# HP Latex 315 Print and Cut Solution

Grow—with this 54-inch business-ready print and cut solution

#### Your perfect fit

- Do more apps—cut through stickers, customizable clothing, window graphics; reach indoor spaces solvent can't
- With HP Signage Suite in the box, no design skills are needed—bring your ideas to life in 3 simple steps<sup>1</sup>
- Space is not the limit—HP print and cut uses essentially the same operating space as an integrated device<sup>2</sup>

#### True print and cut

- Print AND cut at the same time—versus print OR cut with solvent—with this reliable, dual-device solution
- Avoid solvent wait time—prints come out dry, cut/laminate right away; no need to laminate short-term jobs<sup>3</sup>
- Print longer runs with reliable, highprecision cutting—high-accuracy Optical Positioning System (OPOS)

### Reliable, integrated workflow

- Print and cut in 5 simple steps includes in-box HP FlexiPRINT and CUT RIP and friendly user interface
- One point workflow management edit/print jobs, including HP Barcode unattended cutting, without interruption
- Avoid the complexity of other dualdevices—the complete HP solution is designed to work as one

<sup>1</sup> Requires an HP Applications Center account, Internet connection, and connected Internet-capable device. For more information, see hpapplicationscenter.com.

<sup>&</sup>lt;sup>2</sup> Based on operating area requirements, the HP dual-device print and cut solution requires less than 1 m<sup>2</sup> of additional space compared to integrated solvent-technology based print and cut solutions in the market as of February, 2017.

<sup>&</sup>lt;sup>3</sup> You can consider unlaminated use for short-term signage with scratch resistance comparable to hard-solvent inks on self-adhesive vinyl and PVC banner. Scratch-resistance comparison based on testing third-generation HP Latex Inks and representative hard-solvent inks. Estimates by HP Image Permanence Lab on a range of media.

The color variation inside a printed job has been measured to be within this limit: maximum color difference (95% of colors) = 2 dE2000. Reflective measurements on a 943 color target under CIE standard illuminant DS0, and according to the standard CIEDE2000 as per CIE Draft Standard DS 014-6/E:2012. 5% of colors may experience variations above 2 dE2000. Backlit substrates measured in transmission mode may yield different results.
