

Analog signal converters CC range

The signal converter range for every application

2CDC 285 001 F0005

ABB

The universal signal converters – multifunctional, flexible and precise

The product range of universal signal converters CC-U is ideally suited to the requirements of industrial measuring values and processing. They convert existing electrical and physical values into proportional standard signals or relay thresholds. The 3-way electrical isolation of inputs, outputs and supply (1.5 kV) prevents interference such as ground loops, voltage transfers and coupled-in dispersions. Further on the expensive measuring equipment connected to the converters is protected from damage.

Safe application

High precision ensures signals without additional tolerances, so that all signals are transmitted precisely and interference is prevented. Additionally the signal outputs are short-circuit proof so that the converter is protected from damage. The output reaction can be configured, so that the connected controller can take measurements in case of interrupted input signal. The product range of universal signal converters CC-U ensures safety and reliability of the plants and processes.

■ Universal

8 different signal converters, input and output universally configurable, also with option of 2 threshold relay outputs.

■ Convenient

Front-face operating elements, pluggable terminals, easily and directly accessible configuration.

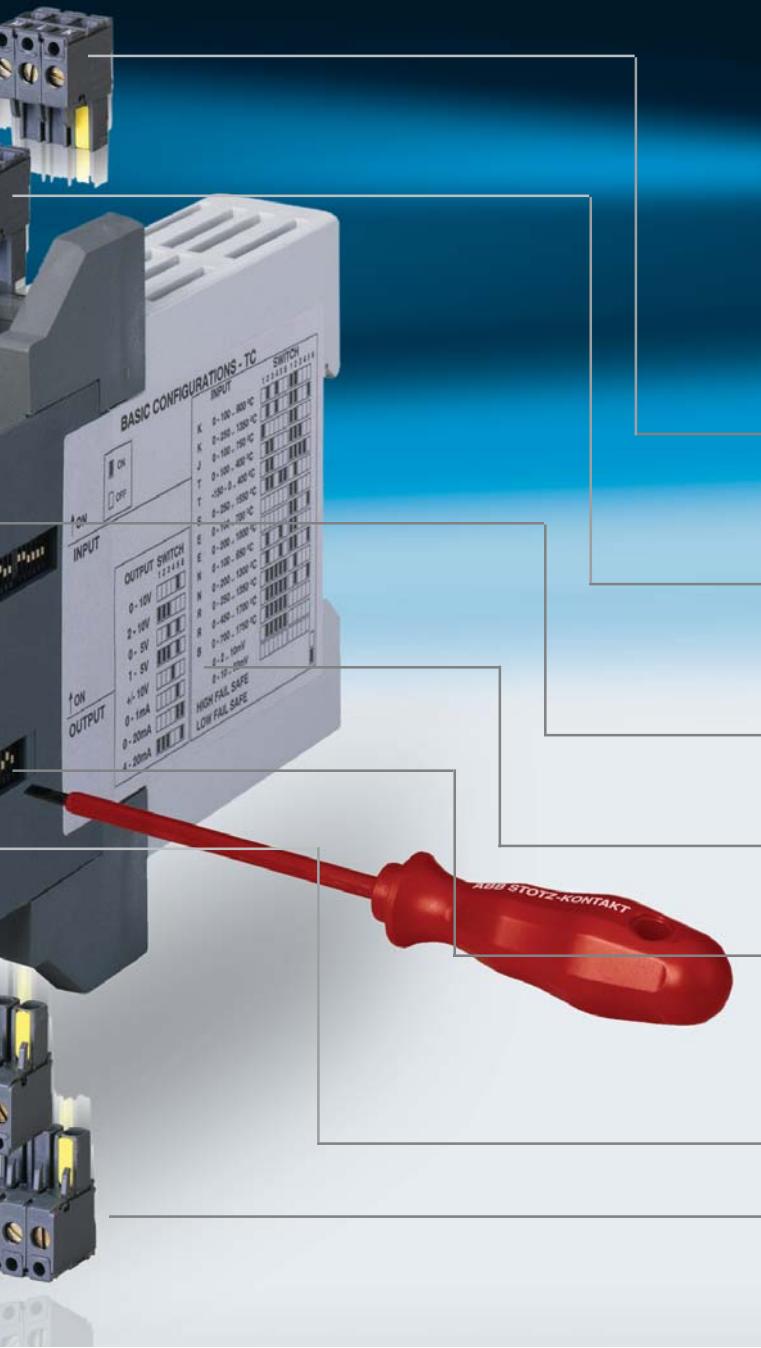

■ Safe

High precision, 3-way electrical isolation, short-circuit proof signal outputs.

Precise adjustment

All front-face configurations by clear and easily comprehensible operating elements.

The product range CC-U

offers devices for conversion of standard signals, temperature signals for RTD sensors (PT10, PT100, PT1000) and thermocouple signals, as well as devices for measuring RMS values of currents and voltages.

Eight different signal converters

for the conversion of all types of signals in processes and plants.

Pluggable connection terminals

for quick exchange without rewiring.

Terminal marking

on the front face.

Clear description of the configuration

printed on side adhesive labels.

Input and output signal ranges

configurable by directly accessible and easily comprehensible lateral DIP-switches (without opening of the enclosure).

Marker label

Eight different standard signal outputs in one device

By means of the universally designed output ranges the user can choose between 6 standard voltage outputs and 4 standard current outputs. Also there are devices with two threshold relay outputs.

Gain coarse

Amplification, preselection, coarse adjustment

Gain fine

Amplification, fine adjustment

Offset

Potentiometer for offset adjustment

T

The product range CC-E for analog signal conversion includes 79 devices in four functional groups (standard signals, temperature measurement by means of PT100 sensors or by means of thermocouples types J and K, current measurement). Each functional group includes one universally configurable device as well as single-function devices. Supply voltage is 24 V DC or 110 - 240 V AC.

The single-function devices do not require any adjustments – thus saving time and money. The input and output signal ranges of the four universal devices can be configured by means of directly accessible lateral DIP-switches. The gain and the offset of the universal converters can be adjusted within a range of +/- 5 % with the front-face potentiometer. All devices feature 3-way electrical isolation between input, output and supply (2,5 kV) to prevent interference which can falsify the measuring signals or destroy expensive measuring equipment connected to the converters. This way you are ensured a safe and correct transmission of the processed signal within the application. The CC-E converters contribute to the safety in processes and plants at a very attractive price/performance ratio.

CC-E is the cost-efficient solution in the field of analog signal conversion.
