STATE HIGHWAY LOCATION REFERENCE

Introduction

This highway reference was established through the combined efforts of the State Highway Administration and the DOT Data Center working together to provide a method for uniquely identifying roadway locations (milepoints), and also to provide data elements that are most commonly requested.

With the ever increasing use of the computer and a growing realization of its capabilities to store and analyze data, it is essential that data relating to the highways be keyed to a common reference system in order that procedures for useful comparisons can be made related to the characteristics of the highways, government and administrative jurisdictions, geographic locations, program expenditures, traffic, services, etc. As new programs are proposed and implemented to deal with complex problems, needs for new kinds of information providing additional relationships become apparent and the use of a common reference system will provide detail and comparison of data necessary for planning, developing programs and managing the highway activities.

Since the use of the photolog/videolog has become increasingly important and is currently being utilized more frequently by SHA personnel to collect and analyze data, this Location Reference will provide information concerning the section of highway being viewed and is easily related due to the identifying roadway location (milepoints) used as the controlled key on each picture being the same as this listing.

This reference is based on conditions as of January 1, 1989. At present, procedures for incorporating changes, additions, deletions, etc. on a current basis are not available. The reference data will be updated on an annual basis with all data being based as of January 1st of each year. A corrected file showing all changes that occur during the year will be maintained by the Highway Information Services Division.

GENERAL INFORMATION

This highway reference is arranged sequentially by county and by route number. Included are all State maintained highways, spurs, and service roads.

Milepoints for concurrent posted routes are included under each pertinent route number.

The State System is aggregated into primary and secondary by rural and urban designation.

The Federal System is aggregated into the various Federal Aid Systems by rural and urban designation. This is the functionally realigned system approved as of July 1, 1980.

Highways may be listed as undivided, divided or channelized by full, partial, or no control of access.

Milepoints are established for junctions of all State highways, structures, railroad crossings, traffic counts, and geographical boundaries.

The total marked lanes are listed including the traveled-way surface widths. Surface type codes are explained at the bottom of each page.

The average annual daily traffic is for the year 1988.

This reference represents only a portion of the data included in the Highway Information System. Additional data may be obtained by directing your request to the Highway Information Services Division.

FEDERAL AID SYSTEM CLASSIFICATION CODES

<u>CODE</u>	<u>DESCRIPTION</u>
FAI	Federal Aid Interstate
FAP	Federal Aid Primary
FAS	Federal Aid Secondary
FAU	Federal Aid Urban
NFA	Non-Federal Aid
