

Overview

Models

HP IMC Enterprise Software Platform with 50-node E-LTU

JG748AAE

Key features

- Highly flexible and scalable deployment options
- Powerful administration control
- Rich resource management
- Detailed performance monitoring and management
- Flexible centralized reporting
- Fault, Configuration, Accounting, Performance and Security (FCAPS) capabilities within the IMC Platform
- IMC Network Traffic Analyzer software are included with IMC Enterprise software, as is the IMC eAPI Library

Product overview

IMC is a comprehensive management platform that was built from the ground up to support the Fault, Configuration, Accounting, Performance, Security (FCAPS) model. It provides features and functions that are designed for comprehensive management of the network infrastructure.

IMC was designed to provide the following functions:

- Supports the ITIL operational center of excellence IT practices model.
- Uses a single-pane management paradigm to enable end-to-end business management of IT services.
- Provides scalability by supporting distributed and hierarchical system architectures, through additional operating system and database support.
- Uses an SOA model to provide full resource, service, and user management.
- Enables the integration of traditionally separate management tools using a modular design.
- Enables enterprises to expand their infrastructure management in scale and to seamlessly accommodate new technologies at the same time.

The software is compatible with Microsoft® Windows® Server as well as Red Hat® Linux®, and supports the management of HP and third-party devices. The base license supports 50 managed devices; additional node licenses can be purchased. Five nodes of IMC Network Traffic Analyzer software are included with IMC Enterprise Software, as is the IMC eAPI Library.

Features and Benefits

Management

- **Resource management**
provides comprehensive element management for multivendor devices using a single Web portal. Operators have access to a feature set for managing and monitoring many different networking devices and can manage them individually or in a group. Operators can also add devices manually, by CSV file, or through auto-discovery. Operators can view devices by topology, IP view, device view, and custom view and see key device details.
- **Configuration and change management**
combines the tasks of network device change and configuration management to effectively manage devices and audit changes. Like the IMC Resource Management feature, the configuration center has a portal for accessing most of IMC change and configuration management features. Operators can view and deploy software to devices, access configuration templates, utilize a system software library, clean the device for new deployments, and back up the system.
- **Performance monitoring and management**

Overview

provides the ability to monitor the performance of devices managed by IMC. The performance management features provide the ability to customize the collection, alarming, and presentation of performance data. IMC enables real-time and historical performance management for managed devices such as routers and switches on data like IPSec VPNs, WSM, and QoS. Also customizable are threshold settings, performance views and data, and global monitors.

- **Virtualization management**

- HP IMC Software is one of the first management tools to integrate management and monitoring of both virtual and physical networks.
- provides insight and management of virtual networks and reduces migration complexity by aligning as well as automating network policies with virtual images
- supports VMware®, Hyper-V, and KVM; IMC Virtual Network Management Software also supports automatic tracking of the network access port of virtual machines

- **Flexible, centralized reporting**

offers administrator performance, operator performance, and resource reporting options by template. Other reports offered include real-time reports and quick custom reports. Quick custom reports also give device and link reports. Device reports give information such as IP address, status, location, hardware or software version on devices while link reports show connected to either end of a link. Reports can be customized in the interface to meet specific needs.

- **Global ACL management**

provides operators with a comprehensive feature set for managing ACLs including viewing and configuring ACLs on devices managed by IMC, and importing ACLs. An ACL manager supports basic, advanced, link, and user-defined ACLs. An ACL assistant facilitates the template rule creation and easier management. An ACL resource list provides a portal for viewing and managing ACLs with a rule set list. An ACL deployment wizard assists in the deployment of ACLs.

- **Role-based administrative controls**

provides administrators with both the tools and the ability to grant access to only those features and resources operators need. IMC also provides controls and audit trails to support IT management best practices. Management rights and access to all resources managed by IMC are granted through operator groups, device groups, and custom views of the devices. An administrator can use operator groups to grant or restrict access to a variety of IMC features.

- **Compliance center**

with network asset manager, administrators and operators can track assets as well as changes to assets. This feature provides operators with a list of asset and drilldown capabilities into individual device details or device audit details. Operators can also query IMC for specific audit records and manage the device auditing process.

- **Real-time fault management**

integrates network management system of fault, performance, auditing, security, and configuration. It also reduces the effort required to manage complex network infrastructures, allowing network managers to have one database of network devices in IMC that drives various tasks of network management. The database integrates with all IMC functions. The alarm or event management system in IMC uses the existing device database and generates alarms in an events of interest.

- **Customized functions and third-party device support**

IMC Enterprise Software extends device management and configuration functions; users can either extend an existing function to support third-party devices by compiling interactive scripts and XML files, or customize a function by compiling interactive scripts, XML files, and UI configuration files.

- **Security Control Center**

the Security Control Center (SCC) can be used to define policies and enforce device settings consistently on selected devices; you can also use policies to manage VLANs and VLAN port settings or automatically apply a configuration template on newly discovered devices; you can configure policies to send alarms when device configurations become noncompliant.

- **Network data collection**

generates, packages, and sends archived information about your network, device, or IMC Software to the appropriate HP support or sales organizations in one simple step; this feature gathers the data you selected and generates reports and data files containing the relevant information; it delivers the reports to your selected destination, either by email, FTP, SFTP, or to a file location.

- **Intuitive user interface**

includes many features enabling administrators and operators to manage the network infrastructure. The tabular navigation system is located at the top of every IMC page to provide one-click access to most of IMC features. IMC

Overview

also provides operators with many paths to the same destination. Operators are provided with quick start guides. With the "My Favorites" feature, operators can create links to the IMC features they use most often.

- **Network traffic analyzer**
informs administrator of real-time network bandwidth consumption by users. IMC Enterprise Software includes five nodes.
- **Extensible platform and module services**
IMC Software has an open platform to support a service-oriented architecture (SOA); features within the software can be integrated with third-party software, utilizing the available APIs
- **Features-based administrative controls**
supports secure operator access to IMC via LDAP or RADIUS authentication, the ability to view the online activity of IMC operators, logging operator access temporarily or permanently, IP-address access, as well as audit trails that detail changes that IMC operators have made to devices in the infrastructure.
- **eAPI library and third-party applications**
the IMC eAPI library utilizes a RESTful implementation for simplified integration with HP and third-party applications; more than 200 eAPI calls are available in the library, which is included with IMC Enterprise software.
- **High availability (Optional software)**
provides high availability for the IMC system by offering one or multiple standby IMC servers for redundancy. IMC HA can be implemented after deployment with a remote database or shared storage.

Warranty and support

- **Electronic and telephone support**
limited electronic and business-hours telephone support is available from HP for the entire warranty period; to reach our support centers, refer to www.hp.com/networking/contact-support; for details on the duration of support provided with your product purchase, refer to www.hp.com/networking/warrantysummary
- **Software releases**
to find software for your product, refer to www.hp.com/networking/support; for details on the software releases available with your product purchase, refer to www.hp.com/networking/warrantysummary

Summary of Changes

Date	Version History	Action	Description of Change:
29-Sep-2014	From Version 6 to 7	Changed	The QuickSpec was completely revised.
30-Sep-2013	From Version 5 to 6	Changed	The Product overview, Key Features, Features and Benefits, model specifications and Options were updated.
13-Jun-2013	From Version 4 to 5	Removed	License models were removed.
19-Feb-2013	From Version 3 to 4	Changed	The Product overview, Key Features, Features and Benefits, model specifications and Options were updated.
13-Feb-2012	From Version 2 to 3	Changed	The Features and Benefits, model names and Options were updated.
06-Apr-2011	From Version 1 to 2	Changed	The QuickSpec was completely revised. Please note the title has changed as well.
