

Split Systems

Cooling Units - 7½ - 20 Tons (60 Hz)
Air Handlers - 5-20 Tons (60 Hz)
Cooling Coils - 10 Tons

Split System Cooling Condenser units designed with your needs in mind...

The Trane reputation for quality and reliability in air conditioning is apparent with Odyssey™ light commercial split systems. These Trane systems are designed to meet your job requirements every time...and at a competitive price.

Odyssey has Trane quality and reliability built-in; couple that with outstanding efficiency, flexibility and installation ease and you have an unbeatable combination for years of worry-free service and operation.

Manufacturing Control

Trane's exclusive control over the design and manufacturing of all major components is unique in the industry. This approach assures us total control over both the quality and reliability of these components. And allows us to custom match components to deliver the best in split system performance.

Designing the Details

Careful attention was given to designing the details — from control wiring to the access panels. Odyssey units feature time-saving colored and numbered wiring and removable panels which allow complete access to all major components and controls. All outdoor units feature external high and low pressure switches for easy diagnosing and servicing of the unit. Service valves with gauge ports are provided on all units.

Introduction

Standardized Cabinets

In addition, all cabinets have been standardized. When you are servicing an outdoor unit or an air handler, all components are in the same location from unit to unit.

Filters

The 5, 7½ and 10 ton air handlers are supplied with 1" throwaway filters as standard. The filter racks were designed to easily convert for installation of 2" filters. The 15 and 20 ton air handlers have 2" filters as standard.

UL Listed and ARI Certified

Trane meets or exceeds all nationally recognized agency safety and design standards. Each condensing unit is UL designed, approved and labeled in accordance to UL Standards: UL 1995 for central cooling air conditioners, refrigeration and air conditioning condensing and compressor units. Each air handler is designed, approved and labeled in accordance to UL 465 and UL 1995 standard for heat pumps. Each unit is certified in accordance with ARI Standard 340/360 or 365.

Features and Benefits

Condensing Units Options

The Odyssey split system product line includes condensing units in single, unloading and dual compressor options.

The 7½ and 10-ton single compressor models feature single refrigeration circuitry lowering job installation costs by requiring only one set of refrigerant lines. These units are ideal for the low cost, new construction job as well as renovation and replacement buildings.

Equally important, Odyssey offers a single refrigerant circuit/capacity unloading option in 10, 15 and 20-ton condensing units. These unloading units feature dual manifolded scroll compressors. They offer an excellent opportunity for both new construction and replacement jobs with two stages of capacity modulation and a single refrigeration circuit.

In addition, Odyssey includes a 10, 12½, 15 and 20-ton dual scroll compressor unit to give true standby protection; if one compressor fails, the second will automatically start-up. Also, the first compressor can be serviced without shutting down the unit since refrigerant circuits are independent. Dual compressors are not just for protection, they also save energy costs. Most buildings are designed

for the peak load requirements yet the building usually operates at less than peak load. During light load conditions only one compressor functions to maintain the space comfort thus reducing the need for energy. For instance, the EER of the 10-ton unit at ARI conditions is 10.3 and at part load conditions it is 11.2.

Trane split systems have been specified in thousands of applications and you'll find Odyssey will win you even more jobs with its smaller, more manageable cabinet. This lighter, compact design will save time and money for rigging and installation. And the compactness will permit Trane's unit to replace almost any unit — effortlessly.

Low Ambient Cooling Operation

Each cooling unit can operate to 50° F as standard. An accessory Head Pressure Control gives you the capability to operate to 0° F. All condensing units offer these accessories:

- Head Pressure Control
- Coil Guard Kits
- Isolators both Rubber-in-Shear and Spring Type
- Anti-Short-Cycle Kit
- Time Delay Relay
- Black Epoxy Coated Coil

Air Handlers Offer More Flexibility

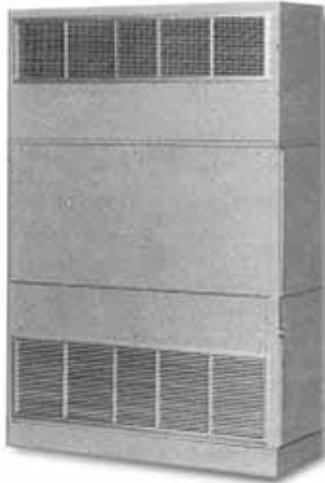

Flexibility is a key to meeting changing market requirements. Odyssey split systems offer not only heat pumps but also convertible air handlers. The air handlers can be installed either vertically in a mechanical room or horizontally above a ceiling. And it doesn't require any removal of panels to make either airflow application work. These air handlers have a double sloped condensate drain pan that allows for either airflow configuration. And the drain pan can easily be removed for cleaning. All the air handlers feature factory installed belt drive and ball bearing evaporator fans with adjustable sheaves for maximum airflow performance. In fact, the standard motor on the 10-ton air handler will deliver 4000 cfm at 1.4" ESP. Plus oversized motors are available for higher static applications.

Features and Benefits

Odyssey air handler versatility is further increased by a complete line of accessories designed to match and install smoothly:

- Discharge Plenum and Grille
- Return Grille
- Subbase
- Electric Heaters
- High Static Evaporator Motor
- Isolators both Rubber-in-Shear and Spring Type
- A Full Line of Thermostats
- Outdoor Thermostat

Odyssey — A Complete Split System

Odyssey delivers the flexibility to select a complete system that meets your particular job requirements. Air handlers are designed, tested, and rated with outdoor units to let you select the proper match between capacity and load. Heat pumps can also be matched with these same air handlers. Also, these matched systems can be quickly engineered for specific applications using Trane's computerized selection and load programs.

Odyssey Lowers Installation Costs

Your installation costs are reduced with Odyssey. Both outdoor units and air handlers are factory packaged and assembled so jobsite installation is quick and easy. You get a complete unit with all the components, controls and the internal wiring factory ready for a smooth jobsite start-up.

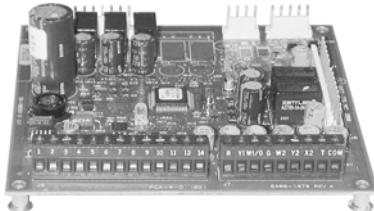

Unlike some competitive models the following components are factory-installed in Trane air handlers:

- Single Point Power Entry
- Blower wheel and housing
- Evaporator motor with sheaves and pulleys
- Low Voltage Terminal Board Transformer
- Contactor
- Fan relay
- DX Coil with complete refrigeration circuitry
- Expansion Valve and Check Valves

There's no need to install components and put together the air handler on the job. This provides you with less labor cost and fewer chances for installation errors which cause callbacks. All this means saving you money both in replacement and new construction applications.

Features and Benefits

Micro Controls

Several years ago, Trane was the first to introduce microprocessor controls into the Light Commercial Market. That design, along with immeasurable experience, has provided the technology for Trane's ReliaTel™ microprocessor controls in Odyssey split unit systems — the first in the industry.

ReliaTel™ Controls:

- Provides unit control for heating and cooling, by utilizing input from sensors that measure indoor temperature.
- Improves quality and reliability through the use of time-tested microprocessor controls and logic.
- Prevents the unit from short cycling, considerably improving compressor life.
- Ensures that the compressor will run for a specific amount of time, which allows oil to return for better lubrication, enhancing the reliability of the compressor.
- Reduces the number of components required to operate the unit, thereby reducing possibilities for component failure.

- Eliminates the need for field-installed components with its built-in anti-short-cycle timer, time delay relay and minimum "on" time controls. These controls are factory tested to ensure proper operation.
- Requires no special tools to run the unit through its paces during testing. Simply place a jumper between Test 1 and Test 2 terminals on the Low Voltage Terminal Board and the unit will walk through its operational steps. The unit automatically returns control to the zone sensor after stepping through the test mode a single time, even if the jumper is left on the unit.
- As long as the unit has power and the LED is lit, ReliaTel™ is operational and functioning properly.
- Features expanded diagnostic capabilities when used with Trane's Integrated Comfort™ Systems.
- As an energy benefit, softens electrical "spikes" by staging on fans, compressors and heaters.
- The Intelligent Fallback or Adaptive Control is a benefit to the building occupant. If a component goes astray, the unit will continue to operate at predetermined temperature set points.
- Intelligent Anticipation is a standard feature of ReliaTel™. Functioning constantly, ReliaTel™ and zone sensors work together in harmony to provide tight comfort control.

Electromechanical Controls

For the simpler job that does not require a building automation system, or expanded diagnostics capabilities, the unit offers electromechanical controls. This 24-volt control includes the control transformer with contactor pressure lugs for power wiring.

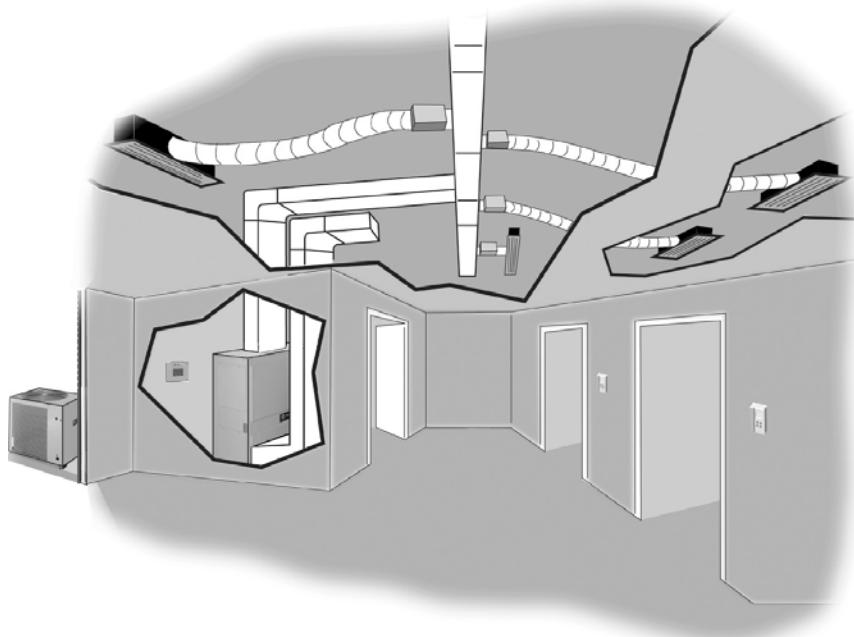

Quality and Reliability Testing

- All units were rigorously rain tested at the factory to ensure water integrity.
- Actual shipping tests were performed to determine packaging requirements. Units were test shipped around the country to determine the best packaging.
- Factory shake and drop tests were used as part of the package design process to help ensure that the unit arrives at the job site in top condition.
- Rigging tests include lifting a unit into the air and letting it drop one foot, ensuring that the lifting lugs and rails hold up under stress.
- We perform a 100% coil leak test at the factory. The evaporator and condenser coils are leak tested at 375 psig and pressure tested to 660 psig.
- All parts are inspected at the point of final assembly. Sub-standard parts are identified and rejected immediately.
- Every unit receives a 100% unit run test before leaving the production line to make sure it lives up to rigorous Trane requirements.

We test designs at our factory not on our customers!

VariTrac

When American Standard's changeover VAV System for light commercial applications is coupled with split unit systems, it provides the latest in technological advances for comfort management systems and can allow thermostat control in every zone served by VariTrac.

Application Considerations

Application of this product should be within the catalogued airflow and performance considerations.

Clearance Requirements

The recommended clearances identified with unit dimensions should be maintained to assure adequate serviceability, maximum capacity and peak operating efficiency. Actual clearances which appear inadequate should be reviewed with the local Trane Representative.

180° Blower Rotation

The 5, 7½, and 10 ton air handler blower section can be rotated 180° to change the discharge pattern. This modification must be done in the field and requires an additional kit. See unit installer's guide.

Low Ambient Cooling

As manufactured, these units can operate to 50° F in the cooling mode of operation. An accessory head pressure control will allow operation to 0° F outdoor ambient. When using these units with control systems such as bypass changeover Variable Air Volume, make sure you consider the requirement for a head pressure control to allow low ambient cooling.

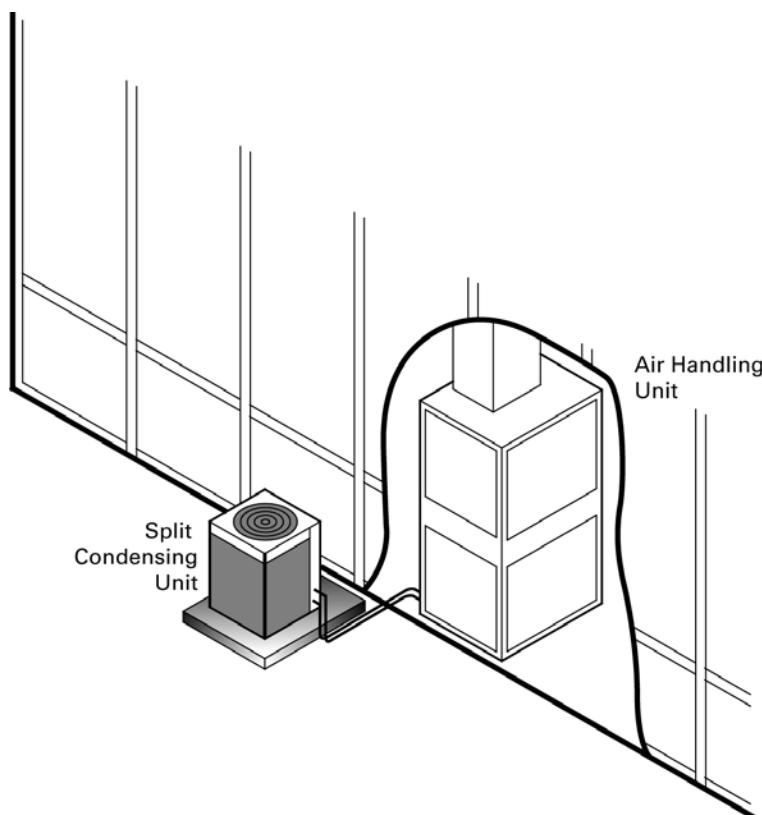

Figure 2. Typical Split System Application

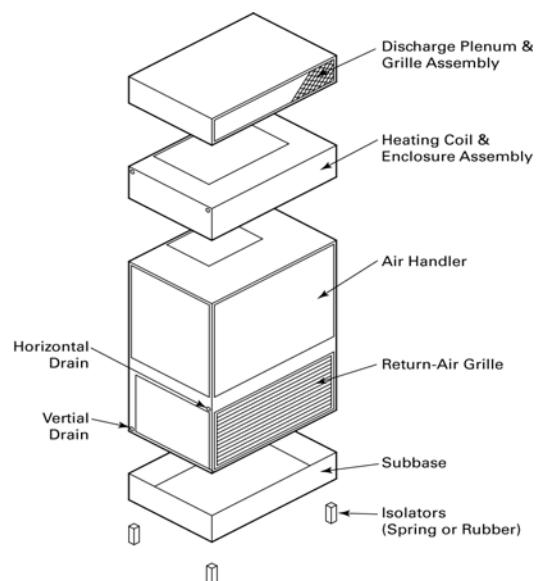

Figure 3. Typical Vertical Air Handler Application

Selection Procedure

Cooling Capacity

1. Calculate the building's total and sensible cooling loads at design conditions. Use the Trane calculation form or any other standard accepted method.
2. Size the equipment using [Table 4 - Table 16](#). Match the cooling loads at design conditions.

Example: The following are the building cooling requirements:

1. Electrical Characteristics:
460/60/3
2. Summer Design Conditions:
Entering Evaporator Coil:
80° F DB/67° F WB
Outdoor Ambient: 95° F
3. Total Cooling Load: 88MBh
4. Sensible Cooling Load: 64 MBh
5. Airflow: 3000 cfm
External Static Pressure:
0.77 inches of water gauge

[Table 4](#) shows that TTA090A4 with TWE090A has a gross cooling capacity of 92.0 MBh and 65.5 MBh sensible capacity at 95° F DB ambient and 3000 cfm with 80° F DB/67° F WB air entering the evaporator.

To find the net cooling capacities, fan motor heat must be subtracted.
Determine the total unit static pressure:

External Static: 0.77 in.
Standard Filter: 0.10 in.
Supplementary Electric Heat:
0.23 in.
Total Static Pressure 1.10 in.

Note: *The Evaporator Fan Performance Table has included the effect of a 1 in. filter already. Therefore, the actual Total Static Pressure is 1.10 - 0.10 = 1.00 in. With 3000 cfm and 1.00 inches, [Table 30](#) shows 1.17 Bhp.*

Note: *The formula below the table can be used to calculate Fan Motor Heat:*
 $3.5 \times \text{Bhp} = \text{MBh}$
 $3.5 \times 1.17 = 4.09 \text{ MBh}$
Net Total Cooling Capacity =
 $92.0 \text{ MBh} - 4.09 = 87.91 \text{ MBh}$
Net Sensible Cooling Capacity =
 $65.5 \text{ MBh} - 4.09 = 61.41 \text{ MBh}$

Heating Capacity

1. Calculate the building heating load using the Trane calculation form or any other standard accepted method.
2. Size the system heating capacity to match the calculated building heating load. The following are building heating requirements:
 - a. Total Heating Load: 97.0 MBh
 - b. 3000 cfm
 - c. Electric Supplementary Heaters

From [Table 45](#), the 34.88 Kw heater has a capacity of 119,045 Btuh. From [Table 54](#), the 34.88 Kw at 460v indicates the heater model number is BAYHTRL435A. This heater will adequately cover the building's heating requirement.

Air Delivery Selection

External static pressure drop through the air distribution system has been calculated to be 0.77 inches of water gauge. From [Table 44](#) static pressure drop through the electric heater is 0.23 inches of water (0.77 + 0.23 = 1.00 in.). Enter [Table 30](#) for TWE090A4 at 3000 cfm and 1.00 static pressure. The standard motor at 821 RPM will give the desired airflow.

(i) TWE60A1 has motor RPM of 3450 for oversized motor.

(ii) Ships wired for 208-230/60/3. Field convertible to 460/60/3.

(iii) TWE120A1 does not have an oversized motor option.

(iv) TWE120B1 does not have an oversized motor option.

(v) Coil has filter rack as standard, but no filters. When using this coil as a duct coil, use below size recommended. Filters for coil not recommended when using coil with upflow gas furnaces.

Notes:

1. Equal MBH and SHC values constitute dry coil condition. Total Gross Cooling Capacity (MBh) shown to the left is not applicable. In this case the Sensible Heat Capacity (SHC) is the total capacity.
2. All capacities shown are gross and have not considered indoor fan heat.
3. To obtain net cooling capacities, subtract indoor fan heat.
4. MBH = Total Gross Cooling Capacity
5. SHC = Sensible Heat Capacity

Notes:

1. Equal MBH and SHC values constitute dry coil condition. Total Gross Cooling Capacity (MBh) shown to the left is not applicable. In this case the Sensible Heat Capacity (SHC) is the total capacity.
2. All capacities shown are gross and have not considered indoor fan heat.
3. To obtain net cooling capacities, subtract indoor fan heat.
4. MBH = Total Gross Cooling Capacity
5. SHC = Sensible Heat Capacity

Notes:

1. Equal MBH and SHC values constitute dry coil condition. Total Gross Cooling Capacity (MBh) shown to the left is not applicable. In this case the Sensible Heat Capacity (SHC) is the total capacity.
2. All capacities shown are gross and have not considered indoor fan heat.
3. To obtain net cooling capacities, subtract indoor fan heat.
4. MBH = Total Gross Cooling Capacity
5. SHC = Sensible Heat Capacity

1 HP Oversized Motor and Sheaves																								

Notes:

1. Data includes pressure drop due to wet coil and 1" filter.
2. Fan motor heat (MBh) = 3.15 x BHP.
3. Trane's factory supplied motors, in commercial equipment, are definite purpose motors, specifically designed and tested to operate reliably and continuously at all cataloged conditions. Using the full horsepower range of our fan motors as shown in our tabular data will not result in nuisance tripping or premature motor failure. Our product's warranty will not be affected.

Notes:

1. Data includes pressure drop due to wet coil and 1" filter.
2. Fan motor heat (MBh) = 3.15 x BHP.
3. Trane's factory supplied motors, in commercial equipment, are definite purpose motors, specifically designed and tested to operate reliably and continuously at all cataloged conditions. Using the full horsepower range of our fan motors as shown in our tabular data will not result in nuisance tripping or premature motor failure. Our product's warranty will not be affected.

(i) Return air filter ESP included in Fan Performance Table data.

(ii) At louver opening angle of 42 degrees. For ESP at other angle openings, see accessory Installer's Guide.

Controls

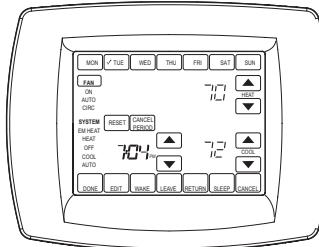

Digital Display Programmable Thermostat (2H/2C)

Two Heat/Two Cool digital display thermostat. 7-day programmable stat with night setback shall be available.

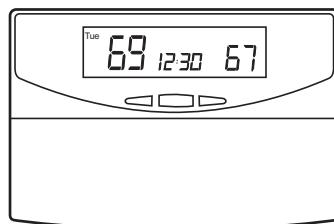

Touchscreen Programmable Thermostat (2H/2C)

Two Heat/Two Cool programmable thermostat with touch screen digital display. Menu-driven programming. Effortless set-up. Program each day separately with no need to copy multiple days. All programming can be done on one screen. Easy to read and use. Large, clear backlit digital display

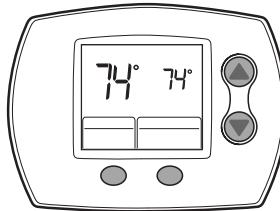

Digital Display Programmable Thermostat with Built-In Relative Humidity Sensing (3H/2C)

Three Heat/Two Cool digital display thermostat with built-in humidity control and display. This thermostat combines both humidity and dry bulb into one. Fully programmable with night setback.

Digital Display Thermostat (3H/2C)

Three Heat, Two Cool digital display thermostat. Easy access battery replacement. Flip-out door for easy battery replacement without removing or disassembling the thermostat.

RA Remote Sensor

Return Air Remote Sensor which can be mounted in the return air duct to report return air temperature.

Room Remote Sensor

Space Remote Sensor which can be mounted on the wall to report/control from a remote location in the space.

Outdoor Thermostat

Outdoor thermostat which can be mounted outdoors to turn on the units electric heater at a pre-selected outdoor temperature.

(i) kW ratings are at: 208/240V for 208-230V air handlers.

480V for 460V air handlers

600V for 575V air handlers

For other than rated voltage, capacity = (Voltage/Rated Voltage)² x Rated Capacity.

(ii) Any power supply and circuits must be wired and protected in accordance with local codes.

(iii) The HACR circuit breaker is for U.S.A. installations only.

(iv) Field wire must be rated at least 75 C.

(v) Field wire must be rated at least 90 C.

(vi) With motor field converted to 460V.

(i) kW ratings are at: 208/240V for 208-230V air handlers.

480V for 460V air handlers

600V for 575V air handlers

For other than rated voltage, capacity = (Voltage/Rated Voltage)² x Rated Capacity.

(ii) Any power supply and circuits must be wired and protected in accordance with local codes.

(iii) The HACR circuit breaker is for U.S.A. installations only.

(iv) Field wire must be rated at least 90 C.

Jobsite Connections

Wiring shown with dashed lines is to be furnished and installed by the customer. All customer-supplied wiring must be copper only and must conform to NEC and local electrical codes. Codes may require line of sight between disconnect switch and unit.

Note:

1. When electric heater accessory is used, single point power entry or dual point power entry is field optional. Single point power entry option is through electric heater only.

TTA060/TWE060A

Field Wiring:

1. 3 power wires. Line voltage for 3 phase; 2 wires for single phase.
2. 3 power wires. Line voltage for 3 phase; 2 wires for single phase
3. Cooling only thermostat: 3 wires, 24 volts.
 - a. One Stage Electric heat: add 1 additional wire, 24 volts.
 - b. Two Stage Electric heat: add 2 additional wires, 24 volts.
4. 2 wires, 24 volts.

Typical Wiring

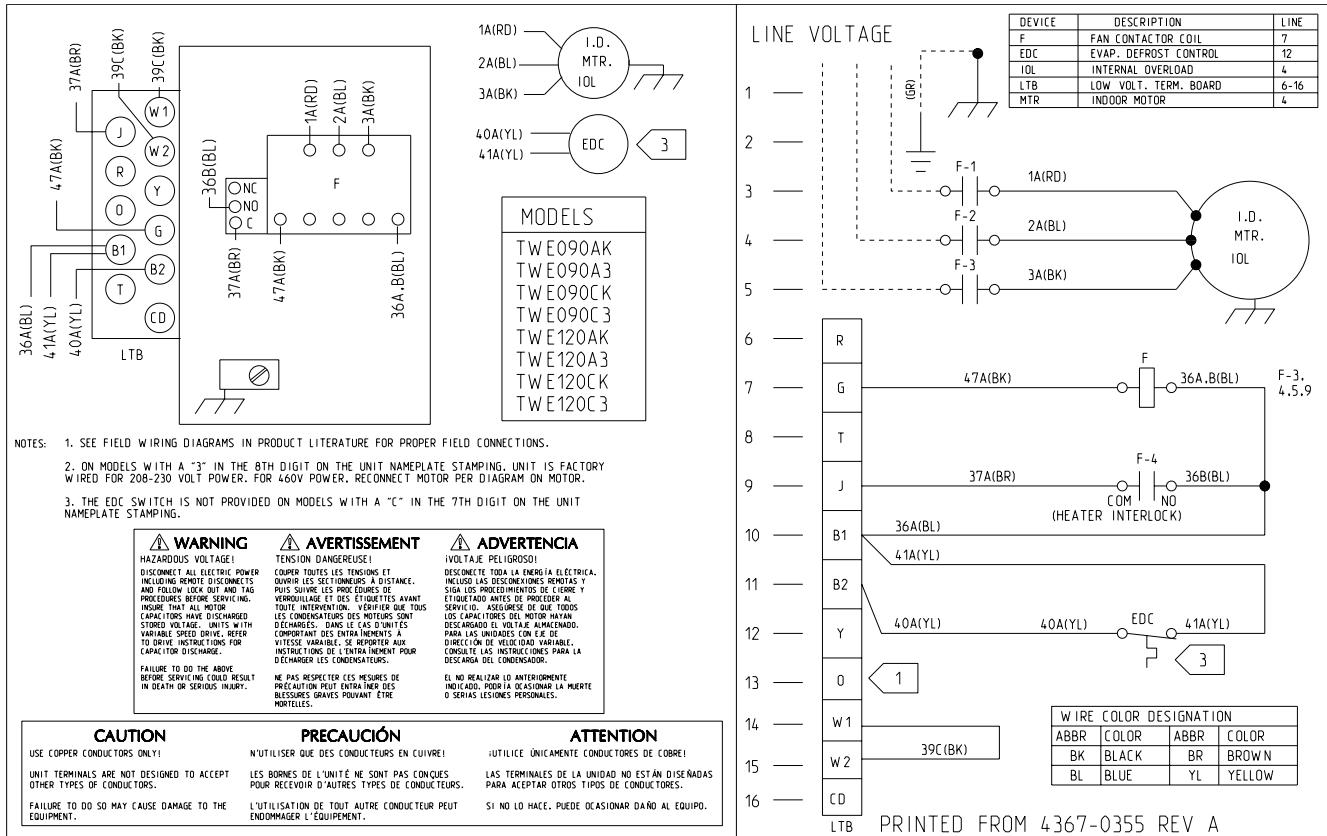

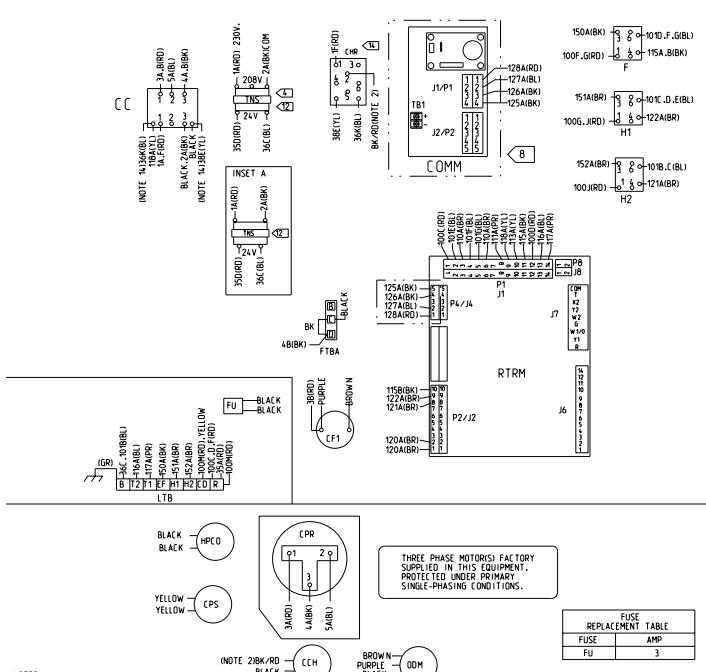

Figure 17. Air Handler: Typical unit wiring diagram. For specific wiring, see individual Service Facts.

TRANE®

Typical Wiring

- NOTES:**
- LOW VOLTAGE WIRING MUST BE 18 AWG MINIMUM.
 - ON ALL NOTE 2 REFERENCES, LEAD COLOR TO BE BK/YW ON TTA09043 MODEL, BK/BR ON TTA090/200W MODELS, AND BK/RD ON ALL OTHER MODELS.
 - SEE HEATER ACCESSORY DIAGRAM FOR DETAILS OF HEATER WIRING.
 - CONNECTIONS SHOWN ARE FOR 230V/60 HZ/3 PH. WHEN 208V/60 HZ/3 PH OPERATION IS REQUIRED, CUT THE TAIRD1 WIRE AT UNIT TRANSFORMER AND RECONNECT TO 208V TRANSFORMER TERMINAL.
 - IF EVAPORATOR DEFROST CONTROL (EDC) IS USED IN INDOOR UNIT, REMOVE JUMPER WIRE ON CONDENSER LOW VOLTAGE BOARD BETWEEN TERMINALS "A" AND "C".
 - HIGH PRESSURE COMPRESSOR PROTECTION SWITCH (CPS) OR THE HIGH PRESSURE CUT-OUT SWITCH (HPCD).
 - ON MODELS WITH RTRM BOARDS, INSTALLER MUST MOVE EDC WIRES 1 IF AIR HANDLER HAS AN EVAPORATOR DEFROST CONTROL FROM AIR HANDLER LOW VOLTAGE TERMINAL CONNECTIONS "B" AND "B1" TO "CD" AND "CD1".
 - ALL COMPRESSIONS WITH PHANTOM LINES AROUND PERIMETER ARE FIELD INSTALLED ACCESSORIES EXCEPT FOR COMMUNICATION INTERFACE BOARD/COMM. AND CRANKCASE HEATER RELAY (CHR) WHICH MAY BE FACTORY INSTALLED ON SOME MODELS.
 - IF ANY HEATER IS USED, IT MUST BE A HEATER WITH A WIRE OF THE SAME GAUGE RATED AT 600 VOLTS AND 105°C.
 - CUT WIRE 120A TO ENABLE ELECTRIC HEAT.
 - CUT WIRE 120A FOR TWO STAGES OF ELECTRIC HEAT.
 - CONNECTIONS FOR THE 230V/60HZ/3 PH UNIT ARE SHOWN FOR 400V, 460V, AND 575V MODELS. SEE TRANSFORMER CONNECTIONS IN INSERT "A" AND "B".
 - UNIT MODELS WITH A "P", "T", "U" OR "W" IN THE 10TH DIGIT SEE UNIT NUMBER FOR THE CORRECT WIRE COLOR. SEE PRODUCT LITERATURE FOR EXPLANATION OF 10TH DIGIT MODEL DESIGNATOR.
 - THE CRANKCASE HEATER RELAY (CHR) IS USED ONLY TTA2044, TTA20AW AND TTA200W MODELS. ON ALL OTHER MODELS, MODEL TABLES, THE BK/RD/NOTE 2, CRANKCASE HEATER RELAY IS NOT LISTED.
 - MATERIALS LISTED IN THIS MANUAL ARE FOR USE IN THE U.S.A. AND CANADA ONLY.
 - MAXIMUM EXTERNAL LOW VOLTAGE LOAD 1.8 AMPS 24 V.A.C. DOES NOT INCLUDE ACCESSORIES, BUT DOES INCLUDE INDOOR BLOWER RELAY.
 - INSTALL OPTIONAL REMOTE SENSOR TO TERMINALS S1 AND S2 WHEN REQUIRED. SEE PROGRESSIVE ZONE SENSOR / REMOTE PANEL LITERATURE FOR OPTION CONFIGURATION.

DEVICE	DESCRIPTION	LINe
CC	COMPRESSOR CONTACTOR	11-14
CEH	CRANKCASE HEATER	16
CF-1	OUTDOOR FAN CAPACITOR	15
CHE	HEAT EXCHANGER RELAY	19-20
CN	CONNECTOR OR WIRE NUT	
COMM	COMMUNICATION INTERFACE MODULE	59-64

RTRM	RELAY/TRANSISTOR MODULE	41-70
TNSA	CONTROL POWER TRANSFORMER	23

CAUTION

USE COPPER CONDUCTORS ONLY!

UNIT TERMINALS ARE NOT DESIGNED TO ACCEPT OTHER TYPES OF CONDUCTORS.

FAILURE TO DO SO MAY CAUSE DAMAGE TO THE EQUIPMENT.

ATTENTION

N'UTILISER QUE DES CONDUCTEURS EN CUIVRE !

LES BORNES DE L'UNITÉ NE SONT PAS CONÇUES POUR RECEVOIR D'AUTRES TYPES DE CONDUCTEURS.

L'UTILISATION DE TOUT AUTRE CONDUCTEUR PEUT ENDOMMAGER L'ÉQUIPEMENT.

PRECAUCIÓN

¡UTILICE ÚNICAMENTE CONDUCTORES DE COBRE!

LAS TERMINALES DE LA UNIDAD NO ESTÁN DISEÑADAS PARA ACEPTAR OTROS TIPOS DE CONDUCTORES.

SI NO LO HACE, PUEDE OCASIONAR DAÑO AL EQUIPO.

WIRE COLOR DESIGNATION	ABBR. COLOR	ABBR. COLOR
BK	BLACK	PURPLE

BR	BROWN	WHITE
GR	GREEN	YL
DR	ORANGE	YELLOW

WARNING

HAZARDOUS VOLTAGE!

DISCONNECT ALL ELECTRICAL POWER INCLUDING REMOTE DISCONNECTS, FOLLOW LOCK OUT AND TAG PROCEDURE BEFORE SERVICING. INDUCE MOTORS. CAPACITORS HAVE DISCHARGED STORED VOLTAGE. UNITS WITH VARIABLE SPEED DRIVE, REFER TO DRIVE INSTRUCTIONS FOR CAPACITOR DISCHARGE.

FAILURE TO DO THE ABOVE BEFORE SERVICING COULD RESULT IN DEATH OR SERIOUS INJURY.

AVERTISSEMENT

TENSION DANGEREUSE!

COUPER TOUTES LES TENSIONS ET OUVRIRE LES SECTIONNEURS À DISTANCE, PUIS SUIVRE LES PROCÉDURES DE VERROUILLAGE ET DÉVERROUILLAGE AVANT TOUTE INTÉVENTION. ASPIREURS ET TOUS LES CONDENSATEURS DES MOTEURS SONT DÉCHARGÉS. DANS LE CAS D'UNITÉS COMPORTANT DES ENTRAÎNEMENTS À VITESSE VARIABLE, SE REPORTEZ AUX INSTRUCTIONS D'ENTRAÎNEMENT POUR DÉCHARGER LES CONDENSATEURS.

NE PAS RESPECTER CES MESURES DE PRÉCAUTION PEUT ENTRAINER DES BLESSURES GRAVES POUVANT ÊTRE MORTELLES.

ADVERTENCIA

¡VOLTAJE PELIGROSO!

DESCONECTE TODA LA ENERGÍA ELÉCTRICA, INCLUSO LAS DESCONEXIONES REMOTAS Y SIGA LOS PROCEDIMIENTOS DE CIERRE Y ETIQUETADO PARA EL SERVICIO. ASPIREURS DE TOUTES LOS CAPACITORES DEL MOTOR HAYAN DESCARGADO EL VOLTAJE ALMACENADO. PARA LAS UNIDADES CON EJE DE DIRECCIÓN DE VELOCIDAD VARIABLE, CONSULTE LAS INSTRUCCIONES PARA LA DESCARGA DEL CONDENSADOR.

EL NO REALIZAR LO ANTERIORMENTE INDICADO, PODRÍA OCASIONAR LA MUERTE O SERIAS LESIONES PERSONALES.

NOTES:

- LOW VOLTAGE WIRING MUST BE 18 AWG MINIMUM.
- MAXIMUM EXTERNAL LOW VOLTAGE LOAD 1.8 AMPS 24 V.A.C. DOES NOT INCLUDE ACCESSORIES, BUT DOES INCLUDE INDOOR BLOWER RELAY.
- SEE HEATER ACCESSORY DIAGRAM FOR DETAILS OF HEATER WIRING.
- CONNECTIONS SHOWN ARE FOR 230V/60 Hz/3 PH. WHEN 208V/60 Hz/3 PH OPERATION IS REQUIRED, REMOVE "E(RD)" WIRE AT UNIT TRANSFORMER AND RECONNECT TO 208V TRANSFORMER TERMINAL.
- IF EVAPORATOR DEFROST CONTROL (EDC) IS USED IN INDOOR UNIT, REMOVE JUMPER WIRE ON CONDENSER LOW VOLTAGE BOARD BETWEEN TERMINALS "R" AND "CD".
- DO NOT JUMPER COMPRESSOR PROTECTION SWITCH (CPS) OR THE HIGH PRESSURE CUT-OUT SWITCH (HPCD).
- ON MODELS WITH RTRM BOARDS, INSTALLER MUST MOVE EDC WIRES (IF AIR HANDLER HAS AN EVAPORATOR DEFROST CONTROL) FROM AIR HANDLER LOW VOLTAGE TERMINAL CONNECTIONS "B2" AND "B1" TO "R" AND "CD".
- ALL ACCESSORIES WITH PHANTOM LINES AROUND PERIMETER ARE FIELD INSTALLED ACCESSORIES EXCEPT FOR COMMUNICATION INTERFACE BOARD/COMM WHICH MAY BE FACTORY INSTALLED ON SOME MODELS.
- IF ANY OF THE ORIGINAL WIRE, AS SUPPLIED WITH THIS UNIT, MUST BE REPLACED, REPLACE WITH WIRING OF THE SAME GAUGE RATED AT 600 VOLTS AND 105°C.
- CUT WIRE 120A TO ENABLE ELECTRIC HEAT.
- CUT WIRE 110A TO CONFIGURE FOR TWO STAGES OF ELECTRIC HEAT.
- CONNECTIONS FOR THE 230V/60Hz/3 PH UNIT ARE SHOWN. FOR 400V.. 460V.. AND 575V. MODELS, SEE TRANSFORMER CONNECTIONS IN INSERT "A" AND "B".
- AT ALL NOTE 13 REFERENCES, LEAD COLOR IS BK/BR ON TTAA180/240BW MODELS, BK/YL ON TTAA1803 MODELS, AND BK/BR ON ALL OTHER MODELS.
- UNIT MODELS WITH A "P", "T", "U" OR "W" IN THE 10TH DIGIT(S) UNIT NAMEPLATE ALL USE A RELIANCE MODULE (RTRM). SEE PRODUCT LITERATURE FOR EXPLANATION OF 10TH DIGIT MODEL DESIGNATOR.
- INSTALL OPTIONAL REMOTE SENSOR / SENSOR TO TERMINALS S1 AND S2 WHEN REQUIRED. SEE PROGRAMMABLE ZONE SENSOR / REMOTE PANEL W/NSA LITERATURE FOR OPTION CONFIGURATION.

WARNING

HAZARDOUS VOLTAGE!
DISCONNECT ALL ELECTRIC POWER
INCLUDING REMOTE DISCONNECTS
AND FOLLOW LOCK OUT AND TAG
PROCEDURES BEFORE SERVICING.
INSURE THAT ALL MOTOR
CAPACITORS HAVE DISCHARGED
STORED VOLTAGE. UNITS WITH
VARIABLE SPEED DRIVE, REFER
TO DRIVE INSTRUCTIONS FOR

(i) For use with Hydronic Heat.

(ii) For use when no heat is supplied.

(iii) For use with electric heat.

Mechanical Specifications

General

Units shall be assembled on sturdy steel mounting/lifting rails and shall be weather proofed. Units shall include hermetic scroll compressors, plate fin condenser coils, fans and motors, controls and holding charge of nitrogen. Operating range shall be between 115°F and 50°F in cooling as standard from the factory. Units shall be UL 1995 listed, certified and rated in accordance with ARI Standard 340/360 or 365.

Casing

Unit casing shall be constructed of zinc coated heavy gauge, galvanized steel. Exterior surfaces shall be finished with a weather-resistant baked enamel finish. Units surface shall be tested 500 hours in salt spray test. Units shall have removable end panels which allow access to all major components and controls.

Refrigeration System – Single Compressor

TTA090A, TTA120A units shall have a single refrigeration circuit. Each refrigeration circuit has an integral subcooling circuit. A refrigeration filter drier shall be provided as standard. The TTA090A, TTA120A units shall have both a liquid line and suction gas line service valve with gauge port.

TTA090A, TTA120A units shall have one direct-drive hermetic scroll compressor with centrifugal oil pump providing positive lubrication to moving parts. Motor shall be suction gas-cooled and shall have a voltage utilization range of plus or minus 10 percent of unit nameplate voltage.

Crankcase heater, internal temperature and current-sensitive motor overloads shall be included for maximum protection. Scroll type compressor shall provide inherently low vibration and noise by having no suction and discharge valves. External high and low pressure cutout devices shall be provided. Evaporator defrost control provided in indoor blower coil shall prevent

compressor slugging by temporarily interrupting compressor operation when low evaporator coil temperatures are encountered.

Refrigeration System – Dual Compressor

TTA120B, TTA150B, TTA180B, TTA240B units shall have two separate and independent refrigeration circuits. Each refrigeration circuit shall have an integral subcooling circuit. A refrigeration filter drier shall be provided as standard. Units shall have both a liquid line and suction gas line service valve with gauge port.

TTA120B, TTA150B, TTA180B, and TTA240B units shall have two Trane direct-drive hermetic scroll compressors with centrifugal oil pump and provide positive lubrication to all moving parts. Motor shall be suction gas-cooled and shall have a voltage utilization range of plus or minus 10 percent of nameplate voltage. Crankcase heater, internal temperature and current-sensitive motor overloads shall be included for maximum protection.

Scroll compressor shall provide inherently low vibration and noise by having no suction and discharge valves. External high and low pressure cutout devices shall be provided. Evaporator defrost control provided in indoor blower coil shall prevent compressor slugging by temporarily interrupting compressor operation when low evaporator coil temperatures are encountered.

Refrigeration System — Dual Manifolded Compressors

TTA 120C, TTA180C and TTA240F units shall have a single refrigeration circuit with an integral subcooling circuit. A refrigeration filter drier shall be provided as standard. Units shall have both a liquid line and suction gas line service valve with gauge port.

The units shall have two scroll compressors manifolded together. Motor shall be suction gas-cooled

and shall have a voltage utilization range of plus or minus 10 percent of nameplate voltage. Crankcase heater, internal temperature and current-sensitive motor overloads shall be included for maximum protection. Scroll type compressor shall provide inherently low vibration and noise by having no suction and discharge valves. External high and low pressure cutout devices shall be provided. Evaporator defrost control provided in the indoor blower coil shall prevent compressor slugging by temporarily interrupting compressor operation when low evaporator coil temperatures are encountered.

Condenser Coil

Coils shall be internally enhanced 3/8 inch copper tubes mechanically bonded to configured aluminum plate fins. Coils shall be factory pressure and leak tested to 660 psig. Metal grilles with PVC coating for coil protection are optional.

Condenser Fan And Motor(s)

Direct-drive, statically and dynamically balanced 26 or 28 inch propeller fan(s) shall be used in draw-through vertical discharge position. Either permanently lubricated totally enclosed or open construction motors shall be provided and shall have built in current and thermal overload protection. Motor(s) shall be either ball or sleeve bearing type.

Controls

Condensing units shall be completely factory wired with necessary controls and contactor pressure lugs or terminal block for power wiring. Unit shall provide an external location for mounting a fused disconnect device.

A choice of microprocessor or electro-mechanical controls shall be available. The 24-volt electro-mechanical control circuit shall include control transformer and contactor pressure lugs for power wiring. Units shall have single point power entry as standard.

Mechanical Specifications

Condensing Units

The microprocessor controls shall provide for all 24-volt control functions. The resident control algorithms shall make all heating, cooling and/or ventilating decisions in response to electronic signals from sensors measuring indoor and outdoor temperatures. The control algorithm maintains accurate temperature control, minimizes drift from set point, and provides better building comfort. A centralized microprocessor shall provide anti-short cycle timing and time delay between compressors to provide a higher level of machine protection.

Time delay timers shall be provided to help prevent compressors in dual compressor units from simultaneous start-up. An anti-short cycle timer shall be available as an optional accessory.

Zone Sensor

This field-installed control shall be provided to interface with the Micro equipped units and shall be available in either manual, automatic programmable with night setback, with system malfunction lights, or remote sensor options.

Thermostat

Two stage heating and cooling operation or one stage heating and cooling shall be available for field installation in either manual or automatic changeover. Automatic programmable electronic with night setback shall also be available.

LonTalk® Communication Interface

This factory- or field-installed option shall be provided to allow the unit to communicate as a Tracer™ LCI-R device or directly with generic LonTalk Network Building Automation System Controls.

Low Ambient Operation

Standard units shall start and operate to approximately 50°F when matched with air handlers and coils. Optional head pressure control accessory permits operation to 0°F.

FACTORY INSTALLED ACCESSORIES

Black Epoxy Coated Condenser Coil — The black epoxy coils have a thermoset vinyl coating that is bonded to the aluminum fin stock prior to the fin-stamping process. The pre-coated coils are an economical option for protection in mildly corrosive environments.

ACCESSORIES

Low Ambient Head Pressure Control — Shall control unit outdoor fan motor in response to outdoor ambient temperature and discharge line pressure or liquid temperature. Accessory provides unit cooling operation to outdoor temperatures of 0°F.

Vibration Isolation Packages — Shall reduce transmission of noise and vibration to building structures, equipment and adjacent spaces. Packages shall be available in either neoprene-in-shear or spring-flex types.

Hot Gas Bypass Kit — Shall be available to provide capacity modulation.

Time Delay Relay — Shall prevent compressors in dual compressor unit from coming online simultaneously. Timer shall be 24-volt, 60 cycle, with four minute timing period.

Anti-Short-Cycle Timer — Shall prevent rapid on-off compressor cycling in light load conditions by not allowing compressor to operate for 5-7 minutes upon shutdown. Shall consist of a solid state timing device, 24-volt, 60 cycle with either 5 or 7 minute fixed-off timing period.

Condenser Coil Guard — Metal grille with PVC coating shall be provided to alleviate coil damage.

Mechanical Specifications

Air Handlers

General

Air handler units shall be completely factory assembled including coil, condensate drain pan, fan motor(s), filters and controls in an insulated casing that can be applied in either vertical or horizontal configuration. Units shall be rated and tested in accordance with ARI standard 210/240, 340/360. Units shall be UL listed and labeled in accordance with UL 465/1995 for indoor blower coil units.

Casing

Unit casing shall be constructed of zinc coated, heavy gauge, galvanized steel. Exterior surfaces shall be finished with a weather-resistant baked enamel finish. Casing shall be completely insulated with cleanable, foil faced, fire-retardant, permanent, odorless glass fiber material. All insulation edges shall be either captured or sealed. Knockouts shall be provided for unit electrical power and refrigerant piping connections. Captive screws shall be standard on all access panels.

Refrigeration System

The TWE060A, TWE090A, TWE120A units shall have a single refrigeration circuit and the TWE060B, TWE090B, TWE120B, TWE180B, TWE240B, TWE240E units shall have dual refrigeration circuits. Each refrigeration circuit is controlled by a factory-installed thermal expansion valve.

Evaporator Coil

Configured aluminum fin surface shall be mechanically bonded to 3/8" internally enhanced copper tubing and factory pressure and leak tested at 660 psig. Coil is arranged for draw-through airflow and shall provide a double sloped condensate drain pan constructed of PVC plastic. The drain pan shall be removable for cleaning. The condensate drain pan can be installed in any of four positions allowing for vertical or horizontal application and providing external connections on either side of the unit.

Evaporator Fan

Double inlet, double width, forward curved, centrifugal-type fan(s) with adjustable belt drive shall be standard. Thermal overload protection shall be standard on motor. Fan and motor bearings shall be permanently lubricated. Oversized motors shall be available as an option for high static application. All indoor fan motors meet the U.S. Energy Policy Act of 1992 (EPACT).

Controls

Magnetic evaporator fan contactor, low voltage terminal strip, check valve(s), and single point power entry shall be included. All necessary controls shall be factory installed and wired. Evaporator defrost control shall be included to prevent compressor slugging by temporarily interrupting compressor operation when low evaporator coil temperatures are encountered.

Filters

One inch, throw-away filters shall be standard on TWE060A, TWE060B, TWE090A, TWE090B, TWE120A AND TWE120B model air handlers. Filters shall be accessible from the side coil access panel. Filter rack can be field converted to two inch capability. Two inch, throw-away filters shall be standard on TWE180B, TWE240B and TWE240E models.

ACCESSORIES

Hydronic Heat Coils

One row steam and two row hot water coils shall be available for mounting on the discharge outlet of the air handler. Coils shall be shipped completely factory assembled within a heavy gauge sheet metal casing, finished with enamel to match the blower coil unit. Coils shall be applied in either vertical or horizontal airflow configurations.

Electric Heaters

UL and CSA approved electric heat modules shall be available for installation directly on fan discharge. Electric Heaters shall be available in a

wide range of capacities with one or two stage control, single-point electric power connection and terminal strip connections. Electric heater elements shall be constructed of heavy duty nickel chromium elements internally wye connected on 480/600 volt, three phase and delta connected on 208/240 volt, three phase. Each 208/240 volt heater shall have pilot duty with secondary backup fuse links for automatic reset of high limit controls. Each 480/600 volt heater shall have automatic line break high limit controls.

Evaporator Coils

Shall be completely factory assembled including the expansion valves and drain pans. The TXE120B coil shall be dual refrigerant circuits. Unit casing shall be constructed of zinc coated, heavy gauge, galvanized steel. Exterior surfaces shall be finished with an enamel finish. Casing shall be completely insulated with foil faced, fire-retardant, permanent, odorless glass fiber material. The coils shall be convertible to either vertical and/or horizontal airflow configuration. Aluminum fin surface shall be mechanically bonded to 3/8" OD copper tubing. Coils shall be factory pressure and leak tested.

Mechanical Specifications

Air Handlers

Discharge Plenums and Grilles

Accessory discharge plenums shall be available for vertical, free discharge applications. Plenums shall be constructed of heavy-gauge, zinc coated galvanized steel finished with baked enamel to match the air handler unit. Grilles shall be satin finished aluminum and have four-way adjustable louvers.

Return Air Grilles

Accessory return air grille shall be provided for vertical front, free return applications. Grilles shall be installed in place of the front lower side panel. Grille shall be satin finished aluminum with non-adjustable louvers.

Mounting Subbase

Available for vertical floor mount configurations. Subbase shall be constructed of heavy gauge, zinc coated galvanized steel with baked enamel finish to match air handler unit. Subbase is required in the vertical air flow application for condensate drain trapping and when isolators are required.

Vibration Isolators

Shall reduce transmission of noise and vibration to building structures, equipment and adjacent spaces. Packages shall be available in either neoprene-in shear or spring-flex types in floor or suspended mountings.

Oversized Motors

Field installed oversized motors shall be available for high static pressure applications.

CONTROL OPTIONS

Standard Indoor Thermostats

Two stage heating and cooling operation or one stage heating and cooling thermostats shall be available in either manual or automatic changeover.

Programmable Electronic Night Setback Thermostat

Shall provide heating setback and cooling setup with 7-day programming capability.
