Organizations Need Flexibility

In order to benefit from the data explosion at the edge, organizations require flexibility.

Traditional refresh cycles are long, and slow, leaving organizations without the most updated technology. Customers are looking for flexible ways to consume, use, and pay for IT services, so they can make sure they always have the newest technology.

Networks are also getting more complex as more data is processed and collected at the edge, more IoT devices are connecting to the network, and more employees are using cloud applications. Flexible management addresses this requirement and simplifies the challenge of connecting and supporting users and devices across the globe.

Since users can connect to the network from anywhere at any time, it is essential the network offers flexible connectivity without introducing security vulnerabilities.

In the following pages, you will learn why flexible consumption, management and connectivity are required for a successful organization today.

데이터 급증의 이점을 활용하려면 유연성이 필요합니다.

기존 업데이트/교체 주기는 길고 느려서 조직에는 최신 기술이 없습니다. 고객은 IT 서비스를 소비,

사용 및 지불할 수 있는 유연한 방법을 찾고 있으므로 항상 최신 기술을 사용할 수 있습니다.

또한 가장자리에 더 많은 데이터가 처리 및 수집되고, 더 많은 IoT 장치가 네트워크에 연결되며, 더

많은 직원이 클라우드 애플리케이션을 사용함에 따라 네트워크도 점점 더 복잡해지고 있습니다.
