### OSHA 29 CFR 1910.138 (A) STATES:

"General requirements. Employers shall select and require employees to use appropriate hand protection when employees' hands are exposed to hazards such as those from skin absorption of harmful substances; severe cuts or lacerations; severe abrasions; punctures; chemical burns; thermal burns; and harmful temperature extremes."

### OSHA 29 CFR 1910.138 (B) STATES:

"Selection. Employers shall base the selection of the appropriate hand protection on an evaluation of the performance characteristics of the hand protection relative to the task(s) to be performed, conditions present, duration of use and the hazards and potential hazards identified."

# Cut Resistant Gloves

Just as the name implies, cut-resistant gloves help you protect your employees from cuts caused by sharp objects like glass, metal and other materials — so all they need to focus on is the job at hand. They are often used in industries such as manufacturing, oil and gas, metal working and mining.

In 2016, the American National Standards Institute (ANSI) released an updated edition of the ANSI/ISEA 105 standard. The changes include a new scale to determine cut score and a revised method for testing gloves to the standard. Cut gloves are now rated on a scale of one through nine to determine cut resistance — one being the lowest and nine being the highest.\*

### DID YOU KNOW?

Some gloves come in letter sizes such as small, medium or large, while others are available in numerical sizes. To determine your numerical glove size, use a tape measure and wrap it around the circumference of the palm of your dominant hand. This measurement in inches is your glove size.
