Best Practice Deployment of F5 App Services in Public Clouds

Andrew Hendry, Sr Mgr Product Marketing

Alex Applebaum, Sr PME

Cloud Adoption Continues...

...across industries, geographies, and customer segments

66% say agility/speed is main driver for moving to private clouds¹

By 2019, **25–30%** of Global 2000 enterprises will implement hybrid cloud, up from 10–15%²

20% of F5 customers plan to migrate up to 50% of their workloads to the cloud³

Moving **60%** of its 9,000 apps to cloud

Deployed its **most critical workloads**, including new flagship mobile-banking app, to AWS

100% of web and mid-tier apps on OpenStack—time to market went from 8 weeks to 1 day

¹ Source: 2015 Gartner DC Conference Poll

² Source: 2015 Gartner Data Center Conference

Deployment Mix Shifting Towards Public Clouds

DEPLOYMENTS ARE TYPICALLY HYBRID

BUT WORKLOADS ARE MOVING TO PUBLIC

PROJECTION OF CLOUD WORKLOADS
2015 CLOUD INDEX REPORT

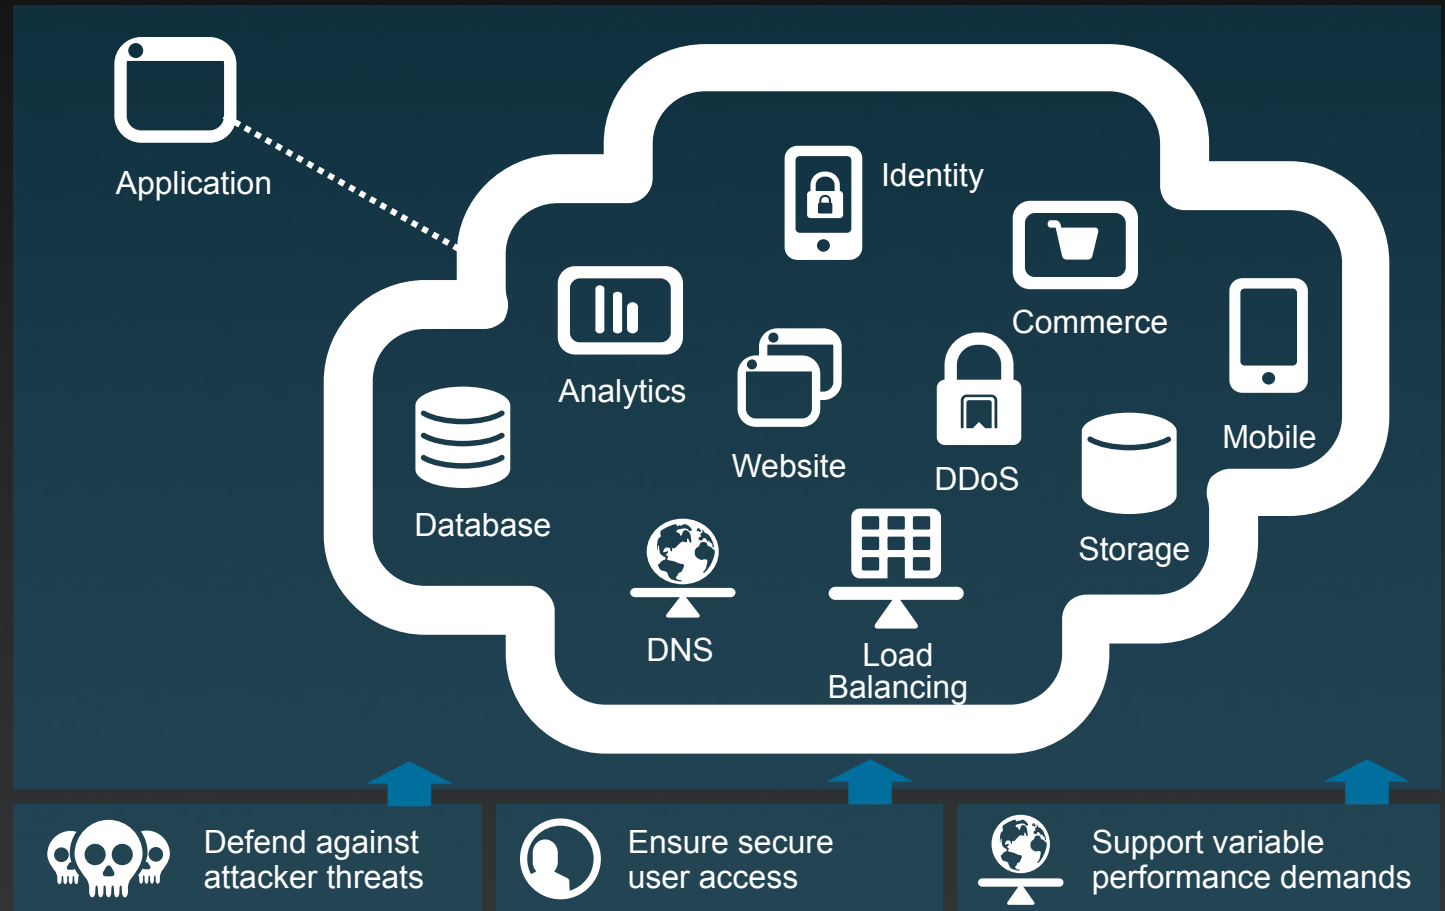

The challenge with today's cloud services

Lack of standardized app services with centralized control

Public cloud vendors offer services-centric model that delivers individual building blocks

Availability and security limited to the network or individual services

Inconsistent app security services and policies can introduce significant risk for vulnerabilities

You must combine components of the cloud platform to ensure app delivery meets user requirements

Your cloud strategy should be an extension of your data center strategy: app-centric

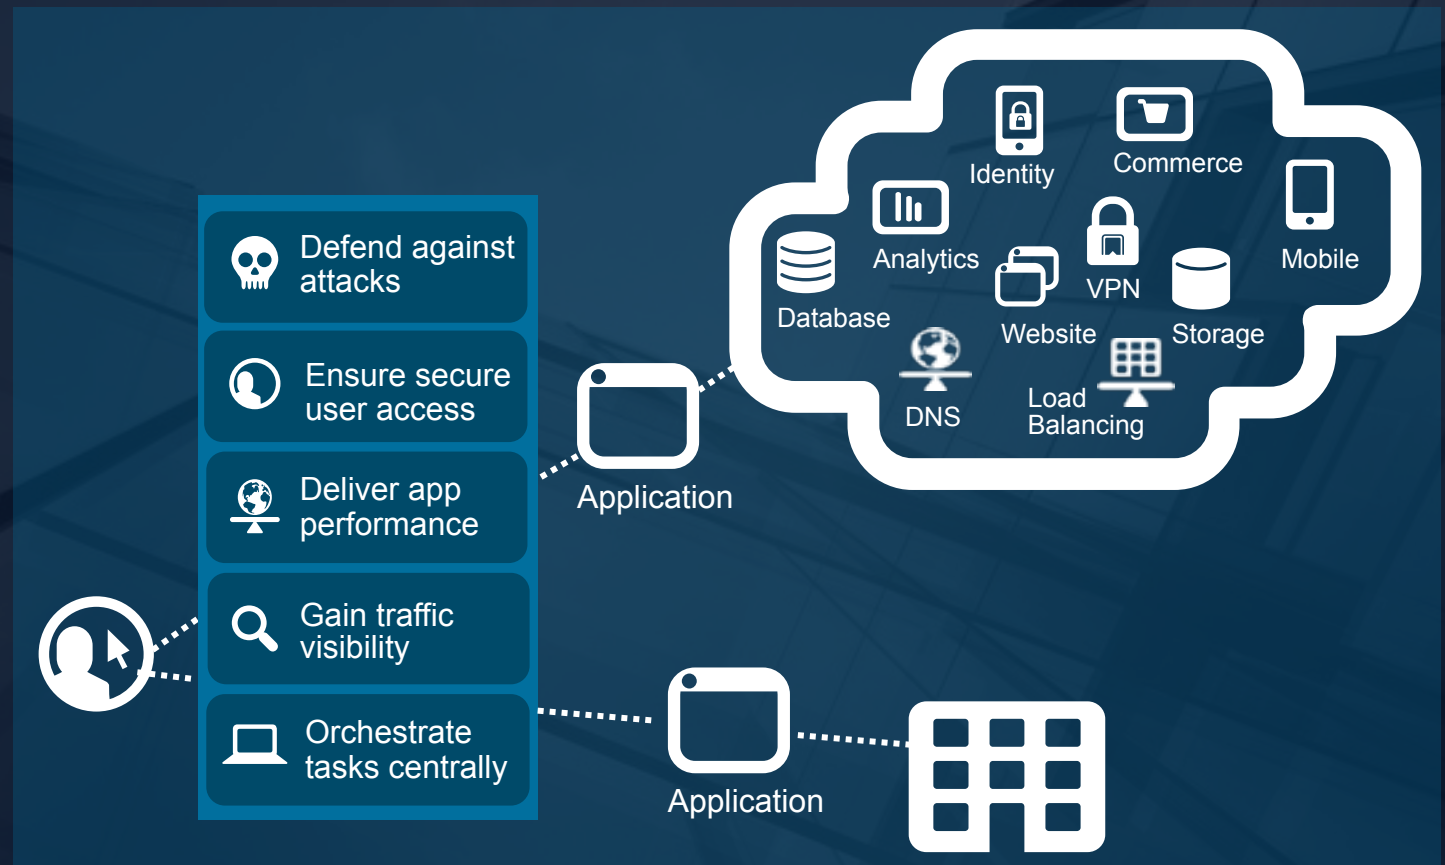

Enable both network and application security

Deliver application high availability; not just infrastructure availability

Ensure application performance

Centralize management and orchestration of the application

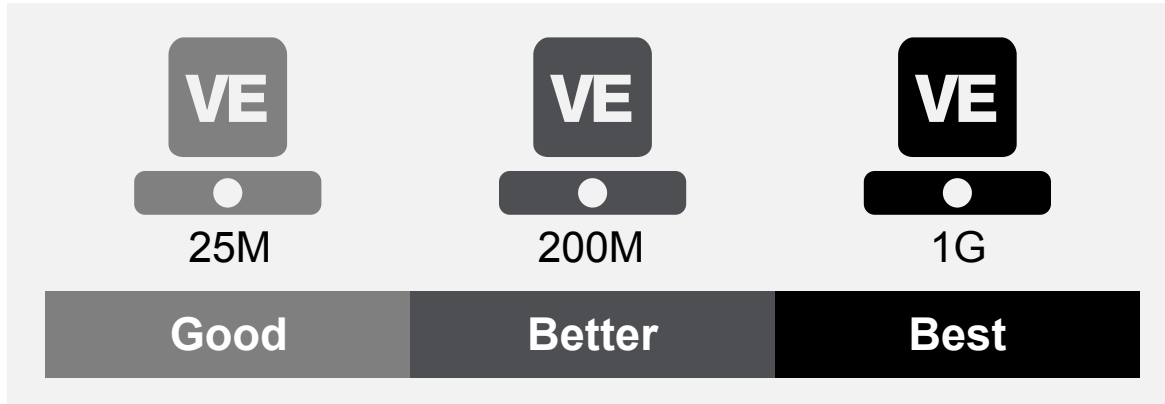

Streamline app delivery and security services across on-premises and cloud

Letting you focus on ensuring availability, security, and performance for each application

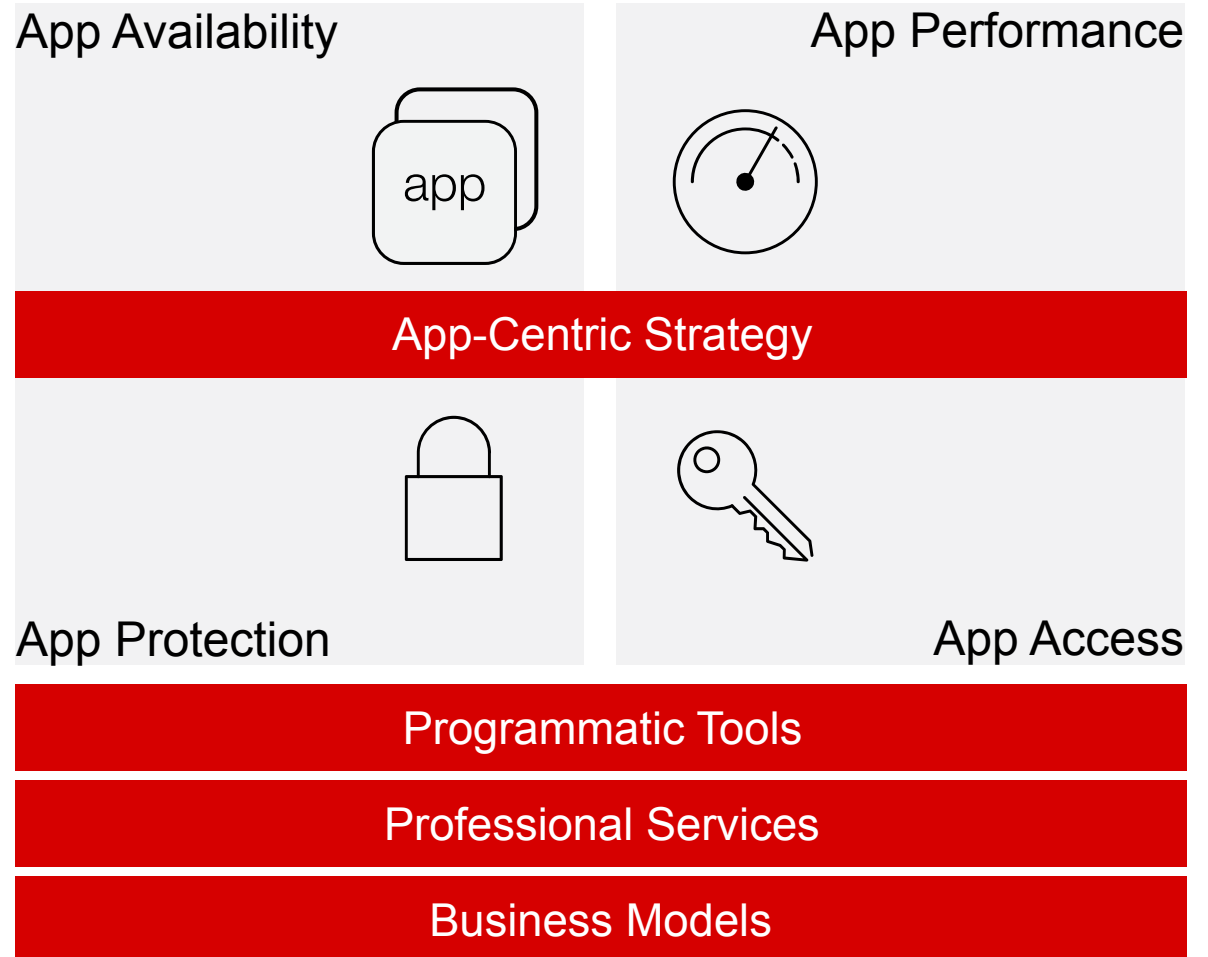

F5 Public Cloud Solutions and Use Cases

Application Availability

Extend availability your users expect to cloud-based apps

Challenges

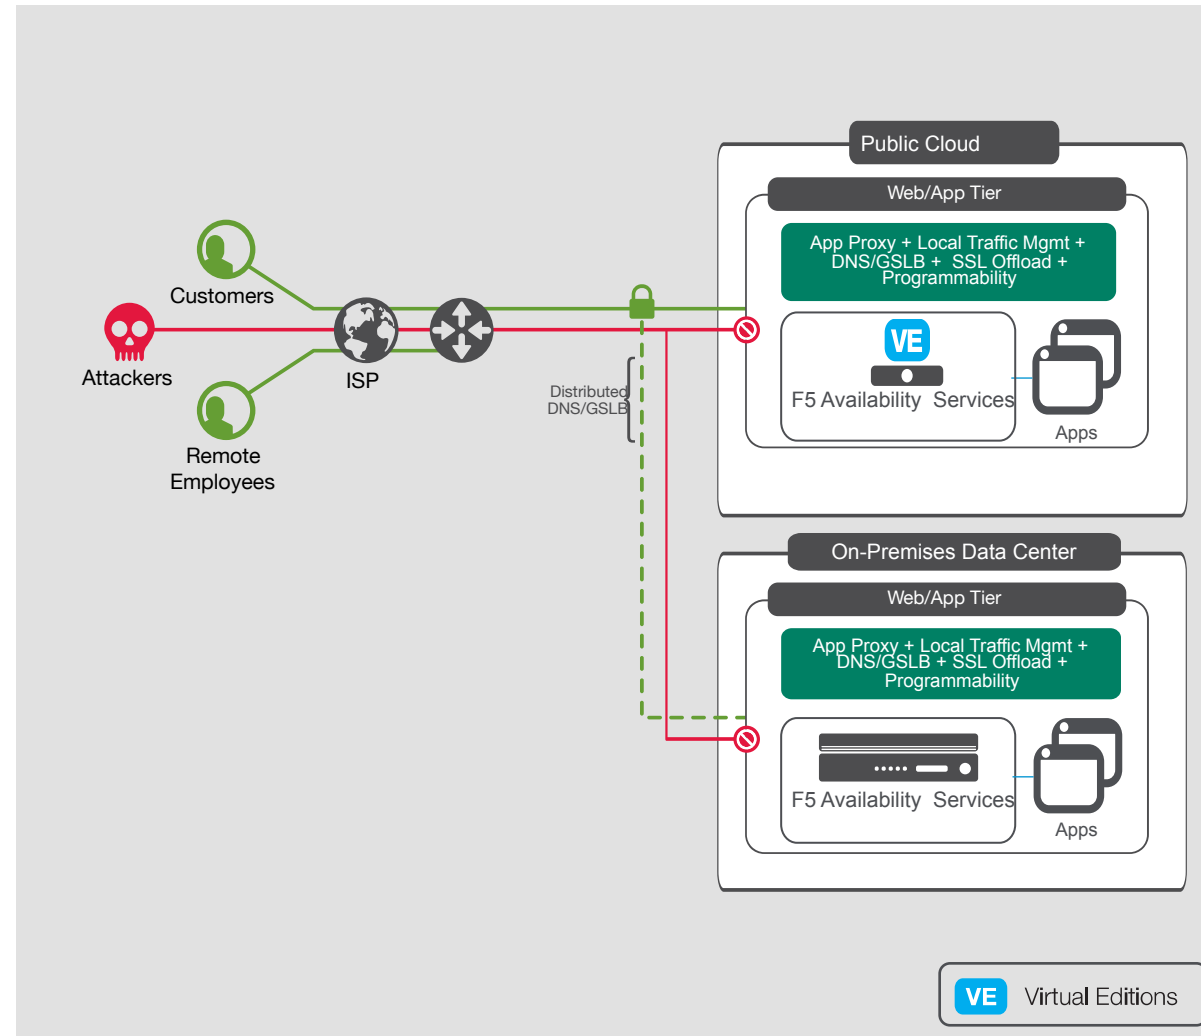

- Application uptime and resiliency
- Lack of application control and flexibility
- Disaster recovery

Recommended app delivery services

- Local + global traffic management, DNS
- SSL offload and intercept
- App templates to deliver consistent powerful application policies (ex. URI routing/WAF/etc.)

Key Benefits

- Deliver customer SLAs
- Monitor + dynamically respond to issues
- Business continuity

Application Availability

Extend availability your users expect to cloud-based apps

Challenges

- Application uptime and resiliency
- Lack of application control and flexibility
- Disaster recovery

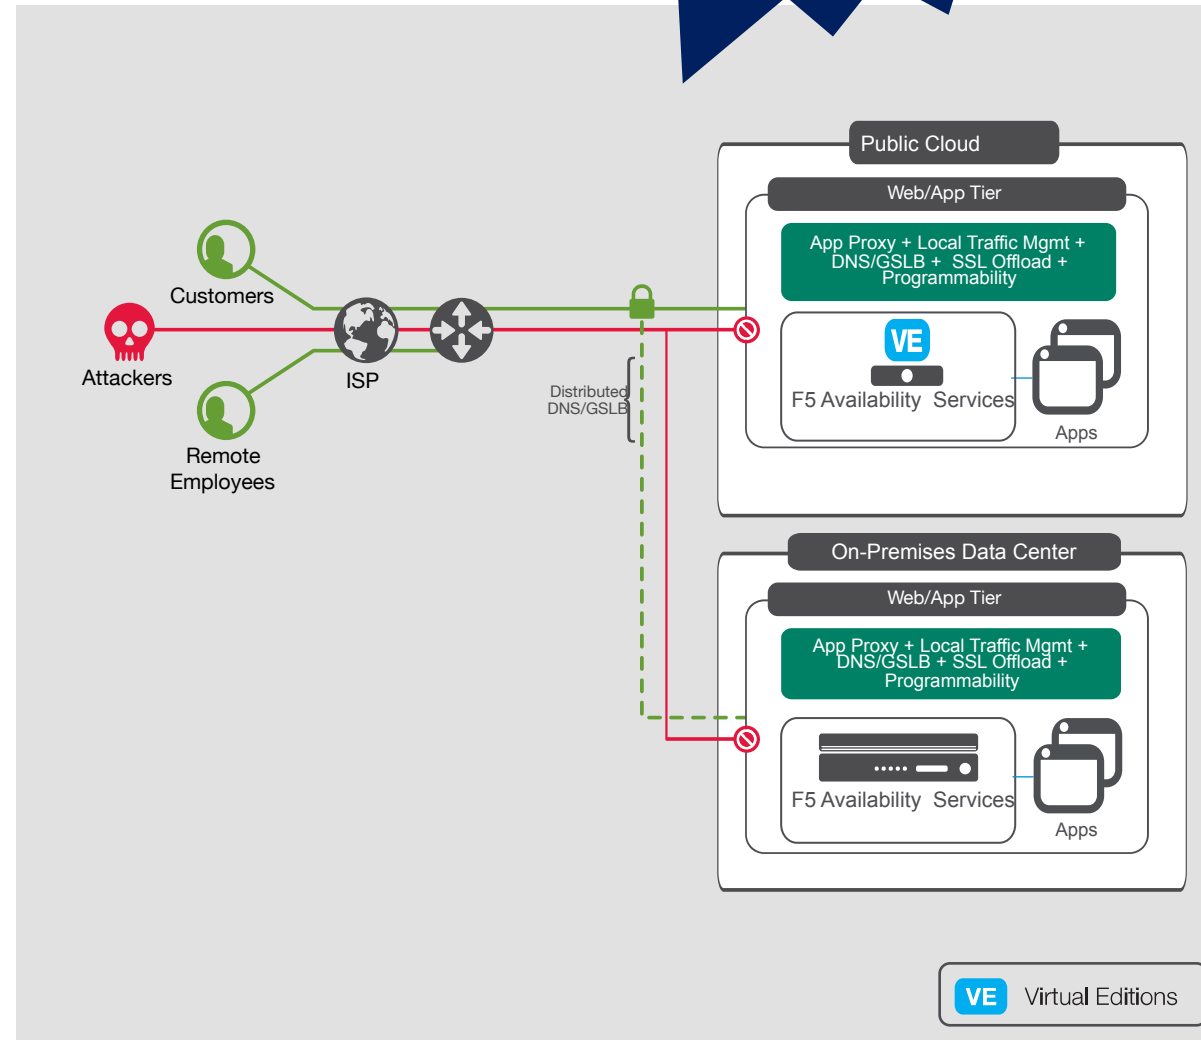

Recommended app delivery services

- Local + global traffic management, DNS
- SSL offload and intercept
- App templates to deliver consistent powerful application policies (ex. URI routing/WAF/etc.)

Key Benefits

- Deliver customer SLAs
- Monitor + dynamically respond to issues
- Business continuity

**Best Practice:
Leverage Scale Out,
GSLB and Failover
Across AZs**

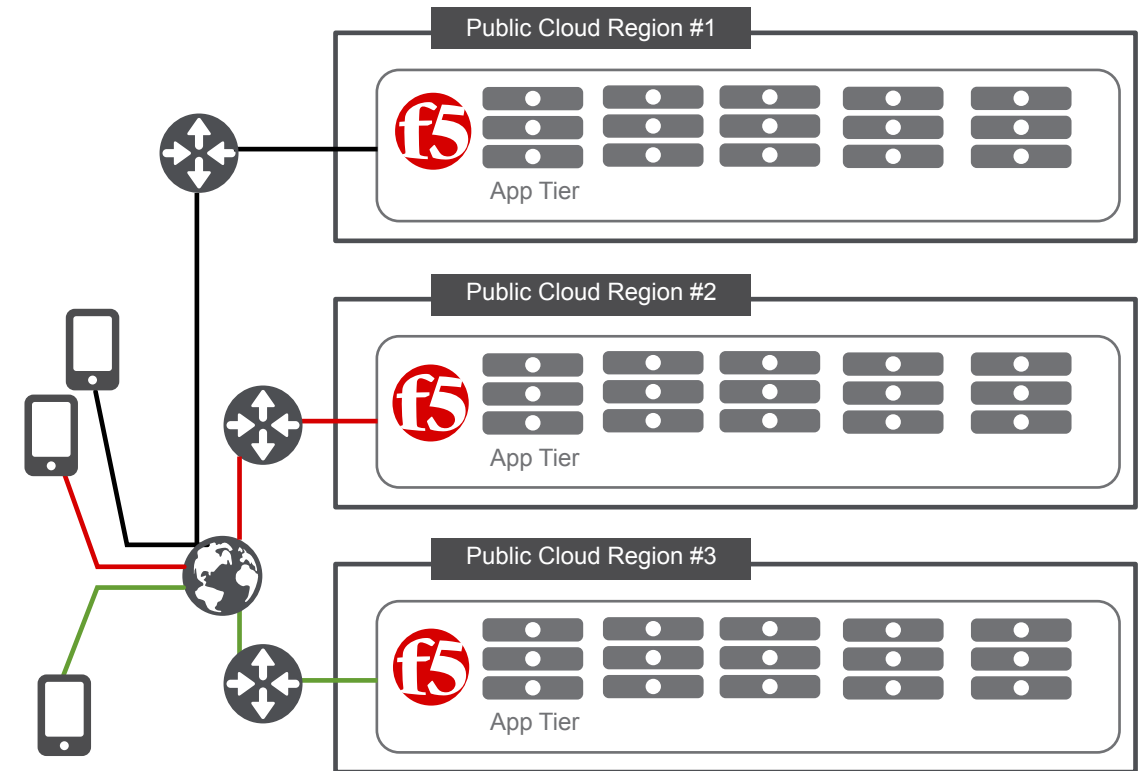

Cloud Traffic Optimization Solution with Context-Aware Programmability

Solution Background and Needs

- Increasing connection handling capacity —caused by long live connections on push applications
- Needs to optimize/reduce compute instances on AWS

Key Benefits

- Reduce OpEx and compute instances on cloud – by 88%

App Performance

Extend performance to cloud-based apps

Challenges

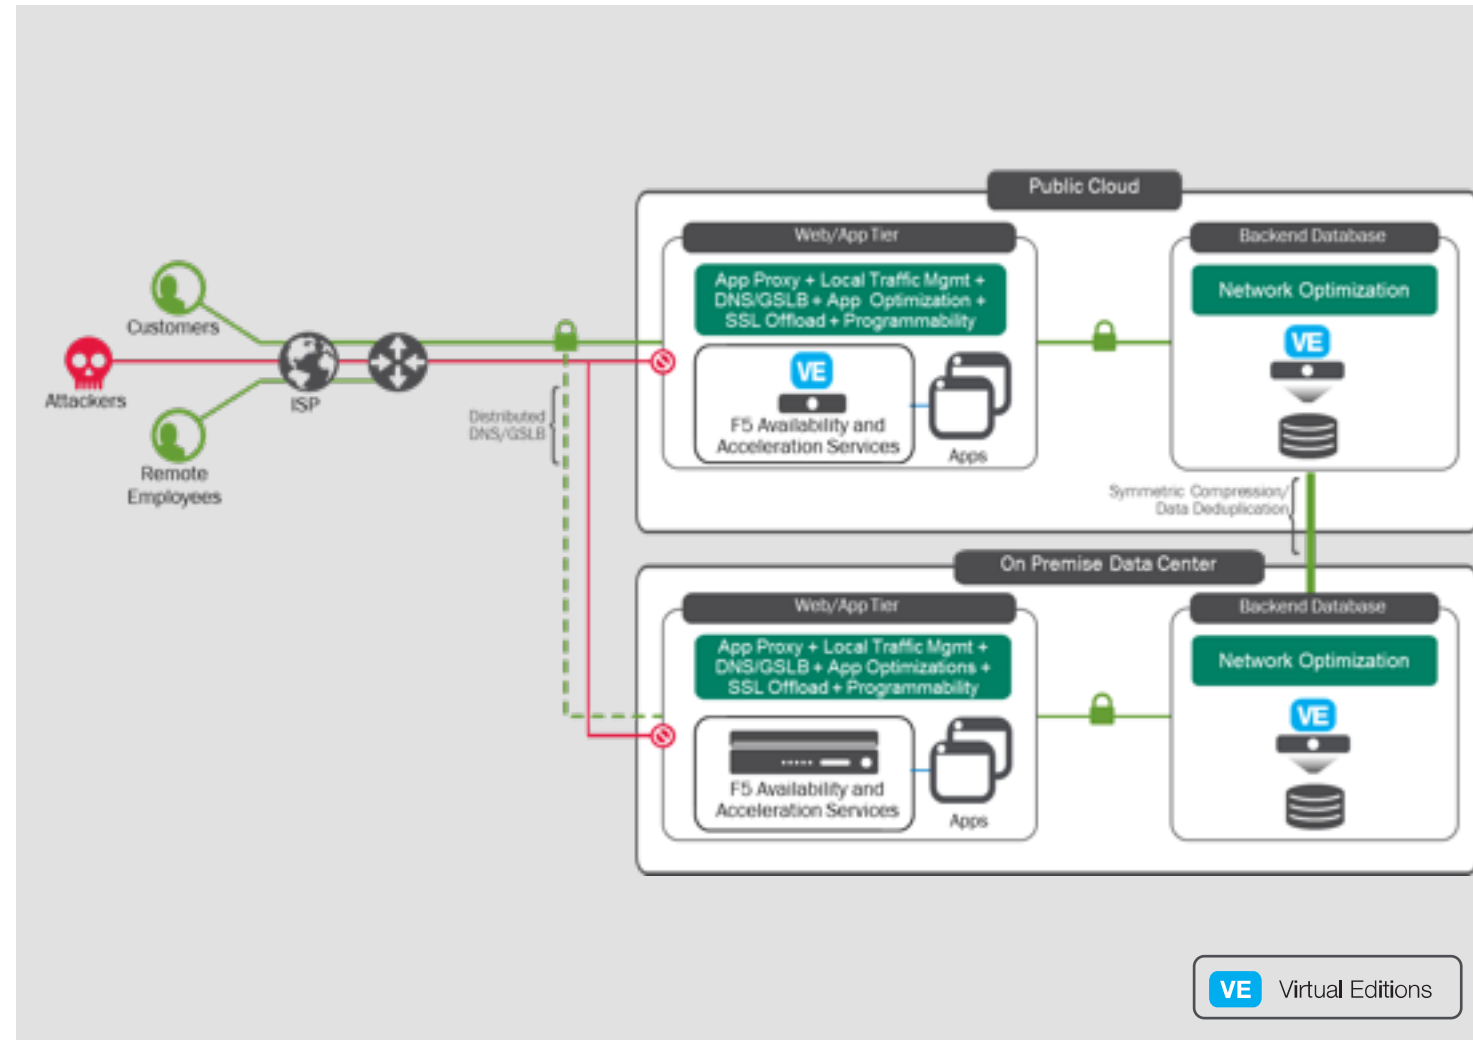

- Lack of application control and flexibility
- Disaster recovery
- **Slow performing apps and latency**

Recommended app delivery services

- Local + global traffic management, DNS
- SSL offload and intercept
- App templates to deliver consistent powerful application policies (ex. URI routing/WAF/ etc.)
- **HTTP2, TCP, and network optimization**

Key Benefits

- Deliver customer SLAs
- Monitor + dynamically respond to issues
- Business continuity
- **Achieve user performance expectations**

App Performance

Extend performance to cloud-based apps

Challenges

- Lack of application control and flexibility
- Disaster recovery
- **Slow performing apps and latency**

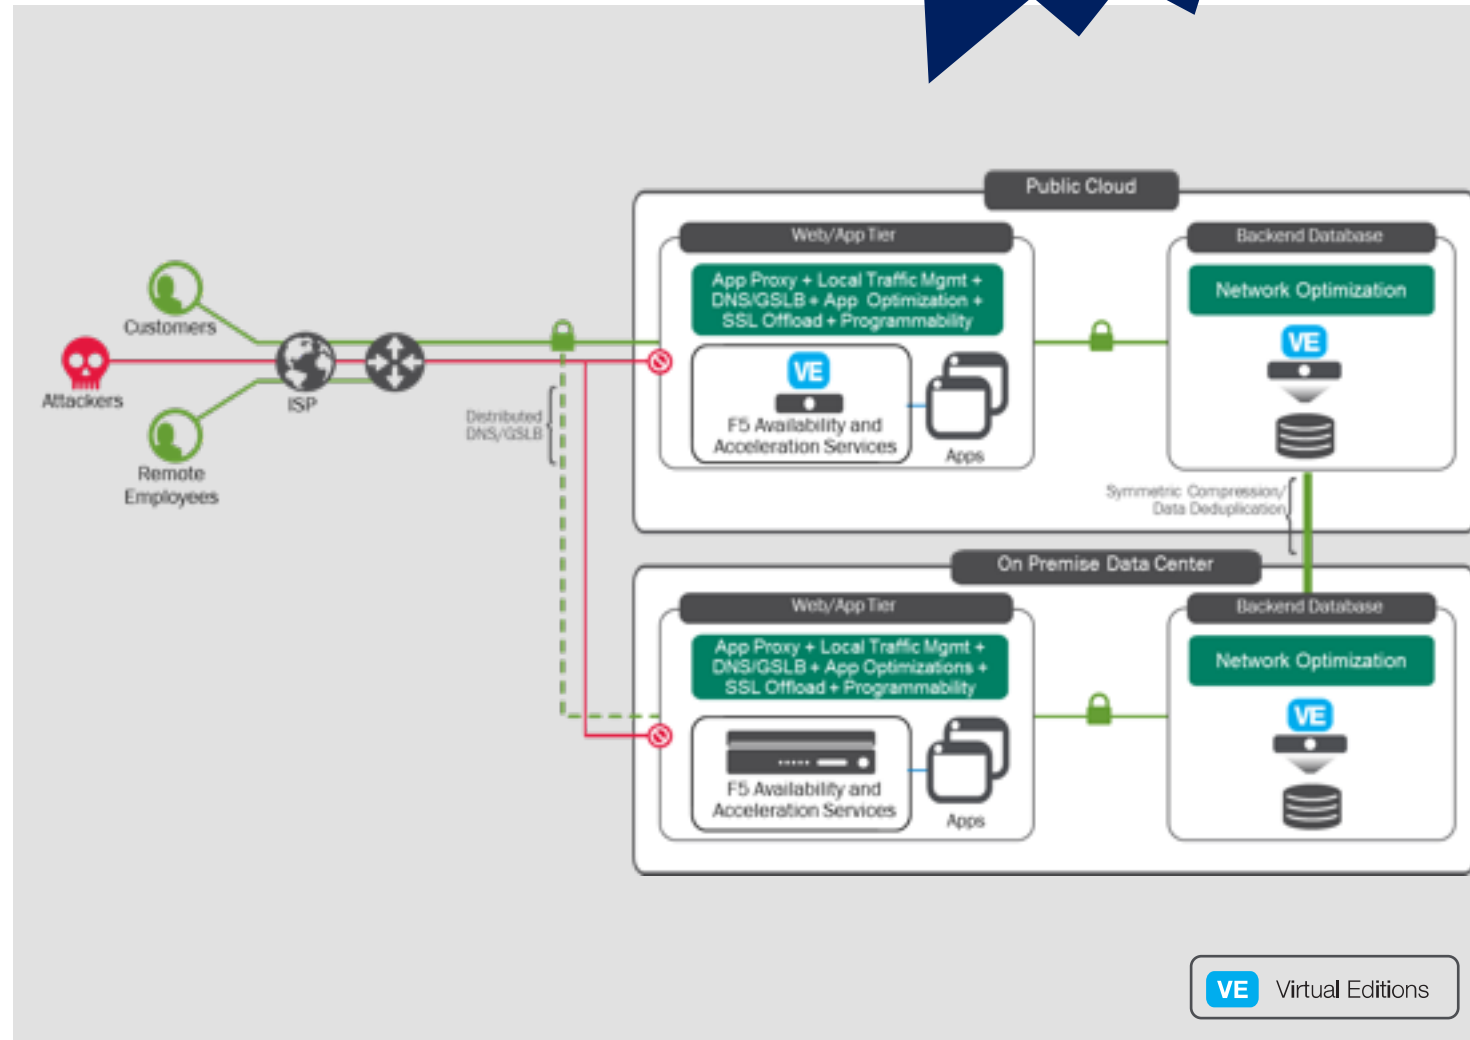

Recommended app delivery services

- Local + global traffic management, DNS
- SSL offload and intercept
- App templates to deliver consistent powerful application policies (ex. URI routing/WAF/ etc.)
- **HTTP2, TCP, and network optimization**

Key Benefits

- Deliver customer SLAs
- Monitor + dynamically respond to issues
- Business continuity
- **Achieve user performance expectations**

**Best Practice:
Apply Dynamic
Autoscale**

Access Control

Ensure granular control in the cloud

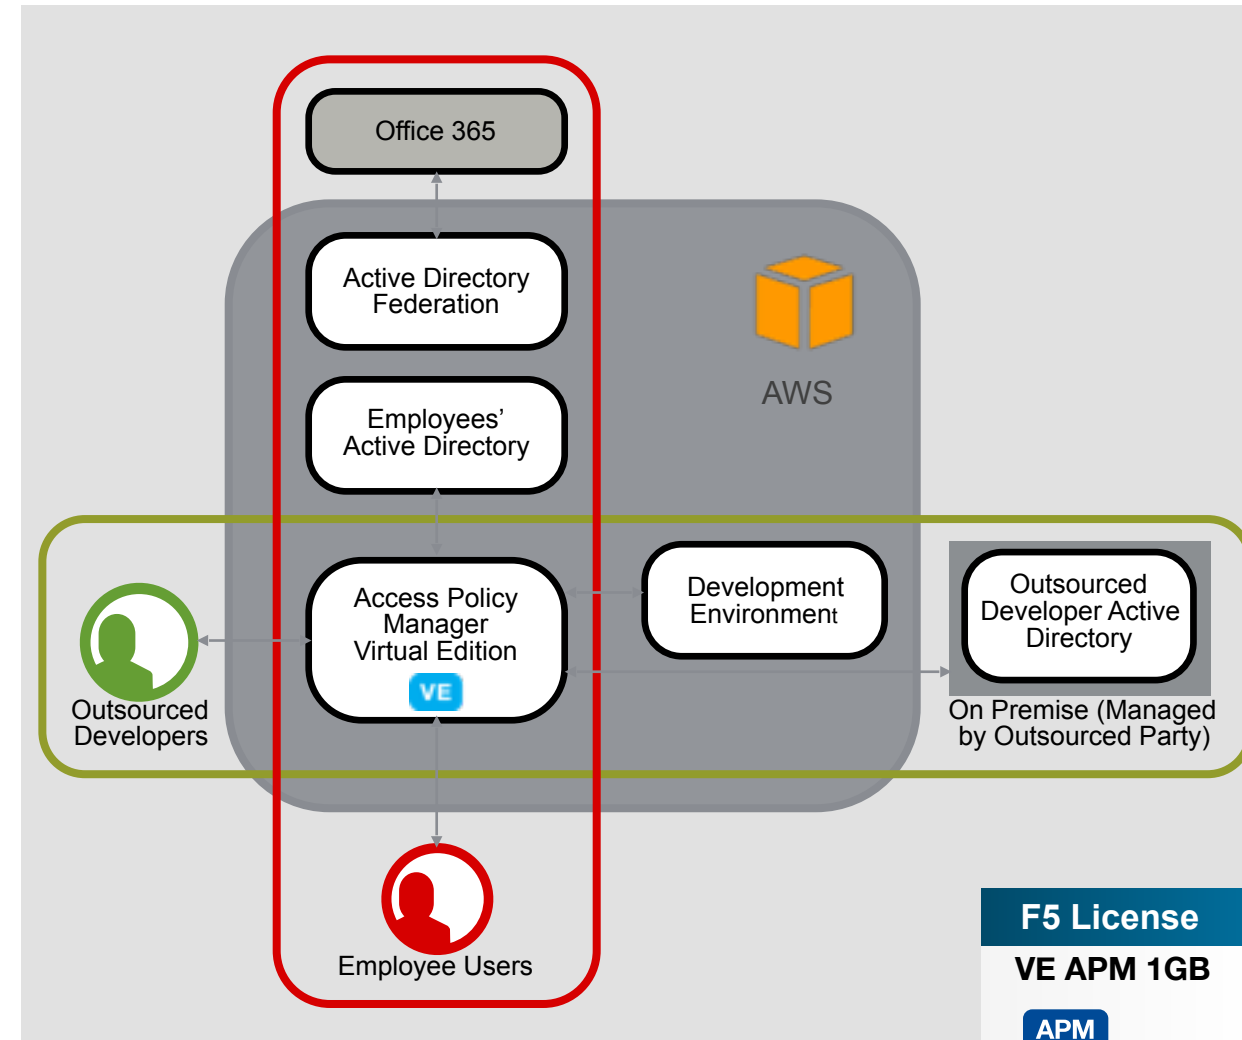

A Japanese utility outsourced their software developments to 3rd party and implements highly secured access control management

Solution Background & Needs

- Support SAML cloud federation – O365
- Cloud based access control -performance
- Simplify security management for 3rd party access – Secured SSL VPN

Key Benefits

- Improved performance, skills retention, APM's stringent endpoint checking control
- Eased operations for policy management
- Single sign-on and federated access for future SAML integration

Access Control

Ensure granular control in the cloud

A Japanese utility outsourced their software developments to 3rd party and implements highly secured access control management

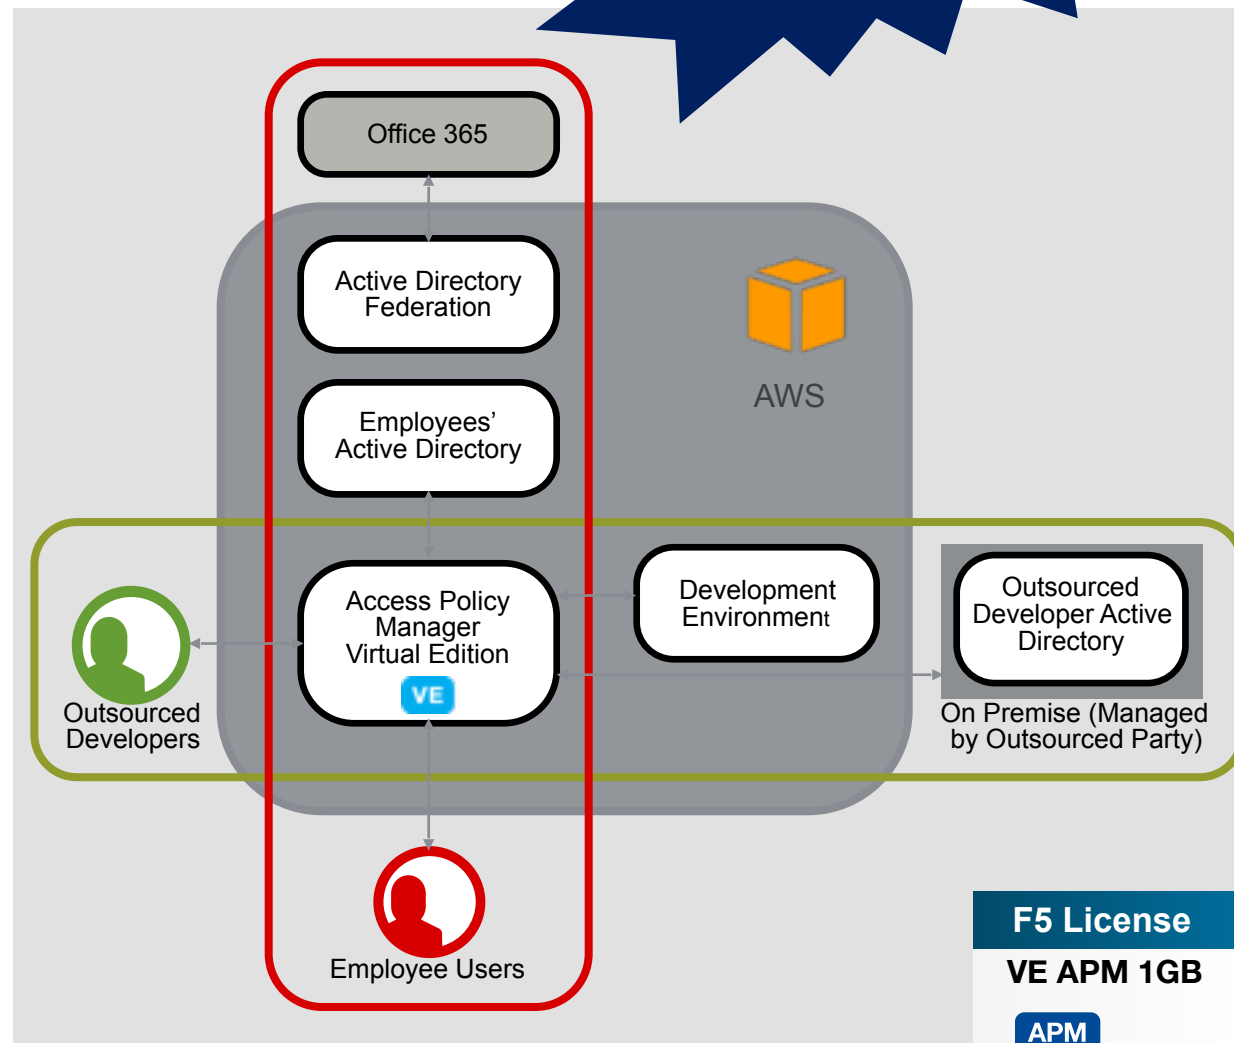

Solution Background & Needs

- Support SAML cloud federation – O365
- Cloud based access control -performance
- Simplify security management for 3rd party access – Secured SSL VPN

Key Benefits

- Improved performance, skills retention, APM's stringent endpoint checking control
- Eased operations for policy management
- Single sign-on and federated access for future SAML integration

**Best Practice:
Federate Your
Cloud-Based Apps**

Application Security on AWS

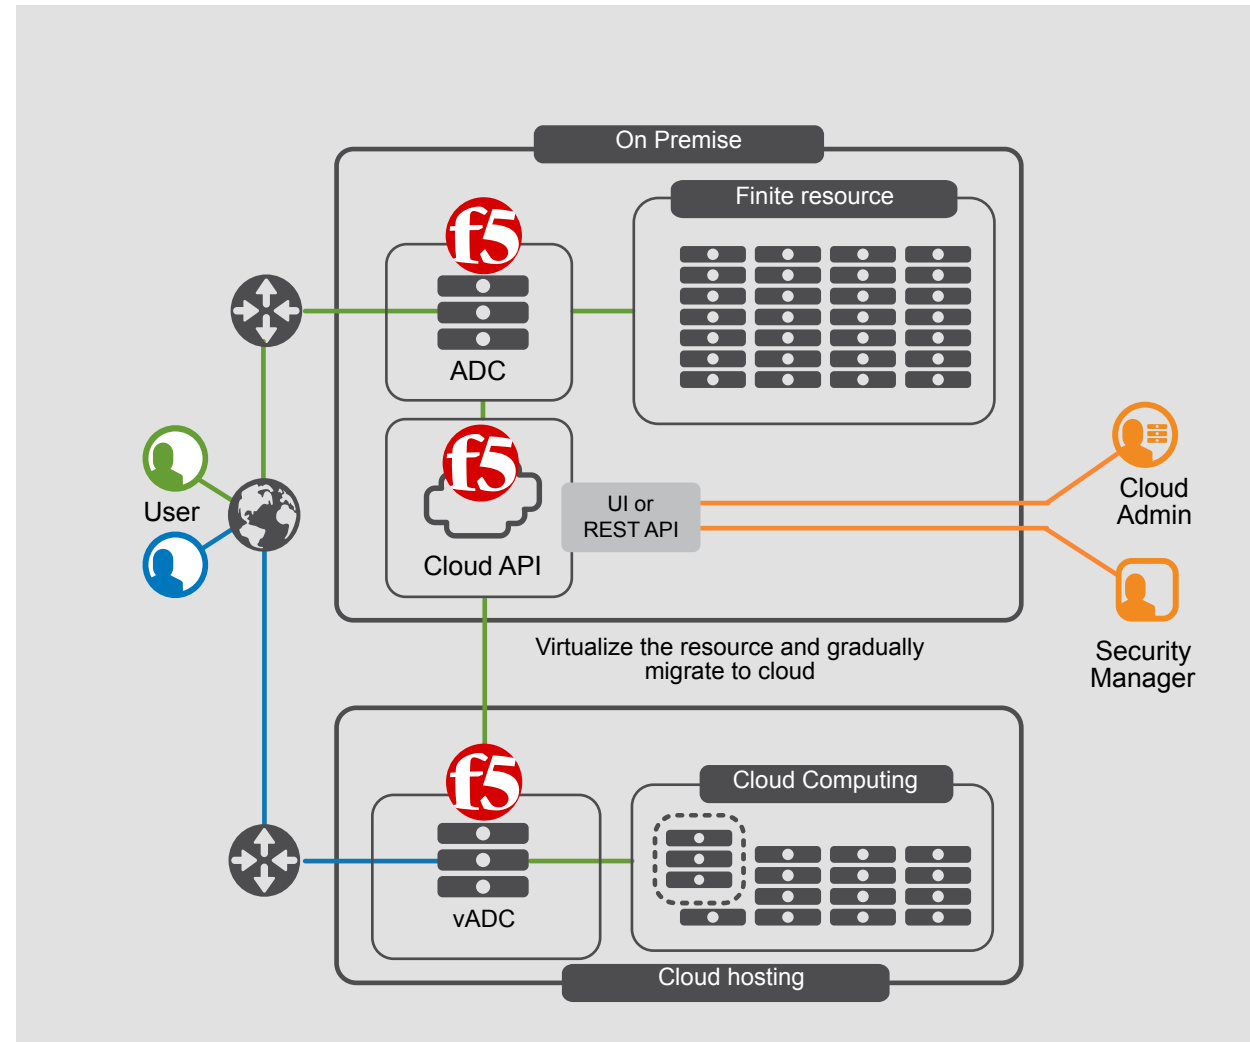

Financial services company has adopted the Cloud First strategy. They plan to migrate about 2000 applications to AWS by end of 2016.

Solution Background & Needs

- Seamless Migration – existing F5 WAF user
- Simplified and consolidated security management

Key Benefits

- Robust application and data protection
- Customized shell scripts to address cross region availability issues
- Skills Retention – seamless migration
- Single platform – simplified, scalable, cost effective

Application Security on AWS

Financial services company has adopted the Cloud First strategy. They plan to migrate about 2000 applications to AWS by end of 2016.

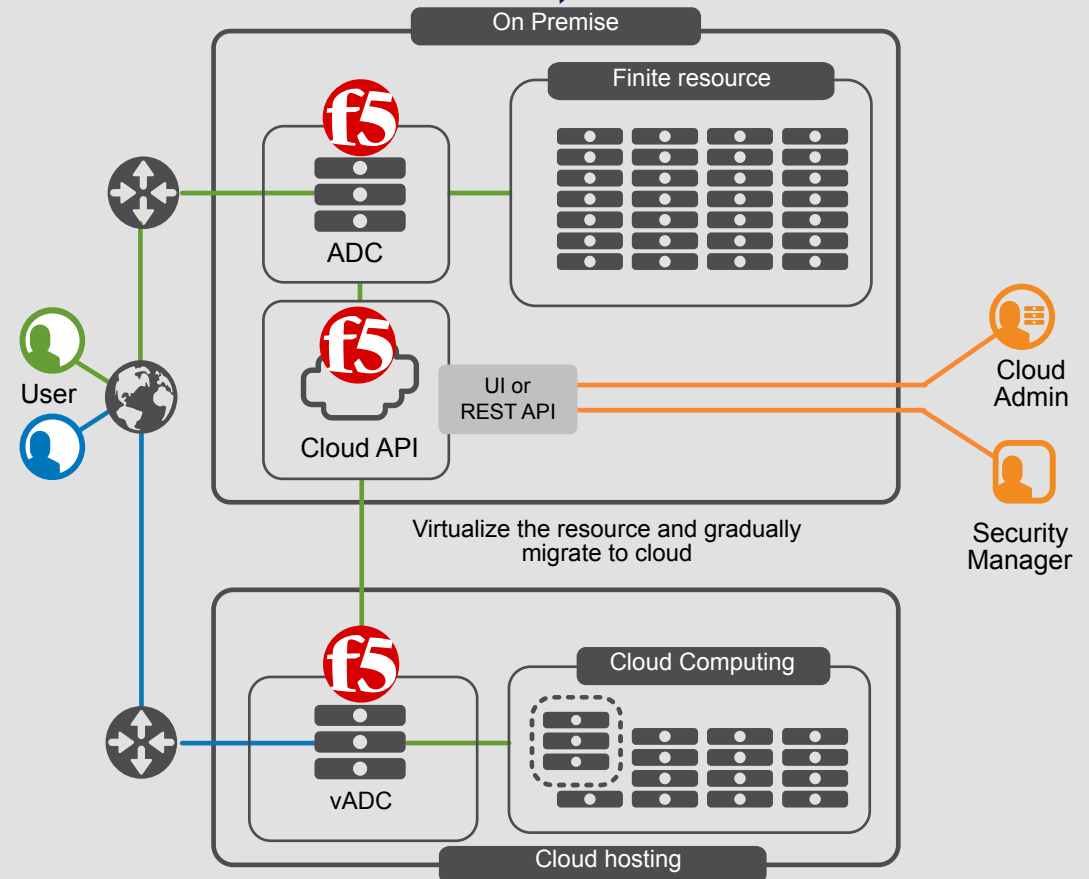

**Best Practice:
Secure ALL Apps,
Not just Tier 1**

Solution Background & Needs

- Seamless Migration – existing F5 WAF user
- Simplified and consolidated security management

Key Benefits

- Robust application and data protection
- Customized shell scripts to address cross region availability issues
- Skills Retention – seamless migration
- Single platform – simplified, scalable, cost effective

F5 Turnkey WAF Solution for Azure Security Center

The image shows two screenshots from the Microsoft Azure interface. The top screenshot is from the Azure Marketplace, displaying the 'F5 Web Application Firewall by F5 Networks' product page. It features the F5 logo, the product name, and a prominent green 'Create Virtual Machine' button. The bottom screenshot is from the Azure Security Center 'Recommendations' page. It shows a list of security recommendations, with 'Add a Web Application Firewall' highlighted in blue. To the left, there are resource health indicators and a bar chart showing security alerts over time.

- **Simple deployment experience** integrated with Azure workflow and services
- **Out-of-the-box choice of security settings** preconfigured by F5 experts
- **Comprehensive application security and compliance** with advanced L7 protections
- **Choice of pay-as-you go and BYOL** to best fit business scenario
- **Integration with Azure dashboard** and alert/visualization services

Restrict traffic through Web Application Firewall	2 Web App	In Progress	Medium

Use existing web application firewall

Create new web application firewall

- Microsoft Web Application Firewall by F5 Networks
- Microsoft Azure Firewall
- Microsoft Azure Firewall
- Cloud Firewall by F5 Networks

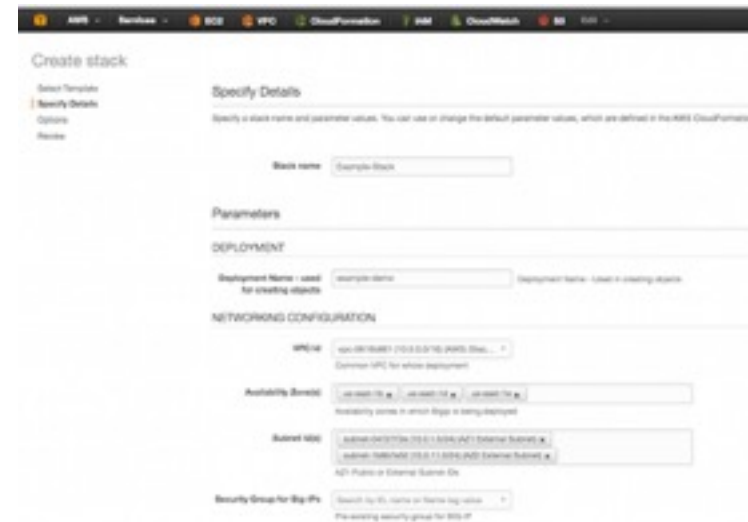

- **Simple deployment experience** integrated with Azure workflow and services
- **Out-of-the-box choice of security settings** preconfigured by F5 experts
- **Comprehensive application security and compliance** with advanced L7 protections
- **Choice of pay-as-you go and BYOL** to best fit business scenario
- **Integration with Azure dashboard** and alert/visualization services

**Best Practice:
Web App with
Port 80 and/or 443**

Automation/Orchestration Best Practices

Deploy using Templates

Common interface among clouds!

AWS = Cloudformation Templates

<https://github.com/f5networks/f5-aws-cloudformation>

Azure = Azure Resource Templates

<https://github.com/f5networks/f5-azure-arm-templates>

Openstack = Heat Templates

<https://github.com/f5networks/f5-openstack-heat>

Automation/Orchestration Best Practices

Cloud-Init – What is it?

Allows for boot time customization of images

Retrieves user data from an external source and performs actions

Will be enabled by default in all BIG-IP VE instances except for Azure

Can be disabled after first boot

Use Cases:

- Configures Hostname, Network and Security Information
- Dynamically discover environment/deployment specific information
- (ex. Deployment Names, Autoscale Group Names, S3 Buckets, etc. from items just created)

Automation/Orchestration Best Practices

Manage Operational Lifecycle

SDKs (uses Big-IP's iControl REST API):

<https://github.com/f5networks/f5-common-python>

Ansible Libraries (facilitates common tasks)

<https://github.com/F5Networks/f5-ansible>

Turn-Key WAF Solution for Microsoft Azure Enable compliance and better protect your applications with the F5 web application firewall(WAF) solution:

- Simple deployment experience integrated with Azure workflow and services
- Out-of-the-box protection from common application vulnerabilities
- Consistent policy management and user experience across Cloud and Datacenter apps

The F5 WAF solution is powered by the industry-leading F5 [BIG-IP Application Security Manager](#) and [BIG-IP Local Traffic Manager](#) technologies and provides:

- Three security settings preconfigured by F5 experts
- Out-of-box defense against OWASP Top 10 threats and layer 7 DDoS attacks
- Compliance with PCI-DSS requirements and ICSA Labs certification
- Automated security policy hardening with build-in Rapid Policy Builder
- Ability to customize the configurations after original deployment

DEMO – Getting Started in AWS Using Automation

*ASG = AutoScale Group

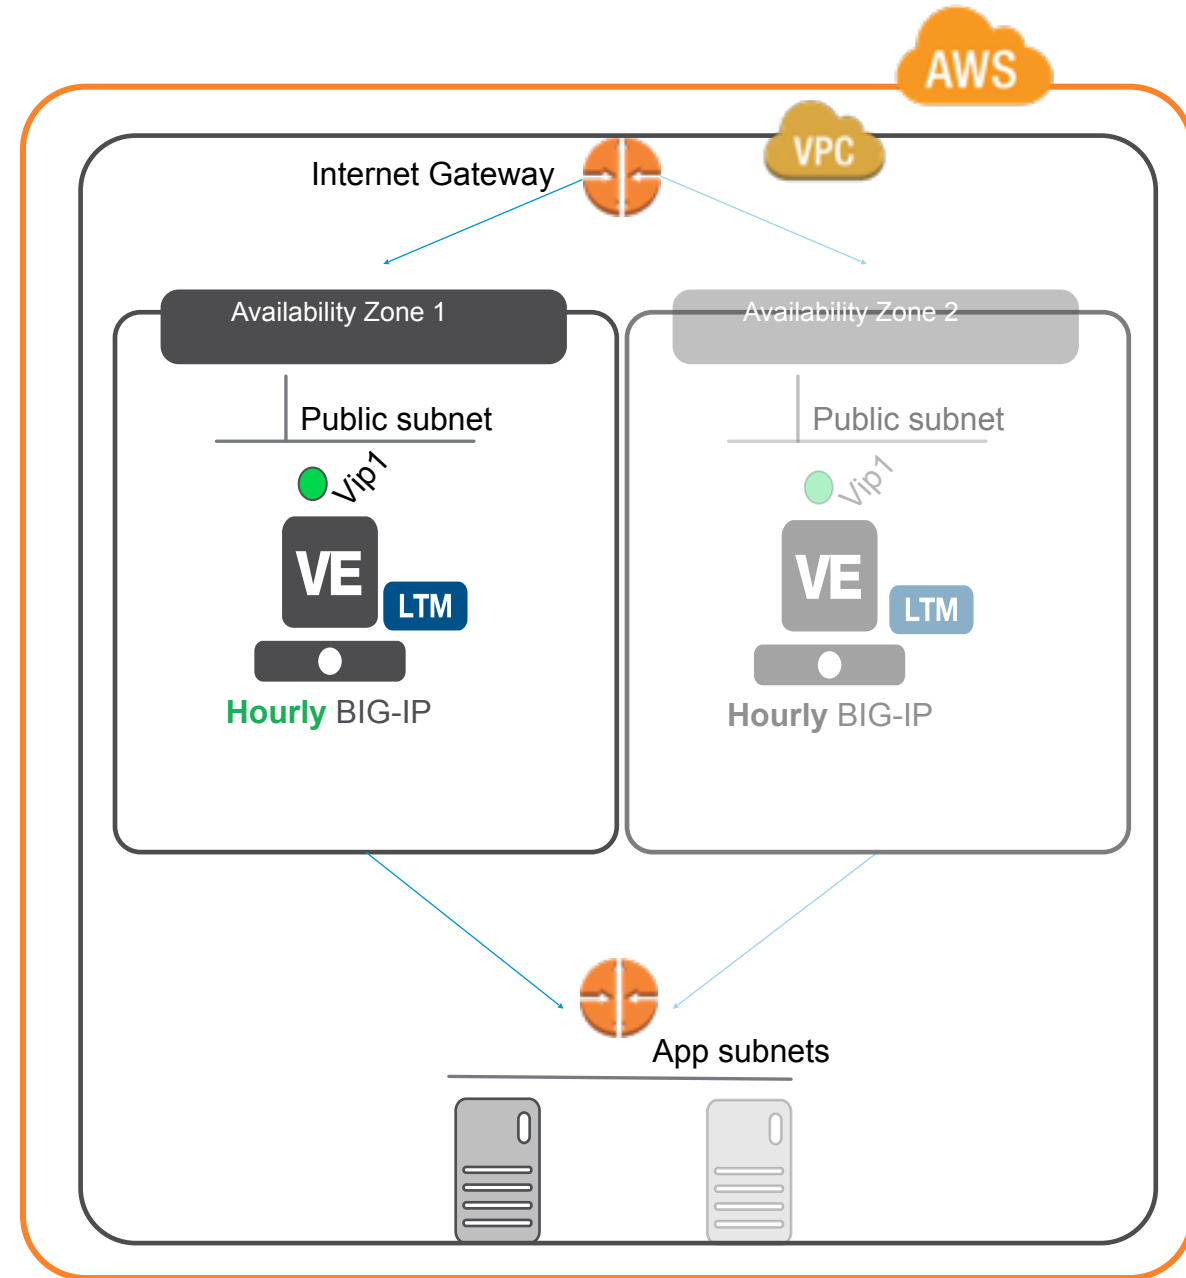

**Multiple availability zones not shown

Demo Full Stack Deployment using Cloudformation Templates

<https://github.com/F5Networks/f5-aws-cloudformation>

- Deploy a full reference stack, complete with
 - VPC
 - Subnets
 - Route Tables
 - Security Groups
 - Web Server
 - Big-IP
- The Big-IP instance
 - BYOL or Utility
 - Single-Nic
 - Has simple URI-Routing Policy
- Full stack ideal for Dev/Test/POCs to provide reference

NOTE: Contains many templates for different deployment needs (ex. Big-IP only for deploying into “Existing” Environments)

DEMO – Dynamic Auto Scaling in AWS

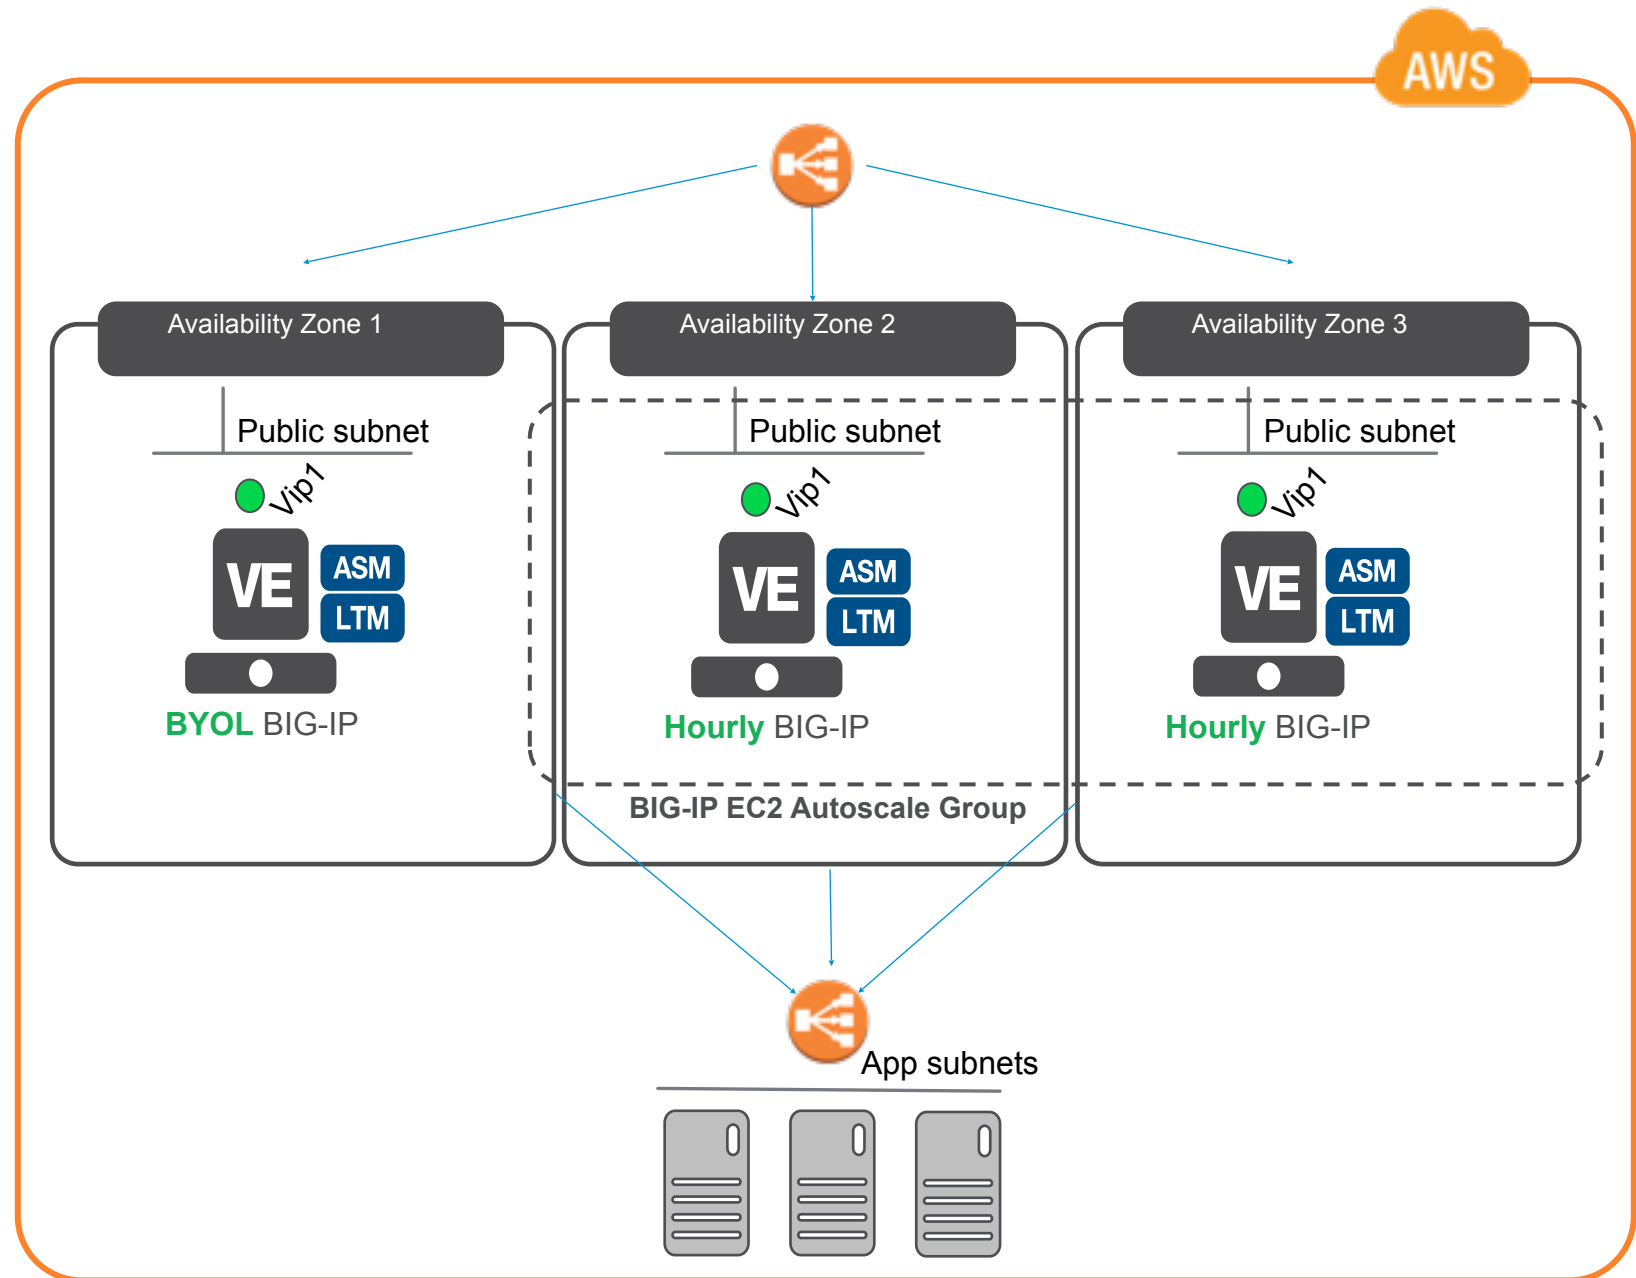

*ASG = AutoScale Group

**Multiple availability zones not shown

Demo Auto-scaled WAF

<https://github.com/f5devcentral/f5-aws-autoscale>

- Auto scale VEs with AWS Auto Scale Service
- BYOL w/ Utility BIG-IP VEs to meet throughput demand
- ELB distributes traffic to BIG-IP VEs
- Connected to all pool members via routed topology
- Provision BIG-IP VEs and app AZs to meet availability SLAs

Multiple Licensing Models to Meet Customer Needs

Marketplace Utility License	Bring Your Own License (BYOL)	Volume Licensing Subscription (VLS)
<ul style="list-style-type: none"> • On-demand utility pricing <ul style="list-style-type: none"> • Highest flexibility • Pay-as-you-go or annual subscription • Public cloud • Best for deployment flexibility, on-demand consumption • OpEx 	<ul style="list-style-type: none"> • Version Plus license (Individual and License Pools) <ul style="list-style-type: none"> • Customer owned • Can move across private and public clouds • Public, private, and hybrid cloud • Best for few production workloads or existing licenses • CapEx 	<ul style="list-style-type: none"> • Subscription discounts for 100+ applications <ul style="list-style-type: none"> • 1- or 3-year terms • Includes premium support • Public, private, and hybrid cloud • Best for large scale workload production, F5 for every app • OpEx
via F5 Ready Cloud Provider	via F5 or Channel Partner	

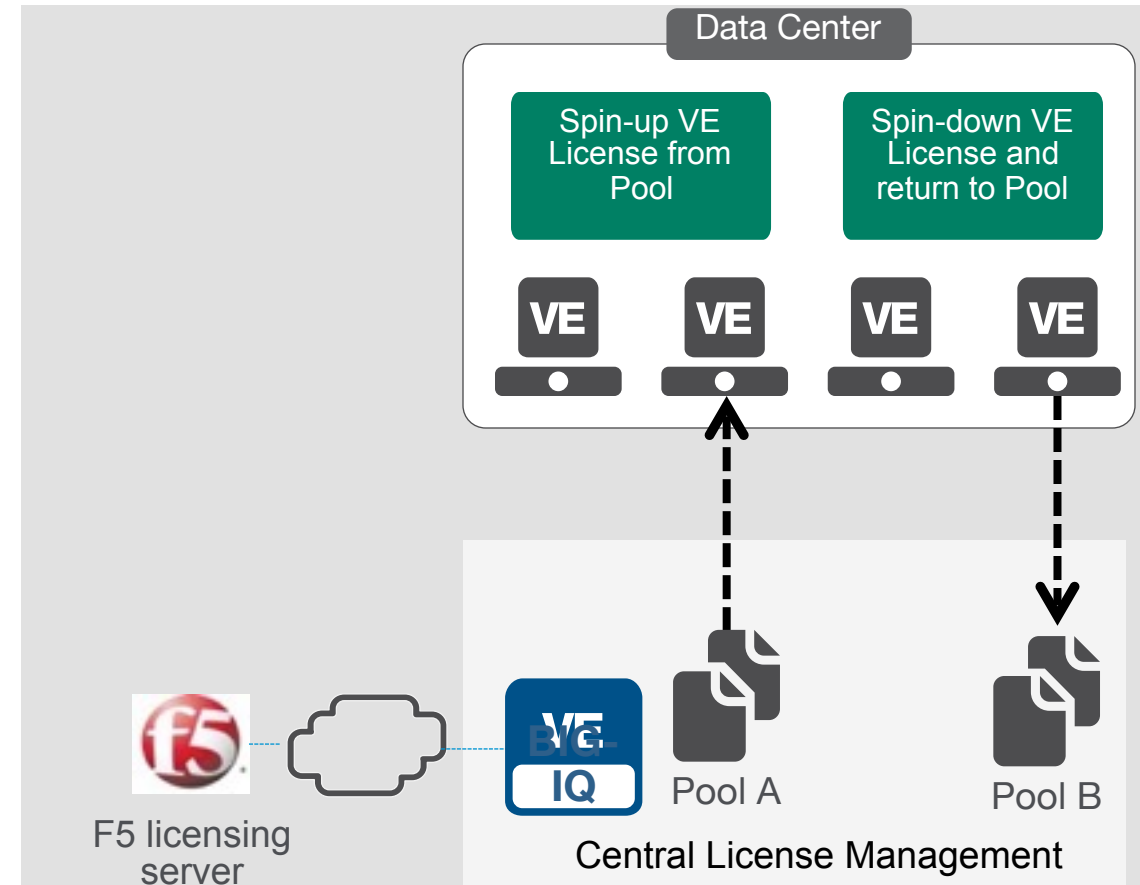

On-Demand License Pool Spin-Up

Best price per instance VE License Pools are available for high-density and multi-tenant virtual deployments

Use Case

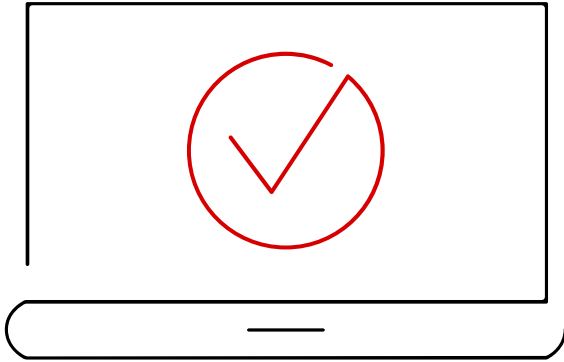

- Spin-up a VE whenever it's needed
- Reuse license on-demand
- Available for 4-pack and 25-pack VE license pools with BIG-IQ License Mgr

Wrap Up

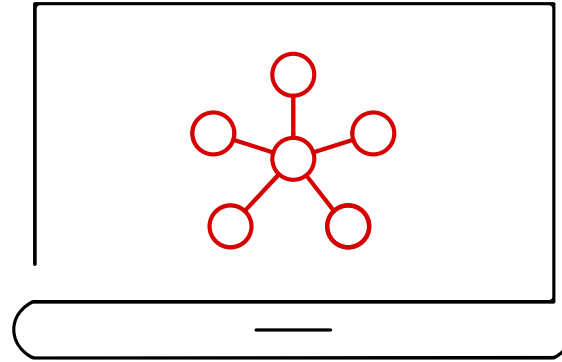

How to Get Started

Get an Evaluation License

30-day virtual edition evaluation licenses of full-featured BIG-IP modules. Available as BYOL.

Buy BIG-IP Lab

For a nominal fee, build, test, configure, and stage full-featured, up-to-date BIG-IP modules in your lab (no time limits). Available as BYOL.

f5.com/trial

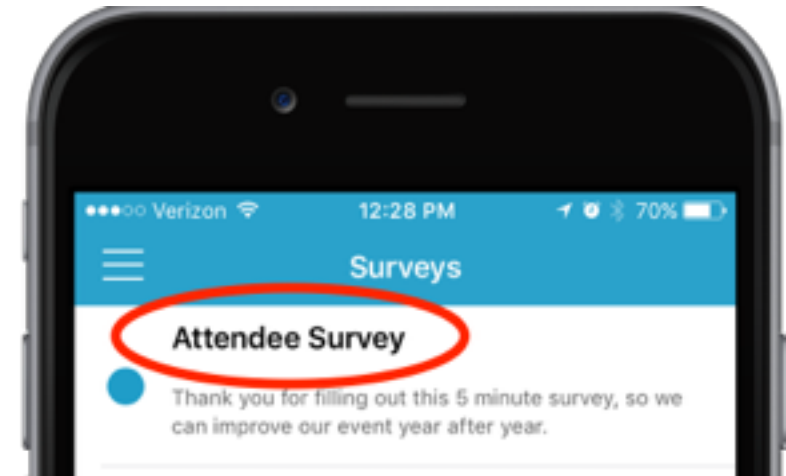

Try in AWS

30-day free trial in AWS Marketplace or test drive with Microsoft apps.
