GENERAL NOTES

1. ALL PIPE LINES, POWER, TELEPHONE, AND TELEGRAPH LINES TO BE MOVED OR LOWERED BY THE RESPECTIVE OWNERS AS PER AGREEMENT WITH SUCH OWNERS.
2. ANY EQUIPMENT OR APPURTENANCE THAT INTERFERES WITH THE PROPOSED CONSTRUCTION AND WHICH MAY BE THE PROPERTY OF UTILITY SERVICE ORGANIZATIONS SHALL BE MOVED BY THE OWNERS UNLESS OTHERWISE PROVIDED.
3. ALL LAND MONUMENTS LOCATED WITHIN THE CONSTRUCTION AREA SHALL BE PROTECTED IN ACCORDANCE WITH SECTION 107.12 OF THE STANDARD SPECIFICATIONS.
4. ALL TREES THAT DO NOT DIRECTLY INTERFERE WITH THE PROPOSED CONSTRUCTION SHALL BE SPARED AS DIRECTED BY THE ENGINEER. CARE AND DISCRETION SHALL BE USED TO INSURE THAT ALL TREES NOT TO BE REMOVED SHALL BE HARMED AS LITTLE AS POSSIBLE DURING THE CONSTRUCTION OPERATIONS.
5. ALL FLEXIBLE BASE AND ASPHALTIC PAVEMENTS REMOVED SHALL BE PAID FOR UNDER THE ITEM NO. 210 - UNCLASSIFIED EXCAVATION.
6. THE EXISTING ASPHALT PAVEMENT TO BE REMOVED FROM THE REMAINING PAVEMENT SHALL BE SEPARATED BY SAWING ALONG A NEAT LINE. AFTER SAWING, THE PAVEMENT TO BE REMOVED SHALL BE CAREFULLY REMOVED IN A MANNER THAT WILL NOT DAMAGE THE PAVEMENT THAT IS TO REMAIN. ANY DAMAGE OF THE ASPHALT PAVEMENT THAT IS TO REMAIN IN PLACE SHALL BE REPAIRED AT THE CONTRACTOR'S EXPENSE.

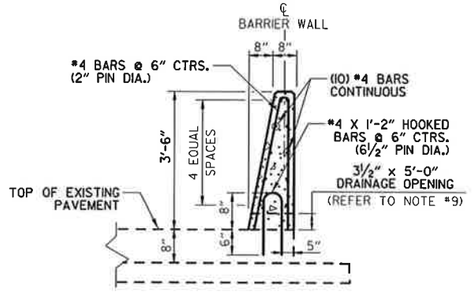
THE CONTRACTOR SHALL NOT PLACE EMBANKMENT AROUND THE EXISTING SIGN POSTS TO A DEPTH SUCH THAT THE STUB POST BASE PLATE IS BURIED.

DETAIL FOR THE MAINTENANCE OF
EXISTING BREAKAWAY SIGN STRUCTURES
NOT TO SCALE



CONCRETE BARRIER WALL
(PIER PROTECTION TYPE A-I; MASH TL-4)
N.T.S.

GENERAL NOTES FOR CONCRETE BARRIER WALLS

1. ALL BARRIER WALLS SHALL BE CONSTRUCTED IN ACCORDANCE WITH SECTION 631 OF THE STANDARD SPECIFICATIONS, 2014 EDITION.
2. CONTRACTION JOINTS REQUIRED @ 15'-0" MAXIMUM SPACING FOR BARRIER TYPES MEDIAN A, SIDE A. A 30'-0" MAXIMUM SPACING IS REQUIRED FOR TYPES MEDIAN C, SIDE C, D & E.
3. ALL CONTRACTION JOINTS TO BE FORMED IN FRESH CONCRETE ON TOP AND IN SIDES OF BARRIER WALL.
4. CONTRACTION JOINTS ARE NOT PERMITTED AT THE DOWEL BAR LOCATIONS.
5. ALL EXPOSED EDGES OF CONCRETE BARRIER WALL SHALL HAVE A ¾" CHAMFER.
6. SPACING BETWEEN EXPANSION JOINTS SHALL NOT EXCEED 400 FT FOR BARRIER TYPES MEDIAN A AND SIDE A OR 120 FT FOR BARRIER TYPES SIDE C, D & E. EXPANSION JOINTS SHALL BE FORMED USING 1" PREFORMED JOINT FILLER. CONTINUOUS REINFORCEMENT SHALL BE CUT 2" CLEAR OF EXPANSION JOINTS.
7. CONSTRUCT DRAINAGE OPENINGS AT EVERY 50' O.C. AND AT SAGS IF SHOWN ON THE PLANS. DOWEL BARS SHALL NOT BE PLACED WITHIN 3" OF DRAINAGE OPENINGS.
8. MAINTAIN 3" CLEARANCE ON ALL FOOTING REINFORCEMENT AND 2" CLEARANCE ON ALL OTHER REINFORCEMENT.
9. REFER TO BARRIER MOUNTED LUMINARE SPECIAL DETAILS FOR INFORMATION REGARDING CONDUIT IN CONCRETE BARRIER WALLS. REFER TO ILLUMINATION LAYOUT FOR LOCATIONS OF CONDUIT RUNS.
10. BARRIER REINFORCING BARS ANCHORED INTO EXISTING CONCRETE PAVEMENT SHALL BE INSTALLED AND SECURED ACCORDING TO 804.06 USING AN APPROVED ANCHORING SYSTEM FROM QPL.

NOTE:
THE COST FOR THE MODIFICATION OF THE BARRIERS AND DROP INLETS ARE TO BE SUBSIDIARY TO CONCRETE BARRIER WALLS AND CURBS.

(2) MAINTENANCE OF TRAFFIC DETAILS

STATE OF ARKANSAS
LICENSED PROFESSIONAL ENGINEER
No. 11425
TRINITY D. SMITH
9-18-18

CONSTRUCTION SEQUENCE FOR I-540:

MILL AND ACHM INLAY OPERATIONS SHALL UTILIZE A SINGLE TWO (2) MILE LANE CLOSURE IN ONE DIRECTION. NO LANE CLOSURE MAY EXCEED THE ACTIVE WORK AREA BY MORE THAN ONE QUARTER (1/4) MILE. REFER TO THE MAINTENANCE OF TRAFFIC SPECIAL PROVISION.

FOR BRIDGE DECK HYDRODEMOLITION, A SINGLE LANE CLOSURE OF NO MORE THAN TWO (2) MILES, WITH NO HOURLY RESTRICTIONS, WILL BE PERMITTED FOR A MAXIMUM OF EIGHTEEN (18) CONSECUTIVE CALENDAR DAYS TO COMPLETE EACH BRIDGE DECK. ONLY ONE LANE CLOSURE PER SET OF MAIN LANES WILL BE ALLOWED AND SHALL NOT EXCEED THE ACTIVE WORK AREA BY MORE THAN ONE QUARTER (1/4) MILE. PRECAST CONCRETE BARRIER WALL WILL BE PROVIDED FOR BRIDGE DECK REHABILITATION AS SHOWN IN THE PLANS. REFER TO THE MAINTENANCE OF TRAFFIC SPECIAL PROVISION.

BRIDGE DECK POLYMER OVERLAY SHALL UTILIZE A SINGLE TWO (2) MILE LANE CLOSURE. NO LANE CLOSURE MAY EXCEED THE ACTIVE WORK AREA BY MORE THAN ONE QUARTER (1/4) MILE. REFER TO THE MAINTENANCE OF TRAFFIC SPECIAL PROVISION.

REMOVAL AND DISPOSAL OF EXISTING GUARDRAIL AND INSTALLATION OF NEW GUARDRAIL SHALL UTILIZE LANE CLOSURES. ALL GUARDRAIL WORK SHALL BE PERFORMED AS DIRECTED BY THE ENGINEER.

CONSTRUCTION SEQUENCE FOR I-40:

BASIS OF ESTIMATE:
ACHM SURFACE COURSE (1/2").....94.5% MIN. AGGR.....5.5% ASPHALT BINDER
MAXIMUM NUMBER OF GYRATIONS = 205 FOR PG 76-22
TACK COAT QUANTITIES WERE CALCULATED USING THE EMULSIFIED ASPHALT RATES. REFER TO SS-400-1 FOR THE RESIDUAL ASPHALT APPLICATION RATES.

* DENOTES STATIONING LOCATED AFTER "386+91.50 BACK - 286+91.50 AHEAD" STATION EQUATION.

RBB040I REVISED.DGN 9/13/2018

① Quantity shown is for estimating and bidding purposes only. Actual quantity, if any, will be determined in the field

② The quantity shown includes approach slabs and gutters.

③ Modification of Existing Bridge Structure (Bridge No.) includes:

Bridge Nos. A&B5629 - Removal and replacement of the backwalls.
See Dwg. Nos. 56861 - 56863.

Bridge Nos. B3604, A5100, & A5101 - Modification of Backwall to match grade increase due to LMC Overlay.
See Dwg. Nos. 56868 - 56869.

Bridge Nos. B5100, & B5101 - Partial repair of backwall for Expansion Joint Rehabilitation.
See Dwg. Nos. 56866 - 56867.

④ See "Detail of Poured Silicone Joint Seal" Dwg. No. 56867 for details.

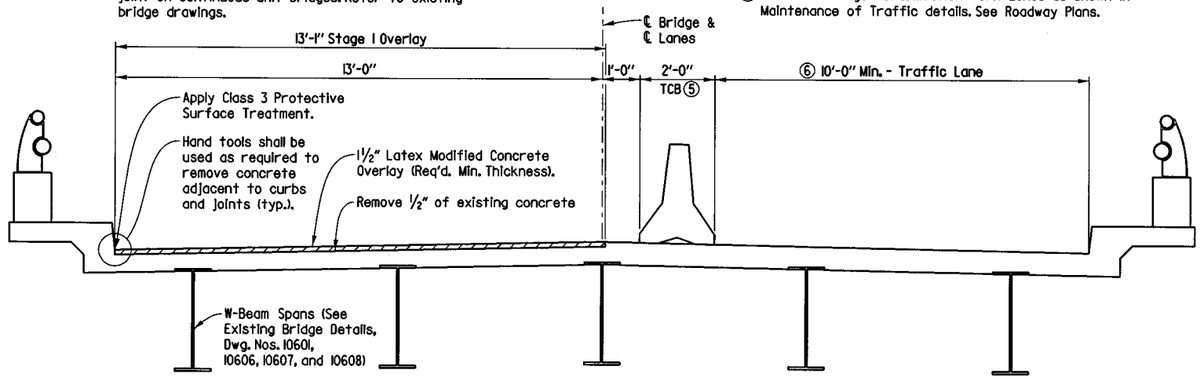
				4	ARK.			
				JOB NO.		BB0401	137	234
				(1) 03270		LMC OVERLAY		60193

NOTE:
The minimum overlay placement length shall be a full span on simple span bridges and to an existing slab joint on continuous unit bridges. Refer to existing bridge drawings.

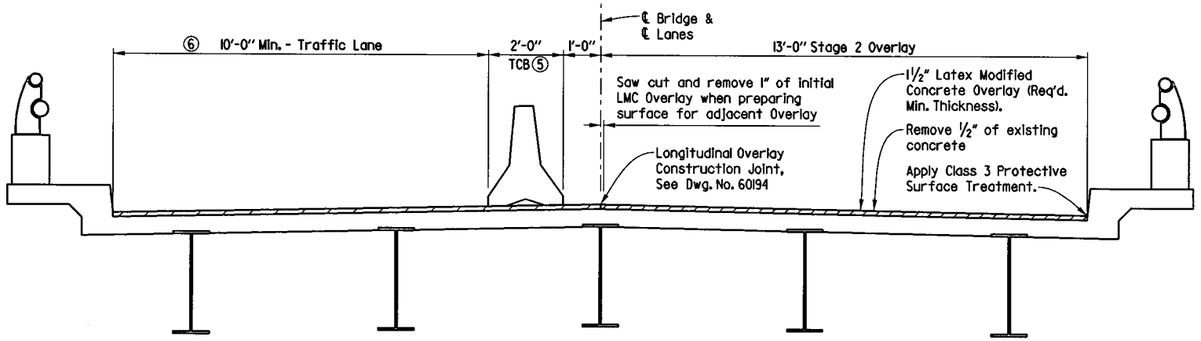
⑥ Refer to Bridge Rehabilitation work zones as shown in Maintenance of Traffic details. See Roadway Plans.



⑤ Temporary Construction Barrier shall not be connected to the surface of the bridge deck. See Std. Dwg. TC-4.

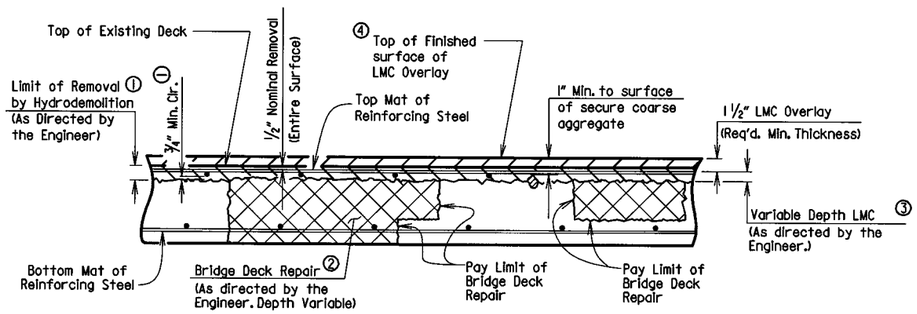
STAGE 1 LATEX MODIFIED CONCRETE OVERLAY

(Looking South)
Scale: ½" = 1'-0"



STAGE 2 LATEX MODIFIED CONCRETE OVERLAY

(Looking South)
Scale: ½" = 1'-0"



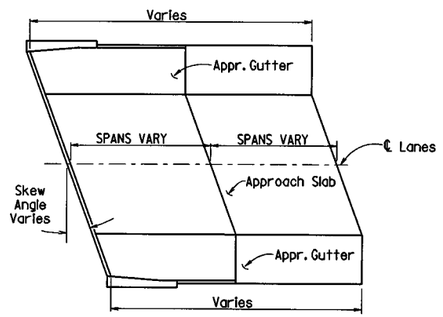
DETAILS OF HYDRODEMOLITION AND LATEX MODIFIED CONCRETE OVERLAY

① Removal of unsound concrete beyond ½" below the original surface shall be at the direction of the Engineer. If the bond between existing concrete and the top mat of reinforcing steel is destroyed, then the concrete shall be removed to a minimum of ¾" clearance below the bar.

② Areas requiring additional repair, as determined by the Engineer, shall be repaired in accordance with the SP Job BB0401 "Bridge Deck Repair".

③ Depth Varies to achieve minimum clearance below top mat of reinforcing steel, where required.

④ Finished Surface of LMC Overlay shall be increased as required to maintain minimum required LMC Overlay thickness and a minimum of 1½" cover to reinforcing steel.



LATEX MODIFIED OVERLAY ON BRIDGE APPROACHES

The Contractor shall remove ½" of existing concrete using hydrodemolition and construct a 1½" min. thickness LMC Overlay on the surface of the approach slabs and approach gutters to match increased LMC overlay grade on the bridge decks. All materials and methods shall conform to appropriate Job Special Provisions and the surface finish shall match that specified for the bridge deck. Joint treatments shall conform to the details on Drawing 60194.

GENERAL NOTES:

CONSTRUCTION SPECIFICATIONS: Arkansas State Highway Commission Standard Specifications for Highway Construction, Edition of 2014, with applicable Special Provisions and Supplemental Specifications. Unless otherwise noted in the plans, Section and Subsection refer to the Standard Specifications.

Drawing shows details and dimensions of existing structure based on the original bridge plans. The Contractor shall make check measurements in the field and make any adjustments necessary to meet the required clearances and fit the new work to the existing structures.

The operation or placement of vehicles, equipment and, or materials on the subject bridge necessary for the completion of this work shall be evaluated in accordance with Subsection 105.14. Certifications of the adequacy of all components for the anticipated loads shall address the capacity of the existing structure at all phases of this work.

Construction activities shall be in accordance with SP Job BB0401 "Special Safety Requirements".

HYDRODEMOLITION: The entire area of the existing bridge deck, approach slabs, and approach gutters shall receive hydrodemolition in accordance with the SP Job BB0401 "Hydrodemolition" to a planned depth of ½" below the existing bridge deck surface. Deteriorated concrete in the bridge deck below this depth shall be removed at the direction of the Engineer up to the limits detailed. These areas shall be measured by the square yard and shall be paid for at the unit price bid for the item SP Job BB0401 "Hydrodemolition".

BRIDGE DECK REPAIR: After hydrodemolition, the deck surface shall be sounded and any areas of unsound, delaminated or otherwise deteriorated concrete shallbe removed at the direction of the Engineer and in accordance with SP Job BB0401 "Bridge Deck Repair".

LATEX MODIFIED CONCRETE OVERLAY: The entire area of the existing bridge deck and the approach slabs and approach gutters shall receive a Latex Modified Concrete (LMC) Overlay with a required minimum thickness of 1½", in accordance with SP Job BB0401 "Latex Modified Concrete Overlay". These areas shall be measured by the square yard and shall be paid for at the unit price bid for the item SP Job BB0401 "Latex Modified Concrete Overlay (1½" Thick)". Areas of the existing bridge deck removed at the direction of the Engineer to a depth greater than ½" below the existing bridge deck surface shall be filled with LMC concurrent to the placement of the 1½" LMC Overlay. This area shall be measured and paid for in accordance with SP Job BB0401 "Latex Modified Concrete Overlay".

SURFACE FINISH: The LMC Overlay surface of the bridge deck, approach slabs, and approach gutters shall be given a grooved finish as specified for final finishing in Subsection 802.19 for Class 7 Grooved Bridge Roadway Surface Finish and in accordance with SP Job BB0401 "Latex Modified Concrete Overlay".

PROTECTIVE SURFACE TREATMENT: The longitudinal joint between the LMC Overlay and the adjacent existing concrete curb or rail shall be given a Class 3 Protective Surface Treatment as specified in Section 803 and in accordance with SP Job BB0401 "Latex Modified Concrete Overlay". Longitudinal and transverse construction joints separating adjacent overlay placements shall be prepared and sealed as shown on Dwg. No. 60194.

The roadway surface of the LMC Overlay shall be given a Class 1 Protective Surface Treatment as specified in Section 803.

EXPANSION JOINT REHABILITATION: After the placement of the LMC Overlay, the existing expansion joints shall be given a poured silicone joint sealant as specified in Section 809 and as shown in "Poured Silicone Joint Seal Details" on Dwg. No. 60194. Backwall modification shall be completed prior to installation of silicone joint sealant. See Dwg. No. 60194 for additional details.

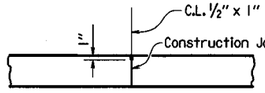
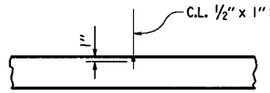
(1) 03270 LMC OVERLAY 60194



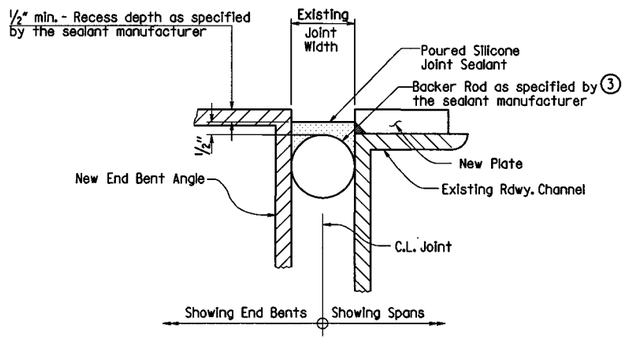
Use ½" X 1" Type 3 or 4 Joint Sealer. See Subsections 501.02(h) and 501.05(j). Backer Rod shall not be installed. Joint Sealer shall be measured and paid for as LMC Overlay. Sealant must be gray or other color similar to concrete.



Use ½" X 1" Type 3 or 4 Joint Sealer. See Subsections 501.02(h) and 501.05(j). Backer rod shall not be installed. Joint Sealer shall be measured and paid for as LMC Overlay. Slab joints shall extend to the outside edge of the deck slab. Slab joints shall be placed at all pouring sequence construction joints and are required at existing slab joint locations.

Slab joints and longitudinal construction joints shall be sawed as soon as the concrete has sufficiently set to allow sawing of the joint without damage to the Overlay.

LONGITUDINAL OVERLAY CONSTRUCTION JOINT DETAIL

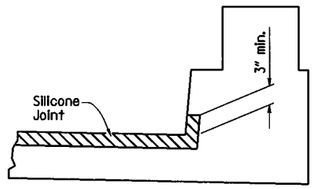


Existing Joint Seal shall be completely removed, backer rods placed, and Silicone Joint Sealant installed across the entire width of the bridge deck in accordance with these details and Manufacturer's instructions. Removal of existing Joint Seal will not be paid for directly, but shall be considered incidental to the item "Silicone Joint Sealant".

Notes: Backer rods shall be extended beyond the length of the poured joint in the initial joint rehabilitation area so that the two pieces can be properly spliced together prior to installing sealant for the adjacent joint rehabilitaton. Manufacturer's recommendations shall be followed to prevent sealant leakage during rehabilitation work.

POURED SILICONE JOINT SEAL DETAILS

TRANSVERSE OVERLAY JOINT DETAIL

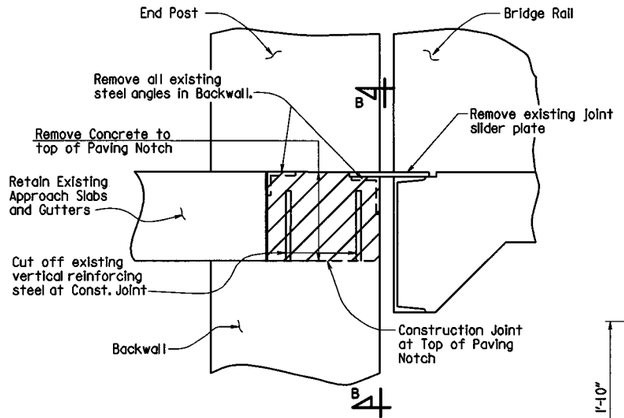


Note: Vertical joints may require forming. The clearance from deck surface to joint material shall be maintained.

JOINT SEAL PLACEMENT AT CURB

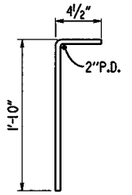
③ Backer rods shall be appropriately sized and set to the depth shown in the manufacturer's literature based on the joint width at the time of sealing. Except as noted, do not install more backer rod than can be sealed in the same day. The Contractor shall verify separation of the backer rod from the joint material after joint material has set.

Backer rod shall be notched or otherwise fit around any existing seal supports or bumper plates to maintain its proper depth as defined above.

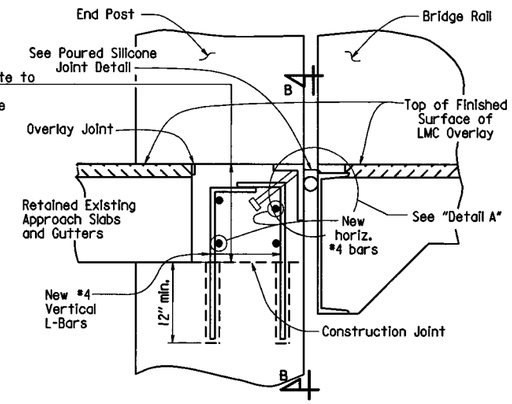


REMOVAL DETAILS AT END BENTS

Removal shall be in accordance with Section 821 and all removed portions of the existing backwall and joint materials shall become the property of the Contractor and shall be disposed of in accordance with Section 205.

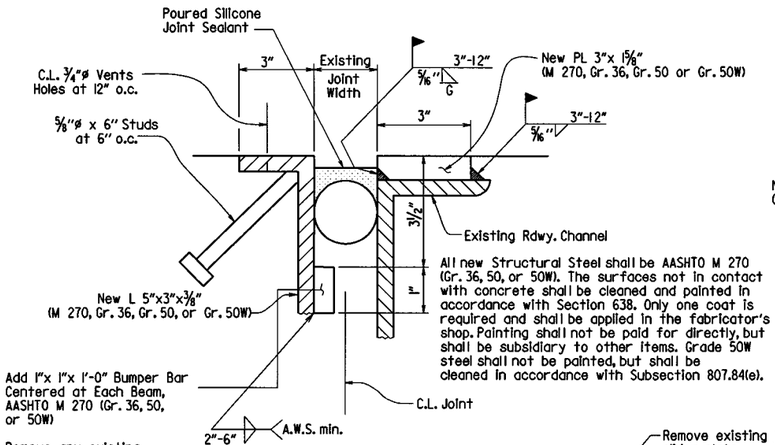


#4 L-BAR

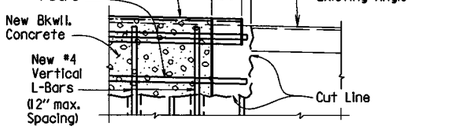


DETAILS OF BACKWALL MODIFICATION

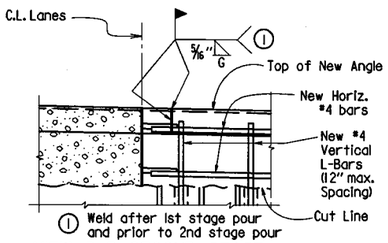
Grout new #4 L-bars into drilled holes spaced to avoid existing reinforcing steel (12" o.c. max.). Grout shall be an approved non-shrink or epoxy grout listed on the QPL. Hole diameter and installation procedure shall be as required by the grout manufacturer.



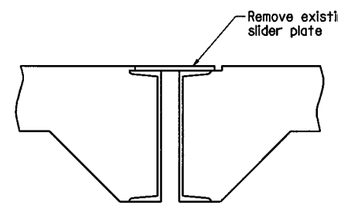
DETAIL A



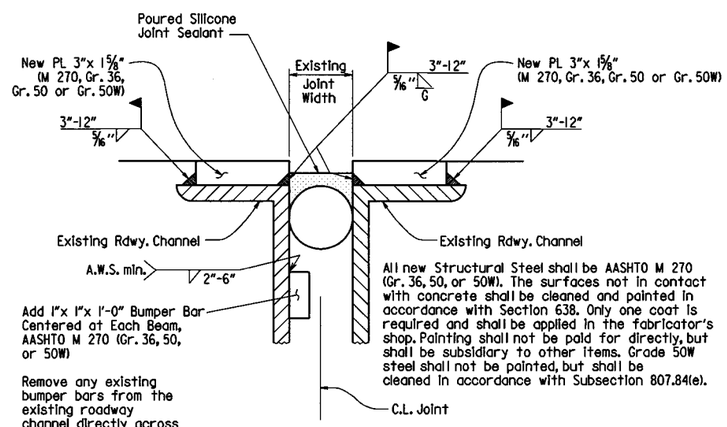
VIEW B-B FIRST STAGE



VIEW B-B SECOND STAGE



REMOVAL DETAILS AT INTERIOR BENTS



DETAILS OF INTERMEDIATE JOINT MODIFICATION

Approximately 33 lb. of Structural Steel per foot of intermediate joint modification (for information only).

Structural Steel (lb.)	Reinforcing Steel (lb.)	Concrete (cu. yd.)
28	6	0.04

APPROXIMATE QUANTITIES FOR BACKWALL MODIFICATION ②

Quantities shown are per foot of backwall and are for information only.

② The Contractor shall make measurements for the backwall at each end of the bridge affected prior to beginning work on the bridge. The top surface of the raised backwall shall match the top surface of the finished LMC Overlay on the adjacent bridge deck and the adjacent approach slabs and approach gutters.

Replacement concrete shall be high early strength Portland Cement Concrete Pavement per Subsection 501.08 or LMC (f'c = 4,000 psi). Reinforcing Steel shall conform to Section 804. Structural Steel and welding shall conform to Section 807. All Materials, Labor, Tools and Equipment shall not be paid for directly but shall be considered subsidiary to the item "Modification of Existing Bridge Structure (Bridge No.)".

GENERAL NOTES:

CONSTRUCTION SPECIFICATIONS: Arkansas State Highway Commission Standard Specifications for Highway Construction, Edition of 2014, with applicable Special Provisions and Supplemental Specifications. Unless otherwise noted in the plans, Section and Subsection refer to the Standard Specifications.

Drawing shows details and dimensions of existing structures based on the original bridge plans. The Contractor shall make check measurements in the field and make any adjustments necessary to meet the required clearances and fit the new work to the existing structures.

The operation or placement of vehicles, equipment and, or materials on the subject bridges necessary for the completion of this work shall be evaluated in accordance with Subsection 105.14. Certifications of the adequacy of all components for the anticipated loads shall address the capacity of the existing structure at all phases of this work.

HYDRODEMOLITION: The entire area of the existing bridge deck, approach slabs, and approach gutters shall receive hydrodemolition in accordance with the SP Job BB0401 "Hydrodemolition" to a planned depth of 1½" below the existing bridge deck surface. Deteriorated concrete in the bridge deck below this depth shall be removed at the direction of the Engineer up to the limits detailed. These areas shall be measured by the square yard and shall be paid for at the unit price bid for the item SP Job BB0401 "Hydrodemolition". Prior to hydrodemolition, cold milling of the concrete deck to a maximum depth of 1" will be allowed unless there will be a conflict with the existing reinforcing.

BRIDGE DECK REPAIR: After hydrodemolition, the deck surface shall be sounded and any areas of unsound, delaminated or otherwise deteriorated concrete shall be removed at the direction of the Engineer and in accordance with SP Job BB0401 "Bridge Deck Repair".

LATEX MODIFIED CONCRETE OVERLAY: The entire area of the existing bridge deck, approach slabs and approach gutters shall receive a Latex Modified Concrete (LMC) Overlay to a planned depth of 1½" below the existing bridge deck surface, in accordance with the SP Job BB0401 "Latex Modified Concrete Overlay". These areas shall be measured by the square yard and shall be paid for at the unit price bid for the item SP Job BB0401 "Latex Modified Concrete Overlay (1½" Thick)". Areas of the existing bridge deck removed at the direction of the Engineer to a depth greater than 1½" below the existing bridge deck surface shall be filled with LMC concurrent to the placement of the 1½" LMC Overlay. This area shall be measured and paid for in accordance with SP Job BB0401 "Latex Modified Concrete Overlay".

SURFACE FINISH: The LMC Overlay surface of the bridge deck, approach slabs, and approach guters shall be given a grooved finish as specified for final finishing in Subsection 802.19 for Class 7 Grooved Bridge Roadway Surface Finish and in accordance with SP Job BB0401 "Latex Modified Concrete Overlay".

PROTECTIVE SURFACE TREATMENT: The longitudinal joint between the LMC Overlay and the adjacent existing concrete curb or rail shall be given a Class 3 Protective Surface Treatment as specified in Section 803 and in accordance with SP Job BB0401 "Latex Modified Concrete Overlay". Longitudinal and transverse construction joints separating adjacent overlay placements shall be prepared and sealed as shown on Dwg. No. 60198.

The roadway surface of the LMC Overlay shall be given a Class 1 Protective Surface Treatment as specified in Section 803.

EXPANSION JOINT REHABILITATION: After the placement of the LMC Overlay, the existing expansion joints shallbe given a poured silicone joint sealant as specified in Section 809 and as shown for Br. No. A3454 in "Poured Silicone Joint Seal Details" on Dwg. No. 60198. Backwall repair, as directed by the Engineer, shall be completed prior to installation of silicone joint sealant. See Dwg. No. 60198 for additional details.

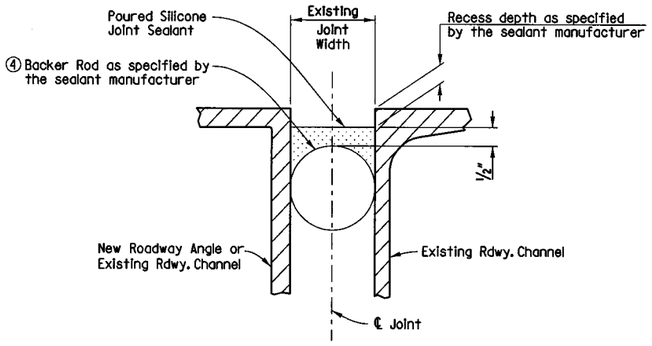
(1) 03452, 03455, LMC OVERLAY 60198
A&B3454, A&B3805, A&B3806



NOTES:
Backer rods shall be extended beyond the length of the poured joint in the initial joint rehabilitation area so that the two pieces can be properly spliced together prior to installing sealant for the adjacent joint rehabilitaton. Manufacturer's recommendations shall be followed to prevent sealant leakage during rehabilitation work.

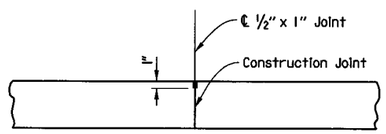
Existing Joint Seal shall be completely removed, backer rods placed, and Silicone Joint Sealant installed across the entire width of the bridge deck in accordance with these details and Manufacturer's instructions. Removal of existing Joint Seal will not be paid for directly, but shall be considered incidental to the item "Silicone Joint Sealant".

POURED SILICONE JOINT SEAL DETAILS

(Br. No. A3454 & B3454 only)
No Scale

④ Backer rod shall be appropriately sized and set to the depth shown in the manufacturer's literature based on the joint width at the time of sealing. Except as noted, do not install more backer rod than can be sealed in the same day. The Contractor shall verify separation of the backer rod from the joint material after joint material has set.

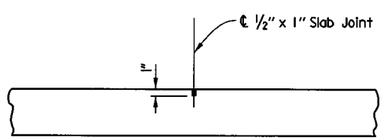
Backer rod shall be notched or otherwise fit around any existing seal supports or bumper plates to maintain its proper depth as defined above.



Use ½" X 1" Type 3 or 4 Joint Sealer. See Subsections 501.02(h) and 501.05(j). Backer Rod shall not be installed. Joint Sealer shall be measured and paid for as LMC Overlay. Sealant must be gray or other color similar to concrete.

LONGITUDINAL OVERLAY CONSTRUCTION JOINT DETAIL

No Scale

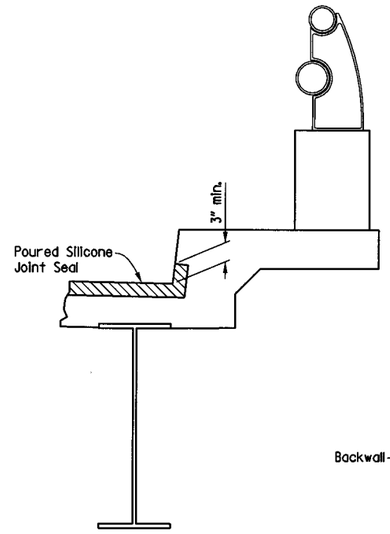


Use ½" X 1" Type 3 or 4 Joint Sealer. See Subsections 501.02(h) and 501.05(j). Backer rod shall not be installed. Joint Sealer shall be measured and paid for as LMC Overlay. Slab joints shall extend to the outside edge of the deck slab. Slab joints shall be placed at all pouring sequence construction joints and are required at existing slab joint locations.

TRANSVERSE OVERLAY JOINT DETAIL

No Scale

Slab joints and longitudinal construction joints shall be sawed as soon as the concrete has sufficiently set to allow sawing of the joint without damage to the Overlay.



NOTE: Vertical joints may require forming. The clearance from deck surface to joint material shall be maintained.

JOINT SEAL PLACEMENT AT CURB

(Br. No. A3454 & B3454 only)

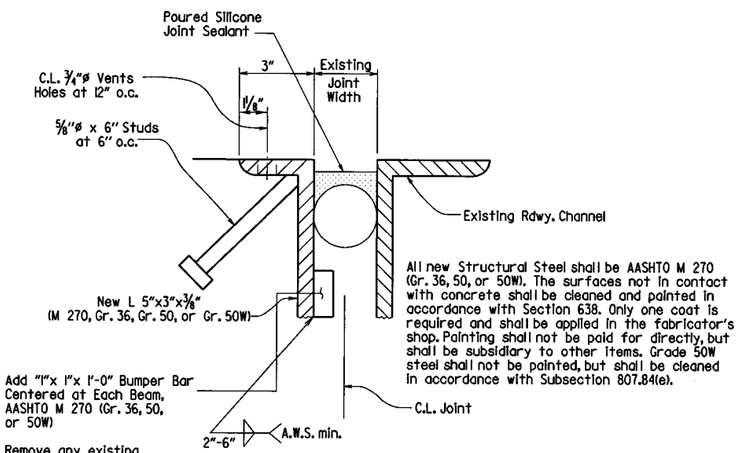
Quantities shown are per foot of repair and are for information only.

APPROXIMATE QUANTITIES FOR BACKWALL REPAIR ③

③ The Contractor shall make measurements at the locations designated by the Engineer for Backwall Repair prior to beginning work on the Bridge. Replacement concrete shall be high early strength Portland Cement Concrete Pavement per Subsection 501.08 or LMC (f'c = 4,000 psi). Reinforcing Steel shall conform to Section 804. Structural Steel and welding shall conform to Section 807. All Materials, Labor, Tools and Equipment shall not be paid for directly but shall be considered subsidiary to the item "Modification of Existing Bridge Structure (Bridge No.)".



Remove any existing bumper bars from the existing roadway channel directly across from these locations.

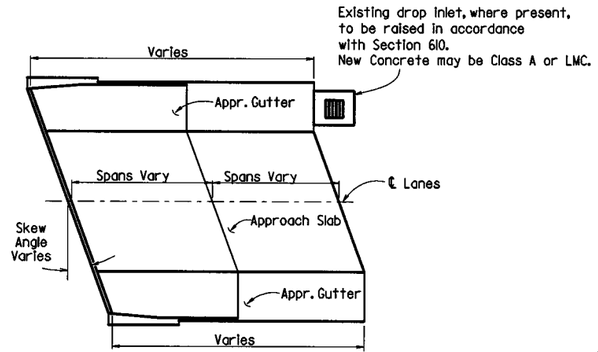
① Removal of unsound concrete beyond 1½" below the original surface shall be at the direction of the Engineer. If the bond between existing concrete and the top mat of reinforcing steel is destroyed, then the concrete shall be removed to a minimum of ¾" clearance below the bar.

② Areas requiring additional repair, as determined by the Engineer, shall be repaired in accordance with the SP Job BB0401 "Bridge Deck Repair".

③ Depth Varies to achieve minimum clearance below top mat of reinforcing steel, where required.

④ Finished Surface of LMC Overlay shall match existing concrete deck surfaces unless increase is required to maintain minimum required LMC Overlay thickness and a minimum of 1½" cover to reinforcing steel.

⑤ Removal of unsound concrete beyond ½" below the original surface shall be at the direction of the Engineer. If the bond between existing concrete and the top mat of reinforcing steel is destroyed, then the concrete shall be removed to a minimum of ¾" clearance below the bar.



LATEX MODIFIED OVERLAY ON BRIDGE APPROACHES
(Applies to Bridge No. 03456)

The Contractor shall remove ½" of existing concrete using hydrodemolition and construct a 1½" min. thickness LMC Overlay on the surface of the approach slabs and approach gutters to match increased LMC overlay grade on the bridge decks. All materials and methods shall conform to appropriate Job Special Provisions and the surface finish shall match that specified for the bridge deck. Joint treatments shall conform to the details on Drawing 60201.

GENERAL NOTES:

CONSTRUCTION SPECIFICATIONS: Arkansas State Highway Commission Standard Specifications for Highway Construction, Edition of 2014, with applicable Special Provisions and Supplemental Specifications. Unless otherwise noted in the plans, Section and Subsection refer to the Standard Specifications.

Drawing shows details and dimensions of existing structures based on the original bridge plans. The Contractor shall make check measurements in the field and make any adjustments necessary to meet the required clearances and fit the new work to the existing structures.

The operation or placement of vehicles, equipment and, or materials on the subject bridges necessary for the completion of this work shall be evaluated in accordance with Subsection 105.14. Certifications of the adequacy of all components for the anticipated loads shall address the capacity of the existing structure at all phases of this work.

Construction activities shall be in accordance with SP Job BB0401 "Special Safety Requirements" for Bridge No. 03453.

HYDRODEMOLITION: The entire area of the existing bridge deck, the south approach slab, and the north approach slab and approach gutters shall receive hydrodemolition in accordance with the SP Job BB0401 "Hydrodemolition" to a planned depth of 1½" below the existing bridge deck surface for Br. No. 03453 and a planned depth of ½" below the existing bridge deck surface for Br. No. 03456. Deteriorated concrete in the bridge deck below this depth shall be removed at the direction of the Engineer up to the limits detailed. These areas shall be measured by the square yard and shall be paid for at the unit price bid for the item SP Job BB0401 "Hydrodemolition". Prior to hydrodemolition, cold milling of the concrete deck to a maximum depth of 1" for Br. No. 03453 and a maximum depth of ½" for Br. No. 03456 will be allowed unless there will be a conflict with the existing reinforcing.

BRIDGE DECK REPAIR: After hydrodemolition, the deck surface shall be sounded and any areas of unsound, delaminated or otherwise deteriorated concrete shall be removed at the direction of the Engineer and in accordance with SP Job BB0401 "Bridge Deck Repair".

LATEX MODIFIED CONCRETE OVERLAY: The entire area of the existing bridge deck, the south approach slab, and the north approach slab and approach gutters shall receive a Latex Modified Concrete (LMC) Overlay to a planned depth of 1½" below the existing bridge deck surface for Br. No. 03453 and a 1½" minimum thickness for Br. No. 03456, in accordance with the SP Job BB0401 "Latex Modified Concrete Overlay". These areas shall be measured by the square yard and shall be paid for at the unit price bid for the item SP Job BB0401 "Latex Modified Concrete Overlay (1½" Thick)". Areas of the existing bridge deck removed at the direction of the Engineer to a depth greater than 1½" below the existing bridge deck surface for Br. No. 03453 and ½" below the existing bridge deck surface for Br. No. 03456 shall be filled with LMC concurrent to the placement of the 1½" LMC Overlay. This area shall be measured and paid for in accordance with SP Job BB0401 "Latex Modified Concrete Overlay".

SURFACE FINISH: The LMC Overlay surface of the bridge deck, the south approach slab, and the north approach slab and approach gutters shall be given a grooved finish as specified for final finishing in Subsection 802.19 for Class 7 Grooved Bridge Roadway Surface Finish and in accordance with SP Job BB0401 "Latex Modified Concrete Overlay".

PROTECTIVE SURFACE TREATMENT: The longitudinal joint between the LMC Overlay and the adjacent existing concrete curb or rail shall be given a Class 3 Protective Surface Treatment as specified in Section 803 and in accordance with SP Job BB0401 "Latex Modified Concrete Overlay". Longitudinal and transverse construction joints separating adjacent overlay placements shall be prepared and sealed as shown on Dwg. No. 60201.

The roadway surface of the LMC Overlay shall be given a Class 1 Protective Surface Treatment as specified in Section 803.

EXPANSION JOINT REHABILITATION: After the placement of the LMC Overlay, the existing expansion joints shall be given a poured silicone joint sealant as specified in Section 809 and as shown for Br. No. 03456 in "Poured Silicone Joint Seal Details" on Dwg. No. 60201. Backwall repair, as directed by the Engineer, shall be completed prior to installation of silicone joint sealant. See Dwg. No. 60201 for additional details.

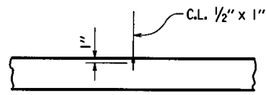
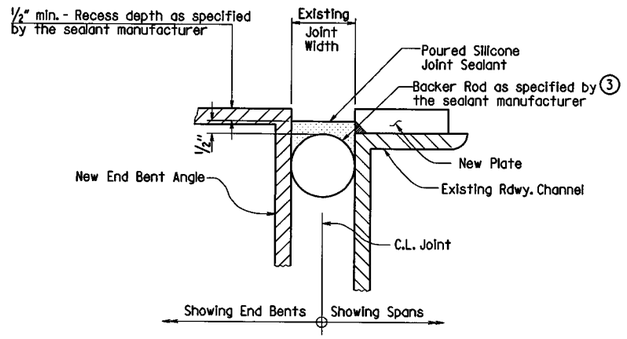
Use ½" X 1" Type 3 or 4 Joint Sealer. See Subsections 501.02(h) and 501.05(j). Backer Rod shall not be installed. Joint Sealer shall be measured and paid for as LMC Overlay. Sealant must be gray or other color similar to concrete.



Use ½" X 1" Type 3 or 4 Joint Sealer. See Subsections 501.02(h) and 501.05(j). Backer rod shall not be installed. Joint Sealer shall be measured and paid for as LMC Overlay. Slab joints shall extend to the outside edge of the deck slab. Slab joints shall be placed at all pouring sequence construction joints and are required at existing slab joint locations.

Slab joints and longitudinal construction joints shall be sawed as soon as the concrete has sufficiently set to allow sawing of the joint without damage to the Overlay.

LONGITUDINAL OVERLAY CONSTRUCTION JOINT DETAIL



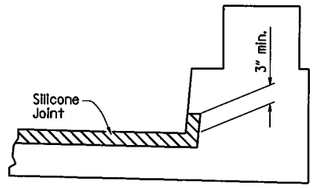
Existing Joint Seal shall be completely removed, backer rods placed, and Silicone Joint Sealant installed across the entire width of the bridge deck in accordance with these details and Manufacturer's Instructions. Removal of existing Joint Seal will not be paid for directly, but shall be considered incidental to the item "Silicone Joint Sealant".

Notes: Backer rods shall be extended beyond the length of the poured joint in the initial joint rehabilitation area so that the two pieces can be properly spliced together prior to installing sealant for the adjacent joint rehabilitaton. Manufacturer's recommendations shall be followed to prevent sealant leakage during rehabilitation work.

POURED SILICONE JOINT SEAL DETAILS

(Applies to Br. No. 03456, 03801 & 03892 only)

TRANSVERSE OVERLAY JOINT DETAIL

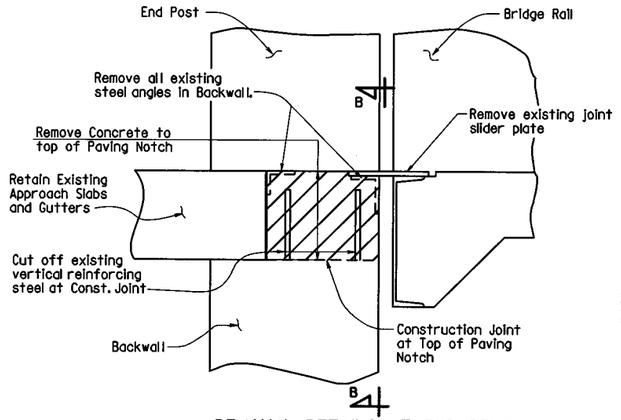


Note: Vertical joints may require forming. The clearance from deck surface to joint material shall be maintained.

JOINT SEAL PLACEMENT AT CURB

③ Backer rods shall be appropriately sized and set to the depth shown in the manufacturer's literature based on the joint width at the time of sealing. Except as noted, do not install more backer rod than can be sealed in the same day. The Contractor shall verify separation of the backer rod from the joint material after joint material has set.

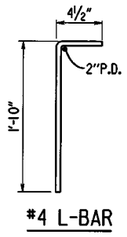
Backer rod shall be notched or otherwise fit around any existing seal supports or bumper plates to maintain its proper depth as defined above.



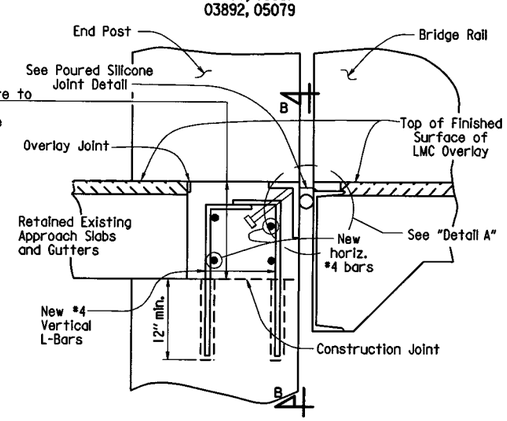
REMOVAL DETAILS AT END BENTS

(Applies to Br. Nos. 03456, 03801 & 03892 only)

Removal shall be in accordance with Section 821 and all removed portions of the existing backwall and joint materials shall become the property of the Contractor and shall be disposed of in accordance with Section 205.



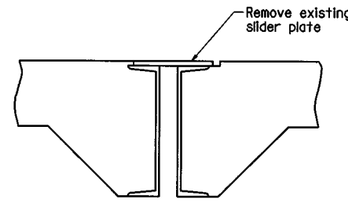
#4 L-BAR



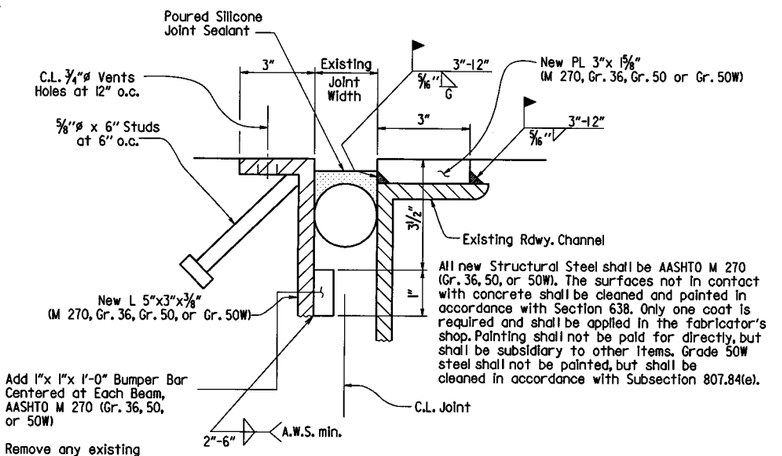
DETAILS OF BACKWALL MODIFICATION

(Applies to Br. Nos. 03456, 03801 & 03892 only)

Grout new #4 L-bars into drilled holes spaced to avoid existing reinforcing steel (12" o.c. max.). Grout shall be an approved non-shrink or epoxy grout listed on the QPL. Hole diameter and installation procedure shall be as required by the grout manufacturer.



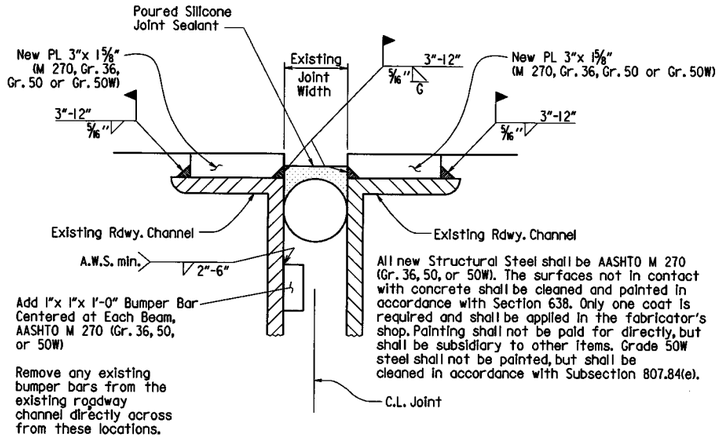
REMOVAL DETAILS AT INTERIOR BENTS



All new Structural Steel shall be AASHTO M 270 (Gr. 36, 50, or 50W). The surfaces not in contact with concrete shall be cleaned and painted in accordance with Section 638. Only one coat is required and shall be applied in the fabricator's shop. Painting shall not be paid for directly, but shall be subsidiary to other items. Grade 50W steel shall not be painted, but shall be cleaned in accordance with Subsection 807.84(e).

DETAIL A

(Applies to Br. Nos. 03456, 03801 & 03892 only)



All new Structural Steel shall be AASHTO M 270 (Gr. 36, 50, or 50W). The surfaces not in contact with concrete shall be cleaned and painted in accordance with Section 638. Only one coat is required and shall be applied in the fabricator's shop. Painting shall not be paid for directly, but shall be subsidiary to other items. Grade 50W steel shall not be painted, but shall be cleaned in accordance with Subsection 807.84(e).

DETAILS OF INTERMEDIATE JOINT MODIFICATION

(Applies to Br. Nos. 03456, 03801 & 03892 only)
Approximately 33 lb. of Structural Steel per foot of intermediate joint modification (for information only).

Structural Steel (lb.)	Reinforcing Steel (lb.)	Concrete (cu. yd.)
28	6	0.04

APPROXIMATE QUANTITIES FOR BACKWALL MODIFICATION ②

(Applies to Br. No. 03456, 03801 & 03892 only)

Quantities shown are per foot of backwall and are for information only.

② The Contractor shall make measurements for the backwall at each end of the bridge affected prior to beginning work on the bridge. The top surface of the raised backwall shall match the top surface of the finished LMC Overlay on the adjacent bridge deck and the adjacent approach slabs and approach gutters.

Replacement concrete shall be high early strength Portland Cement Concrete Pavement per Subsection 501.08 or LMC (f'c = 4,000 psi). Reinforcing Steel shall conform to Section 804. Structural Steel and welding shall conform to Section 807. All Materials, Labor, Tools and Equipment shall not be paid for directly but shall be considered subsidiary to the item "Modification of Existing Bridge Structure (Bridge No.)".

GENERAL NOTES

All concrete to be poured in the dry. All exposed corners to be chamfered ¾" unless otherwise noted.

In general all construction joints in abutments and bents shall be horizontal and shall be provided with keys not less than 1½" high and covering the middle third of both dimensions.

Rock excavation shall be made to neat lines of concrete footings. Care shall be exercised to avoid shattering of rock faces by excessive blasting. Concrete in footings shall be poured directly against excavated surfaces of rock.

For Details of Abutments see Drwg. No. 10602 & 10605

GENERAL NOTES

All concrete to be poured in the dry. All exposed corners to be chamfered 3/4" unless otherwise noted.

Rock excavation shall be made to neat lines of concrete footings. Care shall be exercised to avoid shattering of rock faces by excessive blasting. Concrete in footings shall be poured directly against excavated surfaces of rock.

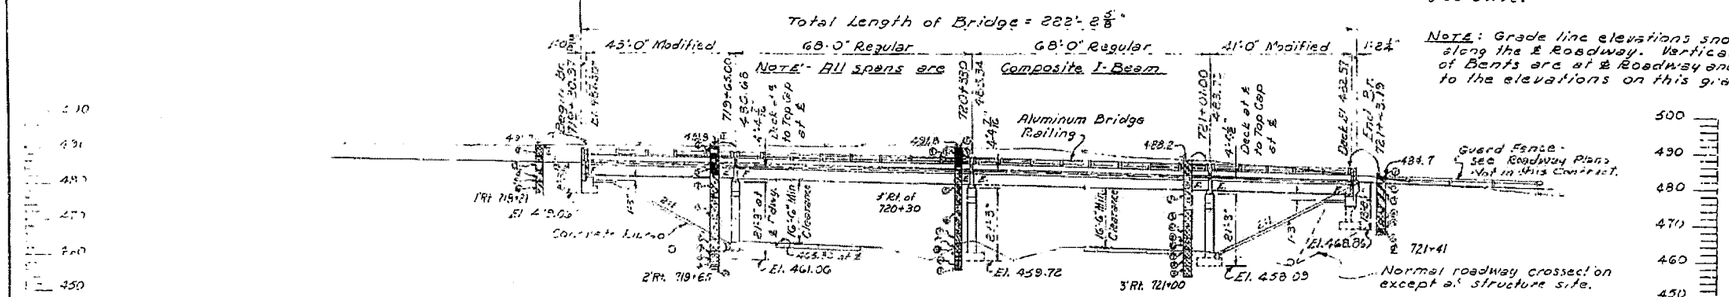
In general, all construction joints in abutments and bents shall be horizontal and shall be provided with keys not less than 1½" high covering the middle third of both dimensions.

For Details of Abutments No. 1 and 2 see Drawing No. 11511 & 11513.

For Details of Bents 1, 2, and 3 see Drawing No. 11512.

For Details of Standard Composite I-Beam Spans see Drawing Nos. 5467 and 5477.

For Supplemental Details of 43', 41', and 68' Composite I-Beam Spans see Drawing Nos. 11514 & 11515.



NOTE: Bents to be constructed with their transverse center lines on the radial lines of a 3°00 curve. Curb and railing to be constructed on an arc parallel to a 3°00 curve.

NOTE: Grade line elevations shown are along the ℄ Roadway. Vertical dimensions of Bents are at ℄ Roadway and in reference to the elevations on this grade line.

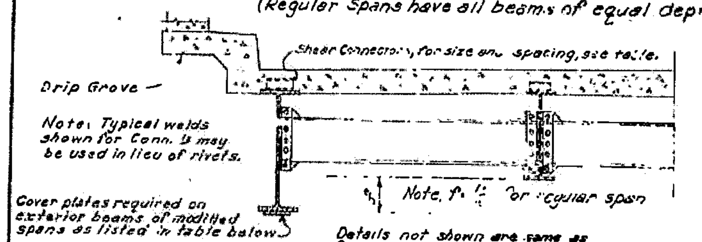
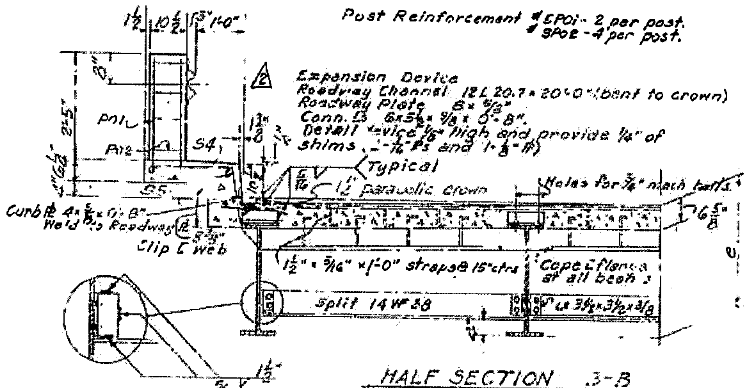
Dimensions are c. to c. of bars.



HALF SECTION A-A MODIFIED SPANS

Interior beams are same as Regular Spans. Exterior beams are of same nominal depth as beams for longest span shown on bridge layout.

Note- See Drwg No. 5462 for location of Sections A-A and B-B and variables a, b, c & d.



OPTIONAL WELDS

HALF SECTION B-B
FOR MODIFIED OR REGULAR SPANS

Note: Stud shear connectors, granular flux filled, solid fluxed, or equal may be used in place of the channels shown at the following ratios: ¾" diameter stud in place of 1.82 inches of channel, ⅞" diameter stud in place of 2.52 inches of channel. The studs shall be 4" long and automatically end welded to the beam flanges in accordance with recomendations of the manufacturer. Channel sections will be used as basis for measurement of structural steel in shear connectors.

GENERAL NOTES

All concrete to be poured in the dry. All exposed corners to be chamfered 3/4" unless otherwise noted.

Rock excavation shall be made to neat lines of concrete footings. Care shall be exercised to avoid shattering of rock faces by excessive blasting. Concrete in footings shall be poured directly against excavated surfaces of rock. Excavate a minimum of 1.5 feet into hard shale for Intermediate Bent footings.

In general, all construction joints in bents shall be horizontal and shall be provided with keys not less than 12" high covering the middle third of both dimensions.

All piling shall be 12" BP @ 53# and shall be driven with a steam hammer to a minimum capacity of 50 tons per pile and into the material designated as shale on the boring logs. Lengths of piling shown are for estimating quantities only. Order lengths shown; cut off or build-up, if necessary, to be paid for in accordance with the Standard Specifications.

Piles in End Bents No. 1 and 4 shall be driven after the embankment is in place.

For details of End Bents see Drawing No. 11.522

For details of Intermediate Bents see Drawing No. 11.523

For details of 45'0" I-beam Spans see Drawing No. 5.465

Specifications: Arkansas State Highway Commission Standard Specifications for Highway Construction, Edition of 1959, and designated Special Provisions.

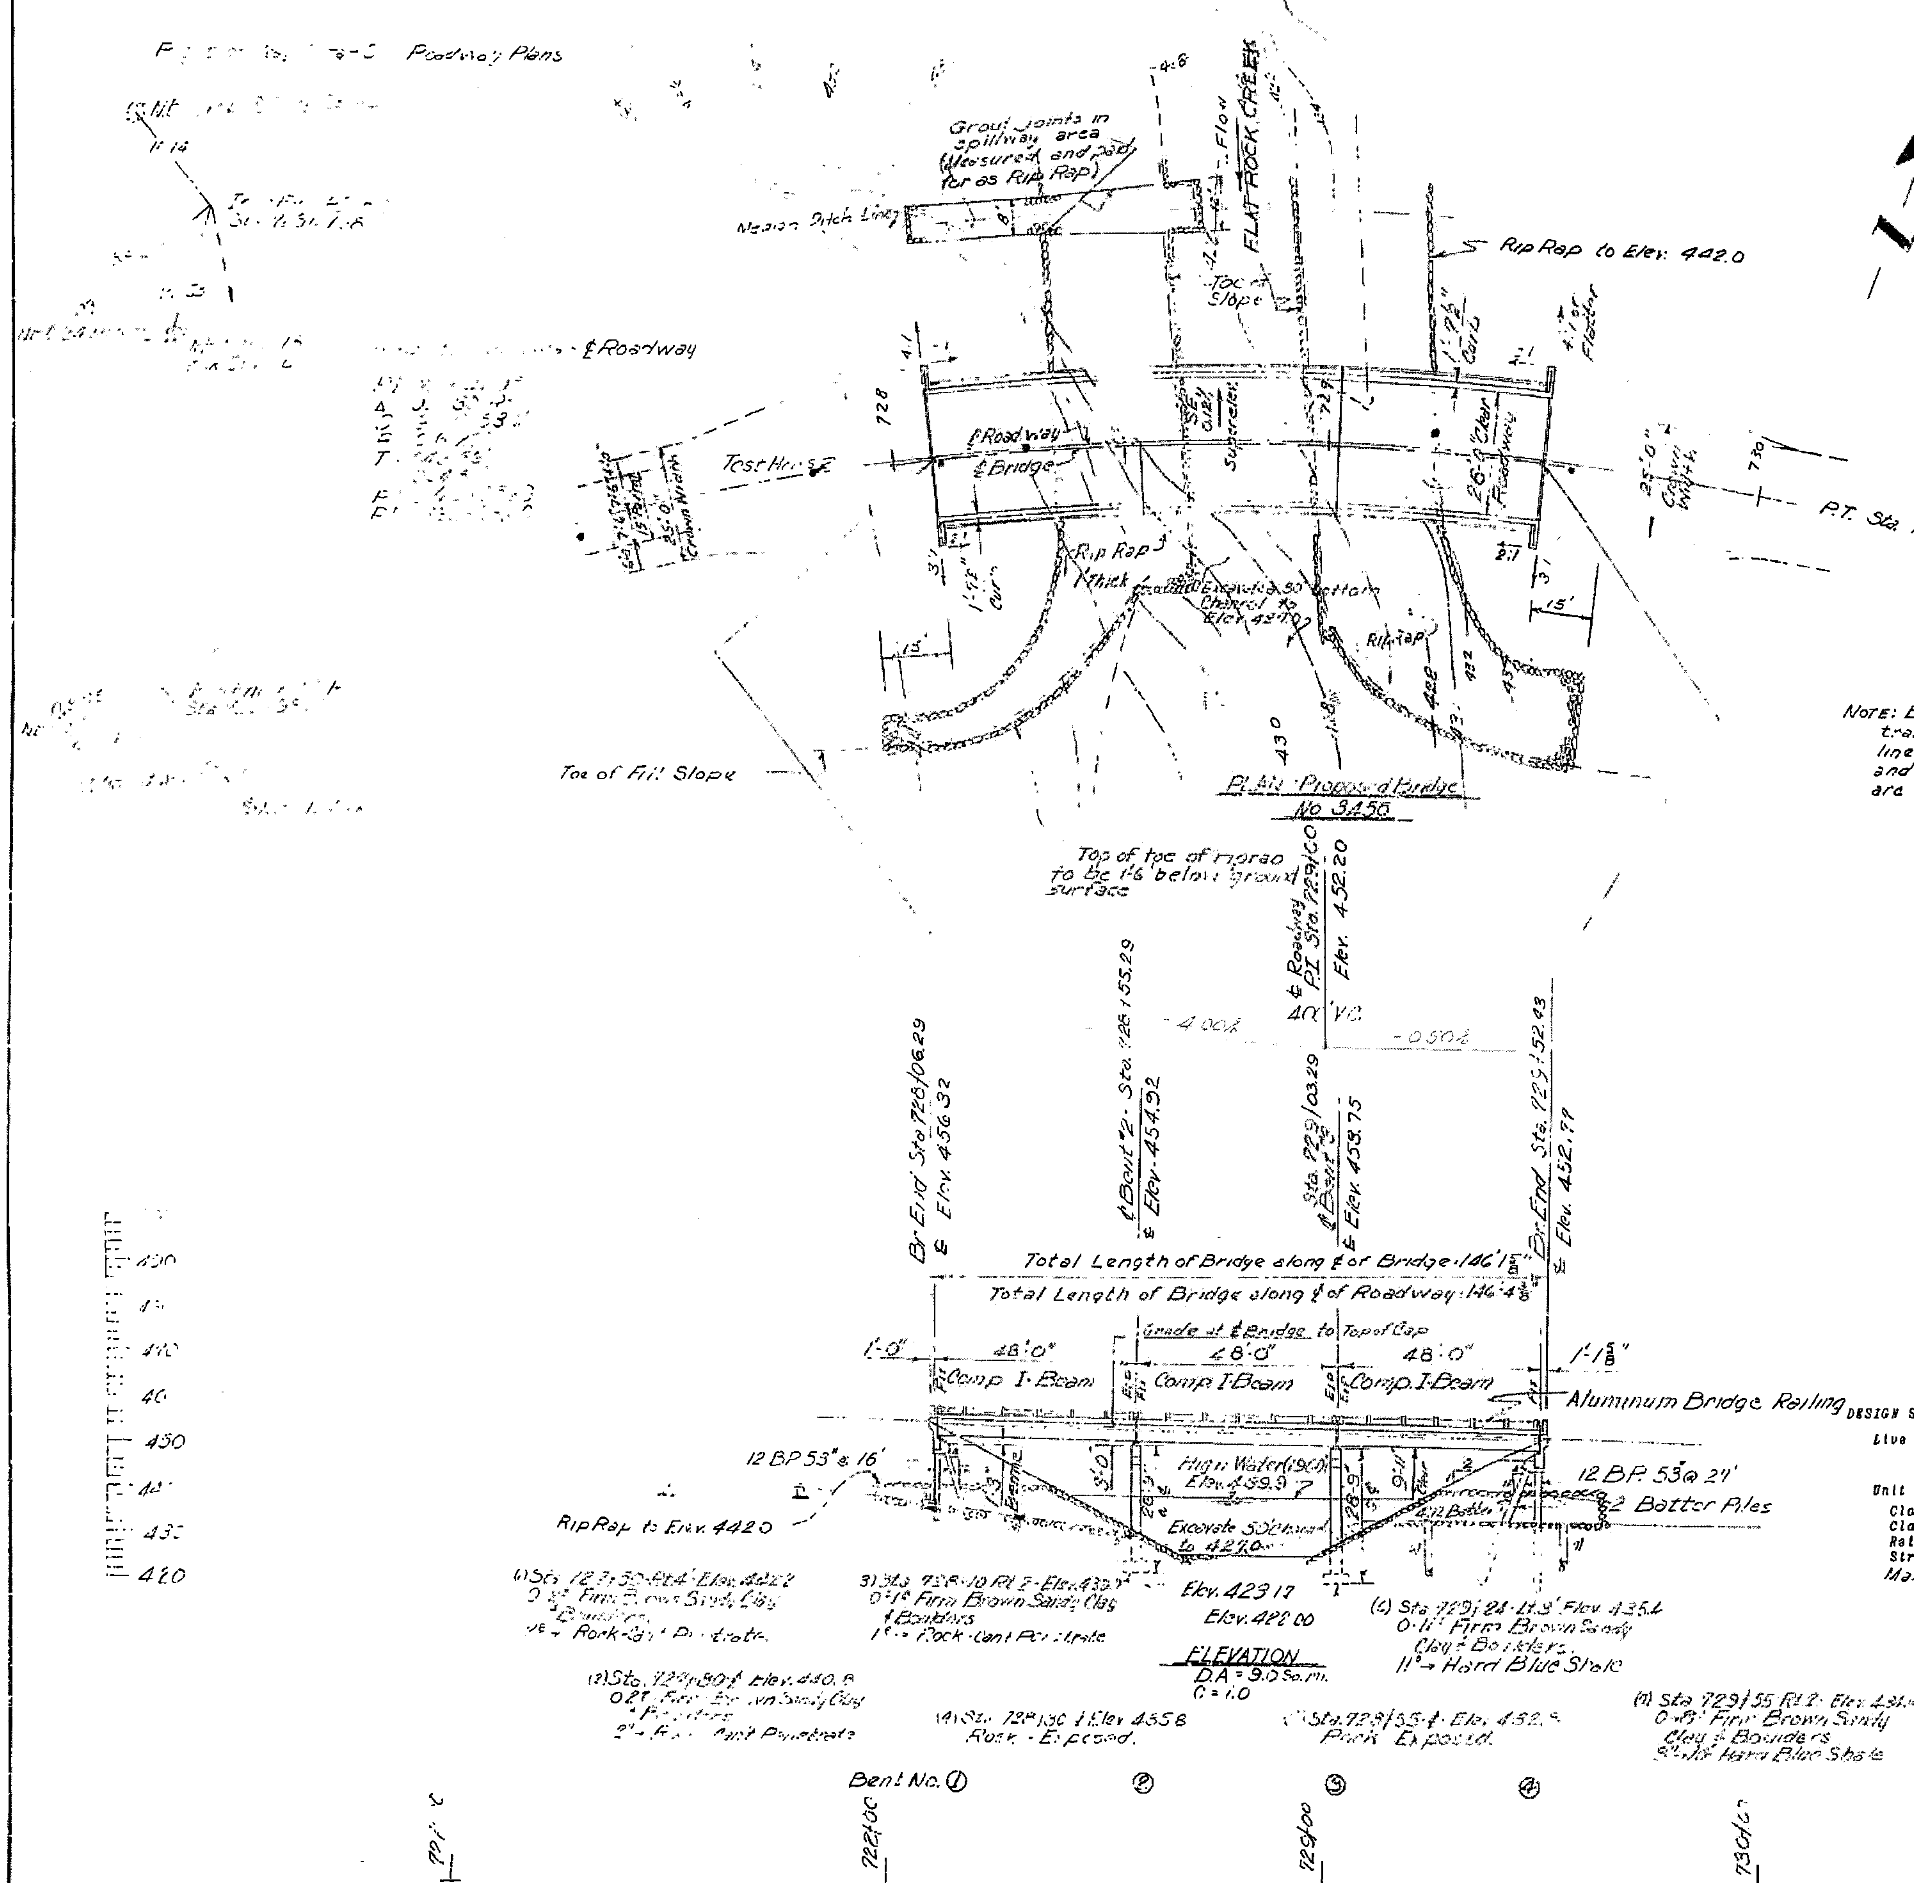
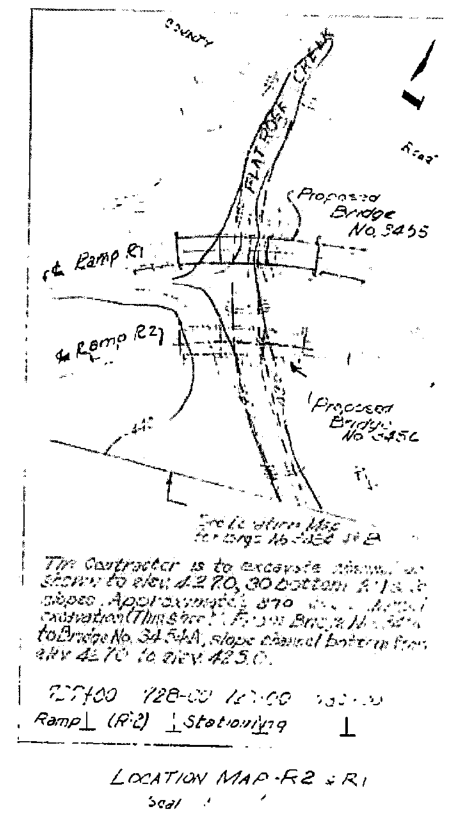
BRIDGE NO. 3455 DRAWING NO. 11527





GENERAL NOTES

All concrete to be poured in the dry. All exposed c... be chamfered ... unless otherwise noted.

Rock excavation shall be made to neat lines of concrete footings. Care shall be exercised to avoid shattering of rock faces by excessive blasting. Concrete in footings shall be poured directly against excavated surfaces of rock. Excavate a minimum of 1.5 feet into hard shale for Intermediate Bent Footings.

In general, all construction joints in bents shall be horizontal and shall be provided with keys not less than 1½" high covering the middle third of both dimensions.

All piling shall be 12"BP @ 53# and shall be driven with a steam hammer to a minimum capacity of 36 tons per pile and into the material designated as shale on the boring logs. Lengths of piling shown are for estimating quantities only. Order lengths shown; cut off or build-up, if necessary, to be paid for in accordance with the Standard Specifications.

Piles in End Bents No. 1 and 4 shall be driven after the embankment is in place.

For details of End Bents see Drawing No. 11529.

For details of Intermediate Bents see Drawing No. 11530.

For details of 48'0" I-beam Spans see Drawing No. 5465, 5462, 11531.

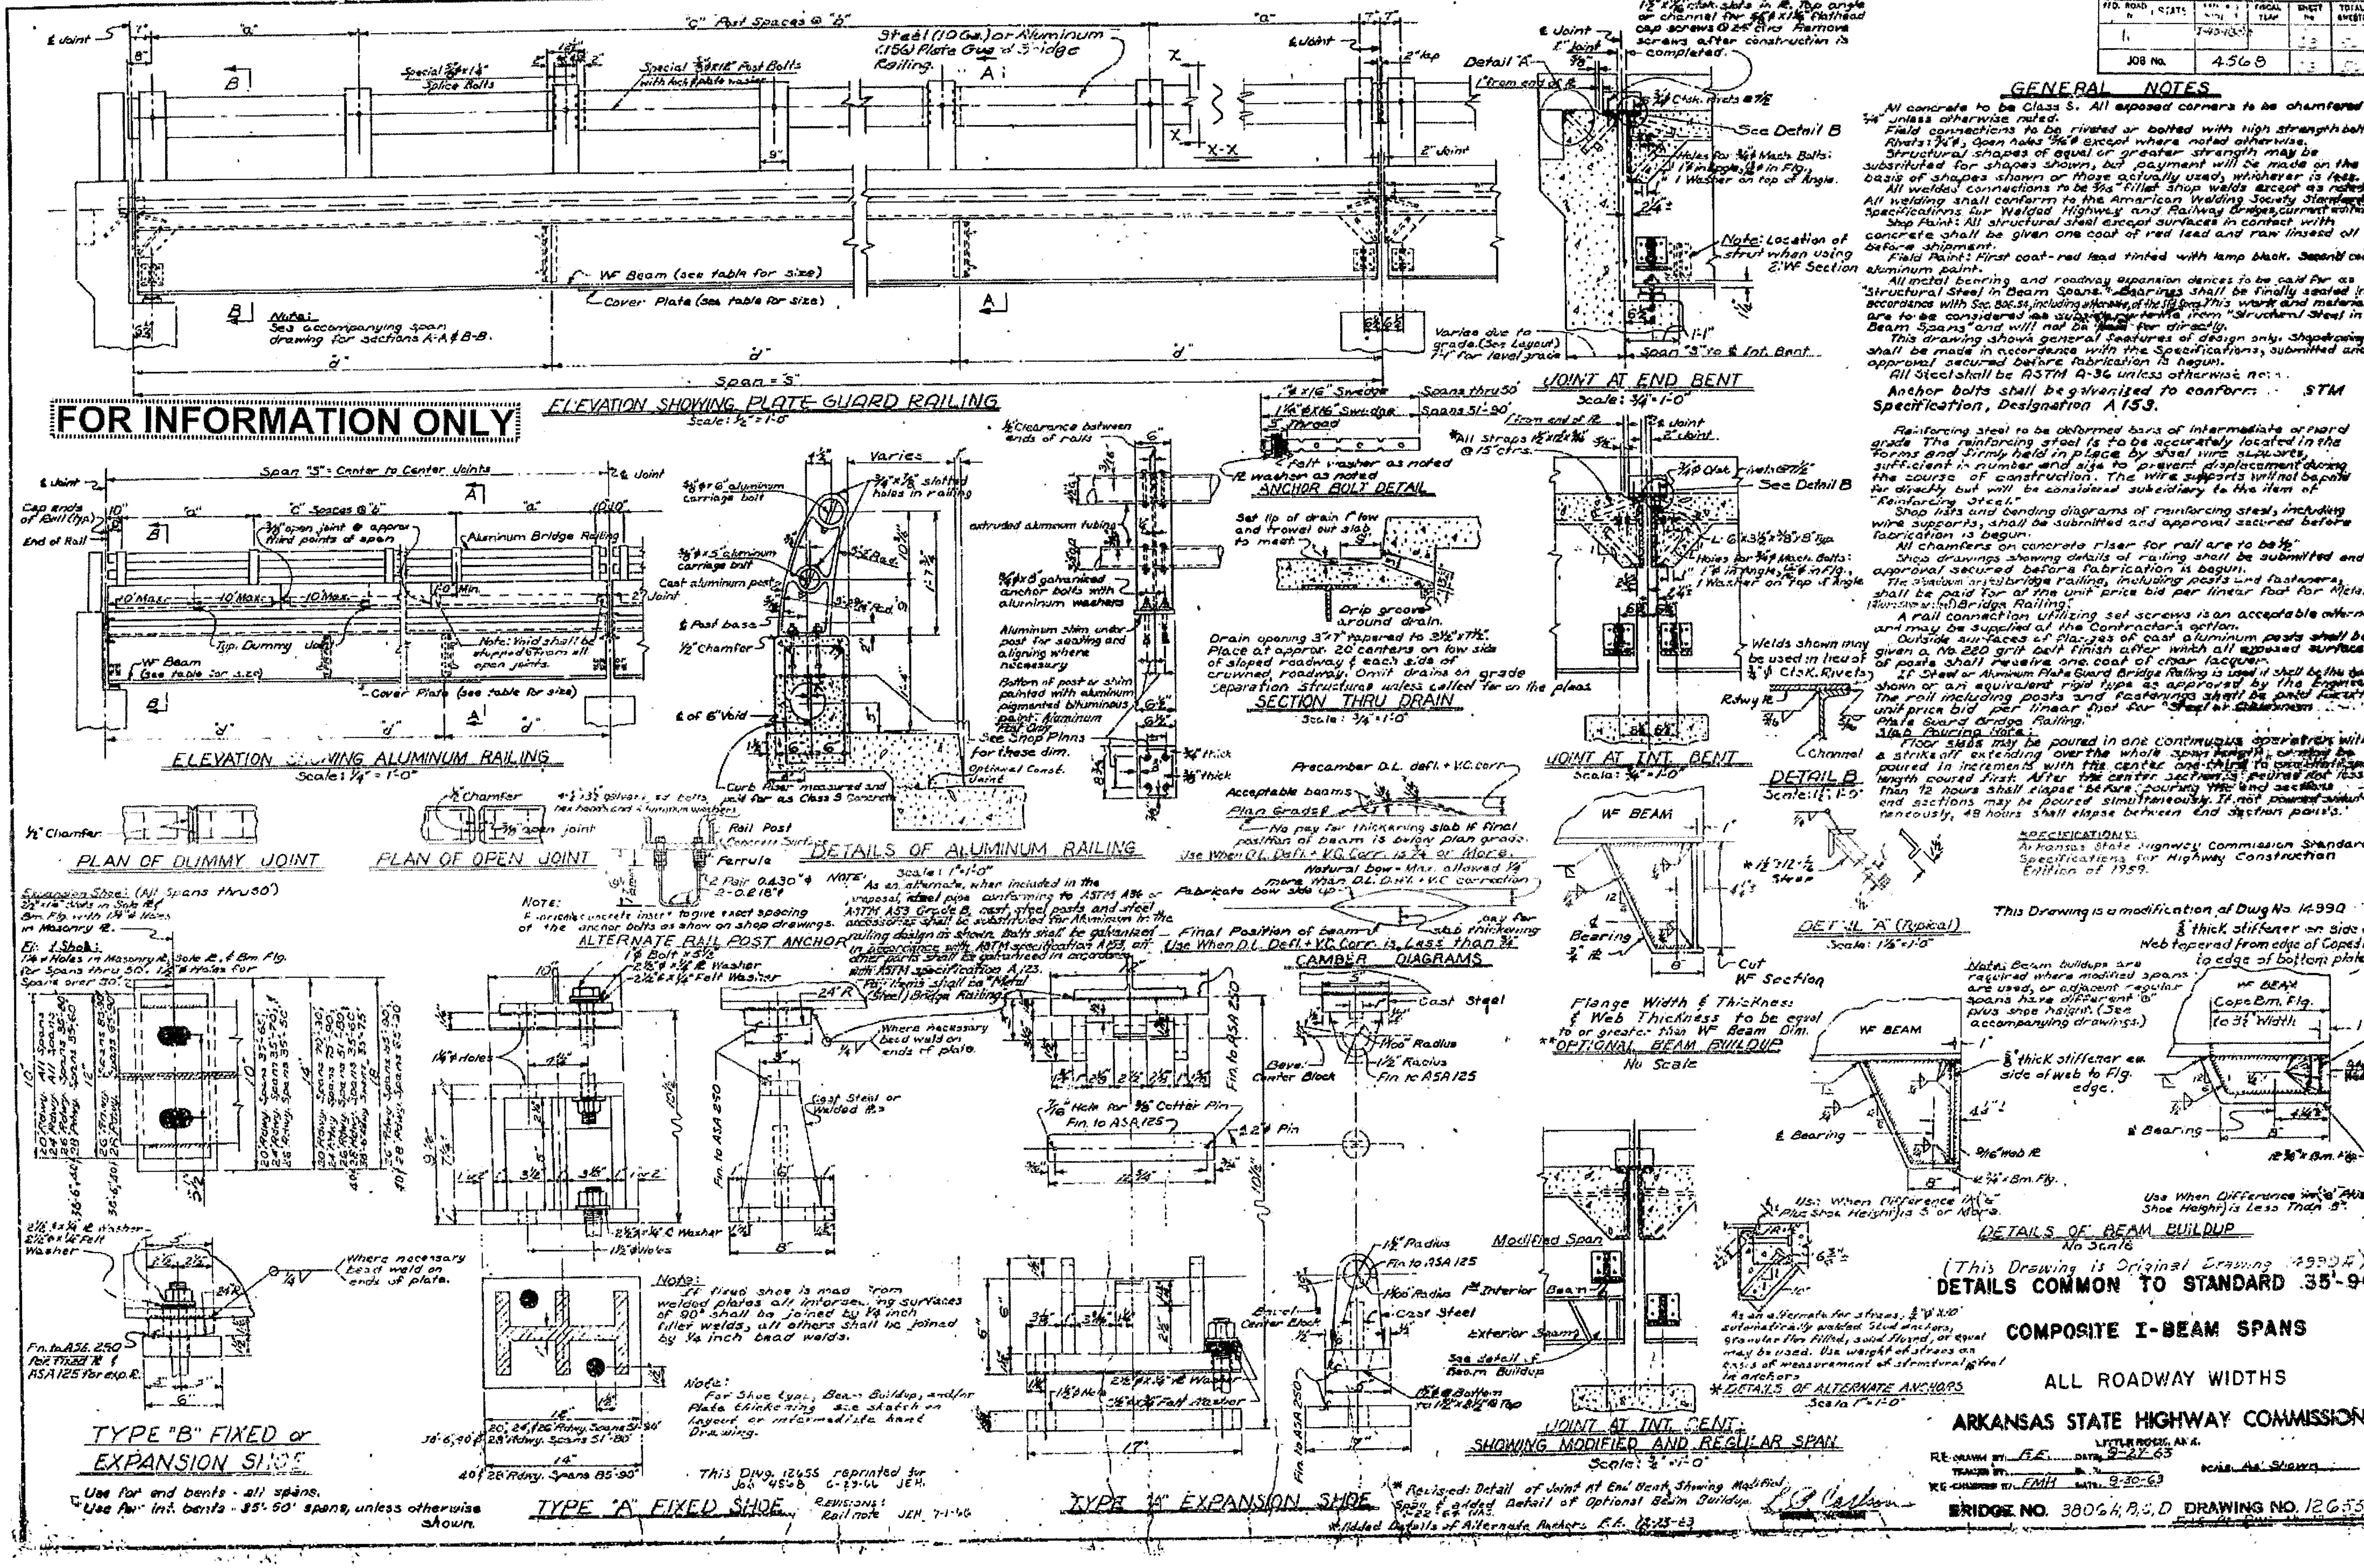
BRIDGE NO. 3800 DRAWING NO. 12652

FOR INFORMATION ONLY



FED. ROAD	STATE		FISCAL YEAR	SHEET No.	TOTAL SHEETS
JOB No.	4568				

GENERAL NOTES

All concrete to be Class S. All exposed corners to be chamfered ¾" unless otherwise noted.

Field connections to be riveted or bolted with high strength bolts. Rivets: ⅞"⌀, Open holes 15/16"⌀ except where noted otherwise.

Structural shapes of equal or greater strength may be substituted for shapes shown, but payment will be made on the basis of shapes shown or those actually used, whichever is less.

All welded connections to be 5/16" Fillet shop welds except as noted. All welding shall conform to the American Welding Society Standard Specifications for Welded Highway and Railway Bridges, current edition.

Shop Paint: All structural steel except surfaces in contact with concrete shall be given one coat of red lead and raw linseed oil before shipment.

Field Paint: First coat - red lead tinted with lamp black. Second coat aluminum paint.

All metal bearing and roadway expansion devices to be paid for as "Structural Steel in Beam Spans." Bearings shall be finally sealed in accordance with Sec. 806.54, including alternate, of the Std. Specs. This work and material are to be considered as subsidiary to item "Structural Steel in Beam Spans" and will not be paid for directly.

This drawing shows general features of design only. Shop drawings shall be made in accordance with the Specifications, submitted and approval secured before fabrication is begun.

All Steel shall be ASTM A-36 unless otherwise noted.

Anchor bolts shall be galvanized to conform ASTM Specification, Designation A 153.

Reinforcing steel to be deformed bars of intermediate or hard grade. The reinforcing steel is to be accurately located in the forms and firmly held in place by steel wire supports, sufficient in number and size to prevent displacement during the course of construction. The wire supports will not be paid for directly but will be considered subsidiary to the item of "Reinforcing Steel."

Shop lists and bending diagrams of reinforcing steel, including wire supports, shall be submitted and approval secured before fabrication is begun.

All chamfers on concrete riser for rail are to be ½".

Shop drawings showing details of railing shall be submitted and approval secured before fabrication is begun.

The aluminum bridge railing, including posts and fasteners, shall be paid for at the unit price bid per linear foot for Metal (Aluminum) Bridge Railing.

A rail connection utilizing set screws is an acceptable alternate and may be supplied at the Contractor's option.

Outside surfaces of flanges of cast aluminum posts shall be given a No. 220 grit belt finish after which all exposed surfaces of posts shall receive one coat of clear lacquer.

If Steel or Aluminum Plate Guard Bridge Railing is used it shall be the type shown or an equivalent rigid type as approved by the Engineer. The rail including posts and fastenings shall be paid for at the unit price bid per linear foot for "Steel or Aluminum Plate Guard Bridge Railing."

Slab Pouring Note:

Floor slabs may be poured in one continuous operation with a strikeoff extending over the whole span length, or may be poured in increments with the center one-third to one-half span length poured first. After the center section is poured not less than 12 hours shall elapse before pouring the end sections. The end sections may be poured simultaneously. If not poured simultaneously, 48 hours shall elapse between end section pours.

NOTE: Stud shear connectors, granular flux filled, solid fluxed, or equal may be used in place of the channels shown at the following ratios: 3/4" diameter stud in place of 1.82 inches of channel, 7/8" diameter stud in place of 2.52 inches of channel. The studs shall be 4" long and automatically end welded to the beam flanges in accordance with recommendations of the manufacturer.

Channel sections will be used as basis for measurement of structural steel in shear connectors

This drawing to be used with drawing 12655

DESIGN SPECIFICATIONS: AASHO 1961
Live Loading: H20-S16 and Special Interstate Loading of 2 - 24,000# axles spaced @ 4'0" ctrs.

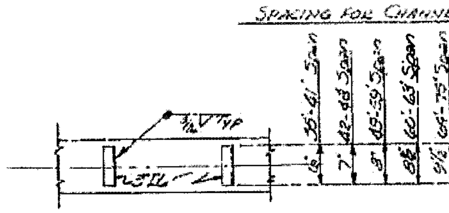
		Structural Steel (A-33)	20,000 psi	
		Reinforcing Steel	20,000 psi	



DETAILS OF SHEAR CONNECTORS

⊗ Interior beams, including Cover Plates, for Modified Spans shall be the same as for Regular Spans as shown in table.

No Cover Plate is required for an exterior beam of a greater depth than the beam listed for a particular span except as shown.

Defl. for Ext. Beams is for Regular Spans only

Omit shear connectors on outside beams of Modified Spans when using beams shown to right of heavy line.

GENERAL NOTES

All concrete to be poured in the dry. Exposed corners to be chamfered 3/4" unless otherwise noted.

In general, all construction joints in bents shall be horizontal and shall be provided with key not less than 1½" high covering the middle third of both dimensions.

All piling shall be 12" BP @ 53# and to be driven with an approved air, steam, or diesel hammer to a minimum bearing capacity of 36 tons per pile and into material designated as clay, gravel and boulders on the boring logs. Lengths of pile shown are for estimating quantities only. Order lengths shown; cut-off or build-up, if necessary, to be paid for in accordance with the standard specifications.

Piles in End Bents No. 1 and 5 shall be driven after embankment is in place.

For Details of Pile End Bents see Dwg. No. 12678.

For Details of Intermediate Bents see Dwg. No. 12679.

For Details of Composite I-Beam Spans see Dwg. No. 12685, 12671, and 12680.

Adjustments of public utilities, where necessary, shall not be at the Contractor's expense. Where adjustments are necessary, the Contractor and the Utility Companies concerned shall coordinate their work to avoid unnecessary delay or expense to service during the construction period

SPECIFICATIONS: Arkansas State Highway Commission Standard Specifications for Highway Construction, Edition of 1958 and designated Special Provisions.

DESIGN SPECIFICATIONS: AASHO 1961

Live Loading: H20-S16 and Special Interstate Loading of 2 - 24 000# axles spaced 4'0" on centers.

GENERAL NOTES

All concrete to be poured in the dry. Exposed corners to be chamfered 3/4" unless otherwise noted.

Rock excavations shall be made to neat lines of concrete footings. Care shall be exercised to avoid shattering of rock faces by excessive blasting. Concrete in footings shall be poured directly against excavated surfaces of rock. Excavate rock 1'-6" minimum.

In general, all construction joints in bents shall be horizontal and shall be provided with keys not less than 1½" covering the middle third of both dimensions.

All piling shall be 10-BP-42 and shall be driven with an approved air, steam or diesel hammer to a minimum capacity of 36 tons per pile and to the material shown as shale on the boring logs. Lengths of pile shown are for estimating quantities only. Order lengths shown; cut-off or build-up, if necessary, to be paid for in accordance with the Standard Specifications. The Contractor at his own expense shall excavate material in pile area below original ground line, if necessary to obtain a minimum pile length of 12' in place, before placing embankment.

Piles in end bents to be driven after embankment is in place.

For Details of End Bents see Dwg. No. 12682.
For Details of Intermediate Bents see Dwg. No. 12663.
For Details of Composite I-Beam Spans see Dwg. Nos. 12655, 12671 and 12684.

GENERAL NOTES

All concrete to be poured in the dry. Exposed corners to be chamfered 3/4" unless otherwise noted

Rock excavation shall be made to neat lines of concrete footings and to a minimum depth of 1.0'. Care shall be exercised to avoid shattering of rock faces by excessive blasting. Concrete in footings shall be poured directly against excavated surfaces of rock.

In general, all construction joints in bents shall be horizontal and shall be provided with keys not less than 1½" high covering the middle third of both dimensions.

All piling shall be 12" BP 53 and shall be driven with an approved air, steam or diesel hammer to a minimum bearing capacity of 36 tons per pile and to a minimum penetration of 20 feet below the ground line and into material designated as shale on the boring logs. Lengths of pile shown are for estimating quantities only. Order lengths shown. Cut-off or build-up, if necessary, to be paid for in accordance with the Standard Specifications.

Piles in End Bents No. 1 and 5 shall be driven after embankment is in place.

For Details of Pile End Bents see Dwg. No. 12694.
For Details of Intermediate Bents see Dwg. No. 12695.

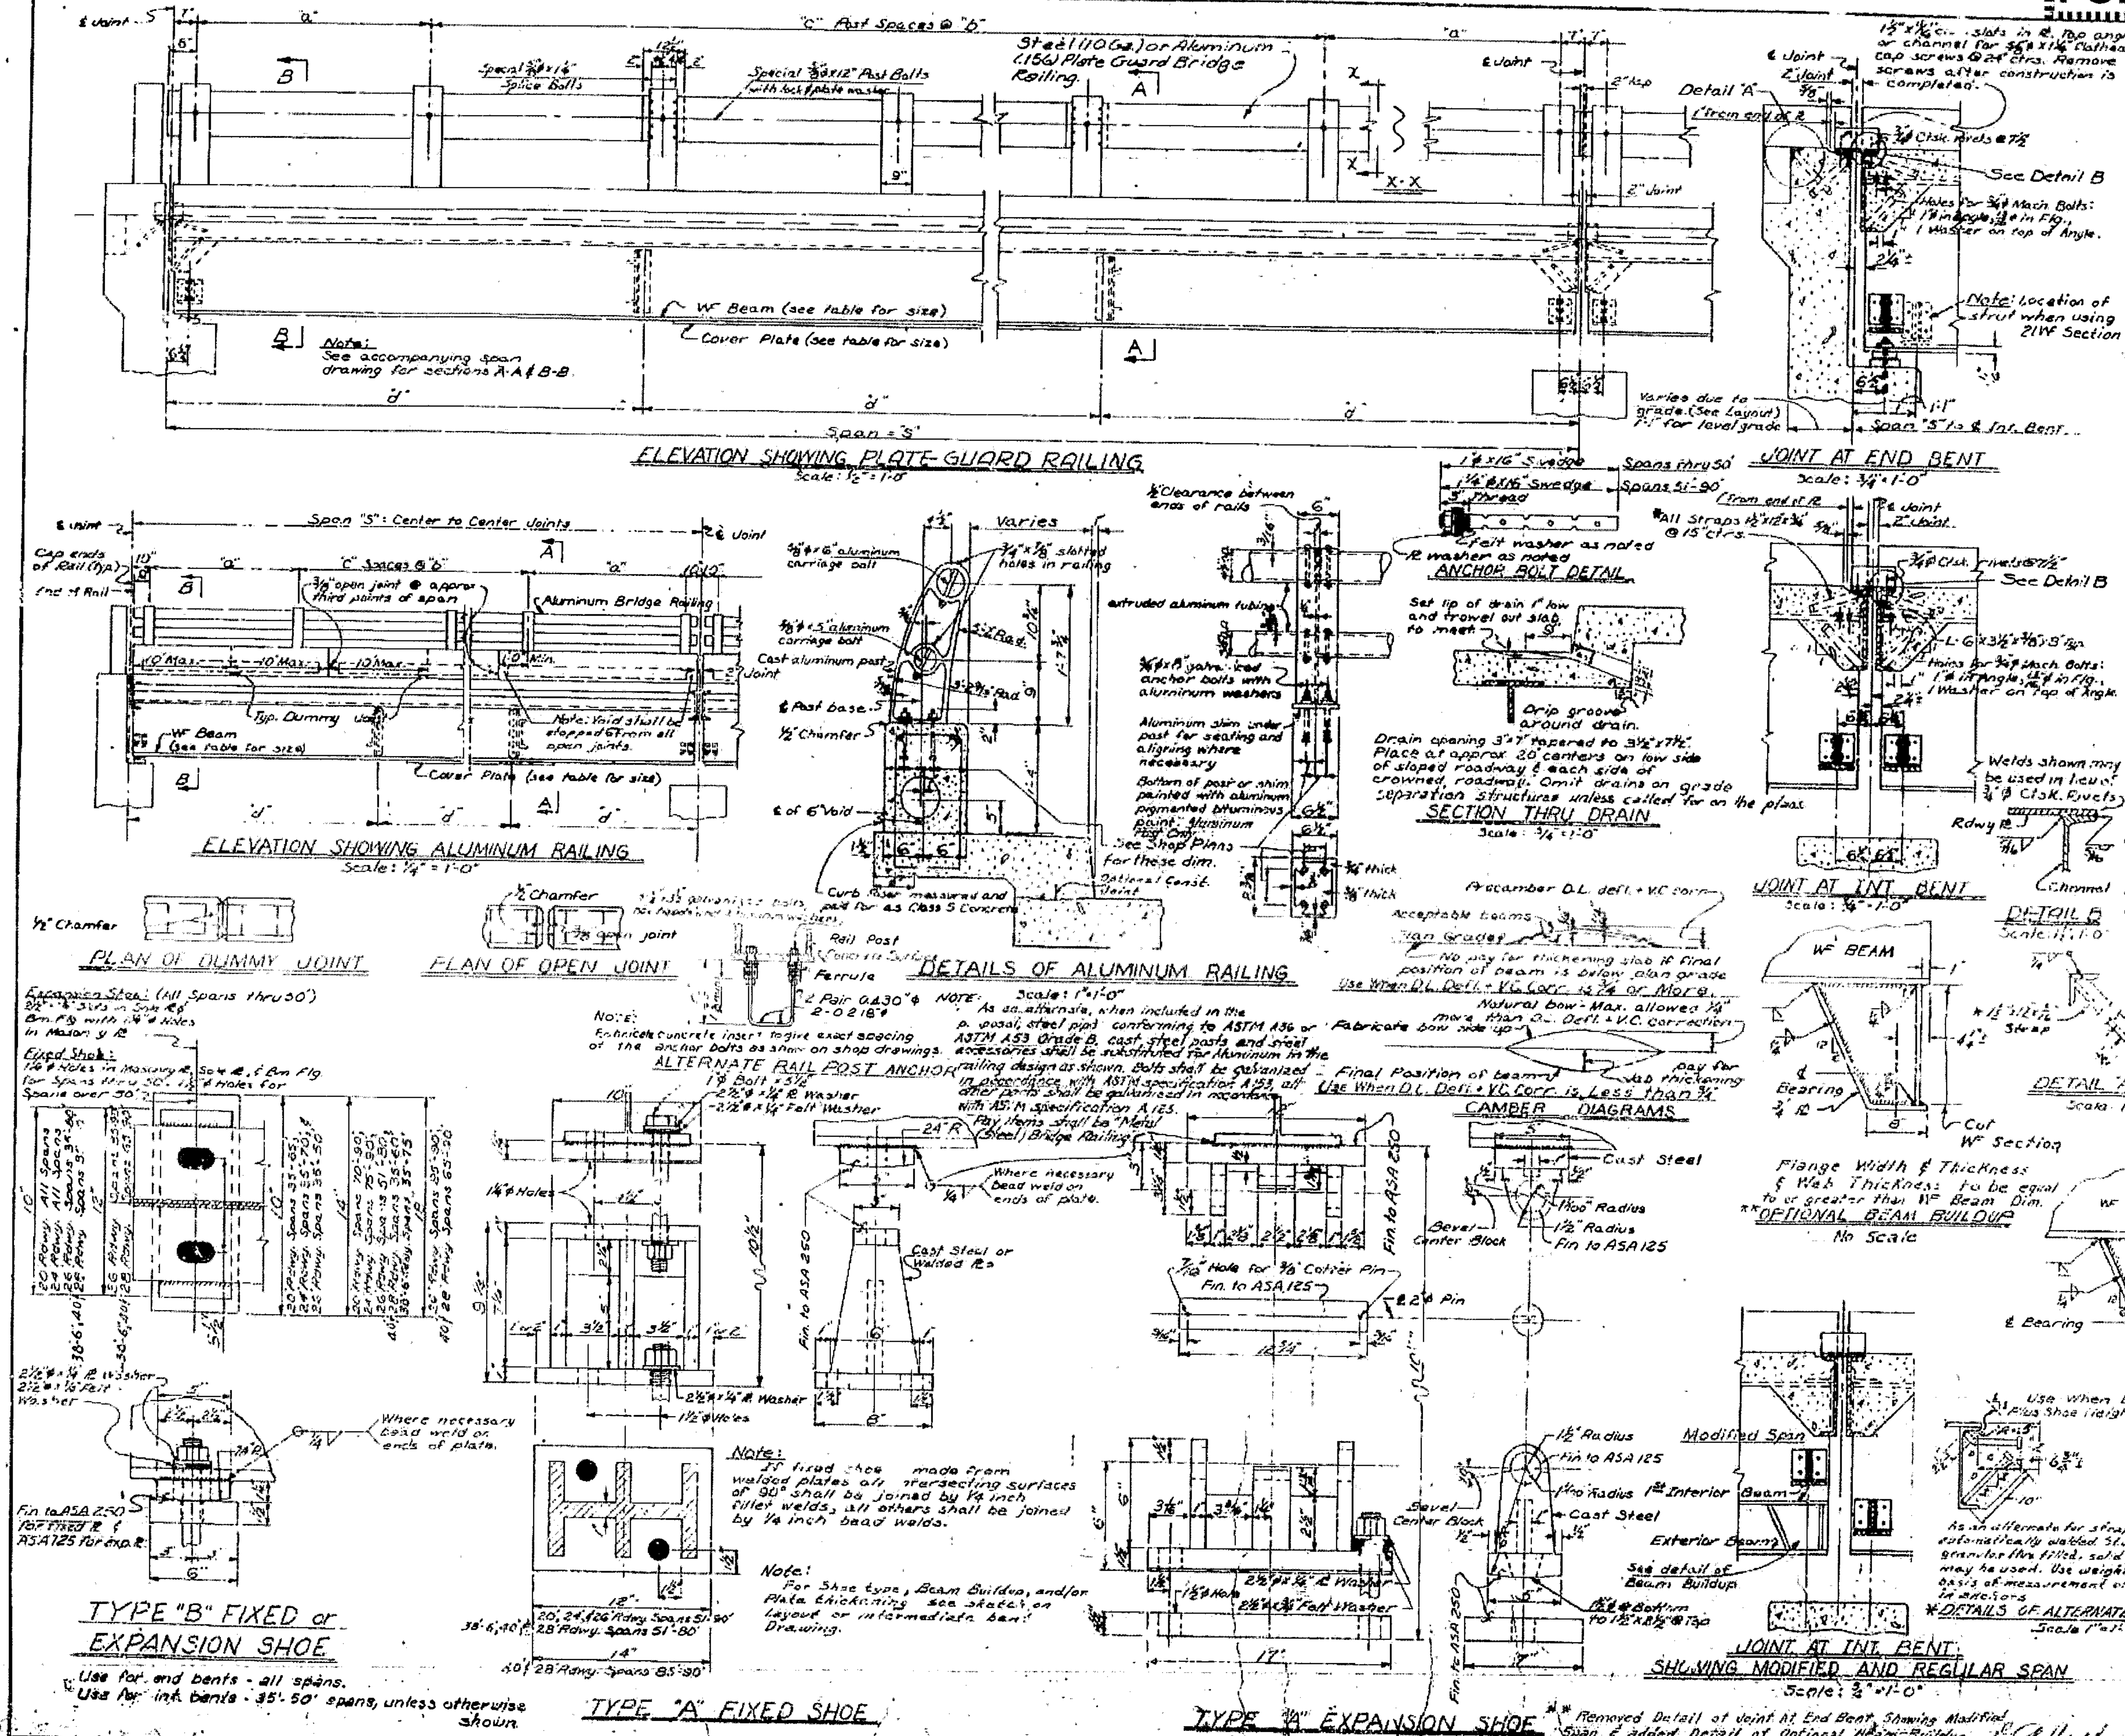
81



FED. ROAD	STATE		FISCAL YEAR	SHEET NO.	TOTAL SHEETS
JOB NO.					

GENERAL NOTES

All concrete to be Class S. All exposed corners to be chamfered 3/4" unless otherwise noted.

Field connections to be riveted or bolted with high strength bolts. Rivets: 3/4"⌀, Open holes 13/16"⌀ except where noted otherwise.

Structural shapes of equal or greater strength may be substituted for shapes shown, but payment will be made on the basis of shapes shown or those actually used, whichever is less.

All welded connections to be 5/16" fillet shop welds except as noted. All welding shall conform to the American Welding Society Standard Specifications for Welded Highway and Railway Bridges, current edition.

Shop Paint: All structural steel except surfaces in contact with concrete shall be given one coat of red lead and raw linseed oil before shipment.

Field Paint: First coat-red lead tinted with lamp black. Second coat-aluminum paint.

All metal bearing and roadway expansion devices to be paid for as "Structural Steel in Beam Spans." Bearings shall be finally seated in accordance with Sec. 806.5c, including alternate, of the Specs. This work and material are to be considered as subsidiary to the item "Structural Steel in Beam Spans" and will not be paid for directly.

This drawing shows general features of design only. Shop drawings shall be made in accordance with the Specifications, submitted and approval secured before fabrication is begun.

All Steel shall be ASTM A-36 unless otherwise noted.

Anchor bolts shall be galvanized to conform to ASTM Specification, Designation A153.

Reinforcing steel to be deformed bars of intermediate or hard grade. The reinforcing steel is to be accurately located in the forms and firmly held in place by steel wire supports, sufficient in number and size to prevent displacement during the course of construction. The wire supports will not be paid for directly but will be considered subsidiary to the item of "Reinforcing Steel."

Shop lists and bending diagrams of reinforcing steel, including wire supports, shall be submitted and approval secured before fabrication is begun.

All chamfers on concrete riser for rail are to be 1/2".

Shop drawings showing details of railing shall be submitted and approval secured before fabrication is begun.

The aluminum bridge railing, including posts and fasteners, shall be paid for at the unit price bid per linear foot for Metal (Aluminum) Bridge Railing.

A rail connection utilizing set screws is an acceptable alternate and may be supplied at the Contractor's option.

Outside surfaces of flanges of cast aluminum posts shall be given a No. 220 grit belt finish after which all exposed surfaces of posts shall receive one coat of clear lacquer.

If Steel or Aluminum Plate Guard Bridge Railing is used it shall be the type shown or an equivalent rigid type as approved by the Engineer. The rail including posts and fastenings shall be paid for at the unit price bid per linear foot for "Steel or Aluminum Plate Guard Bridge Railing."

Slab Pouring Note:

Floor slabs may be poured in one continuous operation with a strikeoff extending over the whole span length, or may be poured in increments with the center one-third to one-half span length poured first. After the center section is poured not less than 72 hours shall elapse before pouring the end sections. End sections may be poured simultaneously. If not poured simultaneously, 48 hours shall elapse between end section pours.

GENERAL NOTES

All concrete to be Class S. All exposed corners to be chamfered ¾" unless otherwise noted.

Field connections to be riveted or bolted with high strength bolts. Rivets: ¾"⌀, Open holes 13/16"⌀ except where noted otherwise.

Structural shapes of equal or greater strength may be substituted for shapes shown, but payment will be made on the basis of shapes shown or those actually used, whichever is less.

All welded connections to be 5/16" Fillet shop welds except as noted. All welding shall conform to the American Welding Society Standard Specifications for Welded Highway and Railway Bridges, current edition.

Shop Paint: All structural steel except surfaces in contact with concrete shall be given one coat of red lead and raw linseed oil before shipment.

Field Paint: First coat-red lead tinted with lamp black. Second coat aluminum paint.

All metal bearing and roadway expansion devices to be paid for as "Structural Steel in Beam Spans." Bearings shall be finally seated in accordance with Sec. 806.34, including alternate, of the 1959 Spec. This work and material are to be considered as subsidiary to the item "Structural Steel in Beam Spans" and will not be paid for directly.

This drawing shows general features of design only. Shop drawings shall be made in accordance with the Specifications, submitted and approval secured before fabrication is begun.

All Steel shall be ASTM A-36 unless otherwise noted.

Anchor bolts shall be galvanised to conform to ASTM Specification, Designation A 153.

Reinforcing steel to be deformed bars of intermediate or hard grade. The reinforcing steel is to be accurately located in the forms and firmly held in place by steel wire supports, sufficient in number and size to prevent displacement during the course of construction. The wire supports will not be paid for directly but will be considered subsidiary to the item of "Reinforcing Steel."

Shop lists and bending diagrams of reinforcing steel, including wire supports, shall be submitted and approval secured before fabrication is begun.

All chamfers on concrete riser for rail are to be ½".

Shop drawings showing details of railing shall be submitted and approval secured before fabrication is begun.

Slab Pouring Note:

Floor slabs may be poured in one continuous operation with a strikeoff extending over the whole span length, or may be poured in increments with the center one-third to one-half span length poured first. After the center section is poured, not less than 72 hours shall elapse before pouring the end sections. End sections may be poured simultaneously. If not poured simultaneously, 48 hours shall elapse between end section pours. A minimum of 72 hours shall elapse between completion of the slab and the pouring of the curb section if poured separately.

For details of Bridge Railing see Dwg. No. 14392 or 14393 as shown on Bridge Layout.

SPECIFICATIONS: Arkansas State Highway Commission Standard Specifications for Highway Construction Edition of 1959, the 1966 Supplemental Specifications thereto and applicable Special Provisions.

EXPANSION JOINT DATA

SPAN LENGTH (AGGREGATE FOR MOVEMENT AT JOINT)	"A" (Joint Width)	"D"	SEAL SIZE	B
To 80' and All Spans Fixed @ Abut.	1"	2½"	1¼" x 2"	1¼"
Over 80' to 100'	1¼"	2¾"	2" x 2½"	1¾"
Over 100' to 140'	1½"	3¼"	2½" x 2¾"	2"
Over 140' to 180'	2"	4¼"	3" x 3½"	2½"

This Drawing is a modification of Dwg. No. 14910

Note: Beam buildups are required where modified spans are used, or adjacent regular spans have different "e" plus shoe height. (See accompanying drawings.)

Revised: Expansion Device for use with Preformed Joint Sealer. A.J.M. 8-65 (Checked J.E.N. 10-13-65)

Revised: Intermediate Diaphragms 10-6-64 VAS.

Revised: Bridge Railing 3-5-65 DFL

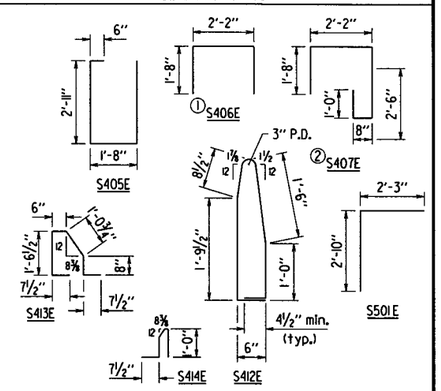
BENDING DIAGRAMS



Dimensions are out to out of bars.

Note: Bars with and "E" suffix are to be epoxy coated.

GENERAL NOTES

The proposed work is to be done in stages and consists of removal of the existing abutment backwalls, approach slabs, and gutters; replumbing of existing rocker bearings; and construction of new concrete diaphragms and Type Special Approach Slabs. Refer to Dwg. No. 56862 for details of abutment backwall removal and Dwg. No. 56864 for details of replumbing of existing rocker bearings. Unless otherwise noted, all existing material removed and not to be incorporated in the finished structure shall become the property of the Contractor.

Dimensions are based on original bridge plans. The Contractor shall make check measurements of the existing bridge and make adjustments necessary to fit the new work to the existing structure.

All concrete shall be Class S with a minimum 28 day compressive strength f'c = 3,500 psi. Concrete shall be poured in the dry and all exposed corners to be chamfered ¾" unless otherwise noted. This work and material shall be paid for as "Class S Concrete - Bridge."

All reinforcing steel shall be Grade 60 conforming to AASHTO M 31 or M 322, Type A, with mill test reports. The reinforcing steel is to be accurately located in the forms and firmly held in place by steel wire supports, sufficient in number and size to prevent displacement during the course of construction. The wire supports will not be paid for directly, but will be considered subsidiary to "Epoxy Coated Reinforcing Steel (Grade 60)."

All stud shear connectors shall be granular flux filled, solid fluxed, or equal and shall be automatically end welded in accordance with recommendations of the manufacturer. This work and material will not be paid for directly, but shall be considered subsidiary to "Modification of Existing Bridge Structure (Bridge No.)."

Prior to pouring concrete diaphragm, remove mill scale from surfaces to be in contact with concrete with a wire brush at beam ends (1'-4" minimum length).

Unreinforced neoprene bearing strip shall conform to Section 808 and shall be considered subsidiary to "Class S Concrete - Bridge."

The joint between the superstructure and substructure shall be waterproofed by the use of polystyrene foam boards, filter fabric meeting the requirements of Subsection 625.02, Type 2, and an approved granular material meeting the requirements of Subsection 403.01, Class 5 or Subsection 802.02(c), Alternate Gradation AASHTO M43 #57.

Refer to the following drawings for the existing details:

See Dwg. No. 19330 for layout of bridge.

See Dwg. Nos. 19331 - 19334 for details of Abutment Nos. 1 and 2.

See Dwg. Nos. 19335 - 19338 for details of the superstructure.

See Dwg. Nos. 19339 - 19340 for details of the approach slabs.

See Dwg. No. 14990F for details of Type B3 and Type D1 Shoes.

③ Temporary barrier shall not be attached to the existing bridge deck, new backwall or approach slab, but may be attached to the existing backwall or approach slab. For details of temporary barrier, see Std. Dwg. TC-4.

TABLE A

① Temperature	Bearing Position From Vertical (Measured Horizontally)
	② Dimension "A"
40°F	3/16"
60°F	Vertical
80°F	-3/16"

① Replumbing temperature is limited to 40°F min. and 80°F max. and shall be the 24 Hour Average Temperature.

② Minus sign (-) indicates the top of bearing is repositioned towards the backwall. Positive sign (+) indicates the top of bearing is repositioned towards pier in median.

REPLUMBING BEARING NOTES:

After the Contractor has lifted (jacked) the beams for a particular abutment, the bearings for that abutment may be replumbed.

Replumbing of bearings shall be done according to Special Provision Job No. BB0401 "Replumbing Existing Rocker Bearings" and these plans.

Temporary supports shall be capable of supporting full loads. Each beam may be lifted (jacked) simultaneously or separately, however beams shall not be lifted more than ¼". Beams shall be blocked after jacking to hold structure in place during replumbing of bearing. The Contractor shall use extreme care during jacking operations. If any damage occurs to the existing structure during construction, it shall be the responsibility of the Contractor to repair the damaged structure to the satisfaction of the Engineer.

CONSTRUCTION NOTES:

1) Temporarily support Existing Steel Beams at each Abutment.

2) Remove existing 5/16" weld between the bottom beam flange and the top rocker bearing plate. The bearing surfaces of the bottom flange and the top rocker plate shall be smooth and shall be in complete contact with each other before welding is allowed.

3) Replumb rocker bearing to vertical (at 60°F). See Table A for position of bearing at other temperatures. Any missing Rocker Bolts shall be replaced. Rocker Bolts will not paid for separately, but will be considered subsidiary to the item "Replumbing Existing Rocker Bearings."

4) Re-weld top rocker bearing plate to bottom flange of beam as shown.

5) Any unpainted steel surfaces exposed or any existing paint that is damaged during this construction shall be cleaned according to Subection 820.05(b) and painted according to Section 807. Cleaning and painting will not be paid for separately, but will be considered subsidiary to the item "Replumbing Existing Rocker Bearings". The color of the paint shall be red and shall match existing, as near as practical, and shall be approved by the Engineer.

TABLE OF BEARING LOADS

Abutment	Beam	③ Dead Load (Kips)	④ Live Load (Kips)	⑤ Total Load (Kips)
⑥ 1	Int.	41.35	46.56	87.91
	Ext.	42.80	45.53	88.33
2	Int.	41.78	46.56	88.34
	Ext.	43.18	45.53	88.71

③ Dead Loads are Service I Limit State and are approximated.

④ Live Loads are Service I Limit State, approximated, and include impact. Live Loads are not concurrent, but the maximum reaction anticipated for any given traffic configuration.

⑤ Total Load = Dead Load + Live Load

⑥ The bearing loads for Abutment 1 are shown for information only. Abutment 1 has Type B3 Fixed Shoes.

Notes:
The jacks used shall have a capacity at least two times the Total Load.

The maximum bearing stress on concrete shall not exceed 1,050 psi at any time.

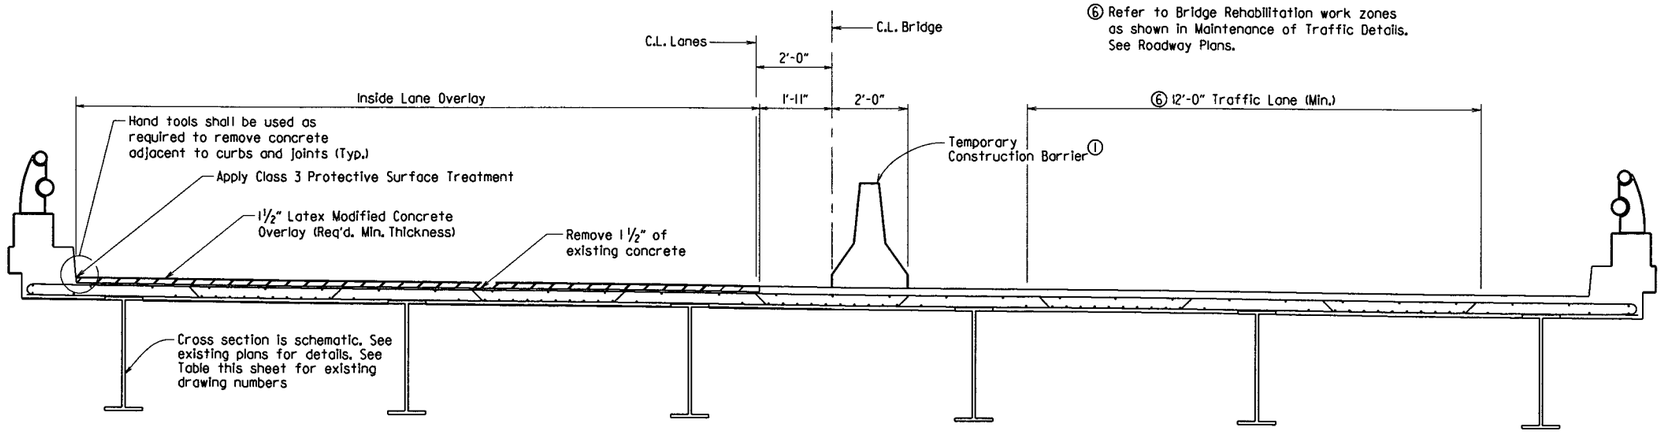
① A3604, A&B5098, B5100, B5101 - LMC OVERLAY - 56866



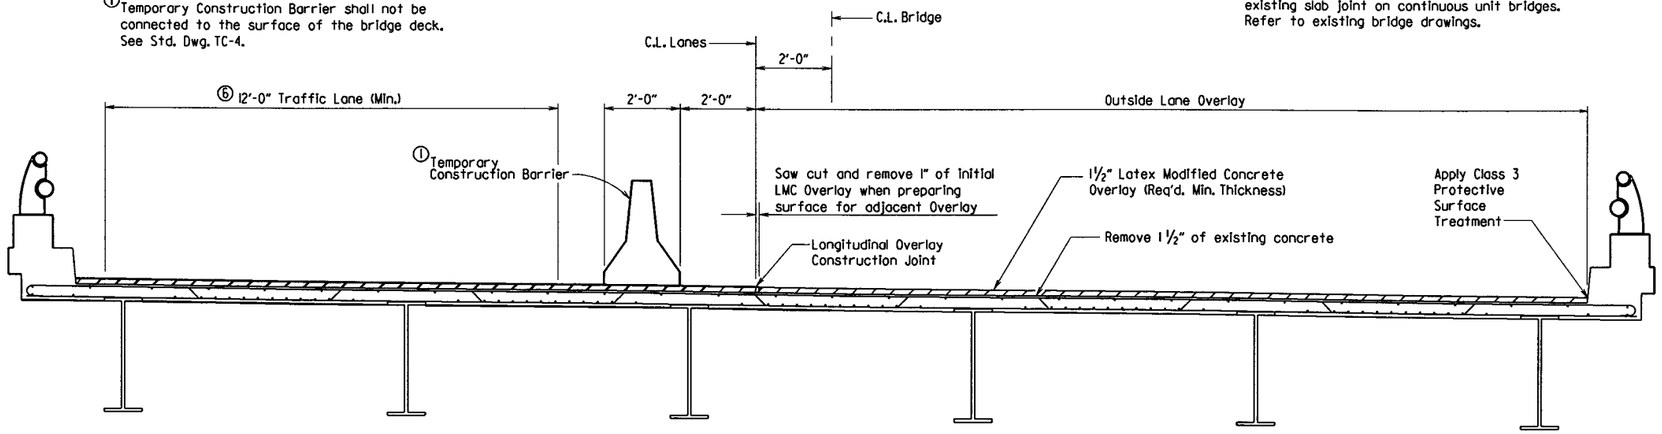
⑥ Refer to Bridge Rehabilitation work zones as shown in Maintenance of Traffic Details. See Roadway Plans.

INSIDE LANE LATEX MODIFIED CONCRETE OVERLAY

(Looking in direction of traffic; A3604 shown, others similar)

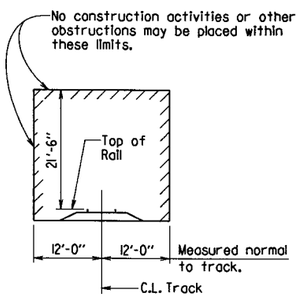
NOTE:
The minimum overlay placement length shall be a full span on simple span bridges and to an existing slab joint on continuous unit bridges. Refer to existing bridge drawings.

① Temporary Construction Barrier shall not be connected to the surface of the bridge deck. See Std. Dwg. TC-4.



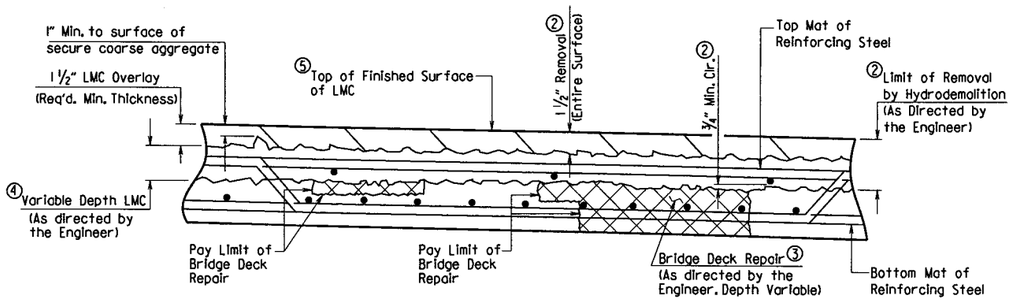
OUTSIDE LANE LATEX MODIFIED CONCRETE OVERLAY

(Looking in direction of traffic; A3604 shown, others similar)



MINIMUM CONSTRUCTION CLEARANCES

Railroad requirements do not allow work within 50 feet of track centerline when a train passes the work site and all personnel must clear the area within 25 feet of the track centerline and secure all equipment.



DETAILS OF HYDRODEMOLITION AND LATEX MODIFIED CONCRETE OVERLAY

② Removal of unsound concrete beyond 1½" below the original surface shall be at the direction of the Engineer. If the bond between existing concrete and the top mat of reinforcing steel is destroyed, then the concrete shall be removed to a minimum of ¾" clearance below the bar.

③ Areas requiring additional repair, as determined by the Engineer, shall be repaired in accordance with the Job Special Provision "Bridge Deck Repair".

④ Depth Varies to achieve minimum clearance below top mat of reinforcing steel, where required.

⑤ Finished Surface of LMC Overlay shall match existing concrete deck surfaces unless increase is required to maintain minimum required LMC Overlay thickness and a minimum of 1½" cover to reinforcing steel.

GENERAL NOTES:

CONSTRUCTION SPECIFICATIONS: Arkansas State Highway Commission Standard Specifications for Highway Construction, Edition of 2014, with applicable Special Provisions and Supplemental Specifications. Unless otherwise noted in the plans Section and Subsection refer to the Standard Specifications.

Drawing shows details and dimensions of existing structures based on the original bridge plans. The Contractor shall make check measurements in the field and make any adjustments necessary to meet the required clearances and fit the new work to the existing structure.

The operation or placement of vehicles, equipment and, or materials on the subject bridges necessary for the completion of this work shall be evaluated in accordance with Subsection 105.14. Certifications of the adequacy of all components for the anticipated loads shall address the capacity of the existing structure at all phases of this work.

Construction activities on Bridge No. B5100 shall be in accordance with Special Provision Job No. BB0401 "Special Safety Requirements" and "Minimum Construction Clearances" detail.

HYDRODEMOLITION: The entire area of the existing bridge deck shall receive hydrodemolition in accordance with the Special Provision Job No. BB0401 "Hydrodemolition" to a planned depth of 1½" below the existing bridge deck surface. Deteriorated concrete in the bridge deck below this depth shall be removed at the direction of the Engineer and up to the limits detailed. These areas shall be measured by the square yard and shall be paid for at the unit price bid for the item "Hydrodemolition." Prior to hydrodemolition, cold milling of the concrete deck to a maximum depth of 1" will be allowed unless there will be a conflict with the existing reinforcing.

BRIDGE DECK REPAIR: After hydrodemolition, the deck surface shall be sounded and any areas of unsound, delaminated or otherwise deteriorated concrete shall be removed at the direction of the Engineer and in accordance with Special Provision Job No. BB0401 "Bridge Deck Repair."

LATEX MODIFIED CONCRETE OVERLAY: The entire area of the existing bridge deck shall receive a Latex Modified Concrete (LMC) Overlay to a planned depth of 1½" below the existing bridge deck surface, in accordance with Special Provision Job No. BB0401 "Latex Modified Concrete Overlay." These areas shall be measured by the square yard and shall be paid for at the unit price bid for the item "Latex Modified Concrete Overlay (1½" Thick)." Areas of the existing bridge deck removed at the direction of the Engineer to a depth greater than 1½" below the existing bridge deck surface shall be filled with LMC concurrent to the placement of the 1½" LMC Overlay. This area shall be measured and paid for in accordance with Special Provision Job No. BB0401 "Latex Modified Concrete Overlay."

BRIDGE DECK: The LMC Overlay surface of the bridge deck shall be given a grooved finish as specified for final finishing in Subsection 802.19 for Class 7 Grooved Bridge Roadway Surface Finish and in accordance with Special Provision Job No. BB0401 "Latex Modified Concrete Overlay."

PROTECTIVE SURFACE TREATMENT : The longitudinal joint between the LMC overlay and the adjacent existing concrete curb or rail shall be given a Class 3 Protective Surface Treatment as specified in Section 803 and in accordance with Special Provision Job No. BB0401 "Latex Modified Concrete Overlay." Longitudinal or transverse construction joints separating adjacent overlay placements shall be prepared and sealed as shown.

The roadway surface of the LMC overlay shall be given a Class 1 Protective Surface Treatment as specified in Section 803.

EXPANSION JOINT REHABILITATION: After the placement of the LMC Overlay, the existing expansion joints shall be given a poured silicone joint sealant as specified in Section 809 and as shown in "Detail of Poured Silicone Joint Seal" on Dwg. No. 56867. Backwall repair, as directed by the Engineer, shall be completed prior to installation of silicone joint sealant. See Dwg. No. 56867 for additional details.

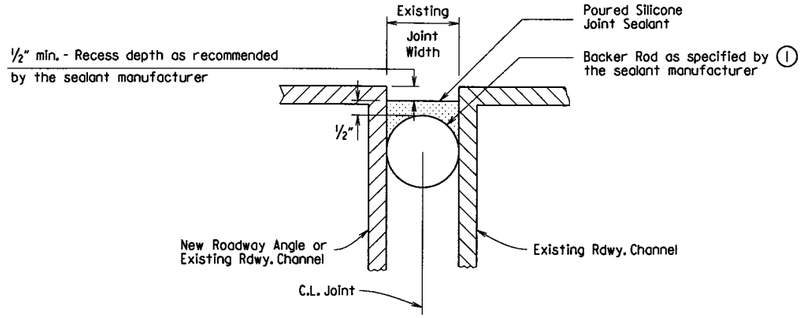
				JOB NO.		BB0401	190	234

① A3604, B5100, B5101, A&B5098 - LMC OVERLAY - 56867



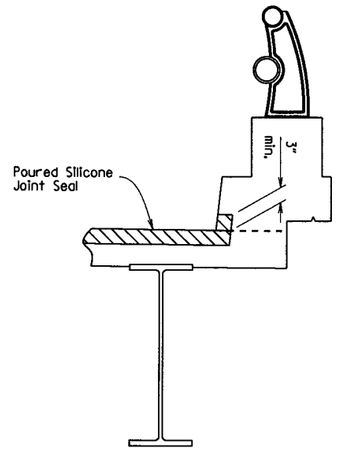
NOTES: Backer rods shall be extended beyond the length of the poured joint in the initial joint rehabilitation area so that the two pieces can be properly spliced together prior to installing sealant for the adjacent joint rehabilitation. Manufacturer's recommendations shall be followed to prevent sealant leakage during rehabilitation work.

Existing Joint Seal shall be completely removed, backer rods placed, and Silicone Joint Sealant installed across the entire width of the bridge deck in accordance with these details and Manufacturer's instructions. Removal of existing Joint Seal will not be paid for directly, but shall be considered incidental to the item "Silicone Joint Sealant".

DETAIL OF POURED SILICONE JOINT SEAL

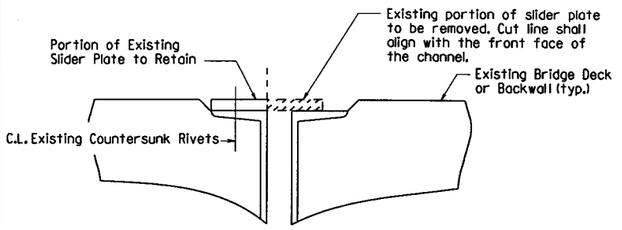
① Backer rod shall be appropriately sized and set to the depth shown in the manufacturer's literature based on the joint width at the time of sealing. Except as noted, do not install more backer rod than can be sealed in the same day. The Contractor shall verify separation of the backer rod from the joint material after joint material has been set.

Backer rod shall be notched or otherwise fit around any existing seal supports or bumper plates to maintain its proper depth as defined above.



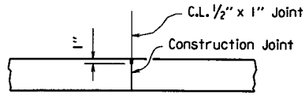
Note: Vertical joints may require forming. The clearance from deck surface to joint material shall be maintained.

JOINT SEAL PLACEMENT AT CURB



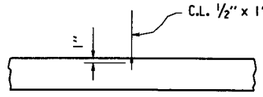
REMOVAL DETAILS AT BRIDGE No. A3604

Portion of Existing slider plate shall be removed as shown in accordance with Section 821. The cut face shall be ground square and flush with the face of channel. At the direction of the Engineer, the exisiting slider plate shall be removed and replaced with a new plate as shown in "JOINT DETAILS AT BRIDGE No. A3604". Removal of existing slider plate will not be paid for directly, but shall be considered subsidiary to the item "Silicone Joint Sealant".



Use ½" X 1" Type 3 or 4 Joint Sealer. See Subsections 501.02(h) and 501.05(j). Backer Rod shall not be installed. Joint Sealer shall be measured and paid for as LMC Overlay. Sealant must be gray or other color similar to concrete.

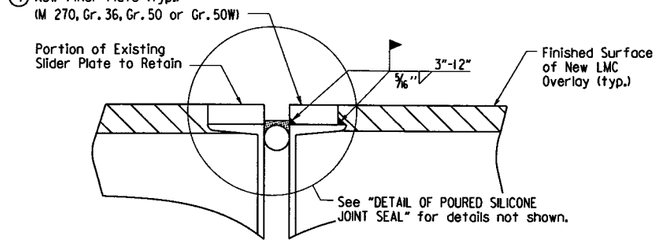
LONGITUDINAL OVERLAY CONSTRUCTION JOINT DETAIL



Use ½" X 1" Type 3 or 4 Joint Sealer. See Subsections 501.02(h) and 501.05(j). Backer rod shall not be installed. Joint Sealer shall be measured and paid for as LMC Overlay. Slab joints shall extend to the outside edge of the deck slab. Slab joints shall be placed at all pouring sequence construction joints and are required at existing slab joint locations.

TRANSVERSE OVERLAY JOINT DETAIL

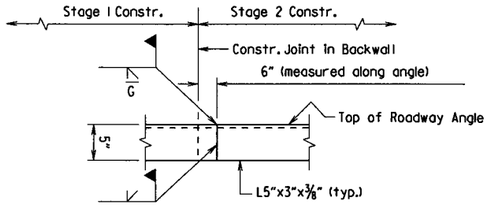
Slab joints and longitudinal construction joints shall be sawed as soon as the concrete has sufficiently set to allow sawing of the joint without damage to the Overlay.



JOINT DETAILS AT BRIDGE No. A3604

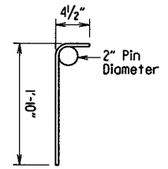
④ New field attached plates atop exisitng roadway channels or angles are required. The plate thickness shall be adjusted as necessary to match surface of finished surface of LMC Overlay and the width shall be ⅞" less than the existing channel flange or angle width.

All new Structural Steel shall be AASHTO M 270 (Gr. 36, 50, or 50W). The surfaces not in contact with concrete shall be cleaned and painted in accordance with Section 638. Only one coat is required and shall be applied in the fabricator's shop. Grade 50W steel shall not be painted, but shall be cleaned in accordance with Subsection 807.84(e). Structural Steel and Painting shall not be paid for directly, but shall be subsidiary to other items.

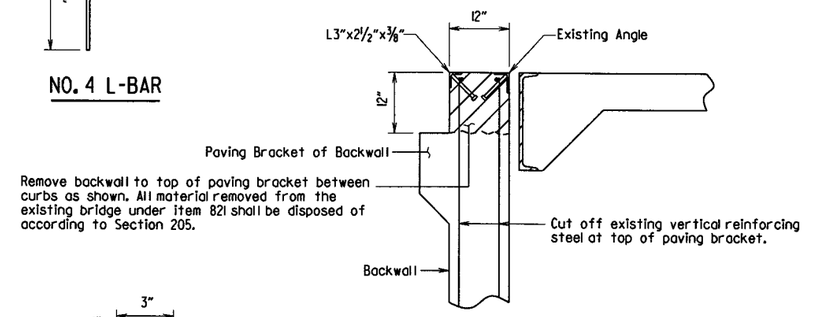


NOTE: All welding shall be done after the Stage I pour and prior to the Stage 2 pour.

DETAIL OF WELD FOR BACKWALL REPAIR

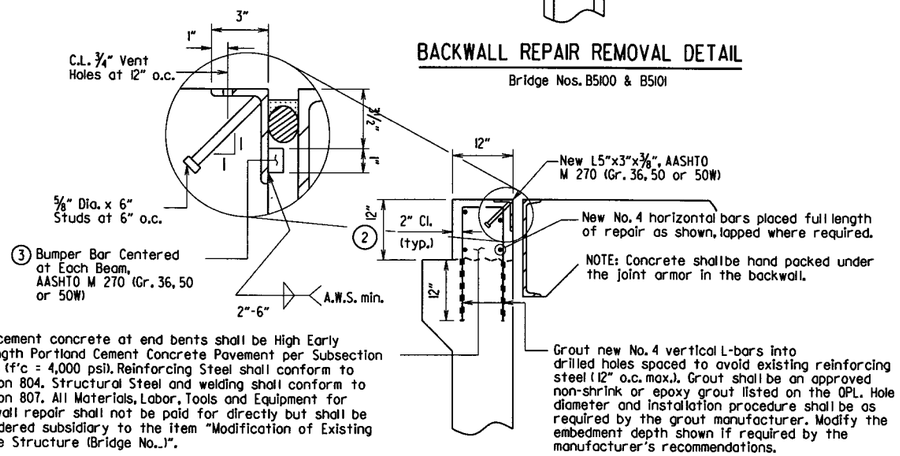


NO. 4 L-BAR



BACKWALL REPAIR REMOVAL DETAIL

Bridge Nos. B5100 & B5101



Replacement concrete at end bents shall be High Early Strength Portland Cement Concrete Pavement per Subsection 501.08 (f'c = 4,000 psi). Reinforcing Steel shall conform to Section 804. Structural Steel and welding shall conform to Section 807. All Materials, Labor, Tools and Equipment for Backwall repair shall not be paid for directly but shall be considered subsidiary to the item "Modification of Existing Bridge Structure (Bridge No..)".

BACKWALL REPAIR INSTALLATION DETAIL

Bridge Nos. B5100 & B5101

② Minor adjustments may be required to match the top surface of the finished LMC Overlay on the adjacent bridge deck and the adjacent roadway surface.

③ For bridges with joints less than 2", a ½"x 1"x 1'-0" Bumper Bar shall be used. For bridges with joints greater than 2", a 1"x 1"x 1'-0" Bumper Bar shall be used.

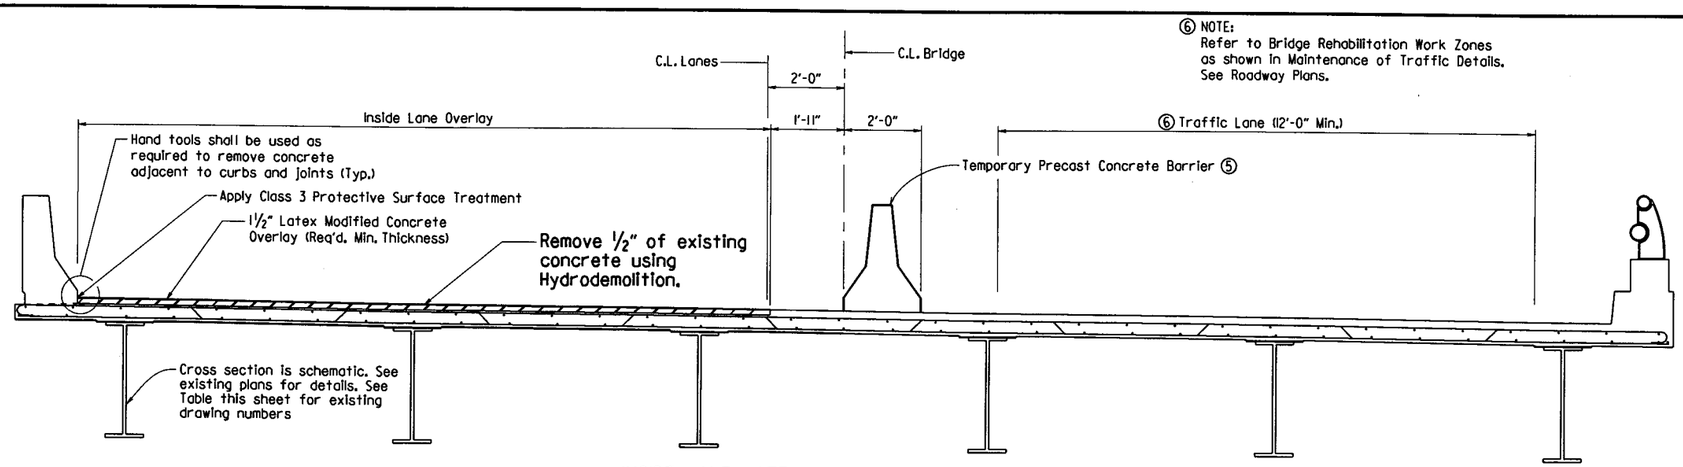
(1) B3604, A5100, A5101 - LMC OVERLAY -56868



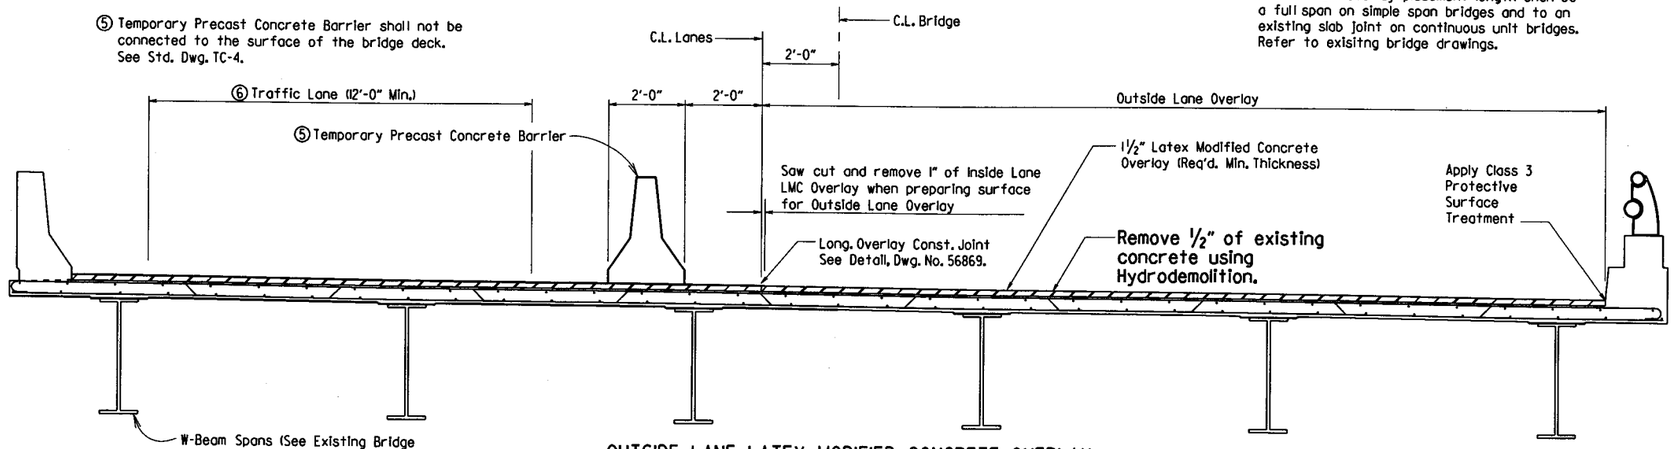
⑥ NOTE:
Refer to Bridge Rehabilitation Work Zones as shown in Maintenance of Traffic Details. See Roadway Plans.

INSIDE LANE LATEX MODIFIED CONCRETE OVERLAY

(Looking in direction of traffic; A5100 & A5101 shown, B3604 similar)

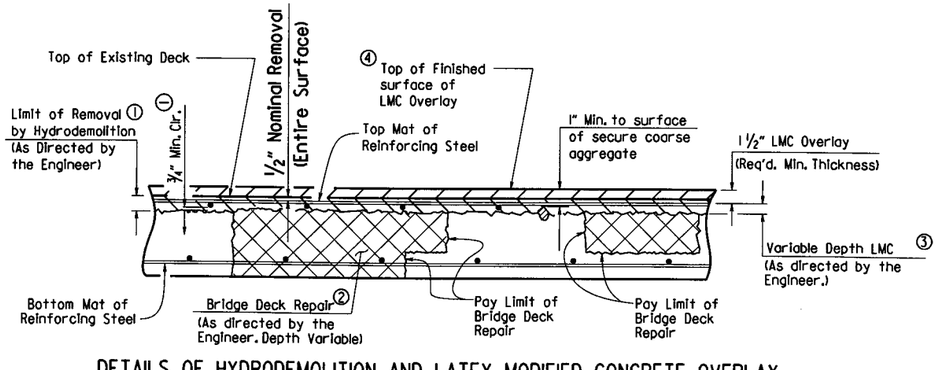
NOTE:
The minimum overlay placement length shall be a full span on simple span bridges and to an existing slab joint on continuous unit bridges. Refer to exisitng bridge drawings.

⑤ Temporary Precast Concrete Barrier shall not be connected to the surface of the bridge deck. See Std. Dwg. TC-4.



OUTSIDE LANE LATEX MODIFIED CONCRETE OVERLAY

(Looking in direction of traffic; A5100 & A5101 shown, B3604 similar)



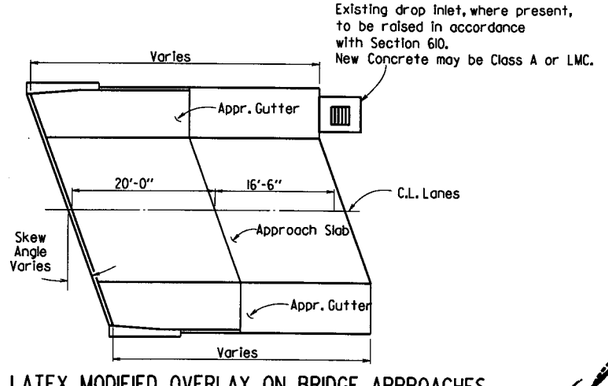
DETAILS OF HYDRODEMOLITION AND LATEX MODIFIED CONCRETE OVERLAY

① Removal of unsound concrete beyond ½" below the original surface shall be at the direction of the Engineer. If the bond between existing concrete and the top mat of reinforcing steel is destroyed, then the concrete shall be removed to a minimum of ¾" clearance below the bar.

② Areas requiring additional repair, as determined by the Engineer, shall be repaired in accordance with the Job Special Provision "Bridge Deck Repair".

③ Depth Varies to achieve minimum clearance below top mat of reinforcing steel, where required.

④ Finished Surface of LMC Overlay shall be increased as required to maintain minimum required LMC Overlay thickness and a minimum of 1½" cover to reinforcing steel.



LATEX MODIFIED OVERLAY ON BRIDGE APPROACHES

The Contractor shall remove ½" of existing concrete using hydrodemolition and construct a 1½" min. thickness LMC Overlay on the surface of the approach slabs and approach gutters to match increased LMC overlay grade on the bridge decks. All materials and methods shall conform to appropriate Job Special Provisions and the surface finish shall match that specified for the bridge deck. Joint treatments shall conform to the details on Drawing 56869.

GENERAL NOTES:

CONSTRUCTION SPECIFICATIONS: Arkansas State Highway Commission Standard Specifications for Highway Construction, Edition of 2014, with applicable Special Provisions and Supplemental Specifications. Unless otherwise noted in the plans Section and Subsection refer to the Standard Specifications.

Drawing shows details and dimensions of existing structures based on the original bridge plans. The Contractor shall make check measurements in the field and make any adjustments necessary to meet the required clearances and fit the new work to the existing structure.

The operation or placement of vehicles, equipment and, or materials on the subject bridges necessary for the completion of this work shall be evaluated in accordance with Subsection 105.14. Certifications of the adequacy of all components for the anticipated loads shall address the capacity of the existing structure at all phases of this work.

Construction activities on Bridge No. A5100 shall be in accordance with Special Provision Job No. BB0401 "Special Safety Requirements" and "Minimum Construction Clearances" detail, Dwg. No. 56866.

HYDRODEMOLITION: The designated area of the existing bridge deck and the approach slabs and approach gutters shall receive hydrodemolition in accordance with the Special Provision Job No. BB0401 "Hydrodemolition" to a planned depth of ½" below the existing bridge deck surface. Deteriorated concrete in the bridge deck below this depth shall be removed at the direction of the Engineer and up to the limits detailed. These areas shall be measured by the square yard and shall be paid for at the unit price bid for the item "Hydrodemolition."

BRIDGE DECK REPAIR: After hydrodemolition, the deck surface shall be sounded and any areas of unsound, delaminated or otherwise deteriorated concrete shall be removed at the direction of the Engineer and in accordance with Special Provision Job No. BB0401 "Bridge Deck Repair."

LATEX MODIFIED CONCRETE OVERLAY: The designated area of the existing bridge deck and the approach slabs and approach gutters shall receive a Latex Modified Concrete (LMC) Overlay with a required minimum thickness of 1½", in accordance with Special Provision Job No. BB0401 "Latex Modified Concrete Overlay."

These areas shall be measured by the square yard and shall be paid for at the unit price bid for the item Special Provision Job BB0401 "Latex Modified Concrete Overlay (1½" Thick)". Areas of the existing bridge deck removed at the direction of the Engineer to a depth greater than ½" below the existing bridge deck surface shall be filled with LMC concurrent to the placement of the 1½" LMC Overlay. This area shall be measured and paid for in accordance with Special Provision Job No. BB0401 "Latex Modified Concrete Overlay."

SURFACE FINISH: The LMC Overlay surface of the bridge deck, the approach slabs, and the approach gutters shall be given a grooved finish as specified for final finishing in Subsection 802.19 for Class 7 Grooved Bridge Roadway Surface Finish and in accordance with Special Provision Job No. BB0401 "Latex Modified Concrete Overlay."

PROTECTIVE SURFACE TREATMENT : The longitudinal joint between the LMC overlay and the adjacent existing concrete curb or rail shall be given a Class 3 Protective Surface Treatment as specified in Section 803 and in accordance with Special Provision Job No. BB0401 "Latex Modified Concrete Overlay."

Transverse and longitudinal construction joints separating adjacent overlay placements shall be prepared and sealed in accordance with the joint details on Dwg. No. 56869.

The roadway surface of the LMC overlay and top of backwall shall be given a Class 1 Protective Surface Treatment as specified in Section 803.

EXPANSION JOINT REHABILITATION: After the placement of the LMC Overlay, the existing expansion joints shall be given a poured silicone joint sealant as specified in Section 809 and as shown in "Poured Silicone Joint Seal Detail" on Dwg. No. 56869. Backwall modification shall be completed prior to installation of silicone joint sealant. See Dwg. No. 56869 for additional details.

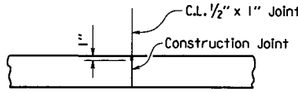
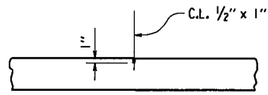
① B3604, A5100, A5101 - LMC OVERLAY - 56869



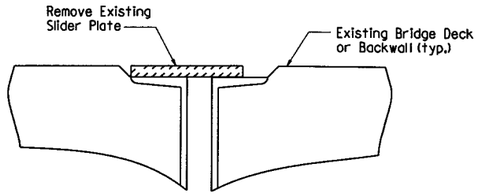
Use ½" X 1" Type 3 or 4 Joint Sealer. See Subsections 501.02(h) and 501.05(j). Backer Rod shall not be installed. Joint Sealer shall be measured and paid for as LMC Overlay. Sealant must be gray or other color similar to concrete.



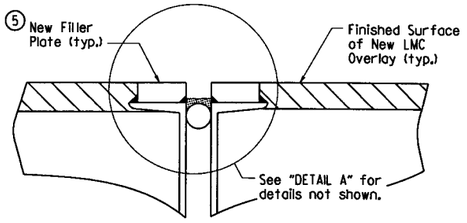
Use ½" X 1" Type 3 or 4 Joint Sealer. See Subsections 501.02(h) and 501.05(j). Backer rod shall not be installed. Joint Sealer shall be measured and paid for as LMC Overlay. Slab joints shall extend to the outside edge of the deck slab. Slab joints shall be placed at all pouring sequence construction joints and are required at existing slab joint locations.

Slab joints and longitudinal construction joints shall be sawed as soon as the concrete has sufficiently set to allow sawing of the joint without damage to the Overlay.

LONGITUDINAL OVERLAY CONSTRUCTION JOINT DETAIL



TRANSVERSE OVERLAY JOINT DETAIL



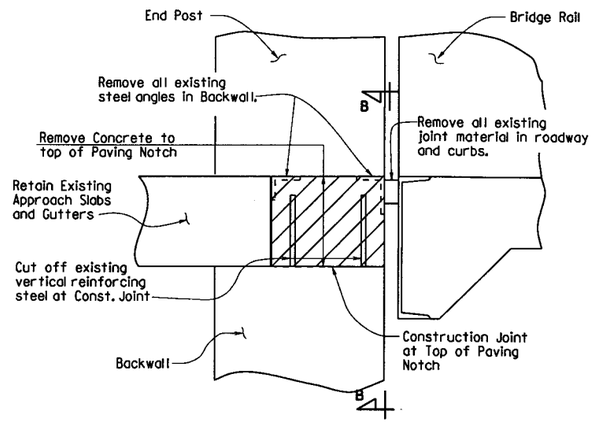
REMOVAL DETAILS AT BRIDGE No. B3604

Existing slider plate shall be completely removed in accordance with Section 821. Removal of existing slider plate will not be paid for directly, but shall be considered subsidiary to the item "Silicone Joint Sealant".

JOINT DETAILS AT BRIDGE No. B3604

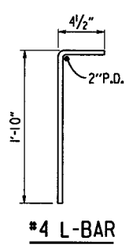
⑤ New field attached plates atop exisitng roadway channels or angles are required. The plate thickness shall be adjusted as necessary to match surface of finished surface of LMC Overlay and the width shall be ⅜" less than the existing channel flange or angle width.

All new Structural Steel shall be AASHTO M 270 (Gr. 36, 50, or 50W). The surfaces not in contact with concrete shall be cleaned and painted in accordance with Section 638. Only one coat is required and shall be applied in the fabricator's shop. Grade 50W steel shall not be painted, but shall be cleaned in accordance with Subsection 807.84(e). Structural Steel and Painting shall not be paid for directly, but shall be subsidiary to other items.

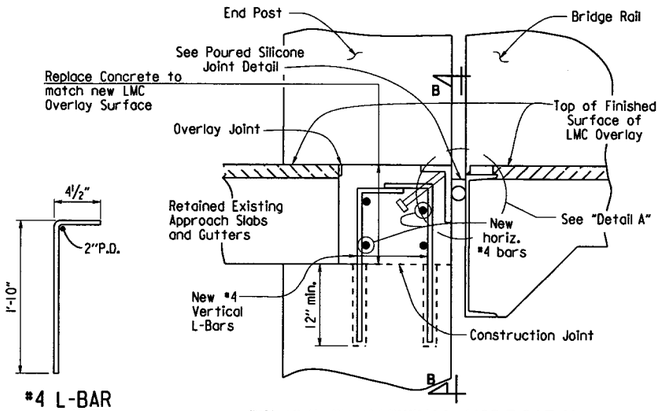


REMOVAL DETAILS AT END BENTS

Removal shall be in accordance with Section 821 and all removed portions of the existing backwall and joint materials shall become the property of the Contractor and shall be disposed of in accordance with Section 205.

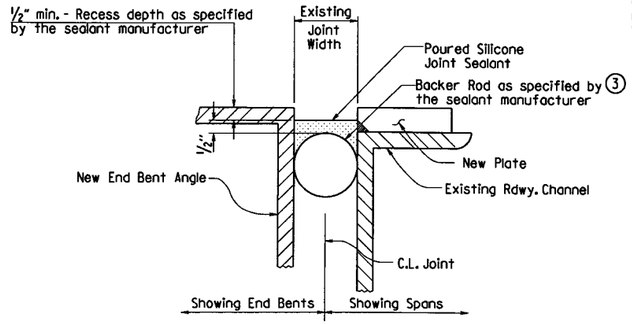


#4 L-BAR



DETAILS OF BACKWALL MODIFICATION

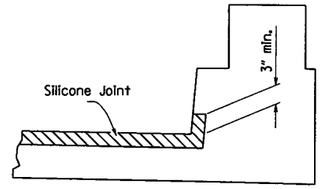
Grout new #4 L-bars into drilled holes spaced to avoid existing reinforcing steel (12" o.c. max.). Grout shall be an approved non-shrink or epoxy grout listed on the OPL. Hole diameter and installation procedure shall be as required by the grout manufacturer.



Existing Joint Seal shall be completely removed, backer rods placed, and Silicone Joint Sealant installed across the entire width of the bridge deck in accordance with these details and Manufacturer's instructions. Removal of existing Joint Seal will not be paid for directly, but shall be considered incidental to the item "Silicone Joint Sealant".

Notes: Backer rods shall be extended beyond the length of the poured joint in the initial joint rehabilitation area so that the two pieces can be properly spliced together prior to installing sealant for the adjacent joint rehabilitaton. Manufacturer's recommendations shall be followed to prevent sealant leakage during rehabilitation work.

POURED SILICONE JOINT SEAL DETAILS



Note: Vertical joints may require forming. The clearance from deck surface to joint material shall be maintained.

JOINT SEAL PLACEMENT AT CURB

③ Backer rods shall be appropriately sized and set to the depth shown in the manufacturer's literature based on the joint width at the time of sealing. Except as noted, do not install more backer rod than can be sealed in the same day. The Contractor shall verify separation of the backer rod from the joint material after joint material has set.

Backer rod shall be notched or otherwise fit around any existing seal supports or bumper plates to maintain its proper depth as defined above.

APPROXIMATE QUANTITES FOR BACKWALL MODIFICATION ②

Quantities shown are per foot of backwall and are for information only.

② The Contractor shall make measurements for the backwall at each end of the bridge affected prior to beginning work on the bridge. The top surface of the raised backwall shall match the top surface of the finished LMC Overlay on the adjacent bridge deck and the adjacent approach slabs and approach gutters.

Replacement concrete shall be high early strength Portland Cement Concrete Pavement, or LMC. Reinforcing Steel shall conform to Section 804. Structural Steel and welding shall conform to Section 807. All Materials, Labor, Tools and Equipment shall not be paid for directly but shall be considered subsidiary to the item "Modification of Existing Bridge Structure (Bridge No.)".

④ Remove any existing bumper bars from the existing roadway channel directly across from these locations.

INTERMEDIATE JOINT MODIFICATION

At intermediate joints, existing rdwy. channels shall each recieve a new plate welded to the top as shown. Structural Steel and welding shall conform to Section 807. All Materials, Labor, Tools and Equipment shall not be paid for directly but shall be considered subsidiary to the item "Modification of Existing Bridge Structure (Bridge No.)".

GENERAL NOTES

ALL CONCRETE TO BE CLASS S OR S(AE) AS SHOWN ON THE LAYOUT. ALL EXPOSED CORNERS TO BE CHAMFERED 3/4" UNLESS OTHERWISE NOTED.

FIELD CONNECTIONS TO BE BOLTED WITH HIGH STRENGTH BOLTS.

BOLTS ¾" Ø, OPEN HOLES 13/16" Ø EXCEPT WHERE NOTED OTHERWISE.

STRUCTURAL SHAPES OF EQUAL OR GREATER STRENGTH MAY BE SUBSTITUTED FOR SHAPES SHOWN, BUT PAYMENT WILL BE MADE ON THE BASIS OF SHAPES SHOWN.

ALL WELDED CONNECTIONS TO BE 5/16" FILLET SHOP WELDS EXCEPT AS NOTED. ALL WELDING SHALL CONFORM TO THE AMERICAN WELDING SOCIETY STANDARD SPECIFICATIONS FOR WELDED HIGHWAY AND RAILWAY BRIDGES, CURRENT EDITION. UNLESS OTHERWISE NOTED ON SPAN DETAIL DRAWINGS, ⑥ ALL STRUCTURAL STEEL EXCEPT SURFACES IN CONTACT WITH CONCRETE SHALL BE GIVEN ONE SHOP COAT AND TWO FIELD COATS IN ACCORDANCE WITH SECTION 807.59 OF THE SPECIFICATIONS AND APPLICABLE SPECIAL PROVISIONS.

ALL METAL BEARING AND ROADWAY EXPANSION DEVICES TO BE PAID FOR AS "STRUCTURAL STEEL IN BEAM SPANS." BEARINGS SHALL BE FINALLY SEATED IN ACCORDANCE WITH SECTION 807.51 OF THE STANDARD SPECIFICATIONS. THIS WORK AND MATERIAL ARE TO BE CONSIDERED AS SUBSIDIARY TO THE ITEM "STRUCTURAL STEEL IN BEAM SPANS" AND WILL NOT BE PAID FOR DIRECTLY. ⑦

THIS DRAWING SHOWS GENERAL FEATURES OF DESIGN ONLY. SHOP DRAWINGS SHALL BE MADE IN ACCORDANCE WITH THE SPECIFICATIONS, SUBMITTED AND APPROVAL SECURED BEFORE FABRICATION IS BEGUN.

ALL STEEL SHALL BE ASTM A-36 UNLESS OTHERWISE NOTED.

ANCHOR BOLTS SHALL BE GALVANIZED TO CONFORM TO ASTM SPECIFICATION, DESIGNATION A153.

REINFORCING STEEL TO BE ASTM A615 OR A617, GR. 60. THE REINFORCING STEEL IS TO BE ACCURATELY LOCATED IN THE FORMS AND FIRMLY HELD IN PLACE BY STEEL WIRE SUPPORTS, SUFFICIENT IN NUMBER AND SIZE TO PREVENT DISPLACEMENT DURING THE COURSE OF CONSTRUCTION. THE WIRE SUPPORTS WILL NOT BE PAID FOR DIRECTLY BUT WILL BE CONSIDERED SUBSIDIARY TO THE ITEM OF "REINFORCING STEEL."

SHOP LISTS AND BENDING DIAGRAMS OF REINFORCING STEEL, INCLUDING WIRE ① SUPPORTS, MAY BE SUBMITTED FOR APPROVAL BEFORE FABRICATION IS BEGUN.

CONCRETE SLABS FOR SPANS THROUGH 50 FEET IN LENGTH SHALL BE ⑪ POURED IN ONE CONTINUOUS OPERATION WITH A STRIKEOFF EXTENDING OVER THE WHOLE SPAN LENGTH. SPANS OVER 50 FEET IN LENGTH MAY BE POURED IN INCREMENTS WITH THE CENTER ONE-THIRD TO ONE-HALF SPAN LENGTH POURED FIRST. AFTER THE CENTER SECTION IS POURED, NOT LESS THAN 72 HOURS SHALL ELAPSE BEFORE POURING THE END SECTIONS. END SECTIONS MAY BE POURED SIMULTANEOUSLY. IF NOT POURED SIMULTANEOUSLY, 48 HOURS SHALL ELAPSE BETWEEN END SECTION POURS. A MINIMUM OF 72 HOURS SHALL ELAPSE BETWEEN COMPLETION OF THE SLAB AND THE POURING OF THE CURB SECTION OR PARAPET.

ON BRIDGE LAYOUT.

SPECIFICATIONS: ARKANSAS STATE HIGHWAY COMMISSION STANDARD SPECIFICATIONS FOR HIGHWAY CONSTRUCTION EDITION OF 1978 AND APPLICABLE SPECIAL PROVISIONS.

ALL CASTINGS FOR SHOES SHALL BE ASTM A27 GRADE 70-40 OR 70-36

③ WELDED SHOES MAY BE USED IN PLACE OF THE TYPE "D" SHOES SHOWN. APPROVED DETAILS WILL BE FURNISHED ON REQUEST.

① HOLES FOR 3/4" BOLTS FOR CONNECTION OF EXPANSION DEVICES, DIAPHRAGMS AND END STRUTS MAY BE 15/16" IF A WASHER IS SUPPLIED FOR USE UNDER BOTH THE NUT AND THE HEAD OF THE BOLT.

EXPANSION JOINT DATA

GENERAL NOTES

ALL CONCRETE TO BE POURED IN THE DRY. EXPOSED CORNERS TO BE CHAMFERED 3/4" UNLESS OTHERWISE NOTED.

ROCK EXCAVATIONS SHALL BE MADE TO NEAT LINES OF CONCRETE FOOTINGS. CARE SHALL BE EXERCISED TO AVOID SHATTERING OF ROCK FACES BY EXCESSIVE BLASTING. CONCRETE IN FOOTINGS SHALL BE POURED DIRECTLY AGAINST EXCAVATED SURFACES OF ROCK.

IN GENERAL, ALL CONSTRUCTION JOINTS IN BENTS SHALL BE HORIZONTAL AND SHALL BE PROVIDED WITH KEYS NOT LESS THAN 1 1/2" HIGH COVERING THE MIDDLE THIRD OF BOTH DIMENSIONS.

ALL PILING SHALL BE HP10x42 AND SHALL BE DRIVEN WITH AN APPROVED AIR, STEAM, OR DIESEL HAMMER TO A MINIMUM CAPACITY OF 55 TONS PER PILE AND INTO THE MATERIAL DESIGNATED AS SHALE ON THE BORINGS. ORDER LENGTHS SHOWN; CUT-OFF OR BUILD-UP, IF NECESSARY, TO BE PAID FOR IN ACCORDANCE WITH THE STANDARD SPECIFICATIONS.

PILES IN END BENTS TO BE DRIVEN AFTER EMBANKMENT IS IN PLACE.

GENERAL NOTES

All concrete shall be poured in the dry. Exposed corners to be chamfered 3/4" unless otherwise noted.

In general, all construction joints in bents shall be horizontal and shall be provided with keys not less than 1½" high covering the middle third of both dimensions.

All piling shall be 10"BP42 and shall be driven with an approved air, steam, or diesel hammer. Lengths of pile shown are for estimating quantities. Order lengths shown; cut-off or build-up, if necessary, shall be paid for in accordance with the Standard Specifications.

Piles in intermediate bents shall be driven to a minimum capacity of 25 tons per pile and to the material designated as shale on the borings.

Piles in end bents shall be driven after embankment, to subgrade, is in place and to a minimum bearing capacity of 40 tons per pile. Note that it is not necessary to drive the end bent piles to shale if the 40 ton capacity is reached before.

For details of substructure see Drawings [illegible].
For details of superstructure see Drawi[illegible]692, 15693, 145900 & 14992.

LOCATION MAP
Scale 1"=50'

GENERAL NOTES

BENCH MARK: USE EXISTING BRIDGE ELEVATIONS.

CONSTRUCTION SPECIFICATIONS: ARKANSAS STATE HIGHWAY COMMISSION STANDARD SPECIFICATIONS FOR HIGHWAY CONSTRUCTION, EDITION OF 1978 AND APPLICABLE SPECIAL PROVISIONS.

DESIGN SPECIFICATIONS: AASHTO STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES, 1983 EDITION.

LIVE LOADING: HS 20 AND SPECIAL INTERSTATE

PROPOSED WORK CONSISTS OF: REPLACING THE EXISTING MEDIAN RAIL AND PARAPET WITH A NEW JERSEY PARAPET. RETAINING AND PAINTING THE EXISTING BEAMS AND DIAPHRAGMS, AND MODIFYING THE EXISTING PREFORMED JOINTS FOR "CLOSED CELL FOAM JOINT FILLER."

THE CONTRACTOR SHALL MAKE CHECK MEASUREMENTS OF THE EXISTING BRIDGE AND MAKE ADJUSTMENTS NECESSARY TO FIT THE NEW WORK TO THE EXISTING STRUCTURE.

FOR DETAILS OF SUPERSTRUCTURE, SEE DWG. NO. 28187.

HALF-SIZE DETAIL SHEETS OF THE EXISTING BRIDGE MAY BE OBTAINED UPON REQUEST TO THE BRIDGE DIVISION OF THE ARKANSAS STATE HIGHWAY AND TRANSPORTATION DEPARTMENT. DRAWINGS NO. 15695 - 15704, 11508.

MAINTENANCE OF TRAFFIC: SEE JOB SPECIAL PROVISION AND STAGE CONSTRUCTION SEQUENCE IN ROADWAY PLANS.

BRIDGE ENGINEER

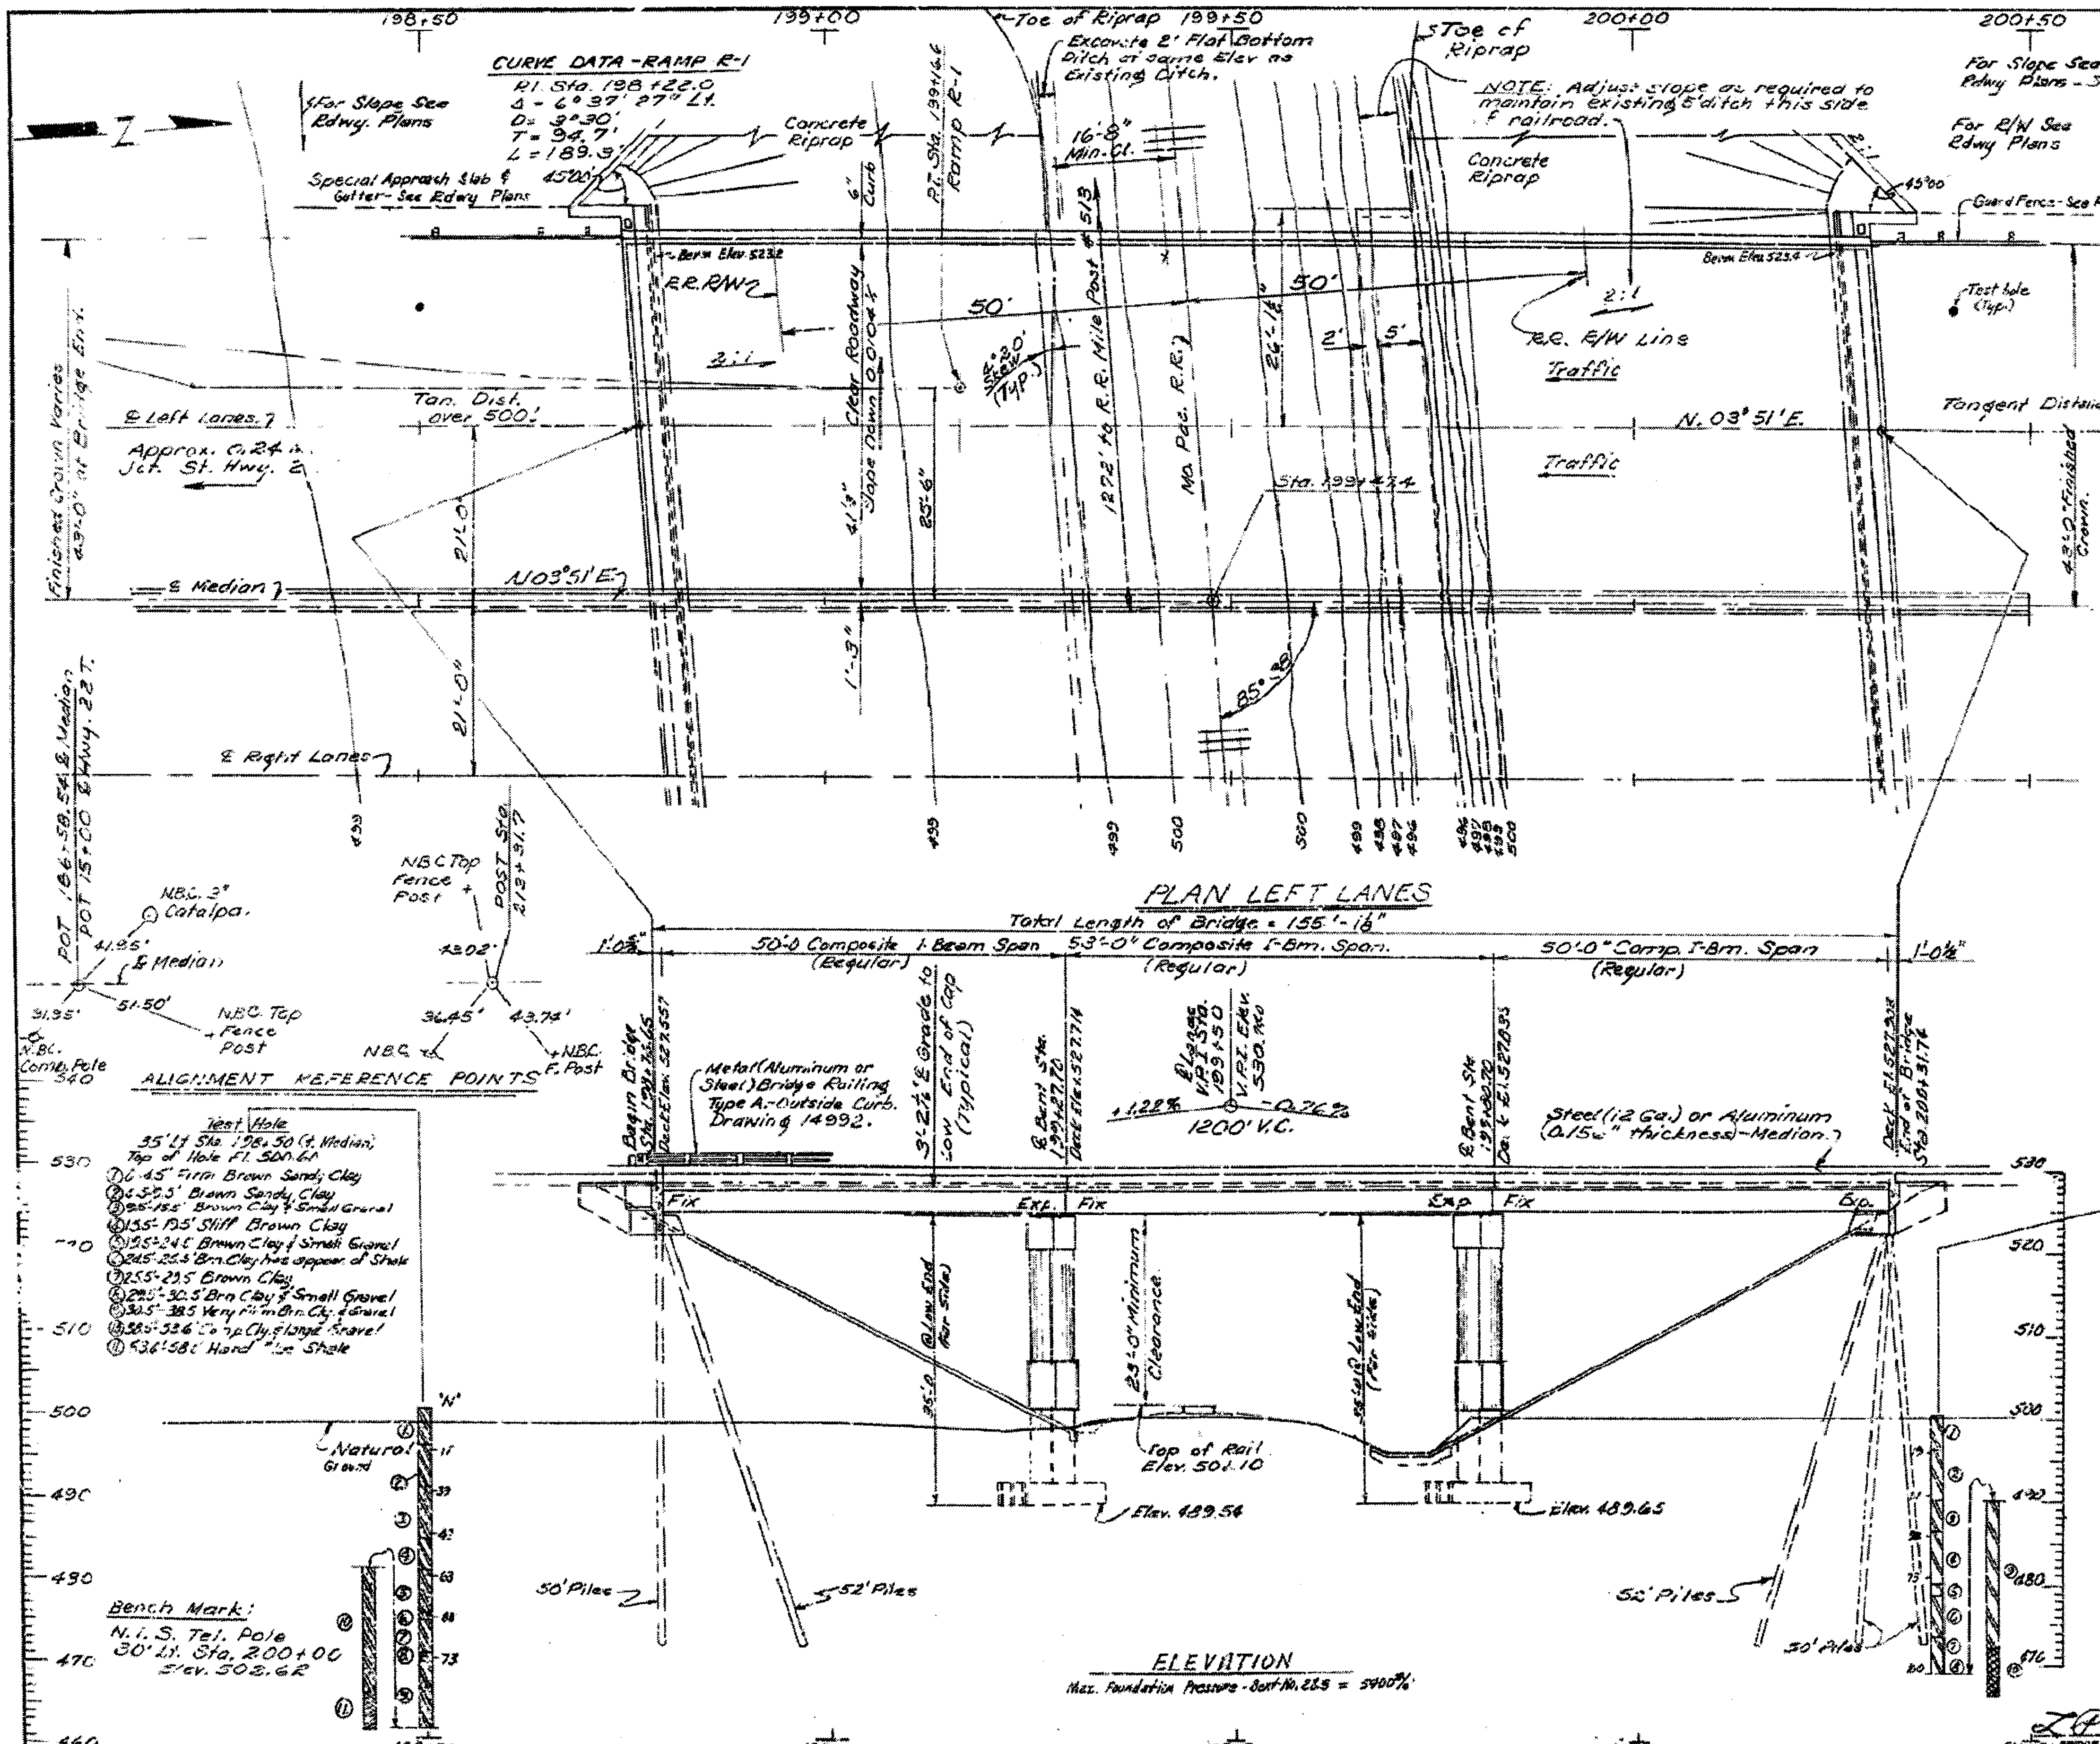
BRIDGE NO. 5100AW & BW DRAWING NO. 28187

JOB NO.	SHEET NO.	TOTAL SHEETS
BB0401	216	234



GENERAL NOTES

All concrete to be poured in the dry. Exposed corners to be chamfered 3/4".

In general all construction joints in ... shall be horizontal and shall be provided with keys not less than 1½" high covering the middle third of both dimensions.

In order not to disturb the founding material the final one foot, at least, of excavation shall carefully be done by hand methods to neat lines, and the concrete shall be poured against the excavated surfaces. Foundation pits shall be kept dry.

All piling shall be 10"BP42# and shall be driven with an approved air, steam, or diesel hammer to a minimum bearing capacity of 40 tons per pile. Note that it is not necessary to drive the piles to snuff if the 40 ton capacity is reached before. Order lengths shown; cut-off or build-up, if necessary, shall be paid for in accordance with the Standard Specifications.

Piles to be driven after embankment to subgrade is in place.

For Details of Substructure see Dwgs. 15698 - 15701.
For Details of Superstructure see Dwgs. 15702, 15703, 14990 & 14992.
For Details of Concrete Riprap see Dwg. 15704.

FOUNDATION PRESSURE (CALCULATED)
6,250 #/ft² - Group III
5,000 #/ft² - Group I Allowable.

GENERAL NOTES

All concrete to be poured in the dry. Exposed corners to be chamfered 3/4".

In general all construction joints in bents shall be horizontal and shall be provided with keys not less than 18" high covering the middle third of both dimensions.

Provide roadway drains at both sides of roadway approximately 12' from bridge ends.

In order not to disturb the founding material, the final one foot, at least, of excavation shall carefully be done by hand methods to neat lines, and the concrete shall be poured against the excavated surfaces. Foundation pits shall be kept dry.

All piling shall be 10"RP42 and shall be driven with an approved air, steam, or diesel hammer to a minimum capacity of 35 tons per pile and to the material designated as shale, on the boring logs. Lengths of piling shown are for estimating quantities only. Order lengths shown; cut-off or build-up, if necessary, to be paid for in accordance with the Standard Specifications.

Piles in end bents shall be driven after embankment, to subgrade, is in place.

GENERAL NOTES

BENCH MARK: USE EXISTING BRIDGE ELEVATIONS.

CONSTRUCTION SPECIFICATIONS: ARKANSAS STATE HIGHWAY COMMISSION STANDARD SPECIFICATIONS FOR HIGHWAY CONSTRUCTION, EDITION OF 1978 AND APPLICABLE SPECIAL PROVISIONS.

DESIGN SPECIFICATIONS: AASHTO STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES, 1983 EDITION.

LIVE LOADING: HS 20 AND SPECIAL INTERSTATE

STEEL PILING: ALL PILING SHALL BE HP10X42 AND SHALL BE DRIVEN WITH AN APPROVED AIR, STEAM, OR DIESEL HAMMER TO A MINIMUM BEARING CAPACITY OF 55 TONS PER PILE AND INTO THE MATERIAL DESIGNATED AS SHALE ON THE ORIGINAL LAYOUT. LENGTHS SHOWN ARE FOR ESTIMATING QUANTITIES AND FOR USE IN DETERMINING PAYMENT FOR CUT-OFF AND BUILD-UP IN ACCORDANCE WITH THE SPECIFICATIONS.

FOOTINGS SHALL BE SET A MINIMUM OF 1'-6" INTO HARD GRAY SHALE. ROCK EXCAVATIONS SHALL BE MADE TO NEAT LINES OF THE CONCRETE FOOTINGS. CARE SHALL BE EXERCISED TO AVOID SHATTERING OF ROCK FACES. CONCRETE IN FOOTINGS SHALL BE POURED DIRECTLY AGAINST EXCAVATED SURFACES OF ROCK. NO BLASTING WILL BE ALLOWED.

PROPOSED WORK CONSISTS OF: REMOVING THE EXISTING CONCRETE DECK. RETAINING THE EXISTING BEAMS AND DIAPHRAGMS, REBUILDING BACKWALLS AT END BENTS, WIDENING THE DECK AND BENTS TO A 41.5 FOOT CLEAR ROADWAY BRIDGE.

THE CONTRACTOR SHALL MAKE CHECK MEASUREMENTS OF THE EXISTING BRIDGE AND MAKE ADJUSTMENTS NECESSARY TO FIT THE NEW WORK TO THE EXISTING STRUCTURE.

⚠ Raised footings per Change Order No. 7 at the Contractor's request. LWM 4-18-13

GENERAL NOTES

BENCH MARK: Elevations and stations are assumed to be the same as shown on the original plans. The original layout shows the elevation at the top of the deck and centerline of existing bridge to be at 414.68 at Sta. 491+12.42 (Beg. of Br. 3608).

CONSTRUCTION SPECIFICATIONS: Arkansas State Highway and Transportation Department Standard Specifications for Highway Construction (2003 edition), with applicable supplemental specifications and special provisions. Unless otherwise noted on the plans, section and subsection refer to the Standard Construction Specifications.

DESIGN SPECIFICATIONS: AASHTO Standard Specifications for Highway Bridges (1996 edition), with current interim specifications.

LIVE LOAD: HS20 + Military Loading METHOD OF DESIGN: Load Factor
SEISMIC PERFORMANCE CATEGORY: A

MATERIALS AND STRENGTHS:

Class S(AE) Concrete (superstructure)	f'c = 4,000 psi
Class S Concrete (substructure)	f'c = 3,500 psi
Reinforcing Steel (AASHTO M31 or M53, Gr. 60)	fy = 60,000 psi
Structural Steel (AASHTO M270, Gr. 50W)	Fy = 50,000 psi
Structural Steel (AASHTO M270, Gr. 36)	Fy = 36,000 psi

BORING LOGS: Boring Logs may be obtained from the Programs and Contracts Division.

BRIDGE DECK: The concrete bridge deck shall be given a tine finish as specified for final finishing in Subsection 802.19 for Class S Tined Bridge Roadway Surface Finish.

CLASS I PROTECTIVE SURFACE TREATMENT: Class I Protective Surface Treatment shall be applied to the roadway surface and to the face and top of the concrete parapet rail.

FOOTINGS: The top of all footings shall have a minimum cover of 2'-0". Foundations for all footings shall be prepared in accordance with Section 801.04.

STEEL PILING: Piling in Bents 1 thru 7 shall be HP12x53 and shall be driven with an approved air, steam, or diesel hammer to a minimum safe bearing capacity of 70 tons per pile and into the material designated as medium hard, dark gray weathered shale on the boring legend. Lengths of piling shown are for estimating quantities and for use in determining payment for cut-off and build-up in accordance with the Standard Specifications. Piles in end bents to be driven after embankment to bottom of cap is in place. On all piles the contractor shall use approved steel H-pile driving points.

DETAIL DRAWINGS:	DRAWING NO.
End Bents	48556-48448, 48561-48563
Intermediate Bents	48559, 48560
571'-8" Cont. Comp. W-Beam Unit	48564-48569
Steel Piling	14995A
Approach Slab	2018
Type Special 1 Approach Gutter	48573
Type Special 3 Median Approach Gutters	48574

REMOVAL AND SALVAGE: The existing bridge, shall be removed in accordance with Section 205. All material from existing bridge shall become the property of the contractor.

EXISTING BRIDGE: Existing Bridge No. 03608 is 67'-0" wide and 562'-2" long and consists of 7 composite 80'-0" simple spans supported by substructures consisting of 6-4 column interior bents and 2 pile end bents. Plans for existing bridge will be made available to the Contractor upon request to Programs and Contracts Division. Existing Dwg. Nos. 12834 thru 12837, 12839, 14992, 14998.

MAINTENANCE OF TRAFFIC: See Roadway Plans.

TEMPORARY SHORING: Temporary shoring may be required. See Special Provision Job No. BB0407 "Shoring".

INFORMATION ONLY

NOTE: The contractor shall check measurements of the existing bridge. Any adjustments necessary to fit the new work to the existing bridge location shall be submitted for the Engineer's approval.

TOP OF DECK ELEVATION POINTS @ C.L. BRIDGE

GENERAL NOTES

BENCH MARK: Elevations and stations are assumed to be the same as shown on the original bridge plans. The contractor shall verify the elevation shown on the original layout at the top of the deck and centerline of existing bridge to be at Sta. 435.00 at Sta. 646+58.91 (Beg. of Br. A3957).

CONSTRUCTION SPECIFICATIONS: Arkansas State Highway and Transportation Department Standard Specifications for Highway Construction (2003 edition), with applicable supplemental specifications and special provisions. Unless otherwise noted on the plans, section and subsection refer to the Standard Construction Specifications.

DESIGN SPECIFICATIONS: AASHTO Standard Specifications for Highway Bridges (2002 edition), with current interim specifications. (New End Bent Backwall, & Deck)

LIVE LOAD: HS20 + Alt. Military LOADING   METHOD OF DESIGN: Load Factor

MATERIALS AND STRENGTHS:

Class S(AE) Concrete (Superstructure)	f'c = 4,000 psi
Class S Concrete (Substructure)	f'c = 3,500 psi
Reinforcing Steel (AASHTO M31 or M53, Gr. 60)	fy = 60,000 psi
Structural Steel (AASHTO M270, Gr. 50)	Fy = 50,000 psi
Structural Steel (AASHTO M270, Gr. 36)	Fy = 36,000 psi

All welding to be performed by a certified welder approved by the Engineer. All welding shall conform to the current AASHTO/AWS D1.5 Welding Code.

Anchor bolt extension shall be ASTM A36 and galvanized. Repair damaged galvanized surfaces in accordance with Subsection 807.88.

Structural steel bearings shall be seated in accordance with subsection 807.66 of the Standard Construction Specifications.

Felt and steel washers on all existing anchor bolts shall be removed and discarded. New steel washers shall be used on all anchor bolts and new rubber washers shall be used where specified on the plans. Payment for new washers will not be paid for directly but will be considered subsidiary to the item "Modification of Existing Bridge Structure (Br. No. A&B3957).

All dimensions are taken from existing bridge plans. See Dwg. Nos. 48446, 48446A-G. of the existing bridge plans. The Contractor shall verify measurements of the existing bridge and make adjustments necessary to fit the new work to the existing structure. This work shall be included in the price bid for "Modification of Existing Bridge Structures (Br. No. A&B3957)".

CLASS 1 PROTECTIVE SURFACE TREATMENT: Class 1 Protective Surface Treatment shall be applied to the roadway surface and to the roadway face and top of the concrete parapet rail.

BRIDGE DECK: The concrete bridge deck shall be given a tine finish as specified for final finishing in subsection 802.19 for Class 5 Tined Bridge Roadway Surface Finish.

REMOVAL AND SALVAGE: All material removed from the existing bridges and not used in the finished structure shall become the property of the Contractor.

PROPOSED WORK: The proposed work is to provide a minimum 16'-0" vertical clearance and an 8.7% superelevation. The work generally consists of removing the end bent backwall and wings, removing the concrete deck, curb and railing, constructing new end bent backwall and wings, constructing concrete beam pedestals on all bents, modifying beam diaphragm connections, cleaning and painting existing beams and diaphragms, installing new end struts, re-furbishing existing bearings as necessary, constructing new concrete deck with parapet rail, and install new preformed joint seal.

METHOD OF WORK: After removal of the bridge deck, the contractor shall disassemble, remove, modify, and clean and apply the prime coat to the structural steel that will be used in the final structure. After the substructure has been modified as detailed in the plans, the contractor shall re-erect, re-assemble, and apply the topcoating of the paint system to the structural steel. Cleaning and painting structural steel will be paid in accordance with Section 807 "Painting Structural Steel". All applicable provisions of Section 807, as determined by the Engineer, shall be followed including Sections 807.56 and 807.61. See SP Job BB0407 "Special Safety Requirements for Bridges" for additional provisions. All work, materials, and labor required for the disassembly, removal, transport, modification, re-erection, and re-assembly of the structural steel will not be paid for directly but will be considered subsidiary to the pay item "Modification of Existing Bridge Structure (Br. No. A&B3957)".

The contractor may submit an alternate Method of Work. The plan shall be submitted to the Engineer for informational and record purposes at least 3 weeks prior to any work being performed. The submittal shall be prepared and/or approved by a Professional Engineer registered in the state of Arkansas and shall include sufficient details and information to the Engineer's satisfaction. The Contractor will be responsible for the results obtained by the use of the alternate Method of Work. All work, materials, and labor required for the Contractor to develop and execute the plan will not be paid for directly but will be considered subsidiary to the pay item "Modification of Existing Bridge Structure (Br. No. A&B3957)".

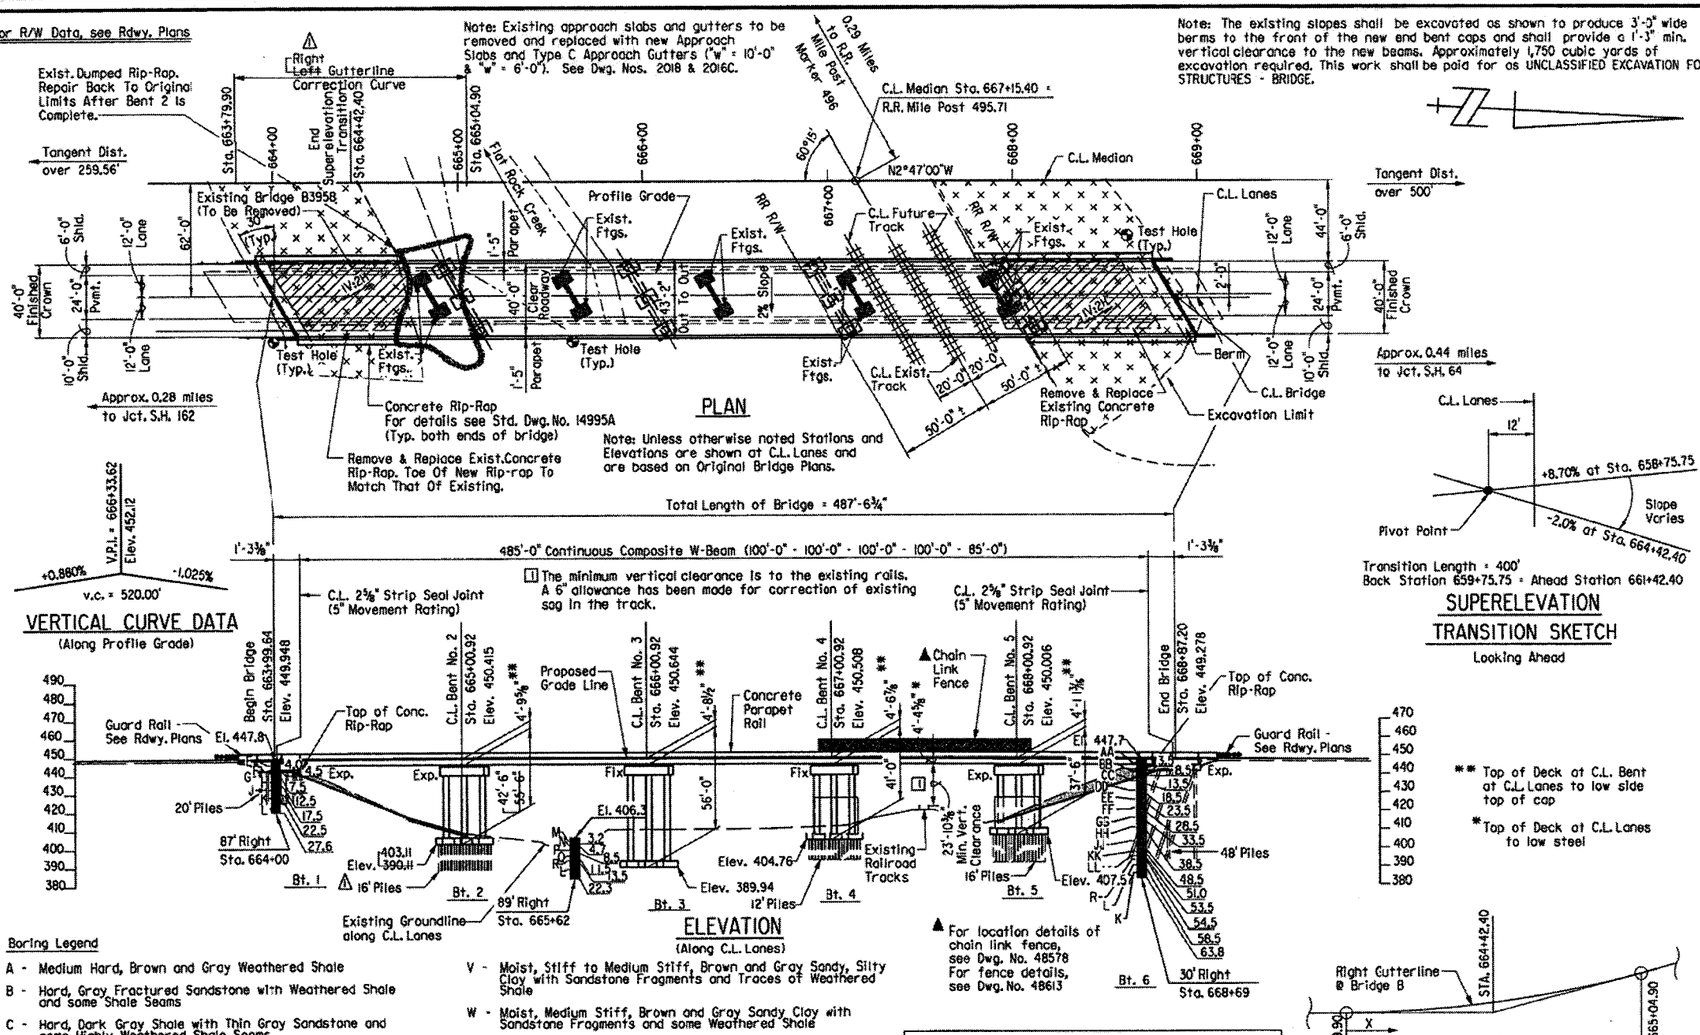
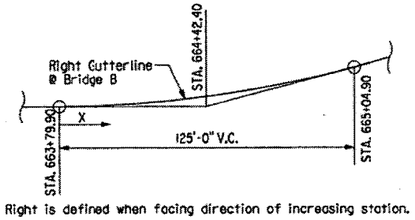
For R/W Data, see Rdwy. Plans



Note: The existing slopes shall be excavated as shown to produce 3'-0" wide berms to the front of the new end bent caps and shall provide a 1'-3" min. vertical clearance to the new beams. Approximately 1,750 cubic yards of excavation required. This work shall be paid for as UNCLASSIFIED EXCAVATION FOR STRUCTURES - BRIDGE.

Transition Length = 400'
Back Station 659+75.75 = Ahead Station 661+42.40

SUPERELEVATION TRANSITION SKETCH
Looking Ahead



Right is defined when facing direction of increasing station.

The right gutterline of Bridge 'B' has been smoothed with a correction equation between the stations shown. The roadway cross slope at any station is a straight line between the left and right gutterlines.

Elev. = 449.77 - 0.0005(X) + 0.0000183(X^2)

X is the distance in feet along centerline lane from beginning station shown. Elevation is at gutterline.

RIGHT GUTTER CORRECTION CURVE
No Scale

GENERAL NOTES

BENCH MARK: Elevations and stations are assumed to be the same as shown on the original plans. The original layout shows the elevation at the top of the deck and centerline of existing bridge to be at 448.14 at Sta. 664+06.91 (Beg. of Br. B3958).

CONSTRUCTION SPECIFICATIONS: Arkansas State Highway and Transportation Department Standard Specifications for Highway Construction (2003 edition), with applicable supplemental specifications and special provisions. Unless otherwise noted on the plans, section and subsection refer to the Standard Construction Specifications.

DESIGN SPECIFICATIONS: AASHTO Standard Specifications for Highway Bridges (1996 edition), with current interim specifications.

LIVE LOAD: HS20 + Military Loading METHOD OF DESIGN: Load Factor
SEISMIC PERFORMANCE CATEGORY: A

MATERIALS AND STRENGTHS:
Class S(AE) Concrete (superstructure) f'c = 4,000 psi
Class S Concrete (substructure) f'c = 3,500 psi
Reinforcing Steel (AASHTO M31 or M53, Gr. 60) fy = 60,000 psi
Structural Steel (AASHTO M270, Gr. 50W) Fy = 50,000 psi
Structural Steel (AASHTO M270, Gr. 36) Fy = 36,000 psi

BORING LOGS: Boring Logs may be obtained from the Programs and Contracts Division.

BRIDGE DECK: The concrete bridge deck shall be given a tine finish as specified for final finishing in Subsection 802.19 for Class 5 Tined Bridge Roadway Surface Finish.

CLASS I PROTECTIVE SURFACE TREATMENT: Class I Protective Surface Treatment shall be applied to the roadway surface and the face and top of the concrete parapet rail.

STEEL PILING: Piling in Bents 1, 4, 5 and 6 shall be HP12x53 and shall be driven with an approved air, steam or diesel hammer to a minimum safe bearing capacity of 70 tons per pile and into the material designated as medium hard shale on the boring legend. Lengths of piling shown are for estimating quantities and for use in determining payment for cut-off and build-up in accordance with the Standard Specifications. Piles in end bents to be driven after embankment to bottom of cap is in place. On all piles the contractor shall use approved steel H-Pile driving points.

PREBORING: Preboring will be required at all piles in Bent 1 to obtain minimum penetration requirement. Quantities of preboring shown are for bidding purposes only. Actual size and depths to be determined in the field by the Engineer. The Contractor shall be responsible for keeping prebored holes free from debris prior to backfilling which may require the use of temporary casings or other methods. Temporary casing, if necessary, will not be paid for directly but will be considered subsidiary to the pay item "PREBORING".

FOOTINGS: Footings for ~~Bents 2 and~~ Bent 3 shall be set a minimum of 1'-6" in top of hard sandstone or hard dark shale. Footings shall not be at a higher elevation than the existing footing and shall have a minimum cover above top of footings of 2'-0". Foundations for all footings shall be prepared in accordance with Section 801.04 of the Standard Specifications. Rock excavations shall be made to neat lines of the concrete footings. Care shall be exercised to avoid shattering of rock faces by excessive blasting. Concrete in footings shall be poured directly against excavated surfaces of rock.

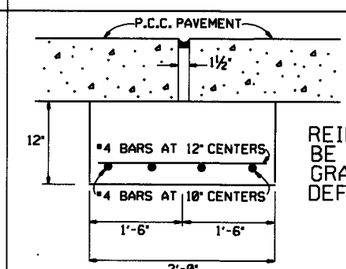
07-15-88	REVISED AND REDRAWN	632-07-15-88



REINFORCING SHALL BE GRADE 40 OR GRADE 60 DEFORMED BARS.

DETAIL OF JOINT SUPPORT FOR EXPANSION JOINTS

GENERAL NOTES

1. "T" DENOTES THICKNESS OF SLAB.
2. DOWEL BARS SHALL BE PLACED IN ACCORDANCE WITH THE DIMENSIONS SHOWN. A TOLERANCE OF PLUS OR MINUS ONE INCH WILL BE ALLOWED FOR THE VERTICAL AND LATERAL PLACEMENT AND A TOLERANCE OF PLUS OR MINUS ¼" WILL BE ALLOWED FOR THE TILT AND SKEW. DOWEL BARS SHALL BE FIELD COATED FOR A MINIMUM DISTANCE OF 2" GREATER THAN HALF THE LENGTH OF THE BAR WITH AN APPROVED GREASE AS A BOND BREAKER JUST PRIOR TO PLACEMENT OF CONCRETE.
3. THE EXPANSION JOINT SUPPORT MAY BE CONSTRUCTED WITH CLASS "A", "S" OR PAVING CONCRETE. PAYMENT FOR THE JOINT SUPPORT SHALL BE FOR THE CONTRACT UNIT PRICE BID FOR THE CLASS OF CONCRETE SPECIFIED IN THE PLANS. PAYMENT FOR ALL OTHER WORK AND MATERIALS REQUIRED FOR THE CONSTRUCTION OF THE JOINT SUPPORT SHALL BE INCLUDED IN THE PRICE BID FOR THE ABOVE ITEMS.
4. CONTRACTION JOINTS SHALL BE CONSTRUCTED ON 15' CENTERS.
5. TOOLING NOT REQUIRED FOR SELF-LEVELING SILICONE.
6. UNLESS OTHERWISE SPECIFIED IN THE PLANS, CONCRETE SHOULDERS SHALL BE CONSTRUCTED ACCORDING TO THE DETAILS SHOWN HEREON. CONTRACTION JOINTS SHALL MATCH CONTRACTION JOINTS IN THE LANES.
7. TIE WIRES IN DOWEL BAR ASSEMBLIES SHALL NOT BE CUT PRIOR TO PLACEMENT OF PAVING CONCRETE.

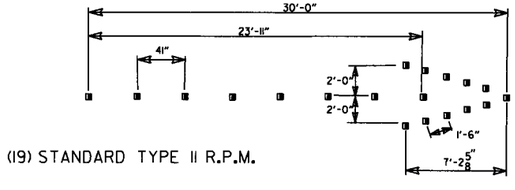
STANDARD
RAISED PAVEMENT MARKERS

NOTE:
THE RED LENS OF THE TYPE II R.P.M. SHALL FACE THE INCORRECT TRAFFIC MOVEMENT.



(19) STANDARD TYPE II R.P.M.

DIRECTIONAL ARROWS

GENERAL NOTES:

THIS DRAWING SHOULD BE CONSIDERED AS TYPICAL ONLY AND THE FINAL LOCATION OF THE STRIPING AND PAVEMENT MARKERS SHALL BE DETERMINED BY THE ENGINEER.

THIS DRAWING SHOULD BE USED IN CONJUNCTION WITH THE "MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES", LATEST REVISION.

NOTE:
DIMENSIONS SHOWN FOR RAISED PAVEMENT MARKERS ARE TYPICAL. THE CONTRACTOR MAY SUBSTITUTE SIMILAR MARKERS WITH THE APPROVAL OF THE ENGINEER. REQUESTING APPROVAL FOR SIMILAR MARKERS MAY BE MADE BY REFERRING TO THE AHTD QUALIFIED PRODUCTS LIST.

DATE	REVISION	FILMED

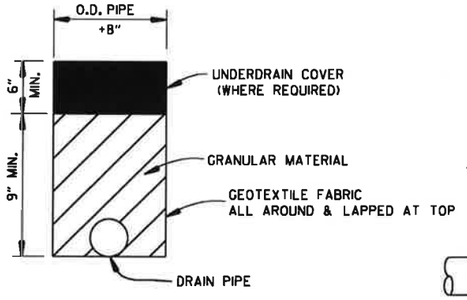
PERMANENT PAVEMENT MARKING ON ACCESS CONTROLLED ROADWAYS

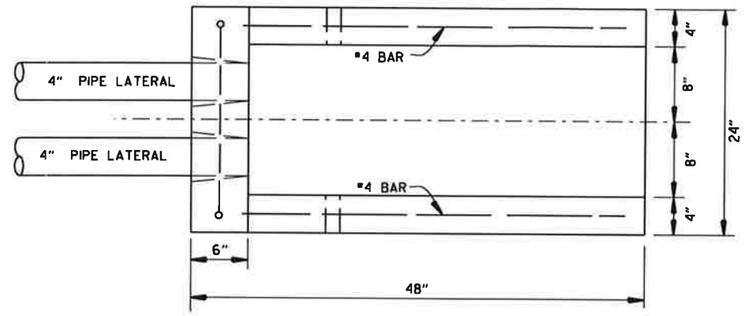
STANDARD DRAWING PM-2

NOTE:

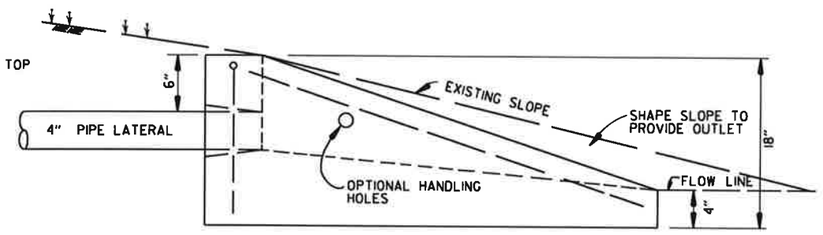
1. UNLESS OTHERWISE SPECIFIED ON THE PLANS, THE UNDERDRAIN COVER SHALL BE THOROUGHLY COMPACTED EARTH AND SHALL BE SUBSIDIARY TO PIPE UNDERDRAIN.

2. GRANULAR MATERIAL SHALL BE WRAPPED WITH GEOTEXTILE FABRIC. LAP FABRIC 12" OR THE WIDTH OF THE TRENCH AT THE TOP.

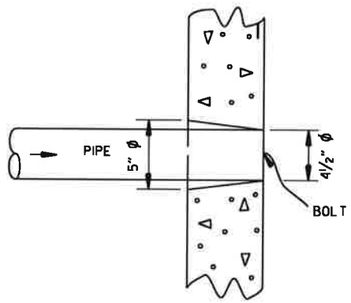




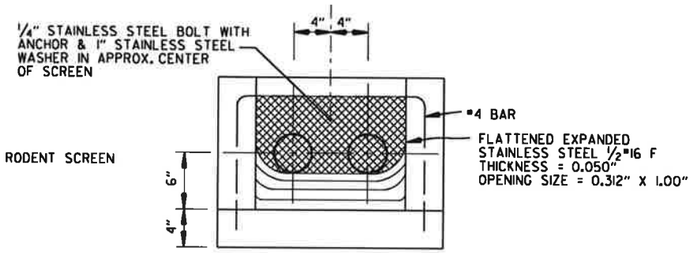
PLAN VIEW



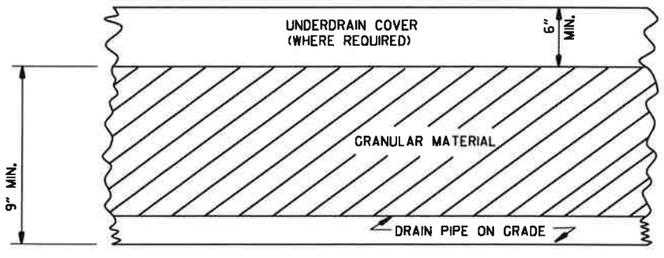
SIDE VIEW



DETAIL OF HOLE FOR 4" PIPE



FRONT VIEW
(DETAIL OF RODENT SCREEN)



DETAILS OF PIPE UNDERDRAIN

NOTES FOR PIPE UNDERDRAINS

1. GEOTEXTILE FABRIC SHALL MEET THE REQUIREMENTS OF SECTION 625 FOR TYPE I. PAYMENT FOR GEOTEXTILE FABRIC AND GRANULAR FILTER MATERIAL SHALL BE INCLUDED IN THE PRICE BID PER LIN. FT. FOR "4" PIPE UNDERDRAINS" IN ACCORDANCE WITH SECTION 611 OF THE STANDARD SPECIFICATIONS.

2. 4" NON-PERFORATED SCHEDULE 40 PVC PIPE LATERALS WITH OUTLET PROTECTORS SHALL BE INSTALLED AS SHOWN HEREON. LATERALS WILL BE MEASURED AND PAID FOR AS "4" PIPE UNDERDRAINS." UNDERDRAIN OUTLET PROTECTORS WILL BE MEASURED AND PAID FOR BY THE UNIT IN ACCORDANCE WITH SECTION 611 OF THE STANDARD SPECIFICATIONS.

3. EXISTING 4" PIPE UNDERDRAINS MAY BE CONNECTED TO PROPOSED DROP INLETS OR EXTENDED WHERE DIRECTED BY THE ENGINEER. PAYMENT FOR CONNECTING TO DROP INLETS SHALL BE CONSIDERED INCLUDED IN THE PRICE BID FOR "4" PIPE UNDERDRAINS."

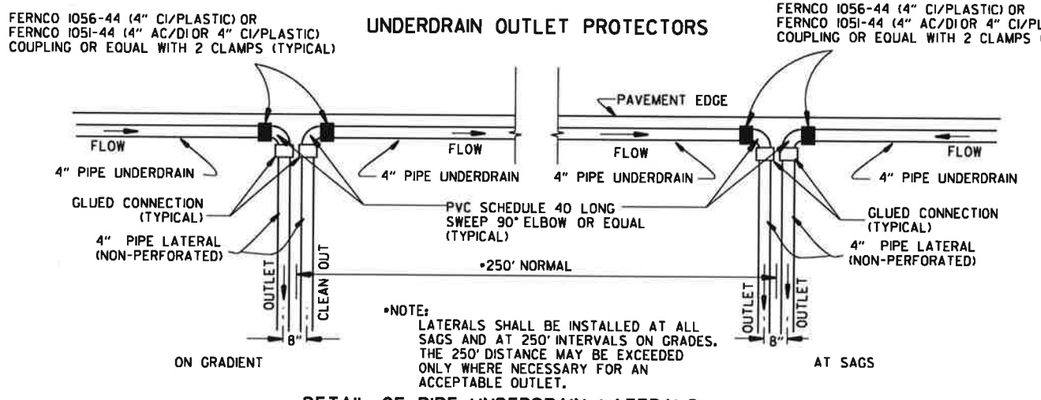
4. THE LOCATION OF ALL LATERALS SHALL BE MARKED WITH 4" X 12" PERMANENT PAVEMENT MARKING TAPE (TYPE III WHITE) AT THE OUTSIDE EDGE OF THE SHOULDER, PLACED TRANSVERSE TO TRAFFIC. PAYMENT FOR THIS WORK SHALL BE INCLUDED IN THE PRICE BID FOR THE VARIOUS CONTRACT ITEMS.

5. PAYMENT FOR THE RODENT SCREEN SHALL BE INCLUDED IN THE PRICE BID PER EACH FOR "UNDERDRAIN OUTLET PROTECTORS."

6. ANY EXISTING UNDERDRAINS THAT INTERFERE WITH INSTALLATION OF THE NEW UNDERDRAIN SYSTEM SHALL BE REMOVED AND DISPOSED OF AS DIRECTED BY THE ENGINEER. PAYMENT WILL BE CONSIDERED INCLUDED IN THE PRICE BID FOR THE VARIOUS CONTRACT ITEMS. EXISTING UNDERDRAIN OUTLET PROTECTORS SHALL BE REMOVED UNDER THE ITEM "REMOVAL AND DISPOSAL OF UNDERDRAIN OUTLET PROTECTORS."

7. AT LOCATIONS WHERE A SINGLE LATERAL IS USED THE CONTRACTOR SHALL HAVE THE FOLLOWING OPTIONS: 1. INSTALL OUTLET PROTECTOR AS SHOWN ON STANDARD DRAWING PU-1 AND GROUT THE UNUSED HOLE OR 2. INSTALL AN OUTLET PROTECTOR WITH A SINGLE HOLE.

UNDERDRAIN OUTLET PROTECTORS



DETAIL OF PIPE UNDERDRAIN LATERALS WHEN PLACED ALONG PAVEMENT EDGE

NOTE: PVC PIPE FOR LATERALS SHALL MEET THE REQUIREMENTS OF ASTM D 1785 (LATEST REVISION) FOR SCHEDULE 40 PIPE.

	AHEAD

GENERAL NOTES:

1. ALL TRAFFIC CONTROL DEVICES USED ON ROAD CONSTRUCTION SHALL CONFORM TO THE MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES, LATEST EDITION, AND TO THE STANDARD HIGHWAY SIGNS, LATEST EDITION, OR AS APPROVED BY THE FEDERAL HIGHWAY ADMINISTRATION.
2. TRAFFIC CONTROL DEVICES SHALL BE SET UP JUST BEFORE THE START OF CONSTRUCTION OPERATIONS AND SHALL BE PROPERLY MAINTAINED DURING THE TIME SUCH CONDITIONS EXIST. THEY SHALL REMAIN IN PLACE ONLY AS LONG AS NEEDED AND REMOVED THEREAFTER.
3. EXISTING SIGNS AND CONSTRUCTION SIGNS SHALL BE KEPT IN PROPER POSITION, AND BE CLEAN AND LEGIBLE AT ALL TIMES. SIGNS THAT DO NOT APPLY TO EXISTING CONDITIONS SHALL BE REMOVED. SIGNS THAT ARE DAMAGED, DEFACED, OR THAT ACCUMULATE DIRT DURING CONSTRUCTION SHALL BE CLEANED, REPAIRED, OR REPLACED.
- 4. SIGNS ARE USUALLY MOUNTED ON A SINGLE POST, ALTHOUGH THOSE WIDER THAN 36" OR LARGER THAN 10 SQ. FT. SHALL BE MOUNTED ON TWO POSTS OR ABOVE A TYPE III BARRICADE.
- 5. SIGN POSTS DIRECT BURIED IN SOIL SHALL BE 2 LB. MINIMUM CHANNEL POST OR 4"x4" WOOD POSTS. CHANNEL POSTS SHALL BE PAINTED GREEN. WOOD POSTS SHALL BE PAINTED WHITE. ALL POSTS SHALL BE NEATLY CONSTRUCTED, AND SHALL BE REPLUMBED, CLEANED, OR REPAIRED AS NEEDED FOR THE DURATION OF THE JOB. THERE SHALL NOT BE MORE THAN 2 POSTS IN A 7' PATH FOR WOOD OR CHANNEL POSTS. ANY CHANNEL POST SPLICE SHALL BE IN ACCORDANCE WITH STANDARD DRAWING TC-3.
6. POST MOUNTED SIGNS IN RURAL AREAS SHALL BE CONSTRUCTED WITH THE NEAR EDGE OF THE SIGN FROM 6 TO 12 FEET FROM THE PAVEMENT EDGE. SIGNS IN URBAN AREAS AND BARRICADE MOUNTED SIGNS SHALL BE MOUNTED A MINIMUM OF 2 FEET FROM THE PAVEMENT EDGE.
7. ALL POST AND BARRICADE MOUNTED SIGNS MOUNTED IN URBAN AREAS SHALL BE MOUNTED A MINIMUM DISTANCE OF 7' FROM THE BOTTOM OF THE SIGN TO THE ROADWAY SURFACE. ALL POST AND BARRICADE MOUNTED SIGNS MOUNTED IN RURAL AREAS SHALL BE MOUNTED A MINIMUM DISTANCE OF 7' FROM THE BOTTOM OF THE SIGN TO THE ROADWAY SURFACE, EXCEPT A MINIMUM OF 6' SHALL BE USED WHEN MOUNTING AN ADVISORY SIGN BELOW A WARNING SIGN. TEMPORARY SIGNS MAY BE MOUNTED ON PORTABLE SUPPORTS FOR INTERMEDIATE TERM STATIONARY WORK CONDITIONS. THE SIGNS MINIMUM MOUNTING HEIGHT SHALL BE 5'. RETROREFLECTIVE DEVICES SHALL BE USED. TEMPORARY SIGNS MAY BE MOUNTED ON PORTABLE SUPPORTS FOR SHORT-TERM, SHORT DURATION, AND MOBILE CONDITIONS. THEY SHALL BE NO LESS THAN ONE (1) FOOT ABOVE THE TRAVELED WAY. LONG-TERM STATIONARY SIGNS SHALL BE DIRECT BURIED IN SOIL, UNLESS CONDITIONS NECESSITATE THE USE OF PORTABLE SIGNS, OR AS APPROVED BY THE ENGINEER. CONCRETE PADS, CONCRETE OR ROCK BALLAST, OR OTHER SOLID MATERIALS SHALL NOT BE UTILIZED WITH PORTABLE SIGN SUPPORTS.
8. FLAGGERS SHALL USE REFLECTORIZED STOP-SLOW PADDLES. FLAGS MAY BE USED ONLY FOR EMERGENCY SITUATIONS.
9. MOST OF THE SIGNS SHOWN ARE ORIENTED TO THE RIGHT. HOWEVER, THIS DOES NOT PRECLUDE THE USE OF MIRROR IMAGES OF THESE SIGNS WHERE THE REVERSE ORIENTATION MIGHT BETTER CONVEY TO MOTORISTS THE PROPER DIRECTION OF MOVEMENT.
10. R55-1 SIGNS SHALL BE PLACED AT LEAST 1500' BUT NOT MORE THAN 1 MILE IN ADVANCE OF THE WORK ZONE. IF A SPEED LIMIT REDUCTION IS IN EFFECT, THE SIGN SHALL BE PLACED A MINIMUM OF 500' IN ADVANCE OF THE "REDUCED SPEED AHEAD" SIGN.

• NOTE: SUPPORTS FOR SIGNS, BARRICADES, AND VERTICAL PANELS THAT ARE DIFFERENT FROM THE REQUIREMENTS SHOWN IN NOTES 4 & 5, BUT MEET THE REQUIREMENTS OF NCHRP-350 OR MANUAL FOR ASSESSING SAFETY HARDWARE (MASH), WILL BE ACCEPTED. COMPLIANCE WITH THE REQUIREMENTS OF NCHRP-350 OR MANUAL FOR ASSESSING SAFETY HARDWARE (MASH) IS REQUIRED FOR ALL PROJECTS.

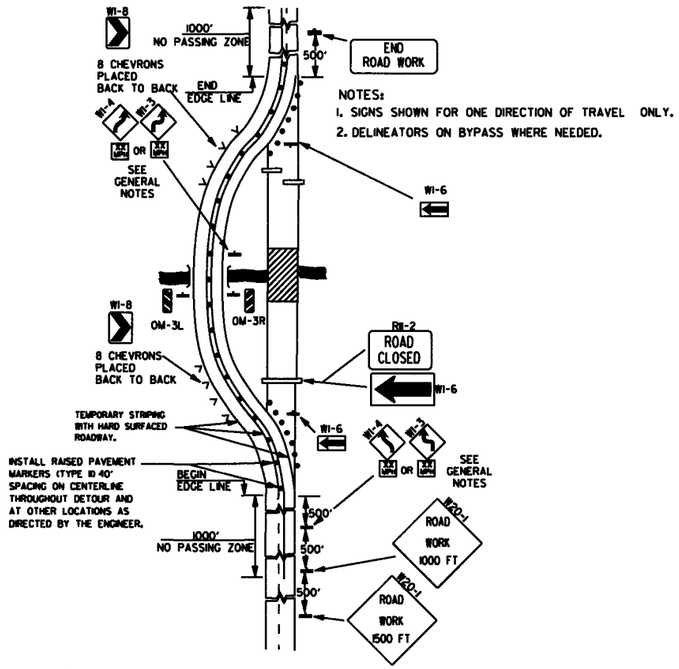
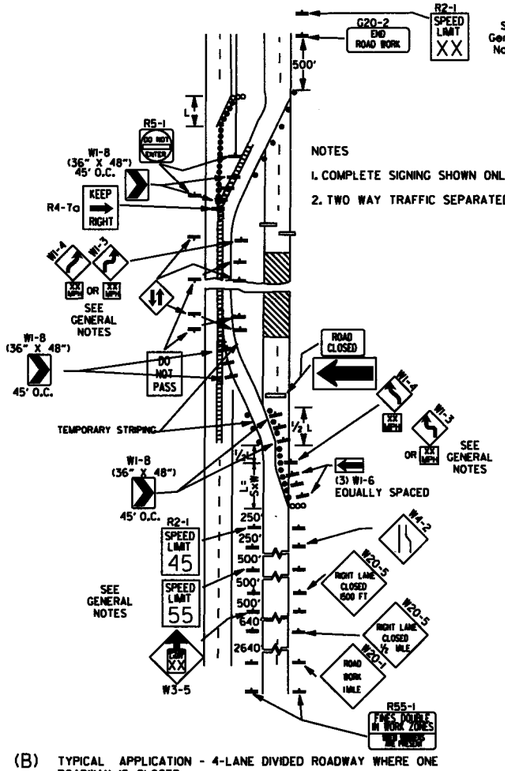
STANDARD TRAFFIC CONTROLS FOR HIGHWAY CONSTRUCTION

STANDARD DRAWING TC-1



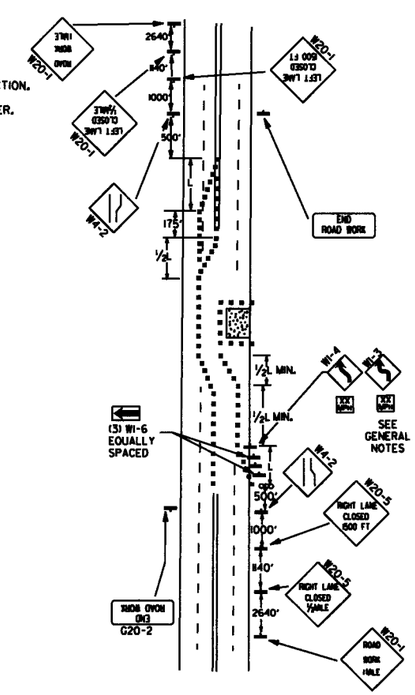
NOTES:
1. SIGNS SHOWN FOR ONE DIRECTION OF TRAVEL ONLY.
2. DELINEATORS ON BYPASS WHERE NEEDED.

(A) TYPICAL APPLICATION OF TRAFFIC CONTROL DEVICES ON A 2-LANE HIGHWAY WHERE THE ENTIRE ROADWAY IS CLOSED AND A BYPASS DETOUR IS PROVIDED.

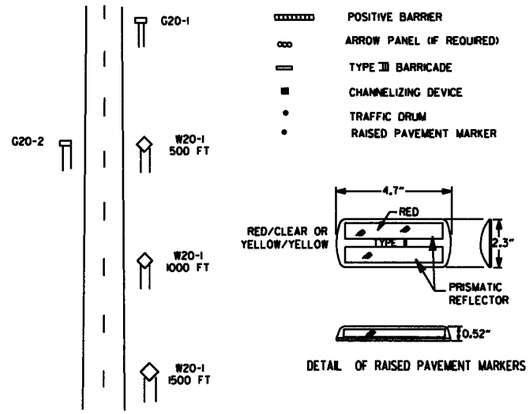


NOTES
1. COMPLETE SIGNING SHOWN ONLY IN CROSSOVER DIRECTION.
2. TWO WAY TRAFFIC SEPARATED WITH POSITIVE BARRIER.

(B) TYPICAL APPLICATION - 4-LANE DIVIDED ROADWAY WHERE ONE ROADWAY IS CLOSED.



(C) TYPICAL APPLICATION - 4-LANE UNDIVIDED ROADWAY WHERE HALF OF THE ROADWAY IS CLOSED.



TYPICAL ADVANCE WARNING SIGN PLACEMENT

KEY:
- FLAGGER
- POSITIVE BARRIER
- ARROW PANEL (IF REQUIRED)
- TYPE III BARRICADE
- CHANNELIZING DEVICE
- TRAFFIC DRUM
- RAISED PAVEMENT MARKER

DETAIL OF RAISED PAVEMENT MARKERS

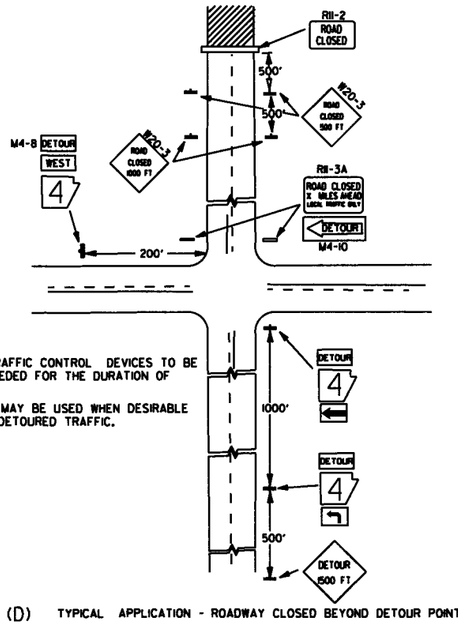
TAPER FORMULAE:

L=SXW FOR SPEEDS OF 45MPH OR MORE.

$L = \frac{WS^2}{60}$ FOR SPEEDS OF 40MPH OR LESS.

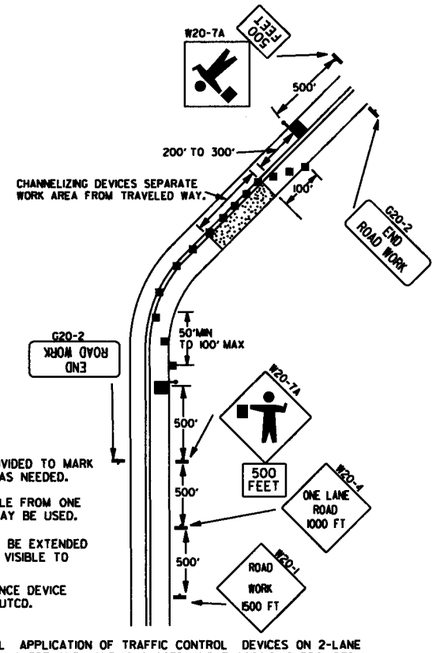
WHERE:
L= MINIMUM LENGTH OF TAPER.
S= NUMERICAL VALUE OF POSTED SPEED LIMIT PRIOR TO WORK OR 85TH PERCENTILE SPEED.
W= WIDTH OF OFFSET.

GENERAL NOTES:
1. ADVISORY SPEED POSTED ON W1-3 OR W1-4 CURVE WARNING SIGNS TO BE DETERMINED AT SITE. USE W1-4 WHEN SPEED IS GREATER THAN 30MPH AND W1-3 WHEN 30MPH OR LESS.
2. WHEN THE EXISTING SPEED LIMIT IS 55MPH AND THE PLANS REQUIRE A SPEED LIMIT OF 45MPH, THE R2-1(55) SHALL BE OMITTED AND THE W3-5 SHALL BE INSTALLED AT THAT LOCATION. ADDITIONAL R2-1 45MPH SPEED LIMIT SIGNS SHALL BE INSTALLED AT A MAXIMUM OF 1 MILE INTERVALS. AT THE END OF THE WORK AREA A R2-1(XX) SHALL BE INSTALLED TO MATCH ORIGINAL SPEED LIMIT.
3. WHEN THE EXISTING SPEED LIMIT IS 65MPH AND THE PLANS REQUIRE A SPEED LIMIT OF 55MPH, THE R2-1(45) SHALL BE OMITTED. ADDITIONAL R2-1 55MPH SPEED LIMIT SIGNS SHALL BE INSTALLED AT A MAXIMUM OF 1 MILE INTERVALS. AT THE END OF THE WORK AREA A R2-1(XX) SHALL BE INSTALLED TO MATCH ORIGINAL SPEED LIMIT.
4. THE MAXIMUM SPACING BETWEEN CHANNELIZING DEVICES IN A TAPER SHOULD BE APPROXIMATELY EQUAL IN FEET TO THE SPEED LIMIT. BEYOND THE TAPER, MAXIMUM SPACING SHALL BE TWO TIMES THE SPEED LIMIT, OR AS DIRECTED BY THE ENGINEER.
5. WARNING LIGHTS AND/OR FLAGS MAY BE MOUNTED TO SIGNS OR CHANNELIZING DEVICES AT NIGHT AS NEEDED.
6. PAVEMENT MARKINGS NO LONGER APPLICABLE WHICH MIGHT CREATE CONFUSION IN THE MINDS OF VEHICLE OPERATORS SHALL BE REMOVED OR OBLITERATED AS SOON AS PRACTICABLE.
7. TRAILER MOUNTED DEVICES SUCH AS ARROW PANELS AND PORTABLE CHANGEABLE MESSAGE SIGNS SHALL BE DELINEATED BY AFFIXING CONSPICUITY MATERIAL IN A CONTINUOUS LINE ON THE FACE OF THE TRAILER. WHEN PLACED ON OR ADJACENT TO THE SHOULDER AND NOT BEHIND A POSITIVE BARRIER, THESE DEVICES SHALL BE DELINEATED BY PLACING FIVE (5) TRAFFIC DRUMS, EQUALLY SPACED ALONG THE TRAFFIC SIDE OF THE DEVICE.
8. DIMENSIONS SHOWN FOR RAISED PAVEMENT MARKERS ARE TYPICAL. THE CONTRACTOR MAY SUBSTITUTE SIMILAR MARKERS WITH THE APPROVAL OF THE ENGINEER. REQUESTING APPROVAL FOR SIMILAR MARKERS MAY BE MADE BY REFERRING TO THE AHTD QUALIFIED PRODUCTS LIST.



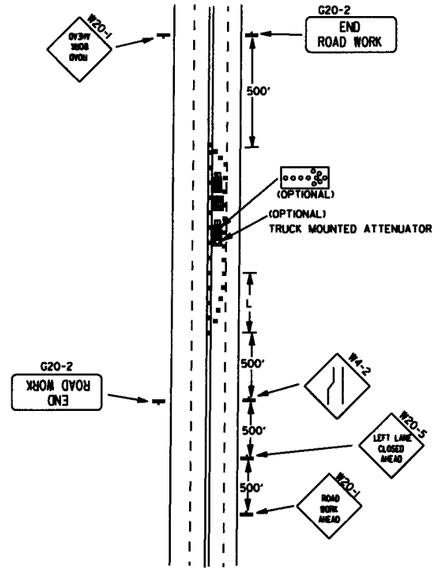
NOTES:
1. REGULATORY TRAFFIC CONTROL DEVICES TO BE MODIFIED AS NEEDED FOR THE DURATION OF THE DETOUR.
2. STREET NAMES MAY BE USED WHEN DESIRABLE FOR DIRECTING DETOURED TRAFFIC.

(D) TYPICAL APPLICATION - ROADWAY CLOSED BEYOND DETOUR POINT.



NOTES:
1. FLOOD LIGHTS SHOULD BE PROVIDED TO MARK FLAGGER STATIONS AT NIGHT AS NEEDED.
2. IF ENTIRE WORK AREA IS VISIBLE FROM ONE STATION, A SINGLE FLAGGER MAY BE USED.
3. CHANNELIZING DEVICES ARE TO BE EXTENDED TO A POINT WHERE THEY ARE VISIBLE TO APPROACHING TRAFFIC.
4. AUTOMATED FLAGGER ASSISTANCE DEVICE (AFAD) OPTIONAL. REFER TO MUTCD.

(E) TYPICAL APPLICATION OF TRAFFIC CONTROL DEVICES ON 2-LANE HIGHWAY WHERE ONE LANE IS CLOSED AND FLAGGING IS PROVIDED.



(F) TYPICAL APPLICATION - 4-LANE UNDIVIDED ROADWAY WITH INSIDE LANE CLOSED.

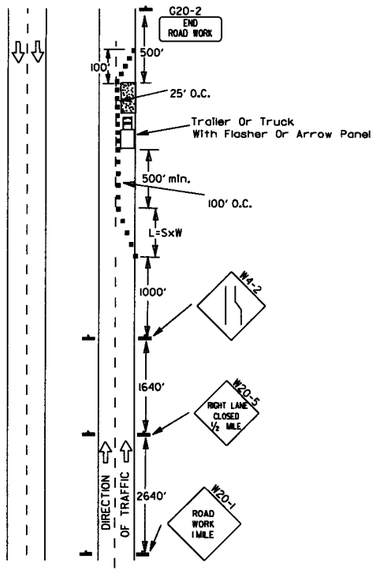
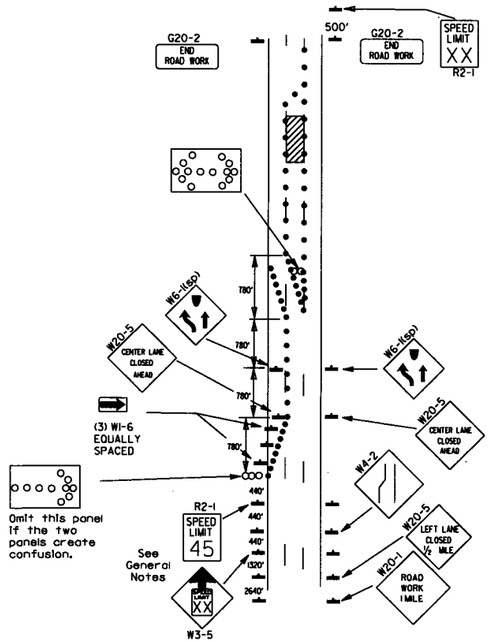
ARKANSAS STATE HIGHWAY COMMISSION

STANDARD TRAFFIC CONTROLS FOR HIGHWAY CONSTRUCTION

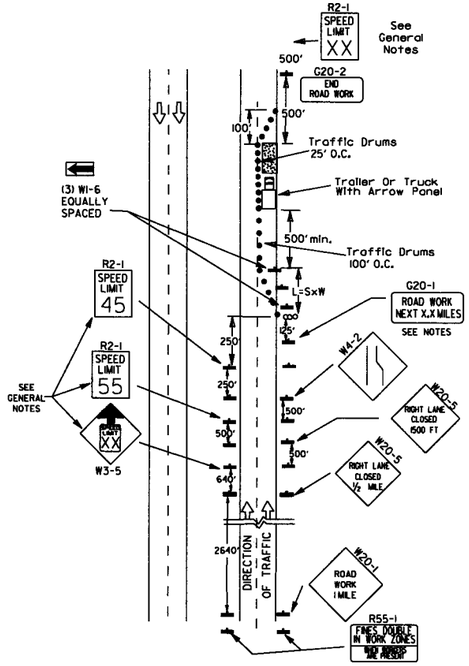
STANDARD DRAWING TC-2



(A) Typical application - daytime maintenance operations of short duration on a 4-lane divided roadway where half of the roadway is closed.



(B) Typical application - 3-lane oneway roadway where center lane is closed.



(C) Typical application - construction operations of intermediate to long term duration on a 4-lane divided roadway where half of the roadway is closed.

KEY:

ooo Arrow Panel (If Required)

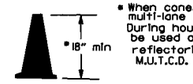
■ Channelizing Device

● Traffic drum

GENERAL NOTES:

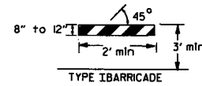
1. A speed limit reduction may be implemented ONLY when designated in the plan or when recommended by the Roadway Design Division.
2. When the existing speed limit is 55mph and the plans require a speed limit of 45mph, the R2-1(55) shall be omitted and the W3-5 shall be installed at that location. Additional R2-1 45mph speed limit signs shall be installed at a maximum of 1 mile intervals. At the end of the work area a R2-1(XX) shall be installed to match original speed limit.
3. When the existing speed limit is 65mph and the plans require a speed limit of 55mph, the R2-1(45) shall be omitted. Additional R2-1 55mph speed limit signs shall be installed at a maximum of 1 mile intervals. At the end of the work area a R2-1(XX) shall be installed to match original speed limit.
4. The maximum spacing between channelizing devices in a taper should be approximately equal in feet to the speed limit. Beyond the taper, maximum spacing shall be two times the speed limit or as directed by the Engineer.
5. Warning lights and/or flags may be mounted to signs or channelizing devices at night as needed.
6. Pavement markings no longer applicable which might create confusion in the minds of vehicle operators shall be removed or obliterated as soon as practicable.
7. The G20-1 sign will be required on jobs of over two miles in length. When the lane closure is not at the beginning of the project, the G20-1 sign shall be erected 125' in advance of the job limit. Additional W20-1 (1 MILE) signs are not required in advance of lane closures that begin inside the project limits.
8. Flaggers shall use STOP/SLOW paddles for controlling traffic through work zones. Flags may be used only for emergency situations.
9. All plastic drums and cones shall meet the requirements of NCHRP-350 or Manual For Assessing Safety Hardware (MASH).
10. Trailer mounted devices such as arrow panels and portable changeable message signs shall be delineated by affixing conspicuity material in a continuous line on the face of the trailer. When placed on or adjacent to the shoulder and not behind a positive barrier, these devices shall be delineated by placing five (5) traffic drums, equally spaced along the traffic side of the device.

Channelizing devices



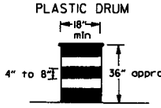
* When cones are used on freeways and multi-lane highways, they shall be 28" min. During hours of darkness, 28" cones shall be used on all roadways, and shall be reflectorized in accordance with the M.U.T.C.D.

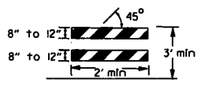
CONES



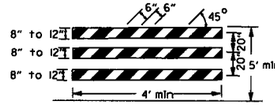
TYPE I BARRICADE

PLASTIC DRUM



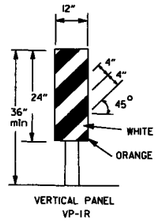


TYPE II BARRICADE



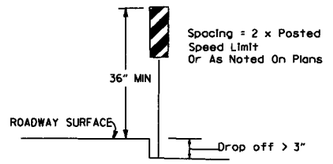
TYPE III BARRICADE

NOTE: For all road closures, the Type III barricades shall be of sufficient length to extend across entire roadway.



VERTICAL PANEL
VP-1R

VERTICAL PANEL PLACEMENT



TRAFFIC CONTROL DEVICES
FOR
VERTICAL PAVEMENT DIFFERENTIALS

VERTICAL DIFFERENTIAL	LOCATIONS	TRAFFIC CONTROL
1" to 3"	Centerline, lane lines	W8-11
1" to 3"	Edge of shoulder	W8-9
Greater than 3"	Lane lines	Standard lane closure required
Greater than 3"	Edge of traveled lane	*RSP-1 and vertical panels, drums or concrete barrier
Greater than 3"	Edge of shoulder	*Vertical panels, drums or concrete barrier

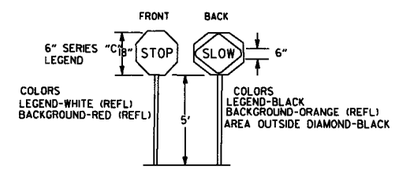
* When shown on the plans concrete barrier will be used.

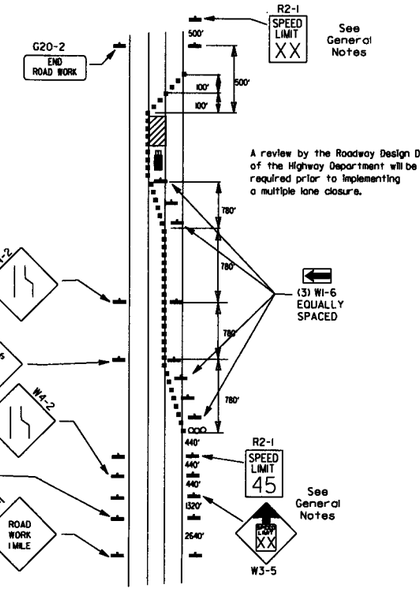
When the shoulder area is used as part of the traveled lane and there is insufficient width to place drums on the remaining shoulder width, then vertical panels shall be used.

FLAG

Flag shall be of good grade red material

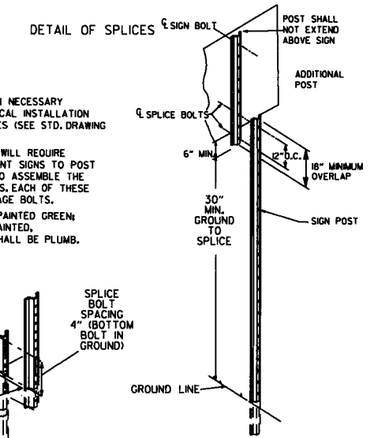
STOP SLOW PADDLE





(D) Typical application - closing multiple lanes of a multilane highway.

DETAIL OF SPLICES



NOTES: USE SPLICES ONLY WHEN NECESSARY FOR INSTALLATION. TYPICAL INSTALLATION SHOULD HAVE NO SPLICES (SEE STD. DRAWING NO. SHS-2)

NORMAL INSTALLATIONS WILL REQUIRE 1/4" DIA. BOLTS TO MOUNT SIGNS TO POST AND 5/16" DIA. BOLTS TO ASSEMBLE THE VARIOUS POST SUPPORTS. EACH OF THESE BOLTS SHALL BE CARRIAGE BOLTS.

SIGN POSTS SHALL BE PAINTED GREEN; SIGNS SHALL NOT BE PAINTED, AND ALL SIGN POSTS SHALL BE PLUMB.

General Notes

1. The contractor shall furnish the Precast Concrete Barrier Units and shall be responsible for the manufacture, shipment, storage, placement and removal. At the completion of the project, the precast units will remain the property of the contractor.

2. Materials shall meet the following minimum requirements:
   Concrete: 2500 psi compressive strength at 28 days.
   Reinforcing Steel: AASHTO M 31 or M 53, Grade 60
   Structural Steel: AASHTO-M270 Grade 36 shall be used for the Connection Pin, Connection Loops, and Stabilization Pins. A One Piece Pin with a 3" rounded top may be used in place of the detailed Connection Pin.
   Delineators: Delineators shall be mounted at 10' spacing on top of precast barrier.

   In applications where barrier wall is within 6 feet of a traffic lane, additional delineators shall be placed on the barrier at 10' spacing approximately one (1) foot from the top of the barrier. Delineators shall be on the AHTD Qualified Products List for Construction Concrete Barrier Markers.
   Delineator color shall be in accordance with the Manual on Uniform Traffic Control Devices.
   Payment for delineators shall be considered included in the price bid per Lin. Ft. for "Furnishing and Installing Precast Concrete Barrier". The contractor shall certify to the Engineer that the material and the design used in the precast barrier units meets the requirements as shown on this standard drawing.

3. Other Precast Concrete Barriers that have been crash tested and approved by the Federal Highway Administration to meet the requirements of NCHRP-350 test level 3 or Manual For Assessing Safety Hardware (MASH) will be accepted in lieu of the barrier shown. Drain slots shall be provided as needed or as directed by the Engineer. The Contractor shall furnish a certification of NCHRP Report 350 or Manual For Assessing Safety Hardware (MASH) compliance for any other types of precast barrier to be used. The certification shall state that the precast concrete barrier meets the requirements of NCHRP Report 350 or Manual For Assessing Safety Hardware (MASH) and include a copy of the Federal Highway Administration's (FHWA) approval letter with all attachments. Precast concrete barrier units shall be fabricated and installed in accordance with crash testing and documentation provided in the FHWA approval letter. Mixing of shapes will not be allowed in a continuous line of units.

4. Dowel holes in pavement or bridge slabs that are to remain in place shall be filled. Holes in concrete pavement and bridge slabs shall be filled with an approved non-shrink epoxy grout. Holes in asphalt pavement shall be filled with an approved asphalt joint filler. Payment for drilling and filling holes to be included in the price for various barrier items.

5. Attach Units To Roadway Surface with Stabilization Pins and to Deck Slabs using bolts when required.

6. A 4" White PVC Sleeve may be used to form the Lifting Hole and if used the Sleeve is to be left in place.

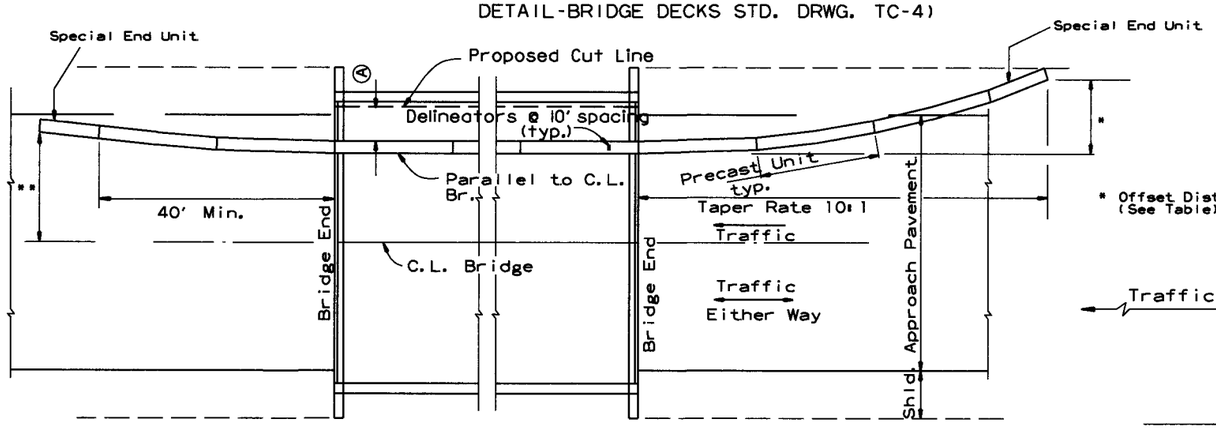
STANDARD TRAFFIC CONTROLS FOR HIGHWAY CONSTRUCTION - TEMPORARY PRECAST BARRIER

STANDARD DRAWING TC-4

Ⓐ 4 feet or greater preferred. If less than 4 feet, Precast Units shall be connected to slab (SEE BARRIER STABILIZATION DETAIL-BRIDGE DECKS STD. DRWG. TC-4)

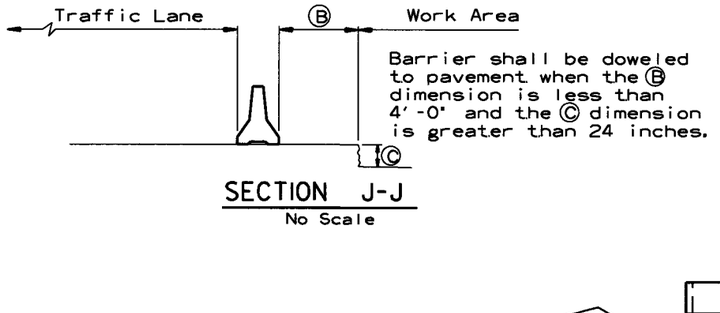


BARRIER PLACEMENT ALONG BRIDGE WITH OFFSET

No Scale

* Offset Distance (See Table)

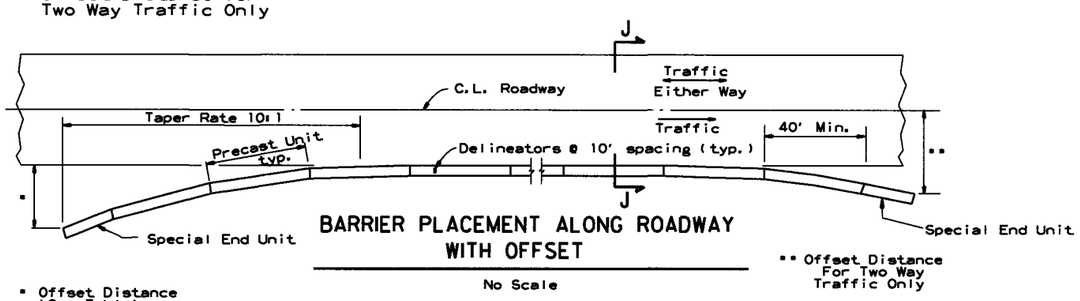
** Offset Distance for Two Way Traffic Only



Barrier shall be doweled to pavement when the Ⓑ dimension is less than 4'-0" and the Ⓒ dimension is greater than 24 inches.

SECTION J-J

No Scale



BARRIER PLACEMENT ALONG ROADWAY WITH OFFSET

No Scale

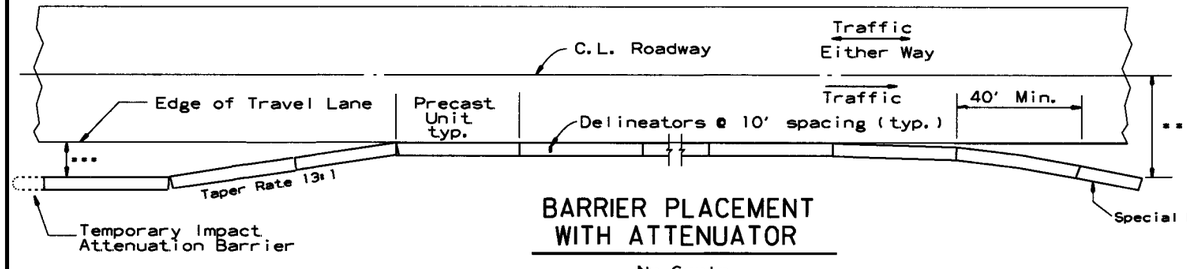
* Offset Distance (See Table)

** Offset Distance For Two Way Traffic Only

Offset Distance Table

Speed (MPH)	Offset Distance (FT.)
≤ 45	12
> 45	18

If offset distance is not attainable, then see "Barrier Placement With Attenuator" Detail shown below.

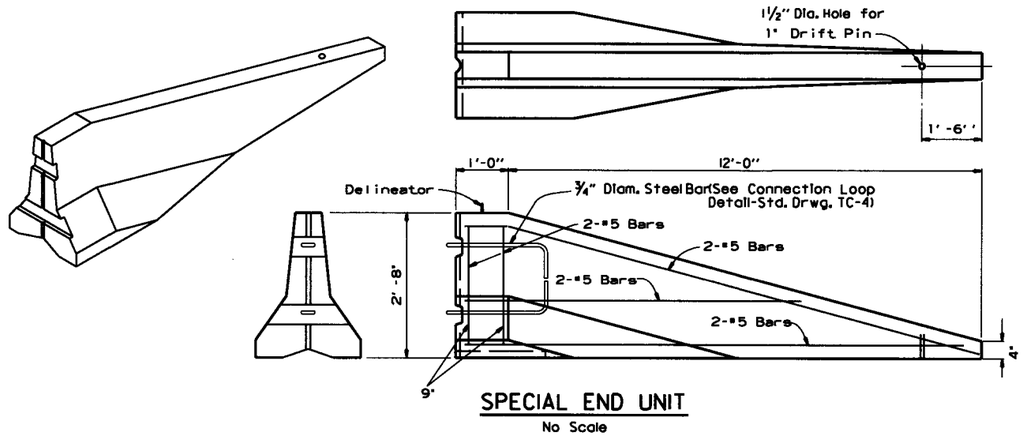


BARRIER PLACEMENT WITH ATTENUATOR

No Scale

*** Min. 3'-0" From Edge of Travel Lane to Nearest Edge of Attenuator

** Offset Distance For Two Way Traffic Only



SPECIAL END UNIT

No Scale

General Notes

When shown on the Plans, the ends of the Temporary Precast Concrete Barrier shall be protected with an NCHRP-350 or Manual For Assessing Safety Hardware (MASH) approved Crash Cushion. Payment for Crash Cushions shall be made under the item of "Temporary Impact Attenuation Barrier."

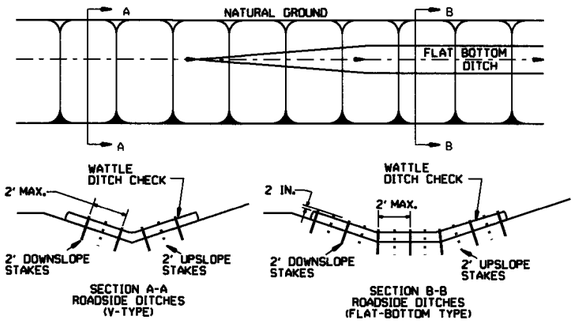
ARKANSAS STATE HIGHWAY COMMISSION

STANDARD TRAFFIC CONTROLS FOR HIGHWAY CONSTRUCTION - TEMPORARY PRECAST BARRIER

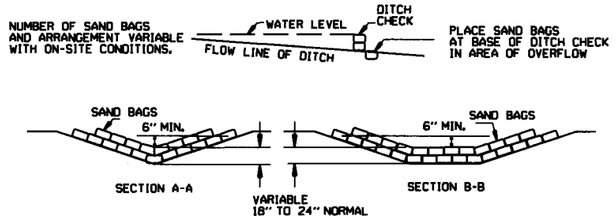
STANDARD DRAWING TC-5

GENERAL NOTES

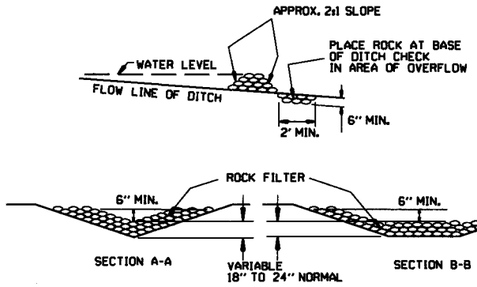
INSTALL A MINIMUM OF 2 UPSLOPE STAKES AND 1 DOWNSLOPE STAKES AT AN ANGLE TO WEDGE WATTLE TO BOTTOM OF DITCH.



WATTLE DITCH CHECK (E-1)



SAND BAG DITCH CHECK (E-5)

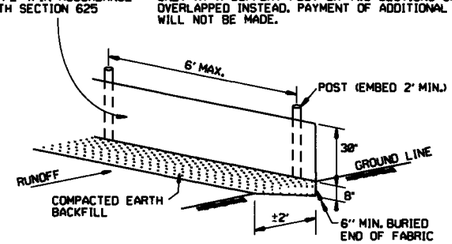


ROCK DITCH CHECK (E-6)

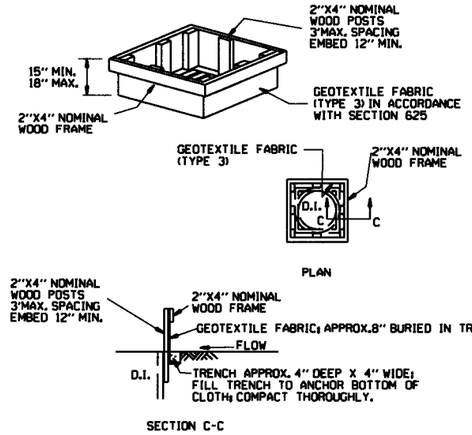
GENERAL NOTES

GEOTEXTILE FABRIC (TYPE 4) IN ACCORDANCE WITH SECTION 625

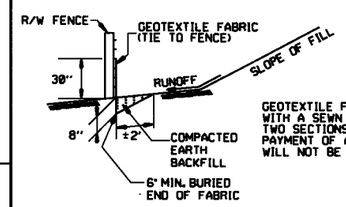
GEOTEXTILE FABRIC SHALL BE SPLICED TOGETHER WITH A SEWN SEAM ONLY AT A SUPPORT POST OR TWO SECTIONS OF FENCE MAY BE OVERLAPPED INSTEAD. PAYMENT OF ADDITIONAL MATERIAL FOR OVERLAP WILL NOT BE MADE.



SILT FENCE (E-11)

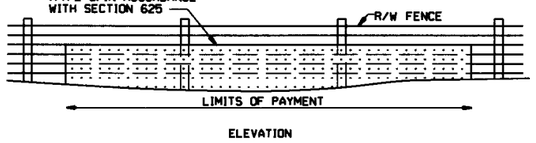


DROP INLET SILT FENCE (E-7)



GENERAL NOTES

GEOTEXTILE FABRIC SHALL BE SPLICED TOGETHER WITH A SEWN SEAM ONLY AT A SUPPORT POST. OR TWO SECTIONS OF FENCE MAY BE OVERLAPPED INSTEAD. PAYMENT OF ADDITIONAL MATERIAL FOR OVERLAP WILL NOT BE MADE.



ELEVATION

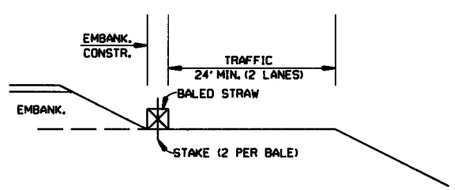
SILT FENCE ON R/W FENCE (E-4)

GENERAL NOTES

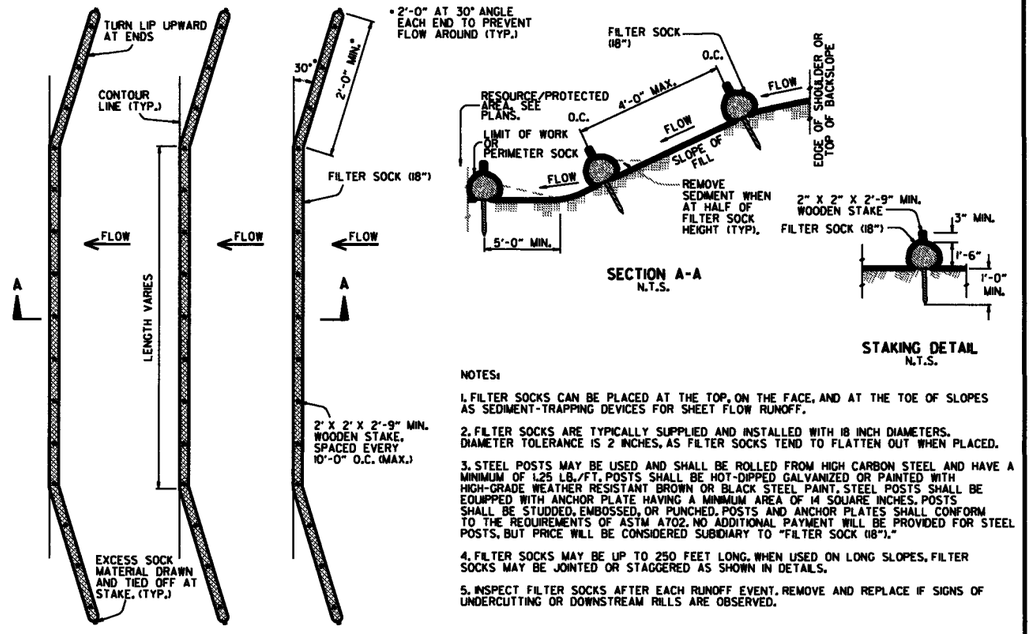
1. STRAW BALES SHALL BE INSTALLED SO THAT THE BINDINGS ARE ORIENTED AROUND THE SIDES RATHER THAN ALONG THE TOPS AND BOTTOMS OF THE BALES. THE BALES SHALL BE A MINIMUM OF 30 INCHES IN LENGTH.

2. NO GAPS SHALL BE LEFT BETWEEN BALES.

3. BALED STRAW FILTER BARRIERS COMPLETED AND ACCEPTED WILL BE MEASURED BY THE BALE IN PLACE AS AUTHORIZED BY THE ENGINEER AND WILL BE PAID FOR AT THE CONTRACT UNIT PRICE BID PER BALE FOR BALED STRAW DITCH CHECKS.



BALED STRAW FILTER BARRIER (E-2)



NOTES:

1. FILTER SOCKS CAN BE PLACED AT THE TOP, ON THE FACE, AND AT THE TOE OF SLOPES AS SEDIMENT-TRAPPING DEVICES FOR SHEET FLOW RUNOFF.

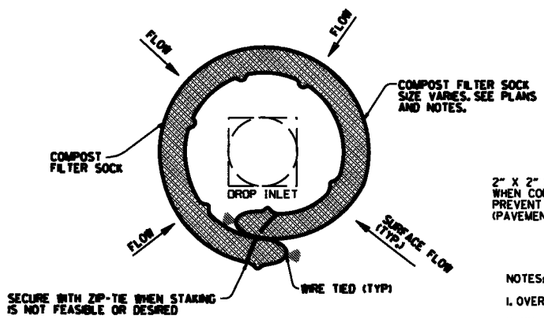
2. FILTER SOCKS ARE TYPICALLY SUPPLIED AND INSTALLED WITH 18 INCH DIAMETERS. DIAMETER TOLERANCE IS 2 INCHES, AS FILTER SOCKS TEND TO FLATTEN OUT WHEN PLACED.

3. STEEL POSTS MAY BE USED AND SHALL BE ROLLED FROM HIGH CARBON STEEL AND HAVE A MINIMUM OF 1.25 LB./FT. POSTS SHALL BE HOT-DIPPED GALVANIZED OR PAINTED WITH HIGH-GRADE WEATHER RESISTANT BROWN OR BLACK STEEL PAINT. STEEL POSTS SHALL BE EQUIPPED WITH ANCHOR PLATE HAVING A MINIMUM AREA OF 14 SQUARE INCHES. POSTS SHALL BE STUDDED, EMBOSSED, OR PUNCHED. POSTS AND ANCHOR PLATES SHALL CONFORM TO THE REQUIREMENTS OF ASTM A702. NO ADDITIONAL PAYMENT WILL BE PROVIDED FOR STEEL POSTS, BUT PRICE WILL BE CONSIDERED SUBSIDIARY TO "FILTER SOCK (18")."

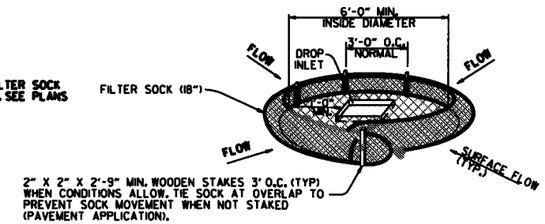
4. FILTER SOCKS MAY BE UP TO 250 FEET LONG. WHEN USED ON LONG SLOPES, FILTER SOCKS MAY BE JOINTED OR STAGGERED AS SHOWN IN DETAILS.

5. INSPECT FILTER SOCKS AFTER EACH RUNOFF EVENT. REMOVE AND REPLACE IF SIGNS OF UNDERCUTTING OR DOWNSTREAM RILLS ARE OBSERVED.

FILTER SOCK ALONG SLOPE (E-3)



DROP INLET PLAN VIEW
N.T.S.



DROP INLET PERSPECTIVE VIEW
N.T.S.

NOTES:

1. OVERLAP ENDS OF SOCK (1' MIN. 3' MAX.).

2. USE 18" DIA. SOCK IN NON-TRAFFIC AREAS OR AREAS WHERE SAFETY IS NOT A CONCERN.

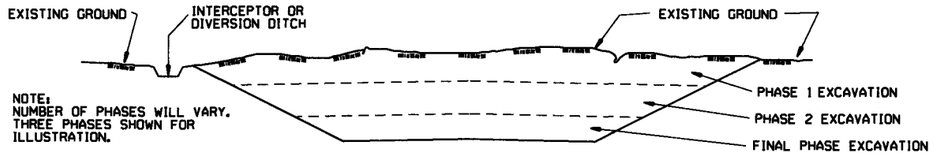
CLEARING AND GRUBBING

CONSTRUCTION SEQUENCE

1. PLACE PERIMETER CONTROLS (I.E. SILT FENCES , DIVERSION DITCHES, SEDIMENT BASINS, ETC.)
2. PERFORM CLEARING AND GRUBBING OPERATION.

EXCAVATION



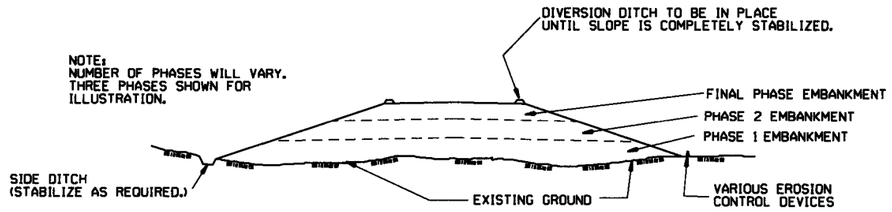
GENERAL NOTE

ALL CUT SLOPES SHALL BE DRESSED, PREPARED, SEEDED, AND MULCHED AS THE WORK PROGRESSES. SLOPES SHALL BE EXCAVATED AND STABILIZED IN EQUAL INCREMENTS NOT TO EXCEED 25 FEET, MEASURED VERTICALLY.

CONSTRUCTION SEQUENCE

1. EXCAVATE AND STABILIZE INTERCEPTOR AND/OR DIVERSION DITCHES.
2. PERFORM PHASE 1 EXCAVATION. PLACE PERMANENT OR TEMPORARY SEEDING.
3. PERFORM PHASE 2 EXCAVATION. PLACE PERMANENT OR TEMPORARY SEEDING.
4. PERFORM FINAL PHASE OF EXCAVATION. PLACE PERMANENT OR TEMPORARY SEEDING. STABILIZE DITCHES. CONSTRUCT DITCH CHECKS, DIVERSION DITCHES, SEDIMENT BASINS, OR OTHER EROSION CONTROL DEVICES AS REQUIRED.

EMBANKMENT



GENERAL NOTE

ALL EMBANKMENT SLOPES SHALL BE DRESSED, PREPARED, SEEDED, AND MULCHED AS THE WORK PROGRESSES. SLOPES SHALL BE CONSTRUCTED AND STABILIZED IN EQUAL INCREMENTS NOT TO EXCEED 25 FEET, MEASURED VERTICALLY.

CONSTRUCTION SEQUENCE

1. CONSTRUCT DIVERSION DITCHES, DITCH CHECKS, SEDIMENT BASINS, SILT FENCES, OR OTHER EROSION CONTROL DEVICES AS SPECIFIED.
2. PLACE PHASE 1 EMBANKMENT WITH PERMANENT OR TEMPORARY SEEDING. PROVIDE DIVERSION DITCHES AND SLOPE DRAINS IF EMBANKMENT CONSTRUCTION IS TO BE TEMPORARILY ABANDONED FOR A PERIOD OF GREATER THAN 21 DAYS.
3. PLACE PHASE 2 EMBANKMENT WITH PERMANENT OR TEMPORARY SEEDING. PROVIDE DIVERSION DITCHES AND SLOPE DRAINS IF EMBANKMENT CONSTRUCTION IS TO BE TEMPORARILY ABANDONED FOR A PERIOD OF GREATER THAN 21 DAYS.
4. PLACE FINAL PHASE OF EMBANKMENT WITH PERMANENT OR TEMPORARY SEEDING. PLACE DIVERSION DITCHES AND SLOPE DRAINS AND MAINTAIN UNTIL ENTIRE SLOPE IS STABILIZED.

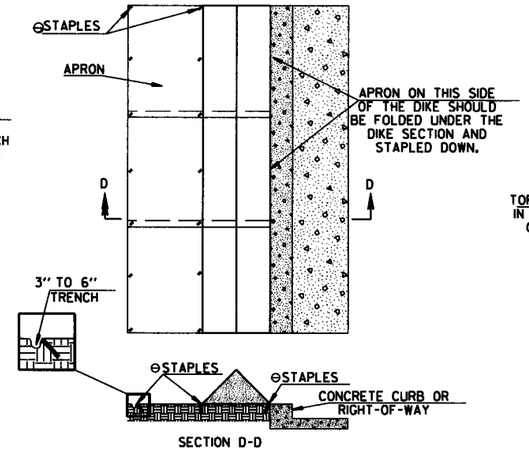
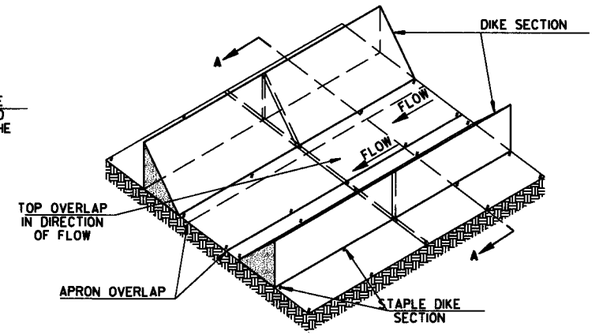
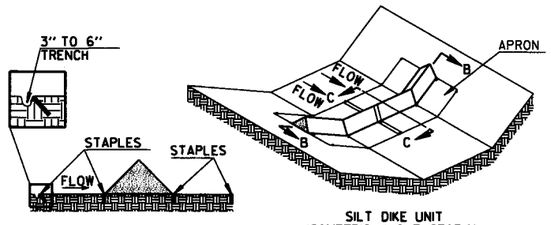
TRIANGULAR SILT DIKE INSTALLATION FOR DIVERSION DITCH AND/OR DITCH LINER



TRIANGULAR SILT DIKE INSTALLATION FOR CONTINUOUS BARRIER



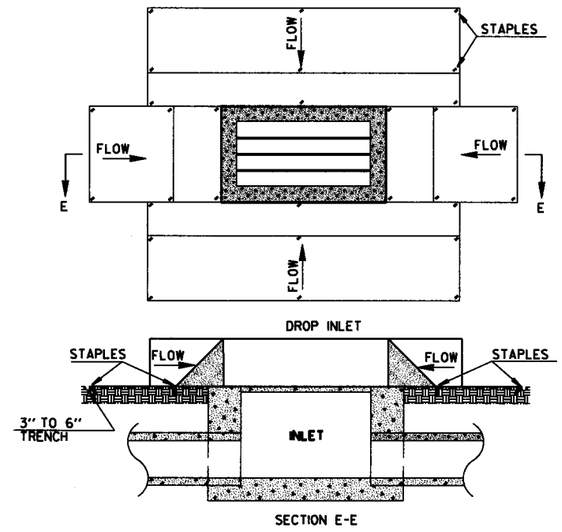
TRIANGULAR SILT DIKE INSTALLATION FOR TEMPORARY DITCH LINER



TRIANGULAR SILT DIKE INSTALLATION FOR ROADWAY DITCH OR DRAINAGE DITCH

O POINT "1" MUST BE HIGHER THAN POINT "2" TO ENSURE THAT WATER FLOWS OVER THE DIKE AND NOT AROUND THE ENDS.

⊖ STAPLES SHALL BE PLACED WHERE THE UNITS OVERLAP AND IN THE CENTER OF THE UNIT AS SHOWN ON THE DIAGRAM.



TRIANGULAR SILT DIKE INSTALLATION FOR DROP INLETS

SYMBOLOGY

SYMBOL TO BE USED TO DENOTE DEVICE ON PLANS

NOTE: SILT DIKE SHOULD ONLY BE USED FOR DROP INLETS IN SUMP LOCATIONS.

GENERAL NOTES

1. THIS WORK SHALL CONSIST OF FURNISHING, INSTALLING, AND MAINTAINING THE TRIANGULAR SILT DIKE. THE DIKES SHALL BE USED AS A CONTINUOUS LINE BARRIER AT THE TOE OF SLOPE OR ACROSS THE ROADWAY DITCH TO CONTAIN SEDIMENT AND MINIMIZE EROSION, OR AS DIRECTED BY THE ENGINEER. THESE DIKES SHALL BE INSTALLED AND LOCATED AS SOON AS CONSTRUCTION WILL ALLOW OR AS DIRECTED BY THE ENGINEER.

2. TRIANGULAR SILT DIKE SHALL BE TRIANGULAR SHAPED HAVING A HEIGHT OF AT LEAST 8" TO 10" IN THE CENTER WITH EQUAL SIDES AND A 16" TO 20" BASE. THE TRIANGULAR SHAPED INNER MATERIAL SHALL BE URETHANE FOAM. THE OUTER COVER SHALL BE A WOVEN GEOTEXTILE FABRIC PLACED AROUND THE INNER MATERIAL & ALLOWED TO EXTEND BEYOND BOTH SIDES OF THE TRIANGLE 24" TO 36". THIS FABRIC SHOULD BE MILDEW RESISTANT, ROT-PROOF AND RESISTANT TO HEAT AND ULTRAVIOLET RADIATION MEETING REQUIREMENTS FOR SEDIMENT CONTROL IN AASHTO M288. THE DIKES SHALL BE ATTACHED TO THE GROUND WITH WIRE STAPLES. THE STAPLES SHALL BE NO. 11 GAUGE WIRE AND BE AT LEAST 6" TO 8" LONG. STAPLES SHALL BE PLACED AS SHOWN ON THESE DETAILS.

   THE CONTRACTOR SHALL INSPECT ALL DIKES AFTER EACH RAINFALL EVENT OF AT LEAST 0.5" OR GREATER. ANY DEFICIENCIES OR DAMAGE SHALL BE REPAIRED BY THE CONTRACTOR. ACCUMULATED SILT OR DEBRIS SHALL BE REMOVED AND RELOCATED AS DIRECTED BY THE ENGINEER. IF THE DIKES ARE DAMAGED OR INADVERTENTLY MOVED DURING THE SILT REMOVAL PROCESS, THE CONTRACTOR SHALL IMMEDIATELY REPLACE AFTER DAMAGE OCCURS.

3. ACCEPTED TRIANGULAR SILT DIKE, MEASURED AS PROVIDED ABOVE, WILL BE PAID FOR AT THE CONTRACT UNIT PRICE BID FOR TRIANGULAR SILT DIKE. PRICE BID WILL INCLUDE THE COST OF FURNISHING THE DIKES, INSTALLING, MAINTAINING AND REMOVAL WHEN DIRECTED BY THE ENGINEER.
