# LM Sickle Scalers

LM

feel the difference

PERIODONTICS  
- SICKLE SCALERS

For the removal of supragingival calculus.

Instrumentation:

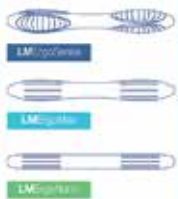

For calculus removal place the tip third of the scaler's cutting edge against the tooth. Tilt the instrument toward the tooth to achieve 70° to 80° angle between the tooth and the blade. Apply lateral pressure and activate the scaler by using vertical, diagonal or horizontal pull strokes. To maintain control use short 2-3 mm long strokes.

Design:

- Triangular cross section
- Face perpendicular to the lower shank
- Two cutting edges (red line)
- Pointed tip

Handle options:

Delicate working end. Especially for tight interdental spaces.

For all tooth surfaces, especially proximal surfaces.

Micro Sickle

- LM 301-302 ES
- LM 301-302 XSI
- LM 301-302 SI

- 204SD design
- Delicate working end
- Elongated shank

Sickle LM204S

- LM 303-304 ES
- LM 303-304 XSI
- LM 303-304 SI

- Sharply angulated shank and very fine working end

Mini Sickle

- LM 311-312 ES
- LM 311-312 XSI
- LM 311-312 SI

- Fine, slightly angled blade
- For all tooth surfaces

Sickle LM23

- LM 313-314 ES
- LM 313-314 XSI
- LM 313-314 SI

- Shorter blade and longer lower shank than in the Mini Sickle

Crane-Kaplan

- LM 322-323 ES
- LM 322-323 XSI
- LM 322-323 SI

- Extremely strong, rigid, sharply angled blade
- For removal of heavy supragingival deposits

Mini Kaplan

- LM 330-334 ES
- LM 330-334 XSI
- LM 330-334 SI

- Same angle but with a more delicate blade than in the Crane-Kaplan

Gracey-Rigid

Gracey Variations

Pocket Scalers (PS) and Mini Pocket Scalers (MPS) have a slender and longer terminal shank to provide access into deeper pockets. MPS has the same slender tip design as PS, but with half the blade length. InSite PS and MPS have a depth gauge at 5mm through 10mm offering an excellent visual guide.

**Big Easy Ultralite** Pocket Scalers (PS) and Mini Pocket Scalers (MPS) do NOT feature the depth gauge found in InSite Scalers.

**Rigid** Gracey designs have a thicker shank than the original Graceys, but are overall slightly shorter for increased strength when removing heavy calculus.

LM Gracey Curettes

**PERIODONTICS**  
- GRACEY FINISHING CURETTES

Area specific curettes for the removal of deep subgingival calculus. For the finishing of subgingival root surfaces.

**Instrumentation:**  
Place the tip third or half of the cutting edge of a Gracey curette against the tooth surface. (The larger outer curve is always the cutting edge.) Make sure that the lower shank is parallel with the tooth surface. For calculus removal apply moderate and for root planing light lateral pressure and activate the curette by using vertical, diagonal or horizontal pull strokes.

**Area specific indications for Gracey curettes:**

# LM ErgoSense

## SIMPLY SENSATIONAL

“LM-ErgoSense  
– Love the larger design“

Today the focus is on ergonomics – without losing sight of efficiency. The new LM-ErgoSense hand instrument, meets both of these requirements and is truly a unique combination of ergonomic design and integrated new RFID technology. It is the outcome of intense research and product development in close cooperation with dental clinicians and professionals. An ergonomic, high quality hand instrument naturally feels good in the hand. Even genuinely sensational as the new, smart LM-ErgoSense has been described.

## Premier Plastic Filling Instruments

### Slix™ Composite Manipulation Instruments

Nonstick - Durable - Ergonomic - Autoclavable

The tips are treated with a revolutionary protective coating that provides superior non-stick properties and a lustrous surface for long lasting esthetic appearance. No more composite sticking; dentists appreciate the easy placement and fast clean-up! The ergonomic handles are manufactured from an advance technology polymer with medical-grade silicone grips. "Surprisingly light"-only 16g - on the largest available handle (1/2" (1.27 cm) diameter) to reduce hand fatigue.

## Luxators

### Ash® Luxation Instruments

- DENTSPLY Ash® Luxation instrument tips are more finely tapered than excavators tips.
- Their characteristics are a combination of a periotome and an elevator.
- The sharp tip enables more efficient cutting of the periodontal ligament, whilst the tapering shaft assists with controlled expansion of the bony socket.
- The DENTSPLY Ash® Luxation Kit comprises of four luxation instruments, a straight and curved blade version in two different widths, a Stainless Steel handled Heidebrink root pick elevator, and a sharpening stone to keep the instruments in perfect condition.

Directa Luxators

Luxator® instruments are a specially designed periodontal ligament knife with a fine tapering blade that compresses the alveolar, cuts the membrane and gently eases the tooth from its socket. The Luxator Dual Edge provides safer insertion and reduced risk of slipping. Ideal for deeply fractured teeth and decayed roots. Available in Original, Short, Dual Edge and Forte.
