OVERVIEW

Cisco HyperFlex Edge Systems are optimized for remote sites, branch offices, and edge environments. As a smaller form factor of Cisco HyperFlex, Cisco HyperFlex Edge keeps the full power of a next generation hyperconverged platform even without connecting to Cisco UCS Fabric Interconnects. Cisco HyperFlex Edge Systems support a variable configuration of 2, 3, or 4 HX converged nodes and supports the scale up of CPU, memory, and storage capacity (hot-add additional capacity drives).

NOTE: HX220 M6 Edge requires Cisco Intersight for cluster deployment and ongoing management.

HyperFlex Edge operates using existing top of rack 1GE or 10/25GE switching with options for both single and dual switch configurations. Edge clusters are configured with replication factor 2 (RF2) to ensure availability during various failure scenarios. HyperFlex Edge is typically deployed in environments with a minimal infrastructure footprint, hence the use of UCS compute-only nodes is not supported.

The Cisco HyperFlex HX220 M6 Edge All Flash/Hybrid Server Nodes extends the capabilities of Cisco's HyperFlex portfolio in a 1U form factor with the addition of the 3rd Gen Intel® Xeon® Scalable Processors (Ice Lake), 16 DIMM slots per CPU for 3200-MHz DDR4 DIMMs with DIMM capacity points up to 128 GB. The maximum memory capacity for 2 CPUs is listed here:

- 4 TB (32 x 128 GB DDR4 DIMMs)

There are several drive and rear riser configurations:

Drives

There are two servers to choose from:

- **HXAF-E-220M6S (All Flash)** (see [Figure 1 on page 5](#)):
 - Up to 10 front SFF SAS/SATA SSDs only.
- **HX-E-220M6S (Hybrid)** (see [Figure 1 on page 5](#)):
 - Up to 10 front SFF SAS/SATA HDDs and SSDs.

Rear PCIe Risers

- One to three half-height PCIe risers, or
- One to two full-height PCIe risers.

The server provides an internal slot for one of the following:

- Cisco 12G SAS pass-through HBA to control SAS/SATA drives.

NOTE: PCIe drives are controlled directly from the CPUs

The HX220 M6 Edge All Flash/Hybrid Server Nodes has two LOM ports (10Gbase-T LOM) and a single 1 GbE management port. A modular LAN on motherboard (mLOM) module provides up to two 100 GbE ports. A connector on the front of the chassis provides KVM functionality.

See [Figure 1 on page 5](#) for front and rear views of the HX220 M6 Edge All Flash/Hybrid Server Nodes.

One Half-Height Riser

NOTE: By default, 1-CPU servers come with only one half-height riser 1 installed. 2-CPU servers support all three half-height risers.

BASE SERVER NODE STANDARD CAPABILITIES and FEATURES

Table 1 lists the capabilities and features of the base server. Details about how to configure the server for a particular feature or capability (for example, number of processors, disk drives, or amount of memory) are provided in *CONFIGURING the SERVER, page 17*.

Table 1 Capabilities and Features

Capability/Feature	Description
Chassis	One rack unit (1RU) chassis
CPU	One or two 3rd Gen Intel® Xeon® Scalable Processors (Ice Lake)
Chipset	Intel® C621A series chipset
Memory	32 slots for registered DIMMs (RDIMMs) or load-reduced DIMMs (LR DIMMs)
Multi-bit Error Protection	This server supports multi-bit error protection
Video	<p>The Cisco Integrated Management Controller (CIMC) provides video using the Matrox G200e video/graphics controller:</p> <ul style="list-style-type: none"> ■ Integrated 2D graphics core with hardware acceleration ■ Embedded DDR memory interface supports up to 512 MB of addressable memory (8 MB is allocated by default to video memory) ■ Supports display resolutions up to 1920 x 1200 16bpp @ 60Hz ■ High-speed integrated 24-bit RAMDAC ■ Single lane PCI-Express host interface running at Gen 1 speed
Power subsystem	<p>Up to two of the following hot-swappable power supplies:</p> <ul style="list-style-type: none"> ■ 1050 W (AC) ■ 1050 W (DC) ■ 1600 W (AC) ■ 2300 W (AC) <p>One power supply is mandatory; one more can be added for 1 + 1 redundancy</p>
Front Panel	A front panel controller provides status indications and control buttons
ACPI	This server supports the advanced configuration and power interface (ACPI) 6.2 standard
Fans	Eight hot-swappable fans for front-to-rear cooling

Notes:

1. There are three PCIe riser connectors on the motherboard: they are labeled Riser 1, Riser 2, and Riser 3. If the server is configured with three half-height risers, Riser 1 plugs into Riser 1 connector, Riser 2 plugs into Riser 2 connector, and Riser 3 plugs into Riser 3 connector. If the server is configured with two full-height connectors, Riser 1 plugs into Riser 1 connector and Riser 2 plugs into Riser 3 connector. See [Risers, page 79](#) for more details.

CONFIGURING the SERVER

Follow these steps to configure the Cisco HX220 M6 Edge All Flash/Hybrid Server Nodes:

- *STEP 1 VERIFY SERVER SKU, page 18*
- *STEP 2 SELECT RISERS, page 19*
- *STEP 3 SELECT CPU(s), page 20*
- *STEP 4 SELECT MEMORY, page 24*
- *STEP 5 SELECT DRIVE CONTROLLERS, page 29*
- *STEP 6 SELECT DRIVES, page 30*
- *STEP 7 SELECT OPTION CARD(s), page 34*
- *STEP 8 ORDER OPTIONAL PCIe OPTION CARD ACCESSORIES, page 36*
- *STEP 9 SELECT HYPERFLEX EDGE NETWORK TOPOLOGY, page 39*
- *STEP 10 ORDER GPU CARDS (OPTIONAL), page 41*
- *STEP 11 ORDER POWER SUPPLY, page 42*
- *STEP 12 SELECT INPUT POWER CORD(s), page 43*
- *STEP 13 ORDER TOOL-LESS RAIL KIT AND OPTIONAL REVERSIBLE CABLE MANAGEMENT ARM, page 47*
- *STEP 14 ORDER SECURITY DEVICES (OPTIONAL), page 48*
- *STEP 15 SELECT LOCKING SECURITY BEZEL (OPTIONAL), page 49*
- *STEP 16 SELECT HYPERVISOR / HOST OPERATING SYSTEM, page 50*
- *STEP 17 SELECT HYPERFLEX DATA PLATFORM (HXDP) SOFTWARE, page 52*
- *STEP 18 CISCO INTERSIGHT, page 53*
- *STEP 19 SELECT INSTALLATION SERVICE, page 54*
- *SUPPLEMENTAL MATERIAL, page 63*

STEP 1 VERIFY SERVER SKU

Table 2 PID of Major Line Bundle (MLB)

Product ID (PID)	Description
HX-M6-MLB	HX/HXAF/EDG M6 MLB This major line bundle (MLB) consists of the HyperFlex All Flash, Hybrid and Edge Server Nodes, with Intersight and HXDP software spare PIDs.

Verify the product ID (PID) of the server as shown in [Table 3](#).

Table 3 PID of the HX220 M6 Edge All Flash/Hybrid Server Nodes

Product ID (PID)	Description
HXAF-E-220M6S ¹ (All Flash)	Cisco HyperFlex HX220 All Flash Edge server is up to 10 SFF front drives with no CPU, memory, HDD, PCIe cards, or power supply
HX-E-220M6S ¹ (Hybrid)	Cisco HyperFlex HX220 Hybrid Edge server is up to 10 SFF front drives with no CPU, memory, HDD, PCIe cards, or power supply

Notes:

1. This product may not be purchased outside of the approved bundles (must be ordered under the MLB).

The Cisco HX220 M6 Edge All Flash/Hybrid Server Nodes do not include power supplies, CPUs, DIMM, hard disk drives (HDDs), solid-state drives (SSDs) riser 1, riser 2, riser 3, tool-less rail kit, or option cards.

The Cisco HX220 M6 Edge All Flash/Hybrid Server Nodes Requires selection of one HyperFlex network topology based on the top of rack switch configuration and network redundancy requirements. Selecting a topology automatically adds the necessary networking adapters to the configuration.

HX220 M6 Edge All Flash/Hybrid Clusters:

HyperFlex Edge clusters can be configured in 2, 3 or 4 node configurations. Single node clusters and clusters larger than 4 nodes are not supported with HyperFlex Edge.

NOTE:

- Refer to [Cisco HyperFlex Drive Compatibility](#) document for future expansion and drive compatibility within the same node and HX cluster.
- Use the steps on the following pages to configure the server with the components that you want to include.

STEP 2 SELECT RISERS

The riser PIDs are listed in [Table 4](#). Full-height risers cannot be mixed with half-height risers.

Table 4 PIDs of the Risers and Riser Blanks

Product ID (PID)	Description
Included by default (no PID)	Half-height riser 1 (controlled by CPU1) <ul style="list-style-type: none"> ■ One x16 PCIe Gen4 riser, standard PCIe, supports Cisco VIC, half-height, 3/4 length
UCSC-R2R3-C220M6	Kit containing two half-height risers (risers 2 and 3): <ul style="list-style-type: none"> ■ Riser 2: One x16 PCIe Gen4 riser, half-height, 3/4 length ■ Riser 3: One x16 PCIe Gen4 riser, supports Cisco VIC, half-height, 3/4 length
HX-GPURKIT-C220	Kit containing a GPU mounting bracket and the following risers (risers 1 and 2): <ul style="list-style-type: none"> ■ Riser 1: One x16 PCIe Gen4 riser, supports Cisco VIC, full-height, 3/4 length ■ Riser 2: One x16 PCIe Gen4 riser, supports Cisco VIC, full-height, 3/4 length
UCSC-FBRS-C220M6	Riser 2 and Riser 3 blank panels

NOTE:

- If you do not order any risers, the system defaults to automatically include the one half-height riser shown in the table.
- If you order PID UCSC-R2R3-C220M6, the system includes three half-height risers (riser 1, riser 2, and riser 3).
- If you order PID HX-GPURKIT-C220, the system includes two full-height risers (riser 1 and riser 2)

Approved Configurations

- (1) Half-height riser 1 only (controlled from CPU1). This is the default and is automatically included.
- (2) Half-height risers 1, 2, and 3 only. Risers 1 and 2 are controlled from CPU1 and Riser 3 is controlled from CPU2.
- (3) Full-height risers 1 and 2 only. Riser 1 is controlled from CPU1 and riser 2 is controlled from CPU2.

STEP 3 SELECT CPU(s)

The standard CPU features are:

- 3rd Gen Intel® Xeon® Scalable Processors (Ice Lake)
- Intel® C621A series chipset
- Cache size of up to 60 MB
- Up to 40 cores

Select CPUs

The available CPUs are listed in [Table 5](#)

Notes:

1. UPI = Ultra Path Interconnect.
2. If higher or lower speed DIMMs are selected than what is shown in [Table 7 on page 25](#) for a given CPU speed, the DIMMs will be clocked at the lowest common denominator of CPU clock and DIMM clock.
3. The maximum number of HX-CPU-I8351N CPUs is one
4. The maximum number of HX-CPU-I6314U CPUs is one
5. The maximum number of HX-CPU-I6312U CPUs is one

CAUTION: For systems configured with 3rd Gen Intel® Xeon® Scalable Processors (Ice Lake) processors operating above 28° C [82.4° F], a fan fault or executing workloads with extensive use of heavy instructions sets such as Intel® Advanced Vector Extensions 512 (Intel® AVX-512), may assert thermal and/or performance faults with an associated event recorded in the System Event Log (SEL).

Table 6 CPU Suffixes

CPU Suffix	Description	Features
N	Networking Optimized	Optimized for use in networking applications like L3 forwarding, 5G UPF, OVS DPDK, VPP FIB router, VPP IPsec, web server/NGINX, vEPC, vBNG, and vCMTS. SKUs have higher base frequency with lower TDPs to enable best performance/Watt.
P	Cloud Optimized	SKU specifically designed for cloud IaaS environments to deliver higher frequencies at constrained TDPs.
V	Cloud Optimized	SKUs specifically designed for cloud environments to deliver high rack density and maximize VM/cores per TCO\$.
T	High T case	SKUs designed for Network Environment-Building System (NEBS) environments.
U	1-socket Optimized	Optimized for targeted platforms adequately served by the cores, memory bandwidth and IO capacity available from a single processor.
S	Max SGX enclave size	Supports Max SGX enclave size (512GB) to enhance and protect the most sensitive portions of a workload or service.
M	Media and AI optimized	Media, AI and HPC Segment Optimized for lower TDP & higher frequencies delivering better perf/w.
Y	Speed Select - Performance Profile	Intel® Speed Select Technology provides the ability to set a guaranteed base frequency for a specific number of cores, and assign this performance profile to a specific application/workload to guarantee performance requirements. It also provides the ability to configure settings during runtime and provide additional frequency profile configuration opportunities.

Approved Configurations

(1) DIMM only configurations:

- Choose one or two identical CPUs listed in [Table 5 Available CPUs, page 20](#)

(2) One-CPU Configuration:

- Choose one CPU from any one of the rows of [Table 5 Available CPUs, page 20](#)
- For 1-CPU systems, the server is shipped by default with riser 1 only
- HX Edge supports single socket for 10 core and above

(3) Two-CPU Configuration:

- Choose two identical CPUs from any one of the rows of [Table 5 Available CPUs, page 20](#)
- For 2-CPU systems, the server is shipped:
 - With half-height risers 1, 2, and 3 by default, or
 - With full-height risers 1 and 2 if you order a non-T4 GPU with more than 75 W power dissipation

NOTE:

- You cannot have two I8351N or two I6314U or I6312U CPUs in a two-CPU configuration.
 - If you configure a server with one I8351N CPU or one I6314U CPU or one I6312U CPU you cannot later upgrade to a 2-CPU system with two of these CPUs.
-

Caveats

- The selection of 1 or 2 CPUs depends on the desired server functionality. See the following sections:
 - [STEP 4 SELECT MEMORY, page 24](#)
 - [STEP 5 SELECT DRIVE CONTROLLERS, page 29](#)
 - [STEP 6 SELECT DRIVES, page 30](#)
 - [STEP 7 SELECT OPTION CARD\(s\), page 34](#)

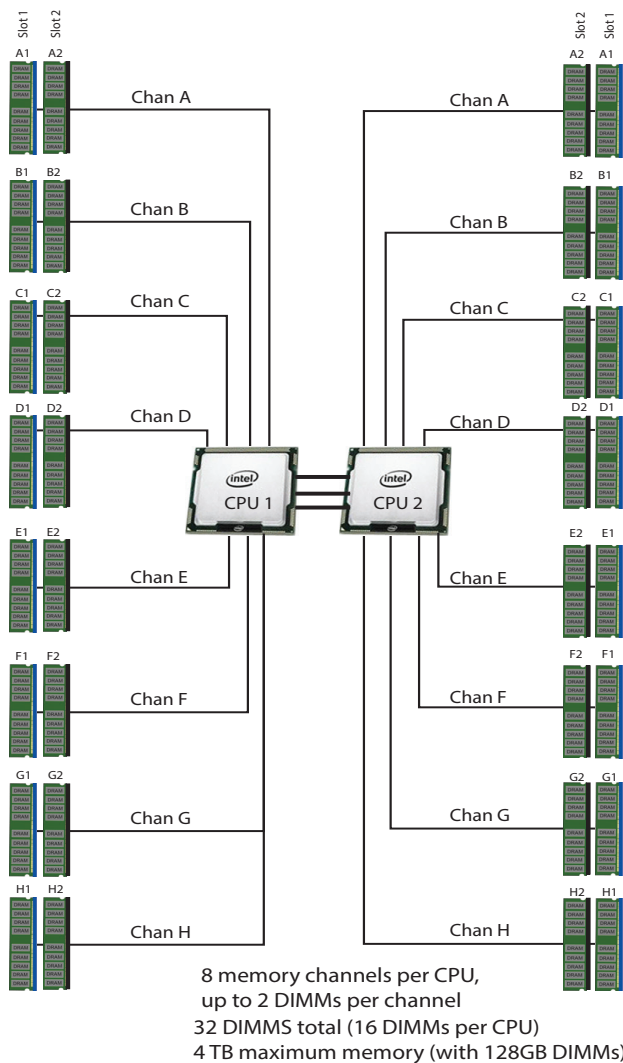

STEP 4 SELECT MEMORY

The available memory main characteristics for the HX220 M6 Edge All Flash/Hybrid Server Nodes are as follows:

- Clock speed: 3200 MHz
- Ranks per DIMM: 1, 2, 4, or 8
- Operational voltage: 1.2 V
- Registered ECC DDR4 DIMMS (RDIMMs), Load-reduced DIMMs (LR DIMMs)

Memory is organized with eight memory channels per CPU, with up to two DIMMs per channel, as shown in [Figure 7](#).

Figure 7 HX220 M6 Edge All Flash/Hybrid Server Nodes Memory Organization

Select DIMMs

The supported memory DIMMs are listed in [Table 7](#).

DIMM Blank¹			
UCS-DIMM-BLK	UCS DIMM Blank		

Notes:

- Any empty DIMM slot must be populated with a DIMM blank to maintain proper cooling airflow.

NOTE:

- System performance is optimized when the DIMM type and quantity are equal for both CPUs, and when all channels are filled equally across the CPUs in the server.
- The selected DIMMs must be all of same type and number of DIMMs must be equal for both CPUs.
- HyperFlex Data Platform reserves memory for each controller VM. Refer to the [<Install Guide>](#) for reservation details.
- The memory mirroring feature is not supported with HyperFlex nodes.

Memory Configurations, Features

System speed is dependent on the CPU DIMM speed support. Refer to [Available CPUs, page 20](#) for DIMM speeds.

- The server supports the following memory reliability, availability, and serviceability (RAS) BIOS options (only one option can be chosen):
 - Adaptive Double Device Data Correction (ADDDC) (default).
 - Maximum performance.
- For best performance, observe the following:
 - When one DIMM is used, it must be populated in DIMM slot 1 (farthest away from the CPU) of a given channel.
 - When single- or dual-rank DIMMs are populated in two DIMMs per channel (2DPC) configurations, always populate the higher number rank DIMM first (starting from the farthest slot). For a 2DPC example, first populate with dual-rank DIMMs in DIMM slot 1. Then populate single-rank DIMMs in DIMM 2 slot.
- DIMMs for CPU 1 and CPU 2 (when populated) must always be configured identically.
- Cisco memory from previous generation servers (DDR3 and DDR4) is not compatible with the server.
- Memory can be configured in any number of DIMMs as pairs, although for optimal performance, see the following document:

[HX M6 Memory Guide](#)

Approved Configurations

(1) 1-CPU configuration

- Select from 1 to 16 DIMMs:
 - 1, 2, 4, 6, 8, 12, or 16 DIMMs allowed
 - 3, 5, 7, 9, 10, 11, 13, 14, 15 DIMMs not allowed
 - DIMMs for both CPUs must be configured identically.

The DIMMs will be placed by the factory as shown in the following tables.

#DIMMs	CPU 1 DIMM Placement in Channels (for identically ranked DIMMs)
1	(A1)
2	(A1, E1)
4	(A1, C1); (E1, G1)

(2) 2-CPU configuration

- Select from 1 to 16 DIMMs per CPU:
 - 1, 2, 4, 6, 8, 12, or 16 DIMMs allowed
 - 3, 5, 7, 9, 10, 11, 13, 14, 15 DIMMs not allowed
 - DIMMs for both CPUs must be configured identically.

The DIMMs will be placed by the factory as shown in the following tables.

DIMM Rules

- Allowed DIMM count for 1 CPU:
 - Minimum DIMM count = 1; Maximum DIMM count = 16
 - 1, 2, 4, 6, 8, 12, or 16 DIMMs allowed
 - 3, 5, 7, 9, 10, 11, 13, 14, or 15 DIMMs not allowed.
- Allowed DIMM count for 2 CPUs:
 - Minimum DIMM count = 2; Maximum DIMM count = 32
 - 2, 4, 8, 12, 16, 24, or 32 DIMMs allowed
 - 6, 10, 14, 18, 20, 22, 26, 28, or 30 DIMMs not allowed.
- DIMM Mixing:
 - Mixing different types of DIMM (RDIMM with LRDIMM) is not supported within a server.
 - Mixing RDIMM with RDIMM types is allowed if they are mixed in same quantities, in a balanced configuration.
 - Mixing 16GB, 32GB, and 64GB RDIMMs is supported.
 - 128GB LRDIMMs cannot be mixed with other RDIMMs.

NOTE:

- See the detailed mixing DIMM configurations at the following link

[HX M6 Memory Guide](#)

STEP 5 SELECT DRIVE CONTROLLERS

The following list summarizes how drives are controlled on the server:

- SAS/SATA drives are controlled through a Cisco 12G SAS pass-through HBA.
- PCIe drives are controlled directly from the CPUs.

Cisco 12G SAS HBA

This HBA supports up to 10 SAS or SATA drives operating at 3 Gbs, 6 Gbs, and 12 Gbs. It supports JBOD or pass-through mode (not RAID) and plugs directly into a dedicated slot.

Select Drive Controller Options

Select the following:

- Cisco 12G SAS HBA (see [Table 9](#))

Table 9 Hardware Controller Options

Product ID (PID)	PID Description
Controllers for Internal Drives	
Note that if the following Cisco 12G SAS HBA is selected, it is factory-installed in a dedicated slot.

Approved Configurations

- The Cisco 12G SAS HBA supports up to 10 internal drives with JBOD support.

STEP 6 SELECT DRIVES

The standard disk drive features are:

- 2.5-inch small form factor
- Hot-pluggable
- Drives come mounted in sleds

Select Drives - HXAF-E-220M6S (All Flash)

The available drives are listed in [Table 10](#).

Approved Configurations

- Three to eight capacity drives

**NOTE:**

- A minimum of 3 capacity drives is supported for HX Edge configuration.
- For cluster scale related information please see the product [release notes](#)

-
- One cache drive
 - One system drive
 - One boot drive

**NOTE:**

- Order two identical M.2 SATA SSDs for the boot-optimized RAID controller. You cannot mix M.2 SATA SSD capacities
- It is recommended that M.2 SATA SSDs be used as boot-only devices.
- The Boot-Optimized RAID controller supports VMWare, Windows and Linux Operating Systems.
- CIMC/UCSM is supported for configuring of volumes and monitoring of the controller and installed SATA M.2 drives.
- The minimum version of Cisco IMC and Cisco UCS Manager that supports this controller is 4.2(1) and later. The name of the controller in the software is MSTOR-RAID.
- The SATA M.2 drives can boot in UEFI mode only. Legacy boot mode is not supported.
- Hot-plug replacement is not supported. The server must be powered off.
- The boot-optimized RAID controller is supported when the server is used as a compute node in HyperFlex configurations.
- See [Figure 21 on page 78](#) for the location of the module connector on the motherboard. This connector accepts the boot-optimized RAID controller.

Caveats

- Self Encrypting Drives (SEDs) and NVMe drives are not supported for HX Edge configurations.

STEP 7 SELECT OPTION CARD(s)

The standard PCIe card offerings are:

- Modular LAN on Motherboard (mLOM)
- Network Interface Cards (NICs)

Select Option Cards

The available option cards are listed in [Table 12](#).

Table 12 Available PCIe Option Cards

Product ID (PID)	PID Description	Location	Card Size ¹

Notes:

1. HHHL = half-height, half-length; FHHL = full-height, half-length; SS = single-slot; DS = double-slot.
2. This PID is auto included with the selection of TOPO 4.
3. This PID is auto included with the selection of TOPO 2.
4. If HX-P-I8Q25GF selected then HX-GPURKIT-C220 must be selected

NOTE: Use of 10GE PCI card is not allowed with 6300 Series FI.

Approved Configurations

(1) 1-CPU Systems

- You can select up to one of the PCIe option cards listed in [Table 12](#) to be installed in Riser 1. Riser 1 is controlled by CPU 1. Risers 2 and 3 are not installed in a 1-CPU system.
- One additional PCIe card may be added with HX-E-TOPO4 or HX-E-TOPO3 selections.
- No additional PCIe cards may be added with HX-E-TOPO2 selection.

(2) 2-CPU Systems

- You can select up to two of the PCIe option cards listed in [Table 12](#) for a two-riser system (Riser 1 and Riser 2 installed) and up to three of the PCIe option cards for a three-riser system (Riser 1, Riser 2, and Riser 3 installed). Risers 1 and 2 are controlled by CPU 1 and riser 3 is controlled by CPU 2.
- Three additional PCIe cards may be added with HX-E-TOPO4 or HX-E-TOPO3 selections.
- Two additional PCIe card may be added with HX-E-TOPO2 selection.

Caveats

- For 1-CPU systems:
 - Only Riser 1 is supported.
- For 2-CPU systems:
 - All risers (Risers 1, 2, and 3) are supported.
- To help ensure that your operating system is compatible with the card you have selected, or to see additional cards that have been qualified to work with the HX220 M6 Edge All Flash/Hybrid Server Nodes, but are not sold on the Cisco pricelist, check the Hardware Compatibility List at this URL:

STEP 9 SELECT HYPERFLEX EDGE NETWORK TOPOLOGY

HyperFlex Edge utilizes the existing top of rack (ToR) switches available in the customer environment.

Many topologies are supported to ensure the right fit for many environments. HyperFlex Edge supports single and dual switch topologies, depending on the level of high availability required. See the [SUPPLEMENTAL MATERIAL, page 63](#) for more details on each topology option.

Select one network topology from the options listed in [Table 16](#).

HX-PCIE-IQ10GF	Intel X710 quad-port 10G SFP+ NIC
HX-P-I8D25GF	Cisco-Intel E810XXVDA2 2x25/10 GbE SFP28 PCIe NIC
R2 Slot 6 x8 PCIe NIC	
HX-PCIE-ID10GF	Intel X710 dual-port 10G SFP+
HX-PCIE-IQ10GF	Intel X710 quad-port 10G SFP+ NIC
HX-P-I8D25GF	Cisco-Intel E810XXVDA2 2x25/10 GbE SFP28 PCIe NIC

**NOTE:**

- A topology selection is required. Intel NIC adapters in [STEP 7](#) are used by guest VMs/applications only. These adapters may not be substituted for the adapters automatically included when selecting a topology.
 - Selecting **HX-E-TOPO4** will include the Cisco UCS VIC 1467 quad port 25G SFP28 mLOM card (**HX-M-V25-04**) for 10/25GE topologies. Two ports on the 10GE are used for HyperFlex functions. The remaining two ports may be used by applications after the HyperFlex deployment is completed.
 - Selecting **HX-E-TOPO2** will include the Intel i350 quad port PCIe NIC for 1GE topologies. Two ports on the NIC are used for HyperFlex functions. The remaining two ports may be used by applications after the HyperFlex deployment is completed.
 - Cisco strongly recommends **HX-E-TOPO4** for all new deployments for the following reasons:
 - Higher storage performance
 - Expansion ready - Ability to support node expansion in a future HyperFlex Data Platform software release.
 - Investment protection provides up to 100GE of theoretical throughput per server.
 - Leaves PCIe slots free for accessories
 - Starting with HyperFlex 5.0(2a), the **TOPO5** option is supported
 - For full details see the [HyperFlex Networking Topologies Tech Note](#).

STEP 10 ORDER GPU CARDS (OPTIONAL)

Select GPU Options

The available GPU PCIe options are listed in [Table 18](#).

Table 18 Available PCIe GPU Cards¹

Product ID (PID)	PID Description	Card Size	Maximum cards Per node
HX-GPU-T4-16	NVIDIA T4 PCIE 75W 16GB	HHHL, single-wide	3

Notes:

1. Refer to https://www.cisco.com/content/en/us/td/docs/unified_computing/ucs/c/hw/c220m6/install/c220m6.html for more details.

NOTE:

- All GPU cards must be procured from Cisco as there is a unique SBIOS ID required by CIMC and UCSM.

Caveats

- GPUs cannot be mixed.
- For the maximum of 3x T4 GPUs, the 3x half slot riser should be selected.
- A GPU can be installed in either full-height PCIe riser 1 or 2 (or both) or can be installed in three half-height riser 1, 2, or 3.

STEP 11 ORDER POWER SUPPLY

Power supplies share a common electrical and physical design that allows for hot-plug and tool-less installation into M6 HX servers. Each power supply is certified for high-efficiency operation and offers multiple power output options. This allows users to “right-size” based on server configuration, which improves power efficiency, lowers overall energy costs and avoids stranded capacity in the data center. Use the power calculator at the following link to determine the needed power based on the options chosen (CPUs, drives, memory, and so on):

<http://ucspowercalc.cisco.com>

WARNING:

- Starting 1st January 2024, only Titanium rated PSUs are allowed to be shipped to European Union (EU), European Economic Area (EEA), United Kingdom (UK), Switzerland and other countries that adopted Lot 9 Regulation.
- DC PSUs are not impacted by Lot 9 Regulation and are EU/UK Lot 9 compliant

HX-PSU1-2300W=	2300W AC Power Supply for Rack Servers Titanium
HX-PSU1-1050ELV	1050W AC PSU Enhanced Low Line (Not EU/UK Lot 9 Compliant)

NOTE: In a server with two power supplies, both power supplies must be identical.

STEP 12 SELECT INPUT POWER CORD(S)

Using [Table 20](#) and [Table 21](#), select the appropriate AC power cords. You can select a minimum of no power cords and a maximum of two. If you select the option R2XX-DMYPWRCORD, no power cord is shipped with the server.

NOTE: [Table 20](#) lists the power cords for servers that use power supplies less than 2300 W. [Table 21](#) lists the power cords for servers that use 2300 W power supplies. Note that the power cords for 2300 W power supplies use a C19 connector so they only fit the 2300 W power supply connector.

STEP 13 ORDER TOOL-LESS RAIL KIT AND OPTIONAL REVERSIBLE CABLE MANAGEMENT ARM

Select a Tool-less Rail Kit

Select a tool-less rail kit from [Table 22](#).

Table 22 Tool-less Rail Kit Options

Product ID (PID)	PID Description
HX-RAIL-M6	Ball Bearing Rail Kit for C220 and C240 M6 rack servers

NOTE: Cisco recommends a minimum quantity of 1 Rail Kit.

Select an Optional Reversible Cable Management Arm

The reversible cable management arm mounts on either the right or left slide rails at the rear of the server and is used for cable management. Use [Table 23](#) to order a cable management arm.

Table 23 Cable Management Arm

Product ID (PID)	PID Description
HX-CMA-C220M6	Reversible CMA for C220 M6 ball bearing rail kit

For more information about the tool-less rail kit and cable management arm, see the Cisco 220 M6 Installation and Service Guide at this URL:

https://www.cisco.com/content/en/us/td/docs/unified_computing/ucs/c/hw/c220m6/install/c220m6.html

NOTE: If you plan to rackmount your HX220 M6 Edge All Flash/Hybrid Server Nodes, you must order a tool-less rail kit. The same rail kits and CMAs are used for M5 and M6 servers.

STEP 14 ORDER SECURITY DEVICES (OPTIONAL)

A Trusted Platform Module (TPM) is a computer chip (microcontroller) that can securely store artifacts used to authenticate the platform (server). These artifacts can include passwords, certificates, or encryption keys. A TPM can also be used to store platform measurements that help ensure that the platform remains trustworthy. Authentication (ensuring that the platform can prove that it is what it claims to be) and attestation (a process helping to prove that a platform is trustworthy and has not been breached) are necessary steps to ensure safer computing in all environments.

A chassis intrusion switch gives a notification of any unauthorized mechanical access into the server.

The security device ordering information is listed in [Table 24](#).

Table 24 Security Devices

Product ID (PID)	PID Description
HX-TPM-002C	TPM 2.0, TCG, FIPS140-2, CC EAL4+ Certified, for M6 servers
HX-INT-SW02	C220 and C240 M6 Chassis Intrusion Switch
UCSX-TPM-OPT-OUT	OPT OUT, TPM 2.0, TCG, FIPS140-2, CC EAL4+ Certified ¹

Notes:

1. Please note that Microsoft certification requires a TPM 2.0 for bare-metal or guest VM deployments. Opt-out of the TPM 2.0 voids the Microsoft certification

NOTE:

- The TPM module used in this system conforms to TPM 2.0, as defined by the Trusted Computing Group (TCG). It is also SPI-based.
- TPM installation is supported after-factory. However, a TPM installs with a one-way screw and cannot be replaced, upgraded, or moved to another server. If a server with a TPM is returned, the replacement server must be ordered with a new TPM.

STEP 15 SELECT LOCKING SECURITY BEZEL (OPTIONAL)

An optional locking bezel can be mounted to the front of the chassis to prevent unauthorized access to the drives.

Select the locking bezel from [Table 25](#).

STEP 20 SELECT SERVICE and SUPPORT LEVEL

A variety of service options are available, as described in this section.

HyperFlex Warranty, No Contract

If you have noncritical implementations and choose to have no service contract, the following coverage is supplied:

- Three-year parts coverage.
- Next business day (NBD) onsite parts replacement eight hours a day, five days a week.
- 90-day software warranty on media.
- Ongoing downloads of BIOS, drivers, and firmware updates.
- UCSM updates for systems with Unified Computing System Manager. These updates include minor enhancements and bug fixes that are designed to maintain the compliance of UCSM with published specifications, release notes, and industry standards.

Smart Net Total Care (SNTC)

For support of the entire HyperFlex System, Cisco offers the Cisco Smart Net Total Care Service. This service provides expert software and hardware support to help sustain performance and high availability of the unified computing environment. Access to Cisco Technical Assistance Center (TAC) is provided around the clock, from anywhere in the world.

For systems that include Unified Computing System Manager, the support service includes downloads of UCSM upgrades. The Cisco Smart Net Total Care Service includes flexible hardware replacement options, including replacement in as little as two hours. There is also access to Cisco's extensive online technical resources to help maintain optimal efficiency and uptime of the unified computing environment. For more information please refer to the following url: <http://www.cisco.com/c/en/us/services/technical/smart-net-total-care.html?stickynav=1>

Solution Support (SSPT)

Solution Support includes both Cisco product support and solution-level support, resolving complex issues in multivendor environments, on average, 43% more quickly than product support alone. Solution Support is a critical element in data center administration, to help rapidly resolve any issue encountered, while maintaining performance, reliability, and return on investment.

This service centralizes support across your multivendor Cisco environment for both our products and solution partner products you've deployed in your ecosystem. Whether there is an issue with a Cisco or solution partner product, just call us. Our experts are the primary point of contact and own the case from first call to resolution. For more information please refer to the following url:

Smart Net Total Care Hardware Only Service

For faster parts replacement than is provided with the standard Cisco HyperFlex warranty, Cisco offers the Cisco Smart Net Total Care Hardware Only Service. You can choose from two levels of advanced onsite parts replacement coverage in as little as four hours. Smart Net Total Care Hardware Only Service provides remote access any time to Cisco support professionals who can determine if a return materials authorization (RMA) is required.

You can choose a desired service listed in [Table 34](#).

Partner Support Service

Cisco Partner Support Service (PSS) is a Cisco Collaborative Services service offering that is designed for partners to deliver their own branded support and managed services to enterprise customers. Cisco PSS provides partners with access to Cisco's support infrastructure and assets to help them:

- Expand their service portfolios to support the most complex network environments
- Lower delivery costs
- Deliver services that increase customer loyalty

PSS options enable eligible Cisco partners to develop and consistently deliver high-value technical support that capitalizes on Cisco intellectual assets. This helps partners to realize higher margins and expand their practice.

PSS is available to all Cisco PSS partners.

The two Partner Support Options include:

- Partner Support Service for HyperFlex
- Partner Support Service for HyperFlex Hardware Only

PSS provides hardware and software support, including triage support for third party software, backed by Cisco technical resources and level three support.

You can choose a desired service listed in [Table 35](#).

Combined Support Service

Combined Services makes it easier to purchase and manage required services under one contract. SNTC services help increase the availability of your vital data center infrastructure and realize the most value from your unified computing investment. The more benefits you realize from the Cisco HyperFlex System, the more important the technology becomes to your business. These services allow you to:

- Optimize the uptime, performance, and efficiency of your HyperFlex system
- Protect your vital business applications by rapidly identifying and addressing issues
- Strengthen in-house expertise through knowledge transfer and mentoring
- Improve operational efficiency by allowing HyperFlex experts to augment your internal staff resources
- Enhance business agility by diagnosing potential issues before they affect your operations

You can choose a desired service listed in [Table 38](#).

Drive Retention Service

With the Cisco Drive Retention Service, you can obtain a new disk drive in exchange for a faulty drive without returning the faulty drive.

Sophisticated data recovery techniques have made classified, proprietary, and confidential information vulnerable, even on malfunctioning disk drives. The Drive Retention service enables you to retain your drives and ensures that the sensitive data on those drives is not compromised, which reduces the risk of any potential liabilities. This service also enables you to comply with regulatory, local, and federal requirements.

If your company has a need to control confidential, classified, sensitive, or proprietary data, you might want to consider one of the Drive Retention Services listed in the above tables (where available)

NOTE: Cisco does not offer a certified drive destruction service as part of this service.

Local Language Technical Support

Where available, and subject to an additional fee, local language support for calls on all assigned severity levels may be available for specific product(s) - see tables above.

SUPPLEMENTAL MATERIAL

Supported Network Topologies for HyperFlex Edge 2 Node Deployments

Cisco HyperFlex Edge offers both 1 Gigabit Ethernet (GE) and 10/25 Gigabit Ethernet (GE) installation option. Both topologies support single top-of-rack (ToR) and dual ToR switch options for ultimate network flexibility and redundancy.

Consider the following when determining the best topology for your cluster:

- Cisco highly recommends the 10/25GE topology for higher performance and future node expansion capabilities.
- The 1GE for clusters that will never require node expansion, and instances where the ToR switch does not have 10/25GE ports available.

NOTE: A network topology is chosen during initial deployment and cannot be changed or upgraded without a full reinstallation. Choose your network topology carefully and with future needs in mind.

Below is a summary of the supported topologies, refer to the [Cisco HyperFlex Edge Deployment Guide, Pre-installation Checklist chapter](#), for full details.

10 or 25 Gigabit Ethernet Dual Switch Topology

Dual switch configuration provides a slightly more complex topology with full redundancy that protects against: switch failure, link failure, and port failure. It requires two switches that may be standalone or stacked, and two 10/25GE ports, one 1GE port for CIMC management, and one Cisco VIC 1467 per server. Trunk ports are the only supported network port configuration. refer [10/25 Gigabit Ethernet Switch Configuration Guidelines](#) for more information.

To deploy this topology, select HX-E-TOPO4 from [STEP 9](#)

Figure 8 Physical cabling for the 10/25GE Dual Switch Topology. Detailed diagrams for network topologies can be found in the [pre-installation checklist](#).

10 or 25 Gigabit Ethernet Single Switch Topology

Single switch configuration provides a simple topology requiring only a single switch, and two 10/25GE ports, one 1GE port for CIMC management, and one Cisco VIC 1467 per server. Switch level redundancy is not provided, however all links/ports and associated network services are fully redundant and can tolerate failures. refer [10/25 Gigabit Ethernet Switch Configuration Guidelines](#) for more information.

To deploy this topology, select HX-E-TOPO4 from [STEP 9](#)

Figure 9 Physical cabling for the 10/25GE Single Switch Topology. Detailed diagrams for network topologies can be found in the [pre-installation checklist](#).

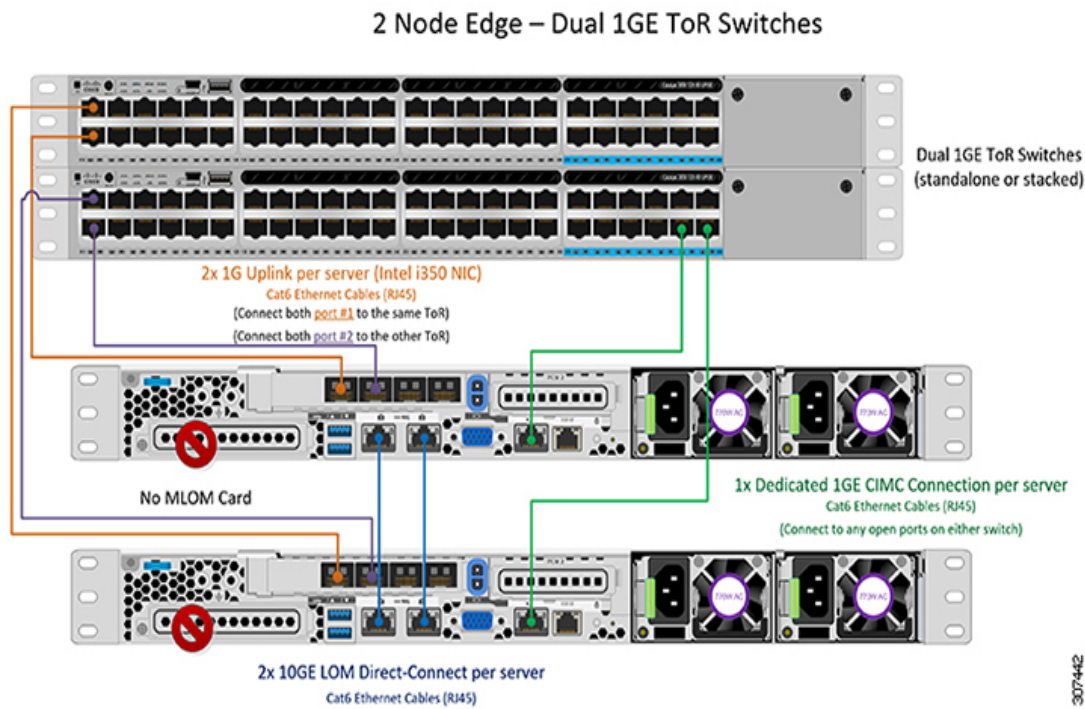

1 Gigabit Ethernet Dual Switch Topology

Dual switch cabling provides a slightly more complex topology with full redundancy that protects against: switch failure, link failure, switch port failure, and LOM/PCIe NIC HW failures. It requires two switches that may be standalone or stacked, and four 1GE ports for cluster and VM traffic, one 1GE port for CIMC management, and one Intel i350 PCIe NIC per server. Trunk ports are the only supported network port configuration. refer [1 Gigabit Ethernet Switch Configuration Guidelines](#) for more information

To deploy this topology, select HX-E-TOPO2 from [STEP 9](#)

1 Gigabit Ethernet Single Switch Topology

Single switch configuration provides a simple topology requiring only a single switch, two 1GE ports for cluster and VM traffic, one 1GE port for CIMC management, and no additional PCIe NICs. Link or switch redundancy is not provided. Access ports and trunk ports are the two supported network port configurations. refer [1 Gigabit Ethernet Switch Configuration Guidelines](#) for more information

To deploy this topology, select HX-E-TOPO2 from [STEP 9](#)

Figure 11 Physical cabling for the 1GE Single Switch Topology. Detailed diagrams for network topologies can be found in the [pre-installation checklist](#).

NIC Based 10 or 25 Gigabit Ethernet Dual Switch Topology (quad port)

Dual switch configuration provides a slightly more complex topology with full redundancy that protects against: switch failure, link failure, and port failure. It requires two switches that may be standalone or stacked, and four 10/25GE ports, one 1GE port for CIMC management, and 1 x quad port NIC per server. Trunk ports are the only supported network port configuration. refer [10/25 Gigabit Ethernet Switch Configuration Guidelines](#) for more information.

It requires two switches that may be standalone or stacked, and four 10/25GE ports, one 1GE port for CIMC management, and 2 x dual port NIC per server. Trunk ports are the only supported network port configuration. refer [10/25 Gigabit Ethernet Switch Configuration Guidelines](#) for more information.

Supported Network Topologies for HyperFlex Edge 3 and 4 Node Deployments

Cisco HyperFlex 220 M6 Edge clusters should be deployed using Cisco Intersight installer. Cisco Intersight provides advanced multi-cluster monitoring and management capabilities; Cisco HyperFlex M6 edge nodes are not supported for installation using HyperFlex OVA installer VM.

Cisco HyperFlex Edge offers both 1 Gigabit Ethernet (GE) and 10/25 Gigabit Ethernet (GE) installation option. Both topologies support single top-of-rack (ToR) and dual ToR switch options for ultimate network flexibility and redundancy.

Consider the following when determining the best topology for your cluster:

- Cisco highly recommends the 10/25GE topology for higher performance and future node expansion capabilities.
- The 1GE topology is reserved for clusters that will never require node expansion, and instances where the ToR switch does not have 10/25GE ports available.

NOTE: A network topology is chosen during initial deployment and cannot be changed or upgraded without a full reinstallation. Choose your network topology carefully and with future needs in mind.

Notes:

1. This part is included with the purchase of option or spare CPU or CPU processor kits.

UPGRADING or REPLACING CPUs

NOTE: Before servicing any CPU, do the following:

- Decommission and power off the server.
- Slide the HX220 M6 Edge All flash and Hybrid Server Node out from the rack.
- Remove the top cover.

To replace an existing CPU, follow these steps:

(1) Have the following tools and materials available for the procedure:

- T-30 Torx driver—Supplied with replacement CPU.
- #1 flat-head screwdriver—Supplied with replacement CPU.
- CPU assembly tool—Supplied with replacement CPU. Can be ordered separately as Cisco PID UCS-CPUAT=.
- Heatsink cleaning kit—Supplied with replacement CPU. Can be ordered separately as Cisco PID UCSX-HSCK=.
- Thermal interface material (TIM)—Syringe supplied with replacement CPU. Can be ordered separately as Cisco PID UCS-CPU-TIM=.

(2) Order the appropriate replacement CPU from [Table 5 on page 20](#)

Carefully remove and replace the CPU and heatsink in accordance with the instructions found in “Cisco M5 Server Installation and Service Guide” found at:

https://www.cisco.com/content/en/us/td/docs/unified_computing/ucs/c/hw/c220m6/install/c220m6.html

To add a new CPU, follow these steps:

(1) Have the following tools and materials available for the procedure:

- T-30 Torx driver—Supplied with new CPU.
- #1 flat-head screwdriver—Supplied with new CPU
- CPU assembly tool—Supplied with new CPU. Can be ordered separately as Cisco PID UCS-CPUAT=
- Thermal interface material (TIM)—Syringe supplied with replacement CPU. Can be ordered separately as Cisco PID UCS-CPU-TIM=

(2) Order the appropriate new CPU from [Table 5 on page 20](#)

(3) Order one heat sink for each new CPU. Order PID UCSC-HSLP-M6=.

Carefully install the CPU and heatsink in accordance with the instructions found in “Cisco M5 Server Installation and Service Guide” found at:

https://www.cisco.com/content/en/us/td/docs/unified_computing/ucs/c/hw/c220m6/install/c220m6.html

UPGRADING or REPLACING MEMORY

NOTE: Before servicing any DIMM do the following:

- Decommission and power off the server.
- Remove the top cover from the server
- Slide the server out the front of the chassis.

To add or replace DIMMs follow these steps:

Step 1 Open both DIMM connector latches.

Step 2 Press evenly on both ends of the DIMM until it clicks into place in its slot

Note: Ensure that the notch in the DIMM aligns with the slot. If the notch is misaligned, it is possible to damage the DIMM, the slot, or both.

Step 3 Press the DIMM connector latches inward slightly to seat them fully.

Step 4 Populate all slots with a DIMM or DIMM blank. A slot cannot be empty.

Figure 27 Replacing Memory

For additional details on replacing or upgrading DIMMs, see “Cisco M5 Server Installation and Service Guide” found at this link:

https://www.cisco.com/content/en/us/td/docs/unified_computing/ucs/c/hw/c220m6/install/c220m6.html

Power Specifications

The server is available with the following types of power supplies:

- 1050 W (AC) power supply (see [Table 42](#)).
- 1050 W V2 (DC) power supply (see [Table 43](#))
- 1600 W (AC) power supply (see [Table 44](#))
- 2300 W (AC) power supply (see [Table 45](#))
