LITERATURE ASSESSMENT OF THE CHARLOTTE HARBOR ESTUARINE SYSTEM  
AND SURROUNDING AREA, SOUTHWEST FLORIDA

By Yvonne E. Stoker and George A. Karavitis

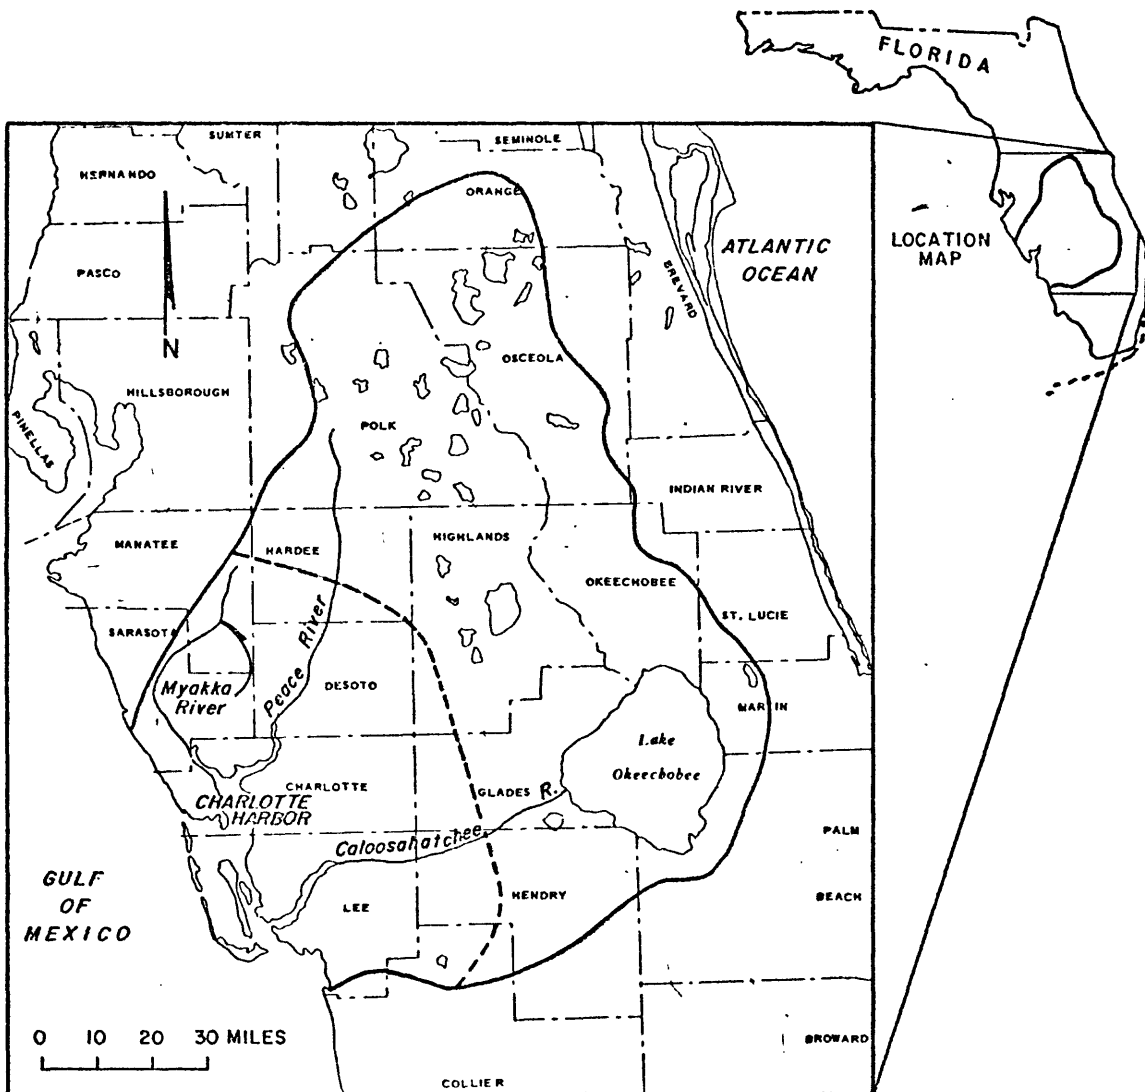

ABSTRACT

The Governor of Florida established the Charlotte Harbor Resource Planning and Management Committee to recommend the course of action Florida should take in planning for potential growth in the rapidly growing areas surrounding Charlotte Harbor. In May 1981, the U.S. Geological Survey began a planning study to determine detailed hydrologic study needs of the Charlotte Harbor area. A literature search of available data and reports pertaining to the Charlotte Harbor estuarine system and surrounding area resulted in 1,288 references. An automated bibliographic system was developed for storage, editing, and publication. This report contains all references collected during this search.

The report contains two principal sections. The first section lists the references alphabetically by author; these references are assigned sequential numbers from 1 to 1,288. The second section is an index listing 68 subjects. Listed under each subject are those references, by assigned number, that deal with that particular subject.

## INTRODUCTION

The Governor of Florida established the Charlotte Harbor Resource Planning and Management Committee for the purpose of recommending the course of action that Florida should take in planning for potential growth in the rapidly growing areas surrounding Charlotte Harbor. This committee was composed of members of local, regional, and State agencies. In June 1980, the U.S. Geological Survey, in cooperation with the Technical Advisory Committee of the Charlotte Harbor Resource Planning and Management Committee, prepared a proposal for a comprehensive environmental assessment study of the Charlotte Harbor area. In May 1981, a planning study was initiated by the U.S. Geological Survey to determine detailed hydrologic study needs of the Charlotte Harbor area. The approximate study area is shown below.

### EXPLANATION

- BOUNDARY OF TOTAL AREA CONTRIBUTING FLOW, PARTIALLY OR TOTALLY, TO CHARLOTTE HARBOR STUDY AREA
  
- APPROXIMATE BOUNDARY OF THE CHARLOTTE HARBOR STUDY

Specific water-resources problems and the objectives, approach, data collection and analysis, methodologies, personnel needs, and costs for the proposed comprehensive study of the harbor were evaluated. The results of this study were outlined in the unpublished draft report, "Plan of Study--Environmental Assessment of the Charlotte Harbor Estuarine System and Surrounding Area, Southwest Florida," by J. F. Turner and Y. E. Stoker. The committee included the proposed comprehensive study as part of their recommendations to the Governor in the fall of 1981.

Some minor changes and refinements to the study plans have been made since the comprehensive study was approved by the Governor and included in the State budget for fiscal year 1982-83. The plan of study has been a flexible tool in guiding the first year of reconnaissance data assessment and collection on Charlotte Harbor.

A literature search of available data and reports pertaining to the Charlotte Harbor area was made to assess what is currently known about the harbor and its contributing drainage basins. This bibliography, which lists 1,288 references, is the result of that effort.

Several published bibliographies were major sources of information. Bibliographies by Morris and Miller (1975) and Estevez (1981), sequence numbers 0781 and 0277, respectively, on publications pertaining to the Charlotte Harbor estuarine system and surrounding coastal areas supplied the most information and greatly aided this effort. The report by Estevez also included information on the Peace River basin. A literature assessment of the Peace River basin by the Southwest Florida Water Management District (1981), sequence number 1013, and a report "U.S. Geological Survey reports on the water-resources of Florida, 1886-1980" by Hoy, Simmons, and Claiborne (1981), U.S. Geological Survey Open-File Report 81-816, also provided literature on the contributing drainage basins into Charlotte Harbor. In addition to these sources, local, state, and regional agencies and the University of South Florida library were searched for reference material. The abstract services of the Water Resources Scientific Information Center and the University of South Florida were contacted for background reports, documents, and data. This list of references is a preliminary assessment of literature pertinent to Charlotte Harbor and its drainage system. During the course of the study, it likely will be found that all of the listed literature is not pertinent and that additional literature may be found pertinent to the study. Included in this listing are selected studies on other estuaries that may aid in determining methodologies of study and procedures of analysis for the Charlotte Harbor comprehensive study.

#### REPORT ORGANIZATION

This report contains two major sections--a bibliography, listed alphabetically by author, and a subject index, listed alphabetically by subject. The subject index lists 68 subject keywords, from air quality through wetlands. Listed under each subject category are those references, by assigned number, that deal with that particular subject.

Some reports or abstracts were not available for subject indexing. In those cases, assignment of keywords was based on the title.

Many reports were not easily classified or were not relevant to the proposed comprehensive study but pertained to Charlotte Harbor. These reports are listed under "Miscellaneous." The type of report typically found in the "Miscellaneous" category includes historic expeditions; archeology; critiques and reviews of other reports; newspaper and magazine articles; animal behavior; indexes to ainage basins, ports, springs, fish, animals, and data sites; turtle and bird-nesting sites; and bibliographies and literature reviews.

Each reference in the bibliographic section (pages 1-A to 120-A) is assigned a sequence number that corresponds to the number found in the Subject Index. To use this bibliography by subject, refer to the Subject Index (pages 1-B to 14-B) to find the sequence number of references listed under that particular subject. For example, to find a report with information on the water quality of Charlotte Harbor, consult page 3-B in the Subject Index for the list of reference sequence numbers under "Charlotte Harbor Water Quality." The first sequence number listed is 0008, which is found on page 1-A of the Bibliographic Section:

- 0008        Alberts, J., Hanke, A. R., and Harriss, R. C., 1970,  
              Studies on the Geochemistry and Hydrography of the  
              Charlotte Harbor Estuary, Florida, Progress Report  
              No. 1: Charlotte Harbor, Estuarine Studies, Mote  
              Marine Laboratory, 34 p.<sup>1/</sup>

---

<sup>1/</sup>This bibliography does not conform strictly with the format required by U.S. Geological Survey reports and should not be used by Survey authors for purposes of compiling a reference list.
