

AT-IX5-28GPX

High Availability Video Surveillance Switch

The Allied Telesis IX5-28GPX offers an impressive set of features in a high-value package, making it ideal for IP video surveillance environments.

Overview

The Allied Telesis IX5-28GPX provides a high performing and scalable solution for today's networks. With 24 PoE+ enabled 10/100/1000Mbps ports, two 1/10 Gigabit uplinks, plus the ability to stack up to four units, the AT-IX5-28GPX is the ideal solution for video surveillance applications where high performance and resilient PoE power are critical.

High availability

The IX5 Series was designed with reliability in mind. It guarantees continual delivery of data and streaming video. Dual hot-swappable load-sharing power supplies provide resilient system and end-point power, with up to 30 Watts available to power today's pan, tilt and zoom cameras. Factor in the ability to operate at up to 60°C, and the IX5 is an easy choice for modern video surveillance environments.

Network resiliency

A Virtual Chassis Stack (VCStack™) of up to four devices can be formed so the network can be maintained or reconfigured as necessary, without affecting uptime.

Ethernet Protection Switched Ring (EPSRing™) ensures distributed network environments have high-speed access to online resources and applications, and guaranteed data throughput.

Simplified network management

Modern converged networks have increasing management requirements. Allied Telesis Management Framework (AMF) automates many everyday tasks, including configuration management, saving you valuable time and resources. The complete network can be managed as a single virtual device with powerful centralized management features. Growing the network can be accomplished with plug-and-play simplicity, and network node recovery is fully zero-touch.

Advanced operating system

The IX5 Series runs the advanced AlliedWare Plus™ fully featured operating system, delivering a rich feature set and an industry-standard CLI. The industry-standard CLI reduces training requirements and is consistent across all AW+ devices, simplifying network management.

Secure

Advanced security features protect the network from the edge to the core. Unprecedented control over user access is provided with Network Access Control (NAC), to mitigate threats to network infrastructure. This ensures the network is accessed only by known users and devices - users' adherence to network security policies is checked, and either access is granted or remediation is offered. Secure access can also be provided for guests. A secure network environment is guaranteed, with

powerful control over network traffic types, secure management options, and other multi-layered security features built right into the AT-IX5-28GPX switch.

Future-proof

The flexibility of the AT-IX5-28GPX, coupled with the ability to seamlessly add new nodes to a VCStack of multiple units, ensures a future-proof network. The AT-IX5-28GPX comes with a comprehensive IPv6 feature set, ensuring it is ready for future network traffic demands.

Eco-friendly

The AT-IX5-28GPX supports Energy Efficient Ethernet, which automatically reduces the power consumed by the switch whenever there is no traffic on a port. This sophisticated feature can significantly reduce operating costs, by reducing the power requirements of the switch and any associated cooling equipment.

New Features

- ▶ ACLs for management traffic
- ▶ Active Fiber Monitoring
- ▶ Microsoft Network Load Balancing (MS NLB) support
- ▶ VLAN Mirroring (RSPAN)

Key Features

Reliable

- ▶ Dual hot-swappable load-sharing power supplies maximize network uptime, ensuring a resilient solution where always-on access is required.

Allied Telesis Management Framework (AMF)

- ▶ Allied Telesis Management Framework (AMF) is a sophisticated suite of management tools that provide a simplified approach to network management. Common tasks are automated or made so simple that the every-day running of a network can be achieved without the need for highly-trained, and expensive, network engineers. Powerful features like centralized management, auto-backup, auto-upgrade, auto-provisioning and auto-recovery enable plug-and-play networking and zero-touch management.

VStack™ (Virtual Chassis Stacking)

- ▶ Create a VStack of up to four IX5 units with 40Gbps of stacking bandwidth to each unit. VStack provides a highly available system where network resources are spread out across stacked units, reducing the impact if one of the units fails. Aggregating switch ports on different units across the stack provides excellent network resiliency.

Long-distance Stacking

- ▶ Long-distance stacking allows a VStack to be created over longer distances, perfect for a distributed network environment.

EPSRing™ (Ethernet Protection Switched Ring)

- ▶ EPSRing and 10 Gigabit Ethernet allow several IX5 switches to form a high-speed protected ring capable of recovery within as little as 50ms. This feature is ideal for large IP surveillance environments.
- ▶ Super-Loop Protection enables a link between two EPSR nodes to be in separate EPSR domains, improving redundancy and network fault resiliency.

Industry-leading Quality of Service (QoS)

- ▶ Comprehensive low-latency wire speed QoS provides flow-based traffic management with full classification, prioritization, traffic shaping and min/max bandwidth profiles. Boosted network performance and guaranteed delivery of business-critical Ethernet services and applications are provided. Time-critical services such as voice and video take precedence over non-essential services such as file downloads, maintaining responsiveness of Enterprise applications.

Loop Protection

- ▶ Thrash limiting, also known as rapid MAC movement, detects and resolves network loops. It is highly user-configurable — from the rate of looping traffic to the type of action the switch should take when it detects a loop.
- ▶ With thrash limiting, the switch only detects a loop when a storm has occurred, which can potentially cause disruption to the network. To avoid this, loop detection works in conjunction with thrash limiting to send special Loop Detection Frame (LDF) packets that the switch listens for. If a port receives an LDF packet, the port, or link can be disabled, or an SNMP trap can be sent. This feature can help to detect loops before a network storm occurs, avoiding the risk and inconvenience of traffic disruption.

Power over Ethernet Plus (PoE+)

- ▶ With PoE, a separate power connection to media endpoints such as IP phones and wireless access points is not necessary. PoE+ reduces costs and provides even greater flexibility, providing the capability to connect devices requiring more power (up to 30 Watts) such as, tilt and zoom security cameras.

Link Layer Discovery Protocol – Media Endpoint Discovery (LLDP – MED)

- ▶ LLDP-MED extends LLDP basic network endpoint discovery and management functions. LLDP-MED allows for media endpoint specific messages, providing detailed information on power requirements, network policy, location discovery (for Emergency Call Services) and inventory.

Voice VLAN

- ▶ Voice VLAN automatically separates voice and data traffic into two different VLANs. This automatic separation places delay-sensitive traffic into a voice- dedicated VLAN, which simplifies QoS configurations.

sFlow

- ▶ sFlow is an industry-standard technology for monitoring high-speed switched networks. It provides complete visibility into network use, enabling performance optimization, usage accounting/billing, and defense against security threats. Sampled packets sent to a collector ensure it always has a real-time view of network traffic.

VLAN Mirroring (RSPAN)

- ▶ VLAN mirroring allows traffic from a port on a remote switch to be analysed locally. Traffic being transmitted or received on the port is duplicated and sent across the network on a special VLAN.

Dynamic Host Configuration Protocol (DHCP) Snooping

- ▶ DHCP servers allocate IP addresses to clients, and the switch keeps a record of addresses issued on each port. IP source guard checks against this DHCP snooping database to ensure only clients with specific IP and/or MAC address can access the network. DHCP snooping can be combined with other features, like dynamic ARP inspection, to increase security in Layer 2 switched environments, and also provides a traceable history, which meets the growing legal requirements placed on service providers.

Tri-authentication

- ▶ Authentication options on the IX5 also include alternatives to IEEE 802.1x port-based authentication, such as web authentication to enable guest access and MAC authentication for endpoints that do not have an IEEE 802.1x supplicant. All three authentication methods— IEEE 802.1x, MAC-based and Web-based— can be enabled simultaneously on the same port for tri-authentication.

Access Control Lists (ACLs)

- ▶ AlliedWare Plus delivers industry-standard Access Control functionality through ACLs. ACLs filter network traffic to control whether routed packets are forwarded or blocked at the port interface. This provides a powerful network security mechanism to select the types of traffic to be analyzed, forwarded, or influenced in some way.

Optical DDM

- ▶ Most modern optical SFP/SFP+/XFP transceivers support Digital Diagnostics Monitoring (DDM) functions according to the specification SFF-8472. This enables real time monitoring of the various parameters of the transceiver, such as optical output power, temperature, laser bias current and transceiver supply voltage. Easy access to this information simplifies diagnosing problems with optical modules and fiber connections.

Active Fiber Monitoring

- ▶ Active Fiber Monitoring prevents eavesdropping on fiber communications by monitoring received optical power. If an intrusion is detected, the link can be automatically shut down, or an operator alert can be sent.

UniDirectional link Detection

- ▶ UniDirectional Link Detection (UDLD) is useful for monitoring fiber-optic links between two switches that use two single-direction fibers to transmit and receive packets. UDLD prevents traffic from being sent across a bad link by blocking the ports at both ends of the link in the event that either the individual transmitter or receiver for that connection fails.

Microsoft Network Load Balancing (MS NLB) Support

- ▶ Support for MS NLB, which clusters identical servers together for increased performance through load-sharing..

Key Solutions

Diagram 1: IP Video Surveillance

IP Video Surveillance

With the evolution of CCTV technology to digital IP-based systems, the emphasis has moved from simple video footage monitoring, to intelligent systems with video analytics capable of identifying abnormal events or behavior. As intelligence increases in these systems, so too do the applications for this technology – from retail outlets, warehouses and office buildings, to hotels, hospitals and advanced traffic monitoring systems.

Modern high definition digital images are sharper and clearer than ever before. Large amounts of digital video can be stored on Network-Attached Storage (NAS) systems, and digital images don't degrade over time.

Allied Telesis provides secure and resilient IP video surveillance network solutions. The key features of our AT-IX5-28GPX switch make it ideal for use in advanced surveillance systems:

- ▶ Dual hot-swappable load-sharing power supplies, and support for operation up to 60°C ensure maximum network uptime.
- ▶ Power over Ethernet (PoE+) provides up to 30 Watts to end-points, supporting the latest generation of pan, tilt and zoom IP cameras.
- ▶ High performance multicast support manages large numbers of digital video streams across the network.
- ▶ Long-Distance Virtual Chassis Stacking (VCStack-LD) is ideal to spread network distribution, while keeping total resilience.
- ▶ Ethernet Protection Switched Rings (EPSR) provides a high-speed ring topology with failover in a little as 50ms, supporting large IP surveillance environments with an 'always-on' solution.

With the AT-IX5-28GPX and other advanced switching products, Allied Telesis IP video surveillance solutions are dependable, scalable and ready for the next generation of digital monitoring technologies.

Product Specifications

PRODUCT	10/100/1000T (RJ-45) COPPER PORTS	100/1000X SFP PORTS	1/10 GIGABIT SFP+ PORTS	10 GIGABIT STACKING PORTS	MAX POE+ PORTS	SWITCHING FABRIC	FORWARDING RATE
AT-IX5-28GPX	24	-	2	2*	24	128Gbps	95.2Mpps

* Stacking ports can be configured as additional 1G/10G Ethernet ports when unit is not stacked

Performance

- ▶ 40 Gbps of stacking bandwidth
- ▶ Supports 13kB Jumbo frames
- ▶ Wirespeed multicasting
- ▶ Up to 16K MAC addresses
- ▶ 512MB DDR SDRAM
- ▶ 64MB flash memory
- ▶ Packet Buffer memory: 2MB

Reliability

- ▶ Modular AlliedWare Plus operating system
- ▶ Redundant power supplies load share providing uninterrupted power and extra reliability
- ▶ Full environmental monitoring of PSUs, fans, temperature and internal voltages. SNMP traps alert network managers in case of any failure

Power Characteristics

- ▶ AC voltage: 90 to 260V (auto-ranging)
- ▶ Frequency: 47 to 63Hz

Expandability

- ▶ Stackable up to four units of IX5 in a VCStack

Flexibility and Compatibility

- ▶ 10G SFP+ ports will support any combination of Allied Telesis 1000Mbps SFP and 10GbE SFP+ modules and direct attach cables listed in this document under Ordering Information
- ▶ Stacking ports can be configured as 10G Ethernet ports
- ▶ Port speed and duplex configuration can be set manually or by auto-negotiation

Diagnostic Tools

- ▶ Active Fiber Monitoring detects tampering on optical links
- ▶ Built-In Self Test (BIST)
- ▶ Find-me device locator
- ▶ Cable fault locator (TDR)
- ▶ UniDirectional Link Detection (UDLD)
- ▶ Automatic link flap detection and port shutdown
- ▶ Optical Digital Diagnostic Monitoring (DDM)
- ▶ Ping polling for IPv4 and IPv6
- ▶ Port and VLAN mirroring (RSPAN)
- ▶ TraceRoute for IPv4 and IPv6

IPv4 Features

- ▶ Black hole routing
- ▶ Directed broadcast forwarding
- ▶ DNS relay
- ▶ Policy-based routing
- ▶ IPv4 static routing
- ▶ UDP broadcast helper (IP helper)

IPv6 Features

- ▶ DHCPv6 relay, DHCPv6 client
- ▶ DNSv6 relay, DNSv6 client
- ▶ IPv4 and IPv6 dual stack
- ▶ IPv6 hardware ACLs

- ▶ Device management over IPv6 networks with SNMPv6, Telnetv6 and SSHv6
- ▶ NTPv6 client and server
- ▶ IPv6 static routing

Management

- ▶ Front panel 7-segment LED provides at-a-glance status and fault information
- ▶ Allied Telesis Management Framework (AMF) enables powerful centralized management and zero-touch device installation and recovery
- ▶ Console management port on the front panel for ease of access
- ▶ Eco-friendly mode allows ports and LEDs to be disabled to save power
- ▶ Web-based Graphical User Interface (GUI)
- ▶ Industry-standard CLI with context-sensitive help
- ▶ Powerful CLI scripting engine and built-in text editor
- ▶ Comprehensive SNMP MIB support for standards-based device management
- ▶ Event-based triggers allow user-defined scripts to be executed upon selected system events
- ▶ USB interface allows software release files, configurations and other files to be stored for backup and distribution to other devices

Quality of Service (QoS)

- ▶ 8 priority queues with a hierarchy of high priority queues for real time traffic, and mixed scheduling, for each switch port
- ▶ Limit bandwidth per port or per traffic class down to 64kbps
- ▶ Wirespeed traffic classification with low latency essential for VoIP and real-time streaming media applications
- ▶ Policy-based QoS based on VLAN, port, MAC and general packet classifiers
- ▶ Policy-based storm protection
- ▶ Extensive remarking capabilities
- ▶ Taildrop for queue congestion control
- ▶ Strict priority, weighted round robin or mixed scheduling
- ▶ IP precedence and DiffServ marking based on layer 2, 3 and 4 headers

Resiliency

- ▶ Stacking ports can be configured as 10G Ethernet ports
- ▶ Control Plane Prioritization (CPP) ensures the CPU always has sufficient bandwidth to process network control traffic
- ▶ Dynamic link failover (host attach)
- ▶ EPSRing (Ethernet Protection Switched Rings) with SuperLoop Protection (SLP)
- ▶ EPSR enhanced recovery for extra resiliency
- ▶ Long-Distance stacking (LD-VCStack)
- ▶ Loop protection: loop detection and thrash limiting
- ▶ PVST+ compatibility mode
- ▶ STP root guard
- ▶ VCStack fast failover minimizes network disruption

Security

- ▶ Access Control Lists (ACLs) based on layer 3 and 4 headers
- ▶ Configurable ACLs for management traffic
- ▶ Auth-fail and guest VLANs
- ▶ Authentication, Authorisation and Accounting (AAA)
- ▶ Bootloader can be password protected for device security
- ▶ BPDU protection
- ▶ DHCP snooping, IP source guard and Dynamic ARP Inspection (DAI)
- ▶ DoS attack blocking and virus throttling
- ▶ Dynamic VLAN assignment
- ▶ MAC address filtering and MAC address lock-down
- ▶ Network Access and Control (NAC) features manage endpoint security
- ▶ Port-based learn limits (intrusion detection)
- ▶ Private VLANs provide security and port isolation for multiple customers using the same VLAN
- ▶ Secure Copy (SCP)
- ▶ Strong password security and encryption
- ▶ Tri-authentication: MAC-based, web-based and IEEE 802.1x
- ▶ RADIUS group selection per VLAN or port

Environmental Specifications

- ▶ Operating temperature range: 0°C to 50°C (32°F to 122°F) nominal
0°C to 60°C (32°F to 140°F) with 2 x PWR800 and 250W PoE max.
Derated by 1°C per 305 meters (1,000 ft)
- ▶ Storage temperature range: -25°C to 70°C (-13°F to 158°F)
- ▶ Operating relative humidity range: 5% to 90% non-condensing
- ▶ Storage relative humidity range: 5% to 95% non-condensing
- ▶ Operating altitude: 3,048 meters maximum (10,000 ft)

Electrical Approvals and Compliances

- ▶ EMC: EN55022 class A, FCC class A, VCCI class A, ICES-003 class A
- ▶ Immunity: EN55024, EN61000-3-levels 2 (Harmonics), and 3 (Flicker) – AC models only

Safety

- ▶ Standards: UL60950-1, CAN/CSA-C22.2 No. 60950-1-03, EN60950-1, EN60825-1, AS/NZS 60950.1
- ▶ Certification: UL, cUL

Restrictions on Hazardous Substances (RoHS) Compliance

- ▶ EU RoHS compliant
- ▶ China RoHS compliant

Country of Origin

- ▶ China

Cryptographic Algorithms

FIPS Approved Algorithms

Encryption (Block Ciphers):

- ▶ AES (ECB, CBC, CFB and OFB Modes)
- ▶ 3DES (ECB, CBC, CFB and OFB Modes)

Block Cipher Modes:

- ▶ CCM
- ▶ CMAC
- ▶ GCM
- ▶ XTS

Digital Signatures & Asymmetric Key Generation:

- ▶ DSA
 - ▶ ECDSA
 - ▶ RSA
- Secure Hashing:
- ▶ SHA-1
 - ▶ SHA-2 (SHA-224, SHA-256, SHA-384, SHA-512)

Message Authentication:

- ▶ HMAC (SHA-1, SHA-2(224, 256, 384, 512)

Random Number Generation:

- ▶ DRBG (Hash, HMAC and Counter)

Non FIPS Approved Algorithms

RNG (AES128/192/256)
DES
MD5

Ethernet

IEEE 802.1AX Link aggregation (static and LACP)
IEEE 802.2 Logical Link Control (LLC)
IEEE 802.3 Ethernet

- RFC 4188 Definitions of managed objects for bridges
- RFC 4318 Definitions of managed objects for bridges with RSTP
- RFC 4560 Definitions of managed objects for remote ping, traceroute and lookup operations
- RFC 6527 Definitions of managed objects for VRRPv3

Multicast Support

- IGMP query solicitation
- IGMP snooping (IGMPv1, v2 and v3)
- IGMP snooping fast-leave
- IGMP/MLD multicast forwarding (IGMP/MLD proxy)
- MLD snooping (MLDv1 and v2)
- RFC 1112 Host extensions for IP multicasting (IGMPv1)
- RFC 2236 Internet Group Management Protocol v2 (IGMPv2)
- RFC 3376 IGMPv3
- RFC 4541 IGMP and MLD snooping switches

Quality of Service (QoS)

- IEEE 802.1p Priority tagging
- RFC 2211 Specification of the controlled-load network element service
- RFC 2474 DiffServ precedence for eight queues/port
- RFC 2475 DiffServ architecture
- RFC 2597 DiffServ Assured Forwarding (AF)
- RFC 2697 A single-rate three-color marker
- RFC 2698 A two-rate three-color marker
- RFC 3246 DiffServ Expedited Forwarding (EF)

Resiliency

- IEEE 802.1D MAC bridges
- IEEE 802.1s Multiple Spanning Tree Protocol (MSTP)
- IEEE 802.1w Rapid Spanning Tree Protocol (RSTP)
- RFC 5798 Virtual Router Redundancy Protocol version 3 (VRRPv3) for IPv4 and IPv6

Security

- SSH remote login
- SSLv2 and SSLv3
- TACACS+ accounting and authentication
- IEEE 802.1X authentication protocols (TLS, TTLS, PEAP and MD5)
- IEEE 802.1X multi-suplicant authentication
- IEEE 802.1X port-based network access control
- RFC 2818 HTTP over TLS ("HTTPS")
- RFC 2865 RADIUS
- RFC 2866 RADIUS accounting
- RFC 2868 RADIUS attributes for tunnel protocol support

3 meter SFP+ direct attach cable

AT-SP10TW7
7 meter SFP+ direct attach cable

SFP Modules

AT-SPSX
1000SX GbE multi-mode 850nm fiber up to 550m

AT-SPSX/I
1000SX GbE multi-mode 850nm fiber up to 550m industrial temperature

AT-SPEX
1000X GbE multi-mode 1310nm fiber up to 2km

AT-SPLX10
1000LX GbE single-mode 1310nm fiber up to 10km

AT-SPLX10/1
1000LX GbE single-mode 1310nm fiber up to 10km industrial temperature

AT-SPBD10-13
1000LX GbE Bi-Di (1310nm Tx, 1490nm Rx) fiber up to 10km

AT-SPBD10-14
1000LX GbE Bi-Di (1490nm Tx, 1310nm Rx) fiber up to 10km

AT-SPLX40
1000LX GbE single-mode 1310nm fiber up to 40km

AT-SPZX80
1000ZX GbE single-mode 1550nm fiber up to 80km

** These modules support dual-rate 1G/10G operation
