

# USB 3.1 GEN 2/GEN 1 ReDrivers & USB 3.1 GEN 1/Active Mux

Diodes USB 3.1 GEN 2 Redriver/Active Mux are a key technology for addressing the rising design complexity that the higher data rates of today's high speed interconnects introduce across every industry and across USB and Type-C ports.

To enable better signal integrity throughout the signal chain, Diodes Incorporated provides redrivers based on its industry-leading signal conditioning technology.

Our USB 3.1 GEN 2 Redriver/Active Mux offer better performance than protocol based signal retimers which act as an end-point that must terminate and then retransmit the signal, thus introducing delay and added system cost.

In addition, redrivers minimize jitter by conditioning and passing signals through at the physical layer.

## PRODUCTS

- **PI3EQX1002B**  
10Gbps, 1-Port USB 3.1 GEN 2 Redriver, 3.3V
- **PI2EQX632E**  
5Gbps, USB 3.1 GEN 1 Active Mux Redriver, 1.8V
- **PI3EQX7841**  
5Gbps, USB 3.1 GEN 1 Active Mux Redriver, 3.3V with I<sup>2</sup>C Control
- **PI3EQX7741AIQ**  
5Gbps, 1-Port, USB 3.1 GEN 1 Redriver, Automotive Compliant
- **PI3EQX501BQ**  
5Gbps, Single-Channel USB 3.1 GEN 1 Redriver, Automotive Compliant

## KEY FEATURES

- USB 3.1 GEN 2 and GEN 1 Compatible
- 5 & 10Gbps Serial Link with Linear Equalizer
- Pin or I<sup>2</sup>C Adjustable receiver equalization
- Pin or I<sup>2</sup>C Adjustable flat gain control
- Pin or I<sup>2</sup>C Adjustable linear swing control
- Adjustable power-down mode
- Automotive - AEC-Q Compliant
- Better performance than protocol based signal Retimers

## BENEFITS

- Compensates USB 3.1 GEN 2/GEN 1 Channel Insertion Loss
- Automatic receiver detect configuration
- Channel based Auto "Slumber" mode
- Maintains signal integrity over long line lengths

# USB 3.1 GEN 1/GEN 2 REDRIVERS/ACTIVE MUX
