CBRE Project Number: TS00423786

Dear Mr. McCabe:

CBRE, Inc. (CBRE) is pleased to submit this copy of our Phase I Environmental Site Assessment on the above-referenced property. This report outlines the findings of CBRE's site reconnaissance, historical land use research, review of governmental records, and interviews.

I declare that, to the best of my professional knowledge and belief, I meet the definition of *environmental professional* as defined in § 312.10 of 40 CFR 312 and I have the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the *subject property*. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Please call the undersigned should you have any questions.

Sincerely,

CBRE, Inc. | Telecom Advisory Services

1.0 EXECUTIVE SUMMARY

This report documents CBRE's findings from our Phase I Environmental Site Assessment for the property located at 69 Leetes Island Road, designated as Parcel ID: H05/J05007/0022A in the Town of Branford, New Haven County, Connecticut (the "Parent Parcel"). The Parent Parcel is situated in a suburban area characterized by single-family residential development, commercial development, light industrial development, agricultural land, and wooded land. The Parent Parcel consists of an approximately five-acre parcel improved with one 6,184 square-foot garage and office building with oil heating constructed in 1958, and one 8,288 square-foot, wood-framed storage barn with no heating systems constructed in 1995. In addition, the Parent Parcel includes a fueling station with tanks installed in 1999, and concrete structures for stockpiling soil. The Parent Parcel is operated by the Department of Transportation and is owned by the State of Connecticut.

Pursuant to lease exhibits prepared by Centek Engineering, dated February 24, 2020 and last revised on April 13, 2020, Pyramid Network Services, LLC proposes to construct a wireless telecommunications facility on a proposed 50' x 50' fenced-in lease area to be located in the northwestern portion of the Parent Parcel. The proposed tower facility will include a 100-foot self-supporting tower, 12' x 34' equipment shelter with a generator room, an ice bridge with two GPS antennas, and a utility conduit.

Coaxial cables will be routed from the proposed equipment shelter to the proposed tower via a proposed ice bridge. Pyramid Network Services, LLC plans to construct a 12' wide gravel access drive from the Parent Parcel's entrance on Leetes Island Road and curving to the northeast towards the proposed tower facility. Power and telco conduits will be routed underground from an existing utility pole near Leetes Island Road to the proposed tower facility, following the path of the proposed driveway. The proposed 50' x 50' lease area, access and utility easements, and all areas proposed to be disturbed is hereby referred to as the "Subject" and is the focus of this report.

This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the Parent Parcel. However, the following historical recognized environmental condition (HREC) was identified:

Leaking Underground Storage Tank (LUST) and SPILLS Listings

One LUST incident and two Spills listings were identified on the Parent Parcel, each of which have been granted regulatory closure by the CT DEEP.

- The Branford Maintenance Facility at 69 Leetes Island Road was identified as the site of LUST Case ID: 35176 (aka LUST ID: 7101 and Spill Case No. 9808521). According to the database, on December 14, 1998, a release of diesel and motor

fuel was detected originating from the Parent Parcel's USTs. The depth to the groundwater was measured at 9.5 feet below grade and flowing to the east, and the classification was set at GA, indicating that the groundwater is assumed to be suitable for drinking without treatment. Based on the associated Spill Case number and CPCS listing, a sheen was discovered on the groundwater at the diesel fuel and gasoline fueling station, specifically around a 4,000-gallon, steel diesel fuel or gasoline tank. Approximately 80 gallons of diesel fuel and gasoline was recovered during remediation. A Phase II was requested and soil removal was performed. The response from the Oil and Chemical Spill Response Division (OCSR) was complete as of March 10, 1999. In addition, the CT DEEP has granted this LUST incident a LUST Status 4, indicating that remediation is complete. Furthermore, based on the dates of the spill and the reference to a steel diesel or gasoline tank, the release must refer to the refueling station located approximately 170 feet to the southeast of the proposed Subject Property area. The tanks in this area were excavated and removed in 1999 to be replaced with the existing fiberglass-reinforced plastic USTs. No subsequent LUST/Spill listing was found associated with the newer USTs. Based on the removal and replacement of the source USTs, presence of groundwater monitoring wells and leak detection equipment on the replacement USTs, which have not reported any subsequent LUST/Spill incidents, the Complete regulatory status of the LUST incident, and eastward groundwater flow of the area of the USTs, which is crossgradient to the proposed area of the Subject Property, it is not suspected that this LUST listing represents an environmental concern to the Subject Property.

- Spill Case No. 6519, occurred at the Parent Parcel on November 30, 1993. A subcontractor for the Department of Transportation knocked over a non-PCB electrical transformer and released approximately 20 gallons of dielectric fluid. Two gallons of the material entered a catch basin and some to the nearby marsh area. The material was contained with pads and sand, and impacted soils were excavated. Based This incident was granted a Closed status by the CT DEEP on November 30, 1993, the same day as the incident. Based on the remedial actions performed, type of material released, and regulatory status, it is not suspected that this incident represents an environmental concern to the Subject Property.
- Spill Case No. 9706103 occurred on October 22, 1997 when a nozzle removed from the gasoline dispenser released approximately 125 gallons of gasoline to the ground surface and a catch basin. ETI was retained to remediate the release. The catch basin was pumped out and all impacted soils were removed. The CT DEEP granted this incident a Closed and Terminated status, indicating that it has been remediated to the satisfaction of the department. Based on the remedial actions performed, and the contained nature of the release, it is not suspected that this spill represents an environmental concern to the Subject Property.

2.0 INTRODUCTION

2.1 General and Reliance

CBRE was retained by Pyramid Network Services, LLC to prepare a Phase I Environmental Site Assessment for the Parent Parcel, in conformance with ASTM International's Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-13. Any exceptions to, or deletions from, this practice are described below.

CBRE has produced this document under an agreement between CBRE and Pyramid Network Services, LLC. All terms and conditions of that agreement are included within this document by reference. This report was prepared for and may be relied upon by Pyramid Network Services, LLC. Any future party seeking to rely on this report may apply to CBRE and Pyramid Network Services, LLC for a letter of reliance.

2.2 Purpose and Scope

2.2.1 Purpose

The purpose of this report is to identify Recognized Environmental Conditions in connection with the property, using the methodology recommended by ASTM International in order to qualify for the innocent landowner defense to CERCLA liability and/or to help understand potential environmental conditions that could materially impact the operation of the business associated with the Parent Parcel. Specifically, this methodology is referred to as *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process Designation: E 1527-13*.

The term Recognized Environmental Conditions is defined by ASTM Standard E 1527-13 as "...the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."

2.2.2 Scope

In general, the scope of this assessment consisted of reviewing reasonably ascertainable information and environmental data relating to the property; interviewing readily

available persons knowledgeable about the site; reviewing readily available maps, aerial photographs and records maintained by federal, state, and local regulatory agencies; and conducting a site visit.

Of importance, the client is advised that federal, state, and local laws may impose environmental assessment obligations beyond the scope of this practice. The client is also notified that there are likely to be other legal obligations with regard to hazardous substances or petroleum products discovered on the Parent Parcel that are not addressed in this practice and that may pose risks of civil and/or criminal sanctions for non-compliance.

The specific scope of this assignment included the following:

- Performing a site reconnaissance to characterize on-site conditions and assess the site's location with respect to surrounding property uses and natural surface features. In addition, CBRE conducted a reconnaissance of nearby surrounding roads and readily accessible adjacent properties to identify obvious potential environmental conditions on neighboring properties. Photographs taken as part of the site reconnaissance are provided in Appendix A.
 - The site visit was conducted on May 11, 2020, by Mr. Robert Strother representing CBRE. The site was not represented at the time of the site visit.
 - Weather conditions were partly cloudy with a temperature of approximately 55°F at the time of our site survey. CBRE conducted the site reconnaissance in a systematic manner, surveying in a grid pattern.
- Interviewing persons familiar with the property to obtain information on present and previous on-site activities potentially resulting in the environmental degradation of the site or adjoining properties. An AAI User Questionnaire was provided to the User. In this questionnaire, CBRE requested title records as well as information pertaining to whether or not any environmental liens or activity and use limitations were associated with the property. The purpose of this questionnaire was to satisfy the user interview all appropriate inquiry requirements and disclose any previous or existing hazardous waste or toxic material conditions, which may not have been apparent at the time of our site reconnaissance.
- If provided, reviewing of information such as previously prepared appraisals, building plans and specifications, and environmental reports.
- Reviewing readily available historical documents, such as topographic maps, aerial photographs, and/or city directories to identify previous activities on and in the

vicinity of the Parent Parcel. Copies of these documents are included in Appendix C.

- Reviewing readily available environmental databases maintained by federal, state, and local agencies within the approximate minimum search distances as described within the Regulatory Review Section 5.0 of this report. A copy of the Computerized Environmental Report, provided by Environmental Data Resources, Inc. (EDR) can be referenced in Appendix D.
- Conducting a visual survey of readily accessible areas to identify the presence of the most obvious and common types of suspect ACMs. The basis for “suspect” determination is taken from the materials listed in Appendix G of the United States Environmental protection Agency (USEPA) publication Managing Asbestos in Place (also known as the Green Book). All building materials listed within Appendix G of the Green Book are considered to be suspect ACMs at the Subject. This screening is not intended to be used for demolition, abatement, renovation, or repair work.

THIS LIMITED SURVEY IS NOT TO BE CONSTRUED AS A COMPREHENSIVE ASBESTOS SURVEY, WHICH OFTEN ENTAILS DESTRUCTIVE TESTING OR THE SURVEY OF AREAS BEHIND WALLS, ABOVE CEILINGS, IN TENANT SPACES, AND IN OTHER TYPICALLY INACCESSIBLE AREAS. MOREOVER, CBRE DOES NOT WARRANT THAT ALL ACMs AT THE SUBJECT HAVE BEEN IDENTIFIED.

- In the course of conducting representative observations of areas that are readily accessible, easily visible, and safe with respect to the field observer, CBRE will report the presence of material quantities of microbial growth.
- This limited scan is not to be construed as a microbial growth survey, which entails a thorough specific inspection and also often includes destructive testing or the survey of areas behind walls, above ceilings, in tenant spaces, and in other typically inaccessible areas. Moreover, CBRE does not warrant that all microbial growth at the Subject has been identified, as mold may exist in inaccessible or non-observable areas or may have amplified subsequent to our site survey.
- During our walkthrough survey, CBRE noted the condition of the paint. Note, a compliance audit for lead-containing paint was not conducted. In addition, if the tower was painted, testing for lead-containing paint was not conducted without prior written approval by CLIENT. NOTWITHSTANDING, THIS SCAN FOR LEAD-CONTAINING PAINT SHOULD NOT BE CONSTRUED AS AN IN-DEPTH LEAD-CONTAINING PAINT SURVEY.

2.3 Data Gaps

According to §3.3.20 of ASTM Standard E 1527-13 a data gap is a lack of or inability to obtain information required by the ASTM Standard despite good faith efforts to gather same. Data gaps may result from incompleteness in any of the activities required by the ASTM Standard. The following data gaps occurred in connection with this report:

Data Gap	Explanation	Significance of Gap
Site History	Site history not conducted in five-year intervals (See § 4)	Low - not likely to alter Report's conclusions due to CBRE's search of standard historical sources of information such as aerial photographs, historic topographic maps, reviews of previous investigations, and interviews with knowledgeable individuals who were familiar with the property.
User Interview	AAI User Questionnaire not returned to CBRE	Low - not likely to alter Report's conclusions
Former Owner or Operator Interview	Unable to interview former site owner or operator due to inability to locate	Low - not likely to alter Report's conclusions
Governmental Records	FOIA requests not returned	Unknown. However, if receipt of FOIA requests alters the Report's conclusion, the client will be notified
Property Title Report	No property title was provided for review.	Low - considering the historical use of the property, a copy of the land title would not likely alter the Report's conclusions.

3.0 SITE DESCRIPTION

Property Information		
Street Address	69 Leetes Island Road	
City, County, and State	Town of Branford, New Haven County, Connecticut 06405	
Legal Designation	Block 7, Lot 22A	
Subject Area	50'x50' Fenced Compound	
Coordinates	41°17'41.6"N and 72°45'42.4"W	
Parent Parcel Area	Five Acres	
Roads on or Adjoining the Property	The property has road frontage along Leetes Island Road to the west.	
Surrounding Land Use		
Direction	Adjacent Properties	Surrounding Properties
North	Across Interstate-95, are a gasoline filling station (48 Leetes Island Road) and a truck stop (3 East Industrial Road)	A shopping plaza, commercial properties, a trailer park, vacant land, and agricultural land farther north
South	A single-family residence (90 Leetes Island Road) and woodland.	Commercial and residential properties, a church, agricultural land, and vacant land farther south
East	HW Zuwalick & Son's sawmill (36 Zuwalick Lane)	Vacant land and single-family residences farther east.
West	Across Leetes Island road are Fischer Excavating (89 Leetes Island Road); New Age Motors (82 Leetes Island Road); Rodeway Inn & Suites (81 Leetes Island Road); and a single-family residence (72 Gould Lane)	Commercial and residential properties farther west with commercial facilities on the other side of I-95.
Of note, several adjoining/surrounding properties were identified on regulatory databases indicative of environmentally sensitive operations. Please see the regulatory review section of this report for additional discussion regarding these facilities.		
Physiographic Setting		

<p>Geologic Conditions</p>	<p>There are no predominant geological surface features such as rock outcroppings on the Subject. According to the Bedrock Geological Map of Connecticut, dated 1985, compiled by John Rodgers for the CT Geological and Natural History Survey, the Parent Parcel is situated on a mixture of the Plainfield Formation (Zp), Stony Creek Granite Gneiss (Zsc), and Narragansett Pier Granite (Pn),</p> <p>The Plainfield Formation consists of interlayered light-gray, thin-bedded quartzite, in places with feldspar, mica, graphite, or pyrite, light- to medium-gray gneiss composed of quartz, oligoclase, and biotite (rarely microcline), medium- to dark-gray schist composed of quartz, oligoclase, biotite, sillimanite, and garnet, dark-gray or green gneiss composed of plagioclase, quartz, biotite, and hornblende (commonly with diopside), amphibolite, diopside-bearing quartzite, and calc-silicate rock. In places contains quartz-sillimanite nodules.</p> <p>Stony Creek Granite Gneiss (Zsc is a red to pink, unevenly medium to very coarse grained, variably foliated granite or granite gneiss, composed of oligoclase, K-feldspar, and quartz with minor biotite and magnetite, sporadic garnet (in foliated varieties), and local muscovite.</p> <p>Narragansett Pier Granite (Pn) is a pink to red, medium to coarse-grained, massive granite</p>
<p>Soil Conditions</p>	<p>According to the Soil Survey of New Haven County, Connecticut, dated September 2016, issued by the United States Department of Agriculture, Soil Conservation Service, the soils at the site are classified as Udorthents-Urban land complex in the northwestern half of the parent parcel (46.2% of the Subject Property's land area) and Wethersfield loam, 3 to 8 percent slopes on the southwestern half of the lot (53.8%).</p> <p>Udorthents soils consist of loam from 0 to 5 inches, gravelly loam from 5 to 21 inches, and very gravelly sandy loam from 21 to 80 inches. This soil is well drained. Depth to the water table is about 54 to 72 inches and depth to a restrictive feature is more than 80 inches.</p> <p>Urban Land complex are those soils in which the soil's original structure and content have been so altered by human activities it has lost its original characteristics and is thus unidentifiable.</p> <p>The Wethersfield series consists of coarse-loamy, mixed, mesic Typic Fragiochrepts, which are well-drained, nonstony to extremely stony and have a reddish brown loam B horizon over a reddish brown fine sandy loam Cx horizon. These soils are formed in compact glacial till that was derived mainly from reddish colored sandstone, conglomerate, akrose, shale, and some basalt.</p>
<p>Hydrogeologic / Hydrologic Conditions</p>	<p>Under natural, undisturbed conditions, shallow groundwater flow generally follows the topography of the land surface and, on this basis, the topography suggests that groundwater flow across the Parent Parcel is in a northeasterly direction. However, localized conditions can alter flow direction and thus the presumed flow may not coincide with the actual in the area.</p>

Topographic Conditions	The Parent Parcel slopes from the southwest to the northeast at an approximate grade of 3%. The topography of the area is characterized as essentially gently sloping. According to the United States Geological Survey (USGS) <i>Branford, CT 7.5 Minute Series</i> topographic map, the Subject's topographic elevation is approximately 103 feet above mean sea level ("amsl").
Wetlands	<p>CBRE reviewed the National Wetlands Inventory Geographic Information Systems (GIS) Mapper which includes a federal wetlands data layer prepared by the US Department of the Interior, Fish and Wildlife Service. CBRE also reviewed the Town of Branford Geographic & Property Information Application, which includes a state freshwater wetlands data layer.</p> <p>Review of the aforementioned wetlands mapping indicated that the Subject is not located on a federal or state designated wetlands area. The southeast-adjacent lot includes a freshwater emergent wetland located approximately 460 feet from the Subject. Additionally, CBRE did not observe visual evidence of potential wetland areas on or adjacent to the Subject. It should be noted that a detailed wetland study or wetland delineation was not within the scope of this report.</p>
Flood Plains	CBRE reviewed the applicable FEMA flood plain map (09009C0467K) for the Subject. According to this review, the Subject is not located within or near a mapped floodplain.
Site Improvements	
Utilities	<p>Water: South Central Connecticut Regional Water Authority</p> <p>Sanitary Sewer: town of Branford</p> <p>Storm Sewer: Town of Branford</p> <p>Electric: Eversource</p> <p>Natural Gas: Connecticut Natural Gas (CNG)</p> <p>Telecom: Verizon</p>
Description of Improvements	The Parent Parcel is improved with a one-story garage and office building constructed in 1956, a storage barn constructed in 1995, a fueling station with tanks installed in 1999, and concrete structures for stockpiling soil. The Parent Parcel is operated by the Department of Transportation. The parcel is owned by the State of Connecticut.
Current Property Use	The Parent Parcel is occupied by State of Connecticut Department of Transportation as a garage, fueling station, offices, soil storage facility, and storage for de-icing tanks. The southern portion of the parcel includes a Park & Ride parking lot. Please refer to the Site Reconnaissance section for a discussion on the USTs identified at the Parent Parcel.

Subject Description

Pursuant to lease exhibits prepared by Centek Engineering, dated February 24, 2020 and last revised on April 13, 2020, Pyramid Network Services, LLC proposes to construct a wireless telecommunications facility on a proposed 50' x 50' fenced-in lease area to be located in the northwestern portion of the Parent Parcel. The proposed tower facility will include a 100-foot self-supporting tower, 12' x 34' equipment shelter with a generator room, an ice bridge with two GPS antennas, and a utility conduit. Coaxial cables will be routed from the proposed equipment shelter to the proposed tower via a proposed ice bridge. Pyramid Network Services, LLC plans to construct a 12' wide gravel access drive from the Parent Parcel's entrance on Leetes Island Road and curving to the northeast towards the proposed tower facility. Power and telco conduits will be routed underground from an existing utility pole near Leetes Island Road to the proposed tower facility, following the path of the proposed driveway.

4.0 HISTORICAL USE

The Parent Parcel was historically agricultural land and an access road to an east-adjacent property (researched back to 1934) prior to the development of the existing Department of Transportation garage in 1958. As indicated by the 1959 aerial photograph, the existing DOT garage, fueling station, soil stockpiling area, and a second outbuilding were constructed. By 1980, the Park & Ride lot on the southern area of the property was paved and the concrete apron for the garage’s historic UST was depicted north of the garage. By 1995, the outbuilding was demolished and the existing storage barn was constructed. By 2005, the paved area of the oil-water separator tank was depicted on the aerial photograph.

None of the historical uses of the property are considered a REC for the Subject or Parent Parcel; however, the presence of USTs and an associated LUST listing for a former tank constitutes an HREC for the Parent Parcel. Please refer to the regulatory review section for additional discussion.

The review of historical information regarding the Parent Parcel and surrounding areas is presented below.

Historical Review	
Historical Source	Observations
Topographic Maps	<p>Topographic maps dated 1954, 1967, 1972, 1984 and 2012 were reviewed.</p> <p>Parent Parcel: In the 1954 topographic map, the Parent Parcel consisted of undeveloped land with a road running west-east to an east-adjacent residence. The existing DOT garage and a shed were constructed by at least 1967.</p> <p>Surrounding Properties: In the 1954 topographic maps, the adjacent and surrounding properties consisted of agricultural land, residences, and the Connecticut Turnpike. By 1967, a residence was constructed on the east-adjacent lot and new commercial properties were constructed to the south. By 1984, new commercial and residential properties were constructed throughout the surrounding area. To the north across the Connecticut Turnpike is the existing truck stop and farther northwest are new commercial buildings.</p>
Fire Insurance Maps	No fire insurance maps were available for the Parent Parcel area based on a search of fire insurance maps performed by EDR.

Historical Review	
Historical Source	Observations
Aerial Photographs	<p>Aerial photographs dated 1934, 1949, 1951, 1959, 1963, 1966, 1970, 1972, 1980, 1986, 1992, 1996, 2005, 2008, 2012, and 2016 were reviewed.</p> <p>Parent Parcel: In the 1934 through 1951 aerial photographs, the Parent Parcel appears to consist of agricultural land and vacant land, with no visible structures or other development except for a road leading to an east-adjacent residence. By 1959, the existing DOT garage, fueling station, soil stockpiling area, and a second outbuilding were constructed. By 1980, the Park & Ride lot was paved. The concrete apron for the garage’s historic UST is depicted north of the building. By 1996, the outbuilding was demolished and the existing storage barn was constructed. By 2005, the paved area of the oil-water separator tank was depicted.</p> <p>Surrounding Properties: In the 1934 through 1951 aerial photographs, the surrounding properties are primarily agricultural land, residences, and undeveloped woodland. By 1959, the north-adjacent highway was paved. Commercial development was observed circa 1966 and expanded through present. Gasoline filling stations were observed to the northwest by 1970 and the north-adjacent truck stop was built in 1980. Larger commercial properties and a shopping plaza were constructed by 1986.</p>
Chain-of-Title	Although requested, a copy of the Chain-of-Title for the Parent Parcel has not been provided to CBRE for review.
Previous Reports	Although requested, no previously prepared environmental reports such as Phase I or II Environmental Site Assessments, lead paint surveys, lead-in-water surveys, asbestos surveys, or geotechnical reports were provided for our review.
Property Tax Records	According to the tax assessor records reviewed, the Parent Parcel consists of a 5-acre parcel identified as Parcel ID: H05/J05 007/0022A. The buildings consist of one 6,184 square-foot garage and office building with oil heating constructed in 1958, and one 8,288 square-foot, wood-framed storage barn with no heating systems constructed in 1995. Please refer to the UST section above for a discussion on the oil heating equipment. No additional records of any tanks, spills or other occurrences which could create a recognized environmental condition for the Parent Parcel were identified in the Assessor’s Office files.
Interviews	CBRE interviewed Mr. David Hartley of the Connecticut Department of Transportation over the phone at the time of site reconnaissance. According to Mr. Hartley the Parent Parcel includes a heating oil AST, diesel-fired emergency generator, and a fuel dispenser with gasoline and diesel USTs. Mr. Hartley had no knowledge of any environmental concerns pertaining to the Parent Parcel.
Additional Resources	CBRE conducted a cursory internet search for the Subject Name and Parent Parcel address using the Google search engine on May 15, 2020. Based on this search, no environmentally related information was identified on the first page of the Google search results.

5.0 REGULATORY REVIEW

5.1 Computerized Environmental Report

A copy of regulatory database information contained within a Computerized Environmental Report (CER) provided by Environmental Data Resources, Inc. (EDR) appears in Appendix D. The CER is a listing of sites identified on select federal and state standard source environmental databases within the approximate minimum search distance specified by ASTM International's Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-13. CBRE reviewed each environmental database on a record-by-record basis to determine if certain sites identified in the CER are suspected to represent a material negative environmental impact to the Parent Parcel. The following table lists the number of sites by regulatory database within the prescribed minimum search distance appearing in the CER:

Databases Reviewed	Approximate Minimum Search Distance (AMSD)	Number of Sites Within AMSD
Federal National Priorities List (NPL)	One-Mile	0
Federal Delisted NPL	One-Half Mile	0
Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) List	One-Half Mile	1
Federal CERCLIS No Further Remedial Action Planned (NFRAP) Site List	One-Half Mile	2
Federal Resource Conservation and Recovery Act (RCRA) Corrective Action Tracking System (CORRACTS) Facilities List	One-Mile	2
Federal RCRA non-CORRACTS Treatment, Storage, and Disposal (TSD) Facilities List	One-Half Mile	0
Federal RCRA Generators List (RCRA LQG, RCRA SQG, RCRA CESQG, and RCRA Non-Generator)	On-Site and Adjoining Properties	1
Federal Institutional Control/Engineering Control Registries	On-Site	0
Federal Emergency Response Notification System (ERNS) List	On-Site	0
State and Tribal Lists of NPL Equivalent Hazardous Waste Sites Identified for Investigation and/or Remediation (SHWS)	One-Mile	2
State and Tribal Landfills or Solid Waste Facilities List (SWF/LF)	One-Half Mile	0
State and Tribal Registered Underground & Aboveground Storage Tank Lists (UST/AST)	On-Site and Adjoining Properties	0
State and Tribal Leaking Storage Tank	One-Half Mile	0

Databases Reviewed	Approximate Minimum Search Distance (AMSD)	Number of Sites Within AMSD
State and Tribal Spills Database	On-Site and Adjoining Properties	0
State and Tribal Institutional/Engineering Control Registries	On-Site	0
State and Tribal Voluntary Cleanup Sites	One-Half Mile	0
State and Tribal Brownfields Sites	One-Half Mile	0

The CER identified 10 “Orphan Sites.” “Orphan Sites” are those sites that could not be mapped or “geocoded” due to inadequate address information. Refer to the CER for a list of these “Orphan Sites.” CBRE attempted to identify these sites via a review of street maps, vehicular reconnaissance and/or aerial photography. Four of these sites were determined to be on the Parent Parcel and are discussed below. Those sites that could be identified were either included in the above table or they were concluded to not represent a recognized environmental condition (REC) for the Subject or Parent Parcel due to their regulatory status (e.g., the incident was closed by the agency) and/or their location relative to the Subject (e.g., greater than the ASTM search distances from the Subject).

Based on our review of the CER, CBRE identified the Parent Parcel on the following regulatory databases: UST, LUST/Spills, CPCS, NPDES, CT Manifest, and RGA LUST

Underground Storage Tank (UST)

The Parent Parcel, under the name Branford Maintenance Facility at 69 Leetes Island Road, was identified on the UST database under Facility ID: 14-3504. According to the database, the Subject Property is currently served by two USTs and was formerly served by four tanks that have since been removed.

Historic USTs included the following:

- Tank ID: D1 was 1,000-gallon, asphalt-coated or bare steel, gasoline tank with steel piping that was installed on January 1, 1980 and last used on December 1, 1998.
- Tank ID: H1 was a 2,000-gallon, asphalt-coated or bare steel, heating oil UST with bare steel piping, which was installed on January 1, 1956. This UST was last used on December 1, 1989.

- Tank ID: H1R1 was a 2,000-gallon, single-walled FRP, heating oil UST with copper piping that was installed on December 1, 1989 and last used on May 6, 2019. The tank includes containment sumps at the tank, a spill bucket, and a ball float device for overfill protection.
 - According to the August 8, 2019 *Notification for Underground Storage Tanks* provided by the CT DEEP, a required site assessment was performed by TRC Companies Inc at the time of tank closure. Soil samples were collected and analyzed for one or more of; VOCs, SVOCs, Metals, and ETPH. According to the form, no RSR criteria were exceeded for GA Pollutant Mobility Criteria or Residential Direct Exposure Criteria.
- Tank ID: N1 was a 4,000-gallon, asphalt coated or bare steel, gasoline UST with bare steel piping that was installed on December 1, 1998. This tank was last used on December 1, 1998.

These historic USTs were identified on the LUST, Spill, and CPCS databases. Refer to the appropriate sections below for additional discussion.

Active USTs include the following:

- Tank ID: D1R1 is a double-walled, 4,000-gallon, fiberglass-reinforced plastic (FRP), diesel fuel UST that was installed on January 1, 1999. Piping is of rigid FRP. Containment sumps are present at the dispensers and tanks, metallic fittings are isolated from the soil and water, and the UST includes a spill bucket.
- Tank ID: N1R1 is a double-walled, 4,000-gallon, fiberglass-reinforced plastic (FRP), gasoline UST that was installed on January 1, 1999. Piping is of rigid FRP. Containment sumps are present at the dispensers and tanks, metallic fittings are isolated from the soil and water, and the UST includes a spill bucket.

Of note, the Subject Property also includes aboveground storage tanks and another UST used as an oil-water separator for the garage. Refer to the Site Reconnaissance section below for additional discussion.

Leaking Underground Storage Tank (LUST) / Spills

The Branford maintenance Facility at 69 Leetes Island Road was identified as the site of LUST Case ID: 35176 (aka LUST ID: 7101 and Spill Case No. 9808521). According to the database, on December 14, 1998, a release of diesel and motor fuel was detected originating from the Parent Parcel's USTs. The depth to the groundwater was measured at 9.5 feet below grade and flowing to the east, and the classification was set at GA, indicating that the groundwater is assumed to be suitable for drinking without

treatment. Based on the associated Spill Case number and CPCS listing, a sheen was discovered on the groundwater at the diesel fuel and gasoline fueling station, specifically around a 4,000-gallon, steel diesel fuel or gasoline tank. Approximately 80 gallons of diesel fuel and gasoline was recovered during remediation. A Phase II was requested and soil removal was performed. The response from the Oil and Chemical Spill Response Division (OCSR) was complete as of March 10, 1999. In addition, the CT DEEP has granted this LUST incident a LUST Status 4, indicating that remediation is complete. Furthermore, based on the dates of the spill and the reference to a steel diesel or gasoline tank, the release must refer to the refueling station located approximately 170 feet to the southeast of the proposed Subject Property area. The tanks in this area were excavated and removed in 1999 to be replaced with the existing fiberglass-reinforced plastic USTs. No subsequent LUST/Spill listing was found associated with the newer USTs. Based on the removal and replacement of the source USTs, presence of groundwater monitoring wells and leak detection equipment on the replacement USTs, which have not reported any subsequent LUST/Spill incidents, the Complete regulatory status of the LUST incident, and eastward groundwater flow of the area of the USTs, which is crossgradient to the proposed area of the Subject Property, it is not suspected that this LUST listing represents an environmental concern to the Subject Property.

Spill Case No. 6519, occurred at the Parent Parcel on November 30, 1993. A subcontractor for the Department of Transportation knocked over a non-PCB electrical transformer and released approximately 20 gallons of dielectric fluid. Two gallons of the material entered a catch basin and some to the nearby marsh area. The material was contained with pads and sand, and impacted soils were excavated. Based This incident was granted a Closed status by the CT DEEP on November 30, 1993, the same day as the incident. Based on the remedial actions performed, type of material released, and regulatory status, it is not suspected that this incident represents an environmental concern to the Subject Property.

Spill Case No. 9706103 occurred on October 22, 1997 when a nozzle removed from the gasoline dispenser released approximately 125 gallons of gasoline to the ground surface and a catch basin. ETI was retained to remediate the release. The catch basin was pumped out and all impacted soils were removed. The CT DEEP granted this incident a Closed and Terminated status, indicating that it has been remediated to the satisfaction of the department. Based on the remedial actions performed, and the contained nature of the release, it is not suspected that this spill represents an environmental concern to the Subject Property.

Spill Case No. 9808521 occurred on December 14, 1998 when a sheen on the groundwater was encountered at the diesel fuel and gasoline fueling station. The source was an inground tank failure. Approximately 80 gallons of diesel fuel and gasoline was recovered during remediation. This listing has been granted a Closed and Terminated

status by the CT DEEP by January 1, 1999. Please refer to the LUST listing above for additional discussion.

Contaminated or Potentially Contaminated Sites (CPCS)

The DOT facility at 69 Leetes Island Road was identified on the CPCS database for a LUST incident with a Lust Status Code: 3, indicating that cleanup has been initiated. A sheen on the groundwater around a 4,000-gallon, steel diesel fuel or gasoline tank was discovered. A Phase II was requested and soil removal was performed. No additional information is provided by this database. Notably, this listing appears to be an outdated reference to LUST Case ID: 35176, which has since been granted a LUST Complete status.

RGA LUST

The DOT facility at 69 Leetes Island Road was identified on the RGA LUST database from 2002 to 2010. Additional RGA LUST listings were identified for CT DOT at Leetes Island Road in 1996, and the CT DOT Garage from 2002 to 2010. No additional information is provided by this database.

CT Manifest

The State of CT DOT Branford site at 69 Leetes Island Road was identified on the Manifest database in 1994 under EPA ID: CTP000016376. According to the database, approximately 68 pounds of solid hazardous wastes (EPA Waste Code D009 – Mercury) was removed from the facility. Based on the low volume of the substance removed, lack of any indications of a release of mercury, and because these wastes have been removed from the Parent Parcel, it is not suspected that this Manifest listing represents an environmental concern to the Subject Property.

State of CT Department of Transportation facility at Leetes Island Road was identified on the Manifest database in 2002 under EPA ID: CTP000026484. According to the database, on June 21, 2002, approximately 10 gallons of solid environmentally hazardous substances (EPA Waste Code D008 – Lead wastes) was removed from the Parent Parcel. Based on the low volume of the substances removed, lack of any indications of a release of lead wastes, and because these wastes have been removed from the Parent Parcel, it is not suspected that this Manifest listing represents an environmental concern to the Subject Property.

National Pollutant Discharge Elimination System NPDES

The Parent Parcel, under the name Branford Salt Storage at 69 Leetes Island Road, is identified on the NPDES database under three different permit numbers:

- Permit Number GSI000007 was issued on August 26, 1997 and after renewals is scheduled to expire on September 30, 2021. This active permit allows stormwater industrial activities at the Parent Parcel.
- Permit Number GVS000774 was issued on November 26, 1997 and expired on May 28, 2007. The type of discharge is not identified on this listing.
- Permit Number GVM000028 was issued on June 12, 2001 and is scheduled to expire on January 23, 2021. This permit allows the discharge of vehicle maintenance wastewater.

Of note, the Subject Property has a UST used for oil-water separation from the discharge of vehicle wastewater. Please refer to the Site Reconnaissance section for additional discussion.

The area surrounding the Parent Parcel included one SEMS listing, two SEMS-Archive sites, two CORRACTS sites, two CT SHWS listings, 10 SDADB listings, 7 CT LUST sites, and three VCP sites. Upon further review, CBRE did not identify the surrounding properties on regulatory databases which would be considered a REC for the Subject or Parent Parcel. Any surrounding sites identified above were determined to not be a REC due to their regulatory status, distance from Subject, downgradient/crossgradient location from the Subject or a combination of same. However, the following properties warrant mention due to taking place adjacent to the Parent Parcel:

48 Leetes Island Road (Northwest-Adjacent)

A gasoline filling station at 48 Leetes Island Road, located approximately 610 feet hydrogeologically crossgradient from the closest point on the Parent Parcel, was identified on the RCRA Generator, UST, LUST/Spills, CPCS, SDADB, and Historic Auto Stations regulatory databases:

- The northwest-adjacent, crossgradient, Opal Ventures, LLC gasoline filling station at 48 Leetes Island Road, located across Interstate 95, was identified as a RCRA-SQG on April 1, 1991 under EPA ID: CTD983877713. According to the CER, the waste stream for this property includes undefined wastes, ignitable waste, and lead. According to the EPA's Enforcement and Compliance History Online (ECHO) database, this facility has no history of inspections or violations.
- The northwest-adjacent Mobil gasoline filling station located on the opposite side of East Industrial Road is identified as a UST site. According to the CER, this site is served by four 10,000-gallon, fiberglass-reinforced plastic, gasoline USTs installed August 1, 1991. Former tanks that have been removed from the site include one tank of unreported construction or capacity removed from the

ground on December 19, 2012; one 8,000-gallon, FRP, gasoline UST installed January 1, 1981 and removed July 1, 1991; two 6,000-gallon, FRP, gasoline USTs installed January 1, 1981 and removed July 1, 1991; one 500-gallon, steel, gasoline UST installed January 1, 1950 and removed July 1, 1991; one 1,000-gallon, steel, gasoline UST installed January 1, 1950 and removed July 1, 1991; and one 1,000-gallon FRP, used oil UST installed August 1, 1991 and removed August 18, 2014.

- The northwest-adjacent gasoline filling station at 48 Leetes Island Road was identified under LUST Case ID: 28072. The LUST listing states that motor fuel and gasoline were released from a tank, and the tank has since been removed. On September 14, 1981, a tank failed a test and was emptied immediately. By October 1981, all steel USTs were removed and replaced by fiberglass or fiberglass-reinforced plastic tanks. Soil excavated during removal was stockpiled on-site and was noted to be present by January 23, 1989. Five monitoring wells were installed on April 10, 1991. Samples indicate contaminant ranges in BTEX of non-detect to 887 ppb and MTBE from ND to 4,800 ppb. By May 21, 1992, maximum concentrations dropped to 14.1 for BTEX and 67.2 ppb for MTBE. As of April 5, 1993, the contaminant maximums were 1.7 for BTEX and 66ppb for MTBE. The CER notes that groundwater flows to the southwest. Based on the remedial actions performed, the regulatory closure granted to the site, and its crossgradient hydrogeological position, it is not suspected that this release represents a significant negative environmental impact to the Subject.
- Spill Case No. 1708 occurred on May 8, 1991 at the northwest-adjacent gasoline filling station. An unreported quantity of petroleum was found contaminating the groundwater. Monitoring wells were installed during a site assessment by Mobil, which determined that the release does not represent an active discharge. Nevertheless, a contamination condition from this Spill listing would have been addressed by remedial actions performed regarding LUST Case No. 28072, which included sampling information up to April of 1993. Based on the above, it is not suspected that this incident represents an environmental concern to the Subject Property.
- Spill Case No. 200802167 occurred on April 11, 2008 when a garbage truck backed into a gas pump, causing a fire and releasing approximately 20 gallons of gasoline to the ground surface. The fire department responded to contain the fire and spill and the incident has since been granted a Closed status. Based on the above, it is not suspected that this incident represents an environmental concern to the Subject Property.
- Spill Case No. 201006527 occurred on October 29, 2010 when approximately one cup of gasoline was released to the ground by a pump failure at the

northwest-adjacent gasoline filling station. The material was sanded and cleaned and the incident has been granted a Closed status. Based on the de minimis nature of the release, is not suspected of representing an environmental concern to the Subject Property.

- Spill Case No. 201605079 occurred on September 19, 2016 at the northwest-adjacent gasoline filling station when approximately 6.5 gallons of gasoline was released from a dispenser to the ground surface. This incident has been granted a Closed status and, based on the de minimis nature of the release, is not suspected of representing an environmental concern to the Subject Property.
- The Mobil Station #06-GEY facility at 48 Leetes Island Road was identified at the site of two RGA LUST listings, which were identified from the years 2002 through 2012. These listings likely refer to the releases explained above and do not represent an additional environmental concern to the Subject Property.
- The Mobile Oil Corp Service Station GEY site at 48 Leetes Island Road was identified on the SDA databases due to its presence on the LUST/Spill database, explained above.
- The northwest-adjacent lot located across I-95 at 48 Leetes Island Road was identified as a gasoline filling station from 1977 to 2014. Specifically, the site was Ted's Mobile Service in 1977, 1978, 1979, 1980, 1982, 1983, 1985, 1986, 1987, 1988, 1989, 1990, and 1991. The property was Cobb's Mobile in 1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, and 2006. The site was then listed as Opal Ventures X LLC in 2012, 2013, 2014. Of note, this facility was also identified on the RCRA, SDADB, LUST/Spills, UST, and CPCS databases. Please refer to the appropriate sections for additional discussion.
- The northwest-adjacent Mobil Station #06-GEY facility at 48 Leetes Island Road was identified on the CPCS database due to LUST Incident 91-1708. An oily sheen was discovered on the water and soil of a ditch between the property and the I-95 ramp. Remediation was initiated. Please refer to Spill Case No. 1708 above for additional discussion.

3 East Industrial Road (North-Adjacent)

The truck stop located across Interstate-95, approximately 225 feet downgradient from the closest point on the Parent Parcel, was identified on the UST, LUST/Spills, and historic auto stations regulatory databases.

- The north-adjacent truck stop located across the street at 3 East Industrial Road was identified as a UST site. The site is currently served by two 30,000-gallon,

Fiberglass-Reinforced Plastic, diesel USTs installed June 6, 2006; one 15,000-gallon, FRP, gasoline UST installed June 6, 2006; one 8,000-gallon, FRP, Other Petroleum UST installed August 1, 2014; one 4,000-gallon FRP used oil UST installed August 1, 2014; one 7,000-gallon, FRP, gasoline UST installed June 6, 2006; one 8,000-gallon, FRP, gasoline UST installed November 1, 2005. Former USTs that have since been removed from the site include one 1,000-gallon, steel, used oil UST installed December 1, 1972 and removed October 1, 1990; one 12,000-gallon, fiberglass-reinforced plastic, gasoline UST installed July 1, 1990 and removed June 6, 2006; one 30,000-gallon, FRP, diesel UST installed June 6, 2006 and abandoned-in-place July 6, 2010; two 20,000-gallon, steel, USTs installed December 1, 1972 and removed October 1, 1990; three 20,000-gallon, steel, diesel USTs installed December 1, 1972 and removed October 1, 1990; two 20,000-gallon, steel, gasoline USTs installed December 1, 1972 and removed October 1, 1990; two 20,000-gallon, FRP, diesel USTs installed July 1, 1990 and removed June 6, 2006; and on 1,000-gallon FRP, used oil UST installed July 1, 1990 and removed July 1, 2014. There were also several USTs listed as being permanently closed, but with no dates of closure or removal, including one 30,000-gallon, FRP, diesel UST; one 1,000-gallon, FRP, used oil UST installed June 6, 2006; one 15,000-gallon, FRP, gasoline UST installed June 6, 2006; one 7,000-gallon, FRP, gasoline UST installed June 6, 2006; one 8,000-gallon, FRP, gasoline UST installed November 1, 2005; two 5,000-gallon FRP, gasoline USTs installed June 6, 2006; and one 5,000-gallon, FRP, Other Petroleum UST installed November 1, 2008.

- The north-adjacent truck stop is identified as a LUST/Spills site under Case ID: 48726. The property has been assigned LUST Status: 3, indicating that cleanup activities have been initiated, but not yet completed. According to the CER, on 1972, a 5,000-gallon UST, which collects incidental surface releases from trucks via a storm drain, was removed, the grave was dewatered, and a release was encountered near the UST's lines. The cause of the release was noted as dribs and drabs of product released from trucks. By 1989, gasoline was detected in a storm drain catch basin adjacent to site. Testing showed tank and line failures with an estimated loss of 2,000 gallons of gasoline over an undetermined time period, of which 1,825 gallons were recovered. A NAPL recovery system was then installed. By July 1990, USTs were removed from the site and approximately 4,750 cubic yards of contaminated soil were removed. Two soil vapor extraction systems were installed in 1991, but were deemed insufficient by Aaron Environmental. Aaron Environmental completed a Phase II ESA in 1995. By 1997, recovery wells, air sparging, a high vacuum total fluids extraction system, and a horizontal vapor extraction well were utilized to remediate the site, which commenced until 2005. In 2007, during the removal of USTs, approximately 8,835 tons of impacted soil and approximately 379,940 gallons

of impacted groundwater were removed from the property. By 2009, Apex Environmental completed a Supplemental Phase II / Phase III Investigation. Remediation is ongoing. The groundwater, measured at 6 to 8 feet below grade, flows in different directions for different sides of site. However, the releases associated with the site are noted to take place near the dispenser islands, which are located along the eastern edge of the property. As such, these releases are assumed to flow to the southeast, which is away from the Subject. Based on the crossgradient geological position of this property's releases, in which groundwater contaminants originating from this site are not expected to migrate towards the Subject. Based on the above, it is not suspected that this facility represents a significant negative environmental impact to the Subject.

- Case No. 2176 occurred on May 2, 1992 when approximately 75 gallons of diesel fuel was encountered in a catch basin leaking from a tanker truck. The release was contained and remediated via a vac truck.
- Case No. 200605784 occurred on September 12, 2006 when approximately five gallons of diesel fuel was encountered as free product during site raising activities and the removal of diesel tanks. The source was likely an inground tank failure. This listing has a Closed status and remediation likely took place under the above LUST listing.

In addition, the CT Spills database identifies the truck stop as the site of several incidents involving surface releases of petroleum:

- Case 2176 occurred on May 2, 1992 when approximately 75 gallons of diesel fuel was encountered in a catch basin leaking from a tanker truck. The release was contained and remediated via a vac truck.
- Case No. 2022 took place on April 13, 1995 when approximately 25 gallons of diesel was released from a truck to the ground. The material was contained and removed.
- Case No. 4210 took place on August 2, 1995 due to a release of 15 gallons of diesel fuel from a truck saddle tank.
- Case No. 9606414 took occurred on December 5, 1996 when approximately 40 gallons of diesel fuel was released to the ground surface.
- Case No. 200100110 occurred on January 4, 2001 when approximately 200 gallons of diesel fuel was released from a tractor trailer due to a transfer line failure to the ground surface.

- Case No. 200308991 took place on December 19, 2003 when approximately three gallons of hydraulic oil was released from a transfer line failure.
- Case No. 200502566 occurred on April 28, 2005 when approximately 25 gallons of diesel fuel was released to the ground surface by an unknown cause.
- Case No. 200608157 occurred on December 29, 2006 due to a release of ten gallons of transmission oil.
- Case No. 200706298 occurred on September 28, 2007 when approximately 10 gallons of diesel fuel was released by a truck saddle tank failure to the ground surface.
- Case No. 200800088 occurred on January 5, 2008 when approximately 25 gallons of diesel fuel was released to the ground surface by either a pump failure or an overfill from a customer at the dispenser.
- Case No. 201203302 occurred on June 26, 2012 due to a release of 20 gallons of diesel fuel.
- Case No. 20120422 occurred on August 6, 2012 due to a release of two gallons of gasoline.
- Case No. 201204745 occurred on August 30, 2012 due to a release of four gallons of diesel fuel.
- Case No. 201204822 occurred on September 4, 2012 due to a release of ten gallons of vegetable oil.
- Case No. 201400583 occurred on February 11, 2014 due to a release of 2.5 gallons of motor oil.
- Case No. 201503044 occurred on June 22, 2015 due to the release of one gallon of gasoline.

Each of the above Spill incidents were surficial releases that were cleaned and granted closure the same day as their releases. Based on the above, as well as the site's crossgradient hydrogeological position to the Parent Parcel, it is not suspected that any of these releases represent a significant negative environmental impact to the Subject.

- The north-adjacent lot located across Interstate 95 at 3 East Industrial Road was identified as the New Haven 95 East Truck Stop in 1983, 1985, 1986, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994, and 1995, which was variously

listed as an eating establishment and a gasoline service station. From 2001 to 2007, the property was listed as gasoline fillings stations. Specifically, as Union 76 in 2001 and 2002; Branford 76 LLC in 2001, 2002, and 2003; Truck Stops of America in 2002; and Travel Centers of America in 2003, 2004, 2005, 2006, and 2007.

89 Leetes Island Road (Southwest-Adjacent)

The southwest-adjacent facility at 89 Leetes Island Road was identified on the Spills database:

The southwest-adjacent Fischer Excavating facility located across the street at 89 Leetes Island Road was identified as the site of Spill Case No. 3979. On October 1, 1991, approximately 50 gallons of oil was released from an abandoned fuel truck that was used on-site to store diesel fuel to fill fleet trucks. The truck was pumped clean by a vac truck and the contaminated soil was excavated and stockpiled on-site for later disposal. After remediation, the incident was granted a Terminated status. Based on the above, and because the impacted material was limited to the soil, which is unlikely to migrate off-site, it is not suspected that this incident represents an environmental concern to the Subject Property.

82 Leetes Island Road (West-Adjacent)

The west-adjacent hotel at 82 Leetes Island Road was identified on the Spills database:

The west-adjacent Rodeway Inn & Suites building, located across the street at 82 Leetes Island Road, was identified as the site of Spill Case No. 5128. On December 9, 1991, approximately five gallons of waste oil was spilled to a drainage ditch, which discharges to the outfall near a church property. The material was remediated with containment pads. The source waste oil tanks were removed and this incident was granted a Terminated status. Based on the above, and the de minimis nature of the release, it is not suspected that this incident represents an environmental concern to the Subject Property.

I-95 Exit Ramp 56 (West-Adjacent)

The Connecticut Turnpike exit ramp No. 56 was identified as the site of 10 Spill listings. These incidents were surface releases from motor vehicles, whose releases were contained to the pavement. The material was sanded and removed by the Fire Department. Based on the lack of an impact to groundwater from any of these listings, as well as the hydrogeologically crossgradient position of the exit ramp, it is not suspected that these releases represent an environmental concern to the Subject Property.

5.2 Vapor Encroachment Screening

CBRE conducted a “Tier I” (non-intrusive) Vapor Encroachment Screening (VES) on the Parent Parcel in accordance with the methodology set forth in ASTM E 2600-10 “Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions”. During the VES, the Area of Concern (AOC) was minimized using the methodology taught in the ASTM Screening for Vapor Encroachment onto Property Involved in Real Estate Transactions Training Course. The purpose of the Tier I VES is to conduct an initial screen to identify, to the extent feasible, the potential for a vapor encroachment condition (VEC) in connection with the Parent Parcel with respect to chemicals of concern that may migrate as vapors into the subsurface of the Parent Parcel as a result of contaminated soil and groundwater on or near the property.

This VES utilized readily available data sources previously discussed in this Phase I ESA to include the type of soils, geology and groundwater characteristics of the Parent Parcel area (refer to Section 3.0) as well as known or potentially contaminated sites as identified on Federal, State, tribal and local databases. CBRE also utilized previously discussed standard historical sources of information to identify potential historical sources of contamination on the Parent Parcel and surrounding properties which may be indicative of a VEC. This data collection and analysis was coupled with our site reconnaissance of the Parent Parcel and surrounding properties. Based upon the results of our data collection, reconnaissance and analysis, a summary of our Tier I VES findings is presented in the table below:

Potential for Vapor Encroachment to Impact the Subject	
Area of Concern	Conclusion
Parent Parcel Operations or Existing Conditions	None identified (Refer to Sections 3.0 Site Description and 6.0 Site Reconnaissance)
Historical Uses of the Parent Parcel	None identified (Refer to Section 4.0 Historical Use)
Adjoining Property Operations or Existing Conditions	None identified (Refer to Section 3.2 Surrounding Land Use)
Historical Uses of Adjoining Properties or Nearby Properties	None identified (Refer to Section 4.0 Historical Use)
Regulatory Review of sites identified on Federal, State, tribal and Local Environmental Databases which were located in Approximate Minimum Search Distance (AMSD)	Several Identified (Detailed within Section 5.1 Regulatory Review), but none of concern.

Analysis/Comment:

VEC can be ruled out, because it does not exist or is not likely to exist. All Spills and LUST listings at the Parent Parcel have been remediated. Based on the removal and replacement of the source USTs, presence of groundwater monitoring wells and leak detection equipment on the replacement USTs, which have not reported any subsequent

LUST/Spill incidents, the Complete regulatory status of the LUST incident, and eastward groundwater flow of the area of the USTs, which is crossgradient to the proposed area of the Subject Property, it is not suspected that this LUST listing represents an environmental concern to the Subject Property.

Furthermore, based on the scope of the installation as an unmanned facility, VEC is not a concern to the installation as proposed.

6.0 SITE RECONNAISSANCE

The site visit was conducted on May 11, 2020, by Mr. Robert Strother representing CBRE. The site was not represented at the time of the site visit.

Weather conditions were partly cloudy with a temperature of approximately 55° F at the time of our site survey. CBRE conducted the site reconnaissance in a systematic manner, surveying in a grid pattern.

Based on the scope of the proposed collocation as an outdoor installation, the interior of the two Department of Transportation buildings are not expected to be disturbed as a result of the proposed collocation nor are these structures expected to have adversely impacted the Subject. However, CBRE accessed the DOT building to obtain a copy of the daily inventory of the Parent Parcel’s USTs from the Veder Root system located within the garage’s office. Refer to the UST section below for additional discussion. In addition, CBRE accessed the western garage portion due to its proximity to the proposed Subject Property. No significant chemical storage or drums of hazardous substances were observed in the garage; however, a floor drain was present in the center of the truck garage, which discharges to a nearby oil-water separator.

The following is a summary of visual and/or physical observations of the areas accessed at the Parent Parcel on the day of the site visit. Photographs of pertinent property features are presented in Appendix A.

As summarized in the table above, CBRE did not observe any of the above conditions in the areas accessed at the Parent Parcel with the exception of the following.

Underground Storage Tanks

The Parent Parcel, under the name Branford Maintenance Facility at 69 Leetes Island Road, was identified on the UST database under Facility ID: 14-3504. Based on review of this database, site observations, and the March 13, 2020 *Notification for Underground Storage Tanks* forms provided by the CT DEEP, the Subject Property is currently served by three USTs and was formerly served by four tanks that have since been removed. Refer to the regulatory review for a discussion of historic tanks and the associated LUST listing identified in 1998.

A concrete apron over two USTs is situated approximately 165 feet to the southeast and crossgradient of the Subject Property, located south of a fuel dispenser and north of the Park&Ride lot. The fill ports were present on the concrete apron and associated vents were present at the adjacent dispensers. Of note, four groundwater monitoring wells were identified at each corner of the UST tank field. The two USTs are used to fuel DOT trucks and consist of:

- Tank ID: D1R1 is a double-walled, 4,000-gallon, fiberglass-reinforced plastic (FRP), diesel fuel UST that was installed on January 1, 1999 and is currently within its expected 30-year lifespan. This tank is provided with continuous electronic interstitial monitoring as its primary release detection. Piping is of single-walled rigid FRP and includes containment sumps at the tank and dispensers and metallic fittings that are isolated from the soil and water. Release detection for the piping is provided by annual precision line tightness testing with mechanical auto line leak detectors. Spill and overfill protection for the UST is provided by a flapper device and an unspecified spill prevention device installed.
- Tank ID: N1R1 is a double-walled, 4,000-gallon, fiberglass-reinforced plastic (FRP), gasoline UST that was installed on January 1, 1999 and is currently within its expected 30-year lifespan. This tank is provided with continuous electronic interstitial monitoring as its primary release detection. Piping is of single-walled rigid FRP and includes containment sumps at the tank and dispensers and metallic fittings that are isolated from the soil and water. Release detection for the piping is provided by annual precision line tightness testing with mechanical

auto line leak detectors. Spill and overflow protection for the UST is provided by a flapper device and an unspecified spill prevention device installed.

No spills or releases have been reported for either of the above UST systems. Based upon the presence of secondary containment, corrosion protection, leak detection, and overflow prevention systems and proper operation and monitoring of this UST system in accordance with CT DEEP requirements and the absence of reported releases, the presence of the existing fuel dispensing USTs is not considered a REC for the Subject or Parent Parcel.

A second concrete apron over a UST was identified approximately 25 feet to the south of the Subject, abutting the DOT garage's western exterior wall. This tank is hydrogeologically upgradient to the Subject. Notably, all active USTs identified by CT DEEP Facility ID: 14-3504 are accounted for, so the identification, capacity, and date of installation is not available from the CT DEEP. Based on aerial photographs, this tank was installed sometime between 1996 and 2004. According to a review of the Tank Management System (TMS-3000) present in the DOT office, this UST is identified as the Oil/Water Separator Tank. As of May 11, the tank contained 46.5 inches of water and 4.1 inches of product. The separator collects wastewater from the DOT garage's floor drains and ultimately discharges to the municipal system. Of note, two groundwater monitoring wells were identified on the concrete apron over the separator, presumably as leak detection. Given that this UST is not involved in the storage or use of petroleum products, and is periodically cleaned out as part of typical maintenance activities, this oil-water separator UST is not considered a REC for the Subject or Parent Parcel.

Aboveground Storage Tanks

CBRE observed a 2,000-gallon, concrete-encased, heating oil AST within a fenced-in enclosure to the north of the DOT garage and approximately 50 feet east and downgradient of the Subject. The AST was observed to be in good condition with no evidence of releases such as staining or distressed vegetation noted. Based a review of aerial photographs and CT DEEP records, the DOT garage was historically served by a 2,000-gallon, asphalt-coated or bare steel, heating oil UST (Tank ID: H1) which was installed on January 1, 1956 and replaced in 1989 by a 2,000-gallon, single-walled, fiberglass-reinforced plastic, heating oil UST (Tank ID: H1R1). In May of 2019, the UST was removed and replaced with the existing AST in approximately the same location. No indications of a release from this AST was observed on the daily printout from the Parent Parcel's TMS-3000 system. Based upon visual observations at the time of the site reconnaissance and distance/topographic relationship with respect to the Subject, the presence of this AST is not considered to be a REC for the Subject or Parent Parcel.

CBRE observed a diesel fuel-fired emergency generator located at the southwestern corner of the storage barn on the eastern portion of the Parent Parcel, approximately

315 feet to the east and crossgradient to the Subject. The emergency generator is served by an integral diesel fuel aboveground storage tank (AST). The AST was observed to be in good condition and constructed of double-wall steel. No evidence of spills or releases such as staining was observed in the vicinity of the AST. Furthermore, no spills or releases have been reported for this AST. Based upon the distance/hydrologic gradient relative to the Subject, visual observations at the time of the site reconnaissance, condition of the AST, and absence of reported releases, the presence of this AST is not considered a REC for the Subject or Parent Parcel.

CBRE observed two large plastic ASTs located approximately 250 feet to the southeast, crossgradient of the Subject. One AST contains magnesium chloride and a second AST contains liquid anti-icer. Both ASTs are used to fill trucks in the winter as an alternative to rock salt or sand to prevent ice from forming on roads. The ASTs were observed to be in good condition with no evidence of releases such as staining or distressed vegetation noted. Based upon visual observations at the time of the site reconnaissance, the distance/topographic relationship with respect to the Subject, and the type of substance contained within the ASTs, the presence of these tanks is not considered to be a REC for the Subject or Parent Parcel.

Solid Waste

Non-hazardous solid waste is disposed of in dumpsters and is removed from the Parent Parcel on a regular basis by the municipality. Potential sources of contamination, such as waste oil or automobile batteries, were not observed in the vicinity of the dumpsters.

Sanitary Sewage

Drains and bathrooms are present in the DOT building that reportedly discharge to the municipal sewer system. No evidence of improper disposals into the drains such as staining, odors, or corrosion were observed in connection with any of the observed drains.

Floor Drains

During the site reconnaissance, an oil-water separator was observed in the form of a UST abutting the western exterior wall of the DOT garage. This separator is serviced on an as-needed basis and at the time of site reconnaissance, according to a review of the TMS-3000 system, the tank contained 46.5 inches of water and 4.1 inches of product. The separator collects wastewater from the DOT garage's floor drains and ultimately discharges to the municipal system. The separator does not appear to pose an environmental concern to the Subject or Parent Parcel. It is recommended that it continue to be pumped out, inspected, and maintained on a regular basis.

Groundwater Monitoring Wells

CBRE observed a total of six groundwater monitoring wells at the Parent Parcel. Specifically, the four wells were present at each corner of the concrete apron covering the Parent Parcel's gasoline and diesel fuel USTs for leak detection purposes. In addition, two groundwater monitoring wells were present on the concrete apron of the oil-water separator tank, also for leak detection purposes. The wells are fitted with secured caps. Refer to the UST section above for additional discussion. CBRE did not identify any additional dry wells, injection wells, observation wells, monitoring wells, recovery wells, or abandoned wells in the areas accessed at the Parent Parcel.

Electrical Transformers

CBRE observed one utility-owned, pad-mounted electrical transformer located along Leetes Island Road, adjacent to the Park&Ride lot in the southwestern portion of the Parent Parcel, approximately 200 feet south and crossgradient of the Subject; one pad-mounted electrical transformer located at the eastern edge of the Parent Parcel, approximately 400 feet east and crossgradient to the Subject; and three pole-mounted transformers located along Leetes Island Road approximately 150 feet southwest and upgradient to the Subject. Of importance, the electrical transformers were observed to be in good condition. Based upon the distance/hydrologic gradient relative to the Subject, condition of the transformers, visual observations at the time of the site reconnaissance, and confirmed non-PCB dielectric fluid from a historic Spill incident involving a transformer on-site, the presence of the transformers is not considered to be a REC for the Subject or Parent Parcel.

Furthermore, in accordance with *Title 40—Protection of Environment, Chapter 1—Environmental Protection Agency, Subchapter R—Toxic Substance Control Act (TSCA), Part 761—Polychlorinated Biphenyls (PCBs), Manufacturing, Processing, Distribution in Commerce, and Use Prohibitions*, the owner of the transformer, the local utility provider is responsible for the transformer's maintenance and remediation in the event of a leak.

7.0 ADDITIONAL SITE CONDITIONS

7.1 Asbestos Containing Material (ACM)

The Subject currently consists of grass-covered land, with the exception of a metal utility pole within the pathway of the proposed access road. As such, no evidence of suspect ACM was observed.

7.2 Lead-Containing Paint (LCP)

The Subject currently consists of grass-covered land, with the exception of a metal utility pole within the pathway of the proposed access road. As such, no evidence of suspect LCP was observed.

7.3 Potential Mold Conditions

Although mold is ubiquitous and may occur in a very short time span, an effort was made to identify conspicuous mold growth in the common areas surveyed. Based upon visual observations at the time of the site reconnaissance, conspicuous mold growth was not identified in the accessible areas of the Parent Parcel.

8.2 Site Representatives

Interviews	
Owner	Although attempted, CBRE was unable to locate an owner representative of the Parent Parcel for interview.
Past Owner	Although attempted, CBRE was unable to locate a past owner representative of the Parent Parcel for interview.

Key Site Manager	<p>CBRE interviewed Mr. David Hartley of the Connecticut Department of Transportation over the phone at the time of site reconnaissance. According to Mr. Hartley the Parent Parcel includes a heating oil AST, diesel-fired emergency generator, and a fuel dispenser with gasoline and diesel USTs. Mr. Hartley had no knowledge of any environmental concerns pertaining to the Parent Parcel.</p> <p>CBRE also asked Mr. Hartley if he knew whether any helpful environmental documents exist as described in the ASTM Standard, and if such documents exist whether they could be provided within reasonable time and cost constraints. According to Mr. Hartley, he was unaware of any environmental documents, including but not limited to environmental reports, permits, or notices of violations available for inclusion in this Phase I Environmental Assessment.</p>
Occupants	Although attempted, no occupants were personally available for interview during our site reconnaissance.
Neighbors	Although attempted, no neighbors were personally available for interview during our site reconnaissance.

8.3 Local Regulatory Agency File Review

CBRE submitted Freedom of Information Act (FOIA) requests to the Connecticut Department of Energy and Environmental Protection (CT DEEP), the East Shore District Health Department, and the Town of Branford Clerk’s Office for environmental information pertaining to the Parent Parcel. Except for a partial response from the CT DEEP and the Town of Branford Assessor’s Office, these agencies have not responded as of this writing. Should receipt of a response from these agencies change the conclusions of this report, the Client will be notified in writing by CBRE.

Town of Branford Assessor’s Office

According to the tax assessor records reviewed, the Parent Parcel consists of a 5-acre parcel identified as Parcel ID: H05/J05 007/0022A. The buildings consist of one 6,184 square-foot garage and office building with oil heating constructed in 1958, and one 8,288 square-foot, wood-framed storage barn with no heating systems constructed in 1995. Please refer to the UST section above for a discussion on the oil heating equipment. No additional records of any tanks, spills or other occurrences which could create a recognized environmental condition for the Parent Parcel were identified in the Assessor’s Office files.

Planning & Zoning

CBRE reviewed the Town of Branford, CT Official Zoning Map, Revised January 2015. The Subject property is depicted on this map in a General Industrial 2 (IG-2) district.

9.0 FINDINGS AND CONCLUSIONS

CBRE has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the proposed Pyramid Network Services, LLC wireless telecommunications facility referred to as “Branford DOT”, located at 69 Leetes Island Road, designated as Parcel ID: H05/J05 007/0022A in the Town of Branford, New Haven County, Connecticut, the Parent Parcel. Any exceptions to, or deletions from, this practice are described within Section 2.0 of this report.

This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the Parent Parcel. However, the following historical recognized environmental condition (HREC) was identified:

Leaking Underground Storage Tank (LUST) and SPILLS Listings

One LUST incident and two Spills listings were identified on the Parent Parcel, each of which have been granted regulatory closure by the CT DEEP.

- The Branford Maintenance Facility at 69 Leetes Island Road was identified as the site of LUST Case ID: 35176 (aka LUST ID: 7101 and Spill Case No. 9808521). According to the database, on December 14, 1998, a release of diesel and motor fuel was detected originating from the Parent Parcel’s USTs. The depth to the groundwater was measured at 9.5 feet below grade and flowing to the east, and the classification was set at GA, indicating that the groundwater is assumed to be suitable for drinking without treatment. Based on the associated Spill Case number and CPCS listing, a sheen was discovered on the groundwater at the diesel fuel and gasoline fueling station, specifically around a 4,000-gallon, steel diesel fuel or gasoline tank. Approximately 80 gallons of diesel fuel and gasoline was recovered during remediation. A Phase II was requested and soil removal was performed. The response from the Oil and Chemical Spill Response Division (OCSR) was complete as of March 10, 1999. In addition, the CT DEEP has granted this LUST incident a LUST Status 4, indicating that remediation is complete. Furthermore, based on the dates of the spill and the reference to a steel diesel or gasoline tank, the release must refer to the refueling station located approximately 170 feet to the southeast of the proposed Subject Property area. The tanks in this area were excavated and removed in 1999 to be replaced with the existing fiberglass-reinforced plastic USTs. No subsequent LUST/Spill listing was found associated with the newer USTs. Based on the removal and replacement of the source USTs, presence of groundwater monitoring wells and leak detection equipment on the replacement USTs, which have not reported any subsequent LUST/Spill incidents, the Complete regulatory status of the LUST incident, and eastward groundwater flow of the area of the USTs, which is crossgradient to the proposed area of the Subject Property, it is not

suspected that this LUST listing represents an environmental concern to the Subject Property.

- Spill Case No. 6519, occurred at the Parent Parcel on November 30, 1993. A subcontractor for the Department of Transportation knocked over a non-PCB electrical transformer and released approximately 20 gallons of dielectric fluid. Two gallons of the material entered a catch basin and some to the nearby marsh area. The material was contained with pads and sand, and impacted soils were excavated. Based This incident was granted a Closed status by the CT DEEP on November 30, 1993, the same day as the incident. Based on the remedial actions performed, type of material released, and regulatory status, it is not suspected that this incident represents an environmental concern to the Subject Property.
- Spill Case No. 9706103 occurred on October 22, 1997 when a nozzle removed from the gasoline dispenser released approximately 125 gallons of gasoline to the ground surface and a catch basin. ETI was retained to remediate the release. The catch basin was pumped out and al impacted soils were removed. The CT DEEP granted this incident a Closed and Terminated status, indicating that it has been remediated to the satisfaction of the department. Based on the remedial actions performed, and the contained nature of the release, it is not suspected that this spill represents an environmental concern to the Subject Property.

10.0 LIMITING CONDITIONS

- 10.1 This report has been prepared in compliance with the ASTM International's standard entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" E1527-13.
- 10.2 The observations described in this report were made under the conditions stated herein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services within the constraints imposed by the client. The work described in this report was carried out in accordance with the Terms and Conditions of the contract.
- 10.3 In preparing this report, CBRE has relied on certain information provided by federal, state, and local officials and other parties referenced therein, and on information contained in the files of governmental agencies, that were readily available to CBRE at the time of this assessment. Although there may have been some degree of overlap in the information provided by these various sources, CBRE did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this site assessment. Observations were made of the site and of the structures on the site as indicated in this report. Where access to portions of the site or to structures on the site was unavailable or limited, CBRE renders no opinion as to the presence of direct or indirect evidence relating to petroleum substances, hazardous substances, or both, in that portion of the site and structure. In addition, CBRE renders no opinion as to the presence of indirect evidence relating to hazardous material or oil, where direct observation of the ground surface, interior walls, floors, ceiling or a structure is obstructed by objects or materials, including snow, covering on or over these surfaces.
- 10.4 As part of this assessment, CBRE submitted requests for information via the Freedom of Information Act (FOIA) to various governmental agencies. As of the preparation of this report, these requests may not have been fulfilled. The conclusions of this report are subject to change upon receipt of a response from these FOIA requests.
- 10.5 CBRE does not represent that the site referred to herein contains no petroleum or hazardous or toxic substances or other conditions beyond those observed by CBRE during the site walkthrough.
- 10.6 CBRE has produced this document under an agreement between CBRE and Pyramid Network Services, LLC. All terms and conditions of that agreement are included within this document by reference. Any reliance upon this document, or upon CBRE's performance of services in preparing this document, is conditioned upon the relying party's acceptance and acknowledgement of the limitations, qualifications, terms, conditions and indemnities set forth in that agreement, and property ownership/management disclosure limitations, if any. It is not to be relied upon by any party other than Pyramid Network Services, LLC nor used for any purpose other than that specifically stated in our Agreement or within this Report's Introduction section without CBRE's advance and express written consent.
- 10.7 **TIME LIMITATION TO ENACT CLAIM AGAINST CBRE.** If in the opinion of the Client, or any third party claiming reliance on CBRE's report or services, that CBRE was negligent or in breach of contract, such aforementioned parties shall have one year from the date of CBRE's site visit to make a claim.
- 10.8 Unless specifically identified within Section 2, Chinese drywall, indoor air quality and any other non-ASTM scope issues as identified in ASTM E1527-13, Section 13.1.5, are excluded from the scope of this assessment.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: State of Connecticut

Survey Area Data: Version 19, Sep 13, 2019

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Dec 31, 2009—Oct 30, 2017

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 01/30/2020 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/30/2020 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/16/2019 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

CT SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Protection's Inventory of Hazardous Disposal Sites.

A review of the CT SHWS list, as provided by EDR, and dated 04/23/2010 has revealed that there are 2 CT SHWS sites within approximately 1 mile of the target property.

CT CPCS: A list of Contaminated or Potentially Contaminated Sites within Connecticut. This list represents the "Hazardous Waste Facilities," as defined in Section 22a-134f of the Connecticut General Statutes (CGS). The list contains the following types of sites: Sites listed on the Inventory of Hazardous Waste Disposal Sites; Sites subject to the Property Transfer Act; Sites at which underground storage tanks are known to have leaked; Sites at which hazardous waste subject to the RCRA; Sites that are included in EPA's (CERCLIS); Sites that are the subject of an order issued by the Commissioner of DEP that requires investigation and remediation of a potential or known source of pollution; and Sites that have entered into one of the Department's Voluntary Remediation Programs.

A review of the CT CPCS list, as provided by EDR, and dated 07/10/2019 has revealed that there are 12 CT CPCS sites within approximately 0.5 miles of the target property.

CT SEH: The Significant Environmental Hazard Statute is intended to identify and abate short-term risks associated with specific environmental conditions identified in the statute. After abatement of short-term risks (meaning abatement of the significant environmental hazard condition), there may still be potential long-term risks associated with the release. However, a significant environmental hazard can be considered abated under the statute even though potential long-term risks may not have been addressed.

A review of the CT SEH list, as provided by EDR, and dated 08/31/2018 has revealed that there are 2 CT SEH sites within approximately 0.5 miles of the target property.

researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.25 miles of the target property.

loss, seepage or filtration of hazardous waste has occurred at the parcel that has not been fully remediated or the environmental conditions at the parcel are unknown. The person signing the Form III certification agrees to investigate and remediate the site in accordance with the remediation standards. The statute does not require completion of remediation before the parcel is transferred. Any person submitting a Form III shall simultaneously submit a completed Environmental Condition Assessment Form (ECAF)(DEP-PERD-PTP-200).

Program: Underground Storage Tank Enforcement
Status: Active
Date of Discovery: 09/10/2014
Resolution Date: Not reported
Resolution Type: None
Staff: Bellmar Gary
ENF Action Comment: Metallic piping in the STP sump is in contact with the ground and/or the ground water or surface run off water and is therefore subject to corrosion.. Significant operational compliance (SOC) violations have resulted in the issuance of an NOV. Accordingly, Class A, Class B or Class C trained operators must be retrained and recertified in accordance with a Connecticut specific approved training program. . The Departments inspector has determined that there is liquid or evidence of liquid accumulating in sump.. The division inspector has determined that a piping sump sensor was not installed at the tank sump.. The owner or operator has failed to perform, or has performed inadequately, the requisite monthly visual inspections at their UST facility or facilities..

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Connecticut Site Information Management System (SIMS) is part of a suite of web-based applications designed to allow the Connecticut Department of Environmental Protection (DEP) staff to harmonize environmental interest information from disparate systems in a single agency-wide data repository (known as CFI). SIMS provides tools for identifying and resolving duplicate data, querying data (using both tabular and geospatial methods), and viewing/maintaining documents associated to the data.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Work Performed: 1972: In December, one 1,000-gallon waste oil UST, two 20,000-gallon gasoline USTs, and four 20,000-gallon diesel USTs were installed on site. 1989: Gasoline detected within a storm drain catch basin adjacent to site. Testing of gasoline UST and lines showed a failed test of unleaded & super unleaded gasoline product lines and the super unleaded gasoline UST. A DF UST also failed tightness test. Two USTs that failed tightness test were taken out of service. Inv. Loss showed loss of approx. 2000 gallons of gasoline over undetermined period of time. A 1989 report indicated 1800 gallons of product recovered from onsite oil/water separator with another 25 lbs of product removed from 2 MWs located in vicinity of gasoline dispenser islands. NAPL recovery system installed. 1990: In July, the 1,000-gallon waste oil UST, the two 20,000-gallon gasoline USTs, and the four 20,000-gallon diesel USTs, installed in 1972, were removed from site. ~4750 cubic yards contaminated soil removed during UST removal activities. In October, a 12,000-gallon gasoline UST, a 1,000-gallon waste oil UST, and two 20,000-gallon diesel USTs were installed on site. 1991: In April, two SVE systems installed and

operated. 1992: In the summer, the SVE was deactivated.1994: In November, Aaron Environmental determined that the existing SVE systems would not be an effective method to remediate soil & GW. 1995: A Phase II Subsurface Investigation was completed by Aaron Environmental.1997: Three GW recovery wells and one AS well were installed. A single horizontal vapor extraction well was installed. These remedial wells (except the AS well) were incorporated into the previously installed high vacuum total fluids extraction system. System operation began.2005: In October, the GW recovery and AS systems were deactivated.2006: In June, two 30,000-gallon diesel USTs, one 15,000-gallon gasoline UST, one 7,000-gallon gasoline UST, and one 8,000-gallon gasoline UST were installed on site.2007: In January a 30,000-gallon diesel UST and a 15,000-gallon gasoline UST, installed in 2006, were abandoned in ground. In August, the 12,000-gallon gasoline UST and the two 20,000-gallon diesel USTs, installed in 1990, were removed from site. During excavation ~8,835 tons of impacted soils and ~379,940-gallons of impacted GW were removed from site.2009: Apex Environmental conducted a Supplemental Phase II/ Limited Phase III Investigation during March and April 2009 which included the advancement of 11 soil borings, all of which were completed as monitoring wells.

Comments:

On tue 11/04/2014 at 3:21 P.M. per SERC 934 Matt Williamson to edit DEEP Case no:2014-05458 to show this was water non reportable. Please see attached email. Mrs. Victoria DiBacco from ECS Eclipse, an environmental and compliance consulting firm, has been retained to assist in reporting suspected releases to the state of Connecticut for Alliance Energy and 95 Express LLC. In that role, we reported a 'suspected release' at the Alliance Energy site 48 Leetes Island Road in Branford, CT to your agency on 10/27/14 and were issued spill id# 2014-05458. Upon further review of the 'suspected release' we recognized that we reported this condition for the wrong site, the condition (50 gallons of water in a sump) was actually for the 95 Express LLC facility located at 49 Leetes Island Road in Branford, CT (the gas station across the street from the Alliance Energy facility). We also recognized that the condition (50 gallons of water in a sump) is not a suspected release and therefore was not required by state regulation to be reported to the state.

Correspondence:	Action: Inspectors Report Issued:5/16/2001 Received:5/16/2001Roseanne Stavola: SNET was excavating on property immediately adjacent to the gas station. The excavation was part of a DOT roadway construction/expansion project. SNET had planned on installing a service manhole immediately adjacent to the gas station. The property in front of the gas station had been acquired as part of the project. SNET encountered gasoline contaminated soil. SNET contracted FLEET Environmental to sample soil in the excavation and an adjacent MW. Sample results have not been forwarded to the DEP yet. 916 investigated. There was no free product encountered during the excavation. The tank inventories did not indicate a current problem. Additionally, there was a historic release on this site. Berkshire Petroleum contracted Earth Technologies to conduct a system inspection of sight wells, MWs, and dispensers. There is no evidence of a current problem.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMs by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

SEH: List of Significant Environmental Hazards Report to DEEP

The Significant Environmental Hazard Statute is intended to identify and abate short-term risks associated with specific environmental conditions identified in the statute. After abatement of short-term risks (meaning abatement of the significant environmental hazard condition), there may still be potential long-term risks associated with the release. However, a significant environmental hazard can be considered abated under the statute even though potential long-term risks may not have been addressed.

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

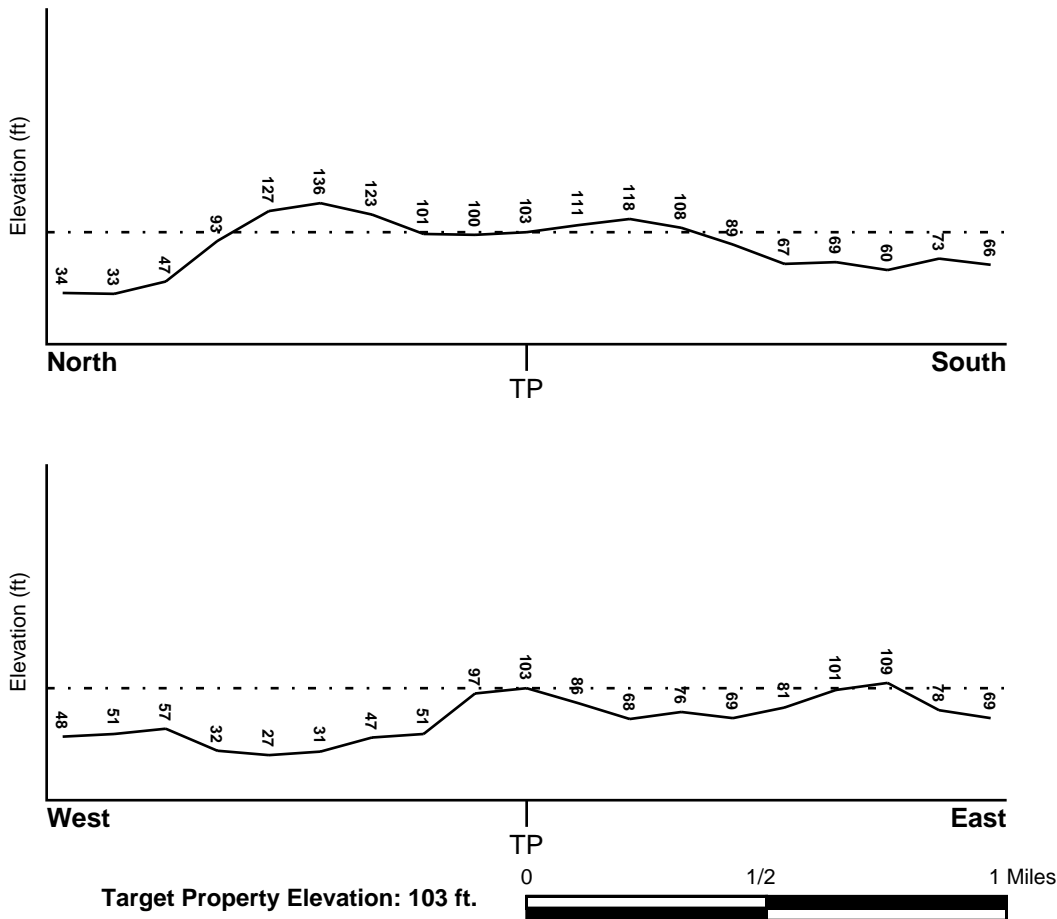

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Connecticut Leachate and Wastewater Discharge Sites

Source: Department of Environmental Protection

Telephone:

The Leachate and Waste Water Discharge Inventory Data Layer (LWDS) includes point locations digitized from Leachate and Wastewater Discharge Source maps compiled by the Connecticut DEP. These maps locate surface and groundwater discharges that (1) have received a waste water discharge permit from the state or (2) are historic and now defunct waste sites or (3) are locations of accidental spills, leaks, or discharges of a variety of liquid or solid wastes.

EPA-Approved Sole Source Aquifers in Connecticut

Source: EPA

Telephone:

Sole source aquifers are defined as an aquifer designated as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for the area and for which there are no reasonable alternative sources should the aquifer become contaminated.

Owners/Operators shall complete the attached "Certification of Financial Responsibility Form" and maintain such completed form at the facility where the storage tank system(s) are located. **THIS FORM DOES NOT NEED TO BE SUBMITTED but must be updated to reflect any changes.**

Part III: Record Information

Off- Site Storage of Records at a Centralized Location

Does the owner/operator of more than 10 facilities with UST systems request to store certain records at a centralized location ? Yes (Leave unchecked if 'No')

If yes, provide the central location address below.

Address: 2800 Berlin Tpke

City/Town: Newington State: CT Zip Code: 06111 - 4113

Such records must be immediately available for inspection by the commissioner or the commissioner's designee at any such central location. Please refer to section 22a-449 q CGS; for storage of underground storage tank system records that may be kept at a centralized location or that must be kept on site.

Part IV: Underground Storage Tank Information

Owners/Operators shall complete the attached "Certification of Financial Responsibility Form" and maintain such completed form at the facility where the storage tank system(s) are located. **THIS FORM DOES NOT NEED TO BE SUBMITTED but must be updated to reflect any changes.**

Part III: Record Information

Off- Site Storage of Records at a Centralized Location

Does the owner/operator of more than 10 facilities with UST systems request to store certain records at a centralized location ? Yes (Leave unchecked if 'No')

If yes, provide the central location address below.

Address: 2800 Berlin Tpke

City/Town: Newington State: CT Zip Code: 06111 - 4113

Such records must be immediately available for inspection by the commissioner or the commissioner's designee at any such central location. Please refer to section 22a-449 q CGS; for storage of underground storage tank system records that may be kept at a centralized location or that must be kept on site.

Part IV: Underground Storage Tank Information

Complete for all tanks and piping at the subject location. Begin by labeling tanks (including compartments, if applicable). Label tanks as required by the instructions. If you have more than 5 tanks in one location, reproduce this section and complete for additional tanks. **You must read the instructions (DEEP-UST-INST-001) in order to properly complete this Part.**

Experience

Mr. Strother has approximately three years of experience on projects throughout the country in the environmental assessment and consulting industry. He has conducted Environmental Site Assessments (ESAs) for a wide range of local and national clients including banks, agency lenders, investment banks, property development companies and individual owners. The properties he has evaluated have included multifamily residential, retail, office, industrial, partially-constructed buildings, active SHWS, BCP, RCRA, and LUST sites, and undeveloped vacant land. In addition, Mr. Strother has performed numerous Limited Site Inspections (LSIs), Design Visits, and Phase I reports for the telecom industry.

Mr. Strother has performed approximately two-hundred Phase I ESAs in accordance with ASTM Standards and other client-specific scopes of works, and has assisted on over two hundred more ESAs throughout the United States and Canada. His environmental background includes detailed understanding of the risks associated with hazardous and regulated material storage, use, generation and disposal, above ground and underground storage tanks, polychlorinated biphenyls (PCBs), radon, asbestos-containing materials (ACM), lead-based paint (LBP), mold, and other regulated substances. Other skills include data collection from municipal, state, federal, and general research sources; on-site sampling procedures for radon, ACM, and LBP, the ability to extract site pertinent data from various environmental reports/facility records; and preparation and documentation of due diligence reports.

Experience

Chris Beetham is a Senior Project Manager in the Telecom Advisory Services Group within Valuation & Advisory Services. Telecom Advisory Services provides environmental and regulatory due diligence to the wireless infrastructure development industry as well as advisory services on wireless infrastructure and related converged network development at, on or within CBRE managed and/or owned properties.

Mr. Beetham has over 25 years of experience in the environmental assessment and consulting industry. He has conducted several environmental due diligence and Environmental Site Assessments (ESAs) for a wide range of local and national clients, including banks, utilities, pharmaceutical companies, and property owners in multiple states. Mr. Beetham has managed and performed numerous limited and comprehensive Phase II ESAs as part of due diligence and liability evaluations associated with property transactions. He has also provided technical review of ESAs and performed Phase II ESAs for clients in Japan.

His technical experience includes geologic and hydrogeologic aspects of subsurface investigations associated with contaminant migration at petrochemical, chlorinated solvent, and various industrial and hazardous waste sites. Additionally, Mr. Beetham has international experience performing environmental site investigation and remediation for various projects in Japan.

Additional areas of current environmental experience include completing Federal Communications Commission (FCC) National Environmental Policy Act (NEPA) checklists and performing Federal Aviation Administration (FAA) airspace analyses and notifications for telecommunications facilities. Previous areas of environmental experience include performing human health risk assessments for CERCLA sites and technical review of human health risk assessment reports for industrial clients and state and federal government agencies.
