create a local area network within the business, with appropriate link speeds for each user's requirements. Either way, they're perfect for graphics, videos, and other applications that have to move large files across the network quickly.

- 95 Series Unmanaged Switches
- 110 Series Unmanaged Switches

Get highly affordable Gigabit, Fast Ethernet, and PoE. No setup is required for QoS, network diagnostics, power-saving mode, and loop detection.

- 200 Series Smart Switches
- 250 Series Smart Switches

Entry-level managed switch features and easy management at a great price. Build a business-class network with the features you need.

220 Series Smart Plus Switches

Get the powerful features, security, and performance of a managed switch with the affordability that's closer to smart switches.

300 Series Managed Switches

350 Series Managed Switches

The ideal combination of affordability and advanced network features for small business, these easy to use fully managed switches are the cornerstone of your network.

350X Series Stackable Managed Switches

Our managed switches deliver an ideal combination of affordability and advanced features with 10-Gigabit Ethernet and stacking.

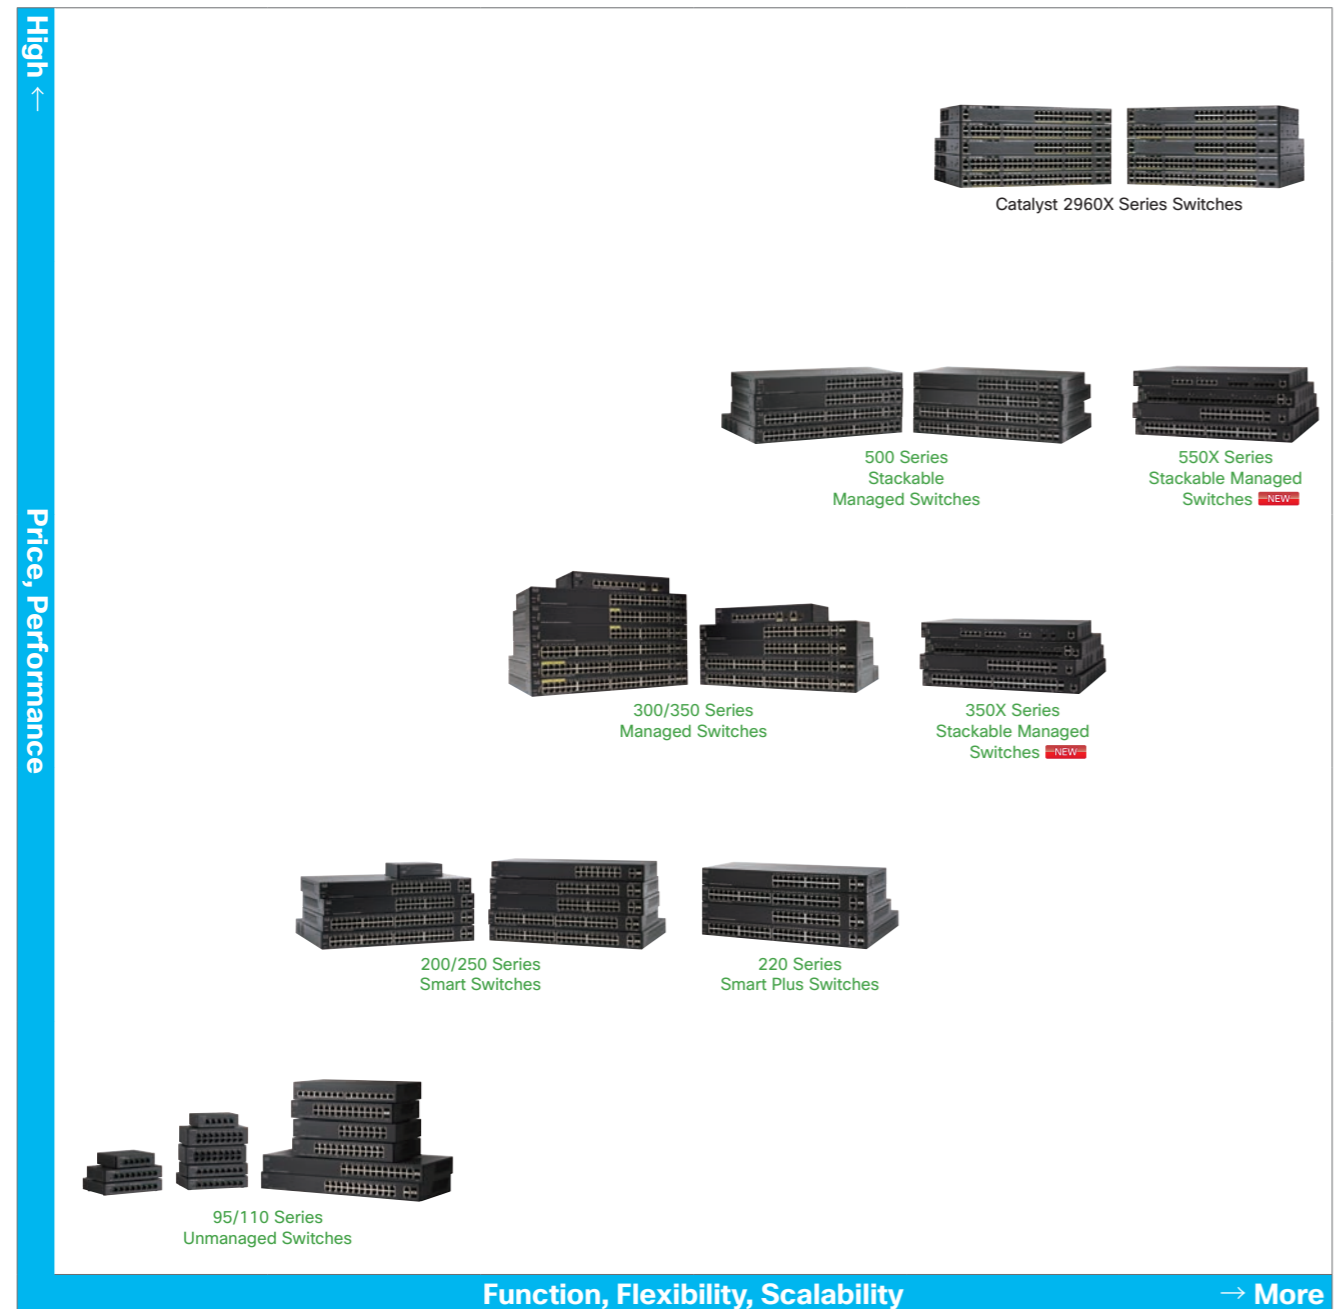

500 Series Stackable Managed Switches

Advanced features, high reliability, and performance at a price you can afford. These stackable managed switches, built for demanding environments, deliver a powerful networking foundation for today and tomorrow.

550X Series Stackable Managed Switches

These next-generation stackable managed switches offer 10-Gigabit Ethernet and advanced capabilities to accelerate your business growth.

Simple Configuration and Management

Cisco Small Business Products are designed to be configured and managed by small businesses, they include an embedded web-based configuration utility. Their simple graphical user interfaces (GUIs) help your staff easily configure, manage, and troubleshoot your network. (Cisco Small Business 95/110 Series Unmanaged Switches are ready to use right out of the box, there is no software to install and nothing to configure.)

■ Cisco FindIT Network Discovery Utility

Easily integrated with your web browser, the Cisco FindIT Network Discovery Utility automatically discovers any Cisco Small Business devices in your network, and allows you to easily view important information about the device or to connect to the device administration interface. You will also be notified of the availability of firmware updates, and about any devices that are no longer under warranty or covered by a support contract.

■ Cisco SFP/SFP+ Transceivers

SKU	Description
MGBT1	1000BASE-T SFP transceiver, for Category 5 copper wire, support up to 100 m
MGBSX1	1000BASE-SX SFP transceiver, for multi-mode fiber, 850 nm wavelength, support up to 500 m
GLC-LH-SMD	1000BASE-LH SFP transceiver, for single-mode fiber, 1310 nm wavelength, support up to 10 km
MGBLH1	1000BASE-LH SFP transceiver, for single-mode fiber, 1310 nm wavelength, support up to 40 km
GLC-BX-U	1000BASE-BX-U SFP transceiver, for single-mode fiber, 1310 nm wavelength, support up to 10 km
SFP-H10GB-CU1M	10GBASE-CU SFP transceiver, for Twinax cable, support up to 1
SFP-H10GB-CU3M	10GBASE-CU SFP transceiver, for Twinax cable, support up to 3 m
SFP-H10GB-CU5M	10GBASE-CU SFP transceiver, for Twinax cable, support up to 5 m
SFP-10	

Cisco Small Business Wireless Access Points

Cisco Small Business Wireless Access Points combine business-class features with the reliability and performance needed for small business networks. The Single Point Setup (SPS) feature makes deployment of multiple access point easy and cost effective.

- Cisco Small Business 100 Series Wireless Access Points**
Sleek and simple to configure, our 100 Series delivers the performance you need at an affordable price.
- Cisco Small Business 300 Series Wireless Access Points**
Get Gigabit speed for your mobile devices. Use our simple controller-less management to manage multiple access points.
- Cisco Small Business 500 Series Wireless Access Points**
Get exceptional performance and coverage for mobile devices and next-generation applications. Use our simple, controller-less management to expand your wireless network.

*1 3G/4G modem is required.

New Models with Web Filtering

Your business and your employees are exposed to phishing, key loggers, spyware, drive-by malware, and other online threats. With the new RV130/130W/320/325 with web filtering, you can keep your employees and users safe from unwanted content and malicious websites. This is accomplished without compromising the users' online experience and can even help boost employee productivity and network performance by limiting Internet surfing to appropriate site categories and eliminating unwanted network traffic. Users are also automatically protected from malicious/compromised websites, regardless of site categorization.

- Dynamic Web Filtering**
 - Router checks URLs with Cisco cloud
 - Router caches websites to speed up response time over time
- Classification System**
 - 300 Million web URL's categorized and assigned reputation score
 - Sophisticated website reputation scoring (think of credit score)
 - 80+ content categories
 - Real-time updates
- No License Renewal are Necessary**

Cisco Smart Net Total Care Service

Your IT infrastructure is the lifeline that connects your business to customers and suppliers. Business success requires maintaining high service levels for your network while reducing costs and expanding your network as your business grows. **Cisco Smart Net Total Care** can help you meet these objectives by providing technical services and smart capabilities that:

- Resolve problems faster**
 Identify issues quickly and streamline your incident management processes to reduce network downtime and improve IT service levels.
- Reduce risk**
 Access to Cisco technical experts combined with smart, proactive tools and capabilities minimizes risks to business continuity.
- Increase operational efficiency**
 Proactive management and automated processes mean fewer support resource requirements and lower costs for managing your network.

Resolve Problems Faster

24 x 7 x 365 TAC assistance on product use, configuration, and troubleshooting

Get replacement hardware in as little as two hours

Automated diagnostic and support capabilities speed time-to-resolution

Improve Risk Management

Visibility into covered and uncovered devices - comply with corporate policies

Identify IT that is nearing end-of-life - simplify upgrades, planning and budgeting

Ensure that Cisco products are running current, supported software

Increase Operational Efficiency

Reduce the time and staff required for contract management and renewal

Improve planning with inventory and support contracts visibility

Pinpoint and manage product and security alerts - only those relevant to your network

Cisco Smart Assist Service

Cisco Smart Assist Service is a related service to extend the value of **Cisco Smart Net Total Care**.

This service can help you accelerate the time to enable and use smart capabilities. It provides assistance for installing the Cisco collector and accessing the Smart Net Total Care portal. It also offers onboarding and enablement services such as smart capability training, support for product inventory collection, installed base (IB) reconciliation (twice per year), and Cisco TAC support for the portal and collections.

Feature / Functionality	Smart Net Total Care (SNTC)	Smart Assist
Smart Capabilities Entitlement	●	Through SNTC
Onboarding Installation Assistance	Customer Self-Service	Cisco Assisted
Onboarding Smart Capabilities Training	Customer Self-Service	Cisco Assisted
IB Reconciliation	Customer Self-Service	Twice per year
Technical Support for Portal & Collections	Community Support	TAC

Cisco Smart Net Total Care helps reduce downtime with fast, expert technical support and flexible hardware coverage provided by the **Cisco Technical Assistance Center (TAC)**. Its integrated smart capabilities provide current information about the customer's installed base, contracts, and security alerts to enhance the efficiency of support workflows.

Technical Service and Incident Management

- Cisco TAC**
 The Cisco TAC is staffed by Cisco professionals certified in a broad range of Cisco products and technologies and service provider architectures. We provide you with access by phone, fax, or email 24 hours a day, 365 days a year and can assist you with product use, configuration, and troubleshooting issues.
- Advance hardware replacement**
 With our customized hardware support service plans, you can have confidence knowing that your hardware can support your ongoing business needs. Cisco offers multiple service levels with different shipment options.

Advance Hardware Replacement Service Levels

Service Level	Description
Smart Net Total Care 24 x 7 x 2	2-hour response, 24 hours a day, 7 days per week, including holidays
Smart Net Total Care 24 x 7 x 4	4-hour response, 24 hours a day, 7 days a week, including holidays
Smart Net Total Care 8 x 5 x 4	4-hour response, local business hours based on depot time, 5 days a week
Smart Net Total Care 8 x 5 x Next Business Day	Next-business-day delivery, local business hours based on depot time, 5 days a week

- Onsite support**
 Cisco is committed to providing professional, customer-focused support services in person at your location. Smart Net Total Care Onsite service includes installation of advance replacement parts.

Onsite Support Service Levels

Service Level	Description
Smart Net Total Care Onsite 24 x 7 x 2	2-hour response, 24 hours a day, 7 days per week, including holidays
Smart Net Total Care Onsite 24 x 7 x 4	4-hour response, 24 hours a day, 7 days a week, including holidays
Smart Net Total Care Onsite 8 x 5 x 4	Based on depot time. 4-hour response, 9 a.m. to 5 p.m., if the request is received before 1 p.m., the service (including parts, labor, and materials) will be provided the same day. For requests received after 1 p.m., the service will be provided the following business day.
Smart Net Total Care Onsite 8 x 5 x NextBusiness Day	Based on depot time. Next business day, 9 a.m. to 5 p.m., if the request is received before 3 p.m., the service (including parts, labor, and materials) will be provided the next business day. After 3 p.m., the service (including parts, labor, and materials) will be provided the following business day.

- Software updates**
 Cisco provides OS software updates for your licensed feature set. Software releases and any supporting documentation are available through Cisco.com Software Central at <http://software.cisco.com/swcentral/home.html>.
- Online self-help support**
 Cisco provides access to the Cisco Support website, which includes Cisco's extensive knowledge library, software downloads, and support tools designed to help users resolve network issues quickly without opening a case.

Security and Product Alerts

- Hardware alerts**
 Hardware alerts inform you about devices that have reached or are approaching end of life in your network.
- Software alerts**
 Software alerts inform you about end-of-life issues with specific software versions you are using.
- Security alerts**
 Security alerts are Product Security Incident Response Team (PSIRT) alerts that inform you about security vulnerabilities associated with specific devices in your network.
- Field notices**
 Field notices inform you about significant issues (other than security vulnerability issues) with a hardware device or software version.

Service Coverage Management

- Service coverage reports**
 Device data from installed base collections can be matched against service contracts and purchase orders to identify coverage gaps. View all service contracts and coverage levels, including 24-month advance visibility into upcoming renewal dates. Reviewing coverage information can help ensure that devices in your network have the right kind of coverage for their intended use.
- Service coverage and renewal management workflow**
 This feature gives you the ability to document and annotate those devices that do not require service coverage and why. You can also assign tasks to people responsible for architectural or budget planning to ask for recommendations about renewing coverage versus replacing specific devices before their service contracts expire.

Product Lifecycle Management

- Role-based access control (RBAC)**
 The Smart Net Total Care portal gives you control over the types of data that users can see. User views within the portal are based on the user's role, allowing administrators to assign roles and designate network device data visibility for portal users, including partners. For example, a certain group of network administrators may be given access to data for a specific segment of the network, and other groups of users may be restricted to specific types of information such as device configuration data or security alerts.
- Device data file uploads**
 In addition to data uploads from the Cisco collector, data can be uploaded using manual file uploads (such as from a spreadsheet) or third-party collection mechanisms. After data is uploaded into the portal, it can be analyzed and enriched with Cisco support information.
