Chapter 1 - base unit

Start

Power supply units & cooling

The PRIMERGY RX2530 M4 offers bays for 1x or 2x direct attached hot plug (opt. redundant) power supply units of 450W, 800W and 1200W with up to 96% efficiency. The PRIMERGY RX2530 M4 comes equipped with ultimate performance processor heat pipes and 3+1 (1CPU) or 7+1 (2 CPU) high performance single hot plug fans (3+1 or 7+1 redundant).

Server Management

iRMC S5 (integrated Remote Management Controller) on-board with dedicated (or shared) 10/100/1000 Service LAN-port and integrated graphics controller. With the integrated onboard indicators and controls you can easily highlight failed components via LEDs. The LEDs can be displayed during service even without mains connection by simply pressing the "indicate CSS" button.

Platform

Fujitsu Systemboard D3383 "made in Germany" based on Chipset Intel® C624 (Lewisburg)

> 2 serial QPI links (Quick Path Interconnect)

Chapter 4 - DDR4 System memory

C

Each CPU offers 12 Slots for DDR4 Memory Modules organised in 2 Banks and 6 Channels with 2 Memory Controllers (3 Channels each). If you need more than 12 Slots you have to configure the 2nd CPU. Depending on the amount of memory configured you can decide between 4 basic modes of operation (see explanation below).

There are 3 different kinds of DDR4 Memory Modules available: RDIMM, RDIMM 3DS (also known as TSV) and LRDIMM
Mix of these different kind of memories is not allowed.

Supported memory capacities per CPU:
384 GB DDR4 RDIMM (12x 32GB 2Rx4)
1.536 GB DDR4 RDIMM 3DS (12x 128GB 8Rx4) - **Special CPU type with a "M" at the end is required while using 128GB modules!**

Supported memory capacities per System:
768GB using RDIMM
3.072GB using RDIMM 3DS technology with 128GB per module

The memory speed is independent from the configuration (1DPC or 2DPC) but restricted by the CPU SKU (max. 2.666 MT/s).
DDR4 memory is operated at 1.2V

S26361-F3694-E10	Independent Mode Installation
Independent Channel Mode allows all channels to be populated in any order. No specific Memory RAS features are defined	
Requires minimum 1 memory Module per CPU	
S26361-F3694-E11	Rank Sparing Mode Installation
BIOS Setup factory preinstalled to this mode. One Rank is spare of other ranks on the same channel. Spare Rank is not shown in System Memory. For effective capacity within a channel, please have a look below.	
Requires minimum 2x 1R/2R or 1x 4R/8R modules per CPU	
S26361-F3694-E12	Performance Mode Installation
BIOS Setup factory preinstalled for maximum Performance, six identical memory modules will be equipped in one memory bank to achieve highest memory performance. All six modules are active and full capacity can be used. Multiple of 6 identical modules to be configured per CPU	
S26361-F3694-E13	Mirrored Channel Mode Installation
BIOS preconfiguration for Mirror mode. Two or three identical memory modules are always equipped at one memory controller to use the mirrored channel mode. Half of the modules contain active data, the remaining modules contain mirrored data. See details below. Multiple of 6 identical modules to be configured per CPU	

Resulting memory capacity / Rank Sparing Mode, 1 Channel populated

	RDIMM					RDIMM 3DS				LRDIMM		
	16GB	1R	16GB	2R	32GB	2R	64GB	4R	128GB	8R	64GB	4R
1DPC			8GB		16GB		32GB		64GB		64GB	
2DPC			16GB		24GB		48GB		96GB		192GB	

Apparently 3DS-DIMMs don't behave like 4Rx4 modules but as 2Rx4; same situation for 8Rx4 organized modules (=> 2Rx4). Result is, that in rank-sparing mode the memory loss is half of one module capacity. This is shown in table above.

Independent channel mode**Rank sparing mode --- 1-Rank Memory modules (RDIMM)**

Rank sparing mode --- 2-Rank Memory modules (RDIMM)**Rank sparing mode --- 4-Rank Memory modules (RDIMM 3DS)**

Rank Sparring Mode requires identical modules (same capacity and technology) within the same channel. The available memory for applications will vary depending on configuration. Please refer to the spreadsheet above "Effective Memory capacity with active Rank Sparring Mode". Population rule for Rank sparing mode is to achieve max. available memory, e.g. 4 DIMMs will be spread across two channels, each with 2DPC

Performance Channel Mode

Mirror Channel Mode (2 DIMMs per CPU)

Mirrored Channel Mode (2 DIMMs per CPU) requires identical modules on channel A & B (1st CPU) or channel G & H (2nd CPU) 50% of the capacity is used for the mirror => the available memory for applications is only half of the installed memory. If this mode is used, a multiple of 2 identical modules has to be ordered.

Mirror Channel Mode (3 DIMMs per CPU)

Mirrored Channel Mode (3 DIMMs per CPU) requires identical modules on channel A, B & C (1st CPU) or channel G, H & J (2nd CPU) 50% of the capacity is used for the mirror => the available memory for applications is only half of the installed memory. If this mode is used, a multiple of 3 identical modules has to be ordered.

Mirror Channel Mode (4 DIMMs per CPU)

Mirrored Channel Mode (4 DIMMs per CPU) requires identical modules on channel A, B, D & E (1st CPU) or channel G, H, K & L (2nd CPU) 50% of the capacity is used for the mirror => the available memory for applications is only half of the installed memory. If this mode is used, a multiple of 4 identical modules has to be ordered.

Mirror Channel Mode (6 DIMMs per CPU)

Mirrored Channel Mode requires identical modules on channel A, B, C, D, E, F (1st CPU) or channel G, H, J, K, L and M (2nd CPU) 50% of the capacity is used for the mirror => the available memory for applications is only half of the installed memory. If this mode is used, a multiple of 6 identical modules has to be ordered.

Chapter 10 - storage drives

SAS drives and SATA drives can be mixed, but cannot be used in one logical RAID volume.

SATA drives can be connected to the onboard Controller (max. 8x).

SAS drives require a dedicated SAS / RAID Controller

Hard Disk Sector Format:

S128 (logical) = 512 byte sectors on the drive media.

S128 (enumeration) = 4K physical sectors on the drive media with 512 byte logical configuration.

S128 HDD Disk Drives: VMware 6.0 or earlier is not supported.

When using SSDs with VMware ESXi, select the SSDs that meet the endurance requirement described in KB2145210 below.

<https://kb.vmware.com/kb/2145210>

DWPD: Drive Writes Per Day over 5 years.

SED (=Self Encryption Drives) require either a RAID controller with *SafeStore (SED) support or an HBA and

in addition a software instance, supporting SED Key Management.

It is strongly recommended to order SafeStore (SED) RAID controller with SED HDD or SSD devices for SafeStore (SED) functionality.

HDD Classifications:

Business-Critical (BC) = SATA=Nearline SATA Enterprise Drives / 7.2kRpm, SATA 6G.

Business-Critical (BC) = SAS=Nearline SAS Enterprise Drives / 7.2kRpm, SAS 12G.

Mission-Critical (MC)=SAS 10K and SAS 15K Enterprise Drives with max. performance and reliability.

Warranty:

SSD and SATA DOM have a built-in Wear-Out indicator. In this case the warranty for such a component, as an exception to the system warranty, is restricted to the time period until the indicator reaches the exhaust level.

PDUAL AP200 is a carrier card for 2x M.2 SATA modules, which is connected to the controller PSAS P40400 and offers RAID1 with 2x M.2 modules.

PDUAL AP200 + 2x M.2 modules + PSAS P40400 is designed for use as a hardware-mirrored (RAID1) boot device for Hypervisor,

which cannot be supported by M.2 via the onboard chipset Software RAID.

Supported RAID level - RAID1 only. Supported M.2 Modules : SSD SATA M.2 240GB (S26361-F5706-E240/L240 or S26361-F5707-E240/L240 for
