Kick Start your DCIM journey with APC™ by Schneider Electric™

StruxureWare™ for Data Centers Starter Pack

Four key reasons your customers need DCIM

1

Lower Costs

With the wealth of information that DCIM offers, lowering costs is an attainable goal. Staff resources can focus on new projects rather than daily operations, and remote management tools can reduce on-site staffing requirements. DCIM also closely monitors power and cooling, reducing those costs substantially.

2

Prevent downtime

The biggest cause of downtime is human error. DCIM provides complete visibility on how the data centre is run which gives your customer the information they need to make decisions whilst reducing risk.

3

Make informed decisions

DCIM also addresses common issues for IT operations, like where to locate new hardware or how to populate racks when changes are made.

4

Speed up infrastructure changes

Normally, every operations team has to build in extra time for deployment, testing, and certification of any changes or additions. This can take weeks, or even months, resulting in wasted project time. DCIM speeds up this process by modelling the changes in near-real time.

DCIM Starter Pack – How to order.

One SKU SWBNDL10R contains a complete monitoring and management solution for up to 10 racks of IT equipment:

- StruxureWare Data Center Expert 25 Node Licences[1]
- StruxureWare Data Center Operation 10 racks[2]
