A CONTINUING BIBLIOGRAPHY (CUMULATIVE ISSUE)

Section 2 • Indexes

Indexes for the annotated references to NASA-owned inventions covered by U.S. patents and applications for patent that were announced in *Scientific and Technical Aerospace Reports (STAR)* between May 1969 and December 1973. This issue supersedes all previous Index Sections.

This Supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22151, for \$4.50 For copies mailed to addresses outside the United States, add \$2.50 per copy for handling and postage.

INTRODUCTION

Several thousand inventions result each year from the aeronautical and space research supported by the National Aeronautics and Space Administration. The inventions having important use in government programs or significant commercial potential are usually patented by NASA. These inventions cover practically all fields of technology and include many that have useful and valuable commercial application.

NASA inventions best serve the interests of the United States when their benefits are available to the public. In many instances, the granting of nonexclusive or exclusive licenses for the practice of these inventions may assist in the accomplishment of this objective. This bibliography is published as a service to companies, firms, and individuals seeking new, licensable products for the commercial market.

The NASA Patent Abstracts Bibliography (NASA PAB) is a semiannual NASA publication containing comprehensive abstracts and indexes of NASA-owned inventions covered by U.S. patents and applications for patent. The 2594 citations included in this Cumulative Issue were originally published in NASA's Scientific and Technical Aerospace Reports (STAR) during the period from May 1969 through December 1973. For the convenience of the user, each issue of NASA PAB has a separately bound Abstract Section and Index Section.

ABSTRACT SECTION (SECTION 1)

The Abstract Section is divided into 34 subject categories (See Table of Contents for scope note of each category) under which are grouped appropriate NASA inventions. Each entry in the Abstract Section consists of a STAR citation accompanied by an abstract and a key illustration taken from the patent or application for patent drawing. Entries are arranged in subject category in order of the ascending NASA Accession Number originally assigned in STAR to the invention. The range of NASA Accession Numbers within each issue is printed on the inside front cover.

Abstract Citation Data Elements: Each of the abstract citations has several data elements useful for identification and indexing purposes, as follows:

NASA Accession Number

NASA Case Number

Inventor's Name

Title of Invention

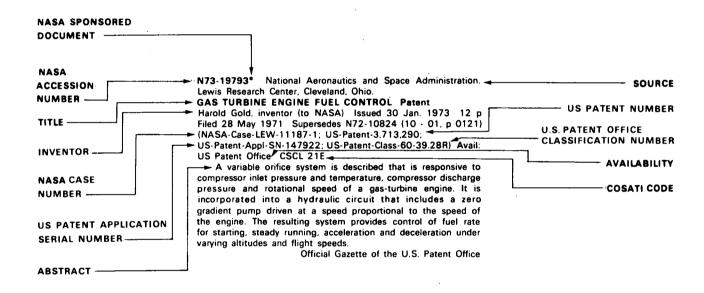

U.S. Patent Application Serial Number

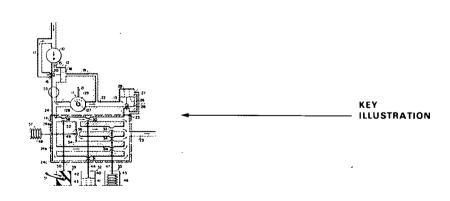

U.S. Patent Number (for issued patents only)

U.S. Patent Office Classification Number(s) (for issued patents only)

These data elements appear in the citation of the abstract as depicted in the Typical Citation and Abstract reproduced below and are also used in the several indexes.

TYPICAL CITATION AND ABSTRACT FROM PATENT ABSTRACTS BIBLIOGRAPHY

INDEX SECTION (SECTION 2)

The Index Section is divided into five indexes which are cross-indexed and are useful in locating a single invention or groups of inventions.

Each of the five indexes utilizes basic data elements: (1) Subject Category Number, (2) NASA Accession Number, and (3) NASA Case Number, in addition to other specific index terms.

Subject Index: Lists all inventions according to appropriate alphabetized technical term and indicates the related NASA Case Number, the Subject Category Number, and the NASA Accession Number.

Inventor Index: Lists all inventions according to alphabetized names of inventors and indicates the related NASA Case Number, the Subject Category Number, and the NASA Accession Number.

Source Index: Lists all inventions according to alphabetized source of invention (i.e., name of contractor or government installation where invention was made) and indicates the related NASA Case Number, the Subject Category Number, and the NASA Accession Number.

Number Index: Lists inventions in order of ascending (1) NASA Case Number, (2) U.S. Patent Application Serial Number, (3) U.S. Patent Classification Number, and (4) U.S. Patent Number and indicates the related Subject Category Number and the NASA Accession Number.

Accession Number Index: Lists all inventions in order of ascending NASA Accession Number and indicates the related Subject Category Number, the NASA Case Number, the U.S. Patent Application Serial Number, the U.S. Patent Classification Number, and the U.S. Patent Number.

HOW TO USE THIS PUBLICATION TO IDENTIFY NASA INVENTIONS

To identify one or more NASA inventions within a specific technical field or subject, several techniques are possible when using the flexibility incorporated into the NASA PAB.

- (1) Using Subject Category: To identify all NASA inventions in any one of the 34 subject categories in this issue of NASA PAB, select the desired Subject Category in the Abstract Section and find the inventions abstracted thereunder. The abstracts are arranged in each Subject Category in order of the ascending Accession Number originally assigned in STAR to each invention.
- (2) Using Subject Index: To identify all NASA inventions listed under a desired technical subject index term, (A) turn to the cumulative Subject Index in the Index Section and find the invention(s) listed under the desired technical subject term. (B) Note the indicated

NA SA Accession Number(s) and the Subject Category Number(s). (C) Using the indicated NA SA Accession Number(s), turn to the Accession Number Index to find the NA SA Patent Case Number, the U.S. Patent Application Serial Number, the U.S. Patent Number, if issued, and the U.S. Patent Classification Number(s), if assigned. (D) To find the abstract of the invention, (i) use the indicated Subject Category Number for the associated NA SA Accession Number to locate the desired Subject Category in the Abstract Section, (ii) turn to the designated Subject Category in the Abstract Section, and (iii) use the associated NA SA Accession Number to locate the invention within the Subject Category.

(3) Using Patent Classification Numbers: To identify all inventions covered by issued NASA patents (does not include applications for patent) within a desired Patent Office Classification, (A) turn to the Patent Classification Number in the Number Index of Section 2 and find the associated invention(s), and (B) follow the instructions outlined in (2) (B), (C), and (D) above.

PUBLIC AVAILABILITY OF COPIES OF PATENTS AND PATENT APPLICATIONS

Copies of U.S. patents may be purchased directly from the U.S. Patent Office, Washington, D.C. 20231, for fifty cents a copy.

Copies of pending NASA applications for patent abstracted in NASA PAB are sold by the National Technical Information Service. Springfield, Virginia 22151, at the price shown in the citation. Microfiche are sold at the established unit price of \$1.45. When ordering copies of an application for patent from NTIS, the U.S. Patent Application Serial Number listed in the index or shown in the citation for each abstract should be used to identify the desired application for patent.

LICENSES FOR COMMERCIAL USE: INQUIRIES AND APPLICATIONS FOR LICENSE

NASA inventions, abstracted in NASA PAB, are available for nonexclusive or exclusive licensing in accordance with the NASA Patent Licensing Regulations. It is significant that all licenses for NASA inventions shall be by express written instruments and that no license will be granted or implied in a NASA invention except as provided in the NASA Patent Licensing Regulations.

Inquiries concerning the NASA Patent Licensing Program or the availability of licenses for the commercial use of NASA-owned inventions covered by U.S. patents or pending applications for patent should be forwarded to the NASA Patent Counsel of the NASA installation having cognizance of the specific invention, or the Assistant General Counsel for Patent Matters, Code GP, National Aeronautics and Space Administration, Washington, D.C. 20546. Inquiries should refer to the NASA Case Number, the Title of the Invention, and the U.S. Patent Number or the U.S. Application Serial Number assigned to the invention as shown in NASA PAB.

The NASA Patent Counsel having cognizance of the invention is determined by the first three letters or prefix of the NASA Case Number assigned to the invention. The addresses of NASA Patent Counsels are listed alongside the NASA Case Number prefix letters in the following table. Formal application of license must be submitted on the NASA Form, Application for NASA Patent License, which is available upon request from any NASA Patent Counsel.

AUTHORITY: The provisions of this Subpart 2 issued under 42 U.S.C. 2457, 2473(b) (3).

§ 1245.200 Scope of subpart.

This Subpart 2 prescribes the terms, conditions, and procedures for licensing inventions covered by U.S. patents and patent applications for which the Administrator of the National Aeronautics and Space Administration holds title on behalf of the United States.

§ 1245.201 Definitions.

For the purpose of this subpart, the following definitions apply:

- (a) "Invention" means an invention covered by a U.S. patent or patent application for which the Administrator of NASA holds title on behalf of the United States and which is designated by the Administration as appropriate for the grant of license(s) in accordance with this subpart.
- (b) "To practice an invention" means to make or have made, use or have used, sell or have sold, or otherwise dispose of according to law any machine, article of manufacture or composition of matter physically embodying the invention, or to use or have used the process or method comprising the invention.
- (c) "Practical application" means the manufacture in the case of a composition of matter or product, the use in the case of a process, or the operation in the case of a machine, under such conditions as to establish that the invention is being utilized and that its benefits are reasonably accessible to the public.
- (d) "Special invention" means any invention designated by the NASA Assistant General Counsel for Patent Matters to be subject to short-form licensing procedures. An invention may be designated as a special invention when a determination is made that:
- (1) Practical application has occurred and is likely to continue for the life of

the patent and for which an exclusive license is not in force, or

- (2) The public interest would be served by the expeditious granting of a nonexclusive license for practice of the invention by the public.
- (e) The "Administrator" means the Administrator of the National Aeronautics and Space Administration, or his designee.
- (f) "Government" means the Government of the United States of America.
- (g) The "Inventions and Contributions Board" means the NASA Inventions and Contributions Board established by the Administrator of NASA within the Administration in accordance with section 305 of the National Aeronautics and Space Act of 1958 as amended (42 U.S.C. 2457).

§ 1245.202 Basic considerations.

- (a) Much of the new technology resulting from NASA sponsored research and development in aeronautical and space activities has application in other fields. NASA has special authority and responsibility under the National Aeronautics and Space Act of 1958, as amended (42 U.S.C. 2451), to provide for the widest practical dissemination and utilization of this new technology. In addition, NASA has been given unique requirements to protect the inventions resulting from NASA activities and to promulgate licensing regulations to encourage commercial use of these inventions.
- (b) NASA-owned inventions will best serve the interests of the United States when they are brought to practical application in the shortest time possible. Although NASA encourages the nonexclusive licensing of its inventions to promote competition and achieve their widest possible utilization, the commercial development of certain inventions calls for a substantial capital investment which private manufacturers may be unwilling to risk under a nonexclusive license. It is the policy of NASA to seek exclusive licensees when such licenses will provide the necessary incentive to the licensee to achieve early practical application of the invention.
- (c) The Administrator, in determining whether to grant an exclusive license, will evaluate all relevant information submitted by applicants and all other persons and will consider the necessity for further technical and market development of the invention, the capabilities of prospective licensees, their proposed plans to undertake the required investment and development, the impact on competitors, and the benefits of the license to the Government and to the public. Preference for exclusive license shall be given to U.S. citizens or companies who intend to manufacture or use, in the case of a process, the invention in the United States of America, its territories and possessions. Consideration may also be given to assisting small businesses and minority business enterprises, as well as economically depressed, low income and labor surplus areas.
 - (d) All licenses for inventions shall

be by express written instruments. No license shall be granted either expressly or by implication, for a NASA invention except as provided for in §§ 1245.203 and 1245.204 and in any existing or future treaty or agreement between the United States and any foreign government.

(e) Licenses for inventions covered by NASA-owned foreign patents and patent applications shall be granted in accordance with the NASA Foreign Patent Licensing Regulations (§ 1245.4).

§ 1245.203 Licenses for practical application of inventions.

- (a) General. As an incentive to encourage practical application of inventions, licenses will be granted to responsible applicants according to the circumstances and conditions set forth in this section.
- (b) Nonexclusive licenses. (1) Each invention will be made available to responsible applicants for nonexclusive, revocable licensing in accordance with \$1245.206, consistent with the provisions of any existing exclusive license.
- (2) The duration of the license shall be for a period as specified in the license.
- (3) The license shall require the licensee to achieve the practical application of the invention and to then practice the invention for the duration of the license.
- (4) The license may be granted for all or less than all fields of use of the invention and throughout the United States of America, its territories and possessions, Puerto Rico, and the District of Columbia, or in any lesser geographic portion thereof.
- (5) The license shall extend to the subsidiaries and affiliates of the licensee and shall be nonassignable without approval of the Administrator, NASA, except to the successor of that part of the licensee's business to which the invention pertains.
- (c) Short-form nonexclusive licenses. A nonexclusive, revocable license for a special invention, as defined in § 1245.201 (d), shall be granted upon written request, to any applicant by the Patent Counsel of the NASA installation having cognizance of the invention.

(d) Exclusive licenses. (1) A limited exclusive license may be granted on an invention available for such licensing provided that:

(i) The Administrator has determined that: (a) The invention has not been brought to practical application by a nonexclusive licensee in the fields of use or in the geographical locations covered by the application for the exclusive license, (b) practical application of the invention in the fields of use or geographical locations covered by the application for the exclusive license is not likely to be achieved expeditiously by the further funding of the invention by the Government or under a nonexclusive license requested by any applicant pursuant to these regulations, and (c) the exclusive license will provide the necessary incentive to the licensee to achieve the practical application of the invention; and

(ii) Either a notice pursuant to

§ 1245,205 listing the invention as available for licensing has been published in the FEDERAL REGISTER for at least 9 months; or a patent covering the invention has been issued for at least 6 months. However, a limited exclusive license may be granted prior to the periods specified above if the Administrator determines that the public interest will best be served by the earlier grant of an exclusive license.

(2) The license may be granted for all or less than all fields of use of the invention, and throughout the United States of America, its territories and possessions, Puerto Rico, and the District of Columbia, or in any lesser geographic

portion thereof.

(3) The exclusive period of the license shall be negotiated, but shall be for less than the terminal portion of the patent, and shall be related to the period necessary to provide a reasonable incentive to invest the necessary risk capital.

(4) The license shall require the licensee to practice the invention within a period specified in the license and then to achieve practical application of the

invention.

- (5) The license shall require the licensee to expend a specified minimum sum of money and/or to take other specified actions, within indicated period(s) after the effective date of the license, in an effort to achieve practical application of the invention.
- (6) The license shall be subject to at least an irrevocable royalty-free right of the Government of the United States to practice and have practiced the invention throughout the world by or on be-half of the Government of the United States and on behalf of any foreign government pursuant to any existing or future treaty or agreement with the United States.
- (7) The license may reserve to the Administrator, NASA, under the following circumstances, the right to require the granting of a sublicense to responsi- § 1245.206 Application for nonexclusive ble applicant(s) on terms that are considered reasonable by the Administrator, stipulated in the license

§ 1245.204 Other licenses.

(a) License to contractor. There is desired;

hereby granted to the contractor reporting an invention made in the performance of work under a contract of NASA in the manner specified in section 305(a) (1) or (2) of the National Aeronautics and Space Act of 1958 as amended (42 U.S.C. 2457(a) (1) or (2)), a revocable, nonexclusive, royalty-free license for the practice of such invention, together with the right to grant sublicenses of the same scope to the extent the contractor was legally obligated to do so at the time the contract was awarded. Such license and right is nontransferable except to the successor of that part of the contractor's business to which the invention pertains.

(b) Miscellaneous licenses. Subject to any outstanding licenses, nothing in this subpart 2 shall preclude the Administrator from granting other licenses for inventions, when he determines that do so would provide for an equitable distribution of rights. The following exemplify circumstances wherein such licenses may be granted:

(1) In consideration of the settlement of an interference:

(2) In consideration of a release of a claim of infringement; or

(3) In exchange for or as part of the consideration for a license under adversely held patent(s).

§ 1245.205 Publication of NASA inventions available for license.

- (a) A notice will be perodically published in the Federal Register listing inventions available for licensing. Abstracts of the inventions will also be published in the NASA Scientific and Technical Aerospace Reports (STAR) and other NASA publications.

§ 1245.207 Application for exclusive license.

- (a) Submission of application. An application for exclusive license under \$ 1245.203(d) may be submitted to NASA at any time. An application for exclusive license shall be addressed to the NASA Assistant General Counsel for Patent Matters.
- (b) Contents of an application for exclusive license. In addition to the requirements set forth in § 1245.206(b), the application for an exclusive license shall include:
- (1) Applicant's status, if any, in any one or more of the following categories:
 - (i) Small business firm:
 - (ii) Minority business enterprise;
- (iii) Location in a surplus labor area; (iv) Location in a low-income urban area; and
- (v) Location in an area designed by the Government as economically depressed.
- (2) A statement indicating the time, expenditure, and other acts which the applicant considers necessary to achieve practical application of the invention, and the applicant's offer to invest that sum and to perform such acts if the license is granted:
- (3) A statement whether the applicant would be willing to accept a license for all or less than all fields of use of the invention throughout the United States of America, its territories and possessions, Puerto Rico, and the District of Columbia, or in any lesser geographic portion thereof.
- (4) A statement indicating the amount of royalty fees or other consideration, if any, the applicant would be willing to pay the Government for the exclusive license: and

cense and that such an exclusive license should be granted to the applicant.

§ 1245.208 Processing applications for license.

- (a) Initial review. Applications for nonexclusive and exclusive licenses under §§ 1245.206 and 1245.207 will be reviewed by the Patent Counsel of the NASA installation having cognizance for the invention and the NASA Assistant General Counsel for Patent Matters, to determine the conformity and appropriateness of the application for license and the availability of the specific invention for the license requested. The Assistant General Counsel for Patent Matters will forward all applications for license conforming to §§ 1245.206(b) and 1245.207(b) to the NASA Inventions and Contributions Board when the invention is available for consideration of the requested license. Prior to forwarding applications for exclusive licenses to the Inventions and Contributions Board, notice in writing will be given to each nonexclusive licensee for the specific invention advising of the receipt of the application for the exclusive license and providing each nonexclusive licensee with a 30-day period for submitting either evidence that practical application of the invention has occurred or is about to occur or, an application for an exclusive license for the invention.
- (b) Recommendations of Inventions and Contributions Board. The Inventions and Contributions Board shall, in accordance with the basic considerations set forth in §§ 1245.202 and 1245.203, evaluate all applications for license forwarded by the Assistant General Counsel for Patent Matters. Based upon the facts presented to the Inventions and Contributions Board in the application and any other facts in its possession, the Inventions and Contributions Board shall recommend to the Administrator: (1) Whether a nonexclusive or exclusive license should be granted, (2) the identity of the licensee, and (3) any special terms or conditions of the license
- (c) Determination of Administrator and grant of nonexclusive licenses. The Administrator shall review the recommendations of the Inventions and Contributions Board and shall determine whether to grant the nonexclusive license as recommended by the Board. If the Administrator determines to grant the license, the license will be granted upon the negotiation of the appropriate terms and conditions of the Office of General Counsel.
- (d) Determination of Administrator and grant of exclusive licenses—(1) Notice. If the Administrator determines that the best interest of the United States will be served by the granting of an exclusive license in accordance with the considerations set forth in basic §§ 1245.202 and 1245.203, a notice shall be published in the FEDERAL REGISTER announcing the intent to grant the exclusive license, the identification of the invention, special terms or conditions of the proposed license, and a statement that NASA will grant the exclusive license unless within 30 days of the publication of such notice the Inventions and Contributions Board receives in writing

any of the following together with supporting documentation:

- (i) A statement from any person setting forth reasons why it would not be in the best interest of the United States to grant the proposed exclusive license; or
- (ii) An application for a nonexclusive license under such invention, in accordance with § 1245.206(b), in which applicant states that he has already brought or is likely to bring the invention to practical application within a reasonable period.

The Inventions and Contributions Board shall, upon receipt of a written request within the 30 days' notice period, grant an extension of 30 days for the submission of the documents designated above.

- (2) Recommendation of Inventions and Contributions Board. Upon the expiration of the period required by subparagraph (1) of this paragraph, the Board shall review all written responses to the notice and shall then recommend to the Administrator whether to grant the exclusive license as the Board initially recommended or whether a different form of license, if any, should instead be granted.
- (3) Grant of exclusive licenses. The Administrator shall review the Board's recommendation and shall determine if the interest of the United States would best be served by the grant of an exclusive license as recommended by the Board. If the Administrator determines

to grant the exclusive license, the license will be granted upon the negotiation of the appropriate terms and conditions by the Office of General Counsel.

§ 1245.209 Royalties and fees.

- (a) Normally, a nonexclusive license for the practical application of an invention granted to a U.S. citizen or company will not require the payment of royalties; however, NASA may require other consideration.
- (b) An exclusive license for an invention may require the payment of royalties, fees or other consideration when the licensing circumstances and the basic considerations in § 1245.202, considered together, indicate that it is in the public interest to do so.

§ 1245.210 Reports.

A license shall require the licensee to submit periodic reports of his efforts to work the invention. The reports shall contain information within his knowledge, or which he may acquire under normal business practice, pertaining to the commercial use that is being made of the invention and such other information which the Administrator may determine pertinent to the licensing program and which is specified in the license.

§ 1245.211 Revocation of licenses.

(a) Any license granted pursuant to § 1245.203 may be revoked, either in part or in its entirety, by the Administrator if in his opinion the licensee at any time shall fall to use adequate efforts to bring to or achieve practical application of the invention in accordance with the terms of the license, or if the licensee at any

time shall default in making any report required by the license, or shall make any false report, or shall commit any breach of any covenant or agreement therein contained, and shall fail to remedy any such default, false report, or breach within 30 days after written notice, or if the patent is deemed unenforceable either by the Attorney General or a final decision of a U.S. court.

- (b) Any license granted pursuant to § 1245.204(a) may be revoked, either in part or in its entirety, by the Administrator if in his opinion such revocation is necessary to achieve the earliest practical application of the invention pursuant to an application for exclusive license submitted in accordance with § 1245.207, or the licensee at any time shall breach any covenant or agreement contained in the license, and shall fail to remedy any such breach within 30 days after written notice thereof.
- (c) Before revoking anv granted pursuant to this Subpart 2 for any cause, there will be furnished to the licensee a written notice of intention to revoke the license, and the licensee will be allowed 30 days after such notice in which to appeal and request a hearing before the Inventions and Contributions Board on the question of revocation. After a hearing, the Inventions and Contributions Board shall transmit to the Administrator the record of proceedings, its findings of fact, and its recommendation whether the license should be revoked either in part or in its entirety. The Administrator shall review the recommendation of the Board and determine whether to revoke the license in part or in its entirety. Revocation of a license shall include revocation of all sublicenses which have been granted.

§ 1245.212 Appeals.

Any person desiring to file an appeal pursuant to § 1245.211(c) shall address the appeal to Chairman, Inventions and Contributions Board. Any person filing an appeal shall be afforded an opportunity to be heard before the Inventions and Contributions Board, and to offer evidence in support of his appeal. The procedures to be followed in any such matter shall be determined by the Administrator. The Board shall make findings of fact and recommendations with respect to disposition of the appeal. The decision on the appeal shall be made by the Administrator, and such decision shall be final and conclusive, except on questions of law, unless determined by a court of competent jurisdiction to have been fraudulent, or capricious, or arbitrary, or so grossly erroneous as necessarily to imply bad faith, or not supported by substantial evidence.

§ 1245.213 Litigation.

An exclusive licensee shall be granted the right to sue at his own expense any party who infringes the rights set forth in his license and covered by the licensed patent. The licensee may join the Government, upon consent of the Attorney General, as a party complainant in such suit, but without expense to the Government and the licensee shall pay costs and any final judgment or decree that may be rendered against the Governmant of the shall pay costs and any final judgment or decree that may be rendered against the Government and the licensee shall pay costs and any final judgment or decree that may be rendered against the Government.

PATENT LICENSING REGULATIONS

ment in such suit. The Government shall also have an absolute right to intervene in any such suit at its own expense. The licensee shall be obligated to promptly furnish to the Government, upon request, copies of all pleadings and other papers filed in any such suit and of evidence adduced in proceedings relating to the licensed patent including, but not limited to, negotiations for settlement and agreements settling claims by a licensee based on the licensed patent, and all other books, documents, papers, and

records pertaining to such suit. If, as a result of any such litigation, the patent shall be declared invalid, the licensee shall have the right to surrender his license and be relieved from any further obligation thereunder.

§ 1245.214 Address of communications.

(a) Communications to the Assistant General Counsel for Patent Matters in accordance with §§ 1245.206 and 1245.207 and requests for information concerning licenses for NASA inventions should be addressed to the Assistant General Counsel for Patent Matters, Code GP, National Aeronautics and Space Administration, Washington, D.C. 20546.

(b) Communications to the Inventions and Contributions Board in accordance with §§ 1245.208, 1245.211, and 1245.212 should be addressed to Chairman, Inventions and Contributions Board, National Aeronautics and Space Administration, Washington, D.C. 20546.

Effective date. The regulations set forth in this subpart 2 are effective April 1, 1972.

JAMES C. FLETCHER, Administrator.

TABLE OF CONTENTS

Section 1 • Abstracts

Subject Categories

Abstracts in the bibliography are grouped under the following categories:

01 Aerodynamics

Includes aerodynamics of bodies, combinations, internal flow in ducts and turbomachinery; wings, rotors, and control surfaces. For applications see: 02 Aircraft and 32 Space Vehicles. For related information see also: 12 Fluid Mechanics; and 33 Thermodynamics and Combustion.

02 Aircraft 3

Includes fixed-wing airplanes, helicopters, gliders, ballons, ornithopters, etc.; and specific types of complete aircraft (e.g., ground effect machines, STOL, and VTOL); flight tests; operating problems (e.g., sonic boom); safety and safety devices; economics; and stability and control. For basic research see: 01 Aerodynamics. For related information see also: 31 Space Vehicles; and 32 Structural Mechanics.

03 Auxiliary Systems 17

Includes fuel cells, energy conversion cells, and solar cells; auxiliary gas turbines; hydraulic, pneumatic and electrical systems; actuators; and inverters. For related information see also: 09 Electronic Equipment; 22 Nuclear Engineering; and 28 Propulsion Systems.

04 Biosciences 43

Includes aerospace medicine, exobiology, radiation effects on biological systems; physiological and psychological factors. For related information see also: 05 Biotechnology.

05 Biotechnology 45

Includes life support systems, human engineering, protective clothing and equipment; crew training and evaluation, and piloting. For related information see also: 04 Biosciences.

06 Chemistry
Includes chemical analysis and identification (e.g., spectroscopy). For applications see: 17 Materials,

spectroscopy). For applications see: 17 Materials, Metallic; 18 Materials, Nonmetallic; and 27 Propellants

iants.

07 Communications 93

Includes communications equipment and techniques, noise; radio and communications blackout; modulation telemetry; tracking radar and optical observation; and wave propagation. For basic research see: 23 Physics, General; and 21 Navigation.

08 'Computers

page 133

Includes computer operation and programming, and data processing. For applications, see specific categories. For related information see also: 19 Mathematics.

09 Electronic Equipment

161

Includes electronic test equipment and maintainability; component parts, e.g., electron tubes, tunnel diodes, transistors, integrated circuitry; microminiaturization. For basic research see: 10 Electronics. For related information see also: 07 Communications and 21 Navigation.

10 Electronics

241

Includes circuit theory; and feedback and control theory. For applications see: 09 Electronic Equipment. For related information see specific Physics categories.

11 Facilities, Research and Support

279

Includes airports; lunar and planetary bases including associated vehicles; ground support systems; related logistics; simulators; test facilities (e.g., rocket engine test stands, shock tubes, and wind tunnels); test ranges; and tracking stations.

12 Fluid Mechanics

299

Includes boundary-layer flow; compressible flow; gas dynamics; hydrodynamics; and turbulence. For related information see also: 01 Aerodynamics; and 33 Thermodynamics and Combustion.

13 Geophysics

211

Includes aeronomy; upper and lower atmosphere studies; oceanography; cartography; and geodesy. For related information see also: 20 Meteorology; 29 Space Radiation; and 30 Space Sciences.

14 Instrumentation and Photography
Includes design, installation, and testing of instrumentation systems; gyroscopes; measuring instruments and gages; recorders, transducers; photography; and telescopes and cameras.

15 Machine Elements and Processes 425

Includes bearings, seals, pumps, and other mechanical equipment; lubrication, friction, and wear; manufacturing processes and quality control; reliability; drafting; and materials fabrication, handling, and inspection.

16 Masers 549

Includes applications of masers and lasers. For basic research see: 26 Physics, Solid-State.

17 Materials, Metallic

563

Includes cermets; corrosion; physical and mechanical properties of materials; metallurgy; and applications as structural materials. For basic research see: 06 Chemistry. For related information see also: 18 Materials, Nonmetallic; and 32 Structural Mechanics.

18 Materials, Nonmetallic

573 Includes corrosion, physical and mechanical properties of materials (e.g., plastics); and elastomers, hydraulic fluids, etc. For basic research see: 06 Chemistry. For related information see also: Materials, Metallic; 27 Propellants; and 32 Structural Mechanics.

19 Mathematics

Includes calculation methods and theory; and numerical analysis. For applications see specific categories. For related information see also: 08 Computers.

20 Meteorology

589

Includes climatology; weather forecasting, and visibility studies. For related information see also: 13 Geophysics; and 30 Space Sciences.

21 Navigation

591

Includes guidance; autopilots; star and planet tracking; inertial platforms; and air traffic control. For related information see also: 07 Communications.

22 Nuclear Engineering

605

Includes nuclear reactors and nuclear heat sources used for propulsion and auxiliary power. For basic research see: 24 Physics, Atomic, Molecular, and Nuclear. For related information see also: 03 Auxiliary Systems; and 28 Propulsion Systems.

23 Physics, General

609

Includes acoustics, cryogenics, mechanics, and optics. For astrophysics see: 30 Space Sciences. For geophysics and related information see also: 13 Geophysics, 20 Meteorology, and 29 Space Radiation.

24 Physics, Atomic, Molecular, and Nuclear

625

Includes atomic, molecular and nuclear physics. For applications see: 22 Nuclear Engineering. For related information see also: 29 Space Radiation.

25 Physics, Plasma

629

Includes magnetohydrodynamics. For applications see: 28 Propulsion Systems.

26 Physics, Solid-State

637

Includes semiconductor theory; and superconductivity. For applications see: 16 Masers. For related information see also: 10 Electronics.

27 Propellants

645

Includes fuels; igniters; and oxidizers. For basic re-

search see: 06 Chemistry; and 33 Thermodynamics and Combustion. For related information see also: 28 Propulsion Systems.

28 Propulsion Systems

651

Includes air breathing, electric, liquid, solid, and magnetohydrodynamic propulsion. For nuclear propulsion see: 22 Nuclear Engineering. For basic research see: 23 Physics, General; and 33 Thermodynamics and Combustion. For applications see: 31 Space Vehicles. For related information see also: 27 Propel-

No

29 Space Radiation

Abstracts

Includes cosmic radiation; solar flares; solar radiation; and Van Allen radiation belts. For related information see also: 13 Geophysics, and 24 Physics, Atomic, Molecular, and Nuclear.

30 Space Sciences

683

Includes astronomy and astrophysics; cosmology; lunar and planetary flight and exploration; and theoretical analysis of orbits and trajectories. For related information see also: 11 Facilities, Research and Support; and 31 Space Vehicles.

31 Space Vehicles

687

Includes launch vehicles; manned space capsules, clustered and multistage rockets; satellites; sounding rockets and probes; and operating problems. For basic research see: 30 Space Sciences. For related information see also: 28 Propulsion Systems; and 32 Structural Mechanics.

32 Structural Mechanics

713

Includes structural element design and weight analysis; fatigue; thermal stress; impact phenomena; vibration; flutter; inflatable structures; and structural tests. For related information see also: 17 Materials, Metallic; and 18 Materials, Nonmetallic.

33 Thermodynamics and Combustion

Includes ablation, cooling, heating, heat transfer, thermal balance, and other thermal effects; and combustion theory. For related information see also: 12 Fluid Mechanics, and 27 Propellants.

NASA PATENT ABSTRACTS BIBLIOGRAPHY Section 2

JANUARY 1974

Typical Subject Index Listing

The subject heading is a key to the subject of the patent or application for patent. The Notation of Content (NOC) rather than the title of the document is used to provide a better description of the subject matter. The NASA Case Number is the prime access point to patent documents. The subject category number indicates the subject category in Section 1: Abstracts in which the citation is located. The NASA accession number denotes the number by which the citation is identified within the subject category. The NOC's are arranged under each subject heading in ascending accession number order.

[NASA-CASE-XMS-09352] CO9 N71-23316	fire resistant, heat insulating materials
Magnetic current regulator for saturable core	[NASA-CASE-ARC-10304-1] c18 N73-26572
transformer	CYCLIC LOADS
[NASA-CASE-ERC-10075] c09 N71-24800	Automatic controlled thermal fatique testing apparatus
Automatic power supply circuit design for driving inductive loads and minimizing power	[NASA-CASE-XLA-02059] c33 N71-24276
consumption including solenoid example	Development of device for simulating cyclic
[NASA-CASE-NPO-10716] CG9 N71-24892	thermal loading of flexible materials by
Turn on current transient limiter for	application of mechanical stresses and
controlling peak current flow in high capacity	deformations
load	[NASA-CASE-LAR-10270-1] c32 N72-25877 Material testing system with load sensor for
[NASA-CASE-GSC-10413] c10 N71-26531	applying and measuring cyclic tensile and
Current requlating voltage divider design with load current shunting	compressive loads to test specimens
[NASA-CASE-MFS-20935] C09 N71-34212	[NASA-CASE-MPS-20673] c14 N73-20476
Circuit for monitoring power supply by ripple	CYCLOTRON BADIATION
current indication	Apparatus for producing high purity I-123 from
[NASA-CASE-KSC-10162] c09 N72-11225	Xe-123 by bombarding tellurium target with
Design of integrated circuit with two amplifiers	cyclotron beam
and feedback stabilization for single channel	[NASA-CASE-LEW-10518-2] c24 N72-28714 CYLINDERS
qyrator [NASA-CASE-MFS-22343-1]	Spraq solenoid brake with cylindrical chamber
Control circuit for reducing bias voltage and	[NASA-CASE-MFS-21846-1] c15 N73-23552
radiation sensitivity of photomultiplier	CYLINDRICAL BODIES
[NASA-CASE-ARC-10593-1] c09 N73-30187	Development of laser illuminated device for
CURVATURE	displaying conditions of cylindrical surfaces
Apparatus and method for spin forming tubular	in two dimensions [NASA-CASE-NPO-11861-1] c14 N72-28461

DATA CONVERTERS SUBJECT INDEX

DATA CONVERTERS	[NASA-CASE-ERC-10112] c07 N72-21119
Logarithmic converter for compressing 19-digit binary input number to 8-digit output	DATA RECORDING
[NASA-CASE-XLA-00471] COS N70-34778	System for recording and reproducing PCM data from data stored on magnetic tape
Mechanical coordinate converter for use with	[NASA-CASE-XGS-01021] C08 N71-21042
spacecraft tracking antennas [NASA-CASE-XNP-00614] c14 N70-36907	Description of system for recording and reading out data related to distribution of occurrence
Data rate converter with rotatable data storing	of plurality of events
drum and fixed and rotatable read/record heads [NASA-CASE-NPO-11659-1] c14 N72-22453	[NASA-CASE-XNP-04067] c08 N71-22707
[NASA-CASE-NPO-11659-1] c14 N72-22453 Analog signal to discrete time converter	Development of data storage system for storing digital data in high density format on
[NASA-CASE-ERC-10048] c09 N72-25251	magnetic tape
Digital converter for scaling binary number to binary coded decimal number of higher multiple	[NASA-CASE-XNP-02778] c08 N71-22710
[NASA-CASE-KSC-10595] CO8 N73-12176	Transient wideo signal tape recorder with expanded playback
DATA CORRELATION	[NASA-CASE-ARC-10003-1] c09 N71-25866
Digital correlation method for synchronizing received pulse code modulated communications	Apparatus for on-film optical recording of
signals	camera lens aperture and focus setting [NASA-CASE-MSC-12363-1] c14 N73-26431
[NASA-CASE-NPO-11302-2] c07 N72-28164	DATA REDUCTION
DATA LINKS Characteristics of two channel telemetry system	System for storing histogram data in optimum number of elements
with two data rate channels for high and low	[NASA-CASE-XNP-09785] c08 N69-21928
data rate communication	Respiration analyzing method and apparatus for
[NASA-CASE-NPO-11572] c07 N73-16121 Automatic accounting system for transfer of data	determining subjects oxygen consumption in
from terminals to computer	aerospace environments [NASA-CASE-XFR-08403] c05 N71-11202
[NASA-CASE-NPO-11456] c08 N73-26176	Minimum time delay unit for conventional time
DATA PROCESSING Data processing and display system for terminal	multiplexed data compression channels
quidance of X-15 aircraft	[NASA-CASE-XNP-08832] c08 N71-12506 Data compression processor for monitoring analog
[NASA-CASE-XFR-00756] c02 N71-13421	signals by sampling procedure
Encoders designed to generate comma free biorthogonal Reed-Muller type code comprising	[NASA-CASE-NPO-10068] COS N71-19288
conversion of 64 6-bit words into 64 32-bit	Wide range analog data compression system [NASA-CASE-XGS-02612] c08 N71-19435
data for communication purposes	Description of system for recording and reading
[NASA-CASE-NPO-10595] c10 N71-25917	out data related to distribution of occurrence
Data acquisition and processing system with buffer storage and timing device for magnetic	of plurality of events [NASA-CASE-XNP-04067]
tape recording of PCM data and timing	Apparatus with summing network for compression
information [NASA-CASE-NPO-12107] c08 N71-27255	of analog data by decreasing slope threshold
[NASA-CASE-NPO-12107] c08 N71-27255 Digital data handling circuits for pulse	sampling [NASA-CASE-NPO-10769]
amplifiers	[NASA-CASE-NPO-10769] CO8 N72-11171 Data reduction and transmission system for TV
[NASA-CASE-XNP-01068] c10 N71-28739	PCM data
Synchronized digital communication system [NASA-CASE-XNP-03623] c09 N73-28084	[NASA-CASE-NPO-11243] c07 N72-20154 Data compression using decreasing slope
DATA PROCESSING EQUIPMENT	threshold test and digital techniques
Data processor having multiple sections activated at different times by selective	[NASA-CASE-NPO-11630] c08 N72-33172
power coupling to sections	DATA RETRIEVAL Magnetic matrix memory system for nondestructive
[NASA-CASE-XGS-04767] c08 N71-12494	reading of information contained in matrix
Development of demodulation system for removing amplitude modulation from two quadrature	[NASA-CASE-XMF-05835] C08 N71-12504
displaced data bearing signals	Procedure for repairing and recovering voice data from heat damaged magnetic tapes
[NASA-CASE-XAC-04030] c10 N71-19472	[NASA-CASE-HSC-14219-1] c07 N73-16132
Development and characteristics of rate augmented digital to analog converter for	DATA SAMPLING
computed time-dependent data	Monitoring circuit design for sampling circuit control and reduction of time-bandwidth in
[NASA-CASE-XLA-07828] c08 N71-27057	video communication systems
Data processor with plural register stages for selectively interconnecting with each other to	[NASA-CASE-XNP-02791] c07 N71-23026
effect multiplicity of operations	Sampling circuit for signal processing in multiplex transmission by Fourier analysis
[NASA-CASE-GSC-10186] c08 N71-33110	[NASA-CASE-NPO-10388] c07 N71-24622
Development and characteristics of telemetry system using computer-accessed circuits and	Video signal processing system for sampling
remotely controlled from ground station	video brightness levels [NASA-CASE-NPO-10140] c07 N71-24742
[NASA-CASE-NPO-11358] c07 N72-25172	Apparatus with summing network for compression
Development and characteristics of data decoder to process convolution encoded information	of analog data by decreasing slope threshold sampling
[NASA-CASE-NPO-11371] c08 N73-12177	[NASA-CASE-NPO-10769] c08 N72-11171
Characteristics of digital data processor using	DATA SMOOTHING
pulse from clock source to derive binary singles to show state of various indicators in	Variable time constant, wide frequency range
processor	smoothing network for noise removal from pulse
[NASA-CASE-GSC-10975-1] c08 N73-13187	[NASA-CASE-XGS-01983] c10 N70-41964
Automatic accounting system for transfer of data from terminals to computer	DATA STORAGE Data handling based on source significance.
[NASA-CASE-NPO-11456] COS N73-26176	storage availability, and data received from
Optical data and image display recorder/processor	source
[NASA-CASZ-GSC-11553-1] c07 N73-31089 DATA RECORDERS	[NASA-CASE-XNP-04162-1] COS N70-34675
Description of system for recording and reading	Magnetic matrix memory system for nondestructive reading of information contained in matrix
out data related to distribution of occurrence	[NASA-CASE-XMF-05835] c08 N71-12504
of plurality of events [NASA-CASE-XNP-04067]	Tape quidance system for multichannel digital
Design and characteristics of recording system	recording system [NASA-CASE-XNP-09453] c08 N71-19420
for selective reprocessing and filtering of	Event recorder with constant speed motor which
data to obtain optimum signal to noise ratios	rotates recording disk

[NASA-CASE-XMS-05365] c14 N71-22993	[NASA-CASE-NPO-10034] c15 N71-17685
Development and characteristics of single or	Device for resistance soldering electrical leads
doubl pulse generator which produces constant	to solder cups of multiple terminal block
width pulses in nanosecond region	[NASA-CASE-GSC-10913] c15 N72-22491
[NASA-CASE-XGS-03427] c10 N71-23029	Development of electric connector and pin
Solid state integrator for converting variable	assembly with radio frequency absorbing sleeve
width pulses into analog voltage	to reduce radio frequency interference
[NASA-CASE-XLA-03356] c10 N71-23315	[NASA-CASE-XLA-02609] c09 N72-25256
Development and characteristics of electric	BLECTRIC WELDING
circuitry for detecting electrical pulses rise	Development of electric weeding torch with casing on one end to form inert gas shield
time and amplitude [NASA-CASE-XMP-08804] c09 N71-24717	[NASA-CASE-XMF-02330] c15 N71-23798
Circuit for measuring wide range of pulse rates	Electrical resistance butt welder for welding
by utilizing high capacity counter	fine gauge tungsten/rhenium thermocouple wire
[NASA-CASE-XNP-06234] c10 N71-27137	[NASA-CASE-LAR-10103-1] c15 N73-14468
Precision full wave rectifier circuit for	Electric resistance spot welding and brazing for
rectifying incoming electrical signals having	producing metal bonds with superior mechanical
positive or negative polarity with only	and structural characteristics
positive output signals	[NASA-CASE-LAR-11072-1] c15 N73-20535
[NASA-CASE-ARC-10101-1] c09 N71-33109	Process for welding compressor and turbine
Transmitter receiver system for measuring	blades to rotors and discs of jet engines

ESTERS	other biomedical devices
Fluorinated esters of polycarboxylic acid and	
lubricating compositions for use at extreme temperature	EXHAUST GASES Device for adding water to high velocity exhaust
[NASA-CASE-MFS-21040-1] c06 N73-3	
ETCHING	[NASA-CASE-XMF-01813] c28 N70-41582
Reusable masking boot for chemical machining	Exhaust nozzle for reducing noise in gas
operations [NASA-CASE-XNP-02092] c15 N70-4	turbines by mixing low velocity air with high velocity engine exhaust
Development of method for etching copper	[NASA-CASE-LEW-11569-1] c28 N73-14792
[NASA-CASE-XGS-06306] c17 N71-1	
Composition and process for improving definit of resin masks used in chemical etching	ion mixing of exhaust gases with ambient atmosphere [NASA-CASE-ARC-10712-1] c28 N73-20826
[NASA-CASE-XGS-04993] c14 N71-1	
Etching aluminum alloys with aqueous solution	
containing sulfuric acid, hydrofluoric acid	
and an alkali metal dischromate for adhesiv	e [NASA-CASE-XLE-00078] c28 N70-33284 Exhaust nozzle with afterburning for generating
[NASA-CASE-XMF-02303] c17 N71-2	
Selective plating of etched circuits without	[NASA-CASE-XLA-00154] c28 N70-33374
removing previous plating [NASA-CASE-XGS-03120] c15 N71-2	Penshaped, supersonic exhaust nozzle design 4047 [NASA-CASE-XLE-00057] c28 N70-38711
Nickel plating onto etched aluminum castings	Automatic ejection valve for attitude control
[NASA-CASE-XNP-04148] c17 N71-2	
Scanning nozzle plating system for etching or plating metals on substrates without masking	
[NASA-CASE-NPO-11758-1] c15 N72-2	
ETHERS	Shrouded divergent body attached to exhaust
Method for producing alternating ether-siloxa	
copolymers with stable properties when expo to elevated temperatures and UV radiation	sed [NASA-CASE-LEW-11286-1] c02 N73-21066 EXPANDABLE STRUCTURES
[NASA-CASE-XMF-02584] C06 N71-2	
Chemical synthesis of hydroxy terminated	solar cell array of Nimbus satellite
perfluoro ethers as intermediates for highl fluorinated polyurethane resins	y [NASA-CASE-XGS-01395] c03 N69-21539 Method of compactly packaging centrifugally
[NASA-CASE-NPO-10768] c06 N71-2	
Formation of polyurethane resins from hydroxy	
terminated perfluoro ethers [NASA-CASE-NPO-10768-2] c06 N72-2	[NASA-CASE-XLA-00138] c31 N70-37981 7144 Foldable conduit capable of springing back as
RTHYLENE OXIDE	self erecting structural member
Using ethylene oxide in preparation of	[NASA-CASE-XLE-00620] c32 N70-41579
sterilized solid rocket propellants and	Collapsible high gain antenna which can be automatically expanded to operating state
encapsulating materials [NASA-CASE-XNP-01749] c27 N70-4	
Ethylene oxide sterilization and encapsulating	g Expandable space frames with high expansion to
process for sterile preservation of	collapse ratio
instruments and solid propellants [NASA-CASE-XNP-09763] c14 N71-2	[NASA-CASE-ERC-10365-1] c31 N73-32749 0461 EXPANSION
EUTECTIC ALLOYS	Apparatus for measuring polymer membrane
High temperature bonding of sapphire to sapph	
by eutectic Al203 and Zr02 mixture to form sapphire rubidium maser cell	[NASA-CASE-XGS-03865] c14 N69-21363 Elastomeric extensometer for measuring surface
[NASA-CASE-GSC-11577-1] c15 N73-1	
EVACUATING (VACUUM)	expansion and contraction
Filling honeycomb matrix with deaerated pasts filler	[NASA-CASE-MPS-21049-1] c14 N73-11405 EXPERIMENTAL DESIGN
[NASA-CASE-XMS-01108] c15 N69-2	
Sealing evacuation port and evacuating vacuum	
container such as space jackets [NASA-CASE-XMF-03290] c15 N71-2	Sealed electric storage battery with gas 3256 manifold interconnecting each cell
Gas leak detection in evacuated systems using	
ultraviolet radiation probe	Electrode attached to helmets for detecting low
[NASA-CASE-ERC-10034] c15 N71-2 Vacuum displacement compression molding of	4896 level signals from skin of living creatures [NASA-CASE-ARC-10043-1] c05 N71-11193
tubular bodies from thermosetting plastics	Conditioning suit for normal function of

coherent, monochromatic light from low	[NASA-CASE-XNP-08840] c23 N71-16365
temperature plasma	Optical monitor panel consisting of translucent
[NASA-CASE-XNP-04167-3] c25 N72-21693	screen with test or meter information
Device for detection of combustion light	projected onto it from rear for application in
preceding qaseous explosions	control rooms of missile launching and tracking stations
[NASA-CASE-LAR-10739-1] c14 N73-16484 LIGHT AIRCRAFT	[NASA-CASE-XKS-03509] c14 N71-23175
Direct lift control system having flaps with	Detecting molecular constituents in radiation
slots adjacent to their leading edge and	transparent media by measuring intensity of
particularly adapted for lightweight aircraft	light transmitted through cell while applying
[NASA-CASE-LAR-10249-1] CO2 N71-26110	electrostatic or electromagnetic field
LIGHT BRAMS	[NASA-CASE-ERC-10021]
Overlapping beams of neodymium laser for detecting picosecond light pulses	Solar cell panel with light transmitting cower plate
[NASA-CASE-ERC-10227] c14 N70-12626	[NASA-CASE-NPO-10747] . c03 N72-22042
Optical system for increasing light beam	Method and system for transmitting and
intensity within solar simulators.	distributing optical frequency radiation
[NASA-CASE-NPO-11096] c11 N70-25959	[NASA-CASE-HQN-10541-3] c23 N72-23695
Cylindrical reflector for resolving wide angle light beam from telescope into narrow beam for	Thin absorbing metallic film for increased visible light transmission
spectroscopic analysis	[NASA-CASE-LAR-10836-1]
[NASA-CASE-XGS-08269]	Transmitting and reflecting diffusers for
Development and characteristics of optical	ultraviolet light
communications system based on modulation of	[NASA-CASE-LAR-10385-2] c23 N72-28694
light beams	LIGHTING EQUIPMENT
[NASA-CASE-XLA-01090] c16 N71-28963 Multiple pattern holographic information storage	Sealed fluorescent tube light unit capable of connection with other units to form string of

HEMBRANE STRUCTURES SUBJECT INDEX

[NASA-CASE-MSC-13972-1] c05 N72-20105	[NASA-CASE-XNP-03459] c15 N71-21078
Automatic system for measuring and monitoring	Leak resistant bonded elastomeric seal for
systolic and diastolic blood pressure in humans	secondary electrochemical cells
[NASA-CASE-MSC-13999-1] c05 N72-25142 Multichannel medical monitoring system to	[NASA-CASE-XGS-02631] c03 N71-23006 Metal pattern bonding technique for cover glass
measure physiological parameters from display	attachment to silicon solar cells for space
device at remote control station	applications
[NASA-CASE-MSC-14180-1]	[NASA-CASE-XLE-08569] c03 N71-23449 Development of electrical system for indicating
Tilting table for testing human body in variety of positions while exercising on ergometer or	optimum contact between electrode and metal
other biomedical devices	surface to permit improved soldering operation
[NASA-CASE-MFS-21010-1] c05 N73-30078	[NASA-CASE-KSC-10242] c15 N72-23497
Automatic device for assaying urine on bacterial adenosine triphosphate content	Development of process for bonding resinous body in cavities of honeycomb structures
[NASA-CASE-GSC-11169-2]	[NASA-CASE-MSC-12357] c15 N73-12489
HEMBRANE STRUCTURES	Electric resistance spot welding and brazing for
Liquid junction for glass electrode or pH meters [NASA-CASE-NPO-10682] c15 N70-34699	producing metal bonds with superior mechanical and structural characteristics
Expulsion and measuring device for determining	[NASA-CASE-LAR-11072-1] c15 N73-20535
quantity of liquid in tank under conditions of	METAL COATINGS
weightlessness	Metal surface treatment including impregnation
[NASA-CASE-XMS-01546] c14 N70-40233 Flexible composite membrane structure impervious	with diamond particles to increase resistance to corrosion, galling, and erosion
to extremely reactive chemicals in rocket	[NASA-CASE-NPO-10779] c15 N70-34641
propellants	Joining aluminum to stainless steel by bonding
[NASA-CASE-XNP-08837] c18 N71-16210 Flexible barrier membrane comprising porous	aluminum coatings onto titanium coated
substrate and incorporating liquid gallium or	stainless steel and brazing aluminum to aluminum/titanium coated steel
indium metal used as sealant barriers for	[NASA-CASE-MFS-07369] c15 N71-20443
spacecraft walls and pumping liquid propellants	Metal soldering with hydrazine monoperfluoro
[NASA-CASE-XNP-08881] c17 N71-28747 MEMBBANES	alkanoate for corrosion resistant coatings [NASA-CASE-XNP-03459] c15 N71-21078
Apparatus for measuring polymer membrane	Low concentration alkaline solution treatment of
expansion in electrochemical cells	aluminum with metal phosphate surface coatings
[NASA-CASE-XGS-03865] c14 N69-21363 Separation cell with permeable membranes for	to improve chemical bonding and reduce coating
fluid mixture component separation	weight [NASA-CASE-XLA-01995] c18 N71-23047
[NASA-CASE-XMS-02952] c18 N71-20742	Organometallic compounds of niobium and tantalum
Water insoluble, cationic permselective membrane	useful for film deposition
[NASA-CASE-NPO-11091] c18 N72-22567	[NASA-CASE-XNP-04023] c06 N71-28808 Silicide coating process and composition for
Ferrite memory arrays from pre-formed metal	protection of refractory metals from oxidation
conductors	[NASA-CASE-XLE-10910] c18 N71-29040
[NASA-CASE-LAR-10994-1] c18 N73-30536 MERCURY (METAL)	Selective nickel deposition on irradiation sensitive compounds
Interrupter switching device utilizing	[NASA-CASE-LEW-10965-1] c15 N72-25452
electrodes and mercury filled capillary tubes	Intermetallic coating for nickel based superalloy
in which current flow vaporizes mercury as	[NASA-CASE-LEW-11348-1] c17 N72-25517
circuit breaker [NASA-CASE-XNP-02251] c12 N71-20896	Development and characteristics of device for applying multiple layers of noble metal to
Method of forming ceramic to metal seals	glass substrate for protection of optical
impervious to gaseous and liquid mercury at	surfaces
high temperature [NASA-CASE-XNP-01263-2] c15 N71-26312	[NASA-CASE-LAR-10362-1] c15 N72-27486 Metallic alloy and aluminide coating for
Development of system for delivering vaporized	metallic base system
mercury to electron bombardment ion engine	[NASA-CASE-LEW-11696-1] c15 N73-10502
[NASA-CASE-NPO-10737] c28 N72-11709 MERCURY VAPOR	Silicon carbide backward diode with coated lead attachment
Interrupter switching device utilizing	[NASA-CASE-ERC-10224-2] c09 N73-27150
