▋ Superior Multilayered Protection

The **Cisco UCS C-Series Rack Servers** provide a rack-server entry point to Cisco UCS. With world-record-setting performance for 2- and 4-socket servers, Cisco UCS C-Series Rack Servers can integrate into Cisco UCS through a single set of cables. Cisco UCS C-Series Rack Servers provide a wide range of I/O, memory, internal disk, and solid-state disk (SSD) drive capacity, enabling you to easily match servers to workloads.

▋ Highlights: Cisco UCS C-Series M5 Rack Servers

Designed to provide your computing infrastructure now and into the future, **Cisco UCS C-Series M5 Rack Servers** give you the benefits of the latest Intel Xeon Scalable processors:

- **More Cores** to accelerate parallelized virtualized and bare-metal workloads
- **Larger Memory Capacity** for better performance and larger in-memory databases
- **Higher Memory Bandwidth** to accelerate the flow of information to and from the CPU
- **Ready for Intel 3D XPoint** nonvolatile memory
- **Up to 6 PCIe GPU Accelerators** for a smooth user experience in virtual desktop environments
- **Cloud Managed** by **Cisco Intersight**

▌ Simple, Flexible, and Powerful Management Capabilities: Cisco Integrated Management Controller (IMC)

The **Cisco Integrated Management Controller (IMC)** is a baseboard management controller that provides embedded server management for the Cisco UCS C-Series Rack Servers. The Cisco IMC enables system management in the datacenter and across distributed branch-office locations. Cisco IMC supports multiple management interfaces, including a web user interface (Web UI), a command-line interface (CLI), and an XML API that is consistent with the one used by the Cisco UCS Manager. Cisco IMC also supports industry-standard management protocols, including Simple Network Management Protocol Version 3 (SNMPv3) and Intelligent Platform Management Interface Version 2.0 (IPMIv2.0).

Cisco IMC is available in Chinese, English, Japanese, Korean, Russian, and Spanish.

Powerful and Configurable Networking: Cisco Virtual Interface Cards (VIC)

The **Cisco Virtual Interface Cards (VIC)** is PCIe-compliant interfaces that support up to 256 PCIe devices with dynamically configured type (NIC or HBA), identity [MAC address or worldwide name (WWN)], fabric failover policy, bandwidth, and QoS policy settings. With Cisco VICs, server configuration — including I/O configuration — becomes configurable on demand, making servers stateless resources that can be deployed to meet any workload need at any time, without any physical reconfiguration or recabling required.

Ability to Integrate into a Fully Managed Environment: Cisco UCS Manager & Cisco UCS Fabric Interconnects

The **Cisco UCS Manager** integrates blade and rack servers into a single self-aware, self-integrating, unified system. It quickly and accurately configures computing, network, storage, and storage-access resources to increase compliance and reduce the chance of errors that can cause downtime. It uses a role- and policy-based approach that helps organizations more easily align policies and configurations with workloads, and it automates system configuration through a "create once, deploy many" approach. Cisco UCS Manager acts as a single point of management and monitoring for the entire system. It is embedded software that runs on the system's fabric interconnects, typically in a redundant, high-availability configuration. It can be accessed through an intuitive GUI, command-line interface (CLI), or XML API. The **Cisco UCS Fabric Interconnects** provide a single point of connectivity and management for the entire system. Typically deployed as an active-active pair, the system's fabric interconnects integrate all components into a single, highly
available management domain controlled by Cisco UCS Manager. The fabric interconnects manage all I/O efficiently and securely at a single point, resulting in deterministic I/O latency regardless of a server or virtual machine's topological location in the system.
- Cisco UCS 6200 Series Fabric Interconnects support line-rate, lossless 10 Gigabit Ethernet and FCoE connectivity
- Cisco UCS 6200 Series Fabric Interconnects can be used to create Cisco UCS domains containing blade or rack servers
- Cisco UCS 6300 Series Fabric Interconnects support line-rate, lossless 40 Gigabit Ethernet and FCoE connectivity
- Cisco UCS 6324 Fabric Interconnects can be used to create a self-contained Cisco UCS Mini solution for branch offices and remote locations

Compute - Hyperconverged Infrastructure
Cisco HyperFlex HX-Series

Brand New HyperFlex Promotion:
Networking Included at No Additional Cost

| **Overview** | **Positioning Map** | **Platform Spec** | **SmartPlay HyperFlex** | **Why HyperFlex?** |

▊ Cisco HyperFlex Systems: Hyperconverged Multicloud Platform

You need infrastructure that can adapt to match the speed of your business—whether deploying enterprise applications or containers in multicloud environments. The **Cisco HyperFlex Systems** with Intel Xeon Scalable processors deliver hyperconvergence with the power and simplicity for **any application**, on **any cloud**, and at **any scale**. Engineered on the Cisco Unified Computing System (UCS), Cisco HyperFlex Systems deliver the agility, scalability, and pay-as-you-grow economics of the cloud with the benefits of onpremises infrastructure.

▊ Cisco HyperFlex HX-Series

The **Cisco HyperFlex HX-Series** provides unified compute, storage, and networking with cloud management. Physically, the Cisco HyperFlex System is delivered as a cluster of the Cisco HyperFlex HX-Series nodes.

A HyperFlex cluster requires a minimum of three homogeneous nodes (with disk storage). Data is replicated across at least two of these nodes, and a third node is required for continuous operation in the event of a single-node failure. Each node is equipped with at least one high-performance SSD drive for data caching and rapid acknowledgment of write requests.

● Hybrid nodes use SSD drives for caching and HDDs for the capacity layer

● All Flash nodes use SSD drives or NVMe storage for caching, and SSD drives for the capacity layer

● **Cisco HyperFlex HX220c Edge M5 Nodes**

These nodes are designed to work in simplified three-node clusters using existing Gigabit Ethernet networks. Cisco HyperFlex Edge systems offer the same easy deployment and management as all Cisco HyperFlex systems.

● **Cisco HyperFlex HX220c M5 Hybrid and All-Flash Nodes**

These nodes balance up to 8 drives of disk capacity in a 2-socket, 1-rack-unit (1RU) package ideal for small-footprint environments.

● **Cisco HyperFlex HX240c M5 Hybrid and All-Flash Nodes**

These nodes balance high disk capacity (up to 23 drives) in a 2-socket, 2RU package ideal for storage-intensive applications.

Compute - Hyperconverged Infrastructure
Cisco HyperFlex HX-Series

Brand New HyperFlex Promotion:
Networking Included at No Additional Cost

| Overview | Positioning Map | Platform Spec | SmartPlay HyperFlex | **Why HyperFlex?** |

▌ Performance Matters

The Cisco HyperFlex's HX Data Platform (HXDP) is engineered to deploy mission-critical applications on hyperconverged infrastructure, providing simplified installation and management, reduced storage footprint, reduction in IOPS variability, reduced read/write latency, and lower TCO.

3x — Higher Virtual Machine Density

3x — Reduced Read/Write Latency

7:1 — Reduction in IOPS Variability

▌ Independent Resource Scaling

The Cisco HyperFlex Systems include a purpose-built, high-performance distributed file system that expands the boundaries of hyperconverged infrastructure. You can scale your environment simply by adding nodes to the configuration.

Unlike with any other hyperconverged product, you can choose to independently scale computing or storage capacity to meet the specific needs of your applications. Our predefined networking resources expand to incorporate the new nodes.

Cisco Nexus 9348GC-FXP Switch

Overview   **Platform Spec**   **Licenses & Accessories**

▌ Gigabit Ethernet ToR Switch with Proven Performance and Density

The **Cisco Nexus 9348GC-FXP Switch** is a 1RU switch that supports 696 Gbps of bandwidth and over 250 mpps. The 48 1GBASE-T downlink ports on the switch can be configured to work as 100-Mbps, 1-Gbps ports. The 4 ports of SFP28 can be configured as 1/10/25-Gbps and the 2 ports of QSFP28 can be configured as 40- and 100-Gbps ports.
Cisco Nexus 9348GC-FXP Switch is designed to meet the changing needs of data centers, big data applications, and automated cloud environments.

▌ Highlights

- Powered by **Cisco Cloud Scale** ASIC technology
- Support for **Cisco NX OS** Software and **Cisco ACI (Application Centric Infrastructure)** architecture
- High-performance, Layer 2 and 3 non-blocking architecture
- Easily deployed into either a hot-aisle or cold-aisle configuration
- **Cisco Tetration Analytics Platform** support with built-in hardware sensors for rich traffic flow telemetry and line-rate data collection
- **Cisco Nexus Data Broker** support for network traffic monitoring and analysis

- Robust hardware system specifications feature 4-core CPU, 24 GB of system memory, and respectively 128-GB SSD drive
- The 40-MB buffer supporting highly scalable data centers and big data applications
- 696 Gbps of bandwidth and over 250 mpps
- Fixed downlinks with 48 x FE/GE
- Fixed uplinks with 4 x 25GE SFP28, 2 x 100GE QSFP28

▌ Adaptive Computing with Cloud-Powered Intelligence

The **Cisco Intersight** delivers a new era of computing for Cisco UCS and HyperFlex systems. This adaptive, cloud-powered management platform enables you to be anywhere and act everywhere. It delivers pervasive simplicity at a global level with connected technical support, so daily activities are easier for everyone.

Intersight provides actionable intelligence based on insights gained from analytics and best practices to enable faster, proactive operations. Intersight is an open platform that will be integrated with Cisco and third party tools and infrastructure to enable agile delivery, so IT can empower the business to respond quickly to change.

▌ Highlights

● **Pervasive Simplicity**

  Use a GUI or API to meet the needs of your development teams.

  Simplify the user experience with the capability to manage your infrastructure regardless of where it is installed.

● **Actionable Intelligence**

  Use best practices to enable faster, proactive operations.

  Gain actionable insight for ongoing improvement and problem avoidance.

● **Agile Delivery**

  Respond quickly to new requests and manage the unpredictable.

  Deploy edge clusters as quickly as you deploy virtual machines in your data center.
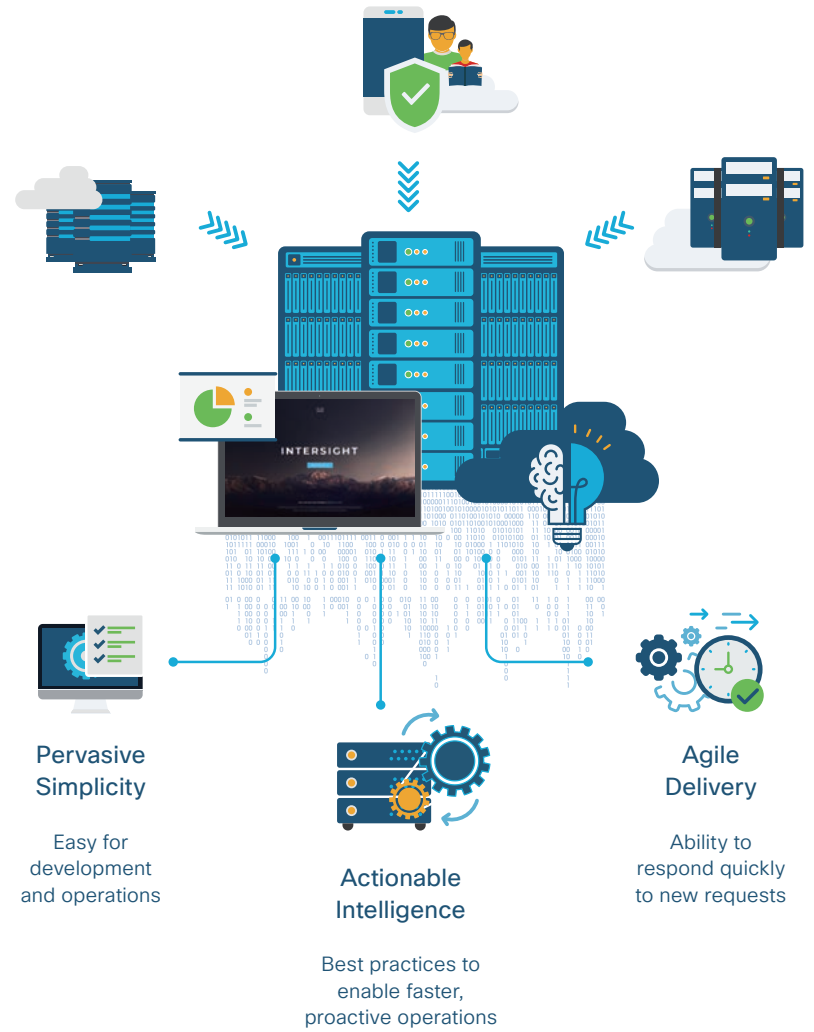

Pervasive Simplicity

Easy for development and operations

▌ Cisco Intersight Editions (Licenses)

The **Cisco Intersight** uses a subscription-based license with multiple editions. Customers can purchase a Subscription duration of one, three, or five years and choose the Cisco UCS server volume tier they need for the selected subscription duration.

Each Cisco UCS server or Cisco HyperFlex system automatically includes a **Cisco Intersight Base** edition at **no additional cost** when the customer accesses the Cisco Intersight portal and claims the device. In addition, customers can purchase the **Cisco Intersight Essentials** edition using the Cisco ordering tool.

● Base

The Cisco Intersight Base offering is available at no cost to customers with platforms enabled to support Cisco Intersight. Enabled platforms are those **Cisco UCS** and **Cisco HyperFlex** systems with a **Cisco Intersight device connector**, including eligible **Cisco UCS Manager**, **Cisco IMC**, and **Cisco HyperFlex** software.

Cisco Intersight Base provides access to a portal that delivers centralized monitoring and basic inventory of managed systems, organizational capabilities including tagging and search, and the capability to launch native endpoint management interfaces including Cisco UCS Manager.

● Essentials

The Cisco Intersight Essentials offering builds on the functions provided in the Base edition. It includes centralized setup and configuration capabilities through a policy engine, firmware management, compliance tool integration, and other features.

Cisco Intersight Essentials enables customers to centralize configuration management through a unified policy engine, determine compliance with the Cisco UCS Hardware Compatibility List (HCL), and initiate firmware updates. The Essentials edition provides a single interface for monitoring, management, and operations, with the capability to launch the virtual keyboard, video, and mouse (vKVM) console directly from Cisco Intersight.

Compute – Management
Cisco Intersight

**Overview**   **Features & Licenses**   **Gallery**

- Customizable dashboard to show overall faults/health/inventory for all managed infrastructure
- Can create unique dashboards for individual Intersight users
- Can add/remove widgets as desired
- Can move (drag and drop) widgets to desired positions
- Can click on various widgets for more detailed information
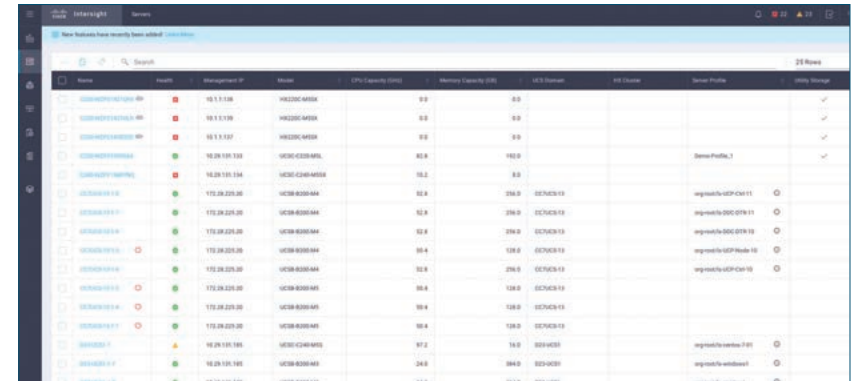

- Main server tab shows all servers managed by Cisco Intersight, and provides basic Health/Model/IP information
- Desired column details can be added/removed as user sees fit
- Clicking on any server name dials in to that server – detailed server overview/inventory information
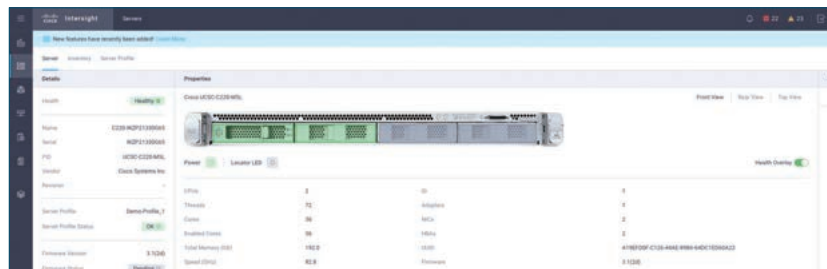

- Server name, model, serial number, and other basic properties are displayed
- Health overlay for front/back/top views can be turned on/off as needed
- Alarms/faults visible on right hand side
- Server actions available as well — IMC cross-launch, vKVM, power operations, tagging
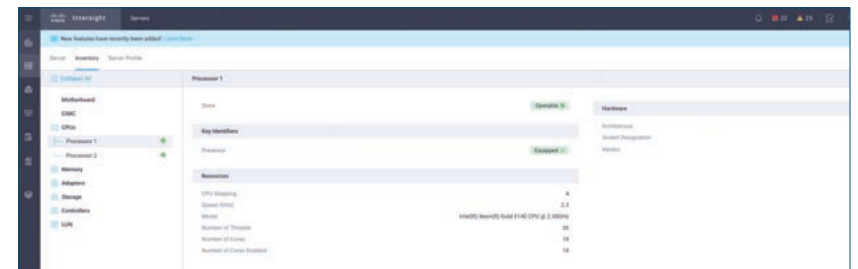

- Detailed information for all server peripherals — CPUs, memory, adapters, storage, etc.
- Can dial in to specific peripheral for additional component information
- Server actions tab available here as well
