Special Item Number (SIN) Detailed Descriptions

- 238910 Installation and Site Preparation Services** Includes installation and site preparation services ordered in conjunction with buildings and structures, building materials, storage tanks/systems, services for alternative energy solutions or power distribution equipment, and fuel dispensing and management systems purchased under this schedule contract. 246-20-3: Miscellaneous Alarm and Signal Systems. Audible/Visual Warning/Signaling Devices - Including radio alarms equipment (excluding those for vehicular use) and exit door alarm systems for security and/or fire safety.
- 334220 Surveillance Systems** Includes surveillance systems, including video storage and services as part of a total solution.
- 334290 Security and Detection Systems** Includes security and detection systems and devices, such as gas detectors, pressure level monitoring, patient/detainee monitoring systems, etc.
- 334290L Physical Access Control Systems (PACS) - Legacy SIN** Includes physical access control systems (PACS), such as card-controlled access, biometrics, security barriers, etc.
- 334290PACS Physical Access Control Systems (PACS) - FIPS 201** Includes physical access control systems (PACS), such as card-controlled access, biometrics, security barriers, etc.
- 334512 Total Solution Support Products for Facilities Management Systems** Includes products to support facilities management systems, such as repair parts, surveillance systems, security functions, energy functions, building comfort systems, etc. This SIN is used for ESPC contracts and the use of the DoE ENABLE Program
- 541330L Security System Integration, Design, Management, and Life Cycle Support** Includes services involving the security integration/management discipline, which supports security products and systems throughout their lifecycle. Services may include, but are not limited to: testing, production, fielding, process improvement, disposal, etc.
- 541330SEC Security System Integration, Design, Management, and Life Cycle Support** Includes services related to PACS design, integration, and implementation, and installation/testing. Employees of offerors of this SIN are CSEIP (Certified System Engineer ICAM PACS) certified and such certification can be verified at IDmanagement.gov." It should read: "Includes services related to PACS design, integration, and implementation, and installation/testing. Offerors under this SIN have at least one employee who is CSEIP (Certified System Engineer ICAM PACS) certified and such certification can be verified at IDmanagement.gov."
- 561210SB Smart Buildings Systems Integrator** Includes the comprehensive integration of building systems and technology using a non-proprietary, open architecture. Typical building systems to be integrated include: building automation, telecommunications, security, energy and environmental control, HVAC, etc.
- OLM Order-Level Materials** OLMs are supplies and/or services acquired in direct support of an individual task or delivery order placed against a Schedule contract or BPA. OLM pricing is not established at the Schedule contract or BPA level, but at the order level. Since OLMs

are identified and acquired at the order level, the ordering contracting officer (OCO) is responsible for making a fair and reasonable price determination for all OLMs.

Note 1: All SINs specifically EXCLUDE Architectural Engineering Services (A&E) under the Brooks Architect-Engineers Act as stated in Federal Acquisition Regulation (FAR) Part 36. These services shall be ordered only in accordance with Part 36 and agency procedures, and shall not be included on a contract order as an open market item.

Note 2: APPLIES WHEN SIN 334512 IS UTILIZED FOR ENERGY SAVINGS PERFORMANCE CONTRACTS ONLY -

CAPITAL LEASES MAY BE PERFORMED UNDER THIS SIN FOR A PERIOD NOT TO EXCEED 25 YEARS FOR THE SOLE PURPOSE OF ENERGY SAVINGS PERFORMANCE CONTRACTS, SUBJECT TO THE FOLLOWING CONDITIONS:

- Agencies utilizing this SIN for Energy Savings Performance Contracts are required to have obtained any required approvals under 42 USC 8287.
- Annual Energy Audits are required. The audit is required to be performed utilizing the North American Measurement and Verification Protocol. Steps in the audit process include: Baseline Verification, Post-Installation Verification, and regular Interval Post-Installation Verification. Required energy audits shall be included in the lease payment quoted by the contractor in response to the agency's scope of work.
- Terms and Conditions of the Performance Guarantee shall be specified by the contractor in their response to the agency's scope of work. This guarantee shall, at a minimum, provide that the contractor is responsible for maintenance and repair services for any energy related equipment installed under this agreement (including computer software systems). **The contractor shall guarantee a minimum amount of energy savings per year.** Shall the minimum savings amount not be met, the difference shall be paid to the agency within 30 days of the end of the yearly period.
- Aggregate annual payments made by an agency to both the utility and energy savings performance contract may not exceed the amount that the agency would have paid for utilities without an energy savings performance contract during the life of the agreement.
- Guaranteed savings must exceed the debt service requirements.
- If the cancellation ceiling exceeds \$10,000,000, the agency shall provide written notification to Congress in accordance with the National Energy Conservation Policy Act Requirements (42 USC 8287).
- Customer agencies shall have the right to place additional requirements within the scope of this contract in their statement of work. Any maintenance agreement performed under this provision shall be effective for the duration of the lease, unless otherwise specified by the agency in their scope of work. The agency shall obtain title to the equipment following the final lease payment
- The agency shall have the option of "buying out" the lease at any period during the lease. The buy-out amount shall be the remaining residual value.

SPECIAL PROVISIONS

This lease is for the number of years stated in the delivery order. The Government has the right to terminate this contract for convenience or default in the accordance with Federal Acquisition regulation Part 49.

In the event that the lease is terminated for lack of funding, the Government may purchase the leased equipment for the residual value within 30 days of receipt of invoice from the vendor or may elect not to purchase the leased equipment. Alternatively, if the equipment is not purchased, the Government shall permit the lessor to enter the premises and remove all or any portion of the leased equipment the lessor may choose. Any equipment not removed shall become the property of the Government.

CANCELLATION CEILING

Should the lease be completely terminated for convenience (for any reason other than the aforementioned lack of funding), the Government shall purchase the leased equipment for the residual value. The residual value shall be determined by utilizing the standard payments function on the commercially available spreadsheet program (e.g. Lotus 1-2-3, Excel, etc.) The contractor shall provide the Government a table detailing the yearly estimated residual value based on the interest rate quoted to the Government at the time of the Statement of Work.

In the event of a partial termination for convenience, the Government and the lessor shall negotiate a reasonable compensation to the lessor for the residual value of the leased equipment included in the terminated portion of the lease.

PERFORMANCE DELAYS

The Contractor shall be liable for default unless nonperformance is caused by an occurrence beyond the reasonable control of the Contractor and without its fault or negligence such as, acts of God or the public enemy, acts of the Government in either its sovereign or contractual capacity, fires, floods, epidemics, quarantine, restrictions, strikes, unusually severe weather, and delays of common carriers. The Contractor shall notify the Contracting Officer in writing as soon as it is reasonably possible after the commencement of any excusable delay, setting forth the full particulars in connection therewith, shall remedy such occurrence. Any delays caused by the Government in its contractual capacity shall be dealt with in accordance with Federal Acquisition Regulation 42.13. Notwithstanding this provision, the Contractor shall not be entitled to any adjustment in the term or price of the lease arising from delays caused by the Government unless a detailed Critical Path Method Schedule was provided to the Government at the start of the project and updated regularly by the Contractor.

ORDERING PROCEDURE

- Contractor performs feasibility analysis.*
- Contractor performs preliminary energy audit.*
- Contractor and Agency enter into agreement for the Contractor to perform a detailed energy audit. **
- Contractor shall present detailed project design, showing the proposed scope of work. In addition to the design, the Contractor shall present a proposed price for the work to be performed. The price shall consist of product prices, and labor prices (to be negotiated in accordance with GSA Schedule Contract requirements). The monthly payment shall be calculated by the Contractor utilizing the contractual rate of interest.

- Upon agreement of the price and scope of work, a delivery order shall be issued by the ordering agency.
- Upon acceptance of the work, the guarantee period shall begin.

*Agency will determine which contractor offers the best value after these two steps. No cost to the agency for these services.

**Cost of the detailed energy audit may be paid for by the agency or rolled into the lease agreement.

Volume II - Labor Categories and Hourly Rates

Branch Rates

A specific GSA Contract rate exists for each Johnson Controls branch labor category. The rate ranges appearing below are for general reference only. Procurement Officials are encouraged to contact the Johnson Controls GSA Contract Administrator shown in the “Ordering Information” section (Volume I, page 2, item 13a.(4)) to receive detailed specific rate information.

Actual GSA Contract hourly rates vary by branch location.		Range of GSA Schedule Contract Hourly Rates (Contact Johnson Controls' GSA Contract Administrator For Branch Specific GSA Schedule Contract Hourly Rates)					
SINs	Labor Category	Regular Time		Overtime		Double Time	
334512, 541330, 541330SEC	Administrative Staff	\$45.83	- \$96.40	\$68.76	- \$144.61	\$91.66	- \$192.81

Labor Category Descriptions

A description of the functions, experience requirements, and educational requirements for each GSA schedule labor category is provided below. An explanation regarding experience and education equivalencies is presented at the end of this section.

Building Automation Systems Designer (561210SB, 334512)

Functional Description: Under direct supervision and using established standards, responsible for hardware designs and software programming for HVAC and other building automation systems to meet the intent of the project requirements. Provides engineering support on systems, system elements, interfacing systems, components, devices and/or processes. Performs hardware designs for flow diagrams, sequence of operations, bill of material, network layouts and electrical schematics as required. Assists in the creation of necessary drawings and equipment schedules for submittals and other detailed information to communicate design and operation to customers, consultants, field installation teams, and subcontractors. Supports test programs and analyzes testing. Gathers field changes from the project team and creates as-built drawings and software documentation.

Minimum Experience: One year of experience with installing and/or commissioning digital HVAC control systems and software applications. Demonstrated advanced computer skills required, particularly computer-related drafting tools and network layouts.

Minimum Education: Associate's Degree in Electronics or a related technical field or equivalent related experience.

Building Automation Systems Engineer (561210SB, 334512)

Functional Description: Designs and configures technically complex HVAC controls and other low-voltage control systems to meet the intent of the project requirements as defined by the contract documents. Performs analysis to define, analyze and allocate requirements. Creates flow diagrams, sequence of operations, bill of material, network layouts and electrical schematics as required. Develops and tests software programs necessary to operate the system per the intent of the project requirements. Prepares drawings, equipment schedules, and other submittals to communicate design and operational intent to customers, consultants, field installation team, and subcontractors. Assists with commissioning, validation of complete system functionality, and troubleshooting to ensure proper operation of the systems. Performs analysis of requirements and components and performs audits to ensure intended functionality and performance is achieved. Assists in performing site-specific training for owner / operator.

Minimum Experience: Three years of related experience in the design and implementation of control systems, automatic temperature controls, building automation systems and other building sub-systems. Demonstrated experience in the integration of low-voltage building sub-systems using various industry protocols (e.g., LON, BACnet). Demonstrated advanced computer skills required, particularly computer-related drafting tools. Possesses broad knowledge of industry practices, standards and technology areas.

Minimum Education: Bachelor's degree in Engineering or Associate's Degree in a related technical field with five years of relevant work experience, or equivalent related experience.

Building Automation System Installation Technician (561210SB, 334290, 238910)

Functional Description: Under direct supervision, performs installation, configuration, programming of building automation systems, temperature control systems, or other electronic building sub-systems. Properly completes required project documentation, such as certificate of completion, customer training forms, punch lists, and notes for as-built documentation. Performs training for owner and/or building operator on how to operate and maintain the system. Adheres to all Johnson Controls and customer safety standards. Communicates with customer upon arrival and before leaving the work site.

Minimum Experience: One year of experience in installing electronic and/or mechanical systems in the HVAC industry. Experience and ability to program HVAC-related software.

Minimum Education: Vocational school or an Associate degree in electronics, mechanical systems, computer technology, air conditioning or similar field, or equivalent experience. Must have knowledge of OSHA general safety standards and the proper care and usage of Personal Protective Equipment (PPE).

Building Automation Lead Systems Specialist (561210SB, 334290, 238910, 334512)

Functional Description: Under general supervision, acts as on-site leader to plan, execute, and complete building automation system installation projects or lifecycle maintenance services. Performs system programming, installation coordination, system, and network commissioning and closeout. Completes typical installation hardware design and software programming using established standards as required. Manages the selection, ordering, budget, and delivery schedule of project materials. Completes the loading, device verification and commissioning of all system controllers as required. Validates complete system functionality and troubleshoots problems with subcontractors and other trades to ensure proper operation. Provides accurate as-built and commissioning documentation. Along with Project Manager, provides work direction to subcontractors, technicians, designers and administrators as necessary. Ensures work performed is in compliance with state, local and Federal legal requirements. Adheres to and ensures that Johnson Controls staff and subcontractors adhere to all safety standards and requirements.

Minimum Experience: Five years of relevant technical hands-on experience in system design and commissioning of digital HVAC controls systems. Must have knowledge of control theory and HVAC systems and equipment.

Minimum Education: Associate Degree in HVAC systems, network technology, or relevant technical field (or equivalent military training).

Building Automation System Service Technician (561210SB, 334290, 238910)

Functional Description: Under general supervision, performs preventive maintenance, repairs, troubleshooting, and programming of building automation systems, temperature control systems, or other electronic building sub-systems. Completes service ticket documentation to report on tasks completed. Provides solutions to system problems by troubleshooting the system or advising others on how to resolve problems. Performs training for owner and/or building operator on how to operate and maintain the system. Adheres to all Johnson Controls and customer safety standards. Communicates with customer upon arrival and before leaving the work site.

Minimum Experience: Three years of experience in servicing electronic and/or mechanical systems in the HVAC industry. Experience and ability to program HVAC-related software.

Minimum Education: Vocational school or an Associate degree in electronics, mechanical systems, computer technology, air conditioning or similar field, or equivalent experience. Must have knowledge of OSHA general safety standards and the proper care and usage of Personal Protective Equipment (PPE).

Chiller Mechanic (334290, 238910)

Functional Description: Under general direction, performs installation, preventive maintenance, and repairs of heating, ventilation, air conditioning, and refrigeration systems, with a particular focus on chillers. Performs the most complex troubleshooting and repair of industrial and commercial mechanical equipment. May perform a variety of advanced and complex mechanical functions associated with diagnostics and repair of machines and mechanical equipment.

Minimum Experience: Five years of practical working experience in the HVAC, refrigeration, plumbing, pipefitting and/or mechanical equipment service industry. Must be skilled craftsmen in their trade. Must demonstrate experience and broad knowledge of mechanical systems, refrigeration systems, chilled water systems, controls systems and energy plants. Must have knowledge of OSHA general safety standards and the proper care and usage of Personal Protective Equipment (PPE).

Minimum Education/Licenses: Mechanical Journeyman License. Must have license or certifications required by federal, state or local laws to work with refrigerants, boilers, and or steam systems. Must hold factory certification from one or more chiller manufacturers. Associate degree or one-year technical program in air conditioning or similar field is preferred. May be required to pass a satisfactory examination as to their special skill.

HVAC Mechanic (334290, 238910)

Functional Description: Under general direction, performs installation, preventive maintenance, and repairs on heating, ventilation, air conditioning, and refrigeration systems. This may include chillers, split-systems, rooftop units, packaged equipment, variable-air volume boxes, air handling units, pumps, exchangers, fans, cooling towers and other equipment. Performs end-to-end testing, servicing, wiring and monitoring of HVAC equipment and related systems at facilities. Changes belts and performs regular maintenance checks.

Minimum Experience: Two years of experience as an HVAC apprentice or specialist. Demonstrates mechanical and electrical aptitude and basic knowledge of HVAC equipment.

Minimum Education/Licenses: Must have license or certifications required by federal, state or local laws to work with refrigerants, boilers, and/or steam. Must have knowledge of OSHA general safety standards and the proper care and usage of Personal Protective Equipment (PPE). Associate degree or one-year technical program in air conditioning or similar field is preferred.

Electrical Installer (334290, 238910, 541330SEC)

Functional Description: Responsible for the installation and maintenance of electrical control systems, including wiring, switches and other systems in a variety of settings. Involved in installation, troubleshooting, wiring, and testing of building automation, HVAC equipment, security systems, fire safety, or other building systems.

Minimum Experience: Four years of related experience.

Minimum Education: High school diploma or equivalent (e.g., GED), and knowledge of OSHA general safety standards and the proper care and usage of Personal Protective Equipment (PPE).

Administrative Staff (334512, 541330, 541330SEC)

Functional Description: Performs a variety of administrative duties that include filing, recordkeeping, copying, delivery, mailing, graphics, word processing, and technical editing. Responsible for compiling written and graphic technical materials, including studies, technical documentation, reports, and other presentation graphics. Ensures compliance with standards of style and format, and assists with ensuring proper grammar usage in documentation.

Minimum Experience: One year of related experience.

Minimum Education: High school diploma or equivalent (e.g., GED).

Fire & Security System Designer (561210SB, 334512, 541330, 541330SEC)

Functional Description: Under direct supervision, responsible for hardware designs and software programming using relevant standards for fire and security systems to meet the intent of the project requirements. Performs hardware designs for flow diagrams, sequence of operations, bill of material, network layouts and electrical schematics as required. Assists in the creation of necessary drawings and equipment schedules for submittals and other detailed information to communicate design and operation to customers, consultants, field installation team, and subcontractors. Assists in the loading and commissioning of all system and network-level controllers

Minimum Experience: One year of experience with installing and/or commissioning security, fire safety, and other electronic building systems and software applications. Demonstrated advanced computer skills required, particularly computer-related drafting tools, fiber optics, and network layouts.

Minimum Education: Associate's Degree in security systems, electronics, network technology, or other relevant technical field, or equivalent related experience.

Security System Engineer (334512, 541330, 541330SEC)

Functional Description: Designs and configures technically complex security, fire, and other low-voltage control sub-systems (e.g., lighting, nurse call, data networks) to meet the intent of the project requirements as defined by the contract documents. Creates flow diagrams, sequence of operations, bill of material, network layouts and electrical schematics as required. Develops and tests software programs necessary to

operate the system per the intent of the project requirements. Prepares drawings, equipment schedules, and other submittals to communicate design and operational intent to customers, consultants, field installation team, and subcontractors. Assists with commissioning, validation of complete system functionality, and troubleshooting to ensure proper operations of the systems. Assists in performing site-specific training for owner / operator.

Minimum Experience: Three years of related experience in the design and implementation of security and/or fire alarm systems. Demonstrated advanced computer skills required, particularly computer-related drafting tools.

Minimum Education: Bachelor's degree in Engineering, or Associate Degree in a related technical field with five years of relevant work experience, or equivalent related experience.

Security Integration Engineer (561210SB, 334512, 541330, 541330SEC)

Functional Description: Under general supervision, engineers highly complex, integrated security systems including access control, CCTV, digital video recording, intrusion, perimeter and other special systems integrated with the overall security system in line with the customer needs and specifications. Provides leadership for engineering of systems, system elements, interfacing systems, components, devices and/or processes. Develops system architectures and designs including software, hardware, communications and interface requirements. Prepares, reviews, and evaluates documentation, specifications, test plans and procedures. Conducts analysis to define, analyze and allocate requirements. Oversees test programs. Leads analysis of requirements to ensure that intended functionality, operation and performance requirements are achieved. Provides detailed information / submittals to communicate design to customers, installation team and subcontractors.

Minimum Experience: Five years of related experience in the design and implementation of security systems. Demonstrated experience in the integration of multiple building sub-systems.

Minimum Education: Bachelor's degree in Engineering, Associate's degree in Electrical / Electronic Technology with 15 years of related experience, or equivalent experience.

Security Solution Engineering Consultant (334512, 541330, 541330SEC)

Functional Description: Defines key concepts for planning, deployment, integration, operation and/or enhancement of state-of-the-art and/or legacy security systems. Works directly with customer management to apply advanced principles, theories, and concepts and develops comprehensive solutions to complex problems. Applies best industry practices and standards, leading-edge technology, and innovative solutions to intractable problems. Develops insightful solutions to meet fiscal, technological and schedule constraints. Provides technical, estimating or process support for high-level complex and/or unique systems during the design process. Leads design of highly complex, integrated security systems including access control, CCTV, digital video recording, intrusion, perimeter and other special systems integrated with the overall security system per plans and specifications or scope created with the customer. Develops system architectures and designs including software, hardware, communications and interface requirements. Prepares, reviews, and evaluates documentation, specifications, test plans and procedures. Conducts analysis to define, analyze and allocate requirements. Oversees test programs.

Minimum Experience: Ten years of related experience in the design and implementation of security systems. Demonstrated advanced experience in the complex integration of multiple building sub-systems.

Minimum Education: Bachelor's degree in Engineering, Associate's degree in Electrical / Electronic Technology with 15 years related experience, or equivalent experience.

Fire & Security Systems Installation Technician (334290, 238910, 541330SEC)

Functional Description: Under direct supervision, completes assigned installation, wiring, programming, testing, and basic troubleshooting of fire alarm and security systems. Performs in-depth technical functions required in the installation of electronic equipment and systems. Configures computers, communications devices, and peripheral equipment. Provides accurate information for as-built documentation.

Minimum Experience: Completion of Johnson Controls Fire & Security Technician onboarding program.

Minimum Education: High school diploma or equivalent (e.g., GED), and knowledge of OSHA general safety standards and the proper care and usage of Personal Protective Equipment (PPE).

Fire & Security Lead System Specialist (561210SB, 334512, 541330, 541330SEC)

Functional Description: Under general supervision, acts as on-site leader to plan, execute, and complete security and/or life safety system installation projects or lifecycle maintenance services. Leads system installation, programming, commissioning and closeout. Performs and oversees technicians in the assembly, fabrication, installation, integration, and testing of devices, subsystems, and systems, using established standards as required. Ensures installed or maintained systems are consistent and compliant with engineered drawings, design guidance and manufacturer's specifications. Manages the selection, ordering, budget, and delivery schedule of project materials. Conducts a variety of tests using established methods. Prepares test specimens, adjusts and operates equipment, and records test data, pointing out deviations resulting from equipment malfunction or observational errors. Validates complete system functionality and troubleshoots problems with subcontractors and other trades to ensure proper operation. Provides accurate as-built and

commissioning documentation. Along with Project Manager, provides work direction to subcontractors, technicians, designers and administrators as necessary. Ensures work performed is in compliance with state, local and Federal legal requirements. Adheres to and ensures that Johnson Controls staff and subcontractors adhere to all safety standards and requirements.

Minimum Experience: Four years of relevant technical experience in the implementation of security, fire alarm, life safety, and/or other electronic building systems.

Minimum Education: Associate's Degree in security systems, electronics, network technology, or other relevant technical field, or high school diploma and equivalent related experience.

Senior Fire & Security Lead System Specialist (561210SB, 334512, 541330, 541330SEC)

Functional Description: Under general supervision, acts as on-site leader to plan, execute, and complete security and/or life safety system installation projects or lifecycle maintenance services. Performs and leads complex work iterations and assignments involving a sequence of related operations for the installation and/or service of complex integrated security systems involving multiple manufacturers. Leads system installation, programming, commissioning and closeout. Performs and oversees technicians in the assembly, fabrication, installation, integration, and testing of devices, subsystems, systems and integrated systems, using established standards as required. Ensures installed or maintained systems are consistent and compliant with engineered drawings, design guidance and manufacturer's specifications. Manages the selection, ordering, budget, and delivery schedule of project materials. Extracts engineering data from various sources and utilizes the data in installing, operating and servicing systems. Conducts a variety of tests using established methods. Prepares test specimens, adjusts and operates equipment, and records test data, pointing out deviations resulting from equipment malfunction or observational errors. Validates complete system functionality and troubleshoots problems with subcontractors and other trades to ensure proper operation. Provides accurate as-built and commissioning documentation. Along with Project Manager, provides work direction to subcontractors, technicians, designers and administrators as necessary. Ensures work performed is in compliance with state, local and Federal legal requirements. Adheres to and ensures that Johnson Controls staff and subcontractors adhere to all safety standards and requirements.

Minimum Experience: Seven years of relevant technical experience in the implementation of security, fire alarm, life safety, and/or other electronic building systems. Programming experience skills at a level sufficient to execute new and custom applications provided by others. May hold security clearances as required by customer agency and work site.

Minimum Education: Associate's Degree in security systems, electronics, network technology, or other relevant technical field, or high school diploma and equivalent related experience. Holds certifications from relevant manufacturers of access control, video, communication and other security system components.

Fire Inspector (334290, 334512)

Functional Description: Under general supervision, performs routine inspection, testing and preventive maintenance of fire alarm and life safety systems. Inspects fire alarm equipment, fire suppression equipment, emergency lighting equipment, and all other assigned systems. Completes Service Acknowledgments with proper coding through communicative devices. Makes minor repairs and programming changes while under authorized supervision.

Minimum Experience: Completion of Johnson Controls Fire Inspector onboarding program.

Minimum Education: High school diploma or equivalent (e.g., GED), and knowledge of OSHA general safety standards and the proper care and usage of Personal Protective Equipment (PPE). Must obtain and retain any licenses that are required by National, State and local codes.

Fire System Representative (334290, 334512)

Functional Description: Responsible for programming, commissioning, troubleshooting and preventive maintenance of fire alarm and life safety systems. Provides solutions to systems problems by troubleshooting the system or advising others on how to resolve problems. Performs site-specific training for owner and/or building operator on how to effectively operate and maintain the system. Communicates with customer upon arrival and before leaving the work site. Strives for continuous proactive customer interactions to gain an in-depth understanding of customer(s) needs and systems currently in place.

Minimum Experience: Two years of related experience.

Minimum Education: Associate's degree in Electronics or relevant technical related field, or equivalent experience. A minimum of Level I NICET certification is required.

Security System Representative (334290, 334512, 541330, 541330SEC)

Functional Description: Responsible for programming, commissioning, troubleshooting and preventive maintenance of security systems. Provides solutions to systems problems by troubleshooting the system or advising others on how to resolve problems. Performs site-specific training for owner and/or building operator on how to effectively operate and maintain the system. Communicates with customer upon arrival and before leaving the work site. Strives for continuous proactive customer interactions to gain an in-depth understanding of customer(s) needs and systems currently in place.

Minimum Experience: Two years of related experience.

Minimum Education: Associate's degree in Electronics or relevant technical related field, or equivalent experience.

Security & Fire System Representative (334290, 334512, 541330, 541330SEC)

Functional Description: Under limited supervision, possesses complete technical competence on all security and/or fire alarm systems and the ability to resolve or guide others through very complex problem resolution. Responsible for programming, commissioning, troubleshooting and preventive maintenance of systems per contract obligations. Configures security and/or fire systems, which utilize both Johnson Controls and third-party security and fire alarm systems or products. Completes all required commissioning documentation. Provides accurate information for as-built documentation. Performs site-specific training for owner and/or building operator on how to effectively operate and maintain the system. Communicates with customer upon arrival and before leaving the work site. Strives for continuous proactive customer interactions to gain an in-depth understanding of customer(s) needs and systems currently in place.

Minimum Experience: Two years of related experience.

Minimum Education: Associate's degree in Electronics or relevant technical related field, or equivalent experience. A minimum of Level I NICET certification is required.

Experience and Education Equivalencies

With regard to equivalent experience in place of a degree, one year of relevant experience may be substituted for each year of educational experience. For example, the following years of experience are deemed to be equivalent to the following degrees:

- 2 years of relevant experience is equivalent to an associate's degree
- 4 years of relevant experience is equivalent to a bachelor's degree

With regard to educational degrees, the following equivalencies apply:

- A Professional Engineer (PE) certification is equivalent to a bachelor's degree in engineering.
- An industry recognized apprentice craft training program is equivalent to an associate's degree for an electronics technician.
- A DOD-sponsored technical training school apprentice program is equivalent to an associate's degree.
- Completion of a Military Class A and/or B school is equivalent to an associate's degree.

With regard to additional equivalent experience for an advanced degree, the following equivalencies apply:
Positions requiring a high school diploma:

- An associate's degree is equivalent to 2 years of experience
- A bachelor's degree is equivalent to 4 years of experience
- A master's degree is equivalent to an additional 2 years of experience

Positions requiring an associate's degree:

- A bachelor's degree is equivalent to 2 years of experience
- A master's degree is equivalent to an additional 2 years of experience

Positions requiring a bachelor's degree:

- A master's degree is equivalent to 2 years of experience

Johnson Controls YORK® Brand Equipment

Johnson Controls combined with YORK® heating, ventilation, air-conditioning, and refrigeration (HVAC&R) systems and solutions creates the largest global provider of integrated products, systems and services for the \$200 billion global building environment industry.

Johnson Controls/YORK® is a global leader in control systems for heating, ventilating, air conditioning (HVAC) for nonresidential buildings, and consulting services. We are represented in over 125 countries, including North America, Asia, Europe, the Middle East, Africa and Latin America and in all markets.

Please contact the Johnson Controls GSA Contract Administrator for contract pricing information at:

MaxE™ YK Centrifugal Chillers

MaxE™ YK centrifugal chillers provide the best route to real-world energy performance — the combined performance at all operating conditions, not just design. Because chillers in the real world operate nearly 99% of the time at off-design conditions, off-design performance is the major factor in energy consumption. That’s why MaxE YK centrifugal chillers are engineered for maximum efficiency at both design and off-design conditions. All units are produced at an ISO 9001 registered facility. All MaxE™ YK centrifugal chillers are rated in accordance with ARI Standard 550/590 at ARI conditions.

The Air-conditioning, Heating, and Refrigeration Institute (AHRI) Chiller Certification Program endorses the validity of off-design analysis to compare chiller energy consumption. Measured with AHRI’s Integrated Part Load Value (IPLV), MaxE YK centrifugal chillers are unsurpassed in energy efficiency. Equipped with an OptiSpeed™ variable-speed drive, they can reduce energy-usage ratios to new lows: 0.40, 0.30, and even 0.20 kW/TR at off-design conditions.

When a MaxE YK centrifugal chiller is equipped with an OptiSpeed drive, it incorporates advanced Adaptive Capacity Control logic, which continually optimizes chiller operation. It closely examines critical operating parameters, and then determines the most efficient way to operate. In addition, it lets you optimize your savings when using intelligent control strategies, such as chilled-water reset. Adaptive Capacity Control logic also accommodates the characteristics of the refrigerant used in the chiller — today and tomorrow.

YCAL Air-Cooled Scroll Compressor Liquid Chillers

YORK® Air-Cooled Scroll Chillers provide chilled water for all air conditioning applications using central station air handling or terminal units. They are completely self-contained and are designed for outdoor (roof or ground level) installation. Each unit includes hermetic scroll compressors, a liquid cooler, air

**Johnson Controls YORK® Equipment
FOB Origin (Factory)**

cooled condenser, a charge of refrigerant R-410A, and a weather resistant microprocessor control center, all mounted on a pressed-steel base. All units are produced at an ISO 9001 registered facility. YCAL chillers are rated in accordance with ARI Standard 550/590 at ARI conditions.

The unit is pressure-tested, evacuated, and fully charged with Refrigerant-410A and includes an initial oil charge. After assembly, a complete operational test is performed with water flowing through the cooler to assure that the refrigeration circuit operates correctly.

The unit structure is heavy-gauge, galvanized steel. This galvanized steel is coated with baked-on powder paint, which, when subjected to ASTM B117 1000 hour, salt spray testing, yields a minimum ASTM 1654 rating of "6". Corrosion resistant wire mesh panels are added to protect the condenser coil from incidental damage and restrict unauthorized access to internal components. Unit also includes service isolation valves as standard. Units are designed in accordance with NFPA 70 (National Electric Code), ASHRAE/ANSI 15 Safety code for mechanical refrigeration, ASME, Listed and labeled with Intertek Testing Services (ETL) and rated in accordance with the latest version of ARI Standard 550/590.

YLAA Air-Cooled Scroll Chillers

The YORK® YLAA air-cooled scroll chiller is an all-in-one package that is a true plug and play system that provides superb efficiency and performance. The chiller is completely self-contained and is designed for outdoor (roof or ground level) installation. An optional hydronic pump kit makes service replacement or new building installations very convenient. Each unit includes zero-ozone-depletion refrigerant (R-410A), hermetic scroll compressors, a liquid evaporator, air cooled condenser, and a weather resistant microprocessor control center, all mounted on a formed steel base. All units are produced at an ISO 9001 registered facility. YLAA chillers are rated in accordance with ARI Standard 550/590 at ARI conditions.

The unit is pressure-tested, evacuated, and fully charged with Ozone Depletion Potential Refrigerant R-410A and includes an initial oil charge. After assembly, a complete operational test is performed with water flowing through the evaporator to assure that the refrigeration circuit operates correctly.

The unit structure is heavy-gauge, galvanized steel. This galvanized steel is coated with baked-on powder paint, which, when subject to ASTM B117 1000 hour, salt spray testing, yields a minimum ASTM 1654 rating of "6". Units are designed in accordance with NFPA 70 (National Electric Code), ASHRAE/ANSI 15 Safety code for mechanical refrigeration, ASME and rated in accordance with ARI Standard 550/590.

With the combination of R-410A refrigerant and a 30%-50% reduction of refrigerant used vs. similar chillers, this chiller provides you with the most ecologically friendly equipment. Partnered with its low sound properties (for noise pollution prevention), this chiller is a true earth-friendly offering.

Latitude™ Air-Cooled Chillers

Latitude™ chillers deliver all of the capital and installation advantages of traditional air-cooled screw chillers. And with their packaged, multi-circuit design and simple control, minimal on-site staff is

**Johnson Controls YORK® Equipment
FOB Origin (Factory)**

required for maintenance and operation. All units are produced at an ISO 9001 registered facility. Latitude™ chillers are rated in accordance with ARI Standard 550/590 at ARI conditions.

What makes Latitude™ chillers unique is that they deliver real-world energy savings, which can reduce operating costs 15–25% when compared with other air-cooled screw chillers. Additionally, their sound levels at off-design conditions are so low that expensive sound-attenuation kits are often not required. Latitude chillers are the high performance, air-cooled screw chillers that deliver revolutionary advances in energy efficiency and sound levels, because, in all of today's buildings, performance matters.

Latitude chillers are designed to provide best-in-class, design efficiencies as high as 10.3 EER, which exceeds the building-energy standard of the American Society of Heating, Refrigerating and Air-conditioning Engineers (ASHRAE), known as ASHRAE 90.1. You can count on getting this outstanding level of performance, because YORK® rates and tests Latitude chillers in accordance with the Air-conditioning and Refrigeration Institute's (ARI) Standard 550/590-98.

So, factor in the low operating costs and improved sound performance with the low installed costs and low maintenance costs, and you will see that Latitude chillers deliver the lowest total cost of ownership of any air-cooled chiller. You no longer have to sacrifice operating costs to achieve low first costs. Latitude™ chillers give you the freedom to have both.

YCWL Water-Cooled Scroll Liquid Chiller

YORK® YCWL Water-Cooled chillers provide chilled water for all air conditioning applications that use central station air handling or terminal units. They are completely self-contained and are designed for indoor (new or retrofit) installation. Each unit includes hermetic scroll compressors, a liquid evaporator, water cooled condenser, and a user-friendly, Microcomputer Control Center mounted on a rugged steel base. All units are produced at an ISO 9001 registered facility. All YCWL chillers are rated in accordance with ARI Standard 550/590 at ARI conditions.

The unit will be pressure-tested, evacuated, and charged with Refrigerant-410A, and York® 'V' (POE) synthetic oil. There will be an operational test, with water flowing through the evaporator, to check that each control device operates correctly.

The unit structure is heavy-gauge, galvanized steel. This galvanized steel is coated with baked-on powder paint, which, when subjected to ASTM B117 1000 hour, salt spray testing, yields a minimum ASTM 1654 rating of "6". Corrosion resistant wire mesh panels are added to protect the condenser coil from incidental damage and restrict unauthorized access to internal components. Unit also includes service isolation valves as standard. Units are designed in accordance with NFPA 70 (National Electric Code), ASHRAE/ANSI 15 Safety code for mechanical refrigeration, ASME, Listed and labeled with Intertek Testing Services (ETL) and rated in accordance with the latest version of ARI Standard 550/590.

The chiller is engineered for maximum efficiency at both design and part-load operation by taking advantage of the colder cooling tower water temperatures which naturally occur during the winter months. Appreciable power savings are realized from these reduced heads.

YORK® Solution® Air-Handling Units

YORK® Solution® air-handling units (AHUs) from Johnson Controls—the only names you need to know for a line that has no limits. Johnson Controls/YORK engineers have developed an AHU line that is so flexible, and able to deliver such high standards of performance, that it can handle virtually any application. Whatever the air-handling challenge—IAQ, acoustics, energy, controls, you name it—Johnson Controls/YORK® can build a Solution AHU that will meet your needs.

All units are produced at an ISO 9001 registered facility. YORK® Solution® air-handling units are rated in accordance with ARI Standard 550/590 at ARI conditions.

Solution® AHU's from Johnson Controls comprise a complete AHU line to meet commercial, institutional and industrial indoor and outdoor unit applications. For more than 50 years, YORK® air handling units have been installed in every type of facility to handle any type of requirement; manufacturing, education, healthcare, life sciences and process manufacturing.

Solution® AHU's come equipped with industry-leading Metasys® controls that are installed and commissioned at the factory. Factory installation assures superior quality, saves time on the jobsite and delivers accurate performance. Plus, you can count on seamless operation with a Metasys building management system.
