# MANAGEMENT

**A CONTINUING LITERATURE SURVEY**

**- With Indexes -**

**A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA Scientific and Technical Information System during 1977.**

This document is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price code A10 (\$9.25 domestic; \$18.50 foreign).

# INTRODUCTION

## COVERAGE

*Management* is a compilation of references to selected reports, journal articles, and other documents on the subject of management. This publication lists 782 documents originally announced in the 1977 issues of *Scientific and Technical Aerospace Reports (STAR)* or *International Aerospace Abstracts (IAA)*.

## SCOPE

This publication series includes references on the management of: research and development, contracts, production, logistics, personnel, safety, reliability and quality control. It also includes references on: program, project and systems management; management policy, philosophy, tools, and techniques; decisionmaking processes for managers; technology assessment; management of urban problems; and information for managers on Federal resources, expenditures, financing, and budgeting.

## ORGANIZATION

Each entry in this bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* and *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Following the abstract sections, three indexes are included: subject, personal author, and corporate source.

# AVAILABILITY OF CITED PUBLICATIONS

## IAA ENTRIES (A77-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at \$6.00 per document up to a maximum of 20 pages; the charge for each additional page is \$0.25. Microfiche<sup>(1)</sup> of documents announced in *IAA* are available at the rate of \$2.50 per microfiche on demand, and at the rate of \$1.10 per microfiche for standing orders for all *IAA* microfiche. The price for the *IAA* microfiche by category is available at the rate of \$1.25 per microfiche plus a \$1.00 service charge per category per issue. Microfiche of all the current AIAA Meeting Papers are available on a standing order basis at the rate of \$1.35 per microfiche.

Minimum air-mail postage to foreign countries is \$1.00 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

## STAR ENTRIES (N77-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code followed by the letters HC or MF in the *STAR* citation. Price codes are given in the tables on page vii of the current issue of *STAR*.

Microfiche is available regardless of age for those accessions followed by a # symbol.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Unit.

**NOTE ON ORDERING DOCUMENTS:** When ordering NASA publications (those followed by the \* symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard \$3.00 price, for those documents identified by a # symbol.)

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

- Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.
- Avail: ERDA Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Energy Research and Development Administration reports, usually in microfiche form, are listed in *Nuclear Science Abstracts*. Services available from the ERDA and its depositories are described in a booklet, *Science Information Available from the Energy Research and Development Administration (TID-4550)*, which may be obtained without charge from the ERDA Technical Information Center.
- Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.
- Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.
- Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.
- Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)
- Avail: ZLDI. Sold by the Zentralstelle für Luftfahrtokumentation und -Information, Munich, Federal Republic of Germany, at the price shown in deutschmarks (DM).
- Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.
- Avail: U.S. Patent Office. Sold by Commissioner of Patents, U.S. Patent Office, at the standard price of 50 cents each, postage free.
- Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

## **GENERAL AVAILABILITY**

All publications abstracted in this bibliography are available to the public through the sources as indicated in the *STAR* Entries or *IAA* Entries. It is suggested that the bibliography user contact his own library or other local libraries prior to ordering any publications inasmuch as many of the documents have been widely distributed by the issuing agencies, especially NASA. A listing of public collections of NASA documents is included on the inside back cover.

MARCH 1978

## IAA ENTRIES

**A77-10192 \* #** Evaluation of a cost-effective loads approach. J. A. Garba, B. K. Wada, R. Bamford, and M. R. Trubert (California Institute of Technology, Jet Propulsion Laboratory, Applied Mechanics Div., Pasadena, Calif.). *Journal of Spacecraft and Rockets*, vol. 13, Nov. 1976, p. 675-683. 11 refs. Contract No. NAS7-100.

A shock spectra/impedance method for loads predictions is used to estimate member loads for the Viking Orbiter, a 7800-lb interplanetary spacecraft that has been designed using transient loads analysis techniques. The transient loads analysis approach leads to a lightweight structure but requires complex and costly analyses. To reduce complexity and cost, a shock spectra/impedance method is currently being used to design the Mariner Jupiter Saturn spacecraft. This method has the advantage of using low-cost in-house loads analysis techniques and typically results in more conservative structural loads. The method is evaluated by comparing the increase in Viking member loads to the loads obtained by the transient loads analysis approach. An estimate of the weight penalty incurred by using this method is presented. The paper also compares the calculated flight loads from the transient loads analyses and the shock spectra/impedance method to measured flight data. (Author)

**A77-10435** Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. Symposium sponsored by IEEE, AIIE, ASQC, IES, SOLE, AIAA, and ASME. New York, Institute of Electrical and Electronics Engineers, Inc., 1976. 525 p. \$18.

The topics considered are related to human performance reliability, assurance sciences models, problem solving using a government-industry data exchange program, consumer product safety, biomedical reliability and maintainability, aerospace reliability, hazard analysis and product liability, practical maintainability, microcircuit reliability, an analysis for mechanical reliability, and life cycle cost and design to cost. Attention is given to the reliability of transportation systems, reliability demonstration and test, warranties, aspects of contracting and management, nuclear system reliability, software reliability and maintainability, and part reliability and failure mechanisms.

G.R.

**A77-10436** Allocation of man-machine reliability. K. P. LaSala (U.S. Navy, Naval Sea Systems Command, Washington, D.C.), A. I. Siegel (Applied Psychological Services, Inc., Wayne, Pa.), and C. Sontz (Tracor, Inc., Arlington, Va.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 4-10.

The two methods of reliability allocation commonly used are the basic allocation method and the AGREE allocation method. The basic concepts governing the allocation are examined, taking into

account the characteristics of suitable man-machine simulation models and the constraints imposed by a restrictive environment. The formulation of the allocation problem is considered. It is found that the allocation problem can actually be written as an optimization problem. The implementation of the described approaches is illustrated with the aid of a sample allocation problem. G.R.

**A77-10437** System reliability estimation from several data sets. J. L. Tomsy (Lockheed Research Laboratories, Palo Alto, Calif.), T. R. Chow, and L. D. Schiller (Lockheed Missiles and Space Co., Inc., Sunnyvale, Calif.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 18-24.

A statistical model is presented for the estimation of a system reliability when there are two or more sets of component data. The estimates are in the form of point estimates and confidence bounds. A Monte-Carlo simulation analysis evaluates the accuracy of the confidence levels. (Author)

**A77-10440** Condemnation rates from failure data. M. Lipow and E. L. Welker (TRW, Inc., Redondo Beach, Calif.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 36-41.

Two models and associated procedures for predicting condemnation rate of a repairable item are presented. An investigation is conducted of the case in which ages or numbers of repairs accumulated on condemned items have not been recorded, or are unavailable. Attention is given to the determination of the age distribution, the determination of the repair frequency distribution, and considerations of uncertainty in the predictions. G.R.

**A77-10443 \*** Failure rate analysis of Goddard Space Flight Center spacecraft performance during orbital life. H. P. Norris and A. R. Timmins (NASA, Goddard Space Flight Center, Greenbelt, Md.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 120-125. 8 refs.

The reported study presents the results of analyses conducted with the aid of both Duane and Weibull growth models. The failure rate values provided may be useful for estimating future space performance, and comparing past, present, and future space performance. Failure rate data from thermal-vacuum system tests are examined and related to the space values. Attention is given to the data base, the time distribution of space malfunctions, limitations on data, and average component reliability for three years in space. G.R.

**A77-10447** Reliability analysis of structures. A new approach. C. W. Johnson and R. E. Maxwell (Hercules, Inc., Bacchus Works, Magna, Utah). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 213-217. 5 refs.

A reliability assessment technique has been developed which contains a number of relatively new methods. These methods, when used together, provide a powerful and practical reliability analysis tool to generate realistic reliability predictions and to develop efficient (maximum effectiveness and minimum cost) test plans, inspection plans, and manufacturing procedures. In the paper, the various methods are used to analyze an aluminum structure to illustrate the use of the reliability assessment technique. The assessment technique consists of the Monte Carlo Simulation and Sensitivity (MCSS) analysis method and the Interpolation Function (IF) method. (Author)

**A77-10448** Reliability growth management of SATCOM terminals. T. D. Cox (U.S. Army, Materiel Command, Alexandria, Va.) and J. Keely (U.S. Army, Satellite Communications Agency, Fort Monmouth, N.J.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 218-223. 7 refs.

This paper provides reliability growth, cost, and failure information gained from the development of a family of super high frequency transportable satellite communication terminals. The Duane and Weibull reliability growth models were used to constructively make reliability management decisions. Differences are noted between the Duane and Weibull models in their use for estimating growth rates, predicting future reliability, and fitting the test data. (Author)

**A77-10449** Implementation of the design to cost concept. T. E. Dixon and R. H. Anderson (USAF, Air Force Special Weapons Center, Kirtland AFB, N. Mex.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 224-229.

This paper describes various management tools which can aid the Program Manager in meeting Design to Cost (DTC) objectives. These management tools provide a system Program Manager with the means to do the following on a day-by-day basis: (1) evaluate current progress of system development; (2) identify problem areas associated with various subsystems where corrective actions or additional subsystem reliability or effectiveness options are required; (3) identify subsystems which have performance (reliability) levels more than adequate to meet mission requirements and investigate if these subsystems can be replaced by lower cost subsystems (which generally implies lower performance) with the cost savings invested more effectively in the improvement of other more critical subsystems, i.e., optimal allocation of resources; (4) select the combination of subsystem reliability and effectiveness options yielding the maximum total system capability achievable at the DTC goal; and, (5) evaluate the effect of any proposed change in system design and its impact on DTC goals. (Author)

**A77-10450** R & M management using risk analysis. V. O. Muglia (International Harvester Co., Solar Div., San Diego, Calif.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 230-233.

A description is presented of a useful risk analysis method, taking into account the practical use of the method for reliability and maintainability management. It is pointed out that risk analysis can be an effective tool for the manager to examine new, high loss potential, or marginal old programs for areas sensitive to input controls relative to profit maximization and life cycle costs minimization. G.R.

**A77-10451\*** Risk management of liquefied natural gas installations. O. H. Fedor (NASA, Kennedy Space Center, Cocoa Beach, Fla.), W. N. Parsons (Boeing Co., Cocoa Beach, Fla.), and J. Coutinho (U.S. Army, Materiel Systems Analysis Activity, Aberdeen Proving Ground, Md.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 245-250. 7 refs.

In connection with the construction of four major liquefied natural gas (LNG) facilities in New York City, the New York City Fire Commissioner has asked NASA for assistance. It was decided that the Kennedy Space Center should develop a risk management system (RMS) for the use of the New York Fire Department (NYFD). The RMS provides for a published set of safety regulations by the NYFD. A description of the RMS is presented as an example of an application of aerospace technology to a civilian sector, namely LNG facilities. G.R.

**A77-10452** Hazard analysis - Space applications to mass transit. G. B. Mumma and W. R. O'Halloran (Martin Marietta Aerospace, Denver, Colo.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 251-256. 9 refs.

This paper describes an aerospace hazard analysis method practiced by Martin Marietta for National Aeronautics and Space Administration (NASA)/United States Air Force (USAF) Shuttle programs and presents an example of how this method is directly applicable to a mass transit system. Emphasis is given to the incorporation of an active and methodical hazard analysis program from the earliest possible design phase of a new system through the initial revenue years of the operational system, including maintenance activities. The hazard analysis program must cover not only system components, such as the vehicles or the automatic train control system, but it must consider the entire system as a whole. It must involve all facets of the program from individual system component suppliers to the operating and maintenance personnel of the transit system authority. (Author)

**A77-10453** Effective reliability planning and implementation. W. W. Provett, Jr. and R. S. Ullman (ITT, Avionics Dept., Clifton, N.J.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 257-262.

Aspects of reliability planning in connection with the production of ECM equipment are considered, taking into account the prototype phase of the reliability program, the reproduction phase, production and deployment phases, and the reliability improvement warranty. Attention is given to internal controls, subcontractor control, internal design reviews, aspects of system developments, component screening, semiconductor and integrated circuit screening, subcontractor device screening, and equipment burn-in requirements. G.R.

**A77-10454** Nomograms for the design of reliability acceptance plans. A. L. Goel (Syracuse University, Syracuse, N.Y.) and A. M. Joglekar (Pillsbury Co., Research and Development Laboratories, Minneapolis, Minn.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 263-268. Contract No. F30602-71-C-0312.

This paper presents nomograms for the design and evaluation of single sample reliability acceptance tests for exponential distribution. The nomograms permit an exploration of the design region and facilitate the examination of alternative solutions and their implications. The nomograms constitute a useful tool for the practicing engineer to weigh the trade-offs between design and test criteria. Several examples are presented to illustrate the use of the nomograms toward plan design, exploration of design region, effect of

changes in design criteria on the designed plans, design with engineering constraints and design with partial information. (Author)

**A77-10456**      **Effects on LCC of test equipment standardization.** H. Rosenberg (ARINC Research Corp., Santa Ana, Calif.) and J. H. Witt (ARINC Research Corp., Annapolis, Md.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 287-292. 5 refs.

The principle of standardization is being given considerable attention by the Department of Defense because standardization represents one approach to reduce life cycle costs. The units of test, measurement, and diagnostic equipment (TMDE) used to support the operations and maintenance activities at the sites of the U.S. Army Communications Command have been identified as potential candidates for standardization. An analysis of the benefits of TMDE standardization is discussed. It is found that standardization could produce significant cost savings. G.R.

**A77-10457**      **The economic implications of unreliability.** J. S. Greenberg (Princeton University, Princeton, N.J.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 293-299.

The evaluation and comparison of alternatives which are based upon technologies in various stages of research, development, design, and use should take into account not only expected cash flows and present values but should also take into account the associated levels of risk. This paper describes a methodology which allows taking into consideration the effects of unreliability and cost uncertainties. The methodology allows an economic value to be established for subsystem reliability improvements. (Author)

**A77-10459**      **An approach to safety and system assurance in urban mass transportation.** R. Field (U.S. Department of Transportation, Urban Mass Transportation Administration, Washington, D.C.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 306-308.

In the development of new transit systems a safety and system assurance program helps increase reliability levels, service levels, and availability while decreasing maintenance costs. Objectives for system assurance are considered and a description is presented of a program plan outline for some essential elements of reliability and maintainability. It is pointed out that a demonstration of the specified reliability and maintainability values through acceptance testing is necessary. A properly constituted warranty program can yield benefits, but it cannot replace the system assurance program. G.R.

**A77-10460**      **Reliability and availability assessment criteria, data inputs and analysis methods for mass transit systems.** E. L. Welker (TRW, Inc., Oakland, Calif.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 309-313.

**A77-10462**      **Improved reliability through formal field tests.** J. H. Jones (Litton Systems, Inc., Data Systems Div., Van Nuys, Calif.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 331-335.

A recommendation is made regarding the conduction of a comprehensive evaluation test during the initial phase of a major electronic system's first field test series. The principal objective of the test is the evaluation of the system's reliability and maintainability elements. An accurate assessment of reliability during the

initial field test period can have a significant impact on the system's ability to achieve reliability and maintainability requirements during its life cycle. G.R.

**A77-10463**      **System burn-in for reliability enhancement.** H. D. Rue (Hughes Aircraft Co., Culver City, Calif.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 336-341.

The system burn-in test discussed involves the 'preconditioning' of assemblies and the accelerated power-on tests performed on electrical and electronic equipments subjected to temperature, vibration, voltage, and humidity cycling in an environmental chamber. An approach which permits prediction, assessment, and control of equipment reliability levels during manufacturing operations are examined, along with methods of determining optimum screening factors to achieve the desired level of equipment reliability. V.P.

**A77-10464**      **A contractor view of warranty contracting.** W. J. Bonner (Litton Systems, Inc., Guidance and Control Systems Div., Woodland Hills, Calif.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 351-356.

Warranty contracting is a viable contract form, the use of which should increase substantially over the coming years, but which has numerous pitfalls for the unwary. In the present paper, a number of typical warranty contract provisions are examined, and the challenges offered to the contractor by these provisions are discussed. The challenges include such that are associated with the commitment to repair all failures over a specified period of time at a fixed price negotiated at the time of contract award, and such that are associated with requirements for contractor assumption of transportation charges, guaranteed turn-around-time for repair units, length of the warranty period, reliability measurement and growth, and the necessity of providing contingency spares. V.P.

**A77-10465**      **Aviation supply office FFW/RIW case history 2, Abex pump.** O. Markowitz (U.S. Department of Defense, Aviation Supply Office, Philadelphia, Pa.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 357-362. 6 refs.

To the satisfaction of both buyer and seller, the FFW/RIW contract between the Navy and Abex Corporation has met and exceeded all the primary objectives. The Navy has attained substantial direct and indirect cost savings, while Abex has earned a large profit by vigorous pursuit of changes aimed at improving reliability and service life of their pump in fleet operations. The contract experience has shown the potential of FFW/RIW contracting on a sole source basis for nonelectronic (mechanical) equipment. Such a contract, properly structured, makes it possible to achieve common buyer-seller goals without the usual adversary relationships. V.P.

**A77-10466**      **Factors in balancing government and contractors risk with warranties.** R. R. Shorey (U.S. Department of Defense, Washington, D.C.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 366-368.

Historically, the Department of Defense has placed uneven emphasis, in the acquisition process, on equipment reliability as compared to performance and schedule. The net effect, particularly in complex tactical weapons, has been a field reliability considerably less than that specified. Warranties planned in conjunction with the acquisition process offer the potential to impart new ideas to the design and production of equipment which is more reliable in the

field than has resulted from conventional acquisition approaches. For the incentive to be widely applicable, the risks and gain must be satisfactory to both parties. Some carefully directed efforts will be needed to achieve a balance between the price and the uncertainties plus risk. V.P.

**A77-10467 Pitfalls in reliability program management.** E. F. Thomas (General Dynamics Corp., Fort Worth, Tex.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 369-373.

Potential pitfalls in reliability program management, which could be avoided if given proper attention during the reliability program planning phase, are discussed. The pitfalls considered are: transition of contract requirements into working paper; weak correction of deficiencies language for nonconformance; the accomplishment of reliability risk assessments; 'subcontracting' within the company; establishing program priorities during design, manufacture, test, and delivery; relevance of reliability predictions as related to product life phases; and the interface between reliability engineering and manufacturing/quality assurance. V.P.

**A77-10468 Report on reliability design and acquisition management.** T. D. Hill and T. A. Musson (USAF, Systems Command, Andrews AFB, Washington, D.C.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 374-377.

This paper is a report of the findings, recommendations, and pending implementing actions in the areas of Reliability Design Techniques and Acquisition Reliability Management, resulting from the Joint Logistics Commanders (JLC) Tri-Service Electronics Reliability Workshop held at the Airlie House, Warrenton, Virginia, during the period May 5-9, 1975. (Author)

**A77-10469 Management of electronic equipment reliability.** B. Reich and S. Grubman (U.S. Army, Electronics Command, Fort Monmouth, N.J.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 378-382.

The electronics system reliability workshop discussed resulted in short- and long-term recommendations for an ambitious wide-ranging program which may have a significant impact on the country's defense posture. The objective of the workshop was to identify problem areas and develop recommendations to improve electronic equipment reliability. The recommendations include such immediately implementable actions as: revising reliability test programs to yield 'real world' results; the development of a real-time field reliability reporting system to permit corrections, rather than merely the repair of design differences; and the publishing of revised and new reliability guidance documentation to allow for proper and enforceable contrast provisions. V.P.

**A77-10470 Integrated analysis of the assurance technologies.** H. W. Wynholds (Lockheed Missiles and Space Co., Inc., Sunnyvale, Calif.) and L. Bass (ECON, Inc., San Jose, Calif.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 394-398.

Described is a methodology that enables the Program Manager, through a systematic approach, to appropriately fund and monitor the various product development and mission support activities which support his program. This paper discusses specific considerations and capabilities of the analysis methodology. Included is a tutorial example which illustrates the essential characteristics of Integrated Program Allocation (IPA). (Author)

**A77-10471 The pay-off of R & M trade-off.** P. M. Stafford (Syracuse University, Syracuse, N.Y.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 399-404. USAF-supported research.

The objectives of the present paper are: to identify individual tasks which represent the program elements of an R & M (Reliability and Maintainability) management plan; to evaluate the relative importance of each of the program elements in securing anticipated reliability and maintainability levels; and to make trade-off recommendations between R & M program elements while recognizing the inherent risk of such compromise. The trade-off opportunities for the various program elements are summarized in diagrams and tables. It appears from the discussion that these opportunities vary to a great extent with the development life cycle phase of the system. The tabulations presented may be used as a guide in determining where compromises might safely be attempted and where shortcuts may have catastrophic results. V.P.

**A77-10472 Bayesian reliability assessment from test data.** J. E. Wolf (TRW Systems Group, Redondo Beach, Calif.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 411-419.

The general problem of making an assessment of reliability from test data is addressed. The exact calculation of Bayesian confidence limits for any type of system (serial, parallel, bridge, etc.) for test data of any assumed nature (binomial, exponential, etc.) is described for data obtained at the component level and/or system level. (Author)

**A77-10473 Estimating the reliability of complex systems.** J. N. Irwin (Hunting Engineers, Ltd., Amphil, Beds., England). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 420-425.

The principles of a technique developed to predict the reliability of complex weapon systems are outlined by applying the technique to an example which employs an over-simplification of a few of the necessary systems to enable a manned spacecraft to carry out a reentry and soft landing. The procedures described are admittedly tedious, but have proved to provide very satisfactory reliability assessments for very complex weapon systems. The advantages of the approach include: the network itself is very useful as a medium for communication and for promoting an understanding of a complex system; the initial runs often reveal unexpected features, leading to system design changes; the combined sampling procedure not only highlights the weaker parts of the design (from the reliability point of view), but also assists in planning adequate component trials. V.P.

**A77-10474 On optimization of SCRAM systems. I.** Bazovsky, Jr. (Igor Bazovsky and Associates, Inc., Tarzana, Calif.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 426-429.

A SCRAM system may be defined as a device which is designed to avert accidents by either shutting down or disarming the primary system as soon as a hazard occurs. Examples of SCRAM systems are the shutdown system of a nuclear reactor and a proximity warning device on an airplane. In the present paper, it is proposed that SCRAM systems be evaluated by the value of their inherent effectiveness which is defined as the conditional probability that the protective device will save a hazard occurring at a time  $t$ , given that neither hazards nor any serious SCRAMs have occurred in the interval  $(0, t)$ . The inherent effectiveness of a SCRAM system is shown to be composed of the eight design characteristics. An

optimization methodology is developed for determining the optimal value of each of these characteristics so that they combine together to yield a maximal value of inherent effectiveness for minimum cost. V.P.

**A77-10476** A new assurance technology for computer software. D. J. Reifer (Aerospace Corp., Los Angeles, Calif.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 446-451. 28 refs.

An advanced development project aimed at improving the reliability of computer software (computer programs and associated data) is discussed, and the methodology developed to attack the problem is described. The first steps are aimed at introducing sound management and engineering practices to the art of computer programming and to develop a new assurance technology for computer software. The assurance technology is explained by first examining the techniques of verification, validation, and certification as they are applied to the test and evaluation of computer software; next, it is shown how these techniques provide technical management with the information required to determine whether the computer program products that evolve during the software development process are correct with respect to their specifications. Application of these techniques to several projects is reviewed, and the current status of the technology is assessed. V.P.

**A77-10477** I.C. screening, reliability or ripoff. J. T. Henderson (Gulton Industries, Inc., Albuquerque, N. Mex.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 452-455.

The need for Specification Control Drawings (SCD's) on Integrated Circuits (IC's) is akin to the need for SCD's on semiconductors or any other part. The part must be completely defined, and continuous control of it must be maintained. Failure to do so may lead to calamities. A nondefined parameter shift or a noncontrolled parameter change may cause problems. Another need for SCD's is product improvement by weeding out potentially defective units (screening) and by selective tightening or restricting parameter limits (guard-banding). In the present paper the merits of SCD's are outlined. Some potential pitfalls of test methods for semiconductor devices are examined, using the MIL-STD-883A system as an example. The general aspects of obtaining a reliable integrated circuit are discussed. V.P.

**A77-10478** Comparison of DPA results on electronic components. S. L. Parker and L. A. Lawson (SCI Systems, Inc., Huntsville, Ala.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings.

New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 456-460.

The application of Destructive Physical Analysis (DPA) to diodes, transistors, and integrated circuits of the type currently used in aerospace equipment is discussed. Particular attention is given to the methods of evaluation and to the sample plans. The results, in terms of quantity accepted and rejected, are given for each method of procurement of parts for each type of part. The data presented may prove to be beneficial to both equipment manufacturers and customers for electronic hardware when deciding what type of parts program to specify during the design and development portions of a program. V.P.

**A77-10479** A Data Base Management /DBMP/ Program for Integrated Logistics Support /ILS/. A. Christensen and R. S. J. Voytek (Litton Systems /Canada/, Ltd., Rexdale, Ontario, Canada). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 467-475. 5 refs.

The Integrated Logistics Support function and its inter-dependent disciplines such as life cycle costing, reliability and maintainability engineering, spares determination and sparing philosophies is discussed in this paper. This inter-relationship is pursued from a Data Base Management Program (DBMP) viewpoint. The (DBMP) can be applied directly to the optimum design and selection of a system of equipment for a sailing vessel, an aircraft, a computer complex or a large orbiting space station. (Author)

**A77-10480** Maintainability analysis versus maintenance analysis - Interfaces and discrimination. W. R. Downs (McDonnell Douglas Astronautics Co., Huntington Beach, Calif.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 476-481. 19 refs.

To clarify the present confusion regarding maintainability engineering and maintenance engineering analyses, the difference between the two is delineated as follows: maintainability engineering is directed at assuring a design performance capability that will permit attaining a required operational capability, while maintenance engineering is directed at assuring a proper integration of the system into the use environment in a manner which assures achieving the predicted system utilization. Both are concerned with minimizing required resources/costs. The differences are identified which must be recognized in order to achieve the objectives of the maintainability engineering program and the interchange of data between the two analyses, which is conducive to reduce program costs. V.P.

**A77-10482** R&M - Today's heating and cooling vs. solar energy. C. H. Karr (Westinghouse Research and Development Center, Pittsburgh, Pa.) and G. L. Wagner (Westinghouse Electric Corp., Astronuclear Div., Pittsburgh, Pa.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 491-499. 10 refs.

The performance data on conventional heating and cooling components discussed include service-call rates, service-call costs, and failure mode types and frequencies which relate to electric and gas air-conditioners, gas and oil furnaces, and heat pumps. This current reliability performance is then extrapolated to a higher-potential future capability. It is shown that certain known failure modes are capable of significant improvement within the present state of the art. By assuming that these obvious problems have been attended to and greatly reduced, an estimate is obtained of how good conventional systems could be in the near future. The study reveals some interesting comparisons, observations, and conclusions concerning reliability and maintenance costs of present conventional systems, improved conventional systems, and candidate solar energy systems. V.P.

**A77-10483** Interface between maintainability and commercial aircraft spares support. J. E. Losee (Douglas Aircraft Co., Long Beach, Calif.). In: Annual Reliability and Maintainability Symposium, Las Vegas, Nev., January 20-22, 1976, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 500-503.

A review of all aspects of the DC-10 program revealed that a new approach to spares support is imperative if an aircraft and a support system that would be financially attractive in the market place were to be produced. The general methodology currently used by Douglas Aircraft to develop the spare support program for the D-10 is described. V.P.

**A77-10916 \* #** Economic benefits of improved meteorological forecasts - The construction industry. R. K. Bhattacharyya and J. S. Greenberg (ECON, Inc., Princeton, N.J.). *International Astronautical Federation, International Astronautical Congress, 27th, Anaheim, Calif., Oct. 10-16, 1976, Paper 76-128.* 12 p. 10 refs. Research supported by the Environmental Research Institute of Michigan; Contract No. NAS5-20021.

## A77-10920

Estimates are made of the potential economic benefits accruing to particular industries from timely utilization of satellite-derived six-hour weather forecasts, and of economic penalties resulting from failure to utilize such forecasts in day-to-day planning. The cost estimate study is centered on the U.S. construction industry, with results simplified to yes/no 6-hr forecasts on thunderstorm activity and work/no work decisions. Effects of weather elements (thunderstorms, snow and sleet) on various construction operations are indicated. Potential dollar benefits for other industries, including air transportation and other forms of transportation, are diagrammed for comparison. Geosynchronous satellites such as STORMSAT, SEOS, and SMS/GOES are considered as sources of the forecast data.

**A77-10920 #** Policies for pricing commercially-useful space systems resulting from government programs. J. P. Stein and C. Wolf, Jr. (Rand Corp., Santa Monica, Calif.). *International Astronautical Federation, International Astronautical Congress, 27th, Anaheim, Calif., Oct 10-16, 1976, Paper 76-132*. 8 p.

Policies for pricing commercially-useful systems resulting from government programs include four principal options: (1) marginal cost pricing; (2) average cost pricing; (3) profit-maximizing pricing; and (4) multipart pricing. For efficient resource allocation in the short run, options (1) and (4) are optimal, whereas (2) and (3) are not. This conclusion requires an assumption that externalities and implementation costs are not so different for the several alternatives as to alter the result. Choosing among alternative policies on the basis of long-run efficiency is more complicated and less conclusive, entailing such elusive considerations as public and congressional reactions to operating deficits and shuttle revenues, stimulating technological advance, etc. Finally, the alternatives can be evaluated in terms of distributional criteria: how they affect costs and benefits paid or received by taxpayers, industry, and potential domestic and foreign users of space shuttle services.

**A77-10954 \* #** Methods utilized in evaluating the profitability of commercial space processing. H. L. Bloom and P. T. Schmitt (General Electric Co., Valley Forge, Pa.). *International Astronautical Federation, International Astronautical Congress, 27th, Anaheim, Calif., Oct. 10-16, 1976, Paper 76-261*. 10 p. NASA-supported research.

Profitability analysis is applied to commercial space processing on the basis of business concept definition and assessment and the relationship between ground and space functions. Throughput analysis is demonstrated by analysis of the space manufacturing of surface acoustic wave devices. The paper describes a financial analysis model for space processing and provides key profitability measures for space processed isoenzymes.

B.J.

**A77-10968 #** Legal and economic prerequisites to space industrialization. A. M. Dula (Butler, Binion, Rice, Cook, and Knapp, Houston, Tex.). *International Astronautical Federation, International Astronautical Congress, 27th, Anaheim, Calif., Oct. 10-16, 1976, Paper ISL-76-29*. 10 p. 10 refs.

A survey is conducted regarding the areas of investment which are presently of interest to private industry in connection with space-based manufacturing and research activities. An investigation is carried out concerning the effects of legal regulations, especially tax and intellectual property law, on industry's willingness to invest in space research and manufacturing. It is found that the intellectual property law dramatically affects the willingness of the respondent industries to participate in space industrialization.

**A77-11305 #** Use of computational models in long-term cost planning (Szamitási modellek használata hosszú időtávú tervezésnek). L. Kocsy (Nehezipari Minisztérium, Budapest, Hungary). *Energia es Atomtehnika*, vol. 29, May 1976, p. 211-213. In Hungarian.

Broad computational models are devised for long-term cost effectiveness planning of power equipment procurement. A stable

unchanging price level is entertained in a first approximation, and models with increasing, decreasing, and time-constant cost-level curves are also constructed. A long-term stationary slow rise in price level on a background of market equilibrium, and with conjunctural transient fluctuations abstracted, is considered for inflationary trends. Problems with imports, foreign exchange and currency, and rise in equipment prices because of inflation and lead time in realization of projects are touched upon. A tool-tiedown factor and a cost-rise index are defined. It is claimed that the models lead to great savings in computational labor in working out cost estimates. R.D.V.

**A77-11307 #** Computational techniques applied to power investments /practical programming/ (Az energetikai beruházásoknál alkalmazott számítási módszerek /gyakorlati programozás/). L. Kocsy. *Energia es Atomtehnika*, vol. 29, June 1976, p. 261-272. In Hungarian.

A variety of computer-oriented techniques for project control, sequencing and scheduling of operations, and cost optimization, applicable to investment programs for power plants and power equipment, are reviewed. The milestone system, cyclogram system, harmonogram system (process elapsed time and overlapping bands for scheduled operations), and scheduling based on power sources are discussed. Network techniques such as the critical path method, program evaluation and review techniques, and mesh point methods are compared. Difficulties in gaining acceptance for network techniques are mentioned.

R.D.V.

**A77-11311** Co-operation in the European aircraft manufacturing industry and among the scheduled airlines /Brancker Memorial Lecture/. K. Hagrup (Scandinavian Airlines System, Bromma, Sweden; International Chamber of Commerce, Paris, France). *Chartered Institute of Transport Journal*, vol. 37, May 1976, p. 93-104.

Cooperation (rather than competition) as the aviation industry has achieved it in AECMA (European Association of Aerospace Manufacturers), in AEA (Association of European Airlines), in ECAC (European Civil Aviation Conference), in KSSU (KLM, SAS, SWR, UTA) and in ATLAS (Air France, Alitalia, Iberia, Lufthansa, Sabena) and other cooperating groups in Europe is discussed. Particular emphasis is on the EEC commission's proposal regarding extended cooperation and centralization of the aerospace manufacturers and airlines of the EEC. Modifications of the EEC commission's proposal are suggested.

B.J.

**A77-11344 \*** Are accidents scheduled. C. Childs (NASA, Washington, D.C.). *Hazard Prevention*, vol. 13, Sept.-Oct. 1976, p. 3-5.

Two major sets of safety problems associated with project scheduling are examined. The first set involves problems resulting from the improper scheduling of the safety tasks. The second involves problems which result from inadequate attention to scheduling of those project tasks which lead to tests and operations and includes condensed schedules, modified schedules, schedule work-arounds, eliminated portions of the schedules and strung out schedules.

B.J.

**A77-11584 #** Spacelab - A new era in communications R & D Project Management. C. E. Cheeseman (General Electric Co., Space Div., Philadelphia, Pa.). (*European Industrial Space Study Group, U.S.-European Conference, 6th, Monte Carlo, Monaco, Oct. 13-16, 1975.*) *British Interplanetary Society, Journal*, vol. 29, Nov. 1976, p. 695-708.

The technical, managerial, and sponsorship aspects of some Spacelab communications payloads are discussed. It is seen that, as with all revolutionary new capabilities, major reconstructing of techniques and methods will be necessary to capitalize on the opportunities provided by Spacelab. The transition must begin several years before the first Spacelab flight. Government and industry must

begin immediately to develop their joint programs and individual projects. The charges for experimenting must be defined to allow R & D choices to be made by the private sector, and the involved questions of government and industry must be addressed. In addition, hardware guidelines and constraints must be established to ensure the safety of the Orbiter, Spacelab, and crew and to reduce to a minimum the associated preparation costs to a potential use of Spacelab. V.P.

**A77-11587 # The potential of Spacelab for space applications missions and the organization for its use.** A. Lebeau, D. J. Shapland, and J. Collet (ESA, Neuilly-sur-Seine, Hauts-de-Seine, France). (*European Industrial Space Study Group, U.S.-European Conference, 6th, Monte Carlo, Monaco, Oct. 13-16, 1975.*) *British Interplanetary Society, Journal*, vol. 29, Nov. 1976, p. 729-742.

Some characteristic features of Spacelab design are examined, with particular reference to the pressurized module that provides a working laboratory environment, and the unpressurized pallet that permits direct exposure to the space environment. The ways in which mission flexibility and adaptability to a range of configurational and mission requirements were achieved are outlined, and the modular approach adopted in the design is illustrated. Spacelab missions, applications, and the respective payloads are discussed, and the mode of Spacelab usage and control is described. The part played by the European Space Agency in the Spacelab project is emphasized. V.P.

**A77-12248 # How construction times of power stations affect investment costs (Eromuvi beruhazasok atfutásidejének költségkihatása).** L. Kocsvay (Nehezpari Miniszterium, Budapest, Hungary). *Energia es Atomtehnika*, vol. 29, Oct. 1976, p. 468-471. In Hungarian.

A worldwide trend of increasing power station investment costs is noted, and the effect of lengthening of construction times and construction delays on investment costs is assessed. The combined effect of price increases and of funding over a 6-8 year construction period is investigated as an example. Additional labor costs and labor overtime costs, inflationary rises in labor costs and materials costs, accumulations in interest payments, and price-moderating trends connected with increases in labor and machine productivity, intensified mechanization of construction work, and improvements in project planning are dealt with. R.D.V.

**A77-12455 R. & D. project cost and schedule realism - A risk analysis approach.** D. C. Borgman (U.S. Army, Air Mobility Research and Development Laboratory, St. Louis, Mo.) and J. D. Hwang (U.S. Army, Air Mobility Research and Development Laboratory, Moffett Field, Calif.). In: *Conference on Decision and Control, 6th, and Symposium on Adaptive Processes, 14th, Houston, Tex., December 10-12, 1975, Proceedings.* New York, Institute of Electrical and Electronics Engineers, Inc., 1975, p. 731-733. 5 refs.

All project managers strive for cost and schedule realism. The Department of the Army has established a novel concept called the 'Total Risk Assessing Cost Estimate (TRACE)' to develop a new program cost-estimation procedure for research, development, test and evaluation cost realism. Such a procedure properly accommodates program uncertainties/risks inherent to specific work elements, and the high-risk work elements are budgeted accordingly. The purpose of this paper is to propose such a procedure which subscribes to a risk analysis approach and satisfies the essential elements of the TRACE concept. The procedure consists of two models: a cost impact model and a schedule variance model. Applications of the procedure to the NASA/Army Tilt Rotor Research Aircraft Project are also presented for illustration.

**A77-13330 Managing by exception in space systems operation.** G. J. Winchell (USAF, Offutt AFB, Neb.). *Defense Management Journal*, vol. 12, Oct. 1976, p. 64-68.

The Defense Meteorological Satellite Program (DMSP) has been one of the more successful U.S. space programs. The 4000th Aerospace Applications Group of the U.S. Air Force's Strategic Air Command, nicknamed the Four Grand, maintains command and control of the DMSP's on-orbit satellites. The group has combined the functions of operational control, technical manual preparation, system training, limited procurement, and design and development engineering of both hardware and software into a relatively small organization of approximately 200 people. Attention is given to aspects of data flow, the organizational structure of the Four Grand, and lessons provided by the experience of the Four Grand with the DMSP. G.R.

**A77-13364 The role of the airport consultant.** A. H. Stratford. *Airport Forum*, vol. 6, Oct. 1976, p. 47-52. In English and German.

Attention is extended from focus on civil engineering, mechanical engineering, and electrical engineering aspects of airport consultants' work to concern with risk capital financing, resources deployment, road vehicle traffic projections in the vicinity of airports, environmental problems, noise levels, expediting of passenger traffic (including: luggage searches, mobile lounges, etc.), and cost studies. The volume and nature of airport consultancy business in Britain are discussed. Construction supervision, the local social and political setting, and the international setting are also viewed as major concerns. R.D.V.

**A77-13777 # Planning and installation of an information center on fatigue and associated aspects at the LBF.** O. Buxbaum (Fraunhofer Gesellschaft, Laboratorium für Betriebsfestigkeit, Darmstadt, West Germany). In: *Problems with fatigue in aircraft; Proceedings of the Eighth Symposium and Colloquium, Lausanne, Switzerland, June 2-5, 1975.* Emmen, Switzerland, Eidgenössisches Flugzeugwerk, 1975, p. 5.1/1-5.1/5.

The considered information center is to serve the needs of industry and research in providing up-to-date and critically analyzed technical information related to fatigue phenomena and the fatigue behavior of materials. In 1974 a pre-design study concerning the information center was conducted, taking into account the group of potential users, the type of information expected, the scope of the literature of fatigue, organizational aspects, and financial questions. The results of the study are briefly discussed. G.R.

**A77-14550 # The future of safety in general aviation.** B. W. Silver. *AIAA Student Journal*, vol. 14, Fall 1976, p. 12-15.

The point is made that the level of safety in general aviation is not good, and that a good deal of the problem lies in the FAA certification process itself. It is argued that this process is not conducive to technically oriented, impartial engineering evaluation of the safety of small aircraft designs. The 'Delegation Option Authorization', whereby the FAA assigns the responsibility for type certification of new aircraft designs to the directors of the nine regional FAA offices, who in turn can pass the responsibility on to the manufacturer, has a built-in conflict of interest, since it essentially permits the manufacturer to certify his own products. It is unfortunate that lawsuits arising from aircraft accidents are becoming a greater enforcer of safety, in some respects, than design regulations. P.T.H.

**A77-14600 # Operations research model for investments scheduling in the transportation industry (Modele economico matematica de etapiare a investitorilor in transporturi).** I. Cuncev (Institutul de Cercetari si Proiectari Tehnologice in Transporturi, Bucharest, Rumania). *Revista Transporturilor si Telecomunicatiilor*, vol. 3, no. 5, 1976, p. 412-417. 5 refs. In Rumanian.

Mathematical cost estimate and investment planning models for transportation, particularly maritime and river transportation, are worked out, with fleet and harbor capacities as parameters and investments as inputs. The waterways fleets and harbor facilities are treated as an automatic system acted upon by input signals (investments). Convolution integrals for the relationship between input and system response are derived, and simplex matrix algorithms are developed. Docking facilities, materials handling equipment, communications equipment, auxiliary harbor vessels, cargo fleet, storage depot areas, and waterways maintenance are treated as (automatic) subsystems. Optimization of cargo/traffic flow under conditions of expanding traffic volume, with various constraints, is aimed at. Some numerical examples are worked out. R.D.V.

**A77-15224** The commercial airline industry: Managerial practices and regulatory policies. N. K. Taneja (MIT, Cambridge, Mass.). Lexington, Mass., D.C. Heath and Co., 1976. 350 p. 368 refs. \$21.95.

An introduction to managerial practices and regulatory policies in the commercial airline industry is presented. Operation of airlines and short- and long-term decision making procedures are discussed after a brief review of historical developments in the industry. Industry structure, airline economics, profitability analysis, marketing of air transport services, fleet planning and selection of aircraft, airline scheduling, labor relations, passenger traffic forecasting, and airline subsidies and mergers are discussed. Passenger fare and freight rate policy decisions are covered and the status of airline regulation and development is considered on a national and on an international basis. The book ends with a discussion of policy issues in air transportation (deregulation, supersonic transport, V/STOL, fuel costs, airport access and congestion, air cargo). R.D.V.

**A77-16375** A new air transport policy for the North Atlantic. J. J. Friedman. New York, Atheneum, 1976. 151 p. 97 refs. \$5.95.

An investigation is conducted concerning the requisites of a sound regulatory policy with regard to the great North Atlantic air transport system. A basic change in the regulatory policy under which the industry now operates is required to solve the deep-lying economic problems which have plagued the North Atlantic service for years. Approaches for achieving improved efficiency are considered, taking into account the control of scheduled capacity, the integration of scheduled and charter capacity, and the control of charter capacity. Questions related to an achievement of economic fares are also discussed, giving attention to fares for scheduled services, the relation of scheduled to charter fares, charter rates, and a standard of reasonableness of profits. G.R.

**A77-16449** Public international air transportation law in a new era: Economic regulation of international air carrier operations. H. A. Wassenbergh (KLM-Royal Dutch Airlines, Amstelveen, Netherlands). Deventer, Netherlands, Kluwer, 1976. 174 p. 313 refs. \$25.10.

Problems related to aspects of international and national control of the international air traffic market are explored, questions concerning the exchange of traffic rights for scheduled services are investigated, and the historical background of the charter development is examined. Attention is also given to the nonaffinity concept, the separation of charter service from scheduled service, the exchange of charter rights by international agreement, developments in the direction of a new freedom of the air, advantages of inter-airline cooperation, and the characteristics of a new U.S. international civil aviation policy. G.R.

**A77-16687** Discussion of the reliability of measuring devices (Messgeräte-Zuverlässigkeit diskutiert). E. Templ and P. Dollmetsch (Standard Elektrik Lorenz AG, Stuttgart, West Germany). *Elektronik*, vol. 25, Nov. 1976, p. 103-105. In German.

Costs related to the use, purchase, and maintenance of devices for measurement, test, and control applications depend to a large degree on aspects of device reliability. The use of devices of low reliability is connected with high service costs. An employment of devices with a high reliability, on the other hand, may be uneconomical. Problems of device selection are related to the requirement to select a device with a reliability for which the total cost, which includes the cost of the device and the service and maintenance costs, is a minimum for the intended application. G.R.

**A77-16735 #** System safety and the Utility Tactical Transport Aircraft System. J. C. Henderson (U.S. Army, Agency for Aviation Safety, Fort Rucker, Ala.). In: International System Safety Conference, 2nd, San Diego, Calif., July 21-25, 1975, Proceedings. Newport Beach, Calif., System Safety Society, 1976, p. 455-460.

After a general description of the UTTAS (Utility Tactical Transport Aircraft System) helicopter, attention is directed to integration of system safety during concept formulation and specific system safety tasks which included hazard analyses, the establishment of positive system safety evaluation procedures for proposed system modifications, and the identification of qualitative and quantitative safety requirements for the system and all subsystems. System safety criteria, hazard identification and control (including preliminary hazard analysis, and operating and maintenance hazard analyses), reliability, vulnerability and crashworthiness are examined. B.J.

**A77-16738 #** Tasks and method of operation of the government aviation inspection. III (Aufgaben und Arbeitsweise der Staatlichen Luftfahrtinspektion. III). K. Zindel (Staatliche Luftfahrtinspektion, Berlin, East Germany). *Technisch-ökonomische Information der zivilen Luftfahrt*, vol. 12, no. 4, 1976, p. 198-200. In German.

Human error, deficiencies in the design of aviation devices, defective material, and unavoidable occurrences can produce aircraft accidents, material damage, or disturbances in air traffic operations. The study of such extraordinary events in civil aviation is considered, taking into account the regulations concerning such events in the German Democratic Republic. Investigations are conducted regarding the aircraft and its equipment, the preparation of the aircraft for the flight, the flight operations, the control and guidance of the aircraft, aspects of flight safety, the ground characteristics, the weather, the duties and responsibilities of the involved persons, the characteristics of the extraordinary event, and the consequences of the event. G.R.

**A77-17020 #** What options for European aviation. E. G. Friberg and R. S. Attiyeh (McKinsey and Co., Inc., Amsterdam, Netherlands). *Astronautics and Aeronautics*, vol. 15, Jan. 1977, p. 50-56.

Back in 1970, with the U.S. aerospace industry hobbled by severe financial and structural weaknesses, the time seemed ripe for European aerospace companies to challenge American dominance of the free-world market. This has not happened, if anything, the Europeans have lost ground. The present article reviews the earlier foreseen opportunity, and shows how the European challenge was blunted by a combination of unforeseen economic events, internal difficulties, and competitive U.S. moves. Steps which the European industry might take to become a more significant factor in the aerospace market are examined. V.P.

**A77-17022 #** Planning a general-aviation product. J. N. Lew (Beech Aircraft Corp., Wichita, Kan.). *Astronautics and Aeronautics*, vol. 15, Jan. 1977, p. 76-82.

The cost-estimating technique described illustrates most of the typical factors which a general-aviation company must consider to

decide whether it should commit itself to the production of a proposed new airplane. It is shown how financial risk can be exposed by predicting profit and return in investment prior to any initial investment. V.P.

**A77-17228** A new development concept for gas turbine engine optimize life cycle costs. W. D. Cowie, E. E. Abell, and E. W. Horn (USAF, Aeronautical Systems Div., Wright-Patterson AFB, Ohio). In: International Symposium on Air Breathing Engines, 3rd, Munich, West Germany, March 7-12, 1976, Proceedings, Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1976, p. 27-38. 12 refs.

The life cycle development and management process for turbine engines is being revised to provide more durable, reliable, and lower life cycle cost engines to the military services. Greater attention is being given earlier in the life cycle to the cost trades between performance, producibility, and operability/supportability; i.e., during the technology, conceptual and validation phases of the development process. The full-scale development phase has been restructured to emphasize structural durability and to provide formal demonstrations of useful engine life limits; operational and logistic characteristics; and validation of the engine life management process to provide economic management rationale for the production hardware acquisition, operational usage, and logistic support phases. (Author)

**A77-17422** Cost reliability trade off in an electronic module. K. Surendran and K. R. Chandra (Indian Space Research Organization, Vikram Sarabhai Space Centre, Trivandrum, India). *Microelectronics and Reliability*, vol. 15, no. 5, 1976, p. 493-496.

A cost reliability trade off study for an electronic subsystem is considered. A practical method is suggested for selecting the components, available in different grades, of a subsystem where its cost is minimized for the required reliability and performance. Based on the method, a flow diagram is presented for computer implementation. An example is provided to illustrate the method. (Author)

**A77-18202** # The airlines - A financial overview. D. J. Lloyd-Jones (American Airlines, Inc., New York, N.Y.). *American Institute of Aeronautics and Astronautics, Annual Meeting and Technical Display Incorporating the Forum on the Future of Air Transportation, 13th, Washington, D.C., Jan. 10-13, 1977, Paper 77-253*. 7 p.

The paper shows that the capital requirements of the airline industry over the next eight years total approximately \$39 billion, with \$34 billion attributable to replacement and growth and another \$5 billion attributable to the noise regulation. The \$34 billion requirement alone would represent a very substantial challenge for almost any U.S. industry. However, the U.S. airlines have coped with re-equipment programs of comparable size relative to their asset base in the past. Future ability of the airline industry to maintain a viable U.S. air transportation system should rely upon adequate earnings and a stable regulatory environment. In particular, the government must permit the airline industry to utilize user charges to finance the \$5 billion impact of the retroactive imposition of the new noise regulation, and there should be reliable regulations that must remain unchanged for a period of time to promote a viable safe industry. S.D.

**A77-18203** # AIAA Forum on the Future of Air Transportation - Regulatory overview. S. D. Browne. *American Institute of Aeronautics and Astronautics, Annual Meeting and Technical Display Incorporating the Forum on the Future of Air Transportation, 13th, Washington, D.C., Jan. 10-13, 1977, Paper 77-254*. 11 p.

The five civil aviation regulatory reform bills introduced into the last Congress are briefly considered and questions related to a regulatory reform are discussed. Comments concerning the proposals of the Cannon Bill, introduced on Sept. 20, 1976, are presented. A brief comparison of aviation reform proposals is also conducted. G.R.

**A77-18205** # The future of air transportation - Airline considerations. R. C. Collins (United Air Lines, Inc., San Francisco, Calif.). *American Institute of Aeronautics and Astronautics, Annual Meeting and Technical Display Incorporating the Forum on the Future of Air Transportation, 13th, Washington, D.C., Jan. 10-13, 1977, Paper 77-257*. 5 p.

Technological breakthrough is discussed as the basic item that can ensure the resistance of the air transportation industry to economic 'strangulation' by government regulation. Considering the industry as a communications and a leisure business, it is argued that the future of air transportation will depend on the industry's ability to keep the price of air travel competitive in an environment conducive to regulatory strangulation. The likelihood of technological breakthrough is evaluated, emphasizing electronics system design based on digital technology and micro integrated circuits. Systems considered for simplification and rational design aimed at eliminating nonessential components include VHF communications, VH navigation, ATC transponders, electrical power units, and fuel assemblies. F.G.M.

**A77-18206** \* # The technical challenge of air transportation - A Government view. L. Roberts (NASA, Ames Research Center, Moffett Field, Calif.). *American Institute of Aeronautics and Astronautics, Annual Meeting and Technical Display Incorporating the Forum on the Future of Air Transportation, 13th, Washington, D.C., Jan. 10-13, 1977, Paper 77-258*. 6 p.

This paper reviews the research and technology that must be conducted, and the facility investments that must be made, in order to assure that the United States is adequately prepared to meet the challenges that air transportation will provide in the future. The technical focal points for the next decade are reviewed in the context of the emerging pattern of air transportation needs for the remainder of the Century and the prospects for satisfying these needs are discussed. Particular attention is given to the responsibility that the Government must assume in aviation R&T and to the relationship that must be encouraged between the Government, the Industry and the University Community. (Author)

**A77-18207** # Financing the future fleet. A. M. de Voursney (United Air Lines, Inc., Chicago, Ill.). *American Institute of Aeronautics and Astronautics, Annual Meeting and Technical Display Incorporating the Forum on the Future of Air Transportation, 13th, Washington, D.C., Jan. 10-13, 1977, Paper 77-261*. 4 p.

If the airlines of the United States are to finance replacement of existing fleets as they become economically obsolete and also acquire added aircraft to accommodate growth, the investment climate for airline securities must be sharply improved. It is important both to air transportation users and our economy that the carriers have access to private financing of capital needs which will total almost \$65 billion by 1990. (Author)

**A77-18216** # Efforts to stimulate aeronautical engineering research could ease the regulatory atmosphere in which the aviation community operates. J. L. McClucas (FAA, Washington, D.C.). *American Institute of Aeronautics and Astronautics, Annual Meeting and Technical Display Incorporating the Forum on the Future of Air Transportation, 13th, Washington, D.C., Jan. 10-13, 1977, Paper 77-277*. 5 p.

The U.S. aviation regulation history is examined. It is found that the government's role in the management of the national aviation system has undergone considerable change in the past half-century. The trend toward regulation has increased steadily as technological improvement has permitted man to fly faster, higher, and farther. Attention is given to the question of whether this trend will continue or whether the regulatory climate can be eased through advances in technology. Advantages and limitations of radar are considered along with the development of an automatic separation assurance system, the desirability to reduce the workload on the pilot, and aspects of flight safety. G.R.

**A77-18221 #** The future economic opportunities for air transport. M. A. Brenner (Trans World Airlines, Inc., New York, N.Y.). *American Institute of Aeronautics and Astronautics, Annual Meeting and Technical Display Incorporating the Forum on the Future of Air Transportation, 13th, Washington, D.C., Jan. 10-13, 1977, Paper 77-284.* 11 p.

An evaluation of long term economic and demographic trends related to the future growth potential of the air transport industry is conducted. It is found that the outlook for future air travel growth is in the range from 6 to 8 per cent per year. The realization of this potential, however, will depend on the economic attractiveness of an investment in the air transport industry. It is pointed out that, over the years, this industry has had a grossly inadequate earnings record. A primary reason has been the amount of already-existing competition which has led to a limitation of the attainable load factor.

G.R.

**A77-18222 #** The future of air transportation - Economic association considerations. F. J. H. Johnston (International Air Transport Association, Montreal, Canada). *American Institute of Aeronautics and Astronautics, Annual Meeting and Technical Display Incorporating the Forum on the Future of Air Transportation, 13th, Washington, D.C., Jan. 10-13, 1977, Paper 77-286.* 19 p.

The International Air Transport Association is responsible for providing the necessary machinery whereby international airlines can negotiate tariff agreements on international services subject to governmental approval. The essence of the future problem of international air transport is how to rationalize the desire of the peoples of the world for air transport services at the lowest possible price levels in face of the inexorable rising cost trends. The political and regulatory environment in which the industry is operating and the changes which may occur in the next ten years are outlined. The prospects for future traffic growth in the industry will be closely related to the economic health of the principal traffic generating countries. However, the economic climate is likely to be not conducive to large-scale or long-range planning by international air transport. Ways in which future prospects can be improved are pointed out.

S.D.

**A77-18258 \* #** The economic viability of pursuing a space power system concept. G. A. Hazelrigg, Jr. (ECON, Inc., Princeton, N.J.). *American Institute of Aeronautics and Astronautics, Annual Meeting and Technical Display Incorporating the Forum on the Future of Air Transportation, 13th, Washington, D.C., Jan. 10-13, 1977, Paper 77-353.* 10 p. NASA-supported research.

The development of a space power system requires no fundamental technological breakthroughs. There are, however, uncertainties regarding the degree to which necessary developments can be achieved or exceeded. An analysis is conducted concerning the implementation of a 5000 MW space-based solar power system based on photovoltaic conversion of solar energy to electrical energy. The solar array is about 13 km long and 5 km wide. Placed in geosynchronous orbit, it provides power to the earth for 30 years. Attention is given to the economic feasibility of a space power system, a risk analysis for space power systems, and the use of the presented methodology for comparing alternative technology development programs.

**A77-19014** Airline managerial efficiency. R. J. Pearson (Central London, Polytechnic, London, England). *Aeronautical Journal*, vol. 80, Nov. 1976, p. 475-482.

Measurement, parametrization, comparative analysis, and objective characterization of airline managerial efficiency are attempted. Marketing efficiency, handling of aircraft productivity,

labor productivity, and cost efficiency, are approached as factors subject to manipulation by airline managerial ability/efficiency. Regression analysis and rank correlations are applied in studies of the productivity or labor categories and of efficiency in the control of costs (by categories), and in comparing productivity vs cost performance. Efficiency aspects subjected to regression analysis are discussed. Profit performance is singled out as the best single raw indicator of managerial efficiency.

R.D.V.

**A77-19175** The seat belt light is on. H. E. Tolle (United Air Lines, Inc., Chicago, Ill.). *Exxon Air World*, vol. 29, no. 1, 1976, p. 5-9.

Future trends affecting growth and revenues of the airline industry are projected with consideration of factors governing passenger travel demand, the profit picture, competition, political constraints, and fuel costs. Success in fuel conservation, the fuel fraction of operating costs, effects of U.S. (FEA, EPA, FAA, CAB, DOT) government regulations, trends in passenger fares and freight rates, impact of inflation, expected slow and modest technological advances, forecasts of the potential passenger market, demographic trends affecting future passenger travel demand, and the capital investment picture are surveyed, along with European competition. Population growth, smaller families, higher incomes, increased leisure time, and increased foreign travel are foreseen as pluses, while higher fares and costs, increased consumer savings, and electronic substitutes for business travel are seen as minuses.

R.D.V.

**A77-19488 #** Urban solid waste processing - An approach developed by Continental Can Company, Inc. M. L. Smith (Continental Can Co., Inc., Chicago, Ill.). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Diego, Calif., July 12-15, 1976, Paper 76-ENAs-41.* 11 p. 6 refs. Members, \$1.50; nonmembers, \$3.00.

The paper describes a method of municipal solid waste resource recovery, developed by Continental Can Company. In this new method, the solid waste is separated into combustible and non-combustible portions. The combustible portion is further processed into CSF (Continental specification fuel), to meet a set of requirements like low ash content, small particle size, low glass content, high heat value and surge storage, which have an important bearing on product marketability. Ferrous metals are magnetically separated from the non-combustible portion and shredded into smaller sizes by the primary shredder. The boiler efficiency conditions and a field study of the boiler tube corrosion mechanism associated with CSF combustion are also presented. Design and process flow details are explained with the help of diagrams and photographs. In a plant of the above type the total construction cost per daily ton of installed capacity will be 1/3 or less than the conventional incinerators. It will also create 25 new jobs/plant and reduce the sanitary landfill requirements by 70%.

A.Y.

**A77-19489 #** Forecasting impacts on solid waste resource recovery systems. C. F. Ketterling and C. C. Kemper (Metropolitan Service District, Portland, Ore.). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Diego, Calif., July 12-15, 1976, Paper 76-ENAs-46.* 8 p. Members, \$1.50; nonmembers, \$3.00.

The prospect of effective solids waste recovery systems (SWRS) is examined with attention given to industrial engineering problems. Parameters of waste recovery systems and relationships between the parameters are examined broadly. A description is attempted of the environment of SWRS (with attention given to social and political attitudes, quantities of waste generated, cost factors, incentives), a scenario is developed to aid evaluation of SWRS effectiveness and acceptance, and scanning techniques for monitoring unforeseen changes and trends are considered. Counterarguments invoking rapid technological obsolescence of SWRS, counterposition of materials recovery and energy recovery, and waste-generating commitments to keep quantities of waste material flowing to SWRS are assessed.

R.D.V.

**A77-19493 \* #** Planning for life sciences research in space. K. M. Mallory, Jr. (Kenneth Mallory and Associates, Inc., Alexandria, Va.) and S. Deutsch (NASA, Washington, D.C.). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Diego, Calif., July 12-15, 1976, Paper 76-ENAs-52*. 8 p. Members, \$1.50; nonmembers, \$3.00.

Invitations to participate in planning the NASA Life Sciences Program in Space were mailed to members of the Life Sciences community at large during April 1975. The invitation is related to current planning for Life Sciences research in space during the 1980's, taking into account a use of the Space Shuttle, Spacelab, and the unmanned Biological Experiments Scientific Satellite (BESS). A response form to be completed and returned to NASA by the scientists included questions requesting suggestions on topics-for-research, laboratory equipment, and test specimens. A description of the invitation results is presented, taking into account general response, respondent specialties, laboratory equipment, test specimens, and research objectives. Attention is also given to an Announcement of Opportunities (AO) for the Space Transportation System. The AO was issued by the Office of Space Science in March 1976. G.R.

**A77-19508 #** Planning for biomedical research in space - The visiting research scientist. A. A. Kelton (McDonnell Douglas Astronautics Co., Life Sciences Div., Huntington Beach, Calif.). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Diego, Calif., July 12-15, 1976, Paper 76-ENAs-67*. 14 p. 21 refs. Members, \$1.50; nonmembers, \$3.00.

Recurrent difficulties in interfacing between spacecraft experimental accommodations and constraints and organizers of research experiments (specifically biomedical) with varying levels of familiarity with spacecraft constraints are outlined and recommendations are presented. Conduct of a mail questionnaire and a list of institutions visited are discussed, along with other problems common to participating institutions (including: funding, publications and patents, unique facilities or location). Recommendations deal with interchanges of information, proprietary rights to data, organizational structure of the visiting scientist program, development of interfacing experiment engineers, experiment simulation, and the common operational research equipment (CORE) concept, among others. R.D.V.

**A77-19912 #** Characteristics of space processing operations. G. H. Stine. *American Institute of Aeronautics and Astronautics, Aerospace Sciences Meeting, 15th, Los Angeles, Calif., Jan. 24-26, 1977, Paper 77-229*. 9 p. 7 refs.

Commercial-scale industrial activities are defined, systematized, and contrasted in relation to terrestrial and extraterrestrial conditions. Characteristics common to, or distinguishing, industrial activities pursued by private corporations or by governments, on the earth or in space, are formalized, and a list of space industrial processes (with classification breakdown) is presented. Energy sources, heat sinks, siting, environment, wastes disposal, warehousing and storage, transportation, and process control and process management problems are sketched. Attention is given to marketing and marketing systems, including the likely situation where the product fabricated in space is unique and has no competition in terrestrial industry or markets. R.D.V.

**A77-19996** Transport to outer space by private enterprises - Aspects of air and space law (Transporte in den Weltraum durch Privatunternehmen - Luft- und weltraumrechtliche Aspekte). D.-H. Böckstiegel. (*Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Munich, West Germany, Sept. 14-16, 1976.*) *Zeitschrift für Luft- und Weltraumrecht*, vol. 25, Dec. 1976, p. 285-303. 89 refs. In German.

A company in West Germany has developed launching vehicles for the commercial transport of civil payloads, including research and communications satellites, into outer space. It is intended to use the

rockets for the launching of payloads from ships on the high seas or from the territory of a large African state. An investigation is, therefore, conducted concerning the legal status of space activities conducted by private firms. It is concluded that the existing regulations of air and space law do not contain any clauses which can be interpreted as prohibiting private space activities. Such activities require, however, the authorization of the appropriate state party to the Space Treaty. Attention is also given to limitations concerning the utilization of outer space by private firms, the necessity for a supervision of private space activities, questions of international consultation, aspects of registration, regulations concerning liability, and aspects of German and international air law. G.R.

**A77-19997** Transport of outer space by private enterprises - Aspects of air- and space law. K.-H. Böckstiegel. *Zeitschrift für Luft- und Weltraumrecht*, vol. 25, Dec. 1976, p. 304-314. 60 refs.

Aspects of space law related to the transport to outer space by private enterprises are considered, taking into account the admissibility of private space activities, the admissibility of private commercial space activities, the conditions for private space activities, and questions of liability. According to the Space Treaty, an authorization and supervision of the activities of nongovernmental entities in outer space by the 'appropriate' State Party to the treaty is required. The 'appropriate state' is defined as the state whose nationality the private enterprise has. Aspects of German and international air law which are relevant to the considered problems are also examined. G.R.

**A77-20068** Canadian air cargo concepts. M. Momberger. *Airport Forum*, vol. 6, Dec. 1976, p. 47, 48, 50, 52-54. In English and German.

Hybrid sea/air containerized cargo shipments and the Canadian ACCESS (Air Canada cargo enquiry and service system) computerized real-time cargo travel report updating system are described at length, along with an account of the TDM (transfer, distribution, manufacturing) concept for flexible air cargo handling. Travel time and prices for combined sea/air cargo service are intermediate between the slow low-cost seaborne containerized freight service and the fast high-cost airborne freight service, and the compromise is optimum for some high-value densely packed merchandise (electronic and photographic equipment, small machine parts or vehicle spares, some luxury foodstuffs and luxury furniture) over distances from the Far East to the Americas, or Americas to Nigeria. R.D.V.

**A77-21535 #** Reducing airline regulation - The need and financial implications. P. J. Bakes, Jr. (U.S. Senate, Subcommittee on Administrative Practice and Procedure, Washington, D.C.). *American Institute of Aeronautics and Astronautics, Annual Meeting and Technical Display Incorporating the Forum on the Future of Air Transportation, 13th, Washington, D.C., Jan. 10-13, 1977, Paper 77-264*. 24 p.

Problems with Civil Aeronautics Board (CAB) regulations are considered, taking into account the results of hearings held by the Congressional Administrative Practice and Procedure Subcommittee. It was found that CAB regulation leads to air fares that are too high, despite the fact that industry profits are low. Questions concerning the justifications for current regulation are examined and suitable approaches for a solution of the problems are discussed. Attention is given to the financial implications of the competitive solution. G.R.

**A77-21593** Regulation of the air traffic control system (La régulation dans le système de contrôle du trafic aérien). J.-F. Vivier. *Navigation (Paris)*, vol. 25, Jan. 1977, p. 82-97. In French.

Major tasks of an air traffic control (ATC) system are reviewed, and charts are provided of decision loops and system control loops.

Demand and capacity, local or global, of ATC systems are discussed along with hierarchy of priorities, rate of arrivals, and conditions of arrivals (presence of prior arrivals on runway) are discussed. Conditions uprange and downrange of approach markers and their effect on ATC system performance are dealt with. R.D.V.

**A77-22186 #** Aerospace policy and energy planning. R. C. Seamans, Jr. (ERDA, Washington, D.C.). *American Institute of Aeronautics and Astronautics, Annual Meeting and Technical Display Incorporating the Forum on the Future of Air Transportation, 13th, Washington, D.C., Jan. 10-13, 1977, Paper 77-341.* 5 p.

A review is given of ERDA's role in planning and executing national energy research, development and demonstration programs. The agency's mandate to establish broad energy production and conservation goals and to encourage activities designed to achieve them is stressed. Programs structured to conserve fuel in the aviation sector are considered, with particular emphasis on propulsion, aerodynamics, and structures. (Author)

**A77-22751** Symposium on Equipment and System Design for Minimum Cost of Ownership, London, England, March 16, 1976, Proceedings. Royal Aeronautical Society, 1976. 98 p. \$6.00.

The present collection of papers is concerned mainly with indispensable measures for reducing ownership costs of avionic systems at the design stage. Particular attention is given to cost savings from improved reliability and maintainability of aircraft. Topics of interest include cost of ownership in civil and military aircraft design, analysis of cost of ownership, and reliability and costs of RAF avionic equipment. S.D.

**A77-22752 #** The reliability and costs of RAF avionic equipment. P. A. Douty (RAF, London, England). In: Symposium on Equipment and Systems Design for Minimum Cost of Ownership, London, England, March 16, 1976, Proceedings. London, Royal Aeronautical Society, 1976. 13 p.; Discussion, p. A1-A10.

Reliability and maintainability requirements as related to the ownership costs of RAF avionic equipment are discussed. Particular attention is given to cost savings from improved reliability of aircraft, to savings from improved reliability in avionic systems, and to maintainability actions to reduce cost. It is suggested to reduce the increasing dominance of maintenance costs, which would result in freeing funds for the continued purchase of new equipment. S.D.

**A77-22753 #** An analysis of cost of ownership. R. de Barros (SABENA Belgian World Airlines, Brussels, Belgium). In: Symposium on Equipment and Systems Design for Minimum Cost of Ownership, London, England, March 16, 1976, Proceedings. London, Royal Aeronautical Society, 1976. 12 p.; Discussion, p. A1-A10.

Life cycle costing is proposed as a suitable approach to make decisions about system acquisition since it is based on the total projected cost of the system over its useful life. Three main phases are relevant in the whole projected period: development, production, and operating. The airline is concerned primarily with the operating phase. The paper analyzes the operating costs of a typical avionic system projected over a period of twenty years regarded as a normal duration of a jet fleet. It is assumed that the evaluation period starts with the first airplane and terminates when the last unit of the fleet is sold or scrapped. Results are presented for a simulation analysis of a typical case to find the influence of the various parameters on the operating costs and to point out the possible areas of improvement. S.D.

**A77-22754 #** Cost of ownership in practice. C. J. Gibson (British Airways, Overseas Div., Hounslow, Middx., England). In: Symposium on Equipment and Systems Design for Minimum Cost of Ownership, London, England, March 16, 1976, Proceedings. London, Royal Aeronautical Society, 1976. 10 p.; Discussion, p. B1-B3.

The paper shows how complexity, performance, and reliability of an avionic system can influence ownership costs. Two systems are discussed, but primarily the inertial navigation system is analyzed since it possesses all the necessary parameters for analysis. The other system discussed is the fuel quantity system which is included for comparison purposes only. A study of the accounts for ownership costs of the inertial navigation system reveals that 81.15% of the total annual maintenance costs is that of subcontract, with gyro overhauls accounting for 56.99% of the total. From the viewpoint of ownership cost, the accuracy of the inertial navigation system is shown to have a potential cost saving of 351,000 pounds sterling a year. S.D.

**A77-22755 #** Cost of ownership in civil aircraft design. D. V. M. Moore (British Aircraft Corp., Ltd., Filton, Bristol, England). In: Symposium on Equipment and Systems Design for Minimum Cost of Ownership, London, England, March 16, 1976, Proceedings. London, Royal Aeronautical Society, 1976. 10 p.; Discussion, p. C1-C6.

The achievement of low direct operating costs is the overall aim in civil aircraft design. Systems requirements (functional, operational, regulatory, and safety) together with evolutionary considerations such as interdependence with future and existing systems, interface standards, ability to retrofit, and fleet mix requirements are normally derived directly from engineering specifications. Future systems architecture is discussed along with new installation concepts. The effect on total ownership cost is greatest in the initial cost area and hence may be indicative of where design emphasis should be placed. S.D.

**A77-22756 #** Design of military aircraft for minimum cost of ownership. A. S. Delahunty (British Aircraft Corp., Ltd. Preston, Lancs., England). In: Symposium on Equipment and Systems Design for Minimum Cost of Ownership, London, England, March 16, 1976, Proceedings. London, Royal Aeronautical Society, 1976. 11 p.; Discussion, p. C1-C6.

Problems that confront the military aircraft designer as opposed to the civil aircraft designer are identified. The discussion covers reduction of unit design costs, reduction of maintainability costs, reduction of training costs, and aircraft effectivity with respect to kill probability. Unit cost reduction should not be achieved at the expense of increased cost of aircraft maintenance. Design for reduced maintenance and training costs can best be attained by user/designer consultations at a very early stage of design. S.D.

**A77-22757 #** Getting it right the first time. W. H. Alexander (Marconi-Elliott Avionic Systems, Ltd., Rochester, Kent, England). In: Symposium on Equipment and Systems Design for Minimum Cost of Ownership, London, England, March 16, 1976, Proceedings. London, Royal Aeronautical Society, 1976. 11 p.; Discussion, p. D1-D7.

The paper is concerned with the problem of reducing the cost of ownership of avionic equipment by means of actions taken at the design stage. Cost of ownership is discussed in terms of procurement cost and cost of maintenance and support. Experience on reliability programs has revealed the need for a closed loop approach to reliability, the need for dedication for both customer and supplier to the reliability objectives, the need to quantify these objectives, the benefits of compulsion-inducement type contracts, and the importance of putting emphasis on the design phase. For most avionic systems there is a level of reliability which will give a minimum cost of ownership. Development of proper standards and a design review procedure are indispensable. S.D.

**A77-23269 #** Direct and indirect subsidies in the air mode in comparison with other modes of transportation. J. Gibberd (Canadian Transport Commission, Ottawa, Canada). *Canadian Aeronautics and Space Journal*, vol. 23, Jan.-Feb. 1977, p. 52-58. 17 refs.

A comparison is presented between direct and indirect public (government) subsidies provided to air transportation and subsidies given to other modes of transportation. It is shown that either on an expenditure or on a cost basis, the subsidy per passenger-mile is largest for rail at 8.11 cents, followed by air in the 1.4 to 2.5 cents range, and road at less than 1 cent. On an expenditure basis, it is seen that the largest total subsidy, both freight and passenger, goes to road, followed by air, marine, and rail. The order on a cost basis changes in that air receives the smallest subsidy. B.J.

**A77-23454 #** Methods of scientific-industrial forecasting in the management of scientific research and development (Metody nauchno-tekhnicheskogo prognozirovaniia v upravlenii nauchnymi issledovaniiami i razbotkami). S. V. Emel'ianov and V. B. Ezerov. *Itogi Nauki i Tekhniki, Seriya Tekhnicheskaja Kibernetika*, vol. 6, no. 2, 1975, p. 77-164. 105 refs. In Russian.

This survey article examines two groups of methods of scientific-industrial forecasting: the methods of expert estimates, and extrapolation methods used in forecasting scientific research and development. Attention is given to the Delphi method and some of its modifications, methods of trend extrapolation and correlation, the method of envelope curves, methods of forecasting industrial efficiency indices, and parametric methods. The basic features of these methods are described and their fundamental formulas and computational problems are set forth. P.T.H.

**A77-23825** Negligence of Federal Aviation Administration delegates under the Federal Tort Claims Act. A. J. Dilk (FAA, Litigation Div., Washington, D.C.). *Journal of Air Law and Commerce*, vol. 42, Summer 1976, p. 575-602. 114 refs.

The FAA has been authorized by statute to delegate various responsibilities to private individuals who are either designated representatives or are certificated. No desire is indicated to have these individuals categorized as 'employees' within the meaning of the Federal Tort Claims Act or to assume Federal responsibility for their acts. Until Congress includes these persons within the coverage of this act as employees, the traditional concept of the independent contractor doctrine should block governmental liability for their negligent acts or omissions. B.J.

**A77-24277** Incentives for managing the environment. B. T. Bower (Resources for the Future, Washington, D.C.), C. N. Ehler (U.S. Environmental Protection Agency, Office of Air, Land and Water, Washington, D.C.), and A. V. Kneese (New Mexico, University, Albuquerque, N. Mex.). *Environmental Science and Technology*, vol. 11, Mar. 1977, p. 250-254.

Some basic issues of identifying and selecting positive and negative incentives as integral components of environmental quality management plans are discussed. The actions desired are the installation of some physical method or technological option and the continuous operation of these physical methods at design levels over time. Particular attention is given to alternative locations for the imposition of incentives in a physical system whose diagram indicates the flows of materials and energy into, through, and from the physical system that generates and discharges pollutants and wastes as residuals. Also discussed are the classification and characteristics of physical methods for improving environmental quality and of implementation incentives whose choice in a particular management context must be matched to the particular situation under consideration. Suggested criteria for evaluating strategies include physical effects, economic effects, flexibility and simplicity in administration, political considerations, and intermedia effects. S.D.

**A77-24421** Nondestructive testing as a basis for the acceptance inspection (Zerstörungsfreie Prüfung als Grundlage der Abnahme). K. Lorenz and H. Ternes (Mannesmannröhren-Werke AG, Düsseldorf, West Germany). (*Deutsche Gesellschaft für zerstörungsfreie Prüfung, Tagung über zerstörungsfreie Materialprüfung, Lahnstein, West Germany, May 24, 1976.*) *Materialprüfung*, vol. 19, Feb. 1977, p. 46-53. In German.

In connection with the transfer of ownership in the case of products and materials, the acceptance of the article by the receiving party depends frequently upon the results of an inspection concerning the condition and the characteristics of the article. The employment of nondestructive testing for such an inspection is discussed, taking into account the regulations concerning such inspections in West Germany, questions regarding the conduction of the tests, the training and the qualification of the persons conducting the tests, details with respect to the test installations, and trends regarding a further development of the test procedures. G.R.

**A77-24450 #** Forum on the future of air transportation. F. W. Bradley, Jr. (CITIBANK, New York, N.Y.). *American Institute of Aeronautics and Astronautics, Annual Meeting and Technical Display Incorporating the Forum on the Future of Air Transportation, 13th, Washington, D.C., Jan. 10-13, 1977, Paper 77-263.* 16 p.

A commercial banker's view is given of the airline industry and the prospects for financing its future capital needs. The total capital requirements of the domestic trunks for the period from 1976 through 1984 are estimated to be in the neighborhood of \$33 billion, of which \$5 to 9 billion will have to be borrowed from commercial banks. Sources for these funds are considered, and arguments are advanced in favor of keeping capital costs down while making very substantial productivity gains, primarily by not retrofitting aircraft to meet FAR Part 36 requirements. The present attitude of bankers toward the airline industry is assessed, the historic sources of capital for the industry are identified, and the financial community's objections to current deregulation proposals are outlined. It is concluded that these proposals will accentuate the financial community's distaste for airline investments and make the industry's impending reequipment program very difficult. Increased fares are suggested along with a dedication to profitability on the part of both management and regulators. F.G.M.

**A77-24593** A long-run model for energy policy analysis. E. Hnyiliczka (MIT, Cambridge, Mass.). In: Summer Computer Simulation Conference, Washington, D.C., July 12-14, 1976, Proceedings. Montvale, N.J., AFIPS Press, 1976, p. 758-763.

The paper outlines the theoretical foundations and empirical specification of a policy-oriented macroeconomic energy model designed to reveal the long-run dynamic interactions between the U.S. energy sector and the aggregate determinants of economic growth, which makes it possible to determine the link between current capital formation and future productive capacity. Several features of the Hudson-Jorgenson model are taken as a point of departure in developing this macroeconomic model. A key novelty is the complete integration of the sectoral capital accumulation dynamics and the sectoral production structure into the growth process itself. The model formulation is neoclassical since it is postulated that the behavioral characteristics of the basic decision units can be described in terms of maximizing behavior in the presence of appropriate constraints. Discussion of production structure, household behavior, and capital accumulation is highlighted. S.D.

**A77-24774** Airports and the environment. Paris, Organization for Economic Co-operation and Development, 1975. 291 p. 68 refs. \$10.00. Translation.

Reduction and abatement of aircraft noise, economic/political/social aspects of urban airport noise problems, management of airport planning, airport siting, and airport land area and facilities

expansion are discussed. Experiences with particular airport siting and noise problems are recounted (Osaka, Frankfurt, Paris, Stockholm-Arlanda, Copenhagen, Oslo). Transportation facilities and road access for passengers and work personnel to and from airport areas are discussed. Attention is given to histories of legal claims by owners of real estate against airports for impairment of property values, wildlife in the vicinity of airports, noiseproofing of structures at or near airports. Airport area use problems at London-Maplin, New York, and Zurich are also discussed. R.D.V.

**A77-25138 #** How economists judge R&D benefits. P. Stevenson (Columbia University, New York, N.Y.). *Astronautics and Aeronautics*, vol. 15, Mar. 1977, p. 30-36. 14 refs.

The article gives an introduction to the basic concepts and techniques with which economists work in order to assess the benefits of R&D investment. The theory and measure of productivity and its determinants, one of which is R&D investment, is outlined. The basic characteristics of several fundamental techniques for measuring R&D effectiveness are examined. These techniques are the measurement of aggregate productivity, input-output analysis, the sector production function, and the consumer's surplus function. P.T.H.

**A77-25139 #** What's been happening to R&D. J. V. Weeden (Aerospace Industries Association, Washington, D.C.). *Astronautics and Aeronautics*, vol. 15, Mar. 1977, p. 37-41.

The paper examines critically the declining role of R&D in the overall U.S. economic picture, and calls for renewed effort in formulating a clear national science policy with greater participation on the part of nongovernment programs. Data on the amount of R&D as a percent of net sales or profits, and also on the percent of R&D funded by the company and the government, are cited for a number of aerospace and other manufacturing companies. The fact that aerospace is investing more in R&D than in new plant and equipment is also brought out. A strengthening of private industry's role in decision-making is seen as necessary. P.T.H.

**A77-25140 #** R&D expenditures - A good national investment. A. N. Doherty (St. John's University, New York, N.Y.) and M. K. Evans (Chase Econometric Associates, Inc., New York, N.Y.). *Astronautics and Aeronautics*, vol. 15, Mar. 1977, p. 42-51. 25 refs.

The paper reviews the economist's conception of technical progress or innovations, economic theory underlying the various specifications of technology within the production function, and the advantages and limitations of the macroeconomic approach to the measurement of technical progress. An outline of a macroeconomic model designed specifically to evaluate the economic impact of NASA R&D expenditures is given. This model contains some 125 stochastic equations and 200 endogenous variables organized in four blocks. Regression analysis on the dependent variable gamma, specified in terms of the rate of increase in technology, shows two peaks of technological growth in the 1960-1962 and 1970-1972 time periods. Results of the regression analysis were fed into the entire macro model to show the effect of NASA R&D spending on eight key general economic indicators. The main conclusions are that NASA R&D programs expand the production arm of society by increasing the rate of technical progress and lower the rate of inflation while increasing output and employment. P.T.H.

**A77-25141 #** Investing in technology during inflation. H. A. Kimbriel (Colin, Hochstin Co.). *Astronautics and Aeronautics*, vol. 15, Mar. 1977, p. 52-54.

The paper outlines some of the chief effects of inflation on companies that are planning to expand, make capital investments, and develop and commercialize new technology. The airline industry is taken as an example of how inflation can cut so deeply into a new product's expected productivity, that potential buyers could not invest in it because it was unclear whether it would meet their rate-of-return objectives. P.T.H.

**A77-25209** Has NASA already solved your next design problem. R. Aronson. *Machine Design*, vol. 49, Mar. 10, 1977, p. 18-20, 22, 23.

By law NASA is required to make available as much of its research information to the U.S. economy as possible. It is estimated that U.S. business and industry will obtain benefits of more than \$7 billion from just four of the space programs. Informative reports sent at no charge by NASA's Technology Utilization office are discussed. Attention is given to the Patent Abstract Bibliography, available data banks, the conduction of searches, the computer programs developed by NASA and other government agencies, and questions concerning the granting of licenses for NASA patents. G.R.

**A77-26497 \* #** The ABC's required for establishing a practical computerized plant engineering management data base system. F. R. Maiocco and J. P. Hume (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.). *American Society of Mechanical Engineers, Winter Annual Meeting, New York, N.Y., Dec. 5-10, 1976, Paper 76-WA/PEM-1*. 5 p. Members, \$1.50; nonmembers, \$3.00. Contract No. NAS7-100.

A system's approach is outlined in the paper to assist facility and Plant Engineers improve their organization's data management system. The six basic steps identified may appear somewhat simple; however, adequate planning, proper resources, and the involvement of management will determine the success of a computerized facility management data base. Helpful suggestions are noted throughout the paper to insure the development of a practical computerized data management system. (Author)

**A77-27033** Introduction to systems engineering - Foundations, capabilities, and limits (Einführung in die Systemtechnik - Grundlagen, Möglichkeiten und Grenzen). R. Huber. (*Verein Deutscher Ingenieure und Deutsche Gesellschaft für Luft- und Raumfahrt, Tagung über die Grundlagen und Anwendung der Systemtechnik als rationales Hilfsmittel für Wirtschaft, Staat und Forschung, Bonn, West Germany, Nov. 9, 10, 1976.*) *VDI-Berichte*, no. 262, 1976, p. 5-17. 40 refs. In German.

After a brief review of general systems theory, cybernetics, decision and utility theory as the theoretical foundations of systems engineering, basic definitions related to systems, their behavior and stabilization are discussed as well as the various types of systems models. The second part of the paper explains the content and process of the systems engineering approach, thereby distinguishing three categories of systems in systems engineering: technical systems, action systems and objective systems. The basic model of decision theory serves to illustrate the problem of systems planning. The main problem with a systematic application of systems engineering in real life relates to its effective integration into existing decision-making bodies and processes. (Author)

**A77-27034** Experience of aeronautics and astronautics in the application of systems engineering (Erfahrungen der Luft- und Raumfahrt bei der Anwendung der Systemtechnik). A. Kutzer. (*Verein Deutscher Ingenieure und Deutsche Gesellschaft für Luft- und Raumfahrt, Tagung über die Grundlagen und Anwendung der Systemtechnik als rationales Hilfsmittel für Wirtschaft, Staat und Forschung, Bonn, West Germany, Nov. 9, 10, 1976.*) *VDI-Berichte*, no. 262, 1976, p. 19-45. 21 refs. In German.

The paper describes the development of systems engineering and management principles that grew out of the particular needs of NASA and German space programs. The procedures and logic involved in evaluating a complex program are outlined. The effectiveness of application of system engineering management principles in handling the Azur satellite project is studied as an example. P.T.H.

**A77-27035** Optimization of transport aircraft availability as illustrated on the example of the Airbus A 300 (Optimierung der Verfügbarkeit von Verkehrsflugzeugen - dargestellt am Airbus A 300). P. Triep. (*Verein Deutscher Ingenieure und Deutsche Gesellschaft für Luft- und Raumfahrt, Tagung über die Grundlagen und Anwendung der Systemtechnik als rationales Hilfsmittel für Wirtschaft, Staat und Forschung, Bonn, West Germany, Nov. 9, 10, 1976.*) *VDI-Berichte*, no. 262, 1976, p. 53-62. In German.

The systems engineering principles which are applied in the design, development, and operation of transport aircraft for ensuring high availability rate and optimum cost effectiveness of operating an aircraft in a complex service system are explained. The logic and structure of spares support, spares planning, spares documentation, technical support and operation support are described. The basic concepts of the computer-supported Reliability Data on Demand (ROD) information project introduced for the Airbus A 300 aircraft are discussed. P.T.H.

**A77-27038** Planning models in the electric economy (Planungsmodelle in der Elektrizitätswirtschaft). H. Tröscher. (*Verein Deutscher Ingenieure und Deutsche Gesellschaft für Luft- und Raumfahrt, Tagung über die Grundlagen und Anwendung der Systemtechnik als rationales Hilfsmittel für Wirtschaft, Staat und Forschung, Bonn, West Germany, Nov. 9, 10, 1976.*) *VDI-Berichte*, no. 262, 1976, p. 91-105. In German.

The paper examines the possibilities of using computer-supported models for prediction and planning in the electric economy. The emphasis is on capital investment planning. P.T.H.

**A77-27161 #** Scientific work organization, an important intensification factor (Wissenschaftliche Arbeitsorganisation - Ein wichtiger Intensivierungsfaktor). K. Huhndorf. *Technisch-ökonomische Information der zivilen Luftfahrt*, vol. 12, no. 6, 1976, p. 305-312. In German.

The scientific work organization in the German Democratic Republic has the objective to guarantee continuous work performance, enhance the degree of working time utilization, modernize the existing techniques, increase the amount of quality work, improve the material working conditions, and ensure that new standards are introduced in connection with new technology. A description is presented of aspects related to the implementation of the considered objective in connection with the operations of the airline INTERFLUG. G.R.

**A77-27163 #** The calculation of cost as an instrument for the management and planning of transportation processes (Kostenrechnung als Instrument der Leitung und Planung des Transportprozesses). U. Niemeyer. *Technisch-ökonomische Information der zivilen Luftfahrt*, vol. 12, no. 6, 1976, p. 320-333. 17 refs. In German.

The significance of cost calculations with respect to the national economy and operational considerations is investigated, taking into account the importance of cost determinations for the control and the analysis of costs, the role of cost data as a source of information for management and workers, and the structure of cost determination procedures for the INTERFLUG airline in the German Democratic Republic. Attention is given to cost categories considered in the INTERFLUG organization, details regarding cost determination procedures, and the requirements and possibilities concerning a further development of cost-computational processes. G.R.

**A77-27208** The Civil Aeronautics Board and foreign air carrier permits. H. DeSaussure. *Air Law*, vol. 1, no. 3, 1976, p. 146-156. 51 refs.

The paper is concerned with the legality of Part 213 of the Federal Aviation Act of 1958. This Part contains the possibility of a

first and second step order to foreign air lines. As a first step, the Civil Aeronautics Board may order a foreign air carrier to file its flight schedules in the U.S.; as a second step, the Board may curtail, suspend, or revoke the right of the foreign carrier to fly under any of the schedules filed. The 1974 amendment to Part 213 broadens the Board's base for issuing the first step order to one of economic balance and unilateral public interest of the U.S., which seems to run counter to the air transport policy formulated by the British and the U.S. in Bermuda in 1946. The paper discusses whether Board action under Part 213 is consistent with U.S. international obligations and discusses the reviewability of orders issued under Part 213 by the Federal Courts of Appeal. The challenge of KLM Royal Dutch Airlines to Part 213 proceedings is examined in particular. P.T.H.

**A77-27639** Upward trends in telecommunications marketing and finance. S. Topol (Scientific-Atlanta, Inc., Atlanta, Ga.). In: *EASCON '76; Electronics and Aerospace Systems Convention, Washington, D.C., September 26-29, 1976, Record.*

New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 46-A to 46-C.

Barriers to expanded use of telecommunications in the domestic and world markets are assessed. Major approaches to overcoming barriers are identified as: strong standard product approach, vigorous marketing, manufacturing in production runs, and cooperative government and industry financing programs. Opportunities for the U.S. to capture a leading role in the world market, repeating the experience in airframes, jet engines, computers, and semiconductors, are assessed. R.D.V.

**A77-27762** Weakest-point analysis in the production domain using multimoment studies - A case analysis (Schwachstellenanalyse im Fertigungsbereich mit Hilfe von Multimomentstudien - Ein Fallbeispiel). U. Maier and P. S. Niess (Fraunhofer-Gesellschaft zur Förderung der angewandten Forschung, Institut für Produktionstechnik und Automatisierung, Stuttgart, West Germany). *VDI-Z*, vol. 119, no. 6, Mar. 1977, p. 301-307. 5 refs. In German.

Use of multimoment studies to pinpoint the weakest points or bottlenecks in a production cycle is demonstrated. Measures to achieve the smoothest data acquisition to that end are suggested, and a program is elaborated for evaluation of multimoment patterns so as to locate orders with long transit times and plot their progress through the cycle. The multimoment order tracking approach can reveal problems in data updating that escape detection by other techniques. R.D.V.

**A77-28063** The safe airline. J. M. Ramsden. London; Macdonald and Jane's Publishers, Ltd., 1976. 244 p. \$8.60.

Safety practices and experiences for airlines, aircraft, airports and pertinent agencies, air crimes, emergency procedures and measures, weather hazards, safety philosophy and relevant legislation, aircraft and airport noise, human factors and pilot performance, and survivability are discussed. Procedures for reporting and assessing of major and minor incidents, approaches to measuring air safety and possible statistical pitfalls, airlines tests, practices followed by some airlines, and emergency responses to total electric failure and fire, accident investigation and accident liability, hazardous cargo, maintenance/overhaul, and relevance of airline financial state are also covered. Hijacking and sabotage, clear air turbulence, storms and lightning, wake turbulence, bird strikes, collision avoidance measures, visual/audible warning systems, and simulator training of pilots are among other topics discussed. R.D.V.

**A77-28223** Principles of computer process planning. S. J. Pflederer and W. S. Mann (United Technologies Research Center, East Hartford, Conn.). *Society of Automotive Engineers, Aerospace Engineering and Manufacturing Meeting, San Diego, Calif., Nov. 29-Dec. 2, 1976, Paper 760914.* 13 p. 7 refs.

An analytic framework for process planning activity has been formulated and incorporated as the basis of a generative computer process planning system. The system uses full geometric design data and produces, under interactive control, detailed operation sheets with dimensioned workpiece drawings. The major elements of the system technology are process decision models, machining analysis and optimization models, a special process planning language, and man-machine communication by interactive graphics. (Author)

**A77-28287 # Global radio navigation - A challenge for management and international cooperation.** J. M. Beukers (Beukers Laboratories, Inc., Bohemia, N.Y.). In: International Navigational Congress, Boston, Mass., August 3-6, 1976, Proceedings. Washington, D.C., Institute of Navigation, 1976, p. 42-49. 26 refs.

The paper addresses the need for publication of firm technical specifications of the Loran-C and Omega systems and the need for definition of the frequency spectrum required by these navigational signal transmissions. The following recommendations are made: (1) that the transmitted signal rate structure for the Loran-C is agreed upon internationally, (2) that a common format is established for communications within Loran-C, (3) that priority is given to the frequency spectrum of 90-110 kHz, (4) that a frequency is allocated and a format established for communicating phase corrections when Omega is employed in the differential mode. B.J.

**A77-28541 # Investment economics of industrial gas turbines.** M. C. Doherty (General Electric Co., Industrial Sales Div., Schenectady, N.Y.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, Philadelphia, Pa., Mar. 27-31, 1977, Paper 77-GT-26.* 10 p. Members, \$1.50; nonmembers, \$3.00.

The reported investigation represents an application of the principles of engineering economy to the evaluation of gas turbines for industrial energy systems. Attention is given to the definition of a minimum investment base case as an economic benchmark against which the preferred alternatives can be evaluated, the development of alternatives, and an example problem for illustrating the described procedure. Economic evaluation methods are discussed, taking into account tax considerations, payout, discounted cash flow, and fixed charges. G.R.

**A77-28609 # Life Cycle Cost as a propulsion system design consideration.** C. E. Curry (General Motors Corp., Detroit Diesel Allison Div., Indianapolis, Ind.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, Philadelphia, Pa., Mar. 27-31, 1977, Paper 77-GT-99.* 7 p. 7 refs. Members, \$1.50; nonmembers, \$3.00.

This paper deals with applying Life Cycle Cost (LCC) and Design to Cost (DTC) principles to aircraft engine programs. The dynamic driving elements of LCC are identified with an example of direct application to a deterministic computer model. This model was used as the principal tool to project operating and support costs for the XT701 turboshaft engine in conjunction with the U.S. Army Heavy Lift Helicopter Development that featured a specific DTC-related award fee in the contract. The overall methodology of LCC and DTC supported by the math model earned a Superior evaluation with an unprecedented 100 percent award fee for this kind of application. The customer audit, in support of the performance award, supports the conclusion that computer models can be used to enhance the LCC aspects of propulsion system development programs. (Author)

**A77-28627 A comparison of enroute conflict risk for three 1995 air traffic surveillance systems.** I. M. Weiss (Rockwell International Corp., El Segundo, Calif.) and J. F. Bellantoni (U.S. Department of Transportation, Transportation Systems Center,

Cambridge, Mass.). In: Productivity; Proceedings of the Joint Automatic Control Conference, West Lafayette, Ind., July 27-30, 1976. New York, American Society of Mechanical Engineers, 1976, p. 89-99. 24 refs.

This paper compares three surveillance systems on the basis of their effect on the manual enroute conflict rate and collision rate, estimated for a postulated 1995 traffic level. The three systems are an Advanced Air Traffic Management System based on satellite surveillance; the Upgraded Third Generation Air Traffic System based on an improved radar beacon system; and a system based on current surveillance radars. These three systems were characterized in this study by their surveillance accuracy and the results presented apply to any systems of equal accuracy. (Author)

**A77-28684 Juridical questions concerning the supply with energy in times of crisis - Regulations regarding the assurance of the supply with electricity /electrical load distribution regulations/ and the supply with gas /gas load distribution regulation/. III (Rechtsfragen der Energieversorgung in Krisenzeiten - Zur Verordnung über die Sicherstellung der Elektrizitätsversorgung /Elektrizitätslastverteilungs-Verordnung/ und der Gasversorgung /Gaslastverteilungs-Verordnung/. III).** U. Büdenbender. *Energiewirtschaftliche Tagesfragen*, vol. 27, Mar. 1977, p. 216-219. 15 refs. In German.

Questions of juridical design and expression in relation to the dispositions of the agency charged with the distribution functions in the case of an energy crisis are discussed, taking into account the characteristics of various types of such dispositions. Attention is also given to financial compensation claims and the relation of the considered regulations to other rules and statutes. G.R.

**A77-29026 \* # Opening a new era in space.** P. E. Culbertson and T. P. Bold (NASA, Office of Planning and Program Integration, Washington, D.C.). *Astronautics and Aeronautics*, vol. 15, Apr. 1977, p. 20-25.

The overall payload planning aimed at initial projected use of the Space Transportation System (STS) which will establish a new capability for exploring and using space through operations of the Shuttle, Spacelab, and Interim Upper Stage (IUS) in the Eighties is reviewed, and the significance of this planning for science and technology is discussed. The first payloads will fly on the STS during Orbital Flight Tests (OFT) beginning in March 1979. Primary OFT objectives include verifying flight systems and the Shuttle's ability to accommodate various types of payloads in different mission modes. The STS schedule will build up to as many as 60 flights in 1984. The STS payloads will make contributions to the management on a global scale of the interrelationship of production, consumption, population growth, and pollution. A.Y.

**A77-29029 # Shuttle payloads - Opportunities to expand ground-based research.** R. L. Merrill and B. W. Davis (Battelle Memorial Institute, Columbus, Ohio). *Astronautics and Aeronautics*, vol. 15, Apr. 1977, p. 38-43.

The capabilities of the upcoming Shuttle flights include: accommodation of very large payloads in both weight (up to 65,000 lb) and size (60 by 15 ft); stay in orbit for extended periods (7 to 30 days); launching and retrieving objects in space (free flyers); returning payloads to earth unharmed; frequent flight schedules (one flight per week by 1985); relatively low cost. These capabilities will enable the earth-bound researchers to move their laboratories to space and take advantage of the properties of the space environment. The cost of space research must be measured in terms of the cost per useful data point, and not the cost per flight. The space research is and will be used in mapping, mineral exploration, land use planning, agricultural crop measurements and forecasting, water-resource management, and environmental monitoring. The exploitation of research opportunities based on the properties of the space environment can potentially contribute to a broad spectrum of physical, biological, chemical, and engineering sciences as well as a very large number of industrial processes. A.Y.

**A77-29030 #** How do U.S. companies view space industrialization. A. M. Dula (Butler, Binion, Rice, Cook and Knapp; Houston, University, Houston, Tex.). *Astronautics and Aeronautics*, vol. 15, Apr. 1977, p. 44-46.

Results from a questionnaire on space industrialization sent to chief executive officers of 378 American companies are discussed. Twenty percent of the companies returned the questionnaire completed. The average company responding to the questionnaire had annual gross sales of \$2.5 billion. Some 30% of the respondents were aware of and interested in the possibility of solar power satellites and communication satellites. Forty-seven percent of the respondents felt that there was some probability of both their industries and their companies becoming involved in a Shuttle-based program.

**A77-29079** MIL-STD-1567 - Productivity growth through work measurement. M. A. Nassr (USAF, Systems Command, Washington, D.C.). *Defense Management Journal*, vol. 13, Apr. 1977, p. 16-20. 7 refs.

MIL-STD-1567, published in 1975, specifies certain minimum requirements which must be met for a contractor's work measurement system to be acceptable. The general requirements call for a documented work measurement system with a clear designation of the organization and personnel responsible for its execution, a plan to establish engineered standards of recognized accuracy, and a plan to use labor standards as inputs to budgeting, estimating, and production planning. Application of the standard to B-1 and F-16 aircraft production is discussed.

B.J.

**A77-29080** Manufacturing technology + teamwork = economy. C. P. Downer (U.S. Department of Defense, Office of the Assistant Secretary of Defense /Installations and Logistics/, Washington, D.C.). *Defense Management Journal*, vol. 13, Apr. 1977, p. 28-33.

The paper considers the DOD Manufacturing Technology program which is designed to develop or improve manufacturing techniques, processes, materials, and equipment to provide for timely, reliable, and economical production of defense material. Attention is given to ways of reducing costs and improving fabrication, and to the Integrated Computer-Aided Manufacturing program.

B.J.

**A77-29298** Comments concerning the dynamics of aeronautical and astronautical research (Gedanken zur Dynamik der Luft- und Raumfahrtforschung). O. H. Gerlach (Nationaal Lucht- en Ruimtevaartlaboratorium, Delft, Netherlands). *DFVLR-Nachrichten*, Feb. 1977, p. 820-827. In German.

Questions concerning the need for aeronautical research projects are investigated, taking into account developments regarding the increase in the cost of aircraft fuel, environmental requirements, noise reduction problems, advanced aerodynamical structural forms, new materials and new construction methods, and modern flight control methods. Attention is given to the innovation process in aircraft development, aspects of cooperation between research institutes and state, questions of financing, the significance of 'spin-in' and 'spin-off' effects, and problems related to an employment of new study methods and new installations.

**A77-29435** Airport systems planning: A critical look at the methods and experience. R. de Neufville. Cambridge, Mass., MIT Press, 1976. 214 p. 189 refs. \$14.95.

The work examines how the systems approach can be applied to airport planning by example and application to specific issues - economic, social, political, and technological. Four basic questions are addressed: (1) what are the biases and implicit assumptions of the industry; (2) what is the nature of the public interest in this aspect of

airport systems; (3) what are the forces and constraints which define and limit the possibilities; and (4) what kind of solution is the community entitled to expect.

B.J.

**A77-29472 \*** Effects of selected R&D options on fuel usage in the commercial air system. F. W. Gobetz and A. P. Dubin (United Technologies Research Center, East Hartford, Conn.). In: Annual Intersociety Conference on Transportation, 4th, Los Angeles, Calif., July 18-23, 1976, Proceedings. New York, American Society of Mechanical Engineers, 1976. 10 p. Contract No. NAS2-8608.

The study on which this paper is based, known as RECAT (Study of Cost Benefit Tradeoffs for Reducing the Energy Consumption of the Commercial Air Transportation System), was sponsored by NASA to establish a basis for assigning priorities in its aircraft fuel-conservation R&D program. The study involved coordinated efforts by four independent contractors to conceive and quantify fuel-conserving technology alternatives, transform these alternatives into viable R&D options, and simulate each option in a general model of the U.S. domestic air transportation system. This paper deals primarily with the latter phase and concentrates on the results of the study, as revealed not only by estimated fuel usage but also by other impacts of the technology options, such as demand growth, operator economics, and fleet composition. However, while the paper focuses on results, the basic assumptions and technology inputs are documented, and a general description of the modeling approach is provided to demonstrate the level of detail considered in the analysis.

**A77-29496** Computer aided aircraft project design. H. P. Y. Hitch (British Aircraft Corp., Ltd., Weybridge, Surrey, England). *Aeronautical Journal*, vol. 81, Feb. 1977, p. 51-62. 19 refs.

The task of projecting a new aircraft consists essentially of finding an optimum practical solution to a complex problem with known constraints. The paper discusses ways in which the computer can be used to assist in the project of aircraft development. Attention is directed to the development of typical computer-aided project design program, to examples of computer-aided project systems currently in use, and to the use of programs for preliminary wing structural design and weight estimation. A properly used computer-aided project design program can assist not only in the development and optimization of specific projects but also in determining the best use of research funds, since the likely gains to be made using advanced technology can be predicted with ease and consistency.

S.D.

**A77-29665 #** Costs and decision making. J. C. Wimpenny (Hawker Siddeley Aviation, Ltd., Hatfield, Herts., England). In: Seeds for success in civil aircraft design in the next two decades; Proceedings of the Spring Convention, London, England, May 19, 20, 1976. London, Royal Aeronautical Society, 1976. 31 p.; Discussion, p. K.1, K.2, L.1. 7 refs.

As the aircraft industry matures, performance gains come less readily and costs appear to be a much greater determinant of progress. Some of the fundamentals of cost reduction are examined. Since cost reduction must be balanced against product effectiveness and there are major interactions between possible cost levels and sales volume, emphasis is placed on treating the subject in the broader framework of commercial viability. The discussion covers cost reduction areas, market prospect, and investment basis and appraisal. A critical review is presented of the investment decisions needed, many of which are urgent and critically important for the future of the civil transport industry. There are indications of profitable growth potential arising from improvements in air traffic control, airport and ground access, and route networks.

**A77-29666** Tehran International Airport. W. Prokosch. (*American Society of Civil Engineers, National Convention, Denver, Colo., Nov. 3-7, 1975, Preprint 2553.*) *ASCE, Transportation Engineering Journal*, vol. 103, Mar. 1977, p. 223-241.

Innovation features of planning and consultative work on the Tehran International Airport (situated 50 km from downtown Tehran) are described. A high-speed train brings passengers to and from the airport and the capital express, making a few local stops at the terminal area. Passenger flow through the terminal is unidirectional for emplaning passengers and unidirectional for deplaning passengers, and (bilingual) signs are kept to a minimum number. Roadway access, climate, precursor concepts (Dallas/Ft. Worth airport), and special facilities (Royal Pavilion for the monarch, a Hadj terminal for Mecca pilgrims) and loading bridge innovations are described. R.D.V.

**A77-29927** Waste reduction - Issues and policies. W. D. Conn (California, University, Los Angeles, Calif.). *Resources Policy*, vol. 3, Mar. 1977, p. 23-38, 28 refs.

Twelve policy options for reducing waste are analyzed to identify the effects of each option on the solid waste stream; materials and energy utilization and environmental impact; government revenues and costs; industry; employment; and consumers. Options include project and purchasing regulations; warranty requirements; mandatory disclosure of environmental impact; mandatory refunds on beverage containers; and various taxes and fees. Goals and likelihood of government action are briefly discussed. M.L.

**A77-30477** A distributed air defense information system. D. K. Tucker. *IEEE Transactions on Aerospace and Electronic Systems*, vol. AES-13, Mar. 1977, p. 91-95.

A cybernetic systems approach is recommended to the development of air defense systems, with available air defense ground environment (ADGE) systems (NADGE, SAGE, LINESMAN) considered as examples. Poor management of the system and project as a whole, long lead times and obsolescence of system goals, and treating the ADGE system as a radar system rather than a data processing system, are seen as main contributors to system concept inadequacy. The central role of a digital communications network in such systems, track extraction options, juxtaposition of a system and presumed antisystem, and system design flexibility are emphasized. R.D.V.

**A77-30591** Economic and policy problems in satellite communications. Edited by J. N. Pelton (International Telecommunications Satellite Organization, Washington D.C.) and M. S. Snow (Hawaii, University, Honolulu, Hawaii). New York, Praeger Publishers, Inc., 1977. 257 p. \$18.50.

Questions of price discrimination and economies of scale in international satellite communications are considered along with economic issues related to the establishment of domestic satellite communications and economic issues in international telecommunications. Attention is given to key problems in satellite communications, political and social implications of communications satellite applications in developed and developing countries, and sources and directions of U.S. satellite policy. G.R.

**A77-30592** Price discrimination and economies of scale in international satellite communications. M. S. Snow (Hawaii, University, Honolulu, Hawaii). In: Economic and policy problems in satellite communications. New York, Praeger Publishers, Inc., 1977, p. 5-30. 47 refs.

Price discrimination is used as a neutral term in economics to refer to the sale of the same product to different individuals or groups of individuals at different prices when no underlying cost differences are involved. Price discrimination can arise only in

monopoly. The relations of the theory of price discrimination considered are applied in a study of the pricing regulations in the case of the Intelsat commercial satellite system. It is pointed out that Intelsat's price discrimination has been used strictly as an adjunct to its overall policy of average cost pricing, in which it resembles most regulated public utilities. G.R.

**A77-30593** Domestic satellite communications - Economic issues in a regulated industry undergoing technical change. R. W. Nelson (New York, Federal Reserve Bank, New York, N.Y.). In: Economic and policy problems in satellite communications. New York, Praeger Publishers, Inc., 1977, p. 31-61. 17 refs.

The economic issues raised by the proposal for domestic satellite communication are assessed from the viewpoint of the regulation of an industry undergoing technical change. A description of the economic and regulatory environment of domestic satellite communication is presented, taking into account the industry structure and technology of long-distance telecommunications prior to satellites, the development of the regulatory issues, and the basic economic issues. Attention is also given to questions concerning the desirability of technical change, the desirability of regulatory control over entry, and the desirability of an experimental pilot approach. G. R.

**A77-30594** Economic issues in international telecommunications - A public policy dilemma. K. B. Stanley (Federal Communications Commission, Washington, D.C.). In: Economic and policy problems in satellite communications. New York, Praeger Publishers, Inc., 1977, p. 62-88. 31 refs.

Selected aspects of economic performance in the international telecommunications industry are examined. Attention is given to Comsat and the Federal Communications Commission (FCC), the market structure and FCC policy decisions, the investment behavior and incentives of rate of return regulation, technological progress and depreciation policy, pricing practices of Comsat, and interactions of market structure, investment policies, and regulatory policies. G.R.

**A77-30595** Key problems in satellite communications Proliferation, competition, and planning in an uncertain environment. J. N. Pelton (International Telecommunications Satellite Organization, Washington, D.C.). In: Economic and policy problems in satellite communications. New York, Praeger Publishers, Inc., 1977, p. 93-123. 32 refs.

The current stage in the development of communications satellites is characterized by the rapid proliferation of communications satellite systems, both those systems presently deployed and those planned for deployment in the next few years. Major issues posed by this proliferation are examined, taking into account geosynchronous orbital locations, frequency allocations, and economic competition. Challenges related to planning in an uncertain environment are discussed, giving attention to multipurpose versus specialized satellite systems, cables versus satellites, the lack of common objectives, and the challenge of new technologies and unknown service requirements. G.R.

**A77-30875** Advanced systems development management. J. Coutinho. New York, Wiley-Interscience, 1977. 449 p. 206 refs. \$23.

This book is concerned with large, complex, high cost systems that make use of advanced technology and that are generally produced in small quantities or one of a kind. The impact of technology on society is considered along with questions of systems assurance, hardware or engineering models, software models, management structures, questions of systems procurement, the systems development and demonstration cycle, design-to-performance and design-to-cost procedures, contractual incentives, technical requirements, and aspects of systems engineering. Attention is also given to problems of design assurance, the organization of the technical

development staff, systems development management, the principles of quality assurance, operational testing and product improvement, and professional responsibilities. G.R.

**A77-31066** Technology and decision making in the air transport industry. D. Schiffl (NSF, Policy Research and Analysis Div., Washington, D.C.). *Traffic Quarterly*, vol. 31, Apr. 1977, p. 317-331. 39 refs.

A review of the literature and synthesis of factors involved in the innovation process in commercial aeronautical technology with three concluding points: new aircraft technology is developed exogenously, outside the control of the air carriers; technological developments are subsequently embodied in new aircraft at times dictated by competition among airframe manufacturers; and as a result of the nonprice nature of competition in the airline industry, the airlines are competitively induced to seek new aircraft and buy new aircraft as they become available. Some permissive factors in decisions about airline flight equipment include the rate of traffic growth, rates of return, and aircraft-operating economies. M.L.

**A77-31067** Local and commuter airlines in the United States. J. D. Mayer (Great Lake Basin Commission, Ann Arbor, Mich.). *Traffic Quarterly*, vol. 31, Apr. 1977, p. 333-349. 32 refs.

The division of the United States air transportation system into three or four hierarchical levels and the history of local airlines are reviewed. It is concluded that local-service airlines will increasingly resemble the major trunk airlines in terms of volume of business, routing, and operating complexity. These airlines will tend to withdraw from the marginal service areas, leaving them to the air taxis and commuter airlines which in turn will face increasing competition from ground transportation. To withstand competition commuter airlines should improve the frequency and quality of their service. M.L.

**A77-31341** An improved management approach to upgrade avionics system reliability. L. S. Klivans (Hughes Aircraft Co., Canoga Park, Calif.). *IEEE Transactions on Reliability*, vol. R-26, Apr. 1977, p. 23-28.

The paper describes a program for reliability improvement aimed at reducing failures and operating anomalies in avionics systems regardless of frequency of occurrence. The approach included determining the causes of malfunctions during manufacturing and field use, and developing ways to eliminate those causes by concurrently improving design change, part specification, and/or manufacturing quality or process control. The program concepts include quantification of specific failure items/modes, verification through test-analyze-fix, and fleet demonstration of required system performance. P.T.H.

**A77-31499** Studies pinpoint cost-saving F-16 manufacturing techniques. E. J. Bulban. *Aviation Week and Space Technology*, vol. 106, May 2, 1977, p. 81, 82, 87, 89, 91.

Manufacturing program for the F-16 emphasizes innovative, cost-effective approaches aimed at making the multinational combat aircraft a viable production program into the latter part of the 1980s and beyond. Studies have indicated cost savings of better than \$23.5 million over a production run of 650 USAF F-16As and F-16Bs, and approximately \$1.5 million for the development aircraft. Cost reduction entailed such factors as modular design, part commonality, extensive use of aluminum, standard fasteners, forging and castings, pre-cut bulkheads, large-volume materials purchasing, coproduction support, production increase keyed to the learning curve, fabrication task studies, improved assembly line procedures, and search for advanced technology. A.Y.

**A77-31501** # Organisation of an operations centre. B. M. Walker (ESA, European Space Operations Centre, Darmstadt, West Germany). *ESA Bulletin*, Nov. 1976, p. 8-13.

The European Space Operations Center (ESOC) manages the portion of the ESA budget allocated to the operation of orbiting satellites. In recent years, the Agency has set aside 19% of its labor and 9% of its total budget for satellite operations. In the present paper, the basic management task to be carried out by the ESOC organization is illustrated by examining the relationship between the cost of operations and the likelihood of their being successful. V.P.

**A77-31504** # Some aspects of mission analysis. H. A. Kellner (ESA, European Space Operations Centre, Darmstadt, West Germany). *ESA Bulletin*, Nov. 1976, p. 23-25.

In the present paper, the major problems involved in mission analysis in the course of project definition and development are discussed. It is shown how a workable system for achieving the mission objectives can be obtained by establishing the functional requirements for five subsystems: the launcher, spacecraft, experiment package, data acquisition, and data utilization. The relations between these subsystems across the interface are identified and investigated; the entire system is then checked out, compromises are introduced where necessary, and the procedure is repeated at subsystem level. V.P.

**A77-31558** Commercial considerations in remote sensing engineering. G. Lewis (British Aircraft Corp., Space Systems Group, Bristol, England). In: *Environmental remote sensing 2: Practices and problems*. London, Edward Arnold (Publishers), Ltd., 1977, p. 25-40.

The industrial process is considered, taking into account the research phase, design considerations, the development process, and aspects of manufacture and quality control. Problems connected with the conduction of external relations with organizations and committees representing the user of the equipment are considered along with difficulties related to changes in the specification of a piece of equipment. Attention is also given to questions of cost and details regarding the characteristics of the contract. G.R.

**A77-31836** # Needed - A Federal R&D policy. K. P. Heiss (Econ, Inc., Princeton, N.J.). *Astronautics and Aeronautics*, vol. 15, May 1977, p. 44, 45.

In 1967, when potential and actual GNP matched nearly one to one, the United States was spending about 3.2% of GNP on R&D, 2.2% of that funded by the Federal government. In constant dollars, the Federal funding of R&D has dropped from about \$17 billion in 1967 to \$13.8 billion in 1977, while R&D funding by industry has stayed constant, at 1% of GNP. Despite the increasing gap between actual and potential gross national product, the government is not considering a massive R&D program, partly because of the long lead-times between cost and payback, also because there is no government agency whose primary purpose is to organize a venture R&D project market. Increased federal planning and spending for research and development is urged. M.L.

**A77-31975** The economy of air transportation /2nd edition/ (L'économie du transport aérien /2nd edition/). J. Belotti. Châtillon-sous-Bagneux, Hauts-de-Seine, France, J. Belotti, 1976. 853 p. 201 refs. In French.

The work concentrates on the role of economic factors in air transportation giving attention to design and construction, airports, airlines, and air transport demand. Also considered is a forecasting model for the future of air transportation consisting of a call for technological cooperation and a restructuring of the European air transportation system. B.J.

**A77-32071** # A cost benefit analysis of space manufacturing facilities. M. M. Hopkins (Harvard University, Cambridge, Mass.). *American Institute of Aeronautics and Astronautics and Princeton University, Conference on Space Manufacturing Facilities, 3rd, Princeton, N.J., May 9-12, 1977, AIAA Paper 77-556*. 9 p. 9 refs. Research supported by the L-5 Society.

## A77-32475

The update of a method (1975) designed to evaluate the costs and benefits of space settlements suggests that the economics of space manufacturing facilities (SMF) are substantially better than the favorable results found for space settlements in earlier applications of the method. The development costs and the cost benefits of SMF are estimated, and the role of public and private financing is discussed. Comparisons with the Econ study of earth-launched satellite power stations (SPS) lead to the suggestion that the SMF option for producing SPS might be less risky than earth-based construction and launching. M.L.

**A77-32475** Practical approach to evaluation of research projects. M. J. Fleetwood (Inco Europe, Ltd., Birmingham, England). *Metals Technology*, vol. 4, Apr. 1977, p. 223-229. 15 refs.

Against the background of a predominantly metallurgical research laboratory, the reasons for choosing a simple cash-flow method for evaluating projects are discussed. Approaches to the estimation of cost, benefit, and probability of success are outlined; it was found that effort is particularly needed to overcome persistent underestimates of time to completion and the difficulties people experience in estimating likely market penetration and probability. A scoring method of deriving probability from a checklist of factors known to lead to project failure has proved useful. Three years' experience in using the evaluation method provides the basis for a discussion of its accuracy and effects on research projects and people. (Author)

**A77-33889** Government-sponsored demonstrations of new technologies. W. S. Baer, L. L. Johnson, and E. W. Merrow (Rand Corp., Santa Monica, Calif.). *Science*, vol. 196, May 27, 1977, p. 950-957. 15 refs. U.S. Department of Commerce Contract No. 4-35959.

An analysis of federally funded demonstration projects suggests several characteristics that are associated with success in speeding commercialization of a new technology. They include a technology well in hand, cost- and risk-sharing with nonfederal participants, project initiative at the local level, a strong industrial system for commercialization, participation in the demonstration by those who will take responsibility for further diffusion, and the absence of tight time constraints. Attention is given to such projects as mechanized refuse collection, computer-assisted electrocardiogram analysis, and a dial-a-ride transportation system. B.J.

**A77-34302** Aircraft manufacturer warranties - Protection for the manufacturer or the purchaser. H. Hughes. *Air Law*, vol. 2, no. 2, 1977, p. 71-81. 34 refs.

Legal decisions enabling aircraft manufacturers to avoid liability for defects in aircraft sold to airlines are discussed. Cases analyzed include actions grounded in strict tort liability, actions alleging negligence, actions based on implied warranty, and actions based on the express warranties in the purchase agreement. In commercial situations, disclaimers of tort liability have often been found not to violate public policy, the decisions apparently based on the policy rationale that business concerns must be allowed to assign the risk of loss to one of the parties to the contract and allocate the price accordingly. Sometimes when an express warranty is breached the manufacturer is liable only for replacement of the defective part even if extensive aircraft damage was caused by the defect. The implications of permitting a company to contractually excuse itself from liability from its own tortious acts are considered. M.L.

**A77-34303** Status report on the renegotiation of the U.S.-U.K. Bilateral Air Transport Agreement /Bermuda Agreement/. P. B. Larsen (Georgetown University; U.S. Department of Transportation, Washington, D.C.). *Air Law*, vol. 2, no. 2, 1977, p. 82-90. 28 refs.

The issues at stake in the renegotiation of the U.S.-U.K. Bilateral Air Transport Agreement (Bermuda Agreement) are discussed. The

British are concerned about the fact that U.K. carriers earned much less than U.S. carriers; the British are said to favor market control of routes, capacity, and fares. The U.S. is said to feel that the market itself should be the deciding factor in regulating air service. The U.K. is reported to support, and the U.S. oppose, the designation of a single carrier from each country for each major route. The U.K. is reported to favor a reduction in fifth freedom traffic rights (traffic beyond the contracting state to a noncontracting state, after an initial flight from one contracting state to the other contracting state). This reduction would affect the ability of U.S. carriers to participate in major trunk routes, the basis for the U.S. international system of air carriage. The Bermuda Agreement was denounced by the U.K. on June 22, 1976 and is scheduled to expire June 22, 1977, unless renegotiated. M.L.

**A77-34305** Liability of carriers for damages of passengers on charter flights. G. Camarda (Palermo, Università, Palermo, Italy). (*International Symposium on the Air Charter Transport and its Impact upon Tourism, Messina, Italy, Nov. 19-21, 1976.*) *Air Law*, vol. 2, no. 2, 1977, p. 96-98. 10 refs. Translation.

It is suggested that the charterer (usually a travel agency) remains liable for injuries and losses to passengers on charter flights even when the charterer has issued the transit ticket in the name of the actual carrier. Although this principle was established by the Guadalajara Convention, some charterers still issue tickets in the name of the carrier, in accordance with the system that developed under the provisions of the Warsaw convention, and a new convention is urged for the purpose of resolving ambiguities in the liability of carriers involved in charter flights. M.L.

**A77-34307** ICAM - Revolution in manufacturing. M. D. Zimmerman. *Machine Design*, vol. 49, May 26, 1977, p. 86-91.

Integrated Computer Aided Manufacturing (ICAM) is a system that uses computers to organize every step of manufacturing - from parts design to physical location of machine tools to shipping - in an economical and efficient mode. The system, a response to the proliferation of unrelated computer systems that sometimes cause extra problems in manufacturing, is scheduled for completion by late 1981. The planning and development process is described. Task I calls for developing an architectural model that blueprints various manufacturing complexities. Task II concerns group technology, in which parts and processes are grouped according to common features. Since ICAM is initially geared toward the batch manufacture of aircraft parts that require metalworking processes, Task III involves the assessment of sheet-metal formability and assembly technology. Flow charts and organization tables are displayed. M.L.

**A77-34470** I.B.M. reaches for a golden future in the heavens. B. Uttal. *Fortune*, vol. 95, June 1977, p. 172-176, 178, 180, 182, 184.

The potentialities and potential impact of I.B.M.'s Satellite Business Systems (SBS) project (in partnership with Comsat and Aetna Life and Casualty) are assessed. Use of large-scale central computers, satellite technology, and ultrahigh microwave frequencies for voluminous data to serve corporate customers utilizing ground ministations is envisaged. Applications include: teleconferences, fast retrieval of high-volume offshore oil exploration data, adjusting system loads to handle computer overloads and bottlenecks, high-volume facsimile service combined with digital data and voice data. A data flow of 41 Megabits per second is projected. The impact of such a system on the business community is assessed. R.D.V.

**A77-34493** Technological change and cost analysis of high-technology systems. E. N. Dodson (General Research Corp., Santa Barbara, Calif.). *IEEE Transactions on Engineering Management*, vol. EM-24, May 1977, p. 38-45. 14 refs.

Technological change is discussed in the context of systems cost analysis in two ways. First, it is a specific objective of research and development programs and is a direct determinant of research and

development cost. Methods of measuring technological change are evaluated and an example of an research and development cost equation is set forth. Second, technological change underlies the relationships between design/performance characteristics and procurement costs. For many systems, the year-to-year change is highly significant, and cost analyses which overlook this phenomenon can be in serious error. Examples are discussed. (Author)

**A77-34494** Management by objectives in the R & D environment - A simulation. E. J. Poziomek (U.S. Army, Chemical Systems Laboratory, Aberdeen Proving Ground, Md.), D. W. Rice (Department of Communications, Communications Research Centre, Ottawa, Canada), and D. F. Andersen (MIT, Cambridge, Mass.). *IEEE Transactions on Engineering Management*, vol. EM-24, May 1977, p. 45-51. 32 refs.

A System Dynamics model of the interrelations in an R&D organization between management by objectives (MBO), social interaction, and employee motivation and productivity is presented. In many cases, MBO is shown to increase employee productivity by generating task-related work pressures. However, longer run counteracting decreases in productivity may result if management neglects the negative effects of task pressure on social interaction. Policies are discussed for managing these positive and negative effects inherent in MBO. (Author)

**A77-34495** Organizing collection, selection, and ranking of ideas leading to national R & D projects. E. Trattner (Israel Institute of Productivity, Tel Aviv, Israel). *IEEE Transactions on Engineering Management*, vol. EM-24, May 1977, p. 51-59. 22 refs.

A rational way of collecting, selecting and ranking problem-generating ideas to be solved by research and development on a national plane is presented. A questionnaire was worked out for the collection of technological, economic and financial information related to the idea supplied. A sifting system has been devised for selection from among the ideas collected, based on the following two criteria: that the idea should not be achievable by technological transfer, and that the idea should be technologically feasible and economically efficient. B.J.

**A77-34496** A management information system for engineering and research. D. W. Karger (Rensselaer Polytechnic Institute, Troy, N.Y.) and R. G. Murdick (Florida Atlantic University, Boca Raton, Fla.). *IEEE Transactions on Engineering Management*, vol. EM-24, May 1977, p. 72-75.

This article describes in practical managerial language (1) management information systems (MIS), (2) the benefits and advantages to be gained by utilizing an MIS, and (3) the major attributes and guidelines for construction. To accomplish its objective it is necessary to note and reference many important practices vital to successful management. (Author)

**A77-34642** Cut energy costs: A guide for buying and plant operation (Energiekosten senken: Ein Leitfaden für Einkauf und Betrieb). Edited by K. Deppardt. Gräfe/Verlag, West Germany, Technischer Verlag Resch, 1977. 178 p. In German. \$12.50.

This book is a collection of papers examining the energy-economical aspects of plant operation, with numerous suggestions being made for procedures which reduce energy losses in an industrial process. Topics discussed include electric power supply contracts and special price controls, energy cost reduction by maximum monitoring and maximum load optimization, electricity cost reduction by reactive current compensation, natural gas purchasing contracts and features of natural gas supply, and energy saving by heat insulation. P.T.H.

**A77-35171** Technology for the control of sulfur oxides and nitrogen oxides in Japan. Y. Masuto (Japan Trade Center, Houston, Tex.). In: Energy and the environment; Proceedings of the Third National Conference, Oxford, Ohio, September 29-October 1, 1975. Dayton, Ohio, American Institute of Chemical Engineers, 1975, p. 317-324. 12 refs.

Japan ranks second among the world's nations in total Gross National Product value. Along with this economic success, however, has come the problem of increased air pollution. To prevent this smothering of its living environment, Japan has become one of the leaders among countries in the demand for active concern about contaminant in its air. The atmosphere is polluted by industrial processes mainly with the following substances: hydrocarbons, sulfur oxides, carbon monoxide, nitrogen oxides, suspended particulate matter, and photochemical oxidants. This paper considers only the oxides of sulfur and nitrogen. A view of the current SO<sub>x</sub> and NO<sub>x</sub> situation in Japan is given, and countermeasures against this pollution are outlined by citing environmental standards and regulation, then listing antipollution budgets and investment. SO<sub>x</sub> and NO<sub>x</sub> pollution control technology is considered from the standpoint of applications, research, and development. (Author)

**A77-35308 \*** Establishing effective working relations with a potential user community - NASA Lewis Research Center experience. P. Foster (NASA, Lewis Research Center, Cleveland, Ohio). In: Space Congress, 14th, Cocoa Beach, Fla., April 27-29, 1977, Proceedings. Cocoa Beach, Fla., Canaveral Council of Technical Societies, 1977, p. 2-6 to 2-11.

The NASA Lewis Research Center has held a series of six major and unique technology utilization conferences which were major milestones in planned structured efforts to establish effective working relationships with specific technology user communities. These efforts were unique in that the activities undertaken prior to the conference were extensive, and effectively laid the groundwork for productive technology transfer following, and as a direct result of, the conferences. The effort leading to the conference was in each case tailored to the characteristics of the potential user community, however, the common factors comprise a basic framework applicable to similar endeavors. The process is essentially a planned sequence of steps that constitute a technical market survey and a marketing program for the development of beneficial applications of aerospace technology beyond the aerospace field. (Author)

**A77-35325 \*** Protecting proprietary rights - A potential Shuttle user's view. J. B. Day (Battelle Columbus Laboratories, Columbus, Ohio). In: Space Congress, 14th, Cocoa Beach, Fla., April 27-29, 1977, Proceedings. Cocoa Beach, Fla., Canaveral Council of Technical Societies, 1977, p. 7-26 to 7-29. NASA-supported research.

Maintaining a high degree of industrial security in the multiple-payload Shuttle environment poses a number of problems for NASA. As a part of Battelle-Columbus' support of NASA's User Development Program, this paper presents a potential user's perspective on this situation. The need for security, the nature of the problem, and precedents for NASA security measures are discussed. Eleven policy guidelines representing desirable features from a potential user's viewpoint are presented for NASA consideration. (Author)

**A77-36262** Large and small-scale systems engineering. A. M. Lavie (Tel Aviv University, Tel Aviv, Israel). (*Israel Conference on Mechanical Engineering, 10th, University of the Negev, Beersheba, Israel, June 21, 22, 1976.*) *Israel Journal of Technology*, vol. 14, no. 4-5, 1976, p. 196-206. 7 refs.

In this article, large-scale systems engineering is related to the whole sequence of operations involved in the complete life cycle of an engineering system, from its generation until its phasing out and replacement by a new one. Small-scale systems engineering is related to the justification phase, when different alternatives are designed and analyzed in order to choose the best compromise and to justify the development of a new system. The large scale is claimed to have a triangular structure: it is divided into three phases (justification phase, development and production phase and operation phase) and each phase is composed of three basic activities. Interesting features of systems engineering are analyzed, such as the mechanism of formulating requirements, the design to cost concept, the strategy

which a small company should adopt in developing products, and the impact of advanced technologies. (Author)

**A77-36274** A regional environmental quality management model - An assessment. C. S. Russell and W. O. Spofford, Jr. (Resources for the Future, Inc., Washington, D.C.). (*American Association of Environmental Economists, Annual Meeting, 1st, Dallas, Tex., Dec. 28, 1975.*) *Journal of Environmental Economics and Management*, vol. 4, June 1977, p. 89-110. 23 refs.

The principal purpose of this paper is to discuss the research and policy lessons learned from a large environmental quality management model constructed for the Lower Delaware River Valley Region. The policy lessons involve estimates of the costs of meeting varying standards on air and water quality and the impact on those costs of certain region-wide management alternatives. The research lessons concern: (1) the desirability of considering air and water quality, and solid waste disposal, simultaneously in a single model; (2) the costs of and returns to including nonlinear models of natural systems in a regional optimization framework; and (3) the feasibility of working with constraints on the geographic distribution of the costs of environmental quality improvement within the regional, nonlinear model. (Author)

**A77-36389** But where's the money coming from. J. L. Blonstein (Eurosace, Paris, France). *British Interplanetary Society, Journal (Space Communications)*, vol. 30, Apr. 1977, p. 155-159.

It is maintained that the establishment of satellite communications systems in the developing countries is no longer a question of technology, but a question of money. The paper attempts to show why the developing countries need more and better communications, and the means by which they can attain them. The use of the Symphonie satellite in the ESOP program is discussed. B.J.

**A77-36424** Energy management. P. W. O'Callaghan and S. D. Probert (Cranfield Institute of Technology, Cranfield, Beds., England). *Applied Energy*, vol. 3, Apr. 1977, p. 127-138. 5 refs.

Metering, critically examining and if necessary modifying the energy flow through a system is desirable in order to achieve a high efficiency. Systematic procedures for energy management and audit of processes and products are suggested: they involve energy flow charts and assessment questionnaires and thereby facilitate the location, and reduction or elimination, of energy profligate subsystems. Design rules for the improvement of energy flow systems are listed. (Author)

**A77-36618** Multiuser area-coverage automatic vehicle monitoring program. D. J. Symes (U.S. Department of Transportation, Office of Research and Development, Washington, D.C.). *IEEE Transactions on Vehicular Technology*, vol. VT-26, May 1977, p. 187-191.

A two-phase program for testing an automatic vehicle monitoring (AVM) system to accommodate both fixed-route and random-route users is described. Field tests and benefit-cost studies in phase I are an essential prerequisite to phase II development. Four types of location subsystems (signpost, radio frequency, dead reckoning, a hybrid combination of the first three) are under test in the Philadelphia area. Data processing, communications, system capacity, location accuracy, and waypoint display arrangements of the AVM system are discussed. R.D.V.

**A77-36956** Temperature measurement technology - Sensor techniques and instrumentation. D. M. MacKenzie and W. E. Kehret (Doric Scientific). In: *International Instrumentation Symposium, 22nd, San Diego, Calif., May 25-27, 1976, Tutorial Proceedings*. Pittsburgh, Pa., Instrument Society of America, 1976, p. 89-107.

Temperature sensor technology has a dramatic impact on instrumentation. Sensor technologies reviewed include metal and semiconductor resistance thermometry, metal and semiconductor

junction thermometry and pyrometry. Instrumentation considerations discussed include sensor lead configuration, excitation and referencing, noise rejection, multiplexing, analog to digital conversion and linearization. Special attention is given to both thermal and electrical parasitic effect. Data processing, alarming and display are also considered both with a functional and a human engineering perspective. Reliability and value engineering concepts are related to actual hardware implementation. (Author)

**A77-37358** A marketplace approach to military avionics standardization. C. N. D. Smith (Arinc Research Corp., Annapolis, Md.). In: *NAECON '76; Proceedings of the National Aerospace and Electronics Conference*, Dayton, Ohio, May 18-20, 1976.

New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 33-41. 14 refs.

This paper explores the commercial practices widely used today by the airlines industry to develop effective avionics specifications and high-quality hardware. Principal among these practices is the Airlines Electronic Engineering Committee's open forum process; the use of form, fit, and function specifications; the use of marketplace forces; the application of warranties; and data exchange within the Avionics Maintenance Conference. It describes some of the major elements of these practices and explores their potential impact on competition, profit, reliability, maintainability, and life-cycle costs. The possible application of commercial avionics acquisition processes to the military environment is reviewed. (Author)

**A77-37384** An approach to modern avionics integration support. A. E. Patterson and R. G. Algire (USAF, Sacramento Air Logistics Center, McClellan AFB, Calif.). In: *NAECON '76; Proceedings of the National Aerospace and Electronics Conference*, Dayton, Ohio, May 18-20, 1976.

New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 243-249. 5 refs.

Attention is given to the F-111 Avionics Integration Support Facility, whose most critical function is the provision of a pool of expertise and system resources ready to respond to the day-to-day avionics system problems as they occur. The resources of the facility include system and subsystem mock-ups, operational flight program simulation systems, a computer support system, flight tests, and a staff of highly skilled personnel. B.J.

**A77-37426** Managing engineers by objectives. J. P. Martino (Dayton, University, Dayton, Ohio). In: *NAECON '76; Proceedings of the National Aerospace and Electronics Conference*, Dayton, Ohio, May 18-20, 1976.

New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 571-578.

The paper describes the use of the management-by-objectives method to manage a medium-sized engineering organization for the Department of Defense. Attention is given to the historical background of the program and to the benefits and shortcomings of the program. B.J.

**A77-37427** The potential in the management of engineering design for reduction of life cycle costs. M. L. Ritchie (Wright State University, Dayton, Ohio). In: *NAECON '76; Proceedings of the National Aerospace and Electronics Conference*, Dayton, Ohio, May 18-20, 1976.

New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 583-588. 11 refs. Grant No. AF-AFOSR-73-2569.

The paper examines a number of problems associated with the reduction of life cycle costs in Air Force aircraft design. These include the fact that manpower costs must be traded off with other aspects of systems design, and the lack of background of engineers and engineering managers in manpower variables. B.J.

**A77-37428** Influences on system designers which compete with the work statement. M. L. Ritchie, P. Vendt, and N. S. Nataraj (Wright State University, Dayton, Ohio). In: *NAECON '76; Proceedings of the National Aerospace and Electronics Conference*, Dayton,

Ohio, May 18-20, 1976. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 600-603. Grant No. AF-AFOSR-73-2569.

A confidential questionnaire was used to determine if designers of Air Force equipment are subjected to influences which detract from straightforward solutions to design problems. It was found that the decisions of the design engineer are affected by the school in which he learned engineering, by the nature and outlook of his immediate supervisor, by what his colleagues approve and expect of him, by his company's policies, and by what he can interpret from the data made available to him. B.J.

**A77-37441** Interactive versions of cost models. F. W. Kurtz (USAF, Avionics Laboratory, Wright-Patterson AFB, Ohio). In: NAECON '76; Proceedings of the National Aerospace and Electronics Conference, Dayton, Ohio, May 18-20, 1976.

New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 696-698.

An interactive cost estimating model is a procedure by which managers get immediate answers to questions concerning the extent to which cost estimates will be influenced by variations in specific factors. Several cost estimating models have been converted to interactive models at Wright-Patterson Air Force Base. The procedure involves modifying a program so that it may be queried on either a teletype or video screen by a decision maker, top manager, or staff assistant, who has not had extensive training in cost estimating methodology. B.J.

**A77-37582** Let's get serious about total life cycle costs. E. P. Eaton (USAF, Office of the Assistant Secretary of Defense, Washington, D.C.). *Defense Management Journal*, vol. 13, Jan. 1977, p. 2-11.

Design analysis methods used to link weapon system performance to dollar costs to control and, if possible, reduce acquisition, design to cost, and downstream operating and support costs are outlined. Special attention is given to the analysis of cost drivers inherent in the support structure of a system. The practical application of the principles described in the Trident submarine system, the Advanced Medium STOL Transport Project, and the Electronically Agile Radar (EAR) program is examined. C.K.D.

**A77-37584** The PRAM program - Capitalizing on cost-reducing opportunities. G. E. Gabel (USAF, Avionics Div., Washington, D.C.). *Defense Management Journal*, vol. 13, Jan. 1977, p. 24-29.

The Air Force PRAM (Productivity, Reliability, Availability, and Maintainability) program, which focuses management funds and attention on selective innovative investment in projects to reduce operational weapons system support costs is described. Prime areas of interest include improved weapon system reliability, maintainability, and supportability; improved efficiency and productivity of maintenance and logistics support operations; exploitation of lower life cycle cost alternatives through standardization and use of current technology components, and elaboration of new research, development, test, and engineering approaches to better accommodate life cycle cost considerations. Methods used to screen investment proposals and results obtained to date are discussed. C.K.D.

**A77-37585** When managing - Think statistics. R. Glubin (USAF, Office of the Assistant Secretary of Defense, Washington, D.C.). *Defense Management Journal*, vol. 13, Jan. 1977, p. 48-55.

The use of statistics to reduce the areas of uncertainty in managerial decision-making is discussed. Suggestions are given for promoting better understanding and cooperation between manager and statistician and for accelerating the pace of management use of statistics. Such topics as coordinating data collection, refining statistical support for management needs, the use of statistical sampling, and budget projections based on statistics are considered. C.K.D.

**A77-37586** The Raytheon approach - Reliability success via total management involvement. D. M. Fradette and J. W. McFarland (Raytheon Co., Missile Systems Div., Bedford, Mass.). *Defense Management Journal*, vol. 13, Jan. 1977, p. 59-67.

The elaboration of a management program which emphasizes reliability at all stages of development of a weapons system program is described. Among the aspects considered are the initial establishment of realistic reliability requirements; determination of causes of unreliability; development of control procedures for purchased material. Techniques for controlling reliability at different stages of fabrication are discussed together with methods for continually assessing the reliability of deployed hardware. C.K.D.

**A77-37587** Critical Path Method - A simple tool for the working manager. G. E. Rutledge (Arizona, University, Tucson, Ariz.). *Defense Management Journal*, vol. 13, Jan. 1977, p. 68-71. 9 refs.

The Critical Path Method for analyzing, planning and scheduling a project is outlined. Each activity or event is situated with respect to the rest of the project by determining which activities must be completed before its initiation, which may be carried out concurrently, and which depend on its completion. A network identifying activities in an ordered sequence of relationships (paths) indicating the flow of activities necessary to complete a task is constructed. Three time estimates are made for each path: the most likely time to completion plus a pessimistic estimate and an optimistic estimate. The path with no slack time available is identified as the critical path for the project. C.K.D.

**A77-37798 #** An integrated program and data management system for engineering applications. A. J. Becqué. Delft, Technische Hogeschool, Doctor in de technische Wetenschappen Dissertation, 1977. 623 p. 73 refs.

Aspects of the LPR (List Processing) integrated programming and data base software system, a tool for developing computer programs and data bases for engineering purposes, are discussed. LPR subroutines used in programming create, lengthen, delete, or read from tables; analyze commands; produce trace output when debugging a program module of a subsystem; edit output. User profiles are examined. Preparation of input data using the 'data language' and the 'function language' is discussed, together with subsystem definition. The LPR subroutines available to the FORTRAN programmer are described. Examples of existing subprograms in the older LPR2 version are given. C.K.D.

**A77-38218** Energy R&D modeling for budgetary decisions. K. Chen, J. Lathrop, C. Kirkwood, and S. Pollock (Michigan, University, Ann Arbor, Mich.). In: Modeling and simulation. Volume 7 - Proceedings of the Seventh Annual Pittsburgh Conference, Pittsburgh, Pa., April 26, 27, 1976. Part 2.

Pittsburgh, Pa., Instrument Society of America, 1976, p. 955-962. 23 refs. NSF Grant No. ENG-74-22564.

A top-down approach is taken to apply multi-objective decision analysis to the strategic budgetary decisions in energy RD&D (research, development and demonstration) planning. A model is developed for the explicit and quantitative treatment of uncertainties and project interrelationships. The model is applied to an example budgetary allocation between two coal liquefaction programs, H-Coal and Synthoil. The example demonstrates the potential appropriateness of decision analysis in energy RD&D strategic planning.

**A77-38627 #** Noise regulations of the Federal Government. C. R. Foster (FAA, Washington, D.C.). *American Institute of Aeronautics and Astronautics and Society of Automotive Engineers, Propulsion Conference, 13th, Orlando, Fla., July 11-13, 1977, AIAA Paper 77-995*. 15 p.

The FAA is charged with the development and promulgation of aircraft noise certification standards. These noise standards are required to be economically reasonable, technologically practicable, appropriate to airplane type, consistent with the highest standards of safety, and compatible with public health and welfare requirements. In addition, it is highly desirable that U.S. noise certification rules be compatible with noise requirements and constraints in other countries. Thus the rulemaking process is fully coordinated with the International Civil Aviation Organization activities in this area.

**A77-38675**      **Accounting methods for new-technology non-utility energy installations.** A. J. Appleby (CNRS, Laboratoire d'Electrolyse, Meudon, Hauts-de-Seine, France). *Energy* (UK), vol. 2, Sept. 1977, p. 317-319.

Inflation of energy costs, until 1973 an unimportant factor in determining the overall rate of inflation in the economy, promises to become a major influence in determining future price increases as society moves towards the use of nonfossil and synthetic fuels. Since the conventional interest rate is effectively indexed to inflation, and since the energy costs in question are strongly capital-intensive, a snowball effect seems inevitable. A mortgage-repayment formula is suggested that has obvious importance when used in an inflationary environment, since it reduces the initial impact of new-technology energy costs compared with formulas used in conventional accounting. In addition, it is advantageous for technologies requiring longer write-off times, and may be particularly useful for small non-utility (e.g., solar) energy installations.

**A77-38792 \***      <sup>5</sup> **The next 25 years: Industrialization of space - Rationale for planning.** J. von Puttkamer (NASA, Office of Space Flight, Washington, D.C.). *British Interplanetary Society, Journal (Space Technology)*, vol. 30, July 1977, p. 257-264. 15 refs.

A methodology for planning the industrialization of space is discussed. The suggested approach combines the extrapolative ('push') approach, in which alternative futures are projected on the basis of past and current trends and tendencies, with the normative ('pull') view, in which an ideal state in the far future is postulated and policies and decisions are directed toward its attainment. Time-reversed vectors of the future are tied to extrapolated, trend-oriented vectors of the quasi-present to identify common plateaus or stepping stones in technological development. Important steps in the industrialization of space to attain the short-range goals of production of space-derived energy, goods and services and the long-range goal of space colonization are discussed.

**A77-39099**      **The airlines mutual aid pact - A lesson in escalated economic warfare and abdicated regulatory responsibility.** W. G. Mahoney. *Journal of Air Law and Commerce*, vol. 42, Autumn 1976, p. 847-878. 140 refs.

**A77-39102**      **French regulations and practices for the allocation of air routes.** F. Legrez (Compagnie Nationale Air France, Paris, France). *Air Law*, vol. 2, no. 1, 1977, p. 19-23.

**A77-39373**      **Transportation policy in the eighties.** M. Wachs (California, University, Los Angeles, Calif.). (*Association of Engineers and Architects in Israel and International Technical Cooperation Centre, World Congress of Engineers and Architects, 4th, Tel Aviv, Israel, Dec. 13-19, 1976.*) *Transportation*, vol. 6, June 1977, p. 103-119. 14 refs.

Urban transportation policy during the nineteen seventies has been characterized by attempts to deal with four major problems: (1) the minimization of environmental impacts of transport investments, (2) the alleviation of inequities in mobility, and financial burdens imposed upon some groups by earlier investments in capital intensive highway networks, (3) the accommodation of demands for public participation in transport decision-making, and (4) the

precipitous rise of public transit operating costs. Examples of policies which have been pursued in attempting to solve each of these problems are given. It is shown that policies designed to solve one of them have often intensified others. Thus, current policy is characterized by reliance upon very small-scale and timid plans and proposals. The eighties may see a return to large-scale and comprehensive transport plans, but these will not be exclusively physical or system plans. Rather, transportation plans in the eighties will include a balance among physical facilities, institutional arrangements, financial plans, and user incentives and disincentives. Several examples of such comprehensive policies are provided.

**A77-39778**      **Aerospace cost prediction - The way ahead.** J. E. A. Harrison (Ministry of Defence /Procurement Executive/, London, England). (*Royal Aeronautical Society, Symposium on Methods of Cost Prediction, London, England, Mar. 9, 1977.*) *Aeronautical Journal*, vol. 81, May 1977, p. 213-219. 6 refs.

An overview of past and present approaches to aerospace cost prediction for budgetary purposes within government is presented. The goals and objectives of budgetary cost prediction are outlined, and the application of cost prediction methods in predicting costs of an engine development program is examined in detail. The assessment of life cycle costs is discussed. The influence of changing technological, managerial, operational and policy factors on cost analysis methods is considered, and future trends in cost analysis for budgetary purposes are predicted.

**A77-40007**      **Methods of cost prediction, Proceedings of the Symposium, London, England, March 9, 1977.** Symposium sponsored by the Royal Aeronautical Society. London, Royal Aeronautical Society, 1977. 96 p. \$7.75.

A collection of papers on project planning and cost prediction methods for aerospace applications is presented. Topics include the prediction of design and development costs of civil airliners; problems of research and development cost predictions in an avionics supply company; aero engine development costing; project planning and control for risk projects.

C.K.D.

**A77-40009 #**      **Problems of research and development cost predictions in an avionics supply company.** H. K. Quilter (Smiths Industries, Ltd., London, England). In: *Methods of cost prediction; Proceedings of the Symposium, London, England, March 9, 1977.* London, Royal Aeronautical Society, 1977. 12 p.

The procedures, methods, and philosophy of preparing research and development cost predictions for avionics projects are discussed. The initial screening of proposals to identify those likely to be economically productive is described, together with cost monitoring and reporting after project initiation. The allocation of responsibility for the execution of design and development tasks within cost constraints is discussed. Cost constraints faced by avionics companies are outlined, and possible approaches to better project definition and more effective cost control are suggested.

C.K.D.

**A77-40011 #**      **A commentary on project planning and control for risk projects.** D. Loveridge (Pilkington Bros., Ltd., Lathom, Lancs., England). In: *Methods of cost prediction; Proceedings of the Symposium, London, England, March 9, 1977.* London, Royal Aeronautical Society, 1977. 13 p.

The selection of the form of organization and of planning and control procedures appropriate to risk projects is discussed. The construction of a geometric system model for the development of a new product is described, and the translation of geometric models into partial arithmetic models is outlined. The synthesis of a boiler plant is illustrated. Two mutually supportive feedback control systems are described.

C.K.D.

**A77-40081** Computer aided process planning. R. C. Read, Jr. (Bell Helicopter Textron, Fort Worth, Tex.). In: American Helicopter Society, Annual National Forum, 33rd, Washington, D.C., May 9-11, 1977, Proceedings. Washington, D.C., American Helicopter Society, Inc., 1977. 8 p. (AHS 77-33-54)

The Bell Computer Aided Process Planning System is an on-line system designed to maximize the planners productivity and reduce the clerical effort required to prepare and release planning. The system uses the latest in data base technology and is the nucleus of Bell's integrated manufacturing system. Planning is automatically printed by the computer from a response from the Work-In-Process (WIP) System. A 40,000 man-hour savings has resulted in the Traveler Reproduction Department since the CAP System was installed. Planning effort has been reduced by a minimum of 20%. The MENU approach (Modules of Canned Planning) allows the planner to create the entire operations section of the planning from a seven digit code. MENU's also promote standardization and traceability of existing planning. Other areas of manufacturing are also experiencing benefits from CAP such as automatic provisioning of material codes, mechanical generation of assembly requisition bill of materials, part and stock location callouts, raw material requisitions, and more accurate planning. (Author)

**A77-40721 #** Structural-logic diagram for ensuring high-rate products (Strukturno-logicheskaiia skhema obespecheniia pokazatelei kachestva izdelii). A. S. Shevelev. *Aviatsionnaia Tekhnika*, vol. 20, no. 1, 1977, p. 117-124. In Russian.

The paper deals with the application of automation and computers to the development of technological processes in the aircraft industry. Specifically, a structural-logic diagram, using which a functional connection can be established between design parameters and technological factors, is proposed as a means of obtaining reliable initial information for use in the development of automated and computer-aided technological processes. V.P.

**A77-40819 #** Questions relating to the planning of the scientific-technical activity of an academic oceanographic research institute (Voprosy sovershenstvovaniia planirovaniia nauchno-tekhnicheskoi deiatel'nosti akademicheskogo NII okeanograficheskogo profilia). V. E. Lapushkin. *Morskii Gidrofizicheskie Issledovaniia*, no. 4, 1976, p. 144-155. In Russian.

A system approach is taken to describing the structure of the research plans of an oceanographic institute and a need for a complex approach to planning the scientific-technical activity of the institute is emphasized. Attention is given to a costs-results model of an academic research institute and the structure of research control and planning is considered. B.J.

**A77-40928** Crash management at airports. J. C. Self (Aerospace Management Services International, Los Angeles, Calif.). *National Fire Protection Association, International Seminar on Aircraft Rescue and Fire Fighting, Geneva, Switzerland, Sept. 13-17, 1976, Paper*. 11 p.

Meshing of community-supported rescue agencies (mutual aid or civil defense organizations) and airport-based crash rescue teams is discussed. Generally an airport should concentrate on providing immediately needed services, such as prompt firefighting. In accidents involving serious fire, for example, only sixty to ninety seconds may be available for evacuating the cabin. Evacuation teams should arrive with the second wave of firefighting equipment and should be equipped to gain access to the cabin in the presence of fire damage and in any crash configuration; be able to work in a toxic atmosphere; and be trained in using backboard and other victim handling techniques. Back-up manpower should be capable of controlling crowds, manning first aid stations, and coordinating airport and community rescue services. Creating a victim profile and a spectrum of hypothetical accidents is discussed, and a typical response system for an airport with two ambulances, a paramedic

team, and one doctor is outlined. The time periods needed to evacuate, triage, transport, and begin treatment of victims are also defined. J.M.B.

**A77-41553 #** Alternatives to oil and gas through energy management. J. A. Belding (ERDA, Div. of Conservation Research and Technology, Washington, D.C.). In: New options in energy technology; Proceedings of the Conference, San Francisco, Calif., August 2-4, 1977. New York, American Institute of Aeronautics and Astronautics, Inc., 1977, p. 4-11. 12 refs. (AIAA 77-1006)

The vital importance of improved energy production and reutilization management in helping to meet energy needs is discussed in relation to short-term candidates for replacing petroleum and natural gas: solar power, nuclear power, and coal. Electric power utilities, transportation, large industry, commercial/residential uses are covered in relation to the problem addressed. Energy management, energy efficiency enhancement, conservation cost/benefits, cost-time analysis, investment in conservation, waste heat utilization, and applications of advanced fuel cells in major power systems are dealt with. R.D.V.

**A77-41644** Market incentives for recycling - The tax credit and product charge compared. K. C. Devine. *Environmental Affairs*, vol. 5, no. 4, 1976, p. 669-695. 197 refs.

Section 2006 of the Senate Finance Committee's draft of the Tax Reform Act of 1976, which provides tax credits to purchasers of recyclable solid wastes, is compared with Section 306 of the House Commerce Committee's 1975 draft of the Solid Waste Utilization Act. Shortcomings of the Senate measure include: failure to take into account the inherent inelasticities in supply and demand of waste materials, which renders the proposal an ineffective instrument for promoting recycling; failure to provide disincentives to discourage the use of virgin materials; and high costs passed on to the consumer. By imposing an excise tax on the use of virgin materials while also providing credits to stimulate reuse of wastes, the House measure will promote increased recycling. In addition, revenues from the excise tax will yield substantial support for local waste management agencies; since it is levied on a small sector of industry, the tax will be no more complex or difficult to collect than similar levies now in effect. J.M.B.

**A77-40926** Lessons from individual aircraft fire accidents: TWA L1011 aircraft fire - Logan International Airport, Boston, Massachusetts, U.S.A., 20 April 1974. G. H. Tryon (National Fire Protection Association, Boston, Mass.). *National Fire Protection Association, International Seminar on Aircraft Rescue and Fire Fighting, Geneva, Switzerland, Sept. 13-17, 1976, Paper*. 7 p.

**A77-41937 #** The value of commercial air transportation to the economy. G. W. James (Air Transport Association of America, Washington, D.C.). In: The place of aviation in society; Proceedings of the Fifteenth Anglo-American Aeronautical Conference, London, England, May 31-June 2, 1977. London, Royal Aeronautical Society, 1977. 11 p.

Quantifiable benefits of commercial air transportation to world and national economies are examined, taking into account a contribution of commercial aviation to the U.S. economy of over 3 percent of the gross national product, the purchases of goods and services by airlines, the employment provided by the airlines in various countries, the development of the tourism industry, and the significance of air transportation for trade. Quantifiable benefits provided by commercial air transportation for local economies are also considered. Many of the benefits of commercial air transportation to society cannot be quantified. Attention is given to benefits related to short transportation times, the value of the educational experience of travel, the importance of cultural and technical interchange, national security, unifying effects, and new cargo markets. G.R.

## A77-42047

**A77-42047** Partnership for a future - Airline view. P. M. Johnstone (Eastern Air Lines, Inc., New York, N.Y.). *Society of Automotive Engineers, Air Transportation Meeting, Washington, D.C., May 10-12, 1977, Paper 770577*. 7 p.

Comparisons of airline expenditures per available seat mile in 1970 and in 1976 indicate a large increase in costs outside the airlines' control (fuel, landing fees, and commissions), but also significant increases in the cost of maintenance, labor, and materials. To bring maintenance costs under control, the following recommendations are made: cooperation between airlines and aircraft manufacturers in developing tools and machines which require minimum manual intervention for repairs; engineering increased reliability of aircraft to reduce out-of-service time; and reexamination of development and acquisition of new aircraft. Research and development programs, the success of which is linked to deregulation of the airlines, include: development of alternate fuels for aircraft, together with equitable allotment of petroleum fuels; studies of noise abatement and emission control; and research into the cost-effectiveness of some safety requirements. J.M.B.

**A77-42049** Airport planning and economics - Some changing perspectives. J. R. Goodwin (FAA, Washington, D.C.). *Society of Automotive Engineers, Air Transportation Meeting, Washington, D.C., May 10-12, 1977, Paper 770581*. 6 p.

Airport planners need to consider the effects of economic fluctuations on the accuracy of long-range projections of air traffic, and should plan adequate lead times for improving capacity in handling aircraft, passengers, baggage, and surface transport. The FAA's Upgraded Third Generation Air Traffic Control System is discussed, and increased capacities attainable through its wake-vortex avoidance system, metering and spacing capability, and discrete address beacon system are mentioned. Other problems confronting airport planners are considered, including the integration of public transport into airport transport systems, effects of environmental accountability legislation on airport development, and methods for choosing or arranging compromises between central, linear, or transporter design of airports. J.M.B.

**A77-42376** National science and technology policy - Current policies and options for the future. B. Ancker-Johnson (U.S. Department of Commerce, Washington, D.C.). *Research Management*, vol. 20, Jan. 1977, p. 7-12. Abridged.

An examination of federal policies regarding technological and scientific research reveals the lack of broadly based, systematic, and continuous planning for a coordinated and effective national technology policy. Possible federal technology policy options are considered. These cover analysis and planning to develop appropriate technico-economic indicators characterizing the needs and opportunities in various industries and possibly furnishing inputs for the formulation of investment guidance policies; actions designed to assure basic resources, appropriate proprietary rights, and direct support for industrial research and development; tax measures affecting the industrial research and development phase of the innovation process; measures for the diffusion of technical information; and means of improving U.S. competitiveness in international trade and providing technological support to developing nations. C.K.D.

**A77-42377** National science and technology policy - Its impact on technological change. J. D. Lewis (National Bureau of Standards, Washington, D.C.). *Research Management*, vol. 20, Jan. 1977, p. 13-16.

The impact of national science and technology policy on technological change is examined. Differences between the criteria used to allocate resources in the public and private markets are discussed. Difficulties arising with the current policies regarding federal sponsorship of research and development are outlined. It is suggested that the major thrust of technology-sensitive policies be directed to the production and marketing stages of technological change, which bear larger costs and risks than the research and

development stage. Such policies are discussed in the context of the basic policy instruments available to the Federal Government: subsidies, regulation, and early procurement of innovative products. C.K.D.

**A77-42378** National science and technology policy - Perceptions of barriers to innovation. H. K. Nason (Monsanto Research Corp., Miamisburg, Ohio). *Research Management*, vol. 20, Jan. 1977, p. 17-20. 11 refs.

The findings and recommendations of recent studies and reports on causes and remedies for the apparent erosion of the technical base for innovation in the U.S. are outlined and compared. These include the report of the Commerce Technical Advisory Board, the 'Charpie Report' submitted by the Panel on Invention and Innovation, a study sponsored by the National Science Foundation, and the Northwestern University study conducted by Rubenstein et al. (1974). Key issues raised in these reports center around refining the perception of barriers and of stimulators for technological innovation. C.K.D.

**A77-42379** National science and technology policy - Needed: Institutional breakthroughs. L. Levy. *Research Management*, vol. 20, Jan. 1977, p. 21-24. Abridged.

Some institutional changes which could stimulate effective application of research and development resources to solve national problems are suggested. Special consideration is given to government aid to small research and development companies. It is suggested that existing procurement regulations be modified to allow more sole source contracts to be granted to research and development firms which submit worthy ideas and are qualified to develop them, and that procurement procedures be streamlined. Other proposals concern initiation of a loan guarantee program for investors similar to that administered by the Overseas Private Investment Corporation, and creation of an organization analogous to the National Research and Development Corporation of the U.K. to develop and finance worthy projects which are rejected by normal venture capital sources. C.K.D.

**A77-42380** Improving R&D productivity - A study program and its application. R. M. Ranftl (Hughes Aircraft Co., Culver City, Calif.). *Research Management*, vol. 20, Jan. 1977, p. 25-29.

Results of a two-year study of research and development productivity are presented. The study identified useful techniques for optimizing productivity in traditional research and development environments and in key interfacing activities, such as marketing, manufacturing, support, and services. Profiles of the productive employee, manager, and organization were developed, and factors counterproductive to productivity were described. A productivity improvement program based on the study is discussed. C.K.D.

**A77-42381** Improving R&D productivity - A program for support operations. A. D. Togna (Texaco, Inc., New York, N.Y.). (*Industrial Research Institute, Annual Meeting, Boca Raton, Fla., May 9-12, 1976.*) *Research Management*, vol. 20, Jan. 1977, p. 30-34.

A program applying productivity improvement principles to support activities for a research and development department is described. Two approaches are discussed: general employee participation, in which all personnel are urged to accept work improvement as a daily responsibility, and assignment of selected personnel to survey teams which review work improvement techniques, generate work improvement ideas and make recommendations to management. Emphasis in the programs placed on minimizing hidden lost time, streamlining work procedures, simplifying laboratory test procedures, and exploiting labor saving devices. C.K.D.

**A77-42382** Improving R&D productivity - Measuring innovation and productivity: A peer rating approach. M. J. Stahl (USAF, Institute of Technology, Wright-Patterson AFB, Ohio) and J. A. Steger (Rensselaer Polytechnic Institute, Troy, N.Y.). *Research Management*, vol. 20, Jan. 1977, p. 35-38. 21 refs.

The authors define 'innovation' as a particular subset of output: output which is original and useful. 'Productivity' is defined as a quantity of output. It is argued that quantitative indicators such as number of patents or publications measure productivity but not innovation, which by definition requires a qualitative method of evaluation. Professional colleagues have been shown to provide suitable evaluations of the innovativeness of a researcher's output.

C.K.D.

**A77-42383**      **Impact of regulations on R & D - The costs and effects of regulations.** P. F. Chenea (GM Research Laboratories, Warren, Mich.). (*Industrial Research Institute, Fall Meeting, Philadelphia, Pa., Oct. 17-20, 1976.*) *Research Management*, vol. 20, Mar. 1977, p. 22-26.

The costs to General Motors of compliance with and administration of government regulations regarding vehicle design and plant facilities are discussed. It is argued that some regulations are excessive and based on insufficient data. The opinion is advanced that present excessive regulation has negative effects on the national economy and hobbles research while yielding only insignificant improvements in the quality of life.

C.K.D.

**A77-42384**      **Measuring the performance of R & D departments.** D. W. Collier (Borg-Warner Corp., Chicago, Ill.). *Research Management*, vol. 20, Mar. 1977, p. 30-34.

A method for evaluating the performance of research and development departments is suggested. To develop a score reflecting the success of a department in meeting its objectives, a rating is assigned to each project based on a comparison of actual performance with objectives set for that project. Each project rating is multiplied by the money spent on it, the products for all projects are added, and the sum is divided by the total expense for the research group. A second step determines the value of business opportunity created by each project which has reached a transitional stage between research and development and other phases of production. Experience gained in application of this return-on research index over a three-year period is discussed.

C.K.D.

**A77-42385**      **Project selection methods that pick winners.** A. Paolini, Jr. and M. A. Glaser (Dexter Corp., Pittsburgh, Calif.). *Research Management*, vol. 20, May 1977, p. 26-29.

The three basic approaches used to select meaningful research projects, or to rank potential projects with respect to one another, are discussed. These include benefit/cost ratio methods, which are largely based on financial considerations and which make use of techniques used in capital budgeting, mathematical programming techniques, and the innovation potential method, in which a project is rated on the basis of eight essential factors (the technical-marketing, technical-customer, and technical-technical interfaces; scientific and technological competence; the effectiveness of the project's champion; marketing opportunity; technical opportunity, top management interest; competitive pressures; timing). The advantages and limitations of each method are considered.

C.K.D.

**A77-42386**      **Effective transfer of technology from research to development.** W. White. *Research Management*, vol. 20, May 1977, p. 30-34.

A general model for the transfer of a project from the research phase to the developmental phases is presented. Special attention is directed to the management of this transition period for technologies new to a corporation. The method gives high priority to the establishment of effective lines of communication between all groups involved in research and development, including marketing and top management. The allocation of responsibility in the transfer stage is discussed.

C.K.D.

**A77-42448**      **Passenger transportation in the suburban area of a large city (Passazhirskii transport v prigorodnoi zone krupnogo goroda).** Edited by I. A. Molodykh. Moscow, Izdatel'stvo Transport, 1976. 144 p. In Russian.

Current trends in the planning and design of transportation networks connecting suburban areas with large cities are discussed. Factors affecting the development of suburban transportation systems, including the mobility of the population, accessibility of trains or vehicles, and desired speeds and head-times are considered. Technical and economic analysis methods are presented for different forms of transportation. New mass transport technologies in research and development phases in the Soviet Union and abroad are described. Special consideration is given to the design of systems linking a large city with an airport located in its suburbs.

C.K.D.

**A77-42855**      **The United States energy dilemma - How can we solve it.** G. R. Hill (Electric Power Research Institute, Palo Alto, Calif.). (*Peninsula Professional Societies, Environmental Pollution Symposium on Practical Alternatives to Present Urban Life, 5th, Menlo Park, Calif., May 12, 13, 1976.*) *Water, Air, and Soil Pollution*, vol. 7, Feb. 1977, p. 141-146.

The basis for the present energy dilemma is described. The current solution to the inadequate petroleum and natural gas supplies and possible long-term solutions are developed. Current efforts within ERDA and by industry and the public to help solve the problem are considered. An important element in solving the problem is the establishment of platforms where effective dialogue can be developed between those concerned with the environment and those trying to produce energy. There the necessary tradeoffs can be discussed and an action plan developed. Finally, possible mechanisms for moving toward energy independence are suggested.

**A77-43144**      **A two-stage forecasting methodology for developing a national energy policy.** T. J. Murray (Missouri-St. Louis, University, St. Louis, Mo.) and Y. Omurtag (Missouri-Rolla, University, Rolla, Mo.). *Energy Communications*, vol. 3, no. 4, 1977, p. 407-427, 24 refs.

The problem of formulating a national energy policy is discussed. A review of the more common forecasting techniques, including regression techniques, time series analysis, spectral analysis, smoothing techniques, and S curve techniques leads to the conclusion that none completely meets the requirements for long-term energy planning. A two-stage forecasting approach is suggested. The first stage uses traditional forecasting models and techniques to generate quantitative and qualitative information which is integrated in the second stage using the Delphi technique.

**A77-43399**      **National Airlines Fuel Management and Allocation Model.** D. W. Darnell (National Airlines, Inc., Miami, Fla.) and C. Loflin. *Interfaces*, vol. 7, Feb. 1977, p. 1-16.

The Fuel Management and Allocation Model determines the optimal strategy for fueling aircraft and can be used to support both short and long-term planning. It has been used operationally by the Fuels Management and Flight Control Departments of National Airlines for over two years, resulting in multi-million dollar savings. The model specifies the best fueling station and vendor for each flight, based on prices, availability, fuel burn, flight data, and cost of tankerage. The model also uses extensive sensitivity analysis techniques to alert management as to when a new policy may be required.

**A77-43637 #**      **Analysis under constraints and decision-making aid for certain scheduling problems (Analyse sous contraintes et aide à la décision pour certains problèmes d'ordonnement).** J. Erschler. Toulouse III, Université, Docteur d'Etat Thesis, 1976. 192 p. 42 refs. In French.

This thesis describes a strictly deterministic approach to a general class of scheduling problems with constraints on available resources. The general problem considered is that of carrying out N projects, each consisting of some number of tasks, where each task cannot be interrupted and is characterized by its duration, the set of

resources it requires, the amount of each resource, and its starting date. Several types of constraints are taken into account: internal constraints of technological coherence, expressed by a set of inequalities on the starting dates of tasks of a given project; external constraints of resource availability; and external constraints regarding deadlines. Modeling is accomplished by means of a nonconjointive potential-task graph. A specific approach is proposed for a shop scheduling problem with interval disjunction constraints. P.T.H.

**A77-44315 # Support cost impacts of reliability predictions.** R. B. Waina and J. H. Brady (Hughes Aircraft Co., Canoga Park, Calif.). *American Institute of Aeronautics and Astronautics, Aircraft Systems and Technology Meeting, Seattle, Wash., Aug. 22-24, 1977, Paper 77-1206.* 6 p.

Unit and system reliability predictions based on piece-part reliability estimates are often used as the basis for forecasting logistics support requirements and life cycle costs. A study was made to determine how closely the actual distribution of field failure rates tracks the predicted distribution. The results of the investigation revealed gross disparities. Such disparities lead to a lack of confidence in support cost predictions, inappropriate maintenance concept choices, and acquisition of incorrect quantities of support resources. New predictive techniques, better utilization of early field usage data, and more flexible contractual support arrangements are required in order to attain the goal of reduced life cycle support costs. (Author)

**A77-44342 # Minimizing operating costs.** B. L. Terrell (Delta Air Lines, Inc., Atlanta, Ga.). *American Institute of Aeronautics and Astronautics, Aircraft Systems and Technology Meeting, Seattle, Wash., Aug. 22-24, 1977, Paper 77-1254.* 7 p.

Commercial air transport operators necessarily operate as profit-making ventures. Grossly simplified, profit is income minus expenditures. In general, successful operators maximize profits by maximizing income and minimizing expenditures. This paper outlines some activities aimed at minimizing the expenditures of a commercial air carrier. These activities include maintenance programs, management information systems, corrosion control, reduced engine thrust, reduced drag and attendant fuel consumption, hardware modifications, and operational techniques. (Author)

**A77-44934 # An approach to a rational distribution of capital investments between production and environmental cleanup sectors (Ob odnom podkhode ratsional'nogo raspredeleniia kapital'nykh vlozhenii mezhdu sektorami proizvodstva i ochistki).** R. S. Shelegiia and M. I. Alpaizde (Tbilisskii Gosudarstvennyi Universitet, Tiflis, Georgian SSR). *Akademiia Nauk Gruzinskoi SSR, Soobshcheniia*, vol. 86, Apr. 1977, p. 213-215. In Russian.

The article outlines one possible approach to achieving a rational distribution of capital investments between new production plant development and promoting cleanup of the environment exposed to industrial pollution. Products of exponential functions are formulated for the flow of harmful production wastes into the environment, with the flow of harmful effluents into the environment from the production sector and the fraction of harmful wastes managing to get through the cleanup sector without undergoing transformation as component terms. Product unit price, product net production cost, net profit, and excess remaining in the production sector are included in the formulation, and a criterion for calculating the rational fraction of capital investments is formulated. R.D.V.

**A77-45172 Design to life cycle costs and logistics alternatives; Conference, Arlington, Va., December 6, 7, 1976 and New Port Beach, Calif., February 8, 9, 1977, Abridged Proceedings.** Conference sponsored by the American Institute of Aeronautics and Astronautics. Los Angeles, American Institute of Aeronautics and Astronautics, Inc., 1977. 150 p. \$10.00.

Attention is given to a DOD overview of life cycle cost management, life cycling costing in the system acquisition process, life cycle costing for the F-18 aircraft, and the projection of life cycle costs for the NATO hydrofoil. Also considered are logistics management, aircraft logistics, effective contractual incentives for life cycle cost control, the impact of life cycle costs on electronically agile radar, an a low cost high volume production program involving Omega navigation. B.J.

**A77-45503 # The timing of technology - Commercial transport aircraft.** J. E. Steiner (Boeing Co., Seattle, Wash.). *American Institute of Aeronautics and Astronautics, Aircraft Systems and Technology Meeting, Seattle, Wash., Aug. 22-24, 1977, Paper 77-1200.* 17 p.

An investigation is conducted of the factors that control the acquisition and the technology of new aircraft, taking into account the current situation and the potential of about 100% improvement in passenger miles per gallon over the pre-1970 aircraft. It is pointed out that the combination of traffic growth and replacement of the older, less efficient, and noisier aircraft brings with it opportunity for technological infusion. Attention is given to the composition of the open market, the U.S. aircraft obsolescence situation, the U.S. cyclic buying situation, the noise regulation situation, the significance of new technology, long-term technological benefits, technology applicable to the next generation, and the magnitude of the next buying cycle. G.R.

**A77-45622 Government regulation effects on the direction of innovation - A focus on performance standards.** A. Gerstenfeld (Worcester Polytechnic Institute, Worcester, Mass.). *IEEE Transactions on Engineering Management*, vol. EM-24, Aug. 1977, p. 82-86. 19 refs. NSF-supported research.

The effect of government regulations concerning performance on the direction of innovation was evaluated by interviewing project managers of 107 projects in eleven different industry categories. In 36% of the cases, the role of government was cited as a major factor affecting the innovations, most of which were correlated with success. The federal government was most often cited as the source of regulation. The type of regulation which most often appeared was safety, followed by pollution. The federal regulations were seen as both a stimulant to the direction of innovation and an expense. P.T.H.

**A77-45623 International transfer of technology system.** B. Joshi (Institute of Economic and Social Research, Ahmedabad, India). *IEEE Transactions on Engineering Management*, vol. EM-24, Aug. 1977, p. 86-93. 24 refs.

The nature, cost, and impact of the complex phenomenon of international transfer of technology have been studied at some length, but factors concerning the transfer process have yet to be given adequate attention. This paper attempts to describe the transfer process at a microenterprise level with the aid of the systems approach. The causal interrelationship among the relevant elements and their components is argued. Next, the model is utilized to analyze an actual case of technology transfer. The particular systems output performance is evaluated, and behavioral abnormalities are explained along with peculiarities of internal structure. The case study also identifies the implications of various elements of the internal structure on the overall performance of the system. (Author)

**A77-45624 Leadership effectiveness in program management.** H. J. Thamhain (GTE Sylvania, Inc., Needham, Mass.) and D. L. Wilemon (Syracuse University, Syracuse, N.Y.). *IEEE Transactions on Engineering Management*, vol. EM-24, Aug. 1977, p. 102-108. 21 refs.

The paper reports the results of an exploratory field study designed to investigate the effectiveness of leadership styles in

various project-oriented work environments. The study concludes that the effectiveness of project managers depends primarily on their leadership style and work environment. A leader-oriented management approach appears most effective in a poor work environment, while in a good organizational climate a team-oriented style seems to be most effective. The findings presented should help the professional project manager to understand the complex interrelationships among position power, leadership style, and organizational variables. Through this understanding he may be able to identify the leadership style which optimizes project performance in his specific work.

**A77-45955** **Project management: How to make it work.** C. C. Martin (United States Management, Inc., New York, N.Y.). New York, AMACOM, 1976. 318 p. \$14.95.

The characteristics of project management as a highly effective management tool are examined. A project has a single set of objectives; achieving them represents completion of the project. A project manager with the necessary authority and control over the resources needed to do the job must be appointed. Attention is given to special features of project management, the establishment of a project, the project management process, people and the project environment, the project-oriented organization, integrated quantitative planning, project direction and control of changes, project-oriented controls, personnel management of the project team, the executive decision to organize a project, the launching of the project, executive decision making at key milestones, tradeoff decisions during project execution, and general management surveillance and support.

**A77-46644** **Railroad transportation planning models and their success.** P. N. Belshaw (Canadian National Railways, Montreal, Canada). In: Control in transportation system; Proceedings of the Third International Symposium, Columbus, Ohio, August 9-13, 1976. Helsinki, International Federation of Automatic Control; Pittsburgh, Pa., Instrument Society of America, 1976, p. 89-96. 6 refs.

The paper describes some computer models and systems developed during the last two years which have assisted planning in Canadian National Railways. The main features of these models are summarized together with comments on their implementation. The first model is an information system for planning. This system includes models which translate market forecasts into workloads. Although the forecast is common to all planners, individual planners can draw off unique subfiles for their particular problems. The second model is an analytical or algebraic model which estimates average over-the-road time for different types of trains moving over a common track. The third model simulates trains moving across the main line and through small yards. It helps in optimally scheduling trains.

(Author)

**A77-46650** **Vehicle management policies for automated transportation systems.** S. J. Kiselewich, Y. M. Tong, and A. S. Morse (Yale University, New Haven, Conn.). In: Control in transportation systems; Proceedings of the Third International Symposium, Columbus, Ohio, August 9-13, 1976. Helsinki, International Federation of Automatic Control; Pittsburgh, Pa., Instrument Society of America, 1976, p. 223-227. 12 refs. NSF Grant No. KO-39072.

A new approach to the problem of managing vehicles within a personalized automated transportation system is outlined. Two alternative vehicle management strategies are suggested; each is potentially applicable to either scheduled or demand responsive systems possessing large numbers of vehicles, topologically complicated guideway networks and capacitated stations. The proposed strategies take station capacity constraints into account by guaranteeing that under normal operating conditions (i.e., no emergencies) no vehicle is ever prevented from entering its destination station because of the unavailability of a berth.

(Author)

**A77-46655** **Selected experiments on fleet utilization for a planned personal rapid transit system.** R. E. Ward (West Virginia University, Morgantown, W. Va.). In: Control in transportation systems; Proceedings of the Third International Symposium, Columbus, Ohio, August 9-13, 1976. Helsinki, International Federation of Automatic Control; Pittsburgh, Pa., Instrument Society of America, 1976, p. 295-306.

The principal objective of this paper is to report on the application of a discrete event digital simulation model to selected experimentation with one aspect of fleet utilization in a PRT, namely, empty vehicle management. In this context a given empty vehicle management strategy was conceived as a combination of three different factors and the way in which each was to be implemented for a given test. Each factor was actually implemented in either one of two ways, and from an experimental viewpoint these alternatives were viewed as levels of the respective factor, or substrategies. Therefore, the results are expressed as the outcome of a 2 to the third power factorial fixed-effects experiment.

**A77-46700** **Cost-sharing approach for air quality control implementation - A case study.** Y. Y. Haimes (Case-Western-Reserve University, Cleveland, Ohio), W. S. Nainis (Arthur D. Little, Inc., Cambridge, Mass.), and S. Goldstone (Energy Commission, Energy Assessment Div., Sacramento, Calif.). *Journal of Environmental Economics and Management*, vol. 4, Sept. 1977, p. 219-238. 20 refs.

A program of cost-sharing among industries within an airshed is proposed to aid in the implementation of the U.S. Clean Air Act as amended in 1970. In particular, the cost-sharing approach addresses the problem of meeting federal standards for sulfur dioxides and particulate levels in the ambient air. The proposal is applied to an industrialized county in Ohio; even without the availability of devices such as wet scrubbers or limestone injectors to desulfurize emissions, it was found that a cost-sharing scheme could provide, at significantly lower capital costs, county-wide sulfur dioxide and particulate removal efficiencies comparable to those obtained through individual plant control plans. The possible role of local and state agencies in promoting cost-sharing air pollution control plans is also discussed.

J.M.B.

**A77-46739** **Design to cost; Proceedings of the Conference, San Francisco, Calif., October 13-15, 1976.** Conference sponsored by the American Institute of Industrial Engineers. Edited by D. T. Newman (Management Education Corp., Santa Monica, Calif.). Santa Monica, Calif., Management Education Corp., 1976. 560 p. \$50.

Attention is given to the implementation of design to cost (the Tomahawk Cruise Missile Project, the Lightweight Doppler Navigation System, the Defense Satellite Communications System, etc.) and to design-to-cost requirements and objectives. Life cycle costing with reference to weapon system acquisition is considered along with contractual source selection in DOD systems and parametric cost models.

B.J.

**A77-46740** **Design-to-cost - A major parameter in the acquisition process.** R. G. Freeman, III (U.S. Naval Weapons Center, China Lake, Calif.). In: Design to cost; Proceedings of the Conference, San Francisco, Calif., October 13-15, 1976.

Santa Monica, Calif., Management Education Corp., 1976, p. 107, 108A-108G.

A methodology for conducting a rational hardware definition process which would better accommodate the introduction of design-to-cost criteria early in the weapon system acquisition process is described. It is proposed that design-to-cost is an essential objective in the development of a new system, if adherence to design-to-cost criteria assists in achieving acceptable life cycle costs.

B.J.

**A77-46742** **Avoiding design to cost roadblocks.** G. W. Talbot (Motorola, Inc., Scottsdale, Ariz.). In: Design to cost; Proceedings of the Conference, San Francisco, Calif., October 13-15, 1976. Santa Monica, Calif., Management Education Corp., 1976, p. 191, 193-207.

Attention is given to the following design-to-cost roadblocks: design-to-cost requirements placed in the contract, tradeoffs over the various requirements (weight, shock, vibrations, schedule, sensitivity, etc.), tradeoff with all the functional and environmental requirements, and price accuracy. The starting point to overcoming these roadblocks is getting the design-to-cost requirements in the design specification, so that design-to-cost responsibility is assigned where it belongs - in both the buying and selling organization in the engineering departments. B.J.

**A77-46743**      **Obstacles to effective cost reduction on DOD programs.** R. Kendall (Motorola, Inc., Arlington, Va.). In: Design to cost; Proceedings of the Conference, San Francisco, Calif., October 13-15, 1976. Santa Monica, Calif., Management Education Corp., 1976, p. 209, 211-216.

A draft of recommendations for improvements in DOD programs is presented, relating to 'color of money' restrictions and the attainment of significant cost reductions. Progress made in reducing costs since the implementation of design-to-cost programs is reviewed. B.J.

**A77-46744**      **Management aid - Systematic Adjustment of Funds and Schedules (SAFS).** J. Ludick (Teledyne Brown Engineering, Huntsville, Ala.). In: Design to cost; Proceedings of the Conference, San Francisco, Calif., October 13-15, 1976. Santa Monica, Calif., Management Education Corp., 1976, p. 583, 585-592.

SAFS is a computer program designed for systematically adjusting schedules and funds by emulating the optimum predetermined pattern. The rationale which underlies SAFS is that a best-fit curve can be found that will adequately represent the profile of the direct task-related costs over time. New schedule or cost changes cause a reapportionment of the area under the curve which projects new time and cost data. B.J.

**A77-46745**      **PRICE - A cost-predicting model.** F. R. Freiman (RCA, Government and Commercial Systems, Moorestown, N.J.). In: Design to cost; Proceedings of the Conference, San Francisco, Calif., October 13-15, 1976. Santa Monica, Calif., Management Education Corp., 1976, p. 593, 595-602.

PRICE (Programmed Review of Information for Costing and Evaluation), a parametric cost modeling technique, is a computerized methodology which provides reliable estimates of system acquisition costs (development and production) during the conceptual phase of a program. It can accommodate variations in designs, performance schedules, reliability, economic escalations and other variables, and provides cost estimates based on the physical description of the device or system to be built and the schedule for design and build. B.J.

**A77-46746**      **DOD progress in design to cost.** J. J. Bennett (U.S. Department of Defense, Office of the Assistant Secretary of Defense, Washington, D.C.). In: Design to cost; Proceedings of the Conference, San Francisco, Calif., October 13-15, 1976. Santa Monica, Calif., Management Education Corp., 1976, p. 607, 609-618.

The management environment in which DOD currently operates is discussed together with the role of design to cost in this environment. The viability of design to cost as a management approach and probable future trends and new initiatives in the field are also considered. B.J.

**A77-46785**      **International Federation of Operational Research Societies, Airline Group, Symposium, 16th, Key Biscayne, Fla., September 26-October 1, 1976, Proceedings.** Miami, Fla., International Federation of Operational Research Societies, Airline Group, 1976. 558 p. \$40.

The application of operations research to such problems of airline management as control of airport congestion, fleet planning, schedule elaboration and seat allocation, aircraft maintenance programs, fuel optimization, flight crew, cabin crew and reservations personnel management and procurement cost allocation, is discussed. Topics of the papers include the reduction of airport congestion by use of optimal runway configurations, an algorithm for planning short-haul aircraft fleets, the application to scheduling of a stochastic model of transportation demand, the management of spare-part inventories, a simulation of an aircraft maintenance program, short- and long-term fuel allocation planning, staffing of reservation and maintenance facilities, recruiting and training of pilots and development of cabin attendant work schedules. J.M.B.

**A77-46902 #**      **Creating corporate incentives to promote creativity.** E. J. Nunlist (Pfaudler Co., Rochester, N.Y.). *American Society of Mechanical Engineers, Design Engineering Conference and Show, Chicago, Ill., May 9-12, 1977, Paper 77-DE-5.* 10 p. 13 refs. Members, \$1.50; nonmembers, \$3.00.

There is ample evidence that the United States is gradually losing its technological dominance in many fields. Since the government and large corporations do the lion's share of R&D, their operations are scrutinized. Indications are that large corporations could be more productive with inventions and innovations, and the government is dampening the enthusiasm of the small operators. To achieve better progress, the employed inventor needs more motivation in big corporations, but best results could be achieved if business and the government would advocate and support a 'seeding' program that enables the proliferation of small, technology-improving enterprises. Their eventual acquisition by larger business establishments would make such operations 'sacrificial,' but the system would perpetuate their existence. (Author)

**A77-46903 #**      **Conflict management for engineers.** R. F. Solberg, Jr. (Southwest Research Institute, San Antonio, Tex.). *American Society of Mechanical Engineers, Design Engineering Conference and Show, Chicago, Ill., May 9-12, 1977, Paper 77-DE-6.* 8 p. 14 refs. Members, \$1.50; nonmembers, \$3.00.

Attitudes about conflict have changed recently, and conflict between individuals, groups, and organizations is now considered inevitable. However, conflict can also be constructive, productive, and functional, or it can be destructive, harmful, and dysfunctional. Guides on recognizing the difference between these types of conflict and some causes of conflict are presented. Methods of managing conflict are presented with the problem-solving technique being offered as the most effective and desirable under most conditions. Skills can be developed - even for those in nonformal management positions, like many engineers - to effectively utilize the potential benefits of conflict. (Author)

**A77-46904 #**      **Design-to-cost in action.** R. L. Bidwell (U.S. Department of Defense, Product Engineering Services Office, Alexandria, Va.). *American Society of Mechanical Engineers, Design Engineering Conference and Show, Chicago, Ill., May 9-12, 1977, Paper 77-DE-9.* 8 p. Members, \$1.50; nonmembers, \$3.00.

The design-to-cost management philosophy instituted by the U.S. Department of Defense to analyze and control cost overruns incurred by contractors is discussed. Case histories involving successes and failures in obtaining adequate product cost estimates from defense contractors and subcontractors during the design phase are given, and a detailed set of criteria for evaluating the acceptability of a contractor's design-to-cost program is provided. Emphasis is placed on identifying and controlling the most costly elements in a design, incorporating production and support costs into design-phase estimates and expressing costs in terms of man-hours of production and material costs. J.M.B.

**A77-46908 #**      **Establishing concrete R&D payback criteria to increase cost effectiveness of R&D operations.** S. A. Spachner (Gulf and Western Advanced Development and Engineering Center, Swarthmore, Pa.). *American Society of Mechanical Engineers, Design*

*Engineering Conference and Show, Chicago, Ill., May 9-12, 1977, Paper 77-DE-25. 4 p. Members, \$1.50; nonmembers, \$3.00.*

In this paper, consideration will be given to the establishment of R&D goals and to examples of R&D payback criteria. Since industrial R&D organizations generally are concerned with new product development and improved process and equipment development for production of existing products, payback criteria will be considered for activity in these areas. (Author)

**A77-47212**      **The MITRE Solid Waste Management Planning Model - A status report.** E. B. Berman and W. M. Stein (Mitre Corp., Bedford, Mass.). In: Energy from solid waste utilization; Proceedings of the Sixth Annual Northeastern Regional Antipollution Conference on a New Source of Materials, Energy and Jobs - Solid Wastes Processing, Kingston, R.I., July 8, 9, 1975. Westport, Conn., Technomic Publishing Co., Inc., 1976, p. 95-135. 5 refs. Research supported by the U.S. Environmental Protection Agency.

The paper describes an optimizing model and the setting which it serves for regional solid waste management planning, consisting basically of a spatial analysis, using fixed-charge linear programming to identify minimum cost alternatives in regional planning of solid waste management systems with resource recovery. The model and its use are described in terms of structure, cost, and procedure. Applications in Massachusetts, St. Louis, and Massachusetts/New Hampshire regions are discussed in full; several maps, graphs, and tables are provided. S.C.S.

**A77-47457**      **Concepts in orthophoto machines and their economics.** J. Höhle and P. B. Stewardson (Wild Heerbrugg, Ltd., Heerbrugg, Switzerland). In: American Society of Photogrammetry and American Congress on Surveying and Mapping, Fall Convention, Seattle, Wash., September 28-October 1, 1976, Proceedings. Falls Church, Va., American Society of Photogrammetry, 1976, p. 538-552. 14 refs.

The costs and performance of on-line and off-line orthophoto machines are compared. For the typical task involving exposure in the final map scale, a cost/value analysis suggests that the OR 1 off-line printer is more economical than the A 8/PPO 8 machine if it is assumed that two scanning units are required. Although the latter machine can produce orthophotos within one or one-and-a-half hours in a production environment, the image quality of the OR 1 off-line printer is better because image defects resulting from slope in the terrain or scanning errors by the operator can be avoided. Additional production methods increasing the usefulness of the digitally controlled OR 1 are described. M.L.

**A77-47647**      **International airlines and public interests: An overview - 1977.** R. M. Jackson (Seaboard World Airlines, Inc., Jamaica, N.Y.). *Chartered Institute of Transport Journal*, vol. 39, Mar. 1977, p. 251-255.

A review of the problems facing the international air transport industry, with special mention of problems regarding all-cargo airlines is presented. National issues are discussed, such as governmental interference and regulations imposed on taxation, zoning, pollution and safety. The conflict of objectives between nations, and their impact on the airline industry is discussed, including the U.S.-U.K. bilateral agreement on dollar-pound conversion rates. The need for all-cargo airlines is analyzed, and various industry malpractices are identified. S.C.S.

**A77-48450**      **Parts coding cuts costs.** V. F. Bobrowicz (Manufacturing Data Systems, Inc., Ann Arbor, Mich.). *Machine Design*, vol. 49, Sept. 22, 1977, p. 82-86.

Parts classification and coding, using a computer in possible conjunction with a microfilm system, is suggested as a means to organize graphics, drawings, and other engineering documents. A combination of a hierarchic and a polycode system is usually the

most applicable for engineering purposes as the hierarchic concept separates parts into major shape characteristics, and the polycode system classifies secondary characteristics. The implementation of such a system is discussed in terms of sorting documents into standard categories, designing the classification and coding system, and training analysts. Applications of part classification and coding systems are presented, such as (1) cost comparison by means of reviewing the history of existing parts being manufactured, (2) design data retrieval for large collections of drawings, (3) product standardization based on analyses of design characteristics, and (4) value analysis, contrasting cost information to parts classification. S.C.S.

**A77-48573**      **Organizational climate changes in the project life cycle.** S. E. Barndt (USAF, Institute of Technology, Wright-Patterson AFB, Ohio), J. C. Larsen (USAF, Tactical Air Command, Eglin AFB, Fla.), and P. J. Ruppert (USAF, Systems Command, Washington, D.C.). *Research Management*, vol. 20, Sept. 1977, p. 33-36. 15 refs.

The working environment as perceived by personnel involved in U.S. Air Force hardware acquisition programs is analyzed. Principal phases of the typical acquisition program, including concept identification, full-scale development and production/deployment, are defined; management systems, such as those characterized by exploitative-authoritative, benevolent-authoritative, consultative and participative organizations are also described. A survey of personnel involved in various phases of development programs was conducted. Results indicated that the concept-identification stage was perceived in the most positive light, followed by the production/deployment phase, and lastly the full-scale development stage. J.M.B.

**A77-48574**      **Uses and benefits of technical information systems.** F. W. Wolek (U.S. Department of Commerce, Office of the Assistant Secretary for Science and Technology, Washington, D.C.). *Research Management*, vol. 20, Sept. 1977, p. 37-41. 11 refs. NSF Grant No. DS-176-21055.

The use of scientific and technical information systems in industrial research and development programs is discussed. Surveys of commercially available technical information systems, the usefulness of data indexing and the efficiency of data searches, due to such innovations as microfilm, are considered. The integration of information libraries into the daily research and development processes is described; the importance of literature searches in generating development proposals is assessed. Data storage and retrieval systems are also suggested as a means for determining the availability of patents and licences and for maintaining compliance with governmental regulations. In addition, the costs of operating scientific and technical information systems are mentioned. J.M.B.

**A77-48679**      **The use of decision table logic in a manufacturing system.** D. A. Milner (Aston, University, Birmingham, England). *International Journal of Production Research*, vol. 15, Jan. 1977, p. 17-26. 5 refs.

Decision tables provide a graphical representation of complex procedures in a way that is easy to visualize and understand. The work required to define the system, develop and programme the solution and to provide the often neglected documentation can be incorporated in a tabular form so that all elements of decision taking are precisely defined. The tables present the relationships among the interfacing variables clearly and show the necessary sequences of conditions and actions in a simple manner. The writing and development of decision tables for implementation in a manufacturing system is indicated here giving details of appropriate checking procedures and constraint boundaries. (Author)

**A77-48680**      **Forecasting of critical materials flow - Managerial decisions utilizing sequential methodology.** M. S. Parks, J. M. Mogg, and W. B. Lee (Houston, University, Houston, Tex.). *International Journal of Production Research*, vol. 15, Jan. 1977, p. 27-36. 7 refs.

This paper addresses a significant problem in the management of production logistics systems: the influence of quality control activities on production scheduling. A sequential three-way classification decision model is presented for rapidly identifying trends in vendor lot quality. The effectiveness of this decision model is illustrated using a simulation model of a material and information flow system. The results show significant cost savings using this approach rather than the more traditional and passive methods of control over vendor quality. (Author)

**A77-49066** The financial incentives for the fabrication of improved absorption coatings for the flat plate collector. F. de Winter (Atlas Corp., Santa Clara, Calif.) and L. D. Fitzgerald (International Copper Research Association, Inc., New York, N.Y.). In: Sharing the sun: Solar technology in the seventies; Proceedings of the Joint Conference, Winnipeg, Canada, August 15-20, 1976. Volume 6. Cape Canaveral, Fla., International Solar Energy Society, 1976, p. 216-239. 27 refs.

**A77-49121** Daedalophobia - Diagnosis and prognosis. H. D. Foster and W. R. D. Sewell (Victoria University, Victoria, British Columbia, Canada). In: Sharing the sun: Solar technology in the seventies; Proceedings of the Joint Conference, Winnipeg, Canada, August 15-20, 1976. Volume 9. Cape Canaveral, Fla., International Solar Energy Society, 1976, p. 83-90. 11 refs.

Difficulties associated with the adoption of solar space heating systems in Canada are considered. The funding levels for government-sponsored research and development of solar heating systems in Canada are found to be inadequate; a lack of capital investment in the building materials industries is also noted. Nonuniform building codes in Canadian localities are cited as having a detrimental effect on the introduction of solar space heating systems. Dissemination of information on the cost and effectiveness of solar heating systems is discussed. J.M.B.

**A77-49648** US Army TMDE Program and investigation of a family of Automatic Test Support Systems (ATSS). C. G. Adenauer (U.S. Army, Logistics Center, Fort Lee, Va.) and P. T. Smith (U.S. Army, Maintenance Management Center, Lexington, Ky.). In: AUTOTESTCON '76; Proceedings of the Symposium, Arlington, Tex., November 10-12, 1976. New York, Institute of Electrical and Electronics Engineers, Inc., 1976, p. 166-171.

**A77-49799 \*** Overcoming people problems in the switch to automated composition. D. K. Korbuly (California Institute of Technology, Jet Propulsion Laboratory, Technical Information and Documentation Div., Pasadena, Calif.). (Institute of Electrical and Electronics Engineers, Conference on Scientific Journals, 3rd, Reston, Va., May 2-4, 1977.) IEEE Transactions on Professional Communication, vol. PC-20, Sept. 1977, p. 58-61. Contract No. NAS7-100.

**A77-49800** Information dissemination - A systems viewpoint. N. A. Bhagat (National Enquiry into Scholarly Communication, Princeton, N.J.). (Institute of Electrical and Electronics Engineers, Conference on Scientific Journals, 3rd, Reston, Va., May 2-4, 1977.) IEEE Transactions on Professional Communication, vol. PC-20, Sept. 1977, p. 76-79.

The impact of current market conditions, costs of publishing processes/materials/services, and restriction of library budgets on publishers, libraries, and user-scholars is assessed, within a 'systemic framework,' and trends in the immediate future are projected. Approaches to minimizing the total of all costs incurred at each link of the author-publisher-library-user chain are considered. With intensified publish-or-perish pressures extending to smaller colleges

and institutions, an increase in supply of manuscripts accompanied by shrinking sales markets is envisaged. New functions for libraries with respect to users, and possibilities in interlibrary loans, are discussed. R.D.V.

**A77-49801** Data base publishing at NTIS. J. G. Coyne (U.S. Department of Commerce, National Technical Information Service, Springfield, Va.). (Institute of Electrical and Electronics Engineers, Conference on Scientific Journals, 3rd, Reston, Va., May 2-4, 1977.) IEEE Transactions on Professional Communication, vol. PC-20, Sept. 1977, p. 94, 95.

The National Technical Information Service is the central source for the public sale of Government-sponsored research, development, and engineering reports and other analyses prepared by Federal agencies, their contractors, and grantees. Current summaries of these reports are published by NTIS in over 30 newsletters, catalogs, and journals. The system used to organize these summaries permits NTIS to create a number of useful information products from a single machine-readable data file. The presentation covers the range of products made available and some of the techniques that are used and that may be applicable to other publishers. (Author)

**A77-49802** Marketing mix for publishing profit. J. A. Mammolo (American Institute of Aeronautics and Astronautics, Inc., New York, N.Y.). (Institute of Electrical and Electronics Engineers, Conference on Scientific Journals, 3rd, Reston, Va., May 2-4, 1977.) IEEE Transactions on Professional Communication, vol. PC-20, Sept. 1977, p. 117-120.

With the spiraling costs of printing and book manufacturing, and high overhead factors, many societies have discovered net losing operations in publications even with the assistance of page charges and other support. Discussed in this paper is the marketing mix - what activities societies should implement to make publications a profitable operation and become a major contribution to society income. (Author)

**A77-50298** Transportation economics and public policy: With urban extensions. A. Abouchar (Toronto, University, Toronto, Canada). New York, Wiley-Interscience, 1977. 337 p. 112 refs. \$17.95.

The book seeks to integrate the three main aspects of public sector transportation analysis and decision making - pricing theory and policy, cost theory and measurement, and investment choice - and to develop policy guidelines on the basis of welfare maximizing principles and real world complexities and constraints. Topics include theories of public expenditure, justification for less-than-full-cost pricing, and the theory of marginal cost and optimal price and financing policy. Other topics include road transport costs, railroad costs, shadow prices, and using cost analysis to evaluate pricing policies and traffic allocation. Additional topics include investment criteria for the private sector, the form of the public sector criterion, the measurements of benefits, and project decisions with physical criteria. Several problems in urban economic analysis, including the theory of congestion and congestion optimization, and decision rules for urban projects and the interpretation of property value change, are discussed. M.L.

**A77-50451** Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977. Proceedings. Symposium sponsored by IEEE, AIAA, ASME, ASQC, IES, SOLE, and SSS. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977. 531 p. \$24.

The papers collected in this volume deal with new reliability models and techniques as applied to parts reliability, human reliability, consumer products, system safety, nuclear power, and aerospace systems. Also included are papers on statistical test design and evaluation, reliability improvement warranties, and design to cost. P.T.H.

**A77-50455** A model for an estimation of the product warranty return rate. K. W. Yun and F. E. Kalivoda (Copeland Corp., Sidney, Ohio). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings.

Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 31-37.

Effective cost control requires an accurate understanding of product failure costs. Expensively gathered failure data often, however, cannot be utilized effectively because of possible inaccuracies. This paper develops a simple model for estimating realistic warranty return levels corrected for human errors in the determination of product failures and the various constraints imposed by operational procedures in warranty administration. An application of the model is illustrated. An experimental determination of probabilistic information in analyzing warranty return product is also suggested, as well as a method of setting upper and lower limits of the probability values from warranty return data. (Author)

**A77-50456** Reliability, availability, maintainability/logistics /RAM/LOG/. L. L. Bishop, T. A. Cronogue, R. Hoffman, D. Reside, G. Donald, and R. Flynn (U.S. Army, Aviation Systems Command, St. Louis, Mo.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings.

Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 49-68.

The paper covers various aspects of the reliability, availability, maintainability/logistics (RAM/LOG) methodology of the U.S. Army Aviation for development aircraft. RAM/LOG data acquisition, processing and computation, and assessment are described. P.T.H.

**A77-50457** Consumer demand results in development of a reliability standard. A. H. Murphy (Lockheed Missiles and Space Co., Inc., Sunnyvale, Calif.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings.

Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 74-77.

In order to enable a producer to assure himself and the consumer that all possible actions have been taken to meet new government regulations on product quality and advertising claims, a standardized reliability program is outlined. The reliability standard proposed is a minimum specification. Prediction and demonstration are coupled. P.T.H.

**A77-50459** Using pattern recognition in product assurance. R. A. Hughes (Lockheed Missiles and Space Co., Inc., Sunnyvale, Calif.), M. A. Fischler, and H. E. Rauch (Lockheed Research Laboratories, Palo Alto, Calif.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings.

Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 101-107, 8 refs.

This paper shows how pattern recognition techniques can lead to the solution of problems in product assurance which did not appear to be open to solution using only conventional statistical or mathematical approaches. The techniques described here include conventional statistical analysis as well as discrimination or classification (Fisher linear discriminant), hypothesis generation (minimum spanning tree clustering and centroid clustering), data display (two-dimensional projection), and data base handling and interactive graphics. This paper presents an overview of methods and experience gained in using the above combination of techniques for exploratory data analysis, decision making, and monitoring of manufacturing processes in problems involving product assurance and quality control. (Author)

**A77-50461** Failure modes and effects analysis by matrix method. G. L. Barbour (Aeronutronic Ford Corp., Palo Alto, Calif.). In: Annual Reliability and Maintainability Symposium, Philadelphia,

Pa., January 18-20, 1977, Proceedings.

Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 114-119.

A matrix method for analyzing failure modes and effects has been developed that supplements the standard narrative-tabular and fault tree methods. The new method uses condensed graphic displays of vertical and horizontal lines so that failure effects on the highest system level can be traced down through subsystem and lower equipment levels to the contributing piece part failure modes. In addition to this traceability feature, this approach provides more effective accountability of such items as piece parts, interface connector pins, circuit solder joints, and wiring. This capability becomes invaluable in identifying single point failure modes, that is, single failures that can cause catastrophic loss or major degradation of system performance. The matrix method of analysis can also be used for safety hazard analyses, for determining test and telemetry failure detectability, and for preparing maintenance malfunction location charts. (Author)

**A77-50462** The life cycle cost impacts of unsafe designs. R. L. Weber (USAF, Inspection and Safety Center, Norton AFB, Calif.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings.

Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 120-123.

The paper outlines how accident costs can be incorporated into life cycle cost estimates. The problem of analyzing costs due to accidents and combining them with operating and servicing costs is discussed. P.T.H.

**A77-50464 \*** Space transportation system payload safety policy. J. A. Scheller (NASA, Washington, D.C.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings.

Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 130-133.

A brief description of the Space Transportation System (STS) is given, and the evolution of a payload safety policy for it is described. The policy adopted in June, 1976, minimizes STS involvement in the payload design process while maintaining the assurance of a safe operation. The payload developer is responsible for assurance of safety and verification of compliance with the requirements. The STS will exercise reviews to ensure that interaction between payloads does not create hazards. P.T.H.

**A77-50469** Optimization of structural design/analysis/testing. R. E. Maxwell and C. W. Johnson (Hercules, Inc., Magna, Utah). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings.

Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 175-180, 9 refs.

A technique has been developed to design, analyze, test, and set up a production quality assurance program for a given set of primary failure modes which gives the required performance and structural reliability at a near minimum overall cost. New and established methods are blended in a unique way to give a powerful and practical system to meet contractual requirements and minimize cost. The system is illustrated by application to an aluminum structure. (Author)

**A77-50470** Reliability growth curves for one shot devices. A. J. Bonis (Rochester Institute of Technology, Rochester, N.Y.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings.

Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 181-185, 6 refs.

A simple and practical procedure for plotting reliability growth curves for one shot devices is described. These are tested in stages of development. The results of each stage of testing are used to improve

the item prior to testing in the next stage. A steady improvement effort is assumed. The model presented (The Modified Exponential Growth Curve) can be used before testing to plan the test program. After testing, the model will permit measuring and predicting reliability. The model should lead to a valuable planning system for new programs. (Author)

**A77-50472** Statistical design of R/M experiments. C. H. McCall, Jr. (CACI, Inc., Los Angeles, Calif.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 194-197. 5 refs.

In this paper, the basic concepts of experimental design, from a statistical viewpoint, will be summarized. Primary emphasis is on terminology and philosophy. Following this introduction, the concepts will be related directly to potential requirements in R/M testing. No examples are worked out in detail, but rather are utilized to reinforce the introductory experimental design concepts. (Author)

**A77-50473** Planning statistical experimental designs in R & M applications. G. R. Herd (Bird Engineering Research Associates, Inc., Vienna, Va.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 198-202.

The paper discusses the planning of tests using statistical design of experiments in reliability and maintainability applications, emphasizing the practical issues involved in the engineering situation regardless of the type of experimental design employed, the type of hardware system, or the operational environment within which the experiment is to be conducted. Three distinct aspects of experimental design planning are addressed: (1) the physical system and its inherent technical characteristics, (2) the statistical requirements involving randomization, isolation of sources of variation and data analysis, and (3) the organization and management aspects of the test program. B.J.

**A77-50476** Mutual development, application and control of suppliers warranties. W. W. Flottman (American Airlines, Inc., New York, N.Y.) and M. R. Worstell (Litton Industries, Aero Products Div., Woodland Hills, Calif.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 213-221.

A warranty is defined from the points of view of the airline and the supplier and reasons for its necessity are discussed. Also considered are the elements of a warranty, factors to be considered when specifying elements of a warranty, and improvements that can be made in reference to warranties. A copy of a typical warranty claim is presented and some practical applications are illustrated. B.J.

**A77-50477** Reliability improvement warranty techniques and applications. C. A. Hardy and R. J. Allen (General Dynamics Corp., Fort Worth, Tex.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 222-228.

Incentives provided by the Air Force to contractors of new systems to design and produce electronic equipment with low failure rates and low repair costs in operational use are included in the procurement contracts as Reliability Improvement Warranty (RIW) provisions. These provisions obligate the contractor to accomplish repair and replacement of failed equipment at a fixed price during operational use of the equipment by the Air Force, and to guarantee the MTBF of the equipment during the warranty period. This paper defines the RIW concept and discusses it in reference to F-16 development. B.J.

**A77-50478** Quantitative models used in the RIW decision process. R. K. Gates, R. S. Bicknell, and J. E. Bortz (Analytic Sciences Corp., Reading, Mass.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 229-236. 9 refs.

Recognition is being given to the potential value of the Reliability Improvement Warranty (RIW) provision in acquiring reliable military equipment and controlling life cycle cost. The decisions that must be made in conjunction with RIW implementation, both by the government and the contractor, are identified and quantitative models for the decision maker are presented. A case study is included to illustrate the decision processes leading up to contract award. (Author)

**A77-50479** Reliability Improvement Warranty /RIW/ and the Army Lightweight Doppler Navigation System /LDNS/. R. Kowalski (ARINC Research Corp., Annapolis, Md.) and R. White (U.S. Army, Fort Monmouth, N.J.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 237-241. 7 refs.

The Army NAVCON Project Office has issued solicitations for low rate initial production (LRIP) of the Lightweight Doppler Navigation System to two engineering development contractors. The solicitation contains an option for a Reliability Improvement Warranty (RIW) as an alternative to in-service maintenance over the initial years of LDNS deployment. The paper describes NAVCON's management approach in developing the RIW terms and conditions for LRIP. Attention is given to the warranty period, exclusions, unverified failures, pipeline flow, operating-hour adjustment and government obligations. B.J.

**A77-50481** Optimum test samples for reliability improvement. E. Boyle (Lockheed Missiles and Space Co., Inc., Sunnyvale, Calif.) and L. Stewart (Lockheed Research Laboratories, Palo Alto, Calif.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 248-251.

Formulas are derived and discussed which provide optimum sample sizes for discovering failure mechanisms. Two cases are considered: (1) the sample size for a single hardware component is determined to obtain an optimal balance between expected improvement in reliability and test cost; and (2) the sample sizes are determined for all hardware components which comprise a system such that the expected improvement in reliability of the system is maximized for a given fixed total test budget. (Author)

**A77-50482** A cost effective approach to weapon acceptance. J. M. Perkins and E. E. Leach (U.S. Navy, Pacific Missile Test Center, Point Mugu, Calif.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 252-256.

The paper reviews the development of production acceptance testing of Navy guided weapon systems at the Pacific Missile Test Center since 1959. The development of the acceptance process for air-launched weapons is used to illustrate how technological improvements in the test process can balance increasing costs. A flight test simulation facility was completed that allows the measurement of weapon reliability under environmental conditions that simulate the fleet operating environment. The results are integrated with results obtained from flight and ground tests to provide a balanced program that has proven to be effective in assessing production quality. B.J.

**A77-50483** RIW experience at ECOM. R. A. Mlinarchik (U.S. Army, Systems Analysis Office, Fort Monmouth, N.J.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa.,

January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 257-260.

The paper reviews the RIW (Reliability Improvement Warranty) experience at the Army Electronic Command (ECOM) with two RIW programs - CONUS NAV and the Absolute Altimeter. The RIW requirements for the two programs are examined with emphasis on warranty period, exclusions, operating-time adjustments and MTBF guarantee. B.J.

**A77-50484** **Warranty contract impact on product liability.** W. J. Bonner (Litton Industries, Inc., Guidance and Control Systems Div., Woodland Hills, Calif.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 261-263.

The paper examines warranty contract provisions and addresses the question whether a contractor's risks under present product liability law are increased by virtue of his producing equipment under a Reliability Improvement or similar warranty contract. Consideration is given only to manufacturer's liability for injury caused by a defect in his product. The effects of the warranty on basic liability, the burden of proof and the likelihood of suit are discussed. B.J.

**A77-50487** **A reliability control tool during manufacturing.** H. D. Rue (Hughes Aircraft Co., Culver City, Calif.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 275-280.

The figure-of-merit methodology of reliability control is based on the notion that catastrophic and sudden failures occur during manufacturing due to initial weakness or defects. As these failures are corrected, a decreasing failure rate is usually experienced. This paper reviews figure-of-merit methodology and presents a quality-control model incorporating comparison factor representing unit failures, system failures, product testing efficiency and manufacturing processes and workmanship controls. The model is applied to the example of an avionics system composed of 22 units. B.J.

**A77-50488** **Effectiveness of reliability system testing on quality and reliability.** J. B. Hovis (Westinghouse Electric Corp., Baltimore, Md.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 281-285.

This paper presents a reliability approach to a program for a high reliability airborne search and track combat radar which was based on three successful approaches evolved at Westinghouse Defense and Electronic Systems Center. The reliability program plan implemented for this radar equipment was designed to produce a system which would perform in a flyoff test better than a predetermined mean-time-between-failure (MTBF). The basis of this approach was basically that used in the successful Electro-Optical system known as the B-52 Steerable TV (AN/AVQ-22) which achieved a field MTBF approximately equal to the predicted value and demonstrated in a Mil-Std-781 test a greater MTBF than the required value. It is felt that the principles described herein could be applied to any program to achieve the desired results in field usage. (Author)

**A77-50489** **Predicting the cost impact of system improvements.** R. L. Morris (Hughes Aircraft Co., Canoga Park, Calif.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 286-289.

The paper describes a study undertaken to find one or more elements in proposed system improvements, which elements can be used to predict the life cycle costs of these improvements. A body of Engineering Change Proposals (ECPs), relating to the performance of a fire control system and associated test equipment, was used as the source data. The ECPs were broken down into samples according to subsystem in which the change was to be located, purpose of change, or a combination of these two factors. For the sample and each subsample, relationships were sought between costs and parts and/or Integrated Logistics Support elements. Existing computer routines were used to perform correlation, regression and evaluation computations, and equations were found which could predict some cost element based on hardware or logistics elements. B.J.

**A77-50490 \*** **Shuttle payload minimum cost vibroacoustic tests.** C. V. Stahle, H. R. Gongloff (General Electric Co., Space Div., Philadelphia, Pa.), J. P. Young, and W. B. Keegan (NASA, Goddard Space Flight Center, Greenbelt, Md.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 290-296.

This paper is directed toward the development of the methodology needed to evaluate cost effective vibroacoustic test plans for Shuttle Spacelab payloads. Statistical decision theory is used to quantitatively evaluate seven alternate test plans by deriving optimum test levels and the expected cost for each multiple mission payload considered. The results indicate that minimum costs can vary by as much as \$6 million for the various test plans. The lowest cost approach eliminates component testing and maintains flight vibration reliability by performing subassembly tests at a relatively high acoustic level. Test plans using system testing or combinations of component and assembly level testing are attractive alternatives. Component testing alone is shown not to be cost effective. (Author)

**A77-50491** **A support system life cycle cost model.** C. Brook and R. Barasia (Bell Northern Research, Ottawa, Canada). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 297-302. 5 refs.

A feasibility study, under contract to the Canadian Department of National Defence, to establish management guidelines for the evaluation of Automatic Test Systems (ATS) requirements has been completed. This paper presents an overview of these guidelines, and discusses a case study which was performed to demonstrate the applicability of the recommended procedures. A graph is presented which shows the relationship between the prime system availability, and the support system life cycle costs. (Author)

**A77-50492** **Weapon system parametric life cycle cost analysis.** H. W. Wynholds and J. P. Skratt (ECON, Inc., San Jose, Calif.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 303-309. 10 refs.

A general approach to parametric life-cycle cost analysis is described in this paper. Foundation of the methodology is a three-dimensional work breakdown structure (program elements, subdivisions of work, and life-cycle program phases). The other important ingredient is a set of parametric cost estimating relationships. Adaptation as an interactive computer model with automated data input and selective output is also discussed. (Author)

**A77-50493** **SPRINT missile subsystem reliability achievements.** A. R. Clark (Martin Marietta Aerospace, Orlando, Fla.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 367-371.

The reliability of the SPRINT subsystem is discussed with emphasis on launch and flight performance and long term storage survivability. The following techniques were used to achieve the reliability objectives: (1) use of high reliability parts, (2) use of one-shot device redundancy, (3) derating, (4) testability, (5) production environmental testing, (6) lot sampling, dissection analysis and storage, (7) certified lines, (8) clean room assembly area, (9) reliability growth test, (10) preflight management review and inspection, (11) no change policy between R & D and production, (12) production line sampling and environmental test, and (13) overstress qualification testing. B.J.

**A77-50495** A reliability incentive based bid decision. C. A. Pell (Boeing Aerospace Co., Seattle, Wash.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 396-400.

The paper discusses a hypothetical program in which two satellites are to be used to perform a space mission and the contractor's fee is based on reliability performance incentive. Payment begins when the hardware produced has operated beyond some minimum lifetime and it ends at some maximum value. Since the satellite lifetimes are uncertain, the producer's payoff is a random variable, whose distribution depends on the design reliability of the hardware. A probabilistic decision approach provides the potential producer with a description of arrangements under which it is worthwhile to bid at all, and if the decision is made, what investment in design reliability is optimal for a given incentive rate. B.J.

**A77-50498** How to get more mileage out of your data. R. H. Dudley, S. E. Van Vleck, R. J. Pooch (Lockheed Missiles and Space Co., Inc., Sunnyvale, Calif.), and T. R. Chow (ESL, Inc., Sunnyvale, Calif.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 414-420.

A statistical model and methodology is presented for using test data - either piece part, package, or system - as the data become available. The discussion is structured to answer two specific questions: (1) when is it judicious to combine data types and (2) how does one combine data types. Combining the results of statistical models with the results of engineering models to augment the limited sample size available for statistical models is addressed. Examples are provided to illustrate decisions of when and how to combine data from engineering models with statistical models. (Author)

**A77-50500** Technical problem management. F. J. Kreuzer (Xerox Corp., Rochester, N.Y.). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 427-431.

Technical problem management is a 'last ditch' reliability control technique which enables the tracking of problems through the identification, definition, resolution and verification phases in a systematic way. It provides a means for the technical program manager to coordinate the efforts of contributing groups and communicate necessary problem/fix related information to supporting agencies. It also assists in prioritization of problems and makes possible an evaluative process to refine analytical tools. B.J.

**A77-50505** Some graphical methods for maintenance planning. B. Bergman (Saab-Scania AB, Linkoping, Sweden). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway,

N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 467-471. 6 refs. Research supported by the Transport Research Delegation of Sweden.

The paper addresses the problem of determining a component-failure control strategy that balances the cost of replacements with the cost of failures and results in a minimum total long-run average cost per unit time. The approach suggested is the use of a simple graphical method of nonparametric age replacement policy. The method is based on data using the Total Time on Test plot (developed by Barlow and Campo, 1975) that employs a component lifetime model. The method may be generalized in some situations where information is available about the state of the unit under evaluation to serve as a basis for the planning of maintenance 'on condition'. B.J.

**A77-50510** Logistics planning simulation model for USAF spare engine management. H. J. Benet (Texas A & M University, College Station, Tex.) and C. H. Shipman (USAF, Wright-Patterson AFB, Ohio). In: Annual Reliability and Maintainability Symposium, Philadelphia, Pa., January 18-20, 1977, Proceedings. Piscataway, N.J., Institute of Electrical and Electronics Engineers, Inc., 1977, p. 500-505. 13 refs.

The simulation model described herein is designed to assist Air Force Logistics Planners in predicting future aircraft engine removals and evaluating the adequacy of spare engine supplies. Written in FORTRAN, the model will give quarterly predictions of both the mean and variance of removals and stockouts so that confidence limits may be set on the ability of the logistics system to support programmed flying requirements. (Author)

**A77-50545** System availability and optimum spare units. M. Sasaki, S. Kaburaki, and S. Yanagi (National Defense Academy, Yokosuka, Japan). *IEEE Transactions on Reliability*, vol. R-26, Aug. 1977, p. 182-188. 8 refs.

The steady-state availability of a repairable system with cold standbys and nonzero replacement time is maximized under constraints of total cost and total weight. Likewise the cost can be minimized under constraints of steady-state availability and total weight. A new, more efficient algorithm is used for the constrained optimization. The problem is formulated as a nonlinear integer programming problem. Since the objective functions are monotone, it is easy to obtain optimal solutions. These new algorithms are natural extensions of the Lawler-Bell algorithm. Availability is adjusted by the number of spares allowed. Other measures of system goodness are considered, viz. failure rate, weight, price, mean repair time, mean repair cost, mean replacement time, and mean replacement cost of a unit. (Author)

**A77-50546** Cost model for testing program based on nonhomogeneous Poisson failure model. J. Donelson, III (Institute for Defense Analyses, Arlington, Va.). *IEEE Transactions on Reliability*, vol. R-26, Aug. 1977, p. 189-194. 6 refs.

A model for the s-expected cost of a development testing program is presented in this paper. The total cost function consists of two terms. The first term is proportional to the duration of the testing program; the second term is a loss function that assesses additional costs for failure to meet reliability goals during the testing program. The reliability growth model assumes that failures during the program occur according to a nonhomogeneous Poisson process having a power-law rate. An example shows how the duration of the test program can be chosen to minimize s-expected total cost. (Author)

**A77-50549** Optimum demonstration tests with grouped inspection data from an exponential distribution. W. Nelson (GE Research and Development Center, Schenectady, N.Y.). *IEEE Transactions on Reliability*, vol. R-26, Aug. 1977, p. 226-231.

Life test data from periodic inspection of test items consist of the number of items failing in each inspection period and are called

grouped data. This paper presents statistical methods for reliability measurement and demonstration from grouped data on items from an exponential life distribution. The maximum likelihood method is used to estimate mean life; tables are given for optimum inspection times. A new statistical (demonstration) test for mean life is locally most powerful and is simpler than the test based on the maximum likelihood estimate. Tables for this test are provided. These tests also apply to a Weibull distribution with known shape parameter.

**A77-51230** Innovation and productivity in R & D - Associated individual and organizational variables. M. J. Stahl (USAF, School of Engineering, Wright-Patterson AFB, Ohio) and J. A. Steger (Rensselaer Polytechnic Institute, Troy, N.Y.). *R & D Management*, vol. 7, Feb. 1977, p. 71-76. 22 refs.

The relationships of organizational variables with innovation and productivity of scientists and engineers in R & D laboratories were explored. Peer ratings of innovation (original and useful output) and productivity (quantity of output) were utilized as criteria. Information was obtained on 154 scientists/engineers in 35 work groups in three Air Force R & D laboratories. Significant relationships found between organizational variables and innovation and productivity included: rewards for innovation, communication on technical matters with other scientists/engineers within the work group, and an age-education demographic group of variables. Level of participation in goal setting and group leader's level of empathy were also consistently related to level of productivity.

**A77-51232** Introduction of a matrix structure into an R & D establishment. H. P. Gunz and A. W. Pearson (Manchester Business School, Manchester, England). *R & D Management*, vol. 7, June 1977, p. 173-181. 15 refs.

Matrix organization is increasingly being written about in terms which suggest that it is almost axiomatic that it is the best way of structuring an R & D lab. In this paper we wish to introduce a note of scepticism into the discussion, for the following reasons. Firstly, we suspect that not everyone has the same thing in mind when discussing matrix organizations. Secondly, we believe that there are many circumstances under which it clearly is not the best way of organizing, although there are plenty under which it is. Thirdly, we have seen in use many variants of the structure, suggesting to us that while there is an underlying, unifying concept at work, it needs to be much modified in most cases before it can successfully be applied. Finally, any reorganizing is a hazardous business, and a change to matrix involves particular difficulties of its own which need highlighting.

**A77-51233** Responsibility and authority in the matrix organization or is ambiguity a good thing. K. Knight (Brunel University, Uxbridge, Middx., England). *R & D Management*, vol. 7, June 1977, p. 183-186. 13 refs.

Ambiguous definition of roles in the matrix is sometimes advocated, but there is evidence that ambiguity can lead to stress and is often experienced as a major problem. A popular alternative is to define the responsibility of project managers without giving them any formal authority. For this to be workable the selection of project managers and the establishment of their function must ensure that they have other sources of effective power. But there is a third option, which is to define responsibility and authority in the matrix clearly and consistently. This approach reveals a range of choice in the authority to be given to project managers, and can be supplemented by the technique of responsibility charting. Finally, choices will need to be made and the paper sets out some of the relevant considerations to be taken into account.

**A77-51283** Water resources planning and management goals. C. H. Gaum (U.S. Army, Corps of Engineers, Washington, D.C.). (*American Society of Civil Engineers, National Water Resources and Ocean Engineering Convention, San Diego, Calif., Apr. 5-8, 1976.*) *American Society of Civil Engineers, Water Resources Planning and Management Division, Journal*, vol. 103, May 1977, p. 73-82.

The basic difficulty concerning the solution of the various water resources problems is related to the limitations of funds which are available. Approaches for overcoming this difficulty are discussed. It is pointed out that water resources planning and management must be comprehensive in order to define what can be accomplished within the budget dollar available. Attention is given to a planning technique for federal projects, aspects of plan formulation, and the utilization of short cuts in methods.

**A77-51387** Communication satellites for public service. F. W. Norwood (Joint Council on Educational Telecommunications, Washington, D.C.) and J. P. Witherspoon (Public Service Satellite Consortium, San Diego, Calif.). *International Astronautical Federation, International Astronautical Congress, 28th, Prague, Czechoslovakia, Sept. 25-Oct. 1, 1977, Paper 77-19*. 10 p.

The advantages of using communications satellites to deliver educational and health services to widely scattered locations are discussed. In particular, the adoption of high-power satellites and relatively simple ground stations is suggested as a means to provide inexpensive data links between communities isolated by terrain, climate or long distances. Furthermore, satellite communications networks may be quickly instituted and readily modified to include such capabilities as voice and data transmission in addition to television transmission. The application of satellite communications systems, including the Applications Technology Satellite-6 and the Communications Technology Satellite, to remote medical diagnoses, agricultural education programs and the delivery of public services is considered.

**A77-51526 \*** Organizing for low cost space transportation. C. M. Lee (NASA, Washington, D.C.). *International Astronautical Federation, International Astronautical Congress, 28th, Prague, Czechoslovakia, Sept. 25-Oct. 1, 1977, Paper A-77-55*. 37 p.

The paper describes the management concepts and organizational structure NASA is establishing to operate the Space Transportation System. Policies which would encourage public and commercial organizations and private individuals to use the new STS are discussed, and design criteria for experiments, spacecraft, and other systems elements are considered. The design criteria are intended to facilitate cost reductions for space operations. NASA plans for the transition from currently used expendable launch vehicles to Shuttle use and Shuttle pricing policies are explained in detail. Hardware development is basically complete, management functions have been defined, pricing policies have been published, and procedures for user contact and services have been placed into operation.

Cost becomes an early concern in applying privacy safeguards to any computerized record keeping system. To determine privacy cost impact a concrete and rigorous approach that permits repeated analysis of carefully documented assumptions is required. The application of that methodology to the technical requirements flowing from the Privacy Act of 1974 is presented. The privacy model contains algorithms reflecting resource expenditures for 56 distinct actions. Written as a FORTRAN program, the model produces several printouts that show the user the consequences of the input data. In addition to a total cost for conversion and an annual operating cost, the model provides subtotal costs for each compliance step. GRA

**SMALL BUSINESS IN THE METALS INDUSTRY: A BACKGROUND STUDY Final Report**

24 May 1976 88 p refs

(NSF Order 76-SP-0871)

(PB-255649/6; NSF/RA-760017)

Avail: NTIS

HC A05/MF A01 CSCL 05C

The principal small business roles in, and innovations of particular importance to, the metallurgical industry, together with associated planning and policy issues, marketing issues, and institutional arrangements are identified. The extraction and processing phases of the metals cycle are studied. Extraction includes all stages prior to metal processing: mining, beneficiation of ores, reduction, smelting, and refining of the pure metals. Processing includes alloying, heat treating, rolling, casting, and fabrication. Three broad areas were identified in which small business is actively involved: high technology, service companies, and secondary recovery. GRA

A state-of-the-art review of the theoretical and empirical literature addressed to the role of government in the allocation of resources to technological innovation is reported. Criteria for government involvement in the direction and support of technological innovation and the expenditure mechanisms through which government does or should fund technological innovation in order to obtain an efficient allocation of resources are examined. An analytical report on the state of the art, a policy oriented summary of the analytical report and an annotated bibliography are presented. GRA

A comparative analysis is made across five countries (France, Germany, the Netherlands, the United Kingdom and Japan) of the ways in which governments influence technological change. This influence operates through government instruments designed or intended to affect: (1) the innovation process, (2) the intellectual resource base, and (3) the adverse consequences of technology such as deterioration of the environment and labor's resistance to technological change. For the purpose of analysis, twelve categories were constructed--each containing a number of diverse government programs of instruments affecting one or more of the three areas described above. GRA

**A PRELIMINARY SYSTEMS DESIGN FOR A MULTI-PURPOSE TRANSIT PLANNING AND MANAGEMENT INFORMATION SYSTEM**

Thomas Walter Friedman Mar. 1976 102 p refs

(Contract FWPCA-WA-11-0005)

(PB-255178/6; RR-76-1; UMTA-WA-11-0005-76-1)

Avail: NTIS HC A06/MF A01 CSCL 13B

A preliminary systems design for a multi-purpose transit planning and management information system is presented. It conceptualizes two such information systems: one for the automation of transit schedule data for the production of scheduling related reports, and the other for the automation of transit schedule data and street network data for a general transit information system. While the former system is designed to produce the types of reports currently manually produced and in use by the transit industry, the latter system is intended to provide an automated data base for the planning and marketing of transit services. Transit properties and others with an efficient file structure for organizing schedule data for the production of various types of output based on the concept of random access search are provided. **A SYSTEMATIC APPROACH TO OPERATIONAL SCHEDULING FOR INFORMATION COLLECTION SYSTEMS Ph.D. Thesis**

David Sims 1976 357 p  
 Avail: Univ. Microfilms Order No. 76-22783

A systematic methodology is presented which enables one to construct and solve a large scale linear zero-one mathematical programming model of an information collection system. The parameters of this model define the system's operational capability, its resources, its management's operational philosophy, and its users' desires. The solution to this model specifies the system's optimum operational schedule. The presented methodology is employed to formulate a computerized scheduling process for the Earth Resources Technology Satellite system. This process is termed a control mechanism. It utilized state variables to define the system element's operational modes and the system's environment. A utility space is established to quantify the management philosophy and the users' desires. The solution process utilizes heuristic programming, the principle of tearing, dynamic programming, and constrained continuous optimization. A methodology for solving the large-scale zero-one model is presented

**MAN, DESIGN, MACHINE: AN INQUIRY INTO PRINCIPLES OF NORMATIVE PLANNING FOR COMPUTER-BASED TECHNICAL SYSTEMS ILLUSTRATED BY A CASE DESIGN OF AN ENTRY, STORAGE AND RETRIEVAL SYSTEM FOR SCIENTIFIC COMMUNICATION AND TECHNOLOGY TRANSFER Ph.D. Thesis**

Wlodzimierz Michel Sachs 1976 195 p

Avail: Univ. Microfilms Order No. 76-22774

Systems theory and normative planning are discussed. Fundamental properties of an IDEAL instrumental system based on advanced computer technology are examined. The properties that such a system should display, assuming no design constraints other than technological feasibility and operational viability are established. The principal arguments are: (1) that design of instruments should be SOCIO-TECHNICAL rather than technocratic; (2) such instruments should offer as many standard services as possible to their users; and (3) that they should also allow for users to program their own services.

**APPLICATION OF PRINCIPLES OF ORGANIZATIONAL STRUCTURE TO HIGH TECHNOLOGY ACTIVITIES**

Thomas G. Evans 20 Oct. 1975 27 p refs

(AD-A024012) Avail: NTIS HC A03/MF A01 CSCL 05/1

The objective of this paper is to provide information about principles of organizational structure as they apply to high technology activities. To acquire background about these principles, an extensive review of the literature was conducted. Those principles that seemed most generally applicable were selected for analysis. The review of the literature demonstrated that merely listing and analyzing the most applicable principles would not adequately satisfy the objective of the paper. It was obvious that human behavioral and system concepts of organization, which are not readily expressed as principles, must be included in order to provide a balanced development of the objective. Thus, this paper lists and analyzes the most applicable principles of organizational structure. Additionally, it discusses human behavioral and systems concepts of organization and, where possible, expresses these concepts as principles. Three major conclusions come from the analysis that was conducted. The first is that principles of organizational structure must be applied in a flexible manner. The second is that traditional principles, to a great degree, continue to apply to high technology activities. The third conclusion is that human behavioral and systems concepts have increased application in high technology activities.

**A CONCEPTUAL MODEL FOR EVALUATING CONTRACTOR MANAGEMENT DURING SOURCE SELECTION Final Report**

F. Theodore Helmer and Robert L. Taylor Mar. 1976 54 p refs

(AD-A023817; USAFA-TR-76-6)

Avail: NTIS HC A04/MF A01 CSCL 05/1

The evaluation model in this report is not a definitive outline of what must be done during source selection; it is, rather, a discussion of a number of the variables that ought to be considered. One can then include only those variables relevant to the task at hand. The model should be viewed as a thought-triggering device for source selection panels to define and structure contractor management evaluation during the source selection process. The evaluation of contractor management is divided into major functional areas: planning, organizing, and controlling. A checklist of variables under each topic is included, with examples of a numerical scoring system, a color-coded evaluation system, and a descriptive adjective evaluation system. The report concludes with a detailed example of a complete source selection numerical scoring system, including technical, cost, management, quality, reliability, experience, facilities, and contract evaluations.

**PROGRAM EVALUATION AND REVIEW TECHNIQUE (PERT): A PLANNING AND CONTROL TOOL FOR OCCUPATIONAL FIELD STUDIES**

John M. Hemphill, Jr., Harold C. Stone, and Dale Yoder Sep. 1975 59 p refs Sponsored in part by the US Marine Corps, Washington, D. C.

(Contract N00014-74-A-0436-0001; NR Proj. 151-370;

RR0420402)

(AD-A024131; TR-3) Avail: NTIS HC A04/MF A01 CSCL 05/1

PERT is a management tool that makes possible more accurate, more objective, and more rapid planning and control of a complex project. Applied research by the ONR-MC Task

Analysis project staff indicated that a full description of PERT and its applications to Occupational Field (OF) studies would be of operational value to the Office of Manpower Utilization (OMU), HQ, USMC. This report on PERT is designed to serve two purposes. First, it can be used as training material for new personnel to introduce them to techniques of planning and control in OF studies. Second, it can provide ready reference materials for individuals directly involved in designing, directing, planning, and controlling OF studies. The description of PERT in this report is specifically addressed to Task Analysis as conducted by the Marine Corps. Accordingly, the various steps, events and activities used as illustrations in the application of PERT employ the terminology of the different phases of OMU's Task Analysis process. GRA

GUIDELINES FOR RESEARCH PLANNING AND DESIGN  
IN TASK ANALYSIS**

William T. Farrell, C. Harold Stone, and Dale Yoder Sep. 1975 30 p refs Sponsored in part by the US Marine Corps, Washington, D. C.  
(Contract N00014-74-A-0436-0001; NR Proj. 151-370; RRO420402)  
(AD-A024132; TR-4) Avail: NTIS HC A03/MF A01 CSCL 05/1

The report focuses upon Task Analysis as research. It is based upon the fact that the Task Analysis program conducted by the Office of Manpower Utilization, HQ, USMC (OMU) involves purposive, systematic investigations and analyses in order to prepare reports of findings that will be useful and influential in Marine Corps planning, policy determination, and management. Guidelines are presented for the planning and design of OMU's projects so that they will justify proper respect and credibility and thereby achieve maximum impact and value. Principles and procedures are outlined so that each Task Analysis project can be planned, designed and conducted in a manner consistent with recognized criteria of dependable scientific research. In addition to the focus upon the research nature of Task Analysis, the qualities of the researcher himself, and his influence upon the research are discussed. The main emphasis of the report is upon research planning and design. GRA

THE EVALUATION OF INTEGRATED MARKET RESEARCH  
INFORMATION SYSTEMS FOR NEW PRODUCT DECISIONS  
Ph.D. Thesis**

Lawrence Lapide 1976 181 p  
Avail: Univ. Microfilms Order No. 76-22724

A methodology with which to evaluate the benefits that can be derived from using various combinations of market research data sources to aid new product decisions is presented. Multimeasurement systems consisting of retail outlet surveys and consumer panel surveys are emphasized. The new product innovation process and its informational requirements for decision making is discussed. Test marketing is identified as a key phase

to focus upon because of the importance of retail outlets and consumer panel surveys in monitoring test market. Rollout commercialization is also identified as another key phase since it is essentially sequential test marketing. The advantages and disadvantages of various data sources for test marketing are discussed as well as the source of error in a test market and their relationship to its duration. Dissert. Abstr.

OPTIMAL PRODUCTIVITY FOR SOLID WASTE COLLEC-  
TION: A SYSTEMS APPROACH Ph.D. Thesis**  
Robert Maurice Clark 1976 104 p  
Avail: Univ. Microfilms Order No. 76-21095

Analytic techniques or models were developed which provide normative measures of optimal solid waste collection productivity. The first model developed is the REM which can be used to rate each collection route based on physical and managerial variables as to its difficulty in terms of the weight which is collected from it, during a maximum work day. If the levels of the variables on the right side of the equation are fixed then the ratio of  $W_{sub d}$  to  $W_{sub u}$  gives the household units which a crew can serve per day on a given route. This ratio is the collection coefficient which is utilized in the ROM. The Route Optimization Model can be applied to achieve the minimum cost, set of crews, trucks, and routes to serve a given solid waste collection service area. Both models are fully transferable between systems and allow an objective comparison between the results achieved in one system versus results achieved in another. Dissert. Abstr.

**AN ANALYSIS OF THE TECHNOLOGY ROLE IN US POWER DURING THE MID-RANGE PERIOD** Student Essay

Edward Miltner 21 Nov. 1975 31 p refs  
 (AD-A024042) Avail: NTIS HC A03/MF A01 CSCL 05/1

The role of technology predominates all elements of U.S. power. It is the key ingredient of defense planning; it looms as the bright spot in our balance of trade; it represents the heart of detente; it is responsible for the enormous improvement in our quality of life; and it is in the direction of technology that mankind seeks solutions in this new age of global interdependency and increased shortages of natural resources. The accelerating importance of technology to our nation's security and world leadership posture stands in astonishing contrast to the long and continuing decline of U.S. funding for research and development. A decline that poses a threat to our national defense - to our economic power - to the quality of life. Data was provided primarily from business and technology periodicals, federal budget review and texts pertaining to technology and its impact on the future. Federal support of R and D has dropped severely over the last decade to 1.2% of GNP. In view of the facts respecting the vital nature of technology to the nation and this reduced support of the R and D effort in the United States, it is recommended that all of the elements of U.S. power be reflected in the President's cabinet. The President's cabinet should be reorganized so that all five elements of U.S. power are represented, and in particular there be created a Secretary of Science and Technology and as a principal arm he creates a National Institute of Science and Technology. It is further suggested that national policy be established to provide five percent of gross national product for research and development.

 (Contract F04701-75-C-0076)  
 (AD-A025902; TR-0076(6793)-1; SAMSO-TR-76-111) Avail:  
 NTIS HC A03/MF A01 CSCL 22/2

The increasing need to maintain uninterrupted military communications service and the economies inherent in batch satellite buys have forced programs to decide on a mode of storage for those satellites not immediately needed for the on-orbit operational system. The experience of on-going satellite programs is reviewed to determine the relative benefits of on-orbit versus on-the-ground (in-plant) storage. Design factors that must be considered for storage on orbit are addressed and show that the impact on satellite design is small. Data on the operability of units (black boxes) that were turned on after years of on-orbit dormancy indicated very low on-orbit dormancy failure rates. GRA

Michael G. Orrell May 1976 85 p refs  
(AD-A024979; DARCOM-ITC-02-08-76-214) Avail: NTIS HC A05/MF A01 CSCL 15/5

The purpose of this paper is to develop a replacement policy. The policy will be for systems consisting of 'N' independently failing subsystems in a series configuration. The decision to replace a component of the system will be determined by a certain number of failures of another component in the system. This paper offers general equations adaptable for different time to failure distributions and it contains a specific example. The specific example is done showing all mathematical developments and results are given in tabular form. Finally, the replacement policy derived in the paper is compared to a more conventional replacement policy and the results show that the developed replacement policy's relative cost is approximately the same as the optimal solution. ### **RESEARCH AND DEVELOPMENT MANAGEMENT ANALYSIS SYSTEM (RDMAS) Final Report, 1973 - 1976**

Stephen F. Rutz Apr. 1976 125 p  
(AD-A025447; WES-Instruction-S-76-1) Avail: NTIS HC A06/MF A01 CSCL 05/1

This report describes a Research and Development Management Analysis System (RDMAS), developed and implemented in the Soils and Pavements Lab. of this Station (WES) during the period 1973-1976 as an extension of the WES Management Information System to provide closer control of the assigned research projects. The RDMAS provides a system of management tools and techniques for formulating research programs, initiating new research projects, determining the resources

required/available to accomplish the effort, assessing the relative priority of competing items, evaluating technical productivity versus expenditure of funds, and monitoring participating elements on a continuous basis throughout the effort life. The report describes the general logic flow of the RDMAS in the basic text with details discussed in five instructional appendixes. GRA

### **AN INITIAL STUDY OF CURRENT AND PROJECTED PUBLISHING TECHNOLOGY PERTINENT TO THE NAVY TECHNICAL MANUAL SYSTEM (NTMS) Final Report**

Jack J. Bialik, Thomas L. Humphrey, Patricia Whiting-Okneef, and Raymond Zablocki Mar. 1976 131 p refs  
(Contract N00014-76-C-0407; SRI Proj. 4739)

(AD-A025744) Avail: NTIS HC A07/MF A01 CSCL 14/5

The U.S. Navy has begun a program to develop an integrated, automated system to prepare, produce, distribute, and update Navy Technical Manuals (TMs). This program, called the Navy Technical Manual System (NTMS), will probably require at least three years to bring to the initial operating phase. It is therefore important to consider technology trends when committing to the design of the system. For this contract, SRI interviewed 30 companies and five newspaper corporations that are users and/or suppliers of automation technology in the printing and publishing fields. Each source contacted was questioned about experience with the use of the equipment, intended plans for use of new or additional equipment, and/or plans to introduce new products into the marketplace in the next two to three years. This report contains the results of the interviews together with an analysis of the information obtained from the interviews. The analysis is directed toward the particular problems that will face the NTMS when it is in operation. GRA

### **THE APPLICATION OF DESIGN-TO-COST ACQUISITION POLICIES TO SELECTED ELECTRONICS SUBSYSTEM DEVELOPMENT PROGRAMS Final Report, May 1974 - May 1976**

C. David Weimer Jun. 1975 185 p refs  
(Contract DAHC15-73-C-0200)  
(AD-A024895; S-459; IDA/HQ-75-17527) Avail: NTIS HC A09/MF A01 CSCL 14/1

This report presents findings and conclusions resulting from a one-year study to observe, record, and analyze the Department of Defense (DOD) experience in applying Design-to-Cost (DTC) acquisition policies to electronics subsystems. Eleven DTC subsystems and three non-DTC subsystems, representing all three major Services and involving 27 industrial contractors, were investigated. Guidelines for future policy development resulting from the findings were recommended in the areas of DTC subsystem program planning, prediction of production costs and equipment performance, reliability improvement warranties, and subsystem management. These recommendations emphasized the importance of planning for DTC early in the development process and providing development time and funds, as necessary, to achieve production or life-cycle cost goals. Recommendations were also focused upon improving the production cost and performance estimating process, identifying risk areas for application of reliability improvement warranties, managing key subcontractors and vendors, and continuing analytic effects to derive DTC 'lessons learned' at the subsystem level. **AN INVESTIGATION OF CHANGE IN DIRECT LABOR REQUIREMENTS RESULTING FROM CHANGES IN AIRFRAME PRODUCTION RATES Final Report Ph.D. Thesis**

Larry L. Smith Jun. 1976 166 p refs  
(AD-A026112; AFBRMC-B-2-2-75) Avail: NTIS HC A08/MF A01 CSCL 13/8

The purpose of this research is to develop a procedure to consider the effect of a production rate change on direct production labor requirements for additional airframe production. The procedure encompasses the needed elements of data collection, variable formation, data analysis and forecasting. In the following

chapter, airframe cost elements are discussed, and the topic is narrowed to estimating airframe direct production labor hours. A third chapter summarizes previous studies in the area. The fourth chapter outlines the approach for conducting the research and identifies sources of data. An analysis of the data is presented in the fifth chapter. The paper closes with a summary, some conclusions and suggestions for further research. GRA

**LANDSAT D USER DATA PROCESSING STUDY Final Report**

22 Nov. 1976 57 p  
(Contract NAS5-23412)  
(NASA-CR-144826; GE-76SDS4277) Avail: NTIS HC A04/MF A01 CSCL 05B

The major expected users of the LANDSAT D system and a preliminary system design of their required facilities are investigated. This system design will then be costed in order to provide an estimate of the incremental user costs necessitated by LANDSAT D. One major use of these cost estimates is as part of an overall economic cost/benefit argument being developed for the LANDSAT D system. The implication of this motive is key; the system design (and corresponding cost estimates) must be a credible one, but not necessarily an optimum one. Author

**A STATISTICAL PROCEDURE FOR OPTIMIZATION OF PERT (PROJECT EVALUATION AND REVIEW TECHNIQUE) NETWORK SCHEDULING SYSTEMS**

R. K. Spoeri, L. J. Ringer, and R. L. Sielken, Jr. Apr. 1976 192 p refs (Contract N00014-68-A-0140; NR Proj. 047-700) (AD-A025022; THEMIS-TR-53) Avail: NTIS HC A09/MF A01 CSCL 05/1

This report is concerned with developing and documenting a system for the statistical analysis and optimization of Program Evaluation and Review Technique (PERT) network scheduling systems. Previous research and results are noted and documented. A technique to allow for network simplification based upon 'blocks' of activity configurations is discussed. Approximation of network completion time distribution and moments based on two points from each activity's completion time distribution is studied, and extended to allow for unequal probability at each percentile. Also, a procedure for optimum allocation of time to project activities when network completion time is to be reduced or compressed is presented. Existing computer programs are modified, tested and documented. New codes have been prepared as required and combined with the others to facilitate implementation of the total program package. The integrated system incorporating all areas is explained, so as to provide for statistical and optimization analysis of PERT networks. GRA

**INCORPORATING PROJECT COST CONSIDERATIONS INTO STOCHASTIC PERT (PROJECT EVALUATION AND REVIEW TECHNIQUE)**

Paul P. Beimer and Robert L. Sielken, Jr. Nov. 1975 65 p refs

(Contract N00014-68-A-0140; NR Proj. 047-700) (AD-A025021; THEMIS-TR-52) Avail: NTIS HC A04/MF A01 CSCL 05/1

This report extends classical PERT to incorporate both random activity durations and project cost considerations. Project costs include both planned activity costs and penalties for activities exceeding their allowed durations. Several problem formulations are mentioned, and the determination of a minimum cost schedule satisfying a predetermined project deadline is discussed in detail. This latter problem is formulated as a separable programming problem which can be solved by the computer algorithm documented in the appendices. GRA

George N. Cone May 1976 47 p refs (AD-A024818; DARCOM-ITC-02-08-76-220) Avail: NTIS HC A03/MF A01 CSCL 05/3

This research report examines the cost overrun figures for both PPE and conventional contracts. It compares the cost of the two types of contracts, and statistical methods are employed to measure the cost overrun differences between them. The shortcomings of conventional contracting methods are reviewed and the advantages and disadvantages of the PPE concept are discussed. The data revealed significant differences between the two types of contracts examined and recommendations are made as to when the more complex PPE concept is justified. Author (GRA)

HC A03/MF A01 CSCL 05C

The impact that environmental pollution controls might have on patterns of area development is discussed with particular emphasis on economically distressed areas. This problem statement represents a synthesis of three concerns or observations: (1) efforts to comply with environmental protection standards will increase the capital and operating costs of industry which may result in plant closings, unemployment and disruptive effects on community life; (2) differential enforcement of environmental standards across geographic areas may influence the movement and location of industry between cities, and redefine the balance between urban and rural centers; and (3) programs and policies designed specifically to spur economic activity in distressed areas may be impacted by counter directional environmental control efforts.

Avail: NTIS HC A06/MF A01 CSCL 09/3

The objective of the study is to investigate the feasibility, practicality, and implementation of standard electronic modules (SEM) for avionics. Tradeoff studies are used to provide quantitative data to assist the Air Force Engineers in selecting the SEM format(s). The broad spectrum of considerations necessary to characterize standard packaging for a wide class of avionics applications are investigated. In depth quantification is placed primarily on digital signal processing and to a lesser degree on analog circuitry. The work is performed in three tasks whereby Task I evaluates current and past industry and DOD module programs, Task II studies present technology and technology trends for determination of the standard avionics module(s), and Task III is a compilation of industry and DOD data concerning standard module information and concepts. The report describes the details of the study with conclusions made and recommendations for future work to be considered.

**ADVANCED AVIONICS FOR THE A-10: A DECISION  
 ANALYSIS MODEL**

Jackson A. Thomas May 1975 49 p refs

(AD-A027678) Avail: NTIS HC A03/MF A01 CSCL 09/3

Using decision analysis techniques a generic decision model for potential avionics enhancements to the A-10 aircraft is developed. Five generic avionics additions and the baseline single seat aircraft are considered in the decision model. Aspects of systems acquisition and the impact of war are also incorporated. The model developed provides the basis for a flexible management tool that can assist the program manager in reaching a decision, if one should be required, concerning avionics additions to the A-10 aircraft. The model demonstrates how the decision analysis techniques can be applied to an unstructured decision problem encountered in program management.

**OPERATIONAL TEST INSTRUMENTATION GUIDE. VOL-  
 UME 3: NON-ARMY DOD TEST FACILITIES**

1 Mar. 1976 579 p refs Prepared jointly with RMC Research  
 Corp., Bethesda, Md.

(Contract DAAG39-73-C-0130)

(AD-A026664) HC A25/MF A01 CSCL 14/2

The United States Army Operational Test and Evaluation Agency (OTEA) Instrumentation Guide presents, in three volumes, the results of an operational test-oriented survey of some thirty-three Department of Defense test/training facilities. In addition to the available instrumentation, detailed information is provided on the landspace, airspace, data reduction, and other general support capabilities of each installation. The general support area includes such information as: (a) type, location, size, and commitments of nearby military units; (b) facility access; (c) maintenance and logistics capability; (d) climate and topography; and (e) power/communications availability. Test support equipment mobility is addressed throughout the guide to indicate its flexibility for use. The Summary (volume I) presents an overview and provides an easy rapid determination of the general facility capabilities for operational tests of Army materiel as compared, in matrix form, with the other potential test facilities. The two succeeding volumes present detailed test support information for each facility. Volume II contains annexes addressing the capabilities of US Army facilities and Volume III presents information for the non-Army DOD facilities. General (unclassified) discussions of threat hardware and targets available at the test facility are presented. Other detailed information in this critical area was reported in Operational Test and Evaluation Simulation Guide, Volume III, Classified Simulator Devices (U), AD-C000 021 published in March 1974.

**MANAGEMENT OF DOD SPACE PAYLOAD INTEGRATION  
 IN THE SPACE SHUTTLE ERA**

Henry W. Steinkamp, Jr. May 1976 62 p refs

(AD-A026384; DSMS-PMC-76-1)

Avail: NTIS

HC A04/MF A01 CSCL 05/1

This report reviews the current management of DOD launch vehicle/spacecraft integration and then shows how the characteristics of the space shuttle will require changes to this baseline. The study has been based on a review of NASA and DOD literature, interviews with knowledgeable USAF officials and the author's experience in expendable launch vehicle planning and in Shuttle payload integration development. The results of the investigation provided supporting rationale for establishing a centralized DOD payload/space shuttle integration management structure. An important question was whether centralized management would motivate more economical utilization of the shuttle. In comparison to management decentralized to satellite System Program Offices of Industrial Fund Techniques, it was concluded that centralization would be more effective and efficient.

Avail: NTIS HC A07/MF A01 CSCL 13B

Difficulties and opportunities for effective cooperation within an interdisciplinary research group are explored. While emphasizing such research within an academic environment and on water resources related cases, this study is directed toward a broad spectrum of research project leaders and team participants. The analytical framework was designed to point out differences that exist between single, multidisciplinary and interdisciplinary team research. An opportunity to respond and share future results is provided. Several steps were suggested for the optimal use of interdisciplinary personnel in water resources research. The salient organizational and situational conditions include the establishment of favorable internal relationships and coalitions as a basis for administrative support and cooperation.

**AN INVESTIGATION OF PRIORITY SCHEDULING  
 METHODS FOR PROJECTS REQUIRING MULTIPLE  
 LIMITED RESOURCES** Ph.D. Thesis

Glen Eugene Andersen 1976 169 p refs  
 Avail: Univ. Microfilms Order No. 76-25855

Four different priority scheduling methods were examined using data on an actual group of data processing systems projects. Three of the scheduling methods examined are in use and are the first-come-first scheduled method, the rate of return method, and the rate of return with replacement method. The fourth scheduling method was the present worth maximization method. No evidence was found indicating that this method was defined previously or applied to the project scheduling problem. The same group of projects was scheduled with the four different scheduling methods with all scheduling conventions, not unique to a particular method, applied consistently. The scheduled projects required varying amounts of three different types of manpower resources, all of which were in limited supply. The primary evaluation of the scheduling methods was based on the total net present worths of project returns resulting from the application of the respective methods. Dissert. Abstr.

**ORGANIZATIONAL COMMUNICATIONS AND DECISION MAKING IN CRISES Final Report, 1 Dec. 1974 - 31 Mar. 1976**

Russell R. Dynes and E. L. Quarentelli May 1976 63 p refs (Contract N00014-75-C-0458; ARPA Order 2851)

(AD-A026984; DRC-Misc-18) Avail: NTIS HC A04/MF A01 CSCL 05/1

The primary focus of this study is on the response of organizations to crises, paying special attention to decision making and communication. The primary data base utilized involves materials collected in community-wide natural disasters by this Center in previous field work. From this data base, a series of propositions are derived, using decision making and communication, both as independent and dependent variables. To make future propositions more specific, the following dimensions must be taken into account: (1) The specific type of organization which experiences crises; (2) The different effect of various crisis agents; (3) The fact that crisis events always have a time and space referent; and (4) That intraorganizational functioning in crises is conditioned by the interorganizational context in which it must operate. A typology of group and organizational behavior in crises is derived from a cross classification of two variables: the nature of the crisis tasks undertaken by groups and the structure of these groups in the emergency period. An extension of this typology is explored, focusing on the importance of organizational coordination in crises. GRA

**PARTICIPATIVE DECISION MAKING: AN INVESTIGATION OF ITS EFFECTIVENESS IN THE PROGRAM MANAGEMENT OFFICE**

Thomas W. Honeywill May 1976 41 p refs

(AD-A026381) Avail: NTIS HC A03/MF A01 CSCL 05/1

The purpose of this study project was to investigate two intervening variables to mediate the effectiveness of PDM: (1) The nature of the task and, (2) the subordinate personality characteristics need for independence. Secondly, to investigate the degree of presence of the variables in the PMO. The study showed that PDM will have positive effects on job performance and attitude when (1) the task environment is characterized by uncertainty, complexity, and rapidly changing technology and; (2) the subordinates possess a moderate or high need for independence. The study showed that the task environment of the PMO is permeated with uncertainty, complexity and changing technology. Additionally, through the sample use of Vroom's need for independence questionnaire it was determined that as many as 90% of PMO subordinates possess a moderate to high need for independence. The study concludes that PDM is a potentially effective management strategy that warrants serious consideration by program managers. Author (GRA)

**AN EVALUATION OF USAF INTERNATIONAL COOPERATIVE R AND D**

George Fletcher Hunter Nov. 1975 64 p refs

(DSMS Proj. PMC-75-2)

(AD-A027130) Avail: NTIS HC A04/MF A01 CSCL 05/1

International cooperative research and development (ICR/D) is the collaboration of the U.S. and one or more of its allies in various R/D ventures to fulfill a common requirement. This report covers the purpose, scope and posture of the USAF in its dealings in ICR/D. The attitudes and barriers toward ICR/D are discussed in light of today's environment. Evolution of the ICR/D concept/process, types of cooperation and the mechanics of implementing ICR/D are also dealt with. The report concludes that attitudes/barriers to ICR/D are manageable, but without a change in outlook and posture, cooperation will tend to remain dormant. Author (GRA)

**THE INTEGRATION OF FRAGMENTED NON-MAJOR SYSTEMS: A MANAGEMENT PROBLEM**

Kenneth Allen Gale Nov. 1975 54 p refs  
(DSMS Proj. PMC-75-2)

(AD-A026566) Avail: NTIS HC A04/MF A01 CSCL 05/1

The Air Force has proposed the modular weapons concept as a weapon acquisition technique to provide technically sufficient weapons while avoiding the proliferation of individual weapon systems. This concept, being applied to the development of the Air Force's guided weapons program, is to develop a standardized set of weapon components. This will provide a mechanism for systematic upgrading of weapons by incorporating new technology into the modular weapon family in the form of a new module. It will require the integration of fragmented weapon components which can be developed throughout the Air Force Systems Command. This study looks at the integration process and at the management problems associated with implementing the modular weapons concept. The main source of problems is that the process is dynamic and requires the PM to work horizontally across the DoD organizations. This is difficult to accomplish on a broad scale in the bureaucratic form of organization. The concept is further compounded by the lack of an approved DoD plan for implementing the concept on a tri-Service basis. GRA

#### **MULTIPLE SMALL PROJECT MANAGEMENT**

George F. Christensen Nov. 1975 43 p refs

(AD-A026564) Avail: NTIS HC A03/MF A01 CSCL 05A

This report presents a series of actions that the Product Manager may take to lessen this managerial workload. Methods involving the development of specialized task areas within the Product Manager's Office are also discussed. The actions specified should reduce the managerial work load and the organizational changes provide increased efficiency that will lead to greater mission accomplishment. It is concluded that an indepth examination of the need, development schedule, budget and acquisition strategy for each project may identify redundant and/or unnecessary tasks that can be eliminated from the management problem. Maximum utilization of support from the commodity commands and other services must be assured through communication and agreements. The development of specialists within the Product Manager's Office to handle specific and recurring tasks and maximum use of computer aids will increase efficiency and thus productivity. The ideas discussed have application to many Product/Program Managers faced with similar challenges. GRA

#### **CONTRACTING FOR OPERATIONAL AVAILABILITY: AN IMPOSSIBLE GOAL**

Lawrence B. Residori May 1976 63 p refs

(AD-A026383; DSMS-PMC-76-1) Avail: NTIS  
HC A04/MF A01 CSCL 05/1

The purpose of this study project is to examine the feasibility of contracting for system operational availability as the ultimate means of achieving system readiness at reduced support costs. The study was conducted based upon the author's experience in the field of establishing reliability, availability, and maintainability (RAM) requirements for inclusion in systems requirements documents. Review of DoD guidance pertaining to RAM and cost effectiveness was accomplished to provide the basic data for analysis. All the parameters which comprise RAM were examined in detail with emphasis on their interrelationship among themselves and logistics. Operational availability was identified as a most meaningful parameter in that it had a direct impact on system effectiveness. The study concluded that increased operational readiness at reduced life cycle cost can only be achieved by stating RAM/logistics requirements in terms of reliability and operational availability. It was further concluded that a systems effectiveness approach is required in order for the system design to be influenced by RAM/logistics requirements. The study recommends that DoD implement the concept of contracting for operational availability and a plan for implementation is presented. The implication of the study is that DoD is incorrectly emphasizing reliability and maintainability in an effort to reduce life cycle costs. Author (GRA)

#### **INFORMATION PROCESSING MODERNIZATION**

John Gioia Nov. 1975 80 p

(AD-A026978) Avail: NTIS HC A05/MF A01 CSCL 09/2

Support costs have skyrocketed in the Department of Defense over the last five years. A substantial portion of the budget is now inflexible and must be used for obligated support costs such as retired pay personnel, and various levels of housekeeping support. The Chief of Staff, USAF is attempting to reduce resource costs wherever possible to put back into the system needed flexibility to develop systems for and to operationally support the combat forces. This paper looks at the administrative area and the possibility of identifying resource savings in the area of modernization. The general conclusion reached is that modernizing the administrative section in the Air Force at all levels is feasible and cost effective, provided each unit thus reconfigured is tailored to its local environment and that surveys pre-determine the cost benefits to be derived. In addition modernized administrative function should provide a synergistic savings in the long run. Program management depends quite heavily on administrative support to perform the mission. The trend toward administrative centers is clear and major Air Force acquisition offices are close to incorporating a new system. Hence program managers will have to depend on the new concept to obtain their administrative support required in the future. GRA

#### **USEFUL LIFE CYCLE COST ESTIMATES FOR DEFENSE SYSTEMS: AN EVALUATION**

Carlton Franklin Roberson Nov. 1975 45 p refs

(AD-A026560) Avail: NTIS HC A03/MF A01 CSCL 05/1

This study analyzes and evaluates the concept and framework of Life Cycle Cost (LCC) estimate policy, guidance, and methodology efforts within the context of DoD major weapon system acquisition strategy. The analysis considered the general types of LCC estimates, the value of estimates in the decision making process, and the interaction of the OSD Assistant Secretaries and policy councils in LCC policy formulation and implementation. Current DOD publications, staff memoranda, and informal interviews with OSD officials were used as the basis for the analysis and evaluation. The study concludes that the ambiguity of current DoD directives regarding LCC estimate policy, guidance, and methodology responsibility makes it extremely difficult to understand where the DoD stands today with LCC. Although within OSD an overall LCC plan may exist in conjunction with well understood in-house responsibilities, in the opinion of the author it has not been clearly nor consistently promulgated within the whole of DoD. The emergence of a single, comprehensive LCC estimating concept which embodies all phases of weapon system acquisition and ownership does not appear to be forthcoming. GRA

(NASA-CR-137926; LR-27769-2) Avail: NTIS HC A15/MF A01 CSCL 05C

Practical means were assessed for achieving reduced fuel consumption in commercial air transportation. Five areas were investigated: current aircraft types, revised operational procedures, modifications to current aircraft, derivatives of current aircraft and new near-term fuel conservative aircraft. As part of a multiparticipant coordinated effort, detailed performance and operating cost data in each of these areas were supplied to the contractor responsible for the overall analysis of the cost/benefit tradeoffs for reducing the energy consumption of the domestic commercial air transportation system. A follow-on study was performed to assess the potential of an advanced turboprop transport aircraft concept. To provide a valid basis for comparison, an equivalent turbofan transport aircraft concept incorporating equal technology levels was also derived. The aircraft as compared on the basis of weight, size, fuel utilization, operational characteristics and costs. Author

**RELIABLE COMPUTER SOFTWARE. WHAT IT IS AND HOW TO GET IT**

David N. Farnan Nov. 1975 42 p refs (DSMS Proj. PMC-75-2)

(AD-A026988) Avail: NTIS HC A03/MF A01 CSCL 09/2

The paper attempts to motivate software acquisition managers to give more attention to software development. Up to now, more attention has been given to hardware acquisition at the expense of software. Since computer software can't really be seen, it is easily ignored. Therefore, it requires greater management visibility. There are many techniques available today which can improve the software design and increase software reliability. The techniques briefly described are: modularization, top-down programming, structured programming, egoless programming, chief programmer team, good programming style, and configuration management. **NAVY AIRBORNE TACTICAL SOFTWARE MANAGEMENT POLICY: REVIEW AND EVALUATION**

Dale C. Dunham Nov. 1975 35 p refs  
(AD-A027023) Avail: NTIS HC A03/MF A01 CSCL 09/2

The purposes of this report are to review current and proposed policies pertaining to management of airborne tactical software in the Navy and then present some views on the effectiveness of these policies. Views on the effectiveness of the current and proposed policies on management of airborne software were obtained by interviewing NAVAIRSYSCOM personnel. In general, it was found that the current and proposed policies on management of airborne tactical software were considered adequate, that airborne tactical software is treated as a configuration item, and that in-house organic support for airborne tactical software is considered essential after the host aircraft system is in full production to ensure maintenance as the software after the host aircraft system production has been completed. A survey of available management information systems and subsystems to determine appropriate packages for TESPO's needs was conducted throughout the various technical environments. The survey was confined first to automated, and later, to all MIS portions that could be applied to project management, to automated network analyses, and to appropriate subsystems. Twenty systems are reviewed in detail for software, hardware and procedural constraints. A complete economic and overall technical evaluation is assessed each of the reviewed systems. Preferred alternatives, both economic and technical, are presented with guidelines for the next efforts. The survey report will be updated by ongoing contact with the various MIS communities. Also, the preliminary design and development of TESPO's own Management Information System is outlined briefly.

**EVALUATION OF A CONTINGENCY JOB DESIGN MODEL IN AN INFORMATION TECHNOLOGY ENVIRONMENT**

Philip Edward Lowry May 1976 177 p refs  
(AD-A026943) Avail: NTIS HC A08/MF A01 CSCL 05/9

This study evaluated a contingency job design model in an information technology environment. The study involved employees (military and civilian) of two United States Army organizations which develop and operate ADP programs. The objective was to determine whether the design model predicts organization behavior in certain ADP jobs. The study examined the relationship between certain job characteristics (task significance, task identity, skill variety, autonomy, and feedback from the job) and on job behavior as represented by internal motivation, general satisfaction, performance, turnover, and absenteeism. Also, the study examined the extent to which growth needs and work values moderated the relationship between job characteristics and job behavior. Results of the study indicate that internal motivation, general satisfaction, and performance of ADP personnel are affected by job characteristics. While growth needs and work values do moderate the relationship, the moderating value is relatively weak. Age, sex, and education demonstrated insignificant or weak influence on job behavior. The study was relevant to the United States Army. Nearly eleven thousand Army employees are in ADP jobs. The ultimate result of improved job design can be increased satisfaction and higher quality performance. Author (GRA)

**DOD/NASA SUPPORT OPERATIONS MANAGEMENT INTERFACE**

Thomas E. Timothy Nov. 1975 56 p refs Sponsored in part by NASA  
(NASA-CR-149203; AD-A027276) Avail: NTIS HC A04/MF A01 CSCL 05/1

The purpose of this study was to investigate the manner in which support operations have been provided from DOD resources to the NASA for manned space flight endeavors. Of particular interest was the investigation of the new Space Shuttle program. The approach used was to examine the historical documents of manned space flight through the recently concluded Apollo Soyuz mission. This investigation developed the extremely successful way in which support operations have been managed by the DOD. Additional research was carried into the Space Shuttle documentation for an insight into how this same type support might be supplied for that mission. This study points out how a well defined, operationally tested management interface is being allowed to deteriorate and perhaps be discarded for a program that appears to need it desperately. GRA

**COMMUNICATION NETWORKS IN R AND D: A CONTRIBUTION TO METHODOLOGY AND SOME RESULTS IN A PARTICULAR LABORATORY**

E. Ritchie and A. Hindle May 1976 69 p refs  
 (BLL-BLRD-5291) Avail: British Library Lending Div., Boston Spa, Engl.

Methods of identifying and analyzing the patterns of technical communication within the laboratory were developed. Experimental tools were designed which can be used with relatively little disruptive effect on the laboratory. This method makes experimentation feasible to discover directly the response of technical communication patterns to managerial actions. This methodology can also be used for exploring these inter-relationships by monitoring communication patterns and managerial actions over time. In this way, the degree of management control over technical communication can be established. In identifying and analyzing the patterns of technical communication in the laboratory the main contribution was in the application of path methods. The data concerning communication were obtained from a detailed questionnaire survey of the laboratory personnel. Each node in the resulting networks is a scientist and each element represents the frequency of communication (of a pre-defined type) between any pair of scientists. Author

**DIFFUSION OF INNOVATIONS IN MUNICIPAL GOVERNMENTS Executive Summary**

Irwin Feller, Donald C. Menzel, and Lee Ann Kozak Jun. 1976 27 p  
 (Grant NSF DA-74-20621)

(PB-257068/7; NSF/PRA-74-20-1) Avail: NTIS HC A03/MF A01 CSCL 05A

The processes of diffusion in municipal governments were described, and by doing so, the importance of factors which were identified in the theoretical literature as determinants of the diffusion of innovations in organizations was examined. The hypothesis that the creation of a performance gap is a critical factor in shaping public sector receptivity to new technologies was tested. The hypothesis was explored that the observed patterns of adoption of new technologies in the public sector--which are often attributed to the organizational characteristics of given state or local agencies--may in fact reflect the independently determined marketing strategies of the manufacturers of these technologies. **COSTING STUDY FOR LIDAR FACILITY ESA Spacelab Utilization Program. Final Report**

R. Henkel, G. Neumann, H. Koch, and E. Wedel Aug. 1976 97 p

(Contract ESA-2704/76)  
 (ESA-CR(P)-863) Avail: NTIS HC A05/MF A01

The basis for this study is the 'Final Report of the Phase-A Study, Spacelabborne Lidar for Atmospheric Research' prepared by MATRA/CNRS. No reworking of the basic documents was undertaken and the only technical modification made was the provision of a degassing filter on the telescope structure. At the first attempt, an overall development time of 36 months was found. This was incompatible with the required delivery time. After consultation with structure, cooling, and mechanism experts, it was found possible to reduce the schedule to 32 months. The conversion of an extended 'Flight Qualification Phase' into a reduced 'Flight Verification Phase' contributed to the reduction in the schedule. Author (ESA)

**ENGINEERING DESIGN HANDBOOK. DEVELOPMENT GUIDE FOR RELIABILITY. PART 4: RELIABILITY MEASUREMENT**

Jan. 1976 298 p refs  
 (AD-A027371; AMCP-706-198-Pt-4) Avail: NTIS  
 HC A13/MF A01 CSCL 14/4

Reliability measurement techniques provide a common discipline that can be used to make system reliability projections throughout the life cycle of a system. The data on component and equipment failures obtained during the reliability measurement program can be used to compute component failure distributions and equipment reliability characteristics. Reliability measurement techniques are used during the research and development phase to measure the reliability of components and equipments and to evaluate the relationships between applied stresses and environments and reliability. Later in a system life cycle, reliability measurement and testing procedures can be used to demonstrate that contractually required reliability levels have been met. GRA

Copyright. Avail: Issuing Activity CSCL 06B

Transfer of technology from non-commercial institutions to industry has played an important role in the development of medical electronics. It is a difficult process, but if the ideas are sound, if clear medical benefits exist and if there is good fit with business plans and the strengths and goals of both parties are com-

plementary, it can work well. In the evaluation process it is considered whether the device meets general tests for suitability for the company, whether there are opportunities for proprietary or patent protection, and whether the medical benefits are self evident or the acceptance period is apt to be long.  (Contract N00014-76-C-0840).

(AD-A029244) Avail: NTIS HC A02/MF A01 CSCL 12/1

Suppose that a device is subject to a sequence of shocks occurring randomly at times  $n = 1, 2, \dots$  according to a Poisson distribution. Shocks cause damage and damages accumulate additively. The device can be replaced before or at failure. The cost of replacement before failure depends on the cumulative damage at replacement time. Cost of replacement at failure is assumed to be a constant. In this paper, we derive the optimal replacement policy for such devices using the long run average cost criterion. Author (GRA)

(AD-A027890; MRC-TSR-1619) Avail: NTIS  
 HC A03/MF A01 CSCL 09/2

Using a simulation model, several buffer assignment algorithms were investigated experimentally. A simple least-recently-used (LRU) technique was compared with one which took into account the type of data and the number of current users (DS). Also investigated was the use of anticipatory fetching. Performance as a function of the number of available buffers was measured for each strategy. For the application and job mix in question it turns out that anticipatory fetching does not pay, and that DS in general behaves somewhat better than LRU. GRA

**FULL EMPLOYMENT MAINTENANCE IN THE PRIVATE SECTOR**

Gifford A. Young 1976 29 p Presented at 4th Ann. Atlantic Econ. Conf., Washington, D. C., 13-16 Oct. 1976 Submitted for publication

(NASA-TM-X-74334) Avail: NTIS HC A03/MF A01 CSCL 05C

Operationally, full employment can be accomplished by applying modern computer capabilities, game and decision concepts, and communication feedback possibilities, rather than accepted economic tools, to the problem of assuring invariant full employment. The government must provide positive direction to individual firms concerning the net number of employees that each firm must hire or refrain from hiring to assure national full employment. To preserve free enterprise and the decision making power of the individual manager, this direction must be based on each private firm's own numerical employment projections. Author

**PROGRAM ON EARTH OBSERVATION DATA MANAGEMENT SYSTEMS (EODMS) Final Report, 1 Jun. - 31 Dec. 1976**

Lester F. Eastwood, Jr., John Kenneth Gohagan, Christopher T. Hill, Robert P. Morgan, Timothy R. Hays, Richard J. Ballard, Gregory R. Crnkovick, and Mark A. Schaeffer 31 Dec. 1976 268 p refs (Contract NAS5-20680) (NASA-CR-144845) Avail: NTIS HC A12/MF A01 CSCL 05B

An assessment was made of the needs of a group of potential users of satellite remotely sensed data (state, regional, and local agencies) involved in natural resources management in five states, and alternative data management systems to satisfy these needs are outlined. Tasks described include: (1) a comprehensive data needs analysis of state and local users; (2) the design of remote sensing-derivable information products that serve priority state and local data needs; (3) a cost and performance analysis of alternative processing centers for producing these products; (4) an assessment of the impacts of policy, regulation and government structure on implementing large-scale use of remote sensing technology in this community of users; and (5) the elaboration of alternative institutional arrangements for operational Earth Observation Data Management Systems (EODMS). It is concluded that an operational EODMS will be of most use to state, regional, and local agencies if it provides a full range of information services -- from raw data acquisition to interpretation and dissemination of final information products. John G. Klinecicz Aug. 1976 32 p refs (Contract N00014-75-C-0241; Grant DAHCO4-75-G-0079; NR Proj. 047-140; ARO Proj. P-11639-M) (AD-A028960; TR-8) Avail: NTIS HC A03/MF A01 CSCL 05/1

In practice, scientific inventory decisions frequently are based on statistical estimates of the mean  $\mu$  and variance ( $\sigma^2$ ) of demand. This report examines the efficacy of modified variance estimates of the form  $\beta \sigma^2$ , where the scaling factor  $\beta$  is selected according to the criterion of minimizing expected total operating cost per period. Simulation experiments are run with a number of economic parameter settings for both cases of known and statistically estimated mean, and the value of using a  $\beta$  value other than unity is assessed. **AN ANALYTIC APPROACH FOR A CAPACITATED CPM PROBLEM**

C. Stafford Loveland and Thom J. Hodgson May 1976 47 p refs

(Contract N00014-76-C-0096)  
(AD-A028285; RR-76-12) Avail: NTIS HC A03/MF A01 CSCL 12/2

The capacitated C.P.M. problem with a single resource and jobs having unit duration and requiring a single unit of resource is formulated efficiently as a 0-1 linear integer program. Individual job precedences are combined into groups and modeled as multiple-precedence constraints. The problem of finding the optimal integer solution is one of finding a feasible basis to the linear program which contains the slack variables of the precedence constraints. The special case containing two multiple-precedence constraints is considered. It is shown that an optimal basis of a linear relaxation of the problem is at most two simplex pivots from the basis of an optimal integer solution. GRA

**MINIMIZING THE COST OF COMPLETING A PROJECT SUBJECT TO A BOUND ON THE EXPECTED DELAY TIME**

James E. Falk 14 May 1976 22 p refs  
(Contract N00014-75-C-0729; NR Proj. 347-020)  
(AD-A027882; Serial-T-336) Avail: NTIS HC A02/MF A01 CSCL 15/5

Given a project with well-defined events and activities, suppose the starting times of the activities are subject to random delays. Suppose it is possible to reduce the magnitude of these delays at additional cost. In this paper, we derive an expression for the total expected delay time of the project, and show that it can be expressed as the maximum of a number of linear expressions. To achieve at most a given expected delay time at minimum cost, we are led to examine an optimization problem with an excessively large number of linear constraints. A simple cutting plane algorithm is applied to the problem, yielding a practical method of solution. A non-convex example with five activities is used to illustrate the method. Author (GRA)

**PRELIMINARY INVESTIGATIONS CONCERNING THE TRAINING OF TACTICAL DECISION MAKING BEHAVIOR** Final Report, Jun. 1974 - Jan. 1976

R. H. Jr. Ahlers Jul. 1976 34 p refs  
(AD-A028722; NAVTRAEQUIPC-IH-269) Avail: NTIS HC A03/MF A01 CSCL 05/9

An accelerating trend for military decision making in command and control situations is to provide the decision maker with statistically processed data. There are obvious benefits to be derived from training a decision maker to be a more efficient user of such diagnostic data. But there is little empirical evidence that training is effective in bringing about an enhancement of decision making performance. Two experiments are reported in which it was attempted to determine the effectiveness of a scenario approach for training individuals to make an abstract type of tactical decision based upon probabilistic data. **MANAGEMENT BY EXCEPTION: A DECISION PROCESS** George R. Baldwin May 1976 39 p refs

(AD-A028943) Avail: NTIS HC A03/MF A01 CSCL 05/1

The report reviews the history and background of the management by exception concept. The concept is a valid tool in management and is often neglected by managers. The management information and control system is also a tool to be utilized by management and provides an excellent base for the management by exception concept. Once the principles of the concept have been accepted, the project manager may be able to develop more accurate and timely decisions during the decision making process. The report further indicates that the utilization of automatic data processing equipment will enhance management operations and particularly the management by exception concept. GRA

**APPLICATION OF THE CRITICAL PATH METHOD NETWORK TECHNIQUE TO THE INTEGRATED LOGISTICS SUPPORT PLAN OF THE AIM-9L PROGRAM**

Wallace T. Bucher May 1976 37 p refs  
(AD-A028923) Avail: NTIS HC A03/MF A01 CSCL 05/1

The purpose of this report is to show how the logistics managers of the AIM-9L program initiated and used a Critical Path Method network to monitor and control the scheduling aspects of their program. The report begins by showing the environment in which the logistics managers were operating and the rationale for the employment of a networking technique. The selection process for the particular networking technique and computer program is shown in detail with emphasis on the selection criteria employed. The construction of the network through the use of a Precedence Diagram is then delineated. The use of the network is shown through the analysis of the output reports. This is intended to provide an example of how a network was successfully initiated and used in the AIM-9L logistics program. Author (GRA)

**SCHEDULED MAINTENANCE POLICIES FOR THE F-4 AIRCRAFT: RESULTS OF THE MAINTENANCE POSTURE IMPROVEMENT PROGRAM**

Ralph Elwell and Chris Roach Jun. 1976 75 p refs

(Contract F44620-73-C-0011)  
(AD-A030146; R-1942-PR) Avail: NTIS HC A04/MF A01 CSCL 01/3

Maintenance procedures for the F-4 aircraft in support of the AF Maintenance Posture Improvement Program were examined. The F-4 has been receiving maintenance on two independent schedules, one being a major calendar-based overhaul at a depot, the other being less drastic maintenance phased into six evenly spaced inspections and cyclically performed at the air base every 450 flying hours. It was found that: (1) certain minor inspections were unnecessary or unnecessarily frequent; (2) it was possible, with safety, to extend the base to 600 hours; and (3) many individual base inspections could be performed more efficiently during the dismantling at the depot. With all three steps implemented, it is estimated that, for the entire F-4 force, 1,537,500 maintenance man-hours (over 70 percent) per year would be saved. Furthermore, the number of aircraft tied up in the inspection docks on any given day would be reduced nearly 70 percent -- from 129 to 41. GRA

**A COMPUTER-ASSISTED METHOD FOR DETERMINING LOGAIR ROUTE STRUCTURES M.S. Thesis**

Michael F. McPherson Jun. 1976 82 p refs  
 (AD-A030288; SLSR-17-76A) Avail: NTIS HC A05/MF A01 CSCL 15/5

This study developed a computer-assisted method for determining LOGAIR route structures. A Mixed-integer model was used to develop the route structures. The objective was to minimize contract cost which was expressed as a function of miles flown and landings. The Honeywell LP6000 package was used to solve the model. The computer-assisted method was tested for FY 75 and FY 76. The computer-assisted method solutions were compared to the routes used by AFLC during FY 75 and FY 76. The results show that the computer-assisted method obtained an estimated savings of approximately \$2 million in FY 75 and \$1 million in FY 76. The writers conclude that the computer method is a useful tool for developing route structures and recommend the procedure be adopted by AFLC. Author (GRA)

**A MATHEMATICAL MODEL FOR DETERMINING LOGAIR FLIGHT SCHEDULES M.S. Thesis**

K. D. Moberly and Theodore C. Gorychka Jun. 1976 100 p refs  
 (AD-A030295; SLSR-27-76A) Avail: NTIS HC A05/MF A01 CSCL 15/5

Logistics Air Transportation System (LOGAIR) is a contracted priority cargo airlift service operated by the United States Air Force. An important problem facing the LOGAIR system is the amount of pipeline time incurred by cargo moving through the system. This thesis develops a mathematical model which reduces pipeline time. The model is a linear program that produces a schedule of aircraft arrival and departure times for a specified route structure consisting of flights and stations. The objective function is structured to minimize ground time for cargo moving station to station on the same flight, and for cargo transferring between flights. The model solution produced an optimum schedule for six flights connecting eleven stations with sixteen transfers in the LOGAIR system. Analysis indicated a significant reduction in pipeline time when compared to an actual LOGAIR schedule that was manually formulated. Author (GRA)

**THE AEROCRANE IN LOTS OPERATIONS M.S. Thesis. Final Report**

John Robert Hauser, Jr. 11 Jun. 1976 78 p refs  
 (AD-A029793) Avail: NTIS HC A05/MF A01 CSCL 13/10

The Army has relied on Logistics Over the Shore (LOTS) operations to resupply forces already ashore in the absence of adequate fixed port facilities. Large scale use of containers has become standard operating procedure in the Army. Proposals have been made to meet these new requirements. One such proposal resulted in the testing of all currently available lighterage vehicles and the adoption of the Lighterage Air

Cushion Vehicle (LACV-30) to support containerized LOTS operations. Another more recent proposal has been the use of the Aerocrane as a potential lighterage vehicle. The thesis investigated this relatively new development to determine the feasibility of using Aerocranes in LOTS operations and their advantage in comparison with current Army lighterage. The conclusion is that the Aerocrane is both more responsive and more cost effective and should be adopted to support containerized LOTS operations. GRA

**THE ENGINE ACTUARIAL SYSTEM M.S. Thesis**

Robert J. Carlson and Richard J. Smith Jun. 1976 144 p refs

(AD-A030312; SLSR-7-76A) Avail: NTIS HC A07/MF A01 CSCL 21/5

The purpose of this study was to examine the method for collecting historical engine data and the influence of various managerial decisions on engine workload forecasts. The J79-GE-15 and TF30-PW-7 engines were selected for this study and were assumed to be representative of engines with large and small inventories. The data base was prepared from approximately 180,000 AF Form 1534's (Engine Status Report). The authors concluded that cluster sampling procedures could significantly reduce the number of bases required to report engine failure data. In addition, it was noted that small changes in the managerial decisions which establish planning factors related to flying hour programs, Maximum Operating Time (MOT), Jet Engine Base Maintenance Return Rate (JEBM/RR), and Dependability Index (DI) could significantly affect the actuarial forecast. Further research is recommended to develop a deterministic method of establishing MOT, JEBM/RR, and DI factors. The data handling tools developed by this research are included as appendixes for use by future researchers. Author (GRA)

**THE EFFECTS OF RENEWAL PROCESSES UPON STOCHASTIC RELIABILITY MODELS M.S. Thesis**

Louis A. Dugas, Jr. and David H. Hartmann Jun. 1976 279 p refs

(AD-A030297; SLSR-16-76A) Avail: NTIS HC A13/MF A01 CSCL 15/5

Maintenance policies for stochastically failing equipment determine the timing and extent of component replacement. The reliability of the assembly and the demands for assemblies are affected by the replacement of components. Policies may include preventive or opportunistic maintenance. A discrete-event stochastic simulation model is used to determine time related reliability and demand patterns. The model utilizes the Simscript II.5 language. The emphasis of this study is upon the transition period to include the introduction phase of new assemblies until steady state to examine aggregate mean time between failures and demands for assemblies. The assemblies modeled consisted of components with increasing, decreasing, and constant failure rates. Combinatorial assemblies employing various component failure rates are also modeled to examine the bathtub failure distribution. The data for the combination of five policies and nine type of assemblies are graphically displayed. It was discovered that certain combinations of policies and unit types produced unexpected peaks in aggregated assembly failure rates and demands. Author (GRA)

CSCL 13/2

This report on air pollution survey techniques is the second of a series presenting solid waste, air pollutions, and water pollution survey guidelines. It is intended primarily for use by installation planning, operating, and maintenance personnel. The report presents guidelines for developing a comprehensive air pollution management plan and contains information on emission inventory procedures, source categorization, emission calculations, and regulation comparisons. Air pollution dispersion is discussed, along with factors affecting dispersion, such as source characteristics, meteorological factors, and physiological effects. A section about ambient air monitoring discusses the classification of common air pollutants and some general principles of an ambient air-monitoring network, such as instrument selection and optimum instrument siting. **AN EXPLORATORY STUDY OF SOFTWARE COST ESTIMATING AT THE ELECTRONIC SYSTEMS DIVISION M.S. Thesis**

Thomas J. Devenny Jul. 1976 163 p refs  
(AD-A030162; GSM/SM/76S-4) Avail: NTIS  
HC A08/MF A01 CSCL 09/2

The estimate of software development cost is the key piece of information in many software management decisions. No technique exists which can consistently produce the reliable and accurate cost estimates which managers need. This thesis research effort explored the software cost estimating process at the Electronic Systems Division of the Air Force Systems Command.

The purpose of the research was to provide managers, researchers, and cost estimators with a better insight into the cost estimating process. Data were gathered from 16 major software acquisitions at ESD using both a structured interview and contractor furnished Cost performance Reports. The research findings identified some major problems which are currently inhibiting the development of accurate and reliable software cost estimates. To reduce these problems, recommendations are made to adopt a common cost estimating technique and to modify the use of contractor furnished software cost information. While the research was limited to ESD, the research findings and the recommendations, may be applicable to other DoD software acquisition agencies.

**MANAGING KNOWLEDGE AS A CORPORATE RESOURCE**

J. F. Berry and C. M. Cook 28 May 1976 71 p refs  
(AD-A029891) Avail: NTIS HC A04/MF A01 CSCL 05/10

Knowledge (as opposed to data or information) is proposed as a basic resource of an enterprise. The differences and interdependencies among data, information, and knowledge are discussed along with some ideas on what constitutes effective knowledge management for an enterprise. Three views of data management (Structural, Functional, and Physical) are put forward as necessary to the proper understanding of the data management activity of an enterprise. The Structural View is used to outline potential problems in knowledge management and to list several areas where further research and development are needed. Finally, a logical system design for possible implementation is suggested along with a discussion of essential managerial steps which should be taken to achieve corporate knowledge management.

**THE WRM INFORMATION SYSTEM M.S. Thesis**

Dennis A. Carlson and Carlos M. Talbott, Jr. Jun. 1976 185 p refs

(AD-A030242; SLSR-15-76A) Avail: NTIS HC A09/MF A01  
CSCL 05/1

In this research, an information system was developed which analyzes MAJCOM WRM data files. The system manipulates data in the RCS: HAF LGS (M) 7107 report and the WCDO, WMP-V, and 2C data files to provide overage and shortage inventory information. Further, it provides an ability to compute WRM requirements for any unplanned contingency force and to compare those requirements with on-hand status information. The FORTRAN program was written to investigate the following research hypothesis: given changes in a USAF general war or contingency plan, the response time in determining the adjustments to be made in WRM stockpiles can be reduced by automated analysis of WRM data files. Statistical and operational evaluations supported this hypothesis. The research also addresses several management information system design considerations used in developing the prototype system. The considerations differentiate data from information and suggest

that automated analysis systems should produce information useful for managerial decision making. Included with the research are the computer program and instructions for its implementation and operation. Author (GRA)

**A STUDY OF INFLUENCE METHODS USED BY PROJECT AND FUNCTIONAL MANAGERS IN A MATRIX ORGANIZATIONAL ENVIRONMENT** M.S. Thesis  
 Leonard J. Melhart, Jr. Jul. 1976 165 p refs  
 (AD-A030299; GSM/SM/76S-18) Avail: NTIS HC A08/MF A01 CSCL 05/1

Modern development projects are costly and involve many complex interdependent tasks. To facilitate the accomplishment of these tasks, the matrix organizational concept has evolved. It is employed by both industry and government and is intended to aid the decision making process by allowing flexible horizontal and diagonal relationships. A unique feature of this concept is the multiple supervision of project personnel. In essence, project personnel have a dual allegiance to and are influenced by project and immediate functional managers. Under this arrangement project managers do not have formal authority over project personnel and therefore must rely on other types of influence methods. The influence methods that are exercised in this unique situation are the primary concern of this study. GRA

**AN ANALYSIS OF THE RELATIONSHIP BETWEEN MANUFACTURER ASSEMBLY TIME AND INTERMEDIATE-LEVEL MAINTENANCE REPAIR TIME** M.S. Thesis  
 Prescott D. Farris Jun. 1976 73 p refs  
 (AD-A030229; SLSR-11-76A) Avail: NTIS HC A04/MF A01 CSCL 15/5

Numerous models have been developed for predicting logistic support costs of which intermediate-level maintenance repair time is an important consideration. However, the major problem is obtaining accurate input data elements to drive the models. The current technique of using historical data extrapolation has proven successful in some cases, yet additional improvement is required. One approach which could circumvent the utilization of historical data is the use of the manufacturer's initial assembly time to predict the intermediate-level maintenance time required to repair a unit. The purpose of this study was to evaluate the relationship between assembly time and repair time. Avionics communication-navigation units were selected as a study vehicle, and the relationship was statistically analyzed through regression analysis. The results obtained failed to indicate that a significant relationship exists between manufacturer assembly time and intermediate-level maintenance repair time; therefore, the study did not provide a viable alternative to the use of the historical data for predicting maintenance repair time. **AN INVESTIGATION OF THE DCAS MANAGEMENT INFORMATION SYSTEM AS A SOURCE OF INFORMATION FOR ALLOCATION OF PROCUREMENT QUALITY ASSURANCE MANPOWER RESOURCES** M.S. Thesis  
 Louis R. Albani, William J. Manley, and Roger A. Sindle Jun. 1976 95 p refs  
 (AD-A030313; SLSR-6-76A) Avail: NTIS HC A05/MF A01 CSCL 15/5

This research was directed at determining if the Dayton Defense Contract Administration Service District (DCASD) Management Information System (MIS) could be of value to the Quality Assurance (QA) manager in the allocation of manpower resources. Data representing 131 contractors under the cognizance of the Dayton DCASD during the period July through December 1975 were collected and analyzed. One data element reported in the MIS, corrective action hours, was expected to be related to product quality. The research was aimed at determining what QA activities and other MIS variables were predictors for the number of hours expended in corrective action. Multiple regression analysis was used both to describe the existing relationships

between corrective action hours as a dependent variable and the independent variables in the MIS, and to develop a model useful in predicting corrective action hours. GRA

**APPLICABILITY OF DESIGN-TO-COST TO SIMULATOR ACQUISITION** M.S. Thesis  
 Kaleem Hazer, Jr. and Daniel L. Ringler Jun. 1976 168 p refs  
 (AD-A030231; SLSR-36-76A) Avail: NTIS HC A08/MF A01 CSCL 14/1

A decision model for determining the appropriateness of applying the Design-to-Cost (DTC) concept to a particular weapons acquisition program had not previously been available within the Air Force Systems Command (AFSC). To formulate such a model, an extensive literature review was made to identify program characteristics which other writers considered necessary or desirable to the successful application of the DTC concept. A set of these characteristics was validated through a structured managerial interview schedule. From this set of characteristics the decision model was designed and applied to the AFSC simulator acquisition process as an example for employing the model. Although many of the characteristics applicable to DTC were also applicable to simulator acquisitions, the authors concluded from the model that the DTC concept would not be applicable for the few simulators normally procured in a small but highly competitive civilian market. However, if a large number of simulator systems had to be procured and then produced on an assembly line basis or if a new system or component that was not available in private industry had to be developed, then DTC would be applicable. This decision model can be applied to other AFSC acquisition programs. Author (GRA)

**A TAXONOMY OF COST ESTIMATING CHARACTERISTICS AS APPLIED TO AN AIRCRAFT REPLENISHMENT SPARES MODEL** M.S. Thesis  
 Eric E. Nelson and William E. Smith Jun. 1976 206 p refs  
 (AD-A030239; SLSR-01-76A) Avail: NTIS HC A10/MF A01 CSCL 15/5

Department of Defense cost estimation requires improvement, particularly as it applies to budgetary estimates for major weapon system acquisitions. This research explores ways of improving cost estimating methodology by the development of a taxonomy of cost estimating characteristics which may be used as a guide in constructing and evaluating cost estimating models. Such a guide was developed on a framework of systems theory and applied to the construction of a conceptual model designed to estimate replenishment investment spares budgetary requirements for the Air Force Logistics Command (AFLC) in support of major weapon systems acquisitions. The taxonomy of cost estimating characteristics was then used to evaluate the conceptual model and the present AFLC replenishment investment spares model. The research demonstrated the usefulness of a taxonomy of cost estimating characteristics and concluded that budgetary estimates for replenishment investment spares could be improved. Author (GRA)

**LIFE CYCLE COST MODELS FOR DURABLE VERSUS DISPOSABLE PACKAGE DECISIONS** M.S. Thesis  
 James A. Arnestad and Samuel C. Emerson Jun. 1976 118 p refs  
 (AD-A030293; SLSR-26-76A) Avail: NTIS HC A08/MF A01 CSCL 15/5

The Department of Defense (DOD) and its service branches have placed increasing attention on defense expenditures. The importance of finding new cost reduction methods cannot be over-emphasized. DOD packaging costs are significant. These costs can probably be reduced by the application of proven management techniques. This research effort applies accepted life cycle cost techniques to the area of packaging decisions.

The application of these techniques can act as a decision tool for selecting preferred alternatives. Air Force Logistics Command (AFLC) packaging managers have indicated that a life cycle cost model would be of invaluable assistance to their Air Logistics Center (ALC) item managers (IM) as well as Air Force Systems Command's System Program Offices (SPO), in the selection of package types. **ECONOMIC MODELING: AN AID TO THE PRICING OF INFORMATION SERVICES**

Harriet W. Zais Aug. 1976 16 p refs Presented at the Ann. Meeting of the Am. Soc. for Inform. Sci., San Francisco, 5 Oct. 1976

(Contract W-7405-eng-48) (LBL-4899; Conf-761011-3) Avail: NTIS HC A02/MF A01

Components of the pricing decision are identified: the pricing objectives pursued, the pricing policies these aims are translated into, and the actual pricing methods employed in calculating what price to charge. Several of the pricing practices are described using a basic classification scheme developed for the field of marketing: cost-oriented, competition-oriented, and demand-oriented approaches to pricing. Costs represent a starting point for developing pricing structure, and cost-oriented pricing techniques are taken up in detail. Cost functions are identified, and their impact on price setting is suggested. Examples and data are provided from recent research into the pricing of computer-assisted selective dissemination of information services. The techniques of price discrimination, marginal cost pricing, and break-even analysis are discussed. ERA

**RESOURCE RECOVERY PLANT IMPLEMENTATION: GUIDES FOR MUNICIPAL OFFICIALS, PROCUREMENT**

Alan Shilepsky 1976 73 p (Contract EPA-68-01-2647) (PB-259140/2; EPA/SW-157.5) Avail: NTIS HC A04/MF A01 CSCL 13B

A competitive negotiation approach to procurement of resource recovery systems and services is refined and explained. This approach offers flexibility and is appropriately used to procure not only equipment and facilities, but also a 'system designer', whether a consulting engineer or a design and construct contractor. Topics that are treated in some detail are managing the procurement process, i.e., procedures for soliciting and evaluating proposals, and preparing the Request for Proposals. GRA

Yvonne M. Garbe and Steven J. Levy 1976 54 p refs Sponsored by EPA (PB-259141/0; EPA/SW-157.3) Avail: NTIS HC A04/MF A01 CSCL 13B

Several materials and a variety of different energy products can potentially be recovered from municipal solid waste and sold to produce revenue. The markets for these energy and material products are discussed, focusing on those characteristics that effect marketability. Included are descriptions and locations of potential markets, the product quality required by those markets, and approximate market prices. Marketing techniques are addressed with directions for conducting a market research and obtaining purchase agreement. GRA

**RESOURCE RECOVERY PLANT IMPLEMENTATION: GUIDES FOR MUNICIPAL OFFICIALS, ACCOUNTING FORMAT**

David B. Sussman 1976 22 p Sponsored by EPA  
(PB-259143/6; EPA/SW-157.6) Avail: NTIS  
HC A02/MF A01 CSCL 13B

The economics of various types of resource recovery systems are difficult to compare. System technologies vary, capital and operating costs vary, revenues from the recovered products vary, the recovered products themselves vary, and the cost accounting methods used to analyze system economics vary. This paper proposed a method of reporting costs and revenues to aid in comparing the costs of various resource recovery systems. The proposed method includes a standardized accounting format and a normalized accounting format. GRA

**RESOURCE RECOVERY PLANT IMPLEMENTATION: GUIDES FOR MUNICIPAL OFFICIALS, TECHNOLOGIES**

Bob Lowe, Bob Holloway, David B. Sussman, and Yvonne M. Garbe 1976 86 p refs Sponsored by EPA  
(PB-259144/4; EPA/SW-157.2) Avail: NTIS  
HC A05/MF A01 CSCL 13B

Techniques for converting mixed municipal waste into marketable products give municipal and regional officials a variety of new options for solving their solid waste management problems. Although these resource recovery systems cannot be expected to operate at a profit and although they will not allow a community to close down its landfill, the life of the landfill can be extended tremendously by the weight and volume reductions achieved. A technology review is presented to acquaint the reader with the available and emerging technology options for processing of mixed municipal waste for resource recovery. GRA

**TRANSPORTATION TECHNICAL ASSISTANCE NEEDS AND REQUIREMENTS ANALYSIS Final Report, Jul. - Sep. 1976**

Peter A. Albin and Rudolph G. DiLuzio Sep. 1976 37 p refs  
(Contract DOT-OS-60500)  
(PB-259680/7; DYN-UR-003; DOT-TST-76T-14) Avail: NTIS  
HC A03/MF A01 CSCL 13B

As part of the reevaluation of the priorities of transportation decision makers, the Office of R and D Policy (OST) has undertaken a study to determine the transportation technical assistance needs of the various user groups in the infrastructure. This determination was based on four independent studies: (1) TSC Technology Sharing surveys, (2) the report of the OBM Study Committee on Policy Management Assistance, (3) Urban Consortium for Technology Initiatives needs determination, and (4) the National Conference of State Legislatures survey. The analysis of these needs determinations was stratified to identify those needs peculiar to each of three user groups: (1) policy, (2) planning and evaluation, and (3) operations. The relationship of the needs to both the public management processes and Federal transportation policy is presented. GRA

**CONVERSION OF SELECTED MILITARY FORCES TO THE USE OF METRIC MEASUREMENT UNITS M.S. Thesis. Final Report**

Gordon L. Boozer 11 Jun. 1976 94 p refs  
(AD-A029707) Avail: NTIS HC A05/MF A01 CSCL 05/1

Conversion of the United States military to the International System of measurement units is in the very early stages. Little

formal planning has been done to articulate the management required to complete the conversion of operational Army and Air Force units. For those operational forces tasked to provide continuous combat readiness throughout metrication, management problems associated with the conversion are particularly difficult because of the nature of these assigned missions. This is the case for the 82nd Airborne Division ready brigade force (DRB) and the Military Airlift Command (MAC) strategic airlift system operating the C-141 and C-5A aircraft. GRA

**AN INVESTIGATION OF ECONOMIC FACTORS IN FCC SPECTRUM MANAGEMENT**  
John O. Robinson Aug. 1976 37 p refs  
(PB-258500/8; FCC/OCE/SAS-76-01) Avail: NTIS  
HC A03/MF A01 CSCL 17B

The result of a preliminary analysis of the feasibility and merit of introducing market characteristics into the FCC spectrum management process are reported. The investigation is aimed at the more modest, but also the more practical, goal of introducing those economic techniques into spectrum management that will eventually result in some measure of increased efficiency in spectrum allocation and use. A free market in the spectrum is considered and rejected as not feasible at this time because of the cost of enforcing property rights. The investigation shows, however, that market characteristics applied within an administrative management process would result in more efficient allocation and use of the spectrum. Three techniques emerged as promising means by which to incorporate economic factors into administrative spectrum management. These include shadow pricing, user charges and auctions. GRA

A system must operate for  $t$  units of time. A certain component is essential for its operation and must be replaced, when it fails, with a new component. The class of spare components is grouped into  $n$  categories with components of the  $i$ th category costing a positive amount ( $C_{sub i}$ ) and functioning for an exponential length of time with rate ( $\lambda_{sub i}$ ). The main problem of interest is, for a given  $t$ , to assign the initial component and subsequent replacements from among the  $n$  categories of spare components so as to minimize the expected cost of providing an operative component for  $t$  units of time. Nov. 1976 76 p 3 Vol.  
(Contract ESOC-TA/154/75-AR)  
(ESA-CR(P)-893-Vol-1) Avail: NTIS HC A05/MF A01

A simple basic computer configuration in a ground support system was studied with a view to optimizing scheduling. Operational problems likely to occur on this system were examined and where possible related to the design of the system. Some of the operational difficulties that will arise are highlighted, and methods of solution for a more complex network configuration are extrapolated. Ground system parameters of interest are identified and illustrated by the ESOC program for Meteosat. Operational problems that will exist are identified, and a proposal is made for the development of solution methods. ESA

 Nov. 1976 68 p 3 Vol.

(Contract ESOC-TA/154/75-AR)

(ESA-CR(P)-893-Vol-2) Avail: NTIS HC A04/MF A01

Possible techniques for solving the problems of satellite ground computer systems optimal scheduling were developed. Mathematical programming is discussed as the most useful family of optimization techniques. Various formulations directly dependent on the mode of operations are proposed, and, for each, the most likely application possibilities are indicated. For unsolvable cases such as representation in a closed functional form of some of the relationships of the ground system, simulation techniques are discussed. Several useful techniques are identified which can be applied in both the transition stages of ground system operations, in planning for expected contingencies, and in the analysis that will accompany the experimental phase of a satellite system. ESA

**A COMPARISON OF SELECTED SCHEDULING HEURISTICS FOR A TAC F-4E MAINTENANCE ORGANIZATION M.S. Thesis**

Richard F. Glad and Robert T. Pierce Sep. 1976 87 p refs  
 (AD-A032327; SLSR-23-76B) Avail: NTIS HC A05/MF A01 CSCL 15/5

Scheduling of activities in simple and complex environments has been a subject of active research for many years. The USAF has actively supported such research in its continuing efforts to determine the impact of scheduling effectiveness on mission capability. The recent validation and availability of the Logistics Composite Model (L-COM) made it possible to test selected scheduling heuristics in the dynamic maintenance environment of a TAC F-4E squadron. Five heuristics were formulated, inserted into the model, and allowed to operate during simulation. Results of the simulation indicated that the selected heuristics did impact mission capability, that rank ordering occurred between them, and that there was a statistically significant difference between the worst and the best heuristic (88.15% to 91.57% sortie effectiveness). GRA

**A PRELIMINARY CONCEPT FOR A DESIGN CRITERIA MANAGEMENT SYSTEM**

Michael J. O'Connor and David A. Jordani Sep. 1976 89 p refs

(AD-A032125; ERL-SR-P-74) Avail: NTIS HC A05/MF A01 CSCL 13/13

The Corps of Engineers' design process relies on the relevancy and currentness of the data used in facility design and the transfer of these data to and from a variety of design and review levels. This report presents a conceptual description of an effective system for the organization, management, and communication of Department of Defense and Corps of Engineers military construction design criteria. The conceptual system comprises three major subsystems: (1) the Standard Design Criteria Subsystem provides for the handling, consistency checking, and production of standard design criteria; (2) the Project-Specific Design Criteria Subsystem permits the introduction of project-specific criteria and the merging of them with standard criteria; and (3) the Facility Criteria File Generation Subsystem translates the criteria into an appropriate format and relates the criteria to the design procedures.

Avail: NTIS

HC A07/MF A01 CSCL 09/2

GRAFTEK is an interactive graphics program that fits by least squares, a curve to N data points. This code combines two CDC 274 graphics curve fitting programs (GRAFFIT, LSQ) for use on the TEKtronix 4014 storage tube using Tektronix software (TCS). The program fits the curve and determines the constants for any of nine empirical equations or a polynomial of up to 11th degree, and displays the fitted curve (up to three at one time) against a background of the data points. Options include reading in new data, rescale of axes, deleting all displayed curves, deleting points, adding new points, restoring all original or selected deleted points, specifying constants, and calling for CALCOMP plotter or quick look hard copy of output.

**THE SYSTEM APPROACH TO MANAGEMENT: A PARADIGM FOR THE TEST AND EVALUATION PROCESS M.S. Thesis**

William Michael Branch Sep. 1976 86 p refs

(AD-A032381) Avail: NTIS HC A05/MF A01 CSCL 05/1

This thesis addresses the Test and Evaluation process and demonstrates, through application of a dynamic systems model, that the Test and Evaluation process is a conglomerate of lower-order systems. Each system can be characteristically analyzed by focusing on objectives, input/outputs, interfaces, environmental, and effectiveness dimensions. Hence, the systems approach to management is suggested as a paradigm for the Test and Evaluation process. This approach provides a systematic way of thinking about the job of management and emphasizes viewing the Test and Evaluation system as a whole instead of as segregated parts. The classic functions of management can be put in juxtaposition with the phases of test and Evaluation to provide a better insight to management of scarce resources. Implementation of a strategy is perhaps the most important first step in practically using the systems approach and as such stimulates the manager to think in the proper perspective.

**AN HEURISTIC SCHEDULING ALGORITHM FOR RESOURCE-CONSTRAINED PROJECT NETWORKS M.S. Thesis**

Stewart Iden Marsh, Jr. Dec. 1976 41 p refs

(AD-A031819) Avail: NTIS HC A03/MF A01 CSCL 05/1

An algorithm is proposed for scheduling project networks having a single constraining resource and a constant level of available resources. The algorithm seeks to generate a minimum length schedule indirectly by maximizing the average resource utilization over the two time intervals represented by the current decision point and its successor. An attempt is made to schedule all of the activities whose predecessors have been completed; failing this, all feasible subsets are considered. Where

possible, the algorithm considers only those subsets which introduce new activities at the subsequent decision point. GRA

**AN ANALYSIS OF EXISTING ETHICAL GUIDELINES AND THE DEVELOPMENT OF A PROPOSED CODE OF ETHICS FOR MANAGERS M.S. Thesis**

Randolph K. Adams Sep. 1976 181 p refs  
(AD-A032387; GSM/SM/76S-1) Avail: NTIS HC A09/MF A01 CSCL 05/1

Recent disclosures of questionable behavior on the part of leaders of many American institutions have left people disillusioned with professions which once commanded deep respect. The primary objective of this study is to develop a proposed universal code of ethics for managers in response to public demand for a clearer picture of the ethical responsibilities of today's leaders. After reviewing current literature, the author develops the nature, need, widespread use, value, and key contents of ethical codes. Information of currently existing ethical codes, creeds, and related policy was solicited from presidents of 201 large industries selected from the 1975 'Fortune 500' listing. Inquiries were made to executive directors of 24 professional associations, to 44 small industries, and to the ethics committees of both the House of Representatives and the Senate. The proposed Code of Ethics for Professional Managers which this thesis develops is modeled on the information gathered regarding contents, format, scope of coverage, and criteria contained in the aggregation of collected codes. Responsibilities of a manager are classified and addressed in terms of key interest groups as follow: customers, investors, employees, employer, the public, and professional associates. The proposed code is presented as a separate unit within the thesis so it may be extracted for review, discussion, and use.

(BLL-BLRD-5302-(2113.56F); Publ-8) Copyright. Avail: British Library Lending Div., Boston Spa, Engl.

The questionnaire is an attempt to devise a standard means of collecting job information in a form which will permit coverage of, and comparison within, a wide and varied population, this information being provided by jobholders themselves. Description is in terms of the behavior called for by the work, and of varying factors in the working environment to which the jobholder must adapt, rather than purely in terms of the job's technical or library characteristics. At the same time, the questionnaire examines the characteristics of the jobholder and how far these match up with those called for by the job.

**INTERACTIVE MATRIX DISPLAYS AND MANAGEMENT INFORMATION REPORTING: A FEASIBILITY ASSESSMENT Ph.D. Thesis**

Bernard Kitous Jun. 1976 291 p refs  
(Contract W-7405-eng-48)  
(LBL-5310) Avail: NTIS HC A13/MF A01

Graphic methods for the display of numerical management information were investigated. A specific class of graphic representations, called matrix displays, is defined as the direct mapping of data tables into two-dimensional graphic matrices. Each data item is represented by variations in the sizes of dots or bars, or in the density of grey shadings. A three-step research methodology is chosen to assess the feasibility of matrix displays for management information reporting: findings in other fields relevant to the thesis of feasibility are identified, a theory of the usefulness of matrix displays and a corresponding model are proposed, and the practical utility of the matrix display model is assessed in a real-life managerial environment. Two different fields of research provide strong evidence that matrix displays are technically feasible, experimental results on human visual performance and multidimensional analytic research.

**SUPPORT EQUIPMENT PROGRAM FOR AVIONICS READINESS: INITIAL PLANNING**

John Bauer and Robert Staples 2 Dec. 1976 62 p refs  
(WF41461408)  
(AD-A033585; NAEC-GSED-104) Avail: NTIS HC A04/MF A01 CSCL 01/5

The Support Equipment Program for Avionics Readiness has been developed to provide greater reliability and improved maintainability of avionics and support equipment than has been achieved thus far. These goals can be achieved by properly developing the necessary technology for incorporating a high degree of readiness into the design of new equipment and for providing the specialized support equipment required to maintain this equipment. In order to attain the high degree of readiness required in future avionics systems, the Support Equipment Program for Avionics Readiness must now be instituted to insure that new technology be included when ready. In order to provide industry with definitive specifications for improved avionics systems, the Navy must have the capacity to define readiness problems and goals, to conduct research in weak or high technological risk areas, and to apply new techniques in systems designs. These efforts must be directed toward both the new primary avionics systems and the secondary support equipment systems, which are a vital part of avionics readiness. Advanced weapons systems are of limited value without the proper advanced support equipment required to maintain them. Proposals to accomplish these tasks for achieving avionics readiness have been incorporated into the Support Equipment Program for Avionics Readiness. The plan includes proposals for the development of management guidelines and techniques for demonstration of equipment support features as part of the primary equipment acceptance criteria and for determining the resulting influence on the cost of future systems.

**FUTURE PERFORMANCE TREND INDICATORS: A CURRENT VALUE APPROACH TO HUMAN RESOURCES ACCOUNTING. REPORT 2: INTERNAL CONSISTENCIES AND RELATIONSHIPS TO PERFORMANCE IN ORGANIZATION VI**

Patricia A. Percorella and David G. Bowers Oct. 1976 105 p refs

(Contract N00014-76-C-0362)  
(AD-A033608) Avail: NTIS HC A06/MF A01 CSCL 05/1

This report describes analyses preparatory to construction of a suitable file for generating a system of future performance trend indicators. Such a system falls into the category of a current value approach to human resources accounting. It requires that there be a substantial body of data which: (1) Uses the work group or unit, not the individual, as the analysis unit, and which contains standard measures of the human organization and dollar-convertible performance measures, both with high internal consistency; and (2) Displays a high frequency of statistically significant relationships of human organization to performance measures. The report describes analyses which were conducted on data from 3 plants of a multi-location manufacturing organization. Internal consistency reliabilities of both human organization (survey) data and performance (total variable expenses and absence rate) were shown to be high, and a pattern of human organization-to-performance correlations resulted which are quite useable. With this data, the authors now have a base of 5 organizational data sets from which they should be able to take the next steps: multiple regression, time lag and magnitude estimation, and value attribution. **A MODEL INTERFACE FOR THE DECISION AIDING INFORMATION SYSTEM Interim Report**

Ralph M. Mitchell, Jr. Sep. 1976 71 p refs  
(Contract N00014-75-C-0440)  
(AD-A033416; Rept-76-09-11) Avail: NTIS HC A04/MF A01 CSCL 05/1

Under the sponsorship of the Office of Naval Research, the Decision Aiding Information System is being developed at the Wharton School to provide a vehicle to assist the tactical level decision maker in bringing together available data, models and programs, and through an active role in user/system interactions improve the manager's decision making activities. In today's complex systems, models have the capacity to play an ever-expanding role in the decision environment, but a system was required that would provide the decision maker with information which will (a) lead the decision maker to the proper model for the situation, (b) automatically find and transfer the required data to the model, and (c) transfer results back to the decision maker in an easy to use form. This paper explains the development and implementation of a Model Interface Program to meet these requirements in order to provide a bridge to enable the manager to integrate mathematical models into his own decision processes. **DEVELOPMENT OF A RESEARCH PROJECT SELECTION MODEL: APPLICATION TO A CIVIL HELICOPTER RESEARCH PROGRAM Final Report**

Michael B. Schoultz and Ira D. Jacobson May 1977 227 p refs  
(Grant NSG-1274)

(NASA-CR-152701; UVA/528051/ESS77/102) Avail: NTIS  
CSCL 01C

A model is described for planning and decision making in research project selection. Evaluations of each project's direct and indirect benefits, uncertainty in achieving these benefits, and schedule priority with resource budget and program balance constraints are considered. The combination of the interactive effect of project selection, resource allocation and scheduling considerations into one model permits tradeoff alternatives to be studied. Clients' value judgments are used in evaluating the benefits from each proposed project. The model is applied to the NASA Civil Helicopter Technology Program. Research project priorities for this program are established, strengths and weaknesses of the model are discussed, and areas of future development are recommended. Author

**SPACE SHUTTLE: A CASE STUDY IN ECONOMIC ANALYSIS**

Byron Theurer Apr. 1976 44 p refs  
(AD-A033871) Avail: NTIS HC A03/MF A01 CSCL 22/2

This case study reports on an application of economic analysis; provides examples of the methods; and draws conclusions and comments on lessons learned. It was developed from NASA and contractor primary references and from the author's experiences. In 1971, NASA was faced with a dilemma. The Space Shuttle Program, which had been established to substantially reduce the cost of space operations, was being designed to reduce principally transportation cost. Issues were surfacing which established that this transportation cost emphasis did not account for Shuttle development cost and the great bulk of the costs of a satellite program. OMB, furthermore, was imposing a peak funding ceiling which precluded developing the then baselined configuration. Economic analysis performed by MATHEMATICA, Inc., succeeded in establishing the economic worth of

Shuttle and pinpointing the most economical configuration. Of particular interest are the explicit treatment of uncertainty in the data base and the innovative methods used to graphically portray results. GRA

Methods by which the manager of a small business can analyze his energy use, and determine the areas in which energy savings can be made are reported. The magnitude of the possible cost savings is estimated. A check list suggests some seventy items which might be important cost saving opportunities to an individual business. Eight of these opportunities are expanded in the appendix into miniature case studies illustrating simple methods for estimating savings. A listing of sources of assistance is included as a guide to obtaining consulting advice. GRA

**A GENERAL SYSTEMS MODEL FOR MEASURING ORGANIZATIONAL EFFECTIVENESS** Ph.D. Thesis

Willis Harold Martin, Jr. 1976 164 p  
 Avail: Univ. Microfilms Order No. 77-6006

Selected functions of general systems theory were used to develop a model to measure organizational effectiveness as determined by managers in selected organizations. Prior to developing the model, a taxonomy for structuring organizational activities was developed. Three hierarchical structures were examined for applicability. These structures are referred to by the strategy used in their development and are identified as (1) reductionist, (2) temporal, and (3) morphological structure. A modification of the morphological structure led to the categorization by the functioning characteristics of an organization. Viewing an organization as an adaptive system and applying general systems theory led to the definition of the generalized functioning characteristics of (1) adaptive self-stabilization, (2)

adaptive self organization, (3) growth, (4) differentiation, (5) control, and (6) competition. Dissert. Abstr.

**INNOVATION AND PRODUCTIVITY IN RESEARCH AND DEVELOPMENT: SOME ASSOCIATED INDIVIDUAL AND ORGANIZATIONAL VARIABLES**

Michael J. Stahl May 1976 283 p refs  
 (AD-A032273; AFIT-TR-76-10) Avail: NTIS HC A13/MF A01 CSCL 05/10

The relationships of organizational variables with innovation and productivity of scientists and engineers in R and D laboratories were explored. Peer ratings of innovation (original and useful output) and productivity (quantity of output) were utilized as criterion. Information was obtained on 154 scientists/engineers in 35 work groups in three Air Force R and D laboratories. Significant relationships found between organizational variables and innovation and productivity included: rewards for innovation, communication on technical matters with other scientists/engineers within the work group, and an age-education demographic group of variables. Level of participation in goal setting and group leader's level of empathy were also consistently related to level of productivity. GRA

**A PROPOSED R AND D MANAGEMENT MODEL.**  
 Robert F. Chaillet and Herman W. Mies Dec. 1976 46 p  
 (AD-A033099) Avail: NTIS HC A03/MF A01 CSCL 05/2

This report describes a proposal that would account for the resources used to perform basic research and exploratory development within the Department of Defense. It describes a means by which research and development managers can determine the output being derived from the resources expended. The proposed system could be implemented with minor changes to existing regulatory reporting requirements. No new DOD reporting forms would be required for the proposed system. Author (GRA)

**LIFE CYCLE MANAGEMENT OF ARMY TACTICAL MANAGEMENT INFORMATION SYSTEMS (TACMIS)**

Mack C. Ward 13 May 1976 28 p refs  
 (AD-A032499) Avail: NTIS HC A03/MF A01 CSCL 05/1

The purpose of this study is to examine the life cycle management of Army Tactical Management Information Systems with particular emphasis on integration of the requirements of the Life Cycle System Management Model (LCSMM) for Army Systems, DA Pam 11-25, and the Army Management Information System (AMIS) AR 18-1. Considerable attention, both in the literature and in practice, has been given to the systems acquisition process for inception through development into production. The principal thrust of this attention, however, has been directed towards RDT and E and acquisition of weapons systems to counter a perceived threat. This study focuses on areas in the present AMIS Model that appear to be weak and attempts to correlate some of the more significant activities and documentation requirements with the LCSMM. The end result of this effort is the determination of the feasibility of developing a single Army TACMIS model with the detail of the LCSMM. Author (GRA)

**THE USE OF INSIGHT IN MANAGEMENT DECISIONS** M.S. Thesis

Sorrell Berman Sep. 1976 54 p refs  
 (AD-A033696) Avail: NTIS HC A04/MF A01 CSCL 05/10

This thesis hypothesizes that insight is the key element in effective decision-making. It approaches this position by developing a basic model of the environment in which the manager functions, showing the resources at his disposal. It then describes the contributions of the technologies which form the knowledge base for decision-making. Next, it distinguishes between intuition and insight, and demonstrates that it is insight which is the basis for the effective manager's art. GRA

Michael F. Salata 16 May 1976 59 p refs  
(AD-A033954) Avail: NTIS HC A04/MF A01 CSCL 05/1

Independent research and development (IR/D) is contractor technical effort not sponsored by or required in the performance of a Government contract. DoD Directive 5100.66 states the policy for recovery of contractors costs and outlines the procedures for administration of contractor initiated R/D effort. Controversy over the DOD policy centers around 2 points: (1) the value of IR/D to the Government considering the expenditure involved; and (2) the appropriateness of the present method of recovery of costs considering other possible alternatives. This report seeks to determine what was perceived as the value of the DOD IR/D program; and, with some knowledge of the current administrative policy for IR/D, to determine the proposed alternatives and how they are perceived. This report includes a discussion centering around the benefits of IR/D definition of various proposed alternative recovery methods for IR/D costs, and an evaluation of these methods by the parties involved in this controversial program. **AIRCRAFT AIRFRAME COST ESTIMATION UTILIZING A COMPONENTS OF VARIANCE MODEL M.S. Thesis**

Ronald C. Marcotte Oct. 1976 99 p refs  
(AD-A032627; GOR/SM/76D-10) Avail: NTIS HC A05/MF A01 CSCL 05/1

Previous studies into airframe acquisition cost estimation do not explicitly recognize the existence of correlation in the historical data. If one believes this data problem exists, then it is possible to develop a components of variance model that takes the problem into account. It is a more general model that recognizes two sources of error: (1) error due to different types of airframes and (2) overall or ordinary regression error. The variance of these two errors can be estimated and then can be utilized along with the technique of generalized least squares to obtain a cost estimating relationship which explicitly accounts for the data correlation. This modeling technique, when compared to techniques presently in service, shows that present estimating relationships underestimate the variance of the cost prediction of a new type airframe and overestimate the variance of the cost prediction of a follow-on airframe. Also, those existing techniques which implicitly recognize data correlation do not make use of all the data information available and therefore produce estimates with poor confidence prediction intervals. GRA

**UTILIZATION OF TECHNOLOGY TRANSFER CONCEPTS AS AN AID FOR ENGINEERING MANAGEMENT IN A TEST AND EVALUATION ORGANIZATION M.S. Thesis**

Jack A. Grubber Sep. 1976 135 p refs  
(AD-A033697; NPS-54CF76093) Avail: NTIS HC A07/MF A01 CSCL 05/2

This thesis addresses Technology Transfer as it might be applied in a Test and Evaluation (T and E) activity for weapons systems and components within the Federal Government. Factors associated with the technology transfer process, aids and barriers to technology transfer, the innovative and creative processes, and managerial requirements for technology transfer are related to the job of an engineering manager in a T and E organization. From the relationships, a paradigm for action for middle management engineers to improve technical capability by utilizing technology transfer concepts is formulated. GRA

**AN ANALYSIS OF THE EFFECTS OF ROUTE RESTRICTION REMOVAL AND DISCRETIONARY AUTHORITY: THE TRANSITION TO A LESS-REGULATED ENVIRONMENT, VOLUME 1**

Jan. 1977 147 p refs 3 Vol.  
(Contract DOT-OS-60155)  
(PB-263685/0; DOT/RAD-12-Vol-1) Avail: NTIS HC A07/MF A01; also available in set of 3 reports, PB-263684-SET, HC E21 CSCL 01B

The consequences to be expected during a transition to greater competition in scheduled interstate air transportation are considered. The conditions studied included the removal of all the certificate restrictions the CAB has placed on existing carriers and, simultaneously, a limited discretionary expansion of carriers' existing route structures. A profile of each trunk line and local service carrier was developed. The consequences of probably entry and exit scenarios were projected for each carrier, for each of the markets it serves, in terms of load factors, ASM, PRM's, and flight frequencies. GRA

**OPTIMIZATION OF RECURRENT CAPACITY EXPANSION MODELS AND GENERALIZATION TO A NON-RECURRENT MODEL**  
R. Scott Shipley 11 Oct. 1976 84 p refs  
(Contract N00014-75-C-0561; NR Proj. 042-002)  
(AD-A033429; SU-TR-180) Avail: NTIS HC A05/MF A01 CSCL 12/2

The determination of optimal expansion sizes  $X^*(K)-1$ , for recurrent capacity expansion strategies of the form  $(X,K)$  where  $X-1$  represents the expansion size undertaken whenever excess demand reaches the value  $K-1$  is considered here, for fixed values  $K$ . A Policy Improvement algorithm is derived to determine optimal expansion sizes for general expansion functions. For a certain class of expansion functions, which includes discrete convex functions, it is shown that the expected discounted costs are unimodal in the expansion size and that the optimal expansion size  $X^*(K)-1$  increases monotonically with  $K$ ; an Interval-Bisection algorithm is given to determine  $X^*(K)$  for this case. The monotonicity of the optimal expansion size is also demonstrated, prior to integer-truncation, for important classes of concave expansion functions which are continuously differentiable; a simple Function Iteration algorithm is derived to determine optimal expansion size for this case. (Contract N00014-75-C-0561)  
(AD-A033777; SU-TR-177) Avail: NTIS HC A02/MF A01 CSCL 12/2

Given a system which operates for  $t$  units of time and a certain component is essential for its operation and must be replaced, when it fails, with a new component. The class of spare components is grouped into  $n$  categories with components of the  $i$ th category costing a positive amount  $C_i$  and functioning for an exponential length of time with rate  $\lambda_i$ . The main problem of interest is, for a given  $t$ , to assign the initial component and subsequent replacements from among the  $n$  categories of spare components so as to minimize the expected cost of providing an operative component for  $t$  units of time. (Contract DASG60-76-C-0080)  
(AD-A033888; CSTR-279) Avail: NTIS HC A08/MF A01 CSCL 09/2

The research proposal is to support the development of the 'science' behind software engineering in order to ensure required system properties, to compare current software engineering techniques, to develop specification for new design and analysis tools, and to demonstrate the practicality of the 'science'. A hierarchical design schema will be developed within which formal representations and analyses can be defined and the required solutions can be found. Since 'worst case' problems are generally impossible to solve, sufficient design laws or constraints will be developed to ensure solvability of the critical problems. Author (GRA)

Howard M. Bloom Nov. 1976 59 p  
(AD-A034427; HDL-TM-76-36) Avail: NTIS HC A03/MF A01 CSCL 05/2

A data-base language called RECALL has been implemented on the Wang 2200 programmable desk calculator. The language was patterned after RETRIEVE, developed by Tymshare, Inc., for its time-sharing network. Differences between the two implementations are very minor. The report describes each command in the language and gives a comprehensive example to illustrate how the entire system can be used. The listing of the program allows the reader to make modifications, if necessary. The RECALL system is implemented on a 2200C calculator with 16k bytes of memory and a model 2230 disk used for temporary storage of the overlay segments needed for running the program. The system assumes that the data bases will be permanently saved on tape cassette. Author (GRA)

**A METHODOLOGY FOR ESTIMATING JET ENGINE COSTS EARLY IN WEAPON SYSTEM ACQUISITION**  
Michael A. Yanke 1 Aug. 1976 38 p ref  
(AD-A033667) Avail: NTIS HC A03/MF A01 CSCL 21/5

The Department of Defense (DOD) is deeply concerned about developing accurate initial estimates for weapon system production costs. An area of particular interest is providing estimates of future production costs for jet engines. Current parametric models used by the Air Force identify engine cost as a function of output variables. Other DOD agencies consider relating input variables as well as output variables to production costs. This study was designed to find a better way to estimate engine production costs. The results of this research include the following findings: (1) current Air Force cost-estimating models are operationally ineffective; (2) raw materials-related variables are highly correlated with cost and should be considered in developing future cost-estimation models; (3) statistical validation of cost models should incorporate confidence interval testing at a specified alpha level for each prediction; and (4) the use of confidence intervals is the correct statistical approach for developing cost estimates which may be used in decision making. **N77-25856# Defense Systems Management School, Fort Belvoir, Va.****CONFIGURATION MANAGEMENT FOR THE DEVELOPMENT OF COMPUTER SYSTEMS**

Mark D. Anway Nov. 1976 41 p refs

(AD-A036782) Avail: NTIS HC A03/MF A01 CSCL 05/1

This study examines configuration management as defined in Department of Defense publications for major defense systems and applies configuration management to the development of computer systems. DOD Directives, DOD Instructions, Military Standards, and Air Force publications provide the primary source of configuration management principles and functions. Configuration management has had limited application to embedded computer systems and even less to general purpose computer systems. The study discusses configuration management principles in the computer system environment and concludes that these principles can be and should be applied to the development of computer systems. To demonstrate that conclusion, the principles are applied to a specific Air Force program, the Base Level Data Automation Program (Phase 4). Author (GRA)

Avail: NTIS HC A07/MF A01 CSCL 05A

The advantages and disadvantages of the use of minicomputers in management information systems is presented. Boise City concluded that the minicomputer approach to managing data has very distinct and identifiable cost savings over traditional alternatives without sacrificing efficiency and effectiveness. Boise City's decision as a direct result of this research project was to acquire a minicomputer, accept this risk of the current state of minicomputer technology as minimal, and to take advantage of the cost savings. **RAPID SCREENING OF DECISION OPTIONS**

Judith Selvidge Oct. 1976 107 p refs

(Contract N00014-76-C-0074)

(AD-A035386; TR-76-12) Avail: NTIS HC A06/MF A01 CSCL 05/1

Decision analysis is a formal method for dealing with decision making under uncertainty that takes into account the decision maker's many options, the possible uncertain events that may occur, the probabilities of occurrence of various outcomes of these events, and the decision maker's utility or value for consequences of different combinations of options and outcomes. By means of the format of decision trees or diagrams, the decision situation can be presented graphically and, in particular, the possible decisions and events clearly enumerated and the sequential nature of the decision process shown. This paper discusses a method, applicable to some decision problems, for reducing the analysis to a small, rather manageable set of simple options and a limited number of uncertain outcomes. This technique is called rapid screening of decision options. GRA

**ON USING SCENARIOS IN THE EVALUATION OF COMPLEX ALTERNATIVES**

Michael F. O'Connor and Ward Edwards (Univ. Southern Calif., Los Angeles) Dec. 1976 72 p refs

(Contract N00014-76-C-0074; ARPA Order 3052)

(AD-A035387; TR-76-17) Avail: NTIS HC A04/MF A01 CSCL 05/1

The deployment of large military (or social) systems will occur in an uncertain future, and decisions concerning the design of and choice among alternative systems must therefore involve projections of the expected outcomes of system deployment in such uncertain futures. An attempt to represent the large number of potential alternative futures using an event diagram will result in the bushy-mess problem, often encountered in applications of decision analytic techniques, in which the number of different branches in a probability (or decision) tree is prohibitively large. An alternative to attempting to exhaustively characterize the future in a system evaluation is to evaluate the alternative systems in a reasonable number of hypothetical scenarios. This report is intended as a general discussion of the problem of the use of such scenarios in system evaluation. GRA

**OPTIMAL DESIGN OF A MANPOWER SYSTEM**

Richard C. Grinold Jan. 1977 24 p refs

(Contract N00014-75-C-0619; NR Proj. 047-120)

(AD-A035434; ORC-77-1) Avail: NTIS HC A02/MF A01 CSCL 05/1

An equilibrium model of a manpower system is developed based on the notion of a career flow. Institutional constraints and measures of system performance are linear functions of the career flow. A typical optimal design problem is formulated and a solution procedure is developed. The optimization problem is a generalized linear program in which columns are generated by solving a shortest path problem. Upper and lower bounds on the optimal value function can be developed at each stage of the calculations. Author (GRA)

Avail: NTIS

HC A02/MF A01 CSCL 09/2

The primary objective of the NAVLIS Project was application of computer networking and data base accessing technology to the current Navy automated logistics environment. The program was terminated in December 1975. This report describes the computer software developed during the construction of a pilot model and the capabilities of that software to extract data from distributed data bases on non-homogeneous computers at geographically dispersed sites. The major technical interests and contributions of the project were Distributed Data Directory concept, Generalized parameter-driven data base interface, Synonym resolution capability and Secondary hit resolution capability. The major recommendations of this report are that NAVLIS Technology be reviewed for its relevance to on-going university level projects, NAVLIS Technology be considered for its potential benefits to other logistics system developments, such as WWMICS and NAICOMMIS, and consideration be given to utilizing the NAVLIS Technology in networking the Navy Data Processing Service Centers. **PROTOTYPING: A STRATEGY FOR THE ACQUISITION OF NAVAL AIRCRAFT**

Michael Alton Pearce 10 Nov. 1976 80 p refs

(AD-A035357) Avail: NTIS HC A05/MF A01 CSCL 15/5

This study examines the historical uses of the aircraft prototype in the acquisition process, and identifies conditions and events which warrant the use of a prototype strategy in naval aircraft development. Prototyping is evaluated considering service compliance with Department of Defense Directive 5000.1. Prototyping is additionally investigated as an adjunct in meeting current design to cost and life cycle cost objectives. The study concludes that competitive aircraft prototyping can provide significant risk reduction in cost, schedule, performance and source selection. The study recommends that the Naval Air Systems Command adopt and implement a prototype acquisition strategy employing a competitive, critical subsystems prototype during the validation and full scale development phases of future aircraft development. **SUBCONTRACT MANAGEMENT AND LESSONS LEARNED**

Ernest W. Rousseau Nov. 1976 29 p refs

(AD-A037074) Avail: NTIS HC A03/MF A01 CSCL 05/1

For a number of years, a major Air Force space program was faced with the problem of having to procure a critical subsystem from a sole source subcontractor. The primary reason for his monopoly was a proprietary process used in his commercial business. The cost associated with meeting the vendor's ever increasing demands was unacceptable and dictated management action. A prototype competition was conducted and resulted in the selection of a new vendor. Associated with this was improved technology, lower cost and better response to schedule requirements. The original subcontractor sued the government and lost. The litigation did however, provide some important 'lessons learned.' Described in the report is the evolution of the problems, relation between the prime contractor and the government in arriving at a solution, the litigation and lessons that were provided. **SPAERS: SIMULATION FOR THE PERFORMANCE AIRCRAFT ENGINE REPAIR SYSTEMS M.S. Thesis**

Henry Givray and Robert Slon May 1976 194 p refs

(Contract N00014-75-C-1172; NR Proj. 042-335)

(AD-A035737) Avail: NTIS HC A06/MF A01 CSCL 21/5

The allocation of spare aircraft engines is critical to the U.S. Naval aircraft operation's performance. An aircraft in this system becomes inoperative in the event of an engine failure and remains in that state until it is replaced by a serviceable engine. An engine is removed upon failure and subsequently is recovered by repairing it at the location's repair facilities or elsewhere. However, the availability of a spare engine at the location could reduce the amount of time an aircraft spent in an inoperative state due to engine repair time. Analytical models have been developed by the DOD to calculate spare engine requirements throughout the system. The models require assumptions to be made about certain parts of the system. A *Simulation for the Performance of Aircraft Engine Repair System SPAERS* was developed to simulate different configurations of an aircraft repair system. The analysis section of this report shows a comparison between two situations, namely the analytical rendering of the repair system, and a situation more closely resembling the real system dynamics. GRA

**PROJECT MANAGEMENT OF ARMY AIRCRAFT SURVIVABILITY EQUIPMENT**

William A. Allen Nov. 1976 47 p refs

(AD-A036785) Avail: NTIS HC A03/MF A01 CSCL 01/3

Efforts by the U.S. Army to improve the survivability characteristics of its combat aircraft resulted in a proliferation of modifications ranging from simple airframe changes to the development of extremely complex electronic countermeasures. To effect centralized management of the development, procurement, and deployment of survivability enhancing equipment, it was necessary to establish the Aircraft Survivability Project Manager's Office within the U.S. Army Aviation Systems Command. This report addresses the policies, regulations, missions, responsibilities, and management concepts employed by the Project Manager and supporting organizations in the realization of this goal. Author (GRA)

**INSTRUMENTATION MAINTENANCE**

Dick A. Mack Sep. 1976 26 p refs Presented at the Conf. on Management of Lab. Instr., Cairo, 5-14 Nov. 1976

(Contract W-7405-eng-48)

(LBL-5505; Conf-761105-4) Avail: NTIS HC A03/MF A01

The organization, staffing and operation of a facility for instrument repair is described. Maintenance policy should be based on studies of (1) preventive vs. catastrophic maintenance, (2) records indicating when equipment should be replaced rather than repaired and (3) priorities established to indicate the order in which equipment should be repaired. Upon establishing a workable maintenance policy, the staff should be instructed so that they may provide appropriate scheduled preventive maintenance, calibration and corrective procedures, and emergency repairs. The education, training and experience of the maintenance staff are discussed along with the organization for an efficient operation. The layout of the various repair shops is described in the light of laboratory space and financial constraints. ERA

**THE EFFECT OF RELIABILITY AND MAINTAINABILITY ON THE F-14A TF30P412A ENGINE**

Bruce N. Erickson Nov. 1976 82 p refs

(AD-A037985) Avail: NTIS HC A05/MF A01 CSCL 01/3

This report covers a brief history of the TF30P412A Engine and the F-14A's capabilities, the present military specification for aircraft engine testing, analysis of major components of the TF30P412A reliability and maintainability (RAM) and their

affect on availability and the logistics support system. It can be concluded from the report that our present system for developing and testing aircraft engines needs to be improved and that the TF30P412A is a result of the inadequate process. The low operational readiness of the F-14A can in part be blamed on the TF30P412A engine's low RAM. The supply problem has grown due to a proliferating parts problem resulting from numerous Engineering Change Proposals (ECP's). It is recommended that the Navy: continue to place more emphasis on reliability in the future; establish a Joint Engine Program Office with the Air Force; establish a 1,000 hour mission test for engine development; should give reliability priority over increased technical performance in the development of a new engine; and compare RAM figures for all the turbofan engines. Author (GRA)

**HUMAN FACTORS CONSIDERATIONS IN NEW GENERATION ARMY AIRCRAFT SYSTEMS**

Carl A. Weaver, Jr. Nov. 1976 30 p refs (AD-A037992) Avail: NTIS HC A03/MF A01 CSCL 01/3

This study is useful to project managers, decision makers and users alike, particularly those interested in rotary-wing system acquisition. It is also useful to behavioral scientists and human factors engineers as an aid to becoming sensitive to user requirements and changes in the operational environment. Purpose, scope and limitations are established. The issues are placed in perspective through a discussion of projected man-machine relationships with respect to the anticipated future operational environment of helicopters. Basic Army aviation systems of the future are described in relation to aviation missions. Projected human factors problems are examined as a function of system performance and operational trends. Human factors are related to life cycle costing by suggesting a relationship between the manager's decision flexibility and a commitment to a final system configuration. It is concluded that a departure from traditional cockpit design is necessary. Recommendations are made concerning decision criteria and human factors-acquisition cycle interface. Author (GRA)

**HUMAN FACTORS PROGRAMS IN NAVY SYSTEMS ACQUISITION**

Stephen C. Merriman Nov. 1976 61 p refs (AD-A037775) Avail: NTIS HC A04/MF A01 CSCL 05/5

This report examined the role that human factors programs play in Navy systems acquisition. It focused upon the conceptual and validation (advanced development) phases of the acquisition process since it is during this period when the great majority of system design decisions are made. Based upon previous analyses, interview data and the author's personal experience, human factors program activities appropriate to the conceptual and validation phases were identified and discussed relative to key acquisition process milestones; e.g., Development Proposal (DP) and Decision Coordination Paper (DCP) preparation, Defense Systems Acquisition Review Council (DSARC) preparation. Department of Defense and Navy systems acquisition policy was briefly reviewed in terms of its effects on the conduct of human factors programs. Past and present human factors programs were reviewed and critiqued. Current trends and major problem areas were identified and discussed. GRA

**N77-27020\*#** Battelle Columbus Labs., Ohio. **FACTORS AFFECTING THE CORPORATE DECISIONMAKING PROCESS OF AIR TRANSPORT MANUFACTURERS Final Report**

R. G. Ollila, J. D. Hill, B. R. Noton, M. A. Duffy, and M. M. Epstein 15 Dec. 1976 118 p refs (Contract NASw-2970) (NASA-CR-154618) Avail: NTIS HC A06/MF A01 CSCL 05A

Fuel economy is a pivotal question influencing the future sale and utilization of commercial aircraft. The NASA Aircraft Energy Efficiency (ACEE) Program Office has a program intended to accelerate the readiness of advanced technologies for energy efficient aircraft. Because the decision to develop a new airframe or engine is a major financial hazard for manufacturers, it is important to know what factors influence the decision making process. A method is described for identifying and ranking individuals and organizations involved at each stage of commercial air transport development, and the barriers that must be overcome in adopting new technologies. A.R.H.

**LABORATORY EQUIPMENT PROCUREMENT**

Dick A. Mack Aug. 1976 23 p refs Presented at the Conf. on Management of Lab. Instr., Cairo, 5-14 Nov 1976 (Contract W-7405-eng-48)

(LBL-5504; Conf-761105-3) Avail: NTIS HC A02/MF A01

As the emphasis of a research organization changes or its facilities are modernized it is important that the instrumentation supporting such research keep abreast of the current needs of the institution. Before acquiring new equipment one must consider the tradeoff between modifying old units and acquiring new, the obsolescence of old technologies in the light of new techniques, and the maintenance costs of older units contrasted with the cost of acquisition of new models. If a decision has been reached that new equipment is required, many factors must be considered before the actual purchase is undertaken. Considerations in translating an experimental need into the completed delivery of an instrument are discussed. ERA

**STUDY OF US ARMY LIBRARIES. VOLUME 2: DIRECTORY Final Report, Sep. 1975 - Jul. 1976**

Vernon E. Palmour, Marcia C. Bellasai, and Louise Nyce Jul. 1976 139 p  
 (AD-A036002; LS76-1-Vol-2) Avail: NTIS HC A07/MF A01 CSCL 05/2

This directory is composed of the address list compiled for the Army Library Study, September 1975 - July 1976. The address list was assembled from lists provided by the staff librarians of the various major commands, and by the chief librarians for headquarters agencies. It was then checked against the listing for the Federal Library Survey, 1972, and against Army accountability listings. Several addresses were listed later from information uncovered during the study. Service outlets indicated refer to the total number of libraries within the system, and include the main library. The names of library director/operating official who responded to the questionnaire, which was part of the Army Library Study, are listed, and current insofar as possible. Further listing of all GS-1410 series librarians is presented as of July 1976. Operating director of librarians who are in other than the GS-1410 series are noted and identified with an asterisk (\*). Their series or classification is listed where known. Arrangement of this directory is by type of library, then by Command/Agency. Telephone numbers are AUTOVON unless otherwise indicated. Numbers shown in the left column are the Army Library Study's identifying number. GRA

**STUDY OF US ARMY LIBRARIES, VOLUME 1 Final Report, Sep. 1975 - Jul. 1976**

Vernon E. Palmour, Marcia C. Bellasai, and Louise Nyce Jul. 1976 240 p refs  
 (AD-A036004; LS76-1-Vol-1) Avail: NTIS HC A11/MF A01 CSCL 05/2

This report addresses the development of programs for increasing efficiency in operation of Army libraries to meet expanding demands for services with static budgets. Army libraries are described in terms of type, resources and expenditures. Problems of current operational patterns are identified. The report recommends establishment of an Army Libraries Management Office (ALMO) which would determine goals, objectives, and priorities for Army libraries, develop uniform standards for operation and support, and develop and coordinate cooperative programs in sharing resources, shared cataloging, and centralized procurement of materials. An Army Libraries Advisory Council (ALAC) is also recommended to maintain continuous two-way communications between the ALMO and operational libraries. Author (GRA)

**MANAGEMENT ASSISTANCE FOR TEXAS CITY GOVERNMENTS. VOLUME 1: APPENDICES A-C Final Report, 1974 - 1976**

May 1976 136 p Prepared in cooperation with Texas A and M Univ., College Station  
 (Contract HUD-H-2182)  
 (PB-264866/5) Avail: NTIS HC A07/MF A01 CSCL 13B

During an 18-month period beginning in 1974, eight projects tested approaches to improving the overall policy development and management capacity of local elected and appointed officials. The demonstration had a dual thrust--making changes at the local level and organizing resources for assistance. The conceptualization, organization, and implementation of the Texas Management Assistance Project are discussed. Technical aspects of assistance to 13 cities in management development and reporting, citizen communications, personnel system design, budgeting performance, and productivity measurement are described. Of particular interest are the development methods for transfer of assistance to twelve additional cities. Diagnostic tools and work planning techniques are detailed. GRA

**CIVIL AERONAUTICS BOARD PRACTICES AND PROCEDURES**

Washington GPO 1975 263 p refs Rept. of the Subcomm. on Administrative Practice and Procedure of the Comm. on the Judiciary, 94th Congr., 1st Sess., 1975  
 (GPO-60-316) Avail: Subcomm. on Administrative Practice and Procedure

The recommendations, conclusions, and analyses arising from the comprehensive 1975 investigation of the Civil Aeronautics Board's practices and procedures are presented. Topics discussed include: competition, route policy, fare policy, capacity restricting agreements, enforcement, consumer protection, and required legislation. Author

**N77-27066#** Committee on Science and Technology (U. S. House).

**THE FUTURE OF AVIATION**  
 Washington GPO 1976 738 p refs Hearings before Subcomm. on Aviation and Transportation on R and D of the Comm. on Sci. and Technol., 94th Congr., 2d Sess., no. 82, 4-6, 11-13, 18 and 20 May 1976  
 (GPO-74-177) Avail: SOD HC \$5.90

A national policy for aeronautical research and development is considered in view of increased foreign government subsidized competition. Factors discussed include: (1) government assistance in private enterprise efforts, without diminishing competition; (2) aeronautical technological capabilities, as compared to foreign competitors; (3) aeronautical research and development capabilities and facilities; (4) areas of possible government sponsored research and development; (5) implementation of aircraft noise

control technology; (6) energy conservation in the form of reduced fuel consumption through design modification and weight reduction; (7) increased safety; and (8) airline industry economics (regulation vs deregulation). J.M.S.

**N77-27086#** Select Committee on Small Business (U. S. Senate). **THE DECLINE OF SUPPLEMENTAL AIR CARRIERS IN THE UNITED STATES, PART 1**

Washington GPO 1976 404 p refs Hearings before Subcomm. on Monopoly of the Select Comm. on Small Business, 94th Congr., 2d Sess., 6-8 Oct. 1976 (GPO-78-955) Avail: Subcomm. on Monopoly

Testimony on airline deregulation is given in detail as a means to introduce competition into the air transportation industry. Evidence was presented supporting the necessity for carriers operating large aircraft to routinize their operations. B.B.

**N77-27157\*#** Martin Marietta Corp., Denver, Colo. **ORBITAL CONSTRUCTION SUPPORT EQUIPMENT Final Report**

Jun. 1977 437 p refs (Contract NAS9-15120) (NASA-CR-151460; MCR-77-234) Avail: NTIS HC A19/MF A01 CSCL 22A

Approximately 200 separate construction steps were defined for the three solar power satellite (SPS) concepts. Detailed construction scenarios were developed which describe the specific tasks to be accomplished, and identify general equipment requirements. The scenarios were used to perform a functional analysis, which resulted in the definition of 100 distinct SPS elements. These elements are the components, parts, subsystems, or assemblies upon which construction activities take place. The major SPS elements for each configuration are shown. For those elements, 300 functional requirements were identified in seven generic processes. Cumulatively, these processes encompass all functions required during SPS construction/assembly. Individually each process is defined such that it includes a specific type of activity. Each SPS element may involve activities relating to any or all of the generic processes. The processes are listed, and examples of the requirements defined for a typical element are given. Authc

Leonard M. Freeman Apr. 1977 140 p refs (NASA-TM-X-73397) Avail: NTIS HC A07/MF A01 CSCL 13H

Elements to be considered in estimating production costs are discussed in this manual. Guidelines, objectives, and methods for analyzing requirements and work structure are given. Time standards for specific operations are listed for machining, sheet metal working, electroplating and metal treating; painting; silk screening, etching and encapsulating; coil winding; wire preparation and wiring; soldering; and the fabrication of etched circuits and terminal boards. The relation of the various elements of cost to the total cost as proposed for various programs by various contractors is compared with government estimates. Author

**GENERAL PURPOSE COMPUTER ACQUISITION**

Francis C. Marr Nov. 1976 102 p refs (AD-A037757) Avail: NTIS HC A06/MF A01 CSCL 09/2

The paper is divided into four major chapters, each of which takes the reader through a series of steps which are essential to the task of evaluating and selecting a computer system. Report concentrates on general purpose commercially available (non-embedded) computers. The inquiry was conducted by means of library research. The emphasis on topic selection is that of the author and is by no means either all-inclusive or exhaustive. The attempt was to review current literature pertaining to ADP acquisition process. Computers are pervasive. Project managers (PM) cannot ignore them. Typical managers prefer to delegate the subject of computers to specialist groups for detailed actions. A manager must be aware of such subjects as benchmarking, simulation, cost-value/scores-weights approach, etc., as they apply to computer evaluation/selection. This paper discusses these aspects and many more. In essence, it serves as an overview of methods in the above subject area, which a PM can use to pick and choose from as his particular rules, regulations, and circumstances permit. Author (GRA)

 (AD-A037895; P-5686) Avail: NTIS HC A02/MF A01 CSCL  
 09/2

Many organizations have experienced serious difficulties in developing complex computer-based systems, especially their software components. The problems include large cost overruns, schedule slippages, inadequate performance, and inability to use the system as originally envisioned. One major reason for such lack of success has been the inability of the management of the organization or the development effort to understand the need for a total-system management approach. In particular, acquisition of software and hardware separately with the hope of integrating them later does not work in complex systems. This paper outlines a management approach to acquiring computer systems which encompass the whole system, with emphasis on the software, from the initial concept formulation to the support of the operational system. Expected improvements in the development process and organizational implications of this management approach are discussed. Author (GRA)

**STEP-THROUGH SIMULATION: A METHOD FOR IMPLEMENTING  
 DECISION ANALYSIS**

Jacob W. Ulvila (Harvard Univ.), Rex W. Brown, and L. Scott Randall Nov. 1976 68 p refs

(Contract N00014-75-C-0426)

(AD-A036969; TR-76-18) Avail: NTIS HC A04/MF A01 CSCL  
 12/2

This report describes the initial development of the step-through variant of Monte Carlo simulation, a new procedure for implementing decision analysis or for training decision makers. Like regular Monte Carlo simulation it involves sampling possible aftermaths of an initial action, and generating a distribution of outcome values for it. However, the detailed structure and/or assessments of the decision model are elicited as called for in the execution of each trial. It therefore permits substantial economy of elicitation if there are few trials. The step-through procedure also offers economy of elicitation and calculation over a traditional extensive-tree decision-analytic model without requiring simplifications or aggregations in the model's conceptualization. **OPTIMAL POLICY FOR DATABASE BATCH OPERATIONS:  
 BACKUP, CHECKPOINTING, AND BATCH UPDATE**

John A. Muckstadt and Guy M. Lohman Sep. 1976 24 p refs

(Contract N00014-75-C-1172)

(AD-A037233; TR-312) Avail: NTIS HC A02/MF A01 CSCL  
 09/2

The purpose of this paper is to present a general model for determining the optimal frequency of batch operations. Specifically, optimal backup, checkpointing, and batch updating policies are derived. Our approach exploits inventory parallels, by seeking the optimal number of items--rather than a time interval--to trigger a batch. The Renewal Reward Theorem is used to find the average long run costs for backup, recovery, and item storage, per unit time, which is then minimized to find the optimal backup policy. This approach allows us to make far less restrictive assumptions about the update arrival process than did previous models, as well as to include storage costs for the updates. The optimal checkpointing and batch updating policies are shown to be special cases of this optimal backup policy. The derivation of previous results as special cases of this model, and an example, demonstrate the generality of the methodology we develop.

**MANAGEMENT STUDY OF A MERGED LARGE-SCALE  
 FLUID DYNAMICS LABORATORY: A JOINT UNIVERSITY-  
 INDUSTRY VENTURE Final Report**

John R. Ragazzini Jul. 1976 47 p refs

(Grant NSF NM-44395)

(PB-264979/6; NYU-AS-75-06)

Avail: NTIS  
 HC A03/MF A01 CSCL 05A

In order to maintain an expensive large scale fluid dynamics laboratory facility at a high level of utilization, the sharing of its equipment and its operating personnel by a number of organizations is desirable. A unique feature of the merged laboratory under study is that it brings together the fluid dynamics laboratories belonging to an industrial corporation (GASL) and an educational institution (NYU) with provisions for further increase of the number of participating institutions. Management problems such as organizational structure, equipment transfer and use, financial arrangements, personnel policies and legal questions are considered. Comparisons with existing consortia are made and certain common features with the NYU/GASL merged laboratory are described. General recommendations for the management of the NYU/GASL facility are described. The applicability of these recommendations to the general class of industry-university joint laboratories is pointed out. GRA

**PROPOSAL PREPARATION, NEGOTIATION AND AWARD. ONE OF A SERIES OF ANALYSES AND IMPACT REPORTS ON MAJOR FEDERAL REQUIREMENT AREAS Final Report**

Arthur B. Jebens Sep. 1974 95 p refs  
(Grant NSF NM-39538)

(PB-264980/4) Avail: NTIS HC A05/MF A01 CSCL 05A

Federal agency requirements relating to proposal preparation, negotiation and award are characterized by the excessive volume of material used to describe the requirements and the extent of minor variations among and within agencies on the same basic theme. Tables summarize twenty-two requirements of nine Federal agencies involved in proposal preparation, negotiation and award to document the extent of these variations. A number of unique and significantly burdensome requirements of individual agencies are identified and their impact on universities analyzed. An extensive list of findings is included as well as discussions of the impact of these requirements in terms of cost, effort, delays, introduction of conflict, academic issues, nonstandardized requirements and recordkeeping. GRA

**FEDERAL PROCUREMENT REQUIREMENTS. ONE OF A SERIES OF ANALYSES AND IMPACT REPORTS OF MAJOR FEDERAL REQUIREMENT AREAS Final Report**

William E. Moser, Jr. Jul. 1975 51 p refs  
(Grant NSF NM-39538)

(PB-264982/0) Avail: NTIS HC A04/MF A01 CSCL 05A

The philosophy which calls for minimal federal requirements consistent with responsible stewardship is demonstrated in a case study. Within the area of procurement requirements, two models for rebudgeting - the Agency Approval system and the Institutional Approval system are identified. The federal requirements associated with the two systems are described, and the Berkeley campus process for implementing the requirements is reviewed. The impact on the University of the requirements is then analyzed in terms of the advantages and disadvantages of each model. Five selected areas of the procurement function as they operate on the Berkeley campus and have been affected by federal requirements are discussed. GRA

**N77-28032#** National Association of Coll. and Univ. Business Officers, Washington, D. C.

**REVIEW AND ASSESSMENT OF RESEARCH MANAGEMENT IMPROVEMENT PROGRAM PROJECT Final Report, 16 Jul. - 31 Dec. 1976**

Steven C. Hychka and D. F. Finn 14 Mar. 1977 14 p

(PB-265012/5; NACUBO-1) Avail: NTIS HC A02/MF A01 CSCL 05A

An assessment by college and university business officers of 18 research projects is presented. Ten of these projects contributed to the understanding of the burdensome problem on federal agencies and institutions of federal regulatory requirements which contribute to lack of uniformity in meeting federal accountability needs and to increasing the paperwork burden on both institutions and the federal government. Six of the projects appear to make substantial contributions to individual institutions in addressing their own research management problems and in finding new approaches and new solutions. Two of the projects provided general services designed to be available to all institutions; these two appear to be a very successful service. GRA

**THE DEVELOPMENT OF COSTS RECOVERY SCHEME: SUGGESTED APPROACHES FOR MUNICIPAL OR REGIONAL WASTEWATER TREATMENT PLANTS Ph.D. Thesis**

Alexander Aristotelis Thomopoulos 1976 137 p

Avail: Univ. Microfilms Order No. 77-2289

Various cost allocations and user charge methods for services provided by municipal or regional wastewater treatment plants are examined, and a reasonable approach to costs recovery for financing treatment systems is developed under some of the guidelines of the 1972 Federal Water Pollution Control Act Amendments, PL 92-500. Some of the basic conclusions are: (1) charge method based on treatment costs of a treatment plant provides a more visible basis for levying charges without any implications, such as the problems of measuring damages in a stream; and (2) the federal government's proposal that a municipality recover a portion of the federal construction grant from only industrial dischargers defies the principle of economics - the burden of costs must be placed on all dischargers. Dissert. Abstr.

**STRATEGIC PLANS FOR ENERGY RESEARCH AND DEVELOPMENT, FY 1976 - FY 1981**

Sep. 1976 66 p refs

(Contract W-7405-eng-48)

(TID-27291) Avail: NTIS HC A04/MF A01

This guidance charts the course for the future direction for the Lawrence Berkeley Laboratory (LBL). ERDA approves the following institutional aspects for LBL: (1) LBL would maintain its strong capability in present basic science programs, but redirect and expand its activities on a selective basis into applied research and technology-developed programs with a goal of achieving a level of activity in these new programs comparable to those of the basic program, and (2) these applied programs would provide a basis of support for ERDA project management teams managing engineering development and demonstration projects. Three important actions that the Lawrence Berkeley Laboratory must undertake as it evolves into this new role are delineated, namely: to collaborate with engineering colleges and various social science departments at the Univ. of California Berkeley Campus; increase its contacts with industry, utilities, and state governments; and participate with the San Francisco ERDA Operations Office and ERDA Program offices in project management responsibilities. Developmental work being performed at LBL is described for the various areas and disciplines. GRA

**A UNIT TASK SIMULATOR FOR THE EVALUATION OF INTERACTIVE MAN-COMPUTER SYSTEMS M.S. Thesis**

Edwin C. Alford and James R. Buck Dec. 1976 225 p refs (Grant NSF APR-73-07822)

(PB-265097/6; NSF/RA-760457)

Avail: NTIS

HC A10/MF A01 CSCL 13H

The UTS (Unit Task Simulator) methodology was developed to assist the systems analyst in modelling the proposed interactive process or production control systems so that he could obtain data for use in evaluating and improving these systems. The UTS program allows simulation activities to be timed to occur in units of real time, and, therefore, the collected data accurately describes the behavior of the man and the process throughout the simulation. A survey of literature relevant to the analysis of man-computer systems is provided. GRA

**CHARGING FOR COMPUTER SERVICES Final Report**

Dan Bernard, James C. Emery, Richard L. Nolan, and Robert H. Scott Feb. 1977 119 p refs

(Contract N00014-75-C-0462)

(AD-A038082; Rept-77-02-06) Avail: NTIS HC A06/MF A01 CSCL 09/2

Charging internally for the use of computer facilities is now a common organizational practice. A charge-out policy can play a major role in promoting effective and efficient utilization of computing resources. In practice, charging all too often fails to have a significant beneficial impact, and indeed can be a source of tensions and user dissatisfaction. A charge-out system is most likely to be successful when it is based on an understanding of the purposes underlying charging and the requirements for it to be effective. This monograph is intended to contribute to such an understanding. Author (GRA)

**A GENERALIZED MAXIMUM ENTROPY PRINCIPLE FOR DECISION ANALYSIS**

Marlin U. Thomas Apr. 1977 26 p refs  
(AD-A039926; NPS55-77-20) Avail: NTIS HC A03/MF A01  
CSCL 12/2

A generalized maximum entropy principle is described for dealing with decision problems involving uncertainty but with some prior knowledge about the probability space corresponding to nature. This knowledge about the probabilistic structure is expressed through known bounds on event probabilities and moments, which is incorporated into a nonlinear programming problem. The solution provides a maximum entropy distribution which is then used in treating the decision problem as one involving risk. An example application is described that involves the selection of oil spill recovery systems for inland harbor regions. Other areas of application are identified and tables of some maximum entropy distributions resulting from a variety of moment constraints are provided. GRA

**A RISK MINIMIZATION APPROACH TO MULTIPLE CRITERIA DECISION ANALYSIS Ph.D. Thesis**

Pat Reynolds Odom 1976 135 p  
Avail: Univ. Microfilms Order No. 77-2713

Applications of a risk minimization approach to analysis of management decision problems involving multiple goals and constraints with uncertainties in problem input-data, are investigated. The analysis concept, termed multirisk programming, is based on determination of the alternative decision solutions which minimize probabilities that the decision maker's goals and constraints will not be satisfied. The baseline type of problem considered is that of selecting the best subset of  $m$  decision entities from a candidate set of  $n$  entities, such that specified multiple goals and constraints are satisfied with minimum risk. The multirisk programming method, model, and computer implementation are presented. A series of case studies performed using the computer model is summarized to illustrate the broad range of potential applications of the analysis concept.

**MEASURING THE EFFICIENCY OF DECISION MAKING UNITS WITH SOME NEW PRODUCTION FUNCTIONS AND ESTIMATION METHODS.**

A. Charnes, W. W. Cooper, and E. Rhodes 8 Oct. 1976 54 p refs

(Contract N00014-75-C-0616)  
(AD-A038211; CCS-276) Avail: NTIS HC A04/MF A01 CSCL 12/1

A new series of linear programming models is used to clarify and extend a measure of efficiency introduced by M.J. Farrell. Multiple output as well as single output versions are provided which relate this efficiency to ordinary Pareto-Koopmans optimality conditions. Their duals supply numerical estimates of production coefficients. This duality, from mathematical programming, is distinguished from another in the theory of production and then used to provide new nonlinear duals which open contacts with other mathematical programming developments in areas like fractional programming, etc. GRA

**LANGUAGE REQUIREMENTS REPORT Interim Report, Oct. 1976 - Apr. 1976**

Benjamin M. Brosgol and James L. Felty Jul. 1976 112 p refs  
(Contract DAHC26-76-C-0006; DA Proj. SX7-62725-D-Y10)  
(AD-A038214; IR-179-2; USACSC-AT-76-06) Avail: NTIS  
HC A06/MF A01 CSCL 09/2

The main purpose of this report is to identify the programming language requirements for the implementation of Army tactical data systems. In addition, language facilities needed for business-oriented management information systems are derived, and are compared with the requirements for tactical systems. The methods employed to identify the needed features include a review of Army responses to questionnaires concerning language

requirements; interviews with Army personnel knowledgeable in various tactical systems; and examination of system specifications documents and secondary material. The fundamental result of this study is that, despite some special requirements for programming tactical and MIS systems, there is no inconsistency between the basic language facilities needed for general purpose vs. tactical or MIS programming. In particular, the features described in the DoD High Order Language Working Group's Tinman document are consistent with the needs of tactical and MIS functions, especially with respect to the language goals of reliability and maintainability. **OPTIMAL SYSTEM SPARE CONFIGURATION BASED ON THE PRESENT WORTH OF OPERATIONAL COSTS UNDER A POLICY OF CANNIBALIZATION Final Research Report, Aug. 1973 - Aug. 1976 Ph.D. Thesis - Texas A and M Univ.**

John P. Solomond Feb. 1977 203 p refs

(AD-A038110; ECOM-4477) Avail: NTIS HC A10/MF A01 CSCL 15/5

An economic model is developed for determining optimal spare provisioning requirements when a system is subject to cannibalization; in this context, cannibalization is defined as the process of using the good components of a terminally failed unit as a source of replenishment spares for future component failures in other units. The model analyzes four components of a system's net operational costs: the manufacturing or procurement costs, the repair/replacement costs, the cannibalization costs, and a compensating revenue or return function, which is treated as a negative cost. The net cost is explicitly a function of the number of multi-component units deployed, the spare configuration for each component type, the time period over which the system is to be used, and the continuous annual interest rate. The model is representing a worth analysis, which reduces all future costs and revenue to a single equivalent present value. Consequently, alternative spare configurations must be compared over the same period of time. The author develops a stochastic analysis of the repair/replacement and cannibalization processes, and derives general formulas for the time dependent repair/replacement, and cannibalization probability; the expressions are based upon general failure and replacement density functions. (PB-264865/7) Avail: NTIS HC A11/MF A01 CSCL 13B

During an 18-month period beginning in 1974, eight projects tested approaches to improving the overall policy development and management capacity of local elected and appointed officials. The demonstration had a dual thrust-making changes at the local level and organizing resources for assistance. The citizen support documents were produced to facilitate the transfer of capacity-building methods from one city to another. The Handbook for City Officials provides in depth introduction to public information and citizen participation. It is intended to serve as a text for training and a tool for officials and administrators to use in building effective citizen communications programs. The Assistance Guide provides a step by step approach to identifying communication factors in a city organization. It can be used by either assistance organizations or city officials to guide organizational analysis and to plan a specific work plan for improvement. GRA

(PB-265718/7; FHWA/PL-77012) Avail: NTIS  
HC A08/MF A01 CSCL 13B

Individual choice (disaggregate) travel demand models in urban transportation planning are applied to: (1) the traditional travel demand process; (2) short range transportation systems management evaluation; and (3) patronage and revenue forecasting for new transportation systems. For each application the suitability of the model is discussed, recent applications are summarized, and two detailed case studies are presented to demonstrate how the models were used. A short primer on individual choice models is included to provide the planner with enough information to understand how the models work and their differences from more conventional planning models. References are given for those who would like to know more about individual choice models. GRA

(PB-265140/4; NSF/RA-760466) Avail: NTIS  
HC A03/MF A01 CSCL 13B

A nationwide experiment designed to test technology innovation in local government is described. The program objectives are outlined, and the results of the first year are summarized. The specific areas of innovation are defined, and the problems encountered during the first year are presented. The methods of data collection and analysis including the elements of data collected, initial survey results, and the status of system data collection are also presented. Budget information is included as well. Finally, a first year assessment is given, along with the objectives for the second operational year. GRA

A description of the air traffic control productivity analysis methods is reported. The relative capacity estimating process models the traffic handling capabilities of individual sectors in terms of routine, surveillance, and conflict processing workloads. The air traffic flow model simulates a multisector network by tracing aircraft flows from sector to sector and measuring traffic loadings, workload requirements, and delays under given sets of traffic input parameters and congestion relief strategy. A detailed examination of the existing Naval Air Systems Command Common Ground Support Equipment replacement model is presented. Basic existing equipment replacement models are discussed and the Annual Cost Model is selected as being most applicable to Navy needs. Model inputs, consisting of both empirical data and assumptions are critically examined to determine the reasons for the observed limited program utility. Several areas for future research are also suggested to improve the program viability. Author (GRA)

(ILR-Mitt-33) Avail: NTIS HC A06/MF A01

The space project described concerns a reusable space transportation system (STS) for the transport of heavy cargo payloads in the order of 100 tons into geostationary orbit and energy equivalent space missions. It is intended to become the backbone of a global space program. This STS is expected to supplement the space shuttle STS and any remaining expendable carrier vehicles on or about 1990. The anticipated market situation for such a vehicle and the economical and political environment are considered in the form of two possible scenarios. Possible vehicle concept alternatives are indicated and typical selection criteria to arrive at the best possible configuration are listed. One of the possible configurations is selected for illustrative purposes and described in some detail with respect to dimensions, masses, performance, and cost. This description is complemented by a representative time, financial, and organizational plan. Potential benefits are evaluated and presented. Author (ESA)

(Contract ESA-2705/76-NL)  
(HSD-TP-7594; ESA-CR(P)-929) Avail: NTIS HC A04/MF A01

The results of a cost and program estimate for a Spacelab-borne lidar facility are presented. Various model philosophies were examined and a single flight model with identified spares backing was selected to meet program constraints and provide an optimum cost/risk ratio. A program is given which will meet the required launch date, identifying predicted problem areas. A budgetary cost estimate for the identified project is given, detailed down to unit level. Several areas where lack of requirements gives rise to cost uncertainty are described. Author (ESA)

**DECISION VERIFICATION AS AN ELEMENT OF NAVY QUALITY ASSURANCE PROGRAMS M.S. Thesis**

Wayne L. Chadwick Mar. 1977 58 p refs  
(AD-A039158) Avail: NTIS HC A04/MF A01 CSCL 05/1

Decision verification in quality assurance is simply the Government's determination of whether or not a contractor's inspection decisions are correct. This paper discusses procedures for accomplishing decision verification both as prescribed by directives and as actually done. It examines reasons why decision verification does not appear to be a viable element in current quality assurance programs even though this procedure is still prescribed in Navy directives for use by contract administrators. The use of operating characteristic curves as a managerial aid to determine whether or not to use decision verification is also discussed. Author (GRA)

This is the final technical report on a five-phase program to develop a Data Management System and a Student Management System. These findings pertain to the naval air training system features that impact on the enhancement of individualized student pilot training treatment and on student training success prediction capabilities and options. The Data Management System (DMS) was designed and implemented on to a Nova 800 minicomputer to demonstrate the feasibility of operation. This DMS is a user-oriented online system which permits non-programmer or non-computer type personnel to create data base files, update these files, search single or multiple files, and to secure hard copy printouts of search results. A unique feature is provided which permits users to execute certain descriptive and analytic statistics on records located by the search. The Student Management System consists of a description and specification of the concept, products and records required to enhance and individualized student naval pilot training treatment program. These student profiles form the quantitative bases from which administrative training personnel can select individualized treatment options. GRA

John Franklin McClain, III and Ronald Wayne Doucette Mar. 1977 144 p refs

(AD-A039773) Avail: NTIS HC A07/MF A01 CSCL 05/1

This thesis examines, specifically, the needs and criteria for a Management Information and Control System (MICS) to adequately fulfill the control and planning aspects of the program management process at the Sidewinder Program Office at NWC (SPO/NWC). The authors discuss the considerations and criteria appropriate for a viable MICS in general application and examine the existing SPO/NWC environment and MICS. Roles, responsibilities, information flows, and controls with respect to the SPO/NWC are identified. The authors stipulate the information and control requirements necessary to ensure successful SPO/NWC accomplishment of responsibilities and conclude that the current system is inadequate. They present a conceptual model of a MICS which would provide the planning and control capabilities required. GRA

The introduction (or modification) of a management system in an organization is often preceded by an effort to gather data from which it can be evaluated. The data may come from some kind of experiment, a conceptual simulation, or some more informal analysis of relevant past experience. This paper discusses how such alternative testing procedures can themselves be evaluated by paying particular attention to analogous testing paradigms in the more established fields of science and engineering. Decision-aiding systems for naval command control are used as an illustrative case. Author (GRA)

**A METHOD FOR EVALUATING MANAGEMENT OPTIONS FOR AN URBANIZING WATERSHED Ph.D. Thesis**

Robert M. Hirsch 1977 267 p  
Avail: Univ. Microfilms Order No. 77-7733

The effectiveness of eight different management options for the Holmes Run watershed (Fairfax County, Virginia) was tested with a year 2000 land use projection. An eleven year record of twenty storm events from the Holmes Run watershed was simulated under each of the eight management options and the simulated flood discharges under each of the options at various locations in the watershed were compared. A multi-objective decision making technique, robust effectiveness analysis (REA), is applied to the problem of selecting a management option. The REA relies on three metrics of performance: flood damage; channel enlargement; and construction cost. Two simple value judgements are elicited from the decision makers. With this information, the analyst identifies the preferred option from among the eight. Dissert. Abstr.

**REPORT TO THE CONGRESS BY THE COMPTROLLER GENERAL OF THE UNITED STATES. BETTER DATA COLLECTION AND PLANNING IS NEEDED TO JUSTIFY ADVANCED WASTE TREATMENT CONSTRUCTION**

21 Dec. 1976 86 p refs Sponsored in part by EPA  
(PB-266452/2; CED-77-12; B-166506) Avail: NTIS HC A05/MF A01 CSCL 138

The Federal Water Pollution Control Act Amendments of 1972 require that comprehensive area-wide and basin plans be prepared for determining the best course of action to follow for improving water quality. The U.S. Geological Survey was successful in gathering adequate water quality data on the Willamette River in Oregon and, as a result, was able to identify more effective and efficient methods for achieving Oregon's water quality standards than through treatment, as originally planned. The potential benefits which may be realized from gathering good water quality data may result in savings of several millions of dollars in Federal, State and local construction funds. GRA

**FLYING, MAINTENANCE, AND THE SALE OF PARTS TO THE FIELD: INTERACTIVE MODELS FOR AH-1 AND CH-47 SYSTEMS Final Report**

Valentin C. Berger and Blaine T. Stone Apr. 1977 61 p refs  
(AD-A039193; DRS-AV-D-77-6; USAVSCOM-TR-77-24) Avail: NTIS HC A04/MF A01 CSCL 01/3

Computer-generated graphic displays are used to investigate the relationships of AH-1 and CH-47 fleet flying hours, and of maintenance occurrences of short and long duration during selected peacetime and wartime (RVN) periods. The rationale for observed relationships is explored in detail, and the discussion is supported with the results of correlation analyses. A similar approach is used to explore the relationships existing between monthly gross sales of stock-funded airframe parts to the field and the number of short and long duration maintenance events, and between those sales and monthly fleet flying hours. The AH-1 and CH-47 fleets are examined during a peacetime period of 1-1/2 fiscal years. The two elements of the study are shown to be complementary and suitable for the construction of interactive models of operations and supply support. A probable connection is postulated between managed field maintenance support activities and the cost-effectiveness of On Condition Maintenance (OCM) world-wide team visits. GRA

**AIDING DECISION MAKERS WITH A GENERALIZED DATA BASE MANAGEMENT SYSTEM: AN APPLICATION TO INVENTORY MANAGEMENT**

Robert H. Bonczek, Clyde W. Holsapple, and Andrew B. Whinston Aug. 1976 32 p refs

(Contract DI-14-34-0001-6076; OWRT Proj. B-080-IND(1))  
(PB-267306/9; W77-07814) Avail: NTIS HC A03/MF A01 CSCL 13B

The attributes of a generalized data base management system are examined with respect to its impact on managerial decision-making. Primary considerations are: the organization of data within data base such that all intricate relationships are represented; and the utilization of a facile method for nonprogramming users to interrogate the data base. Examples drawn from the field of material requirements planning are used to illustrate the concepts and potential of the generalized data base management system. GRA

Rachael K. Black, Robert Katz, Malcolm D. Gray, and Richard F. Curnow Griffiss AFB, N. Y. RADC Mar. 1977 197 p  
(Contract F30602-76-C-0174)

(AD-A039852; BCS-40151; RADC-TR-77-116) Avail: NTIS  
HC A09/MF A01 CSCL 09/2

This report contains the results of work accomplished by Boeing Computer Services for AF RADC. The purpose of this study was to assess the impact of modern software development techniques on the cost of developing computer software. The five in-house projects selected for study varied in size, type of application, and computing environment. The collection of practices found to have the most beneficial impact on software development are, in order of their impact: Project Organization and Management Procedures, Testing Methodology, Configuration Management and Change Control, and Design Methodology. Existing military standards and specifications are sufficiently comprehensive to encourage the use of beneficial practices; however, certain standards and specifications may require modification to make their applicability to software procurements more pertinent. **ON THE SOLUTION OF CONVEX KNAPSACK PROBLEMS WITH BOUNDED VARIABLES**

Gabriel R. Bitran and Arnold C. Hax Apr. 1977 18 p refs  
(Contract N00014-75-C-0556)

(AD-A039164; TR-129) Avail: NTIS HC A02/MF A01 CSCL 12/2

In this paper, a recursive method is presented to solve separable differentiable convex knapsack problems with bounded variables. The method differs from classical optimization algorithms of convex programming and determines at each iteration the optimal value of at least one variable. Applications of such problems are frequent in resource allocation and recently have shown to be useful in hierarchical production planning. Computational results are presented. GRA

**OPTIMAL MANAGEMENT POLICY FOR THE M/G/1 QUEUE WITH HETEROGENEOUS USERS Final Report**

Robert J. Dolan (Chicago Univ., Ill.) Dec. 1976 25 p refs  
(Grant NSF NM-44241)

(PB-267075/0) Avail: NTIS HC A02/MF A01 CSCL 12B

The administrator of a service facility must specify the rule which determines the order of service to waiting users. The total delay cost to users can be minimized only if the system administrator takes the per unit time delay cost and service requirement into account. Specifically, for the M/G/1 queue with nonpreemptive service, the total expected delay cost to users is minimized by serving users in descending order of the true per unit time delay cost divided by the expected service requirement. A priority pricing mechanism which structures a situation such that a user maximizes his individual welfare by revealing his true per unit time delay cost and expected requirement is developed. The user's objective function is formalized, the priority pricing algorithm specified, and then it is proven that the stated aim is accomplished. An example of the process is also given and future extensions are noted. GRA

### **AUTOMATION MANAGEMENT STUDY, DIRECTOR OF ARMY AUTOMATION (DAA) Final Report**

Miriam F. Levine 25 Feb. 1977 65 p refs (AD-A039565) Avail: NTIS HC A04/MF A01 CSCL 05/1

The Automation Management Study was a 7-month study effort which produced the Charter and implementing documents for the central manager of Army Automation, the Director of Army Automation (DAA). The DAA organizationally and functionally replaced the Director, Management Information Systems, Office Chief of Staff Army. The Mission of the DAA is to manage automation by establishing automation policy, developing comprehensive, integrated automation plans, exercising broad resource management responsibilities, and evaluating the execution of plans and programs to employ automation technology within the Army. Army automation encompasses computer-based systems which support management or mission functions, and are configured for operations in combat or special environments, or are embedded within combat weapons systems. Operational functions associated with the life cycle management of automated systems will be decentralized to Army Staff agencies and major commands. Three new organizational structures to support the DAA are the Automation Management Offices, the Army Automation Steering Committee, and the Army Command and Control Management Structure. ### **OPTIMIZATION MODELS FOR PLANNING ECONOMIC DEVELOPMENT**

Silvia Pariente Apr. 1977 64 p refs (Contract N00014-75-C-0556; NR Proj. 347-027; MIT Proj. OSP-82491) (AD-A039165; TR-130) Avail: NTIS HC A04/MF A01 CSCL 05/3

In recent years, more and more countries have experimented with quantitative methods as a way to design short term and long term plans, and to evaluate the impacts of investment and other policies on the future development of their economies. Optimization models have proved useful in several fields of economics, such as economic growth and development planning, urban and regional economics, agricultural and energy economics, etc. The purpose of this paper is to formulate optimization models

that can be applied fruitfully for economy-wide planning, sectoral planning, and project evaluation. It is an attempt at synthesizing the different models encountered in the literature, and at describing some of the difficulties inherent to this approach. Author (GRA)

### **MANAGERIAL ECONOMICS: PAST, PRESENT AND FUTURE**

A. Charnes and W. W. Cooper (Harvard Univ.) Mar. 1977 52 p refs Presented at Southwestern Soc. Sci. Assoc. Meeting, Dallas, Tex., 31 Mar. 1977 (Contracts N00014-75-C-0569; Grant NSF SOC-76-156876; NR Proj. O47-021) (AD-A040549; CCS-287) Avail: NTIS HC A04/MF A01 CSCL 12/2

In this paper the present state of managerial economics is portrayed against the backdrop of a still-continuing series of methodological developments which began to impact on the civilian management sector in the late 1950's. Historically these developments were associated with changes that were occurring in disciplines like Operations Research, Management Science, and Systems Sciences. The latter involved an orientation toward civilian (private enterprise) management in place of a previous almost exclusive focus on problems in military management. This, in turn, caused these disciplines to interact with and impact on developments in managerial economics. This paper suggests that managerial economics, and these other disciplines should (and will) expand their focus in the near future to include management problems in the public sector. This should increase the interactions between them and also improve their ability to deal with problems in private (and military) management as well. Examples of how this might be accomplished are suggested in this paper via PPBS formats for local government and private enterprise management, along with methods of measuring management performance directed to multiple objectives in private as well as public sector management. Author (GRA)

### **IMPROVING THE HIGHWAY SYSTEM BY UPGRADING AND OPTIMIZING TRAFFIC CONTROL DEVICES Final Report**

Harold Lunenfeld Apr. 1977 77 p refs (PB-266987/7; FHWA-TO-77-1) Avail: NTIS HC A05/MF A01 CSCL 13B

Upgrading and optimizing the highway information system was evaluated in terms of human factors, safety, benefit-cost, and traffic engineering. It was found that those portions of the highway system not in compliance with the Manual on Uniform Traffic Control Devices (MUTCD) would experience significant safety benefits and improved system efficiency through upgrading to current standards. Among the factors leading to this conclusion are: (1) Traffic control device deficiencies can lead to driver error and accidents; (2) roads with the lowest level of MUTCD compliance generally experience disproportionately high accident rates; (3) studies show significant positive safety and efficiency benefits and driver error reductions with traffic control devices improvements; (4) if optimizing the total information

system reduced accidents by 10 percent, a benefit-cost ratio of from 10:1 to 20:1 would be realized. It was recommended that emphasis be given to upgrading all traffic control devices to MUTCD standards and optimizing through positive guidance.

**SENSITIVITY OF ARMY HELICOPTER OPERATING AND SUPPORT COSTS TO CHANGES IN DESIGN AND LOGISTIC PARAMETERS**

John D. Forster May 1977 54 p refs  
(Contract SD-321)  
(AD-A040353; LMI-75-1/4) Avail: NTIS HC A04/MF A01  
CSCL 01/3

This study assesses Army helicopter O and S costs and Support Investment (SI) costs in order to assure that the degree of hardware design and logistic parameter sensitivity included in cost estimates accurately reflects actual expenditure sensitivities. Army O and S cost data sources, methodology, and approaches are examined, and selected cost improvements isolated and evaluated. Strengths of the current costing structure are noted so that they can be carried forward and improved upon to assure accurate representation of new systems to the DSARC. O and S data sources reviewed include reliability, maintainability, and field reported cost data. The present methodology and approaches for both Baseline (Program Manager's) Cost Estimates (BCE) and Independent Parametric Cost Estimates (IPCE) are assessed. The dominant O and S costs are found to be Manpower, Replenishment Spares, and Initial Spares. For Manpower and Initial Spares, simplified models are discussed which give OASD visibility into the critical sensitivities of Army helicopter O and S costs. Of the parameters examined for the selected helicopters, O and S costs are most sensitive to the Mean Time Between Dynamic Component Removals (MTBRDC). The report concludes with a discussion of bounding values of Army helicopter O and S cost that can be expected if extreme values of critical O and S cost driving parameters, including those assumed in the cost estimate's approach, are encountered in actual practice.

**DATA MANAGEMENT SYSTEMS ANALYSIS: FINDINGS AND RECOMMENDATIONS Final Task 3 Report**  
 Robert K. Wood and Craig A. Webster Jun. 1977 66 p  
 (Contract SD-321)

The Office of Economic Adjustment (OEA) within the Office of the Assistant Secretary of Defense for Manpower, Reserve Affairs and Logistics (ASD(MRA and L)) serves as the staff arm of the President's Interagency Economic Adjustment Committee (EAC). The office is responsible for organizing and coordinating the Federal government's response to communities affected by Defense base closures, reductions, or buildups. The Logistics Management Institute (LMI) has a contract with OEA under Task Order SD-321-57 Revised (LMI Task 76-16) with two principal objectives: (1) to design a data management system that would allow OEA to respond rapidly to inquiries from the White House, Congress, State Governors and the press, as well as to improve internal management of project activities; and (2) to develop a project management manual to be used by OEA Project Managers and Regional Directors in carrying out their economic adjustment function. The study is divided into four tasks. Tasks 1 and 2 are to conduct a preliminary review of current OEA activities and reporting requirements and prepare a work plan. Task 3 is to design a data management system for OEA, specify requirements for alternative processing concepts, specify and evaluate the alternatives and recommend a preferred concept; Task 3A is to develop a project management manual. Task 4 is to develop system specifications necessary for OEA to proceed with the implementation of the data management system. GRA

**ECONOMICS OF MANAGEMENT OF UNIVERSITY COMPUTING RESOURCES Final Report**

Michael C. Jensen Apr. 1977 59 p  
 (Grant NSF-NM-44241)

(PB-267107/1) Avail: NTIS HC A04/MF A01 CSCL 09B

The study focuses primarily on the budgeting, pricing, and organizational aspects of the problems and emphasizes the application of economics to their understanding and solution. The basic assumption underlying the approach taken in this report is that most of the major problems associated with the management of computing resources are 'organizational' or human problems. In solving them it is important to strive for the creation of a combination of pricing, budgeting, evaluation, and other organizational policies which create a system which contains strong incentives for people to make changes which are generally in the 'right' direction. To do so such a system must provide strong incentives for people to economize on the use of scarce resources. GRA

This report describes a comparative analysis of organizational factors in maintenance. The analysis involves an investigation and comparison of U.S. military and U.S. civilian maintenance organizations, as well as Israeli military maintenance practices. The report includes: (1) an overview of the program, including a statement of the problem, background, objectives and technical

approach; (2) the description and formalization of a model of incentives and organizational effectiveness, a review of the psychological literature concerning the effects of organizational factors on maintenance personnel productivity and satisfaction forms the foundation of the effectiveness model; and (3) the findings of a preliminary maintenance systems analysis, which compares U.S. military and U.S. civilian maintenance practices. The next phase of work will focus on developing and administering questionnaires and interviews for obtaining detailed comparisons of military and civilian maintenance practices. An analysis of Israeli military practices will also be completed in the next work phase.

**ELECTROMAGNETIC COMPATIBILITY: THE PROGRAM MANAGER'S CONSIDERATIONS**

Albert B. Garcia May 1977 36 p refs  
 (AD-A042876) Avail: NTIS HC A03/MF A01 CSCL 09/3

This report seeks to provide insight into the configuration control problems that can occur after a competitive procurement. The author discusses the configuration control problems experienced by the 5-in./54 MK-45 Lightweight Gun System Program Office as a result of a competitive procurement. Specifically the problem areas include: configuration identification, change control and configuration status accounting. The configuration control procedures formulated and implemented to correct the problems identified are also discussed. The report concludes with the lessons learned and makes appropriate recommendations. The lessons learned were that competitive procurement: (1) can have a significant impact on program configuration control; (2) impacts the production baseline; and (3) affects change control procedures and configuration status accounting.

**RELIABILITY IMPROVEMENT WARRANTIES: GOVERNMENT BENEFITS, CONTRACTOR RISKS M.S. Thesis**  
 Roland Franz Habicht Dec. 1976 119 p refs  
 (AD-A043166) Avail: NTIS MF A01 CSCL 05/1

Reliability Improvement Warranties illustrate a new contractual technique for improving reliability by providing a strong monetary incentive to the contractor. This incentive, however, also places additional monetary risk on the contractor. Industry has expressed mounting concerns over this risk. This thesis contains an examination of the relationship between government benefits and contractor risk. Existing and proposed RIW contracts are evaluated in regard to the type of equipment under warranty, the use of exclusions, penalties for non-compliance, and RIW price. The results of the analysis illustrate how RIW is being used by the government.

**A NEW LOOK IN RELIABILITY: F-18 OPERATIONAL MISSION ENVIRONMENT**

Douglas P. Dunbar, Jr. May 1977 40 p refs  
 (AD-A042781) Avail: NTIS HC A03/MF A01 CSCL 17/8

This study project examines the F-18 program's development of an expected operational mission environment (OME) of the airplane to tailor existing specifications for design and test requirements of systems and equipment. Based on F-18 contractor studies and reports plus interviews of contractor and Navy Project Management Office personnel, discussion is presented treating establishment of mission profiles/environments, expected reliability improvements and life cycle cost savings. Study results indicate that use of the OME concept will significantly increase F-18 operational reliability as compared to existing carrier-based aircraft. Analysis also indicates that a 'front end' investment cost of approximately three million dollars for OME design and test of selected mission-critical equipment will result in a savings of over 100 million dollars in operating and support costs through manpower, spares and rework reductions. Recommendations include establishment of a requirement for, and standard methodology of developing mission profiles early in the acquisition cycle of future systems. The expected operational environment derived from these profiles should then form the baseline for design and test requirements of system and equipment.

**CSC PLOTTING PACKAGE Final Report**

J. R. Warner and K. I. Joy Nov. 1976 57 p  
 (Grant DAAG29-76-G-0095)  
 (AD-A041104; UCCC-76-21; ARO-13742.1-EL) Avail: NTIS HC A04/MF A01 CSCL 09/2

The CSC plotting package is a computer software system for generating tabular graphs from United States Army personnel information. As input, the CSC plotting package accepts a sequential file of information built using the United States Army's SIR (Selective Information Retrieval) system. As output, the package generates an annotated histogram or pie chart derived from the sequential SIR file. SIR allows users to selectively define and build a retrieval file from an information data bank. The CSC plotting package synthesizes the retrieval file in generating a customized plot. The CSC plotting package accepts simple input commands for generating the tabular plots. Graphics output may be routed to any display device that supports line drawing capabilities. The plot package is functional in both batch and time-sharing environments. The CSC plotting package is written in ANSI Standard FORTRAN IV for compatibility among computing installations. The following sections of this report detail the general configuration of the package. Four appendices: describe the user interface (i.e., input commands);

detail a sequence of example plots; describe the device-dependent graphics routines; and provide the general system schematic.

**COMPUTER SCIENCE AND TECHNOLOGY: A DATA BASE MANAGEMENT APPROACH TO PRIVACY ACT COMPLIANCE**

Elizabeth Fong Jun. 1977 37 p refs  
(PB-268500/6; NBS-SP-500-10; LC-77-608106) Avail: NTIS HC A03/MF A01 CSCL 09B

The Privacy Act provisions on personal record handling present new issues concerning effective use of commercial data base management systems (DBMS) by Federal agencies. A technical approach is proposed to compliance with certain Privacy Act requirements through the use of a generalized data base management system. Requirements are translated into a set of computer data files and procedures. These procedures, incorporated at pivotal points of data base software, can implement those Privacy Act compliance procedures amenable to automation. The use of DBMS appears to be a viable and technologically feasible solution to the effective and efficient implementation of many Privacy Act provisions.

**A MATHEMATICAL PROGRAMMING MODEL FOR AN AIRCRAFT MODIFICATION PROGRAM Final Report**

D. Frank Fox Aug. 1977 33 p  
(AD-A042813; DRDAV-BC-77-1; USAAVRADCOM-TR-77-1) Avail: NTIS HC A03/MF A01 CSCL 01/3

A large fleet of aircraft is to be modified by the installation on each aircraft in the fleet of a certain number of engineering change proposal (ECP) kits. The aircraft are deployed in smaller sub-fleets, called field units, at various locations around the world, and the kit installations are to take place at a single contractor facility. Therefore, each of the aircraft must be taken out of operation in the field and sent in to the contractor facility for modification. Each field unit has an authorized strength of aircraft with a specified operational readiness to maintain, permitting only a certain number of aircraft to be away from each field unit at a given time. Furthermore, ECP kits become available over a period of time. At the beginning of the program only certain types of kits are available, and the last type of kit doesn't become available until some time later. Therefore, an aircraft sent in for modification early in the program will not get all of the ECP kits and must be sent back at least a second time. In order to maintain operational readiness, the aircraft should be sent in as few times as possible and brought back as quickly as possible. An optimum solution to the problem of how many aircraft should be sent in and for how long they should remain can be developed using mathematical programming.

**HIGH ORDER LANGUAGE CONTROL FACILITY**

Benjamin D. Blood May 1977 39 p refs  
(AD-A042943) Avail: NTIS HC A02/MF A01 CSCL 09/2

Recent DoD studies dealing with the problems of proper management of computer resources have made several recommendations. One is that high order languages (HOL) should be used to develop software so long as the number of different HOL is constrained and those remaining are carefully controlled. The purpose of this study is to specify the organization and functions of a HOL Control Facility and to discuss some of the issues involved in implementing such a facility for the DoD HOL Program. This study resulted from a synthesis of information available in the literature and from the author's experience as part of the DoD HOL Program. He concludes that: control facilities are necessary for all DoD approved HOL; control facilities for existing DoD approved HOL will remain separate entities under the various military departments; the control facility for the new DoD HOL should be jointly manned and supported and set up as soon as possible; and that the facility should use the ARPANET and become part of the National Software Works.

**A MULTISTAGE MODEL OF NETWORK USAGE**

Jun. 1977 18 p refs  
(Contract N00014-75-C-0266)  
(AD-A041970) Avail: NTIS HC A02/MF A01 CSCL 09/2

The evolution of network service usage can be considered as being in three stages, constituting a usage life cycle. The first stage (inception) is that of initial low level usage. The second (expansion) is characterized by rapid growth in usage and is often unstable and uncontrolled. The third stage (stability) is a reaction to the second stage and imposes order on usage. Decision making, data collection, and measurement considerations are examined for this framework.

**ISSUES OF HIERARCHICAL PLANNING IN MULTI-STAGE PRODUCTION SYSTEMS**

Dan Candea Jul. 1977 267 p refs  
(Contract N00014-75-C-0556; NR Proj. 347-027)  
(AD-A042559; TR-134) Avail: NTIS HC A12/MF A01 CSCL 05/3

The multi-stage production system is viewed as a production process in which component parts have to be obtained by manufacturing or by purchasing then assembled into subassemblies, assemblies, and finally into the finished good. At the aggregate level a new formulation for the aggregate planning model is given, in order to bring computational feasibility to situations in which older formulations went beyond the capabilities of current linear programming codes. The resulting aggregate model is a large scale system that lends itself to solution by column generation. A dynamic programming algorithm for the generation of columns is developed. Next, at the disaggregation level, the problem of computing optimal lot sizes in multi-stage systems is addressed and solved. Since exact solution procedures are found to be either very expensive or computationally infeasible, a heuristic approach is adopted and results are reported. For more complex situations, in which parts are common to several end products or where there is independent demand for parts, even the heuristics become infeasible; therefore it is suggested that myopic lot sizing policies be used.

**ESTABLISHMENT OF THE PROGRAM MANAGER FOR AVIONICS**

Mervyn W. Leavity May 1977 43 p refs  
(AD-A043163) Avail: NTIS HC A03/MF A01 CSCL 05/1

This report establishes the background from which the concept of Program Management for common avionics emerged. The Carrier Aircraft Inertial Navigation System (CAINS) Program is used as a case study that ultimately developed the idea of the Program Manager for Avionics as a 'better way of doing things'. The report also deals with what Program Management of common avionics is all about. The report delineates the mission, scope, operating relationships, organization and resources, authority, accountability and responsibility of the Program Manager for Avionics. Finally, the study reports on the actions that have taken place implementing the Program Manager for Avionics, and identifies actions that still need to be done with the author's recommendations for areas of further improvement.

**THE ROLE OF OPERATIONAL TEST AND EVALUATION IN THE AIR FORCE AIRCRAFT ACQUISITION PROCESS**

Michael John Butchko May 1977 60 p refs  
(AD-A042774) Avail: NTIS HC A04/MF A01 CSCL 05/1

The purpose of this report was to assess the current role of operational test and evaluation (OT and E) and the Air Force Test and Evaluation Center (AFTEC) in the AF aircraft acquisition process. Additionally, it was intended to provide recommendations to the program manager (PM) on ways to ensure adequate coverage of OT and E requirements in his program. A trace of the OT and E policy in DOD and AF from 1970 until 1976

leads to an analysis of the new DOD draft Test and Evaluation Directive 5000.3, dated 7 March 77. This revision to DOD T and E policy emphasizes earlier operator involvement and combined development and operational testing in the acquisition process. A series of interviews with DOD and AF officials was used to compare the current perceptions of the role and effectiveness of IOT and E and AFTEC. The AFTEC view of itself is compared with the other viewpoints expressed in the interviews. Finally, the paper makes recommendations to the PM as to how he can better ensure that he includes all valid operational requirements in his test program. The areas covered are establishing the baseline, organizing and planning with primary emphasis on the latter. GRA

**MANAGEMENT OF RESEARCH AND DEVELOPMENT FOR ELECTRONIC SYSTEMS**

George L. Wooley 3 Jun. 1977 76 p refs  
 (AD-A042859) Avail: NTIS HC A05/MF A01 CSCL 05/1

The intent of this investigative research effort was to perform a critical appraisal of the Department of Defense technological innovation process in the light of recent research in private industry technological innovation. The study focuses specifically on Research and Development and technological innovations for electronic systems. The focus is directed toward electronic systems because of the thesis that electronic technology is progressing rapidly enough to make the life span of technologies less than the optimum DOD system acquisition cycle time. The study concludes that more DOD electronic systems will be fielded with obsolete computer subsystems unless changes are made in the military R and D approaches. The first recommendation is that Department of Defense establish a program of joint service evaluation of competing technologies as part of electronic systems development projects. The study also recommends the establishing of a more meaningful incentive program for government and contractor personnel that is unique to technological innovation. GRA

**ACQUIRING AFFORDABLE WEAPONS SYSTEMS**

Robert A. Singer May 1977 89 p  
 (AD-A042777) Avail: NTIS HC A05/MF A01 CSCL 15/3

This project attempts to examine the approaches being taken to reduce the O and S cost implications of systems being acquired, and to examine the potential effectiveness of these approaches. The project was conducted by interviewing key people within OSD and the Services currently participating in outyear cost management, by researching recent available literature on the subject, and by integrating the results into a capsule summary and evaluation of current activities. A series of efforts are ongoing. New draft management directives have been prepared in OSD and the Services aimed at infusing affordability considerations more heavily throughout the acquisition process. O and S cost data banks are being constructed by the Services to provide weapon system and subsystem cost visibility. Innovative procurement procedures and affordability management techniques are being used successfully on some new system acquisitions. Considerably more effort is required before more affordable weapons systems become a reality. This includes integration and increasing responsiveness of diverse organizational units, improvements in cost estimation, building of a suitably detailed cost data base, joint consideration of logistics support, manpower planning with design variables, and development of a more rigorous affordability discipline. GRA

**MILESTONE ZERO: ITS CHANGES ON THE AIR FORCE ACQUISITION PROCESS**

Larry R. Gross May 1977 40 p refs  
 (AD-A042770) Avail: NTIS HC A03/MF A01 CSCL 05/1

This project examines the changes caused by the addition of milestone-0 to the weapon system acquisition process, particularly with respect to the activities leading to a program initiation decision. Since the Air Force has not issued directives

to implement this new DoD policy, the unresolved issues are examined. The author made a literature survey to obtain the background and historical focus of past concerns which eventually lead to the current policy; the results are summarized. In addition, structured interviews were conducted at DDRE, HQ USAF and HQ AFSC to obtain perspective on the intent of the new policy as well as insight on methods to implement it. As a result, this report provides some criteria which the Secretary of the Air Force could use in recommending that a major program be initiated. A possible set of mission areas is presented which could be the basis for mission area analyses. Finally, changes to the existing requirements documentation process are offered. GRA

**MANAGING TOTAL ACQUISITION TIME: A NEW PRIORITY FOR MAJOR WEAPON SYSTEMS**

James B. Lincoln May 1977 33 p refs  
 (AD-A043164) Avail: NTIS HC A03/MF A01 CSCL 15/5

The report analyzes the background and evolutionary changes that led to the current weapons acquisition management environment that emphasizes cost controls over all other management controls. The resulting lack of emphasis on time has brought about significant increases in total acquisition time for major systems. Specific causes of increased acquisition time have been lengthy decision processes, contracting procedures and other indirect factors such as economic conditions and multinational considerations. Current conditions of rapidly advancing state of the art and improving enemy capabilities point out the need for reduced, not increased, acquisition time, from inception to operational capability. Rashad Abdulmohymen Abu-Aisamh Jun. 1977 67 p refs  
(AD-A042304) Avail: NTIS HC A04/MF A01 CSCL 12/1

This thesis investigates the long run implications of short term policy making decisions. Manpower modeling techniques based on Markovian chains are applied to a small fast growing Navy organization. An interactive model is designed here to simulate policy changes and illustrate the interaction between flows, promotions and stocks, relative to a stable set of policy parameters over a period of time. Training and budget planning are addressed in some detail with a focus of the civilian population within the organization. Because real data is not available, the numerical examples are based on hypothetical data. The examples are presented to give the reader a feeling for how the model simulates various policy alternatives. Author (GRA)

**MAJOR SYSTEM ACQUISITION: IS A SEPARATE SPARES CONTRACT BETTER**

Louis Keith Dumas May 1977 48 p refs  
(AD-A042775) Avail: NTIS HC A03/MF A01 CSCL 15/5

This study seeks to focus attention on the support investment aspect of the weapon system acquisition process and to examine current views on the use of a separate spares contract for the initial provisioning and acquisition of spare/repair parts. The author contrasts historical and current approaches to contracting for initial spare/repair parts in support of aircraft acquisition programs. Historically, spare/repair parts have been provisioned by use of support element contract line items contained in the system production contract. Recently, separate spares contracts have been used to acquire spare/repair parts for major weapon systems such as the F-15, A-10, AWACS and the F-16. The purpose of this study is to describe differences between end item and spares line item relationships on conventional system contracts and separate spares contracts. The study reviews problems anticipated and encountered in contract separation, and reports current comments and evaluations regarding the effectiveness of separate spares contracts in achieving desired benefits. **IMPACT OF COMPETITIVE PROCUREMENT ON CONFIGURATION CONTROL**

Fred Garza, Jr. May 1977 42 p refs  
(AD-A042876) Avail: NTIS HC A03/MF A01 CSCL 05/1

This report seeks to provide insight into the configuration control problems that can occur after a competitive procurement. The author discusses the configuration control problems experienced by the 5-in./54 MK-45 Lightweight Gun System Program Office as a result of a competitive procurement. Specifically the problem areas include: Configuration identification, Change control and Configuration status accounting. The configuration control procedures formulated and implemented to correct the problems identified are also discussed. The report concludes with the lessons learned and makes appropriate recommendations. The lessons learned were that competitive procurement: (1) can have a significant impact on program configuration control; (2) impacts the production baseline; and (3) affects change control procedures and configuration status accounting. **A PREDICTION MODEL TO FORECAST THE COST IMPACT FROM A BREAK IN THE PRODUCTION SCHEDULE**

Leon M. Delionback Sep. 1977 37 p refs  
(NASA-TM-78131) Avail: NTIS HC A03/MF A01 CSCL 05C

The losses which are experienced after a break or stoppage in sequence of a production cycle portend an extremely complex situation and involve numerous variables, some of uncertain quantity and quality. There are no discrete formulas to define the losses during a gap in production. The techniques which are employed are therefore related to a prediction or forecast of the losses that take place, based on the conditions which exist in the production environment. Such parameters as learning curve slope, number of predecessor units, and length of time the production sequence is halted are utilized in formulating a prediction model. The pertinent current publications related to this subject are few in number, but are reviewed to provide an understanding of the problem. Example problems are illustrated together with appropriate trend curves to show the approach. Solved problems are also given to show the application of the models to actual cases or production breaks in the real world. Author

A directory of United States activities in technology that incorporates a concern for maintenance of the ecological balance by increasing the use of renewable resources, extending recycling and diminishing waste, and fostering the resource independence of local areas is presented. The field was surveyed to learn

from individuals and groups about the scope of their activities, the legal and technical problems they are facing in moving from idea to application, and their recommendations for federal activity in support of appropriate technology. The directory is, in part, a compilation of the descriptions of activities of the survey respondents.

GRA

# Subject Index

MANAGEMENT/a continuing bibliography

MARCH 1978

## Typical Subject Index Listing

The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of *Management*. If applicable, a report number is also included as an aid in identifying the document.

## A

- A-10 AIRCRAFT**  
Advanced avionics for the A-10: A decision analysis model [AD-A027678] N77-14023
- A-300 AIRCRAFT**  
Optimization of transport aircraft availability as illustrated on the example of the Airbus A 300 A77-27035
- ACCELERATED LIFE TESTS**  
System burn-in for reliability enhancement A77-10463
- ACCIDENT INVESTIGATION**  
Evaluation methodology for federal motor vehicle safety standards. Volume 2: Technical findings [PB-266937/2] N77-33382
- ACCIDENT PREVENTION**  
On optimization of SCRAM systems --- accident prevention warning device A77-10474
- Are accidents scheduled --- safety management problems A77-11344
- The future of safety in general aviation A77-14550
- Improving the highway system by upgrading and optimizing traffic control devices [PB-266987/7] N77-31031
- ACOUSTIC MEASUREMENTS**  
Shuttle payload minimum cost vibroacoustic tests A77-50490
- AERONAUTICAL ENGINEERING**  
Design-to-cost in action [ASME PAPER 77-DE-9] A77-46904
- Aviation and programmatic analyses; Volume 1, Task 1: Aviation data base development and application --- for NASA OAST programs [NASA-CR-152581] N77-29139
- Aviation and programmatic analyses. Volume 2, Task 2: Identification of planning factors and activities --- for NASA OAST programs [NASA-CR-152582] N77-29140
- Aviation and programmatic analyses. Volume 3, Task 3: Development of special issue papers --- for NASA OAST programs [NASA-CR-152583] N77-29141
- AERONAUTICS**  
Comments concerning the dynamics of aeronautical and aeronautical research A77-29298
- AEROSPACE ENGINEERING**  
Has NASA already solved your next design problem --- aerospace technology utilization A77-25209
- Methods of cost prediction; Proceedings of the Symposium, London, England, March 9, 1977 A77-40007
- Research and technology objectives and plans. A summary, FY 1977 research and technology program [NASA-TM-X-74296] N77-12925
- An analysis of an application of aerospace systems engineering process as it affects design N77-16012
- Options for organization and operation of space applications transfer centers [NASA-CR-153005] N77-24979
- National Aeronautics and Space Administration authorization, fiscal year 1978 [S-REPT-95-281] N77-26025
- Some philosophical views of algorithms and computing methods in applied mathematics [AD-A038921] N77-28870
- Advanced space program studies. Overall executive summary [NASA-CR-154893] N77-31185
- AEROSPACE INDUSTRY**  
Legal and economic prerequisites to space industrialization [IAF PAPER ISL-76-29] A77-10968
- What options for European aviation A77-17Q20
- Aerospace policy and energy planning [AIAA PAPER 77-341] A77-22186
- What's been happening to R&D A77-25139
- Technology and decision making in the air transport industry A77-31066
- AEROSPACE SCIENCES**  
Research and technology objectives and plans. A summary, FY 1977 research and technology program [NASA-TM-X-74296] N77-12925
- AEROSPACE SYSTEMS**  
Policies for pricing commercially-useful space systems resulting from government programs [IAF PAPER 76-132] A77-10920
- Managing by exception in space systems operation A77-13330
- Experience of aeronautics and astronautics in the application of systems engineering A77-27034
- Aerospace cost prediction - The way ahead A77-39778
- Some aspects of economically-effective prediction for an optimal program of space system designing [IAF PAPER A-77-61] A77-51529
- AIR CARGO**  
Canadian air cargo concepts A77-20068
- Code of federal regulations. 14. Aeronautics and space, parts 200 to 1199 --- regulations and standards for the civil aeronautics board N77-12934
- AIR DEFENSE**  
A distributed air defense information system A77-30477
- AIR POLLUTION**  
Technology for the control of sulfur oxides and nitrogen oxides in Japan A77-35171
- Air quality considerations in transportation planning: Findings and recommendations on transportation control planning, phase 2 [PB-256424/3] N77-12576

## AIR QUALITY

Laws and regulations affecting coal with summaries of Federal, State, and local laws and regulations pertaining to air and water pollution control, reclamation, diligence and health and safety, part 1  
[PB-255927/6] N77-12592

Diffusion of innovations in municipal governments  
[PB-257069/5] N77-15935

Air pollution survey guidelines for Army installations  
[AD-A029633] N77-18628

**AIR QUALITY**  
Cost-sharing approach for air quality control implementation - A case study  
A77-46700

**AIR TRAFFIC**  
Code of federal regulations. 14. Aeronautics and space, parts 200 to 1199 --- regulations and standards for the civil aeronautics board  
N77-12934

**AIR TRAFFIC CONTROL**  
Regulation of the air traffic control system  
A77-21593

A comparison of enroute conflict risk for three 1995 air traffic surveillance systems  
A77-28627

Code of federal regulations. 14. Aeronautics and space, parts 1 to 59 --- federal aviation procedural rules and standards  
N77-12932

Code of federal regulations. 14. Aeronautics and space, parts 60 to 199 --- federal aviation procedural rules and standards  
N77-12933

A computer-assisted method for determining LOGAIR route structures  
[AD-A030288] N77-18121

Techniques for determining airport airside capacity and delay  
[AD-A032475/6] N77-20118

An analysis of the effects of route restriction removal and discretionary authority: The transition to a less-regulated environment, volume 1  
[PB-263685/0] N77-24079

An analysis of the effects of route restriction removal and discretionary authority: The transition to a less-regulated environment. Volume 2: Truck airline  
[PB-263686/8] N77-24080

An analysis of the effects of route restriction removal and discretionary authority: The transition to a less-regulated environment. Volume 3: Local service carrier profiles  
[PB-263687/6] N77-24081

Advanced productivity analysis methods for air traffic control operations  
[AD-A035095] N77-29120

**AIR TRANSPORTATION**  
The commercial airline industry: Managerial practices and regulatory policies --- Book  
A77-15224

A new air transport policy for the North Atlantic --- Book  
A77-16375

Public international air transportation law in a new era: Economic regulation of international air carrier operations --- Book  
A77-16449

AIAA Forum on the Future of Air Transportation - Regulatory overview --- civil aviation reform proposals  
[AIAA PAPER 77-254] A77-18203

The future of air transportation - Airline considerations  
[AIAA PAPER 77-257] A77-18205

The technical challenge of air transportation - A Government view  
[AIAA PAPER 77-258] A77-18206

Financing the future fleet --- for U.S. air transportation  
[AIAA PAPER 77-261] A77-18207

The future economic opportunities for air transport  
[AIAA PAPER 77-284] A77-18221

The future of air transportation - Economic association considerations  
[AIAA PAPER 77-286] A77-18222

Canadian air cargo concepts  
A77-20068

## SUBJECT INDEX

Direct and indirect subsidies in the air mode in comparison with other modes of transportation  
A77-23269

Forum on the future of air transportation  
[AIAA PAPER 77-263] A77-24450

The calculation of cost as an instrument for the management and planning of transportation processes  
A77-27163

Effects of selected R&D options on fuel usage in the commercial air system  
A77-29472

Technology and decision making in the air transport industry  
A77-31066

Local and commuter airlines in the United States  
A77-31067

The economy of air transportation /2nd edition/ --- French book  
A77-31975

Status report on the renegotiation of the U.S.-U.K. Bilateral Air Transport Agreement /Bermuda Agreement/  
A77-34303

Liability of carriers for damages of passengers on charter flights  
A77-34305

French regulations and practices for the allocation of air routes  
A77-39102

The place of aviation in society; Proceedings of the Fifteenth Anglo-American Aeronautical Conference, London, England, May 31-June 2, 1977  
A77-41926

The value of commercial air transportation to the economy  
A77-41937

Minimizing operating costs --- of commercial air transport  
[AIAA PAPER 77-1254] A77-44342

International airlines and public interests: An overview - 1977  
A77-47647

Code of federal regulations. 14. Aeronautics and space, parts 200 to 1199 --- regulations and standards for the civil aeronautics board  
N77-12934

Study of the cost/benefit tradeoffs for reducing the energy consumption of the commercial air transportation system  
[NASA-CR-137926] N77-15007

Study of the cost/benefit tradeoffs for reducing the energy consumption of the commercial air transportation system  
[NASA-CR-137927] N77-15008

A computer-assisted method for determining LOGAIR route structures  
[AD-A030288] N77-18121

A mathematical model for determining LOGAIR flight schedules  
[AD-A030295] N77-18124

Airport and air transport planning  
[PB-259413/3] N77-20057

An analysis of the effects of route restriction removal and discretionary authority: The transition to a less-regulated environment, volume 1  
[PB-263685/0] N77-24079

An analysis of the effects of route restriction removal and discretionary authority: The transition to a less-regulated environment. Volume 2: Truck airline  
[PB-263686/8] N77-24080

An analysis of the effects of route restriction removal and discretionary authority: The transition to a less-regulated environment. Volume 3: Local service carrier profiles  
[PB-263687/6] N77-24081

Factors affecting the corporate decisionmaking process of air transport manufacturers  
[NASA-CR-154618] N77-27020

The decline of supplemental air carriers in the United States, part 1  
[GPO-78-955] N77-27086

**AIRBORNE/SPACEBORNE COMPUTERS**  
Design considerations for implementing a shipboard computer supported command management system  
[AD-A027290] N77-14925

## SUBJECT INDEX

## AIRCRAFT PRODUCTION

Navy airborne tactical software management policy:  
Review and evaluation  
[AD-A027023] N77-15890

**AIRCRAFT ACCIDENT INVESTIGATION**  
Tasks and method of operation of the government  
aviation inspection. III A77-16738

**AIRCRAFT ACCIDENTS**  
Crash management at airports A77-40928  
The life cycle cost impacts of unsafe designs ---  
aircraft accident effects A77-50462

**AIRCRAFT APPROACH SPACING**  
Regulation of the air traffic control system A77-21593

**AIRCRAFT DESIGN**  
The future of safety in general aviation A77-14550  
System safety and the Utility Tactical Transport  
Aircraft System A77-16735  
Cost of ownership in civil aircraft design A77-22755  
Design of military aircraft for minimum cost of  
ownership A77-22756  
Comments concerning the dynamics of aeronautical  
and astronautical research A77-29298  
Computer aided aircraft project design A77-29496  
Problems of research and development cost  
predictions in an avionics supply company A77-40009  
The timing of technology - Commercial transport  
aircraft A77-45503  
[AIAA PAPER 77-1200]  
The life cycle cost impacts of unsafe designs ---  
aircraft accident effects A77-50462  
An analysis of an application of aerospace systems  
engineering process as it affects design N77-16012

**AIRCRAFT ENGINES**  
Life Cycle Cost as a propulsion system design  
consideration [ASME PAPER 77-GT-99] A77-28609  
Logistics planning simulation model for USAF spare  
engine management A77-50510  
SPAERS: Simulation for the Performance Aircraft  
Engine Repair Systems [AD-A035737] N77-26073

**AIRCRAFT EQUIPMENT**  
The airlines - A financial overview [AIAA PAPER 77-253] A77-18202  
Reliability, availability,  
maintainability/logistics /RAM/LOG/ A77-50456  
Analysis of flight equipment purchasing practices  
of representative air carriers [NASA-CR-154619] N77-27021

**AIRCRAFT FUEL SYSTEMS**  
National Airlines Fuel Management and Allocation  
Model A77-43399

**AIRCRAFT INDUSTRY**  
Co-operation in the European aircraft  
manufacturing industry and among the scheduled  
airlines /Brancker Memorial Lecture/ A77-11311  
Forum on the future of air transportation [AIAA PAPER 77-263] A77-24450  
Costs and decision making --- for aircraft  
production effectiveness A77-29665  
Aircraft manufacturer warranties - Protection for  
the manufacturer or the purchaser A77-34302  
Aircraft industry capacity study [AD-A037837] N77-26071  
Factors affecting the corporate decisionmaking  
process of air transport manufacturers [NASA-CR-154618] N77-27020

**AIRCRAFT MAINTENANCE**  
Interface between maintainability and commercial  
aircraft spares support A77-10483

The airlines - A financial overview [AIAA PAPER 77-253] A77-18202  
Symposium on Equipment and System Design for  
Minimum Cost of Ownership, London, England,  
March 16, 1976, Proceedings A77-22751  
An analysis of cost of ownership --- of avionic  
system operation A77-22753  
Cost of ownership in practice --- of airborne  
inertial navigation system A77-22754  
Design of military aircraft for minimum cost of  
ownership A77-22756  
Getting it right the first time --- cost reduction  
for avionic equipment ownership A77-22757  
Optimization of transport aircraft availability as  
illustrated on the example of the Airbus A 300 A77-27035  
Mutual development, application and control of  
suppliers warranties A77-50476  
Reliability improvement warranty techniques and  
applications --- to F-16 aircraft A77-50477  
Logistics planning simulation model for USAF spare  
engine management A77-50510  
Scheduled maintenance policies for the F-4  
aircraft: Results of the maintenance posture  
improvement program [AD-A030146] N77-18045  
AH-1G Flat Rate Manual [AD-A029933] N77-18046  
An analysis of the relationship between  
manufacturer assembly time and  
intermediate-level maintenance repair time [AD-A030229] N77-18944  
A comparison of selected scheduling heuristics for a  
TAC F-4E maintenance organization [AD-A032327] N77-20912  
The magnitude of internal rework on the F-4  
aircraft during depot level maintenance at Ogden  
Air Logistics Center [AD-A032458] N77-23048  
The effect of the operational readiness of the  
float on the operational readiness of the entire  
fleet [AD-A035748] N77-25167  
SPAERS: Simulation for the Performance Aircraft  
Engine Repair Systems [AD-A035737] N77-26073  
Procedure for the development of naval aviation  
maintenance objectives [AD-A038201] N77-28064  
Flying, maintenance, and the sale of parts to the  
field: Interactive models for AH-1 and CH-47  
systems [AD-A039193] N77-30073  
Development of performance measures for  
organizational level aviation maintenance managers  
[AD-A042295] N77-32073  
Comparative studies of organizational factors in  
military maintenance [AD-A042847] N77-32075  
A mathematical programming model for an aircraft  
modification program [AD-A042813] N77-32761  
Product improvement program evaluation [AD-A042134] N77-33101

**AIRCRAFT NOISE**  
The airlines - A financial overview [AIAA PAPER 77-253] A77-18202  
Airports and the environment --- Book A77-24774  
Noise regulations of the Federal Government  
[AIAA PAPER 77-995] A77-38627

**AIRCRAFT PERFORMANCE**  
Overall aircraft systems evaluation N77-24121

**AIRCRAFT PRODUCTION**  
Planning a general-aviation product A77-17022  
Studies pinpoint cost-saving F-16 manufacturing  
techniques A77-31499

**AIRCRAFT RELIABILITY**

**SUBJECT INDEX**

ICAM - Revolution in manufacturing --- Integrated Computer Aided Manufacturing	A77-34307	[AIAA PAPER 77-257]	A77-18205
Aerospace cost prediction - The way ahead	A77-39778	Financing the future fleet --- for U.S. air transportation	A77-18207
Computer aided process planning [AHS 77-33-54]	A77-40081	[AIAA PAPER 77-261]	A77-18222
Structural-logic diagram for ensuring high-rate products --- in aircraft industry quality control	A77-40721	The future of air transportation - Economic association considerations	A77-18222
An investigation of change in direct labor requirements resulting from changes in airframe production rates	N77-13269	[AIAA PAPER 77-286]	A77-19019
Factors affecting the corporate decisionmaking process of air transport manufacturers [NASA-CR-154618]	N77-27020	Airline managerial efficiency	A77-19019
<b>AIRCRAFT RELIABILITY</b>		The seat belt light is on --- airline industry economic assessment and forecasts	A77-19175
Symposium on Equipment and System Design for Minimum Cost of Ownership, London, England, March 16, 1976, Proceedings	A77-22751	Canadian air cargo concepts	A77-20068
The reliability and costs of RAP avionic equipment	A77-22752	Reducing airline regulation - The need and financial implications	A77-21535
Optimization of transport aircraft availability as illustrated on the example of the Airbus A 300	A77-27035	[AIAA PAPER 77-264]	A77-22753
Aircraft manufacturer warranties - Protection for the manufacturer or the purchaser	A77-34302	An analysis of cost of ownership --- of avionic system operation	A77-24450
Reliability, availability, maintainability/logistics /RAM/LOG/	A77-50456	Forum on the future of air transportation [AIAA PAPER 77-263]	A77-25141
Reliability improvement warranty techniques and applications --- to F-16 aircraft	A77-50477	Investing in technology during inflation	A77-27161
A new look in reliability: F-18 operational mission environment [AD-A042781]	N77-32573	Scientific work organization, an important intensification factor	A77-27163
<b>AIRCRAFT SAFETY</b>		The calculation of cost as an instrument for the management and planning of transportation processes	A77-27208
The future of safety in general aviation	A77-14550	The Civil Aeronautics Board and foreign air carrier permits	A77-28063
System safety and the Utility Tactical Transport Aircraft System	A77-16735	The safe airline --- Book	A77-31067
Tasks and method of operation of the government aviation inspection. III	A77-16738	Local and commuter airlines in the United States	A77-31067
Efforts to stimulate aeronautical engineering research could ease the regulatory atmosphere in which the aviation community operates [AIAA PAPER 77-277]	A77-18216	Aircraft manufacturer warranties - Protection for the manufacturer or the purchaser	A77-34302
<b>AIRCRAFT SURVIVABILITY</b>		Status report on the renegotiation of the U.S.-U.K. Bilateral Air Transport Agreement /Bermuda Agreement/	A77-34303
Project management of Army aircraft survivability equipment [AD-A036785]	N77-26128	Liability of carriers for damages of passengers on charter flights	A77-34305
<b>AIRFRAMES</b>		The airlines mutual aid pact - A lesson in escalated economic warfare and abdicated regulatory responsibility	A77-39099
An investigation of change in direct labor requirements resulting from changes in airframe production rates [AD-A026112]	N77-13269	French regulations and practices for the allocation of air routes	A77-39102
Aircraft airframe cost estimation utilizing a components of variance model [AD-A032627]	N77-24005	National Airlines Fuel Management and Allocation Model	A77-43399
<b>AIRLINE OPERATIONS</b>		Minimizing operating costs --- of commercial air transport [AIAA PAPER 77-1254]	A77-44342
Interface between maintainability and commercial aircraft spares support	A77-10483	International Federation of Operational Research Societies, Airline Group, Symposium, 16th, Key Biscayne, Fla.; September 26-October 1, 1976, Proceedings	A77-46785
Co-operation in the European aircraft manufacturing industry and among the scheduled airlines /Brancker Memorial Lecture/	A77-11311	International airlines and public interests: An overview - 1977	A77-47647
The commercial airline industry: Managerial practices and regulatory policies --- Book	A77-15224	Mutual development, application and control of suppliers warranties	A77-50476
A new air transport policy for the North Atlantic --- Book	A77-16375	Aviation economics --- commercial airlines [GPO-73-830]	A77-23008
Public international air transportation law in a new era: Economic regulation of international air carrier operations --- Book	A77-16449	Analysis of flight equipment purchasing practices of representative air carriers [NASA-CR-154619]	N77-27021
Tasks and method of operation of the government aviation inspection. III	A77-16738	<b>AIRPLANE PRODUCTION COSTS</b>	
The airlines - A financial overview [AIAA PAPER 77-253]	A77-18202	Costs and decision making --- for aircraft production effectiveness	A77-29665
The future of air transportation - Airline considerations		The economy of air transportation /2nd edition/ --- French book	A77-31975
		<b>AIRPORT PLANNING</b>	
		The role of the airport consultant	A77-13364
		Airports and the environment --- Book	A77-24774

**SUBJECT INDEX**

**AVAILABILITY**

Airport systems planning: A critical look at the methods and experience --- Book  
A77-29435

Tehran International Airport [ASCE PREPRINT 2553] A77-29666

An analysis of the effects of route restriction removal and discretionary authority: The transition to a less-regulated environment, volume 1 [PB-263685/0] N77-24079

An analysis of the effects of route restriction removal and discretionary authority: The transition to a less-regulated environment. Volume 2: Truck airline [PB-263686/8] N77-24080

**AIRPORTS**  
Airports and the environment --- Book A77-24774

Airport and air transport planning [PB-259413/3] N77-20057

Techniques for determining airport airside capacity and delay [AD-A032475/6] N77-20118

**ALGORITHMS**  
Advanced dial-a-ride algorithms research project [PB-254752/9] N77-11922

An heuristic scheduling algorithm for resource-constrained project networks [AD-A031819] N77-20916

Some philosophical views of algorithms and computing methods in applied mathematics [AD-A038921] N77-28870

**ALLOCATIONS**  
Allocation of man-machine reliability A77-10436

**ALTERNATIVES**  
On using scenarios in the evaluation of complex alternatives [AD-A035387] N77-26008

**AMPHIBIOUS VEHICLES**  
The aerocrane in LOTS operations [AD-A029793] N77-18151

**ANALYSIS (MATHEMATICS)**  
Standardization guide for construction and use of HORT-type analytic trees [ERDA-45/8] N77-32010

**ANALYSIS OF VARIANCE**  
Biased variance estimators for statistical inventory policies [AD-A028960] N77-17817

Aircraft airframe cost estimation utilizing a components of variance model [AD-A032627] N77-24005

**APPROACH**  
Development of an integrated configuration management/flight director system for piloted STOL approaches [NASA-CR-2883] N77-30132

**APPROPRIATIONS**  
NASA authorization for fiscal year 1977 [GPO-57-010] N77-20935

Authorizing appropriations to the National Aeronautics and Space Administration [H-REPT-95-67] N77-20936

National patterns of R and D resources: Funds and manpower in the United States, 1953 - 1976 [PB-263778/3] N77-26006

NASA authorization for fiscal year 1978, part 2 [GPO-86-914] N77-26024

National Aeronautics and Space Administration Authorization Act, 1978 [PUB-LAW-95-76] N77-30028

NASA authorization, 1978, volume 3 [GPO-92-950] N77-31026

NASA authorization for fiscal year 1978, part 3 [GPO-86-914] N77-32029

**APPROXIMATION**  
Spare parts calculations [LRBA-WT-24/75/BT] N77-10547

**ARC LAMPS**  
Manufacturing methods and technology (MTE) measure for fabrication of low voltage start sealed beam arc lamps [AD-A036189] N77-28418

**ARMED FORCES (UNITED STATES)**  
The application of design-to-cost acquisition policies to selected electronics subsystem development programs [AD-A024895] N77-12931

An evaluation of USAF international cooperative R and D [AD-A027130] N77-14929

A preliminary concept for a design criteria management system --- for military facilities [AD-A032125] N77-20913

Configuration management for the development of computer systems --- for military data systems [AD-A036782] N77-25856

Navy logistics information sharing (NAVLIS) project [AD-A035847] N77-26010

Prototyping: A strategy for the acquisition of naval aircraft [AD-A035357] N77-26011

Study of US Army libraries. Volume 2: Directory [AD-A036002] N77-27028

Study of US Army libraries, volume 1 --- management methods [AD-A036004] N77-27033

AFGL fiscal year 1978, Air Force technical objectives document --- environmental research at the Air Force Geophysics Laboratory [AD-A039054] N77-28026

Army life cycle cost model for missile systems [AD-A040143] N77-30161

Comparative studies of organizational factors in military maintenance [AD-A042847] N77-32075

The role of operational test and evaluation in the air force aircraft acquisition process [AD-A042774] N77-32962

Milestone zero: Its changes on the Air Force acquisition process [AD-A042770] N77-32965

**ARTIFICIAL INTELLIGENCE**  
ACS. 1: An experimental management tool [AD-A037311] N77-27023

**ASSURANCE**  
An approach to safety and system assurance in urban mass transportation A77-10459

Using pattern recognition in product assurance A77-50459

Development of automated aids for decision analysis [AD-A026379] N77-15892

**AUTOMATIC CONTROL**  
Hazard analysis - Space applications to mass transit A77-10452

Vehicle management policies for automated transportation systems A77-46650

**AUTOMATIC TEST EQUIPMENT**  
US Army TMDE Program and investigation of a family of Automatic Test Support Systems /ATSS/ --- Test, Measurement, Diagnostic Equipment A77-49648

A support system life cycle cost model A77-50491

**AUTOMATION**  
Overcoming people problems in the switch to automated composition A77-49799

Automation management study, Director of Army Automation (DAA) [AD-A039565] N77-31007

**AUTOMOBILES**  
Proposed energy conservation contingency plan: Emergency commuter parking management and carpooling incentives. Economic impact analysis. Environmental impact assessment [PB-258625/3] N77-18585

Federal support for the development of alternative automotive power systems: The general issue and the stirling, diesel, and electric cases [PB-263523/3] N77-23518

**AVAILABILITY**  
Reliability, availability, maintainability/logistics /RAM/LOG/ A77-50456

AVIONICS

AVIONICS

Effective reliability planning and implementation --- for ECM equipment production A77-10453

Symposium on Equipment and System Design for Minimum Cost of Ownership, London, England, March 16, 1976, Proceedings A77-22751

The reliability and costs of RAF avionic equipment A77-22752

An analysis of cost of ownership --- of avionic system operation A77-22753

Cost of ownership in practice --- of airborne inertial navigation system A77-22754

Getting it right the first time --- cost reduction for avionic equipment ownership A77-22757

An improved management approach to upgrade avionic system reliability --- F-14 Phoenix system operational reliability and availability A77-31341

A marketplace approach to military avionics standardization A77-37358

An approach to modern avionics integration support A77-37384

Problems of research and development cost predictions in an avionics supply company A77-40009

Reliability improvement warranty techniques and applications --- to F-16 aircraft A77-50477

Modular packaging approaches, volume 1 [AD-A027520] N77-14022

Management guide to avionics software acquisition. Volume 3: Summary of software related standards and regulations [AD-A030593] N77-20808

Management guide to avionics software acquisition. Volume 4: Technical aspects relative to software acquisition [AD-A030594] N77-20809

Management guide to avionics software acquisition. Volume 1: An Overview of software development and management [AD-A030591] N77-21870

Management guide to avionics software acquisition. Volume 2: Software acquisition process [AD-A030592] N77-21871

Support equipment program for avionics readiness: Initial planning [AD-A033585] N77-22104

Establishment of the program manager for avionics [AD-A043163] N77-32961

**B**

BATCH PROCESSING

Optimal policy for database batch operations: Backup, checkpointing, and batch update [AD-A037233] N77-28025

BAYES THEOREM

Bayesian reliability assessment from test data A77-10472

BEAM LEADS

Manufacturing methods and technology program for beam lead sealed junction semiconductor devices [AD-A038681] N77-28406

## SUBJECT INDEX

## DECISION MAKING

## DATA MANAGEMENT

The ABC's required for establishing a practical computerized plant engineering management data base system  
[ASME PAPER 76-WA/PEM-1] A77-26497

A distributed air defense information system  
A77-30477

An integrated program and data management system for engineering applications --- Book  
A77-37798

LANDSAT D data processing facility study  
[NASA-CR-144828] N77-13495

Data management plan for the oceanographic sub-programme data centre  
N77-16586

Program on Earth Observation Data Management Systems (EODMS)  
[NASA-CR-144845] N77-17548

Contract data management  
[AD-A029272] N77-17931

Effectiveness of information transfer through water resources researcher/user group interaction  
[PB-258767/3] N77-18956

The formal design and analysis of distributed data processing systems  
[AD-A033888] N77-24985

Minicomputers: An alternative approach to municipal information systems  
[PB-263775/7] N77-26003

Navy logistics information sharing (NAVLIS) project  
[AD-A035847] N77-26010

In support of technical development plan 43-03X, education and training --- naval air training data management system  
[AD-A038346] N77-30013

Data management systems analysis: Findings and recommendations --- economic impact of military facility closures, reductions, or buildups  
[AD-A041968] N77-31813

**DATA PROCESSING**

Temperature measurement technology - Sensor techniques and instrumentation  
A77-36956

LANDSAT D user data processing study  
[NASA-CR-144826] N77-13493

LANDSAT D data processing facility study  
[NASA-CR-144828] N77-13495

An investigation of priority scheduling methods for projects requiring multiple limited resources  
N77-14921

Multi-mini systems: A functional development of the architecture for tomorrow's administrative computing  
[UCRL-77946] N77-15718

A preliminary study of data handling techniques in the United Kingdom, volume 1  
[BLL-BLRD-5296-VOL-1] N77-15900

The formal design and analysis of distributed data processing systems  
[AD-A033888] N77-24985

General purpose computer acquisition  
[AD-A037757] N77-27728

A management approach to the development of computer-based systems  
[AD-A037895] N77-27796

Automatic data processing risk assessment  
[PB-265950/6] N77-28819

Economics of management of university computing resources  
[PB-267107/1] N77-31822

Safety information system guide  
[ERDA-76-45/9] N77-33384

**DATA PROCESSING EQUIPMENT**

Report to the Congress by the Comptroller General of the United States: Managers need to provide better protection for federal automatic data processing facilities  
[PB-254077/1] N77-10943

Information processing modernization  
[AD-A026978] N77-14934

**DATA REDUCTION**

Study of nationwide on-line access to evaluated engineering design data. Survey 1: Focus group study  
[PB-264981/2] N77-28995

**DATA RETRIEVAL**

Study of nationwide on-line access to evaluated engineering design data. Survey 1: Focus group study

[PB-264981/2] N77-28995

**DATA SAMPLING**

How to get more mileage out of your data --- statistical model for reliability assessment  
A77-50498

Optimum demonstration tests with grouped inspection data from an exponential distribution  
A77-50549

**DATA STORAGE**

A preliminary study of data handling techniques in the United Kingdom, volume 1  
[BLL-BLRD-5296-VOL-1] N77-15900

A methodology for generalized database restructuring, volumes 1 and 2  
N77-16744

**DATA SYSTEMS**

The ABC's required for establishing a practical computerized plant engineering management data base system  
[ASME PAPER 76-WA/PEM-1] A77-26497

A preliminary study of data handling techniques in the United Kingdom, volume 1  
[BLL-BLRD-5296-VOL-1] N77-15900

**DATA TRANSMISSION**

The Deep Space Network  
[NASA-CR-152647] N77-21110

**DC 10 AIRCRAFT**

Interface between maintainability and commercial aircraft spares support  
A77-10483

**DEACTIVATION**

Data management systems analysis: Findings and recommendations --- economic impact of military facility closures, reductions, or buildups  
[AD-A041968] N77-31813

**DECISION MAKING**

Experience of aeronautics and astronautics in the application of systems engineering  
A77-27034

Costs and decision making --- for aircraft production effectiveness  
A77-29665

Technology and decision making in the air transport industry  
A77-31066

When managing - Think statistics  
A77-37585

Critical Path Method - A simple tool for the working manager  
A77-37587

Energy R&D modeling for budgetary decisions  
A77-38218

Analysis under constraints and decision-making aid for certain scheduling problems --- French book  
A77-43637

The use of decision table logic in a manufacturing system  
A77-48679

Forecasting of critical materials flow - Managerial decisions utilizing sequential methodology  
A77-48680

Quantitative models used in the RIW decision process --- Reliability Improvement Warranty  
A77-50478

A reliability incentive based bid decision  
A77-50495

Application of decision/risk analysis in operational tests and evaluation  
[AD-A024205] N77-10857

Economic evaluation methods in community planning  
[PB-253432/9] N77-12936

Advanced avionics for the A-10: A decision analysis model  
[AD-A027678] N77-14023

Organizational communications and decision making in crises  
[AD-A026984] N77-14927

Participative decision making: An investigation of its effectiveness in the program management office  
[AD-A026381] N77-14928

Useful life cycle cost estimates for defense systems: An evaluation  
[AD-A026560] N77-14951

Development of automated aids for decision analysis  
[AD-A026379] N77-15892

## DECISION THEORY

## SUBJECT INDEX

- Biased variance estimators for statistical inventory policies [AD-A028960] N77-17817
- Planning and multiple criteria decision making with NAPS, a computerized system for evaluating complex alternatives [BMPT-PB-W-76-19] N77-17924
- Preliminary investigations concerning the training of tactical decision making behavior [AD-A028722] N77-17928
- The effects of renewal processes upon stochastic reliability models [AD-A030297] N77-18468
- A study of influence methods used by project and functional managers in a matrix organizational environment [AD-A030299] N77-18943
- Applicability of design-to-cost to simulator acquisition [AD-A030231] N77-18946
- Life cycle cost models for durable versus disposable package decisions [AD-A030293] N77-18953
- Method of assessing strategies for transportation energy conservation [UCRL-52051] N77-18955
- Decision-makers guide in solid waste management [PB-258266/6] N77-18961
- A renewal decision problem [AD-A031413] N77-20464
- A model interface for the decision aiding information system [AD-A033416] N77-22995
- Decision environment: A proposed physical installation [AD-A033520] N77-23003
- Strategy for the NSF Intergovernmental Science and public technology/industrial program to enhance technological innovation from and capacity of the small business community [PB-261951/8] N77-23036
- The use of insight in management decisions [AD-A033696] N77-23996
- Rapid screening of decision options [AD-A035386] N77-26007
- On using scenarios in the evaluation of complex alternatives [AD-A035387] N77-26008
- Factors affecting the corporate decisionmaking process of air transport manufacturers [NASA-CR-154618] N77-27020
- Planning and control under risk --- mathematical models [AD-A037013] N77-28023
- Optimal policy for database batch operations: Backup, checkpointing, and batch update [AD-A037233] N77-28025
- Evaluation of NASA-sponsored research on capital investment decision making in the civil aviation industry [NASA-CR-154620] N77-28101
- Measuring the efficiency of decision making units with some new production functions and estimation methods. [AD-A038211] N77-28974
- A technique to assist citizen groups in decision making [PB-265742/7] N77-29025
- Decision verification as an element of Navy quality assurance programs [AD-A039158] N77-29545
- A method for evaluating management options for an urbanizing watershed N77-30030
- Aiding decision makers with a generalized data base management system: An application to inventory management [PB-267306/9] N77-30796
- An interactive computer aiding system for group decision making [AD-A041758] N77-34030
- DECISION THEORY**
- Regulation of the air traffic control system N77-21593
- Introduction to systems engineering - Foundations, capabilities, and limits N77-27033
- A replacement policy for components of a pure series system utilizing one component as an indicator of replacement time [AD-A024979] N77-12825
- Development of automated aids for decision analysis [AD-A026379] N77-15892
- A renewal decision problem --- component replacement [AD-A033777] N77-24984
- Step-through simulation: A method for implementing decision analysis [AD-A036969] N77-28024
- A generalized maximum entropy principle for decision analysis [AD-A039926] N77-28899
- A risk minimization approach to multiple criteria decision analysis N77-28971
- An interactive computer aiding system for group decision making [AD-A041758] N77-34030
- DECISIONS**
- Laboratory equipment procurement [LBL-5504] N77-27022
- DEEP SPACE NETWORK**
- The Deep Space Network [NASA-CR-152647] N77-21110
- DEFENSE INDUSTRY**
- Manufacturing technology + teamwork = economy --- DOD programs A77-29800
- Useful life cycle cost estimates for defense systems: An evaluation [AD-A026560] N77-14951
- Expediting diversification of Department of Defense contractors [PB-259190/7] N77-20956
- DEFENSE PROGRAM**
- Managing by exception in space systems operation A77-13330
- When managing - Think statistics A77-37585
- Obstacles to effective cost reduction on DOD programs A77-46743
- DOD progress in design to cost A77-46746
- Useful life cycle cost estimates for defense systems: An evaluation [AD-A026560] N77-14951
- Independent research and development issues and alternatives --- defense department policy for recovery of contractor costs [AD-A033954] N77-23997
- Advanced space program studies. Overall executive summary [NASA-CR-154893] N77-31185
- Data management systems analysis: Findings and recommendations --- economic impact of military facility closures, reductions, or buildups [AD-A041968] N77-31813
- Management of research and development for electronic systems --- Defense Department policies [AD-A042859] N77-32963
- Milestone zero: Its changes on the Air Force acquisition process [AD-A042770] N77-32965
- DELPHI METHOD (FORECASTING)**
- Methods of scientific-industrial forecasting in the management of scientific research and development A77-23454
- A two-stage forecasting methodology for developing a national energy policy A77-43144
- DEMAND (ECONOMICS)**
- Project Independence Evaluation System (PIES) documentation. Volume 6: Methodology for improving the price sensitivity of the PIES oil and gas supply curves [PB-264069/6] N77-28606
- DESIGN ANALYSIS**
- Are accidents scheduled --- safety management problems A77-11344
- Large and small-scale systems engineering A77-36262
- Interactive versions of cost models --- computerized system A77-37441
- Let's get serious about total life cycle costs A77-37582

- Engineering design handbook. Development guide for reliability. Part 4: Reliability measurement [AD-A027371] N77-16363
- DESTRUCTIVE TESTS**  
Comparison of DPA results on electronic components --- Destruct Physical Analysis A77-10478
- DEVELOPING NATIONS**  
But where's the money coming from --- Survey of satellite communication systems in developing countries A77-36389
- DIESEL ENGINES**  
Federal support for the development of alternative automotive power systems: The general issue and the stirling, diesel, and electric cases [PB-263523/3] N77-23518
- DIGITAL SIMULATION**  
Selected experiments on fleet utilization for a planned personal rapid transit system A77-46655
- DIGITAL SYSTEMS**  
A distributed air defense information system A77-30477
- DISPLAY DEVICES**  
Temperature measurement technology - Sensor techniques and instrumentation A77-36956  
Interactive matrix displays and management information reporting: A feasibility assessment [LBL-5310] N77-21988
- DISTRICT OF COLUMBIA**  
Airport and air transport planning [PB-259413/3] N77-20057
- DOCUMENTATION**  
Overcoming people problems in the switch to automated composition A77-49799  
Aviation and programmatic analyses. Volume 3, Task 3: Development of special issue papers --- for NASA OAST programs [NASA-CR-152583] N77-29141
- DOCUMENTS**  
Information dissemination - A systems viewpoint A77-49800  
Data base publishing at NTIS A77-49801  
Marketing mix for publishing profit A77-49802

Economic and policy problems in satellite communications --- Book A77-30591  
Price discrimination and economies of scale in international satellite communications A77-30592  
Domestic satellite communications - Economic issues in a regulated industry undergoing technical change A77-30593  
Economic issues in international telecommunications - A public policy dilemma A77-30594  
Key problems in satellite communications - Proliferation, competition, and planning in an uncertain environment A77-30595  
The economy of air transportation /2nd edition/ --- French book A77-31975  
Practical approach to evaluation of research projects --- cash-flow method A77-32475  
Questions relating to the planning of the scientific-technical activity of an academic oceanographic research institute A77-40819  
The timing of technology - Commercial transport aircraft [AIAA PAPER 77-1200] A77-45503  
Transportation economics and public policy: With urban extensions --- Book A77-50298  
Some aspects of economically-effective prediction for an optimal program of space system designing [IAF PAPER A-77-61] A77-51529  
Evaluating the benefits of government funded R & D aimed at the private sector [IAF PAPER A-77-62] A77-51530  
Small business in the metals industry: A background study [PB-255649/6] N77-10958  
Proceedings of the Mineral Economics Symposium: Winning the high stakes at the critical commodity game [PB-255607/4] N77-12502  
Code of federal regulations. 14. Aeronautics and space, parts 200 to 1199 --- regulations and standards for the civil aeronautics board N77-12934  
Economic evaluation methods in community planning [PB-253432/9] N77-12936  
Analysis of fiscal year 1977 DOT program by policy and RD and D management objectives. Program levels for fiscal years 1975, 1976, 1977, volume 1 [PB-255401/2] N77-13922  
Life cycle cost models for durable versus disposable package decisions [AD-A030293] N77-18953

## ECONOMIC DEVELOPMENT

Decision-makers guide in solid waste management  
[PB-258266/6] N77-18961

Economic modeling: An aid to the pricing of  
information services  
[LBL-4899] N77-19933

Space shuttle: A case study in economic analysis  
--- explicitly the data base  
[AD-A03871] N77-23176

The plan for the economic evaluation of the public  
service communication satellite system  
[NASA-CR-153007] N77-25369

The 1985 R and D funding projections  
[PB-263856/7] N77-26022

Handbook of estimating data, factors, and procedures  
--- for manufacturing cost studies  
[NASA-TM-X-73397] N77-27248

Economics of management of university computing  
resources  
[PB-267107/1] N77-31822

Issues of hierarchical planning in multi-stage  
production systems  
[AD-A042559] N77-32960

**ECONOMIC DEVELOPMENT**  
Needed - A Federal R&D policy --- to match GNP  
increase  
A77-31836

The value of commercial air transportation to the  
economy  
A77-41937

Relationship of environmental improvement efforts  
on development in economically distressed areas  
[PB-256702/2] N77-13925

Regional economic development and federal  
legislation  
[PB-256179/3] N77-14953

Technology assessment for new water development  
projects, volume 1  
[PB-259276/4] N77-18972

Analysis of the effectiveness of industrial R and D  
--- costs and impact on economic growth  
[NASA-CR-153001] N77-24978

Optimization models for planning economic  
development  
[AD-A039165] N77-31024

**ECONOMIC FACTORS**  
Economic benefits of improved meteorological  
forecasts - The construction industry  
[IAF PAPER 76-128] A77-10916

Legal and economic prerequisites to space  
industrialization  
[IAF PAPER ISL-76-29] A77-10968

A new air transport policy for the North Atlantic  
--- Book  
A77-16375

Public international air transportation law in a  
new era: Economic regulation of international  
air carrier operations --- Book  
A77-16449

The future of air transportation - Economic  
association considerations  
[AIAA PAPER 77-286] A77-18222

Local and computer airlines in the United States  
A77-31067

The economy of air transportation /2nd edition/  
--- French book  
A77-31975

Full employment maintenance in the private sector  
[NASA-TM-X-74334] N77-16948

Proposed energy conservation contingency plan:  
Emergency commuter parking management and  
carpooling incentives. Economic impact  
analysis. Environmental impact assessment  
[PB-258625/3] N77-18585

An investigation of economic factors in FCC  
spectrum management  
[PB-258500/8] N77-20305

Factors affecting the corporate decisionmaking  
process of air transport manufacturers  
[NASA-CR-154618] N77-27020

Metric transition in the United States  
[PB-266868/9] N77-28343

Federal assistance programs and energy  
development-impacted municipalities  
[PB-265804/5] N77-29026

Data management systems analysis: Findings and  
recommendations --- economic impact of military  
facility closures, reductions, or buildups  
[AD-A041968] N77-31813

## SUBJECT INDEX

## ECONOMICS

Aviation economics --- commercial airlines  
[GPO-73-830] N77-23008

OPEC and the monopoly price of world oil (World  
Oil Project)  
[PB-265015/8] N77-29001

Managerial economics: Past, present and future  
[AD-A040549] N77-31025

The plan for the economic evaluation of the Public  
Service Communication Satellite system  
[NASA-CR-155051] N77-32351

**EDUCATION**  
Preliminary investigations concerning the training  
of tactical decision making behavior  
[AD-A028722] N77-17928

In support of technical development plan 43-03X,  
education and training --- naval air training  
data management system  
[AD-A038346] N77-30013

**ELECTRIC AUTOMOBILES**  
Federal support for the development of alternative  
automotive power systems: The general issue and  
the sterling, diesel, and electric cases  
[PB-263523/3] N77-23518

**ELECTRIC GENERATORS**  
Program definition for the development of  
geothermal energy. Volume 3: Appendixes  
[NASA-CR-153223] N77-25614

**ELECTRIC POWER PLANTS**  
Computational techniques applied to power  
investments /practical programming/  
A77-11307

How construction times of power stations affect  
investment costs  
A77-12248

Planning models in the electric economy  
A77-27038

Juridical questions concerning the supply with  
energy in times of crisis - Regulations  
regarding the assurance of the supply with  
electricity /electrical load distribution  
regulations/ and the supply with gas /gas load  
distribution regulation/. III  
A77-28684

Cut energy costs: A guide for buying and plant  
operation --- industrial energy saving techniques  
A77-34642

**ELECTRIC POWER SUPPLIES**  
Use of computational models in long-term cost  
planning --- of power equipment procurement  
A77-11305

Computational techniques applied to power  
investments /practical programming/  
A77-11307

FEA energy financing workshops. Section 1:  
Summaries of proceedings. Section 2:  
Background papers  
[PB-265706/2] N77-28615

**ELECTROMAGNETIC COMPATIBILITY**  
Electromagnetic compatibility: The program  
manager's considerations  
[AD-A042876] N77-32370

**ELECTRONIC CONTROL**  
Multiuser area-coverage automatic vehicle  
monitoring program  
A77-36618

**ELECTRONIC COUNTERMEASURES**  
Effective reliability planning and implementation  
--- for ECM equipment production  
A77-10453

**ELECTRONIC EQUIPMENT**  
Discussion of the reliability of measuring devices  
A77-16687

The application of design-to-cost acquisition  
policies to selected electronics subsystem  
development programs  
[AD-A024895] N77-12931

Product assurance programme plan for high  
reliability products  
[ECR-59] N77-23520

Management of research and development for  
electronic systems --- Defense Department policies  
[AD-A042859] N77-32963

**ELECTRONIC EQUIPMENT TESTS**  
Improved reliability through formal field tests  
A77-10462

System burn-in for reliability enhancement  
A77-10463

- Report on reliability design and acquisition management A77-10468
- Management of electronic equipment reliability A77-10469
- Bayesian reliability assessment from test data A77-10472
- Comparison of DPA results on electronic components --- Destruct Physical Analysis A77-10478
- Cost reliability trade off in an electronic module A77-17422

- Project Independence Evaluation System (PIES) documentation. Volume 9: Allocation of exploratory activity to oil and natural gas in the FEA oil and gas supply model [PB-265772/4] N77-29325

## ENERGY REQUIREMENTS

Continuation of the adjustment as a production incentive to the maximum weighted average first sale price for domestic crude oil (Energy Action no. 11)  
[PB-266841/6] N77-30636

Optimization models for planning economic development  
[AD-A039165] N77-31024

Solar collector manufacturing activity  
[PB-266985/1] N77-33664

**ENERGY REQUIREMENTS**

The United States energy dilemma - How can we solve it  
A77-02855

Development of methods for forecasting the national industrial demand for energy  
[PB-257914/2] N77-16451

**ENERGY SOURCES**

Alternatives to oil and gas through energy management  
[AIAA 77-1006] A77-41553

Strategic plans for energy research and development, FY 1976 - FY 1981  
[TID-27291] N77-28595

**ENERGY TECHNOLOGY**

Effects of selected R&D options on fuel usage in the commercial air system  
A77-29472

Accounting methods for new-technology non-utility energy installations  
A77-38675

Alternatives to oil and gas through energy management  
[AIAA 77-1006] A77-41553

Input-Output capital coefficients for energy technologies  
[BNL-50608] N77-30027

**ENGINE DESIGN**

A new development concept for gas turbine engine optimize life cycle costs  
A77-17228

Life Cycle Cost as a propulsion system design consideration  
[ASME PAPER 77-GT-99] A77-28609

**ENGINEERING MANAGEMENT**

Maintainability analysis versus maintenance analysis - Interfaces and discrimination  
A77-10480

The role of the airport consultant  
A77-13364

The ABC's required for establishing a practical computerized plant engineering management data base system  
[ASME PAPER 76-WA/PEN-1] A77-26497

A management information system for engineering and research  
A77-34496

Managing engineers by objectives  
A77-37426

The potential in the management of engineering design for reduction of life cycle costs  
A77-37427

Influences on system designers which compete with the work statement  
A77-37428

An integrated program and data management system for engineering applications --- Book  
A77-37798

Conflict management for engineers  
[ASME PAPER 77-DE-6] A77-46903

Technical problem management --- for reduced service cost and improved field reliability  
A77-50500

**ENTROPY**

A generalized maximum entropy principle for decision analysis  
[AD-A039926] N77-28899

**ENVIRONMENT EFFECTS**

Airports and the environment --- Book  
A77-24774

National support for science and technology: An examination of foreign experience. Volume 2: Country monographs  
[PB-253364/4] N77-10966

**ENVIRONMENT MANAGEMENT**

Incentives for managing the environment --- environmental quality management methods  
A77-24277

## SUBJECT INDEX

A regional environmental quality management model - An assessment  
A77-36274

**ENVIRONMENT PROTECTION**

An approach to a rational distribution of capital investments between production and environmental cleanup sectors  
A77-44934

Justifications of appropriation estimates for Committee on Appropriations, fiscal year 1976  
[PB-256464/9] N77-11604

**ENVIRONMENTAL ENGINEERING**

The role of the airport consultant  
A77-13364

APGL fiscal year 1978, Air Force technical objectives document --- environmental research at the Air Force Geophysic Laboratory  
[AD-A039054] N77-28026

**ENVIRONMENTAL QUALITY**

Incentives for managing the environment --- environmental quality management methods  
A77-24277

A regional environmental quality management model - An assessment  
A77-36274

A coarse sort system for preliminary water resources management alternatives  
[PB-260491/6] N77-21542

Appropriate technology: A directory of activities and projects  
[PB-267970/2] N77-34052

**ENVIRONMENTAL SURVEYS**

Environmental impacts of BART interim service findings, report on phase 1  
[PB-257498/6] N77-15918

Using an impact measurement system to evaluate land development  
[PB-263780/9] N77-25031

**EQUIPMENT SPECIFICATIONS**

I.C. screening, reliability or ripoff --- Specification Control Drawings for Integrated Circuits reliability maintenance  
A77-10477

Consumer demand results in development of a reliability standard  
A77-50457

Summary of development and recommendations for a quality assurance program for the procurement and manufacture of urban mass transit operating equipment and systems  
[NASA-CR-149559] N77-16954

Quality assurance program guidelines for application to and use by manufacturers of rail/guideway vehicles, buses, automatic train control systems, and their major subsystems  
[NASA-CR-149558] N77-16955

Support equipment program for avionics readiness: Initial planning  
[AD-A033585] N77-22104

**ESA SATELLITES**

Organisation of an operations centre --- for orbiting satellites  
A77-31501

**ESTIMATES**

Biased variance estimators for statistical inventory policies  
[AD-A028960] N77-17817

Measuring the efficiency of decision making units with some new production functions and estimation methods.  
[AD-A038211] N77-28974

**ESTIMATING**

Advanced productivity analysis methods for air traffic control operations  
[AD-A035095] N77-29120

**EUROPEAN SPACE AGENCY**

What options for European aviation  
A77-17020

Organisation of an operations centre --- for orbiting satellites  
A77-31501

European Space Tribology Laboratory management procedures handbook  
[ESA-PSS-06-ISS-2] N77-18172

Project control requirements and procedures for major procurement actions. Phase B: System definition  
[ESA-PSS-32-ISSUE-1] N77-26001

## SUBJECT INDEX

## FEDERAL BUDGETS

- Project control requirements and procedures for major procurement actions. Phase C/D: System development and production [ESA-PSS-33-ISSUE-1] N77-26002
- EUROPEAN SPACE PROGRAMS**  
Transport to outer space by private enterprises - Aspects of air and space law A77-19996
- Costing study for lidar facility [ESA-CR(P)-863] N77-16079
- EXPANSION**  
Optimization of recurrent capacity expansion models and generalization to a non-recurrent model [AD-A033429] N77-24983
- EXPERIMENTAL DESIGN**  
Statistical design of R/M experiments A77-50472
- Planning statistical experimental designs in R & M applications A77-50473
- EXPONENTIAL FUNCTIONS**  
Optimum demonstration tests with grouped inspection data from an exponential distribution A77-50549
- EXTRAPOLATION**  
Methods of scientific-industrial forecasting in the management of scientific research and development A77-23454
- F**
- F-4 AIRCRAFT**  
Scheduled maintenance policies for the F-4 aircraft: Results of the maintenance posture improvement program [AD-A030146] N77-18045
- A comparison of selected scheduling heuristics for a TAC F-4E maintenance organization [AD-A032327] N77-20912
- The magnitude of internal rework on the F-4 aircraft during depot level maintenance at Ogden Air Logistics Center [AD-A032458] N77-23048
- F-14 AIRCRAFT**  
The effect of reliability and maintainability on the F-14A TP30P412A engine [AD-A037985] N77-26525
- F-16 AIRCRAFT**  
Studies pinpoint cost-saving F-16 manufacturing techniques A77-31499
- Reliability improvement warranty techniques and applications --- to F-16 aircraft A77-50477
- F-18 AIRCRAFT**  
Design to life cycle costs and logistics alternatives; Conference, Arlington, Va., December 6, 7, 1976 and New Port Beach, Calif., February 8, 9, 1977, Abridged Proceedings A77-45172
- F-111 AIRCRAFT**  
An approach to modern avionics integration support A77-37384
- FACTOR ANALYSIS**  
Project screening [AD-A023837] N77-11894
- FACTORIAL DESIGN**  
Design criteria for solid waste management in recreational areas [PB-258597/4] N77-17955
- FAIL-SAFE SYSTEMS**  
Integrated analysis of the assurance technologies --- system failure-success model A77-10470
- FAILURE ANALYSIS**  
Condemnation rates from failure data A77-10440
- Failure rate analysis of Goddard Space Flight Center spacecraft performance during orbital life A77-10443
- Monograms for the design of reliability acceptance plans A77-10454
- Integrated analysis of the assurance technologies --- system failure-success model A77-10470
- US Army TMDE Program and investigation of a family of Automatic Test Support Systems /ATSS/ --- Test, Measurement, Diagnostic Equipment A77-49648
- A model for an estimation of the product warranty return rate A77-50455
- Failure modes and effects analysis by matrix method --- for spacecraft technologies A77-50461
- Cost model for testing program based on nonhomogeneous Poisson failure model A77-50546
- A replacement policy for components of a pure series system utilizing one component as an indicator of replacement time [AD-A024979] N77-12825
- Forecasting of secondary item returns --- mathematical models for inventory management [AD-A030343] N77-19924
- FAILURE MODES**  
Comparison of DPA results on electronic components --- Destruct Physical Analysis A77-10478
- Failure modes and effects analysis by matrix method --- for spacecraft technologies A77-50461
- FATIGUE (MATERIALS)**  
Planning and installation of an information center on fatigue and associated aspects at the LBF A77-13777
- FEASIBILITY ANALYSIS**  
Methods utilized in evaluating the profitability of commercial space processing [IAF PAPER 76-261] A77-10954
- Interactive matrix displays and management information reporting: A feasibility assessment [LBI-5310] N77-21988
- FEDERAL BUDGETS**  
National science and technology policy - Perceptions of barriers to innovation A77-42378
- Daedalophobia - Diagnosis and prognosis --- solar energy utilization obstacles in Canada A77-49121
- Water resources planning and management goals A77-51283
- Justifications of appropriation estimates for Committee on Appropriations, fiscal year 1976 [PB-256464/9] N77-11604
- Analysis of fiscal year 1977 DOT program by policy and RD and D management objectives. Program levels for fiscal years 1975, 1976, 1977, volume 1 [PB-255401/2] N77-13922
- Analysis of fiscal year 1977 DOT program by policy and RD and D management objectives. Program levels for fiscal years 1975, 1976, 1977, volume 2 [PB-255402/0] N77-13923
- Information processing modernization [AD-A026978] N77-14934
- Regional economic development and federal legislation [PB-256179/3] N77-14953
- NASA authorization, 1978, volume 1, part 1 [GPO-79-706] N77-17942
- NASA authorization, 1978, volume 2, part 1 [GPO-70-664] N77-17943
- NASA authorization for fiscal year 1977 [GPO-57-010] N77-20935
- Authorizing appropriations to the National Aeronautics and Space Administration [H-REPT-95-67] N77-20936
- Science at the bicentennial: A report from the research community. Report of the National Science Board/1976 [NSB-76-1] N77-24982
- NASA authorization for fiscal year 1978, part 2 [GPO-86-914] N77-26024
- National Aeronautics and Space Administration authorization, fiscal year 1978 [S-REPT-95-281] N77-26025
- Priorities and efficiency in Federal research and development [GPO-70-801] N77-28973
- National Aeronautics and Space Administration Authorization Act, 1978 [PUB-LAW-95-76] N77-30028
- NASA authorization, 1978, volume 3 [GPO-92-950] N77-31026

**FIGHTER AIRCRAFT**

**SUBJECT INDEX**

The reporting of federal research and development resources applied to innovation [PB-266765/7] N77-32009  
 NASA authorization for fiscal year 1978, part 3 [GPO-86-914] N77-32029

**FIGHTER AIRCRAFT**  
 Scheduled maintenance policies for the F-4 aircraft: Results of the maintenance posture improvement program [AD-A030146] N77-18045  
 A new look in reliability: F-18 operational mission environment [AD-A042781] N77-32573

**FIGURE OF MERIT**  
 A reliability control tool during manufacturing A77-50487

**FILE MAINTENANCE (COMPUTERS)**  
 Data base publishing at NTIS A77-49801  
 The CODASYL data base approach: A COBOL example of design and use of a personnel file [PB-265694/0] N77-28982

**FILES**  
 Research on large file management information systems [AD-A037161] N77-27024

**FINANCIAL MANAGEMENT**  
 How construction times of power stations affect investment costs A77-12248  
 Operations research model for investments scheduling in the transportation industry A77-14600  
 Planning a general-aviation product A77-17022  
 The airlines - A financial overview [AIAA PAPER 77-253] A77-18202  
 Financing the future fleet --- for U.S. air transportation [AIAA PAPER 77-261] A77-18207  
 Direct and indirect subsidies in the air mode in comparison with other modes of transportation A77-23269  
 Forum on the future of air transportation [AIAA PAPER 77-263] A77-24450  
 Investing in technology during inflation A77-25141  
 Planning models in the electric economy A77-27038  
 Upward trends in telecommunications marketing and finance A77-27639  
 Needed - A Federal R&D policy --- to match GNP increase A77-31836  
 Accounting methods for new-technology non-utility energy installations A77-38675  
 Management aid - Systematic Adjustment of Funds and Schedules /SAFS/ A77-46744  
 Some aspects of economically-effective prediction for an optimal program of space system designing [IAP PAPER A-77-61] A77-51529  
 An approach to improve management visibility within the procurement and financial group at Goldstone N77-10109  
 Financial critical factors analysis --- waste treatment management for Miami Valley, Ohio region [PB-254377/5] N77-12937  
 Operational cost estimates, space shuttle --- Development of user charge policy on reusable spacecraft [GPO-81-196] N77-17134  
 Low cost program practices for future NASA space programs, volume 1 [NASA-CR-149656] N77-17940  
 Low cost program practices for future NASA space programs. Volume-2: Appendix [NASA-CR-149657] N77-17941  
 NASA authorization, 1978, volume 1, part 1 [GPO-79-706] N77-17942  
 NASA authorization, 1978, volume 2, part 1 [GPO-70-664] N77-17943  
 Choosing the optimum financial strategy for pollution control investments [PB-259443/0] N77-20971

Independent research and development issues and alternatives --- defense department policy for recovery of contractor costs [AD-A033954] N77-23997  
 National patterns of R and D resources: Funds and manpower in the United States, 1953 - 1976 [PB-263778/3] N77-26006  
 The 1985 R and D funding projections [PB-263856/7] N77-26022

- Information processing modernization [AD-A026978] N77-14934
- A survey of existing management information systems. Software and hardware options [AD-A027046] N77-15891
- Evaluation of a contingency job design model in an information technology environment [AD-A026943] N77-15894
- Management information systems for the US Army satellite communications agency [AD-A029273] N77-17781
- An implementation of a CODASYL based data base management system under the UNIX operating system [AD-A028893] N77-17927
- Minicomputer based, controlled materials information system [UCRL-78215] N77-18804
- The WRM information system --- data bases and computer program for stockpile analysis [AD-A030242] N77-18942
- An investigation of the DCAS management information system as a source of information for allocation of procurement quality assurance manpower resources [AD-A030313] N77-18945
- A preliminary concept for a design criteria management system --- for military facilities [AD-A032125] N77-20913
- Implementation and testing of a Neighborhood Office Center (NOC) and integration of the NOC with an administrative correspondence management information system --- for NASA [NASA-CR-152645] N77-21985
- Interactive matrix displays and management information reporting: A feasibility assessment [LBL-5310] N77-21988
- A model interface for the decision aiding information system [AD-A033416] N77-22995
- Decision environment: A proposed physical installation [AD-A033520] N77-23003
- A proposed R and D management model [AD-A033099] N77-23994
- Life cycle management of Army tactical management information systems (TACHIS) [AD-A032499] N77-23995
- A systems approach to integrating future manufacturing technology with the munitions production base modernization planning [AD-A033817] N77-23998
- The formal design and analysis of distributed data processing systems [AD-A033888] N77-24985
- RECALL: A management information retrieval system for the Wang 2200 --- programmable calculator [AD-A034427] N77-24986

MANAGEMENT METHODS

SUBJECT INDEX

Minicomputers: An alternative approach to municipal information systems [PB-263775/7] N77-26003

Research on large file management information systems [AD-A037161] N77-27028

Local government information systems: A study of USAC and the future application of computer technology [PB-264577/8] N77-28041

Automatic data processing risk assessment [PB-265950/6] N77-28819

Language requirements report --- military and business-oriented management information systems [AD-A038214] N77-28975

OSCR system applications analysis [AD-A038477] N77-28976

In support of technical development plan 43-03X, education and training --- naval air training data management system [AD-A038346] N77-30013

Design considerations and criteria for a management information and control system for the Sidewinder Program Office, Naval Weapons Center, China Lake, California [AD-A039773] N77-30014

Commitment information system: User guide --- project management data bases [ORNL-TM-5408] N77-30023

Aiding decision makers with a generalized data base management system: An application to inventory management [PB-267306/9] N77-30796

Automation management study, Director of Army Automation (DAA) [AD-A039565] N77-31007

Computer science and technology: A data base management approach to Privacy Act compliance [PB-268500/6] N77-32743

**MANAGEMENT METHODS**

R & M management using risk analysis --- Reliability and Maintainability A77-10450

Managing by exception in space systems operation A77-13330

Airline managerial efficiency A77-19014

Incentives for managing the environment --- environmental quality management methods A77-24277

Scientific work organization, an important intensification factor A77-27161

Weakest-point analysis in the production domain using multimoment studies - A case analysis A77-27762

Advanced systems development management --- Book A77-30875

Organisation of an operations centre --- for orbiting satellites A77-31501

A regional environmental quality management model - An assessment A77-36274

Energy management --- resources, supply, conversion and utilization A77-36424

Managing engineers by objectives A77-37426

Interactive versions of cost models --- computerized systems A77-37441

The PRAM program - Capitalizing on cost-reducing opportunities --- Productivity, Reliability, Availability, and Maintainability A77-37584

When managing - Think statistics A77-37585

The Raytheon approach - Reliability success via total management involvement A77-37586

Critical Path Method - A simple tool for the working manager A77-37587

Accounting methods for new-technology non-utility energy installations A77-38675

National Airlines Fuel Management and Allocation Model A77-43399

Government regulation effects on the direction of innovation - A focus on performance standards A77-45622

Leadership effectiveness in program management A77-45624

Project management: How to make it work --- Book A77-45955

Creating corporate incentives to promote creativity [ASME PAPER 77-DE-5] A77-46902

Applying a system concept to R & D management A77-51228

Aspects of project control in R & D A77-51231

Introduction of a matrix structure into an R & D establishment A77-51232

Energy: The policy planning framework in state governments. Volume 1: Summary report [PB-254466/6] N77-10665

Energy: The policy planning framework in state governments. Volume 2: Appendices [PB-254467/4] N77-10666

Optimizing the use of materials and energy in transportation construction [PB-253713/2] N77-11475

A methodology for the evaluation of program cost and schedule risk for the SEASAT program [NASA-CR-149230] N77-12478

Need for better management and control over scientific equipment (report to the Congress) [PB-257289/9] N77-15893

Full employment maintenance in the private sector [NASA-TN-X-74334] N77-16948

Group technology --- computer programming for production management [BDX-613-1478] N77-17479

Planning and multiple criteria decision making with NAPS1, a computerized system for evaluating complex alternatives [BNFT-PB-W-76-19] N77-17924

Management by exception: A decision process [AD-A028943] N77-17929

Low cost program practices for future NASA space programs, volume 1 [NASA-CR-149656] N77-17940

Low cost program practices for future NASA space programs. Volume 2: Appendix [NASA-CR-149657] N77-17941

Transportation system management: A bibliography of technical reports [PB-257273/3] N77-17971

A study of influence methods used by project and functional managers in a matrix organizational environment [AD-A030299] N77-18943

Public management of science: Case studies [PB-258945/5] N77-20911

Residual waste best management practices: A water planner's guide to land disposal [PB-258849/9] N77-20943

Strategic studies for energy planning and management [PB-260364/5] N77-21705

Urban Design Role in Local Government [PB-262370/0] N77-23034

Instrumentation maintenance --- management methods [LBL-5505] N77-26465

Rand library evaluation survey [AD-A037917] N77-27030

Study of US Army libraries, volume 1 --- management methods [AD-A036004] N77-27033

Energy management in residential and small commercial buildings [BNL-50576] N77-27511

A management approach to the development of computer-based systems [AD-A037895] N77-27796

Labor-management relations [NASA-TN-74763] N77-28022

Federal procurement requirements. One of a series of analyses and impact reports of major federal requirement areas [PB-264982/0] N77-28031

Local government information systems: A study of USAC and the future application of computer technology [PB-264577/8] N77-28041

- Application areas for statistical methods [BDX-613-1600] N77-28507
- The organization, management and support services for a large organized research unit within a university: Scripps Institution of Oceanography. One of a series of research studies under the research management improvement program [PB-264973/9] N77-28978
- A technique to assist citizen groups in decision making [PB-265742/7] N77-29025
- Advanced productivity analysis methods for air traffic control operations [AD-A035095] N77-29120
- Aviation common ground support equipment replacement policy investigation [AD-A039160] N77-29180
- Interdisciplinary research management improvement [PB-265011/7] N77-30015
- Development and application of functional manning standards in the National Aeronautics and Space and Space Administration N77-30733
- Optimal management policy for the M/G/ queue with heterogeneous users [PB-267075/0] N77-30899
- Managerial economics: Past, present and future [AD-A040549] N77-31025
- Economics of management of university computing resources [PB-267107/1] N77-31822
- A multistage model of network usage [AD-A041970] N77-32779
- MANAGEMENT PLANNING**
- Reliability growth management of SATCOM terminals N77-10448
- A contractor view of warranty contracting A77-10464
- Pitfalls in reliability program management A77-10467
- The pay-off of R & M trade-off --- Reliability and Maintainability management plan program elements A77-10471
- Upward trends in telecommunications marketing and finance A77-27639
- Principles of computer process planning [SAE PAPER 760914] A77-28223
- Economic and policy problems in satellite communications --- Book A77-30591
- Key problems in satellite communications - Proliferation, competition, and planning in an uncertain environment A77-30595
- Advanced systems development management --- Book A77-30875
- An improved management approach to upgrade avionics system reliability --- P-14 Phoenix system operational reliability and availability A77-31341
- Needed - A Federal R&D policy --- to match GNP increase A77-31836
- Technological change and cost analysis of high-technology systems A77-34493
- Management by objectives in the R & D environment - A simulation A77-34494
- Organizing collection, selection, and ranking of ideas leading to national R & D projects A77-34495
- A management information system for engineering and research A77-34496
- A commentary on project planning and control for risk projects A77-40011
- Questions relating to the planning of the scientific-technical activity of an academic oceanographic research institute A77-40819
- National science and technology policy - Current policies and options for the future A77-42376
- National science and technology policy - Its impact on technological change A77-42377
- National science and technology policy - Perceptions of barriers to innovation A77-42378
- Improving R&D productivity - A study program and its application A77-42380
- Improving R&D productivity - A program for support operations A77-42381
- Improving R&D productivity - Measuring innovation and productivity: A peer rating approach A77-42382
- Project selection methods that pick winners A77-42385
- Effective transfer of technology from research to development A77-42386
- Railroad transportation planning models and their success A77-46644
- Vehicle management policies for automated transportation systems A77-46650
- Selected experiments on fleet utilization for a planned personal rapid transit system A77-46655
- Design to cost; Proceedings of the Conference, San Francisco, Calif., October 13-15, 1976 A77-46739

**OPTIONS**

Improving R&D productivity - A study program and its application A77-42380

The MITRE Solid Waste Management Planning Model - A status report A77-47212

Optimization of structural design/analysis/testing A77-50469

Optimum test samples for reliability improvement A77-50481

System availability and optimum spare units A77-50545

Optimum demonstration tests with grouped inspection data from an exponential distribution A77-50549

Some aspects of economically-effective prediction for an optimal program of space system designing [IAF PAPER A-77-61] A77-51529

Optimal replacement of damaged devices [AD-A029244] N77-16845

A renewal decision problem --- component replacement [AD-A033777] N77-24984

Optimal design of a manpower system [AD-A035434] N77-26009

Optimal policy for database batch operations: Backup, checkpointing, and batch update [AD-A037233] N77-28025

Optimization models for planning economic development [AD-A039165] N77-31024

**OPTIONS**

Rapid screening of decision options [AD-A035386] N77-26007

**ORGANIZATIONS**

Organizational climate changes in the project life cycle A77-48573

Application of principles of organizational structure to high technology activities [AD-A024012] N77-11895

Strategy for the NSF Intergovernmental Science and public technology/industrial program to enhance technological innovation from and capacity of the small business community [PB-261951/8] N77-23036

Civil Aeronautics Board practices and procedures [GPO-60-316] N77-27064

A technique to assist citizen groups in decision making [PB-265742/7] N77-29025

**ORGANIZING**

Scientific work organization, an important intensification factor A77-27161

Coordination and organizational effectiveness: A canonical analysis [AD-A026440] N77-14926

A general systems model for measuring organizational effectiveness N77-23992

**ORTHOGRAPHY**

Concepts in orthophoto machines and their economics A77-47457

**OUTER SPACE TREATY**

Transport to outer space by private enterprises - Aspects of air and space law A77-19996

Transport of outer space by private enterprises - Aspects of air- and space law A77-19997

**OUTPUT**

A prediction model to forecast the cost impact from a break in the production schedule [NASA-TN-78131] N77-34044

**P**

**PASSENGERS**

Liability of carriers for damages of passengers on charter flights A77-34305

Transportation for elderly and handicapped persons. An information bulletin of the transportation task force of the Urban Consortium of Technology initiatives [PB-258734/3] N77-18974

Airport and air transport planning [PB-259413/3] N77-20057

**SUBJECT INDEX**

**PATENT APPLICATIONS**

Technology assessment and forecast --- patent and patent applications data base [REPT-7] N77-25007

**PATENTS**

Technology assessment and forecast --- patent and patent applications data base [REPT-7] N77-25007

**PATTERN RECOGNITION**

Using pattern recognition in product assurance A77-50459

**PAYLOAD MASS RATIO**

Management of DOD space payload integration in the space shuttle era [AD-A026384] N77-14187

**PAYLOADS**

The potential of Spacelab for space applications missions and the organization for its use A77-11587

Shuttle payloads - Opportunities to expand ground-based research A77-29029

Space transportation system payload safety policy A77-50464

Shuttle payload minimum cost vibroacoustic tests A77-50490

STS payloads mission control study continuation phase A-1. Volume 2-B: Task 2. Evaluation and refinement of implementation guidelines for the selected STS payload operator concept [NASA-CR-151027] N77-31233

**PDP 11/50 COMPUTER**

An implementation of a CODASYL based data base management system under the UNIX operating system [AD-A028893] N77-17927

**PERFORMANCE PREDICTION**

Support cost impacts of reliability predictions [AIAA PAPER 77-1206] A77-44315

Predicting the cost impact of system improvements A77-50489

Forecasting of secondary item returns --- mathematical models for inventory management [AD-A030343] N77-19924

**PERFORMANCE TESTS**

Measuring the performance of R & D departments A77-42384

Optimization of structural design/analysis/testing A77-50469

Utilization of technology transfer concepts as an aid for engineering management in a test and evaluation organization --- weapons development management [AD-A033697] N77-24014

**PERSONNEL**

A study of influence methods used by project and functional managers in a matrix organizational environment [AD-A030299] N77-18943

Review of health maintenance program findings, 1960-1974 N77-30721

Development and application of functional manning standards in the National Aeronautics and Space and Space Administration N77-30733

**PERSONNEL DEVELOPMENT**

Improving R&D productivity - A program for support operations A77-42381

Leadership effectiveness in program management A77-45624

Organizational climate changes in the project life cycle A77-48573

Program Evaluation and Review Technique (PERT): A planning and control tool for occupational field studies --- training and reference material for new personnel and project directors [AD-A024131] N77-11897

**PERSONNEL MANAGEMENT**

Conflict management for engineers [ASHE PAPER 77-DE-6] A77-46903

Multiple small project management [AD-A026564] N77-14931

Full employment maintenance in the private sector [NASA-TN-X-74334] N77-16948

Labor-management relations [NASA-TN-74763] N77-28022

## SUBJECT INDEX

## PREDICTION ANALYSIS TECHNIQUES

The CODASYL data base approach: A COBOL example of design and use of a personnel file [PB-265694/0] N77-28982

CSC plotting package [AD-A041104] N77-32736

An application of Markovian chains in manpower planning [AD-A042304] N77-34032

**PERT**  
 A statistical procedure for optimization of PERT (Project Evaluation and Review Technique) network scheduling systems [AD-A025022] N77-13895  
 Incorporating project cost considerations into stochastic PERT (Project Evaluation and Review Technique) [AD-A025021] N77-13896

**PHOTOCATHODES**  
 Infrared detectors and laser technology [AD-A042140] N77-32484

**PHOTOGRAMMETRY**  
 Concepts in orthophoto machines and their economics A77-47457

**PHOTOGRAPHIC EQUIPMENT**  
 Concepts in orthophoto machines and their economics A77-47457

**PHOTOMAPPING**  
 Concepts in orthophoto machines and their economics A77-47457

**PILOT TRAINING**  
 Design of military aircraft for minimum cost of ownership A77-22756

**PILOTS (PERSONNEL)**  
 Code of federal regulations. 14. Aeronautics and space, parts 1 to 59 --- federal aviation procedural rules and standards N77-12932  
 Code of federal regulations. 14. Aeronautics and space, parts 60 to 199 --- federal aviation procedural rules and standards N77-12933

**PLOTTING**  
 CSC plotting package [AD-A041104] N77-32736

**POINT TO POINT COMMUNICATIONS**  
 Implementation and testing of a Neighborhood Office Center (NOC) and integration of the NOC with an administrative correspondence management information system --- for NASA [NASA-CR-152645] N77-21985

**POISSON DENSITY FUNCTIONS**  
 Cost model for testing program based on nonhomogeneous Poisson failure model A77-50546  
 Spare parts calculations [LRBA-NT-24/75/BT] N77-10547  
 Optimization of recurrent capacity expansion models and generalization to a non-recurrent model [AD-A033429] N77-24983

**POLICIES**  
 Economic issues in international telecommunications - A public policy dilemma A77-30594  
 Needed - A Federal R&D policy --- to match GNP increase A77-31836  
 National science and technology policy - Current policies and options for the future A77-42376  
 National science and technology policy - Its impact on technological change A77-42377  
 National science and technology policy - Perceptions of barriers to innovation A77-42378  
 National science and technology policy - Needed: Institutional breakthroughs A77-42379  
 National support for science and technology: An examination of foreign experience. Volume 2: Country monographs [PB-253364/4] N77-10966  
 Diffusion of innovations in municipal governments [PB-257068/7] N77-15934  
 Diffusion of innovations in municipal governments [PB-257069/5] N77-15935  
 An analysis of existing ethical guidelines and the development of a proposed code of ethics for managers [AD-A032387] N77-21986

Scientific and technical information: Options for national action [PB-261863/5] N77-23000

Civil Aeronautics Board practices and procedures [GPO-60-316] N77-27064

Research in industry; Roles of the government and National Science Foundation [PB-265904/3] N77-28986

Aviation common ground support equipment replacement policy investigation [AD-A039160] N77-29180

Report to the Congress by the Comptroller General of the United States. Better data collection and planning is needed to justify advanced waste treatment construction [PB-266452/2] N77-30038

Manual of references (regulations, guidance, procedures). Municipal wastewater treatment works construction grants program, supplement number 3 [PB-266731/9] N77-30039

Technological objectives and federal policy, volumes 1 and 2 [PB-267971/0] N77-33001

**POLITICS**  
 The politics and planning of a metropolitan growth policy for the Twin Cities/An executive summary [PB-260604/4] N77-22015  
 A technique to assist citizen groups in decision making [PB-265742/7] N77-29025

**POLLUTION CONTROL**  
 Waste reduction - Issues and policies A77-29927  
 Technology for the control of sulfur oxides and nitrogen oxides in Japan A77-35171  
 Noise regulations of the Federal Government [ATAA PAPER 77-995] A77-38627  
 An approach to a rational distribution of capital investments between production and environmental cleanup sectors A77-44934  
 Cost-sharing approach for air quality control implementation - A case study A77-46700  
 Relationship of environmental improvement efforts on development in economically distressed areas [PB-256702/2] N77-13925  
 Air pollution survey guidelines for Army installations [AD-A029633] N77-18628  
 Draft guidelines for state and areawide water quality management program development [PB-259507/2] N77-18976  
 Choosing the optimum financial strategy for pollution control investments [PB-259443/0] N77-20971  
 Best Management Practices For Non-point Source Pollution Control Seminar. (Guidance for section 208 planners and implementing agencies) [PB-265731/0] N77-28633

**POSITION (TITLE)**  
 Responsibility and authority in the matrix organization or is ambiguity a good thing A77-51233

**PREDICTION ANALYSIS TECHNIQUES**  
 Condemnation rates from failure data A77-10440  
 Estimating the reliability of complex systems --- weapon systems reliability prediction technique applied to spacecraft reentry A77-10473  
 Methods of scientific-industrial forecasting in the management of scientific research and development A77-23454  
 Aerospace cost prediction - The way ahead A77-39778  
 Methods of cost prediction; Proceedings of the Symposium, London, England, March 9, 1977 A77-40007  
 Problems of research and development cost predictions in an avionics supply company A77-40009

## PRESSURE VESSEL DESIGN

PRICE - A cost-predicting model --- Programmed  
Review of Information for Costing and Evaluation  
A77-46745

Logistics planning simulation model for USAF spare  
engine management  
A77-50510

**PRESSURE VESSEL DESIGN**  
High-pressure safety at the Lawrence Livermore  
Laboratory, an energy research facility  
[UCRL-77724-REV-1] N77-19078

**PRINTED CIRCUITS**  
Printed wiring board production assembly cost  
guidelines manual  
[AD-A026944] N77-15319

**PRIORITIES**  
An investigation of priority scheduling methods  
for projects requiring multiple limited resources  
N77-14921

Priorities and efficiency in Federal research and  
development  
[GPO-70-801] N77-28973

**PROBABILITY DISTRIBUTION FUNCTIONS**  
A generalized maximum entropy principle for  
decision analysis  
[AD-A039926] N77-28899

**PROBABILITY THEORY**  
A model for an estimation of the product warranty  
return rate  
A77-50455

A reliability incentive based bid decision  
A77-50495

**PROBE METHOD (FORECASTING)**  
Weakest-point analysis in the production domain  
using multimoment studies - A case analysis  
A77-27762

**PROBLEM SOLVING**  
Review and assessment of research management  
improvement program project  
[PB-265012/5] N77-28032

**PROCEDURES**  
European Space Tribology Laboratory management  
procedures handbook  
[ESA-PSS-06-ISS-2] N77-18172

**PROCUREMENT**  
Use of computational models in long-term cost  
planning --- of power equipment procurement  
A77-11305

General purpose computer acquisition  
[AD-A037757] N77-27728

**PROCUREMENT MANAGEMENT**  
A contractor view of warranty contracting  
A77-10464

Factors in balancing government and contractors  
risk with warranties  
A77-10466

Management of electronic equipment reliability  
A77-10469

Symposium on Equipment and System Design for  
Minimum Cost of Ownership, London, England,  
March 16, 1976, Proceedings  
A77-22751

Getting it right the first time --- cost reduction  
for avionic equipment ownership  
A77-22757

Technological change and cost analysis of  
high-technology systems  
A77-34493

National science and technology policy - Needed:  
Institutional breakthroughs  
A77-42379

Design to cost; Proceedings of the Conference, San  
Francisco, Calif., October 13-15, 1976  
A77-46739

Design-to-cost - A major parameter in the  
acquisition process  
A77-46740

Avoiding design to cost roadblocks  
A77-46742

Obstacles to effective cost reduction on DOD  
programs  
A77-46743

PRICE - A cost-predicting model --- Programmed  
Review of Information for Costing and Evaluation  
A77-46745

DOD progress in design to cost  
A77-46746

Organizational climate changes in the project life  
cycle  
A77-48573

## SUBJECT INDEX

Warranty contract impact on product liability  
A77-50484

An approach to improve management visibility  
within the procurement and financial group at  
Goldstone  
N77-10109

Printed wiring board production assembly cost  
guidelines manual  
[AD-A026944] N77-15319

Reliable computer software. What it is and how to  
get it  
[AD-A026988] N77-15700

An investigation of the DCAS management  
information system as a source of information  
for allocation of procurement quality assurance  
manpower resources  
[AD-A030313] N77-18945

Applicability of design-to-cost to simulator  
acquisition  
[AD-A030231] N77-18946

**PROCUREMENT POLICY**  
The application of design-to-cost acquisition  
policies to selected electronics subsystem  
development programs  
[AD-A024895] N77-12931

Summary of development and recommendations for a  
quality assurance program for the procurement  
and manufacture of urban mass transit operating  
equipment and systems  
[NASA-CR-149559] N77-16954

Quality assurance program guidelines for  
application to and use by manufacturers of  
rail/guideway vehicles, buses, automatic train  
control systems, and their major subsystems  
[NASA-CR-149558] N77-16955

A taxonomy of cost estimating characteristics as  
applied to an aircraft replenishment spares model  
[AD-A030239] N77-18952

Support equipment program for avionics readiness:  
Initial planning  
[AD-A033585] N77-22104

Project control requirements and procedures for  
major procurement actions. Phase B: System  
definition  
[ESA-PSS-32-ISSUE-1] N77-26001

Project control requirements and procedures for  
major procurement actions. Phase C/D: System  
development and production  
[ESA-PSS-33-ISSUE-1] N77-26002

Prototyping: A strategy for the acquisition of  
naval aircraft  
[AD-A035357] N77-26011

Analysis of flight equipment purchasing practices  
of representative air carriers  
[NASA-CR-154619] N77-27021

Laboratory equipment procurement  
[LBL-5504] N77-27022

Study of US Army libraries, volume 1 ---  
management methods  
[AD-A036004] N77-27033

Federal procurement requirements. One of a series  
of analyses and impact reports of major federal  
requirement areas  
[PB-264982/0] N77-28031

The role of operational test and evaluation in the  
air force aircraft acquisition process  
[AD-A042774] N77-32962

Milestone zero: Its changes on the Air Force  
acquisition process  
[AD-A042770] N77-32965

**PRODUCT DEVELOPMENT**  
Computer aided aircraft project design  
A77-29496

A commentary on project planning and control for  
risk projects  
A77-40011

Product assurance --- conference proceedings  
[ESA-SP-116] N77-13438

Printed wiring board production assembly cost  
guidelines manual  
[AD-A026944] N77-15319

Research and development in industry, 1974.  
Funds, 1974. Scientists and engineers, January  
1975  
[PB-263779/1] N77-26005

Technological objectives and federal policy,  
volumes 1 and 2  
[PB-267971/0] N77-33001

## PRODUCTION ENGINEERING

Effective reliability planning and implementation  
--- for ECM equipment production A77-10453

Methods utilized in evaluating the profitability  
of commercial space processing  
[IAF PAPER 76-261] A77-10954

Characteristics of space processing operations  
[AIAA PAPER 77-229] A77-19912

Principles of computer process planning  
[SAE PAPER 760914] A77-28223

Manufacturing technology + teamwork = economy ---  
DOD programs A77-29080

ICAM - Revolution in manufacturing --- Integrated  
Computer Aided Manufacturing A77-34307

A management information system for engineering  
and research A77-34496

Structural-logic diagram for ensuring high-rate  
products --- in aircraft industry quality control  
A77-40721

Avoiding design to cost roadblocks A77-46742

Obstacles to effective cost reduction on DOD  
programs A77-46743

An investigation of priority scheduling methods  
for projects requiring multiple limited resources  
N77-14921

Product assurance programme plan for high  
reliability products  
[ECR-59] N77-23520

A systems approach to integrating future  
manufacturing technology with the munitions  
production base modernization planning  
[AD-A033817] N77-23998

Establishment of linear sequences  
[BLL-RTS-10323] N77-26903

Application areas for statistical methods  
[BDX-613-1600] N77-28507

Productibility: A selected bibliography  
[AD-A041905] N77-32506

Issues of hierarchical planning in multi-stage  
production systems  
[AD-A042559] N77-32960

**PRODUCTION MANAGEMENT**

Nondestructive testing as a basis for the  
acceptance inspection A77-24421

Weakest-point analysis in the production domain  
using multimoment studies - A case analysis  
A77-27762

ICAM - Revolution in manufacturing --- Integrated  
Computer Aided Manufacturing A77-34307

Forecasting of critical materials flow -  
Managerial decisions utilizing sequential  
methodology A77-48680

The evaluation of integrated market research  
information systems for new product decisions  
N77-11900

An investigation of change in direct labor  
requirements resulting from changes in airframe  
production rates  
[AD-A026112] N77-13269

Group technology --- computer programming for  
production management

A systematic approach to operational scheduling  
for information collection systems N77-11483

**PROGRAMMING LANGUAGES**

An integrated program and data management system  
for engineering applications --- Book A77-37798

## PROJECT MANAGEMENT

Language requirements report --- military and business-oriented management information systems [AD-A038214] N77-28975

High order language control facility [AD-A042943] N77-32766

**PROJECT MANAGEMENT**

Implementation of the design to cost concept --- in system program management A77-10449

An approach to safety and system assurance in urban mass transportation A77-10459

Pitfalls in reliability program management A77-10467

The pay-off of R & M trade-off --- Reliability and Maintainability management plan program elements A77-10471

Are accidents scheduled --- safety management problems A77-11344

Spacelab - A new era in communications R & D Project Management A77-11584

R. & D. project cost and schedule realism - A risk analysis approach A77-12455

Managing by exception in space systems operation A77-13330

The economic viability of pursuing a space power system concept [AIAA PAPER 77-353] A77-18258

Practical approach to evaluation of research projects --- cash-flow method A77-32475

Managing engineers by objectives A77-37426

Measuring the performance of R & D departments A77-42384

Project selection methods that pick winners A77-42385

Government regulation effects on the direction of innovation - A focus on performance standards A77-45622

Leadership effectiveness in program management A77-45624

Project management: How to make it work --- Book A77-45955

Organizational climate changes in the project life cycle A77-48573

Technical problem management --- for reduced service cost and improved field reliability A77-50500

Cost model for testing program based on nonhomogeneous Poisson failure model A77-50546

Aspects of project control in R & D A77-51231

Responsibility and authority in the matrix organization or is ambiguity a good thing A77-51233

Continuing research in the development of interactive man-computer systems for engineering-construction projects [PB-252927/9] N77-11679

Project screening [AD-A023837] N77-11894

A conceptual model for evaluating contractor management during source selection [AD-A023817] N77-11896

Advanced avionics for the A-10: A decision analysis model [AD-A027678] N77-14023

The Management of Large-Scale Interdisciplinary Research [PB-256573/7] N77-14922

An evaluation of monitoring systems in selected regional program areas [PB-255981/3] N77-14923

The integration of fragmented non-major systems: A management problem [AD-A026566] N77-14930

Multiple small project management [AD-A026564] N77-14931

Minimizing the cost of completing a project subject to a bound on the expected delay time [AD-A027882] N77-17926

Contract data management [AD-A029272] N77-17931

## SUBJECT INDEX

A study of influence methods used by project and functional managers in a matrix organizational environment [AD-A030299] N77-18943

Stochastic models for software project management N77-19107

Public management of science: Case studies [PB-258945/5] N77-20911

An heuristic scheduling algorithm for resource-constrained project networks [AD-A031819] N77-20916

Program definition for the development of geothermal energy. Volume 3: Appendixes [NASA-CR-153223] N77-25614

Project control requirements and procedures for major procurement actions. Phase B: System definition [ESA-PSS-32-ISSUE-1] N77-26001

Project control requirements and procedures for major procurement actions. Phase C/D: System development and production [ESA-PSS-33-ISSUE-1] N77-26002

National Aeronautics and Space Administration authorization, fiscal year 1978 [S-REPT-95-281] N77-26025

Project Independence Evaluation System (PIES) documentation. Volume 6: Methodology for improving the price sensitivity of the PIES oil and gas supply curves [PB-264069/6] N77-28606

NASA Program planning and control, part 2 [GPO-76-106] N77-28972

Project management through simulation [AD-A036335] N77-28979

A model for analysis and design of university research support services systems [PB-265137/0] N77-28983

A technique to assist citizen groups in decision making [PB-265742/7] N77-29025

Aviation and programmatic analyses. Volume 3, Task 3: Development of special issue papers --- for NASA OAST programs [NASA-CR-152583] N77-29141

Project Independence Evaluation System (PIES) documentation. Volume 9: Allocation of exploratory activity to oil and natural gas in the FEA oil and gas supply model [PB-265772/4] N77-29325

Impact of structured programming standards on small government contractors, volume 1 [AD-A040771] N77-29841

Impact of structured programming standards on small government contractors, volume 2 [AD-A040828] N77-29842

Commitment information system: User guide --- project management data bases [ORNL-TM-5408] N77-30023

NASA occupational medicine programs: Our obligation to management N77-30716

**PROJECT PLANNING**

Risk management of liquefied natural gas installations A77-10451

How construction times of power stations affect investment costs A77-12248

Planning for life sciences research in space [ASHE PAPER 76-ENAS-52] A77-19493

Planning models in the electric economy A77-27038

Computer aided aircraft project design A77-29496

Some aspects of mission analysis --- spacecraft flight planning A77-31504

I.B.N. reaches for a golden future in the heavens --- Satellite Business Systems project A77-34470

Some aspects of economically-effective prediction for an optimal program of space system designing [IAF PAPER A-77-61] A77-51529

Energy: The policy planning framework in state governments. Volume 1: Summary report [PB-254466/6] N77-10665

Energy: The policy planning framework in state governments. Volume 2: Appendixes [PB-254467/4] N77-10666

Project screening [AD-A023837]	N77-11894	A77-17228
Program Evaluation and Review Technique (PERT): A planning and control tool for occupational field studies --- training and reference material for new personnel and project directors [AD-A024131]	N77-11897	
A methodology for the evaluation of program cost and schedule risk for the SEASAT program [NASA-CR-149230]	N77-12478	
Evaluation of water quality models: A management guide for planners [PB-256412/8]	N77-12574	
Air quality considerations in transportation planning: Findings and recommendations on transportation control planning, phase 2 [PB-256424/3]	N77-12576	
Regional economic development and federal legislation [PB-256179/3]	N77-14953	
Costing study for lidar facility [ESA-CR(P)-863]	N77-16079	
Data management plan for the oceanographic sub-programme data centre [PB-256179/3]	N77-16586	
Report of the third session of WMO Executive Committee intergovernmental panel on the first GARP global experiment [GARP-SPEC-REPT-22]	N77-16657	
Model plan of study, supplement to: Guidance for preparing a facility plan, municipal wastewater treatment works construction grants program [PB-257650/2]	N77-18962	
Transportation for elderly and handicapped persons. An information bulletin of the transportation task force of the Urban Consortium of Technology initiatives [PB-258734/3]	N77-18974	
Demand responsive transportation planning guidelines (1976) [PB-261314/9]	N77-23017	
Development of a research project selection model: Application to a civil helicopter research program [NASA-CR-145225]	N77-23088	
Program definition for the development of geothermal energy. Volume 1: Background and program definition summary [NASA-CR-153221]	N77-25612	
Program definition for the development of geothermal energy. Volume 2: Program definition development rationale and subprogram descriptions [NASA-CR-153222]	N77-25613	
Program planning and control with NASA and the GAO, part 1 [GPO-70-420]	N77-26000	
The 1976 world survey of current research and development on roads and road transport [PB-264430/0]	N77-26030	
Procedure for the development of naval aviation maintenance objectives [AD-A038201]	N77-28064	
NASA Program planning and control, part 2 [GPO-76-106]	N77-28972	
PROSPECTS: Design of a project plan for a reusable carrier system for heavy cargo transportation in space [ILR-MITT-33]	N77-29210	
Manual of references (regulations, guidance, procedures). Municipal wastewater treatment works construction grants program, supplement number 3 [PB-266731/9]	N77-30039	
Advanced space program studies. Overall executive summary [NASA-CR-154893]	N77-31185	
The plan for the economic evaluation of the Public Service Communication Satellite system [NASA-CR-155051]	N77-32351	
A mathematical programming model for an aircraft modification program [AD-A042813]	N77-32761	
New model framework and structure and the commonality evaluation model --- concerning unmanned spacecraft projects [NASA-CR-155157]	N77-33249	
<b>PROPELLSION SYSTEM PERFORMANCE</b>		
A new development concept for gas turbine engine optimize life cycle costs		
<b>PROTOTYPES</b>		
Prototyping: A strategy for the acquisition of naval aircraft [AD-A035357]	N77-26011	
<b>PSYCHOLOGY</b>		
An analysis of existing ethical guidelines and the development of a proposed code of ethics for managers [AD-A032387]	N77-21986	
<b>PUBLIC LAW</b>		
Aircraft manufacturer warranties - Protection for the manufacturer or the purchaser		A77-34302
Liability of carriers for damages of passengers on charter flights		A77-34305
Energy industry investigation. Part 1: Joint ventures [GPO-72-530]		N77-27499
Energy industry investigation. Part 2: Industry structure [GPO-83-695]		N77-27500
National Aeronautics and Space Administration Authorization Act, 1978 [PUB-LAW-95-76]		N77-30028

**RESEARCH PROJECTS**

Proposal preparation, negotiation and award. One of a series of analyses and impact reports on major federal requirement areas [PB-264980/4] N77-28030

Review and assessment of research management improvement program project [PB-265012/5] N77-28032

NASA Program planning and control, part 2 [GPO-76-106] N77-28972

Financial management: Budgeting and reporting under federal contracts and grants. One of a series of analyses and reports on the impact of federal requirements on research management [PB-265166/9] N77-28977

The organization, management and support services for a large organized research unit within a university: Scripps Institution of Oceanography. One of a series of research studies under the research management improvement program [PB-264973/9] N77-28978

The impact of federal regulations on research management in colleges and universities: Overview and summaries [PB-265169/3] N77-28981

A model for analysis and design of university research support services systems [PB-265137/0] N77-28983

The academic administration of research: A descriptive analysis [PB-265149/5] N77-28984

Research in industry: Roles of the government and National Science Foundation [PB-265904/3] N77-28986

Toward a theory of innovation [PB-264908/5] N77-29009

Proposals for space research in 1977 [LAS-PG-76-01] N77-29185

Interdisciplinary research management improvement [PB-265011/7] N77-30015

Indirect costs in university research. Preliminary findings from the research management improvement program [PB-266621/2] N77-30016

Infrared detectors and laser technology [AD-A042140] N77-32484

Establishment of the program manager for avionics [AD-A043163] N77-32964

Management of research and development for electronic systems --- Defense Department policies [AD-A042859] N77-32963

Disclosure of research information under the Freedom of Information Act: Report and recommendations [PB-268105/4] N77-32970

Industrial Productivity Workshop Executive Summary [PB-267299/6] N77-34031

**RESEARCH PROJECTS**

Planning for life sciences research in space [ASME PAPER 76-ENAS-52] A77-19493

Planning for biomedical research in space - The visiting research scientist [ASME PAPER 76-ENAS-67] A77-19508

Practical approach to evaluation of research projects --- cash-flow method A77-32475

Measuring the performance of R & D departments A77-42384

Project selection methods that pick winners A77-42385

Organizational climate changes in the project life cycle A77-48573

**RESIDENTIAL AREAS**

Energy management in residential and small commercial buildings [BNL-50576] N77-27511

**RESOURCE ALLOCATION**

Implementation of the design to cost concept --- in system program management A77-10449

Organisation of an operations centre --- for orbiting satellites A77-31501

National science and technology policy - Needed: Institutional breakthroughs A77-42379

National Airlines Fuel Management and Allocation Model

**SUBJECT INDEX**

A77-43399

Analysis under constraints and decision-making aid for certain scheduling problems --- French book A77-43637

System availability and optimum spare units A77-50545

The role of government in the allocation of resources to technological innovation. Volume 1: Executive summary [PB-252478/3] N77-10961

The role of government in the allocation of resources to technical innovation. Volume 2: Survey of the literature, policy guidelines, and agenda for future research [PB-252479/1] N77-10962

The role of government in the allocation of resources to technological innovation. Volume 3: Abstracts/annotated bibliography [PB-252480/9] N77-10963

On the solution of convex knapsack problems with bounded variables [AD-A039164] N77-30897

 Development of an integrated configuration management/flight director system for piloted STOL approaches [NASA-CR-2883] N77-30132

**SOCIAL FACTORS**  
 Local and commuter airlines in the United States A77-31067

**SOCIOLOGY**  
 An analysis of existing ethical guidelines and the development of a proposed code of ethics for managers [AD-A032387] N77-21986

**SOLAR ARRAYS**  
 A review of the solar array manufacturing industry costing standards [NASA-CR-153401] N77-30608

**SOLAR COLLECTORS**  
 The financial incentives for the fabrication of improved absorption coatings for the flat plate collector A77-49066  
 Solar collector manufacturing activity [PB-266985/1] N77-33664

SUBJECT INDEX

**SOLAR ENERGY CONVERSION**  
 REM - Today's heating and cooling vs. solar energy A77-10482  
 The economic viability of pursuing a space power system concept [AIAA PAPER 77-353] A77-18258  
 Daedalophobia - Diagnosis and prognosis --- solar energy utilization obstacles in Canada A77-49121

**SOLAR HEATING**  
 Daedalophobia - Diagnosis and prognosis --- solar energy utilization obstacles in Canada A77-49121

**SOLID WASTES**  
 Urban solid waste processing - An approach developed by Continental Can Company, Inc [ASME PAPER 76-ENAS-41] A77-19488  
 Forecasting impacts on solid waste resource recovery systems [ASME PAPER 76-ENAS-46] A77-19489  
 Waste reduction - Issues and policies A77-29927  
 The MITRE Solid Waste Management Planning Model - A status report A77-47212  
 Optimal productivity for solid waste collection: A systems approach N77-11913  
 Design criteria for solid waste management in recreational areas [PB-258597/4] N77-17955  
 Front end recycling: A study of the economics of recycling by source separation and its application for Fairfield County, Connecticut [PB-257404/4] N77-17970  
 Decision-makers guide in solid waste management [PB-258266/6] N77-18961  
 Resource recovery plant implementation: Guides for municipal officials, procurement [PB-259140/2] N77-19942  
 Resource recovery plant implementation: Guides for municipal officials, markets [PB-259141/0] N77-19943  
 Resource recovery plant implementation: Guides for municipal officials, risks and contracts [PB-259142/8] N77-19944  
 Waste clearinghouses and exchanges: New ways for identifying and transferring reusable industrial process wastes [PB-261287/7] N77-20949  
 WRAP: A model for regional solid waste management planning: Users guide [PB-266220/3] N77-29023

**SPACE FLIGHT**  
 Some aspects of mission analysis --- spacecraft flight planning A77-31504

**SPACE LAW**  
 Legal and economic prerequisites to space industrialization [IAP PAPER ISL-76-29] A77-10968  
 Transport to outer space by private enterprises - Aspects of air and space law A77-19996  
 Transport of outer space by private enterprises - Aspects of air- and space law A77-19997  
 Protecting proprietary rights - A potential Shuttle user's view A77-35325

**SPACE MAINTENANCE**  
 The economic implications of unreliability --- sensor/spacecraft model A77-10457

**SPACE MANUFACTURING**  
 Methods utilized in evaluating the profitability of commercial space processing [IAP PAPER 76-261] A77-10954  
 Legal and economic prerequisites to space industrialization [IAP PAPER ISL-76-29] A77-10968  
 How do U.S. companies view space industrialization A77-29030  
 A cost benefit analysis of space manufacturing facilities [AIAA PAPER 77-556] A77-32071  
 The next 25 years: Industrialization of space - Rationale for planning A77-38792

## SUBJECT INDEX

## SPARE PARTS

- A review of the solar array manufacturing industry costing standards  
[NASA-CR-153401] N77-30608
- SPACE MISSIONS**  
Planning for biomedical research in space - The visiting research scientist  
[ASME PAPER 76-ENAS-67] A77-19508
- SPACE PROCESSING**  
Characteristics of space processing operations  
[AIAA PAPER 77-229] A77-19912  
How do U.S. companies view space industrialization  
A77-29030  
The next 25 years: Industrialization of space - Rationale for planning  
A77-38792
- Orbital construction support equipment  
[NASA-CR-151460] N77-27157
- SPACE PROGRAMS**  
Some aspects of economically-effective prediction for an optimal program of space system designing  
[IAF PAPER A-77-61] A77-51529  
Evaluating the benefits of government funded R & D aimed at the private sector  
[IAF PAPER A-77-62] A77-51530  
Low cost program practices for future NASA space programs, volume 1  
[NASA-CR-149656] N77-17940  
Low cost program practices for future NASA space programs. Volume 2: Appendix  
[NASA-CR-149657] N77-17941  
Advanced space program studies. Overall executive summary  
[NASA-CR-154893] N77-31185  
New model framework and structure and the commonality evaluation model --- concerning unmanned spacecraft projects  
[NASA-CR-155157] N77-33249
- SPACE SHUTTLE ORBITERS**  
Operations management of DOD space missions in the shuttle era  
[AD-A038673] N77-28177
- SPACE SHUTTLE UPPER STAGES**  
Space transportation system payload safety policy  
A77-50464
- SPACE SHUTTLES**  
Policies for pricing commercially-useful space systems resulting from government programs  
[IAF PAPER 76-132] A77-10920  
Opening a new era in space --- Space Transportation System utilizing Shuttle, Spacelab and Interim Upper Stage  
A77-29026  
Shuttle payloads - Opportunities to expand ground-based research  
A77-29029  
Protecting proprietary rights - A potential Shuttle user's view  
A77-35325  
Space transportation system payload safety policy  
A77-50464  
Shuttle payload minimum cost vibroacoustic tests  
A77-50490  
Management of DOD space payload integration in the space shuttle era  
[AD-A026384] N77-14187  
DOD/NASA support operations management interface  
[NASA-CR-149203] N77-15895  
Operational cost estimates, space shuttle --- Development of user charge policy on reusable spacecraft  
[GPO-81-196] N77-17134  
Space shuttle: A case study in economic analysis --- explicitly the data base  
[AD-A033871] N77-23176
- SPACE STATIONS**  
Space station systems analysis study. Part 3: Documentation. Volume 4: Supporting research and technology report  
[NASA-CR-151521] N77-33238  
Space station systems analysis study. Part 3: Documentation. Volume 5: Cost and schedule data  
[NASA-CR-151520] N77-33239
- SPACE TRANSPORTATION**  
Transport to outer space by private enterprises - Aspects of air and space law  
A77-19996  
Transport of outer space by private enterprises - Aspects of air- and space law  
A77-19997
- Opening a new era in space --- Space Transportation System utilizing Shuttle, Spacelab and Interim Upper Stage  
A77-29026  
Space transportation system payload safety policy  
A77-50464  
Organizing for low cost space transportation  
[IAF PAPER A-77-55] A77-51526  
PROSPECTS: Design of a project plan for a reusable carrier system for heavy cargo transportation in space  
[ILR-MITT-33] N77-29210  
STS payloads mission control study continuation phase A-1. Volume 2-B: Task 2. Evaluation and refinement of implementation guidelines for the selected STS payload operator concept  
[NASA-CR-151027] N77-31233
- SPACECRAFT COMMUNICATION**  
Spacelab - A new era in communications R & D Project Management  
A77-11584  
The Deep Space Network  
[NASA-CR-152647] N77-21110
- SPACECRAFT DESIGN**  
Evaluation of a cost-effective loads approach --- shock spectra/impedance method for Viking Orbiter  
A77-10192  
The potential of Spacelab for space applications missions and the organisation for its use  
A77-11587
- SPACECRAFT PERFORMANCE**  
Failure rate analysis of Goddard Space Flight Center spacecraft performance during orbital life  
A77-10443
- SPACECRAFT POWER SUPPLIES**  
The economic viability of pursuing a space power system concept  
[AIAA PAPER 77-353] A77-18258
- SPACECRAFT REENTRY**  
Estimating the reliability of complex systems --- weapon systems reliability prediction technique applied to spacecraft reentry  
A77-10473
- SPACECRAFT RELIABILITY**  
Failure rate analysis of Goddard Space Flight Center spacecraft performance during orbital life  
A77-10443  
The economic implications of unreliability --- sensor/spacecraft model  
A77-10457
- SPACECRAFT TRACKING**  
The Deep Space Network  
[NASA-CR-152647] N77-21110
- SPACELAB**  
Spacelab - A new era in communications R & D Project Management  
A77-11584  
The potential of Spacelab for space applications missions and the organisation for its use  
A77-11587  
Opening a new era in space --- Space Transportation System utilizing Shuttle, Spacelab and Interim Upper Stage  
A77-29026  
Costing study for lidar facility  
[ESA-CR(P)-863] N77-16079  
Lidar development cost study report. Volume 1: Technical --- Spacelab  
[HSD-TP-7594] N77-29366
- SPACELAB PAYLOADS**  
Space transportation system payload safety policy  
A77-50464
- SPARE PARTS**  
Interface between maintainability and commercial aircraft spares support  
A77-10483  
System availability and optimum spare units  
A77-50545  
Spare parts calculations  
[LRBA-NT-24/75/BT] N77-10547  
A replacement policy for components of a pure series system utilizing one component as an indicator of replacement time  
[AD-A024979] N77-12825  
Optimal replacement of damaged devices  
[AD-A029244] N77-16845  
A taxonomy of cost estimating characteristics as applied to an aircraft replenishment spares model  
[AD-A030239] N77-18952

- WATER QUALITY
  - Evaluation of water quality models: A management guide for planners [PB-256412/8] N77-12574
  - Financial critical factors analysis --- waste treatment management for Miami Valley, Ohio region [PB-254377/5] N77-12937
  - Effectiveness of information transfer through water resources researcher/user group interaction [PB-258767/3] N77-18956
  - Draft guidelines for state and areawide water quality management program development [PB-259507/2] N77-18976
  - Residual waste best management practices: A water planner's guide to land disposal [PB-258849/9] N77-20943
  - Report to the Congress by the Comptroller General of the United States. Better data collection and planning is needed to justify advanced waste treatment construction [PB-266452/2] N77-30038
- WATER RECLAMATION
  - Municipal wastewater recycling: A strategy for meeting the zero discharge goal of PL 92-500 [PB-261912/0] N77-23026
- WATER RESOURCES
  - Water resources planning and management goals A77-51283
  - Effectiveness of information transfer through water resources researcher/user group interaction [PB-258767/3] N77-18956
  - Technology assessment for new water development projects, volume 1 [PB-259276/4] N77-18972
  - A coarse sort system for preliminary water resources management alternatives [PB-260491/6] N77-21542

**WATER TREATMENT**

The development of costs recovery scheme:  
Suggested approaches for municipal or regional  
wastewater treatment plants

N77-28036

Manual of references (regulations, guidance,  
procedures). Municipal wastewater treatment  
works construction grants program, supplement  
number 3  
[PB-266731/9]

N77-30039

Transferring environmental technology to local  
leaders --- water pollution, treatment, and  
reclamation  
[PB-266838/2]

N77-31035

**WATERSHEDS**

Best Management Practices For Non-point Source  
Pollution Control Seminar. (Guidance for  
section 208 planners and implementing agencies)  
[PB-265731/0]

N77-28633

A method for evaluating management options for an  
urbanizing watershed

N77-30030

**WEAPON SYSTEM MANAGEMENT**

An improved management approach to upgrade avionics  
system reliability --- F-14 Phoenix system  
operational reliability and availability

A77-31341

Let's get serious about total life cycle costs

A77-37582

DOD progress in design to cost

A77-46746

The life cycle cost impacts of unsafe designs ---  
aircraft accident effects

A77-50462

The integration of fragmented non-major systems:  
A management problem

N77-14930

A taxonomy of cost estimating characteristics as  
applied to an aircraft replenishment spares model

N77-18952

**WEAPON SYSTEMS**

Factors in balancing government and contractors  
risk with warranties

A77-10466

Estimating the reliability of complex systems ---  
weapon systems reliability prediction technique  
applied to spacecraft reentry

A77-10473

An approach to modern avionics integration support

A77-37384

The PRAM program - Capitalizing on cost-reducing  
opportunities --- Productivity, Reliability,  
Availability, and Maintainability

A77-37584

Design-to-cost - A major parameter in the  
acquisition process

A77-46740

Obstacles to effective cost reduction on DOD  
programs

A77-46743

Quantitative models used in the RIW decision process  
--- Reliability Improvement Warranty

A77-50478

A cost effective approach to weapon acceptance

A77-50482

Weapon system parametric life cycle cost analysis

A77-50492

An analysis of an application of aerospace systems  
engineering process as it affects design

N77-16012

Design considerations and criteria for a  
management information and control system for  
the Sidewinder Program Office, Naval Weapons  
Center, China Lake, California

N77-30014

Establishment of the program manager for  
avionics

N77-32961

Acquiring affordable weapons systems

N77-32964

Managing total acquisition time: A new priority  
for major weapon systems

N77-32966

[AD-A043164]

**WEAPONS**

A systems approach to integrating future  
manufacturing technology with the munitions  
production base modernization planning

N77-23998

[AD-A033817]

**WEAPONS DEVELOPMENT**

Organizational climate changes in the project life

cycle

A77-48573

Utilization of technology transfer concepts as an  
aid for engineering management in a test and  
evaluation organization --- weapons development  
management

[AD-A033697]

N77-24014

**WEAPONS INDUSTRY**

A methodology for estimating jet engine costs  
early in weapon system acquisition

[AD-A033667]

N77-25001

Major system acquisition: Is a separate spares  
contract better

[AD-A042775]

N77-34033

**WEATHER FORECASTING**

Economic benefits of improved meteorological  
forecasts - The construction industry

[IAF PAPER 76-128]

A77-10916

**WEIGHT (MASS)**

Dimensions (NBS). Volume 60, number 10: Weights  
and measures: New challenges in today's  
marketplace

[PB-248904/10]

N77-21266

**WORK**

Future performance trend indicators: A current  
value approach to human resources accounting.  
Report 2: Internal consistencies and  
relationships to performance in organization VI

[AD-A033608]

N77-22994

**WORK CAPACITY**

The Sheffield manpower project: A survey of  
staffing requirements for librarianship and  
information work

[BLL-BLRD-5302-(2113.56P)]

N77-21987

**WORLD DATA CENTERS**

Data management plan for the oceanographic  
sub-programme data centre.

N77-16586

**WORLD METEOROLOGICAL ORGANIZATION**

Report of the third session of WMO Executive  
Committee intergovernmental panel on the first  
GARP global experiment

[GARP-SPEC-REPT-22]

N77-16657

# Personal Author Index

MANAGEMENT/a continuing bibliography

MARCH 1978

## Typical Personal Author Index Listing

The STAR or IAA accession number is located beneath and to the right of the title, e.g., N77-12478. Under any one author's name, these accession numbers are listed in ascending order in each series.

## A

- ABRAM, P.**  
A methodology for the evaluation of program cost and schedule risk for the SEASAT program  
[NASA-CR-149230] N77-12478
- ABDEL-HANEED, H.**  
Optimal replacement of damaged devices  
[AD-A029244] N77-16845
- ABELL, E. E.**  
A new development concept for gas turbine engine optimize life cycle costs  
A77-17228
- ABOUCHEAR, A.**  
Transportation economics and public policy: With urban extensions  
A77-50298
- ABRAM, P.**  
A methodology for the evaluation of program cost and schedule risk for the SEASAT program  
[NASA-CR-149230] N77-12478
- ABU-ALSAMH, B. A.**  
An application of Markovian chains in manpower planning  
[AD-A042304] N77-34032
- ADAMS, R. K.**  
An analysis of existing ethical guidelines and the development of a proposed code of ethics for managers  
[AD-A032387] N77-21986
- ADEBAUER, C. G.**  
US Army TMDE Program and investigation of a family of Automatic Test Support Systems /ATSS/  
A77-49648
- ADOLPH, C. E.**  
Overall aircraft systems evaluation  
N77-24121
- AHLERS, R. H. J.**  
Preliminary investigations concerning the training of tactical decision making behavior  
[AD-A028722] N77-17928
- AHREN, P.**  
Economic evaluation methods in community planning  
[PB-253432/9] N77-12936
- ALBANI, L. R.**  
An investigation of the DCAS management information system as a source of information for allocation of procurement quality assurance manpower resources  
[AD-A030313] N77-18945
- ALBIN, P. A.**  
Transportation technical assistance needs and requirements analysis  
[PB-259680/7] N77-19958
- ALEXANDER, W. E.**  
Getting it right the first time  
A77-22757
- ALFORD, E. C.**  
A unit task simulator for the evaluation of interactive man-computer systems  
[PB-265097/6] N77-28738
- ALGIRE, R. G.**  
An approach to modern avionics integration support  
A77-37384
- ALLEN, R. J.**  
Reliability improvement warranty techniques and applications  
A77-50477
- ALLEN, W. A.**  
Project management of Army aircraft survivability equipment  
[AD-A036785] N77-26128
- ALPAIDZE, H. I.**  
An approach to a rational distribution of capital investments between production and environmental cleanup sectors  
A77-44934
- ANCKER-JOHNSON, B.**  
National science and technology policy - Current policies and options for the future  
A77-42376
- ANDERSEN, D. P.**  
Management by objectives in the R & D environment - A simulation  
A77-34494
- ANDERSEN, E.**  
Product assurance programme plan for high reliability products  
[ECR-59] N77-23520
- ANDERSEN, G. E.**  
An investigation of priority scheduling methods for projects requiring multiple limited resources  
N77-14921
- ANDERSON, C. J.**  
Method of assessing strategies for transportation energy conservation  
[UCRL-52051] N77-18955
- ANDERSON, R. H.**  
Implementation of the design to cost concept  
A77-10449
- ANDERSON, W. E.**  
Development of performance measures for organizational level aviation maintenance managers  
[AD-A042295] N77-32073
- ANWAY, M. D.**  
Configuration management for the development of computer systems  
[AD-A036782] N77-25856
- APPLEBY, A. J.**  
Accounting methods for new-technology non-utility energy installations  
A77-38675
- ARNBRUSTER, B.**  
Manufacturing methods and technology program for beam lead sealed junction semiconductor devices  
[AD-A038681] N77-28406
- ARNESTAD, J. A.**  
Life cycle cost models for durable versus disposable package decisions  
[AD-A030293] N77-18953
- ARNOLDT, L. B.**  
NASA occupational medicine programs: Our obligation to management  
N77-30716
- ARONSON, E.**  
Has NASA already solved your next design problem  
A77-25209
- ASHFORD, W. A.**  
National support for science and technology: An examination of foreign experience. Volume 2: Country monographs  
[PB-253364/4] N77-10966

- ATTIYEH, R. S. A77-46644  
What options for European aviation
- AUSTIN, T. A. A77-17020  
Problem identification and ranking. A selected review of techniques used by public agencies [PB-261391/7] N77-23015
- B**
- BAER, W. S. A77-33889  
Government-sponsored demonstrations of new technologies
- BAKES, P. J., JR. A77-21535  
Reducing airline regulation - The need and financial implications [AIAA PAPER 77-264]
- BALDWIN, G. R. N77-17929  
Management by exception: A decision process [AD-A028943]
- BALLARD, R. J. N77-17548  
Program on Earth Observation Data Management Systems (EODMS) [NASA-CR-144845]
- BANFORD, R. A77-10192  
Evaluation of a cost-effective loads approach
- BARASIA, R. A77-50491  
A support system life cycle cost model
- BARBOUR, G. L. A77-50461  
Failure modes and effects analysis by matrix method
- BARDLEY, F. H., JR. N77-29180  
Aviation common ground support equipment replacement policy investigation [AD-A039160]
- BARNDT, S. E. A77-48573  
Organizational climate changes in the project life cycle
- BASS, L. A77-10470  
Integrated analysis of the assurance technologies
- BATEY, J. N77-27511  
Energy management in residential and small commercial buildings [BNL-50576]
- BAUER, J. N77-22104  
Support equipment program for avionics readiness: Initial planning [AD-A033585]
- BAKOVSKY, I., JR. A77-10474  
On optimization of SCRAM systems
- BEASLEY, P. N77-26005  
Research and development in industry, 1974. Funds, 1974. Scientists and engineers, January 1975 [PB-263779/1]
- BECCUE, A. J. A77-37798  
An integrated program and data management system for engineering applications
- BEINER, P. P. N77-13896  
Incorporating project cost considerations into stochastic PERT (Project Evaluation and Review Technique) [AD-A025021]
- BELDING, J. A. A77-41553  
Alternatives to oil and gas through energy management [AIAA 77-1006]
- BELLANTONI, J. P. A77-28627  
A comparison of enroute conflict risk for three 1995 air traffic surveillance systems
- BELLASSAI, M. C. N77-27028  
Study of US Army libraries. Volume 2: Directory [AD-A036002]  
Study of US Army libraries, volume 1 [AD-A036004] N77-27033
- BELOTTI, J. A77-31975  
The economy of air transportation /2nd edition/
- BELSHAW, P. E.  
Railroad transportation planning models and their success
- BENET, H. J. A77-50510  
Logistics planning simulation model for USAF spare engine management
- BENNETT, E. N77-12576  
Air quality considerations in transportation planning: Findings and recommendations on transportation control planning, phase 2 [PB-256424/3]
- BENNETT, J. J. A77-46746  
DOD progress in design to cost
- BERG, J. L. N77-17937  
Data Base Directions: The Next Steps [PB-258103/1]
- BERGER, V. C. N77-30073  
Flying, maintenance, and the sale of parts to the field: Interactive models for AH-1 and CH-47 systems [AD-A039193]
- BERGMAN, B. A77-50505  
Some graphical methods for maintenance planning
- BERKOWITZ, J. B. N77-20949  
Waste Clearinghouses and exchanges: New ways for identifying and transferring reusable industrial process wastes [PB-261287/7]
- BERLAD, A. L. N77-27511  
Energy management in residential and small commercial buildings [BNL-50576]
- BERMAN, E. B. A77-47212  
The MITRE Solid Waste Management Planning Model - A status report  
WRAP: A model for regional solid waste management planning: Users guide [PB-266220/3] N77-29023
- BERMAN, S. N77-23996  
The use of insight in management decisions [AD-A033696]
- BERNARD, D. N77-28796  
Charging for computer services [AD-A038082]
- BERRY, J. B. N77-23048  
The magnitude of internal rework on the F-4 aircraft during depot level maintenance at Ogden Air Logistics Center [AD-A032458]
- BERRY, J. P. N77-18940  
Managing knowledge as a corporate resource [AD-A029891]
- BERSON, B. L. N77-32075  
Comparative studies of organizational factors in military maintenance [AD-A042847]
- BESSEY, M. N77-12576  
Air quality considerations in transportation planning: Findings and recommendations on transportation control planning, phase 2 [PB-256424/3]
- BEUKERS, J. H. A77-28287  
Global radio navigation - A challenge for management and international cooperation
- BHAGAT, M. A. A77-49800  
Information dissemination - A systems viewpoint
- BHATTACHARYYA, R. K. A77-10916  
Economic benefits of improved meteorological forecasts - The construction industry [IAP PAPER 76-128]
- BIALIK, J. J. N77-12926  
An initial study of current and projected publishing technology pertinent to the Navy Technical Manual System (NTMS) [AD-A025744]
- BICKNELL, R. S. A77-50478  
Quantitative models used in the RIW decision process
- BIDWELL, E. L. A77-46904  
Design-to-cost in action [ASME PAPER 77-DE-9]
- BISHOP, E.  
An application of market research techniques to the dissemination of scientific and technical information

[PB-265130/5] N77-28991

**BISHOP, L. L.** A77-24277  
Reliability, availability,  
maintainability/logistics /RAM/LOG/

**BITRAM, G. R.** A77-50456  
On the solution of convex knapsack problems with  
bounded variables  
[AD-A039164]

**BLACK, R. K.** N77-30897  
BCS software production data  
[AD-A039852]

**BLAIR, L. F.** N77-30819  
Problem identification and ranking. A selected  
review of techniques used by public agencies  
[PB-261391/7]

**BLANCHARD, L.** N77-23015  
Minicomputers: An alternative approach to  
municipal information systems  
[PB-263775/7]

**BLEWITT, S. J.** N77-26003  
Product improvement program evaluation  
[AD-A042134]

**BLISS, H.** N77-33101  
Minicomputers: An alternative approach to  
municipal information systems  
[PB-263775/7]

**BLOWSTEIN, J. L.** N77-26003  
But where's the money coming from

**BLOOD, B. D.** A77-36389  
High order language control facility  
[AD-A042943]

**BLOOM, H. L.** A77-32766  
Methods utilized in evaluating the profitability  
of commercial space processing  
[IAF PAPER 76-261]

**BLOOM, H. H.** A77-10954  
RECALL: A management information retrieval system  
for the Wang 2200  
[AD-A034427]

**BOBROWICZ, V. P.** N77-24986  
Parts coding cuts costs

**BOECKSTIEGEL, D.-H.** A77-48450  
Transport to outer space by private enterprises -  
Aspects of air and space law

**BOECKSTIEGEL, K.-H.** A77-19996  
Transport of outer space by private enterprises -  
Aspects of air- and space law

**BOLD, T. P.** A77-19997  
Opening a new era in space

**BONCZEK, R. H.** A77-29026  
Aiding decision makers with a generalized data  
base management system: An application to  
inventory management  
[PB-267306/9]

**BOWIS, A. J.** N77-30796  
Reliability growth curves for one shot devices

**BOWNER, W. J.** A77-50470  
A contractor view of warranty contracting

**BOOZER, G. L.** A77-10464  
Warranty contract impact on product liability

**BOOZER, G. L.** A77-50484  
Conversion of selected military forces to the use  
of metric measurement units  
[AD-A029707]

**BORGHAN, D. C.** N77-20284  
R. & D. project cost and schedule realism - A risk  
analysis approach

**BORTZ, J. E.** A77-12455  
Quantitative models used in the RIW decision process

**BOSIV, D.** A77-50478  
PROSPECTS: Design of a project plan for a  
reusable carrier system for heavy cargo  
transportation in space  
[ILR-MITT-33]

**BOSYJ, H.** N77-29210  
COMS: A Computer-based Operations Management System  
[AD-A026250]

**BOWER, B. T.** N77-14933  
Incentives for managing the environment

**BOWERS, D. G.** A77-24277  
Future performance trend indicators: A current  
value approach to human resources accounting.  
Report 2: Internal consistencies and  
relationships to performance in organization VI  
[AD-A033608]

**BOYLE, E.** N77-22994  
Optimum test samples for reliability improvement

**BRADLEY, P. W., JR.** A77-50481  
Forum on the future of air transportation  
[ATAA PAPER 77-263]

**BRADY, J. H.** A77-24450  
Support cost impacts of reliability predictions  
[ATAA PAPER 77-1206]

**BRANCH, W. H.** A77-44315  
The system approach to management: A paradigm for  
the test and evaluation process  
[AD-A032381]

**BRAND, W. E.** N77-20915  
AH-1G Flat Rate Manual  
[AD-A029933]

**BRAUN, R. L.** N77-18046  
Evaluation methodology for federal motor vehicle  
safety standards. Volume 1: Executive summary  
[PB-266936/4]

**BRENNER, H. A.** N77-33381  
Evaluation methodology for federal motor vehicle  
safety standards. Volume 2: Technical findings  
[PB-266937/2]

**BRENNER, H. A.** N77-33382  
The future economic opportunities for air transport  
[ATAA PAPER 77-284]

**BROOK, C.** A77-18221  
A support system life cycle cost model

**BROSGOL, B. H.** A77-50491  
Language requirements report  
[AD-A038214]

**BROWN, R. V.** N77-28975  
Testing procedures in the design of management  
systems: Some methodological reflections  
[AD-A040630]

**BROWN, R. W.** N77-30017  
Step-through simulation: A method for  
implementing decision analysis  
[AD-A036969]

**BROWNE, S. D.** N77-28024  
ATAA Forum on the Future of Air Transportation -  
Regulatory overview  
[ATAA PAPER 77-254]

**BRUMH, H. J., JR.** A77-18203  
The role of government in the allocation of  
resources to technological innovation. Volume  
1: Executive summary  
[PB-252478/3]

**BRUMH, H. J., JR.** N77-10961  
The role of government in the allocation of  
resources to technical innovation. Volume 2:  
Survey of the literature, policy guidelines, and  
agenda for future research  
[PB-252479/1]

**BRUMH, H. J., JR.** N77-10962  
The role of government in the allocation of  
resources to technological innovation. Volume  
3: Abstracts/annotated bibliography  
[PB-252480/9]

**BUCHER, W. T.** N77-10963  
Application of the critical path method network  
technique to the integrated logistics support  
plan of the AIM-9L program  
[AD-A028923]

**BUCK, J. R.** N77-17930  
A unit task simulator for the evaluation of  
interactive man-computer systems  
[PB-265097/6]

**BUEDENBENDER, U.** N77-28738  
Juridical questions concerning the supply with  
energy in times of crisis - Regulations  
regarding the assurance of the supply with  
electricity /electrical load distribution  
regulations/ and the supply with gas /gas load  
distribution regulation/. III

**BUHANAN, D.** A77-28684  
Manufacturing methods and technology program for  
beam lead sealed junction semiconductor devices  
[AD-A038681]

**BULBAN, E. J.** N77-28406  
Studies pinpoint cost-saving F-16 manufacturing  
techniques

- BULLOCK, H. G. A77-31499  
Safety information system guide  
[ERDA-76-45/9] N77-33384
- BURKE, A. C. A77-42383  
Transit system productivity. An information  
bulletin of the transportation task force of the  
urban consortium for technology initiatives

# Corporate Source Index

MANAGEMENT/a continuing bibliography

MARCH 1978

## Typical Corporate Source Index Listing

The STAR accession number is located beneath and to the right of the title, e.g. N78-11896. Under any one corporate source, these accession numbers are listed in ascending order in each series. /AA items do not show a corporate source.

## A

- ACTION FOR BRIDGEPORT COMMUNITY DEVELOPMENT, INC., CONN.**  
 Front end recycling: A study of the economics of recycling by source separation and its application for Fairfield County, Connecticut [PB-257404/4] N77-17970
- ADJUTANT GENERALS OFFICE (ARMY), WASHINGTON, D. C.**  
 Study of US Army libraries. Volume 2: Directory [AD-A036002] N77-27028  
 Study of US Army libraries, volume 1 [AD-A036004] N77-27033
- AERONAUTICAL SYSTEMS DIV., WRIGHT-PATTERSON AFB, OHIO.**  
 Project screening [AD-A023837] N77-11894
- AEROSPACE CORP., EL SEGUNDO, CALIF.**  
 On-orbit and in-plant satellite storage [AD-A025902] N77-12105  
 Advanced space program studies. Overall executive summary [NASA-CR-154893] N77-31185
- AIR FORCE ACADEMY, COLO.**  
 A conceptual model for evaluating contractor management during source selection [AD-A023817] N77-11896
- AIR FORCE CONTRACT MANAGEMENT DIV., KIRTLAND AFB, N. MEX.**  
 A methodology for estimating jet engine costs early in weapon system acquisition [AD-A033667] N77-25001
- AIR FORCE FLIGHT TEST CENTER, EDWARDS AFB, CALIF.**  
 Overall aircraft systems evaluation N77-24121
- AIR FORCE GEOPHYSICS LAB., HANSCOM AFB, MASS.**  
 AFGL fiscal year 1978, Air Force technical objectives document [AD-A039054] N77-28026
- AIR FORCE INST. OF TECH., WRIGHT-PATTERSON AFB, OHIO.**  
 A computer-assisted method for determining LOGAIR route structures [AD-A030288] N77-18121  
 A mathematical model for determining LOGAIR flight schedules [AD-A030295] N77-18124  
 The engine actuarial system [AD-A030312] N77-18162  
 The effects of renewal processes upon stochastic reliability models [AD-A030297] N77-18468  
 An exploratory study of software cost estimating at the Electronic Systems Division [AD-A030162] N77-18791
- The WRM information system [AD-A030242] N77-18942  
 A study of influence methods used by project and functional managers in a matrix organizational environment [AD-A030299] N77-18943  
 An analysis of the relationship between manufacturer assembly time and intermediate-level maintenance repair time [AD-A030229] N77-18944  
 An investigation of the DCAS management information system as a source of information for allocation of procurement quality assurance manpower resources [AD-A030313] N77-18945  
 Applicability of design-to-cost to simulator acquisition [AD-A030231] N77-18946  
 A taxonomy of cost estimating characteristics as applied to an aircraft replenishment spares model [AD-A030239] N77-18952  
 Life cycle cost models for durable versus disposable package decisions [AD-A030293] N77-18953  
 A comparison of selected scheduling heuristics for a TAC P-4E maintenance organization [AD-A032327] N77-20912  
 An analysis of existing ethical guidelines and the development of a proposed code of ethics for managers [AD-A032387] N77-21986  
 The magnitude of internal rework on the P-4 aircraft during depot level maintenance at Ogden Air Logistics Center [AD-A032458] N77-23048  
 Innovation and productivity in research and development: Some associated individual and organizational variables [AD-A032273] N77-23993  
 Aircraft airframe cost estimation utilizing a components of variance model [AD-A032627] N77-24005

# PUBLIC COLLECTIONS OF NASA DOCUMENTS

## DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

### CALIFORNIA

University of California, Berkeley

### COLORADO

University of Colorado, Boulder

### DISTRICT OF COLUMBIA

Library of Congress

### GEORGIA

Georgia Institute of Technology, Atlanta

### ILLINOIS

The John Crerar Library, Chicago

### MASSACHUSETTS

Massachusetts Institute of Technology, Cambridge

### MISSOURI

Linda Hall Library, Kansas City

### NEW YORK

Columbia University, New York

### OKLAHOMA

University of Oklahoma, Bizzell Library

### PENNSYLVANIA

Carnegie Library of Pittsburgh

### WASHINGTON

University of Washington, Seattle

NASA publications (those indicated by an "\*" following the accession number) are also received by the following public and free libraries:

### CALIFORNIA

Los Angeles Public Library

San Diego Public Library

### COLORADO

Denver Public Library

### CONNECTICUT

Hartford Public Library

### MARYLAND

Enoch Pratt Free Library, Baltimore

### MASSACHUSETTS

Boston Public Library

### MICHIGAN

Detroit Public Library

### MINNESOTA

Minneapolis Public Library

### MISSOURI

Kansas City Public Library

St. Louis Public Library

### NEW JERSEY

Trenton Public Library

### NEW YORK

Brooklyn Public Library

Buffalo and Erie County Public Library

Rochester Public Library

New York Public Library

### OHIO

Akron Public Library

Cincinnati Public Library

Cleveland Public Library

Dayton Public Library

Toledo Public Library

### TENNESSEE

Memphis Public Library

### TEXAS

Dallas Public Library

Fort Worth Public Library

### WASHINGTON

Seattle Public Library

### WISCONSIN

Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 750 Third Avenue, New York, New York 10017.

## EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "\*", from: ESA - Space Documentation Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.
