CRISIS LEADERSHIP: RESOLVING CLIMATE IMPACTS THROUGH COMMUNITY LIFELINES

FEMA COURSE MGT-### TBD

EQUIPPING LEADERS TO BUILD RESILIENT COMMUNITIES AGAINST CLIMATE RISKS

As climate-induced disasters become more frequent, intense, and longer in duration, communities need to establish more robust systems for mitigating these impacts and addressing disproportionate effects on vulnerable populations.

Are you ready to implement climate resilience strategies?

DELIVERED IN PARTNERSHIP BY

Georgia Tech Enterprise Innovation Institute

Developed under DHS/FEMA Grant No. EMW-2022-CA-00038-S01 for NTED. www.firstrepondertraining.gov

Course Overview:

This course will teach participants to evaluate future climate change impacts using FEMA's Community Lifelines Toolkit to formulate climate mitigation and adaptation strategies. Participants will learn to utilize FEMA's Community Lifelines Toolkit, web-based tools, and climate models to determine projected impacts on underserved populations and disadvantaged communities. Participants will incorporate a whole community approach to resolving climate impacts.

Course Scope:

This course equips participants with skills and knowledge to assess future climate change impacts to develop strategies for whole community preparedness and resilience, focusing on underserved populations, using FEMA's Community Lifelines toolkit.

Target Audience:

Emergency managers, urban planners, state, local, tribal, and territorial government (SLTT) leadership, first responders, community-based organizations, economic development organizations, public health officials, councils of government, public information officers

Course Length:

6 hours, in-person, instructor-led training

Course Core Capabilities:

- Planning
- Operational coordination
- Threat & hazard identification
- Long-term vulnerability reduction
- Community resilience
- Risk & disaster resilience assessment

Certification:

A certificate will be issued to participants who successfully complete this course.
