D

The Systemboard of TX/RX2560 M1, D3289, offers 24 DDR4 slots with up to 2.133MHz.

768GB DDR4 LRDIMM (12x 64GB 4R per CPU)

384GB DDR4 RDIMM (12x 32GB 2R per CPU)

The memory area is divided into 4 channels per CPU with 3 slots each

up to 2.133 MHz with 1DPC R-DIMM (depending on CPU\*)

up to 2.133 MHz with 2DPC LR-DIMM (depending on CPU\*)

up to 1.866 MHz with 2DPC (depending on CPU\*)

1.600 MHz with 3DPC

DDR4 memory is operated at 1.2V

Registered and load reduced DIMM cannot be operated together in one Server.

\* = means: some CPU types support less than 2.133MHz, please check the details in the chapter "CPU"

**S26361-F3694-E10**

Independent Memory Mode

Independent Channel Mode allows all channels to be populated in any order. All channels must run at the same interface frequency. But each channel may run at different DIMM timings (RAS latency, CAS latency, and so forth). The slowest memory module defines to bus speed.

Configuration: minimum 1 memory module per CPU, maximum 12 memory modules per CPU

**S26361-F3694-E1**

Rank sparing mode

BIOS preconfiguration for rank sparing. Spare of other ranks on the same channel. Spare Rank is not shown in System Memory.

Configuration: minimum 2x 1R/2R or 1x 4R memory modul(es) per CPU, maximum 12 memory modules per CPU

**S26361-F3694-E2**

Performance Memory Mode

BIOS preconfiguration for maximum Performance. Four identical memory modules will be equipped in each slot of each channel to achieve highest memory performance. Always a multiple of 4 identical modules must be configured per CPU. All four modules are active and full capacity can be used.

Configuration: minimum 4 memory module or 8 memory module or 12 memory modules per CPU

**S26361-F3694-E3**

Mirror Channel Mode

BIOS preconfiguration for Mirror mode. Four identical memory modules are always equipped in one memory bank to use the mirrored channel mode. Only two modules contain active data, the remain two modules contain mirrored data.

Configuration: minimum 4 memory module or 8 memory module or 12 memory modules per CPU

### Independent channel mode

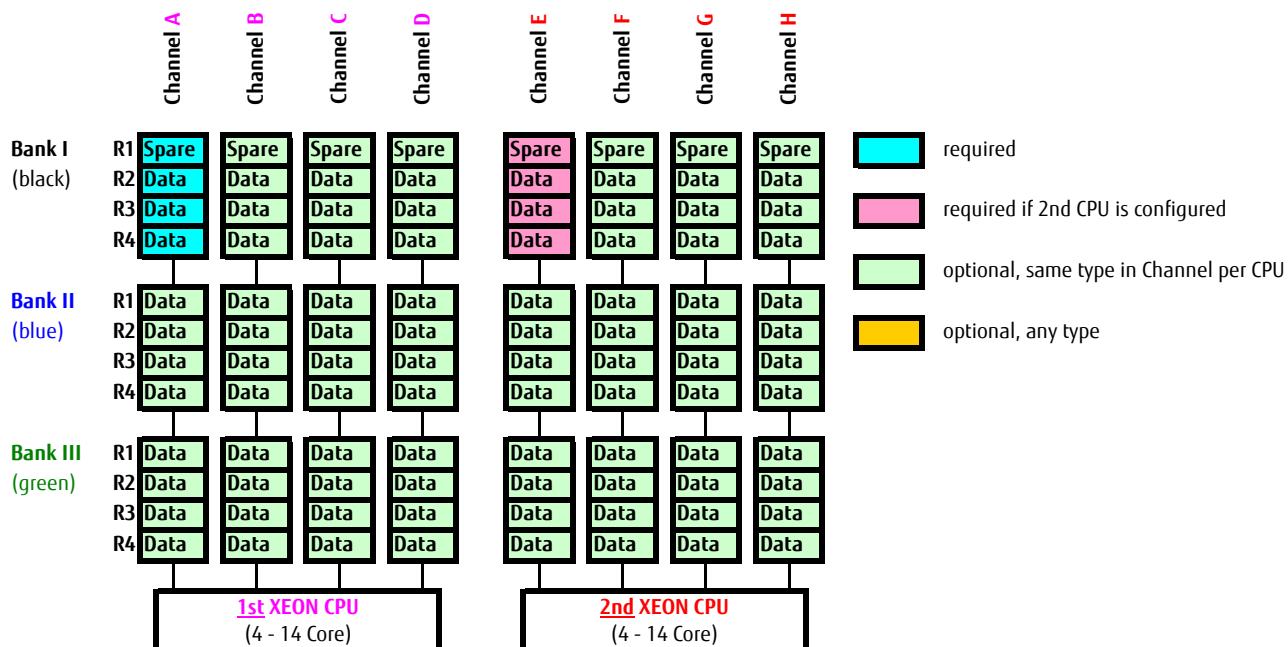

Rank sparing mode --- 1-Rank Memory modules (R-DIMM)

Rank sparing mode --- 2-Rank Memory modules (R-DIMM)

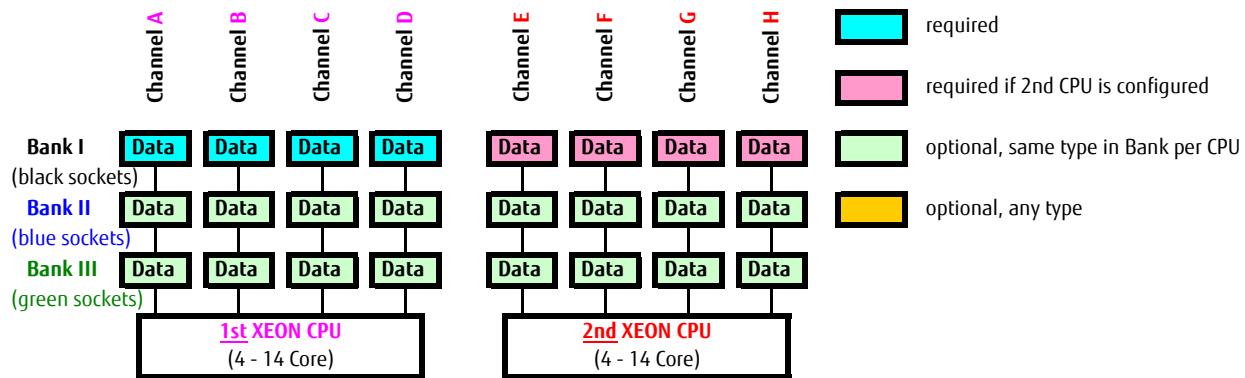

Rank sparing mode --- 4-Rank Memory modules (LR-DIMM)

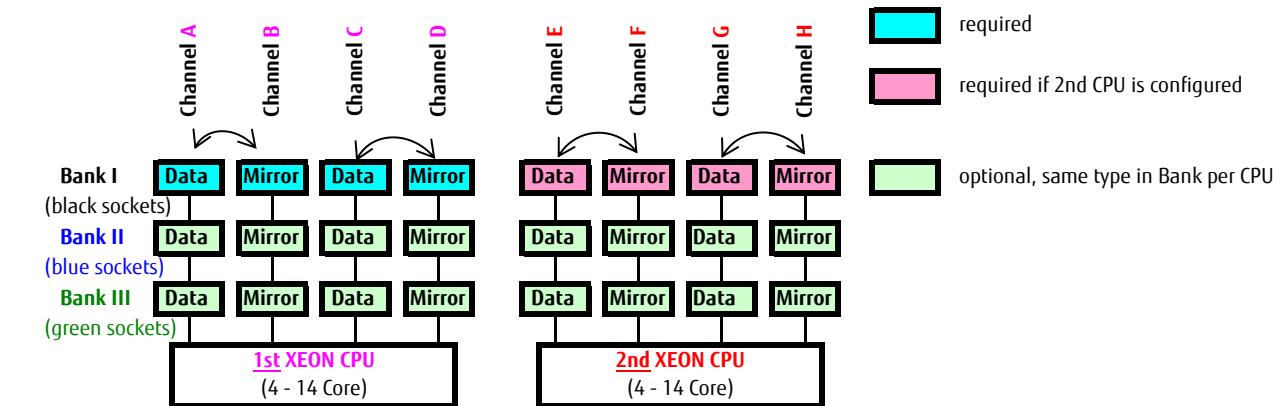

Rank Sparing Mode requires identical modules (same capacity and technology) within the same channel. The available memory for applications will vary depending on configuration. Please refer to the spreadsheet above "Effective Memory capacity with active Rank Spared Mode". Population rule for Rank sparing mode is to achieve max. available memory, e.g. 6 DIMMs will be spread across two channels, each with 3DPC

### Performance Channel Mode

### Mirror Channel Mode

Mirrored Channel Mode requires identical modules on channel A,B, C, D (1st CPU) or channel E, F, G and H (2nd CPU) 50% of the capacity is used for the mirror => the available memory for applications is only half of the installed memory. If this mode is used, a multiple of 4 identical modules has to be ordered.

## Chapter 3 - CPU

B

There are 2 processor sockets available. Please configure minimum 1 Processor, maximum 2 processors.

>> In case of Dual processor operation, processor 2 must be the same as processor 1.

>> for the processors on the left side (marked with blue headers) you may choose 1x or 2x CPUs

>> for the processors on the right side (marked with orange headers) you must choose 2x CPUs ("Dual processor only")

## Chapter 6 - HD drive cage

F

Definition:

HD drive cage = metal box providing 4 bays for 3.5" HDD or 8 bays for 2.5" HDD/SSD (see sample pictures left).

3.5"

2.5"

Please choose one of the drive cage kits of the following pages. Each kit contains all relevant parts (metal cage, SAS 3.0 backplanes, SAS 3.0 cables and mounting materials). Kits for more than 8x SAS 3.0 HDD contain a 24x or 32x SAS 3.0 Expander included as well in the kit. Kits for PCIe SSD cages contain the 4x \*4 PCIe switch and relevant cables already. The red dotted line highlights the content of each drive cage kit.

- 1) indicates the order code of the complete kit, explanation & describes the content
- 2) lists the recommended or possible RAID controllers with the related order code
- 3) describes how many drive bays for ODD / backup drives are available
- 4) lists the available upgrade kit options after purchase.

## Chapter 8 - ODD optical disk drives

With most configurations the TX / RX 2560 M1 offers 3 x 1.6" bay in the accessible drives area located at the top of the Tower Server (or at the right side of the Rack) for various ODD and or backup drives.

Depending on the HDD drive configuration there may be some or all of these 1.6" bays already occupied - please find the number of available bays and the size listed as point 3) at each of the drive bundles. All bundles with limitations are highlighted with 2 exclamation marks in the front (e.g. "!! 1x 9.5mm ...")

## Chapter 10 - storage drives

### Hard Disk Sector Format

512n HDD or HDD without sector size information: 512 byte sectors on the drive media.

512e (e=emulation) HDD: 4K physical sectors on the drive media with 512 byte logical configuration.

512e drives are not supported with the current versions of vSphere and VSAN

L

SAS drives and SATA drives can be mixed, but cannot be used in one logical RAID volume.

### 2.5" PCIe-SSD, SSD and SATADOM

2.5" PCIe-SSD's require one of the HDD cage kits with PCIe support

!2nd CPU is mandatory (PCIe switch is inserted in Slot9)
