# ViewBoard® Interactive Displays

Newly upgraded ViewSonic® IFP50 Series

# Limitless Collaboration and Endless Creativity

Connect. Collaborate. Create.

Designed to help classrooms connect, collaborate and create, the newly upgraded IFP50 series of interactive displays delivers exactly what you need to drive engagement, energize and motivate students, and make teaching more fun.

Featuring state-of-the-art touch display technology, ViewBoard interactive displays deliver an ultra-smooth, natural handwriting experience. With stunning 4K resolution, upgradeable slot-in PC options, and secure myViewBoard<sup>®</sup> software, these interactive displays offer a customizable, secure, and future-proof whiteboarding solution for any classroom or huddle space.

## ViewSonic myViewboard® software is a powerful tool that enables teachers to build dynamic lesson plans, import engaging content, and share lessons with students.

Whether yours is a Windows, Android, Mac or Chrome environment, myViewBoard works well with existing technology and seamlessly integrates into nearly any classroom.

• **myViewBoard:** A digital whiteboard designed to run on all operating systems. It's ideal for use on large touchscreen displays, but will also run on non-interactive screens such as a laptop screen, where mouse clicks replace touch for interaction.

• **Manager**: The included Manager<sup>™</sup> software enables IT admin to securely setup, manage and maintain all of your school's digital displays from a centralized dashboard.

• **Classroom:** Classroom is an online teaching tool packed with a variety of features to help you effortlessly create and manage a classroom environment in the digital space that connects you to your students wherever they may be.

## ViewBoard Cast enables content streaming from any device onto a ViewSonic display over wireless or cable networks.

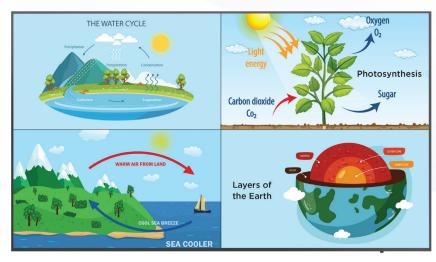

• Wirelessly share content from any device: Stream content from Windows, Mac, iOS, Android, and Chromecast devices onto a ViewSonic display. Instant streaming means no valuable meeting time or class time is wasted.

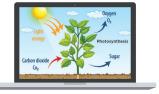

• **Multi-screen sharing:** Up to four users can simultaneously annotate content (such as documents, cloud files, multimedia, etc.) on their devices in real time. That content can then be streamed and shared onto the ViewBoard display via four split screens.

• **Remote touch control:** A host can remotely access and control a presenter's Windows or Mac device via touch control on the ViewBoard display. Touch annotations on the ViewBoard display will then appear on the controlled device.

# **Drive Engagement, Energize and Motivate Students**

## **ViewBoard Specifications**
