### Power supply units & cooling

The PRIMERGY CX400 M4 offers bays for 1x or 2x direct attached hot plug (opt. redundant) power supply units of 1,600W, 2400W with up to 94% efficiency. The PRIMERGY CX400 M4 supports high performance hot plug fans (N+1 redundant).

### Server Management

iRMC S5 (integrated Remote Management Controller) on-board with dedicated (or shared) 10/100/1000 Service LAN-port and integrated graphics controller. With the integrated onboard indicators and controls you can easily highlight failed components via LEDs. The LEDs can be displayed during service even without mains connection by simply pressing the "indicate CSS" button.

**[Node CX2550 / CX2560 / CX2570 M4](#)**

16x DIMM configuration (Mix configuration for 1DPC / 2DPC)

[There are 2 different kinds of DDR4 Memory Modules available: RDIMM and RDIMM 3DS \(also known as TSV\)](#)  
[Mix of RDIMM and RDIMM 3DS is under investigation.](#)

The memory speed is independent from the configuration (1DPC or 2DPC) but restricted by the CPU SKU (max. 2.666 MT/s).  
 DDR4 memory is operated at 1.2V

[Max memory capacity is 768GB/CPU. If >768GB/CPU is required, please take 6100M or 8100M CPU SKU](#)

**Preview on NVDIMM support in 2018 (not POR for release in 2017)**

Up to 12 NVDIMMs are supported per System (6 per CPU)

This leads to the following maximum memory capacity per System:

**i** 7.680 GB DDR4 with 12x 512GB NVDIMM (6.144GB) + 12x 128GB RDIMM 3DS (1.536GB)

S26361-F3694-E10	Independent Mode Installation
Independent Channel Mode allows all channels to be populated in any order. No specific Memory RAS features are defined	
Requires minimum 1 memory Module per CPU	
S26361-F3694-E1	Rank Sparing Mode Installation
	BIOS Setup factory preinstalled to this mode. One Rank is spare of other ranks on the same channel. Spare Rank is not shown in System Memory. For effective capacity within a channel, please have a look below. Requires minimum 2x 1R/2R or 1x 4R/8R modules per CPU
S26361-F3694-E2	Performance Mode Installation
	BIOS Setup factory preinstalled for maximum Performance, six identical memory modules will be equipped in one memory bank to achieve highest memory performance. All six modules are active and full capacity can be used. Multiple of 6 identical modules to be configured per CPU
S26361-F3694-E3	Mirrored Channel Mode Installation
	BIOS Setup factory preinstalled to this mode. Six identical memory modules are always equipped in one memory bank to use the Mirrored channel Mode. Only three modules contain active data, the remain three modules contain mirrored data. Multiple of 6 identical modules to be configured per CPU

SAS drives and SATA drives can be mixed, but cannot be used in one logical RAID volume.  
 SATA drives can be connected to the onboard Controller (max. 8x),  
 SAS drives require a dedicated SAS / RAID Controller  
 Hard Disk Sector Format Information:  
 512n HDD: 512 byte sectors on the drive media.  
 512e (e=emulation) HDD: 4K physical sectors on the drive media with 512 byte logical configuration.  
 512e HDD Disk Drives: VMware is not supported.

512n & 512e HDDs can be mixed, but cannot be used in one logical RAID volume.  
 When using SSDs with VMware ESXi, select the SSDs that meet the endurance requirement described in KB2145210 below.

<https://kb.vmware.com/kb/2145210>

DWPD (5y): Drive Writes Per Day over 5 years.

SED (=Self Encrypting Drives) require either a RAID controller with \*SafeStore (SED) support or an HBA and in addition a software instance, supporting SED Key Management.

It is strongly recommended to order SafeStore (SED) RAID controller with SED HDD or SSD devices for SafeStore (SED) functionality.

**HDD Classes:**

Business-Critical (BC) -SATA=Nearline SATA Enterprise Drives / 7.2Krpm, SATA 6G.

Business-Critical (BC) -SAS=Nearline SAS Enterprise Drives / 7.2Krpm, SAS 6G or SAS 12G .

Mission-Critical (MC)=SAS 10K and SAS 15K Enterprise Drives with max. performance and reliability.

**Warranty:**

SSD and SATA DOM have a built-in Wear-Out indicator. In this case the warranty for such a component, as an exception to the system warranty, is restricted to the time period until the indicator reaches the exhaust level.
