AXIS Store Data Manager
For integration with third-party applications

AXIS Store Data Manager provides a local point where you can gather, store and manage statistical data from cameras running supported Axis applications. It lets you dynamically group, filter and drill down data, and then export it to a third-party business intelligence application for viewing. And, by only storing numerical data and never images or video, personal integrity is never compromised. Plus, it doubles as a system-health monitoring application by monitoring camera connections and sending an email alert if there's problems retrieving data. Furthermore, this flexible tool allows viewing and management from a range of web browsers.

> **Store and manage data locally**

> **Monitor system health**

> **Integrate with third-party applications**

> **Supports a wide range of web browsers**

> **Group, filter and drill-down data**

AXIS Store Data Manager
