Brand Promotion

40 Years as ASCO, future as AISIN

As one of the prominent leaders in Original Equipment automotive parts manufacturing, AISIN is over 73,000 employees strong in 140 associated global subsidiaries, and is the 4th ranked in the world by FOURIN's "Monthly Report on the World Automotive Industry". Developed using AISIN OE Manufacturing Technology, Aftermarket Merchandising announced the discontinuance of the ASCO brand, and as of 2005, the products will be marketed under the original AISIN name. New logos, packaging, and marketing signify a celebration of 40 years and commemorate a new outlook into the future.

Proactive Supplier of Value

If AISIN Aftermarket were a person, its character would be summed up in the phrase of "Proactive Supplier of Value". With a constantly autonomous and active stance, this personality is based on the essence of two important aspects: "a proactive supplier that appeals to the customer and market" and "that provides not only "things" to customers, but value that goes along with the products and service".

Brand Protection

"No Counterfeit Parts"

AISIN has been actively involved in preventing the manufacturing and sale of counterfeit products. In addition to our own efforts, AISIN is also participating with the "NO Counterfeit Parts" movement in conjunction with the Japan Auto Parts Industries Association (JAPIA).

Our goal is to eliminate counterfeit parts through individual and organized group efforts. If you have any information on the sale or production of counterfeit items, please contact your local representatives immediately or you may send us information directly using the Counterfeit Report Form.

Design of the AISIN Logo

The initial letter "A" in AISIN is the first letter of the alphabet, and it often expresses leadership and superiority. AISIN's advanced originality is expressed by the open shape of the "A," which symbolizes open mindedness.

"Quality First"

Since our very beginning, Aisin Seiki has been built on a long-standing dedication to "quality first." It's a principle that defines the organization, from product development and assurance through customer satisfaction, the environment and our sense of social responsibility and contribution.

"Don't Produce! Don't Sell! Don't Buy!"

Japan Auto Parts Industries Association (JAPIA) is providing a series of posters as part of the "No Counterfeit Parts" movement. To provide international awareness of illegal activities, posters are available in several key languages: English, French, Spanish, Chinese, and Arabic. Please contact your local sales representatives to receive posters and additional information. You may also apply directly using the Request Form.

IMPORTANT NOTICE

The purpose of this catalog is to furnish our customers with as complete a listing of parts requirements as possible.

All listings, applications or interchanges contained in this catalog are based on the latest information available at the time of printing. Every effort has been made to ensure that the information contained in this catalog is correct, but we do not assume any responsibility for errors which may occur.

All references to manufactures names or part numbers are only used as a guide when ordering parts.

Products Catalog

Clutch

AISIN's original equipment technology and know-how is used to ensuring product quality.

Cover Features

- Aisin's "Hot Seating" process stabilizes performance of the diaphragm spring.
- Diaphragm Spring Turnover (DST) type cover improves release of pressure plate.
- Higher load capacity, achieved by the latest designs enables an increase in vehicle application.

Disc Features:

- Premium quality, heat resistant and less abrasive facings ensures
- extended service life of clutch components.
- Aisin's disc spring design enhances engagement and release performance.
Floating rubber cushions or twin-hub types ensure low twisting rigidity to reduce noise, vibration and harshness.

Water Pump

AISIN, the No. 1 original equipment manufacturer of water pumps in the world, manufactures for the aftermarket to protect engines from severe heat.

Features

- Engine specific water pressure is achieved without excessive load to engine.
- Aisin's aluminum die-casting technology allows for size and weight reduction.
- Improved strength in body design and carbon ceramic mechanical seals assures leak prevention.

High precision machining process for Water Pumps

ATF

Automatic Transmission, one of Aisin's main products, has been widely used by more than 40 carmakers around the world. One out of every five A/T vehicles uses Aisin's Automatic Transmission. Aisin is the world largest A/T supplier. Amongst the makers who have capability to design and manufacture A/T as well as high quality ATF, AISIN is one of the best choice. Ever since the development of A/T, the electronic and hydraulic components have become more complicated. Therefore it is very important to service A/T regularly.

AISIN recommends car owners to change ATF every 2 years or 20000km. Without proper maintenance for the ATF, your car performance will be worsened, more fuel will be consumed and the transmission may be damaged.

AISIN supplying Automatic Transmission to the following client

- Japan
 - TOYOTA
 - Mitsubishi
 - Isuzu
 - Mazda
 - Suzuki
 - Daihatsu
- Europe
 - Volvo
 - Opel
 - Vauxhall
 - Volkswagen
 - Porsche
 - Audi
 - Peugeot Citroen
 - Ford
 - Skoda
 - BMW
 - Jaguar
- USA
 - Chrysler
 - GM

Features

- Smooth starts under the coldest conditions: Eliminates start delays at low temperatures with superior low temperature flow characteristics.
- Improved shift feel: Optimum friction properties deliver seamless gear changes without harsh shift shock.
- Responsive starts and increased performance: Optimum friction properties reduce power loss, improve responses, and ensure reliability.

Advantages of regular ATF maintenance:

Daihatsu		Ammix CVT Fluid - DC	×	○
		Gear oil *③	×	×

*①Please use only genuine CVTF when you change the fluid.

*②Do not change ATF fluid. Different fluid is used.

*③Old type CVT for Suzuki and Daihatsu do not use CVTF.

*④Do not use AISIN CVTF for multimatic and multimatic S.

*⑤Varies depending on the genuine oil and Aisin ATF.

*⑥General small AT trucks and buses are equipped with "Step AT". Use of AISIN ATF is prohibited for INOMAT, SMOTHER E/G(Mitsubishi) and PROSHIFT (HINO) because of the mechanical Clutch.

*①ATF for LT711411 is sometimes mentioned as "SYNTHETIC", but you can use GENERAL ATF.

*②In case of replenishment, mixing oil or fluid (less than 1L) can be accepted by the DEXRON Standard.

*③Do not change the fluid because this is the old standard for Ford.

*④Do not change the fluid because this is the European Standard for Ford.

*⑤Do not change the fluid because this is a clutch oil for serres speed.

*⑥The car maker states that the exchange of ATF is not necessary. As the structure of AT is complicated, please be careful if you need to change the fluid.

*⑦Number is No. MB326.7 but we recommend the ATF fluid be changed depending on the components. Not for 7AT.

■Do not change the fluid if ATF has not been chaged at all for the last 5 years, it a car was imported parallel, or if a car is old but its total driven distance is short.

Oil Pump

Engineered to exacting OE specifications, AISIN Oil Pumps deliver ideal oil pressure to the engine without creating excess load. Lubricating critical components to extend the life of the engine, AISIN Oil Pumps are always OE Matched.

Features

- Delivers ideal oil pressure to the engine without creating excess load.
- AISIN aluminum die-casting technology allows for size and weight reduction.
- Lubricates critical components to maximize the life of the engine.

Oil pump test on engine dynamometer

Timing Chain Cover

Engineered to exacting OE specifications, AISIN Timing Chain Cover, equipped with an AISIN brand Water Pump, Oil Pump and Fan Clutch, offers precise fitment, optimal cooling and lubrication. Providing protection for vital moving parts, AISIN Timing Chain Cover are always OE Matched.

Features

- Precision fitment to protect the timing chain and gears from debris.
- Module-Oriented assembly allow for easy, one step replacement of the timing chain cover, water pump, oil pump and fan clutch (when applicable).
- Optimal cooling and lubrication to exacting OE specifications.

Fan Clutch

Engineered to exacting OE specifications, AISIN Fan Clutch quickly adjusts to temperature changes to provide efficient, controlled cooling. Providing optimal cooling performance without sacrificing engine efficiency, AISIN Fan Clutches are always OE Matched.

Features

- Manufactured with the highest quality materials to withstand heat and vibration while adjusting coolant temperature for optimal engine efficiency.
- Delivers precise fan speeds in proportion to engine RPM, providing optimal cooling to exacting OE specifications.
- As a vital cooling component, the installer and user will have the peace of mind that the parts are manufactured by one of the leading Tier 1 suppliers in the world.

Fan Blade

Engineered to exacting OE specifications, our fan blade makes cars lighter in weight and higher in performance through diversity of products for drive systems, engines, and vehicle bodies.

Features

- Reduce air pressure between fan and radiator by fan rotation.
 - Cooling of radiator with air ventilation from pressure fluctuation.
-

Hydraulic Belt Tensioner

Engineered to exacting OE specifications, AISIN Hydraulic Belt Tensioners deliver ideal tension to the timing belt. Maintaining reliability by automatically adjusting belt tension, AISIN Hydraulic Timing Belt Tensioners are always OE Matched.

Features

- Utilizes hydraulic pressure to deliver optimal belt tension, automatically adjusting throughout the RPM range.
- AISIN OE Engineering developed pressurizing mechanism efficiently dampens timing belt vibrations.
- Manufactured with the highest quality materials to maximize durability.

Fan Pulley Bracket

Engineered to exacting OE specifications, AISIN Fan Pulley Brackets are built with the highest quality materials and robust design. Maintaining structure and supporting the clutch fan, AISIN Fan Pulley Brackets are always OE Matched.

Features

- Optimal geometrical design maintains structural integrity, ensuring fan clutch stability.
- Equipped with the highest quality bearings to support extreme clutch fan rotations.
- AISIN aluminum die-casting technology allows for size and weight reduction.

Hydraulics

AISIN's original equipment technology and know-how is applied to design and engineer hydraulics. Each part is manufactured vehicle specific, ensuring product quality and reliability.

Features

- Precision honing of hydraulic cylinders are monitored under OE quality control standards.
- Anodizing and "Kanizen" plating of cylinder bodies strengthens surface, ensuring smooth operation of the piston, and resists corrosion.
- Heat resistant and extended life Ethylene Propylene Rubber (EPDM) seals prevent leakage.
- Quick response design reacts to driver's clutch and brake pedal input.

All weather performance testing for vehicle Hydraulics

Concentric Slave Cylinder

- CSC has the function of clutch release cylinder and release bearing.
- Benefit of CSC clutch system
 - ① Decrease the force on pedal
 - ② Decrease stroke weight for disconnecting clutch
 - ③ Avoid degradation of quality due to friction coefficient increase
 - ④ Reducing the number of component (Merge component)

Features

- AISIN's CSC has less loss stroke in CMC compared with other products. A clutch can be controlled with weaker pedal power

Free Wheel Hub

Engineered to exacting OE specifications, AISIN Free Wheel Hubs efficiently transfers and disconnects drivetrain power to part time 4 Wheel Drive applications. Compact in design and durable against the toughest terrain, AISIN Freewheel Hubs are manufactured to the highest standards and are always OE Matched.

Features

- Compact and durable design withstands the same rugged terrain tests performed by the vehicle manufactures.
- Robust locking mechanism provides reliable connection of the drivetrain power to the wheels in 4 Wheel Drive mode.
- Large manual dial allows the user to effortlessly change from 2 Wheel Drive to 4 Wheel Drive mode.

Flywheel Damper

Engineered to exacting OE specifications, AISIN Flywheel Dampers are designed to reduce torsional vibration created by diesel or high performance engine. Sometimes they are called Dual Mass Flywheel, AISIN Flywheel Dampers are always OE matched.

Features

- AISIN OE Engineering developed, the flywheel is divided into two portions, one for the engine (primary flywheel), and the other for the transmission (secondary flywheel).
- Between them, lightweight coilsprings are laid out in-line, with both ends of each coil spring supported by sheets.

Manual Transmission

Based on AISIN's original equipment technology and experience, AISIN Manual Transmissions are designed for each vehicle. AISIN Manual Transmissions perfectly work as well as Genuine Transmissions.

Features

- Evaluated best material and process for each component. Gives best performance to vehicle power train system and extend its service life.

Height Control Sensor

Engineered to exacting OE specifications, AISIN Height Control Sensor is a vital component of the HID Automatic Light Leveling Control System.

Features

- It detects changes of pitching angle of the vehicle during driving, enables the HID system to adjust the headlight pitching angle accordingly to always aim at the targeted area.

Motor Transfer Shift Actuator

Engineered to exacting OE specifications, AISIN Motor Transfer Shift Actuator alternates High-Low mode of the Transfer and Free-Lock mode of the Center Differential.

Features

- With the build-in multiple switches, this device can detect and alternate the status of Transfer and Center Differential. It has dual motors to respectively control and alternate High-Low mode of the Transfer and Free-Lock mode of the Center Differential.

Motion Control Beam

Features

- Motion Control Beam will enhance the driving performance and conformability by installing on front/rear of a car body.
It also achieves the effect which almost is equal to the tuning of suspension and robustness, so will lead the stability during high speed driving and the easiness of driving .

Internal Structure

Mounted Sample

Door Stabilizer

Features

- It is filling the gaps in between door and body, and it reduce the delay of vehicle response during operation. It makes a quick response of the vehicle operation.

Improvement of the steer ability

Finerevo Comfort Cushion

Features

- This comfort cushion can maintain a good posture of its user. With the application Aisin Seiki's innovative resin-elastic "FINE REVO", it can offer a comfortable ride to you.

Specifications

■ Feeling of Fitting

Bony pelvis is well supported by Fine Revo, for a comfortable seating position.

■ Feeling of Stability

Aisin is one of the leading suppliers of automobile seats. With the optimal design technology of Aisin, this cushion can fit on the seat and maintain its stable position.

4 New Features

- 1 Quick Search Part Number Interchange
- 2 Catalog Download
- 3 New Topics
- 4 Product Details

1 Quick Search

Shorten application
look up time!

Look up Genuine No. to AISIN No. directly and shorten product inquiry time by accessing our online part number interchange.

2 Catalog Download

Direct access to sales
promotion tools!

Catalogs, bulletins, diagnostic manuals, and other helpful marketing items that may help in promoting AISIN products.

3 Product Detail

Expanded AISIN Aftermarket
Product Line-Up!

AISIN, known world-wide as a leader in clutch technology, has other OE Matched quality parts available. Check out our other product lines for your aftermarket needs.

4 New Topics

News from around the world!

Keep up to date with developments from AISIN affiliates across the globe. The ideal place for international information exchange for the ever expanding global market.

Oil Pump System

Operation Diagram

The oil pump is the vital component that provides the circulation of oil which cools, cleans and lubricates internal engine components. In some engines, the oil pump also provides hydraulic power to valve lifters and valve timing components. Driven by crankshaft power, the pump creates suction to draw oil from the oil pan through the strainer. The suction by the pump creates the pressure where oil is driven through the oil filter, oil cooler, internal moving parts, provide hydraulic power, then collected back into the oil pan.

Drive Systems

Various systems are utilized to transfer power from the crankshaft to the oil pump. The type of drive system influences the configuration and location of the oil pump.

Direct Crankshaft Drive

Integral Unit with W/P
(Front Module)

Chain Drive

Gear Drive
(Integral Unit with Gear Case)

Structure and Components

The basic structure of the oil pump consists of a sprocket (drive rotor) which revolves within a housing (driven rotor). The complex geometry of the rotor and the housing creates suction. Depending on the type of oil pump drive system, the rotor can receive power through a shaft that is connected to a pulley, a gear, a sprocket or directly into the crankshaft. When the rotor is revolved, oil is drawn in from the suction port and expelled into the discharge port. This process creates oil pressure to supply oil to the moving components of the engine. A relief valve is strategically configured in between the ports to prevent excessive pressure build-up and maintain optimal operating oil pressure.

Oil Pump Configuration

Chain Drive / Gear Drive

Direct Crankshaft Drive

Relief Valve Configuration

The relief valve is configured to prevent excessive oil pressure. The excess pressure along the discharge port compresses the relief valve spring to open the valve, relieving pressure by re-circulating the oil back into the suction port.

Installation Procedure

CAUTION!

Failure to follow recommended procedures may cause engine failure and injury. Always consult the manufacturer's vehicle specific service manual for reference.

1

Remove old pump, gaskets and foreign materials left on the mounting surface. Thoroughly clean with non-abrasive solvent. Confirm that the mounting surfaces are free of damage, deformation, and debris.

Damage, deformation, and debris on mounting surfaces may cause seal malfunction which will create oil leakage and lower oil pressure.

2

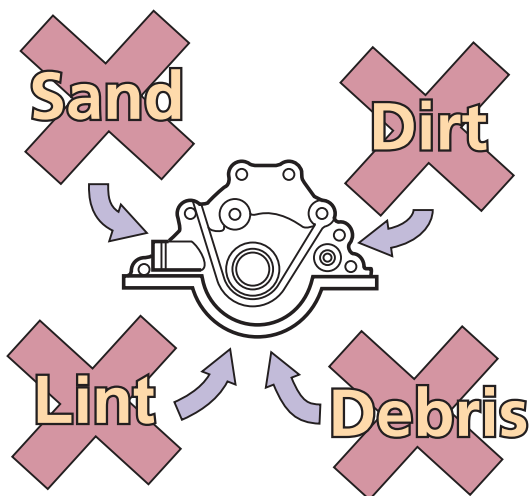

Always use engine oil to lubricate the sliding and rotating components of the oil pump when installing, disassembling, or cleaning.

Lubricating surfaces will prevent pump seizure and suction failure.

3

Ensure that there are no contaminants or debris in the pump before installation.

Contaminants and debris will cause damage to rotors. Consequently, improper valve operations and abnormal pressure may occur.

4

Check for damage, deformation, and debris along the oil seal mounting areas. Install oil seal and confirm proper seating.

Improper seating will cause oil leakage and loss of oil pressure.

CAUTION! Failure to follow recommended procedures may cause engine failure and injury. Always consult the manufacturer's vehicle specific service manual for reference.

5

Always use new O-rings and gaskets when installing an oil pump. Ensure the O-ring does not pinch between mounting surfaces during installation.

Pinched oil rings will cause oil leaks and lower oil pressure.

6

Oil pump rotors are precision components that require care in handling. Take extreme caution when inspecting and installing.

Damaged rotors will cause improper rotation and incorrect oil pressure.

7

Install the oil pump in a diagonal (star) pattern. Always follow the manufacturer's vehicle specific recommended torque tools, procedures, and specifications.

Following correct procedures prevents leakage from the mounting surface, oil pump body, and body fractures caused by over-torque.

8

After the installation of the oil pump, start and idle the engine until operating temperature has been reached. Stop the engine and check the oil level. Add oil to proper level.

Circulating the oil after replacing the pump bleeds trapped air within the engine. Adding oil to the proper level prevents engine damage and ensures optimal performance.

ATTENTION:
 - Genuine No.'s listed are part numbers for reference only.
 - Representative Genuine No.'s may include components that are NOT included with the associated AISIN No.'s.
 - AISIN No.'s listed designate part numbers for the Fan Pulley Bracket only.

Hydraulic Belt Tensioner
Fan Pulley Bracket

Clutch Master Cylinder

Function

The clutch master cylinder is a device that transforms mechanical force into hydraulic pressure. As the driver presses the clutch pedal, the pedal lever applies force to the clutch master cylinder which transmits hydraulic pressure to the clutch release (slave) cylinder that disconnects engine power to the transmission.

Structure and Components

The clutch master cylinder structure consists of the piston, cups, and springs, built within a precision machined body. The primary cup, positioned on the leading side of the body, functions to create hydraulic pressure when fluid is forced inside by the piston. Located on the trailing side is the secondary cup, which guides the piston and prevents fluid from leaking. When the clutch pedal is pressed, the primary cup is blocked away by the piston from the oil spill port leading to the reservoir tank, pressure in the cylinder rises as the fluid is fed through the pipeline. When the clutch pedal is released, the hydraulic pressure and the force of the return spring pulls back the piston to relieve fluid back into the reservoir. The clutch master cylinder is what provides the necessary force to control the application of drivetrain power.

Variations

Clutch Master Cylinder Variations

- Conventional Type
- Integrated Reservoir Type

[Conventional Type]

[Integrated Reservoir Type]

Installation Procedure

CAUTION!

Failure to follow recommended procedures may cause clutch failure and injury. Always consult the manufacturer's vehicle specific service manual for reference.

1

Do not allow dust, dirt, and debris to enter the cylinder or reservoir tank.

Internal damage may occur, resulting in fluid leakage and improper hydraulic pressure.

2

Always use vehicle manufacturer specified fluid.

Specified brake fluid Other brake fluids

Sealing can be impaired if mineral additives are mixed with fluid which can cause clutch failure.

3

Tighten bolts, nuts, and screws as specified by the manufacturer's vehicle specific manual.

Damage of screws and threads may cause improper function.

4

Adjust the clutch pedal lever according to the method specified by the manufacturer's vehicle specific manual.

Improper adjustment will cause poor clutch engagement and release.

CAUTION! Failure to follow recommended procedures may cause clutch failure and injury. Always consult the manufacturer's vehicle specific service manual for reference.

5

Handle with care. Clutch master cylinders are precision manufactured. Do not drop or deform. Never use a damaged unit.

Optimal hydraulic pressure may not be achieved due to damaged internal parts, resulting in incorrect operation and injury.

Clutch Release Cylinder

Function

The clutch release cylinder (also known as the clutch slave cylinder) is the component that transfers hydraulic pressure, achieved through the clutch master cylinder, into a mechanical force to control the clutch fork. The force from the release cylinder engages and releases engine power to the transmission.

Structure and Components

The clutch release cylinder is composed of the piston, cups, spring, and push rod, built within a precision machined body and covered with a boot. The boot provides protection from dirt, dust and debris from contaminating the push rod and piston. When the clutch pedal is pressed and the fluid pressure reaches the release cylinder, the piston moves the push rod out to apply force onto the clutch fork which releases the clutch. When the clutch pedal is released, the hydraulic pressure and the force of the return spring pulls back the push rod and sends back the fluid to the master cylinder, therefore engaging the clutch.

Installation Procedure

CAUTION!

Failure to follow recommended procedures may cause clutch failure and injury. Always consult the manufacturer's vehicle specific service manual for reference.

1

Do not allow dust, dirt, and debris to enter the cylinder or reservoir tank.

Internal damage may occur, resulting in fluid leakage and improper hydraulic pressure

2

Always use vehicle manufacturer specified fluid.

Sealing can be impaired if mineral additives are mixed with fluid which can cause clutch failure.

3

Tighten bolts, nuts, and screws as specified by the manufacturer's vehicle specific manual.

Damage of screws and threads may cause improper function.

4

Handle with care. Clutch release cylinders are precision manufactured. Do not drop or deform. Never use a damaged unit.

Optimal hydraulic pressure may not be achieved due to damaged internal parts, resulting in incorrect operation.
