Allied Telesis have been serving the needs of the network communications industry for over 30 years. Although the technology we design and build has evolved significantly over time, our hard-earned reputation for standards-based performance, product reliability and value has remained a constant, highly respected value to our customers and partners around the globe.

Our solutions-based philosophy of producing products that deliver value to our customers, together with high-quality service and support, has resulted in a very extensive worldwide customer base.

Allied Telesis continuously enhances its products. As a result, this catalog may not correctly represent all products currently available. Products may also vary by geographic region. Product specifications can change without notice, and while Allied Telesis makes every effort to ensure the accuracy of information presented in this catalog, the Company does not accept liability for errors or changes in the stated specifications.

For current product availability by region, full and complete product specifications and warranty information, please contact your regional sales manager or visit **alliedtelesis**.com.

Environmental Policy

As a major industry developer and manufacturer of networking equipment, Allied Telesis is committed to providing our customers with products designed and built to the highest quality, while minimizing the impact to the environment during both manufacturing and product operation.

Our Philosophy
Allied Telesis recognizes the importance of protecting the global environment and promoting conservation of biodiversity. We creatively utilize technology for sustainable social progress and for protecting the environment. Allied Telesis is committed to passing down a healthy global environment to the next generation.

NETWORK SMARTER

Smart Network Management

Administering a network is no easy feat.

Rapid troubleshooting and the ability to monitor network performance is critical. Allied Telesis offers software tools to help visualize and plan for network growth, while maintaining the health and performance of your network. Allied Telesis understands that enterprise customers want simplicity, security and automation. Customers are well-placed to enjoy a variety of network automation tools that make networking easy. Our powerful network management solutions deliver many benefits at an affordable price.

Intent-Based Networking (IBN) promises to deliver more agile networks that are easier to manage, as administrators move away from esoteric device-specific command lines, and instead use natural language or a graphical interface to express their intent. Device and network configuration are then automatically updated to meet the expected outcomes in performance and application operation.

Supporting the move to IBN, centralized management and network automation tools remove the need for constant administrative input, and the network becomes self-managing and self-healing, resulting in an improved online experience for users, and greatly reduced management time and effort.

Powerful network automation and management

Allied Telesis have developed tools for autonomous networking for several years. Our Autonomous Management Framework™ (AMF) and Autonomous Wave Controller™ (AWC) automate and optimize wired and wireless networks, saving time and cost by reducing the amount of manual administration effort required for network operation.

Vista Manager EX is our single-pane-of-glass graphical management dashboard for central control or AMF and AWC networks. These tools accomplish the day-to-day heavy lifting of running a network, using powerful built-in automation to free up skilled network administrators for more useful tasks. The integration of AMF Security, and addition of a Software-Defined WAN dashboard continue to add further centralized management capabilities to Vista Manager EX, making it a one-stop solution for monitoring and managing your entire network infrastructure.

Allied Telesis continue to innovate in making network management both natural and easy, meeting business intent.

AMF

AUTONOMOUS MANAGEMENT FRAMEWORK

AMF is an intelligent and scalable network management platform. It supports Allied Telesis switching, firewall, and wireless products, as well as a wide range of third-party devices—including video surveillance cameras and IP phones—for truly inclusive network automation. Reducing network running costs by automating and simplifying many day-to-day tasks, AMF allows skilled staff to be better utilized.

Save time and reduce costs by up to 60% with AMF

CENTRALIZED MANAGEMENT
Manage the entire network as a single virtual device.
AUTO-BACKUP
Automatically backup the entire network daily for peace-of-mind networking.

AUTO-UPGRADE
Upgrade the network with a single command.

AUTO-PROVISIONING AND AUTO-RECOVERY
Plug-and-Play additions or replacements.

### Business Value Through Automation

AMF delivers immediate value to businesses of all sizes, with centralized network management able to treat a network of any size as a single, converged entity. This reduces cost and complexity by delivering:
▶ **Centralized management** of many or all devices right across the network—locally or world-wide.

▶ **Network automation**, with zero-touch or one-touch backup, provisioning, upgrade, and recovery.

▶ **Network intelligence** reacts to changes in the network and automatically changes the topology.

▶ **Smart commands** allow network problems to be quickly identified and issues resolved.

AMF saves time and money!

Simplify Your Network

Software Defined Networking (SDN) is moving networking towards the ideal combination of optimal network utilization and centralized management. An integral part of the Allied Telesis SDN solution, AMF delivers powerful management capabilities that are easy to use, and reduce the time and skill required to maintain the network. Configuration and firmware files are regularly backed up, network expansion is automated, and device recovery is fully zero-touch.

AMF Security

AMF-Sec™

ENHANCE NETWORK SECURITY AND REDUCE ADMINISTRATION EFFORTS

AMF Security (AMF-Sec) is a state-of-the-art network management and security solution. It provides what enterprises consistently tell us they need: reduced network management costs, increased security and an improved end-user experience. Our award-winning innovative SDN solution works with security applications to instantly respond to alerts and block the movement of threats anywhere within your wired or wireless network.

▶ Automatic security threat isolation and remediation
▶ Blocks any offending wired or wireless user device
▶ Open and flexible SDN solution

Block Threats at the Source

Most IPS solutions are only capable of blocking suspicious traffic as it passes through the IPS device. Since this tends to be near the gateway to the Internet, only external threats can be detected and blocked—this is the traditional "secure border" model. However, AMF-Sec can isolate traffic anywhere in the network, so it can prevent threats not only on the border, but threats inside the network too, such as those introduced inadvertently by staff with USB sticks, BYOD and so on.

1. Targeted attack inside the network! Threat information sent upline
2. Firewall sends threat notification
3. AMF-Sec instructs switch to shut down threat source
4. Infected device sent to quarantine

WILDFIRE Service

Palo Alto Networks Next-Generation Firewall (or other compatible firewall)

Allied Telesis AMF-Sec Controller

Business Application Integration

The AMF-Sec controller includes powerful northbound APIs that collect real-time data from business applications. AMF-Sec analyzes this data to decide if network configurations need to be altered to reflect new business rules. For example, when new employees join the company, their details are entered into the HR system. AMF-Sec detects this, and automatically instructs the network to grant the new users the appropriate level of network access.

1. New employee added to HR system
2. AMF-Sec retrieves business data and sets up network policy
3. New employee is granted appropriate access

Network Edge - Wired & Wireless
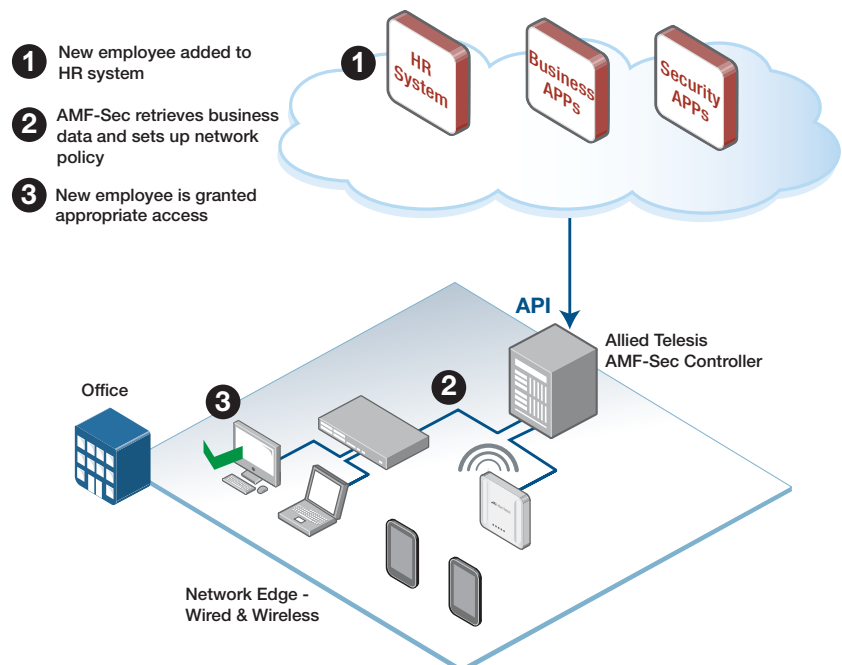

AT-**VISTA** Manager EX

POWERFUL NETWORK MONITORING AND MANAGEMENT

Vista Manager EX is the intelligent way to monitor and manage your Autonomous Management Framework (AMF) network, as well as your wireless APs using Autonomous Wave Control (AWC) technology. Single-pane-of-glass visibility enables pro-active management.

Enjoy complete network monitoring from the dashboard— including network details, status, event information and a topology map, where critical issues are highlighted for timely resolution. Intuitive access to powerful features like service and performance monitoring, control of wired and wireless devices, and automation tools, makes networking easy right across your LAN and WAN.

VISTA MANAGER EX

▶ Intuitive single-pane-of-glass interface

▶ Centralized network and device management

▶ Manage Allied Telesis switches, firewalls, wireless APs, as well as third-party devices

▶ Automatically created topology maps

▶ Real-time traffic, protocol, and service monitoring

▶ Simplified VLAN creation and management

▶ Integrated security alerts from the AMF Security controller

▶ Secure SD-WAN dashboard for inter-branch network optimization
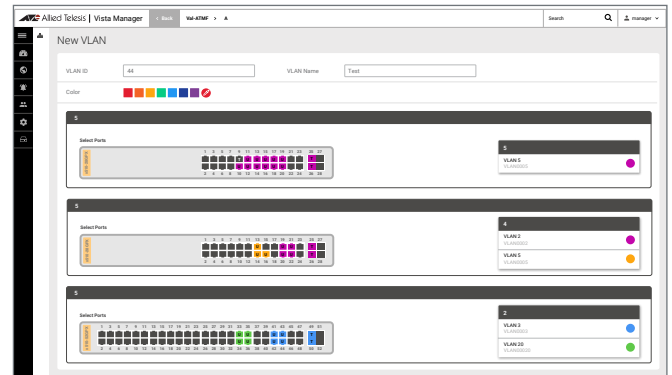

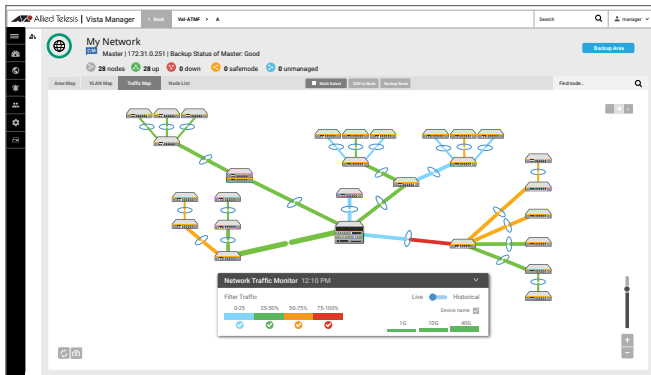

Secure SD-WAN

Today's organizations are increasingly adopting cloud-based services with the ability to rapidly deploy new services and adopt the latest functionality with minimal effort. The same is true of the adoption of software-defined technologies with the ability to deliver greater performance and flexibility, while at the same time reducing cost.

SD-WAN

Secure SD-WAN simplifies your branch office connections for more reliable and secure application delivery. Our solution improves WAN performance, flexibility and agility, with the added benefits of built-in security and reduced operating costs.

Better Performance
Build higher-performance, more secure WANs.

More Value
Improve productivity while reducing complexity and cost.

Less Risk
WAN automation reduces the need for skilled resouces at the branch.

Switches

Feature-rich, dependable switching - from edge to core.

Allied Telesis engineers high-performance, high-quality, future-proof products to meet requirements for enterprise, campus, branch, and private cloud networks of various sizes.

Allied Telesis SwitchBlade® and xSeries switches, with the AlliedWare Plus™ operating system, provide scalable and versatile switching solutions for today's enterprise and service provider networks from edge to core. These switches, featuring Allied Telesis Autonomous Management Framework (AMF), decrease network operating expenses by automating and simplifying many day-to-day tasks. Allied Telesis also produces top-of-rack switches for the enterprise data center market, extended temperature products for industry, and unmanaged and WebSmart switches for small and medium business.

SWITCHBLADE

SwitchBlade x8100 Series

The SwitchBlade x8100 Series core chassis switches are primarily engineered for medium to large enterprise networks — but are equally at home in the enterprise data center. They are designed to deliver high availability, maximum performance, future scalability, and high port count in compact, eco-friendly packages.
SwitchBlade x908 GEN2

Following on from the incredible success of the SwitchBlade x908, the Generation 2 builds on the popular modular design, with performance to satisfy the most demanding network applications and traffic requirements.

New expansion modules (XEMs) support today's fastest Ethernet standards, with 100G, 40G and 10G/1G options. The ability to use any combination of XEMs, as well as stack up to four units, make the SwitchBlade x908 GEN2 the most flexible and powerful 3RU switching solution available.

VCStack Plus license for CFC960

x950 Series

Allied Telesis x950 Series switches are ideal for high-performing modern enterprise network cores, with stacking to create a resilient local or distributed solution, and integrated management of wired and wireless network devices. These powerful switches have 100 Gigabit connectivity built-in, and are expandable, delivering the capacity to enable today's Smart City and IoT networks.

x930 Series

Allied Telesis x930 Series switches are a high-performing and feature-rich choice for today's networks. With a range of 24- and 48-port models with 10 Gigabit uplink ports, the option of PoE+, and the power of Allied Telesis Virtual Chassis Stacking (VCStack™), the x930 Series has the flexibility and performance for demanding aggregation and distribution applications.

x550 Series

The x550 Series of compact 10 Gigabit switches provide an ideal solution for 10G aggregation with 40G uplinks in larger networks, or a resilient 10G network core for smaller networks with stacked units providing high availability.

x510 Series

The Allied Telesis x510 Series of stackable Gigabit switches includes a full range of security and resiliency features. With a choice of 24- and 48-port models with 10 Gigabit uplinks, PoE+, and fiber, combined with the power of VCStack, they offer a versatile solution for applications at the network edge.

x320 Series

Allied Telesis x320 Series provide an intelligent smart building solution, with the high power model (90W/port) matched with the PoE pass-through model to support building automation.

x310 Series

Allied Telesis x310 Series provide high performing Fast Ethernet access for today's networks. The ability to stack up to four units, and PoE models that can power edge devices, ensures a flexible and scalable edge solution for enterprise networks.

x230 Series

Allied Telesis x230 Series switches provide an excellent access solution for today's networks, supporting Gigabit to the desktop for demanding applications. Compact PoE models enable easy deployment, while connecting and remotely powering devices such as wireless access points, and IP video surveillance cameras at the network edge.

x220 Series

The Allied Telesis x220 Series are fully managed high-performing Gigabit Layer 3 switches. Integrated security features, and 28 SFP or 48 Gigabit copper ports, enable long-distance fiber, or high-density copper connectivity at the edge of the network.

Intelligent SMB

XS900MX Series

The XS900MX Series are the ideal 10G access switches for enterprise networks or anywhere a relay switch with 10G uplink is required. The switches also make the ideal core or aggregation switch, to connect servers and storage in a small network. Available with a mix of copper and fiber 10G connectivity options, the XS900MX Series enable a highly flexible and reliable network, which can easily scale to meet increasing traffic demands.

GS900MX/MPX Series

Allied Telesis CentreCOM GS900MX/MPX Series switches are cost effective, fully managed, and provide scalable deployment options. With a choice of 24- and 48-port 10/100/1000T versions with 10G uplinks, Power over Ethernet (PoE), plus the ability to stack up to four units, the GS900MX/ GS900MPX Series switches are ideal for demanding applications at the edge of the network.

SFP/SFP+ Optics

GS980M Series

The GS980M Series of Layer 3 Gigabit switches enable a cost-effective and fully managed network. PoE+ connects and powers end points at the network edge.

GS970M Series

Allied Telesis CentreCOM GS970M Series switches provide an excellent access solution for today's networks, supporting Gigabit to the desktop for maximum performance. The Power over Ethernet Plus (PoE+) models are ideal solution for connecting and remotely powering wireless access points, IP video surveillance cameras, and IP phones.

FS980M Series

The FS980M Series switches provide high-performance Fast Ethernet connectivity right where you need it—at the network edge. Flexible and robust, this series provides total security and management features for enterprises of all sizes. Power over Ethernet (PoE) models enable connecting and powering edge devices in video surveillance and Point of Sale (POS) applications.

GS950 Series

The Allied Telesis GS950 Series of PoE+ power Gigabit WebSmart switches deliver up to 30 Watts per port to support video surveillance and security cameras, wireless access points, IP phones, and other PoE-powered devices. The GS950 Series also features IPv6 management and TACACS+ to add an extra layer of security.

GS920 Series

The Allied Telesis GS920 Series offers secure Gigabit switching solutions for the desktop and small networks. Front-panel DIP switches provide configuration of commonly used features – network device management made easy.

GS910 Series

The Allied Telesis GS910 Series offers unmanaged Gigabit switching. The GS910 Series delivers the Gigabit performance demanded by today's high-bandwidth applications, such as video, graphics and industrial design. Compact design and silent operation enable deployment in work areas.

FS750 Series

The FS750 Series Fast Ethernet WebSmart switches offer the simplicity of unmanaged switches with the performance and reliability of managed switches, providing an ideal solution for integrating management at the edge of the network. Minimizing power consumption through high efficiency power supplies and low power chipsets, the FS750 Series at the network edge are the ideal cost-effective solution for small businesses.

FS710 Series

The Allied Telesis CentreCOM FS710 Series is the ideal economical and eco-friendly solution for today's networks, providing an extensive range of cost-effective options. The FS710 Series switches provide easy set-up, with silent operation and simple connectivity for desktop and small to medium network environments.

FS700 Series

The FS700 Series is easy to set-up with simple connectivity for small to medium-sized networks—with an extensive range of cost-effective options.

Industrial

Our ruggedized Industrial Ethernet switches are built for enduring performance in harsh environments, such as those found in manufacturing, transportation and physical security. Offering high throughput, rich functionality and advanced security features.

IE Series

The Allied Telesis IE Series is built for performance in harsh environments, and deliver the performance and reliability demanded by industrial deployments in the Internet of Things (IoT) age.

Distributed Network Core
Today's large enterprises demand ready access to online resources and applications, and require a high-performing network that can seamlessly carry multiple converged services. This campus solution uses the SwitchBlade x908 GEN2 and long-distance Virtual Chassis Stacking (VCStack LD)—ideal for a distributed network core that provides high availability, increased capacity and ease of management.

Using VCStack at the core of the network allows multiple switches to appear as a single virtual chassis, simplifying management. In normal operation, the full bandwidth of the network is used, ensuring always-available online services. Seamless wireless access, and the convergence of business

data, voice, and video surveillance traffic on the network, are easily supported with this powerful solution.

AMF allows the entire network to be unified for ease of management. The SwitchBlade x908 GEN2 acts as the AMF Master, automatically backing up the entire network, and enabling plug-and-play networking with zero-touch expansion and recovery.

The SwitchBlade x908 GEN2 delivers a protocol-less and Active/Active campus backbone solution, with high performance and flexible scalability.

Security Appliances

Protection and security from the bottom to the top of your network stack.

The comprehensive, high-performance Allied Telesis AR Series features UTM firewalls and conventional secure VPN routers. Both product types offer functions such as advanced routing, QoS, IPv6, and advanced security, which includes firewall and VPN services. AR Series products are able to deliver the breadth of functionality that small- and medium-sized businesses require at a price point they can afford, and with a proven reliability that makes Allied Telesis a trusted networking partner.

Allied Telesis UTM (Unified Threat Management) firewalls and VPN (Virtual Private Network) routers are an ideal integrated security platform for today's networks. Application-aware firewall, threat protection and secure remote access is combined with routing and switching, to provide an innovative high-performance solution.
Firewalls and Routers

AR1050V

The Allied Telesis AR1050V Secure Virtual Private Network (VPN) router is the ideal secure gateway for modern businesses. Integrated firewall and VPN functionality is combined with routing and switching, providing an innovative solution that is easy to use and very secure.

Wireless

Support the growing demands of your network with our innovative, high performance wireless solutions.

The broad portfolio of Allied Telesis wireless products provides customers with high performance and low operating costs. Optimized for deployment across most environments, Allied Telesis wireless solutions are ideal for every application — from offices to classrooms, from distributed retail stores to large hospitals and campuses, and from warehouses to convention centers and sports arenas/stadiums. Advanced software features and a broad range of accessories meet the demands of SOHO to enterprise-class networks.

Wireless Access Points

TQ Series

Allied Telesis TQ Series enterprise class wireless access points support the latest IEEE 802.11ac standards, doubling the raw wireless capacity available with an IEEE 802.11n access point. With flexible deployment modes: standalone, AP-cluster, or controlled by the AWC WLAN controller, TQ Series access points are suitable for a wide variety of environments — from small offices to large campuses.

TQ5403

The innovative Channel Blanket hybrid mode of the TQ5403 enables optimized wireless networking for all environments. By allowing simultaneous multi-channel and single-channel WLAN connectivity from the same access point, network administrators can combine the performance attributes of the two architectures to best suit their specific deployment requirements.

MWS Series

Allied Telesis MWS Series wireless access points are a cost-effective solution for small to medium networks, with an intuitive GUI for easy management. They offer simultaneous dual-band support of the 2.4GHz and 5GHz frequencies, increasing bandwidth, and providing a high-quality network that prioritizes traffic to minimize interference.

PD
Powered Device receives power from Power Sourcing Equipment.

WMM
Wireless Multimedia is a Wi-Fi Alliance interoperability certification that provides basic Quality of Service (QoS) to applications running over Wi-Fi.

PoE Injector

Feeding protected PoE to any Fast and Gigabit Ethernet equipment without having to replace non-PoE switches.

AUTONOMOUS WAVE CONTROL (AWC)

Allied Telesis AWC is an advanced network technology that utilizes Artificial Intelligence (AI) to deliver significant improvements in wireless network connectivity and performance while reducing deployment and operating costs. AWC regularly analyses coverage gaps and Access Point (AP) interference, and automatically optimizes the Wi-Fi network to deliver a high-quality user experience that responds to network configuration changes, and bandwidth demands from wireless devices.

No Compromise Wi-Fi

Commonly used multi-channel wireless APs offer high throughout, but complex deployment and radio interference can reduce overall effectiveness. Single-channel wireless networks provide reliable roaming, but less throughput.

Our world-first hybrid Wi-Fi solution enables multi-channel and single-channel wireless connectivity on the same APs for maximum performance where you need it, and seamless roaming for critical applications. Unified management of the hybrid APs by AWC enables self-optimization of the entire wireless network with no administrator input.

Identifying WiFi device technology

To help users identify devices that provide the latest Wi-Fi experience, Wi-Fi Alliance has introduced simplified generational names that may appear in device names and product descriptions. The latest generation of Wi-Fi devices, based on the IEEE 802.11ax standard, are known as Wi-Fi 6 devices. The majority of devices shipping today, based upon the IEEE 802.11ac standard, are identified as Wi-Fi 5.

NAMING CONVERSION		
LEGACY NAME		**NEW NAME**
IEEE 802.11n technology	➡	Wi-Fi 4
IEEE 802.11ac technology	➡	Wi-Fi 5
IEEE 802.11ax technology	➡	Wi-Fi 6

AWC Smart Connect

AWC Smart Connect takes wireless automation to another level, with simple plug-and-play deployment requiring only a power connection to grow your wireless network. Our advanced APs communicate with each other wirelessly for optimal throughput back to the wired network. With only original APs needing a wired back-haul connection, while the others use a wireless uplink, a Wi-Fi network can easily expand to support business growth or for one-off events. Allied Telesis AWC Smart Connect makes zero-touch wireless deployment a reality.

Wireless Controllers

Centrally manage an innovative Allied Telesis wireless solution with the AWC plugin for Vista Manager EX, our single-pane-of-glass graphical network management tool. Or for smaller networks, AWC-Lite is built right into the Device GUI that runs on a number of our switches, firewalls, and routers.

Enjoy the power of AWC for industry-leading Wi-Fi optimization, automation, and performance.

Visualize AP deployment with wireless floor and heat maps

Multiservice Access

A smarter, feature-rich and flexible approach to delivering subscriber services.

IP is driving new, innovative services and applications. Converged services and real-time communications are changing lifestyles, along with the type of network required to deliver them. Service providers face the challenge of re-architecting the access network to meet today's IP-driven broadband service, such as IP Triple Play, and at the same time try to anticipate the requirements for the "next new service." Selecting the best platform and technology becomes critical to protecting investments and responding competitively to new service needs.

The rapid changes from broadcast to on-demand video and from surfing the Web to content sharing have not only increased demands for bandwidth, but created greater needs to manage converged IP services. If a service provider is to capitalize on the revenue opportunities derived from multimedia services and satisfied consumer needs, an intelligent home gateway approach becomes essential.

intelligent Multiservice Gateways (iMG)

The iMG family of full-featured indoor and outdoor gateways support xDSL and fiber (FTTH) options, all designed with the features, management, and IP functionality needed to deliver the "connected home."

As the name implies, intelligent Multiservice Gateway products are fully featured for delivering multimedia services such as broadcast and streaming IP video, Internet data, analog voice, and VoIP from a single subscriber line to multiple devices in the home.

Media Converters

Solutions that let you extend and evolve your network.

Allied Telesis media converters extend network distances by adding fiber and VDSL (via coax and telephone-grade twisted pair) only where it is needed. This enables customers to keep pace with changing technology and to integrate high-bandwidth devices into the network without changing the entire network infrastructure. From standalone units to chassis-based blades, Allied Telesis media converters are highly configurable to meet every need.

Allied Telesis media converters enable the connection of disparate cabling types in networks where many cabling types exist. Network segments may also operate at different speeds, and media converters can be used to convert between speeds. Typically, media converters are used to connect copper and fiber-optic cabling that coexist in a network. Converters exist in a variety of standalone, multi-port, and modular forms. These different physical forms address the need for different applications and conversion densities.

Desktop Powered

The Allied Telesis DMC100 and DMC1000 Series of Gigabit mini media converters are among the smallest media converters in the market today. At just 1.25 in wide × 3.6 in deep × 0.85 in high, these media converters can easily fit into the palm of your hand. In addition to being compact — with a small carbon footprint — the DMC Series can also be powered with the included micro USB to USB cable, and plugged directly into a laptop or PC. This saves installation time and cabling as there are no further power requirements necessary.

The UMC Series are powered and transfer data via the USB port. There is no need for copper cabling or a power cable to enable fiber to the desktop, workstation or laptop. Simply plug the fiber into the UMC200/2000 and the USB port into the PC.

Mounting Hardware

The majority of unmanaged Allied Telesis media converters can be mounted in a number of ways.

Desktop

All Allied Telesis media converters have the option to be fitted with rubber feet. These allow the product to be positioned on the desktop.

Wall

A standalone media converter or switch can be easily mounted on a wall or under a table using this wallmount fixture.

▶ **WLMT**
Wallmount fixture (supplied in packages of 10)

DIN Rail

This universal bracket allows a wide range of Allied Telesis media converters and media/rate converters to be mounted onto an industry-standard 35 mm DIN rail.

▶ **DINRAIL1-010**
Mounting kit (supplied in packages of 10)

Rack

Larger multi-channel and modular media converters ship with 19" rackmount kits. Smaller media converters may also be rackmounted in a number of ways:

▶ **MCR1** chassis
This small chassis can be rackmounted, and allows a single standalone media converter or 2-port switch to be powered by an internal power supply. It is available with either AC or -48vDC power supply.

▶ **MCR12** chassis
This chassis allows mounting of up to 12 standalone media converters or switches. The chassis supports optional redundant power supplies and can be AC or DC powered.

▶ **TRAY1** and **TRAY4**
These simple trays allow one to four standalone media converters to be mounted into a rack.

Universal Power Supply

For customers already using Allied Telesis media converters, replacement power adapters are available.

▶ **MCPWR**
Universal, high-efficiency external power adapter

MMC Rack

▶ **MMCR18**
This chassis allows mounting of up to 18 standalone MMC Series media converters. The chassis supports optional redundant power supplies and can be AC or DC powered. Standard, 19-inch, rack.

▶ **MMCTRAY6**
This 1RU rackmount tray allows the mounting of up to six MMC Series media converters.

PoE Series

Allied Telesis PC PoE Series media converters are the ideal solution for powering remote devices such as IP phones, video cameras, wireless access points, etc., which are more than 100 m from a Power over Ethernet switch.

* Dependant on SFP

Allied Telesis industrial Ethernet media converters offer an operating range from -40° to 75°C. The temperature-hardened IMC Series features Plug-and-Play and auto-negotiation.

IMC Series

Allied Telesis industrial media converters are the perfect fit for networks needing an extended temperature range. They extend the distance of the network by converting data between twisted pair cabling and multi-mode or single-mode fiber-optic cabling.

These industrial rate and media converters are capable of accepting 100MB or Gigabit SFP modules (auto sensing). With Remote Power Cycle you do not need to be onsite to cycle the power on the end device, saving you time and money.

MANAGED MEDIA CONVERSION SYSTEM

The Converteon™ family provides the next generation of managed media conversion. Expandable from a single unit to a modular 18-slot chassis, Converteon primarily provides Fast Ethernet and Gigabit-rate media conversion. Support for IEEE 802.3ah Ethernet in the First Mile (EFM) makes Converteon ideal for both service providers and the enterprise.

Chassis-Based

MCF3000 Series `COMING SOON`

The Allied Telesis MCF3000 is a 1RU, three blade, chassis system able to support up to 24 conversions, (dependent on connector type). This chassis is powered by hot-swappable AC or DC power supplies. This allows for flexibility amongst connection types/speeds as well as the industry's smallest form factor for up to 24 media conversions at 1RU high.

With both Gig (MCF3000) and 10 Gig (MCF3010) blades the MCF3300 chassis family will be able to handle the most robust conversion needs. The SFP port on the MCF3000/8SP enables backward compatibility to 100MB networks, while the SFP+ port on the MCF3010T/4SP will handle 10G distances beyond the standard 220m using our complete line of optics.

▶ **MCF3300**

SFP and SFP+ Optics
Learn more about Allied Telesis pluggable optics on page 42.

Network Adapters

We're the market leader for fiber adapters with fast, secure and reliable solutions.

From 100Mbps to 10 Gigabit, Allied Telesis seamlessly connects desktops, laptops, servers, and thin clients with a continually expanding portfolio of high-quality, reliable, and cost-effective network adapters.

As the worldwide leader in fiber adapter cards Allied Telesis continues to offer the highest-quality cards at competitive prices. With offerings from 100FX to 10 Gig, we have a card to fit your secure fiber optic network needs.

29xx Series

Allied Telesis 29xx network adapters provide the maximum possible bandwidth and bus efficiency with the benefits of low-power consumption. They include a comprehensive Microsoft Windows utility which performs detailed tests, diagnostics and analysis.

Advanced Power Management (ACPI)

ACPI is part of the environmental control initiative for computers. Allied Telesis adapter cards support ACPI, which places the system in a low power state when it is not receiving or transmitting data.

Wake-on-LAN (WoL)

WoL is a feature of adapter cards that allows a computer fitted with a card to be remotely powered-on. The computer receives a special data packet via the network port that will cause the computer to boot. This, coupled with PXE support, allows network administrators to gain complete access to all computers on their networks.

Preboot Execution Environment (PXE) Support

PXE allows network administrators to perform preboot procedures on a system, such as installing an operating system, running a virus checker, or downloading a predefined system configuration. PXE support included in Allied Telesis adapter cards allows a workstation or computer to boot from a remote server connected to the network prior to booting from the local hard drive.

27M2 29M2

The Allied Telesis 27M2 and 29M2 network adapters are ideal for fiber-to-the-desktop networks that depend on secure and reliable systems. These compact form-factor PCBA adapters are specifically designed for motherboards with the M.2 interface.
ANC/DNC Series

Large file transfers, multimedia support and more and more users are causing high demand on network resources. These issues are taxing on bandwidth.

Allied Telesis single and dual-port, 10 Gigabit adapters offer cost-effective solutions for your file or application server or even a high-powered workstation to transfer more data, faster.

SFP/SFP+ Optics

Transceiver Modules

Offering a wide variety of products to round out your end-to-end network solution.

Allied Telesis optics provide fiber and copper connectivity for the full range of Allied Telesis product lines. Pluggable transceivers allow one product the flexibility to expand by media type (copper or fiber), speed (Fast Ethernet and 1, 10, or 40 Gigabit), and/or distance (220 m to 80 km).

Allied Telesis offers SFP, cSFP, SFP+, QSFP+ and QSFP28 pluggable transceivers, which comply with industry networking regulations. This compliance allows Allied Telesis pluggable optics to be used on any industry-standard networking equipment.

Pluggable Transceivers

SFP Series (SP)
The SP Series delivers flexible, full-duplex Ethernet connectivity. These hot-swappable fiber interfaces simply plug into an SFP slot on Allied Telesis products that are SFP compatible. Configurations can be optimized to meet a variety of distance and service requirements.

cSFP Series
The cSFP Series offers two channel Bi-Directional SFP designed expressly for high-speed communication applications. This hot-pluggable transceiver simply plugs into a cSFP slot on an Allied Telesis product for convenient transmission capacity upgrade.

QSFP Series (QSFP+)
The QSFP Series offers the latest industry-standard 40 Gigabit Ethernet connectivity in a flexible, small form factor. It is ideal for Datacom/Telecom switch and router connections, as well as data aggregation, backplane, proprietary protocol, and high-density applications. This hot-swappable transceiver simply plugs into a QSFP slot on any compatible Allied Telesis product.

TAA Compliant

Allied Telesis provides many options for Trade Act Compliant (TAA) optics. These products are manufactured in TAA compliant countries and continue our commitment to providing a wide range of offerings for any network requirement.

SP10 Series (SFP+)

The SP10 Series offers customers a wide variety of 10 Gigabit Ethernet connectivity options for data center, enterprise, and service provider transport applications. These hot-swappable devices plug into an Ethernet SFP+ port and have the smallest 10G form factor in the industry. Configurations can be optimized to meet a variety of distance and service requirements.

iMG Transceivers

▶ **TN-P015-A**
SC, Gigabit/100M, 20 km SFP, Tx 1310, Rx 1480 - 1560, use with iMG1400 Series

▶ **SPBD20EPON-13/I**
20 km, bi-directional, 1 Gigabit GEPON SFP for iMG2426F

INDUSTRIAL   EXTENDED

Temperatures

Different network environments call for a variety of temperature ranges. Allied Telesis supports a wide range of industrial temperature optical accessories for use in all its extended and industrial temperature products. The SP Series is available in standard (0-70°C), industrial (-40 to 85°C), and extended (-40 to 105°C) temperature variants.
