Foreword

I am happy to release the 2014 California Agricultural Statistics Review. Even though the 2014 crop year coincides with the third consecutive year of unprecedented drought, the innovation and resilience of California's agricultural community continues to ensure the State's agricultural abundance.

Despite the tremendous challenges in 2014, the farmgate value of the state's 76,400 farms and ranches was a record \$54 billion. Of the \$54 billion, over \$21 billion was attributed to California's agricultural exports.

Our farmers, ranchers and nurserymen deserve special commendation for maintaining this delicate balance of continued healthful food production in an era of drought. From fallowing land totaling a half million acres to capital-intensive investment in drip irrigation and other sustainability processes, our agricultural community is a respected partner with university experts and policy-makers who responsibly steward California's agricultural heritage and its tremendous potential.

Many of the nutritious food products so valued and necessary as part of a healthy diet are produced exclusively in California. With over 400 commodities produced commercially, no other state is poised to harness the combination of human ingenuity, productive soils, sunshine and water as we are in this great state. In terms of environmental stewardship, initiatives funded here demonstrate our forward-thinking commitment to maintaining the farm ecosystem environment for future generations.

At the time of this publication, it was estimated the direct costs of the continued drought to California agriculture had amounted to almost \$2 billion for the preceding year. Despite this, I remain optimistic that challenges or not, the industrious men and women of agriculture are creating a better future for all of us; our air, land and water included.

We thank you for taking the time to review this report. And, to the many who have made this report possible, thank you. I look forward to partnering with you this coming year.

Yours truly,

Karen Ross, Secretary
California Department of Food and Agriculture

Agricultural Statistical Overview

The sales value generated by California agriculture increased by 5.1 percent between the 2013 and 2014 crop years. The State’s 76,400 farms and ranches received \$53.5 billion for their output, up from the \$50.9 billion received in 2013. California’s increase in revenue was led by the dairy industry followed by almonds and grapes, respectively.

Almond cash receipts decreased year-over-year for the first time since 2009 as revenue decreased to \$5.89 billion. Cash receipts fell by 7.7 percent due to decreased production as well as a fall in prices from \$3.21 per pound of almonds in 2013 to \$3.19 per pound in 2014. Grape production generated \$5.24 billion in cash receipts in 2014, down 6 percent from last year’s record high. Production decreased by 12 percent from 2013, but prices received by growers increased from \$719 per ton of grapes in 2013 to \$768 per ton in 2014. Revenue generated from the cattle increased year-over-year and reached a record high as cash receipts were \$3.72 billion for the year. Receipts increased more than 22 percent from 2013 as production decreased 7 percent.

The dairy industry, California’s leading commodity in cash receipts, generated a record \$9.36 billion for milk production in 2014, up 23 percent from 2013 and 22 percent above the record year of 2011. Milk production decreased by nearly 3 percent and a rise in prices resulted in an overall increase in cash receipts for the marketing year. Milk prices received by producers rose from \$18.48 per hundred pounds of milk sold in 2013 to \$22.12 in 2014. As the leading dairy producing state in the country, California produced nearly 20 percent of the nation’s supply in 2014.

California remained the leading state in cash farm receipts in 2014 with combined commodities representing nearly 13 percent of the U.S. total.

California’s leading crops remained fruits, nuts and vegetables. Over a third of the country’s vegetables and two-thirds of the country’s fruits and nuts were produced in California.

Notable Increases in California Value of Production:

Onions, Processing.....	117%
Onions, Summer Storage	104%
Plums.....	66%
Raspberries, All.....	65%
Peaches, Freestone	62%
Peppers, Chile	61%
Nectarines	44%
Cabbage, Fresh.....	44%
Oranges, Navel & Misc.....	34%
Sunflower, Non-Oil.....	30%

Notable Decreases in California Value of Production:

Corn for Grain.....	-60%
Wheat, All	-50%
Cherries, Sweet	-47%
Barley	-49%
Olives	-46%
Celery	-34%
Asparagus.....	-30%
Potatoes, Spring	-29%
Rice, All	-28%
Cottonseed.....	-27%

Farm Facts

In 2014, 76,400 farms operated in California, which is 1.9 percent less than in 2013 and 3.7 percent of the national total. Nearly 27 percent of California farms generated commodity sales over \$100,000, greater than the national average of 20 percent. The amount of land devoted to farming and ranching in California remained unchanged at 25.5 million acres in 2014. As a result, the average farm size increased from 327

acres to 334, which is below the national average of 438 acres.

Land Values/Cash Rents

The average value of California farm real estate increased in 2014 to \$7,400 per acre. Irrigated cropland's value increased 2.5 percent to \$12,100 per acre and non-irrigated cropland increased slightly to \$3,650 per acre. The value of all cropland increased 2.8 percent to \$10,140. The value of pastureland increased slightly from the 2013 level to \$2,700 per acre. The rental rate of irrigated cropland increased to \$405 per acre, up from \$365 per acre in 2013. Non-irrigated rental rates increased by 7 percent to \$32 per acre, up from \$30 per acre in 2013. Pastureland rental rates increased from 2013 rental rates, up to \$13.5 per acre in 2014 from \$12 in 2013.

Top Commodities

California's top 20 crop and livestock commodities accounted for more than \$43.0 billion in value in 2014. Thirteen commodities exceeded \$1 billion in value in 2014. The cash receipts of fourteen of the top twenty commodities increased in value between 2013 and 2014. The growth in the cash receipts of lemons, tangerines, and oranges were the largest percentage gains of the top 20 commodities. Grower returns are subject to change and could result in an updated dollar amount in next year's report.

Weather Highlights for 2014

The year began with unseasonably dry and warm weather across the State. A stubborn high pressure ridge blocked cool air and storm systems. Daytime high temperatures across Northern California were 10 to 20 degrees above normal and some locations exceeded record levels. Minimum temperatures were cooler than normal. Dry conditions persisted around the State with slight precipitation reported. Light precipitation fell across the northern mountains and into the North Sacramento Valley. Off shore winds across the State led to a moderate Santa Ana wind episode in the southern counties. There were increased fire weather concerns, especially in Southern California. January ended with a low

pressure system building south to the coast of Baja California. The residual moisture from this low resulted in a few isolated showers in Southern California. Then a low pressure system dropped southward from the Pacific Northwest and spread showers across the State. For some locations, this brought the first measurable precipitation of the year.

As February began, high pressure quickly moved in behind this system to return the dry and mild conditions. Following this, a moist subtropical air mass was drawn towards the West Coast, resulting in the first really heavy precipitation to the State in over a year. Periods of heavy rain fell across much of the State, with a particular focus across the Central Coast, Sacramento Valley, and the western slopes of the Sierra Nevada Mountains. The month ended with a series of cold fronts and storms that brought especially heavy rains to Southern California. This last surge of showers actually brought some stations up to normal precipitation for the month of February, although all stations were still far below seasonal normal.

March brought a high pressure that developed over Southern California, bringing dry and mild conditions, while a series of weaker frontal systems pushed through the north. These weather disturbances brought widespread showers for the northern coast and mountains. In the South, a moderate Santa Ana wind episode resulted in March brought a high pressure that developed over Southern California, bringing dry and mild conditions, while a series of weaker frontal systems pushed through the north. These weather disturbances brought widespread showers for the northern coast and mountains. In the South, a moderate Santa Ana wind episode resulted in continued warm and dry conditions. By mid-month, temperatures were warming and remained above normal. Sunny skies continued until the month closed with rain and mountain snow in the northern half of the State and an unstable atmosphere. Widespread thunderstorm activity developed, which resulted in localized areas of heavy rain, small hail, and even a few tornadoes across the Central Valley. Southern California remained relatively dry and warm.

April began with wet weather moving across the State as a couple of moderately strong cold fronts pushed through the West Coast. A high pressure ridge moved in bringing dry and warm conditions with temperatures well above normal for the time of year. The month closed with a fast moving cold front reaching the North Coast. This resulted in periods of light rain and some scattered thunderstorms across the Sierra crest, mainly

to the south of Lake Tahoe. A series of Pacific frontal systems brought rain and mountain snows across the State.

In May, a warming trend progressed throughout the State. A strong Santa Ana wind episode developed across Southern California resulted in very dry conditions across the Southland, with critical

fire weather conditions. As the month progressed, showers fell across the northern region, but the rest of the State remained very dry. Interior temperatures climbed to the 90s and low 100s across the State, even the San Francisco Bay Area experienced temperatures into the 90s. Locations along the south central coast saw temperatures rise into the low 100s. Towards the end of May, there were scattered showers, isolated thunderstorms, and light snow at the highest elevations. Temperatures across the State remained warm.

June began with sunny skies and no precipitation. Temperatures were as much as 15-20 degrees above normal in some locations and some maximum temperature records were matched or broken. The hot weather continued into the middle of the month with triple digit temperatures throughout the Central Valley. Dry conditions persisted except for a few isolated or spotty showers noted over the higher elevations of the Northeast Plateau, Lassen region, and Sierra Nevada crest areas. The month closed with scattered showers along the northern coast and reduced temperatures across most of the State.

Top 5 Agricultural States in Crop Cash Receipts, 2014

Rank	State	Crop Cash Receipts \$1,000
	United States	421,940,522
1	California	53,492,081
2	Iowa	30,957,028
3	Nebraska	24,942,122
4	Texas	24,734,962
5	Minnesota	18,827,590

In July, a persistent high pressure ridge remained over the western United States for. Temperatures across the Central Valley were hot, with triple digit high temperatures common across the Central Valley. Inland sections of the southern part of the State were also warm and the southeastern deserts were intensely hot. Monsoonal moisture streamed up from Mexico and spread into the State, resulted in scattered thunderstorm activity across the desert and mountain regions. Some of these storms produced enough rain to trigger flash floods in some locations. Towards the middle of the month,

Crop and Livestock Commodities in which California Leads the Nation ¹

Almonds	Flowers, Bulbs	Melons, Cantaloupe	Plums, Dried
Apricots	Flowers, Cut	Melons, Honeydew	Pluots

Escarole/Endive	Limes	Plums	Watercress
Figs	Mandarins & Mandarin Hybrids ²		

¹ California is the sole producer (99 percent or more) of the commodities in **bold**.

² Includes tangelos, tangerines and tangors.

the moisture continued in the mountain areas, with over an inch and a half falling near Yosemite. Light amounts did manage to reach the Central Valley. This moisture continued and towards the end of the month led to light showers spreading across the southern part of the State. Temperatures were generally near or a little above normal.

September began with moderate temperatures. Moisture from Hurricane Norbert caused some issues for the southern portion of the State with isolated, slow moving intense thunderstorms. This resulted in flash flooding in northeast San Bernardino County and western Riverside County with precipitation in excess of one inch. Behind this system, a ridge of high pressure built which resulted in temperatures soaring to well above average across the State. There were numerous record highs recorded for the central and southern sections of the State. Some temperatures were 15-20 degrees above average. This was followed by a deeper low pressure system that moved southward off the coast. Temperatures cooled and there was widespread light precipitation. The month wrapped up with 2 to 4 inches of rain along the north coast. The precipitation spread down to the central coast and inland into the valley and Sierra Nevada locations. The southern coast and mountains remained dry.

October began with dry weather and cool temperatures for the northern half of the State and sub-freezing morning lows in the Sierra Nevada Mountains. Much of the southern parts for the State saw highs hit or exceed the 100 degree mark. By midmonth, a Pacific system moved across the Northwest third of the State and rain totals of one half to one inch fell across the northern and northwest coast. Rain over the interior North Central and the West Central Coast were mostly under one quarter of an inch. One inch or more fell in the Northern Sierra Nevada Range. The rest of the State remained dry and mostly sunny. Wrapping up the month, rain totals of one to three inches were common over northern region, with the heaviest totals over the Northwest Coast. Temperatures averaged several degrees above normal over most of the State. Maximum temperatures continued to reach into the 90s over then interior portion of the State. Freezing temperatures were limited to the Extreme Inland North and Sierras.

November started with a high pressure centered on the Great Basin region limited precipitation. Then, a plume of moisture off the ocean moved in, leading to rain showers for the northern 2/3 of the State. Locations gradually cooled statewide as the month progressed. High and low temperatures remained fairly constant mid-month with the typical variability within the State. The month closed with high temperature variability as a sharp temperature gradient had set up as the southern extent of polar air pushed into the northern half of the State. This region received close to an inch to an inch and a half of rain. Modest snowfall occurred in the northern Sierras, with locations around Truckee reporting around 3-6 inches. The southern half of the State remained dry.

The beginning of December saw the wet season begin in earnest as low pressure pulled in Pacific moisture. Several locations in the central valley near Sacramento reported over 5 inches of rain per week and some locations received rainfall nearly every day. The desert south and the Los Angeles basin saw the least amount of rainfall, but nearly every location reported at least some rain. The moisture contributed to the growth of the snowpack in the Sierras, with several mountain locations receiving several feet of snow. The end of the month saw temperatures averaging 5-10 degrees warmer than normal across most of the State. The exception was over southeast California and in the deserts, where temperatures averaged closer to seasonal levels. Precipitation lowered to moderate levels throughout the State.

Global Marketplace

California continues to set the pace for the rest of the nation as the country's largest agricultural producer and exporter. In dollar terms, California's agricultural exports reached a \$21.59 billion for 2014.

Significantly, California is the nation's sole exporter of many agricultural commodities, supplying 99 percent or more of the following: table grapes, raisins, dried plums, kiwi, dates, olives and olive oil, figs, almonds, walnuts, pistachios, garlic, and artichokes.

California's agricultural export values have realized tremendous gains in the past decade. While 2014 showed relatively the same values as the previous year, on average, California's agricultural exports have grown at an impressive rate over the past 10 years, except for a slight contraction between 2008 and 2009.

California's Top 10 Agricultural Export Markets, 2014

¹ Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

² A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

California's Fruit and Vegetable Crop Seasons

County Statistical Data

California’s counties reported an increase of 8.5 percent in the value of their agricultural production for 2014. Seven counties reported agricultural production exceeding \$3.0 billion each. Fourteen counties reported a value of production in excess of \$1.0 billion. Tulare County remained the leading county with an agricultural production value of \$8.08 billion, an increase of 10.0 percent from the 2013 value. Kern County was second in value of production with \$7.55 billion, an 11.6 percent increase from 2013. Fresno County was third in value, with an increase of 9.2 percent in production to \$7.04 billion. Monterey remained fourth in value with \$4.49 billion, an increase of 6.6 percent from 2013.

Notes to the Agricultural Commissioners’ Data

The gross value of production published in this report includes all farm production, whether sold into usual marketing channels or used on the farm where it is produced. Values placed on pasture and range feed are included and fresh fruit and vegetable crop values are based on the Free-On-Board (F.O.B.) packed price. Values are recorded for all products grown during the calendar year, regardless of when they are marketed. The California County Agricultural Commissioners’ Reports publication also provides statistics on a broader range of commodities than estimates prepared by other agencies.

Highlights of County Ranks and State Totals, 2014

Rank	Commodity	County Rankings
1	Milk and Cream	Tulare leads again with over 27 percent of the State total
2	Almonds	Kern leads at nearly 19 percent followed by Stanislaus and Fresno both about 17 percent
3	Grapes, All	Kern leads with 25 percent of the State total followed by Fresno with 13 percent
4	Cattle and Calves	Tulare leads with 22 percent of total, Fresno moves to rank 2nd this year with 13 percent
5	Nursery Products	San Diego continues to lead with 24 percent of the State total
6	Walnuts (English)	San Joaquin leads with over 20 percent, followed by Butte
7	Strawberries	Monterey and Ventura lead with nearly 60 percent of the total
8	Lettuce	Monterey leads with over 70 percent, Imperial follows with almost 8 percent
9	Pistachios	Kern leads with 24 percent followed by Fresno with 23 percent
10	Oranges	Tulare leads with 62 percent of the State total
11	Alfalfa Hay	Kern leads with 15 percent, followed by Imperial at 14.5 percent
12	Tomatoes, Processing	Fresno leads with over 32 percent, followed by Yolo and Kings this year
13	Silage, All	Tulare at almost 24 percent of the total followed by Merced with just under 19 percent
14	Chickens	Fresno leads with nearly 50 percent, Merced follows with over 26 percent
15	Tangerines	Kern holds almost 50 percent followed by Tulare with over 32 percent

California's Leading Timber Counties, 2014¹

Timber Rank	County	Timber Volume	Total Agricultural Value	Timber Value	Timber Percentage of Total
		Million Bd. Ft.	(Including Timber)	\$1,000	Agricultural Value Within County
			\$1,000	\$1,000	Percent
1	Humboldt	244,697	278,303	81,513	29.3
2	Shasta	192,176	143,594	39,861	27.8
3	Siskiyou	183,730	363,330	36,745	10.1
4	Mendocino	115,197	174,200	34,661	19.9
5	Plumas	97,207	51,482	18,416	35.8

¹ Timber volume and value data are from the State Board of Equalization, Timber Tax Division.

Because of these concepts, the State total for gross dollar values summarized in this report differs from the cash receipts to farmers estimated by USDA's National Agricultural Statistics Service, Pacific Region-California. The larger total value reported by Agricultural Commissioners results from the different definitions used in estimating total value of production rather than cash receipts to producers.

Some counties include timber as a part of their crop report, following the pattern set by the California County Agricultural Commissioners and Sealers Association (CACASA). Since it is not comparable to earlier county summaries, timber has not been made a part of the main tables of this summary. The total 2014 value of production reported by the counties, including timber, is \$64.9 billion, up 8.5

percent from last year. At \$81.5 million, Humboldt County leads the State with 25 percent of the State's total timber value.

County Agricultural Commissioners' Reports

Copies of individual County Agricultural Commissioners' Reports may be requested or obtained directly from each County Agricultural Commissioner's Office. Many of the counties publish the reports on their websites free-of-charge.

USDA's National Agricultural Statistics Service, Pacific-Region California publications are available free-of-charge on the internet at: www.nass.usda.gov/ca.

Field Crops

The total value of California field crop production decreased to \$3.70 billion, down 14.9 percent from 2013. Dry edible beans, hay (alfalfa and other), fall potatoes, and sunflowers (non-oil) were the only field crops in California whose total value increased from 2013 to 2014. Large-to-moderate decreases in most field crop values led to the decrease in total field crop value.

Cotton acreage and value decreased from 2013 to 2014. The price of Upland cotton was \$0.88 per pound, down 3 percent from 2013. The total value of Upland cotton decreased from \$145 million in 2013 to \$99 million in 2014, a decrease of 32 percent. California growers planted 155 thousand acres of American Pima cotton, down 32 thousand acres from 2013. The American Pima cotton price decreased from \$1.72 to \$1.57 per pound in 2014. This resulted in the value of American Pima cotton decreasing from \$504 million in 2013 to \$392 million in 2014.

California produced nearly 5.69 million tons of alfalfa hay in 2014, valued at \$1.41 billion. Production of hay other than alfalfa decreased by 7.4 percent, while its total value increased by 0.4 percent. Total hay production decreased 3.4 percent from 2013. In 2014, there were small changes in hay acreage and yield and an increase in price per ton which resulted in an overall increase in the value of production.

Rice plantings decreased by 23 percent, with 434 thousand acres planted in 2014. Medium grain rice contributed to 91 percent of the total rice acreage and 93 percent of the total production. Acreage and production decreased for all three grain lengths, but yield increased for long and medium varieties. The total value of rice production was \$714 million, a decline of 28 percent from the previous year.

California corn for grain production was valued at \$74 million for 2014, a 60 percent decrease from 2013. Harvested acreage decreased by 47 percent. Yield and price both decreased from the previous year. Harvested acreage decreased to 95 thousand acres and price decreased by 14 percent. Harvested acres of corn silage increased by 1 percent to 420 thousand acres. Production of corn silage decreased slightly to 10.9 million tons, down 1 percent from 2013.

Forty-two percent of the California wheat crop was harvested for grain in 2014. Wheat was planted on 530 thousand acres and 220 thousand were harvested for grain. Overall, production decreased 43 percent and value decreased 50 percent. The production of winter wheat decreased 45 percent from 2013, while Durum wheat production decreased 36 percent from 2013.

Notable Increases in Value:

Sunflower, Non-Oil	30%
Hay, Alfalfa	18%
Hay, All	14%
Beans, All Dry Edible	6%

Notable Decreases in Value:

Corn For Grain	-60%
Wheat, All	-50%
Barley	-49%
Cotton, Upland	-32%
Potatoes, Spring	-29%

¹ Area planted includes preceding fall.

² Production is on a clean basis.

³ Missing data has not been published due to the estimate being discontinued, not estimated, or not available.

⁴ Includes varieties not listed separately. Excludes beans grown for garden seed.

⁵ Planted acreage is for all purposes.

⁶ Production ginned. Cotton bales are 480 lbs. net-weight.

⁷ Estimates began in 2005.

⁸ All alfalfa forage production is the sum of alfalfa harvested as dry hay; and alfalfa haylage and greenchop production after converting it to a dry equivalent basis.

⁹ All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop; after converting alfalfa and all other haylage and greenchop to a dry equivalent basis.

¹⁰ Estimated marketings of alfalfa and other hay used as weights to calculate all hay prices.

¹¹ Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is not included.

¹² Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.

¹³ Sweet rice acreage has been included since the 2003 crop year, but not previous years.

¹⁴ Excludes wild rice.

¹⁵ Estimates began in 2000.

¹⁶ Relates to year of intended harvest for fall planted beets in central California and to year of planting for overwintered beets in central and Southern California. Data for 2014 is not yet available.

¹⁷ Preliminary Marketing Year Average Price.

¹⁸ Value derived from County Agricultural Commissioner data. Report from 2014 is not yet available.

¹⁹ Beginning in 2010, winter and summer estimates included in spring total.

N/A Not available.

Floriculture

California's floriculture crop continued to lead the nation with crops valued at \$1.05 billion in sales, for operations with more than \$100,000 in sales, comprising 26 percent of the U.S. total wholesale value. Sales decreased slightly from the 2013 total. California producers decreased from 732 in 2013 to 582 in 2014.

For operations with more than \$100,000 in sales, California accounted for 15 percent of the total value of Total Bedding and Garden plants, the highest-valued crop category in the 15-state program. The wholesale value of California-grown bedding and garden plants at \$273 million in 2014 was down 2 percent from 2013.

California also led the country in potted flowering plant value for 2014, with a total value of \$288 million wholesale, up 3 percent from 2013 valuation. California accounted for 37 percent of the 15-state total wholesale value reported for potted flowering plants.

California was the dominant state in cut flower production, accounting for about 77 percent of the total cut flower wholesale value. The \$275 million in value for 2014 was down slightly from 2013.

¹ The total covered growing area of 147,570,000 square feet consisted of the following: 29,455,000 square feet of shade and temporary cover; 12,341,000 square feet of glass; 36,911,000 square feet of fiberglass and other rigid greenhouses; 68,863,000 square feet of film plastic (single/multi) greenhouses; and 10,844 acres of open ground.

² Included in state totals to avoid disclosure of individual operations

³ Pot price is for 1 to 2 gallon pots.

Fruit and Nut Crops

In 2014, California accounted for over 57 percent of the U.S. non-citrus fruit and nut production. Of the citrus crops, California accounts for 37 percent of the U.S. citrus production and 56 percent of the national value. In total, the state produced over 15.9 million tons of fruit and nuts in 2014, 51 percent of the national total. The state's total value of all fruits and nuts in 2014 was \$21.4 billion, over 71 percent of the U.S. total value of all fruits and nuts.

For the second year in a row, almonds were the number one valued fruit or nut crop in California, coming in at \$5.9 billion in production value for 2014. Grapes were a close second at \$5.2 billion. California is the number one producer of almonds in the world, with over 65 percent of 2014 almond shipments exported. California grapes accounted for 88 percent of the U.S. utilized grape production in 2014.

Crops with record California production in 2014 were blueberries, mandarins, raspberries, strawberries, and walnuts. California accounted for all or nearly all the national production of almonds, dates, figs, kiwifruit, olives, Clingstone peaches, pistachios, dried plums, raisins, and walnuts.

The nation's largest fruit producing states are California, Florida and Washington. California accounts for 52 percent of the harvested fruit acreage in the country.

The value of U.S. tree nut production in 2014 was over \$10 billion, with almonds, walnuts, and pistachios accounting for 93 percent of the sales.

California is the nation's only producer of those three nut crops. For almonds and pistachios, California is the number one producer in the world, producing over 80 percent of the world's almonds and around 40 percent of the world's pistachios. For walnuts, California is the second largest producer in the world and the largest exporter.

Notable Increases in California Production:

Raspberries, All	39%
Nectarines	29%
Plums, Dried	22%
Plums	18%
Walnuts	16%
Mandarins	13%
Blueberries	11%

Notable Decreases in California Production:

Cherries, Sweet	60%
Olives	43%
Grapes, Raisin	22%
Pears, Other	19%
Grapefruit	15%
Pears, All	14%
Pears, Bartlett	13%
Grapes, All	12%
Apples	11%

Grape Crush

Grape Crush Grape Overview

Information contained in this report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

The Final Grape Crush Report includes all grape tonnage crushed during the 2014 season. Changes in tonnage, Brix and prices from the preliminary report to this final report were due to late reports and corrections to the original data. Reporting errors by some processors have caused a change in some district/variety entries.

Details of the crushed tonnage, degrees Brix, and weighted average prices were reported by grape type and variety, as well as by grape pricing districts. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code.

Summary of Grape Tonnages and Prices

The 2014 crush totaled 4,144,534 tons, down 12 percent from the record high 2013 crush of 4,700,377 tons. Red wine varieties accounted for the largest share of all grapes crushed, at 2,141,359 tons, down 11 percent from 2013. The 2014 white wine variety crush totaled 1,753,038 tons, down 4 percent from 2013. Tons crushed of raisin type varieties totaled 155,514, down 53 percent from 2013, and tons crushed of table type varieties totaled 94,623, down 25 percent from 2013.

The Grape Crush Report includes the total number of tons crushed for concentrate production. In determining grape tonnage crushed for concentrate production, each processor was required to report the estimated equivalent tons of grapes crushed for grape concentrate. For the 2014 season, this total was 469,927 tons, 11 percent of the 2014 grape crush total. This report provides only the aggregate figure for grapes crushed for concentrate production and does not include information by district, type, or variety.

The 2014 average price per ton of all varieties was \$743.57, up 4 percent from 2013. Average prices for the 2014 crop by type were as follows: red wine grapes, \$892.80, up 5 percent from 2013; white wine grapes, \$595.84, down 4 percent from 2013; raisin grapes, \$232.79, down 9 percent; and table grapes, \$233.70, up 5 percent.

Leading Grape Varieties and Districts

In 2014, Chardonnay accounted for the largest percentage of the total crush volume with 17.3 percent. Cabernet Sauvignon accounted for the second leading percentage of crush with 12.4 percent of the total crush. The next eight highest percentages of grapes crushed included wine and raisin grape varieties. Thompson Seedless, the leading raisin grape variety crushed for 2014, held 3.2 percent of the total crush.

District 13, (Madera, Fresno, Alpine, Mono, Inyo Counties; and Kings and Tulare Counties north of Nevada Avenue (Avenue 192)), had the largest share of the State's crush, at 1,336,946 tons. The average price per ton in District 13 was \$307.18.

Grapes produced in District 4 (Napa County) received the highest average price of \$4,079.76 per ton, up 10 percent from 2013. District 3 (Sonoma and Marin counties) received the second highest return of \$2,319.55, up 4 percent from 2013. The 2014 Chardonnay price of

Leading Varieties Crushed Percentage of Total 2014 Crush

Source: USDA, NASS, California Field Office

\$860.95 was down 1 percent from 2013, and the Cabernet Sauvignon price of \$1,427.79 was up 6 percent from 2013. The 2014 average price for Zinfandel was \$623.93, down 4 percent from 2013, while the Merlot average price was up 3 percent from 2013 at \$775.12 per ton.

White Riesling - Johannisberg Riesling, Riesling		

Livestock and Dairy

California's total livestock and livestock products cash receipts were \$15.3 billion in 2014, up 20 percent from 2013. The 23 percent increase in dairy receipts was the principle contributor to the rise in total livestock receipts, accounting for nearly 70 percent of the total increase. Livestock and livestock products accounted for over 29 percent of the state's gross cash receipts and over 8 percent of total U.S. livestock cash receipts. California ranked third behind Texas and Iowa in total livestock receipts for 2014. Dairy products remained the state's leading commodity and accounted for 19.0 percent of receipts for U.S. dairy products or 5.3 percent more than Wisconsin. Receipts for hogs and pigs were down 6 percent from the previous year. Poultry and egg cash receipts were up 4 percent from 2013. Cash receipts for cattle and calves increased 20 percent from 2013.

For the first ten months of 2014 the Golden State's dairy industry saw prices received for milk hover around \$22.50 before beginning a tumble that continued into 2015. At \$22.12, the average all milk price received for milk in 2014 was \$3.64 more than the average price of the prior year. Feed costs per hundredweight of milk produced were down 3.6 percent from 2013 according to the California Department of Food and Agriculture (CDFA) Cost of Production Survey, while other production costs. Corn for feed costs were down from 2013. The drought impacted the quality and

quantity of forage grown in 2014. Alfalfa hay and other forage prices increased in 2014. The largest increase in cost of production per hundred weight was in labor expenses with a 4.2 percent over 2013 expenses. Total cost of production per cow increased 1.7 percent from 2013, while the cost per hundredweight rose by only 0.2 percent. The year's increase in production per cow mitigated production costs per hundredweight.

An eighty year chapter of the cooperation between CDFA, USDA's Animal Plant Health Inspection Service (APHIS) and the livestock industry regarding the Brucellosis Milk Surveillance Program came to a close as CDFA determined to better reallocate the resources spent on this brucellosis test. Since July 2009 the USDA has designated California as Class Free for bovine brucellosis (Bang's disease). That year the focus to control brucellosis turned towards wildlife transmission and USDA funding for milk testing was eliminated. California maintained the brucellosis ring testing through July 2014, 22 years after the last California dairy herd was detected with brucellosis using the ring test.

Focus on California and the possibility of a Federal Milk Market Order (FMMO) replacing the current CDFA pricing program waned in early 2014, as prices received recovered from the lows seen the prior two years. The 2104 Farm Bill revived the discussion with language permitting some form of the California quota system if a FMMO is adopted. As milk prices dropped in the final months of 2014 and discontent mounted over CDFA adjustments to the pricing formulas, the issue was revitalized. Throughout the year, the extended drought was a principle concern for many dairies as it impacted both water availability and feed costs. Organic dairies struggled to find forage to fulfill the National Organic Program's requirement of a minimum of 120 days on pasture. A USDA temporary variance on this requirement provided

Livestock and Dairy

Bee Colonies, Honey Production and Value, 2005-2014 ¹

² Average price per unit based on expanded sales.

some relief, along with the Farm Service Agency's Livestock Forage Disaster Program for drought impacted counties. The number of dairies continued to decline, but only twenty-six operations were shuttered in 2014 compared to the 67 operations lost in 2013. The average number of head per dairy rose by over thirty from 2013. States, including Nevada, Texas, Nebraska, and Iowa, continue to court California dairies with available water and feed, cheap land, and less regulatory oversight.

California continued to be the nation's leading dairy state. The Golden State's sales of milk and cream totaled \$9.36 billion in 2014. Wisconsin, Idaho, New York, and Pennsylvania were the next leading states in total milk production. The top five dairy states accounted for nearly 52 percent of total U.S. dairy receipts. California ranked number one in the U.S. in the production of fluid milk, butter,

Mozzarella, Hispanic cheeses, and nonfat dry milk. California continued to be second in total cheese production behind Wisconsin. California ranked 4th nationally in milk produced per cow per year in 2011, but dropped down to 7th in 2013, and slipped behind Nevada to 8th place in 2014.

California's dairies produced 42.3 billion pounds of milk, accounting for almost 21 percent of the nation's milk supply. The monthly average production was over 3.5 billion pounds. Milk production per cow averaged 23,785, up 2.6 percent from 2013. Milk utilization experienced declines in fluid, butter, and yogurt; yet saw increases in cheese, frozen products, and cottage cheese. California's total cheese production of 207.9 billion pounds was up 5.7 percent from 2013. California milk going into cheese production comprised 45.8 percent of the state's total production, up 1.6 percent. Mozzarella continued to account for the bulk of California cheese production, constituting nearly 59 percent of the state's cheese.

According to the California Department of Food and Agriculture's Dairy Statistics Branch, 33 counties contributed to the state's commercial milk production. The top five milk-producing counties in California accounting for nearly 73 percent of the state's total milk production were Tulare (27.3 percent), Merced (15.3 percent), Kings (10.4 percent), Stanislaus (10.1 percent) and Kern (9.7 percent). Merced County production increased over 4.6 percent from last year, while Kings County increased nearly as much at 4.5 percent.

California contributes about 40 percent of the total U.S. dairy exports per the California Milk Advisory Board. United States cheese exports increased over 16 percent from 2013 to 369 thousand metric tons per the USDA Foreign Agricultural Service (FAS). This is more than double the 2010 exports of only 173 thousand metric tons of cheese. Butter exports decreased by 27 percent from 81 to 59 thousand metric tons. Dry whey products export increased almost one percent to 550 thousand metric tons. Exports of skim milk powder decreased by 2 percent to 546 thousand metric tons. Asian-Pacific markets imported 46 percent of U.S. dairy exports in 2014, up two percent from 2013. Total tons of dairy products exported to East Asia exceeded the combined exports to Canada and Mexico, though Mexico remained the single largest imported of U.S. Dairy products. Chinese imports in 2014 dropped by nearly two percent from 2013. Increased production in New Zealand and the European Union (EU) and shifting exchange rates tempered 2014's U.S. total dairy exports. U.S. cheese exporters were concerned about the EU promotion of restrictive language in trade deals concluded in 2014 with China, Japan, several Latin American, and Middle Eastern countries regarding Geographic Indication (GI) protection for cheese names and the impact on exports of Parmesan, Feta, and other cheeses with names that in the U.S. market have become generic labels not associated with a distinct region if this is not favorably addressed in the ongoing negotiations of the Transatlantic Trade and Investment Partnership (TTIP) free trade agreement.

Cattle and calf sales totaled \$3.72 billion, compared with \$3.05 billion in 2013. California's total cattle and calve inventory on January 1, 2015 was 5,150 thousand, down 100 thousand from the prior January. Commercial cattle slaughter dropped to 1,360 thousand head from last year's 1,742 thousand head, while the annual average live weight increased from 1,299 to 1,312 pounds. 2014's hog and pig sales were \$37.8 thousand, down from last year sales of \$40.4 thousand. The December 1, 2014 hog and pig inventory was up 15 thousand to 110 thousand head. The state's commercial hog slaughter declined from 2,365 thousand in 2013 to 2,345 thousand head. Slaughtered hog annual average live weight was 250

pounds, up 5 pounds from the prior year. Sheep and lamb inventory rose from 590 thousand on January 1, 2014 to 600 thousand by January 1, 2015. Commercial sheep and lamb slaughter for 2014 was 290 thousand head, 25 thousand less than the prior year. Their annual average live weight was 138 pounds, only one pound lighter than 2013's average slaughter weight. Wool production rose in 2014 to 2,900 thousand pounds, while the price per pound dropped ten cents from 2013 to \$1.35 per pound.

In anticipation of the 2015 implementation of the 2008 Proposition 2 regulating animal confinement, some producers decreased their flocks. Salmonella outbreaks in several Western poultry processing plants dominated the headlines in 2014, though Salmonella rates at many local plants were drastically reduced. Domestic consumption of chicken increased by 17 percent. Supply struggled to meet the growing demand. Poultry industry workshops focused on sustainability, safety, proactive regulatory compliance, combating antibiotic resistance and the tracking and prevention of Avian Flu outbreaks.

2014 honey production, at 12.5 million pounds, was up 15 percent from the prior year. Producing colonies totaled 320 thousand down ten thousand from the revised 2013 colony count, and below the ten year average of 367 thousand hives. The yield per colony averaged 39 pounds, compared to 33 pounds produced in 2013. The average price received was down 8 cent to \$2.03 per pound for 2014. The importance of bees in California agriculture is apparent when the majority of the nation's colonies are needed for almond pollination. Increased compensation for almond pollination as well as record-high national honey prices provided beekeepers incentives to increase colony numbers, but the total honey producing colonies were the lowest on record. The focus of research into the decimation of bees continues to focus on agricultural chemicals playing a significant role.

¹ Preliminary 2014 data.

² Excludes processed cheese and cottage cheese.

³ Includes Cheddar, Colby, washed curd, stirred curd, Monterey, and Jack.

⁴ Includes all cheeses not included in the above categories.

⁵ Includes low fat and nonfat cottage cheese. Fat content is less than 4 percent.

⁶ Contains minimum milk-fat content of 10 percent and not less than 4.5 pounds per gallon.

⁷ Includes hard, soft-serve, freezer-made milkshake, and freezer-made "milk drink."

Contains less than 10 percent milk-fat required for ice cream.

⁸ Not shown when fewer than three plants reported or individual plant operations could be disclosed.

Vegetables and Melons

California continued as the leading fresh market vegetable producing state in 2014, accounting for 47 percent of the U.S. harvested vegetable acres, 52 percent of the national production, and 60 percent of the value, for the 24 selected vegetables and melons estimated.

California also led the nation in processing vegetable production during 2014, with 28 percent of the U.S. harvested acreage, 74 percent of the national production and 60 percent of the total value, for the eight processed vegetables estimated.

The total value of California’s 2014 fresh and processing vegetable and melon production was \$7.8 billion, up from 2013’s revised total of \$7.3 billion. Lettuce remained the leading vegetable crop in value of production, at \$2.0 billion, followed by tomatoes at \$1.6 billion.

Vegetable crops that had value increases were snap beans, cabbage, cauliflower, sweet corn, garlic, lettuce, honeydew melons, mushrooms, spring onions, summer non-storage onions, summer storage onions, chile peppers, pumpkins, spinach, and processing tomatoes. Crops that had decreased value included artichokes, asparagus, broccoli, carrots, celery, cucumbers, cantaloupe melons, watermelon, bell peppers, squash, and fresh market tomatoes.

Notable Increases in Production:

Onions, Processing.....	117%
Onion, Summer Storage.....	104%
Chile Peppers	61%
Cabbage, Fresh Market	44%
Spinach, Fresh Market	25%
Cauliflower.....	23%
Processing Tomatoes.....	17%
Sweet Corn.....	17%
Head Lettuce	15%
Leaf Lettuce	13%
Garlic.....	12%
Honeydew Melons	8%

Notable Decreases in Production:

Celery	34%
Asparagus.....	30%
Cucumbers	16%
Squash.....	15%
Bell Peppers	6%
Broccoli.....	6%
Artichokes	5%

¹ The processed price is based on equivalent returns at the processing plant door. The fresh market price is at the point of first sale.

² Includes both fresh marketing and processing vegetables.

³ 2011 to 2014 were not published to avoid disclosing data for individual farms.

⁴ Primarily dehydrated and other processing. Production includes quantity harvested. Total Values equals production minus summer storage shrinkage and loss (250,000 cwt per year).

⁵ Included in summer storage onions.

⁶ Data in 2014 was not published to avoid disclosing data for individual operations.

N/A Not available.

California Agricultural Exports

In 2014, California's agricultural exports amounted to \$21.59 billion in value, showing relatively no change compared to the previous year. As indicated by the table below, California's agricultural exports have grown at an impressive pace for the past 10 years except for a slight contraction between 2008 and 2009.

California Agricultural Export Values, 2004-2014

Year	Export Value in \$Billions
2014	\$21.59
2013	\$21.55
2012	\$18.45
2011	\$17.23
2010	\$14.75
2009	\$12.44
2008	\$12.90
2007	\$11.17
2006	\$9.82
2005	\$9.37
2004	\$8.24

Exports of almonds continued to be the top commodity from California, with a value of \$4.53 billion in foreign sales. Dairy products ranked second to almonds with a California total export value of \$2.43 billion, a 0.7 percent increase over 2013.

The principal 57 export commodities accounted for \$18.77 billion in export value, or 89 percent of the total value of California's agricultural exports, while the remaining 11 percent of exports were associated with "Other Products and Mixtures." Of the top 57 commodities exported, 11 experienced an increase in export value of 5 percent or greater.

California's share of total U.S. agricultural exports for 2014 was 14.3 percent — slightly less than the 14.9 percent share reported last year. California's top 10 export destinations — European Union, Canada, China/Hong Kong, Japan, Mexico, Korea, India, United Arab Emirates, Turkey, and Vietnam — accounted for 69 percent of the 2014 export value. India showed the largest growth in total export value compared to the previous year at 19.1 percent.

Methodology

Data to compute agricultural exports are derived from official government sources published industry sources and unpublished information from the government and the industry. Export quantities and values of the whole U.S. and California port districts are from the Department of Commerce (DOC) trade data posted on the United States International Trade Commission (USITC) online database (<http://dataweb.usitc.gov/>). Canadian import (value) data are from Strategis Canada's online database (<http://strategis.ic.gc.ca/engdoc/main.html>). If the California export price is not available for a particular product, we use the U.S.

average export price for that commodity in order to provide a dollar value for exports.

Production quantities and values are from various National Agricultural Statistics Service (NASS), Economic Research Service (ERS), and Agricultural Marketing Service (AMS) publications. A share of the raw data provided in these USDA service publications are released as a preliminary report early in the calendar year followed by a more accurate final report released at a later date. For accuracy, The University of California Agricultural Issues Center (AIC) export estimates use data from final USDA reports.

AIC exports estimates use different methods from other sources, such as ERS. The ERS estimates are based on a state's national share of production of the exported commodity. The ERS method assumes that, for any particular commodity, a state's share

of U.S. production equals that state's share of U.S. exports. Other sources use geographic port data, without direct links to where the product originated. The AIC export figures correspond to commodities that have been produced on farms and ranches within California. Products originated in another state and exported via California ports are not included in these statistics.

In most cases, AIC reports exports at the individual commodity level. For instance, exports of a given fruit in fresh, canned, and dried forms are summed and listed under the name of the fruit, although the method for fresh fruit exports may differ from the method used for canned and dried fruit. The ratio of quantity exported to quantity produced is given on a farm weight basis. That means, for example, that wine is converted back into fresh grapes. Standard conversion factors published by the USDA are applied.

California Agricultural Products Export Values and Rankings, 2012-2014

Source: University of California, Agricultural Issues Center.

¹ Total export values for each year are rounded to the nearest million dollars. More precise values are used in the percent change calculations.

² Export values for 2013 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

³ Export values for 2012 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

⁴ Hides and skins are included in the heading "Beef and Products."

⁵ "Raspberries and Blackberries" category also includes exports of "Mulberries and Loganberries."

⁶ Product category "Olives and Olive Oil" is equal to the product category "Olives and Products" found in previous years' data tables.

⁷ "Total Principal Commodity" values for 2012 and 2013 were revised based on updates to U.S. Department of Agriculture/National Agricultural Statistics Service production data.

⁸ "Total Other Products and Mixtures" is composed of (a) highly processed products that are difficult to attribute to a specific commodity such as mixtures of fruits, nuts and vegetables and other processed foods; (b) categories for which the listed item does not provide data on individual commodities and (c) animal and plant products marketed in such small quantities that they are not included in the top 57 leading commodities.

Source: University of California Agricultural Issues Center.

¹ Export values were revised for 2013 based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

² Hides and skins are included in the heading "Beef and Products."

³ "Raspberries and Blackberries" category also includes exports of "Mulberries and Loganberries."

⁴ Product category "Olives and Olive Oil" is equal to the product category "Olives and Products" found in previous years' data tables.

⁵ Total "Other Products and Mixtures" is equal to "Total U.S. Agricultural Exports" minus "Total California Principal Commodity Exports."

⁶ Total U.S. agricultural export values come from USDA. USDA defines agriculture to include: live animals, meat, and products of livestock, poultry, and Dairy and products; hides and skins (but not leather products); animal fats and greases; food and feed grains and grain products; oilseeds and oilseed products; fruits, nuts, and vegetables and products of these; juices, wine, and malt beverages (not distilled spirits); essential oils; planting seeds; raw cotton, wool, and other fibers (not manufactured products of these); unmanufactured tobacco (not manufactured tobacco products); sugar and sugar products; coffee, cocoa, tea, and products of these; rubber and allied products; and stock for nurseries and greenhouses, spices, and crude or natural drugs. Fish, shellfish, and forestry products are not included in "agriculture."

Source: University of California Agricultural Issues Center.

¹ This table shows destinations that receive shares of total exports greater than or equal to 5 percent of each commodity in either 2013 or 2014 for which reliable data are available.

² Accurate export destination data are only available for 50 of the top 57 commodities. The commodities for which export destinations are not included are apples, chickens, eggs, mushrooms, seeds for sowing, turkey and wheat.

³ "Hides and Skins" are included in the heading "Beef and Products."

⁴ "Raspberries and Blackberries" category also includes exports of "Mulberries and Loganberries."

⁵ Product category "Olives and Olive Oil" is equal to the product category "Olives and Products" found in previous years' data tables.

¹ This table provides the total export value and export values for individual commodities to the top 15 destinations. Only commodities with export values greater than \$2 million to the destination are reported.

² "Raspberries and Blackberries" category also includes exports of "Mulberries and Loganberries."

³ Product category "Olives and Olive Oil" is equal to the product category "Olives and Products" found in previous years' data tables.

⁴ "Hides and Skins" are included in the heading "Beef and Products."

¹ The EU-27 members to which California exports are shipped reflect only the initial destination of the product, not the EU country of consumption. Many products are distributed throughout the EU after the initial entry.

² "Other Principal Products" are those that individually account for less than \$100 million in export value to the EU.

³ Accurate export destination data is only available for 50 of the top 57 commodities. The commodities for which export destinations are not included are apples, chickens, eggs, mushrooms, seeds for sowing, turkey, and wheat. Totals may not equal due to rounding.

⁴ The other 17 EU members include Austria, Bulgaria, Cyprus, Czech Republic, Estonia, Finland, Greece, Hungary, Ireland, Latvia, Lithuania, Malta, Poland, Portugal, Romania, Slovak Republic, and Slovenia. All these countries combined account for just over 5 percent of California agricultural exports to the EU.

Ratio of California Farm Quantity Exported to Farm Quantity Produced, 2013 and 2014

(Export volumes in farm weight basis)

Source: University of California Agricultural Issues Center.

¹ Export quantities of processed goods were converted to farm fresh quantities using conversion factors published by USDA ERS (<http://www.ers.usda.gov/publications/ah697/>) or annual conversion factors published by USDA NASS in annual crop summaries.

² Quantities for 2013 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

³ "Hides and Skins" are included in the heading "Beef and Products."

⁴ Farm quantity exported for "Dairy and Products" is calculated by converting cheese, condensed milk, fluid milk, ice cream, nonfat dry milk, and whole dry milk to their fluid milk equivalents.

⁵ "Grapes, All" includes grape juice, raisins, table grapes, and wine.

⁶ Product category "Olives and Olive Oil" is equal to the product category "Olives and Products" found in previous years' data tables.

⁷ "Raspberries and Blackberries" category also includes exports of "Mulberries and Loganberries."

⁸ The weighted average is based on each of the 53 commodity's share of production value. Values for chickens, flowers and nursery products, mushrooms and seeds for sowing are not included because reliable data on export quantity is not available.
