

Patient handset with speech

Part-No.: 74133A1

The patient handset is a user-friendly control unit suitable for making calls, selecting radio and TV channels and switching the light on/off as well as for discreet communication with the nursing staff. It is equipped with a clearly structured button panel and orientation light /reassurance lamp at the call push-button. With the 4-digit 7-segment display, the selected radio channels, TV function as well as the time (when available) is displayed. The patient handset is equipped with a speaker and a 3.5 mm jack headphone connection for radio and TV audio. Its surface is easy to clean and water-proof (IP54). The bracket on the wall or at the bedside table serves as a handset retainer. The handset is connected to the bed module via an auto-release plug.
