CHROME

Perfect for shareable class sets or 1 to 1 programs, Chromebooks are versatile devices with dynamic content and G Suite built in. They're easy to use and simple to manage as well.

• Rather than a full-fledged operating system, Chrome OS is browser based, so it doesn't require resources.

• Optimal performance, thanks to simplicity and hardware reliability.

• No need to install any antivirus software on a Chromebook. Google does not allow you to install 3rd party programs so that's the primary reason is it so secure.

• Chromebooks can run up to 8 hours without even charging the device. The web-based operating system doesn't require much horsepower either.

CLASSROOM

Although important, students need more than just devices in the classroom. Adequate tools and infrastructure is imperative for 21st century learning for students.

Educators, too, have seen firsthand the benefits of technology in the classroom. According to a study by IT trade association CompTIA around 75 percent of educators believe that technology has a positive impact in the education process. Educators also recognize the importance of developing these technological skills in students so they will be prepared to enter the workforce once they complete their schooling.

IN THE
AUDITORIUM

Creating presentations that keep students engaged is becoming much easier for K-12 educators, who have a host of technology at their fingertips. D&H brings you many innovative solutions to help presenters break through the distractions and effectively engage students in larger settings.

STEAM

It's more important than ever for students to be equipped with the knowledge and skills to solve tough problems, gather and evaluate evidence and make sense of information. These are the types of skills students learn by studying Science, Technology, Engineering, Art and Math, subjects collectively known as STEAM.
