IntelliVue

MX450 and MX500
Patient Monitors

Keeping pace
with your point of care

One intuitive view at the point of care

Having comprehensive patient information at a glance can make a real difference when multiple patients and priorities demand your attention. Your monitoring also needs to change with patient acuity, and be able to withstand the rigors of in-hospital transport.

It is with this in mind that we designed the Philips IntelliVue MX450 and MX500 to monitor a wide, flexible range of vital signs and relevant patient data, while giving you portability when needed. Whether you are in the ICU or on a sub-acute floor, the MX450 and MX500 monitors offer you the same high standard of patient monitoring you already associate with the rest of our IntelliVue family.

In situations where there are frequent non-actionable alarms, the optional Alarm Advisor application can track caregiver responses. It uses this data to provide proactive suggestions for deploying alarm management strategies, or to personalize alarm thresholds depending on the patient's condition (according to hospital-defined guidance). The result can alleviate alarm fatigue, and help caregivers focus on clinically relevant and actionable¹ alarms.

See it clearly and quickly

It is important to find what you need right away. The 12" touchscreen of the IntelliVue MX450 and MX500 makes it easy. You will also recognize the familiar, easy-to-use interface, common throughout the IntelliVue monitoring portfolio. This consistency makes training and use as simple as possible.

Whether you are examining the patient in a brightly-lit environment, or allowing the patient to rest with room lights dimmed, you won't have to adjust the monitor's display brightness. The display, with its ambient light sensor, automatically adjusts screen brightness to maintain readability in nearly any lighting environment.

The monitors also have built-in Advanced Clinical Solutions that provide tools to summarize and visualize complex clinical data and their interactions. Multiple streams of information come together in one, intuitive view.

The IntelliVue MX450 (left) uses multi-measurement modules with primary measurements. The IntelliVue MX500 (right) adds the possibility of adding additional measurement modules.

Transforming the sounds of care

As a global leader in patient monitoring, we have spent many years refining and improving the ergonomic and physical design of our devices. We've now focused our efforts on the third dimension of monitoring - how we announce alarms. Working with a musician and sound experts to develop the Philips Sounds, we're making incremental changes to the primary alarming sounds in all of our IntelliVue monitors. We're working to create a patient monitoring experience that will set the stage so you can focus your care on the patients who need you most.

Addressing the **changing needs** of healthcare

Like all clinicians, you rely on accurate, real-time physiological patient data when making decisions. In the dynamic, demanding environment of today's healthcare, the scope of that data is constantly evolving. The return on your hospital's considerable investment in an EMR relies on sharing data between clinical information systems, helping to contribute to the comprehensive availability of that data.

Make the most of your EMR

The IntelliVue MX450 and MX500 work to enhance your investment by helping reduce cost and complexity when connecting bedside devices to your EMR. If you are using the optional IntelliVue XDS software, you can even view and control the patient monitor remotely, while accessing the patient's record simultaneously on the EMR.

The optional IntelliBridge EC10 device interfacing on the IntelliVue MX450 and MX500 provide an efficient point of interfacing² for ventilators and many other devices at the bedside and during in-hospital transport³. Clinical data from the monitor and other linked bedside devices are combined into a single HL7 message stream. Even alarm strips captured as electronic documents during in-hospital transport can be

reviewed and transferred using a document import interface provided by the EMR.

Robust cybersecurity measures

With healthcare becoming a prime target for malicious actors, IntelliVue patient monitors and Philips Information Center iX allow your institution to configure cybersecurity measures such as node authentication, user authentication, user permissions, network data encryption, print report encryption and device file system encryption.

Smooth integration into your IT infrastructure

As part of achieving compliance with security and data transfer requirements, it is important to integrate the IntelliVue MX450 and MX500 smoothly into your IT infrastructure. Our IT services can support you in completing this integration efficiently and successfully. And our extensive network assessment capabilities – encompassing proactive recommendations and validation checks – can help you to improve network performance, a vital element in keeping your monitoring system running smoothly.

Fit monitoring around workflows

Today your workflows need to adapt in the blink of an eye. The IntelliVue MX450 and MX500 can be scaled to cover most critical care monitoring requirements as patient acuity levels change. Both devices support IntelliVue multi-measurement modules (such as the IntelliVue X3 or MMX) and extension modules. The MX500 can also accommodate specialty measurements via up to three single/double-width parameter modules.

Take monitoring with you

Environments that have large variability in acuity, such as the ED, step-down, conscious sedation, and NICU, can be tough on patient monitors. The IntelliVue MX450 and MX500 are optimized for these specialized clinical environments and workflows. With their built-in handles and standard battery operation, these monitors are rugged enough to cope with demanding in-hospital transport – and compact enough to be easy to transport. The optional Philips quick-release mount allows you to unfasten either of these monitors from a bedside mounting in seconds, to secure to the bed or gurney or trolley, using our optional and lightweight bed hanger mount developed exclusively for the IntelliVue MX series. (For the full range of mounting solutions, please refer to the Philips IntelliVue monitor mounting webpage.)

Supporting your infection-control protocols

We've engineered the IntelliVue MX450 and MX500 with infection control in mind. They are simple to clean because of the smooth surfaces, minimal seams, and sturdy material approved for use with a variety of tested disinfecting agents.⁴

As with all IntelliVue monitors, these monitors have no hard drive and use passive cooling. That means no fan blades that are likely to accumulate and distribute pathogens, helping you in your battle against hospital acquired infections.

Comprehensive solutions that deliver more than the sum of their parts

Pairing equipment with the right value-added services helps you get more from your systems across their lifecycle. And we're not talking about simple break-fix support. Philips Customer Services encompass so much more. We can help you with implementation, project management, optimizing your care environment, maintaining your systems and extracting the full value of your equipment throughout the lifecycle.

Partnering with you

We deliver comprehensive, tailored offerings that take into account your specific needs. We take a holistic approach, working with you to suggest solutions that complement your facility, your monitoring landscape, and your strategic aims. How? By partnering with you every step of the way to find answers to the challenges you're facing. And by seamlessly connecting your people, processes, technology and data – helping to make them work better together.

¹ Philips defines actionable alarms that reflect the patient condition or device status and are relevant to the clinical condition of the patient (for example, low respiration rate alarm in patients with respiratory depression).

² Requires IntelliBridge EC10 interface port(s). On the IntelliVue MX450 you can add up to two interfaces as expansion boards. On the IntelliVue MX500 you can use any combination of IntelliBridge EC10 modules or expansion boards, for a total of up to two device interfaces. For

device compatibility, refer to latest IntelliBridge EC10 external device compatibility list.

³ Wireless data transfer to EMR via Philips Patient Information Center iX (PIC iX). Use in transport is only possible with third-party devices that can also be used for transport.

⁴ Refer to the IntelliVue Patient Monitoring Instructions for Use for a detailed list of approved cleaning agents.
