AdvanGate-100 ™
RFID pedestal for loss prevention

Benefits:

- Shrinkage reduction
- Combination of loss-prevention and product identification in one system
- The pedestals can be separated up to 4 meters
- Provides data to detect which products suffer more theft attempts
- Very quick detection
- Continuous detection field
- Plug and play installation

Applications:

- Loss prevention at retail stores
- Loss prevention at warehouses
- Product tracking at backdoors, entrances, corridors, etc.

Product overview

AdvanGate-100 is a loss prevention system based on RFID UHF. It comprises a pedestal with two antennas, an embedded reader, controller and alarm combining EAS and RFID functions in one system.

AdvanGate-100 detects the tagged items that pass between the pedestals, verifies if those items have been paid, and triggers an acoustic and/or visual alarm if any item has not been paid.
AdvanGate-100 can use **four configurations** for checking if a tagged item has been paid:
- Checks the EAS bit of NXP chips
- Checks if the EPC code includes a pre-defined pattern that signals that the product has or not been paid
- Checks against the POS database if the product has been paid
- Checks bulk theft: trigger an alarm if a certain number of tags belonging to the same category are read in a certain time period (e.g. a few seconds).

AdvanGate-100 comprises primary units and secondary units:
- The **primary unit** has an integrated reader, a controller, an alarm, a visual alarm indicator and two directive antennas.
- The **secondary unit** comprises two directive antennas and visual alarm.

As shown in the following illustrations, secondary units can be connected to primary units.

Primary, single sided	Secondary, single sided	Primary, single sided	Secondary, dual sided	Primary, single sided

RF cables   RF cables   RF cables

Primary, single sided	Primary, dual sided	Primary, dual sided	Primary, single sided

No cables needed   No cables needed   No cables needed

AdvanGate-100 works with any hard and soft Gen2 RFID UHF tags.

AdvanGate-100 includes **configurable parameters** for minimizing false alarms.

# RFID pedestal for loss prevention

Radiation pattern

To minimize the detection of products inside the store, AdvanGate-100 has a radiation diagram wide in one direction and narrow in the other (perpendicular) direction.

Connection to AdvanCloud

AdvanGate-100 can be optionally connected to AdvanCloud cloud-based software platform.

The products that trigger an alarm can be shown on a **smartphone** managed by store staff or security staff, in order to:
- Thwart theft attempts
- Register the event: false alarm, thwarted theft, theft

This information can then be analyzed for **business intelligence** purposes:
- Theft attempts by day and time of day
- Products that suffer more theft attempts
- Stores with more theft activity
- ...

Optionally, AdvanGate-100 can be connected to a camera and send images of the person passing by when the alarm is triggered, to any smartphone.

AdvanGate-100 ™

Anti-theft dashboard

If AdvanGate is connected to AdvanCloud, the status of AdvanGate as well as the alarms triggered can be monitored through the AdvanCloud loss-prevention dashboard.
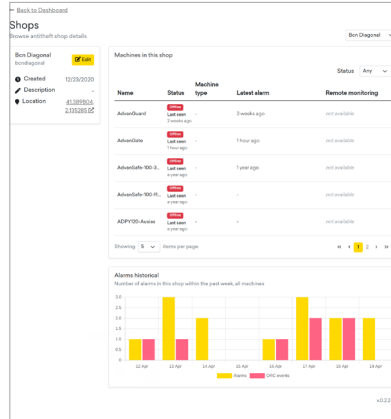

The alarms historical by shops are shown on the dashboard with details of machine status.
The dashboard will show your active systems on the map, providing alarm information.
Device remote management
List of devices (online/offline)

Check if devices connected to AdvanCloud are online (green) or offline (red).

Remote Acces to AdvanNet (Keonn RFID readers)

Acces remotely to AdvanNet from AdvanCloud for managing Keonn RFID readers.

Check device health status

Monitor the active device's health with detailed diagnostics of errors.

Technical specifications

Operating Frequency EU Version	865 to 868 MHz
Operating Frequency US Version	902 to 928 MHz
Separation between pedestals	Up to 3.5 m
Alarm Light	Light Emitting Diode (LED)
Alarm Audio	Signal Buzzer
Radiation angle	Fan shape 40° / 90° -15 dB sidelobes
Alarm function Preset	System gives audio alarm and light by detection of NXP EAS bit ON, or by a specific bit set in the EPC code (can be adjusted to different EAS data models)
Power supply	Power over Ethernet Optional: External power supply
Energy Consumption	6 W max., 1,5 W stand by, 0,5 W sleep modus, <5µA power down
Reader Power	max. 31,5 dBm
Radiated power	2 W ERP, 3.2 W EIRP
Anticollision	Yes
Interface	RS485, Ethernet
Transponder Protocol Standard	ISO 18000-6C EPC Class1 Gen2
Conformity	EN 50364, EN 301 489, EN 302 208 (LBT), EN 300 220
Temperature range	-20°C to +55°C
Dimensions	1550 mm x 460 mm x 55 mm
Weight	10,4 kg
Material Housing	Aluminum and plastic
Available colors	Black White
Human exposure	EN 50364
EMC	EN 301 489, EN 300 220
Air Interface (EU)	EN 302 208 v1.2 (DRM)

Mechanical specifications
Units in millimeters and [inches]

Product codes for ordering

ADGT	-	U	S	FF	-	aaa	-	CC	-	mmm	
											U = unit
		m									primary
