YEAR 2000 NOTICE

Juniper Networks hardware and software products are Year 2000 compliant. Junos OS has no known time-related limitations through the year 2038. However, the NTP application is known to have some difficulty in the year 2036.

END USER LICENSE AGREEMENT

The Juniper Networks product that is the subject of this technical documentation consists of (or is intended for use with) Juniper Networks software. Use of such software is subject to the terms and conditions of the End User License Agreement ("EULA") posted at <https://support.juniper.net/support/eula/>. By downloading, installing or using such software, you agree to the terms and conditions of that EULA.

	MPC9E	135

	MX10003 MPC (Multi-Rate)	136
	MX10K-LC2101	138
Chapter 9	MX Series MIC Descriptions	141
	ATM MIC with SFP	142
	DS3/E3 MIC	145
	Gigabit Ethernet MIC with SFP	149
	Port Numbering	150
	Gigabit Ethernet MIC with SFP (E)	152
	Gigabit Ethernet MIC with SFP (EH)	156
	10-Gigabit Ethernet MICs with XFP	157
	10-Gigabit Ethernet MIC with SFP+ (10 Ports)	159
	10-Gigabit Ethernet MIC with SFP+ (24 Ports)	161
	10-Gigabit Ethernet OTN MIC with SFP+ (24 Ports)	162
	40-Gigabit Ethernet MIC with QSFP+	164
	100-Gigabit Ethernet MIC with CFP	165
	100-Gigabit Ethernet MIC with CXP	167
	100-Gigabit Ethernet MIC with CXP (4 Ports)	168
	100-Gigabit Ethernet MIC with CFP2	169
	100-Gigabit DWDM OTN MIC with CFP2-ACO	171
	Channelized SONET/SDH OC3/STM1 (Multi-Rate) MICs with SFP	180
	Channelized OC3/STM1 (Multi-Rate) Circuit Emulation MIC with SFP	185
	Channelized OC3/STM1 (Multi-Rate) Circuit Emulation MIC with SFP (H)	187
	Channelized E1/T1 Circuit Emulation MIC	190
	Channelized E1/T1 Circuit Emulation MIC (H)	193
	Tri-Rate MIC	196
	MIC MRATE	200
	Multiservices MIC	202
	SONET/SDH OC3/STM1 (Multi-Rate) MICs with SFP	204
	MX10003 Multi-Rate Ethernet MIC	208
	Multi-Rate Ethernet MIC	210
	SONET/SDH OC192/STM64 MIC with XFP	212
Chapter 10	MX Series PIC Descriptions	215
	Channelized OC12/STM4 Enhanced IQ (IQE) PIC with SFP	215
	Channelized OC48/STM16 Enhanced IQ (IQE) PIC with SFP	216
	SONET/SDH OC3/STM1 (Multi-Rate) PIC with SFP	222
	SONET/SDH OC12/STM4 (Multi-Rate) PIC with SFP	225
	SONET/SDH OC48/STM16 Enhanced IQ (IQE) PIC with SFP	228
	SONET/SDH OC48/STM16 (Multi-Rate) PIC with SFP	232
	SONET/SDH OC48/STM16 PIC with SFP	235
	SONET/SDH OC192c/STM64 PIC	238
	SONET/SDH OC192c/STM64 PIC with XFP	241
Part 3	SFB, SCB, ADC, and CB-RE Descriptions	
Chapter 11	SFB and SFB2 Descriptions	247
	MX2000 Switch Fabric Board (SFB)	247
	MX2000 Enhanced Switch Fabric Board (SFB2)	250

Chapter 12	SCBs, SCBEs, and SCBE2 Descriptions	253
	MX-Series Switch Control Board (SCB) Overview	254
	CLI Identification	254
	SCBE2-MX Description	255
	SCBE2 Interoperability with Existing Hardware	258
	MX SCBE Description	259
	MX SCBE Slots	260
	MX SCBE Redundancy	260
	MX SCBE Components	260
	Supported Routing Engines and MPCs for the SCBE	261
	MX480 SCBE Description	261
	MX SCBE Slots	262
	MX SCBE Redundancy	262
	MX SCBE Components	262
	MX240 SCBE Description	263
	MX SCBE Slots	264
	MX SCBE Redundancy	264
	MX SCBE Components	264
	MX960 SCB Description	265
	SCB Slots	266
	SCB Redundancy	266
	SCB Components	267
	Supported Routing Engines	267
	MX480 SCB Description	268
	SCB Slots	268
	SCB Redundancy	268
	SCB Components	269
	MX240 SCB Description	269
	SCB Slots	270
	SCB Redundancy	270
	SCB Components	270
Chapter 13	ADC Description	273
	MX2000 Adapter Card (ADC) Description	273
Chapter 14	RE, CB-RE, and RCB Descriptions	275
	MX2000 Host Subsystem CB-RE Description	275
	MX960 Routing Engine Description	276
	Supported Routing Engines	276
	Routing Engine Function	277
	Routing Engine Slots	277
	Routing Engine Interface Ports	277
	MX480 Routing Engine Description	278
	Routing Engine Components	279
	Routing Engine Interface Ports	279
	Routing Engine Boot Sequence	279
	MX240 Routing Engine Description	280
	RE-S-X6-64G and RE-S-X6-64G-LT Routing Engine Components	282
	Routing Engine Interface Ports	283

	RE-S-X6-64G and RE-S-X6-64G-LT Routing Engine Interface Ports	283
	Routing Engine Boot Sequence	283
	MX5, MX10, MX40, and MX80 Routing Engine Description	284
	MX2008 Routing and Control Board (MX2008 RCB) Description	284
	Supported RCBs	285
	RCB Function	285
	RCB Slots	285
	RCB Front Panel	286
	RCB Interface Ports	287
	MX10003 Routing and Control Board (RCB) Description	288
	Routing and Control Board Functions	289
	Routing and Control Board Components	289
	RCB Front Panel	289
	RCB Interface Ports	291
	MX10008 Routing and Control Board Components and Descriptions	292
	MX10008 Routing and Control Board Description	292
	Routing and Control Board Functions	293
	Routing and Control Board (JNP10K-RE1) Components	293
	MX10008 Routing and Control Board LEDs	295
	Routing Engine Specifications	297
Part 4	Protocol and Application Support	
Chapter 15	DPC Protocol and Application Support for MX240, MX480, and MX960	305
	Protocols and Applications Supported by DPCs and Enhanced DPCs (DPC and DPCE-R)	305
	Protocols and Applications Supported by Enhanced Ethernet Services DPCs (DPCE-X)	311
	Protocols and Applications Supported by Enhanced Queuing IP Services DPCs (DPCE-R-Q)	315
	Protocols and Applications Supported by Enhanced Queuing Ethernet Services DPCs (DPCE-X-Q)	320
	Protocols and Applications Supported by the Multiservices DPC (MS-DPC)	325
Chapter 16	MPC Protocol and Application Support for MX240, MX480, MX960, MX2010, MX2020, and MX10003	327
	Protocols and Applications Supported on MPCs for MX Series Routers	327
	Protocols and Applications Supported on the MPC1E for MX Series Routers	336
	Protocols and Applications Supported by the MX240, MX480, MX960, MX2010, and MX2020 MPC2E	342
	Protocols and Applications Supported by the MPC3E on MX Series Routers	351
	Protocols and Applications Supported on the MPC4E for MX Series Routers	359
	Protocols and Applications Supported by the MPC5E for MX Series Routers	368
	Protocols and Applications Supported by the MPC6E for MX2000 Routers	374
	Protocols and Applications Supported by the MPC7E for MX Series Routers	381
	Protocols and Applications Supported by the MPC8E and MPC9E on the MX2010 and MX2020 Routers	390
	Protocols and Applications Supported by the MS-MIC and MS-MPC	397

Protocols and Applications Supported by the MX10003 MPC (Multi-Rate) on the MX10003 Router	399
Protocols and Applications Supported by the JNP10K-LC2101 on the MX10008 Routers	405

Documentation and Release Notes

To obtain the most current version of all Juniper Networks® technical documentation, see the product documentation page on the Juniper Networks website at <https://www.juniper.net/documentation/>.

If the information in the latest release notes differs from the information in the documentation, follow the product Release Notes.

Juniper Networks Books publishes books by Juniper Networks engineers and subject matter experts. These books go beyond the technical documentation to explore the nuances of network architecture, deployment, and administration. The current list can be viewed at <https://www.juniper.net/books>.

Documentation Conventions

Table 1 on page xviii defines notice icons used in this guide.

Table 1: Notice Icons

Icon	Meaning	Description
	Informational note	Indicates important features or instructions.
	Caution	Indicates a situation that might result in loss of data or hardware damage.
	Warning	Alerts you to the risk of personal injury or death.
	Laser warning	Alerts you to the risk of personal injury from a laser.
	Tip	Indicates helpful information.
	Best practice	Alerts you to a recommended use or implementation.

Table 2 on page xviii defines the text and syntax conventions used in this guide.

Table 2: Text and Syntax Conventions

Convention	Description	Examples
Bold text like this	Represents text that you type.	To enter configuration mode, type the configure command: user@host> configure
Fixed-width text like this	Represents output that appears on the terminal screen.	user@host> show chassis alarms No alarms currently active
<i>Italic text like this</i>	<ul style="list-style-type: none"> Introduces or emphasizes important new terms. Identifies guide names. Table 2: Text and Syntax Conventions (continued)

Convention	Description	Examples
Text like this	Represents names of configuration statements, commands, files, and directories; configuration hierarchy levels; or labels on routing platform components.	<ul style="list-style-type: none"> To configure a stub area, include the stub statement at the [edit protocols ospf area area-id] hierarchy level. The console port is labeled CONSOLE.
< > (angle brackets)	Encloses optional keywords or variables.	stub <default-metric metric>;
(pipe symbol)	Indicates a choice between the mutually exclusive keywords or variables on either side of the symbol. The set of choices is often enclosed in parentheses for clarity.	broadcast multicast (string1 string2 string3)
# (pound sign)	Indicates a comment specified on the same line as the configuration statement to which it applies.	rsvp { # Required for dynamic MPLS only
[] (square brackets)	Encloses a variable for which you can substitute one or more values.	community name members [community-ids]
Indentation and braces ({ })	Identifies a level in the configuration hierarchy.	[edit] routing-options { static { route default { nexthop address; retain; } } }
;(semicolon)	Identifies a leaf statement at a configuration hierarchy level.	
GUI Conventions		
Bold text like this	Represents graphical user interface (GUI) items you click or select.	<ul style="list-style-type: none"> In the Logical Interfaces box, select All Interfaces. To cancel the configuration, click Cancel.
> (bold right angle bracket)	Separates levels in a hierarchy of menu selections.	In the configuration editor hierarchy, select Protocols>Ospf .

Documentation Feedback

We encourage you to provide feedback so that we can improve our documentation. You can use either of the following methods:

- Online feedback system—Click TechLibrary Feedback, on the lower right of any page on the [Juniper Networks TechLibrary](#) site, and do one of the following:

- Click the thumbs-up icon if the information on the page was helpful to you.
- Click the thumbs-down icon if the information on the page was not helpful to you or if you have suggestions for improvement, and use the pop-up form to provide feedback.
- E-mail—Send your comments to techpubs-comments@juniper.net. Include the document or topic name, URL or page number, and software version (if applicable).

Requesting Technical Support

Technical product support is available through the Juniper Networks Technical Assistance Center (JTAC). If you are a customer with an active J-Care or Partner Support Service support contract, or are covered under warranty, and need post-sales technical support, you can access our tools and resources online or open a case with JTAC.

- JTAC policies—For a complete understanding of our JTAC procedures and policies, review the *JTAC User Guide* located at <https://www.juniper.net/us/en/local/pdf/resource-guides/7100059-en.pdf>.
- Product warranties—For product warranty information, visit <https://www.juniper.net/support/warranty/>.
- JTAC hours of operation—The JTAC centers have resources available 24 hours a day, 7 days a week, 365 days a year.

Self-Help Online Tools and Resources

For quick and easy problem resolution, Juniper Networks has designed an online self-service portal called the Customer Support Center (CSC) that provides you with the following features:

- Find CSC offerings: <https://www.juniper.net/customers/support/>
- Search for known bugs: <https://prsearch.juniper.net/>
- Find product documentation: <https://www.juniper.net/documentation/>
- Find solutions and answer questions using our Knowledge Base: <https://kb.juniper.net/>
- Download the latest versions of software and review release notes: <https://www.juniper.net/customers/csc/software/>
- Search technical bulletins for relevant hardware and software notifications: <https://kb.juniper.net/InfoCenter/>

- Join and participate in the Juniper Networks Community Forum:
<https://www.juniper.net/company/communities/>
- Open a case online in the CSC Case Management tool: <https://www.juniper.net/cm/>

To verify service entitlement by product serial number, use our Serial Number Entitlement (SNE) Tool: <https://entitlementsearch.juniper.net/entitlementsearch/>

Opening a Case with JTAC

You can open a case with JTAC on the Web or by telephone.

- Use the Case Management tool in the CSC at <https://www.juniper.net/cm/>.
- Call 1-888-314-JTAC (1-888-314-5822 toll-free in the USA, Canada, and Mexico).

For international or direct-dial options in countries without toll-free numbers, see <https://www.juniper.net/support/requesting-support.html>.

- [Network Interface Specifications on page 39](#)

Interface Module Overview

- [MX Series Interface Module Overview on page 3](#)

MX Series Interface Module Overview

Juniper Networks MX Series 5G Universal Routing Platforms process incoming and outgoing packets on several different types of interface modules (also known as line cards), including Dense Port Concentrators (DPCs), Flexible Port Concentrators (FPCs) with associated Physical Interface Cards (PICs), Trio Modular Port Concentrators (MPCs) with associated Modular Interface Cards (MICs). FPCs are populated with PICs for various interface types. DPCs and MPCs combine the functions of FPCs and the PICs, and with associated physical interfaces support a variety of interface types. The configuration syntax for each type of line card is the same: *type-fpc/pic/port*.

Switch Control Boards (MX-SCBs, MX-SCBEs, MX-SCBE2s) provide full line-rate performance and redundancy without a loss of bandwidth for all MX series routers. Switch Fabric Boards (SFBs) provide increased fabric bandwidth per slot for MX2000 routers. Routing Engines (REs) and Control Boards with Routing Engines (CB-REs) provide the software processes that run Junos OS.

- Dense Port Concentrators (DPCs)—A DPC provides multiple physical interfaces and Packet Forwarding Engines on a single board that installs into a slot within the MX240, MX480, and MX960 routers. See the following topics for more information about DPCs:
 - [MX Series DPC Overview on page 7](#)
 - [DPCs Supported on MX240, MX480, and MX960 Routers on page 8](#)
- Modular Port Concentrators (MPCs) provide packet forwarding services. The MPCs are inserted into a slot in an MX240, MX480, MX960, MX2008, MX2010, and MX2020 router. MPCs for MX5, MX10, MX40, MX80, and MX104 routers install directly into the router chassis. Modular Interface Cards (MICs) provide the physical interfaces and install into the MPCs. You can install up to two MICs of different media types in the same MPC as long as the MPC supports those MICs. See the following topics for information about MPCs:
 - [MX Series MPC Overview on page 11](#)
 - [MPCs Supported by MX Series Routers on page 12](#)
 - [MIC/MPC Compatibility on page 26](#)

- [Protocols and Applications Supported on MPCs for MX Series Routers on page 327](#)
- [Protocols and Applications Supported by the MPC3E on MX Series Routers on page 351](#)
- [Protocols and Applications Supported on the MPC4E for MX Series Routers on page 359](#)
- [Protocols and Applications Supported by the MPC5E for MX Series Routers on page 368](#)
- [Protocols and Applications Supported by the MPC6E for MX2000 Routers on page 374](#)
- [Protocols and Applications Supported by the MPC7E for MX Series Routers on page 381](#)
- [Protocols and Applications Supported by the MPC8E and MPC9E on the MX2010 and MX2020 Routers on page 390](#)
- [Protocols and Applications Supported by the MS-MIC and MS-MPC on page 397](#)
- [Protocols and Applications Supported by the MX10003 MPC \(Multi-Rate\) on the MX10003 Router on page 399](#)
- Modular Interface Cards (MICs) provide physical interfaces for the router. MICs install into Modular Port Concentrators (MPCs) which provide packet forwarding services. MICs and MPCs function similarly to PICs and FPCs. MPCs install vertically in the MX2020, MX2010, MX2008, and MX960 router chassis, and horizontally in the MX480 and MX240 router chassis. On MX5, MX10, MX40, MX80, and MX104 routers, MICs install directly into the router chassis. There are also fixed-configuration MPCs, with built-in network ports or services functionality, that do not accept MICs. The maximum number of supported MPCs varies per router and hardware configuration. See the following topics for information about MICs:
 - [MX Series MIC Overview on page 17](#)
 - [MICs Supported by MX Series Routers on page 18](#)
 - [MIC/MPC Compatibility on page 26](#)
- Flexible PIC Concentrators (FPCs) and Physical Interface Cards (PICs) function similarly to MICs and MPCs. PICs provide physical interfaces for the router, and install into FPCs, which provide packet forwarding services. FPCs are installed into a slot in an MX240, MX480, and MX960 router. See the following topics for information about PICs and FPCs:
 - [MX Series FPC and PIC Overview on page 35](#)
 - [High Availability Features on page 36](#)
 - [FPCs Supported by MX240, MX480, and MX960 Routers on page 36](#)
 - [PICs Supported by MX240, MX480, and MX960 Routers on page 37](#)
- Switch Fabric Boards (SFBs) provide increased fabric bandwidth per slot. The MX2000 line of routers can support eight Switch Fabric Boards (SFB) and eight Enhanced Switch Fabric Boards (SFB2) but not both at the same time. The SFB is supported on MX2010 and MX2020 routers. See the following topics for information about SFBs:
 - [MX2000 Switch Fabric Board \(SFB\) on page 247](#)

- [MX2000 Enhanced Switch Fabric Board \(SFB2\) on page 250](#)
- MX Switch Control Boards (MX-SCBs, MX-SCBEs, MX-SCBE2s) provide full line-rate performance and redundancy without a loss of bandwidth. The MX-SCB is the first-generation SCB and was designed to work with the first-generation DPC line cards. The MX-SCBE was designed specifically for use with the MPC3e line cards. The MX-SCBE2 provides improved fabric performance for high-capacity line cards using the third generation fabric XF2 chip (MPC4e, MPC5e, MPC2/3 NG, and MPC7e). See the following topics for information about MX-SCBs, MX-SCBEs, and MX-SCBE2s:
 - [MX-Series Switch Control Board \(SCB\) Overview on page 254](#)
 - [SCBE2-MX Description on page 255](#)
 - [MX SCBE Description on page 259](#)
 - [MX480 SCBE Description on page 261](#)
 - [MX240 SCBE Description on page 263](#)
 - [MX960 SCB Description on page 265](#)
 - [MX480 SCB Description on page 268](#)
 - [MX240 SCB Description on page 269](#)
 - [MX240 SCBE Description on page 263](#)
 - [MX960 SCB Description on page 265](#)
 - [MX480 SCB Description on page 268](#)
 - [MX240 SCB Description on page 269](#)
- MX-ADC is a special line card adapter (ADC) for line cards that were designed to work with the MX-SCB and MX-SCBE line cards (MPC1E, MPC2E, and MPC3E). It is supported only for MX2010 and MX2020 routers. The ADC is a hardware casing that fits into a line card slot. The MPCs attach to the ADCs which in turn attach to the backplane. See the following topics for more information about the MX-ADC:
 - [MX2000 Adapter Card \(ADC\) Description on page 273](#)
- Routing Engines (REs) and Control Boards with Routing Engines (CB-REs) provide the software processes that run Junos OS. The routing engine maintains the routing tables, manages the routing protocols used on the router, controls the router interfaces, controls some chassis components, and provides the interface for system management and user access to the router. Each CB-RE is a combined Routing Engine and Switch Control Board in one unit. See the following topics for information about REs and CB-REs for MX routers:
 - [MX2000 Host Subsystem CB-RE Description on page 275](#)
 - [MX960 Routing Engine Description on page 276](#)
 - [MX480 Routing Engine Description on page 278](#)
 - [MX240 Routing Engine Description on page 280](#)
 - [MX5, MX10, MX40, and MX80 Routing Engine Description on page 284](#)

CHAPTER 2

DPCs Supported on MX Series Routers

- [MX Series DPC Overview on page 7](#)
- [DPCs Supported on MX240, MX480, and MX960 Routers on page 8](#)

MX Series DPC Overview

A Dense Port Concentrator (DPC) provides multiple physical interfaces and Packet Forwarding Engines (PFEs) on a single board that installs into a slot within the MX240, MX480, and MX9603D Universal Edge Routers. A DPC receives incoming packets from the network and sends outgoing packets to the network. The PFEs on a DPC are equipped with purpose-built ASICs that perform packet processing and forwarding.

In addition to Layer 3 routing capabilities, the DPCs also have many Layer 2 functions that allow MX Series routers to be used for many virtual LAN (VLAN) and other Layer 2 network applications.

NOTE: In the Junos OS CLI, you use the FPC syntax to configure or display information about DPCs, and you use the PIC syntax to configure or display information about Packet Forwarding Engines on the DPCs.

DPCs install vertically in the MX960 router chassis and horizontally in the MX480 and MX240 router chassis. The maximum number of supported DPCs varies per router:

- MX960 router—up to 12 DPCs
- MX480 router—up to 6 DPCs
- MX240 router—up to 3 DPCs

When a slot is not occupied by a DPC, you must insert a blank DPC to fill the empty slot and ensure proper cooling of the system. For complete information about installing and handling DPCs, see the hardware guide for your router.

CHAPTER 3

MPCs Supported on MX Series Routers

- [MX Series MPC Overview on page 11](#)
- [MPCs Supported by MX Series Routers on page 12](#)

MX Series MPC Overview

Modular Port Concentrators (MPCs) provide packet forwarding services. The MPCs are inserted into a slot in an MX240, MX480, MX960, MX2008, MX2010, MX2020, and MX10003 router. MPCs for MX5, MX10, MX40, MX80, and MX104 routers install directly into the router chassis. Modular Interface Cards (MICs) provide the physical interfaces and install into the MPCs. You can install up to two MICs of different media types in the same MPC as long as the MPC supports those MICs.

A specialized fixed configuration MPC provides higher port density over MICs and combines packet forwarding and Ethernet interfaces onto a single line card. The fixed configuration MPC is inserted into a slot in a router and contains no slots for MICs.

MICs receive incoming packets from the network and transmit outgoing packets to the network. During this process, each MIC performs framing and high-speed signaling for its media type. Before transmitting outgoing data packets through the MIC interfaces, the MPCs encapsulate the packets received. Each MPC is equipped with up to four Junos Trio chipsets, which perform control functions tailored to the MPC's media type.

You must install a high-capacity fan tray to use an MPC. When a slot is not occupied by an MPC, you must insert a blank DPC to fill the empty slot and ensure proper cooling of the system. For complete information about installing and handling MPCs, see the hardware guide for your router.

The maximum number of supported MPCs varies per router and hardware configuration:

- MX2020 router—Up to 20 MPCs (For power requirements, see *Calculating AC Power Requirements for MX2020 Routers* and *Calculating DC Power Requirements for MX2020 Routers*).
- MX2010 router—Up to 10 MPCs (For power requirements, see *Calculating AC Power Requirements for MX2010 Routers* and *Calculating DC Power Requirements for MX2010 Routers*.)
- MX960 router—Up to 12 MPCs (For power requirements, see *Calculating Power Requirements for MX960 Routers*.)

- MX480 router—Up to 6 MPCs (For power requirements, see *Calculating Power Requirements for MX480 Routers*.)
- MX240 router—Up to 3 MPCs (For power requirements, see *Calculating Power Requirements for MX240 Routers*.)

MX80 router—One fixed 10-Gigabit Ethernet MIC with four ports for uplink connections.

NOTE: The MX80 router is available as a modular (MX80) or fixed (MX80-48T) chassis. Both chassis have a fixed Modular Interface Card (MIC) that has 3 10-Gigabit Ethernet ports. The fixed MX80 router has an additional 48 10/100/1000Base-T RJ45 ports. The modular chassis has two dedicated slots for MICs.

MX Series MIC Overview

MICs provide the physical connections to various network media types. MICs allow different physical interfaces to be supported on a single line card. You can install MICs of different media types on the same router as long as the router supports those MICs.

MICs receive incoming packets from the network and transmit outgoing packets to the network. During this process, each MIC performs framing and high-speed signaling for its media type. MICs install into Modular Port Concentrators (MPCs) which provide packet forwarding services. Before transmitting outgoing data packets through the MIC interfaces, the Modular Port Concentrator (MPCs) encapsulate the packets received. Each MPC is equipped with up to four Junos Trio chipsets, which perform control functions tailored to the MPC's media type.

MICs and MPCs function similarly to PICs and FPCs. MICs are hot-removable and hot-insertable. You can install up to two MICs of different media types in the same MPC as long as the MPC supports those MICs. Depending on the MX router chassis, the MICs install vertically or horizontally into MPCs, or directly into the MX router chassis as follows:

- Vertically into MPCs— MX960, MX2008, MX2010, and MX2020 routers
- Horizontally into MPCs—MX10003, MX480, and MX240 routers
- Directly into the router chassis—MX5, MX10, MX40, MX80, and MX104 routers

NOTE: The MX80 router is available as a modular (MX80) or fixed (MX80-48T) chassis. Both chassis have a fixed Modular Interface Card (MIC) that has 3 10-Gigabit Ethernet ports. The fixed MX80 router has an additional 48 10/100/1000Base-T RJ45 ports. The modular chassis has two dedicated slots for MICs.

MIC/MPC Compatibility

The following tables provide a compatibility matrix for the MICs currently supported by MPC1, MPC2, MPC3, MPC6, MPC8, and MPC9 on MX240, MX480, MX960, MX2008, MX2010, MX2020, and MX10003 routers. Each table lists the first Junos OS release in which the MPC supports the MIC. For example, Junos OS Release 10.2 is the first release in which the MX-MPC1-3D supports the Gigabit Ethernet MIC with SFP. An en dash indicates that the MIC is not supported.

Table 10: MIC/MPC1 Compatibility

MIC Name	MPC1	MPC1E	MPC1 Q	MPC1E Q
MIC-3D-80C3-20C12-ATM ("ATM MIC with SFP" on page 142)	—	—	12.1	12.1R4

CHAPTER 5

FPCs and PICs Supported on MX Series Routers

- [MX Series FPC and PIC Overview on page 35](#)
- [High Availability Features on page 36](#)
- [FPCs Supported by MX240, MX480, and MX960 Routers on page 36](#)
- [PICs Supported by MX240, MX480, and MX960 Routers on page 37](#)

MX Series FPC and PIC Overview

Flexible PIC Concentrators (FPCs) and Physical Interface Cards (PICs) function similarly to MICs and MPCs. PICs provide physical interfaces for the router and install into FPCs which provide packet forwarding services. Each FPC supports up to two Physical Interface Cards (PICs). You can install PICs of different media types on the same router as long as the router supports those PICs.

PICs receive incoming packets from the network and transmit outgoing packets to the network. During this process, each PIC performs framing and high-speed signaling for its media type. Before transmitting outgoing data packets, the PICs encapsulate the packets received. Each PIC is equipped with a media-specific ASIC that performs control functions tailored to the PIC's media type.

An FPC occupies two Dense Port Concentrator (DPC) slots on an MX Series router. FPCs install vertically in the MX960 router chassis, and horizontally in the MX480 and MX240 router chassis. The maximum number of supported FPCs varies per router:

- MX960 router—6 FPCs
- MX480 router—3 FPCs
- MX240 router—1 FPC

MX240, MX480, and MX960 Universal Routing Platforms support 2 PICs per FPC. The maximum number of supported PICs varies per router:

- MX960 router—12 PICs
- MX480 router—6 PICs
- MX240 router—2 PICs

Blank PICs resemble other PICs but do not provide any physical connection or activity. When a slot is not occupied by a PIC, you must insert a blank PIC to fill the empty slot and ensure proper cooling of the system.

 - [FPCs Supported by MX240, MX480, and MX960 Routers on page 36](#)
 - [PICs Supported by MX240, MX480, and MX960 Routers on page 37](#)

High Availability Features

High availability features include Routing Engine redundancy, graceful Routing Engine switchover (GRES), nonstop bridging, nonstop active routing, graceful restart for routing protocols, Virtual Router Redundancy Protocol (VRRP), and unified in-service software upgrade (ISSU). Some high availability features are not supported by all platforms and all PICs. For more information, see the *Unified ISSU System Requirements* in the *High Availability Feature Guide*.

FPCs Supported by MX240, MX480, and MX960 Routers

An FPC occupies two slots when installed in an MX240, MX480, or MX960 router. The maximum number of supported FPCs varies per router:

- MX960 router—6 FPCs
- MX480 router—3 FPCs
- MX240 router—1 FPC

[Table 17 on page 36](#) lists FPCs supported by MX Series routers.

Table 17: FPCs Supported by MX Series Routers

FPC Type	FPC Name	FPC Model Number	Maximum Number of PICs Supported	Maximum Throughput per FPC (Full-duplex)	First Junos OS Release
3	FPC3	MX-FPC3	2	20 Gbps	9.4
2	FPC2	MX-FPC2	2	10 Gbps	9.5

Network Interface Specifications

- Determining Transceiver Support and Specifications on page 39
- Cable and Connector Specifications for MX Series and PTX Series Devices on page 40

Determining Transceiver Support and Specifications

You can find information about the pluggable transceivers supported on your Juniper Networks device by using the Hardware Compatibility Tool. In addition to transceiver and connector type, the optical and cable characteristics—where applicable—are documented for each transceiver. The Hardware Compatibility Tool allows you to search by product, displaying all the transceivers supported on that device, or category, displaying all the transceivers by interface speed or type. The Hardware Compatibility Tool is located at <https://apps.juniper.net/hct/>.

Some transceivers support additional monitoring using the operational mode CLI command **show interfaces diagnostics optics**. Use the Hardware Compatibility Tool to determine if your transceiver supports monitoring. See the Junos OS documentation for your device for a description of the monitoring fields.

CAUTION: If you face a problem running a Juniper Networks device that uses a third-party optic or cable, the Juniper Networks Technical Assistance Center (JTAC) can help you diagnose the source of the problem. Your JTAC engineer might recommend that you check the third-party optic or cable and potentially replace it with an equivalent Juniper Networks optic or cable that is qualified for the device.

Cable and Connector Specifications for MX Series and PTX Series Devices

The transceivers that are supported on MX Series and PTX Series devices use fiber-optic cables and connectors. The type of connector and the type of fiber depends on the transceiver type.

You can determine the type of cable and connector required for your specific transceiver by using the [Hardware Compatibility Tool](#).

CAUTION: To maintain agency approvals, use only a properly constructed, shielded cable.

NOTE: The terms multifiber push-on (MPO) and multifiber termination push-on (MTP) describe the same connector type. The rest of this topic uses MPO to mean MPO or MTP.

- [12-Fiber MPO Connectors on page 40](#)
- [24-Fiber MPO Connectors on page 44](#)
- [LC Duplex Connectors on page 44](#)

12-Fiber MPO Connectors

There are two types of cables used with 12-fiber MPO connectors on Juniper Networks devices—patch cables with MPO connectors on both ends, and breakout cables with an MPO connector on one end and four LC duplex connectors on the opposite end. Depending on the application, the cables might use single-mode fiber (SMF) or multimode fiber (MMF). Juniper Networks sells cables that meet the supported transceiver requirements, but it is not required to purchase cables from Juniper Networks.

Ensure that you order cables with the correct polarity. Vendors refer to these crossover cables as *key up to key up*, *latch up to latch up*, *Type B*, or *Method B*. If you are using patch panels between two transceivers, ensure that the proper polarity is maintained through the cable plant.

Also, ensure that the fiber end in the connector is finished correctly. Physical contact (PC) refers to fiber that has been polished flat. Angled physical contact (APC) refers to fiber that has been polished at an angle. Ultra physical contact (UPC) refers to fiber that has been polished flat, to a finer finish. The required fiber end is listed with the connector type in the [Hardware Compatibility Tool](#).

12-Fiber Ribbon Patch Cables with MPO Connectors

You can use 12-fiber ribbon patch cables with female MPO connectors to connect two transceivers of the same type—for example, 40GBASE-SR4-to-40GBASESR4 or 100GBASE-SR4-to-100GBASE-SR4. You can also connect 4x10GBASE-LR or 4x10GBASE-SR transceivers by using patch cables—for example,

4x10GBASE-LR-to-4x10GBASE-LR or 4x10GBASE-SR-to-4x10GBASE-SR—instead of breaking the signal out into four separate signals.

Table 19 on page 41 describes the signals on each fiber. Table 20 on page 41 shows the pin-to-pin connections for proper polarity.

Table 19: Cable Signals for 12-Fiber Ribbon Patch Cables

Fiber	Signal
1	Tx0 (Transmit)
2	Tx1 (Transmit)
3	Tx2 (Transmit)
4	Tx3 (Transmit)
5	Unused
6	Unused
7	Unused
8	Unused
9	Rx3 (Receive)
10	Rx2 (Receive)
11	Rx1 (Receive)
12	Rx0 (Receive)

Table 20: Cable Pinouts for 12-Fiber Ribbon Patch Cables

MPO Pin	MPO Pin

9	4
10	3
11	2
12	1

12-Fiber Ribbon Breakout Cables with MPO-to-LC Duplex Connectors

You can use 12-ribbon breakout cables with MPO-to-LC duplex connectors to connect a QSFP+ transceiver to four separate SFP+ transceivers—for example, 4x10GBASE-LR-to-10GBASE-LR or 4x10GBASE-SR-to-10GBASE-SR SFP+ transceivers. The breakout cable is constructed out of a 12-fiber ribbon fiber-optic cable. The ribbon cable splits from a single cable with a female MPO connector on one end, into four cable pairs with four LC duplex connectors on the opposite end.

[Table 21 on page 42](#) describes the way the fibers are connected between the MPO and LC duplex connectors. The cable signals are the same as those described in [Table 19 on page 41](#).

Table 21: Cable Pinouts for 12-Fiber Ribbon Breakout Cables

MPO Connector Pin	LC Duplex Connector Pin
1	Tx on LC Duplex 1
2	Tx on LC Duplex 2
3	Tx on LC Duplex 3
4	Tx on LC Duplex 4
5	Unused
6	Unused
7	Unused
8	Unused
9	Rx on LC Duplex 4

12	Rx on LC Duplex 1

12-Ribbon Patch and Breakout Cables Available from Juniper Networks

Juniper Networks sells 12-ribbon patch and breakout cables with MPO connectors that meet the requirements described above. It is not required to purchase cables from Juniper Networks. [Table 22 on page 43](#) describes the available cables.

Table 22: 12-Ribbon Patch and Breakout Cables Available from Juniper Networks

Cable Type	Connector Type	Fiber Type	Cable Length	Juniper Model Number
12-ribbon patch	Female MPO/PC to female MPO/PC, key up to key up	MMF (OM3)	1 m	MTP12-FF-M1M
			3 m	MTP12-FF-M3M
			5 m	MTP12-FF-M5M
			10 m	MTP12-FF-M10M
	Female MPO/APC to female MPO/APC, key up to key up	SMF	1 m	MTP12-FF-S1M
			3 m	MTP12-FF-S3M
			5 m	MTP12-FF-S5M
			10 m	MTP12-FF-S10M
12-ribbon breakout	Female MPO/PC, key up, to four LC/UPC duplex	MMF (OM3)	1 m	MTP-4LC-M1M
			3 m	MTP-4LC-M3M
			5 m	MTP-4LC-M5M
			10 m	MTP-4LC-M10M
	Female MPO/APC, key up, to four LC/UPC duplex	SMF	1 m	MTP-4LC-S1M
			3 m	MTP-4LC-S3M
			5 m	MTP-4LC-S5M
			10 m	MTP-4LC-S10M

24-Fiber MPO Connectors

You can use patch cables with 24-fiber MPO connectors to connect two supported transceivers of the same type—for example, 100GBASE-SR10-to-100GBASE-SR10.

Figure 1 on page 44 shows the 24-fiber MPO optical lane assignments.

Figure 1: 24-Fiber MPO Optical Lane Assignments

NOTE: Ensure that you order cables with the correct polarity. Vendors refer to these crossover cables as *key up to key up*, *latch up to latch up*, *Type B*, or *Method B*. If you are using patch panels between two transceivers, ensure that the proper polarity is maintained through the cable plant.

The MPO optical connector for the CFP2-100G-SR10-D3 is defined in Section 5.6 of the CFP2 Hardware Specification and Section 88.10.3 of IEEE STD 802.3-2012. These specifications include the following requirements:

- Recommended Option A in IEEE STD 802.3-2012 is required.
- The transceiver receptacle is male. A patch cable with female connector is required to mate with the module.
- Ferrule finish shall be flat polished interface that is compliant with IEC 61754-7.
- Alignment key is key up.

The optical interface must meet the requirement FT-1435-CORE in *Generic Requirements for Multi-Fiber Optical Connectors*. The module must pass wiggle test defined by IEC 62150-3.

LC Duplex Connectors

You can use patch cables with LC duplex connectors to connect two supported transceivers of the same type—for example, 40GBASE-LR4-to-40GBASE-LR4 or 100GBASE-LR4-to-100GBASE-LR4. The patch cable is one fiber pair with two LC duplex connectors at opposite ends. LC duplex connectors are also used with 12-fiber ribbon breakout cables, as described in “12-Fiber Ribbon Breakout Cables with MPO-to-LC Duplex Connectors” on page 42.

Figure 2 on page 45 shows an LC duplex connector being installed in a transceiver.

Figure 2: LC Duplex Connector

Gigabit Ethernet DPC with SFP

Software release

- Junos OS Release 8.2 and later
- End-of-life (see notification [PSN-2009-06-400](#))

Description

- 40 Gigabit Ethernet ports
- Power requirement: 6.98 A @ 48 V (335 W)
- Weight: 13.1 lb (5.9 kg)
- Supports large Ethernet frame sizes for more efficient throughput across the intra-POP network
- Model number: DPC-R-40GE-SFP
- Name in the CLI: **DPC 40x 1GE R**

Hardware features

- High-performance throughput on each port at speeds up to 1 Gbps
- Autonegotiation between Gigabit Ethernet circuit partners
- Full-duplex mode
- Maximum transmission units (MTUs) of up to 9192 bytes

Software features

- Optical diagnostics and related alarms
- See “[Protocols and Applications Supported by DPCs and Enhanced DPCs \(DPC and DPCE-R\)](#)” on page 305 for information about the protocols and applications that this DPC supports.

Interfaces

Syntax: *ge-fpc/pic/port* where:

- fpc: Slot in the router where the DPC is installed
- pic: 0 (bottom left row of 10 ports), 1 (bottom right row of 10 ports), 2 (top left row of 10 ports), or 3 (top right row of 10 ports)
- port: 0 through 9

For example, *ge-1/3/0* is the interface for port 0 in the top right row of 10 ports on a DPC installed in slot 1.

Cables and connectors **TIP:** You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

The list of supported transceivers for the MX Series is located at <https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series>.

You can install any transceiver supported by the DPC. For information about installing and removing transceivers, see the hardware guide for your router.

NOTE: Do not install Gigabit Ethernet SFPs in the SONET/SDH port. The port will not recognize the SFP.

LEDs

OK/FAIL LED, one bicolor:

- Steady green—DPC is functioning normally.
- Blinking green—DPC is transitioning online or offline.
- Red—DPC has failed.

Link LED, one green per port:

- Off—No link.
- On steadily—Link is active.

The Link LEDs are labeled in groups of five:

- 0/0 for 0/0 through 0/4
- 0/5 for 0/5 through 0/9
- 1/0 for 1/0 through 1/4
- 1/5 for 1/5 through 1/9
- 2/0 for 2/0 through 2/4
- 2/5 for 2/5 through 2/9
- 3/0 for 3/0 through 3/4
- 3/5 for 3/5 through 3/9

10-Gigabit Ethernet Enhanced Ethernet Services DPC with XFP

Software release	<ul style="list-style-type: none"> Junos OS Release 8.4 and later
Description	<ul style="list-style-type: none"> Four 10-Gigabit Ethernet ports Power requirement: 6.46 A @ 48 V (310 W) Weight: 13.1 lb (5.9 kg) Model number: DPCE-X-4XGE-XFP Name in the CLI: DPCE 4x 10GE X
Hardware features	<ul style="list-style-type: none"> High-performance throughput on each port at speeds up to 10 Gbps WAN-PHY mode at 9.953 Gbps LAN-PHY mode at 10.3125 Gbps Full-duplex mode Maximum transmission units (MTUs) of up to 9192 bytes Enhanced ASICs for increased performance and scalability of Layer 2 features
Software features	<ul style="list-style-type: none"> Configurable WAN-PHY mode options See “Protocols and Applications Supported by Enhanced Ethernet Services DPCs (DPCE-X)” on page 311 for information about the protocols and applications that this DPC supports. <p>NOTE: The routing table is limited to 32,000 IP routes. This limitation applies to any manner in which the routes are learned, such as OSPF, RIP, and so on. The DPC supports BGP for L2 VPNs only.</p>

Interfaces Syntax: *xe-fpc/pic/port* where:

- fpc: Slot in the router where the DPC is installed
- pic: 0 through 3
- port: 0

For example, *xe-1/0/0* is the interface for the first port on a DPC installed in slot 1.

Cables and connectors **TIP:** You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

The list of supported transceivers for the MX Series is located at <https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series>.

You can install any transceiver supported by the DPC. For information about installing and removing transceivers, see the hardware guide for your router.

LEDs **OK/FAIL LED**, one bicolor:

- Steady green—DPC is functioning normally.
- Blinking green—DPC is transitioning online or offline.
- Red—DPC has failed.

TUNNEL LED, one green per port:

- Off—Normal operating mode.
- On steadily—Port configured in tunnel mode.

LINK LED, one green per port:

- Off—No link.
- On steadily—Link is active.

The **TUNNEL** and **LINK** LEDs are labeled top to bottom **0/0** through **3/0**.

Multiservices DPC

Software release	<ul style="list-style-type: none"> Junos OS Release 9.3 and later
Description	<ul style="list-style-type: none"> Power requirement: 5.52 A @ 48 V (265 W) Weight: 14.7 lb (6.7 kg) Supports tunnel services. This feature is included with the DPC and does not require an individual license. Individual licenses must be purchased for additional services. Supports large Ethernet frame sizes for more efficient throughput across the intra-POP network The maximum number of supported MS-DPCs is as follows except where noted in “Protocols and Applications Supported by the Multiservices DPC (MS-DPC)” on page 325: <ul style="list-style-type: none"> MX240 router: 2 MX480 router: 4 MX960 router: 6 Model number: MS-DPC
Hardware features	<ul style="list-style-type: none"> Active monitoring on up to 10 million flows Maximum transmission units (MTUs) of up to 9192 bytes Two Multiservices Processing Units (MSPUs) per DPC, which include two 1.1Ghz multicore CPUs, each with 4GB of memory for processing integrated services
Software features	<ul style="list-style-type: none"> Support for up to 12,000 service sets See “Protocols and Applications Supported by the Multiservices DPC (MS-DPC)” on page 325 for information about the protocols and applications that this DPC supports.

Interfaces

Syntax: *mediatype-fpc/pic/port* where:

- mediatype: gr, pc, pd, etc
- fpc: Slot in the router where the MPC is installed
- pic: 0 or 1
- port: 0

NOTE: Port number reflects the internal interface and is not a physical port.

Cables and connectors

TIP: You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

The list of supported transceivers for the MX Series is located at <https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series>.

- SFPs are not supported.

LEDs

OK/FAIL LED, one bicolor:

- Steady green—DPC is functioning normally.
- Blinking green—DPC is transitioning online or offline.
- Red—DPC has failed.

STATUS LED, one tricolor per MSPU:

- Off—MSPU is offline. If both MSPUs are offline it is safe to remove the DPC from the chassis.
- Green—MSPU is operating normally.
- Yellow—MSPU is initializing.
- Red—MSPU has an error or failure.

Application (APP) LED, one tricolor per MSPU:

- Off—Service is not running on the MSPU.
- Green—Service is running on the MSPU under acceptable load.
- Yellow—Service on the MSPU is overloaded.

Tri-Rate Enhanced DPC

Software release	<ul style="list-style-type: none"> Junos OS Release 9.1 and later
Description	<ul style="list-style-type: none"> 40 autonegotiating 10BASE-T, 100BASE-TX, or 1000BASE-T Megabit Ethernet ports Power requirement: 6.67 A @ 48 V (320 W) Weight: 14.5 lb (6.6 kg) Supports large Ethernet frame sizes for more efficient throughput across the intra-POP network Model number: DPCE-R-40GE-TX Name in the CLI: DPCE 40x 1GE R TX
Hardware features	<ul style="list-style-type: none"> High-performance throughput on each port at speeds of 10 Mbps, 100 Mbps, or 1000 Mbps Autonegotiation between Gigabit Ethernet circuit partners Full-duplex mode Maximum transmission units (MTUs) of up to 9192 bytes Enhanced ASICs for increased performance and scalability of Layer 2 features There are four sets of 10 ports labeled: <ul style="list-style-type: none"> 0/0 through 0/9 1/0 through 1/9 2/0 through 2/9 3/0 through 3/9
Software features	<ul style="list-style-type: none"> See “Protocols and Applications Supported by DPCs and Enhanced DPCs (DPC and DPCE-R)” on page 305 for information about the protocols and applications that this DPC supports.

Interfaces Syntax: *ge-fpc/pic/port* where:

- fpc: Slot in the router where the DPC is installed
- pic: Grouping of 10-ports, numbered 0 through 3
- port: 0 through 9

For example, ge-1/3/0 is the interface for port 0 (labeled **3/0**) in the right-most grouping of ports on a DPC installed in slot 1.

Cables and connectors **TIP:** You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

The list of supported transceivers for the MX Series is located at <https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series>.

- Connector: Four-pair, Category 5 shielded twisted-pair connectivity through an RJ-45 connector
- Pinout:
 - Junos OS Release 9.1: MDI
 - Junos OS Release 9.2 and later: MDI, MDI crossover
- Maximum distance: 328 ft/100 m

CAUTION: Do not use RJ-45 cables with strain-relief boots exceeding 1.5 mm from the bottom of the connector. Cable boots that exceed this measurement can damage the port.

LEDs **OK/FAIL LED**, one bicolor:

- Steady green—DPC is functioning normally.
- Blinking green—DPC is transitioning online or offline.
- Red—DPC has failed.

ACT LED, one green per port:

- Off—No active traffic.
- Blinking—Link is active.

SPD LED, one bicolor:

- Green—DPC is functioning in 1000BASE-T mode.
- Yellow—DPC is functioning in 10BASE-T or 100BASE-TX mode.
- Off—No link.

The **ACT** and **SPD** LEDs are located on either side of the ports labeled horizontally and top to bottom 0/0 through 3/9.

Tri-Rate Enhanced Ethernet Services DPC

Software release	<ul style="list-style-type: none"> Junos OS Release 9.1 and later EOL (see PSN-2009-06-400)
Description	<ul style="list-style-type: none"> 40 autonegotiating 10BASE-T, 100.BASE-TX, or 1000BASE-T Megabit Ethernet ports Power requirement: 6.67 A @ 48 V (320 W) Weight: 14.5 lb (6.6 kg) Supports large Ethernet frame sizes for more efficient throughput across the intra-POP network Model number: DPCE-X-40GE-TX Name in the CLI:
Hardware features	<ul style="list-style-type: none"> High-performance throughput on each port at speeds of 10 Mbps, 100 Mbps, or 1000 Mbps Autonegotiation between Gigabit Ethernet circuit partners Full-duplex mode Maximum transmission units (MTUs) of up to 9192 bytes Enhanced ASICs for increased performance and scalability of Layer 2 features
Software features	<ul style="list-style-type: none"> See "Protocols and Applications Supported by Enhanced Ethernet Services DPCs (DPCE-X)" on page 311 for information about the protocols and applications that this DPC supports.
Interfaces	<p>Syntax: <code>ge-fpc/pic/port</code> where:</p> <ul style="list-style-type: none"> fpc: Slot in the router where the DPC is installed pic: Grouping of 10-ports, numbered 0 through 3 port: 0 through 9 <p>For example, <code>ge-1/3/0</code> is the interface for port 0 (labeled 3/0) in the right-most grouping of ports on a DPC installed in slot 1.</p>

Cables and connectors **TIP:** You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

The list of supported transceivers for the MX Series is located at <https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series>.

- Connector: Four-pair, Category 5 shielded twisted-pair connectivity through an RJ-45 connector
- Pinout:
 - Junos OS Release 9.1: MDI
 - Junos OS Release 9.2 and later: MDI, MDI crossover
- Maximum distance: 328 ft/100 m

CAUTION: Do not use RJ-45 cables with strain-relief boots exceeding 1.5 mm from the bottom of the connector. Cable boots that exceed this measurement can damage the port.

LEDs

OK/FAIL LED, one bicolor:

- Steady green—DPC is functioning normally.
- Blinking green—DPC is transitioning online or offline.
- Red—DPC has failed.

ACT LED, one green per port:

- Off—No active traffic.
- Blinking—Link is active.

SPD LED, one bicolor:

- Green—DPC is functioning in 1000BASE-T mode.
- Yellow—DPC is functioning in 10BASE-T or 100BASE-TX mode.
- Off—No link.

The **ACT** and **SPD** LEDs are located on either side of the ports labeled horizontally and top to bottom **0/0** through **3/9**.

16x10GE MPC

Software release

- MX240, MX480, and MX960 routers : Junos OS Release 10.0R2 and later
- MX2010 and MX2020 router: Junos OS Release 12.3 and later

Description

- Fixed configuration MPC with sixteen 10-Gigabit Ethernet ports
- Power requirement: 9.17 A @ 48 V (440 W)
- Weight: 18.35 lb (8.3 kg)
- Model numbers:
 - MPC-3D-16XGE-SFPP
 - MPC-3D-16XGE-SFPP-R-B
- Name in the CLI:
 - **MPC 3D 16x10GE**
 - **MPC 3D 16x10GE EM**

Hardware features

- High-performance throughput on each port at speeds up to 10 Gbps
- Four fully programmable Junos Trio chipsets for increased scaling for bandwidth, subscribers, and services
- One Junos Trio chipset per set of four ports
- LAN-PHY mode at 10.3125 Gbps

NOTE: The 16x10GE 3D MPC does not support WAN-PHY mode.

Software features	<ul style="list-style-type: none"> • Optical diagnostics and related alarms • See “Protocols and Applications Supported on MPCs for MX Series Routers” on page 327 for information about the protocols and applications that this MPC supports.
Interfaces	<p>Syntax: <i>xe-fpc/pic/port</i> where:</p> <ul style="list-style-type: none"> • fpc: Slot in the router where the MPC is installed • pic: Grouping of 4 ports, numbered 0 through 3 • port: 0 through 3 <p>For example, <i>xe-1/3/3</i> is the interface for the last port (labeled 3/3) on an MPC installed in slot 1.</p>
Cables and connectors	<p>TIP: You can use the Hardware Compatibility Tool to find information about the pluggable transceivers supported on your Juniper Networks device.</p> <p>The list of supported transceivers for the MX Series is located at https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series.</p> <p>NOTE: The 16x10GE 3D MPC does not support WAN-PHY mode.</p> <p>NOTE: SFPP-10G-CT50-ZR is not NEBS compliant when plugged into the MPC-3D-16XGE-SFPP. If the ambient air temperature exceeds 40 degrees C, Junos OS disables the transmitter, which takes the optical transceiver offline.</p>
LEDs	<p>OK/FAIL LED, one bicolor:</p> <ul style="list-style-type: none"> • Steady green—MPC is functioning normally. • Blinking green—MPC is transitioning online or offline. • Red—MPC has failed. <p>Enable/disable LED, one bicolor per port:</p> <ul style="list-style-type: none"> • Green—Port is enabled. • Yellow—Port is not functioning normally. • Off—Port is disabled. <p>The enable/disable LEDs are labeled in groups of four:</p> <ul style="list-style-type: none"> • 0/0 through 0/3 • 1/0 through 1/3 • 2/0 through 2/3 • 3/0 through 3/3

Software release

- Junos OS Release 13.2R4 and later

For information on which MPCs are supported on MX Series routers, see [“MPCs Supported by MX Series Routers”](#) on page 12.

Description

- Power requirement: 12.2 Amps @ 48 V (590W)
- Weight: 14 lbs.
- Model number: MS-MPC
- Name in the CLI: **MS-MPC**

Hardware features

- One Junos Trio chipset for increased scaling for bandwidth, subscribers, and services.
- Enhanced memory with 128 GB of memory (32 GB per NPU) and processing capabilities.
- NPU CPU Clock Cycle of 1.2GHz.
- Four NPUs per MPC.
- Works with SCBs and SCBEs.
- Interoperable with MS-DPCs. Both MS-MPCs and MS-DPCs can co-exist in the same chassis.

Software features

- Active flow monitoring and export of flow monitoring version 9 records based on RFC 3954
- IP Security (IPsec) encryption
- Network Address Translation (NAT) for IP addresses
- Port Address Translation (PAT) for port numbers
- Traffic sampling
- Stateful firewall with packet inspection—detects SYN attacks, ICMP and UDP floods, and ping-of-death attacks
- Network Attack Protection (NAP)
- Support for up to 6000 service sets
- Support for MTUs up to 9192 bytes.
- Multiple services can be supported. See *Junos OS Services Interfaces Library for Routing Devices* for more information.
- See [“Protocols and Applications Supported by the MS-MIC and MS-MPC”](#) on page 397 for information about the protocols and applications that this MIC supports.

LEDs

OK/FAIL LED, one bicolor:

- Steady green—MPC is functioning normally.
- Blinking green—MPC is transitioning online or offline.
- Red—MPC has failed.

IC LED—Reserved for future use.

STATUS LED, one tricolor per MSPU:

- Off—MSPU is offline. If both MSPUs are offline it is safe to remove the DPC from the chassis.
- Green—MSPU is operating normally.
- Yellow—MSPU is initializing.
- Red—MSPU has an error or failure.

Application (**APP**) LED, one tricolor per MSPU:

- Off—Service is not running on the MSPU.
- Green—Service is running on the MSPU under acceptable load.
- Yellow—Service on the MSPU is reconfiguring.
- Red—Service on the MSPU has failed.

Activity (**LINK/ACT**) LED, one per control port:

- Off—No link.
- Green—Chassis cluster control port link is active.

ENABLE LED, one per control port:

- Off—Chassis cluster control port is disabled.
- Green—Chassis cluster control port is enabled.

6x40GE + 24x10GE MPC5E

Software release	<ul style="list-style-type: none"> • Junos OS Release 13.3R2 and later
Description	<ul style="list-style-type: none"> • Fixed-port MPC with six 40-Gigabit Ethernet ports and twenty-four 10-Gigabit Ethernet ports • Weight: 21 lb (9.52 kg) • Model number: MPC5E-40G10G • Name in the CLI: MPC5E 3D 24XGE+6XLGE
Hardware features	<ul style="list-style-type: none"> • Line-rate throughput of up to 240 Gbps • Supports one of the following port combinations: <ul style="list-style-type: none"> • Six 40-Gigabit Ethernet ports • Twenty-four 10-Gigabit Ethernet ports • Three 40-Gigabit Ethernet ports and twelve 10-Gigabit Ethernet ports • Supports up to 32,000 queues per-slot • LAN-PHY mode at 10.3125 Gbps on a per-port basis • WAN-PHY mode at 9.95328 Gbps on a per-port basis • Supports maximum transmission unit (MTU) size of 9,192 bytes for host bound packets. For Junos OS 16.1R1 and later releases, the MTU size supported is 9,500 bytes. • The ports are labeled as: <ul style="list-style-type: none"> • 10-Gigabit Ethernet ports: <ul style="list-style-type: none"> 0/0 through 0/11 1/0 through 1/11 • 40-Gigabit Ethernet ports: <ul style="list-style-type: none"> 2/0 through 2/2 3/0 through 3/2 <p>NOTE: On MX960 routers, all the MPC slots work with the ambient temperature of up to 40° C. However, when the chassis temperature exceeds 40° C, slots 0 and 11 can work with MPC1s, MPC2s, and the 16x10GE MPC.</p>

Software features

- Optical diagnostics and related alarms
- Support for optical transport network (OTN) on 10-Gigabit Ethernet ports
- Two packet-forwarding engines, PFE0 and PFE1. PFE0 hosts PIC0 and PIC2. PFE1 hosts PIC1 and PIC3.
- Configurable LAN-PHY and WAN-PHY mode options per 10-Gigabit Ethernet port
- See “[Protocols and Applications Supported by the MPC5E for MX Series Routers](#)” on page 368 for information about the protocols and applications that this MPC supports.

NOTE: On MX240, MX480, and MX960 routers, MPC5E powers on only if the **network-services** mode on the router is configured to either **enhanced-ip** or **enhanced-ethernet**. On MX2010 and MX2020 routers, only **enhanced-ip** is supported.

NOTE: A maximum of two PICs can be powered on at any one time (PIC0 or PIC2, and PIC1 or PIC3). The other PICs must be powered off.

Cables and connectors

TIP: You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

The list of supported transceivers for the MX Series is located at <https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series>.

NOTE: QSFPP-40GE-LX4 is not NEBS compliant on the MX960 router in FPC slot 0 or FPC slot 11.

Power requirements

- Typical: 9.68 A @ 48 V (460 W)
- At different temperatures with default configuration:
 - 55° C: 558 W
 - 40° C: 496 W
 - 25° C: 469 W
- At different temperatures when **flexible-queueing-mode** CLI knob is configured under **set chassis fpc 1 flexible-queueing-mode**:
 - 55° C: 607 W
 - 40° C: 541 W
 - 25° C: 511 W

LEDs

OK/FAIL LED, one bicolor:

- Steady green—MPC is functioning normally.
- Blinking green—MPC is transitioning online or offline.
- Red—MPC has failed.

10-Gigabit Ethernet **LINK LED**, one green per port:

- Green—Link is up.
- Off—Link is down or disabled.

40-Gigabit Ethernet **LINK LED**, one bicolor per port:

- Green—Link is up.
- Yellow—Link is disabled.
- Off—Link is down.

Software release	<ul style="list-style-type: none"> • Junos OS Release 13.3R3 and later
------------------	---

Description	<ul style="list-style-type: none"> • Fixed-configuration MPC with two 100-Gigabit Ethernet ports and four 10-Gigabit Ethernet ports • Weight: 21 lb (9.52 kg) • Model number: MPC5EQ-100G10G • Name in the CLI: MPC5E 3D Q 2CGE+4XGE
-------------	---

- Hardware features**
- Line rate throughput of up to 240 Gbps
 - Supports up to 1 million queues per-slot
 - LAN-PHY mode at 10.3125 Gbps on a per-port basis
 - WAN-PHY mode at 9.95328 Gbps on a per-port basis
 - Supports maximum transmission unit (MTU) size of 9,192 bytes for host bound packets. For Junos OS 16.1R1 and later releases, the MTU size supported is 9,500 bytes.
 - The ports are labeled as:
 - 10-Gigabit Ethernet ports: **0/0**, **0/1**, **2/0**, and **2/1**
 - 100-Gigabit Ethernet ports: **1/0** and **3/0**

NOTE: On MX960 routers, all the MPC slots work with the ambient temperature of up to 40° C. However, when the chassis temperature exceeds 40° C, slots **0** and **11** can work with MPC1s, MPC2s, and the 16x10GE MPC.

- Software features**
- Supports hierarchical QoS (HQoS)
 - Configurable LAN-PHY and WAN-PHY mode options per 10-Gigabit Ethernet port
 - Optical diagnostics and related alarms
 - Intelligent oversubscription services
 - See “[Protocols and Applications Supported by the MPC5E for MX Series Routers](#)” on page 368 for information about the protocols and applications that this MPC supports.

NOTE: On MX240, MX480, and MX960 routers, MPC5E powers on only if the **network-services** mode on the router is configured to either **enhanced-ip** or **enhanced-ethernet**. On MX2010 and MX2020 routers, only **enhanced-ip** is supported.

- Cables and connectors** **TIP:** You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

The list of supported transceivers for the MX Series is located at <https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series>.

NOTE:

- CFP2-100G-ER4-D is not NEBS compliant on the MX960 router in FPC slot **0** or FPC slot **11**.
- CFP2-DCO-T-WDM-1 is not NEBS compliant on the MX960 router or the MX2020 router in FPC slot **0** or FPC slot **11**. Slots **0** and **11** can only work with an ambient temperature of up to 40° C.

- Power requirements**
- Typical: 10.52 A @ 48 V (505 W)
 - At different temperatures:
 - 55° C: 607 W
 - 40° C: 541 W
 - 25° C: 511 W

LEDs

OK/FAIL LED, one bicolor:

- Steady green—MPC is functioning normally.
- Blinking green—MPC is transitioning online or offline.
- Red—MPC has failed.

10-Gigabit Ethernet LINK LED, one bicolor per port:

- Green—Link is up.
- Yellow—Link is disabled.
- Off—Link is down or disabled.

100-Gigabit Ethernet LINK LED, one bicolor per port:

- Green—Link is up.
- Yellow—Link is disabled.
- Off—Link is down.

MPC6E

Software release

- Junos OS Release 13.3R2 and later

For information about which MICs are supported on this MPC, "[MIC/MPC Compatibility](#)" on page 26.

Description

- Two slots for MICs
- Weight: 27.4 lb (12.43 kg) (net weight without blank panels)
- Model number: MX2K-MPC6E
- Name in the CLI: **MPC6E 3D**

Hardware features

- Two slots for MICs
- Line-rate throughput of up to 480 Gbps
- Field-removable septum, to accommodate future full-height MICs
- Supports maximum transmission unit (MTU) size of 9,192 bytes for host bound packets. For Junos OS 16.1R1 and later releases, the MTU size supported is 9,500 bytes.

Maximum Power Requirements	<p>Power requirement: 20.9 A @ 52 V (880 W; plus 104 W for each MIC)</p> <p>MX2K-MPC6E:</p> <ul style="list-style-type: none"> • Typical: 648 W • 880 W at 55° C • 834 W at 40° C • 824 W at 25° C
Software features	<ul style="list-style-type: none"> • Optical diagnostics and related alarms • Configurable LAN-PHY and WAN-PHY mode options per 10-Gigabit Ethernet port • Two Packet Forwarding Engines for each MIC slot • Intelligent oversubscription services • See "Protocols and Applications Supported by the MPC6E for MX2000 Routers" on page 374 for information about the protocols and applications that this MPC supports.
LEDs	<p>OK/FAIL LED, one bicolor:</p> <ul style="list-style-type: none"> • Steady green—MPC is functioning normally. • Blinking green—MPC is transitioning online or offline. • Red—MPC has failed. <p>LINK LED, one bicolor per port:</p> <ul style="list-style-type: none"> • Green—Link is up. • Yellow—Link is disabled. • Off—Link is down.

MPC7E (Multi-Rate)

Software release	<ul style="list-style-type: none"> • Junos OS Release 15.1F4 with Junos Continuity. • Junos OS Release 15.1F6 and later. • Junos OS release 16.1R1 and later.
Description	<ul style="list-style-type: none"> • Fixed-configuration MPC with 10-Gbps, 40-Gbps, and 100-Gbps port speeds • Weight: 15.7 lb (7.12 kg) • Model number: MPC7E-MRATE • Name in the CLI: MPC7E-MRATE

Hardware features

- Line-rate throughput of up to 480 Gbps on MX240, MX480, and MX960 routers.
- Line-rate throughput of up to 400 Gbps on MX2000 routers with SFB, and up to 430 Gbps on MX2000 routers with SFB2.
- Junos Trio chipsets for increased scaling for bandwidth, subscribers, and services
- Twelve Gigabit Ethernet ports that can be configured as 40-Gigabit Ethernet port or as 4 10-Gigabit Ethernet port using a breakout cable. The ports support quad small-form factor pluggable plus (QSFP+) transceivers.
- Four out of the twelve ports can be configured as 100-Gigabit Ethernet ports. Port numbers **0/2**, **0/5**, **1/2** and **1/5** are the four 100-Gigabit Ethernet ports.
- You can configure different combination of port speeds as long as the aggregate capacity per group of six ports labeled **0/0** through **0/5** does not exceed 240 Gbps. Similarly, aggregate capacity per group of the other six ports labeled **1/0** through **1/5** should not exceed 240 Gbps.
- Requires high-capacity power supplies, high-capacity fan trays, and SCBE2 on MX240, MX480, and MX960 routers.
- Requires an adapter card to be housed in MX2000 routers.
- The ports are labeled as (with the MPC orientation as shown in the above figure):
 - 10-Gigabit Ethernet or 40-Gigabit Ethernet ports:
0/0, **0/1**, **0/2 100G**, **0/3**, **0/4**, **0/5 100G**, **1/0**, **1/1**, **1/2 100G**, **1/3**, **1/4**, and **1/5 100G**
 - 100-Gigabit Ethernet ports:
0/2 100G, **0/5 100G**, **1/2 100G** and **1/5 100G**

NOTE: Only ports marked **100G** support 100-Gigabit Ethernet speed using QSFP28 transceivers.

- Supports maximum transmission units (MTUs) from 256 bytes through 16,000 bytes for transit traffic, and from 256 bytes through 9,500 bytes for host bound packets.

NOTE: On MX960 routers, all the MPC slots can be occupied by MPC7E (Multi-Rate) at an ambient temperature of up to 40° C and at any altitude. All the MPC slots can be occupied by MPC7E (Multi-Rate) at temperatures of up to 55° C and at sea level. At an ambient temperature of 55° C and above, and at an altitude above sea level, slot 11 cannot host MPC7E (Multi-Rate).

Software features

- Supports rate selectability at the port level.
- By default, the ports are configured as 10-Gigabit Ethernet ports.
- Optical diagnostics and related alarms
- See “[Protocols and Applications Supported by the MPC7E for MX Series Routers](#)” on page 381 for information about the protocols and applications that the MPC7E supports.

NOTE: On MX240, MX480, and MX960 routers, MPC7E powers on only if the **network-services** mode on the router is configured as either **enhanced-ip** or **enhanced-ethernet**. On MX2000 router no additional configuration is required as by default the router operates in **enhanced-ip** mode.

Cables and connectors

TIP: You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

The list of supported transceivers for the MX Series is located at <https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series>.

Power requirements

- At different temperatures:
 - 55° C: 545 W
 - 40° C: 465 W
 - 25° C: 440 W

LEDs	<p>OK/FAIL LED, one bicolor:</p> <ul style="list-style-type: none"> Steady green—MPC is functioning normally. Yellow—MPC has failed. <p>LINK LED, one green per port (4 per QSFP+ cage):</p> <ul style="list-style-type: none"> Steady green—Link is up. Off—Link is down or disabled.
Related Documentation	<ul style="list-style-type: none"> MPC7E (Multi-Rate) on MX Series Routers Overview MX Series MPC Overview on page 11 MPCs Supported by MX Series Routers on page 12 Junos Continuity Software User Guide (Junos OS Release 14.1R4 and Later Releases)

MPC7E 10G

Software release	<ul style="list-style-type: none"> Junos OS Release 15.1F5 with Junos Continuity Junos OS release 16.1R1 and later
Description	<ul style="list-style-type: none"> Fixed-configuration MPC with forty 10-Gbps ports Weight: 17 lb (7.7 kg) Model number: MPC7E-10G Name in the CLI: MPC7E 3D 40XGE
Hardware features	<ul style="list-style-type: none"> Line-rate throughput of up to 400 Gbps on MX240, MX480, and MX960 routers. Line-rate throughput of up to 400 Gbps on MX2000 routers. Junos Trio chipsets for increased scaling for bandwidth, subscribers, and services. Forty 10-Gigabit Ethernet ports. The ports support SFP+ transceivers. Requires high-capacity power supplies, high-capacity fan trays, and SCBE2 on MX240, MX480, and MX960 routers. Requires an adapter card to be housed in MX2000 routers. Supports maximum transmission units (MTUs) from 256 bytes through 16,000 bytes for transit traffic, and from 256 bytes through 9,500 bytes for host bound packets. The ports are labeled as (with the MPC orientation as shown in the figure): <ul style="list-style-type: none"> 0/0 through 0/9 0/10 through 0/19 1/0 through 1/9 1/10 through 1/19

Software features

- Supports MACsec using the following encryption algorithms: gcm-aes-128 and gcm-aes-256.
- Supports **Hyper mode** to speed up packet processing.
- Supports **Flexible queuing** using an add-on license to support 32,000 queues per line card, including queues on both ingress and egress interfaces. You can use an additional license to support up to 512,000 queues.
- Optical diagnostics and related alarms
- See “[Protocols and Applications Supported by the MPC7E for MX Series Routers](#)” on page 381 for information about the protocols and applications that MPC7Es support.

NOTE: On MX240, MX480, and MX960 routers, MPC7E powers on only if the **network-services** mode on the router is configured as either **enhanced-ip** or **enhanced-ethernet**. On MX2000 routers, no additional configuration is required because by default the router operates in **enhanced-ip** mode.

Cables and connectors

TIP: You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

The list of supported transceivers for the MX Series is located at <https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series>.

- 10GBASE-ZR (model number: SFPP-10G-ZR-OTN-XT)

NOTE: MPC7E 10G does not support OTN rates.

- 10GBASE-ZR (model number: SFPP-10G-DT-ZRC2)

NOTE:

- Supported from Junos OS release 16.1R1 and later.
- Supports 40° C ambient temperature operation at any altitude, and 55° C ambient temperature operation at sea level.

Power requirements

- Typical: 405 W
- At different temperatures:
 - 55° C: 500 W
 - 40° C: 465 W
 - 25° C: 430 W

NOTE: On MX960 routers, all the MPC slots can be occupied by MPC7E 10G at an ambient temperature of up to 40° C and at any altitude. All the MPC slots can be occupied by MPC7E 10G at temperatures of up to 55° C and at sea level. At an ambient temperature of 55° C and above, and at an altitude above sea level, slot 11 cannot host MPC7E 10G.

LEDs

OK/FAIL LED, one bicolor:

- Steady green—MPC is functioning normally.
- Yellow—MPC has failed.

Link LED, one green per port:

- Steady green—Link is up.
- Off—Link is down or disabled.

MPC8E

Software release	<ul style="list-style-type: none"> Junos OS Release 15.1F5 with Junos Continuity Junos OS release 16.1R1 and later
Description	<ul style="list-style-type: none"> Weight: 31.4 lb (14.24 kg) (net weight without blank panels) Model number: MX2K-MPC8E Name in the CLI: MPC8E 3D
Hardware features	<ul style="list-style-type: none"> Line-rate throughput of up to 960 Gbps on the MX2000 routers. Line-rate throughput of up to 1600 Gbps (1.6 Tbps) on the MX2000 routers with software upgrade. <p>NOTE: Starting from Junos OS Release 16.1R1, you can upgrade MPC8E to provide an increased bandwidth of 1600 Gbps (1.6 Tbps) by using an add-on license. After you perform the upgrade, MPC8E provides a bandwidth of 1.6 Tbps, which is equivalent to the bandwidth of "MPC9E" on page 135. However, the MPC continues to be identified as MPC8E.</p> Four Packet Forwarding Engines, each providing a maximum bandwidth of 240 Gbps in normal mode and 400 Gbps in 1.6Tbps upgraded mode. A license is required to operate in 1.6 Tbps upgraded mode. Supports two MICs. For information about which MICs are supported on this MPC, see "MIC/MPC Compatibility" on page 26. Junos Trio chipsets for increased scaling for bandwidth, subscribers, and services. Supports the Switch Fabric Boards SFB and SFB2. When MPC8E is used with SFB, the line-rate throughput is limited to 800 Gbps. Supports maximum transmission units (MTUs) from 256 bytes through 16,000 bytes for transit traffic, and from 256 bytes through 9,500 bytes for host bound packets.
Software features	<ul style="list-style-type: none"> Dynamic power management for effective utilization of available power. Inline flow monitoring for higher scalability and performance. Flexible queuing using an add-on license to support 32,000 queues per line card, including queues on both ingress and egress interfaces. You can use an additional license to support up to 512,000 queues per slot or 1,000,000 queues per slot. Hyper mode to speed up packet processing. Optical diagnostics and related alarms. <p>For more information about features supported on MPC8E, see "Protocols and Applications Supported by the MPC8E and MPC9E on the MX2010 and MX2020 Routers" on page 390.</p>

Power requirements Normal mode with line-rate throughput of 960 Gbps:

(without MICs)

- Typical: 688 W
- At different temperatures:
 - 55° C: 805 W
 - 40° C: 720 W
 - 25° C: 690 W

Upgrade mode with line-rate throughput of 1.6 Tbps:

- Typical: 838 W
- At different temperatures:
 - 55° C: 1018 W
 - 40° C: 870 W
 - 25° C: 840 W

LEDs

OK/FAIL LED, one bicolor:

- Steady green—MPC is functioning normally.
- Yellow—MPC has failed.

MPC9E

Software release

- Junos OS Release 15.1F5 with Junos Continuity
- Junos OS release 16.1R1 and later

Description

- Weight: 31.4 lb (14.24 kg) (net weight without blank panels)
- Model number: MX2K-MPC9E
- Name in the CLI: **MPC9E 3D**

- Hardware features**
- Line-rate throughput of up to 1600 Gbps (1.6 Tbps) on MX2000 routers.
 - Four Packet Forwarding Engines, each providing a maximum bandwidth of 400 Gbps.
 - Supports two MICs. For information about which MICs are supported on this MPC, see [“MIC/MPC Compatibility” on page 26](#).
 - Junos Trio chipsets for increased scaling for bandwidth, subscribers, and services
 - Supports the Switch Fabric Boards SFB and SFB2. When MPC9E is used with SFB, the line-rate throughput is limited to 800 Gbps.
 - Supports maximum transmission units (MTUs) from 256 bytes through 16,000 bytes for transit traffic, and from 256 bytes through 9,500 bytes for host bound packets.

- Software features**
- *Dynamic Power Management* for effective utilization of available power.
 - *Inline Active Flow Monitoring* for higher scalability and performance.
 - *Flexible Queuing Mode* using an add-on license to support 32,000 queues per line card, including queues on both ingress and egress interfaces. You can use an additional license to support up to 512,000 queues per slot or 1,000,000 queues per slot.
 - *Hyper Mode* to speed up packet processing.
 - Optical diagnostics and related alarms.

MX10003 MPC (Multi-Rate)

JNP10003-LC2103

- Software release**
- Junos OS release 17.3R1 and later

Description	<ul style="list-style-type: none"> Weight: 30 lb (13.61 kg) (net weight without blank panel and without any MIC in slot 1) Model number: MX10003-LC2103 Power requirement: <ul style="list-style-type: none"> 715 W at 55° C 660 W at 25° C Name in the CLI: LC2103
Hardware features	<ul style="list-style-type: none"> The MX10003 MPC is a 1.2-Terabit capable MPC with three Packet Forwarding Engine complexes (that is, three EA ASICs). The EA ASIC operates in 400G mode. The Packet Forwarding Engine is based on the third generation of the Trio chipset architecture---namely, the EA (Eagle) ASIC. The Packet Forwarding Engine offers 400 Gbps of WAN and fabric bandwidth each. MX10003 MPC has six built-in QSFP+ optics ports, and one MIC slot. Supports Multi-Rate Ethernet Modular Interface Card (MIC) (model numbers: JNP-MIC1 and JNP-MIC1-MACSEC), and the fixed-port PIC (6xQSFP). For information about which MICs are supported on this MPC, see “MIC/MPC Compatibility” on page 26. Supports maximum transmission units (MTUs) from 256 bytes through 16,000 bytes for transit traffic, and from 256 bytes through 9,500 bytes for host bound packets.
Software features	<ul style="list-style-type: none"> <i>Dynamic Power Management</i> for effective utilization of available power. <i>Inline Active Flow Monitoring</i> for higher scalability and performance. <i>Flexible Queuing Mode</i> to support 32,000 queues per line card, including queues on both ingress and egress interfaces. Supports up to 512,000 queues per slot or 768,000 queues per slot. <i>Hyper Mode</i> to speed up packet processing. Optical diagnostics and related alarms. <p>For more information about features supported on MX10003 MPC, see “Protocols and Applications Supported by the MX10003 MPC (Multi-Rate) on the MX10003 Router” on page 399.</p>
Cables and connectors	<p>TIP: You can use the Hardware Compatibility Tool to find information about the pluggable transceivers supported on your Juniper Networks device.</p> <p>The list of supported transceivers for the MX Series is located at https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series.</p>
Power requirements (without MICs)	<ul style="list-style-type: none"> At different temperatures: <ul style="list-style-type: none"> 55° C: 715 W 25° C: 660 W
LEDs	<p>OK/FAIL LED, one bicolor:</p> <ul style="list-style-type: none"> Steady green—MPC is functioning normally and the link is up. Off—MPC is plugged-in but not powered on. Red—MPC has failed. <p>For information on the lane LEDs (L0, L1, L2, and L3), see <i>MPC and MIC Lane LED Scheme Overview</i>.</p>

Table 23 on page 138 summarize the port speed capability of MX10003 MPCs.

Table 23: MX10003 MPC (Multi-Rate) Port Speed

MIC	Port Number	Port Speed Supported
PIC 0	0-5	40 Gigabit Ethernet 4X10-Gigabit Ethernet
PIC 1	0-11	100 Gigabit Ethernet 40 Gigabit Ethernet 4X10-Gigabit Ethernet

Description

- Weight: 31.57 lbs (14.32 Kgs)
- Model number: JNP10K-LC2101
- Name in the CLI: **JNP10K-LC2101**
- Dimensions: Height = 1.89 in (48.01 mm), Width = 17.2 in (436.88 mm), Depth = 19.05 in (484 mm) (Excluding FRU Ejector)

Hardware features	<ul style="list-style-type: none"> • Fixed-configuration MPC with 10-Gbps, 40-Gbps, and 100-Gbps port speeds. • All the ports are multi-rate ports. Each port is capable of supporting either 100-Gbps or 40-Gbps or 10-Gbps (4x10-Gbps with breakout cable). • Line-rate throughput of up to 2.4 Tbps on the MX10008 router. • Six Packet Forwarding Engines, each providing a maximum bandwidth of 400 Gbps. • EA chipsets for increased scaling for bandwidth, subscribers, and services. • Supports the Switch Fabric Board, JNP10008-SF. • Supports maximum transmission units (MTUs) from 256 bytes through 16,000 bytes for transit traffic, and from 256 bytes through 9,500 bytes for host bound packets.
-------------------	---

Software features	<ul style="list-style-type: none"> • Supports rate selectability at the port level. • By default, the ports are configured as 10-Gigabit Ethernet ports. • Optical diagnostics and related alarms.
-------------------	---

Power requirements	<p>Line-rate throughput of 2.4 Tbps:</p> <ul style="list-style-type: none"> • Power consumption At different temperatures: 40° C: 1175 W 25° C: 1120 W
--------------------	---

LEDs	<p>OK/FAIL LED, one bicolor:</p> <ul style="list-style-type: none"> • Steady green—MPC is functioning normally. • Yellow—MPC has failed. <p>Port LED—Link</p> <ul style="list-style-type: none"> • Off—Port not enabled. • Green—Port link is up with no alarms or failures. • Red—Port link is down with alarms. <p>NOTE: When a QSFP+ port is configured for the 10-Gigabit mode with a breakout cable, the link status for 10-Gigabit port is indicated with the addition of 4 LEDs provided on the line card. The lane LEDs for the corresponding port indicates the port status.</p> <p>Like the port status LED, each individual lane LED support four states as: OFF, AMBER, GREEN, RED. See <i>MPC and MIC Lane LED Scheme Overview</i> for more details.</p> <p>For the 40-Gigabit mode the lane number LED is not applicable. The port LED indicates the port status irrespective of whichever lane number LED is ON.</p>

ATM MIC with SFP

Figure 8: 8-Port ATM MIC with SFP

MIC-3D-OCx-ATM

Software release

- Junos 12.1 and later

For information on which MPCs support this MIC, see “MIC/MPC Compatibility” on page 26. For information on which MICs are supported on MX Series routers, see “MICs Supported by MX Series Routers” on page 18.

Description

- Rate-selectable using one of the following rates:
 - 8-port OC3
 - 2-port OC12
- Power requirement: 0.73 A @ 48 V (35 W)
- Weight: 1.2 lb (0.54 kg)
- Model number: MIC-3D-8OC3-2OC12-ATM
- Name in the CLI: **3D 8OC3 2OC12 ATM**

Hardware features

- High-performance parsing of SONET/SDH frames
- Packet segmentation and reassembly (SAR) management and output port queuing
- Packet buffering, Layer 2 parsing
- Line rate throughput for each port

Software features

- Circuit cross-connect (CCC) for leveraging ATM access networks
- User-configurable virtual circuit (VC) and virtual path (VP) support
- Support for idle cell or unassigned cell transmission
- OAM fault management processes alarm indication signal (AIS), remote defect indication (RDI) cells, and loop cells
- Point-to-point and point-to-multipoint mode Layer 2 counters per VC and per VP
- Local and remote loopback
- Simple Network Management Protocol (SNMP):
 - Management Information Base (MIB) 2 (RFC 1213)
 - ATM MIB (RFC 1695)
 - SONET MIB
 - PWE3 MIB (RFC 5603)
 - PW-ATM-MIB (RFC 5605)
 - PW-FRAME-MIB (RFC 5601)
 - MIB for CoS
- Unspecified bit rate (UBR), non-real-time variable bit rate (VBR), and constant bit rate (CBR) traffic shaping
- Per-VC or per-VP traffic shaping
- Support for F4 OAM cells (AIS, RDI, Loopback, and Continuity Check)
- Support for F5 OAM cells (AIS, RDI, Loopback, and Continuity Check)
- Support for 16 bit VCI range
- Encapsulations:
 - atm-ccc-cell-relay (Junos 12.1 and later)
 - atm-ccc-vc-mux (Junos 12.1 and later)
 - atm-snap (Junos 12.2 and later)
 - atm-vc-mux (Junos 12.2 and later)
 - atm-tcc-snap (Junos 13.3 and later)
 - atm-tcc-vc-mux (Junos 13.3 and later)
 - vlan-vci-ccc (Junos 16.1 and later)
 - ether-over-atm-llc
 - ppp-over-ether-over-atm-llc
 - atm-ppp-llc
 - atm-ppp-vc-mux

NOTE: Inline MLPPP is not supported on this MIC.

Cables and connectors

TIP: You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

The list of supported transceivers for the MX Series is located at <https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series>.

LEDs	<p>OK/FAIL LED, one bicolor:</p> <ul style="list-style-type: none">• Green—MIC is functioning normally.• Red—MIC has failed. <p>Link LED, one green per port:</p> <ul style="list-style-type: none">• Off—No link.• On steadily—Link is up.• Blinking—Online with alarms for remote failures• Blinking rapidly—Active with a local alarm; router has detected a failure
Alarms, errors, and events	<ul style="list-style-type: none">• Alarm indication signal—line (AIS-L)• Alarm indication signal—path (AIS-P)• Bit error rate—signal degrade (BERR-SD)• Bit error rate—signal fail (BERR-SF)• Loss of cell delineation (LOC)• Loss of frame (LOF)• Loss of pointer (LOP-P)• Loss of signal (LOS)• Payload mismatch (PLM-P)• Payload unequipped (unequipped STS at path level) (UNEQ-P)• Remote defect indication—line (RDI-L)• Remote defect indication—path (RDI-P)• Error detection:<ul style="list-style-type: none">• Bit interleaved parity errors B1, B2, B3• Errored seconds (ES-S, ES-L, ES-P)• Far-end bit errors, remote error indication—line (REI-L), far-end line coding violations (CV-LFE)• Far-end bit errors, remote error indication—path (REI-P), far-end path coding violations (CV-PFE)• Far-end errored seconds (ES-LFE, ES-PFE)• Far-end severely errored seconds (SES-LFE, SES-PFE)• Far-end unavailable seconds (UAS-LFE, UAS-PFE)• Severely errored framing (SEF)• Severely errored framing seconds (SEFS-S)• Severely errored seconds (SES-S, SES-L, SES-P)• Unavailable seconds (UAS-L, UAS-P)

NOTE: MIC-3D-8OC3-2OC12-ATM Revision 8 and Revision 22 are supported only by the following Junos OS releases:

- Junos OS Release 12.3—12.3R9 and later
- Junos OS Release 13.3—13.3R6 and later
- Junos OS Release 14.1—14.1R4 and later
- Junos OS Release 14.2—14.2R3 and later
- Junos OS Release 15.1 and later

You must upgrade to a supported Junos OS release to use MIC-3D-8OC3-2OC12-ATM Revision 8 and Revision 22 and later.

Related Documentation

- [MX Series MIC Overview on page 17](#)

DS3/E3 MIC

Figure 9: DS3/E3 MIC

Software release

- Junos OS Release 11.4 and later

For information on which MPCs support this MIC, see [“MIC/MPC Compatibility” on page 26](#). For information on which MICs are supported on MX Series routers, see [“MICs Supported by MX Series Routers” on page 18](#).

Description

- Eight E3 or DS3 ports
- DS3/E3 MIC ports can be configured as one of the following:
 - 8 clear-channel DS3 ports
 - 8 channelized DS3 ports
 - 8 clear-channel E3 ports

NOTE: You can upgrade the DS3/E3 MIC with the S-MIC-3D-8CHDS3 software license (purchased separately) to support DS3 channelization. Channelized DS3/E3 MIC is supported only on queuing MPCs. On the MX80 router, you also need an S-MX80-Q software license.

- DS3 or E3 is configurable on a per-port granularity
- DS3 channelization for the 8-port Channelized DS3/E3 MIC:
 - 8 DS3 channels
 - 224 DS1 channels
 - 2038 DS0 channels
- Power requirement: 4.0 A @ 9 V (36W)
- Weight: 4.4 lb (2 kg)
- Model numbers:
 - DS3/E3 MIC: MIC-3D-8DS3-E3
 - Channelized DS3/E3 MIC: MIC-3D-8CHDS3-E3-B

Hardware features

- Ports are numbered 0 through 7, Tx0 through Tx7 and Rx0 through Rx7
-

Software features

- Maximum transmission units (MTUs) of up to 9192 bytes
- Framing: M13, C-bit parity, framed clear channel
- Subrate and scrambling:

NOTE: Only DS3 interfaces support subrate and scrambling.

- Digital Link/Quick Eagle
- Kentrox
- Larscom
- ADTRAN
- Verilink
- Internal and look clocking
- DS3 far-end alarm and control (FEAC) channel
- Full bit error rate test (BERT) for DS0, DS1, and DS3
- Encapsulations:
 - MPLS fast reroute
 - MPLS CCC (circuit cross-connection)
 - MPLS TCC (translational cross-connection)
 - Cisco High-Level Data Link Control (cHDLC)
 - Cisco HDLC CCC
 - Cisco HDLC TCC
 - Point-to-Point Protocol (PPP)
 - PPP for CCC
 - PPP for TCC
 - Flexible Frame Relay
 - Frame Relay
 - Frame Relay for CCC
 - Frame Relay for TCC
 - PPP over Frame Relay

NOTE: Ethernet over Frame Relay is not supported.

- Encapsulations available only for Channelized DS3/E3 MIC (Junos OS Release 12.1 and later):
 - Multilink Point-to-Point Protocol (MLPPP)
 - Multiclass MLPPP
 - Multilink Frame Relay (MLFR) end-to-end (FRF.15)
 - Multilink Frame Relay (MLFR) UNI NNI (FRF.16, also referred to as MFR)
 - Compressed Real-Time Transport Protocol (CRTP)

NOTE: When you configure multilink services on a MIC in an MX Series router, ensure that a Multiservices DPC is present in the same router.

Cables and connectors

TIP: You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

The list of supported transceivers for the MX Series is located at <https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series>.

- Coaxial:
 - Custom 10-ft (3-m) mini-SMB to BNC cable (model number: CBL-DS3-E3-M-S), set of 8 cables (bundled RX and TX)

LEDs**OK/FAIL LED, one bicolor:**

- Green—MIC is functioning normally
- Red—MIC has failed

Link LED, one green per port:

- Off—Not enabled
- Green—Online with no alarms or failures
- Yellow—Online with alarms for remote failures
- Red—Active with a local alarm; router has detected a failure

Alarms, errors, and events**DS3 alarms:**

- Alarm indication signal (AIS)
- Loss of frame (LOF)
- Loss of signal seconds (LOS)
- Phase lock loop (PLL)

DS3 error detection:

- C-bit code violations (CCV)
- C-bit errored seconds (CES)
- C-bit severely errored seconds (CSES)
- CRC errors
- Excessive zeros (EXZ)
- Far-end block error (FEBE)
- Far-end receive failure (FERF)
- Line errored seconds (LES)
- Parity bit (P-bit) code violations (PCV)
- Parity bit (P-bit) errored seconds (PES)
- Parity bit (P-bit) severely errored framing seconds (PSES)
- Severely errored framing seconds (SEFS)
- Unavailable seconds (UAS)

Gigabit Ethernet MIC with SFP (E)

Figure 14: 20-Port Gigabit Ethernet MIC with SFP (E)

MIC-3D-20GE-SFP-E

- Software release**
- Junos 13.2R2 and later

For information on which MPCs support this MIC, see [“MIC/MPC Compatibility” on page 26](#). For information on which MICs are supported on MX Series routers, see [“MICs Supported by MX Series Routers” on page 18](#).

- Description**
- 20 Gigabit Ethernet ports
 - Power requirement: 0.77 A @ 48 V (37 W)
 - Weight: 1.2 lb (0.54 kg)
 - Model number: MIC-3D-20GE-SFP-E
 - Name in the CLI: **3D 20x 1GE(LAN)-E,SFP**

- Hardware features**
- High-performance throughput on each port at speeds up to 1 Gbps
 - Auto-negotiation between Gigabit Ethernet circuit partners
 - Up to 20-Gbps of full-duplex traffic
 - Maximum transmission units (MTUs) of up to 9192 bytes
 - Environmentally hardened for 32° F (0° C) to 131° F (55° C) operating temperatures
 - SEC PHY
 - Timing PHY

- Software features**
- Optical diagnostics and related alarms
 - Virtual Router Redundancy Protocol (VRRP) support
 - IEEE 802.1Q virtual LANs (VLANs) support
 - Remote monitoring (RMON) EtherStats
 - Source MAC learning
 - MAC accounting and policing—Dynamic local address learning of source MAC addresses
 - Flexible Ethernet encapsulation
 - Multiple tag protocol identifiers (TPID)
 - Precision Time Protocol (PTP) or IEEE 1588v2
 - Media Access Control Security (MACsec)

- Interfaces
- Syntax: `ge-fpc/pic/port` where:
- fpc: Slot in the router where the MPC is installed. The MPCs are represented in the CLI as **FPC0** through **FPC19**.
 - pic: The logical PIC number on the MIC, numbered 0 or 1. [Figure 15 on page 154](#), [Figure 16 on page 155](#), and [Figure 17 on page 155](#) illustrate the port numbering for the Gigabit Ethernet MIC with SFP (E) installed in the MX960, MX480, and MX240, respectively.
 - port: 0 through 9.

For example, `ge-3/1/0` is the interface for port 0 in PIC 1 on the MPC installed in slot 3.

[Figure 15 on page 154](#), [Figure 16 on page 155](#), and [Figure 17 on page 155](#) illustrate the port numbering for the MIC-3D-20GE-SFP-E installed in an MX960, MX480, and MX280, respectively.

Cables and connectors **TIP:** You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

100-Gigabit DWDM OTN MIC with CFP2-ACO

Software release	<ul style="list-style-type: none"> Junos OS Release 15.1F5 and 15.1F6, Junos OS Release 17.1R1 and later <p>For information about which MPCs support this MIC, see “MIC/MPC Compatibility” on page 26. For information about which MICs are supported on MX Series routers, see “MICs Supported by MX Series Routers” on page 18.</p>
Description	<ul style="list-style-type: none"> One 100-Gigabit DWDM OTN port Power requirements (including transceiver) at different temperatures: <ul style="list-style-type: none"> 55° C: 1.90 A @ 48 V (91 W) 25° C: 1.73 A @ 48 V (83 W) Weight: 2.3 lb (1.04 kg) Model number: MIC3-100G-DWDM Name in the CLI: 1X100GE DWDM CFP2-ACO

Hardware features

- Dual-wide MIC that installs into two MIC slots
- Supports CFP2 analog coherent optics (CFP2-ACO)
- Transparent transport of a 100-Gigabit Ethernet signal with OTU4V framing
- ITU-standard OTN performance monitoring and alarm management
- Dual-polarization quadrature phase shift keying (DP-QPSK) modulation
- Supports three types of forward error correction (FEC):
 - Soft-decision FEC (SD-FEC)
 - High-gain FEC (HG-FEC)
 - G.709 FEC (GFEC)
- 100 channels on C-band ITU grid with 50-GHz spacing
- Latency:
 - SD-FEC: 14 μ s (TX + RX)
 - HG-FEC: 22 μ s (TX + RX)
 - GFEC: 6 μ s (TX + RX)
- Interoperable with the CFP-100GBASE-ZR transceiver supported on the 100-Gigabit Ethernet MIC with CFP (MIC3-3D-1X100GE-CFP) on MX Series routers and the 100-Gigabit Ethernet PIC with CFP (P1-PTX-2-100GE-CFP) on PTX Series routers.
- Interoperable with the 100-Gigabit DWDM OTN PIC with CFP2 (PTX-5-100G-WDM) on PTX Series routers when the 100-Gigabit DWDM OTN MIC is configured to use SD-FEC or GFEC.

NOTE: The 1-port 100-Gigabit DWDM OTN MIC is not directly interoperable with the 2-port 100-Gigabit DWDM OTN PIC (P1-PTX-2-100G-WDM), but they can both operate over the same DWDM line system.

Software features

NOTE: For information about configuring the MIC, see [Configuring OTN Interfaces on MIC3-100G-DWDM MIC](#). For information about upgrading the firmware on the PIC, see [Upgrading Firmware on the 100-Gigabit DWDM OTN MIC \(MIC3-100G-DWDM\)](#).

- Compliant with ITU G.709 and G.798
 - Provides a transport interface and state model (GR-1093)
 - Performance monitoring features such as alarms, threshold-crossing alarms, OTU/ODU error seconds and FEC and bit error rate (BER) statistics
 - SNMP management of the MIC based on *RFC 3591, Managed Objects for the Optical Interface Type*, including the following:
 - Set functionality
 - Black Link MIB
 - IFOTN MIB
 - Optics MIB
 - FRU MIB
 - Pre-FEC BER monitoring provides interrupt-driven, BER-based detection of link signal degradation for MPLS fast reroute.
 - User-configurable optics options:
 - Transmit (TX) laser enable and disable
 - TX output power
 - Wavelength
 - Receive (RX) LOS warning or alarm thresholds
 - Threshold crossing alarms (TCAs)
- User-configurable card options:
- FEC mode (SD-FEC, HG-FEC, or GFEC)
 - TCAs

Cables and connectors

TIP: You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

The list of supported transceivers for the MX Series is located at <https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series>.

NOTE: When inserting the C form-factor pluggable 2 (CFP2) transceiver, ensure that the transceiver sits tightly in the port. You hear a distinct click sound when the latch locks into the corresponding port. The latch must be fully engaged in the corresponding port for the CFP2 transceiver to function properly. Failing to do so can result in loss of connection.

To verify that the CFP2 transceiver module is inserted properly, give a gentle pull by grasping the sides of the module. The module should sit tightly.

 - Maximum over PM interval
 - Average over PM interval

TIP: You can view network lane receive-related status by using the **show interfaces transport pm optics** operational-mode CLI command.

FEC statistics:

- Corrected Errors—the number of bits received that were in error, but corrected.
- Uncorrected Words—the number of FEC codewords received that were uncorrectable.
- Corrected Error Ratio—the number of corrected bits divided by the number of bits received

TIP: You can view FEC statistics by using the **show interfaces interface-name extensive** operational-mode CLI command.

Table 24 on page 178 describes the OTN alarms and defects that can occur on the MIC and the link status when the alarm or defect occurs.

TIP: You can view OTN alarms and defects by using the **show interfaces interface-name extensive** operational-mode CLI command.

Table 24: OTN Alarms and Defects

Category	Alarm	Description	Link Status
OTN	LOS	Loss of signal	Link down
	LOF	Loss of frame	Link down
	LOM	Loss of multiframe	Link down
OTN FEC	FEC Degrade (OTU-FEC-DEG)	Forward error correction degraded	Link down if signal degrade or backward FRR thresholds are met
	FEC Excessive (OTU-FEC-EXE)	There are uncorrected words and there are errors in the frame header	Possible link down
OTN OTU	OTU-AIS	Alarm indication signal or all ones signal	Link down
	OTU-BDI	Backward defect identification	Link down
	OTU-IAE	Incoming alignment error	Warning
	OTU-TTIM	Destination access point identifier (DAPI), source access point identifier (SAPI), or both mismatch from expected to received	Can cause the link to be down if otu-ttim-act-enable is configured at the [edit interfaces <i>interface-name</i> otn-options] hierarchy level
	OTU-BIAE	Backward incoming alignment error	Warning
	OTU-TSF	OTU trail signal fail	Warning
	OTU-SSF	OTU server signal fail	Warning

Table 24: OTN Alarms and Defects (continued)

Category	Alarm	Description	Link Status
OTN ODU	ODU-AIS	Alarm indication signal or all ones signal	Link down
	ODU-OCI	Open connection error	Link down
	ODU-LCK	ODU lock triggers for path monitoring and TCM levels 1 through 6	Link down
	ODU-BDI	Backward defect indication	Link down
	ODU-TTIM	DAPI or SAPI mismatch from expected to received	Can cause the link to be down if <code>odu-ttim-act-enable</code> is configured at the <code>[edit interfaces interface-name otn-options]</code> hierarchy level
	ODU-IAE	Incoming alignment error	Warning
	ODU-LTC	Loss of tandem connection	Warning
	ODU-CSF	Client signal failure	Warning
	ODU-TSF	Trail signal fail	Warning
	ODU-SSF	Server signal fail	Warning
	ODU-PTIM	Payload type mismatch	Link down

Description

- 4-port: Rate-selectable using one of the following rates:
 - 4-port OC3/STM1
 - 2-port OC12/STM4
- 8-port: Rate-selectable using one of the following rates:
 - 8-port OC3/STM1
 - 4-port OC12/STM4
- Channelization: OC3, DS3, DS1, DS0, E3, E1. For information on channelization numbers, see *Channelized Interfaces Feature Guide for Routing Devices*.
- Power requirement:
 - 4-port: 4.56 A @ 9 V (41 W)
 - 8-port: 5.78 A @ 9 V (52 W)
- Weight:
 - 4-port: 4.4 lb (2 kg)
 - 8-port: 4.4 lb (2 kg)
- Model number:
 - 4-port: MIC-3D-4CHOC3-2CHOC12
 - 4-port: MIC-4COC3-2COC12-G
 - 8-port: MIC-3D-8CHOC3-4CHOC12
 - 4-port: MIC-4COC3-2COC12-G
 - 8-port: MIC-3D-8CHOC3-4CHOC12
 - 8-port: MIC-8COC3-4COC12-G

NOTE: MIC-4COC3-2COC12-G and MIC-8COC3-4COC12-G are RoHS 6/6 compliant.

- Hardware features
- The ports are labeled:
 - 4-port: 0-3
 - 8-port: 0-7

- Software features
- Maximum transmission units (MTUs) of up to 9192 bytes
 - Per-port SONET/SDH framing
 - Local and remote loopback on each port
 - Optical diagnostics and monitoring
 - Clocking options: internal or external/loop mode
 - Encapsulations:
 - MPLS fast reroute
 - MPLS CCC (circuit cross-connection)
 - MPLS TCC (translational cross-connection)
 - Cisco High-Level Data Link Control (cHDLC)
 - Cisco HDLC CCC
 - Cisco HDLC TCC
 - Point-to-Point Protocol (PPP)
 - PPP for CCC
 - PPP for TCC
 - Flexible Frame Relay
 - Frame Relay
 - Frame Relay for CCC
 - Frame Relay for TCC
 - PPP over Frame Relay
 - Multilink-based protocols (Junos OS Release 12.1 and later):
 - Multilink Point-to-Point Protocol (MLPPP)
 - Multiclass MLPPP
 - Multilink Frame Relay (MLFR) end-to-end (FRF.15)
 - Multilink Frame Relay (MLFR) UNI NNI (FRF.16, also referred to as MFR)
 - Compressed Real-Time Transport Protocol (CRTP)

NOTE: When you configure multilink services on a MIC in an MX Series router, ensure that a Multiservices DPC is present in the same router.

NOTE: Ethernet over Frame Relay is not supported.

- Cables and connectors **TIP:** You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

The list of supported transceivers for the MX Series is located at <https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series>.

LEDs

OK/FAIL LED, one bicolor:

- Green—MIC is functioning normally
- Red—MIC has failed

LINK LED, one green per port:

- Off—Not enabled
- Green—Online with no alarms or failures
- Yellow—Online with alarms for remote failures
- Red—Active with a local alarm; router has detected a failure

Alarms, errors, and events

SONET alarms:

- Loss of light (LOL)
- Loss of signal (LOS)
- Loss of frame (LOF)
- Phase lock loop (PLL)
- Severely errored frame (SEF)
- Alarm indicator signal—line (AIS-L)
- Alarm indicator signal—path (AIS-P)
- Remote defect indicator—line (RDI-L)
- Remote defect indicator—path (RDI-P)
- Loss of pointer—path (LOP-P)
- Bit error rate—signal degrade (BERR-SD)
- Bit error rate—signal fail (BERR-SF)
- Payload label mismatch—Path (PLM-P)
- Unequipped—path (UNEQ-P)
- Remote error indicator—path (REI-P)
- Alarm indicator signal—virtual container (V-AIS)
- Loss of pointer—virtual container (V-LOP)
- Remote defect indicator—virtual container (V-RDI)
- Unequipped—virtual container (V-UNEQ)
- Mismatch—virtual container (V-MIS)

SDH alarms:

- Loss of light (LOL)
- Phase lock loop (PLL)
- Loss of frame (LOF)
- Loss of signal (LOS)
- Severely errored frame (SEF)
- Multiplex-section alarm indicator signal (MS-AIS)
- Higher order path—alarm indication signal (HP-AIS)
- Loss of pointer (LOP)
- Bit error rate—signal degrade (BER-SD)
- Bit error rate—signal fail (BER-SF)
- Multiplex section—far end receive failure (MS-FERF)
- Higher order path—far-end receive failure (HP-FERF)
- Higher order path—payload label mismatch (HP-PLM)
- Remote error indicator (REI)

- Unequipped (UNEQ)
- Tributary unit–alarm indicator signal (TU-AIS)
- Tributary unit–loss of pointer (TU-LOP)
- Tributary unit–remote defect indicator (TU-RDI)
- Tributary unit–unequipped (TU-UNEQ)
- Tributary unit–mismatch (TU-MIS)

DS3 alarms:

- Alarm indication signal (AIS)
- Loss of frame (LOF)
- Loss of signal seconds (LOS)
- Phase lock loop (PLL)

DS3 error detection:

- C-bit code violations (CCV)
- C-bit errored seconds (CES)
- C-bit severely errored seconds (CSES)
- CRC errors
- Excessive zeros (EXZ)
- Far-end block error (FEBE)
- Far-end receive failure (FERF)
- Line errored seconds (LES)
- Parity bit (P-bit) code violations (PCV)
- Parity bit (P-bit) errored seconds (PES)
- Parity bit (P-bit) severely errored framing seconds (PSES)
- Severely errored framing seconds (SEFS)
- Unavailable seconds (UAS)

Hardware features	<ul style="list-style-type: none"> Ports are numbered 0 through 3

- Software features
- Per-MIC SONET/SDH framing
 - Internal and loop clocking
 - Encapsulations:
 - Pseudo Wire Emulation Edge-to-Edge (PWE3) Architecture (RFC 3985)
 - Requirements for Pseudo-Wire Emulation Edge-to-Edge (PWE3) (RFC 3916)
 - Structure-Agnostic Time Division Multiplexing (TDM) over Packet (SAToP) (RFC 4553)
 - Structure-Aware Time Division Multiplexed (TDM) Circuit Emulation Service over Packet Switched Network (CESoPSN) (RFC 5086)
 - Pseudowire Emulation Edge-to-Edge (PWE3) Control Word for Use over an MPLS PSN (RFC 4385)
 - L2 Network Interconnections (protocol stitching):
 - TDM LDP PWs to BGP L2VPN—see *Using the Layer 2 Interworking Interface to Interconnect a Layer 2 Circuit to a Layer 2 VPN* for more information. Note that stitching CESoPSN PW to BGP L2VPN is not supported.
 - Unified in-service software upgrade (unified ISSU)

Interfaces

Syntax: *mediatype-fpc/pic/port* where:

- mediatype: coc3, coc12, cstm1, cstm4, or ds
- fpc: Slot in the router where the MPC is installed
- pic: 0 when installed in MIC slot 0 or 2 when installed in MIC slot 1
- port: 0 through 3

For example, *cstm4-1/2/0* is the channelized STM4 interface for port 0 on the MIC installed in MIC slot 1 on an MPC installed in slot 1.

Cables and connectors **TIP:** You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

The list of supported transceivers for the MX Series is located at <https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series>.

NOTE: To extend the life of the laser, when a MIC is not being actively used with any valid links, take the MIC offline until you are ready to establish a link to another device. For information about taking a MIC offline, see the **request chassis pic offline** command in the *Junos OS System Basics and Services Command Reference*.

LEDs

OK/FAIL LED, one bicolor:

- Green—MIC is functioning normally
- Red—MIC has failed

LINK LED, one tricolor per port:

- Off—Not enabled
- Green—Online with no alarms or failures
- Yellow—Online with alarms for remote failures
- Red—Active with a local alarm; router has detected a failure

Alarms, errors, and events

Structure-agnostic alarms for T1 and E1 interface:

- Alarm indication signal (AIS)
- Loss of signal (LOS)
- Line code violation (LCV)
- Errored seconds (ES)
- Line-errored seconds (LES)
- Severely errored seconds (SES)
- Unavailable errored seconds (UAS)

Structure aware alarms for T1 and E1 interface:

- Severely errored frame (SEF)
- Block error event (BEE)
- Loss of frame (LOF)
- Yellow alarm (remote alarm indication RAI)
- Path code violation (PCV)
- Severely errored frame seconds (SEFS)
- Bursty errored seconds (BES)

Multiservices MIC

Figure 36: MS-MIC-16G

Supported Junos OS Release	<ul style="list-style-type: none"> • Junos OS Release 13.2 and later • Model number: MS-MIC-16G • Name in the CLI: MS-MIC-16G
Description	The Multiservices Modular Interfaces Card (MS-MIC) provides improved scaling and high performance for MX series routers. The MS-MIC has enhanced memory (16 GB) and enhanced processing capabilities.
Software Features	<ul style="list-style-type: none"> • Active flow monitoring and export of flow monitoring version 9 records based on RFC 3954 • IP Security (IPsec) encryption • Network Address Translation (NAT) for IP addresses <p>NOTE: The Multiservices MIC does not support Network Address Translation-Traversal (NAT-T).</p> <ul style="list-style-type: none"> • Port Address Translation (PAT) for port numbers • Traffic sampling • Stateful firewall with packet inspection—detects SYN attacks, ICMP and UDP floods, and ping-of-death attacks • Network Attack Protection (NAP) • Support for up to 6000 service sets • Support for MTUs up to 9192 bytes. • Multiple services can be supported. See <i>Junos OS Services Interfaces Library for Routing Devices</i> for more information. • See “Protocols and Applications Supported by the MS-MIC and MS-MPC” on page 397 for information about the protocols and applications that this MIC supports.
Hardware Features and Requirements	<ul style="list-style-type: none"> • MICs are hot-removable and hot-insertable • MS-MIC CPU Clock Cycle – 800MHz • Works with SBCs and SBCEs • Interoperable with MS-DPCs. Both MS-MPCs and MS-DPCs can co-exist in the same chassis • Chassis requires enhanced fan trays and high-capacity DC or AC power supplies <p>NOTE: Only one Multiservices MIC is supported in each MPC.</p> <p>NOTE: Starting in Junos OS Release 13.3R3, 14.1R2, and 14.2R1, MX104 routers support only two Multiservices MICs.</p>

Input/Output Power Requirements	MS-MIC—6.67 amps @ 9V (60W)
Weight and Dimensions	Weight: 2 lbs (.91 kg); Height: 0.9 in. (2.26 cm); Width: 6 in. (15.24 cm); Depth: 7 in. (17.78 cm)
MPC Support	<ul style="list-style-type: none"> • Multiservices MPC on page 86 • See “MIC/MPC Compatibility” on page 26 for a list of the MPCs that support the MS-MIC.
LEDs	<p>Application activity tricolor LED, labeled APP STATUS:</p> <ul style="list-style-type: none"> • Off—Application is not running. • Red—Application has failed. • Yellow—Application is reconfiguring. • Green—Application is running. <p>MIC activity tricolor LED, labeled MIC STATUS:</p> <ul style="list-style-type: none"> • Off—MIC has failed. • Red—MIC has an error or failure. • Yellow—MIC is transitioning online or offline. • Green—MIC is functioning normally.

- Description
- 4-port: 4 OC3/STM1 or OC12/STM4 ports
 - Each port is rate-selectable and supports OC3, OC12, or OC48.
 - The ports can be configured to support a combination of OC3, OC12, and OC48 rates. In the combination, you can configure only one port to support OC48, whereas OC3 or OC12 can be configured on all four ports.
 - 8-port: 8 OC3/STM1 or OC12/STM4 ports
 - Each port is rate-selectable and supports OC3, OC12, or OC48.
 - The ports can be configured to support a combination of OC3, OC12, and OC48 rates. In the combination, you can configure only four ports to support OC48, whereas OC3 or OC12 can be configured on all eight ports.
 - Power requirement:
 - 4-port: 2.6 A @ 9 V (23.4 W)
 - 8-port: 3.1 A @ 9 V (27.9 W)
 - Weight:
 - 4-port: 1.27 lb (0.58 kg)
 - 8-port: 1.47 lb (0.67 kg)
 - Model number:
 - 4-port: MIC-3D-4OC3OC12-1OC48
 - 8-port: MIC-3D-8OC3OC12-4OC48

- Hardware features
- The ports are labeled:
 - 4-port: 0-3
 - 8-port: 0-7
 - Maximum transmission units (MTUs) of up to 9192 bytes

- Software features
- Per-port SONET/SDH framing
 - Local and remote loopback on each port
 - Optical diagnostics and monitoring
 - Clocking options: internal or external/loop mode.
 - Unified in-service software upgrade (unified ISSU)
 - Encapsulations:
 - Multiprotocol Label Switching (MPLS) fast reroute
 - MPLS CCC (circuit cross-connect)
 - MPLS TCC (translational cross-connect)
 - Cisco High-Level Data Link Control
 - Cisco HDLC CCC
 - Cisco HDLC TCC
 - Point-to-Point Protocol (PPP)

LEDs

OK/FAIL LED, one bicolor:

- Green—MIC is functioning normally
- Red—MIC has failed

LINK LED, one green per port:

- Off—Not enabled
- Green—Online with no alarms or failures
- Yellow—Online with alarms for remote failures
- Red—Active with a local alarm; router has detected a failure

Alarms, errors, and events**SONET alarms:**

- Loss of light (LOL)
- Loss of signal (LOS)
- Loss of frame (LOF)
- Phase lock loop (PLL)
- Severely errored frame (SEF)
- Alarm indicator signal–line (AIS-L)
- Alarm indicator signal–path (AIS-P)
- Remote defect indicator–line (RDI-L)
- Remote defect indicator–path (RDI-P)
- Loss of pointer–path (LOP-P)
- Bit error rate–signal degrade (BERR-SD)
- Bit error rate–signal fail (BERR-SF)
- Payload label mismatch–Path (PLM-P)
- Unequipped–path (UNEQ-P)
- Remote error indicator–path (REI-P)

SDH alarms:

- Loss of light (LOL)
- Phase lock loop (PLL)
- Loss of frame (LOF)
- Loss of signal (LOS)
- Severely errored frame (SEF)
- Multiplex-section alarm indicator signal (MS-AIS)
- H Path alarm indicator signal (HP-AIS)
- Loss of pointer (LOP)
- Bit error rate–signal degrade (BER-SD)
- Bit error rate–signal fail (BER-SF)
- Multiplex section–far end receive failure (MS-FERF)
- High order path–far end receive failure (HP-FERF)
- High order path–payload label mismatch (HP-PLM)
- Remote error indicator (REI)
- Unequipped (UNEQ)

For information about which MPCs support this MIC, see [“MIC/MPC Compatibility”](#) on page 26. For information about which MICs are supported on MX Series routers, see [“MICs Supported by MX Series Routers”](#) on page 18.

Description

- Weight: 3 lb (1.36 kg)
- Model numbers:
Without MACsec support: JNP-MIC1
With MACsec support: JNP-MIC1-MACSEC
- Power requirement:
 - JNP-MIC1:
85 W at 55° C
80 W at 25° C
 - JNP-MIC1-MACSEC:
130 W at 55° C
125 W at 25° C
- Name in the CLI:
JNP-MIC1: **MIC1**
JNP-MIC1-MACSEC: **MIC1-MACSEC**

- Hardware features
- JNP-MIC1 and JNP-MIC1-MACSEC:
 - Twelve 100-Gigabit Ethernet ports that support quad small form-factor pluggable (QSFP28) transceivers
 - The ports are numbered 0 through 11.
 - Each port can be configured as a 100-Gigabit Ethernet port, 40-Gigabit Ethernet port, or as four 10-Gigabit Ethernet ports (by using a breakout cable).
- Table 26 on page 209 lists the configurable Gigabit Ethernet port speeds for each port.

- Software features
- Supports rate selectability at the port level.
 - By default, the ports are configured as 10-Gigabit Ethernet ports.
 - Supports remote port identification.
 - JNP-MIC1-MACSEC supports Media Access Control Security.

Cables and connectors **TIP:** You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

The list of supported transceivers for the MX Series is located at <https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series>.

- LEDs
- OK/FAIL LED, one bicolor:
 - OFF—MIC is offline or MIC has fault.
 - Red—MIC is in power failure state.
 - Green—MIC is online.
 - Link LED, one green per port:
 - Steady green—Link is up.
 - Off—Link is down or disabled.
 - Like port status LED, each individual lane LED support four states as: OFF, AMBER, GREEN, RED. See *MPC and MIC Lane LED Scheme Overview* for more details.

Multi-Rate Ethernet MIC

Figure 41: MIC-MACSEC-MRATE

Software release Junos OS release 17.4R1 and later

For information about which MPCs support this MIC, see [“MIC/MPC Compatibility” on page 26](#). For information about which MICs are supported on MX Series routers, see [“MICs Supported by MX Series Routers” on page 18](#).

Description

- Weight: 3 lb (1.36 kg)
- Model number: MIC-MACSEC-MRATE
- Power requirement:
 - 110 W at 45° C
 - 105 W at 25° C
- Name in the CLI: **MACSEC-12xQSFPX-XGE-XLGE-CGE**

- Hardware features
- Twelve Gigabit Ethernet QSFP+ ports, each of which can be configured as a 40-Gigabit Ethernet port or as four 10-Gigabit Ethernet ports (by using a breakout cable).
 - The ports are numbered **0** through **11**.
 - Eight out of the twelve ports can be configured as 100-Gigabit Ethernet ports. Port numbers **0** through **3**, and **6** through **9** are the eight 100-Gigabit Ethernet ports.
 - When used in MP8CE:
 - Four ports out of the total twelve ports support 100-Gigabit Ethernet speed
 - Maximum aggregate port capacity across ports **0** through **5** should not exceed 240 Gbps
 - Maximum aggregate port capacity across ports **6** through **11** should not exceed 240 Gbps
 - When used in MPC9E:
 - Eight ports out of the total twelve ports support 100-Gigabit Ethernet speed
 - Maximum aggregate port capacity across ports **0** through **5** should not exceed 400 Gbps
 - Maximum aggregate port capacity across ports **6** through **11** should not exceed 400 Gbps
 - [Table 27 on page 211](#) lists the configurable Gigabit Ethernet port speeds for each port.

- Software features
- Supports rate selectability at the port level.
 - By default, the ports are configured as 10-Gigabit Ethernet ports.
 - Supports remote port identification.
 - Supports Media Access Control Security (MACsec)

Cables and connectors **TIP:** You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

SONET/SDH OC192/STM64 MIC with XFP

Figure 42: SONET/SDH OC192/STM64 MIC with XFP

Software release

- Junos OS Release 12.2 and later

For information on which MPCs support this MIC, see [“MIC/MPC Compatibility” on page 26](#). For information on which MICs are supported on MX Series Routers, see [“MICs Supported by MX Series Routers” on page 18](#).

Description

- One OC192 port
- Clear channel functionality
- Power requirement: 4.25 A @ 9 V (38.25 W)
- Weight: 1.34 lb (0.61 kg)
- Model number: MIC-3D-1OC192-XFP

Hardware features

- Maximum transmission units (MTUs) of up to 9192 bytes
- MIC bandwidth of up to 10 Gbps

Software features

- SONET/SDH framing
- Multiprotocol Label Switching (MPLS) fast reroute
- Ingress behavior aggregate (BA) classification
- Internal and loop clocking
- Encapsulations:
 - MPLS fast reroute
 - MPLS CCC (circuit cross-connection)
 - MPLS TCC (translational cross-connection)
 - Cisco High-Level Data Link Control (cHDLC)
 - Cisco HDLC CCC
 - Cisco HDLC TCC
 - Point-to-Point Protocol (PPP)
 - PPP for CCC
 - PPP for TCC
 - Flexible Frame Relay
 - Frame Relay
 - Frame Relay for CCC
 - Frame Relay for TCC
 - PPP over Frame Relay

NOTE: Ethernet over Frame Relay is not supported.

Cables and connectors

TIP: You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

The list of supported transceivers for the MX Series is located at <https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series>.

NOTE: To extend the life of the laser, when a MIC is not being actively used with any valid links, take the MIC offline until you are ready to establish a link to another device. For information about taking a MIC offline, see the **request chassis pic offline** command in the [CLI Explorer](#).

LEDs

OK/FAIL LED, one bicolor:

- Green—MIC is functioning normally
- Red—MIC has failed

LINK LED, one tricolor per port:

- Off—Not enabled
- Green—Online with no alarms or failures
- Yellow—Online with alarms for remote failures
- Red—Active with a local alarm; router has detected a failure

Alarms, errors, and events**SONET alarms:**

- Loss of light (LOL)
- Phase lock loop (PLL)
- Loss of signal (LOS)
- Loss of frame (LOF)
- Severely errored frame (SEF)
- Alarm indicator signal–line (AIS-L)
- Alarm indicator signal–path (AIS-P)

Channelized OC48/STM16 Enhanced IQ (IQE) PIC with SFP

Software release	<ul style="list-style-type: none"> • Junos 9.5 and later
Description	<ul style="list-style-type: none"> • One OC48/STM16 port • SONET or SDH is configurable on a per-port granularity • SONET channelization: <ul style="list-style-type: none"> • 4 OC12 channel • 16 OC3 channels • 48 DS3 channels • 672 DS1 channels • 975 DS0 channels • SDH channelization: <ul style="list-style-type: none"> • 4 STM4 channel • 16 STM1 channels • 48 E3 channels • 504 E1 channels • 975 DS0 channels • Power requirement: 1.10 A @ 48V (53 W) • Model Number: PB-1CHOC48-STM16-IQE-SFP
Hardware features	<ul style="list-style-type: none"> • Port is numbered 0.

Software features	<ul style="list-style-type: none"> • Quality of service (QoS) per channel: weighted round-robin (WRR), random early detection (RED), weighted random early detection (WRED) • Enhanced fine-grained queuing per logical interface. See the <i>Class of Service Feature Guide for Routing Devices and EX9200 Switches</i> for more information about class of service features. • Subrate and scrambling: <ul style="list-style-type: none"> • Digital Link/Quick Eagle • Kentrox • Larscom • ADTRAN • Verilink • Packet buffering, Layer 2 parsing • M13/C-bit parity encoding • DS3 far-end alarm and control (FEAC) channel support • Local line, remote line, and remote payload loopback testing • Simple Network Management Protocol (SNMP): OC12, OC3 MIB, DS3 MIB, T1 MIB • Dynamic, arbitrary channel configuration • Full bit error rate test (BERT) • Encapsulations: <ul style="list-style-type: none"> • Circuit cross-connect (CCC) • Translational cross-connect (TCC) • Extended Frame Relay for CCC and TCC • Flexible Frame Relay • Frame Relay • Frame Relay for CCC • Frame Relay for TCC • Frame Relay port CCC • High-Level Data Link Control (HDLC) • HDLC framing for CCC • HDLC framing for TCC • MPLS CCC • MPLS TCC • Multilink Frame Relay (MLFR) UNI NNI (MFR FRF.16) • Point-to-Point Protocol (PPP) • PPP for CCC • PPP for TCC • Encapsulations available only for DSI: <ul style="list-style-type: none"> • Multilink Frame Relay end-to-end (MLFR FRF.15) • Multilink PPP (MLPPP) • PPP over Frame Relay
-------------------	---

Cables and connectors **TIP:** You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

The list of supported transceivers for the MX Series is located at <https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType=All&pf=MX+Series>.

LEDs

One tricolor per port:

- Off—Not enabled
- Green—Online with no alarms or failures
- Yellow—Online with alarms for remote failures
- Red—Active with a local alarm; router has detected a failure

Alarms, errors, and
events

SONET alarms:

- Alarm indication signal—line (AIS-L)
- Alarm indication signal—path (AIS-P)
- Bit error rate—signal degrade (BERR-SD)
- Bit error rate—signal fail (BERR-SF)
- Loss of frame (LOF)
- Loss of light (LOL)
- Loss of pointer (LOP)
- Loss of signal (LOS)
- Payload label mismatch (PLM-P)
- Remote defect indication—line (RDI-L)
- Remote defect indication—path (RDI-P)
- Remote error indication (REI)
- Payload unequipped (unequipped STS at path level) (UNEQ-P)
- Virtual container—alarm indication signal (VAIS)
- Virtual container—loss of pointer (VLOP)
- Virtual container—mismatch (VMIS)
- Virtual container—remote defect indication (VRDI)
- Virtual container—unequipped (VUNEQ)

SDH alarms:

- Administrative unit alarm indication signal (AU-AIS)
- Bit error rate—signal degrade (BERR-SD)
- Bit error rate—signal fail (BERR-SF)
- Bit interleaved parity (BIP) error B1, B2, B3
- Higher order path—alarm indication signal (HP-AIS)
- Higher order path—far-end receive failure (HP-FERF)
- Higher order path—payload label mismatch (HP-PLM)
- Higher order path—loss of pointer (HP-LOP)
- Higher order path—remote defect indication (HP-RDI)
- Higher order path—unequipped (HP-UNEQ)
- Loss of frame (LOF)
- Loss of light (LOL)
- Loss of signal (LOS)
- Multiplex section—alarm indication signal (MS-AIS)
- Multiplex section—far-end receive failure (MS-FERF)
- Multiplex section—remote defect indication (MS-RDI)
- Multiplex section—remote error indication (MS-REI)
- Phase lock loop (PLL)
- Remote error indication (REI)
- Severely errored frame (SEF)
- Tributary unit—alarm indication signal (TU-AIS)
- Tributary unit—loss of pointer (TU-LOP)
- Tributary unit—mismatch (TU-MIS)
- Tributary unit—remote defect indication (TU-RDI)
- Tributary unit—unequipped (TU-UNEQ)

DS1 alarms:

- Alarm indication signal (AIS)
- Loss of frame (LOF)
- Remote alarm indication signal (RAIS)
- DS1 error detection:
 - Bursty errored seconds (BES)
 - CRC errors
 - Errored seconds (ES)
 - Line errored seconds (LES)
 - Loss of framing seconds (LOFS)
 - Severely errored seconds (SES)
 - Severely errored framing seconds (SEFS)
 - Unavailable seconds (UAS)
 - DS3 alarms:
 - Alarm indication signal (AIS)
 - Loss of frame (LOF)
 - Yellow alarm
 - DS3 error detection:
 - C-bit code violations (CCV)
 - C-bit errored seconds (CES)
 - C-bit severely errored framing seconds (CEFS)
 - CRC errors
 - Excessive zeros (EXZ)
 - Far-end block error (FEBE)
 - Far-end receive failure (FERF)
 - Line errored seconds (LES)
 - Parity bit (P-bit) code violations (PCV)
 - Parity bit (P-bit) errored seconds (PES)
 - Parity bit (P-bit) severely errored framing seconds (PSES)
 - Severely errored framing seconds (SEFS)
 - Unavailable seconds (UAS)

Instrumentation
(counters)

- Layer 2 per-queue and per-channel packet and byte counters

SONET/SDH OC48/STM16 Enhanced IQ (IQE) PIC with SFP

Software release	<ul style="list-style-type: none"> Junos OS Release 10.4R2 and later (Type 3)
Description	<ul style="list-style-type: none"> Four OC48/STM16 ports Clear channel functionality SONET and SDH is configured on a per-port granularity Power requirement: 1.06 A @ 48 V (51 W) Weight: 1.6 lb (0.725 kg) Model number: PC-4OC48-STM16-IQE-SFP
Hardware features	<ul style="list-style-type: none"> Ports are numbered: <ul style="list-style-type: none"> Top row: 0 and 1 from left to right Bottom row: 2 and 3 from left to right Maximum transmission units (MTUs) of up to 9192 bytes

- Software features
- Quality of service (QoS) per channel: weighted round-robin (WRR), random early detection (RED), weighted random early detection (WRED)
 - Fine-grained egress queuing per logical interface. See the *Class of Service Feature Guide for Routing Devices and EX9200 Switches* for more information about class-of-service features
 - Packet buffering
 - Local line and remote payload loopback testing
 - Optical diagnostics and monitoring
 - Clocking options: internal or external/loop mode. Each OC48 transmitter port is configured either in internal or external mode. The default clocking option is internal mode.
 - Encapsulations:
 - Extended Frame Relay for circuit cross-connect (CCC) and translational cross-connect (TCC)
 - Flexible Frame Relay
 - Frame Relay
 - Frame Relay for CCC
 - Frame Relay for TCC
 - Frame Relay port CCC
 - High-Level Data Link Control (HDLC)
 - HDLC framing for CCC
 - HDLC framing for TCC
 - MPLS CCC
 - MPLS TCC
 - Point-to-Point Protocol (PPP)
 - PPP for CCC
 - PPP for TCC

Cables and connectors **TIP:** You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

The list of supported transceivers for the MX Series is located at <https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series>.

NOTE: To extend the life of the laser, when a PIC is not being actively used with any valid links, take the PIC offline until you are ready to establish a link to another device. For information about taking a PIC offline, see the **request chassis pic offline** command in the [CLI Explorer](#).

LEDs

OK LED, one tricolor:

- Off—PIC is offline and safe to remove from the router
- Green—PIC is operating normally
- Yellow—PIC is initializing
- Red—PIC has an error or failure

APP LED, one green per port:

- Off—Service is not running
- Green—Service is running under acceptable load

Port LEDs, one tricolor per port:

- Off—Not enabled
- Green—Online with no alarms or failures
- Yellow—Online with alarms for remote failures
- Red—Active with a local alarm; router has detected a failure

Alarms, errors, and events

SONET alarms:

- Loss of light (LOL)
- Phase lock loop (PLL)
- Loss of frame (LOF)
- Loss of signal (LOS)
- Severely errored frame (SEF)
- Alarm indicator signal—line (AIS-L)
- Alarm indicator signal—path (AIS-P)
- Loss of pointer (LOP)
- Bit error rate—signal degrade (BERR-SD)
- Bit error rate—signal fail (BERR-SF)
- Remote defect indicator—line (RDI-L)
- Remote defect indicator—path (RDI-P)
- Remote error indicator (REI)
- Unequipped (UNEQ)
- Payload label mismatch—path (PLM-P)

SDH alarms:

- Loss of light (LOL)
- Phase lock loop (PLL)
- Loss of frame (LOF)
- Loss of signal (LOS)
- Severely errored frame (SEF)
- Multiplex-section alarm indicator signal (MS-AIS)
- H Path alarm indicator signal (HP-AIS)
- Loss of pointer (LOP)
- Bit error rate—signal degrade (BERR-SD)
- Bit error rate—signal fail (BERR-SF)
- Multiplex section—far end receive failure (MS-FERF)
- High order path—far end receive failure (HP-FERF)
- Remote error indicator (REI)
- Unequipped (UNEQ)
- High order path—payload label mismatch - Path (HP-PLM)

Optical diagnostics related alarms:

NOTE: Transceivers from some vendors do not support these fields.

- Temperature high/low alarms and warnings
- Supply voltage high/low alarms and warnings
- Tx bias current high/low alarms and warnings
- Tx output power high/low alarms and warnings
- Rx received power high/low alarms and warnings

SONET/SDH OC192c/STM64 PIC

Software release	<ul style="list-style-type: none"> • Junos 9.4 and later
Description	<ul style="list-style-type: none"> • One OC192 port • Power requirement: 0.45 A @ 48 V (21.6 W) • Model Number: PC-1OC192-SON-VSR
Hardware features	<ul style="list-style-type: none"> • Multiplexing and demultiplexing • Rate policing on input • Rate shaping on output • Packet buffering, Layer 2 parsing
Software features	<ul style="list-style-type: none"> • SONET/SDH framing • Link aggregation • Alarm and event counting and detection • Dual-router automatic protection switching (APS) • Multiprotocol Label Switching (MPLS) fast reroute • Encapsulations: <ul style="list-style-type: none"> • High-Level Data Link Control (HDLC) • Frame Relay • Circuit cross-connect (CCC) • Translational cross-connect (TCC) • Point-to-Point Protocol (PPP)

Cables and connectors **TIP:** You can use the [Hardware Compatibility Tool](#) to find information about the pluggable transceivers supported on your Juniper Networks device.

The list of supported transceivers for the MX Series is located at <https://pathfinder.juniper.net/hct/category/#catKey=100001&modelType;=All&pf;=MX+Series>.

- Very short reach (VSR 1): 12-ribbon multimode fiber with MTP connector (Rx and Tx)
- Fiber-optic 10-gigabit small form-factor pluggable (XFP) transceivers: 10GBASE-S very short reach (VSR-1) (model number: XFP-10G-S)

NOTE: To extend the life of the laser, when a PIC is not being actively used with any valid links, take the PIC offline until you are ready to establish a link to another device. For information about taking a PIC offline, see the **request chassis pic offline** command in the [CLI Explorer](#).

LEDs

One tricolor LED per port:

- Off—Not enabled
- Green—Online with no alarms or failures
- Yellow—Online with alarms for remote failures
- Red—Active with a local alarm; router has detected a failure

Alarms, errors, and events

- SONET alarms:
 - Alarm indication signal—line (AIS-L)
 - Alarm indication signal—path (AIS-P)
 - Bit error rate—signal degrade (BERR-SD)
 - Bit error rate—signal fail (BERR-SF)
 - Bit interleaved parity (BIP) error B1, B2, B3
 - Far-end bit error: remote error indication—line (REI-L), far-end line coding violations (CV-LFE)
 - Far-end bit error: remote error indication—path (REI-P), far-end path coding violations (CV-PFE)
 - Loss of frame (LOF)
 - Loss of pointer (LOP-P)
 - Loss of signal (LOS)
 - Payload label mismatch (PLM-P)
 - Payload unequipped (unequipped STS at path level) (UNEQ-P)
 - Remote defect indication—line (RDI-L)
 - Remote defect indication—path (RDI-P)
- SDH alarms:
 - Administrative unit alarm indication signal (AU-AIS)
 - Bit error rate signal degrade (BERR-SD)
 - Bit error rate signal fail (BERR-SF)
 - Bit interleaved parity (BIP) error B1, B2, B3
 - Higher order path—payload label mismatch (HP-PLM)
 - Higher order path—loss of pointer (HP-LOP)
 - Higher order path—remote defect indication (HP-RDI)
 - Higher order path—unequipped (HP-UNEQ)
 - Loss of frame (LOF)
 - Loss of signal (LOS)
 - Multiplex section—alarm indication signal (MS-AIS)
 - Multiplex section—remote defect indication (MS-RDI)
 - Multiplex section—remote error indication (MS-REI)
- Error detection:
 - Errored seconds (ES-S, ES-L, ES-P)
 - Far-end errored seconds (ES-LFE, ES-PFE)
 - Far-end severely errored seconds (SES-LFE, SES-PFE)
 - Far-end unavailable seconds (UAS-LFE, UAS-PFE)
 - Severely errored framing (SEF)
 - Severely errored framing seconds (SEFS-S)
 - Severely errored seconds (SES-S, SES-L, SES-P)
 - Unavailable seconds (UAS-L, UAS-P)

- MX2000 Enhanced Switch Fabric Board (SFB2) on page 250

MX2000 Switch Fabric Board (SFB)

Switch Fabric Boards (SFBs) are the data plane for the subsystems in the MX router chassis. Switch Fabric Boards (SFBs) create a highly scalable and resilient “all-active” centralized switch fabric that delivers up to 2 Tbps of full-duplex switching capacity to each MPC slot in an MX2000 router.

The SFB and Enhanced Switch Fabric Board (SFB2) are the same except that the SFB has three XF fabric chips per card whereas the SFB2 has two PF fabric chips per card.

Figure 43: Switch Fabric Board

Name in CLI	Switch Fabric Board
-------------	---------------------

Description	<p>The MX2000 Switch Fabric Board (SFB; model number: MX2000-SFB-S) provides increased fabric bandwidth per slot. The MX2000 line of routers can support eight Switch Fabric Boards (SFB) and eight Enhanced Switch Fabric Boards (SFB2) but not both at the same time. The MX2000-SFB-S is supported on MX2010 and MX2020 routers. Refer to Figure 43 on page 247.</p> <p>NOTE: If you decide to upgrade from an SFB to an SFB2, the MX2000 line of routers support both the SFB and SFB2 at the same time for the duration of the upgrade.</p>
Features and Components	<ul style="list-style-type: none"> • Powers the device on and off • PCIe control of three XF ASICs • I2C bus logic interface, used for component management and monitoring of temperature, and voltage • Switch fabric—Provides switching functions for the MPCs • Fabric capacity—Supports 750-Gbps per slot with eight SFBs, and 860-Gbps per slot with seven SFBs. • Front panel components—Service ports, system LEDs, and operational buttons
SFB Slots	<p>You can install up to eight SFBs in the MX2000 router. The SFBs install vertically into the front of the chassis in the slots labeled 0 through 7. If any slots are empty, you must install a blank panel.</p> <p>CAUTION: If one of the SFBs fails, do not remove the failed SFB until you have a replacement or blank panel to install.</p> <p>CAUTION: A blank panel cannot be installed in slot 0. Slot 0 should always have a functioning SFB. If the slot 0 SFB fails, you must replace it with a functioning SFB from another slot, and then put a blank panel in place of the SFB that is used to replace the slot 0 SFB.</p>
SFB Redundancy	<p>Seven of eight SFBs are required for line rate operation. The system can continue operating with fewer than seven SFBs, but forwarding performance will be impacted.</p>
Weight and Dimensions	<ul style="list-style-type: none"> • Weight: 12 lb (5.44 kg) • Width: 1.7 in. (4.31 cm) • Depth: 23.6 in. (59.94 cm). With ejector handle: 26.14 in. (66.39 cm) • Height: 16.225 in. (41.21 cm)
Maximum Power Requirements (without MICs)	<p>MX2020:</p> <ul style="list-style-type: none"> • Typical: 250 W • At different temperatures: <ul style="list-style-type: none"> 295 W at 55° C 280 W at 40° C 270 W at 25° C <p>MX2010:</p> <ul style="list-style-type: none"> • Typical: 220 W • At different temperatures: <ul style="list-style-type: none"> 265 W at 55° C 250 W at 40° C 240 W at 25° C

LEDs

OK/FAIL LED, one bicolor:

- Steady green—SFB is online and functioning normally.
- Slow blinking green—SFB is initializing.
- Fast blinking green—SFB is being identified by software.

NOTE: This is used to guide the operator to correct any action needed on the SFB.

- Red—SFB has failed.
- Off—SFB is offline.

Each SFB also has a set of bicolor LEDs on the craft interface that indicate its status. The SFB LEDs, labeled 0 through 7, are located along the bottom center of the craft interface. For more information about the SFB LED on the craft interface, see *MX2000 Switch Fabric Board LED*.

MX-Series Switch Control Board (SCB) Overview

MX Switch Control Boards (MX-SCB, MX-SCBE, MX-SCBE2) provide full line-rate performance and redundancy without a loss of bandwidth. MX-series SCBs feature an integrated switch fabric that connects to all slots in the chassis in a nonblocking architecture. The SCBs house the Routing Engine (RE), control power to MPCs, monitor and control system functions such as fan speed and the system front panel, and manage clocking, resets, and boots. The SCB is a single-slot card and has a carrier for the routing engine on the front.

The SCB is the first-generation SCB and was designed to work with the first-generation DPC line cards. The MX-SCBE was designed specifically for use with the MPC3e line cards. The MX SCBE2 provides improved fabric performance for high-capacity line cards using the third generation fabric XF2 chip (MPC4e, MPC5e, MPC2/3 NG, and MPC7e).

Table 28 on page 254 compares the capacities of the MX-Series SCBs and lists the supported REs.

Table 28: Switch Control Board Capacities and Supported REs

Model Number	Description	Switch Fabric Capacity	Supported Routing Engines
SCBE2- MX-BB	Enhanced MX Switch Control Board (SCBE2)	10.56 Tbps (half-duplex)	RE-S-1800 RE-S-X6
SCBE-MX-BB	Enhanced Switch Control Board (SCBE)	5.12Tbps	RE-S-1300 RE-S-1800
SCB-MX-BB	Switch Control Board (SCB)	2.64 Tbps	RE-S-1300 RE-S-1800

SCBs install vertically in the MX2020, MX2010, and MX960 chassis, and horizontally in the MX480 and MX240 chassis. The number of supported SCBs varies per router:

- MX240 and MX480 routers—2 SCBs for 1 + 1 MX SCB redundancy when used with the DPC line cards
- MX960 router—3 SCBs for 2 + 1 redundancy when used with the DPC line cards
- MX2010 and MX2020 routers—8 switch fabrics/planes

CLI Identification

The SCBs are identified in the CLI as SCB, SCBE, and SCBE2.

SCBE2-MX Description

The SCBE2-MX features the third-generation fabric on the MX960, MX480, and MX240 routers. It uses the XF2 ASIC fabric chip, providing support for higher interface density (slot and capacity scale) as well as improved services. The SCBE2-MX was released with Junos release 13.3R1.

The SCBE2-MX is installed vertically in the MX960 chassis and horizontally in the MX480 and MX240 chassis. The routing engine is installed directly into a slot on the SCBE2-MX (see [Figure 45 on page 256](#)).

Figure 45: SCBE2-MX

- Software release
- Junos OS Release 13.3 R1 and later
 - Name in CLI: **SCBE2**

Requirements For proper cooling, you must install MX-series high-capacity fan trays in the MX chassis. Additionally, for the MX960, you must install a high-capacity filter tray.

- SCBE2-MX Features
- Provides improved fabric performance for high-capacity line cards using the third generation fabric XF2 chip.
 - Provides bandwidth of up to 340 Gbps per slot with redundant fabric support and 480 Gbps per slot without redundant fabric support.
 - Provides a central clocking module and a centralized clocking architecture that supports clock cleanup and distribution. The Stratum 3 clock module performs clock monitoring, filtering, and holdover at a centralized chassis location.
 - Supports dynamic multicast replication.
 - Supports GRES.
 - Supports MPC line cards. Does not support DPCs.
 - Allows you to configure the system such that one SCBE2-MX supports a GPS interface, and the other SCBE2-MX supports a BITS interface.
 - Provides support for cross-coupling of clock input. This requires an enhanced midplane:
 - MX960—CHAS-BP3-MX960-S
 - MX480—CHAS-BP3-MX480-S
 - MX240—CHAS-BP3-MX240-S

SCBE2-MX Components	<ul style="list-style-type: none"> • Control Board and Routing Engine (CB-RE) mastership mechanism. • External clock interface—Allows BITS or GPS clock source input to the centralized timing circuit, or allows centralized timing to be output to BITS or GPS. • Switch fabric—Provides switching functions for MPCs. • 1000Base-T Ethernet controller—Provides a 1-Gbps Ethernet link between the Routing Engines. • Power circuits for the Routing Engine and the SCBE2-MX. • LEDs—Provide status of the SCBE2-MX and the clocking interface.
---------------------	--

SCBE2-MX Slots	<p>For the MX960:</p> <ul style="list-style-type: none"> • You can install up to three SCBE2-MX's in the MX960 router chassis. • SCBE2-MX's are installed vertically into the front of the MX960 chassis in the slots labeled 0, 1, and 2. If any slots are empty, you must install a blank panel. • The two SCBE2-MX's residing in slot 6 and slot 7 of the MX960 chassis provide both control and switch fabric features, while the third SCBE2-MX residing in slot 8 of the chassis (hybrid slot) will only do fabric functions. <p>For the MX480 and MX240 routers:</p> <ul style="list-style-type: none"> • You can install either one or two SCBE2-MX's in the MX480 and MX240 router chassis. SCBE2-MX's are installed horizontally into the front of the MX480 and MX240 chassis in the slots labeled 0 and 1. If any slots are empty, you must install a blank panel.
----------------	--

SCBE2-MX Fabric Planes and Redundancy	<p>For the MX960:</p> <ul style="list-style-type: none"> • Each SCBE2-MX provides two switch fabric planes for packet forwarding among the MPCs in the MX960. • The MX960 chassis may contain up to three SCBE2-MX's. Therefore, six fabric planes are available. • Three SCBE2-MX's are required for 2 + 1 redundancy. • In redundant fabric mode, four fabric planes from the first two SCBE2-MX's will be in Active mode, and two fabric planes from the third SCBE2-MX will be in Spare mode. • In an increased fabric bandwidth mode, all six fabric planes will be in Active mode. <p>For the MX240 and MX480 routers:</p> <ul style="list-style-type: none"> • Each SCBE2-MX provides four switch fabric planes for packet forwarding among the MPCs in the MX480 and MX240 chassis. • The MX480 and MX240 routers contain a maximum of two SCBE2-MX's. Therefore, eight logical planes are available. • Two SCBE2-MX's are required for 1 + 1 redundancy. • In redundant fabric mode, four fabric planes from the first SCBE2-MX will be in Active mode, and four fabric planes from the second SCBE2-MX will be in Spare mode. • In an increased fabric bandwidth mode, all eight fabric planes will be in Active mode. • Each fabric ASIC is configured in virtual plane mode, where two virtual planes exist on one fabric ASIC.
---------------------------------------	--

Weight and Dimensions	<ul style="list-style-type: none"> • Weight: 9.6 lb (4.4 kg) (with Routing Engine installed) • Width: 17 in (43.2 cm) • Depth: 22 in (55.9 cm) • Height: 1.25 in (3.2 cm) height.
-----------------------	---

Maximum Power Requirements	SCBE2-MX (applies to MX240, MX480, and MX960) 185 W at 55° C 160 W at 40° C 155 W at 25° C
----------------------------	---

LEDs

- **FABRIC ACTIVE**, **FABRIC ONLY**, and **OK/FAIL** LEDs indicate the status of the SCBE2-MX.
- The **BITS**, **GPS**, and **UTI** LEDs, located next to the **EXT CLK** port, indicate the status of the respective clocking interface.
- The **LINK** LED located next to the two Ethernet ports, indicate the status of the respective SFP+ interface.

For more information about the SCBE2-MX LEDs, see *SCBE2-MX LEDs*.

MX SCBE Description

The MX SCBE serves the carrier Ethernet services router and carrier Ethernet transport markets that require higher-capacity traffic support demanding greater interface density (slot and capacity scale), as well as improved services. The upgraded SCB is supported on MX960, MX480, and MX240 routers. Some key attributes of the MX SCBE are:

- 160 Gbps/slot bandwidth with redundant fabric support, and improved fabric performance by using the next-generation fabric (XF) chip
- A central clocking module and a centralized clocking architecture that supports clock cleanup and distribution. The Stratum 3 clock module performs clock monitoring, filtering, and holdover in a centralized chassis location
- Full performance with fabric redundancy for higher capacity line cards such as 16x10GE and MPC3

The Routing Engine installs directly into a slot on the MX SCBE (see [Figure 46 on page 260](#)).

Figure 46: MX SCBE

MX SCBE Slots

You can install up to three MX SCBEs. The MX SCBEs install vertically into the front of the chassis in the slots labeled **0**, **1**, and **2**. If any slots are empty, you must install a blank panel.

MX SCBE Redundancy

If three MX SCBEs are installed, the third MX SCBE functions as the backup.

MX SCBE Components

Each MX SCBE consists of the following components:

- I2C bus logic, used for low-level communication with each component
- Component redundancy circuitry
- Control Board/Routing Engine mastership mechanism
- Gigabit Ethernet switch that is connected to the embedded CPU complex on all components
- External clock interface—Allows BITS or GPS clock source input to the centralized timing circuit, or allows centralized timing to be output to BITS or GPS

- Switch fabric—Provides the switching functions for the DPCs, FPCs, and MPCs
- Control field-programmable gate array (FPGA)—Provides the Peripheral Component Interconnect (PCI) interface to the Routing Engine
- 1000Base-T Ethernet controller—Provides a 1-Gbps Ethernet link between the Routing Engines
- Circuits for chassis management and control
- Power circuits for the Routing Engine and SCBE
- LEDs—Provide status of the SCBE and clocking interface

Supported Routing Engines and MPCs for the SCBE

Supported Routing Engines	Supported MPCs
RE-S-1300	MPC3e
RE-S-1800	MPC3e
RE-S-2000	MPC3e

MX480 SCBE Description

The MX SCBE serves the carrier Ethernet services router and carrier Ethernet transport markets that require higher-capacity traffic support demanding greater interface density (slot and capacity scale), as well as improved services. The upgraded SCB is supported on MX960, MX480, and MX240 routers. Some key attributes of the MX SCBEs are:

- 160 Gbps/slot bandwidth with redundant fabric support, and improved fabric performance by using the next-generation fabric (XF) chip
- A central clocking module and a centralized clocking architecture that supports clock cleanup and distribution. The Stratum 3 clock module performs clock monitoring, filtering, and holdover in a centralized chassis location
- Full performance with fabric redundancy for higher capacity line cards such as 16x10GE and MPC3

The Routing Engine installs directly into a slot on the MX SCBE (see [Figure 47 on page 262](#)).

Figure 47: MX SCBE

MX SCBE Slots

You can install one or two MX SCBEs. The MX SCBEs install horizontally into the front of the chassis in the slots labeled **0** and **1**. If any slots are empty, you must install a blank panel.

MX SCBE Redundancy

If two MX SCBEs are installed, one MX SCBE functions as the master MX SCBE and the other as its backup. If the master fails or is removed, the backup restarts and becomes the master.

MX960 SCB Description

The SCB provides the following functions:

- Powers on and powers off DPCs, FPCs, and MPCs
- Controls clocking, system resets, and booting
- Monitors and controls system functions, including fan speed, board power status, PDM status and control, and the craft interface
- Provides interconnections to all the DPCs, FPCs, and MPCs within the chassis through the switch fabrics integrated into the SCB

The Routing Engine installs directly into a slot on the SCB (see [Figure 49 on page 266](#)).

Figure 49: SCB

SCB Slots

You can install up to three. The SCBs install vertically into the front of the chassis in the slots labeled **0**, **1**, and **2/6**. If any slots are empty, you must install a blank panel.

SCB Redundancy

SCBs installed in slots **0** and **1** provide nonredundant fabric connections. An SCB installed in slot **2/6**, in conjunction with SCBs in slots **0** and **1**, provides redundant fabrics, but the Routing Engine installed on it receives no power and provides no additional routing functions. If no SCB is installed in slot **2/6**, you must install a blank panel in the slot (see [Table 29 on page 266](#)).

Table 29: SCB Slot Mapping and Functionality

Functionality	Slot 0	Slot 1	Slot 2/6
Full fabric	SCB	SCB	–
	Routing Engine		
Full fabric and redundant Routing Engine	SCB	SCB	–
	Routing Engine	Routing Engine	
Redundant fabric and Routing Engine	SCB	SCB	SCB
	Routing Engine	Routing Engine	

SCB Components

Each SCB consists of the following components:

- Chassis management Ethernet switch
- I2C bus logic, used for low-level communication with each component
- Component redundancy circuitry
- Control Board/ Routing Engine mastership mechanism
- Gigabit Ethernet switch that is connected to the embedded CPU complex on all components
- Switch fabric—Provides the switching functions for the DPCs, FPCs, and MPCs

- [MX240 Routing Engine Description on page 280](#)

ADC Description

- [MX2000 Adapter Card \(ADC\) Description on page 273](#)

MX2000 Adapter Card (ADC) Description

The MX2000 routers are compatible with all Trio-based MPC line cards; However, because the MX2000 routers use a newer-generation Switch Fabric Board (SFB) with faster bandwidth, line cards that were designed to work with the SCB and SCBE (MPC1E, MPC2E, and MPC3E) must use a special Line Card Adapter (ADC). The ADC is merely a shell that accepts MPC1E, MPC2E, and MPC3E line cards in the front and converts power and switch fabric in the rear. ADCs install vertically in the front of the router.

NOTE: When a slot is not occupied by a combined ADC and MPC, you must insert a blank panel to fill the empty slot and ensure proper cooling of the system.

ADCs are hot-removable and hot-insertable. [Figure 52 on page 274](#) shows the ADC supported on MX2000 routers.

MX2000 Host Subsystem CB-RE Description

The host subsystem provides routing protocol processes, as well as software processes that control the router's interface, the chassis components, system management, and user access to the router. These routing processes run on top of a kernel that interacts with the Packet Forwarding Engine (PFE). You can install one or two host subsystems on the router. Each host subsystem functions as a unit—the Control Board and Routing Engine (CB-RE). The MX2000 line of routers supports the following CB-RE's:

- RE-MX2000-1800x4 CB-RE
- REMX2K-X8-64G-LT CB-RE

The CB-RE is hot-pluggable. You can install one or two CB-REs in the router. Each CB-RE is a combined Routing Engine and Control Board in one unit. A USB port on the CB-RE accepts a USB memory device that allows you to load Junos OS. The CB-RE installs into the front of the chassis in vertical slots labeled **0** and **1**. If two CB-REs are installed, one functions as the master and the other acts as the backup. If the master CB-RE fails or is removed and the backup is configured appropriately, the backup takes over as the master. If no CB-RE is installed in a slot, install a blank panel in the slot.

A minimum of one CB-RE must be installed in either slot **0** or slot **1** at all times.

CAUTION: If one of the CB-REs fails, do not remove the failed CB-RE until you have a replacement or blank panel to install.

NOTE: REMX2K-X8-64G-LT CB-RE is equipped with limited encryption support only.

MX960 Routing Engine Description

If the host system is redundant, the backup Routing Engine is hot-removable and hot-insertable, but the master Routing Engine is hot-pluggable. A Routing Engine that is not redundant is hot-pluggable.

- [Supported Routing Engines on page 276](#)
- [Routing Engine Function on page 277](#)
- [Routing Engine Slots on page 277](#)
- [Routing Engine Interface Ports on page 277](#)

Supported Routing Engines

The MX960 router supports the following Routing Engines:

- RE-S-1300-2048 supported for Junos OS Release 8.2 and later.
- RE-S-2000-4096 supported for Junos OS Release 8.2 and later.
- RE-S-1800x2 supported for Junos OS Release 10.4 and later.
- RE-S-1800x4 supported for Junos OS Release 10.4 and later.
- RE-S-X6-64G supported for Junos OS Release 15.1F4, 16.1 and later.
- RE-S-X6-64G-LT supported for Junos OS Release 17.2R1 and later.

NOTE: The Routing Engine is equipped with limited encryption support only.

NOTE: If two Routing Engines are installed, they must both be the same hardware model.

Routing Engine Function

The Routing Engine runs the Junos OS. Software processes that run on the Routing Engine maintain the routing tables, manage the routing protocols used on the router, control the router interfaces, control some chassis components, and provide the interface for system management and user access to the router.

Routing Engine Slots

You can install one or two Routing Engines in the router. Each Routing Engine must be installed directly into an SCB. A USB port on the Routing Engine accepts a USB memory device that allows you to load Junos OS. The Routing Engines install into the front of the chassis in vertical slots directly into the SCBs labeled **0** and **1**. If two Routing Engines are installed, one functions as the master and the other acts as the backup. If the master Routing Engine fails or is removed and the backup is configured appropriately, the backup takes over as the master.

On the MX960 router, a Routing Engine installed in SCB slot **2/6** receives no power and supplies no additional routing functions. If no SCB is installed in slot **2/6**, install a blank panel in the slot.

Routing Engine Interface Ports

Three ports, located on the right side of the routing engine, connect the Routing Engine to one or more external devices on which system administrators can issue Junos OS command-line interface (CLI) commands to manage the router.

The ports with the indicated labels function as follows:

- **AUX**—Connects the Routing Engine to a laptop, modem, or other auxiliary device through a serial cable with an RJ-45 connector.
- **CONSOLE**—Connects the Routing Engine to a system console through a serial cable with an RJ-45 connector.
- **ETHERNET or MGMT**—Connects the Routing Engine through an Ethernet connection to a management LAN (or any other device that plugs into an Ethernet connection) for out-of-band management. The port uses an autosensing RJ-45 connector to support 10-Mbps or 100-Mbps connections. Two small LEDs on the right of the port indicate the connection in use: the LED flashes yellow or green for a 10-Mbps or 100-Mbps connection, and the LED is light green when traffic is passing through the port.

Routing Engine Components

NOTE: For specific information about Routing Engine components (for example, the amount of DRAM), issue the `show vmhost hardware` command.

Routing Engine Interface Ports

Three ports, located on the right side of the Routing Engine, connect the Routing Engine to one or more external devices on which system administrators can issue Junos OS command-line interface (CLI) commands to manage the router.

The ports with the indicated labels function as follows:

- **AUX**—Connects the Routing Engine to a laptop, modem, or other auxiliary device through a serial cable with an RJ-45 connector.
- **CONSOLE**—Connects the Routing Engine to a system console through a serial cable with an RJ-45 connector.
- **ETHERNET** or **MGMT**—Connects the Routing Engine through an Ethernet connection to a management LAN (or any other device that plugs into an Ethernet connection) for out-of-band management. The port uses an autosensing RJ-45 connector to support 10-Mbps or 100-Mbps connections. Two small LEDs on the right of the port indicate the connection in use: The LED on the left indicates speed—green for 1000-Mbps, yellow for 100-Mbps and when the LED is dark, it indicates 10-Mbps speed. The LED on the right indicates activity—flashing green when packets are passing through the port.

Routing Engine Boot Sequence

The Routing Engine boots from the storage media in this order: the USB device (if present), then the CompactFlash card, then the hard disk, then the LAN. The disk from which the router boots is called the *primary boot device*, and the other disk is the *alternate boot device*.

NOTE: If the router boots from an alternate boot device, a yellow alarm lights the LED on the router's craft interface.

Booting in a RE-S-X6-64G Routing Engine follows this sequence—the USB device, SSD1, SSD2, and LAN. SSD1 is the primary boot device. Boot sequence is tried twice for SSD1 and SSD2.

If the Routing Engines are configured for *graceful switchover*, the backup Routing Engine automatically synchronizes its configuration and state with the master Routing Engine. Any update to the master Routing Engine state is replicated on the backup Routing Engine. If the backup Routing Engine assumes mastership, packet forwarding continues through the router without interruption. For more information about graceful switchover, see the *Junos OS Administration Library*.

NOTE: If two Routing Engines are installed, they must both be the same hardware model.

RE-S-X6-64G and RE-S-X6-64G-LT Routing Engine Components

In MX240 routers with dual Routing Engines, both the Routing Engines must be RE-S-X6-64G Routing Engines.

Each RE-S-X6-64G Routing Engine (shown in [Figure 54 on page 278](#)) consists of the following components:

- CPU—Runs Junos OS to maintain the routing tables and routing protocols.
- EEPROM—Stores the serial number of the Routing Engine.
- DRAM—Provides storage for the routing and forwarding tables and for other Routing Engine processes.
- One 10-Gigabit Ethernet interface between Routing Engine and Switch Control Board.
- Two 50 GB slim Solid State Drives—SSD1 (primary) and SSD2 (secondary)—Provide storage for software images, configuration files, microcode, log files, and memory dumps. The Routing Engine reboots from SSD2 when boot from primary SSD fails.
- Two USB ports (**USB1** and **USB2**)—Provide a removable media interface through which you can install Junos OS manually. The Junos OS supports USB versions 3.0, 2.0, and 1.1.
- Interface ports—The **AUX**, **CONSOLE**, and **MGMT** provide access to management devices. Each Routing Engine has one 10/100/1000-Mbps Ethernet port for connecting to a management network, and two asynchronous serial ports—one for connecting to a console and one for connecting to a modem or other auxiliary device.
- **RESET** Button—Reboots the Routing Engine when pressed.
- **ONLINE/OFFLINE** Button—Makes the Routing Engine online or offline when pressed.
- Extractor clips—Control the locking system that secures the Routing Engine.
- LEDs—*MX240 Routing Engine LEDs* describes the functions of these LEDs.

NOTE: For specific information about Routing Engine components (for example, the amount of DRAM), issue the `show vmhost hardware` command.

Routing Engine Interface Ports

Three ports, located on the right side of the Routing Engine, connect the Routing Engine to one or more external devices on which system administrators can issue Junos OS command-line interface (CLI) commands to manage the router.

The ports with the indicated labels function as follows:

- **AUX**—Connects the Routing Engine to a laptop, modem, or other auxiliary device through a serial cable with an RJ-45 connector.
- **CONSOLE**—Connects the Routing Engine to a system console through a serial cable with an RJ-45 connector.
- **ETHERNET or MGMT**—Connects the Routing Engine through an Ethernet connection to a management LAN (or any other device that plugs into an Ethernet connection) for out-of-band management. The port uses an autosensing RJ-45 connector to support 10/100/1000-Mbps connections. Two small LEDs on the right of the port indicate the connection in use: The LED on the left indicates speed—green for 1000-Mbps, yellow for 100-Mbps and when the LED is dark, it indicates 10-Mbps speed. The LED on the right indicates activity—flashing green when packets are passing through the port.

RE-S-X6-64G and RE-S-X6-64G-LT Routing Engine Interface Ports

Three ports, located on the left side of the Routing Engine, connect the Routing Engine to one or more external devices on which system administrators can issue Junos OS command-line interface (CLI) commands to manage the router.

The ports with the indicated labels function as follows:

- **AUX**—Connects the Routing Engine to a laptop, modem, or other auxiliary device through a serial cable with an RJ-45 connector.
- **CONSOLE**—Connects the Routing Engine to a system console through a serial cable with an RJ-45 connector.
- **MGMT**—Connects the Routing Engine through an Ethernet connection to a management LAN (or any other device that plugs into an Ethernet connection) for out-of-band management. The port uses an autosensing RJ-45 connector to support 10/100/1000-Mbps connections. Two small LEDs on the right of the port indicate the connection in use: The LED on the left indicates speed—green for 1000-Mbps, yellow for 100-Mbps and when the LED is dark, it indicates 10-Mbps speed. The LED on the right indicates activity—flashing green when packets are passing through the port.

Routing Engine Boot Sequence

The Routing Engine boots from the storage media in this order: the USB device (if present), then the CompactFlash card, then the hard disk, then the LAN. The disk from which the

router boots is called the *primary boot device*, and the other disk is the *alternate boot device*.

NOTE: If the router boots from an alternate boot device, a yellow alarm lights the LED on the router's craft interface.

Booting in a RE-S-X6-64G and in a RE-S-X6-64G-LT Routing Engine follows this sequence—the USB device, SSD1, SSD2, and LAN. SSD1 is the primary boot device. Boot sequence is tried twice for SSD1 and SSD2.

MX5, MX10, MX40, and MX80 Routing Engine Description

The Routing Engine is built-in on the MX5, MX10, MX40, and MX80 baseboard and cannot be replaced.

The Routing Engine consists of the following components:

- Processor—Runs Junos OS to maintain the router's routing tables and routing protocols.
- DRAM—Buffers incoming packets and provides storage for the routing and forwarding tables and for other Routing Engine processes. To view the amount of DRAM installed on your router, issue the **show chassis routing-engine** command.
- NAND flash—Provides primary storage for software images, configuration files, and microcode.

MX2008 Routing and Control Board (MX2008 RCB) Description

The MX2008 Routing and Control Board (MX2008 RCB) is an integrated board and a single FRU that provides Routing Engine and Control Board functionality.

The REMX2008-X8-128G RCB is equipped with a 8-Core 2.3 GHz processor, 128 GB memory, and two 200 GB SSDs and also supports Secure Boot for enhanced boot security.

The REMX2008-X8-64G-LT RCB is equipped with a 8-Core 2.3 GHz processor, 64 GB memory, and two 100 GB SSDs. The RCB is equipped with limited encryption support only.

- [Supported RCBs on page 285](#)
- [RCB Function on page 285](#)
- [RCB Slots on page 285](#)
- [RCB Front Panel on page 286](#)
- [RCB Interface Ports on page 287](#)

Supported RCBs

The following are some key attributes of the MX2008 RCB:

- The RCB combined the Control Board and the Routing Engine in a single FRU.
- The RCB is hot-pluggable.
- The RCB is less than half the size of native MX2000 CB-RE.

The MX2008 router supports the following RCBs:

- REMX2008-X8-64G
- REMX2008-X8-64G-LT
- REMX2008-X8-128G

RCB Function

The RCB runs Junos OS. Software processes that run on the RCB maintain the routing tables, manage the routing protocols used on the router, control the router interfaces, control some chassis components, and provide the interface for system management and user access to the router.

RCB Slots

The user can install one or two RCBs in the router. Each RCB is a combined Routing Engine and Control Board in one unit. A USB port on the RCB accepts a USB storage device that enables you to load Junos OS. You can install the RCBs into the front of the chassis in vertical slots labeled 0 and 1. If two RCBs are installed, one functions as the master and the other acts as the backup. If the master RCB fails or is removed and the backup is configured appropriately, the backup takes over as the master. If no RCB is installed in a slot, install a blank panel in the slot.

A minimum of one RCB must be installed in either slot 0 or slot 1 at all times.

CAUTION: If one of the RCBs fails, do not remove the failed RCB until you have a replacement or blank panel to install.

RCB Front Panel

Table 30 on page 286 describes the Routing and Control Board (RCB).

Figure 60: RCB Front View

Figure 61: RCB (REM2008-X8-64G-LT) Front View

Figure 62: RCB (REM2008-X8-128G) Front View

Table 30: Components on the RCB

Function No.	Label	Description
1	ONLINE, MASTER, and OK/FAIL	There is one bicolor LED for each RCB control. The ONLINE LED indicates that the RCB is transitioning online and functioning properly. The MASTER LED indicates that this board is a master RCB, and the OK/FAIL LED indicates the RCB has failed.
2	SSD0 and SSD1	LEDs shows the state of the two solid-state drives (SSDs) in the RCB.
3 4	GPS, UTI, and BITS	These ports shows the external clocking interface status. There is one bicolor LED for each external clock interface—GPS, UTI and BITS.
5	RESET	This button used to reboot the RCB.
6	AUX	This port is used to connect a laptop, modem, or other auxiliary unit.
7 12	CLK0 and CLK1	Connects the RCB to two external clock interfaces for BITS and GPS function through a serial cable with an RJ-45 connector.

Table 30: Components on the RCB (continued)

Function No.	Label	Description
8 11	LNK-0 and LNK-1	Two SFP+ ports connects the RCB through an Ethernet connection to support hardware diagnostics and JCS port testing. The port supports two 1-Gbps or 10-Gbps connections. The LED on these ports are associated with each of the SFP+ port (XGE-0 and XGE-1) and indicates the connection in use.
9	USB	This port is used to install a USB flash drive that contains Junos OS.
10	MGT	This port is a dedicated management channel for device maintenance. It is also used for system administrators to monitor and manage the MX2008 router remotely.
13	CONSOLE	This port is used to configure the MX2008 router.

RCB Interface Ports

Three ports, located on the RCB, connect the RCB to one or more external devices on which system administrators can issue Junos OS CLI commands to manage the router. In addition, four ports located on the RCB include, two 10-Gigabit Ethernet SFP+ interface connectors supporting hardware diagnostics (JCS port testing), and two external clock interfaces for BITS and GPS function.

The RCB interface ports with the indicated labels function as follows:

- **AUX**—Connects the RCB to a laptop, modem, or other auxiliary device through a serial cable with an RJ-45 connector.
- **CONSOLE**—Connects the RCB to a system console through a serial cable with an RJ-45 connector.
- **MGT**—Connects the RCB through an Ethernet connection to a management LAN (or any other device that plugs into an Ethernet connection) for out-of-band management. The port uses an autosensing RJ-45 connector to support 10-Mbps, 100-Mbps, or 1000-Mbps connections. Two small LEDs on the bottom of the port indicate the connection in use: the LED flashes yellow or green for a 10-Mbps, 100-Mbps, or 1000-Mbps connection, and the LED is lit green when traffic is passing through the port.

The Control Board interface ports function as follows:

- **USB**—Provides a removable media interface through which you can install the Junos OS manually. Junos OS supports USB version 1.0 and later.

- **LNK-0** and **LNK-1**—Two SFP+ port connect the RCB through Ethernet to support two 1-Gbps or 10-Gbps connections to any external control box. Two small LEDs on the side of each SFP+ port indicate the connection in use: the LED flashes yellow when there is no link, flashes green when there is activity, or is lit green for a 1-Gbps or 10-Gbps connection.
- **CLK-0** and **CLK-1**—Connect the RCB to an external clock device through a serial cable with an RJ-45 connector.

- [Replacing an MX2008 RCB](#)
- [MX2008 Host Subsystem Description](#)
- [Supported Routing Engines by Router](#)
- [Routing Engine Specifications on page 297](#)

MX10003 Routing and Control Board (RCB) Description

The host subsystem provides routing protocol processes, as well as software processes that control the router's interface, the chassis components, system management, and user access to the router. These routing processes run on top of a kernel that interacts with the Packet Forwarding Engine. The MX10003 host subsystem consists of two Routing and Control Boards, or RCBs. The RCB is an integrated board and a single FRU that provides Routing Engine (RE) and Control Board (CB) functionality. The RE performs all route-processing functions, whereas the CB performs chassis control and management plane functionality. The RCB provides control plane functions. You can install one or two RCBs on the router. Each RCB functions as a unit.

NOTE: Install two RCBs for redundant protection. If you install only one RCB, you can install it in slot 0 or slot 1. By default, slot 0 functions as the master.

CAUTION: If one of the RCBs fails, do not remove the failed RCB until you have a replacement or blank panel to install.

The MX10003 router supports the following RCBs:

- JNP10003-RE1
- JNP10003-RE1-LT

This topic covers:

- [Routing and Control Board Functions on page 289](#)
- [Routing and Control Board Components on page 289](#)

- [RCB Front Panel on page 289](#)
- [RCB Interface Ports on page 291](#)

Routing and Control Board Functions

The Routing and Control Board integrates the Routing Engine and Control Board functions into a single management unit. Each RCB provides all the functions needed to manage the operation of the modular chassis:

- System control functions such as environmental monitoring
- Routing Layer 2 and Layer 3 protocols
- Communication to all components such as line cards, power, and cooling
- Transparent clocking
- Alarm and logging functions

Routing and Control Board Components

Each RCB consists of the following internal components:

- High-performance 1.6-GHz Intel 8 Core X86 CPU
- 64-GB DDR4 RAM
- 100-GB SATA SSD

RCB Front Panel

[Figure 63 on page 290](#) shows the front panel of the MX10003 RCB (model number: JNP10003-RE1).

Figure 63: JNP10003-RE1 RCB Ports

1—USB port	8—Time of day (ToD) port with LEDs (This port is reserved for future use)
2—Management (MGMT) port	9— BITS port with LEDs
3—Console (CON) port	10—Clocking ports

5—SSD slots (0 and 1)	12— ONLINE LED
6—Master (MST) LED	13— OK/FAIL LED
7—Alarm (ALM) LED	14— RESET button

Figure 64 on page 290 shows the front panel of the MX10003 RCB with limited encryption support (model number: JNP10003-RE1-LT).

Figure 64: JNP10003-RE1-LT RCB Ports

1—USB port	8—Time of day (ToD) port with LEDs (This port is reserved for future use)
2—Management (MGMT) port	9— BITS port with LEDs
3—Console (CON) port	10—Clocking ports
4—SSD LEDs	11— OFFLINE button
5—SSD slots (0 and 1)	12— ONLINE LED
6—Master (MST) LED	13— OK/FAIL LED
7—Alarm (ALM) LED	14— RESET button

The MX10003 router with JNP10003-RE1-LT RCB supports only Junos Limited image. The Junos Limited image does not have data-plane encryption and is intended only for countries in the Eurasian Customs Union because these countries have import restrictions on software containing data-plane encryption. Unlike the Junos Worldwide image, the Junos Limited image supports control plane encryption through Secure Shell (SSH) and Secure Sockets Layer (SSL), thus allowing secure management of the system. The Limited Restriction RCB boots only the encryption free Junos software and fails to boot if the fully encrypted Junos software is used for booting. The Junos upgrade and VMHost upgrade using non-limited version of Junos software fails on the JNP10003-RE1-LT RCB.

The command **show chassis hardware [models | clei-models | extensive]** displays the model number and helps identifying the different SKUs. An alarm, **Mixed Master and Backup RE types** is displayed when dissimilar Routing Engines are present on the chassis (see *Chassis Alarms*).

RCB Interface Ports

The ports located on the RCB, connect the RCB to one or more external devices on which system administrators can issue Junos OS CLI commands to manage the router. In addition, ports to connect external clock interfaces for BITS and GPS function are also available on the RCB.

The RCB interface ports with the indicated labels function are as follows (see [Figure 63 on page 290](#)):

- **CON**—Connects the RCB to a system console through a serial cable with an RJ-45 connector.
- **MGMT**—Connects the RCB through an Ethernet connection to a management LAN (or any other device that plugs into an Ethernet connection) for out-of-band management. The port uses an autosensing RJ-45 connector to support 10-Mbps, 100-Mbps, or 1000-Mbps connections. Two small LEDs on the port indicate the connection in use: the LED flashes yellow or green for a 10-Mbps, 100-Mbps, or 1000-Mbps connection, and the LED is lit green when traffic is passing through the port.
- **BITS**—Building-integrated timing supply (BITS) external clocking interface for connection to external clocking devices.
- **ToD**—Time-of-day (TOD) port on the front panel of the router allows you to connect external timing signal sources.

NOTE: This port is reserved for future use.

- **10MHZ** (one input and one output)—The 10-MHz timing connectors on the front panel of the router connect to external clock signal sources. The clocking ports provide the synchronized output clocks from any one of the reference clock inputs based on the clock's priority.
- **PPS** (one input and one output)—1-pulse-per-second (PPS) connectors on the front panel of the router connect to external clock signal sources. The clocking ports provide

the synchronized output clocks from any one of the reference clock inputs based on the clock's priority.

- USB—Provides a removable media interface through which you can install Junos OS manually. Junos OS supports USB version 1.0 and later.

MX10008 Routing and Control Board Components and Descriptions

- [MX10008 Routing and Control Board Description on page 292](#)
- [MX10008 Routing and Control Board LEDs on page 295](#)

MX10008 Routing and Control Board Description

The MX10008 Routing and Control Board (RCB) is responsible for system management in an MX10008 router. (see [Figure 65 on page 293](#)). The chassis can run with one or two RCBs. Base configurations ship with one RCB that can be expanded with a second RCB for a fully-redundant system. When two RCBs are installed, one functions as the master and the second as a backup. If the master RCB is removed, the backup becomes the master if GRES is configured.

MX10008 supports the following Routing Engines:

- JNP10K-RE1
- JNP10K-RE1-LT
- JNP10K-RE1-128G

Figure 65: Routing and Control Board (JNP10K-RE1)

This topic covers:

- [Routing and Control Board Functions on page 293](#)
- [Routing and Control Board \(JNP10K-RE1\) Components on page 293](#)

[Routing and Control Board Functions](#)

The Routing and Control Board integrates the control plane and Routing Engine functions into a single management unit. Each RCB provides all the functions needed to manage the operation of the modular chassis:

- System control functions such as environmental monitoring
- Routing Layer 2 and Layer 3 protocols
- Communication to all components such as line cards, Switch Fabric Boards (SFBs), and power and cooling
- Transparent clocking
- Alarm and logging functions

[Routing and Control Board \(JNP10K-RE1\) Components](#)

Each RCB consists of the following internal components:

Figure 66: Routing and Control Board Faceplate

1—Handles	7—Reset button
2—BITS0 clock port	8—Online/Offline button
3—GPS clock ports	9—USB port
4—XGE-0 and XGE-1 JCS ports	10—Management (MGMT) ports
5— ToD —Time-of-day (TOD) port	11—Console (CONSOLE) port
6—BITS1 clock port	

Each RCB (JNP10K-RE1) consists of the following internal components:

- CPU—Runs Junos OS to maintain the routing tables and routing protocols.
- EEPROM—Stores the serial number of the Routing Engine.
- DRAM—Provides storage for the routing and forwarding tables and for other Routing Engine processes.
- One 10-Gigabit Ethernet interface between the Routing Engine and Switch Control Board.
- One USB port—Provides a removable media interface through which you can install Junos OS manually. The Junos OS supports USB versions 3.0, 2.0, and 1.1.
- Management ports—Two ports, one copper (RJ-45 port) and one SFP port provide access to management devices. Use only one of the two management ports at a time. Use an RJ-45 connector for the copper port or use a fiber optic connector for the SFP port. Do not use copper SFP or SFP-T modules in the SFP port as they are not supported.
- **RESET** button—Reboots the Routing Engine when pressed.
- LEDs—Provide status of the Routing Engine.

NOTE: For specific information about Routing Engine components (for example, the amount of DRAM), issue the `show vmhost hardware` command.

MX10008 Routing and Control Board LEDs

The MX10008 Routing and Control Boards have four types of LED indicators (see [Figure 67 on page 295](#)).

Figure 67: Routing and Control Board (JNP10K-RE1) LEDs

1— Routing and Control Board status panel	3— Clock LEDs- BITS0, and BITS1
2— SSD LEDs, DISK1 and DISK2	

[Table 31 on page 295](#) describes the LEDs on the RCB status panel.

Table 31: Routing and Control Board (JNP10K-RE1) Status LEDs

LED	Color	State	Description
PWR	Green	On steadily	RCB is receiving adequate power.
	Yellow	Blinking	RCB has detected an error.
	Dark	Unlit	RCB is not powered up.
STS	Green	On steadily	RCB is online and functioning correctly.
	Green	Blinking	The beacon feature is enabled.
	Yellow	On steadily	RCB is booting.
	Yellow	Blinking	The Control Board has detected an error.
	Dark	Unlit	The power supply is switched off.
MST	Green	On steadily	RCB is the master.
	Dark	Unlit	RCB is the backup.

Figure 68: Management Port LEDs on a MX10008 (JNP10K-RE1)

1— Status LED (RJ-45)	3—LINKLED—Green indicates the link is up; blinking indicates activity (SFP)
2— Activity LED (RJ-45)	

Table 32 on page 296 describes the RJ-45 management port and SFP LEDs, and Table 33 on page 296 describes the SFP status LEDs.

Table 32: RJ-45 Management Port LEDs on a MX10008 Routing and Control Board (JNP10K-RE1)

LED	Color	State	Description
Activity/Status LED	Unlit	Off	The port speed is 10 M.
	Green	Blinking	The port speed is 100 M.
	Green	On steadily	The port speed is 1000 M.
LINK	Unlit	Off	No link is established, there is a fault, or the link is down.
	Green	On steadily	A link is established.
		Blinking	There is link activity.
	Yellow	Blinking or flickering	The beacon feature is enabled.

Table 33: JCS Port LEDs on a MX10008 Routing and Control Board (JNP10K-RE1)

LED	Color	State	Description
LINK LEDs for JCS Ports (XGE0 and XGE1)	Unlit	Off	No transceiver is present.
	Green	On steadily	A link is established. The interface is up.
	Green	Blinking or flickering	The beacon feature is enabled.
	Yellow	Blinking	An error has occurred.

Table 34 on page 297 describes the LEDs for the secondary SATA drives.

Table 34: Routing and Control Board (JNP10K-RE1) SSD Status LEDs

LED	Color	State	Description
DISK1 and DISK2	Green	On steadily	A SATA drive is present.
	Green	Blinking	The drive is active.
	Yellow	On steadily	The drive is active.
	Dark	Unlit	A drive is not installed.

RE-M40	200-MHz Pentium	256 MB	Fast Ethernet	6.4 GB hard disk	80 MB CompactFlash card	3.2	FA-HW-0101-001

Table 36: End-of-Life Routing Engine Specifications (continued)

Routing Engine	Processor	Memory	Connection to PFEs	Disk	Media	First Junos OS Support	EOL Details
RE-M40-333-768	333-MHz Pentium II	768 MB	Fast Ethernet	10 GB hard disk	80 MB CompactFlash card	4.2	PSN-2003-01-063
RE-M600-2048	600-MHz Pentium III	2048 MB	Fast Ethernet	30 GB hard disk	128 MB CompactFlash card	5.4	PSN-2004-TI-020
RE-1600-2048	1.6-GHz Pentium M	2048 MB	Gigabit Ethernet	40 GB hard disk	1 GB CompactFlash card	6.2	PSN-2008-02-019

NOTE: The memory in [Table 35 on page 297](#) indicates the amount of total memory. To determine the amount of available memory, issue the `show chassis routing-engine` CLI command.

On routers that accept two Routing Engines, you cannot mix Routing Engine types except for a brief period (one minute or so) during an upgrade or downgrade to two Routing Engines of the same type.

Protocols and Applications Supported by the Multiservices DPC (MS-DPC)

Table 41 on page 325 contains the first Junos OS Release support for protocols and applications on the MX240, MX480, and MX960 Multiservices DPCs. A dash indicates that the protocol or application is not supported.

NOTE: The maximum number of supported MS-DPCs is as follows except where noted in Table 41 on page 325:

- MX240 router: 2
- MX480 router: 4
- MX960 router: 8

Table 41: Protocols and Applications Supported by the Multiservices DPC (MS-DPC)

Protocol or Application	MS-DPC
Accepts traffic destined for GRE tunnels	9.3
Active flow monitoring exports cflowd version 5 and version 8 records	9.3
Active flow monitoring exports flow monitoring version 9 records, based on RFC 3954	9.3
Graceful Routing Engine Switchover (GRES)	9.4
GRE dont fragment	9.3
GRE Key	9.3
GRE reassembly	9.3
IP Security (IPSec) encryption	9.3
Network Address Translation (NAT) for IP addresses	9.3
NOTE: The MX960 supports 8 MS-DPCs using this feature.	
NAPT - Preserve parity	15.1
NAPT - Preserve range	15.1
No translation	15.1
Twice NAT	15.1

Table 41: Protocols and Applications Supported by the Multiservices DPC (MS-DPC) (continued)

Protocol or Application	MS-DPC
Packet-triggered dynamic subscribers and policy control (PTSP)	10.2
<i>NOTE:</i> Starting in Junos OS Release 13.1R1, the packet-triggered subscribers and policy control (PTSP) feature is no longer supported.	
Port Address Translation (PAT) for port numbers	9.3
Real-time Performance Monitoring (RPM)	9.3
Stateful firewall with packet inspection: detects SYN attacks, ICMP and UDP floods, and ping-of-death attacks	9.3
<i>NOTE:</i> The MX960 supports 8 MS-DPCs using this feature.	
Tunnel services:	
• GRE unicast tunneling-Supports GRE fragmentation	9.3
• IP-IP unicast tunneling	9.4
• Multicast tunneling	9.4
• Protocol Independent Multicast (PIM) sparse mode unicast tunneling	9.4
• Virtual loopback tunneling (VT)	9.4
Voice over IP (VoIP) services:	
• Border Gateway Function (BGF) using external H.248/Ia control	10.2
• Integrated Multi-Service Gateway (IMSG)-Session Border Controller

Protocols and Applications Supported on MPCs for MX Series Routers

Table 42 on page 328 contains the first Junos OS Release support for protocols and applications on the MX240, MX480, MX960, MX2010, and MX2020 MPCs.

NOTE: The MX2010 router supports protocols and applications in Junos OS 12.3R3 and later. Features added after the Junos OS 12.3R3 release are supported on the MX2010 router in the release indicated.

NOTE: The MX2020 router supports protocols and applications in Junos OS 12.3R2 and later. Features added after the Junos OS 12.3R2 release are supported on the MX2020 router in the release indicated.

A dash indicates that the protocol or application is not supported.

Protocols and Applications Supported on the MPC1E for MX Series Routers

Table 43 on page 337 contains the first Junos OS Release support for protocols and applications on the MX240, MX480, MX960, MX2010, and MX2020 Enhanced MPCs (MPCEs).

NOTE: The MX2010 and M2020 routers support protocols and applications in Junos OS 12.3 and later. Features added after the Junos OS 12.3 release are supported on the MX2010 and MX2020 routers in the release indicated.

A dash indicates that the protocol or application is not supported.

Table 43: Protocols and Applications Supported by the MX240, MX480, MX960, MX2010, and MX2020 Enhanced MPCs (MPCIEs)

First Junos OS Release Supported by MPCIE Model Number (MPCE Name)		
Protocol or Application	MX-MPCIE-3D (MPCIE)	MX-MPCIE-3D-Q (MPCIE Q)
Access Node Control Protocol (ANCP)	11.2R4	11.2R4
Accepts traffic destined for GRE tunnels or DVMRP (IP-in-IP) tunnels	11.2R4	11.2R4
Bidirectional Forwarding Detection protocol (BFD)	11.2R4	11.2R4
Border Gateway Protocol (BGP)	11.2R4	11.2R4
BGP/Multiprotocol Label Switching (MPLS) virtual private networks (VPNs)	11.2R4	11.2R4
Distance Vector Multicast Routing Protocol (DVMRP) and generic routing encapsulation (GRE) support—access side and server side	11.2R4	11.2R4
IEEE 802.1ag Ethernet OAM Continuity Check protocol	11.2R4	11.2R4
IEEE 802.1ag Ethernet OAM Linktrace protocol	11.2R4	11.2R4
IEEE 802.1ag Ethernet OAM Loopback protocol	11.2R4	11.2R4
Firewall filters	11.2R4	11.2R4
Flexible Ethernet encapsulation	11.2R4	11.2R4
Graceful Routing Engine Switchover (GRES)	11.2R4	11.2R4
Ingress Differentiated Services code point (DSCP) rewrite	11.2R4	11.2R4
Hierarchical quality-of-service (HQoS)	-	12.1R3
Intelligent oversubscription	11.2R4	11.2R4
Integrated routing and bridging (IRB)	11.2R4	11.2R4
Intermediate System-to-Intermediate System (IS-IS)	11.2R4	11.2R4
Internet Group Management Protocol (IGMP) (excluding snooping)	11.2R4	11.2R4
Internet Group Management Protocol (IGMP) snooping	11.2R4	11.2R4
IPv4	11.2R4	11.2R4
IP multicast	11.2R4	11.2R4

Protocols and Applications Supported by the MPC3E on MX Series Routers

Table 45 on page 352 lists the first supported Junos OS Release for MPC3E protocols and applications for the MX240, MX480, MX960, MX2010, and MX2020 routers. The protocols and applications support feature parity with Junos OS Release 10.4.

NOTE: The MX2010 and M2020 routers support protocols and applications in Junos OS 12.3 and later. Features added after the Junos OS 12.3 release are supported on the MX2010 and MX2020 routers in the release indicated.

A dash indicates that the protocol or application is not supported.

Table 45: Protocols and Applications Supported by MPC3E Cards for MX Series Routers

Protocol or Application	First Supported Junos OS Release

IPv6 MLD	13.3R3
<i>IPv6 multicast</i>	13.3R3
<i>IPv6 Neighbor Discovery</i>	13.3R3
<i>IS-IS</i>	13.3R3
ITU-T Y.1731 timestamping support on MX Series routers	13.3R3
Flow monitoring and services:	Release
• Active monitoring (multiple version 8 j-flow templates)	• 13.3R3
• Active monitoring (cflowed version 9 templates)	• 13.3R3
• Port mirroring family VPLS, bridge CCC encapsulation (VPWS)	• 13.3R3
• Packet slice for port mirroring	• 13.3R3
• Flow monitoring on Multiservices DPCs	• -
• Inline active flow monitoring on MPC5E	• 13.3R3
<i>Labeled-switched-paths (LSPs) including accounting, policers, and filtering</i>	13.3R3
<i>LDP</i>	13.3R3
<i>Layer 2 features:</i>	Release
• Trunk ports	• 13.3R3
• Layer 2 support for MX Series Virtual Chassis	• 13.3R3
• Layer 2 and Layer 2.5, IRB, and Spanning Tree Protocols (xSTP)	• -
• IEEE 802.1ad provider bridges	• 13.3R3
• Layer 2 protocol tunneling (L2PT) support	• 13.3R3
• Layer 2 Tunneling Protocol (L2TP)	• 13.3R3
• Multichassis LAG—active/active and active/standby	• 13.3R3
• Multichassis LAG—active/active with IGMP snooping	• 13.3R3
• Link aggregation group (LAG)—VLAN-CCC encapsulation	• 13.3R3
• IGMP snooping with bridging, IRB, and VPLS	• 13.3R3

Table 47: Protocols and Applications Supported by the MX240, MX480, MX960, MX2010, and MX2020 MPC5E (continued)

Protocol or Application	First Supported Junos OS Release
Layer 2 VPN interfaces support VLAN ID list	13.3R3
<i>Link aggregation (IEEE 802.3ad)</i>	13.3R3
<i>Link Aggregation Control Protocol (LACP)</i>	13.3R3
<i>Link Layer Discovery Protocol (LLDP)</i>	13.3R3
Local loopback	13.3R3
<i>MAC learning, policing, accounting, and filtering</i>	13.3R3
Mobile IP	-
Multichassis link aggregation	-
Multiple Tag Protocol Identifiers (TPIDs)	13.3R3
<i>MPLS:</i>	13.3R3
<ul style="list-style-type: none"> • Switching of pseudowire segments (multisegment pseudowires with BGP-L2VPN) • LDP signaling for VPLS (LDP-VPLS) and MAC flush message processing (MAC-FLUSH-TLV) • RSVP graceful restart interoperability with Cisco using Nodal Hello • Failure action on BFD session down of RSVP LSPs • OSPF and IS-IS loop-free alternates (LFA) • 4/5 label MPLS operation • Virtual circuit connectivity verification (VCCV) BFD • <i>Point to multipoint</i> using the enhanced-ip command (support for NG-MVPN and <i>point-to-multipoint</i> load balancing over aggregated Ethernet) • MPLS-FRR bypass link protection • Load sharing across 64 ECMP next hops • MPLS-FRR VPLS instance prioritization • Five label stack on ingress 	
MPLS node protection, link protection, and statistics for static LSPs	13.3R3
<i>mvrp</i>	-
<i>Multitopology routing</i>	-
Nonstop active routing (NSR)	13.3R3

Protocols and Applications Supported by the MS-MIC and MS-MPC

Table 51 on page 397 contains the first Junos OS Release support for protocols and applications on the MX104, MX240, MX480, MX960, MX2010, and MX2020 Multiservices MIC (MS-MIC) and Multiservices MPC (MS-MPC). A dash indicates that the protocol or application is not supported.

Table 51: Protocols and Applications Supported by the MS-MIC and MS-MPC

Software Feature	First Supported Junos OS Release
GRE Key	-
GRE dont-fragment	-
HTTP redirect services	15.1R4

Table 51: Protocols and Applications Supported by the MS-MIC and MS-MPC (continued)

Software Feature	First Supported Junos OS Release
Stateful firewall	13.2R4
Network Address Translation (NAT) for IP addresses	13.2R4
Port Address Translation (PAT) for port numbers	13.2R4
IP Security (IPSec) encryption	13.2R4
Flow aggregation	–
Active flow monitoring exports cflowd version 5 and version 8 records	–
Active flow monitoring exports flow monitoring version 9 records, based on RFC 3954	13.2R4
<i>Graceful Routing Engine Switchover (GRES)</i>	13.3 <i>NOTE: GRES is not supported for MS-MIC on MX104 router.</i>
Passive flow monitoring	–
Passive flow collection	–
Flow-tap	–
Dynamic flow capture	–
Real-time performance monitoring	13.3
Link Services	–
MX Series Virtual Chassis with stateful firewall	14.2
MX Series Virtual Chassis with IPv4-to-IPv4 basic NAT, dynamic NAT, static destination NAT, dynamic NAT with port mapping, and stateful NAT64.	16.1R4 and 18.3R1
Traffic sampling	13.2R4
Tunnel services: <ul style="list-style-type: none"> • IP-IP unicast tunneling • GRE unicast tunneling—Supports GRE fragmentation • Protocol Independent Multicast (PIM) sparse mode unicast tunneling 	–
Virtual tunnel interface for Layer 3 VPNs	–
Layer 2 Tunneling Protocol (L2TP)	–

<i>IEEE 802.1ag Ethernet OAM Continuity Check protocol</i>	17.3R1
<i>IEEE 802.1ag Ethernet OAM Linktrace protocol</i>	17.3R1
<i>IEEE 802.1ag Ethernet OAM Loopback protocol</i>	17.3R1
IEEE 802.1ag maintenance association intermediate point (MIP) support, continuity check message (CCM), stacked VLAN tagging, trunk ports, support for VPLS/VPWS, VLAN circuit cross-connect (CCC) encapsulation and translational cross-connect (TCC) encapsulation	17.3R1
IEEE 802.1ag optional type, length, and value (TLVs) support <i>Port Status TLV and Interface Status TLV</i>	17.3R1
IEEE 802.3ah distributed periodic packet management (PPM) process, alarm indication signal (AIS), and remote defect indication (RDI)	17.3R1
<i>Firewall filters and policers:</i>	17.3R1
<ul style="list-style-type: none"> • Policer support for aggregated Ethernet • Aggregate firewall-based policer for all families of a logical interface • Intelligent hierarchical policers • Set forwarding class and loss priority for Routing Engine-generated packets by using a firewall • Physical interface policers, applying policers to the entire port • Lower policer limit from 32,000 to 8000 • Egress .1p MF and BA classification for VPLS • Differentiated Services Code Point (DSCP) rewrite for IPv4 and IPv6 	
<i>Flexible Ethernet encapsulation</i>	17.3R1
<i>Graceful Routing Engine Switchover (GRES)</i>	17.3R1
IGMPv3 support with snooping disabled	17.3R1
Ingress and egress hierarchical class-of-service (CoS) shaping and <i>hierarchical-scheduler:</i>	17.3R1
<ul style="list-style-type: none"> • Set of Interfaces • VLAN level • Port level 	
<i>Inline flow monitoring</i>	17.3R1

Table 52: Protocols and Applications Supported by MX10003MPC on the MX10003 Router (continued)

Protocol or Application	First Supported Junos OS Release
<i>Intelligent Oversubscription</i>	17.3R1
<i>Integrated routing and bridging (IRB)</i>	17.3R1
Interoperability with existing MPCs	17.3R1
IPv4	17.3R1
<i>IPv4 multicast</i>	17.3R1
<i>IPv6</i>	17.3R1
IPv6 MLD	17.3R1
<i>IPv6 multicast</i>	17.3R1
<i>IPv6 Neighbor Discovery</i>	17.3R1
<i>IS-IS</i>	17.3R1
ITU-T Y.1731 timestamping support on MX Series routers	-
Flow monitoring and services:	Release
<ul style="list-style-type: none"> • Active monitoring (cflowed version 9 templates) • Port mirroring family VPLS, bridge CCC encapsulation (VPWS) • Packet slice for port mirroring • Flow monitoring on MS-DPCs • Inline flow monitoring 	<ul style="list-style-type: none"> • 17.3R1 • 17.3R1 • 17.3R1 • - • 17.3R1
<i>Labeled-switched-paths (LSPs)</i> including accounting, policers, and filtering	17.3R1
<i>LDP</i>	17.3R1
Layer 2 features:	Release
<ul style="list-style-type: none"> • Trunk ports • Layer 2 support for MX Series Virtual Chassis • Layer 2 and Layer 2.5, IRB and spanning tree protocols (xSTP) • IEEE 802.1ad provider bridges • Layer 2 protocol tunneling (L2PT) support • Layer 2 Tunneling Protocol (L2TP) • Multichassis LAG—active/active and active/standby • Multichassis LAG—active/active with IGMP snooping • IGMP snooping with bridging, IRB, and VPLS 	<ul style="list-style-type: none"> • 17.3R1 • - • 17.3R1 • 17.3R1 • 17.3R1 • 17.3R1 • 17.3R1 • 17.3R1 • 17.3R1

Table 52: Protocols and Applications Supported by MX10003MPC on the MX10003 Router (continued)

Protocol or Application	First Supported Junos OS Release
Layer 2 VPN interfaces support VLAN ID list	17.3R1
<i>Link aggregation (IEEE 802.3ad)</i>	17.3R1
<i>Link Aggregation Control Protocol (LACP)</i>	17.3R1
<i>Link Layer Discovery Protocol (LLDP)</i>	17.3R1
Local loopback	17.3R1
<i>MAC learning, policing, accounting, and filtering</i>	17.3R1
MACSec with GCM-AES-256 Encryption and GCM-AES-XPB-256 Encryption	17.3R2
NOTE: MACSec is supported on JNP-MIC1-MACSEC only.	
Mobile IP	-
Multichassis Link Aggregation	17.3R1
Multiple Tag Protocol Identifiers (TPIDs)	17.3R1
<i>MPLS:</i>	17.3R1
<ul style="list-style-type: none"> • Switching of pseudowire segments (multisegment pseudowires with BGP-L2VPN) • LDP signaling for VPLS (LDP-VPLS) and MAC flush message processing (MAC-FLUSH-TLV) • RSVP graceful restart interoperability with Cisco using Nodal Hello • Failure action on BFD session down of RSVP LSPs • OSPF and IS-IS loop-free alternates (LFA) • 4/5 label MPLS operation • Virtual circuit connectivity verification (VCCV) BFD • MPLS-FRR bypass link protection • Load sharing across 64 ECMP next hops • MPLS-FRR VPLS instance prioritization • Five label stack on ingress 	
MPLS node protection, link protection, and statistics for static LSPs	17.3R1
<i>mvrp</i>	-
<i>Multitopology routing</i>	17.3R1
Nonstop active routing (NSR)	17.3R1
<i>OSPF</i>	17.3R1
