

FEDERAL REGISTER

Vol. 84 Friday,
No. 86 May 3, 2019

Book 1 of 2 Books
Pages 18971–19156

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.federalregister.gov.

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at www.govinfo.gov, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, gpocusthelp.com.

The annual subscription price for the **Federal Register** paper edition is \$860 plus postage, or \$929, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 84 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register

Vol. 84, No. 86

Friday, May 3, 2019

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 97

[Docket No. 31249; Amdt. No. 3849]

Standard Instrument Approach Procedures, and Takeoff Minimums and Obstacle Departure Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This rule establishes, amends, suspends, or removes Standard Instrument Approach Procedures (SIAPs) and associated Takeoff Minimums and Obstacle Departure Procedures (ODPs) for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, adding new obstacles, or changing air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: This rule is effective May 3, 2019. The compliance date for each SIAP, associated Takeoff Minimums, and ODP is specified in the amendatory provisions.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the **Federal Register** as of May 3, 2019.

ADDRESSES: Availability of matters incorporated by reference in the amendment is as follows:

For Examination

1. U.S. Department of Transportation, Docket Ops-M30, 1200 New Jersey

Avenue SE, West Bldg., Ground Floor, Washington, DC 20590-0001.

2. The FAA Air Traffic Organization Service Area in which the affected airport is located;

3. The office of Aeronautical Navigation Products, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 or,

4. The National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202-741-6030, or go to: http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.

Availability

All SIAPs and Takeoff Minimums and ODPs are available online free of charge. Visit the National Flight Data Center at nfdc.faa.gov to register. Additionally, individual SIAP and Takeoff Minimums and ODP copies may be obtained from the FAA Air Traffic Organization Service Area in which the affected airport is located.

FOR FURTHER INFORMATION CONTACT:

Thomas J. Nichols, Flight Procedures and Airspace Group, Flight Technologies and Procedures Division, Flight Standards Service, Federal Aviation Administration. Mailing Address: FAA Mike Monroney Aeronautical Center, Flight Procedures and Airspace Group, 6500 South MacArthur Blvd., Registry Bldg. 29, Room 104, Oklahoma City, OK 73125. Telephone: (405) 954-4164.

SUPPLEMENTARY INFORMATION: This rule amends Title 14 of the Code of Federal Regulations, Part 97 (14 CFR part 97), by establishing, amending, suspending, or removes SIAPs, Takeoff Minimums and/or ODPS. The complete regulatory description of each SIAP and its associated Takeoff Minimums or ODP for an identified airport is listed on FAA form documents which are incorporated by reference in this amendment under 5 U.S.C. 552(a), 1 CFR part 51, and 14 CFR part 97.20. The applicable FAA forms are FAA Forms 8260-3, 8260-4, 8260-5, 8260-15A, and 8260-15B when required by an entry on 8260-15A.

The large number of SIAPs, Takeoff Minimums and ODPs, their complex nature, and the need for a special format make publication in the **Federal Register** expensive and impractical. Further, airmen do not use the regulatory text of the SIAPs, Takeoff

Minimums or ODPs, but instead refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP, Takeoff Minimums and ODP listed on FAA form documents is unnecessary. This amendment provides the affected CFR sections and specifies the types of SIAPs, Takeoff Minimums and ODPs with their applicable effective dates. This amendment also identifies the airport and its location, the procedure, and the amendment number.

Availability and Summary of Material Incorporated by Reference

The material incorporated by reference is publicly available as listed in the **ADDRESSES** section.

The material incorporated by reference describes SIAPs, Takeoff Minimums and/or ODPS as identified in the amendatory language for part 97 of this final rule.

The Rule

This amendment to 14 CFR part 97 is effective upon publication of each separate SIAP, Takeoff Minimums and ODP as Amended in the transmittal. Some SIAP and Takeoff Minimums and textual ODP amendments may have been issued previously by the FAA in a Flight Data Center (FDC) Notice to Airmen (NOTAM) as an emergency action of immediate flight safety relating directly to published aeronautical charts.

The circumstances that created the need for some SIAP and Takeoff Minimums and ODP amendments may require making them effective in less than 30 days. For the remaining SIAPs and Takeoff Minimums and ODPs, an effective date at least 30 days after publication is provided.

Further, the SIAPs and Takeoff Minimums and ODPs contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Procedures (TERPS). In developing these SIAPs and Takeoff Minimums and ODPs, the TERPS criteria were applied to the conditions existing or anticipated at the affected airports. Because of the close and immediate relationship between these SIAPs, Takeoff Minimums and ODPs, and safety in air commerce, I find that notice and public procedure under

5 U.S.C. 553(b) are impracticable and contrary to the public interest and, where applicable, under 5 U.S.C 553(d), good cause exists for making some SIAPs effective in less than 30 days.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 97

Air Traffic Control, Airports, Incorporation by reference, Navigation (Air).

Issued in Washington, DC, on April 19, 2019.

Rick Domingo,

Executive Director, Flight Standards Service.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, Title 14, Code of Federal Regulations, Part 97 (14 CFR part 97) is amended by establishing, amending, suspending, or removing Standard Instrument Approach Procedures and/or Takeoff Minimums and Obstacle Departure Procedures effective at 0901 UTC on the dates specified, as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

■ 1. The authority citation for part 97 continues to read as follows:

BILLING CODE 4910-13-P

DEPARTMENT OF TRANSPORTATION**Federal Aviation Administration****14 CFR Part 97**

[Docket No. 31250; Amdt. No. 3850]

Standard Instrument Approach Procedures, and Takeoff Minimums and Obstacle Departure Procedures; Miscellaneous Amendments**AGENCY:** Federal Aviation Administration (FAA), DOT.**ACTION:** Final rule.

SUMMARY: This rule amends, suspends, or removes Standard Instrument Approach Procedures (SIAPs) and associated Takeoff Minimums and Obstacle Departure Procedures for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, adding new obstacles, or changing air traffic requirements. These changes are designed to provide for the safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: This rule is effective May 3, 2019. The compliance date for each SIAP, associated Takeoff Minimums, and ODP is specified in the amendatory provisions.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of May 3, 2019.

ADDRESSES: Availability of matter incorporated by reference in the amendment is as follows:

For Examination

1. U.S. Department of Transportation, Docket Ops-M30, 1200 New Jersey Avenue SE, West Bldg., Ground Floor, Washington, DC 20590-0001;

2. The FAA Air Traffic Organization Service Area in which the affected airport is located;

3. The office of Aeronautical Navigation Products, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 or,

4. The National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202-741-6030, or go to: http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.

Availability

All SIAPs and Takeoff Minimums and ODPs are available online free of charge. Visit the National Flight Data Center online at nfdc.faa.gov to register. Additionally, individual SIAP and Takeoff Minimums and ODP copies may be obtained from the FAA Air Traffic Organization Service Area in which the affected airport is located.

FOR FURTHER INFORMATION CONTACT:

Thomas J. Nichols, Flight Procedures and Airspace Group, Flight Technologies and Procedures Division, Flight Standards Service, Federal Aviation Administration. Mailing Address: FAA Mike Monroney Aeronautical Center, Flight Procedures and Airspace Group, 6500 South MacArthur Blvd., Registry Bldg. 29, Room 104, Oklahoma City, OK 73125. Telephone: (405) 954-4164.

SUPPLEMENTARY INFORMATION: This rule amends Title 14, Code of Federal Regulations, Part 97 (14 CFR part 97) by amending the referenced SIAPs. The complete regulatory description of each SIAP is listed on the appropriate FAA Form 8260, as modified by the National Flight Data Center (NFDC)/Permanent Notice to Airmen (P-NOTAM), and is incorporated by reference under 5 U.S.C. 552(a), 1 CFR part 51, and 14 CFR 97.20. The large number of SIAPs, their complex nature, and the need for a special format make their verbatim publication in the **Federal Register** expensive and impractical. Further, airmen do not use the regulatory text of the SIAPs, but refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained on FAA form documents is unnecessary.

This amendment provides the affected CFR sections, and specifies the SIAPs and Takeoff Minimums and ODPs with their applicable effective dates. This amendment also identifies the airport and its location, the procedure and the amendment number.

Availability and Summary of Material Incorporated by Reference

The material incorporated by reference is publicly available as listed in the **ADDRESSES** section.

The material incorporated by reference describes SIAPs, Takeoff Minimums and ODPs as identified in the amendatory language for part 97 of this final rule.

The Rule

This amendment to 14 CFR part 97 is effective upon publication of each separate SIAP and Takeoff Minimums and ODP as amended in the transmittal. For safety and timeliness of change considerations, this amendment incorporates only specific changes contained for each SIAP and Takeoff Minimums and ODP as modified by FDC permanent NOTAMs.

The SIAPs and Takeoff Minimums and ODPs, as modified by FDC permanent NOTAM, and contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Procedures (TERPS). In developing these changes to SIAPs and Takeoff Minimums and ODPs, the TERPS criteria were applied only to specific conditions existing at the affected airports. All SIAP amendments in this rule have been previously issued by the FAA in a FDC NOTAM as an emergency action of immediate flight safety relating directly to published aeronautical charts.

The circumstances that created the need for these SIAP and Takeoff Minimums and ODP amendments require making them effective in less than 30 days.

Because of the close and immediate relationship between these SIAPs, Takeoff Minimums and ODPs, and safety in air commerce, I find that notice and public procedure under 5 U.S.C. 553(b) are impracticable and contrary to the public interest and, where applicable, under 5 U.S.C. 553(d), good cause exists for making these SIAPs effective in less than 30 days.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 97

Air Traffic Control, Airports, Incorporation by reference, Navigation (Air).

Issued in Washington, DC, on April 19, 2019.

Rick Domingo,

Executive Director, Flight Standards Service.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, Title 14, Code of Federal regulations, Part 97, (14 CFR part 97), is amended by amending Standard Instrument Approach Procedures and Takeoff Minimums and

ODPs, effective at 0901 UTC on the dates specified, as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

■ 1. The authority citation for part 97 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40103, 40106, 40113, 40114, 40120, 44502, 44514, 44701, 44719, 44721–44722.

■ 2. Part 97 is amended to read as follows:

§§ 97.23, 97.25, 97.27, 97.29, 97.31, 97.33, 97.35 [AMENDED]

By amending: § 97.23 VOR, VOR/DME, VOR or TACAN, and VOR/DME or TACAN; § 97.25 LOC, LOC/DME, LDA, LDA/DME, SDF, SDF/DME; § 97.27 NDB, NDB/DME; § 97.29 ILS, ILS/DME, MLS, MLS/DME, MLS/RNAV; § 97.31 RADAR SIAPs; § 97.33 RNAV SIAPs; and § 97.35 COPTER SIAPs, Identified as follows:

* * * *Effective Upon Publication*

AIRAC date	State	City	Airport	FDC No.	FDC date	Subject

BILLING CODE 4910–13–P

EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

29 CFR Part 1602

[3046–0007]

EEO–1 Pay Data Collection for 2017

AGENCY: Equal Employment Opportunity Commission.

ACTION: Announcement of collection of EEO–1 Component 2 data for calendar year 2017.

SUMMARY: The U.S. Equal Employment Opportunity Commission (EEOC) announces the collection of 2017 pay data (EEO–1 Component 2) from EEO–1 filers by September 30, 2019.

DATES: May 3, 2019. The EEOC expects to begin collecting EEO–1 Component 2 data for calendar years 2017 and 2018 in mid-July 2019.

FOR FURTHER INFORMATION CONTACT: Rashida Dorsey, Ph.D., MPH, Director, Data Development and Information Products Division and Senior Advisor on Data Strategy, Office of Enterprise Data and Analytics, Equal Employment Opportunity Commission, 131 M Street NE, Room 4SW32L, Washington, DC 20507; (202) 663–4355 (voice) or (202) 663–7063 (TTY). Requests for this notice in an alternative format should be made to the Office of Communications and Legislative Affairs at (202) 663–4191 (voice) or (202) 663–4494 (TTY).

SUPPLEMENTARY INFORMATION: EEO–1 filers should begin preparing to submit Component 2 data for calendar year 2017, in addition to data for calendar year 2018, by September 30, 2019, in light of the court’s recent decision in *National Women’s Law Center, et al., v.*

Office of Management and Budget, et al., Civil Action No. 17–cv–2458 (D.D.C.). The EEOC expects to begin collecting EEO–1 Component 2 data for calendar years 2017 and 2018 in mid-July, 2019, and will notify filers of the precise date the survey will open as soon as it is available.

Dated: May 1, 2019.

For the Commission.

Victoria A. Lipnic,
Acting Chair.

BILLING CODE 6570–01–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 100

[Docket No. USCG–2019–0235]

Special Local Regulation: Fort Lauderdale Air Show; Atlantic Ocean, Fort Lauderdale, FL

AGENCY: Coast Guard, DHS.

ACTION: Notice of enforcement of regulation.

SUMMARY: The Coast Guard will enforce a special local regulation for the Fort Lauderdale Air Show from May 4 through 5, 2019, to provide for the safety of life on navigable waterways during this event. During the enforcement periods, the operator of any vessel in the regulated area must comply with directions from the Patrol Commander or any Official Patrol displaying a Coast Guard ensign.

DATES: The special local regulation in 33 CFR 100.726 will be enforced from 9 a.m. until 6 p.m., each day on May 4 and 5, 2019.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notice of enforcement, call or email Omar Beceiro, Sector Miami Waterways Management Division, U.S. Coast Guard; telephone 305–535–4317, email Omar.Beceiro@uscg.mil.

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce the special local regulation in 33 CFR 100.726 for the Fort Lauderdale Air Show regulated area from 9 a.m. through 6 p.m. on May 4 and 5, 2019. This action is being taken to provide for the safety of life on navigable waterways during this 2-day event. Our regulation for the Fort Lauderdale Air Show, § 100.726, specifies the location of the regulated area for the Fort Lauderdale Air Show which is located on the Atlantic Ocean, east of Ft. Lauderdale, FL. During the enforcement periods, if you are the operator of a vessel in the regulated area you must comply with directions from the Patrol Commander or any Official Patrol displaying a Coast Guard ensign.

In addition to this notice of enforcement in the **Federal Register**, the Coast Guard plans to provide notification of this enforcement period via the Local Notice to Mariners and marine information broadcasts.

Dated: April 30, 2019.

M.M. Dean,

Captain, U.S. Coast Guard, Captain of the Port Miami.

[FR Doc. 2019–09128 Filed 5–2–19; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY**Coast Guard****33 CFR Part 165****[Docket Number USCG–2019–0013]****RIN 1625–AA00****Safety Zones; Coast Guard Sector Ohio Valley Annual and Recurring Safety Zones Update****AGENCY:** Coast Guard, DHS.**ACTION:** Final rule.

SUMMARY: The Coast Guard is amending and updating its safety zones regulations for annual events that take place in the Coast Guard Sector Ohio Valley area. This action is necessary to update the current list of recurring safety zones with revisions, additional events, and removal of events that no longer take place in Sector Ohio Valley. This regulation restricts vessel traffic from the safety zones during the events unless authorized by the Captain of the Port Sector Ohio Valley or a designated representative.

DATES: This rule is effective May 3, 2019.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to <https://www.regulations.gov>, type USCG–2019–0013 in the “SEARCH” box and click “SEARCH.” Click on Open Docket Folder on the line associated with this rule.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Petty Officer Riley Jackson, Sector Ohio Valley, U.S. Coast Guard; telephone (502) 779–5347, email Riley.S.Jackson@uscg.mil.

SUPPLEMENTARY INFORMATION:**I. Table of Abbreviations**

CFR Code of Federal Regulations
 COTP Captain of the Port Sector Ohio Valley
 DHS Department of Homeland Security
 FR Federal Register
 NPRM Notice of proposed rulemaking
 § Section
 U.S.C. United States Code

II. Background Information and Regulatory History

The Captain of the Port Sector Ohio Valley (COTP) is amending 33 CFR 165.801 to update the table of annual fireworks displays and other marine-related events in Coast Guard Sector Ohio Valley. These events include air shows, fireworks displays, and other marine related events requiring a

limited access area restricting vessel traffic for safety purposes.

On March 27, 2019, the Coast Guard published a notice of proposed rulemaking (NPRM) titled Safety Zones; Coast Guard Sector Ohio Valley Annual and Recurring Safety Zones Update (84 FR 11449). There we stated why we issued the NPRM, and invited comments on our proposed regulatory action related to those recurring safety zones. During the comment period that ended on April 11, 2019, we received zero comments.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making it effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule would be impracticable and contrary to the public interest because immediate action is necessary to respond to the potential safety hazards associated with these marine events.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 33 U.S.C. 1231. Based on the nature of these marine events, large numbers of participants and spectators, and event locations, the COTP has determined that the events listed in this rule could pose a risk to participants or waterways users if the normal vessel traffic were to interfere with the events. Possible hazards include risks of injury or death from near or actual contact among participant vessels and spectators or mariners traversing through the regulated area. This purpose of this rule is to ensure the safety of all waterway users, including event participants and spectators, during the scheduled events.

IV. Discussion of Comments, Changes, and the Rule

As noted above, we received zero comments on our NPRM published March 27, 2019. There are no changes in the regulatory text of this rule from the proposed rule on the NPRM.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits.

Executive Order 13771 directs agencies to control regulatory costs through a budgeting process. This rule has not been designated a “significant regulatory action,” under Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB), and pursuant to OMB guidance it is exempt from the requirements of Executive Order 13771.

This regulatory action determination is based on the size, location, and duration of the safety zones. These safety zones are limited in size and duration, and are usually positioned away from high vessel traffic areas. Moreover, the Coast Guard would issue a Broadcast Notice to Mariners via VHF–FM marine channel 16 about the zones, and the rule would allow vessels to seek permission to enter the zones.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard received no comments from the Small Business Administration on this rulemaking. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section IV.A above this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The

Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1-888-REG-FAIR (1-888-734-3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501-3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes,

or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this rule has implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531-1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this proposed rule under Department of Homeland Security Management Directive 023-01 and Commandant Instruction M16475.ID, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321-4370f), and have made a determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. Normally such actions are categorically excluded from further review under paragraph L61 of Appendix A, Table 1 of DHS Instruction

Manual 023-01-001-01, Rev. 01 as it involves the revision of the table that informs the public of safety zones occurring in the Sector Ohio Valley AOR. A memorandum for the record is available in the docket where indicated under **ADDRESSES**.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

16. 1 day—One weekend in June	West Virginia Symphony Orchestra/Symphony Sunday.	Charleston, WV	Kanawha River, Miles 59.5–60.5 (West Virginia).
17. 1 day—Last weekend in June or first weekend in July.	Riverview Park Independence Festival	Louisville, KY	Ohio River, Miles 617.5–620.5 (Kentucky).
18. 1 day—Last weekend in June or First weekend in July.	City of Point Pleasant/Point Pleasant Sternwheel Fireworks.	Point Pleasant, WV	Ohio River, Miles 265.2–266.2, Kanawha River Miles 0.0–0.5 (West Virginia).
19. 1 day—Last weekend in June or first weekend in July.	City of Aurora/Aurora Firecracker Festival.	Aurora, IN	Ohio River, Mile 496.7; 1400 ft. radius from the Consolidated Grain Dock located along the State of Indiana shoreline at (Indiana and Kentucky).
20. 1 day—Last week of June or first week of July.	PUSH Beaver County/Beaver County Boom.	Beaver, PA	Ohio River, Miles 25.2–25.6 (Pennsylvania).
21. 1 day—Last weekend in June or first week in July.	Evansville Freedom Celebration/4th of July Fireworks.	Evansville, IN	Ohio River, Miles 790.0–796.0 (Indiana).
22. 1 day—Last week in June or first week of July.	Newburgh Fireworks Display	Newburgh, IN	Ohio River, Miles 777.3–778.3 (Indiana).
23. 1 day—Last week in June or First week in July.	Rising Sun Fireworks	Rising Sun, IN	Ohio River, Miles 506.0–507.0 (Indiana).
24. 1 day—Weekend before the 4th of July.	Kentucky Dam Marine/Kentucky Dam Marina Fireworks.	Gilbertsville, KY	350 foot radius, from the fireworks launch site, on the entrance jetties at Kentucky Dam Marina, on the Tennessee River at Mile Marker 23 (Kentucky).
25. 1 day—Saturday before July 4th ...	Town of Cumberland City/Lighting up the Cumberlands.	Cumberland City, TN.	Cumberland River, Miles 103.0–105.5 (Tennessee).
26. 1 day—July 3rd	Chattanooga Presents/Pops on the River.	Chattanooga, TN ...	Tennessee River, Miles 462.7–465.2 (Tennessee).
27. 1 day—July 3rd	Randy Boyd/Independence Celebration Fireworks Display.	Knoxville, TN	Tennessee River, Miles 625.0–628.0 (Tennessee).
28. 1 day—3rd or 4th of July	City of Paducah, KY	Paducah, KY	Ohio River, Miles 934.0–936.0; Tennessee River, Miles 0.0–1.0 (Kentucky).
29. 1 day—3rd or 4th of July	City of Hickman, KY/Town Of Hickman Fireworks.	Hickman, KY	700 foot radius from GPS coordinate 36°34.5035 N, 089°11.919 W, in Hickman Harbor located at mile marker 921.5 on the Lower Mississippi River (Kentucky).
30. 1 day—July 4th	City of Knoxville/Knoxville Festival on the 4th.	Knoxville, TN	Tennessee River, Miles 646.3–648.7 (Tennessee).
31. 1 day—July 4th	Nashville NCVC/Independence Celebration.	Nashville, TN	Cumberland River, Miles 189.7–192.3 (Tennessee).
32. 1 day—July 4th	Shoals Radio Group/Spirit of Freedom Fireworks.	Florence, AL	Tennessee River, Miles 254.5–257.4 (Alabama).
33. 1 day—4th of July (Rain date—July 5th).	Monongahela Area Chamber of Commerce/Monongahela 4th of July Celebration.	Monongahela, PA	Monongahela River, Miles 032.0–033.0 (Pennsylvania).
34. 1 day—July 4th	Cities of Cincinnati, OH and Newport, KY/July 4th Fireworks.	Newport, KY	Ohio River, Miles 469.6–470.2 (Kentucky and Ohio).
35. 1 day—July 4th	Wellsburg 4th of July Committee/Wellsburg 4th of July Freedom Celebration.	Wellsburg, WV	Ohio River, Miles 73.5–74.5 (West Virginia).
36. 1 day—week of July 4th	Wheeling Symphony fireworks	Wheeling, WV	Ohio River, Miles 90–92 (West Virginia).
37. 1 day—First week or weekend in July.	Summer Motions Inc./Summer Motion	Ashland, KY	Ohio River, Miles 322.1–323.1 (Kentucky).
38. 1 day—week of July 4th	Chester Fireworks	Chester, WV	Ohio River mile 42.0–44.0 (West Virginia).
39. 1 day—First week of July	Cincinnati Symphony Orchestra	Cincinnati, OH	Ohio River, Miles 460.0–462.0 (Ohio).
40. 1 day—First weekend or week in July.	Queen's Landing Fireworks	Greenup, KY	Ohio River, Miles 339.3–340.3 (West Virginia).
41. 1 day—First week or weekend in July.	Gallia County Chamber of Commerce/Gallipolis River Recreation Festival.	Gallipolis, OH	Ohio River, Miles 269.5–270.5 (Ohio).

DEPARTMENT OF DEFENSE

Department of the Army, Corps of Engineers

33 CFR Part 326

RIN 0710-AA82

Civil Monetary Penalty Inflation Adjustment Rule

AGENCY: U.S. Army Corps of Engineers, Department of Defense.

ACTION: Final rule.

SUMMARY: The U.S. Army Corps of Engineers (Corps) is issuing this final rule to adjust its civil monetary penalties (CMP) under the Clean Water Act (CWA) and the National Fishing

Enhancement Act to account for inflation.

DATES: This final rule is effective on May 3, 2019.

FOR FURTHER INFORMATION CONTACT: Mr. Brad Guarisco at 202-761-5856 or by email at Brad.A.Guarisco@usace.army.mil or access the U.S. Army Corps of Engineers Regulatory Home Page at <http://www.usace.army.mil/Missions/CivilWorks/RegulatoryProgramandPermits.aspx>.

SUPPLEMENTARY INFORMATION:

Background Information

The Federal Civil Penalties Inflation Adjustment Act of 1990, Public Law 101-410, 104 Stat. 890 (28 U.S.C. 2461, note), as amended by the Debt Collection Improvement Act of 1996,

Public Law 104–134, April 26, 1996, and further amended by the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015 (Inflation Adjustment Act), Public Law 114–74, November 2, 2015, required agencies to annually adjust the level of CMP for inflation to improve their effectiveness and maintain their deterrent effect. The Inflation Adjustment Act required that not later than July 1, 2016, and not later than January 15 of every year thereafter, the Corps must adjust its CMP by the inflation adjustment described in the Inflation Adjustment Act. The inflation adjustment is determined by increasing the maximum CMP or the range of minimum and maximum CMPs, as applicable, for each CMP by the cost-of-living adjustment, rounded to the nearest multiple of \$1. The cost-of-living adjustment is the percentage (if any) for each CMP by which the Consumer Price Index (CPI) for the month of October preceding the date of the adjustment, exceeds the CPI for the month of October in the previous calendar year.

The initial catch up adjustments for inflation to the Department of Defense’s CMPs were published as an interim final rule in the **Federal Register** on May 26, 2016 (81 FR 33389–33391) and became effective on that date. The interim final rule was published as a final rule without change on September 12, 2016 (81 FR 62629–62631), effective that date.

Using the adjustment criteria provided in the December 14, 2018, Office of Management and Budget Memorandum regarding the “Implementation of Penalty Inflation Adjustments for 2019, Pursuant to the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015”, the 2019 annual adjustment for inflation will increase the Class I civil

penalty under Section 309 of the Clean Water Act to \$21,934 per violation, and the maximum civil penalty increases to \$54,833. The judicial civil penalty under Section 404(s) of the Clean Water Act increases to \$54,833 per day for each violation. Under the National Fishing Enhancement Act, the Class I civil penalty increases to \$24,017 per violation. This rule will apply prospectively to penalty assessments beginning on its effective date, May 3, 2019.

Section 4 of the Inflation Adjustment Act directs federal agencies to publish annual penalty inflation adjustments. In accordance with Section 553 of the Administrative Procedures Act (APA), most rules are subject to notice and comment and are effective no earlier than 30 days after publication in the **Federal Register**. Section 4(b)(2) of the Inflation Adjustment Act further provides that each agency shall make the annual inflation adjustments “notwithstanding section 553” of the APA. According to the December 2018 OMB guidance issued to Federal agencies on the implementation of the 2019 annual adjustment, the phrase “notwithstanding section 553” means that “the public procedure the APA generally requires (*i.e.*, notice, an opportunity for comment, and a delay in effective date) is not required for agencies to issue regulations implementing the annual adjustment.” Consistent with the language of the Inflation Adjustment Act and OMB’s implementation guidance, this rule is not subject to notice and opportunity for public comment.

On August 3, 2011, the Deputy Secretary of Defense delegated to the Secretary of the Army the authority and responsibility to adjust penalties administered by the U.S. Army Corps of Engineers. On July 26, 2018, the

Secretary of the Army delegated that authority and responsibility to the Assistant Secretary of the Army for Civil Works who further delegated the authority on October 31, 2018, to the Commanding General of the U.S. Army Corps of Engineers. On January 23, 2019, the Commanding General of the U.S. Army Corps of Engineers delegated that authority and responsibility to the Deputy Commanding General for Civil and Emergency Operations of the U.S. Army Corps of Engineers.

With this rule, the new statutory maximum penalty levels listed in Table 1 will apply to all statutory civil penalties assessed on or after the effective date of this rule. Table 1 shows the calculation of the 2019 annual inflation adjustment based on the guidance provided by OMB (see December 14, 2018, Memorandum for the Heads of Executive Departments and Agencies, from Mick Mulvaney, Director, OMB, Subject: Implementation of Penalty Inflation Adjustments for 2019, Pursuant to the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015). The OMB provided to agencies the cost-of-living adjustment multiplier for 2019, based on the Consumer Price Index for All Urban Consumers (CPI-U) for the month of October 2018, not seasonally adjusted, which is 1.02522. Agencies are to adjust “the maximum civil monetary penalty or the range of minimum and maximum civil monetary penalties, as applicable, for each civil monetary penalty by the cost-of-living adjustment.” For 2019, agencies multiply each applicable penalty by the multiplier, 1.02522, and round to the nearest dollar. The multiplier should be applied to the most recent penalty amount, *i.e.*, the one that includes the 2018 annual inflation adjustment.

TABLE 1

Citation	Current civil monetary penalty (CMP) amount established by law	Current CMP amount in effect prior to this rulemaking	2019 Inflation adjustment multiplier	CMP amount as of May 3, 2019
CWA, 33 U.S.C. 1319(g)(2)(A).	\$10,000 per violation, with a maximum of \$25,000.	\$21,394 per violation, with a maximum of \$53,484.	1.02522	\$21,934 per violation, with a maximum of \$54,833.
CWA, 33 U.S.C. 1344(s)(4) ...	Maximum of \$25,000 per day for each violation.	Maximum of \$53,484 per day for each violation.	1.02522	Maximum of \$54,833 per day for each violation.
National Fishing Enhancement Act, 33 U.S.C. 2104(e).	Maximum of \$10,000 per violation.	Maximum of \$23,426 per violation.	1.02522	Maximum of \$24,017 per violation.

This rule will not result in any additional costs to implement the Corps Regulatory Program because the Class I civil penalties and judicial civil penalties have been in effect since 1990

when the Corps first promulgated regulations regarding such penalties (Class I civil penalties were first established by statute in 1987). This rule merely adjusts the value of current

statutory civil penalties to reflect and keep pace with the levels originally set by Congress when the statutes were enacted, as required by the Inflation Adjustment Act. This rule will result in

additional costs to members of the regulated public who do not comply with the terms and conditions of issued Department of the Army permits and either receive a final Class I civil administrative penalty order from a District Engineer or are subject to a judicial civil penalty. The rule increases the minimum and maximum penalty amounts to \$21,934 and \$54,833 for Class I civil administrative penalties under the Clean Water Act, to a maximum of \$54,833 for judicially-imposed civil penalties under the Clean Water Act, and to a maximum of \$24,017 for Class I civil administrative penalties under the National Fishing Enhancement Act. The benefit of this rule will be to improve the effectiveness of Corps civil monetary penalties by maintaining their deterrent effect and promoting compliance with the law.

Regulatory Procedures

Plain Language

In compliance with the principles in the President's Memorandum of June 1, 1998, regarding plain language, this preamble is written using plain language. The use of "we" in this notice refers to the Corps and the use of "you" refers to the reader. We have also used the active voice, short sentences, and common everyday terms except for necessary technical terms.

Executive Order 12866 and Executive Order 13563, "Improving Regulation and Regulatory Review"

This rule is not designated a "significant regulatory action" under Executive Order 12866. Accordingly, OMB has not reviewed this rule. Moreover, this final rule makes nondiscretionary adjustments to existing civil monetary penalties in accordance with the Inflation Adjustment Act and OMB guidance. The Corps, therefore, did not consider alternatives and does not have the flexibility to alter the adjustments of the civil monetary penalty amounts as provided in this rule.

Public Law 96-511, "Paperwork Reduction Act" (44 U.S.C. Chapter 35)

The Department of Defense determined that provisions of the Paperwork Reduction Act of 1995, Public Law 104-13, 44 U.S.C. Chapter 35, and its implementing regulations, 5 CFR part 1320, do not apply to this rule because there are no new or revised recordkeeping or reporting requirements. This action merely increases the level of statutory civil penalties that could be imposed in the context of a federal civil administrative

enforcement action or civil judicial case for violations of Corps-administered statutes and their implementing regulations.

Executive Order 13771, "Reducing Regulation and Controlling Regulatory Costs"

This rule has been deemed not significant under Executive Order 12866, "Regulatory Planning and Review," and is, therefore, not subject to the requirements of Executive Order 13771, "Reducing Regulation and Controlling Regulatory Costs."

Executive Order 13132, "Federalism"

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a rule that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. This final rule will not have a substantial effect on State and local governments.

Public Law 96-354, "Regulatory Flexibility Act" (5 U.S.C. Chapter 6)

Because notice of proposed rulemaking and opportunity for comment are not required pursuant to 5 U.S.C. 553, or any other law, the analytical requirements of the Regulatory Flexibility Act (5 U.S.C. 601, *et seq.*) are inapplicable. Therefore, a regulatory flexibility analysis is not required and has not been prepared.

Unfunded Mandates Reform Act (2 U.S.C. Chapter 25)

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) (2 U.S.C. 1532) requires agencies to assess anticipated costs and benefits before issuing any rule the mandates of which require spending in any year of \$100 million in 1995 dollars, updated annually for inflation. In 2016, that threshold is approximately \$146 million. This rule will not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs.

Public Law 104-113, "National Technology Transfer and Advancement Act" (15 U.S.C. Chapter 7)

Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (NTTAA), Public Law 104-113, (15 U.S.C. 272 note), directs us to use voluntary consensus standards in our regulatory activities, unless to do so would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (*e.g.*, materials specifications,

test methods, sampling procedures, and business practices) that are developed or adopted by voluntary consensus standards bodies. The NTTAA directs us to provide Congress, through OMB, explanations when we decide not to use available and applicable voluntary consensus standards. This rule does not involve technical standards. Therefore, we did not consider the use of any voluntary consensus standards.

Executive Order 13045, "Protection of Children From Environmental Health Risks and Safety Risks"

Executive Order 13045 applies to any rule that: (1) Is determined to be "economically significant" as defined under Executive Order 12866, and (2) concerns an environmental health or safety risk that we have reason to believe may have a disproportionate effect on children. If the regulatory action meets both criteria, we must evaluate the environmental health or safety effects of the rule on children, and explain why the regulation is preferable to other potentially effective and reasonably feasible alternatives. This rule is not subject to this Executive Order because it is not economically significant as defined in Executive Order 12866. In addition, it does not concern an environmental or safety risk that we have reason to believe may have a disproportionate effect on children.

Executive Order 13175, "Consultation and Coordination With Indian Tribal Governments"

Executive Order 13175 requires agencies to develop an accountable process to ensure "meaningful and timely input by tribal officials in the development of regulatory policies that have tribal implications." The phrase "policies that have tribal implications" is defined in the Executive Order to include regulations that have "substantial direct effects on one or more Indian tribes, on the relationship between the Federal government and the Indian tribes, or on the distribution of power and responsibilities between the Federal government and Indian tribes."

This rule does not have tribal implications. The rule imposes no new substantive obligations on tribal governments. Therefore, Executive Order 13175 does not apply to this rule.

Public Law 104-121, "Congressional Review Act" (5 U.S.C. Chapter 8)

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as amended by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the

agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. We will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This rule is not a “major rule” as defined by 5 U.S.C. 804(2).

Executive Order 12898, “Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations”

Executive Order 12898 requires that, to the greatest extent practicable and permitted by law, each Federal agency must make achieving environmental justice part of its mission. Executive Order 12898 provides that each Federal agency conduct its programs, policies, and activities that substantially affect human health or the environment in a manner that ensures that such programs, policies, and activities do not have the effect of excluding persons (including populations) from participation in, denying persons (including populations) the benefits of, or subjecting persons (including populations) to discrimination under

such programs, policies, and activities because of their race, color, or national origin. This rule merely adjusts civil penalties to account for inflation, and therefore, is not expected to negatively impact any community, and therefore is not expected to cause any disproportionately high and adverse impacts to minority or low-income communities.

Executive Order 13211, “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use”

This rule is not a “significant energy action” as defined in Executive Order 13211 because it is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

List of Subjects in 33 CFR Part 326

Administrative practice and procedure, Intergovernmental relations, Investigations, Law enforcement, Navigation (Water), Water pollution control, Waterways.

Dated: April 24, 2019.

Approved by:

Scott A. Spellmon,

Major General, U.S. Army, Deputy Commanding General for Civil and Emergency Operations.

For the reasons set forth in the preamble, the Corps amends 33 CFR part 326 as follows:

PART 326—ENFORCEMENT

■ 1. The authority citation for part 326 continues to read as follows:

Authority: 33 U.S.C. 401 *et seq.*; 33 U.S.C. 1344; 33 U.S.C. 1413; 33 U.S.C. 2104; 33 U.S.C. 1319; 28 U.S.C. 2461 note.

■ 2. Amend § 326.6 by revising paragraph (a)(1) to read as follows:

§ 326.6 Class I administrative penalties.

(a) * * *

(1) This section sets forth procedures for initiation and administration of Class I administrative penalty orders under Section 309(g) of the Clean Water Act, judicially-imposed civil penalties under Section 404(s) of the Clean Water Act, and Section 205 of the National Fishing Enhancement Act. Under Section 309(g)(2)(A) of the Clean Water Act, Class I civil penalties may not exceed \$21,934 per violation, except that the maximum amount of any Class I civil penalty shall not exceed \$54,833. Under Section 404(s)(4) of the Clean Water Act, judicially-imposed civil penalties may not exceed \$54,833 per day for each violation. Under Section 205(e) of the National Fishing Enhancement Act, penalties for violations of permits issued in accordance with that Act shall not exceed \$24,017 for each violation.

TABLE 1 TO PARAGRAPH (a)(1)

Environmental statute and U.S. code citation	Statutory civil monetary penalty amount for violations that occurred after November 2, 2015, and are assessed on or after May 3, 2019
Clean Water Act (CWA), Section 309(g)(2)(A), 33 U.S.C. 1319(g)(2)(A)	\$21,934 per violation, with a maximum of \$54,833.
CWA, Section 404(s)(4), 33 U.S.C. 1344(s)(4)	Maximum of \$54,833 per day for each violation.
National Fishing Enhancement Act, Section 205(e), 33 U.S.C. 2104(e)	Maximum of \$24,017 per violation.

BILLING CODE 3720-58-P

POSTAL REGULATORY COMMISSION

39 CFR Part 3020

[Docket Nos. MC2010-21 and CP2010-36]

Update to Product List

AGENCY: Postal Regulatory Commission.

ACTION: Final rule.

SUMMARY: The Commission is updating the competitive product list. This action reflects a publication policy adopted by Commission order. The referenced policy assumes periodic updates. The updates are identified in the body of this document. The competitive product

list, which is re-published in its entirety, includes these updates.

DATES: *Effective date:* May 3, 2019. For applicability dates, see **SUPPLEMENTARY INFORMATION**.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202-789-6800.

SUPPLEMENTARY INFORMATION:

Applicability Dates: January 2, 2019, Priority Mail Contract 501 (MC2019-60 and CP2019-65); January 2, 2019, Priority Mail Express Contract 69 (MC2019-61 and CP2019-66); January 3, 2019, Parcel Return Service Contract 11 (MC2019-62 and CP2019-67); January 3, 2019, Parcel Return Service Contract 12 (MC2019-63 and CP2019-68); January 8, 2019, Priority Mail Contract 502 (MC2019-66 and CP2019-71); January 8, 2019, Priority Mail

Express & Priority Mail Contract 81 (MC2019-68 and CP2019-73); January 8, 2019, Priority Mail Express & Priority Mail Contract 82 (MC2019-69 and CP2019-74); January 8, 2019, Priority Mail Express & Priority Mail Contract 83 (MC2019-70 and CP2019-75); January 8, 2019, Parcel Select & Parcel Return Service Contract 7 (MC2019-64 and CP2019-69); January 8, 2019, Global Plus 6 Contracts (MC2019-65 and CP2019-70); January 9, 2019, Priority Mail Express, Priority Mail & First-Class Package Service Contract 48 (MC2019-71 and CP2019-76); January 9, 2019, Priority Mail Express, Priority Mail & First-Class Package Service Contract 49 (MC2019-72 and CP2019-77); January 9, 2019, Priority Mail Express, Priority Mail & First-Class Package Service Contract 50 (MC2019-73 and CP2019-78); January 10, 2019, Priority Mail

Express & Priority Mail Contract 84 (MC2019–74 and CP2019–79); January 10, 2019, Priority Mail Express & Priority Mail Contract 85 (MC2019–75 and CP2019–80); January 11, 2019, Priority Mail Contract 503 (MC2019–67 and CP2019–72); January 31, 2019, Priority Mail Express & Priority Mail Contract 78 (MC2019–48 and CP2019–52); February 13, 2019, Priority Mail Contract 504 (MC2019–76 and CP2019–81); February 13, 2019, Priority Mail Contract 505 (MC2019–77 and CP2019–82); March 19, 2019, Priority Mail Contract 506 (MC2019–80 and CP2019–86); March 19, 2019, Priority Mail Contract 508 (MC2019–82 and CP2019–88); March 19, 2019, Priority Mail Contract 507 (MC2019–81 and CP2019–87); March 20, 2019, Priority Mail Contract 509 (MC2019–83 and CP2019–89); March 20, 2019, Priority Mail Contract 510 (MC2019–84 and CP2019–90); March 20, 2019, Priority Mail Contract 512 (MC2019–86 and CP2019–92); March 20, 2019, Priority Mail Contract 513 (MC2019–87 and CP2019–93); March 20, 2019, Priority Mail Express Contract 70 (MC2019–78 and CP2019–84); March 20, 2019, Priority Mail Express & Priority Mail Contract 86 (MC2019–79 and CP2019–85); March 21, 2019, Priority Mail Express, Priority Mail & First-Class Package Service Contract 51 (MC2019–88 and CP2019–94); March 21, 2019, Priority Mail Express Contract 71 (MC2019–89 and CP2019–95); March 21, 2019, Priority Mail Express & Priority Mail Contract 87 (MC2019–90 and CP2019–96); March 21, 2019, Priority Mail & First-Class Package Service Contract 94 (MC2019–91 and CP2019–97); March 21, 2019, First-Class Package Service Contract 98 (MC2019–92 and CP2019–98); March 22, 2019, Priority Mail Express, Priority Mail & First-Class Package Service Contract 52 (MC2019–93 and CP2019–99); March 25, 2019, Priority Mail Express & Priority Mail Contract 88 (MC2019–94 and CP2019–100); March 26, 2019, Priority Mail & First-Class Package Service Contract 95 (MC2019–97 and CP2019–105); March 27, 2019, Priority Mail & First-Class Package Service Contract 96 (MC2019–101 and CP2019–109); March 28, 2019, Parcel Select & Parcel Return Service Contract 8 (MC2019–98 and CP2019–106).

This document identifies updates to the competitive product list, which appears as 39 CFR Appendix B to Subpart A of Part 3020—Competitive Product List. Publication of the updated product list in the **Federal Register** is addressed in the Postal Accountability and Enhancement Act (PAEA) of 2006.

Authorization. The Commission process for periodic publication of

updates was established in Docket Nos. MC2010–21 and CP2010–36, Order No. 445, April 22, 2010, at 8.

Changes. The competitive product list is being updated by publishing a replacement in its entirety of 39 CFR Appendix B to Subpart A of Part 3020—Competitive Product List. The following products are being added, removed, or moved within the competitive product list:

Competitive Product List

1. Priority Mail Contract 501 (MC2019–60 and CP2019–65) (Order No. 4961), added January 2, 2019.
2. Priority Mail Express Contract 69 (MC2019–61 and CP2019–66) (Order No. 4962), added January 2, 2019.
3. Parcel Return Service Contract 11 (MC2019–62 and CP2019–67) (Order No. 4964), added January 3, 2019.
4. Parcel Return Service Contract 12 (MC2019–63 and CP2019–68) (Order No. 4965), added January 3, 2019.
5. Priority Mail Contract 502 (MC2019–66 and CP2019–71) (Order No. 4968), added January 8, 2019.
6. Priority Mail Express & Priority Mail Contract 81 (MC2019–68 and CP2019–73) (Order No. 4969), added January 8, 2019.
7. Priority Mail Express & Priority Mail Contract 82 (MC2019–69 and CP2019–74) (Order No. 4970), added January 8, 2019.
8. Priority Mail Express & Priority Mail Contract 83 (MC2019–70 and CP2019–75) (Order No. 4971), added January 8, 2019.
9. Parcel Select & Parcel Return Service Contract 7 (MC2019–64 and CP2019–69) (Order No. 4974), added January 8, 2019.
10. Global Plus 6 Contracts (MC2019–65 and CP2019–70) (Order No. 4975), added January 8, 2019.
11. Priority Mail Express, Priority Mail & First-Class Package Service Contract 48 (MC2019–71 and CP2019–76) (Order No. 4977), added January 9, 2019.
12. Priority Mail Express, Priority Mail & First-Class Package Service Contract 49 (MC2019–72 and CP2019–77) (Order No. 4978), added January 9, 2019.
13. Priority Mail Express, Priority Mail & First-Class Package Service Contract 50 (MC2019–73 and CP2019–78) (Order No. 4979), added January 9, 2019.
14. Priority Mail Express & Priority Mail Contract 84 (MC2019–74 and CP2019–79) (Order No. 4981), added January 10, 2019.
15. Priority Mail Express & Priority Mail Contract 85 (MC2019–75 and CP2019–80) (Order No. 4982), added January 10, 2019.
16. Priority Mail Contract 503 (MC2019–67 and CP2019–72) (Order No. 4985), added January 11, 2019.
17. Priority Mail Express & Priority Mail Contract 78 (MC2019–48 and CP2019–52) (Order No. 4995), added January 31, 2019.
18. Priority Mail Contract 504 (MC2019–76 and CP2019–81) (Order No. 4999), added February 13, 2019.
19. Priority Mail Contract 505 (MC2019–77 and CP2019–82) (Order No. 5000), added February 13, 2019.
20. Priority Mail Contract 506 (MC2019–80 and CP2019–86) (Order No. 5007), added March 19, 2019.
21. Priority Mail Contract 508 (MC2019–82 and CP2019–88) (Order No. 5008), added March 19, 2019.
22. Priority Mail Contract 507 (MC2019–81 and CP2019–87) (Order No. 5009), added March 19, 2019.
23. Priority Mail Contract 509 (MC2019–83 and CP2019–89) (Order No. 5010), added March 20, 2019.
24. Priority Mail Contract 510 (MC2019–84 and CP2019–90) (Order No. 5011), added March 20, 2019.
25. Priority Mail Contract 512 (MC2019–86 and CP2019–92) (Order No. 5012), added March 20, 2019.
26. Priority Mail Contract 513 (MC2019–87 and CP2019–93) (Order No. 5013), added March 20, 2019.
27. Priority Mail Express Contract 70 (MC2019–78 and CP2019–84) (Order No. 5014), added March 20, 2019.
28. Priority Mail Express & Priority Mail Contract 86 (MC2019–79 and CP2019–85) (Order No. 5015), added March 20, 2019.
29. Priority Mail Express, Priority Mail & First-Class Package Service Contract 51 (MC2019–88 and CP2019–94) (Order No. 5016), added March 21, 2019.
30. Priority Mail Express Contract 71 (MC2019–89 and CP2019–95) (Order No. 5017), added March 21, 2019.
31. Priority Mail Express & Priority Mail Contract 87 (MC2019–90 and CP2019–96) (Order No. 5018), added March 21, 2019.
32. Priority Mail & First-Class Package Service Contract 94 (MC2019–91 and CP2019–97) (Order No. 5019), added March 21, 2019.
33. First-Class Package Service Contract 98 (MC2019–92 and CP2019–98) (Order No. 5020), added March 21, 2019.
34. Priority Mail Express, Priority Mail & First-Class Package Service Contract 52 (MC2019–93 and CP2019–99) (Order No. 5021), added March 22, 2019.
35. Priority Mail Express & Priority Mail Contract 88 (MC2019–94 and CP2019–100) (Order No. 5027), added March 25, 2019.

36. Priority Mail & First-Class Package Service Contract 95 (MC2019–97 and CP2019–105) (Order No. 5028), added March 26, 2019.

37. Priority Mail & First-Class Package Service Contract 96 (MC2019–101 and CP2019–109) (Order No. 5029), added March 27, 2019.

38. Parcel Select & Parcel Return Service Contract 8 (MC2019–98 and CP2019–106) (Order No. 5031), added March 28, 2019.

The following negotiated service agreements have expired, or have been terminated early, and are being deleted from the Competitive Product List:

1. Parcel Return Service Contract 9 (MC2015–58 and CP2015–88) (Order No. 2569).

2. Parcel Return Service Contract 10 (MC2015–59 and CP2015–89) (Order No. 2572).

3. Priority Mail Contract 132 (MC2015–66 and CP2015–97) (Order No. 2598).

4. Priority Mail Express & Priority Mail Contract 19 (MC2015–69 and CP2015–107) (Order No. 2638).

5. Parcel Select Contract 10 (MC2015–85 and CP2015–141) (Order No. 2735).

6. Priority Mail Contract 146 (MC2016–3 and CP2016–3) (Order No. 2763).

7. Priority Mail Express, Priority Mail & First-Class Package Service Contract 6 (MC2016–21 and CP2016–27) (Order No. 2848).

8. Priority Mail Contract 157 (MC2016–23 and CP2016–29) (Order No. 2878).

9. Parcel Select Contract 12 (MC2016–37 and CP2016–46) (Order No. 2927).

10. Priority Mail Contract 171 (MC2016–48 and CP2016–63) (Order No. 2977).

11. Priority Mail Contract 170 (MC2016–47 and CP2016–62) (Order No. 2978).

12. Priority Mail Express Contract 31 (MC2016–61 and CP2016–76) (Order No. 2982).

13. Priority Mail & First-Class Package Service Contract 11 (MC2016–62 and CP2016–77) (Order No. 2985).

14. Priority Mail Contract 179 (MC2016–63 and CP2016–78) (Order No. 2986).

15. Priority Mail Contract 180 (MC2016–64 and CP2016–79) (Order No. 2987).

16. Priority Mail & First-Class Package Service Contract 10 (MC2016–58 and CP2016–73) (Order No. 2989).

17. Priority Mail Contract 178 (MC2016–60 and CP2016–75) (Order No. 2993).

18. Priority Mail Contract 172 (MC2016–49 and CP2016–64) (Order No. 3006).

19. First-Class Package Service Contract 42 (MC2016–74 and CP2016–91) (Order No. 3018).

20. Priority Mail Contract 167 (MC2016–41 and CP2016–50) (Order No. 3071).

21. Priority Mail Contract 168 (MC2016–42 and CP2016–51) (Order No. 3072).

22. Priority Mail Contract 169 (MC2016–43 and CP2016–52) (Order No. 3073).

23. Priority Mail Contract 174 (MC2016–52 and CP2016–67) (Order No. 3074).

24. Priority Mail Express, Priority Mail & First-Class Package Service Contract 9 (MC2016–78 and CP2016–103) (Order No. 3102).

25. Priority Mail Contract 189 (MC2016–83 and CP2016–108) (Order No. 3135).

26. Priority Mail Contract 191 (MC2016–85 and CP2016–110) (Order No. 3141).

27. Priority Mail Contract 195 (MC2016–92 and CP2016–117) (Order No. 3152).

28. Priority Mail Contract 194 (MC2016–91 and CP2016–116) (Order No. 3154).

29. Priority Mail Express Contract 34 (MC2016–93 and CP2016–118) (Order No. 3155).

30. Priority Mail Contract 196 (MC2016–95 and CP2016–120) (Order No. 3174).

31. Priority Mail Contract 198 (MC2016–99 and CP2016–127) (Order No. 3191).

32. First-Class Package Service Contract 46 (MC2016–103 and CP2016–131) (Order No. 3192).

33. Priority Mail Express & Priority Mail Contract 28 (MC2016–106 and CP2016–134) (Order No. 3195).

34. Priority Mail & First-Class Package Service Contract 16 (MC2016–105 and CP2016–133) (Order No. 3199).

35. Parcel Select Contract 14 (MC2016–102 and CP2016–130) (Order No. 3200).

36. Priority Mail Contract 197 (MC2016–98 and CP2016–126) (Order No. 3202).

37. First-Class Package Service Contract 51 (MC2016–119 and CP2016–149) (Order No. 3251).

38. First-Class Package Service Contract 54 (MC2016–141 and CP2016–178) (Order No. 3341).

39. Priority Mail Express Contract 38 (MC2016–161 and CP2016–232) (Order No. 3416).

40. Priority Mail & First-Class Package Service Contract 65 (MC2018–61 and CP2018–101) (Order No. 4317).

Updated product list. The referenced changes to the competitive product list

is incorporated into 39 CFR Appendix B to Subpart A of Part 3020—Competitive Product List.

List of Subjects in 39 CFR Part 3020

Administrative practice and procedure, Postal Service.

For the reasons discussed in the preamble, the Postal Regulatory Commission amends chapter III of title 39 of the Code of Federal Regulations as follows:

PART 3020—PRODUCT LISTS

■ 1. The authority citation for part 3020 continues to read as follows:

Authority: 39 U.S.C. 503; 3622; 3631; 3642; 3682.

■ 2. Revise appendix B to subpart A of part 3020 to read as follows:

Appendix B to Subpart A of Part 3020—Competitive Product List

(An asterisk (*) indicates an organizational class or group, not a Postal Service product.)

Domestic Products *

Priority Mail Express
Priority Mail
Parcel Select
Parcel Return Service
First-Class Package Service
USPS Retail Ground

BILLING CODE 7710-FW-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA-R05-OAR-2018-0569; FRL-9993-25-
Region 5]

Air Plan Approval; Wisconsin; Nonattainment New Source Review Requirements for the 2008 8-Hour Ozone Standard

AGENCY: Environmental Protection
Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is approving, as a State Implementation Plan (SIP) revision, Wisconsin's certification that its SIP satisfies the nonattainment new source review (NNSR) requirements of the Clean Air Act (CAA) for the 2008 ozone National Ambient Air Quality Standard (NAAQS). The State's submittal is in response to EPA's February 3 and December 11, 2017, Findings of Failure to Submit (FFS) final rule, which found that Wisconsin failed to satisfy CAA requirements for implementation of the 2008 ozone NAAQS in nonattainment areas.

DATES: This final rule is effective on June 3, 2019.

ADDRESSES: EPA has established a docket for this action under Docket ID No. EPA-R05-OAR-2018-0569. All documents in the docket are listed on the www.regulations.gov website. Although listed in the index, some information is not publicly available, *i.e.*, Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available either through www.regulations.gov or at the Environmental Protection Agency, Region 5, Air and Radiation Division, 77 West Jackson Boulevard, Chicago, Illinois 60604. This facility is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays. We recommend that you telephone Rachel Rineheart, Environmental Engineer, at (312) 886-7017 before visiting the Region 5 office.

FOR FURTHER INFORMATION CONTACT:

Rachel Rineheart, Environmental Engineer, Air Permits Section, Air Programs Branch (AR-18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 886-7017, Rineheart.rachel@epa.gov.

SUPPLEMENTARY INFORMATION:

Throughout this document whenever "we," "us," or "our" is used, we mean EPA. This supplementary information section is arranged as follows:

- I. Background
- II. What action is EPA taking?
- III. Statutory and Executive Order Reviews

I. Background

A. Background on the 2008 Ozone Standard

On March 27, 2008, EPA promulgated a revised 8-hour ozone NAAQS of 0.075 parts per million (ppm).¹ Promulgation of a revised NAAQS triggers a requirement for EPA to designate areas of the country as nonattainment, attainment, or unclassifiable for the standard. For the ozone NAAQS, this also involves classifying any nonattainment areas at the time of designation.² Ozone nonattainment areas are classified based on the severity of their ozone levels (as determined based on the area's "design value," which represents air quality in the area for the most recent 3 years). The classifications for ozone nonattainment areas are marginal, moderate, serious, severe, and extreme.³

Areas that EPA designates nonattainment for the ozone NAAQS are subject to the general nonattainment area planning requirements of CAA section 172 and also to the ozone-specific planning requirements of CAA section 182. Ozone nonattainment areas in the lower classification levels have fewer and/or less stringent mandatory air quality planning and control requirements than those in higher classifications. For marginal areas, a state is required to submit a baseline emissions inventory, adopt provisions into the SIP requiring emissions statements from stationary sources, and implement a NNSR program for the relevant ozone NAAQS.⁴ For moderate areas, a state needs to comply with the marginal area requirements, plus additional moderate area requirements, including the requirement to submit a modeled demonstration that the area will attain the NAAQS as expeditiously as practicable but no later than 6 years after designation, the requirement to submit a reasonable further progress (RFP) plan, the requirement to adopt and implement certain emissions controls, such as Reasonably Available Control Technology and Vehicle Emissions Inspection and Maintenance, and the requirement for greater emissions offsets for new or modified major stationary sources under the state's NNSR program.⁵

¹ 73 FR 16436.

² CAA sections 107(d)(1) and 181(a)(1).

³ CAA section 181(a)(1).

⁴ CAA section 182(a).

⁵ CAA section 182(b).

B. Background on the Wisconsin Ozone Nonattainment Areas

On June 11, 2012,⁶ EPA designated the Chicago area as a marginal nonattainment area for the 2008 ozone NAAQS. The Chicago area includes Cook, DuPage, Kane, Lake, McHenry, and Will Counties and part of Grundy and Kendall Counties in Illinois; Lake and Porter Counties in Indiana; and part of Kenosha County in Wisconsin. On May 4, 2016,⁷ pursuant to section 181(b)(2) of the CAA, EPA determined that the Chicago area failed to attain the 2008 ozone NAAQS by the July 20, 2015 marginal area attainment deadline and thus reclassified the area from marginal to moderate nonattainment. In that action, EPA established January 1, 2017, as the due date for all moderate area nonattainment plan SIP requirements applicable to newly reclassified areas. Pleasant Prairie and Somers townships in Kenosha County are part of the Chicago area nonattainment area. The remainder of Kenosha County is designated as unclassifiable/attainment.

On May 21, 2012,⁸ EPA designated Sheboygan County in Wisconsin as a marginal nonattainment area for the 2008 ozone NAAQS. On December 19, 2016,⁹ pursuant to section 181(b) of the CAA, EPA determined that Sheboygan County failed to attain the 2008 ozone NAAQS by the July 20, 2016 marginal area attainment deadline and thus reclassified the area from marginal to moderate nonattainment. In that action, EPA established January 1, 2017, as the due date for all moderate area nonattainment plan SIP requirements applicable to newly reclassified areas. Effective March 6, 2017, EPA found that 15 states and the District of Columbia failed to submit SIP revisions in a timely manner to satisfy certain requirements for the 2008 ozone NAAQS.¹⁰ This finding established certain deadlines for the imposition of sanctions if a state does not submit a timely SIP revision addressing the requirements for which the finding was made and for EPA to promulgate a Federal Implementation Plan (FIP) to address any outstanding SIP requirements. As part of that action, EPA made a finding that Wisconsin failed to submit a marginal NNSR SIP for the Wisconsin portion of the Chicago area and for Sheboygan County.

C. Wisconsin's Submittal

On July 19, 2018, Wisconsin submitted a SIP revision requesting EPA approve Wisconsin's certification that its existing SIP-approved NNSR regulations fully satisfy the NNSR requirements set forth in 40 CFR 51.165 for both marginal and moderate ozone nonattainment areas for the 2008 ozone NAAQS. EPA proposed to approve Wisconsin's certification on February 12, 2019, with a comment period ending on March 14, 2019 (84 FR 3376). No comments were received during the comment period.

II. What action is EPA taking?

EPA is approving Wisconsin's July 18, 2018, SIP revision addressing the NNSR requirements for the 2008 ozone NAAQS for the Wisconsin portion of the Chicago Nonattainment Area and for Sheboygan County. EPA has concluded that Wisconsin's submission fulfills the 40 CFR 51.1114 revision requirement, meets the requirements of CAA sections 110 and 172 and the minimum SIP requirements of 40 CFR 51.165. Approval of the NNSR requirements addresses EPA's finding that Wisconsin failed to submit moderate ozone NNSR requirements and EPA's approval turns off the sanctions and FIP clock.

III. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Is not an Executive Order 13771 (82 FR 9339, February 2, 2017) regulatory action because SIP approvals are exempted under Executive Order 12866;
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);

- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Public Law 104-4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a "major rule" as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by July 2, 2019. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the

⁶ 77 FR 34221, effective July 20, 2012.

⁷ 81 FR 26697.

⁸ 77 FR 30088 (May 21, 2012).

⁹ 81 FR 91841 (December 19, 2016).

¹⁰ 82 FR 9158 (February 3, 2017).

time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Ozone, Reporting and recordkeeping requirements, Volatile organic compounds.

Dated: April 24, 2019.

Cheryl L. Newton,

Acting Regional Administrator, Region 5.

40 CFR part 52 is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

■ 2. Section 52.2585 is amended by adding paragraph (hh) to read as follows:

§ 52.2585 Control strategy: Ozone.

* * * * *

(hh) Approval—On July 19, 2018, Wisconsin submitted a SIP revision certifying that the existing SIP-approved nonattainment new source review regulations fully satisfy the nonattainment new source review requirements for marginal and moderate ozone nonattainment areas for the 2008 ozone NAAQS.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA-R08-OAR-2018-0593; FRL-9992-97-Region 8]

Approval and Promulgation of Air Quality Implementation Plans; Colorado; Revisions to Regulation Number 3

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is taking final action to approve State Implementation Plan (SIP) revisions submitted by the State of Colorado on February 25, 2015, and May 24, 2017. These SIP revisions are

necessary for Colorado to address current federal prevention of significant deterioration (PSD) and nonattainment new source review (NSR) regulations. In this rulemaking, we are taking final action on all portions of the February 25, 2015, and May 24, 2017 submittals, except for those portions of the submittal which have been previously acted on or do not belong in the SIP. The intended effect of this action is to bring Colorado's PSD and nonattainment NSR permitting programs in line with federal requirements. This action is being taken under section 110 of the Clean Air Act (CAA).

DATES: This final rule is effective on June 3, 2019.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA-R08-OAR-2018-0593. All documents in the docket are listed on the <http://www.regulations.gov> website. Although listed in the index, some information is not publicly available, e.g., confidential business information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available through <http://www.regulations.gov>, or please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section for additional availability information.

FOR FURTHER INFORMATION CONTACT: Kevin Leone, Air Program, EPA, Region 8, Mailcode 8P-AR, 1595 Wynkoop Street, Denver, Colorado 80202-1129, (303) 312-6227, leone.kevin@epa.gov.

SUPPLEMENTARY INFORMATION: Throughout this document “we,” “us,” and “our” means the EPA.

I. Background

The EPA is taking final action to approve all revisions as submitted by the State of Colorado on February 25, 2015, and May 24, 2017, with the exception of the revisions that we have previously acted on or proposed to not act on, as outlined in section I. of our proposed rulemaking published on February 28, 2019 (84 FR 6732). On October 12, 2017 (82 FR 47380), we approved the following provisions that were part of the February 25, 2015 submittal: (1) Colorado's revisions to fine particulate matter (PM_{2.5}), significant impact levels (SILs) and significant monitoring concentration (SMC) provisions; (2) Revisions to Colorado's air pollution emission

notices; and (3) Revisions to public notice requirements.

This final action approves the remaining revisions in the February 25, 2015 submittal that include revisions to the State's PSD program in Regulation Number 3, the definitions of carbon dioxide equivalent (CO_{2e}) and regulated NSR pollutant, and the addition of plantwide applicability limit (PAL) provisions for greenhouse gases (GHGs). On March 24, 2017, the State submitted two sets of SIP revisions to Regulation Number 3: The first pertaining to regulatory changes necessary in response to the June 23, 2014 U.S. Supreme Court decision in *Utility Air Regulatory Group v. EPA*; and the second addresses nonattainment NSR applicability in (among other things) ozone nonattainment areas that have been classified or reclassified as serious, severe or extreme. We proposed to approve those revisions in the February 28, 2019 rulemaking and are now taking final action to approve them.

We provided a detailed explanation of the bases for our proposed approval in our February 28, 2019 rulemaking, which will not be restated here. See 84 FR 6732. We invited comment on all aspects of our proposal and provided a 30-day comment period. The comment period ended on April 1, 2019.

II. Response to Comments

We received no comments during the public comment period.

III. Final Action

As outlined in our proposed rulemaking, the EPA is taking final action to approve the addition of new and revised rules to Regulation 3 that were submitted by Colorado on February 25, 2015, and May 24, 2017. Specifically, we are taking final action to approve the following revisions: *Regulation Number 3, Part A: I. (Applicability)—I.B.10., I.B.23., I.B.25.c., I.B.28., I.B.28e., I.B.43., I.B.44.b., I.B.44.c., I.B.44.e.; V. (Certification And Trading Of Emission Reduction Credits Offset And Netting Transactions)—V.C.6., V.C.7., V.C.8., V.C.12., V.I.1; VI. (Fees)—VI.C.1.c, VI.C.1.; Regulation Number 3, Part D: I. (Applicability)—I.A.2., I.A.3.; I.B.1., I.B.2., I.B.3., I.C.; II. (Definitions)—II.A.1.d., II.A.2., II.A.4., II.A.4.e., II.A.4.f., II.A.5.c., II.A.13.a., II.A.13.a.(i)–(ii), II.A.13.b., II.A.13.b.(i)–(ii), II.A.16.–22., II.A.22.a.–c., II.A.23.–31. II.A.32.–35., II.A.36.–39., II.A.40.a.–c., II.A.40.d., II.A.40.e.–g., II.A.41.–45., II.A.46., II.A.46.a.–b., II.A.47., II.A.47.a.–b., II.A.48.; V. (Requirements Applicable to Nonattainment Areas)—V.A.3.c., V.A.7.c., V.A.7.c.(i)(C), V.A.7.c.(v); VI. (Requirements applicable to attainment*

and unclassifiable areas and pollutants implemented under Section 110 of the Federal Act (Prevention of Significant Deterioration Program))—

VI.A.6., VI.B.5., VI.B.5.a.(iii), VI.B.5.e.; XV (Actual PALs)—XV.A.1., XV.A.2., XV.A.2.c.–d., XV.A.3., XV.B., XV.B.1., XV.B.4., XV.C.1., XV.C.1.a., XV.C.1.d., XV.C.1.g., XV.D., XV.E.1., XV.E.6., XV.E.6.a.–c., XV.F.1., XV.F.3., XV.F.5., XV.F.6., XV.F.7., XV.F.11, XV.G.2.b., XV.H.1.a., XV.H.4., XV.H.5., XV.I.1., XV.I.2., XV.I.4.c.(i)–(ii), XV.J.1., XV.J.1.a.–b., XV.K.1.a, XV.N.1.b, XV.N.1.d., and XV.N.2.

IV. Incorporation by Reference

In this document, the EPA is finalizing regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA is finalizing the incorporation by reference of the State of Colorado's revisions to its State Implementation Plan as described in section III. of this preamble. The EPA has made, and will continue to make, these materials generally available through www.regulations.gov and at the EPA Region 8 Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information). Therefore, these materials have been approved by the EPA for inclusion in the SIP, have been incorporated by reference by the EPA into that plan, are fully federally enforceable under sections 110 and 113 of the CAA as of the effective date of the final rulemaking of the EPA's approval, and will be incorporated by reference in the next update to the SIP compilation.¹

V. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this action merely approves state law as meeting federal requirements and does not impose additional requirements beyond those

imposed by state law. For that reason, this action:

- Is not a “significant regulatory action” subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
 - Is not an Executive Order 13771 (82 FR 9339, February 2, 2017) regulatory action because SIP approvals are exempted under Executive Order 12866;
 - Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
 - Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
 - Does not contain any unfunded mandate or significantly or uniquely affect small governments, described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
 - Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
 - Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
 - Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
 - Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
 - Does not provide the EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).
- In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small

Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. The EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Volatile Organic Compounds.

Dated: April 29, 2019.

Debra Thomas,

Acting Regional Administrator, Region 8.

40 CFR part 52 is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

- 1. The authority for citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart G—Colorado

- 2. In § 52.320, the table in paragraph (c) is amended:
 - a. Under the center heading “5 CCR 1001–05, Regulation Number 3, Part A, Concerning General Provisions Applicable to Reporting and Permitting” by revising entries I, V, and VI; and
 - b. Under the center heading “5 CCR 1001–05, Regulation Number 3, Part D, Concerning Major Stationary Source New Source Review and Prevention of Significant Deterioration” by revising entries I, II, V, VI, and XV.

The revisions read as follows:

§ 52.320 Identification of plan.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 158

[EPA–HQ–OPP–2018–0668; FRL–9984–52]

RIN 2070–AK41

Pesticides; Technical Amendment to Data Requirements for Antimicrobial Pesticides

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: EPA is finalizing a correction pertaining to the “200 ppb (parts per billion) level” described in the antimicrobial pesticides data requirements regulation to clarify that the 200 ppb level is based on total estimated daily dietary intake for an

individual and not on the amount of residue present on a single food, as was incorrectly implied by the previous regulatory text. This change is intended to enhance understanding of the data required to support an antimicrobial pesticide registration and does not alter the burden or costs associated with these previously-promulgated requirements. This action does not otherwise establish any new data requirements or any other revisions (substantive or otherwise) to existing requirements.

DATES: This final rule is effective July 2, 2019.

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPP–2018–0668 is available online at <http://www.regulations.gov> or in person at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the EPA Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW, Washington, DC

20460–0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OPP Docket is (703) 305–5805. Please review the visitor instructions and additional information about the docket available at <http://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT: Cameo Smoot, Field and External Affairs Division (7506P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; (703) 305–5454; email address: smoot.cameo@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Does this action apply to me?

You may be potentially affected by this action if you are a producer or registrant of an antimicrobial pesticide product or device. The following list of

North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- NAICS code 325320, Pesticide and Other Agricultural Chemical Manufacturing, *e.g.*, pesticide manufacturers or formulators of pesticide products, importers, exporters, or any person or company who seeks to register a pesticide product or to obtain a tolerance for a pesticide product.

If you have any questions regarding the applicability of this action to a particular entity, consult the person listed under **FOR FURTHER INFORMATION CONTACT**.

B. What action is the Agency taking?

EPA is finalizing a single correction to the data requirements for antimicrobial pesticide products that are codified in 40 CFR part 158, subpart W. EPA is not making any other changes (substantive or otherwise) or establishing any new data requirements. The correction to the “200 ppb level” that is described in 40 CFR 158.2230(d) will clarify that the 200 ppb level is based on total estimated daily dietary intake for an individual and not on the amount of residue present on a single food.

This change will also harmonize the EPA standard with the U.S. Food and Drug Administration levels established for indirect food use biocides set forth in “Guidance for Industry: Preparation of Food Contact Notifications for Food Contact Substances: Toxicology Recommendations,” Revised April 2002. For reference, a copy of the FDA guidance has been placed in the docket for this action.

C. What is the Agency’s authority for taking this action?

This action is issued under the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), 7 U.S.C. 136 *et seq.* and the Federal Food, Drug, and Cosmetic Act (FFDCA), 21 U.S.C. 346a(d).

D. Why is the Agency taking this action?

EPA has determined that the correction to the “200 ppb level” that is described in 40 CFR 158.2230(d) is necessary to clarify that the 200 ppb level is based on total estimated daily dietary intake for an individual and not on the amount of residue present on a single food, as is incorrectly implied by the current regulatory text.

E. What are the incremental costs and benefits of this action?

This correction does not result in any new burden or costs being imposed. This change represents a technical correction. No new studies are being requested, registrants will not submit more studies than they are currently submitting in their application packages, and there is no increase in the frequency at which existing data are required. As a result, this change will not cause any increase in the cost to register an antimicrobial pesticide product. EPA believes the correction should provide registrants with more specific information such that it could reduce the number of consultations (emails, phone calls, and meetings) in which registrants seek to ensure that they are correctly interpreting the regulations before they begin their testing programs. Applicants may save time and money by better understanding when studies are needed and by not submitting unneeded studies. Submission of all required studies at the time of application may reduce potential delays in the registration process, thereby allowing products to enter the market earlier. The clarity derived from having more understandable data requirements may be especially important to small firms and new firms entering the industry who may have less experience with the pesticide registration program than those firms that routinely work with the Agency.

II. Summary of the Proposed Rule

On August 18, 2017 (82 FR 39399) (FRL–9965–54), EPA published and requested public comment on a proposal to correct the language at 40 CFR 158.2230(d) in a proposed rule entitled “Pesticides: Technical Amendment to Data Requirements for Antimicrobial Pesticides.” As described in more detail in the proposed rule, the correction is in response to a petition filed by the American Chemistry Council (ACC) in the United States Court of Appeals for the District of Columbia Circuit on July 3, 2013 (*American Chemistry Council, Inc. v. Environmental Protection Agency*, No.13–1207 (D.C. Cir.)). That petition sought judicial review of the 2013 final rule, entitled “Data Requirements for Antimicrobial Pesticides” (78 FR 26936, May 8, 2013) (FRL–8886–5). EPA and ACC subsequently entered into a settlement agreement that addressed the ACC petition. The settlement agreement, which became effective on March 2, 2015, is available at <http://www.regulations.gov> (Document ID No.

EPA–HQ–OPP–2008–0110–0139). Under the settlement agreement with ACC, EPA agreed to propose a correction to the language at 40 CFR 158.2230(d) referring to the 200 ppb level as “the concentration of the antimicrobial residues in or on the food item” in order to make the language consistent with the U.S. Food and Drug Administration’s (FDA) policy set forth in the FDA document entitled “Guidance for Industry, Preparation of Food Contact Notifications for Food Contact Substances: Toxicology Recommendations. Final Guidance. April 2002.” A copy of the FDA guidance has been placed in the docket for this rulemaking.

In the 2017 proposed rule, EPA proposed to clarify that the 200 ppb level established in the 2013 rule is based on total estimated daily dietary intake, and not on the amount of residue present on a single food item or commodity. As part of its obligations under the settlement agreement, EPA issued interim guidance on April 30, 2015, which is available on EPA’s website at <https://www.epa.gov/pesticide-registration/epa-data-requirements-registration-antimicrobial-pesticides-part-158w>.

III. Comments and Responses

The Agency appreciates the comments provided by the public, and the Agency’s detailed response to the comments received is provided in a document that is posted in the docket for this action. EPA received two public comments. One commenter was supportive of the adoption of the technical correction without requesting any revisions to the text. The other commenter submitted an inquiry as to why 200 ppb instead of 100 ppb was the limit for concentrations of biocides on food.

The 200 ppb level was previously established by FDA for indirect food use biocides (see Guidance for Industry: Preparation of Food Contact Notifications for Food Contact Substances: Toxicology Recommendations, Revised April 2002). The 200 ppb level is derived by dividing FDA’s cumulative exposure upper limit of 1,000 ppb level by 5 to be conservative and to account for the fact that antimicrobial pesticides (*e.g.*, biocides) are a class of pesticide that are generally toxic by design. It is important to note that EPA is not using this 200 ppb value as a risk level. It is used in this situation to determine if additional toxicity data are required. No substantive changes were suggested and EPA is finalizing the correction as proposed.

IV. FIFRA Review Requirements

In accordance with FIFRA sections 21 and 25(a), EPA submitted a draft of this final rule to the Secretary of the Department of Health and Human Services (HHS), and the Secretary of the U.S. Department of Agriculture (USDA). Under FIFRA section 25(d), EPA submitted a draft of this final rule to the FIFRA Scientific Advisory Panel (SAP). The SAP waived its review of the final rule on November 14, 2018, because the final rule does not contain scientific issues that warrant review by the Panel. A copy of FIFRA SAP response is available in the docket.

As required by FIFRA section 25(a)(3), copies of the draft final rule were also provided to the appropriate Congressional Committees (*i.e.*, the Committee on Agriculture in the U.S. House of Representatives, and the Committee on Agriculture, Nutrition, and Forestry in the United States Senate).

V. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders can be found at <http://www2.epa.gov/laws-regulations/laws-and-executive-orders>.

A. Executive Order 12866: Regulatory Planning and Review; and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a significant regulatory action was therefore not submitted to the Office of Management and Budget (OMB) for review under Executive Orders 12866 (58 FR 51735; October 4, 1993) and 13563 (76 FR 3821, January 21, 2011).

B. Executive Order 13771: Reducing Regulation and Controlling Regulatory Costs

The burden reduction and controlling provisions in Executive Order 13771 (82 FR 9339, February 3, 2017), do not apply to this action because this action is not a significant regulatory action as defined by Executive Order 12866.

C. Paperwork Reduction Act (PRA)

This action does not impose any new information collection requirements that require additional review or approval by OMB under the PRA, 44 U.S.C. 3501 *et seq.* The information collection requirements associated with the submission of data under 40 CFR part 158 have already been approved by OMB pursuant to the PRA and are covered by the following existing Information Collection Requests (ICRs):

- The information collection activities associated with the

establishment of a tolerance is approved under OMB Control No. 2070–0024 (EPA ICR No. 0597).

- The information collection activities associated with the application for a new or amended registration of a pesticide are approved under OMB Control No. 2070–0060 (EPA ICR No. 0277).

- The information collection activities associated with the generation of data for registration review is approved under OMB Control No. 2070–0174 (EPA ICR No. 2288).

- The information collection activities associated with the generation of data for experimental use permits are approved under OMB Control No. 2070–0040 (EPA ICR No. 0276).

This final rule does not involve a change in information collection activities associated with the generation of data for antimicrobial pesticide products or devices. EPA believes no additional burden for data submission would be imposed by the simple correction in this final rule.

D. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA, 5 U.S.C. 601 *et seq.* The small entities directly regulated by this final rule are registrants and manufacturers of antimicrobial pesticide products that qualify as a small business as defined by the Small Business Administration. Small nonprofit organizations and small government jurisdictions as defined by the RFA are not expected to become a registrant or manufacturer of an antimicrobial pesticide product and are not therefore expected to be impacted by this rule.

In determining whether a rule has a significant economic impact on a substantial number of small entities, the impact of concern is any significant adverse economic impact on small entities, since the primary purpose of the regulatory flexibility analyses is to identify and address regulatory alternatives “which minimize any significant economic impact of the rule on small entities.” 5 U.S.C. 603 and 604. Thus, an agency may certify that a rule will not have a significant economic impact on a substantial number of small entities if the rule relieves regulatory burden, or otherwise has a positive economic effect on all the small entities subject to the rule.

There will not be significant adverse economic impacts on a substantial number of small entities by this simple correction. On the contrary, all registrants and manufacturers of antimicrobial pesticide products,

regardless of size, will benefit equally from the correction related by likely reduction in the number of requests for further clarification of this data requirement, and may also enjoy a more streamlined registration process.

E. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded federal mandate and does not significantly or uniquely affect small governments. Accordingly, this action is not subject to the requirements of UMRA, 2 U.S.C. 1501 *et seq.*

F. Executive Order 13132: Federalism

This action does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 4, 1999). It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. Thus, Executive Order 13132 does not apply to this action.

G. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications as specified in Executive Order 13175 (65 FR 67249, November 9, 2000). This action will not have any effect on tribal governments, on the relationship between the Federal Government and the Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. Thus, Executive Order 13175 does not apply to this action.

H. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

EPA interprets Executive Order 13045 (62 FR 19885, April 23, 1997) as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of “covered regulatory action” in section 2–202 of the Executive Order. This action is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk.

I. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211 (66 FR 28355, May 22, 2001), because it is not a significant

regulatory action under Executive Order 12866, nor does it affect energy supply, distribution or use.

J. National Technology Transfer and Advancement Act (NTTAA)

This action does not involve any technical standards that would require the consideration of voluntary consensus standards pursuant to NTTAA section 12(d), 15 U.S.C. 272 note.

K. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

This action does not involve special consideration of environmental justice related issues as specified in Executive Order 12898 (59 FR 7629, February 16, 1994), because this action does not address human health or environmental risks or otherwise have any disproportionate high and adverse human health or environmental effects on minority, low-income or indigenous populations.

L. Congressional Review Act (CRA)

This action is subject to the CRA, 5 U.S.C. 801 *et seq.*, and EPA will submit a rule report to the U.S. Senate, and the U.S. House of Representatives, and the Comptroller General of the United States. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 158

Environmental protection, Administrative practice and procedure, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: April 25, 2019.

Alexandra Dapolito Dunn,
Assistant Administrator, Office of Chemical Safety and Pollution Prevention.

Therefore, 40 CFR part 158 is amended as follows:

PART 158—[AMENDED]

■ 1. The authority citation for part 158 continues to read as follows:

Authority: 7 U.S.C. 136–136y; subpart U is also issued under 31 U.S.C. 9701.

■ 2. In § 158.2230, revise paragraph (d) to read as follows:

§ 158.2230 Toxicology.

* * * * *

(d) *200 parts per billion (ppb).* The 200 ppb level was originally used by the Food and Drug Administration with respect to the concentration of residues in or on food for tiering of data requirements for indirect food use biocides. The Agency has also adopted this same residue level for determining toxicology data requirements for indirect food uses of antimicrobial pesticides. The 200 ppb level is the concentration of antimicrobial residues in the total estimated daily dietary intake.

Proposed Rules

Federal Register

Vol. 84, No. 86

Friday, May 3, 2019

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 25

[Docket No. FAA-2019-0283; Notice No. 25-19-04-SC]

Special Conditions: Airbus Model A380; Stairways Between Decks

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed amended special conditions.

SUMMARY: This action proposes an amendment to special conditions for the Airbus A380 airplane. This airplane will have novel or unusual design features when compared to the state of technology envisioned in the airworthiness standards for transport category airplanes. This design feature is associated with the complex systems and the configuration of the airplane, including its full-length double deck. For these design features, the applicable airworthiness regulations do not contain adequate or appropriate safety standards regarding stairways between decks. These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

By issuance of this amendment to the special condition, the FAA is correcting an error that appeared in the **Federal Register** on August 28, 2006, for Special Conditions No. 25-326-SC, Docket No. NM314. The applicable airworthiness regulations do not contain adequate or appropriate safety standards for this design feature. These proposed special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

DATES: Send comments on or before June 17, 2019.

ADDRESSES: Send comments identified by Docket No. FAA-2019-0283 using any of the following methods:

- *Federal eRegulations Portal:* Go to <http://www.regulations.gov/> and follow the online instructions for sending your comments electronically.
- *Mail:* Send comments to Docket Operations, M-30, U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE, Room W12-140, West Building Ground Floor, Washington, DC 20590-0001.
- *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12-140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.
- *Fax:* Fax comments to Docket Operations at 202-493-2251.

Privacy: The FAA will post all comments it receives, without change, to <http://www.regulations.gov/>, including any personal information the commenter provides. Using the search function of the docket website, anyone can find and read the electronic form of all comments received into any FAA docket, including the name of the individual sending the comment (or signing the comment for an association, business, labor union, etc.). DOT's complete Privacy Act Statement can be found in the **Federal Register** published on April 11, 2000 (65 FR 19477-19478).

Docket: Background documents or comments received may be read at <http://www.regulations.gov/> at any time. Follow the online instructions for accessing the docket or go to Docket Operations in Room W12-140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Dan Jacquet, Airframe and Cabin Safety Section, AIR-675, Transport Standards Branch, Policy and Innovation Division, Aircraft Certification Service, Federal Aviation Administration, 2200 South 216th Street, Des Moines, Washington 98198; telephone and fax 206-231-3208; email Daniel.Jacquet@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite interested people to take part in this rulemaking by sending written comments, data, or views. The

most helpful comments reference a specific portion of the special conditions, explain the reason for any recommended change, and include supporting data.

We will consider all comments we receive by the closing date for comments. We may change these special conditions based on the comments we receive.

Background

Airbus requested an amendment to Special Condition No. 25-326-SC in letter (L2578ME1831060) revision 1, dated November 21, 2018. This letter states:

The Special Conditions applicable to the stairways on full-length double-deck airplane were extensively discussed in the VLTA conference, dt. October 1998 in Noordwijkerhout, The Netherlands and in the Cabin Safety Meeting between FAA, EASA, and Airbus, held in Hamburg, Feb. 25, 2003. In the latter meeting, the Special Conditions have been aligned. Based on that, Airbus has received CRI-D6 and IP-C1 (linked to FAA project CP-101) for A380 Type Certification.

However, Airbus noticed that the Special Conditions for the availability of stairs published in the **Federal Register** (ref. 25-326-SC from September 11, 2006) require more when compared to Special Conditions of IP-C1 Stage 4 Airbus received June 13, 2003.

The **Federal Register**, ref. 25-326-SC reads:

a. At least one stairway between decks must meet the following requirements: The stairway accommodates the carriage of an incapacitated person from one deck to the other. The crew member procedures for such carriage must be established.

b. There must be at least two stairways between decks that meet the following requirements:

The stairways must be designed such that evacuees can achieve an adequate rate for going down or going up under probable emergency conditions, including a condition in which a person falls or is incapacitated while on a stairway. One of the stairways must be the stairway specified in paragraph a. above.

For whatever reasons, the consideration of the condition in which a person falls or is incapacitated while on the stairs re-appears. Resulting from the A380 Certification Meeting held in

Hamburg this was agreed to be not required by the IP.

It was the FAA position that “this type of demonstration is not required for the main passenger aisle in the airplane and therefore should not be required for the stairways”.

The Stage 4 of the IP–C1 dt. February 25, 2003 received for A380 TC thus reads.

A. At least two stairways between decks must meet the following requirements:

(1) At least one of the stairways must accommodate the carriage of an incapacitated person from one deck to the other. The crew member procedures for such a carriage must be established.

(2) The stairways must be designed such that evacuees can be shown to achieve an adequate rate, for going down or going up, under probable emergency conditions.

All further Special Conditions published in the **Federal Register** (§§ c through e) are identical to the Special Conditions of the IP (§§ B though D), however using a different wording.

Since the IP–C1, Stage 4 is the bilateral agreement between FAA and Airbus, and the **Federal Register** is available to the public, Airbus would appreciate the correction of the SC published in the **Federal Register** under 25–326–SC. This would avoid any misunderstanding in the A380 future.

During initial discussions with Airbus regarding the proposed special conditions, the FAA had included a requirement that the stairways be designed such that evacuees can achieve an adequate rate going down or up under probable emergency conditions, including a condition in which a person falls or is incapacitated while on the stairway. Airbus agreed with the requirement except for the portion pertaining to a person falling or being incapacitated. The FAA documented agreement with Airbus’s position. Unfortunately the special condition was issued with the FAA’s initial proposal rather than the final agreement, and stated that the stairs be designed such that evacuees can achieve an adequate rate going up or down the stairs under probable emergency conditions including a condition in which a person falls or is incapacitated while on the stairway.

Type Certification Basis

Under the provisions of 14 CFR 21.17, Airbus must show that the Model A380 airplane meets the applicable provisions of 14 CFR part 25, as amended by Amendments 25–1 through 25–98. If the Administrator finds that the applicable airworthiness regulations do not contain

adequate or appropriate safety standards for the Airbus Model A380 airplane because of novel or unusual design features, special conditions are prescribed under the provisions of 14 CFR 21.16.

In addition to the applicable airworthiness regulations and special conditions, the Airbus Model A380 airplane must comply with the fuel vent and exhaust emission requirements of 14 CFR part 34 and the noise certification requirements of 14 CFR part 36. In addition, the FAA must issue a finding of regulatory adequacy pursuant to section 611 of Public Law 93–574, the “Noise Control Act of 1972.”

Special conditions, as defined in 14 CFR 11.19, are issued in accordance with 14 CFR 11.38 and become part of the type certification basis in accordance with 14 CFR 21.17(a)(2).

Special conditions are initially applicable to the model for which they are issued. Should the type certificate for that model be amended later to include any other model that incorporates the same novel or unusual design feature, the special conditions would also apply to the other model under the provisions of 14 CFR 21.101.

Novel or Unusual Design Features

The Airbus Model A380 airplane will incorporate the following novel or unusual design features: This airplane has a full-length double deck. For these design features, the applicable airworthiness regulations do not contain adequate or appropriate safety standards regarding stairways between decks.

Discussion

The Model A380 airplane incorporates seating on two full-length passenger decks, each of which has the capacity of a typical wide body airplane. Two staircases—one located in the front of the cabin and one located in the rear—allow for the movement of persons between decks. With large seating capacities on the main deck and the upper deck of the Model A380 airplane, the staircases need to be able to support movement between decks in an inflight emergency. In addition, although compliance with the evacuation demonstration requirements of § 25.803 does not depend on the use of stairs, there must be a way for passengers on one deck to move to the other deck during an emergency evacuation. This need must be addressed in the certification of the airplane.

The regulations governing the certification of the Model A380 airplane do not adequately address a passenger

airplane with two separate full-length decks for passengers. The Boeing Model 747 and the Lockheed Model L–1011 airplanes were certificated with limited seating capacity on two separate decks, and special conditions were issued to certificate those arrangements. When the seating capacity of the upper deck of the Boeing Model 747 airplane exceeded 24 passengers, the FAA issued Special Conditions 25–61–NW–1 for a maximum seating capacity of 32 passengers on the upper deck for take-off and landing. A second set of Special Conditions, 25–71–NW–3, was issued to cover airplanes with a maximum seating capacity of 45 passengers on the upper deck for take-off and landing. That second set of Special Conditions was later modified to address airplanes with a maximum seating capacity of 110 passengers on the upper deck. These previously issued special conditions provided a starting point for the development of special conditions for the Model A380 airplane.

In the case of both the Model L–1011 and the Model 747 airplanes, the special conditions were based on the requirements and associated level of safety in place at the time of application for type certificate. The requirements and the level of safety have improved significantly since that time, and these special conditions reflect those improvements.

In addition to the requirements of §§ 25.803 and 25.811 through 25.813, special conditions are needed to address the movement of passengers between the two full-length decks on the Model A380 airplane. These special conditions provide additional requirements for the stairways to ensure the safe passage of occupants between decks during moderate turbulence, an inflight emergency, or an emergency evacuation.

These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

Applicability

As discussed above, these special conditions are applicable to the Airbus Model A380 airplane. Should Airbus apply at a later date for a change to the type certificate to include another model incorporating the same novel or unusual design features, these special conditions would apply to that model as well under the provisions of § 21.101.

Conclusion

This action affects only certain novel or unusual design features of the Airbus

Model A380 airplane. It is not a rule of general applicability.

List of Subjects in 14 CFR Part 25

Aircraft, Aviation safety, Reporting and recordkeeping requirements.

Authority Citation

The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40113, 44701, 44702, 44704.

The Proposed Special Conditions

Accordingly, pursuant to the authority delegated to me by the Administrator, the following special conditions are issued as part of the type certification basis for the Airbus Model A380 airplane.

Airbus Model A380, Stairways Between Decks

1. At least one stairway between decks must meet the following requirements: The stairway accommodates the carriage of an incapacitated person from one deck to the other. The crew member procedures for such carriage must be established.

2. There must be at least two stairways between decks that meet the following requirements: The stairways must be designed such that evacuees can achieve an adequate rate for going down or going up under probable emergency conditions. One of the stairways must be the stairway specified in paragraph I. above.

3. Each stairway between decks must meet the following requirements:

a. It must have an entrance, exit, and gradient characteristics that—with the assistance of a crew member—would allow the passengers of one deck to merge with passengers of the other deck during an evacuation and exit the airplane. These entrance, exit, and gradient characteristics must occur with the airplane in level attitude and in each attitude resulting from the collapse of any one or more legs of the landing gear. These requirements must be demonstrated by tests or analysis.

b. The stairway must have a handrail on at least one side in order to allow people to steady themselves during foreseeable conditions, including but not limited to the condition of gear collapse on the ground and moderate turbulence in flight. The handrails must be constructed, so that there will be no obstruction on them which will cause the user to release his/her grip on the handrail or will hinder the continuous movement of the hands along the handrail. Handrails must be terminated in a manner which will not obstruct pedestrian travel or create a hazard.

Adequacy of the design must be demonstrated by using persons representative of the 5% female and the 95% male.

c. The stairway must be designed and located to minimize damage to it during an emergency landing or ditching.

d. The stairway must have a wall or the equivalent on each side to minimize the risk of falling and to facilitate use of the stairway under conditions of abnormal airplane attitude.

e. Treads and landings must be designed and demonstrated to be free of hazard. The landing area at each deck level must be demonstrated to be adequate in terms of flow rate for the maximum number of people that will be using the stair in an emergency. Treads and risers must be designed to ensure an easy and safe use of the stairway.

f. General emergency illumination must be provided so that—when measured along the centerlines of each tread and landing—the illumination is not less than 0.05 foot-candle.

g. In normal operation, the general illumination level must not be less than 0.05 foot-candles. The assessment must be done under day light and dark of night conditions.

h. Both stairway ends must be indicated by an exit sign visible to passengers when in the stairway. This exit sign must meet the requirements of § 25.812(b)(1)(ii).

i. A floor proximity path marking system which meets the requirements of § 25.812(e) must be available to guide passengers in the stairway to the stairway ends. It must not direct the occupants of the cabin to the stair entrance.

j. The public address system must be audible in the stairway during all flight phases.

k. “No smoking” and “return to seat” signs must be installed and must be visible in the stairway both going up and down and at the stairway entrances.

4. Cabin crew procedures and positions must be established to manage the use of the stairs on the ground and in flight under both normal and emergency situations. This may require that cabin crew members have specific dedicated duties for the management of the stairs during emergency and precautionary evacuations.

5. It should not be hazardous for crew members or passengers who are returning to their seats to use the stairways during moderate turbulence.

Issued in Des Moines, Washington, on April 11, 2019.

Paul Siegmund,

Acting Manager, Transport Standards Branch, Policy and Innovation Division, Aircraft Certification Service.

[REG–113943–17]

RIN 1545–BO01

Certain Transfers of Property to Real Estate Investment Trusts [REITs]; Correction

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Correction to a partial withdrawal of notice of proposed rulemaking and notice of proposed rulemaking.

SUMMARY: This document contains a correction to a partial withdrawal of notice of proposed rulemaking and notice of proposed rulemaking (REG–113943–17) that was published in the **Federal Register** on March 26, 2019. If adopted, the withdrawn portion of the notice of proposed rulemaking would have provided guidance for transactions in which property of a C corporation becomes the property of a REIT following certain corporate distributions of controlled corporation stock. The notice of proposed rulemaking provided revised guidance on the same subject.

DATES: Written or electronic comments and requests for a public hearing are still being accepted and must be received by May 10, 2019.

FOR FURTHER INFORMATION CONTACT: Concerning the proposed regulations, Austin Diamond-Jones, (202) 317–5363; concerning submission of comments or to request a public hearing, Regina Johnson, (202) 317–6901 (not toll-free numbers).

SUPPLEMENTARY INFORMATION:

Background

The proposed regulations that are the subject of this correction are under section 337(d) of the Internal Revenue Code.

Need for Correction

As published, the partial withdrawal of notice of proposed rulemaking and notice of proposed rulemaking (REG–113943–17) contains errors which may

prove to be misleading and need to be clarified.

Correction of Publication

Accordingly, the partial withdrawal of notice of proposed rulemaking and notice of proposed rulemaking (REG–113943–17) that was the subject of FR Doc. 2019–05682, published at 84 FR 11259 (March 26, 2019), is corrected to read as follows:

§ 1.337(d)–7 [Corrected]

■ On page 11263, second column, the second line of paragraph (f)(3)(iii), the language “distribution is described in a ruling” is corrected to read “distribution occurred before December 7, 2015 or is described in a ruling”.

Martin V. Franks,

*Chief, Publications and Regulations Branch,
Legal Processing Division, Associate Chief
Counsel, (Procedure and Administration).*

DEPARTMENT OF HEALTH AND HUMAN SERVICES

45 CFR Part 155

[CMS–9936–NC2]

Request for Information Regarding State Relief and Empowerment Waivers

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS; Department of the Treasury.

ACTION: Request for information.

SUMMARY: This request for information (RFI) solicits public comment on ideas for innovative programs and waiver concepts that states could consider in developing a 1332 waiver plan. The Department of the Treasury and the Centers for Medicare & Medicaid Services in the Department of Health and Human Services (collectively, the Departments) are seeking feedback and ideas on how states might take advantage of new flexibilities provided in recently published October 2018 guidance. The overarching goal of section 1332 waivers is to give all Americans the opportunity to gain high value and affordable health coverage regardless of income, geography, age, gender, or health status while empowering states to develop health coverage strategies that best meet the needs of their residents. The

Departments are committed to empowering states to innovate in ways that will strengthen their health insurance markets, expand choices of coverage, target public resources to those most in need, and meet the unique circumstances of each state.

DATES: *Comment Date:* To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on July 2, 2019.

ADDRESSES: Written comments may be submitted to the addresses specified below. Any comment that is submitted will be shared between the Departments. Please do not submit duplicates.

All comments will be made available to the public. Warning: Do not include any personally identifiable information (such as name, address, or other contact information) or confidential business information that you do not want publicly disclosed. All comments are posted on the internet exactly as received and can be retrieved by most internet search engines. No deletions, modifications, or redactions will be made to the comments received, as they are public records. Comments may be submitted anonymously.

In commenting, refer to file code CMS–9936–NC2. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to <http://www.regulations.gov>. Follow the “Submit a comment” instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–9936–NC2, P.O. Box 8013, Baltimore, MD 21244–1850.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–9936–NC2, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

FOR FURTHER INFORMATION CONTACT: Michelle Koltov, Centers for Medicare &

Medicaid Services, Department of Health and Human Services, at (301) 492–4225.

Lina Rashid, Centers for Medicare & Medicaid Services, Department of Health and Human Services, at (202) 260–6098.

SUPPLEMENTARY INFORMATION:

Submission of Comments: All submissions received for this notice must include the Agency file code CMS–9936–NC2.

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. Comments received before the close of the comment period are posted on the following website as soon as possible after they have been received: <http://www.regulations.gov>. Follow the search instructions on that website to view public comments.

I. Background

One of the Administration’s priorities in health care is to empower states by providing tools to address the serious problems that have surfaced in state individual health insurance markets with the implementation of the Patient Protection and Affordable Care Act (PPACA). The Administration is committed to expanding state flexibility and empowering states to address problems with their individual health insurance markets and increase health insurance coverage options for their residents, while at the same time encouraging states to adopt innovative strategies to reduce future overall health care spending. Section 1332 of the PPACA permits a state to apply for a State Innovation Waiver (referred to as a section 1332 waiver or a State Relief and Empowerment Waiver) to pursue innovative strategies for providing their residents with access to higher value, more affordable health coverage. The overarching goal of section 1332 waivers is to give all Americans the opportunity to gain high value and affordable health coverage regardless of income, geography, age, gender, or health status while empowering states to develop health coverage strategies that best meet the needs of their residents. Section 1332 waivers provide states an opportunity to promote a stable health insurance market that offers more choice and affordability to state residents, in part through expanded competition.

On November 29, 2018, CMS released a discussion paper entitled “Section 1332 State Relief and Empowerment

Waiver Concepts.”¹ These waiver concepts are intended to foster discussion with states by illustrating how states might take advantage of new flexibilities provided in guidance related to section 1332 published on October 24, 2018 (referred to as the 2018 guidance),² which replaced the previous guidance published on December 16, 2015.³ The 2018 guidance aims to lower barriers to innovation for states seeking to reform their health insurance markets, increases flexibility with respect to the manner in which a section 1332 state plan may meet section 1332 approval requirements, clarifies the adjustments that the Secretary of the Department of the Treasury and the Secretary of the Department of Health and Human Services (collectively, the Secretaries) may make to maintain federal deficit neutrality, and clarifies that states may use existing state legislative authority to authorize section 1332 waivers in certain scenarios. The Departments are committed to empowering states to innovate in ways that will strengthen their health insurance markets, expand choices of coverage, target public resources to those most in need, and meet the unique circumstances of their state.

As noted in the 2018 guidance, the Secretaries will consider favorably section 1332 waiver applications that advance some or all of the following five principles as elements of a section 1332 waiver application. The principles are as follows:

- *Provide increased access to affordable private market coverage.* Making private health insurance coverage more accessible and affordable should be a priority for a section 1332 waiver. A section 1332 state plan should foster health coverage through competitive private coverage, including Association Health Plans and short-term limited-duration insurance plans, over public programs. Additionally, the Departments will look favorably upon section 1332 applications under which states increase issuer participation in state insurance markets and promote competition.

- *Encourage sustainable spending growth.* Section 1332 waivers should promote more cost-effective health coverage and be fair to the federal taxpayer by restraining growth in

federal spending commitments. For example, states should consider eliminating or reducing state-level regulation that limits market choice and competition in order to reduce prices for consumers and reduce costs to the federal government, as part of their section 1332 waiver applications.

- *Foster state innovation.* States are better positioned than the federal government to assess and respond to the needs of their citizens with innovative solutions. We encourage states to craft solutions that meet the needs of their consumers and markets and innovate to the maximum extent possible under the law.

- *Support and empower those in need.* Americans should have access to affordable, high value health insurance. Some Americans, particularly those with low incomes or high expected health care costs, may require financial assistance. Policies in section 1332 waiver applications should support state residents in need in the purchase of private coverage with financial assistance that meets their specific health care situations.

- *Promote consumer-driven healthcare.* Section 1332 waivers should empower Americans to make informed choices about their health coverage and health care with incentives that encourage consumers to seek value. Instead of only offering a one-size-fits-all plan proposal, a section 1332 state plan should focus on providing people with the resources and information they need to afford and purchase the private insurance coverage that best meets their needs.

Consistent with the principles laid out above, the Secretaries intend to provide states with maximum flexibility within the law to innovate, empower consumers, and expand higher value and more affordable coverage options.

Under a section 1332 waiver, states may seek waivers of requirements under Part I of Subtitle D of Title I of the PPACA (relating to establishing Qualified Health Plans (QHPs)); Part II of Subtitle D of Title I of the PPACA (relating to consumer choices and insurance competition through health insurance Exchanges); Sections 36B of the Internal Revenue Code and 1402 of the Internal Revenue Code (relating to premium tax credits and cost-sharing reductions for QHPs offered within the Exchanges); and Section 4980H of the Internal Revenue Code (relating to employer shared responsibility). For example, a state may seek to waive requirements under parts I and II of Subtitle D of the PPACA, including the requirement that an Exchange operate in the state; that the Exchange in the state performs

certain minimum functions, including QHP certification, administration of annual and special enrollment periods; as well as requirements related to essential health benefits (EHB) and actuarial value (AV) metal levels. The Departments' waiver authority does not permit states to waive other PPACA title I requirements such as pre-existing condition protections; allowable premium rating factors, including age bands; guaranteed availability and renewability of health coverage; risk adjustment; and eligibility determinations under section 1411 of the PPACA for programs outside of the Exchange (this applies to determinations for Medicaid, the Children's Health Insurance Program (CHIP), and the Basic Health Program (BHP)). Under section 1332 of the PPACA, the Departments have no authority to waive any provision of the Employee Retirement Income Security Act (ERISA).

In order for the Departments to be able to grant a request for a section 1332 waiver, the Departments must determine that the waiver will provide access to health insurance coverage that is at least as comprehensive and affordable as would be provided under the PPACA without the waiver, will provide coverage to at least a comparable number of residents of the state as would be provided coverage without the waiver, and will not increase the federal deficit. These statutory criteria are referred to as the “guardrails.” Before submitting a section 1332 waiver application, a state must have enacted a law providing for implementation of the waiver, provided public notice and a period for public comment, and held public hearings sufficient to ensure a meaningful level of public input.

Under a section 1332 waiver, a state may receive pass-through funding associated with the resulting reductions in federal spending on Exchange financial assistance (that is, spending on PTC under section 36B of the Internal Revenue Code, Small Business Tax Credits (SBTC) under section 45R of the Internal Revenue Code, or Cost-Sharing Reductions (CSRs)⁴ consistent with the statute and the state's waiver plan. Pass-through funding may only be used to implement the approved state waiver plan.

The waiver concepts in the discussion paper released in November 2018 were offered to spur innovative ideas that

⁴ So long as there is no available appropriation to support federal CSR payments, states may not receive pass-through funds based on federal savings in CSR payments.

¹ <https://www.cms.gov/CCIIO/Programs-and-Initiatives/State-Innovation-Waivers/Downloads/Waiver-Concepts-Guidance.PDF>.

² 83 FR 53575, <https://www.federalregister.gov/documents/2018/10/24/2018-23182/state-relief-and-empowerment-waivers>.

³ 80 FR 78131, <https://www.federalregister.gov/documents/2015/12/16/2015-31563/waivers-for-state-innovation>.

could be utilized by individual states seeking approval for section 1332 waivers that could help improve their health care markets. The four waiver concepts addressed in that discussion paper are summarized below:

- *Account-Based Subsidies:* Under this waiver concept, a state can create its own subsidy structure and direct public subsidies into a defined-contribution, consumer-directed account that an individual uses to pay for health insurance premiums or other health care expenses. The account could be funded with pass-through funding made available by waiving federal spending on Exchange financial assistance, such as the PTC under section 36B of the Internal Revenue Code (IRC) or SBTC under section 45R of the IRC, or by waiving other provisions as described above, thereby resulting in reduced federal financial assistance spending. The account could also allow individuals to aggregate funding from additional sources, including individual and employer contributions. An account-based approach could give beneficiaries more choices and require beneficiaries to take responsibility for managing their health care spending. This approach could also provide consumers with a greater ability to select a plan based on their needs, or their family's needs, including a higher deductible plan with lower premiums.

- *State-Specific Premium Assistance:* States can use the State-Specific Premium Assistance waiver concept to create a new, state-administered subsidy program. A state may design a subsidy structure that meets the unique needs of its population in order to provide more affordable health care options to a wider range of individuals, attract more young and healthy consumers into their market, or to address structural issues that create perverse incentives, such as the subsidy cliff. States may receive federal pass-through funding by waiving federal spending on Exchange financial assistance, such as the PTC under section 36B of the IRC to help fund the state subsidy program, or by waiving other provisions as described above, thereby resulting in reduced federal financial assistance spending.

- *Adjusted Plan Options:* Under this waiver concept, states could provide financial assistance for different types of health insurance plans, including non-QHPs, potentially increasing consumer choice and making coverage more affordable for individuals. For example, states could choose to expand the availability of catastrophic plans beyond the current eligibility limitations by waiving section 1302(e)(2) of the PPACA. Used in conjunction with the

account-based subsidy waiver concept, states could provide subsidies in the form of contributions to consumer-directed accounts, allowing individuals to use the funds to purchase coverage that is right for them and use any remaining funds in the account to offset out-of-pocket health care expenses.

- *Risk Stabilization Strategies:* To address risk associated with individuals with high health care costs, this waiver concept gives states more flexibility to implement reinsurance programs or high risk pools. For example, a state can implement a state-operated reinsurance program or high-risk pool by waiving the single risk pool requirement under section 1312(c)(1) of the PPACA. Reinsurance programs established through section 1332 waivers have lowered premiums for consumers, improved market stability, and increased consumer choice. To date, states have chosen to use a variety of models to operate their state-based reinsurance programs, using flexibility available under section 1332. These models include a claims cost-based model, a conditions-based model, and a hybrid conditions and claims cost-based model. For approved 1332 waivers, if the Departments determine that the waiver will reduce federal spending on Exchange financial assistance, the state will receive federal pass-through funding to help fund the state's high risk pool/reinsurance program.

States are not required to use these concepts in their waiver applications; states may use these waiver concepts alone or in combination with other waiver concepts, state proposals, or policy changes. States may also submit applications that do not use any of the waiver concepts outlined above. A state's use of any of these waiver concepts, in whole or in part, does not guarantee approval. The Departments will continue to evaluate all section 1332 waiver applications received on an individual basis in a manner consistent with the requirements of section 1332 of the PPACA and its implementing regulations at 31 CFR part 33 and 45 CFR part 155.

II. Solicitation of Public Comments

The Departments are committed to empowering states to innovate and as such are interested in waiver ideas for states to consider that will strengthen their health insurance markets, expand choices of coverage, target public resources to those most in need, and meet the unique circumstances of each state. This RFI is intended to solicit ideas and spur additional thinking and innovation as states consider developing section 1332 waiver plans.

In this RFI, the Departments solicit public comments on ideas for other innovative waiver concepts. The Departments seek public comments on ideas that states may be able to use to develop innovative waiver programs that meet the section 1332 guardrails. The Departments are soliciting comments on waiver concepts that states could potentially use alone or in combination with other waiver concepts, state proposals, or policy changes. In this RFI, the Departments also seek public comments on ideas for waiver concepts that could advance some or all of the principles outlined in the October 2018 guidance and Background section above.

The Departments are also soliciting public comments on ideas for waiver concepts that incorporate the entire range of waivable requirements allowed under section 1332. The Departments are also interested in how states might align these flexibilities under section 1332 with other flexibilities under federal law, including regulatory flexibility, section 1115 Medicaid waivers, as well as state law.

The Departments may consider the ideas received in response to this RFI to develop additional waiver concepts in the future.

III. Collection of Information Requirements

Please note, this is a request for information (RFI) only. In accordance with the implementing regulations of the Paperwork Reduction Act of 1995 (PRA), specifically 5 CFR 1320.3(h)(4), this general solicitation is exempt from the PRA. Facts or opinions submitted in response to general solicitations of comments from the public, published in the **Federal Register** or other publications, regardless of the form or format thereof, provided that no person is required to supply specific information pertaining to the commenter, other than that necessary for self-identification, as a condition of the agency's full consideration, are not generally considered information collections and therefore not subject to the PRA.

Respondents are encouraged to provide complete but concise responses. This RFI is issued solely for information and planning purposes; it does not constitute a Request for Proposal (RFP), applications, proposal abstracts, or quotations. This RFI does not commit the U.S. Government to contract for any supplies or services or make a grant award. Further, CMS is not seeking proposals through this RFI and will not accept unsolicited proposals. Responders are advised that the U.S.

Government will not pay for any information or administrative costs incurred in response to this RFI; all costs associated with responding to this RFI will be solely at the interested party's expense. Not responding to this RFI does not preclude participation in any future procurement, if conducted. It is the responsibility of the potential responders to monitor this RFI announcement for additional information pertaining to this request. Please note that CMS will not respond to questions about the policy issues raised in this RFI. CMS may or may not choose to contact individual responders. Such communications would only serve to further clarify written responses. Contractor support personnel may be used to review RFI responses. Responses to this notice are not offers and cannot be accepted by the U.S. Government to form a binding contract or issue a grant. Information obtained as a result of this RFI may be used by the U.S. Government for program planning on a non-attribution basis. Respondents should not include any information that might be considered proprietary or confidential. This RFI should not be construed as a commitment or authorization to incur cost for which reimbursement would be required or sought. All submissions become U.S. Government property and will not be returned. CMS may publically post the comments received, or a summary thereof.

Signed at Washington DC, this 5th day of April, 2019.

David J. Kautter,

Assistant Secretary (Tax Policy), Department of the Treasury.

Dated: March 19, 2019.

Seema Verma,

Administrator, Centers for Medicare & Medicaid Services.

Dated: April 26, 2019.

Alex M. Azar II,

Secretary, Department of Health and Human Services.

BILLING CODE 4120-01-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG-2019-0238]

RIN 1625-AA00

Safety Zone; Delaware River; Baker Range, DE and NJ

AGENCY: Coast Guard, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Coast Guard is proposing to establish a temporary moving safety zone in the Baker Range portion of the Delaware River. This action is necessary to provide for safety of life and navigation on this portion of the Delaware River during submarine power cable laying operations. This proposed rulemaking would prohibit persons and vessels from entering or transiting through the safety zone without authorization of the Captain of the Port Delaware Bay or a designated representative. We invite your comments on this proposed rulemaking. **DATES:** Comments and related material must be received by the Coast Guard on or before June 3, 2019.

ADDRESSES: You may submit comments identified by docket number USCG-2019-0238 using the Federal eRulemaking Portal at <https://www.regulations.gov>. See the "Public Participation and Request for Comments" portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: If you have questions about this proposed rulemaking, call or email Petty Officer Edmund Ofalt, U.S. Coast Guard, Sector Delaware Bay, Waterways Management Division, Coast Guard; telephone (215) 271-4814, email Edmund.J.Ofalt@uscg.mil.

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background, Purpose, and Legal Basis

On October 2, 2018, the Harlan Electric Company notified the Coast Guard of construction activities in the Delaware River involving submerged cable laying operations. The submerged

cable laying operations are scheduled to begin on July 1, 2019, and continue through September 20, 2019. During this time, the cable laying operations will intermittently take place within the main navigation channel. The Captain of the Port Delaware Bay has determined that hazards associated with these operations would be a safety concern for anyone within 300 yards of the M/V ULISSE and any associated equipment.

The purpose of this rulemaking is to ensure the safety of vessels and the navigable waters within a 300-yard radius of the M/V ULISSE during cable laying operations. The Coast Guard is proposing this rulemaking under authority in 46 U.S.C. 70034 (previously 33 U.S.C. 1231).

III. Discussion of Proposed Rule

The COTP is proposing to establish a temporary moving safety zone from July 1, 2019, through September 20, 2019. The safety zone would cover all navigable waters within 300 yards of the M/V ULISSE in and around the Baker Range on the Delaware River. The duration of the zone is intended to ensure the safety of vessels and these navigable waters during submerged cable laying operations. Vessels would be allowed to enter the safety zone if they get permission from the COTP or a designated representative. Vessels would also be allowed to enter the zone if the vessel maintains minimum safe speed to reduce wake and maintain steerage, contact is made with the M/V ULISSE and safe passage is arranged, vessel begins and completes its transit only when the M/V ULISSE is not conducting cable laying operations within Baker Range Channel.

The regulatory text we are proposing appears at the end of this document.

IV. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13771 directs agencies to control regulatory costs through a budgeting process. This NPRM has not been designated a "significant regulatory action," under Executive

Order 12866. Accordingly, the NPRM has not been reviewed by the Office of Management and Budget (OMB), and pursuant to OMB guidance it is exempt from the requirements of Executive Order 13771.

This regulatory action determination is based on the size, location and duration of the safety zone. Vessel traffic would be provided notice of the safety zone's expected location, specifically any main navigational channel impact, approximately 12 hours in advance via Broadcast Notice to Mariners and Marine Safety Information Bulletin. This would allow vessel traffic to plan accordingly and minimize the effect on vessel traffic. Any channel obstructions are expected to be less than four hours per obstruction event.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule would not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section IV.A above, this proposed rule would not have a significant economic impact on any vessel owner or operator.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this rule would have a significant economic impact on it, please submit a comment (see **ADDRESSES**) explaining why you think it qualifies and how and to what degree this rule would economically affect it.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this proposed rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

C. Collection of Information

This proposed rule would not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this proposed rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this proposed rule has implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule would not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this proposed rule under Department of Homeland Security Directive 023–01 and Commandant Instruction M16475.1D, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This proposed rule

involves a safety zone for all navigable waters within 300 yards of cable laying operations in the Delaware River. Normally such actions are categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 01. A preliminary Record of Environmental Consideration supporting this determination is available in the docket where indicated under **ADDRESSES**. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

V. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking, and will consider all comments and material received during the comment period. Your comment can help shape the outcome of this rulemaking. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

We encourage you to submit comments through the Federal eRulemaking Portal at <http://www.regulations.gov>. If your material cannot be submitted using <http://www.regulations.gov>, contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions.

We accept anonymous comments. All comments received will be posted without change to <https://www.regulations.gov> and will include any personal information you have provided. For more about privacy and the docket, visit <https://www.regulations.gov/privacyNotice>.

Documents mentioned in this NPRM as being available in the docket, and all public comments, will be in our online docket at <https://www.regulations.gov> and can be viewed by following that website's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted or a final rule is published.

List of Subjects 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard proposes to amend 33 CFR 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 0170.1.

■ 2. Add § 165.T05–0238, to read as follows:

§ 165.T05–0238 Safety Zone; Delaware River; Baker Range, PA.

(a) *Location.* The following area is a safety zone: All navigable waters within 300 yards of the M/V ULISSE during submarine cable laying operations in and around Baker Range on the Delaware River.

(b) *Definitions.* As used in this section, *designated representative* means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port Delaware Bay (COTP) in the enforcement of the safety zone.

(c) *Regulations.* (1) In accordance with the general safety zone regulations in subpart C of this part and except for as described in paragraph (c)(3) of this section, vessels may not enter, remain in, or transit the safety zone described in paragraph (a) of this section unless authorized by the COTP or the COTP's designated representative.

(2) To seek permission to enter or remain in the zone contact the COTP or the COTP's representative via VHF–FM Channel 16. Those in the safety zone must comply with all lawful orders or directions given to them by the COTP or the COTP's designated representative.

(3) Vessels may transit the safety zone without prior authorization from the COTP or COTP's representative if they meet all of the following criteria:

(i) Vessel shall maintain the minimum safe speed to reduce wake and maintain steege.

(ii) Vessel must contact the M/V ULISSE and arrange for safe passage.

(iii) Vessel may begin, and must complete, its transit only when M/V ULISSE is not conducting cable laying operations within Baker Range Channel as depicted on U.S. Nautical Charts 12311 or US5DE13M. Cable laying operations within the channel will be announced via Broadcast Notice to Mariners and are expected to last approximately 4 hours at a time.

(d) *Enforcement.* The U.S. Coast Guard may be assisted in the patrol and enforcement of the safety zone by Federal, State, and local agencies.

(e) *Enforcement period.* Enforcement of the safety zone will begin July 1, 2019, and continue through September 20, 2019.

Dated: April 29, 2019.

Scott E. Anderson,

Captain, U.S. Coast Guard, Captain of the Port, Delaware Bay.

BILLING CODE 9110–04–P

ENVIRONMENTAL PROTECTION AGENCY**40 CFR Part 52**

[EPA–R09–OAR–2019–0005; FRL–9993–10–Region 9]

Air Plan Approval; California; Imperial County Air Pollution Control District

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve revisions to the Imperial County Air Pollution Control District (ICAPCD) portion of the California State Implementation Plan (SIP). These revisions concern emissions of particulate matter (PM) from open areas and wood burning appliances and update certain definitions relevant to stationary source permitting. We are proposing to approve local rules to regulate these emission sources under the Clean Air Act (CAA or the Act). We are taking comments on this proposal and plan to follow with a final action.

DATES: Any comments must arrive by June 3, 2019.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R09–OAR–2019–0005 at <https://www.regulations.gov>. For comments submitted at *Regulations.gov*, follow the

online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov*. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.*, on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <https://www.epa.gov/dockets/commenting-epa-dockets>.

FOR FURTHER INFORMATION CONTACT:

Christine Vineyard, EPA Region IX, 75 Hawthorne St., San Francisco, CA 94105. By phone:(415) 947–4125 or by email at vineyard.christine@epa.gov.

SUPPLEMENTARY INFORMATION:

Throughout this document, “we,” “us” and “our” refer to the EPA.

I. The State's Submittal

A. What rules did the State submit?

Table 1 lists the rules addressed by this proposal with the dates that they were adopted by the ICAPCD and submitted by the California Air Resources Board (CARB).

TABLE 1—SUBMITTED RULES

Local agency	Rule No.	Rule title	Adopted/ amended/ revised	Submitted
ICAPCD	101	Definitions	09/11/18	10/29/18
ICAPCD	428	Wood Burning Appliances ¹	09/11/18	10/29/18
ICAPCD	429	Mandatory Episodic Curtailment of Wood and Other Solid Fuel Burning.	09/11/18	10/29/18
ICAPCD	804	Open Areas	09/11/18	10/29/18

On December 12, 2018, the EPA determined that the submittal for ICAPCD Rules 101, 428, 429, and 804 met the completeness criteria in 40 CFR part 51 appendix V, which must be met before formal EPA review.

B. Are there other versions of these rules?

There are no previous versions of Rules 428 and 429 in the SIP. We approved earlier versions of Rules 101 and 804 into the SIP on June 8, 2017 (82 FR 26594) and April 22, 2013 (78 FR 23677), respectively. The ICAPCD adopted revisions to the SIP-approved versions on September 11, 2018, and CARB submitted them to us on October 29, 2018. The ICAPCD also previously adopted revisions to 804 on April 12, 2016, and CARB submitted the revised rule to us on August 22, 2016. We consider this earlier submittal to have been superseded by the October 29, 2018 submittal. While we are acting on only the most recently submitted version, we have reviewed materials provided with previous submittals.

C. What is the purpose of the submitted rules and revisions?

Emissions of PM, including PM equal to or less than 2.5 microns in diameter (PM_{2.5}) and PM equal to or less than 10 microns in diameter (PM₁₀), contribute to effects that are harmful to human health and the environment, including premature mortality, aggravation of respiratory and cardiovascular disease, decreased lung function, visibility impairment, and damage to vegetation and ecosystems. Section 110(a) of the CAA requires states to submit regulations that control PM emissions.

New Rule 428 limits emissions of PM from wood burning appliance by requiring use of only New Source Performance Standard (NSPS) certified devices or EPA-Qualified fireplaces;

¹ We are not acting on the opacity in limit in section E.4.2. of Rule 428 at this time. However, ICAPCD Rule 401, which has been approved into the California SIP (54 FR 5448 February 3, 1989), establishes a 20% opacity limit that applies to most sources, including wood burning appliances. Our action on Rule 428 will not affect the applicability of this existing limit.

restricting the use of burning materials to seasoned wood, uncolored paper, pellets, and manufactured logs; and requiring distribution of public awareness information to educate owners on proper installation, operation, and maintenance of the wood burning appliance.

New Rule 429 requires a mandatory wood burning curtailment in Calexico whenever the ICAPCD forecasts that the 24-hour average PM_{2.5} concentration will exceed 35 micrograms per cubic meter (µg/m³) at the Calexico monitoring station. Rule 429 also includes a contingency measure that will be triggered upon notification from the EPA that the Imperial County nonattainment area has failed to (1) meet Reasonable Further Progress in the “Imperial County 2018 Annual Particulate Matter Less Than 2.5 Microns in Diameter State Implementation Plan” (“2018 Annual PM_{2.5} SIP”), (2) meet a Quantitative Milestone in the 2018 Annual PM_{2.5} SIP, and/or (3) submit a Quantitative Milestone Report required under 40 CFR 51.1013(b). If this occurs, then a mandatory curtailment shall be declared for all of Imperial County whenever the forecast for the 24-hour average PM_{2.5} concentration is equal to or exceeds 30 µg/m³ at the Calexico monitoring station.

Rule 804, Open Areas, was revised to include a provision that would expand the rule’s applicability if contingency measures are triggered. Another new provision allows for implementation of alternative control measures in the exposed playa at the Salton Sea, subject to approval by the ICAPCD and the EPA.

Four definitions in Rule 101, Definitions, were revised to correspond to revisions in Rule 207—New and Modified Stationary Source Review.²

The EPA’s technical support documents (TSDs) have more information about these rules.

² CARB submitted revisions to Rule 207 to the EPA on October 5, 2018. The EPA proposed to approve these revisions on March 22, 2019 (84 FR 10753).

II. The EPA’s Evaluation and Action

A. How is the EPA evaluating the rules?

Rules in the SIP must be enforceable (see CAA section 110(a)(2)), must not interfere with applicable requirements concerning attainment and reasonable further progress or other CAA requirements (see CAA section 110(l)), and must not modify certain SIP control requirements in nonattainment areas without ensuring equivalent or greater emissions reductions (see CAA section 193).

The ICAPCD regulates a nonattainment area classified as Moderate for the 2012 annual PM_{2.5} standard and Serious for the annual PM₁₀ standard (40 CFR 81.305). Generally, SIP rules must implement Best Available Control Measures (BACM) in Serious PM₁₀ nonattainment areas (see CAA section 189(a)(1)(B)) and Reasonably Available Control Measures (RACM), including Reasonably Available Control Technology (RACT), as well as additional reasonable measures, in Moderate PM_{2.5} nonattainment areas (see CAA sections 172(c)(1) and 189(a)(1)(C)). An overall RACM and RACT evaluation is generally performed in context of a broader plan.

Guidance and policy documents that we used to evaluate enforceability, revision/relaxation and rule stringency requirements for the applicable criteria pollutants include the following:

1. “State Implementation Plans; General Preamble for the Implementation of Title I of the Clean Air Act Amendments of 1990,” 57 FR 13498 (April 16, 1992); 57 FR 18070 (April 28, 1992).
2. “Issues Relating to VOC Regulation Cutpoints, Deficiencies, and Deviations,” EPA, May 25, 1988 (the Bluebook, revised January 11, 1990).
3. “Guidance Document for Correcting Common VOC & Other Rule Deficiencies,” EPA Region 9, August 21, 2001 (the Little Bluebook).
4. “State Implementation Plans for Serious PM–10 Nonattainment Areas, and Attainment Date Waivers for PM–10 Nonattainment Areas Generally; Addendum to the General Preamble for

the Implementation of Title I of the Clean Air Act Amendments of 1990,” 59 FR 41998 (August 16, 1994).

5. “PM–10 Guideline Document,” EPA 452/R–93–008, April 1993.

6. “Fugitive Dust Background Document and Technical Information Document for Best Available Control Measures,” EPA 450/2–92–004, September 1992.

B. Do the rules meet the evaluation criteria?

These rules are consistent with CAA and regulatory requirements and relevant guidance regarding enforceability, BACM, RACM/RACT, and SIP revisions. EPA’s TSDs include more information on our evaluation of the rules.

C. EPA Recommendations To Further Improve the Rules

The TSDs include recommendations for the next time the ICAPCD modifies the rules.

D. Public Comment and Proposed Action

As authorized in section 110(k)(3) of the Act, the EPA proposes to fully approve the submitted rules (except for Rule 428 section E.4.2) because they fulfill all relevant requirements. We will accept comments from the public on this proposal until June 3, 2019. If we take final action to approve the submitted rules, our final action will incorporate these rules into the federally enforceable SIP.

III. Incorporation by Reference

In this rule, the EPA is proposing to include in a final EPA rule regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA is proposing to incorporate by reference the ICAPCD rules described in Table 1 of this preamble. The EPA has made, and will continue to make, these materials available through www.regulations.gov and at the EPA Region IX Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information).

IV. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA’s role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this proposed

action merely proposes to approve state law as meeting federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this proposed action:

- Is not a “significant regulatory action” subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);

- Is not an Executive Order 13771 (82 FR 9339, February 2, 2017) regulatory action because SIP approvals are exempted under Executive Order 12866;

- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);

- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);

- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);

- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);

- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);

- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);

- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and

- Does not provide the EPA with the discretionary authority to address disproportionate human health or environmental effects with practical, appropriate, and legally permissible methods under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Particulate matter, Reporting and recordkeeping requirements.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: April 18, 2019.

Deborah Jordan,

Acting Regional Administrator, Region IX.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 52 and 81

[EPA–R05–OAR–2018–0733; FRL–9993–26–Region 5]

Air Plan Approval; Indiana; Redesignation of the Terre Haute Sulfur Dioxide Nonattainment Area

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to redesignate the Terre Haute area from nonattainment to attainment for the 2010 sulfur dioxide (SO₂) standard. The area consists of Fayette and Harrison Townships in Vigo County, Indiana. EPA is also proposing to approve Indiana’s maintenance plan for this area.

DATES: Comments must be received on or before June 3, 2019.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R05–OAR–2017–0733 at <http://www.regulations.gov>, or via email to aburano.douglas@epa.gov. For comments submitted at [Regulations.gov](http://www.regulations.gov), follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from [Regulations.gov](http://www.regulations.gov). For either manner of submission, EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.*, on the web, cloud, or other file sharing

system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <http://www2.epa.gov/dockets/commenting-epa-dockets>.

FOR FURTHER INFORMATION CONTACT: Samantha Panock, Environmental Scientist, Attainment Planning and Maintenance Section, Air Programs Branch (AR-18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312)353-8973, panock.samantha@epa.gov.

SUPPLEMENTARY INFORMATION: Throughout this document whenever “we,” “us,” or “our” is used, we mean EPA. This supplementary information section is arranged as follows:

- I. Background
- II. Redesignation Requirements
 - A. Determination of Attainment
 - B. Permanent and Enforceable Emission Reductions
 - C. Requirements for the Area Under Section 110 and Part D
 - D. Fully Approved SIP Under Section 110(k)
 - E. Maintenance Plan
- III. What action is EPA taking?
- IV. Statutory and Executive Order Reviews

I. Background

On June 22, 2010 (75 FR 35520), EPA published a revised primary SO₂ national ambient air quality standard (NAAQS) of 75 parts per billion (ppb), which is met at a monitoring site when the 3-year average of the annual 99th percentile of daily maximum 1-hour concentrations does not exceed 75 ppb. This NAAQS was codified at 40 CFR 50.4. On July 25, 2013 (78 FR 47191), EPA published its initial air quality designations for the SO₂ NAAQS based upon air quality monitoring data for calendar years 2009–2011. In that action, the Vigo County area comprised of Fayette and Harrison Townships was designated nonattainment for the SO₂ NAAQS (Terre Haute nonattainment area).

Indiana was required to submit a nonattainment State Implementation Plan (SIP) that meets the requirements of sections 172(c) and 191–192 of the Clean Air Act (CAA) and provide for attainment of the SO₂ NAAQS as expeditiously as practicable, but no later than October 4, 2018, which represents five years after the area was originally designated as nonattainment under the 2010 SO₂ NAAQS. SO₂ emissions from all sources within the nonattainment area totaled 56,238 tons in 2011, and 2,662 tons in 2017. Due to a variety of factors, including the retirement of all coal-fired electric generating units at Wabash River Generating Station, there has been a significant, permanent, and enforceable reduction in SO₂ emissions within the Terre Haute nonattainment area. In addition, the area’s SO₂ monitors’ 3-year SO₂ design values¹ for 2015–2017 had fallen below the SO₂ NAAQS. Consequently, the Indiana Department of Environmental Management (IDEM) submitted a redesignation request on October 24, 2018. For the reasons set forth in this document, EPA is proposing to redesignate the area to attainment.

II. Redesignation requirements

Under CAA section 107(d)(3)(E), there are five criteria which must be met before a nonattainment area may be redesignated to attainment.

1. EPA has determined that the relevant NAAQS has been attained in the area.
2. The applicable implementation plan has been fully approved by EPA under section 110(k).
3. EPA has determined that improvement in air quality is due to permanent and enforceable reductions in emissions resulting from the SIP, Federal regulations, and other permanent and enforceable reductions.
4. EPA has fully approved a maintenance plan, including a contingency plan, for the area under section 175A of the CAA.
5. The State has met all applicable requirements for the area under section 110 and part D.

A. Determination of Attainment

For redesignation of a nonattainment area to attainment, the CAA requires EPA to determine that the area has attained the applicable NAAQS (CAA section 107(d)(3)(E)(i)). As stated in the April 2014 “Guidance for 1-Hour SO₂ Nonattainment Area SIP Submissions,” for SO₂, there are two components needed to support an attainment determination: A review of representative air quality monitoring data, and a further analysis, generally requiring air quality modeling, to demonstrate that the entire area is attaining the applicable standard, based on current actual emissions or the fully implemented control strategy. Indiana has addressed both components.

Under EPA regulations at 40 CFR 50.17, the SO₂ standard is met at an ambient air quality monitoring site when the 3-year average of the annual 99th percentile of 1-hour daily maximum concentrations is less than or equal to 75 ppb, as determined in accordance with appendix T of 40 CFR part 50, at all relevant monitoring sites in the subject area. EPA has reviewed the ambient air monitoring data for the Terre Haute nonattainment area. The Terre Haute nonattainment area has two SO₂ monitoring sites located in Terre Haute—the Lafayette Avenue site and the Ft. Harrison Road site. This review addresses air quality data collected in the 2015–2017 period, which are the most recent quality assured data available. All data considered are complete, quality assured, certified, and recorded in EPA’s Air Quality System database.

Table 1 shows the 2014–2017 design values for the Terre Haute nonattainment area. The 3-year average design values for 2014–2016 are 71 ppb and 114 ppb, respectively, for the Lafayette Avenue and Ft. Harrison Road monitoring sites. The 2015–2017 design values are 44 ppb and 75 ppb, respectively. All design values for 2015–2017 are at or below the SO₂ standard. Therefore, the Terre Haute SO₂ monitors clearly show attainment. Preliminary data for 2018 indicate that the area continues to attain the SO₂ standard.

TABLE 1—MONITORING DATA FOR THE TERRE HAUTE NONATTAINMENT AREA FOR 2014–2017

Site	Site name	Year and 99th percentile value (ppb)				3-Year design values 2014–2016 (ppb)	3-Year design values 2015–2017 (ppb)
		2014	2015	2016	2017		
18–167–0018	Lafayette Ave	85	71	58	3	71	44

¹ The design value is a statistic computed according to the data handling procedures of the NAAQS (in 40 CFR part 50 appendix T) that, by

comparison to the level of the NAAQS, indicates whether the area is violating the NAAQS. For SO₂, the design value is the 3-year average of the annual

99th percentile of 1-hour daily maximum concentrations.

TABLE 1—MONITORING DATA FOR THE TERRE HAUTE NONATTAINMENT AREA FOR 2014–2017—Continued

Site	Site name	Year and 99th percentile value (ppb)				3-Year design values 2014–2016 (ppb)	3-Year design values 2015–2017 (ppb)
		2014	2015	2016	2017		
18–167–1014	Ft. Harrison Rd	120	103	120	3	114	75

Regarding the second component of the attainment determination, IDEM has performed extensive modeling of the Terre Haute nonattainment area to determine the effect of local and national emission control strategies on SO₂ and to demonstrate attainment of the SO₂ NAAQS.

A total of seven sources were included in the SO₂ attainment demonstration and technical support document for the Terre Haute nonattainment area submitted to EPA for review and approval on October 2, 2015. These facilities are: (1) Duke Energy—Wabash River Generating Station, (2) Wabash Valley Power Authority—Wabash River CC Plant, (3) sqSolutions, (4) Sony DADC, (5) Taghleef Industries, (6) Terre Haute Regional Hospital, and (7) Terre Haute Union Hospital.

The American Meteorological Society/Environmental Protection Agency Regulatory Model (AERMOD version 14134) was the regulatory air quality model used for the 2010 SO₂ attainment demonstration modeling for the Terre Haute nonattainment area. Five years, 2008–2012, of surface meteorological data from the Indianapolis, IN National Weather Service (NWS) site was used in conjunction with five years of concurrent upper-air meteorological data from Lincoln, Illinois.

Several Federal rulemakings established allowable limits for the seven sources listed previously. These rulemakings include the Cross State Air Pollution Rule (CSAPR), Mercury and Air Toxics Standards (MATS), and National Emission Standards for Hazardous Air Pollutants for Major Sources (NESHAP): Industrial, Commercial, and Institutional Boilers and Process Heaters. These limits, which were adopted at 326 Indiana Administrative Code (IAC) 7–4–3.1, have been applied to the seven sources.

The AERMOD modeling results for the Terre Haute nonattainment area showed a maximum 1-hour SO₂ concentration of 167.0 micrograms per cubic meter (µg/m³). When added to a background concentration value of 23.0 µg/m³, a total 1-hour SO₂ concentration of 189.9 µg/m³ is achieved. This is below the 1-hour SO₂ NAAQS of 75 ppb or 196.2 µg/m³ and, therefore, demonstrates attainment of the NAAQS for SO₂.

In summary, the monitored data show attainment for 2015–2017, and IDEM has demonstrated, via modeling, that sources within the area are not expected to cause future violations in the area because of the permanent and enforceable limits that apply to those sources. Therefore, EPA agrees that the Terre Haute nonattainment area is currently attaining the SO₂ NAAQS.

B. Permanent and Enforceable Emission Reductions

To support the redesignation of an area from nonattainment to attainment, section 107(d)(3)(E)(iii) of the CAA requires EPA to determine that the air quality improvement in the area is due to permanent and enforceable reductions in emissions resulting from the implementation of the attainment demonstration and applicable Federal air pollution control regulations as well as any other permanent and enforceable emission reductions. As previously stated, the reduction in emissions from the seven sources in the area has led to a decrease in monitored levels. The controls and operational changes that were made by the seven facilities, as well as unit retirements, resulted in emission reductions for the nonattainment area between the 2011 nonattainment base year and the 2017 attainment year.

Table 2 compares SO₂ emissions for all sources (*i.e.*, EGU sources, non-EGU point sources, non-point sources (area), non-road sources, and on-road sources) for the 2011 nonattainment year and the 2017 attainment year for the Terre Haute area. SO₂ emissions within Terre Haute declined by 99.7% between the nonattainment year (2011) and the attainment year (2017) resulting in attainment of the 2010 SO₂ NAAQS.

TABLE 2—COMPARISON OF 2011 (NONATTAINMENT YEAR) AND 2017 (ATTAINMENT YEAR) SO₂ EMISSIONS, ALL SOURCES, TERRE HAUTE, INDIANA [Tons per year]

	2011	2017	Change	% Change
SO ₂	56,238	191	–56,046	–99.7

As indicated above, the seven facilities identified in the attainment plan have reduced their emissions from

the 2011 nonattainment year to the 2017 attainment year. Table 3, below, shows

the reductions that took place from 2011 to 2017.

TABLE 3—EMISSION REDUCTION COMPARISON OF 2011 (NONATTAINMENT YEAR) AND 2017 (ATTAINMENT YEAR) FOR SO₂ EMISSIONS, TERRE HAUTE, INDIANA [Tons per year]

Affected source	Type of reduction	Effective date of reduction	2011 Emissions (tpy)	2017 Emissions (tpy)	Change (tpy)
Duke Energy—Wabash River	Facility Retirement	2016	55,343	0	–55,343

TABLE 3—EMISSION REDUCTION COMPARISON OF 2011 (NONATTAINMENT YEAR) AND 2017 (ATTAINMENT YEAR) FOR SO₂ EMISSIONS, TERRE HAUTE, INDIANA—Continued

Taghleef Industrires	Unit Retirement & Fuel Switch (coal to natural gas).	1/1/17	238	<1	– 237
Terre Haute Regional Hospital	None—Existing Operational Limits ..	1/1/17	49	49	0
Terre Haute Union Hospital	None—Existing Operational Limits ..	1/1/17	123	123	0

EPA agrees that the improvement in air quality in the nonattainment area is due to permanent and enforceable emission reductions, as described more fully in EPA’s March 22, 2019 approval of Indiana’s attainment demonstration [84 FR 10692]. In preparing its attainment plan, Indiana adopted revisions to the previously approved SO₂ regulations at 326 IAC 7. These rule revisions were adopted by the Indiana Environmental Rules Board following established, appropriate public review procedures. In addition, the rule revisions provide unambiguous, permanent emission limits, expressed in lbs/hour of allowable SO₂ emissions, that, if exceeded by a source, would be clear grounds for an enforcement action.

Revised limits for the seven facilities identified above are codified in 326 IAC 7, titled “Sulfur Dioxide Rules.” These are: “Compliance date” (326 IAC 7–1.1–3, which contains a compliance date of January 1, 2017), “Reporting requirements; methods to determine compliance” (7–2–1), “Vigo County sulfur dioxide emission limitations” (7–4–3.1). The rules also include associated monitoring, testing, and recordkeeping and reporting requirements. For example, continuous emission monitoring will be conducted for assessing compliance with the 30-day average limits. Specifically, 326 IAC 7–

1–10.1 is being replaced by 326 IAC 7–4–3.1 for Vigo County. EPA finds these limits to be enforceable. An additional summary of the limits is provided in EPA’s March 22, 2019 approval of Indiana’s attainment demonstration (84 FR 10692). The attainment plan also satisfies requirements for emission inventories, RACT/RACM, RFP, and contingency measures. Additionally, Indiana has previously addressed requirements regarding nonattainment area NSR rules. Therefore, EPA has determined that Indiana’s SO₂ attainment plan meet the applicable requirements of CAA sections 110, 172, 191, and 192.

C. Requirements for the Area Under Section 110 and Part D

As a criterion for redesignation of an area from nonattainment to attainment of a NAAQS, the CAA requires EPA to determine that the state has met all applicable requirements under section 110 and part D of title I of the CAA (see section 107(d)(3)(E)(v) of the CAA). Indiana’s submission meets section 110 and part D requirements. EPA approved Indiana’s infrastructure SIP for SO₂ on August 3, 2015 (80 FR 48733). In this infrastructure SIP approval, EPA determined that Indiana’s SIP meets the requirements of CAA section 110(a)(1) and 110(a)(2) and contains the basic program elements, such as an active

enforcement program and permitting program.

With the redesignation request of October 24, 2018, Indiana submitted information addressing the SIP requirements under section 172 and part D. Indiana submitted an attainment inventory of the SO₂ emissions from sources in the nonattainment area on October 2, 2015. Indiana chose 2011 for its base year emissions inventory, as comprehensive emissions data was available and updated that year, which satisfies the 172(c)(3) requirements. The seven facilities identified in the previous section were the main sources in the nonattainment area.

Table 4 compares SO₂ emissions for all sources for the 2017 attainment year and the 2030 maintenance year for Terre Haute, Indiana. SO₂ emissions within the Terre Haute area are projected to decline by 71% between 2017 and 2030, primarily due to facility and unit retirement, fuel switching (coal to natural gas), and operational limits (SIP approved emission limits based on 1-hour SO₂ rates in pounds per hour identified for each facility in 326 IAC 7–4–3.1). The decrease in emissions shown between the attainment year (2017) and the maintenance year (2030) in Table 3 illustrates that continued maintenance of the 2010 1-hour SO₂ NAAQS is expected.

TABLE 4—COMPARISON OF 2017 (ATTAINMENT YEAR) AND 2030 (MAINTENANCE YEAR) SO₂ EMISSIONS, ALL SOURCES, TERRE HAUTE, INDIANA
[Tons per year]

	2017	2030	Change	% Change
SO ₂	9,231	2,662	– 6,569	– 71

Section 172(c)(1) requires nonattainment area SIPs to provide for the implementation of all reasonably available control measures (RACM) as expeditiously as practicable and to

provide for attainment of the NAAQS. EPA’s longstanding interpretation of the nonattainment planning requirements of section 172 is that once an area is attaining the NAAQS, those

requirements are not applicable for purposes of CAA section 107(d)(3)(E)(ii) and therefore need not be approved into the SIP before EPA can redesignate the area. In the 1992 General Preamble for

Implementation of Title I, EPA set forth its interpretation of applicable requirements for purposes of evaluating redesignation requests when an area is attaining a standard. See 57 FR 13498, 13564 (April 16, 1992). EPA noted that the requirements for reasonable further progress (RFP) and other measures designed to provide for attainment do not apply in evaluating redesignation requests because those nonattainment planning requirements “have no meaning” for an area that has already attained the standard. EPA’s understanding of section 172 also forms the basis of its Clean Data Policy, which was articulated with regard to SO₂ in the April 2014 “Guidance for 1-Hour SO₂ Nonattainment Area SIP Submissions,” and suspends a State’s obligation to submit most of the attainment planning requirements that would otherwise apply, including an attainment demonstration and planning SIPs to provide for RFP, RACM, and contingency measures under section 172(c)(9). Courts have upheld EPA’s interpretation of section 172(c)(1) for “reasonably available” control measures and control technology as meaning only those controls that advance attainment, which precludes the need to require additional measures where an area is already attaining. *NRDC v. EPA*, 571 F.3d 1245, 1252 (D.C. Cir. 2009); *Sierra Club v. EPA*, 294 F.3d 155, 162 (D.C. Cir. 2002); *Sierra Club v. EPA*, 314 F.3d 735, 744 (5th Cir. 2002); *Sierra Club v. EPA*, 375 F.3d 537 (7th Cir. 2004).² Therefore, because the Terre Haute nonattainment area has attained the SO₂ standard, no additional measures are needed to provide for attainment, and section 172(c)(1) requirements for an attainment demonstration and RACM are not part of the “applicable implementation plan” required to have been approved prior to redesignation per CAA section 107(d)(3)(E)(ii). EPA believes that Indiana has satisfied the reasonably available control measures/ reasonably available control techniques (RACM/RACT) requirement for this area.

The other section 172 requirements that are designed to help an area achieve attainment are the section 172(c)(2) requirement that nonattainment plans contain provisions promoting RFP, the requirement to submit the section

172(c)(9) contingency measures, and the section 172(c)(6) requirement for the SIP to contain control measures necessary to provide for attainment of the NAAQS. These are also not required to be approved as part of the “applicable implementation plan” for purposes of satisfying CAA section 107(d)(3)(E)(ii).

Section 172(c)(4) requires the identification and quantification of allowable emissions for major new and modified stationary sources to be allowed in an area, and section 172(c)(5) requires source permits for the construction and operation of new and modified major stationary sources anywhere in the nonattainment area. EPA has determined that, since Prevention of Significant Deterioration (PSD) requirements will apply after redesignation, areas being redesignated need not comply with the requirement that a New Source Review (NSR) program be approved prior to redesignation, provided that the area demonstrates maintenance of the NAAQS without part D NSR. A more detailed rationale for this view is described in a memorandum from Mary Nichols, Assistant Administrator for Air and Radiation, dated October 14, 1994, entitled “Part D New Source Review Requirements for Areas Requesting Redesignation to Attainment.” Indiana has demonstrated that the Terre Haute nonattainment area will be able to maintain the 2010 SO₂ NAAQS without part D NSR in effect, and therefore Indiana does not need to have a fully approved part D NSR program prior to approval of the redesignation request. Indiana’s PSD program will become effective in the nonattainment area upon redesignation to attainment.

Section 172(c)(7) requires the SIP to meet the applicable provisions of section 110(a)(2). As noted above, EPA believes that the Indiana SIP meets the requirements of section 110(a)(2) applicable for purposes of redesignation.

Section 176(c) of the CAA requires States to establish criteria and procedures to ensure that federally supported or funded projects conform to the air quality planning goals in the applicable SIP. The requirement to determine conformity applies to transportation plans, programs, and projects that are developed, funded, or approved under title 23 of the United States Code (U.S.C.) and the Federal Transit Act (transportation conformity) as well as to all other federally supported or funded projects (general conformity). State transportation conformity SIP revisions must be consistent with Federal conformity regulations relating to consultation,

enforcement, and enforceability that EPA promulgated pursuant to its authority under the CAA. On June 4, 2010, Indiana submitted documentation establishing transportation conformity procedures in its SIP. EPA approved these procedures on August 17, 2010 (75 FR 50708). Moreover, EPA interprets the conformity SIP requirements as not applying for purposes of evaluating a redesignation request under section 107(d) because, like other requirements listed above, State conformity rules are still required after redesignation and Federal conformity rules apply where State rules have not been approved. See *Wall v. EPA*, 265 F.3d 426 (6th Cir. 2001) (upholding this interpretation); see also 60 FR 62748 (December 7, 1995) (redesignation of Tampa, Florida).

As discussed above, EPA is proposing to find that Indiana has satisfied all applicable requirements for purposes of redesignation of the Terre Haute nonattainment area under section 110 and part D of title I of the CAA.

D. Fully Approved SIP Under Section 110(k)

As a criterion for redesignation of an area from nonattainment to attainment of a NAAQS, the CAA requires that the state has a fully approved SIP under section 110(k) of the CAA (see section 107(d)(3)(E)(ii) of the CAA). SIPs must be fully approved only with respect to currently applicable requirements of the CAA. EPA has determined that Indiana has a fully approved SIP under section 110(k). As discussed above in section II.C., Indiana has submitted, and EPA has approved all applicable requirements under section 110 and part D of title I of the CAA. Indiana has implemented its SO₂ SIP regulations at 326 IAC 7–4–3, and Indiana maintains an active enforcement program to ensure ongoing compliance. Indiana’s new source review/prevention of significant deterioration program will address emissions from new sources. Indiana’s current SO₂ SIP rule for Vigo County, which contains the Terre Haute SO₂ area, is codified at 326 IAC 7–4–3 which was approved into the SIP on March 22, 2019 (84 FR 10692).

E. Maintenance Plan

CAA section 175A sets forth the elements of a maintenance plan for areas seeking redesignation from nonattainment to attainment. Under section 175A, the plan must demonstrate continued attainment of the applicable NAAQS for at least ten years after the nonattainment area is redesignated to attainment. Eight years after the redesignation, the state must submit a revised maintenance plan

² Although the Court of Appeals for the Sixth Circuit has issued a contrary opinion in the context of redesignations for ozone and PM_{2.5}, EPA believes that these opinions, interpreting the applicability of the ozone and PM_{2.5} RACM/RACT requirements for redesignations for those pollutants, do not address the applicability of the RACM/RACT requirement for SO₂. See *Sierra Club v. EPA*, 793 F.3d 656 (6th Cir. 2015).

demonstrating that attainment will continue to be maintained for the ten years following the initial ten year period. To address the possibility of future 2010 SO₂ NAAQS violations, the maintenance plan must contain contingency measures as EPA deems necessary to assure prompt correction of any future 2010 SO₂ NAAQS violations. Specifically, the maintenance plan should address five requirements: The attainment emissions inventory, maintenance demonstration, monitoring, verification of continued attainment, and a contingency plan.

Indiana's October 24, 2018 redesignation request contains its maintenance plan, which Indiana has committed to review eight years after redesignation. Indiana submitted an attainment emission inventory which addresses current emissions and projections of future emissions for point, area, and mobile sources. Indiana has demonstrated that the area is attaining and is expected to maintain the SO₂ NAAQS. Indiana has committed to continue monitoring at its monitoring sites in accordance with the requirements of 40 CFR part 58. These data will be used to verify continued attainment. Indiana has the authority to adopt, implement and enforce any subsequent emissions control measures deemed necessary to correct any future SO₂ violations. Regarding contingency measures to implement in the case of a future violation of the 2010 SO₂ standard, Indiana provided a list of five potential measures for the sources within the nonattainment area, including requiring: Alternative fuel, SO₂ emissions add-on control technologies for existing emission units, reduced operating hours, SO₂ emission offsets for new and modified major sources and SO₂ emission offsets for new and modified minor sources.

Indiana commits to study SO₂ emission trends and identify areas of concern if the annual average 99th percentile maximum daily 1-hour SO₂ concentration of 79 ppb or greater occurs in a single year, or if a 2-year average of 76 ppb or greater occurs in the maintenance area. Indiana will adopt and implement corrective actions as necessary to address such trends of increasing emissions or ambient impacts. The public will have the opportunity to participate in the contingency measure implementation process. EPA proposes to find that Indiana's maintenance plan adequately addresses the five basic components necessary to maintain the SO₂ standard in the Terre Haute nonattainment area.

III. What action is EPA taking?

As requested by Indiana on October 24, 2018, EPA is proposing to redesignate the Terre Haute nonattainment area from nonattainment to attainment of the 2010 SO₂ NAAQS. Indiana has demonstrated that the area is attaining the SO₂ standard, and that the improvement in air quality is due to permanent and enforceable measures. EPA is also proposing to approve the maintenance plan that Indiana submitted to ensure that the area will continue to maintain the SO₂ standard.

IV. Statutory and Executive Order Reviews

Under the CAA, redesignation of an area to attainment and the accompanying approval of the maintenance plan under CAA section 107(d)(3)(E) are actions that affect the status of geographical area and do not impose any additional regulatory requirements on sources beyond those required by state law. A redesignation to attainment does not in and of itself impose any new requirements, but rather results in the application of requirements contained in the CAA for areas that have been redesignated to attainment. Moreover, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Is not an Executive Order 13771 (82 FR 9339, February 2, 2017) regulatory action because SIP approvals are exempted under Executive Order 12866;
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4);

- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);

- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);

- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);

- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and

- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

Endangered and Threatened Wildlife and Plants; Reclassifying the American Burying Beetle From Endangered to Threatened on the Federal List of Endangered and Threatened Wildlife With a 4(d) Rule

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule and 12-month petition finding; request for comments.

SUMMARY: Under the authority of the Endangered Species Act of 1973, as amended (Act), we, the U.S. Fish and Wildlife Service (Service), propose to reclassify the American burying beetle (*Nicrophorus americanus*) from endangered to threatened on the Federal List of Endangered and Threatened Wildlife (List). This determination is based on a thorough review of the best available scientific and commercial information, which indicates that the threats to this species have been reduced to the point that it no longer meets the definition of an endangered species under the Act, but is likely to become endangered within the foreseeable future. We are also proposing a rule under section 4(d) of the Act to provide for the conservation of the species. Many routine activities in the species' range will not be regulated if this proposal is finalized because these practices will not affect the overall viability of the American burying beetle. We are soliciting additional data and information that may assist us in making a final decision on this proposed action. This document also serves as the 12-month finding on a petition to remove this species from the List.

DATES: We will accept comments received or postmarked on or before July 2, 2019. Please note that if you are using the Federal eRulemaking Portal (see **ADDRESSES**), the deadline for submitting an electronic comment is 11:59 p.m. Eastern Time on this date. We must receive requests for public hearings, in writing, at the address shown in **FOR FURTHER INFORMATION CONTACT** by June 17, 2019.

ADDRESSES: *Written comments:* You may submit comments by one of the following methods:

(1) *Electronically:* Go to the Federal eRulemaking Portal: <http://www.regulations.gov>. In the Search box, enter FWS-R2-ES-2018-0029, which is the docket number for this rulemaking. Then, click on the Search button. On the resulting page, in the Search panel on the left side of the screen, under the Document Type heading, click on the Proposed Rules link to locate this document. You may submit a comment by clicking on "Comment Now!"

(2) *By hard copy:* Submit by U.S. mail or hand-delivery to: Public Comments Processing, Attn: FWS-R2-ES-2018-0029, U.S. Fish and Wildlife Service, MS: BPHC, 5275 Leesburg Pike, Falls Church, VA 22041-3803.

We request that you send comments only by the methods described above. We will post all comments on <http://www.regulations.gov>. This generally means that we will post any personal information you provide us (see *Public Comments*, below, for more information).

Copies of documents: This proposed rule and supporting documents are available on <http://www.regulations.gov>. In addition, the supporting file for this proposed rule will be available for public inspection, by appointment, during normal business hours, at the Oklahoma Ecological Services Field Office, 9014 East 21st St., Tulsa, OK 74129; telephone 918-382-4500.

FOR FURTHER INFORMATION CONTACT: Jonna Polk, Field Supervisor, U.S. Fish and Wildlife Service, Oklahoma Ecological Services Field Office, 9014 East 21st St., Tulsa, OK 74129; telephone 918-382-4500. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Relay Service at 800-877-8339.

SUPPLEMENTARY INFORMATION:

Executive Summary

Why we need to publish a rule.

Under the Act, a species may warrant reclassification from endangered to threatened if it no longer meets the definition of endangered (in danger of extinction). The American burying beetle is listed as endangered, and we are proposing to reclassify the American burying beetle as threatened because we have determined it is not currently in danger of extinction. Reclassifications can only be made by issuing a rulemaking. Furthermore, changes to the prohibitions relevant to this species, such as those we are proposing for this species under a section 4(d) rule, can only be made by issuing a rulemaking.

The basis for our action.

Under the Act, we may determine that a species is an endangered or threatened

species based on any one or a combination of five factors: (A) The present or threatened destruction, modification, or curtailment of its habitat or range; (B) overutilization for commercial, recreational, scientific, or educational purposes; (C) disease or predation; (D) the inadequacy of existing regulatory mechanisms; or (E) other natural or manmade factors affecting its continued existence. We have determined that the American burying beetle is not currently at risk of extinction and, therefore, does not meet the definition of endangered. However, due to continued threats from increasing temperatures and ongoing land use changes, we find that the American burying beetle is likely to become an endangered species within the foreseeable future throughout all of its range.

We are proposing to promulgate a section 4(d) rule.

The Service proposes to prohibit all intentional take of the American burying beetle and specifically tailor the prohibition of incidental take to the three geographic areas that the American burying beetle occupies. In the New England and Northern Plains analysis areas, incidental take under the proposed rule is only prohibited in suitable habitat when the take is the result of soil disturbance. However, we propose an exception for any incidental take associated with ranching and grazing activities. In the Southern Plains analysis areas, incidental take is not prohibited unless it occurs on defined conservation lands. However, we propose an exception for any incidental take that occurs on conservation lands while conducting activities that are in compliance with a Service-approved management plan. Federally implemented, funded, or permitted actions would continue to be subject to the requirements of section 7 of the Act.

Information Requested

Public Comments

We want any final rule resulting from this proposal to reflect full consideration of all relevant issues and be as effective as possible. Therefore, we invite tribal and governmental agencies, the scientific community, industry, and other interested parties to submit comments or recommendations concerning any aspect of this proposed rule. Comments should be as specific as possible.

To issue a final rule to implement this proposed action, we will take into consideration all comments and any additional information we receive. Such communications may lead to a final rule

that differs from this proposal, *i.e.*, a final rule could leave the species listed as endangered, reclassify the species as threatened, or remove the species from the List. All comments, including commenters' names and addresses, if provided to us, will become part of the supporting record.

We specifically request comments on:

(1) New information on the historical and current status, range, distribution, and population size of the American burying beetle, including the locations of any additional populations.

(2) New information on the known, potential, and future threats to the American burying beetle, particularly any projected quantities and locations of potential threats to the American burying beetle or its habitat. For example, we request any information that would allow us to better project the potential future impacts of wind development, including scientific assessments of how much potential habitat could be lost. Better assessments of future land use and industry development could allow us to develop more accurate assessments of risks and potential exemptions associated with the proposed rule under section 4(d) of the Act (16 U.S.C. 1531 *et seq.*), which we refer to as our proposed "4(d) rule," below.

(3) The temperature range in which the species will or will not persist long term.

(4) Any available data on the effects climate change may have on the ecosystem on which this species depends, particularly information related to a future northward shift of this ecosystem.

(5) New information regarding the life history, ecology, and habitat use of the American burying beetle.

(6) Information on a potential acreage threshold level below which the prohibitions in the proposed 4(d) rule would not be necessary and advisable for the conservation of American burying beetle.

Please note that submissions merely stating support for or opposition to the action under consideration without providing supporting information, although noted, will not be considered in making a determination, as section 4(b)(1)(A) of the Act (16 U.S.C. 1533(b)(1)(A)) directs that determinations as to whether any species is an endangered or threatened species must be made "solely on the basis of the best scientific and commercial data available."

You may submit your comments and materials concerning the proposed rule by one of the methods listed in **ADDRESSES**. Comments must be

submitted to <http://www.regulations.gov> before 11:59 p.m. (Eastern Time) on the date specified in **DATES**. We will not consider hand-delivered comments that we do not receive, or mailed comments that are not postmarked, by the date specified in **DATES**.

We will post your entire comment—including your personal identifying information—on <http://www.regulations.gov>. If you provide personal identifying information in your comment, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so.

Comments and materials we receive, as well as supporting documentation we used in preparing this proposed rule, will be available for public inspection on <http://www.regulations.gov>, or by appointment, during normal business hours at the U.S. Fish and Wildlife Service, Oklahoma Ecological Services Field Office (see **FOR FURTHER INFORMATION CONTACT**).

Public Hearing

Section 4(b)(5)(E) of the Act provides for a public hearing on this proposed rule, if requested. We must receive requests for a public hearing, in writing, at the address shown in **FOR FURTHER INFORMATION CONTACT** by the date shown in **DATES**. We will schedule a public hearing on this proposal, if requested, and the place of the hearing, as well as how to obtain reasonable accommodations, in the **Federal Register** at least 15 days before the hearing.

Peer Review

In accordance with our policy, "Notice of Interagency Cooperative Policy for Peer Review in Endangered Species Act Activities," which was published on July 1, 1994 (59 FR 34270), we solicited the expert opinion of appropriate independent specialists regarding scientific data and interpretations contained in the Species Status Assessment Report (SSA Report) (Service 2019; available at <http://www.regulations.gov> under Docket No. FWS-R2-ES-2018-0029) supporting this proposed rule. The purpose of such review is to ensure that our decisions are based on scientifically sound data, assumptions, and analysis. We have incorporated feedback from the peer review in the SSA Report (Service 2019).

Background

Section 4(b)(3)(B) of the Act requires that, for any petition to revise the Federal Lists of Endangered and

Threatened Wildlife and Plants that contains substantial scientific or commercial information that reclassifying a species may be warranted, we make a finding within 12 months of the date of receipt of the petition ("12-month finding"). In this finding, we determine whether the petitioned action is: (1) Not warranted, (2) warranted, or (3) warranted, but immediate proposal of a regulation implementing the petitioned action is precluded by other pending proposals to determine whether species are endangered or threatened, and expeditious progress is being made to add or remove qualified species from the Federal Lists of Endangered and Threatened Wildlife and Plants. We must publish these 12-month findings in the **Federal Register**. This document represents:

- Our 12-month not-warranted finding on an August 21, 2015, petition to remove the American burying beetle from the List (that is, to "delist" this species);
- Our proposed determination that the American burying beetle no longer meets the definition of endangered under the Act;
- Our proposed determination that the American burying beetle meets the definition of threatened under the Act;
- Our proposed rule to reclassify the American burying beetle from endangered to threatened on the Federal List of Endangered and Threatened Wildlife; and
- Our proposed 4(d) rule that outlines the proposed prohibitions applicable to the conservation of the American burying beetle.

Previous Federal Actions

We published a final rule to list the American burying beetle as an endangered species under the Act on July 13, 1989 (54 FR 29652). We issued a recovery plan on September 27, 1991. We completed a status review ("5-year review") under section 4(c)(2)(A) of the Act for the American burying beetle on June 16, 2008. The 5-year review recommended that this species remain classified as endangered (Service 2008).

On August 21, 2015, we received a petition dated August 18, 2015, from the American Stewards of Liberty, the Independent Petroleum Association of America, the Texas Public Policy Foundation, and Dr. Steven W. Carothers requesting that the American burying beetle be removed from the List. The petition claims that the threats to the species do not support a conclusion that the species is at risk of extinction now or in the foreseeable future. The Service published a 90-day finding on

March 16, 2016 (81 FR 14058), that the petition contained substantial scientific or commercial information indicating that the petitioned action may be warranted. The Independent Petroleum Association of America, American Stewards of Liberty, and Osage Producers Association filed a lawsuit on September 21, 2017, challenging the Service's failure to make a 12-month finding on their petition. The parties have settled this lawsuit, with the Service agreeing to deliver a 12-month finding on the petition no later than April 30, 2019. This document serves as our 12-month finding on the August 18, 2015, petition to remove the American burying beetle from the List.

Species Status Assessment for American Burying Beetle

We prepared a species status assessment (SSA) for the American burying beetle (Service 2019), which includes a thorough review of the species' taxonomy, natural history, habitats, ecology, populations, and range. The SSA analyzes individual, population, and species requirements, as well as factors affecting the species' survival and its current conditions, to assess the species' current and future viability in terms of resiliency, redundancy, and representation.

We define viability as the ability of a species to persist and to avoid extinction over the long term. Resiliency refers to the population size and demographic characteristics necessary to endure stochastic environmental variation (Shaffer and Stein 2000, pp. 308–310). Resilient populations are better able to recover from losses caused by random variation, such as fluctuations in recruitment (demographic stochasticity), variations in rainfall (environmental stochasticity), or changes in the frequency of wildfires. Redundancy refers to the number and geographic distribution of populations or sites necessary to endure catastrophic events (Shaffer and Stein 2000, pp. 308–310). As defined here, catastrophic events are rare occurrences, usually of finite duration, that cause severe impacts to one or more populations. Examples of catastrophic events include tropical storms, unusually high or prolonged floods, prolonged drought, and unusually intense wildfire. Species that have multiple resilient populations distributed over a larger landscape are more likely to survive catastrophic events, because not all populations would be affected. Representation refers to the genetic diversity, both within and among populations, necessary to conserve long-term adaptive capability (Shaffer and Stein 2000, pp. 307–308).

Species with greater genetic diversity are more able to adapt to environmental changes and to colonize new sites.

The SSA Report (Service 2019) provides the scientific basis that informs our regulatory determination as to whether or not this species should be listed as an endangered or a threatened species under the Act. This decision involves the application of standards within the Act, the Act's implementing regulations, and Service policies (see *Finding and Proposed Determination*, below). The following discussion is a summary of the results and conclusions from the SSA Report (Service 2019). We have solicited and incorporated peer review of the draft SSA Report (Service 2019) from objective and independent scientific experts.

Description

The American burying beetle (*Nicrophorus americanus*) is a member of the beetle family Silphidae (subfamily Nicrophorinae); these beetles bury vertebrate carcasses for reproductive purposes and exhibit parental care of young. The genus *Nicrophorus* contains about 70 species worldwide, of which 15 occur in North America (Peck and Kaulbars 1987, entire). Globally, burying beetles are restricted to temperate climates, and high elevations in tropical climates (Arnett 1946; Howden & Peck 1972; Cornaby 1974; Anderson & Peck 1985; Young 1978; Peck & Anderson 1985; Trumbo 1990; Ruddiman 2001; Sikes & Venables 2013). The American burying beetle is the largest silphid (carrion beetle) in North America, reaching 1.0 to 1.8 inches (25 to 35 centimeters) in length (Anderson 1982, p. 362; Backlund and Marrone 1997, p. 53). The beetles are black with orange-red markings. The American burying beetle is native to at least 35 States in the United States, covering most of temperate eastern North America, and the southern borders of three eastern Canadian provinces. The species is believed to be extirpated from all but nine States in the United States and is likely extirpated from Canada. Based on the last 15 years of surveys, the American burying beetle is known to occur in portions of Arkansas, Kansas, Oklahoma, Nebraska, South Dakota, and Texas; on Block Island off the coast of Rhode Island; and in reintroduced populations on Nantucket Island off the coast of Massachusetts and in southwest Missouri, where a nonessential experimental population (NEP) was established in 2012 under section 10(j) of the Act (77 FR 16712; March 22, 2012). Reintroduction efforts are also underway in Ohio, but survival of

reintroduced American burying beetles into the next year (successful over-wintering) has not yet been documented. A 2017 report of a potential American burying beetle in Michigan is being investigated. Surveys for American burying beetles in Michigan in 2018 failed to confirm the report, but additional surveys are planned in 2019. While it is possible that additional surveys could result in the location of additional American burying beetles in areas not currently known to support them, it is unlikely that there are viable populations that are not known. Most portions of the historical range have not had a positive survey in over 50 years and over that time period it is likely that the species would have been reported if there was a viable population present.

The American burying beetle is a nocturnal species that lives for only one year. During the daytime, American burying beetles are believed to bury themselves under vegetation litter or into soil (Jurzenski 2012, p. 76). American burying beetles are active from late spring through early fall, occupy a variety of habitats and bury themselves in the soil to hibernate for the duration of the winter. American burying beetles emerge from their winter inactive period when ambient nighttime air temperatures consistently exceed 59 degrees Fahrenheit (°F) (15 degrees Celsius (°C)) (Kozol 1988, p. 11; Kozol 1990c, p. 4; Bedick *et al.* 1999, p. 179; Service 2008, p. 13). Reproduction occurs in the spring to early summer after this emergence. New adult beetles or offspring (called teneral), usually emerge in summer, over-winter (hibernate) as adults, and comprise the breeding population the following summer (Kozol 1988, p. 2; Amaral *et al.* 2005, pp. 30, 35).

Summary of Species Requirements

Requirements of Individuals

Adults and larvae depend on dead animals (carrion), *e.g.*, cotton rats, pheasants, prairie dogs, ground squirrels, etc., for food and moisture. Adults also require adequate soil moisture, appropriate soil temperatures, and appropriate soil particle size to allow them to bury themselves and/or a carcass (see chapter 2 of the SSA Report; Service 2019). Although American burying beetles will use multiple soil types, they have a strong preference for soils with high moisture levels. Burying beetles likely seek moist microhabitats to avoid drying out (Bedick *et al.* 2006; Hoback 2008, pp. 2, 4), but a specific threshold for soil moisture is unknown. Adequate soil moisture levels appear to

be critical for American burying beetles, and they show a strong preference for moist, sandy loam soil with organic matter (Hoback 2008, unpublished). When the nighttime ambient air temperature is consistently below 59 °F (15 °C), American burying beetles bury into the soil and become inactive (Service 1991, p. 11; Scott and Traniello 1989, pp. 34–35; Kozol 1995, p. 11). American burying beetles require adequate soil moisture, temperature, and particle size during this inactive phase as well (Bedick *et al.* 2004, p. 28).

Carrion selection for food can include an array of available carrion species and sizes, as well as feeding through capturing and consuming live insects (Service 1991, p. 11) and eating fly larvae when encountered on a carcass (Trumbo 1994, p. 247).

Population and Species Requirements

For reproduction, American burying beetles need appropriately sized carrion, access to mates, and suitable soils. American burying beetles are nocturnal and must find and bury the carcass in one night. Carrion sources that American burying beetles have been documented using for reproduction include carcasses weighing from 1.7 to 10.5 ounces (48 to 297 grams (g)), but the optimum weight of carcasses is 3.5 to 7.0 ounces (80 to 200 g) (Kozol 1988, pp. 12–13, 25, 36–39, figures 1 and 2; Kozol 1990a, pp. 7–8). Once an appropriate carcass has been found for reproduction, American burying beetles may compete amongst themselves or with other species for control of the carcass until usually only a single dominant male and female burying beetle remain (Springett 1967, p. 56; Wilson and Fudge 1984, entire; Scott and Traniello 1989, p. 34). Once the pair wins the battle for the rights to the carcass, the successful couple buries the carrion, copulates, and constructs an underground cavity called a brood chamber around the carcass, although either sex is capable of burying a carcass alone (Kozol *et al.* 1988, p. 170).

Once underground, both parents strip the carcass of fur or feathers, roll the carcass into a ball and treat it with secretions that form a brood chamber

and retard growth of mold and bacteria. The female American burying beetle lays eggs in the soil adjacent to the carcass (Pukowski 1933, p. 555; Milne 1976, p. 84; Scott and Traniello 1990, p. 274) where the eggs incubate for about 6 days before hatching into larvae that require parental care. Higher ambient temperatures increase egg development rates and reduce incubation times (Damos and Savolpoulou-Soultani 2012). Females reproducing on smaller carcasses produce fewer eggs than females reproducing on larger carcasses (Creighton *et al.* 2009, p. 681; Billman *et al.* 2014a, entire; 2014b, entire). Brood sizes of American burying beetles can sometimes exceed 25 larvae, but 12 to 18 is more typical (Kozol 1990b, entire).

Parental care in the genus *Nicrophorus* is unique because both parents participate in the rearing of young (Pukowski 1933, p. 585; Fetherston *et al.* 1990, entire; Trumbo 1990, p. 9). Larvae of large *Nicrophorus* species are extremely dependent on parental regurgitation and will die before they reach second instar (second stage of larval development) if they receive no parental care (Scott 1998a, p. 602). Additionally, American burying beetles will cull their brood through cannibalism to increase size and survival of larvae in response to a less than adequately sized carcass (Billman *et al.*, 2014a, entire; 2014b, entire). The reproductive process from carcass burial to eclosure (emergence from pupae) is about 30 to 65 days (Kozol 1995, pp. 2, 99; 55–65 days; Kozol 1988, p. 16; 48–65 days; Smith and Clifford 2006, p. 11).

Suitable carrion for reproduction is more likely to be available in properly functioning ecosystems that have diverse vegetative communities and associated potential carrion species. Suitable soils contain the appropriate abiotic elements (*e.g.*, soil temperature, soil moisture, particle size, etc.) that are favorable for excavation and formation of brood chambers. These abiotic elements also contribute to proper growth and development of young.

Areas containing the appropriate abiotic elements must be of sufficient size to support the survival of adequate

numbers of individual American burying beetles such that the opportunity to find a mate is not reduced and that the presence and abundance of carrion to support breeding and feeding are uninterrupted. The Service does not currently have information on the minimum size of suitable areas (habitat patch size) needed to maintain a healthy population of American burying beetles. The minimum area needed to support a self-sustaining population varies based on habitat quality factors such as climate, soils, vegetation, carrion availability, predators, and competition.

The American burying beetle lives up to 12–16 months and is dependent upon annual reproduction to sustain extant populations. Sufficiently sized areas also contribute to opportunities for populations to at least remain stable over time. Ideally, areas should be of sufficient size to support a positive growth rate and enable populations to expand over time. These suitable areas also must be connected with other suitable, occupied American burying beetle habitats so that gene flow and genetic diversity are maintained, if not enhanced, and individuals have access to areas with appropriate temperatures, moisture levels, and soil types, when needed, across the landscape.

We generally refer to American burying beetle populations as clustered, localized areas, roughly defined by habitat differences or other geographical features, with inter-breeding individuals. However, there are no clear boundaries separating many of the areas known to be occupied by American burying beetles. For the purposes of this analysis we organized the current range of the American burying beetle into analysis areas that follow broad geographic and ecological patterns: Northern Plains analysis areas, Southern Plains analysis areas, and the New England Analysis Area (see Figure 1). This is the scale of “populations” referred to in the analysis of risk factors potentially affecting the species (chapters 4 and 5 in the SSA Report; Service 2019).

BILLING CODE 4333–15–P

American Burying Beetle SSA Analysis Areas

Figure 1. The Southern Plains analysis areas include the Red River, Arkansas River, and Flint Hills analysis areas in Texas, Oklahoma, Kansas, and Arkansas. The Northern Plains analysis areas include the Loess Canyons, Sand Hills, and Niobrara River analysis areas in Nebraska and South Dakota. The New England Analysis Area includes Block Island off the coast of Rhode Island, and a reintroduced population on Nantucket Island off the coast of Massachusetts.

BILLING CODE 4333-15-C

Review of the Recovery Plan

Section 4(f) of the Act directs us to develop and implement recovery plans for the conservation and survival of endangered and threatened species unless we determine that such a plan will not promote the conservation of the species. Recovery plans identify site-specific management actions that will achieve recovery of the species, measurable criteria that set a trigger for review of the species' status, and methods for monitoring recovery progress.

Recovery plans are not regulatory documents; instead they are intended to establish goals for long-term conservation of listed species and define criteria that are designed to indicate when the threats facing a species have been removed or reduced to such an extent that the species may no longer need the protections of the Act, as well

as actions that may be employed to achieve reaching the criteria. There are many paths to accomplishing recovery of a species, and recovery may be achieved without all criteria being fully met or all actions fully implemented. Recovery of a species is a dynamic process requiring adaptive management that may, or may not, fully follow the guidance provided in a recovery plan.

The American burying beetle recovery plan was approved by the Service on September 27, 1991 (Service 1991). Delisting criteria were not established in the recovery plan. However, for reclassification from endangered to threatened, the recovery plan established a criterion of at least three self-sustaining populations of at least 500 individuals in each of four broad geographical areas of the species' historical range: The Northeast, the Southeast, the Midwest, and the Great Lakes States. The threshold of 500 individuals was developed based on

limited empirical data from Block Island (Service 1991, p. 8) and theoretical conservation biology literature (Franklin 1980; Soule 1980; Salwasser *et al.* 1982) that suggested the effective population number of 500 was the minimum threshold size for a biological population to maintain long-term adaptability. We now understand that a population estimate of 500 adults is probably an inadequate metric for a self-sustaining population of this species, because minimum viable population for most species would be considerably larger than 500 individuals, minimum viable populations thresholds vary by species, and additional empirical data and analysis for American burying beetles suggest a larger threshold may be more appropriate for this species (Reed *et al.* 2003; Amaral *et al.* 2005; p. 36; Brook *et al.* 2006; Flather *et al.* 2011; Wolf *et al.* 2015). However, new population targets for the species have not been developed and would be

different for each population due to differences in habitat and stressors acting on populations. Likewise, conservation of populations in the four broad geographical areas used in the recovery plan may not appropriately address future threats given our current understanding of the species' range and risks to populations (see sections 2.5.4 and 5.4 in the SSA Report; Service 2019). For example, the authors of the recovery plan were not aware of future climate-related risks and current projections indicating that southern portions of the historic range would not be suitable for future recovery (see section 5.4 in the SSA Report; Service 2019). Because we have limited information on actual population estimates by which to measure population resiliency, the primary indicators that we rely on for resiliency are area and condition of habitat, geographic distribution of American burying beetles within analysis areas, relative abundance, and size and number of concentrations of positive surveys within an analysis area (see chapters 4 and 5 in the SSA Report; Service 2019). Thus, the recovery plan information is considered to be out of date (Service 2008), and the SSA Report (Service 2019) provides an updated, revised analysis of current and future risks based on our current understanding of the species' needs.

Current Status of the Species

Because the American burying beetle completes its life cycle in one year, each year's population levels are largely dependent on the reproductive success of the previous year and reproductive conditions in the current year. Fluctuations are thought to be a function of the abundance of the carrion resources on which the species depends. Therefore, population numbers may be cyclic (due to weather, disease, etc.), with high numbers and abundance in one year, followed by a decline in numbers the succeeding year. Because survey information can fluctuate over time and survey effort is not equal for all analysis areas, the SSA Report (Service 2019) uses a combination of habitat and population factors to evaluate the current status of populations. For each analysis area, a current condition category is assigned based on relative abundance, population distribution, known population trends, availability of suitable habitat, acres of protected areas, and the level of management in protected areas (see section 4.7.1 in the SSA Report; Service 2019). The current condition categories are qualitative estimates of the current status of the species.

Southern Plains Analysis Areas

We included three separate analysis areas within the Southern Plains analysis areas: Red River Analysis Area, Arkansas River Analysis Area, and Flint Hills Analysis Area. The Red River Analysis Area includes 3,251,894 total acres in portions of Arkansas, Texas, and southeastern Oklahoma near the Red River. Within this area, there are 2,678,406 acres of suitable habitat, 123,779 acres of managed protected lands, and 23,997 acres of multi-purpose protected lands. Managed lands are defined in the SSA Report (Service 2019) as those areas that have management plans that incorporate active management with the primary purpose of maintaining or improving wildlife habitat and are assumed to protect or improve American burying beetle habitat. Multi-purpose protected lands are defined in the SSA Report (Service 2019) as areas managed for mixed purposes and are assumed to include some management for wildlife that would protect or improve American burying beetle habitat. Within the Red River Analysis Area, only the Hugo Wildlife Management Area in Oklahoma is currently known to support American burying beetles, with five captured in 2016. Between 1993 and 1996, the southeastern portion of the Red River Analysis Area supported localized populations with relatively high catch rates of American burying beetles (Creighton *et al.* 2009, p. 40), but catch rates in these areas have declined since the early 2000s, and this area is no longer considered to be occupied. No positive surveys have been documented in the Arkansas or Texas portions of the Red River Analysis Area since 2008, and only eight positive surveys are known in the analysis area (all in Oklahoma) since 2008. Populations in Texas may be extirpated. The current resiliency of the Red River Analysis Area is considered low due to the limited distribution and very low ratios of positive to negative surveys in recent years.

The Arkansas River Analysis Area includes 17,753,431 total acres in portions of Arkansas, Oklahoma, and Kansas. Within this area, there are 14,470,603 acres of suitable habitat, 1,486,002 acres of managed protected lands, and 933,608 acres of multi-purpose protected lands. Protected areas include multiple Federal, State, and private areas, many of which are known to support American burying beetles. There are some positive surveys in all portions of the Arkansas River Analysis Area and scattered concentrations of positive surveys in all but the northeastern portion of the analysis

area. The current resiliency of the analysis area is considered high due to the large area of suitable habitat, wide distribution of American burying beetles within the analysis area, the presence of several large protected areas, and fair ratios of positive to negative surveys.

The Flint Hills Analysis Area includes 3,706,908 total acres in portions of Oklahoma and Kansas. Within this area, there are 2,758,610 acres of suitable habitat, 133,196 acres of managed protected lands, and 52,114 acres of multi-purpose protected lands. Protected areas include Federal, State, tribal, and private areas, many of which are known to support American burying beetles. Distribution is fair with some recent positive surveys in the southern two-thirds of the analysis area and one concentration of positive surveys. This analysis area has a relatively low ratio of positive to negative surveys with relatively large fluctuations between years. Reports for 2016 indicated more positive surveys and a higher ratio of positive to negative surveys, but some areas have limited survey effort. Portions of this analysis area have a very low ratio of positive surveys, which indicates low density populations. The current resiliency of the analysis area is considered moderate due to the large area of native habitat, relatively wide distribution within the analysis area and proximity to the Arkansas River Analysis Area, the presence of several large protected areas, and ratios of positive to negative surveys that are on average low but can periodically be good in some locations.

Northern Plains Analysis Areas

We included three separate analysis areas within the Northern Plains analysis areas: Loess Canyons Analysis Area, Sand Hills Analysis Area, and Niobrara Analysis Area. The Loess Canyons Analysis Area includes 2,758,610 total acres in southcentral portions of Nebraska. Within this area, there are 1,686,948 acres of suitable habitat, 15,342 acres of managed protected lands, and 3,843 acres of multi-purpose protected lands. In addition, there are five conservation easements specifically set up for protection and management of American burying beetles, held by the Nebraska Land Trust, in the Loess Canyons, totaling 3,277 acres. The protected areas within this analysis area are known to support American burying beetles. Distribution is currently fair across the Loess Canyons Analysis Area, with one relatively large contiguous concentration of positive surveys in the center of the analysis area. This analysis area has a fair ratio of positive to

negative surveys. The current resiliency of the analysis area is considered moderate due to the extent of native habitat, relatively wide distribution within the analysis area, and fair ratios of positive to negative surveys. However, expansion of eastern redcedar (*Juniperus virginiana*) due to a lack of fire or mechanical control has reduced the habitat quality in much of this analysis area, and this population is sensitive to droughts. The analysis area is relatively small and isolated from other populations.

The Sand Hills Analysis Area includes 10,819,170 total acres in northcentral portions of Nebraska. Within this area, there are 8,633,685 acres of suitable habitat, 93,983 acres of managed protected lands, and 24,633 acres of multi-purpose protected lands. Most protected areas within this analysis area are known to support American burying beetles, but some large forested areas have relatively few positive surveys. The Valentine National Wildlife Refuge is the only large block of protected lands in this analysis area with relatively good catch rates and distribution of American burying beetles, but smaller protected areas near the Niobrara River also have American burying beetles (Hoback 2018, pers. comm.). Distribution is good, with some positive surveys in all portions of the analysis area and one large contiguous concentration of positive surveys. This analysis area has the highest ratio of positive to negative surveys for the last 15-year timeframe. The current resiliency of the analysis area is considered high due to the large area of native habitat, wide distribution within the analysis area, and good ratios of positive to negative surveys.

The Niobrara River Analysis Area includes 4,108,903 total acres in northcentral portions of Nebraska and southcentral portions of South Dakota. Within this area, there are 2,961,469 acres of suitable habitat, 58,918 acres of managed protected lands, and 33,582 acres of multi-purpose protected lands. It includes a large area of tribal land, but no American burying beetles have been documented there. Some protected areas within this analysis area are known to support American burying beetles. Distribution is currently fair with some positive surveys in most portions of the analysis area and one contiguous concentration of positive surveys. This analysis area has a fair ratio of positive to negative surveys for the last 15-year timeframe. The current resiliency of the analysis area is considered moderate due to the large area of native habitat, relatively wide distribution, and fair ratios of positive to negative surveys.

New England Analysis Area

The New England Analysis Area includes Block Island and Nantucket Island. Block Island has 2,554 acres of suitable habitat, and Nantucket Island has 23,311 acres of suitable habitat. This is a small area relative to other analysis areas, but the level of protection and active management are significantly greater than the other analysis areas. There are 2,507 acres of protected lands on Block Island and 11,934 acres on Nantucket Island. The total area of protected lands is small compared to some other analysis areas, but it is a relatively large percentage of the suitable habitat. The protected areas within this analysis area are known to support American burying beetles. Distribution is currently fair, with some positive surveys in most portions of the analysis area that is considered suitable habitat. This analysis area has a good ratio of positive to negative surveys on Block Island and fair to poor ratios on Nantucket Island. On Block Island, the American burying beetle population is relatively stable with population estimates ranging from 200 to 1,000. This population has been monitored annually since 1991. Carrion provisioning has been conducted on Block Island since 1993. On Nantucket Island, the reintroduced population does not appear to be self-sustaining and requires human assistance for long-term maintenance (Mckenna-Foster *et al.* 2016, entire). The current resiliency of the analysis area is considered moderate due to relatively good distribution, and fair ratios of positive to negative surveys. However, the populations on both islands are highly dependent on active management.

Summary of Factors Affecting the Species

Section 4 of the Act and its implementing regulations (50 CFR part 424) set forth the procedures for listing species, reclassifying species, or removing species from listed status. A species may be determined to be an endangered or threatened species due to one or more of the five listing factors described in section 4(a)(1) of the Act: (A) The present or threatened destruction, modification, or curtailment of its habitat or range; (B) overutilization for commercial, recreational, scientific, or educational purposes; (C) disease or predation; (D) the inadequacy of existing regulatory mechanisms; or (E) other natural or manmade factors affecting its continued existence. A species may be reclassified or delisted on the same basis. The SSA Report (Service 2019) represents a

compilation of the best scientific and commercial data available concerning the status of the species, including the past, present, and future threats, to evaluate viability of the American burying beetle. The effects of conservation actions were also assessed as part of the current condition of the American burying beetle in the SSA Report (Service 2019), and those effects were projected in future scenarios.

The American Burying Beetle Recovery Plan (Service 1991) and the 5-year status review of the species (Service 2008) identify the following factors as threats or potential threats to American burying beetles: Direct habitat loss and alteration, increase in competition for carrion resources, decrease in abundance of prey, loss of genetic diversity in isolated populations, disease/pathogens, dichloro-diphenyl-trichloroethane (commonly known as DDT), habitat fragmentation due to agricultural and grazing practices that lead to changes in vertebrate composition or density, and invasive species. We now know that DDT and some other threats identified at the time that the recovery plan and 5-year status review were completed are either no longer a threat or pose less of a threat to the species. However, none of these factors alone adequately explains why the American burying beetle declined over much of its historic range while species in the same genus are still relatively common rangewide. There are eight sympatric congeners (other *Nicrophorus* species or species of the same genus) which have not experienced similar reductions in their ranges (Sikes and Raithel 2002, p. 104).

Much of the evidence suggesting the reduction of appropriate carrion resources as a primary mechanism of population decline for the American burying beetle is circumstantial. However, this hypothesis fits the temporal and geographical pattern of the disappearance of American burying beetles from 90 percent of its historical range, and may explain why American burying beetles declined while related species that do not rely on the same carrion resources did not similarly decline (Sikes and Raithel 2002, p. 104). The availability of appropriately sized carrion may explain current distributions of the American burying beetle and the presence or absence of American burying beetles in most of the existing analysis areas. For example, the American burying beetle population on Nantucket Island was established with provisioned carcasses, but is projected to be extirpated without continued provisioning of appropriately sized carcasses (Mckenna-Foster *et al.* 2016,

entire). Apparently, the natural availability of appropriately sized carrion is limited on the island and will not support the population without any provisioning. American burying beetles need carcasses of 80 to 200 grams, and areas that can support the species must have potential carrion sources within this size range. The abundance of potential carrion species and competition for the carcasses can affect availability for American burying beetles.

Risk factors are not equal in all portions of the American burying beetle's range, and some risk factors have changed since the recovery plan was written. All current risks for each analysis area are described in chapter 4, and future risks are discussed in chapter 5, of the SSA Report (Service 2019). Risks such as conversion to cropland and wind energy development are greater in portions of the Northern Plains analysis areas, while risks associated with grazing, silviculture, and oil and gas development are more common in the Southern Plains analysis areas. All remaining populations have some risks associated with areas of urban or suburban development, particularly in the New England Analysis Area, but most current American burying beetle populations are in rural areas and have potential risks associated with habitat loss due to agricultural land uses. Risks associated with the effects of changing climate, including increasing temperatures, are now the most significant threat for most analysis areas.

Present or Threatened Destruction, Modification, or Curtailment of Its Habitat or Range (Factor A)

Agricultural land uses and urban expansion are predicted to have impacts to American burying beetle habitat and populations over time; however, those impacts are expected to be relatively minor in most of the current known range of the species. Historically and to a lesser extent currently, land conversion to agriculture, intensive domestic livestock grazing, logging, fire suppression, wind energy development, and urban development are common causes of habitat quality reductions, loss, and fragmentation within the current range of the American burying beetle. Habitat loss and alteration affect this species at local and regional levels, and could account for the extirpation of populations once they become isolated from others (Kozol 1995, p. 170; Ratcliffe 1996; Lomolino and Creighton 1996, entire; Amaral *et al.* 1997, pp. 123–124; Bedick *et al.* 1999, p. 179; Creighton *et al.* 2009, p. 40). There are

no known American burying beetle populations surviving in intensively farmed or highly urbanized areas.

Large areas of native grasslands have been converted to nonnative grasses to improve pastures for intensive cattle grazing operations. Even in areas with native vegetation, pastures and hay fields can be more intensively grazed or mowed during drought periods when demand for grass or hay is high, which can keep habitat in an unfavorable or marginal condition for longer time periods. A more complete description of potential land use impacts is provided in chapter 3 of the SSA Report (Service 2019).

Relatively little urban and industrial development is occurring within the current known range of the American burying beetle. There are a few relatively large urban areas near American burying beetle populations in the New England area but most of the current range is rural. Most of the existing American burying beetle range is already under some agricultural use (primarily grazing and hay production).

Two scenarios in the SSA Report (Service 2019) explore potential future land use changes to help characterize the likely potential for impacts to suitable habitat for the American burying beetle. Land use changes were evaluated separately for each analysis area because they are a risk factor for current conditions. Future risk factors like climate changes affect different analysis areas over different time periods; however, climate changes were not considered under the two land use scenarios in the SSA Report (Service 2019). Climate related impacts to habitat and range are addressed under Factor E.

The large areas of known and potential habitat in the Southern Plains buffer the effects of most land use changes. The projected combined permanent loss of suitable habitat from all sources for the Southern Plains analysis areas is 1.2% or 246,293 acres from the existing 19,995,088 acres (Service 2019). The combined impacts of urban expansion and agriculture (primarily conversion to cropland) are expected to affect 5–15% of the suitable habitat in the Northern Plains and redcedar expansion in the Loess Canyon Analysis Area is expected to result in up to an additional 30% habitat loss (Service 2019).

The projections in our SSA Report (Service 2019) indicate that future representation and redundancy are both reduced with potential losses of habitat in New England, Loess Canyons, and the reintroduction site in Missouri. The potential loss of the Loess Canyons population is due to land use changes,

including redcedar expansion, and the New England populations and Missouri reintroduction could be lost if active management and habitat protection are not continued. The combined effects of land use and future climate changes (see Factor E) are likely to impact the resiliency of most populations and the overall viability of the species.

Other Considerations

This assessment of land use effects includes cautions because these effects were compared to areas of potential suitable habitat, and our assessment of suitable habitat was very broad. Not all potentially suitable habitat is occupied by American burying beetles; therefore, this analysis may underestimate the impacts of land use changes. Additional cautions are related to our limited ability to quantify some potential future effects. For example, uncommon increases in crop prices could increase incentives for conversion of grassland to row crops to levels beyond the assumptions used in the two scenarios.

Recent development and potential expansion of wind energy projects could also add to impacts from other land use changes. The construction of wind turbines, roads, and powerlines has direct permanent habitat impacts and fragments the remaining habitat. The operation of wind turbines also has potential for direct take through American burying beetle collisions with the blades.

Future land use effects related to wind power were not factored into land use scenarios because we did not have estimates of future development or total areas that may be affected by wind projects, and there are no studies available to evaluate the actual effects of wind projects on American burying beetles. Within the Southern Plains analysis areas, the current area of wind projects is relatively small, and there is limited potential for expansion. Less than 10 percent of the Southern Plains analysis areas have annual average wind speeds of 6 meters/second (m/s) or greater at 30 meters height that are recommended for wind development. There is greater potential for wind energy development in the Northern Plains analysis areas. Nearly all of the Northern Plains analysis areas have annual average wind speeds of 6 m/s or greater at 30 meters height. There are 6,471 wind turbines registered in the Northern Plains analysis areas, but we do not know what areas, or what percentage of the suitable habitat in Northern Plains analysis areas, may be affected by wind projects in future years. The Service intends to do further evaluation of potential effects of wind

projects and welcomes any additional information on the subject.

Overutilization for Commercial, Recreational, Scientific, or Educational Purposes (Factor B)

Overutilization for any purpose was not identified as a threat to the species at the time of listing in 1989, and it is not considered a threat to the species' continued existence today.

Disease or Predation (Factor C)

While disease and predation may represent relevant threats to the American burying beetle, they are not known to result in population-level impacts. Further information regarding disease and predation can be found in the SSA Report (Service 2019).

Inadequacy of Existing Regulatory Mechanisms (Factor D)

Under this factor, we examine the stressors identified within the other factors as ameliorated or exacerbated by any existing regulatory mechanisms or conservation efforts. Section 4(b)(1)(A) of the Act requires that the Service take into account "those efforts, if any, being made by any State or foreign nation, or any political subdivision of a State or foreign nation, to protect such species . . ." In relation to Factor D under the Act, we interpret this language to require the Service to consider relevant Federal, State, and Tribal laws, regulations, and other such binding legal mechanisms that may ameliorate or exacerbate any of the threats we describe in threat analyses under the other four factors or otherwise enhance the species' conservation. We give strongest weight to statutes and their implementing regulations and to management direction that stems from those laws and regulations.

Existing regulatory mechanisms vary by location, but generally do not fully address the numerous stressors that the American burying beetle faces. The American burying beetle is State-listed in Kansas, Massachusetts, Nebraska, Ohio, and Oklahoma. The specific protections vary by State, but often include some permitting requirements or coordination with the State wildlife agencies when projects could directly impact the species or its habitat. It is not State-listed in Rhode Island, Arkansas (special concern only), South Dakota, or Texas. Currently, there is no protection under State law for the habitat of the American burying beetle in Arkansas or South Dakota (Backlund *et al.* 2008).

In some parts of the range (Nebraska, South Dakota, and Kansas), the species occurs almost exclusively on private land and regulatory mechanisms do not

address the stressors impacting the species. In other areas, there are several robust populations on public lands or private conservation organization properties, but many protected lands supporting American burying beetles require ongoing management like prescribed fire or other measures to control invasion of woody vegetation to ensure the species' continued presence. Federal and State agencies have adopted and implemented laws, regulations, and best management practices that result in protection of American burying beetles.

In addition, the Department of Defense (DoD), with the assistance of the Service and the states, is responsible under the Sikes Act (16 U.S.C. 670a–670f, as amended) for carrying out programs and implementing management strategies to conserve and protect biological resources on its lands. Integrated Natural Resources Management Plans (INRMPs) are planning documents that allow DoD installations to implement landscape-level planning to provide for the management of natural resources, including fish, wildlife, and plants, without any net loss in the capability of an installation to support its military mission. Incorporation of INRMPs on the DoD installations provide management and conservation benefit to American burying beetles.

In some cases, where American burying beetles occur on lands with conservation easements, deed restrictions, or owned by conservation organizations, existing regulatory mechanisms appear to be adequate. However, existing land protections are not comprehensive for the American burying beetle. Given the varied missions of these landowners, the level of protection varies and may change over time. Additionally, populations in the New England and Northern Plains Analysis areas are expected to experience future threats from land use change and all populations are expected to experience future threats from climate change over varying time periods. Existing regulatory mechanisms do not address those future threats to the American burying beetle.

Other Natural and Manmade Factors (Factor E)

The most significant potential threat under this factor is climate change. This is a summary of climate-related risks, and additional information is available in the SSA Report (Service 2019). The SSA Report's chapter 3 summarizes general climate risks, chapter 4 includes current risks, and chapter 5 covers future risks (Service 2019).

Most considerations of climate change in classification decisions hinge upon whether climate change will manifest in changing habitat conditions and how the species is likely to respond to these changes in the future. Therefore, a key consideration for classification decisions where climate change is a potential stressor is how we interpret "foreseeable future" in the definition of a threatened species under the Act.

The Intergovernmental Panel on Climate Change (IPCC) adopted four possible Representative Concentration Pathways (RCP) scenarios (2.6, 4.5, 6, and 8.5) to capture the possible ranges of climate change within the next century (Hartmann *et al.* 2013; Moss *et al.* 2008). In our analysis of potential climate change impacts to the American burying beetle, we used two of those scenarios, RCP 4.5 and 8.5, over different blocks of time through the end of this century (years 2010–2039, 2040–2069, and 2070–2099). For the purpose of this document we define those time periods as: "early century time period" (2010–2039), "mid-century time period" (2040–2069), and "late century time period" (2070–2099). We use more than one emissions scenario to account for uncertainty regarding future atmospheric greenhouse gas concentrations. By using both a relatively high and relatively low emissions scenario in our projections, we attempt to bracket the likely possibilities for climate change in the foreseeable future. RCP 4.5 is at the low end of the intermediate range of conditions projected by the IPCC and represents a situation under which key atmospheric conditions would stabilize at a relatively moderate level shortly after 2100. This scenario envisions emissions mitigation through strong policy action by the international community, including the United States, in the near future to curb emissions and the resulting effects to global climate. RCP 8.5 is the high end of IPCC projections of atmospheric conditions. RCP 8.5 is the expected scenario if strong policy actions to curb emissions are not pursued by the United States and the international community. This scenario is essentially the continuation of current trends in emissions as they may play out over the next century. For ease of reference, we refer to these as "emissions scenarios," although they are not based solely on emissions of greenhouse gases. Our approach of using the two RCPs is consistent with the current widespread scientific practice of considering projections based on RCP 4.5 and RCP 8.5 so as to consider a range of projected

conditions, rather than relying on a single scenario. The U.S. Global Change Research Program used these two RCPs as the core scenarios for the Fourth National Climate Assessment (Hayhoe *et al.* 2017), and they also are used as the basis for projections generated via the U.S. Geological Survey's National Climate Change Viewer.

The life-history characteristics of American burying beetles indicate limited ability to tolerate warmer temperatures. Adult American burying beetles use secretions to slow decomposition of carcasses they bury for reproduction (see *Summary of Species Requirements*, above, for more information on the role of carcasses in reproduction). The carcasses are buried and must support both adults and larvae for at least 2 to 3 weeks, but high temperatures have been shown to reduce the effectiveness of the secretions and accelerate decomposition (Jacques *et al.* 2009, p. 871). While the American burying beetle has life-history requirements similar to other carrion beetles, it is the largest *Nicrophorus* in North America and requires a larger carcass to reach its maximum reproductive potential (*i.e.*, to raise a maximum number of offspring) than the other burying beetles (Service 1991, p. 2; Kozol *et al.* 1988, p. 37; Trumbo 1992, pp. 294–295). American burying beetles also have a longer time period for egg and larval development than other *Nicrophorus* carrion beetles, so the carcass must last longer (at least 12 to 14 days) to provide food and moisture for adults and support development of their larvae to the pupa stage. Temperature-related increases in decomposition and development of fly larvae would limit or prohibit reproductive success for American burying beetles if carcasses are in a suitable condition for shorter periods of time or do not last long enough to support development of their larvae.

The distribution of American burying beetles also indicates a limited ability to tolerate warmer temperatures. *Nicrophorus* abundance and diversity are higher in cooler climates. There are 15 *Nicrophorus* species in the United States and Canada, but only 2 are endemic to Central and South America, and they occur at higher elevations with cooler temperatures. Reasons for burying beetles' lack of success in warmer climates include increased competition with flies and ants, as well as increased rates of carcass decomposition. Carcass decomposition is dominated by dipteran species (true flies) and the diversity of dipteran species using carcasses increases in warmer climates. Based on species

distributions and existing climate conditions, few *Nicrophorus* species appear to be capable of maintaining populations in areas with long-term average summer mean-maximum temperatures at or exceeding a 95 °F threshold (*N. carolinus*, and possibly *N. pustulatus* and *N. marginatus*), and there are no *Nicrophorus* species in areas with average summer mean-maximum temperatures exceeding 100 °F.

Under both RCP 4.5 and 8.5 emissions scenarios, all American burying beetle populations in the Southern Plains Analysis Areas are projected to have summer mean-maximum temperatures exceeding 95 °F within the mid-century time period. Surveys for American burying beetles in locations that have experienced a mean-maximum temperature near or above 95 °F during summer have shown declining capture rates the following year. Existing survey information from Fort Chaffee (Arkansas River Analysis Area) supports the assumption that mean-maximum temperatures above 95 °F would adversely affect American burying beetle populations. Monitoring of American burying beetles has occurred annually from 1992 through 2016. During the study period, catch rates of American burying beetles declined from the previous year every time mean-maximum temperatures exceeded 95 °F, which happened a total of six times throughout the study period. Based on this information, we anticipate continued population declines and potential extirpation if mean-maximum temperatures exceeding 95 °F became the average during summer months and more extreme temperatures occurred more frequently.

Evidence suggests that southern populations of American burying beetles that experience summer mean-maximum temperatures near 95 °F are declining. Since 2008, only seven American burying beetles have been detected within the Oklahoma portion of the southernmost analysis area, and no American burying beetles have been documented in the Texas or Arkansas portions. We have no evidence to suggest that habitat conditions within these areas have significantly changed, which might otherwise explain the observed American burying beetle declines in this area. Populations have declined or are extirpated in large protected areas like Camp Maxey, Texas, with no apparent changes in land use. It appears that temperatures near this area are at, or past, a threshold that would support American burying beetles. This may be further supported by the fact that the species does not

exist south of the Red River area in Texas and Louisiana, where habitat, soil conditions, and carrion availability are likely to be similar. This leads us to conclude that the southern edge of the species' range is driven by this temperature threshold.

Temperature has always limited the American burying beetle's range to some degree. Populations at the northern edge of the range are limited by cool night time temperatures and shorter growing seasons, whereas populations at the southern edge of the range are likely limited by high temperatures. The western edge of the species' range has been limited by reduced precipitation and soil moisture. Although temperature and other effects of climate change are expected to affect American burying beetles in both the northern and the southern parts of the range, we expect that the populations in southern areas will be affected sooner and to a greater extent based on projected temperatures. Under both the RCP 4.5 and 8.5 emissions scenarios, a majority of the Southern Plains analysis areas are expected to be near or exceed summer mean-maximum threshold temperatures (95 °F) by 2039, with potential to extirpate American burying beetles from most or all Southern Plains populations. Within the mid-century time period, all Southern Plains analysis areas are expected to exceed threshold temperatures under both the RCP 4.5 and 8.5 emissions scenarios, likely resulting in extirpation of the American burying beetle from these areas. American burying beetles near the southern and western edge of the range may already be at their limits for temperature- and moisture-related tolerances and have a limited ability to adapt to rapidly changing climate conditions (see comments on limits related to life history in chapter 5 of the SSA Report; Service 2019).

There are no American burying beetle populations, including known historical populations, located in areas that experience a long-term summer mean-maximum air temperature above 95 °F. The Red River Analysis Area represents the southernmost and warmest portion of the American burying beetle's current range, with summer mean-maximum air temperatures of approximately 93 to 94 °F. Historical populations south of the Red River Analysis Area have not been documented in over 70 years. Because American burying beetles have not expanded their range to warmer climates since the early 1900s, we believe that climate conditions associated with the current and historical ranges represent existing

thresholds for maintaining American burying beetle populations.

Increased air temperatures, changes in precipitation, increased evaporative losses, and prolonged droughts may stress or kill individual American burying beetles and reduce reproductive success or reduce the time periods with suitable conditions for reproduction. High air temperatures have been documented to kill or sterilize American burying beetles at captive colonies when air conditioning systems have failed, resulting in colony temperatures at 85 to 90 °F for about 2 weeks (Merz 2016, pers. comm.). Survey protocols require traps to be checked in the morning because American burying beetle mortalities have occurred when they are confined in traps during warm days. More indirect effects of increased temperatures and reduced precipitation or soil moisture may be related to competition. Congeners with higher temperature or lower moisture tolerances, like *N. carolinus*, may be more competitive and reduce or eliminate American burying beetles in southern populations. Species like *N. carolinus* can compete for appropriate carcasses and reproduce under warmer and drier conditions than American burying beetles (Abbott and Abbott 2013, p. 2). At Camp Maxey, *N. carolinus* numbers increased rapidly when American burying beetle and *N. orbicollis* numbers declined (Abbott and Abbott 2013, p. 2).

Increasing temperatures resulting from climate change could reduce the reproductive success of American burying beetles by reducing the portion of the active season with suitable temperatures for reproduction. Recent temperature studies with *N. orbicollis* indicate even small increases in temperature can affect reproduction (Creighton 2016, pers. comm.). This type of research is currently being conducted with American burying beetles as well, but those results are not yet available. *N. orbicollis* has a similar historical range and is the most closely related congener; therefore, we expect the American burying beetle study will yield similar results. For *N. orbicollis*, the percent of successful broods declined at temperatures greater than 20 °C (68 °F) and declined rapidly at any temperatures greater than 25 °C (77 °F). An increase of only 2 to 3 degrees (from 25 to 27–28 °C, or approximately 77 to 80 °F) stopped most beetles from attempting to prepare a carcass for reproduction, and those that did were not successful in producing any larvae or teneral. The warmer temperatures apparently precluded eggs from hatching or larvae from developing

beyond a very early stage. The study also demonstrated effects of temperatures on seasonal timeframes that would support reproduction. While more southern latitudes have a longer active season and would logically have more time to reproduce, the temperature restrictions actually reduce the potential for reproduction in Oklahoma. *N. orbicollis* in the northern portion of their range (Wisconsin) have a longer period of suitable climate conditions for reproduction and could reproduce more often than *N. orbicollis* in the southern portion of their range (Oklahoma) due to these temperature restrictions. Projected climate changes could limit reproduction in the future to an even greater extent.

American burying beetles are a nocturnal species, and nighttime temperatures are likely to influence the behavior and range of this species as well. Nights above 75 °F were only observed in the Southern Plains analysis areas (Red River, Arkansas River, and Flint Hills analysis areas) with the exception of 7 nights over a 35-year period in Colome, South Dakota (1 night in 2001, 3 nights in 2006, and 3 nights in 2011). The effects of the increase in nights above 75 °F and potential impacts to reproductive success may be occurring in the Red River Analysis Area, where declines in positive American burying beetle surveys have been documented since the early 2000s. Temperatures of 75 °F or higher adversely affected reproductive success in *N. orbicollis* (Creighton 2016, pers. comm.) and may have a similar effect on American burying beetles. We do not have data specifically related to reproductive success in the Red River Analysis Area, but the American burying beetle population declines coincide with the increase in nighttime temperatures above 75 °F. From 1993–1996, the Red River Analysis Area supported some areas with good catch rates of American burying beetles in the southeastern portion (Creighton *et al.* 2009, p. 40), but positive/negative ratios and catch rates have declined since the early 2000s. On the Weyerhaeuser Habitat Conservation Plan planning area in McCurtain County, Oklahoma, relative densities of American burying beetles generally declined from an average of 0.076 beetles per trap-night (106 beetles captured) in 1997, to 0.010 beetles per trap-night (16 beetles captured) in 2001. There was a slight increase in 2002 (0.015 beetles per trap-night), and a greater one in 2003 (0.053 beetles per trap-night), but then relative densities dropped again. During 2005–2007, there were no captures of

American burying beetles at regular sites and only one capture in 2005 at a supplemental site (Schnell *et al.* 2008). No positive surveys have been documented in the Arkansas or Texas portions since 2008, and only seven positive surveys are known in the Oklahoma portion since 2006. Populations in Texas may be extirpated.

American burying beetles are only active at night, resulting in a very narrow window of time for suitable carcasses to be available for American burying beetles to find, bury, and prepare for reproduction. Higher temperatures cause carrion to decompose more rapidly, and fly larvae to develop faster and quickly consume small carcasses. At high temperatures, exposed carcasses can be heavily infested with fly larvae within 2 days, and carcasses may only be suitable and available for 1 or 2 nights. Thus, we conclude that increased air temperatures can affect reproductive success by reducing the availability of suitable carrion due to competition with flies and ants.

Risks associated with the effects of changing climate, including increasing temperatures, are a significant threat for some analysis areas in the foreseeable future. The combination of information in the SSA Report (see chapter 5; Service 2019) indicates increasing air and soil temperatures as a result of climate change is a significant risk to future viability of the species. Within the mid-century time period, American burying beetles in all Southern Plains analysis areas would likely be extirpated and would represent a loss of approximately 59 percent of the current range of the species. The summer mean-maximum threshold (95 °F), where we determine American burying beetle numbers will decline and not be able to persist into the future, is predicted to be exceeded in nearly all portions of the Southern Plains analysis areas under either the moderate or high emissions levels of climate change within the mid-century time period. Northern Plains analysis areas are largely unaffected by moderate emissions levels of climate change within the mid-century time period (see chapter 5 of the SSA Report; Service 2019), but under the RCP 8.5 emissions scenario, temperatures approach 93 to 95 °F in about two-thirds of the Loess Canyons Analysis Area and small portions of the other two analysis areas in the Northern Plains within the mid-century time period. Under the RCP 8.5 emissions scenario, Southern Plains American burying beetle populations would be projected to have summer mean-maximum temperatures up to 98 to 100 °F within the mid-century time

period. We conclude that the American burying beetle is at risk of extirpation within the Southern Plains analysis areas under the two projected climate conditions we analyzed (RCP 4.5 and 8.5) within the mid-century time period. The species would likely continue to be represented by Northern Plains and New England populations, but at least three populations and 59 percent of the existing range of the species are projected to be lost within the mid-century time period.

The effects of climate change, such as increasing temperatures, changes in precipitation, increased evaporative losses, and prolonged droughts, are known to stress and sometimes kill individual American burying beetles and, therefore, are likely to reduce reproductive success. Overall, we consider these factors threats to American burying beetle populations, but the impacts are currently limited to the southernmost parts of the range. However, future projections indicate that American burying beetles have a high risk of extirpation throughout the Southern Plains analysis areas and in large portions of the Northern Plains analysis areas due to these effects of climate change.

Finding and Proposed Determination

We have carefully assessed the best scientific and commercial information available regarding the past, present, and future threats to the American burying beetle. The American burying beetle was listed as endangered in 1989, due to the disappearance of the species across the vast majority of its known historical range, habitat changes, and competition for limited carrion resources. At the time of listing, only two highly disjunct populations of a formerly widespread species were known to be extant, one in New England and one in eastern Oklahoma.

We now know there are more populations over a much wider area relative to the time of listing. Since the time of listing, numerous searches and surveys have resulted in the discovery of additional American burying beetle occurrences in Oklahoma, Nebraska, Arkansas, Texas, Kansas, and South Dakota. However, some known populations are small and isolated, and populations in the monitored portions of the southernmost areas have declined in recent years. In some parts of the range (Nebraska, South Dakota, and Kansas), the species occurs almost exclusively on private land, presenting additional future risks for land use conversion leading to loss or fragmentation of previously suitable habitat. Several robust populations

occur on public lands or private conservation organization properties, but many protected lands supporting American burying beetles require ongoing management like prescribed fire or other measures to control invasion of woody vegetation to ensure the species' continued presence. Additionally, most of those protected areas are in southern areas, where increasing temperatures due to climate change are projected to cause extirpation sometime within the mid-century time period. Although we now know the species occurs in more locations than at the time of listing, extant American burying beetle populations vary in level of protected habitat, there is limited information on population trends and biological limiting factors for most populations, and all populations are exposed to a combination of risk factors. Further, although the threats to the species vary in scope and severity, some threats (such as those related to increasing temperatures) are difficult to avoid or minimize. Population viability in the only areas that are not threatened by climate changes, namely the New England Analysis Area, appears to be reliant to some degree upon continuing habitat management and/or provisioning of carrion.

We have determined that the American burying beetle's current viability is higher than was known at the time of listing. Based on the analysis in the SSA Report (Service 2019), and summarized information above, the Service concludes that the American burying beetle does not currently meet the definition of endangered under the Act because it is not presently in danger of extinction. Our analysis indicates that the overall viability of the species is not significantly impacted by the current rate of land use change or the existing level of habitat degradation or fragmentation. The species is currently represented by several populations with moderate to high resiliency that are distributed in several portions of the historical range.

The future status of the species was evaluated under increasing temperatures for three periods of time (years 2010–2039, 2040–2069, and 2070–2099). As described above, we defined those time periods, as such: “early century time period,” “mid-century time period,” and “late century time period,” respectively. According to both RCP 4.5 and 8.5 emissions scenarios, due to expected temperature increases, the species is likely to be extirpated from the Southern Plains analysis areas sometime within the mid-century time period. Furthermore, mean

maximum summer temperatures in the Northern Plains analysis areas approach 93–95 °F under the RCP 8.5 emissions scenario within the mid-century time period. About two-thirds of the Loess Canyons Analysis Area and small portions of the other two analysis areas in the Northern Plains would also be at risk of extirpation under this scenario. The projections of increasing temperatures are considered reliable; however, there is greater uncertainty in future projections of land use change and in the species' response to both increasing temperatures and changes in land use. We believe that the risk of extinction will increase significantly between 2040 and 2069, based primarily on the effects of projected temperature increases. The foreseeable future is uniquely related to population status, trends, and threats for the species in each analysis area, and there are varying degrees of foreseeability with respect to various threats. Due to the improved condition of the species' status since the time of listing and the increasing threats from increasing temperatures and ongoing land use changes, we find that the American burying beetle is not currently in danger of extinction, but is likely to become endangered within the foreseeable future throughout all of its range. Because we have found that the American burying beetle meets the definition of threatened under the Act, we propose to reclassify it from endangered to threatened on the Federal List of Endangered and Threatened Wildlife (List).

Significant Portion of the Range Analysis

Under the Act and our implementing regulations, a species may warrant listing if it is endangered or threatened throughout all or a significant portion of its range. Because we have determined that the American burying beetle is likely to become an endangered species within the foreseeable future throughout all of its range (*i.e.*, warrants listing as a threatened species), we find it unnecessary to proceed to an evaluation of potentially significant portions of the range. Where the best available information allows the Services to determine a status for the species rangewide, that determination should be given conclusive weight because a rangewide determination of status more accurately reflects the species' degree of imperilment and better promotes the purposes of the Act. Under this reading, we should first consider whether the species warrants listing “throughout all” of its range and proceed to conduct a “significant portion of its range” analysis if, and only if, a species does

not qualify for listing as either an endangered or a threatened species according to the “throughout all” language. We note that the court in *Desert Survivors v. Department of the Interior*, No. 16–cv–01165–JCS, 2018 WL 4053447 (N.D. Cal. Aug. 24, 2018), did not address this issue, and our conclusion is therefore consistent with the opinion in that case.

Therefore, on the basis of the best available scientific and commercial information, we propose to reclassify the American burying beetle as a threatened species across its entire range in accordance with sections 3(20) and 4(a)(1) of the Act.

Conclusion

Using the best available scientific and commercial information, we conclude that, while the American burying beetle is not currently in danger of extinction throughout all or a significant portion of its range, it is likely to become an endangered species within the foreseeable future throughout all of its range. In accordance with 50 CFR 424.11(c), we therefore propose to reclassify the American burying beetle as threatened on the Federal List of Endangered and Threatened Wildlife at 50 CFR 17.11(h).

Proposed 4(d) Rule

Under section 4(d) of the Act, the Service has discretion to issue regulations that we find necessary and advisable to provide for the conservation of threatened species. We may also prohibit by regulation, with respect to threatened wildlife, any act prohibited by section 9(a)(1) of the Act for endangered wildlife. When we establish a 4(d) rule, the general prohibitions in 50 CFR 17.31 for threatened species do not apply to the subject species, and the 4(d) rule contains all the prohibitions and exceptions that apply to the subject species. For the American burying beetle, the Service has developed a proposed 4(d) rule to respond to the specific threats and conservation needs of this species.

The proposed 4(d) rule would prohibit all intentional take of the American burying beetle. The proposed 4(d) rule would only prohibit incidental take of the species where the Service has determined such a prohibition is necessary and advisable for the conservation for the species. For example, take from a biologically insignificant threat would not be necessary and advisable to regulate whereas a factor that is a population driver would be necessary and advisable to regulate via a 4(d) rule. Incidental

take is defined as take that is incidental to, and not the purpose of, otherwise lawful activity.

The Service proposes to specifically tailor the prohibition of incidental take in each of the three geographic areas that the American burying beetle occupies. In the New England and Northern Plains analysis areas, incidental take would only be prohibited in suitable habitat when the take is the result of soil disturbance. Suitable habitat is defined, consistent with the SSA Report (Service 2019), as areas where suitable soils contain the appropriate abiotic elements (*e.g.*, soil temperature, soil moisture, particle size, etc.) that are favorable for excavation and formation of brood chambers and where appropriate carrion for reproduction is available. This suitable habitat accounts for breeding, feeding, overwintering, and dispersal needs. Areas that are regularly tilled, maintained through regular mowing, or urban areas with paved surfaces are examples of lands considered unfavorable for use by American burying beetles. Soil disturbance means movement or alteration of soil associated with modifying the existing land use. Soil disturbance includes actions such as grading, filling, soil excavating or topsoil stripping. Soil disturbance also includes non-physical alterations such as chemical treatment, including ground or soil sterilizers, and pesticides that would make the habitat unsuitable. However, typical agricultural levels of applications like liming or fertilizer should not affect American burying beetles, and we do not intend to regulate such practices.

Because incidental take stemming from normal livestock ranching and grazing activities is not expected to have an appreciable negative impact on the species, and retaining land uses associated with ranching or grazing (rather than converting the land to row crops) provides potential habitat for the species, we are proposing to allow any incidental take associated with ranching and grazing. Ranching and grazing means activities involved in grazing livestock (*e.g.*, cattle, bison, horse, sheep, goats or other grazing animals) such as: Gathering of livestock; construction and maintenance of fences associated with livestock grazing; installation and maintenance of corrals, loading chutes, and other livestock working facilities; development and maintenance of livestock watering facilities; placement of supplements such as salt blocks for grazing livestock; and, when associated with livestock grazing, the control of noxious weeds, haying, mowing, and prescribed

burning. Ranching and grazing does not include any form of tillage, conversion of grassland to cropland, or management of cropland. Overall, we find that ranching, grazing, and wildlife management activities, such as prescribed fire or invasive species control, is necessary and advisable to conserve the species.

In the Southern Plains analysis areas, incidental take would only be prohibited on certain conservation lands, as defined below under Proposed Regulation Promulgation. However, within these conservation lands, activities conducted in compliance with Service-approved conservation plans that result in take of the species would not be prohibited. For example, on conservation lands in the Southern Plains analysis areas managed by the Department of Defense, certain activities that result in incidental take would not be prohibited if those activities are in compliance with a Service-approved integrated natural resources management plan.

In addition to intentional take and some forms of incidental take, we also propose to prohibit activities related to possession and other acts with unlawfully taken American burying beetles, import and export of the species, activities related to shipping or delivering the species in interstate or foreign commerce, and the sale or offering to sell of the species. These activities are generally prohibited for endangered wildlife. We have determined that it is appropriate to extend the Act’s protections to these activities as well for the American burying beetle.

This proposed 4(d) rule tailors the Act’s protections to allow activities that only have minor or temporary effects and are unlikely to affect the resiliency of American burying beetle populations or viability of the species. The risks for American burying beetle populations are different for each region of the country, and risks that may be minor for one population could affect the resiliency of others. For example, urban expansion is a minor risk for larger populations in Nebraska and South Dakota, but is a substantial risk for the small Block Island population in Rhode Island. The proposed 4(d) rule includes protection of habitat related to soil disturbance activities on Block Island because suitable habitat is limited (only about 2,000 acres) and protecting habitat is necessary for the conservation of this population.

Although threats vary in type and degree across the American burying beetle’s range, those related to land use activities and climate change continue

to impact the species. Habitat loss or alteration related to land use activities is ongoing in all American burying beetle populations, but the impacts of these habitat losses is minor for most analysis areas with the exception of the Loess Canyons and New England populations. Climate change impacts are ongoing as well, and southern populations are projected to be extirpated within 20 to 30 years, as described above.

We recognize that many types of activities will impact suitable American burying beetle habitat, and application of prohibitions should also take into account the scope, scale, and magnitude of potential risks in American burying beetle habitat. We recognize that large intact areas of habitat are important for American burying beetle conservation. We seek public comment on the proposed 4(d) rule to ensure that proposed measures will effectively conserve the American burying beetle.

Provisions of the Proposed 4(d) Rule in the New England Analysis Area

Within the New England Analysis Area, we propose to only prohibit incidental take if it occurs in suitable habitat and is the result of soil disturbance, as defined below under Proposed Regulation Promulgation, which includes converting suitable habitat from an existing land use to a different land use. The species persistence in the New England Analysis Area is dependent upon active management occurring on two small coastal islands. There is a large percentage of land mass in the New England Analysis Area that is protected in some form, and American burying beetles occur on many lands with conservation easements, deed restrictions, or owned by conservation organizations; municipal, State, and Federal agencies; and private land trusts. However, existing land protections are not comprehensive for the American burying beetle. Given the varied missions of these landowners, the level of protection varies and may change over time. Although there may be some minimal level of take incidental to ranching and grazing, the effects of such land uses serve to maintain suitable habitat for the species. Therefore, prohibiting take from ranching and grazing is not necessary and advisable to conserve the species. Urban and suburban expansion and development activities can lead to soil disturbance that may lead to incidental take of the species. Habitat conversion further limits the habitat available to American burying beetles in the New England Analysis Area. The population

in the New England Analysis Area is proportionally more sensitive and vulnerable to impacts than the other analysis areas, because it is limited to two small coastal islands, and the species' persistence on one or both of the islands is likely dependent on management, particularly captive breeding, reintroduction, and the provisioning of carrion. Thus, urban and suburban expansion represent substantial risks to the future viability of the species in this area. Therefore, we have determined that prohibiting incidental take due to activities that cause soil disturbance, including suitable habitat conversion, is necessary and advisable to conserve the species. Limiting the prohibition to suitable habitat is sufficient as any beetles occupying unsuitable habitat would be very few in number and possibly either lost to the population or not of value to the population.

Provisions of the Proposed 4(d) Rule in the Northern Plains Analysis Areas

Within the Northern Plains analysis areas, we propose to only prohibit incidental take if it occurs in suitable habitat and is the result of soil disturbance, which includes converting habitat from an existing land use to a different land use, as defined below under Proposed Regulation Promulgation. The combined impacts of urban expansion and agriculture (primarily conversion to cropland) are expected to affect 5–15% of the suitable habitat in the Northern Plains (Service 2019). Thus, we find that urban expansion and agriculture land conversion to cropland (combined with other risks such as cedar expansion as discussed earlier in the proposed rule) represent risks to the future viability of the species in this area. Therefore, we have determined that prohibiting incidental take due to activities that cause soil disturbance, including suitable habitat conversion, is necessary and advisable to conserve the species.

However, incidental take that is the result of normal grazing and livestock activities would not be prohibited. In addition, activities by State or Federal government agencies related to wildlife management that result in incidental take of American burying beetles would not be prohibited. Grasslands in the Northern Plains support relatively high-density populations of American burying beetles that have high resiliency. Ranching, grazing, and wildlife management activities in this area are generally compatible with conservation of this species, as these land uses help maintain native grassland habitats (see chapters 4 and 5

in the SSA Report; Service 2019) important for American burying beetle conservation. Based on the analysis of climate change impacts in the SSA Report (Service 2019), we believe it is possible that the Northern Plains may support the only remaining self-sustaining populations with moderate or high resiliency by mid-century. Therefore, protecting existing habitat in the Northern Plains is important for the future viability of the species. Although there may be some minimal level of take incidental to ranching, grazing, and wildlife management activities, the effects of such land uses serve to maintain suitable habitat for the species and prevent more extensive soil disturbance than would occur with other land use changes such as farming or urban development.

Provisions of the Proposed 4(d) Rule in the Southern Plains Analysis Areas

Within the Southern Plains analysis areas on defined conservation lands, see below under Proposed Regulation Promulgation, incidental take is exempted if it occurs in compliance with a Service-approved management plan, such as an integrated natural resources management plan (INRMP), that includes conservation measures for the American burying beetle. Outside of defined conservation lands incidental take is not prohibited because the Southern Plains Analysis Area currently has low risks to the species associated with land development. The combined permanent loss of habitat projected due to urban and agricultural expansion is less than 2 percent (Service 2019).

Currently, conservation lands provide relatively large protected areas of habitat with good populations; these lands would potentially serve as sources of American burying beetles for relocation and reintroduction efforts in areas that are projected to have future climate conditions that would be expected to sustain the species. We propose to define "conservation lands" as lands included within the existing boundaries of Fort Chaffee in Arkansas (approximately 64,000 acres), and McAlester Army Ammunition Plant (approximately 45,000 acres), Camp Gruber/Cherokee Wildlife Management Area (approximately 64,000 acres), and The Nature Conservancy Tall Grass Prairie Preserve (approximately 40,000 acres) in Oklahoma. These areas have defined boundaries and management that is compatible with recovery for the American burying beetle; however, that management is not intentionally being conducted for American burying beetles and monitoring and management would likely cease at some sites without the

incidental take protections in place specific to the species. Active management and monitoring in these conservation lands is considered important to help support recovery by serving as source populations for relocation and reintroduction efforts of American burying beetle populations, for as long as they sustain beetle populations.

Land use changes such as urban development and conversion to agricultural lands that cause habitat loss and fragmentation are a minor risk in Southern Plains analysis areas. These activities are not considered a threat to the species in this area because the combined permanent loss of habitat projected due to urban and agricultural expansion is less than 2 percent of these large analysis areas and is unlikely to affect the viability of the species in these areas (Service 2019). Large areas of suitable habitat, combined with low levels of projected land use change, and relatively large areas of protected habitat indicate that impacts to habitat are not likely to affect the viability of the species in these areas.

Section 4(d) and Section 7 of the Act

Federal agencies would continue to be required to consult on all actions that may affect American burying beetles in all analysis areas; however, these consultations could likely be streamlined through a programmatic consultation for actions with incidental take that is not prohibited under the proposed 4(d) rule.

Permits for Threatened Wildlife

We may issue permits to carry out otherwise prohibited activities involving threatened wildlife under certain circumstances. Regulations governing permits are codified at 50 CFR 17.32. With regard to threatened wildlife, a permit may be issued for the following purposes: For scientific purposes, for the enhancement of propagation or survival, for economic hardship, for zoological exhibition, for educational purposes, or for special purposes consistent with the purposes of the Act. There are also certain statutory exemptions from the

prohibitions, which are found in sections 9 and 10 of the Act.

Questions regarding whether specific activities would constitute a violation of 50 CFR 17.47(c) should be directed to the Oklahoma Ecological Services Field Office (see **FOR FURTHER INFORMATION CONTACT**).

Effects of the Rule

This proposal, if made final, would revise 50 CFR 17.11(h) to reclassify the American burying beetle as threatened on the Federal List of Endangered and Threatened Wildlife and would revise 50 CFR 17.47 to codify the prohibitions and exceptions that would apply to the American burying beetle under the 4(d) rule. This proposal would not affect the designation of the nonessential experimental population in four counties in Missouri or the prohibitions established for that population. There is no critical habitat designated for this species; therefore, this proposed rule would not affect 50 CFR 17.95.

Required Determinations

Clarity of the Rule

We are required by Executive Orders 12866 and 12988 and by the Presidential Memorandum of June 1, 1998, to write all rules in plain language. This means that each rule we publish must:

- (1) Be logically organized;
- (2) Use the active voice to address readers directly;
- (3) Use clear language rather than jargon;
- (4) Be divided into short sections and sentences; and
- (5) Use lists and tables wherever possible.

If you feel that we have not met these requirements, send us comments by one of the methods listed in **ADDRESSES**. To better help us revise the rule, your comments should be as specific as possible. For example, you should tell us the numbers of the sections or paragraphs that are unclearly written, which sections or sentences are too long, the sections where you feel lists or tables would be useful, etc.

National Environmental Policy Act

We have determined that environmental assessments and

environmental impact statements, as defined under the authority of the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), need not be prepared in connection with regulations pursuant to section 4(a) of the Act. We published a notice outlining our reasons for this determination in the **Federal Register** on October 25, 1983 (48 FR 49244).

References Cited

A complete list of all references cited in this proposed rule is available at <http://www.regulations.gov> at Docket No. FWS-R2-ES-2018-0029, or upon request from the Oklahoma Ecological Services Field Office (see **FOR FURTHER INFORMATION CONTACT**).

Authors

The primary authors of this proposed rule are staff members of the Service's Oklahoma Ecological Services Field Office (see **FOR FURTHER INFORMATION CONTACT**).

List of Subjects in 50 CFR Part 17

Endangered and threatened species, Exports, Imports, Reporting and recordkeeping requirements, Transportation.

Proposed Regulation Promulgation

Accordingly, we propose to amend part 17, subchapter B of chapter I, title 50 of the Code of Federal Regulations, as set forth below:

PART 17—ENDANGERED AND THREATENED WILDLIFE AND PLANTS

- 1. The authority citation for part 17 continues to read as follows:

Authority: 16 U.S.C. 1361–1407; 1531–1544; and 4201–4245, unless otherwise noted.

- 2. Amend § 17.11(h) by revising the entry for “Beetle, American burying” under “INSECTS” in the List of Endangered and Threatened Wildlife to read as follows:

§ 17.11 Endangered and threatened wildlife.

* * * * *
(h) * * *

Common name	Scientific name	Where listed	Status	Listing citations and applicable rules
*	*	*	*	*
INSECTS				
*	*	*	*	*
Beetle, American burying.	<i>Nicrophorus americanus</i> .	Wherever found, except where listed as an experimental population.	T	54 FR 29652, 7/13/1989; [Federal Register citation of the final rule]; 50 CFR 17.47(c). ^{4d}

Common name	Scientific name	Where listed	Status	Listing citations and applicable rules
Beetle, American burying.	<i>Nicrophorus americanus</i> .	In southwestern Missouri, the counties of Cedar, St. Clair, Bates, and Vernon.	XN	77 FR 16712, 3/22/2012; 50 CFR 17.85(c). ¹⁰⁾
*	*	*	*	*

■ 3. Amend § 17.47 by adding paragraph (c) to read as follows:

§ 17.47 Special rules—insects.

* * * * *

(c) American burying beetle (*Nicrophorus americanus*).

(1) *Prohibitions.* The following prohibitions apply to the American burying beetle:

(i) Take of the American burying beetle, except that take that is incidental to otherwise lawful activity (incidental take) is only prohibited when the take occurs on suitable American burying beetle habitat:

(A) In the New England and Northern Plains Analysis Areas where the incidental take results from soil disturbance; or

(B) In the Southern Plains Analysis Areas where the incidental take occurs on defined conservation lands, except where incidental take is in compliance with a Service-approved conservation plan.

(ii) Possession and other acts with unlawfully taken American burying beetles.

(A) It is unlawful to possess, sell, deliver, carry, transport, or ship, by any means whatsoever, any American burying beetle that was taken in violation of paragraph (c)(1)(i) of this section or State law.

(B) Notwithstanding paragraph (c)(1)(ii)(A) of this section, Federal and State law enforcement officers may possess, deliver, carry, transport, or ship any American burying beetle taken in violation of the Act as necessary in performing their official duties.

(iii) Import and export of the American burying beetle.

(iv) Interstate or foreign commerce. It is unlawful to deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, and in the course of a commercial activity, the American burying beetle.

(v) Sale or offer for sale. It is unlawful to sell or to offer for sale in interstate or

foreign commerce any American burying beetle.

(2) *Exceptions from prohibitions.* (i) Any employee or agent of the Service or of a State conservation agency that is operating a conservation program pursuant to the terms of a cooperative agreement with the Service in accordance with section 6(c) of the Act, who is designated by his agency for such purposes, may, when acting in the course of his official duties, take American burying beetles, provided that, for State conservation agencies, the American burying beetle is covered by an approved cooperative agreement to carry out conservation programs.

(ii) Federal or State government agencies may incidentally take American burying beetles when conducting wildlife management activities in the Northern Plains Analysis Areas.

(iii) Incidental take of American burying beetles resulting from ranching and grazing activities is allowed.

(3) *Definitions.* For the purposes of this paragraph (c), we define the following terms:

(i) *Conservation lands* means lands included within the existing boundaries of Fort Chaffee in Arkansas (approximately 64,000 acres), and McAlester Army Ammunition Plant (approximately 45,000 acres), Camp Gruber/Cherokee Wildlife Management Area (approximately 64,000 acres), and The Nature Conservancy Tall Grass Prairie Preserve (approximately 40,000 acres) in Oklahoma.

(ii) *New England Analysis Area* means Block Island in Rhode Island and Nantucket Island in Massachusetts.

(iii) *Northern Plains Analysis Areas* means portions of Nebraska and South Dakota, as presented in the map at paragraph (c)(4) of this section, to initially include an 18.6-mile buffer around each capture location to determine the outside boundaries of the analysis area. For specific information regarding whether a parcel of land is

inside the Northern Plains Analysis Areas, contact your local Service ecological services field office. Field office contact information may be obtained from the Service regional offices, the addresses of which are listed at 50 CFR 2.2.

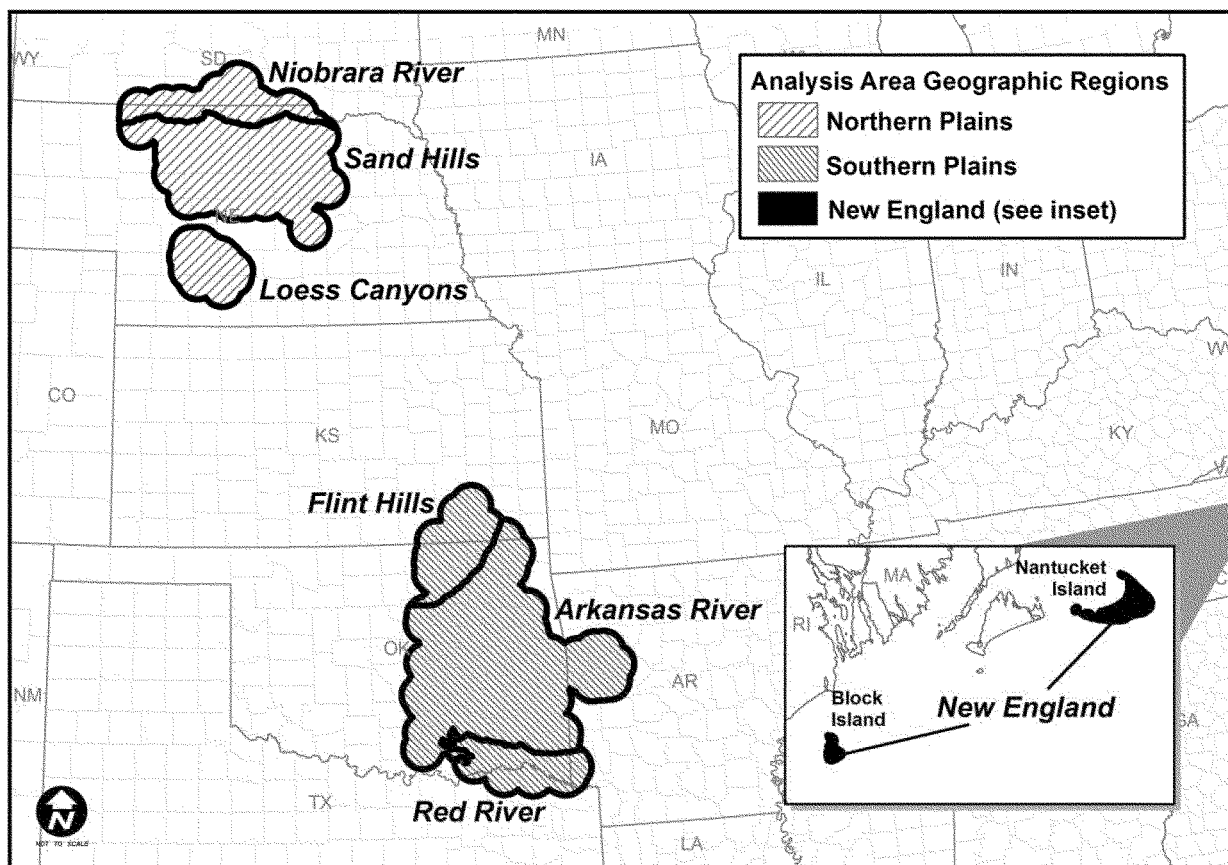

(iv) *Ranching and grazing* means activities involved in grazing livestock (e.g., cattle, bison, horse, sheep, goats, or other grazing animals) such as: Gathering of livestock; construction and maintenance of fences associated with livestock grazing; installation and maintenance of corrals, loading chutes, and other livestock working facilities; development and maintenance of livestock watering facilities; placement of supplements such as salt blocks for grazing livestock; and, when associated with livestock grazing, the control of noxious weeds, haying, mowing, and prescribed burning. Ranching and grazing does not include any form of farming, conversion of grassland to cropland, or management of cropland.

(v) *Soil disturbance* means movement or alteration of soil. Soil disturbance includes actions such as grading, filling, soil excavating or topsoil stripping. Soil disturbance also includes non-physical alterations such as chemical treatment.

(vi) *Southern Plains Analysis Areas* means portions of Arkansas, Kansas, Oklahoma, and Texas, as presented in the map at paragraph (c)(4) of this section, to initially include an 18.6-mile buffer around each capture location to determine the outside boundaries of the analysis area. For specific information regarding whether a parcel of land is inside the Southern Plains Analysis Areas, contact your local Service ecological services field office. Field office contact information may be obtained from the Service regional offices, the addresses of which are listed at 50 CFR 2.2.

(4) *Map of American Burying Beetle Analysis Areas.*

DEPARTMENT OF AGRICULTURE

Agricultural Research Service

Notice of Intent To Seek OMB Approval To Collect Information: Forms Pertaining to the Scientific Peer Preview of ARS Research Projects, Correction

AGENCY: Agricultural Research Service (ARS), USDA.

ACTION: Notice and request for comments; correction.

SUMMARY: The Agricultural Research Service published a document in the *Federal Register* of April 30, 2019 concerning request for comments on forms pertaining to the scientific peer preview of ARS research projects. The document was missing the collection title, OMB number and expiration date.

DATES: Written comments on this notice should be submitted on or before July 2, 2019.

ADDRESSES: All comments concerning this notice should be directed to the Director and Program Coordinator listed under **FOR FURTHER INFORMATION CONTACT**.

FOR FURTHER INFORMATION CONTACT: Dr. Marquee D. King, Director and Program Coordinator, Office of Scientific Quality Review (OSQR), Agricultural Research Service, 5601 Sunnyside Avenue, Beltsville, Maryland 20705; Telephone: 301-504-3283; Fax: 301-504-1251; email: marquee.king@usda.gov.

Correction

In the *Federal Register* of April 30, 2019, FR Doc. 2019-08689, on page 18236, under **SUPPLEMENTARY INFORMATION**, paragraph 1, should read as follows:

SUPPLEMENTARY INFORMATION:

Title: Peer Review Related Forms for the Office of Scientific Review.

OMB Number: 0518-0028

Expiration Date: June 30, 2019.

The OSQR will seek approval from OMB to update six existing forms to ensure that ARS can efficiently manage data associated with the peer review of agricultural research. All forms are transferred and received electronically and may include on-line submissions in the future.

Dated: April 30, 2019.

Yvette Anderson,

Federal Register Liaison Officer for ARS, ERS, NASS.

BILLING CODE 3410-03-P

DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service

[Docket No. APHIS-2019-0009]

General Conference Committee of the National Poultry Improvement Plan; Meeting

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Notice of meeting.

SUMMARY: We are giving notice of a meeting of the General Conference Committee of the National Poultry Improvement Plan.

DATES: The General Conference Committee meeting will be held on June 13, 2019, from 7:30 a.m. to 12:30 p.m.

ADDRESSES: The meeting will be held at the Sheraton Albuquerque Uptown, 2600 Louisiana Boulevard NE, Albuquerque, NM 87110.

FOR FURTHER INFORMATION CONTACT: Dr. Denise Heard, Senior Coordinator, National Poultry Improvement Plan, VS, APHIS, USDA, 1506 Klondike Road, Suite 101, Conyers, GA 30094; (770) 922-3496.

SUPPLEMENTARY INFORMATION: The General Conference Committee (the Committee) of the National Poultry Improvement Plan (NPIP), representing cooperating State agencies and poultry industry members, serves an essential function by acting as liaison between the poultry industry and the Department in matters pertaining to poultry health.

Topics for discussion at the upcoming meeting include:

1. NPIP approval of new diagnostic tests.
2. National Veterinary Services Laboratories avian influenza update.

3. Salmonella update.

4. Mycoplasma update.

The meeting will be open to the public. However, public participation in discussions during the session will only be allowed if time permits. Written statements may be filed at the meeting or filed with the Committee before or after the meeting by sending them to the person listed under **FOR FURTHER INFORMATION CONTACT**. Please refer to Docket No. APHIS-2019-0009 when submitting your statements.

This notice of meeting is given pursuant to section 10 of the Federal Advisory Committee Act (5 U.S.C. App. 2).

Done in Washington, DC, this 29th day of April 2019.

Kevin Shea,

Administrator, Animal and Plant Health Inspection Service.

BILLING CODE 3410-34-P

DEPARTMENT OF AGRICULTURE

Food and Nutrition Service

Agency Information Collection Activities: Information Collection; Comment Request—CACFP National Disqualified List

AGENCY: Food and Nutrition Service (FNS), USDA.

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice invites the general public and public agencies to comment on a proposed information collection. This collection is an extension, without change, of a currently approved collection for maintaining the National Disqualified List of institutions, day care home providers, and individuals that have been terminated or otherwise disqualified from Child and Adult Care Food Program (CACFP) participation. These federal requirements affect eligibility under the CACFP. The State Agencies are required to enter data as institutions and individuals become disqualified from participating in the CACFP. The collection is the result of a FNS web-based system constructed to update and maintain the list of disqualified institutions and individuals so that no State agency or sponsoring organization may approve any entity on

the National Disqualified List to ensure the integrity of the Program.

DATES: Written comments must be received on or before July 2, 2019.

ADDRESSES: Comments may be sent to: Sarah Smith-Holmes, Director, Program Monitoring and Operational Support Branch, Child Nutrition Division, Food and Nutrition Service, U.S. Department of Agriculture, 3101 Park Center Drive, Room 630, Alexandria, Virginia 22302 or via phone: (703) 605-3223.

Comments may also be submitted via fax to the attention of Sarah Smith-Holmes at (703) 605-4016. Comments will also be accepted through the Federal eRulemaking Portal. Go to <http://www.regulations.gov>, and follow the online instructions for submitting comments electronically.

All responses to this notice will be summarized and included in the request for Office of Management and Budget (OMB) approval, and will become a matter of public record.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of this information collection should be directed to Sarah Smith-Holmes (703) 605-3223.

SUPPLEMENTARY INFORMATION: Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the

agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions that were used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, including use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Title: CACFP National Disqualified List.

Form Number: FNS-843 and FNS-844.

OMB Number: 0584-0584.

Expiration Date: 11/30/2019.

Type of Request: Extension, without change, of a currently approved collection.

Abstract: The Food and Nutrition Service administers the Child Nutrition Act of 1966, as amended (42 U.S.C. 1771, *et seq.*). Section 243(c) of Public Law 106-224, the Agricultural Risk Protection Act of 2000, amended section 17(d)(5) of the Richard B. Russell National School Lunch Act (42 U.S.C. 1766(d)(5)(E)(i) and (ii)) by requiring the Department of Agriculture to maintain a list of institutions, day care home providers, and individuals that have been terminated or otherwise disqualified from Child and Adult Care Food Program participation. The law

also requires the Department to make the list available to State agencies for their use in reviewing applications to participate and to sponsoring organizations to ensure that they do not employ as principals any persons who are disqualified from the program. Forms FNS-843 Report of Disqualification from Participation—Institutions and Responsible Principals/Individuals and FNS-844 Report of Disqualification from Participation—Individually Disqualified Responsible Principal/Individual or Day Care Home Provider are used to collect and maintain this data. This statutory mandate has been incorporated into § 226.6(c)(7) of the Program regulations. In addition, the recordkeeping burden associated with maintaining documentation related to institutions and providers terminated for cause at the State agency level is captured under the Information Collection for the CACFP OMB Control Number 0584-0055 Child and Adult Care Food Program, expiration date 2/29/2020. Therefore, there is no recordkeeping burden associated with this collection.

Affected Public: State Agencies.

Estimated Number of Respondents: 56.

Estimated Number of Responses per Respondent: 28.

Estimated Total Annual Responses: 1,568.

Estimate Time per Response: 0.50.

Estimated Total Annual Burden: 784.

Affected public	Instrument	Estimated number of respondents	Number of responses per respondent	Total annual responses	Estimated total hours per response	Estimated total burden

BILLING CODE 3410-30-P

DEPARTMENT OF AGRICULTURE

Forest Service

Southeast Washington Resource Advisory Committee

AGENCY: Forest Service, USDA.

ACTION: Notice of meeting.

SUMMARY: The Southeast Washington Resource Advisory Committee (RAC)

will meet in Pomeroy, Washington. The committee is authorized under the Secure Rural Schools and Community Self-Determination Act (the Act) and operates in compliance with the Federal Advisory Committee Act. The purpose of the committee is to improve collaborative relationships and to provide advice and recommendations to the Forest Service concerning projects and funding consistent with Title II of the Act.

DATES: The meeting will be held on May 22, 2019, at 6 p.m.

All RAC meetings are subject to cancellation. For status of meeting prior to attendance, please contact the person

listed under **FOR FURTHER INFORMATION CONTACT.**

ADDRESSES: The meeting will be held at the Pomeroy Ranger District Office, 71 West Main Street, Pomeroy, Washington.

Written comments may be submitted as described under **SUPPLEMENTARY INFORMATION.** All comments, including names and addresses when provided, are placed in the record and are available for public inspection and copying. The public may inspect comments received at Pomeroy Ranger District, 71 West Main Street, Pomeroy, Washington. Please call ahead at 509-843-4620 to facilitate entry into the building.

FOR FURTHER INFORMATION CONTACT:

Monte Fujishin, RAC Designated Federal Official, USDA Umatilla National Forest, Pomeroy Ranger District, 71 West Main Street, Pomeroy, Washington 99347, by phone at 509-843-4620; or by email at mfujishin@fs.fed.us.

Individuals who use telecommunication devices for the deaf (TDD) may call the Idaho Washington Relay Service at 1-800-377-3529, 24 hours a day, 365 days a year, Mountain Standard Time. Please make requests in advance for sign language interpreting, assistive listening devices or other reasonable accommodation for access to the facility or proceedings by contacting the person listed above.

SUPPLEMENTARY INFORMATION: The purpose of the meeting is to:

- (1) Review past projects and progress of continuing projects,
- (2) Discuss and select proposed projects and participants, and
- (3) Discuss public comments.

The meeting is open to the public. The agenda will include time for people to make oral statements of three minutes or less. Individuals wishing to make an oral statement should request in writing by May 17, 2019, to be scheduled on the agenda. Anyone who would like to bring related matters to the attention of the committee may file written statements with the committee staff before or after the meeting. Written comments and requests for time for oral comments must be sent to Monte Fujishin, RAC Designated Federal Official, USDA Umatilla National Forest, Pomeroy Ranger District, 71 West Main Street, Pomeroy, WA 99347; by email to mfujishin@fs.fed.us, or via facsimile to 509-843-4621.

Meeting Accommodations: If you are a person requiring reasonable accommodation, please make requests in advance for sign language interpreting, assistive listening devices, or other reasonable accommodation. For access to the facility or proceedings, please contact the person listed in the section titled **FOR FURTHER INFORMATION CONTACT**. All reasonable accommodation requests are managed on a case by case basis.

Dated: April 16, 2019.

Allen Rowley,

Acting Associate Deputy Chief, National Forest System.

BILLING CODE 3411-15-P

DEPARTMENT OF AGRICULTURE**Forest Service****Alabama Resource Advisory Committee**

AGENCY: Forest Service, USDA.

ACTION: Notice of meeting.

SUMMARY: The Alabama Resource Advisory Committee (RAC) will meet in Montgomery, Alabama. The committee is authorized under the Secure Rural Schools and Community Self-Determination Act (the Act) and operates in compliance with the Federal Advisory Committee Act. The purpose of the committee is to improve collaborative relationships and to provide advice and recommendations to the Forest Service concerning projects and funding consistent with Title II of the Act. RAC information, including the meeting summary/minutes can be found at the following website: <https://www.fs.usda.gov/main/alabama/workingtogether/advisorycommittees>.

DATES: The meeting will be held Friday, June 7, 2019, from 10:00 a.m. to 12:00 p.m. All RAC meetings are subject to cancellation. For status of the meeting prior to attendance, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

ADDRESSES: The meeting will be held at the USDA Forest Service Supervisor's Office, Downstairs Conference Room, 2946 Chestnut Street, Montgomery, Alabama.

The meeting will be held via teleconference. For anyone who would like to attend by teleconference, please visit the website listed in the **SUMMARY** section or contact Lisa Kamnikar at lkamnikar@fs.fed.us or Tammy Freeman Brown at tfreemanbrown@fs.fed.us.

Written comments may be submitted as described under **SUPPLEMENTARY INFORMATION**. All comments, including names and addresses when provided, are placed in the record and are available for public inspection and copying. The public may inspect comments received at the USDA Forest Service Supervisor's Office, 2946 Chestnut Street, Montgomery, Alabama. Please call ahead to facilitate entry into the building.

FOR FURTHER INFORMATION CONTACT: Lisa Kamnikar, Alabama RAC Coordinator, by phone at (334) 832-4470 ext. 114 or via email at lkamnikar@fs.fed.us or Tammy Freeman Brown, DFO, by phone (334) 832-4470 ext. 144 or via email at tfreemanbrown@fs.fed.us.

Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information

Relay Service (FIRS) at 1-800-877-8339 between 8:00 a.m. and 8:00 p.m., Eastern Standard Time, Monday through Friday.

SUPPLEMENTARY INFORMATION: The purpose of the meeting is to:

1. Discuss mission and operating guidelines, and chairman responsibilities,
2. discuss the status of current approved projects, and
3. discuss Title II funding amounts and processes for project recommendation.

The meeting is open to the public. The agenda will include time for people to make oral statements of three minutes or less. Individuals wishing to make an oral statement should request in writing by May 31, 2019, to be scheduled on the agenda. Anyone who would like to bring related matters to the attention of the committee may file written statements with the committee staff before or after the meeting. Written comments and requests for time to make oral comments must be sent to Lisa Kamnikar, Alabama RAC Coordinator, 2946 Chestnut Street, Montgomery, Alabama 36107; by email to lkamnikar@fs.fed.us, or via facsimile to (334) 241-8111.

Meeting Accommodations: If you are a person requiring reasonable accommodation, please make requests in advance for sign language interpreting, assistive listening devices or other reasonable accommodation. For access to the facility or proceedings, please contact the person listed in the section titled **FOR FURTHER INFORMATION CONTACT**. All reasonable accommodation requests are managed on a case by case basis.

Dated: March 25, 2019.

BILLING CODE P

DEPARTMENT OF COMMERCE**Foreign-Trade Zones Board**

[B-28-2019]

Foreign-Trade Zone (FTZ) 38—Spartanburg County, South Carolina; Notification of Proposed Production Activity; Michelin North America, Inc. (Tire Assemblies, Wheel Assemblies, Tire Pressure Monitor Systems), Woodruff and Laurens, South Carolina

Michelin North America, Inc. (MNAI) submitted a notification of proposed production activity to the FTZ Board for its facilities in Woodruff and Laurens, South Carolina. The notification conforming to the requirements of the regulations of the FTZ Board (15 CFR 400.22) was received on April 8, 2019.

MNAI already has authority to produce certain wheel assemblies (duty rate—2.5%) within Subzone 38L and Site 5 of FTZ 38. The current request would add finished products and foreign-status materials/components to the scope of authority. Pursuant to 15 CFR 400.14(b), additional FTZ authority would be limited to the specific foreign-status materials/components and specific finished products described in the submitted notification (as described below) and subsequently authorized by the FTZ Board.

Production under FTZ procedures could exempt MNAI from customs duty payments on the foreign-status materials/components used in export production. On its domestic sales, for the foreign-status materials/components noted below and in the existing scope of authority, MNAI would be able to choose the duty rates during customs entry procedures that apply to: Rubber tire assemblies for motor cars; rubber tire assemblies for buses and trucks; rubber tire assemblies for aircraft; rubber tire assemblies for motorcycles; rubber tires assemblies for bicycles; rubber tire assemblies for agricultural or forestry vehicles and machines; rubber tire assemblies for construction, mining or industrial handling vehicles; rubber tire assemblies for all-terrain vehicles, golf carts, trailers, lawn and garden equipment, and tactical vehicles; airless skid steer loader tire assemblies; airless mower tire assemblies; wheel assemblies for tram and rail vehicles; airless golf cart tire assemblies; wheel assemblies for aircraft; and, tire pressure monitor systems (duty rates range from duty free to 4%). MNAI would be able to avoid duty on foreign-status components which become scrap/waste. Customs duties also could possibly be deferred or reduced on foreign-status production equipment.

The materials/components sourced from abroad include: Rubber aircraft tires; rubber motorcycle tires; rubber bicycle tires; rubber tires for mining equipment; rubber tires for all-terrain vehicles, golf carts, trailers, lawn and garden equipment, and tactical vehicles; rubber tire tubes; airless skid steer loader tires; hub adapter kits for skid steer loaders; airless mower tires; hub adapter kits for mowers; antennas; airless golf cart tires; hub adapter kits for golf carts; aircraft wheels; and, tire pressure monitor systems (duty rate ranges from duty free to 4%). The request indicates that mining equipment tires are subject to an antidumping/countervailing duty (AD/CVD) order if imported from certain countries. The FTZ Board's regulations (15 CFR 400.14(e)) require that merchandise subject to AD/CVD orders, or items which would be otherwise subject to suspension of liquidation under AD/CVD procedures if they entered U.S. customs territory, be admitted to the zone in privileged foreign status (19 CFR 146.41). The request also indicates that certain materials/components are subject to special duties under Section 301 of the Trade Act of 1974 (Section 301), depending on the country of origin. The applicable Section 301 decisions require subject merchandise to be admitted to FTZs in privileged foreign status.

Public comment is invited from interested parties. Submissions shall be addressed to the Board's Executive Secretary at the address below. The closing period for their receipt is June 12, 2019.

A copy of the notification will be available for public inspection at the Office of the Executive Secretary, Foreign-Trade Zones Board, Room 21013, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230-0002, and in the "Reading Room" section of the Board's website, which is accessible via www.trade.gov/ftz.

For further information, contact Diane Finver at Diane.Finver@trade.gov or (202) 482-1367.

Dated: April 26, 2019.

Andrew McGilvray,
Executive Secretary.

BILLING CODE 3510-DS-P

DEPARTMENT OF COMMERCE**International Trade Administration**

[A-570-079]

Cast Iron Soil Pipe From the People's Republic of China: Antidumping Duty Order

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: Based on affirmative final determinations by the Department of Commerce (Commerce) and the International Trade Commission (ITC), Commerce is issuing the antidumping duty (AD) order on cast iron soil pipe from the People's Republic of China (China).

DATES: Effective May 3, 2019.

FOR FURTHER INFORMATION CONTACT: Javier Barrientos at (202) 482-2243, AD/CVD Operations, Office V, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230.

SUPPLEMENTARY INFORMATION:**Background**

In accordance with sections 735(d) and 777(i) of the Tariff Act of 1930, as amended (Act), and 19 CFR 351.210(c), on February 28, 2019, Commerce published its affirmative final determination in the less than fair value investigation of cast iron soil pipe from China.¹

On April 8, 2019, the ITC notified Commerce of its final affirmative determination that an industry in the United States is materially injured within the meaning of section 735(b)(1)(A)(i) of the Act, by reason of imports of subject merchandise from China.²

Scope of the Order

The scope of this order covers cast iron soil pipe from China. For a complete description of the scope, see the Appendix to this notice.

Antidumping Duty Order

On April 8, 2019, in accordance with section 735(d) of the Act, the ITC notified Commerce of its final

determination that an industry in the United States is materially injured within the meaning of section 735(b)(1)(A)(i) of the Act by reason of imports of cast iron soil pipe from China.³ Therefore, in accordance with sections 735(c)(2) and 736 of the Act, Commerce is issuing this AD order. Because the ITC determined that imports of cast iron soil pipe from China are materially injuring a U.S. industry, unliquidated entries of such merchandise from China, entered or withdrawn from warehouse for consumption, are subject to the assessment of antidumping duties.

As a result of the ITC's final determination, in accordance with section 736(a)(1) of the Act, Commerce will direct U.S. Customs and Border Protection (CBP) to assess, upon further instruction by Commerce, antidumping duties equal to the amount that normal value exceeds export price (or constructed export price) of the subject merchandise for all relevant entries of cast iron soil pipe from China. Antidumping duties will be assessed on unliquidated entries of cast iron soil pipe from China entered, or withdrawn from warehouse, for consumption on or after August 31, 2018, the date of publication of the *Preliminary Determination*,⁴ but will not include entries occurring after the expiration of the provisional measures period and before publication of the ITC's final affirmative injury determination as further described below.

Suspension of Liquidation

In accordance with section 736 of the Act, we will instruct CBP to reinstitute suspension of liquidation on all relevant entries of cast iron soil pipe from China, effective on the date of publication of the ITC's notice of final determination in the **Federal Register**, and to assess, upon further instruction by Commerce pursuant to section 736(a)(1) of the Act,⁵ antidumping duties for each entry of the subject merchandise equal to the amount that normal value exceeds export price (or constructed export price) for the subject merchandise. These instructions suspending liquidation will remain in effect until further notice. Commerce will also

instruct CBP to require cash deposits equal to the amounts as indicated below. Accordingly, effective on the date of publication of the ITC's final affirmative injury determination, CBP will require, at the same time as importers would normally deposit estimated duties on this subject merchandise, a cash deposit equal to the antidumping duty rates listed below.⁶ As stated in the *Final Determination*, Commerce made no adjustments for export subsidies to the antidumping cash deposit rate.

Provisional Measures

Section 733(d) of the Act states that instructions issued pursuant to an affirmative preliminary determination may not remain in effect for more than four months, except where exporters representing a significant proportion of exports of the subject merchandise request Commerce to extend that four-month period to no more than six months. At the request of mandatory respondent, HengTong Casting Co., Ltd., who accounts for a significant proportion of cast iron soil pipe from China, Commerce extended the four-month period to six months in this case.⁷ Commerce published its *Preliminary Determination* on August 31, 2018. Therefore, the extended period, beginning on the date of publication of the *Preliminary Determination*, ended on February 27, 2019. Furthermore, section 737(b) of the Act states that definitive duties are to begin on the date of publication of the ITC's final injury determination.

Therefore, in accordance with section 733(d) of the Act and our practice, we will instruct CBP to terminate the suspension of liquidation and to liquidate, without regard to antidumping duties, unliquidated entries of cast iron soil pipe from China entered, or withdrawn from warehouse, for consumption on or after February 27, 2019, the date the provisional measures expired, through the day preceding the date of publication of the ITC's final injury determination in the **Federal Register**. Suspension of liquidation will resume on the date of publication of the ITC's final determination in the **Federal Register**.

Notifications to Interested Parties

This notice constitutes the antidumping duty order with respect to cast iron soil pipe from China pursuant to section 736(a) of the Act. Interested parties can find a list of antidumping duty orders currently in effect at <http://enforcement.trade.gov/stats/iastats1.html>.

This order is issued and published in accordance with section 736(a) of the Act and 19 CFR 351.211(b).

Dated: April 26, 2019.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

Appendix

Scope of the Order

The merchandise covered by this order is cast iron soil pipe, whether finished or unfinished, regardless of industry or proprietary specifications, and regardless of wall thickness, length, diameter, surface finish, end finish, or stenciling. The scope of this order includes, but is not limited to, both hubless and hub and spigot cast iron soil pipe. Cast iron soil pipe is nonmalleable iron pipe of various designs and sizes. Cast iron soil pipe is generally distinguished from other types of nonmalleable cast iron pipe by the manner in which it is connected to cast iron soil pipe fittings.

Cast iron soil pipe is classified into two major types—hubless and hub and spigot. Hubless cast iron soil pipe is manufactured without a hub, generally in compliance with Cast Iron Soil Pipe Institute (CISPI) specification 301 and/or American Society

for Testing and Materials (ASTM) specification A888, including any revisions to those specifications. Hub and spigot pipe has one or more hubs into which the spigot (plain end) of a fitting is inserted. All pipe meeting the physical description set forth above is covered by the scope of this order, whether or not produced according to a particular standard.

The subject imports are currently classified in subheading 7303.00.0030 of the Harmonized Tariff Schedule of the United States (HTSUS): Cast iron soil pipe. The HTSUS subheading and specifications are provided for convenience and customs purposes only; the written description of the scope of this order is dispositive.

Polyester Textured Yarn From India: Preliminary Affirmative Countervailing Duty Determination, and Alignment of Final Determination With Final Antidumping Duty Determination

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) preliminarily determines that countervailable subsidies are being provided to producers and exporters of

polyester textured yarn (yarn) from India for the period of investigation (POI) April 1, 2017 through March 31, 2018. Interested parties are invited to comment on this preliminary determination.

DATES: Effective May 3, 2019.

FOR FURTHER INFORMATION CONTACT: Janae Martin or Jesus Saenz AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482-0238 or (202) 482-8184, respectively.

SUPPLEMENTARY INFORMATION:

Background

This preliminary determination is made in accordance with section 703(b) of the Tariff Act of 1930, as amended (the Act). Commerce published the notice of initiation of this investigation on November 19, 2018.¹

On February 1, 2019, pursuant to a request from the Unifi Manufacturing, Inc. and Nan Ya Plastics Corporation, America (the petitioners),² Commerce

¹ See *Polyester Textured Yarn from India and the People's Republic of China: Initiation of Countervailing Duty Investigations*, 83 FR 58232 (November 19, 2018) (*Initiation Notice*).

² See Letter, "Countervailing Duty Investigation of Polyester Textured Yarn from India—Petitioners' Request to Postpone Preliminary Determination," dated December 10, 2018.

postponed the preliminary determination of this investigation to March 18, 2019.³ Commerce exercised its discretion to toll all deadlines affected by the partial federal government closure from December 22, 2018, through the resumption of operations on January 29, 2019.⁴ If the new deadline falls on a non-business day, in accordance with Commerce's practice, the deadline will become the next business day. The revised deadline for the preliminary determination is now April 26, 2019.

For a complete description of the events that followed the initiation of this investigation, see the Preliminary Decision Memorandum.⁵ A list of topics discussed in the Preliminary Decision Memorandum is included as Appendix II to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <http://access.trade.gov>, and is available to all parties in the Central Records Unit, room B8024 of the main Department of Commerce building. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at <http://enforcement.trade.gov/frn/>. The signed and electronic versions of the Preliminary Decision Memorandum are identical in content.

Scope of the Investigation

The product covered by this investigation is polyester textured yarn from India. For a complete description of the scope of this investigation, see Appendix I and "Scope Comments" section below.

Scope Comments

In accordance with the preamble to Commerce's regulations,⁶ the *Initiation Notice* set aside a period of time for

³ See *Polyester Textured Yarn from India and the People's Republic of China: Postponement of Preliminary Determinations in the Countervailing Duty Investigations*, 84 FR 1062 (February 1, 2019).

⁴ See Memorandum to the Record from Gary Taverman, Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations for Enforcement and Compliance, "Deadlines Affected by the Partial Shutdown of the Federal Government," dated January 28, 2019. All deadlines in this segment of the proceeding have been extended by 40 days.

⁵ See Memorandum, "Decision Memorandum for the Preliminary Affirmative Determination: Countervailing Duty Investigation of Polyester Textured Yarn from India," dated concurrently with, and hereby adopted by, this notice (Preliminary Decision Memorandum).

⁶ See *Antidumping Duties; Countervailing Duties, Final Rule*, 62 FR 27296, 27323 (May 19, 1997).

parties to raise issues regarding product coverage (*i.e.*, scope).⁷ Certain interested parties commented on the scope of the investigation as it appeared in the *Initiation Notice*. For a summary of the product coverage comments and responses submitted to the record for this preliminary determination, and accompanying discussion and analysis of all comments timely received, see the Preliminary Scope Decision Memorandum.⁸ Commerce is preliminarily modifying the scope language as it appeared in the *Initiation Notice* to exclude bulk continuous filament yarn. See revised scope in Appendix I.

Methodology

Commerce is conducting this investigation in accordance with section 701 of the Act. For each of the subsidy programs found countervailable, Commerce preliminarily determines that there is a subsidy, *i.e.*, a financial contribution by an "authority" that confers a benefit to the recipient, and that the subsidy is specific.⁹ In making these findings, Commerce relied, in part, on facts available and, because it finds that certain respondents did not act to the best of their ability to respond to Commerce's requests for information, it drew an adverse inference where appropriate in selecting from among the facts otherwise available.¹⁰ For a full description of the methodology underlying our preliminary conclusions, see the Preliminary Decision Memorandum.

Alignment

In accordance with section 705(a)(1) of the Act and 19 CFR 351.210(b)(4), Commerce is aligning the final countervailing duty determination in this investigation with the final determination in the companion antidumping duty investigation of polyester textured yarn from India, based on a request made by the petitioners.¹¹ Consequently, the final countervailing duty determination will be issued on the same date as the final antidumping determination, which is

⁷ See *Initiation Notice*.

⁸ See Memorandum, "Polyester Textured Yarn from India and the People's Republic of China: Scope Comments Decision Memorandum for the Preliminary Determinations," dated concurrently with this notice (Preliminary Scope Decision Memorandum).

⁹ See sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

¹⁰ See sections 776(a) and (b) of the Act.

¹¹ See Petitioners' letter, "Polyester Textured Yarn from China and India—Petitioners' Request to Align the Department's Final Determinations," dated March 29, 2019.

currently scheduled to be issued no later than September 9, 2019, unless postponed.

All-Others Rate

Sections 703(d)(1)(A)(i) and 705(c)(5)(A) of the Act provide that, in the preliminary determination, Commerce shall determine an estimated all-others rate for companies not individually examined. This rate shall be an amount equal to the weighted average of the estimated subsidy rates established for those companies individually examined, excluding any zero and *de minimis* rates and any rates based entirely under section 776 of the Act.

In this investigation, Commerce preliminarily calculated individual estimated countervailable subsidy rates for JBF Industries Limited (JBF) and Reliance Industries Limited (Reliance). Therefore, Commerce calculated the all-others rate using a weighted average of the individual estimated subsidy rates calculated for JBF and Reliance using each company's reported sales values¹² for the merchandise under consideration.

Preliminary Determination

Commerce preliminarily determines that the following estimated countervailable subsidy rates exist:

Company	Subsidy rate (percent)
JBF Industries Limited	20.45
Reliance Industries Limited ..	7.09
All Others	13.82

Suspension of Liquidation

In accordance with section 703(d)(1)(B) and (d)(2) of the Act, Commerce will direct U.S. Customs and Border Protection (CBP) to suspend liquidation of entries of subject merchandise as described in the scope of the investigation section entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice in the **Federal Register**. Further, pursuant to 19 CFR 351.205(d), Commerce will instruct CBP to require a cash deposit equal to the rates indicated above.

Disclosure

Commerce intends to disclose its calculations and analysis performed to interested parties in this preliminary determination within five days of its public announcement, or if there is no public announcement, within five days

¹² Both companies reported their respective sales values as public information.

of the date of this notice in accordance with 19 CFR 351.224(b).

Verification

As provided in section 782(i)(1) of the Act, Commerce intends to verify the information relied upon in making its final determination.

Public Comment

As stated in the Preliminary Scope Decision Memorandum, all interested parties will have the opportunity to submit case and rebuttal briefs on the preliminary scope determination.¹³ The deadline for these comments will be established in the **Federal Register** notice regarding the preliminary determination of the companion antidumping duty investigation of polyester textured yarn from India to be issued at a later date.

Case briefs or other written comments, not pertaining to scope issues, may be submitted to the Assistant Secretary for Enforcement and Compliance no later than seven days after the date on which the last verification report is issued in this investigation. Rebuttal briefs, limited to issues raised in case briefs, may be submitted no later than five days after the deadline date for case briefs.¹⁴ Pursuant to 19 CFR 351.309(c)(2) and (d)(2), parties who submit case briefs or rebuttal briefs in this investigation are encouraged to submit with each argument: (1) A statement of the issue; (2) a brief summary of the argument; and (3) a table of authorities.

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing, limited to issues raised in the case and rebuttal briefs, must submit a written request to the Assistant Secretary for Enforcement and Compliance, U.S. Department of Commerce within 30 days after the date of publication of this notice. Requests should contain the party's name, address, and telephone number, the number of participants, whether any participant is a foreign national, and a list of the issues to be discussed. If a request for a hearing is made, Commerce intends to hold the hearing at the U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230, at a time and date to be determined. Parties should confirm by telephone the date, time, and location of the hearing two days before the scheduled date.

Parties are reminded that briefs and hearing requests are to be filed

electronically using ACCESS and that electronically filed documents must be received successfully in their entirety by 5 p.m. Eastern Time on the due date.

International Trade Commission Notification

In accordance with section 703(f) of the Act, Commerce will notify the International Trade Commission (ITC) of its determination. Pursuant to section 705(b)(2) of the Act, if the final determination is affirmative, the ITC will make its final injury determination before the later of 120 days after the date of this preliminary determination or 45 days after the final determination.

Notification to Interested Parties

This determination is issued and published pursuant to sections 703(f) and 777(i) of the Act and 19 CFR 351.205(c).

Dated: April 26, 2019.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

Appendix

Scope of the Investigation

The merchandise covered by this investigation, polyester textured yarn, is synthetic multifilament yarn that is manufactured from polyester (polyethylene terephthalate). Polyester textured yarn is produced through a texturing process, which imparts special properties to the filaments of the yarn, including stretch, bulk, strength, moisture absorption, insulation, and the appearance of a natural fiber. This scope includes all forms of polyester textured yarn, regardless of surface texture or appearance, yarn density and thickness (as measured in denier), number of filaments, number of plies, finish (luster), cross section, color, dye method, texturing method, or packing method (such as spindles, tubes, or beams).

Excluded from the scope of this investigation is bulk continuous filament yarn that: (a) Is polyester synthetic multifilament yarn; (b) has denier size ranges of 900 and above; (c) has turns per meter of 40 and above; and (d) has a maximum shrinkage of 2.5 percent.

The merchandise subject to this investigation is properly classified under subheadings 5402.33.3000 and 5402.33.6000 of the Harmonized Tariff Schedule of the United States (HTSUS). Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of the investigation is dispositive.

BILLING CODE 3510-DS-P

DEPARTMENT OF COMMERCE

International Trade Administration

Meeting of the Civil Nuclear Trade Advisory Committee

AGENCY: International Trade Administration, U.S. Department of Commerce.

ACTION: Notice of Federal Advisory Committee meeting.

SUMMARY: This notice sets forth the schedule and proposed agenda for a meeting of the Civil Nuclear Trade Advisory Committee (CINTAC).

DATES: The meeting is scheduled for Wednesday, May 22, 2019, from 9:00 a.m. to 4:00 p.m. Eastern Daylight Time (EDT).

ADDRESSES: The meeting will be held at the U.S. Department of Commerce, Herbert C. Hoover Building, Room 1412, 1401 Constitution Ave. NW, Washington, DC 20230

FOR FURTHER INFORMATION CONTACT: Mr. Devin Horne, Office of Energy & Environmental Industries, International Trade Administration, Room 28018, 1401 Constitution Ave. NW, Washington, DC 20230. (Phone: 202-482-0775; Fax: 202-482-5665; email: devin.horne@trade.gov).

SUPPLEMENTARY INFORMATION:

Background: The CINTAC was established under the discretionary authority of the Secretary of Commerce and in accordance with the Federal Advisory Committee Act (5 U.S.C. App.), in response to an identified need for consensus advice from U.S. industry to the Secretary of Commerce regarding the development and administration of programs to expand United States exports of civil nuclear goods and services in accordance with applicable U.S. laws and regulations, including advice on how U.S. civil nuclear goods and services export policies, programs, and activities will affect the U.S. civil nuclear industry's competitiveness and ability to participate in the international market. The Department of Commerce renewed the CINTAC charter on August 10, 2018. This meeting is being convened under the sixth charter of the CINTAC.

Topics to be considered: The agenda for the Wednesday, May 22, 2019, CINTAC meeting is as follows:

¹³ See Preliminary Scope Decision Memorandum.

¹⁴ See 19 CFR 351.309; *see also* 19 CFR 351.303 (for general filing requirements).

Public Session 9:00 a.m.–4:00 p.m.

1. International Trade Administration's Civil Nuclear Trade Initiative Update
2. Civil Nuclear Trade Promotion Activities Discussion
3. Public comment period

The meeting will be open to the public and will be accessible to people with disabilities. Members of the public wishing to attend the meeting must notify Mr. Devin Horne at the contact information above by 5:00 p.m. EDT on Friday, May 17, 2019 in order to pre-register. Please specify any requests for reasonable accommodation at least five business days in advance of the meeting. Last minute requests will be accepted but may not be possible to fill.

A limited amount of time will be available for pertinent brief oral comments from members of the public attending the meeting. To accommodate as many speakers as possible, the time for public comments will be limited to two (2) minutes per person, with a total public comment period of 60 minutes. Individuals wishing to reserve speaking time during the meeting must contact Mr. Chesebro and submit a brief statement of the general nature of the comments and the name and address of the proposed participant by 5:00 p.m. EDT on Friday, May 17, 2019. If the number of registrants requesting to make statements is greater than can be reasonably accommodated during the meeting, ITA may conduct a lottery to determine the speakers.

Any member of the public may submit pertinent written comments concerning the CINTAC's affairs at any time before and after the meeting. Comments may be submitted to the Civil Nuclear Trade Advisory Committee, Office of Energy & Environmental Industries, U.S. Department of Commerce, Mail Stop 28018, 1401 Constitution Ave. NW, Washington, DC 20230. For consideration during the meeting, and to ensure transmission to the Committee prior to the meeting, comments must be received no later than 5:00 p.m. EDT on Friday, May 17, 2019. Comments received after that date will be distributed to the members but may not be considered at the meeting.

Copies of CINTAC meeting minutes will be available within 90 days of the meeting.

Man Cho,

Deputy Director, Office of Energy and Environmental Industries.

BILLING CODE 3510-DR-P

DEPARTMENT OF COMMERCE**International Trade Administration**

[C-570-080]

Cast Iron Soil Pipe From the People's Republic of China: Countervailing Duty Order

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: Based on affirmative final determinations by the Department of Commerce (Commerce) and the International Trade Commission (ITC), Commerce is issuing the countervailing duty (CVD) order on cast iron soil pipe from the People's Republic of China (China).

DATES: Effective May 3, 2019.

FOR FURTHER INFORMATION CONTACT: Omar Qureshi at (202) 482-5307, AD/CVD Operations, Office V, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230.

SUPPLEMENTARY INFORMATION:

Background

In accordance with sections 705(a), 705(d), and 777(i) of the Tariff Act of 1930, as amended (Act), and 19 CFR 351.210(c), on February 28, 2019, Commerce published its affirmative final determination in the countervailing duty investigation of cast iron soil pipe from China.¹

On April 8, 2019, the ITC notified Commerce of its final affirmative determination that an industry in the United States is materially injured within the meaning of section 705(b)(1)(A)(i) of the Act by reason of imports of subject merchandise from China.²

Scope of the Order

The scope of this order covers cast iron soil pipe from China. For a complete description of the scope, see the Appendix to this notice.

Countervailing Duty Order

On April 8, 2019, in accordance with section 705(d) of the Act, the ITC notified Commerce of its final determination that an industry in the

¹ See *Cast Iron Soil Pipe from the People's Republic of China: Final Affirmative Countervailing Duty Determination*, 84 FR 6770 (February 28, 2019) (*Final Determination*) and the accompanying Issues and Decision Memorandum (IDM).

² See Letter to Gary Taverman, Acting Assistant Secretary of Commerce for Enforcement and Compliance, from David S. Johanson, Chairman of the U.S. International Trade Commission, dated April 8, 2019 (ITC Letter).

United States is materially injured within the meaning of section 705(b)(1)(A)(i) of the Act by reason of imports of cast iron soil pipe from China.³ Therefore, in accordance with sections 705(c)(2) and 706 of the Act, Commerce is issuing this countervailing duty order. Because the ITC determined that imports of cast iron soil pipe from China are materially injuring a U.S. industry, unliquidated entries of such merchandise from China, entered or withdrawn from warehouse for consumption, are subject to the assessment of countervailing duties.

As a result of the ITC's final determination, in accordance with section 706(a) of the Act, Commerce will direct U.S. Customs and Border Protection (CBP) to assess, upon further instruction by Commerce, countervailing duties for all relevant entries of cast iron soil pipe from China. Countervailing duties will be assessed on unliquidated entries of cast iron soil pipe from China entered, or withdrawn from warehouse, for consumption on or after July 2, 2018, the date of publication of the *Preliminary Determination*,⁴ but will not include entries occurring after the expiration of the provisional measures period and before publication of the ITC's final affirmative injury determination as further described below.

Suspension of Liquidation

In accordance with section 706 of the Act, we will instruct CBP to reinstitute suspension of liquidation on all relevant entries of cast iron soil pipe from China, effective on the date of publication of the ITC's notice of final determination in the **Federal Register**, and to assess, upon further instruction by Commerce pursuant to section 706(a)(1) of the Act,⁵ countervailing duties for each entry of the subject merchandise in an amount based on the net countervailable subsidy rate for the subject merchandise. These instructions suspending liquidation will remain in effect until further notice. Commerce will also instruct CBP to require cash deposits equal to the amounts as indicated below. Accordingly, effective on the date of publication of the ITC's final affirmative injury determination, CBP will require, at the same time as importers would normally deposit

³ *Id.*

⁴ See *Cast Iron Soil Pipe from the People's Republic of China: Preliminary Affirmative Countervailing Duty*, 83 FR 30914 (July 2, 2018) (*Preliminary Determination*) and the accompanying Preliminary Decision Memorandum.

⁵ See *Cast Iron Soil Pipe from China*, Investigation Nos. 701-TA-597 and 731-TA-1407 (Final), USITC Publication 4879 (April 2019).

estimated duties on this subject merchandise, a cash deposit equal to the subsidy rates listed below.⁶

Provisional Measures

Section 733(d) of the Act states that instructions issued pursuant to an affirmative preliminary determination may not remain in effect for more than four months, except where exporters representing a significant proportion of exports of the subject merchandise request Commerce to extend that four-month period to no more than six months. At the request of mandatory respondent, HengTong Casting Co., Ltd.,

which accounts for a significant proportion of cast iron soil pipe from China, Commerce extended the four-month period to six months in this case.⁷ Commerce published its *Preliminary Determination* on July 2, 2018. Therefore, the extended period, beginning on the date of publication of the *Preliminary Determination*, ended on December 29, 2018. Furthermore, section 737(b) of the Act states that definitive duties are to begin on the date of publication of the ITC's final injury determination.

Therefore, in accordance with section 733(d) of the Act and our practice, we

will instruct CBP to terminate the suspension of liquidation and to liquidate, without regard to countervailing duties, unliquidated entries of cast iron soil pipe from China entered, or withdrawn from warehouse, for consumption on or after December 29, 2018, the date the provisional measures expired, through the day preceding the date of publication of the ITC's final injury determination in the **Federal Register**. Suspension of liquidation will resume on the date of publication of the ITC's final determination in the **Federal Register**.

Estimated Subsidy Margins

Exporter/producer	Subsidy rate (percent)
Kingway Pipe Co., Ltd	109.27
Yuncheng Jiangxian Economic Development Zone HengTong Casting Co., Ltd ⁸	14.69
All-Others	14.69

Notifications to Interested Parties

This notice constitutes the countervailing duty order with respect to cast iron soil pipe from China pursuant to section 706(a) of the Act. Interested parties can find a list of countervailing duty orders currently in effect at <http://enforcement.trade.gov/stats/iastats1.html>.

This order is issued and published in accordance with section 706(a) of the Act and 19 CFR 351.211(b).

Dated: April 26, 2019.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

Appendix

Scope of the Order

The merchandise covered by this order is cast iron soil pipe, whether finished or unfinished, regardless of industry or proprietary specifications, and regardless of wall thickness, length, diameter, surface finish, end finish, or stenciling. The scope of this order includes, but is not limited to, both hubless and hub and spigot cast iron soil pipe. Cast iron soil pipe is nonmalleable iron pipe of various designs and sizes. Cast iron soil pipe is generally distinguished from other types of nonmalleable cast iron pipe by the manner in which it is connected to cast iron soil pipe fittings.

Cast iron soil pipe is classified into two major types—hubless and hub and spigot. Hubless cast iron soil pipe is manufactured without a hub, generally in compliance with Cast Iron Soil Pipe Institute (CISPI)

specification 301 and/or American Society for Testing and Materials (ASTM) specification A888, including any revisions to those specifications. Hub and spigot pipe has one or more hubs into which the spigot (plain end) of a fitting is inserted. All pipe meeting the physical description set forth above is covered by the scope of this order, whether or not produced according to a particular standard.

The subject imports are currently classified in subheading 7303.00.0030 of the Harmonized Tariff Schedule of the United States (HTSUS): Cast iron soil pipe. The HTSUS subheading and specifications are provided for convenience and customs purposes only; the written description of the scope of this order is dispositive.

Polyester Textured Yarn From the People's Republic of China: Preliminary Affirmative Countervailing Duty Determination, and Alignment of Final Determination With Final Antidumping Duty Determination

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) preliminarily determines

HengTong's request to reflect its name as "Yucheng Jiangxian Economic Development Zone HengTong Casting Co., Ltd. (HengTong)," which is the name we have used in this proceeding.

¹ See *Polyester Textured Yarn from India and the People's Republic of China: Initiation of*

that countervailable subsidies are being provided to producers and exporters of polyester textured yarn (yarn) from the People's Republic of China (China) for the period of investigation (POI) January 1, 2017 through December 31, 2017. Interested parties are invited to comment on this preliminary determination.

DATES: Effective May 3, 2019.

FOR FURTHER INFORMATION CONTACT: Bob Palmer or Joseph Dowling, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482-9068 or (202) 482-1646, respectively.

SUPPLEMENTARY INFORMATION:

Background

This preliminary determination is made in accordance with section 703(b) of the Tariff Act of 1930, as amended (the Act). Commerce published the notice of initiation of this investigation on November 19, 2018.¹

On February 1, 2019, pursuant to a request from the Unifi Manufacturing, Inc. and Nan Ya Plastics Corporation (the petitioners),² Commerce postponed the preliminary determination of this

Countervailing Duty Investigations, 83 FR 58232 (November 19, 2018) (*Initiation Notice*).

² See Letter, "Countervailing Duty Investigation of Polyester Textured Yarn from China: Petitioners' Request to Postpone Preliminary Determination," dated December 10, 2018.

⁶ See section 706(a)(3) of the Act.

⁷ See *Preliminary Determination*, 83 FR at 44569.

⁸ Commerce initiated this proceeding on two respondents "Jiangxian Economic Development Zone Heng (Jiangxian) and Kingway Pipe Co Ltd (Kingway)" based on CBP data. We have accepted

investigation to March 18, 2019.³ On April 18, 2019, Commerce issued its preliminary critical circumstances determination determining that critical circumstances exist for imports from all producers and exporters of the subject merchandise from China.⁴ Commerce exercised its discretion to toll all deadlines affected by the partial federal government closure from December 22, 2018, through the resumption of operations on January 29, 2019.⁵ If the new deadline falls on a non-business day, in accordance with Commerce's practice, the deadline will become the next business day. The revised deadline for the preliminary determination is now April 26, 2019.

For a complete description of the events that followed the initiation of this investigation, see the Preliminary Decision Memorandum.⁶ A list of topics discussed in the Preliminary Decision Memorandum is included as Appendix II to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <http://access.trade.gov>, and is available to all parties in the Central Records Unit, Room B8024 of the main Department of Commerce building. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at <http://enforcement.trade.gov/frn/>. The signed and electronic versions

⁴ See *Polyester Textured Yarn from the People's Republic of China: Preliminary Affirmative Determination of Critical Circumstances in the Antidumping and Countervailing Duty Investigations*, 84 FR 16840 (April 23, 2019) (*Preliminary Affirmative Critical Circumstances Determination*).

⁵ See Memorandum to the Record from Gary Taverman, Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance, "Deadlines Affected by the Partial Shutdown of the Federal Government," dated January 28, 2019. All deadlines in this segment of the proceeding have been extended by 40 days.

⁶ See Memorandum, "Decision Memorandum for the Preliminary Determination of the Countervailing Duty Investigation of Polyester Textured Yarn from the People's Republic of China," dated concurrently with, and hereby adopted by, this notice (Preliminary Decision Memorandum).

of the Preliminary Decision Memorandum are identical in content.

Scope of the Investigation

The product covered by this investigation is polyester textured yarn from China. For a complete description of the scope of this investigation, see Appendix I and "Scope Comments" section below.

Scope Comments

In accordance with the preamble to Commerce's regulations,⁷ the *Initiation Notice* set aside a period of time for parties to raise issues regarding product coverage (*i.e.*, scope).⁸ Certain interested parties commented on the scope of the investigation as it appeared in the *Initiation Notice*. For a summary of the product coverage comments and responses submitted to the record for this preliminary determination, and accompanying discussion and analysis of all comments timely received, see the Preliminary Scope Decision Memorandum.⁹ Commerce is preliminarily modifying the scope language as it appeared in the *Initiation Notice* to exclude bulk continuous filament yarn. See revised scope in Appendix I.

Methodology

Commerce is conducting this investigation in accordance with section 701 of the Act. For each of the subsidy programs found countervailable, Commerce preliminarily determines that there is a subsidy, *i.e.*, a financial contribution by an "authority" that confers a benefit to the recipient, and that the subsidy is specific.¹⁰ In making these findings, Commerce relied, in part, on facts available and, because it finds that certain respondents did not act to the best of their ability to respond to Commerce's requests for information, it drew an adverse inference where appropriate in selecting from among the facts otherwise available.¹¹ For further information, see "Use of Facts

⁷ See *Antidumping Duties; Countervailing Duties, Final Rule*, 62 FR 27296, 27323 (May 19, 1997).

⁸ See *Initiation Notice*, 83 FR at 58233.

⁹ See Memorandum, "Polyester Textured Yarn from India and the People's Republic of China: Scope Comments Decision Memorandum for the Preliminary Determinations," dated concurrently with this notice (Preliminary Scope Decision Memorandum).

¹⁰ See sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

¹¹ See sections 776(a) and (b) of the Act.

Otherwise Available and Adverse Inferences" in the Preliminary Decision Memorandum. For a full description of the methodology underlying our preliminary conclusions, see the Preliminary Decision Memorandum.

Alignment

In accordance with section 705(a)(1) of the Act and 19 CFR 351.210(b)(4), Commerce is aligning the final countervailing duty determination in this investigation with the final determination in the companion antidumping duty investigation of yarn from China, based on a request made by the petitioners.¹² Consequently, the final countervailing duty determination will be issued on the same date as the final antidumping determination, which is currently scheduled to be issued no later than September 9, 2019, unless postponed.

All-Others Rate

Sections 703(d)(1)(A)(i) and 705(c)(5)(A) of the Act provide that in the preliminary determination, Commerce shall determine an estimated all-others rate for companies not individually examined. This rate shall be an amount equal to the weighted average of the estimated subsidy rates established for those companies individually examined, excluding any zero and *de minimis* rates and any rates based entirely on facts otherwise available, as outlined under section 776 of the Act.

In this investigation, Commerce preliminarily assigned rates based entirely on facts available for Suzhou Shenghong Fiber Co., Ltd. and its cross-owned affiliates, and Suzhou Shenghong Garment Development Co. Therefore, the only rate that is not zero, *de minimis* or based entirely on facts otherwise available is the rate calculated for Fujian Billion Polymerization Fiber Technology Industrial Co., Ltd. (Fujian Billion). Consequently, the rate calculated for Fujian Billion is also assigned as the rate for all other producers and exporters.

Preliminary Determination

Commerce preliminarily determines that the following estimated countervailable subsidy rates exist:

¹² See Petitioners' Letter, "Polyester Textured Yarn from China and India—Petitioners' Request to Align the Department's Final Determinations," dated March 29, 2019.

Company	Subsidy rate (percent)
Fujian Billion Polymerization Fiber Technology Industrial Co., Ltd ¹³	32.04
Suzhou Shenghong Fiber Co., Ltd ¹⁴	459.98
Suzhou Shenghong Garmant Development Co	459.98
All Others	32.04

Suspension of Liquidation

In accordance with sections 703(d)(1)(B) and (d)(2) of the Act, Commerce will direct U.S. Customs and Border Protection (CBP) to suspend liquidation of entries of subject merchandise as described in the scope of the investigation section entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice in the **Federal Register**. Further, pursuant to 19 CFR 351.205(d), Commerce will instruct CBP to require a cash deposit equal to the rates indicated above.

Section 703(e)(2) of the Act provides that, given an affirmative determination of critical circumstances,¹⁵ any suspension of liquidation shall apply to unliquidated entries of merchandise entered, or withdrawn from warehouse, for consumption on or after the later of (a) the date which is 90 days before the date on which the suspension of liquidation was first ordered, or (b) the date on which the notice of initiation of the investigation was published. Commerce preliminarily found that critical circumstances exist for all imports of subject merchandise from China. In accordance with section 703(e)(2)(A) of the Act, the suspension of liquidation shall apply to unliquidated entries from all exporters and producers of the subject merchandise from China that were entered, or withdrawn from warehouse, for consumption on or after the date which is 90 days before the publication of this notice.

¹³ As discussed in the Preliminary Decision Memorandum, Commerce has found the following companies to be cross-owned with Fujian Billion: (1) Billion Development (Hong Kong) Limited and (2) Billion Industrial Investment Limited.

¹⁴ As discussed in the Preliminary Decision Memorandum, Commerce has found the following companies to be cross-owned with Suzhou Shenghong Fiber Co., Ltd.: (1) Jiangsu Zhonglu Technology Development Co., Ltd., (2) Jiangsu Guowang High-Technique Fiber Co., Ltd., (3) Jiangsu Shenghong Science and Technology Co., Ltd., (4) Jiangsu Honggang Petrochemical Co., Ltd., (5) Shenghong Group Co., Ltd., (6) Shenghong Holding Group, Co., Ltd., (7) Shenghong (Suzhou) Group Co., Ltd., (8) Jiangsu Shenghong Investment Development Co., Ltd., (9) Jiangsu Shenghong New Material Co., Ltd., and (10) Jiangsu Shenghong Textile Imp & Exp Co. and its successor Jiangsu Huahui Import and Export Co., Ltd.

¹⁵ See *Preliminary Affirmative Critical Circumstances Determination*, 84 FR at 16842.

Disclosure

Commerce intends to disclose its calculations and analysis performed to interested parties in this preliminary determination within five days of its public announcement, or if there is no public announcement, within five days of the date of this notice in accordance with 19 CFR 351.224(b).

Verification

As provided in section 782(i)(1) of the Act, Commerce intends to verify the information relied upon in making its final determination.

Public Comment

As stated in the Preliminary Scope Decision Memorandum, all interested parties will have the opportunity to submit case and rebuttal briefs on the preliminary scope determination.¹⁶ The deadline for these comments will be established in the **Federal Register** notice regarding the preliminary determination of the companion antidumping duty investigation of yarn from China to be issued at a later date.

Case briefs or other written comments, not pertaining to scope issues, may be submitted to the Assistant Secretary for Enforcement and Compliance no later than seven days after the date on which the last verification report is issued in this investigation. Rebuttal briefs, limited to issues raised in case briefs, may be submitted no later than five days after the deadline date for case briefs.¹⁷ Pursuant to 19 CFR 351.309(c)(2) and (d)(2), parties who submit case briefs or rebuttal briefs in this investigation are encouraged to submit with each argument: (1) A statement of the issue; (2) a brief summary of the argument; and (3) a table of authorities.

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing, limited to issues raised in the case and rebuttal briefs, must submit a written request to the Assistant Secretary for Enforcement and Compliance, U.S. Department of Commerce, within 30 days after the date of publication of this notice. Requests should contain the party's name,

¹⁶ See Preliminary Scope Decision Memorandum.

¹⁷ See 19 CFR 351.309; see also 19 CFR 351.303 (for general filing requirements).

address, and telephone number, the number of participants, whether any participant is a foreign national, and a list of the issues to be discussed. If a request for a hearing is made, Commerce intends to hold the hearing at the U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230, at a time and date to be determined. Parties should confirm by telephone the date, time, and location of the hearing two days before the scheduled date.

Parties are reminded that briefs and hearing requests are to be filed electronically using ACCESS and that electronically filed documents must be received successfully in their entirety by 5 p.m. Eastern Time on the due date.

International Trade Commission Notification

In accordance with section 703(f) of the Act, Commerce will notify the International Trade Commission (ITC) of its determination. Pursuant to section 705(b)(2) of the Act, if the final determination is affirmative, the ITC will make its final injury determination before the later of 120 days after the date of this preliminary determination or 45 days after the final determination.

Notification to Interested Parties

This determination is issued and published pursuant to sections 703(f) and 777(i) of the Act and 19 CFR 351.205(c).

Dated: April 26, 2019.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigation

The merchandise covered by this investigation, polyester textured yarn, is synthetic multifilament yarn that is manufactured from polyester (polyethylene terephthalate). Polyester textured yarn is produced through a texturing process, which imparts special properties to the filaments of the yarn, including stretch, bulk, strength, moisture absorption, insulation, and the appearance of a natural fiber. This scope includes all forms of polyester textured yarn, regardless of surface texture or appearance, yarn density and thickness (as measured in denier), number of filaments, number of plies, finish (luster), cross section, color, dye

method, texturing method, or packing method (such as spindles, tubes, or beams).

Excluded from the scope of the investigation is bulk continuous filament yarn that: (a) Is polyester synthetic multifilament yarn; (b) has denier size ranges of 900 and above; (c) has turns per meter of 40 and above; and (d) has a maximum shrinkage of 2.5 percent.

The merchandise subject to this investigation is properly classified under subheadings 5402.33.3000 and 5402.33.6000 of the Harmonized Tariff Schedule of the United States (HTSUS). Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the merchandise is dispositive.

International Trade Administration

[A-570-900]

Diamond Sawblades and Parts Thereof From the People's Republic of China: Initiation of Anti-Circumvention Inquiry

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: In response to a request from Diamond Sawblades Manufacturers' Coalition (the petitioner), the Department of Commerce (Commerce) is initiating an anti-circumvention inquiry to determine whether certain imports of diamond sawblades and parts thereof (diamond sawblades) comprised of cores and segments produced in the People's Republic of China (China) and joined into finished diamond sawblades in, and exported from, Canada are circumventing the antidumping duty order on diamond sawblades from China.

DATES: Effective May 3, 2019.

FOR FURTHER INFORMATION CONTACT: Yang Jin Chun, AD/CVD Operations Office I, Enforcement and Compliance, International Trade Administration,

U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482-5760.

SUPPLEMENTAL INFORMATION:

Background

On November 4, 2009, Commerce published the antidumping duty order on diamond sawblades from China.¹ On December 20, 2018, the petitioner filed a request for a circumvention ruling, requesting that Commerce issue a determination of circumvention and suspend liquidation of certain diamond sawblades exported from third countries.² Specifically, the petitioner claims that a Canadian company, Protech Diamond Tools Inc. (Protech), is circumventing the antidumping duty order.

Scope of the Order

The products covered by the order are all finished circular sawblades, whether slotted or not, with a working part that is comprised of a diamond segment or segments, and parts thereof, regardless of specification or size, except as specifically excluded below. Within the scope of the order are semi-finished diamond sawblades, including diamond sawblade cores and diamond sawblade segments. Diamond sawblade cores are circular steel plates, whether or not attached to non-steel plates, with slots. Diamond sawblade cores are manufactured principally, but not exclusively, from alloy steel. A diamond sawblade segment consists of a mixture of diamonds (whether natural or synthetic, and regardless of the quantity of diamonds) and metal powders (including, but not limited to, iron, cobalt, nickel, tungsten carbide) that are formed together into a solid shape (from generally, but not limited to, a heating and pressing process).

Sawblades with diamonds directly attached to the core with a resin or electroplated bond, which thereby do not contain a diamond segment, are not included within the scope of the order. Diamond sawblades and/or sawblade cores with a thickness of less than 0.025 inches, or with a thickness greater than 1.1 inches, are excluded from the scope of the order. Circular steel plates that have a cutting edge of non-diamond material, such as external teeth that protrude from the outer diameter of the plate, whether or not finished, are

¹ See *Diamond Sawblades and Parts Thereof from the People's Republic of China and the Republic of Korea: Antidumping Duty Orders*, 74 FR 57145 (November 4, 2009). The effective date of this antidumping duty order was January 23, 2009.

² See the petitioner's circumvention ruling request dated December 20, 2018 (the petitioner's circumvention ruling request).

excluded from the scope of the order. Diamond sawblade cores with a Rockwell C hardness of less than 25 are excluded from the scope of the order. Diamond sawblades and/or diamond segment(s) with diamonds that predominantly have a mesh size number greater than 240 (such as 250 or 260) are excluded from the scope of the order.

Merchandise subject to the order is typically imported under heading 8202.39.00.00 of the Harmonized Tariff Schedule of the United States (HTSUS). When packaged together as a set for retail sale with an item that is separately classified under headings 8202 to 8205 of the HTSUS, diamond sawblades or parts thereof may be imported under heading 8206.00.00.00 of the HTSUS. On October 11, 2011, Commerce included the 6804.21.00.00 HTSUS classification number to the customs case reference file, pursuant to a request by U.S. Customs and Border Protection.³ Pursuant to requests by CBP, Commerce included to the customs case reference file the following HTSUS classification numbers: 8202.39.0040 and 8202.39.0070 on January 22, 2015, and 6804.21.0010 and 6804.21.0080 on January 26, 2015.⁴

The tariff classification is provided for convenience and customs purposes; however, the written description of the scope of the order is dispositive.

Merchandise Subject to the Anti-Circumvention Inquiry

This anti-circumvention inquiry covers diamond sawblades produced in Canada using cores and segments of Chinese origin and exported from Canada to the United States by Protech. If we receive additional evidence regarding potential circumvention of the order on diamond sawblades from China by other companies in Canada, we will consider expanding the scope of this inquiry at that time.

Initiation of Anti-Circumvention Inquiry

Section 781(b)(1) of the Tariff Act of 1930, as amended (the Act), provides that Commerce may find circumvention of an antidumping or countervailing duty order if: (A) Merchandise imported into the United States is of the same class or kind as any merchandise produced in a foreign country that is the

³ See *Diamond Sawblades and Parts Thereof from the Republic of Korea: Preliminary Results of Antidumping Duty Administrative Review*, 76 FR 76128 (December 6, 2011).

⁴ See *Diamond Sawblades and Parts Thereof from the People's Republic of China: Final Results of Antidumping Duty Administrative Review; 2016-2017*, 83 FR 64331 (December 14, 2018) and accompanying Issues and Decision Memorandum (IDM) at 3.

subject of an antidumping or countervailing duty order or finding; (B) before importation into the United States, such imported merchandise is completed or assembled in another foreign country from merchandise which is subject to the order or merchandise which is produced in the foreign country that is subject to the order; (C) the process of assembly or completion in the foreign country referred to in section (B) is minor or insignificant; (D) the value of the merchandise produced in the foreign country to which the AD or CVD order applies is a significant portion of the total value of the merchandise exported to the United States; and (E) the administering authority determines that action is appropriate to prevent evasion of such order or finding. As discussed below, the petitioner provided information available to them with respect to these criteria.⁵

A. Merchandise of the Same Class or Kind

The petitioner claims that, in accordance with section 781(b)(1)(A)(i) of the Act, diamond sawblades exported from Canada to the United States are identical to diamond sawblades exported from China to the United States subject to the antidumping duty order. The petitioner contends that, because cores, segments, and diamond sawblades are all one class or kind of subject merchandise, a process that simply transforms one of these items to another should not serve as an avenue for Chinese producers to evade the antidumping duty order.⁶

B. Completion of Merchandise in a Third Country Before Importation Into the United States

The petitioner contends that, in Canada, cores made in China are being joined to segments made in China and undergo a minor welding operation and minor processing before they are imported into the United States.⁷

C. Minor or Insignificant Process

The petitioner explains that, in accordance with section 781(b)(1)(C) of the Act, Commerce considers whether the assembly or completion that occurs in the other foreign country is minor or insignificant. The petitioner states that, under sections 781(b)(2)(A)–(E) of the Act, Commerce considers five factors to determine whether the process of assembly or completion is minor or

insignificant. The petitioner alleges that, based on these factors, the completion of the merchandise in Canada is minor and insignificant.⁸

1. Level of Investment in Canada

The petitioner argues that there is little evidence of any significant level of investment in Canada for production activities beyond joining cores and segments and laser welding.⁹ In other words, according to the petitioner, diamond sawblades production facilities in Canada are not sophisticated enough to produce segments. The petitioner explains that the production of segments is a complex process that requires detailed expertise in metallurgy and technical experience in the bonding of diamond powders and metal powders in the production process and the performance of diamond sawblades for particular applications. The petitioner claims that only highly skilled technicians can perform such production processes, while laser-welding is a highly-automated process that essentially only requires a person who can operate a keyboard.¹⁰ The petitioner claims further that other methods of joining cores and segments, *e.g.*, silver soldering or sintering, are even less sophisticated than laser-welding.¹¹

The petitioner distinguishes the level of capital investment between segment production and laser-welding. The petitioner explains that segment production requires significant capital investment for equipment such as weighing scales, mixing equipment, granulating equipment, cold pressing equipment, sintering presses, inspecting equipment, and radius grinding equipment. The petitioner claims that, in particular, the induction and resistance presses used in segment production represent a substantial capital investment. The petitioner contends that the capital investment required for joining cores and segments is essentially limited to a piece of laser-welding equipment.¹²

The petitioner distinguishes the level of costs between segment production and joining cores and segments. According to the petitioner, the production cost for finished diamond sawblades segments may represent a

certain percentage of the cost of producing a finished diamond sawblade, whereas joining cores and segments typically accounts for a much smaller percentage of the cost of production.¹³ The petitioner also asserts that the capital investment required for joining is essentially limited to a piece of laser-welding equipment.¹⁴ The petitioner argues that, for these reasons, the joining operations require very minimal investment.¹⁵

2. Level of Research and Development

The petitioner argues that, because laser-welding is a highly-automated process and other methods of joining cores and segments are less sophisticated than laser-welding, entities joining China cores and segments in Canada do not, and do not need to, invest in research and development in Canada.¹⁶

3. Nature of Production Process

The petitioner states that there is very minimal additional processing done to diamond sawblades exported from China to Canada that are re-exported to the United States. The petitioner reiterates that joining cores and segments is a highly automated process and, compared to segment production, welding of cores and segments is a minimal step in the overall production process.¹⁷

4. Extent of Production Facilities in Canada

The petitioner identifies three Canadian production facilities, of which the petitioner claims two production facilities appear to have only laser-welding operations.¹⁸ The petitioner claims that Protech's Canadian facilities were established to re-export Chinese diamond sawblades to the United States and that the investment to Protech's Canadian facilities is very limited for production of cores and segments. Similarly, according to the petitioner, Diamond Tools Technology Canada, Inc. appears to have insignificant production facilities in Canada and appears to be established to evade the antidumping

¹³ *Id.* Commerce considers that this portion of the petitioner's circumvention ruling request is relevant to the consideration contained in section 781(b)(1)(D) of the Act ("the value of the merchandise produced in the foreign country to which the antidumping order applies is a significant portion of the total value of the merchandise exported to the United States").

⁷ *Id.* at 14–17 and Exhibits 5, 7–15.

duty order on diamond sawblades from China.¹⁹

5. Value of Processing in Canada

The petitioner cites the *Thailand Preliminary Determination* to support its claim that the joining of cores and segments constitutes a minor portion of the cost and represents the smallest portion of the production costs of diamond sawblades imported into the United States.²⁰ The petitioner argues that, consistent with the *Thailand Preliminary Determination*, the value of processing in Canada represents a minor portion of the imported diamond sawblade's value.²¹

D. Value of Merchandise Produced in China Is a Significant Portion of the Total Value of the Merchandise Exported to the United States

The petitioner cites the *Thailand Preliminary Determination* to emphasize that the values of the segments and cores produced in China represent the vast majority of the value of the products exported to the United States.²² The petitioner quotes the *Thailand Preliminary Determination* to argue that the value of the Chinese cores and Chinese segments, either combined or individually, represent "a significant portion of the total value of the merchandise exported to the United States."²³

E. Additional Factors To Consider in Determining Whether Action Is Necessary

Section 781(b)(3) of the Act directs Commerce to consider additional factors in determining whether to include merchandise assembled or completed in a foreign country within the scope of the order, such as: "(A) the pattern of trade, including sourcing patterns, (B) whether the manufacturer or exporter of the merchandise . . . is affiliated with the person who uses the merchandise . . . to assemble or complete in the foreign country the merchandise that is subsequently imported into the United States, and (C) whether imports into the foreign country of the merchandise . . . have increased after the initiation of the investigation which resulted in the issuance of such order or finding." The petitioner claims an increase of the

imports of diamond sawblades from Canada from \$246,758 for January through October 2017 to \$776,328 for January through October 2018 represents a noticeable shift in patterns of trade.²⁴ The petitioner asserts that Protech has been, and may be currently, transshipping Chinese diamond sawblades into the United States.²⁵ The petitioner believes that Protech is likely to have evaded antidumping duties on Chinese diamond sawblades for several years.²⁶

The petitioner argues that there is evidence of affiliation between Chinese producers and their Canadian counterparts that are engaged in circumvention of the antidumping duty order. For example, the petitioner claims that Protech appears to be affiliated with two Chinese producers: Guangzhou Pro Tech Diamond Tools Inc. and Protec Tools Co., Ltd. The petitioner argues that Protech has entered into exclusive agreements with Chinese producers and factories to sell diamond sawblades to Canada and the United States. The petitioner also argues that Diamond Tools Technology Canada, Inc. appears to be affiliated with a Chinese producer that Commerce determined in the *Thailand Preliminary Determination* to have circumvented the antidumping duty order by using minor assembly processes in Thailand.²⁷

The petitioner explains that Chinese cores and Chinese segments are in-scope merchandise and the mere joining of these two parts, which represent the smallest cost in the production of diamond sawblades, should not be permitted as an avenue to circumvent the antidumping duty order on diamond sawblades from China.

Analysis of the Allegation

Based on our analysis of the petitioner's anti-circumvention allegation and the information provided therein, we find that an anti-circumvention inquiry of the antidumping duty order on diamond sawblades from China is warranted with respect to diamond sawblades made in Canada with Chinese cores and Chinese segments and exported to the United States.

With regard to whether the merchandise from Canada is of the same class or kind as the merchandise produced in China, the petitioner presented information to Commerce indicating that, in accordance with

section 781(b)(1)(A) of the Act, the merchandise being produced in and/or exported from Canada is of the same class or kind as diamond sawblades produced in China, which is subject to the antidumping duty order.²⁸ Consequently, we find that the petitioner provided sufficient information in its request regarding the class or kind of merchandise to support the initiation of this anti-circumvention inquiry.

With regard to completion or assembly of merchandise in a foreign country, in accordance with section 781(b)(1)(B) of the Act, the petitioner also presented to us four affidavits indicating that diamond sawblades exported from Canada to the United States by Protech are produced in Canada using cores and segments produced and exported from China.²⁹ We find that the information presented by the petitioner regarding this criterion supports its request to initiate this anti-circumvention inquiry at this time with respect to diamond sawblades made in Canada with Chinese cores and Chinese segments and exported to the United States.

Commerce finds that the petitioner sufficiently addressed the factors described in section 781(b)(1)(C) and (2) of the Act regarding whether the process of assembly or completion of finished diamond sawblades in Canada is minor or insignificant with respect to Protech. In particular, the petitioner provided information indicating that: (1) The level of investment in the production facilities is minimal, when compared with the level of investment for the facilities used in the production of segments;³⁰ (2) there is little or no research and development taking place in Canada;³¹ (3) the joining process involves the highly automated laser-welding, or other simpler joining methods, of cores and segments produced in China and subject to the antidumping duty order;³² (4) the production facilities in Canada are more limited than facilities in China;³³ and (5) the value of the processing performed in Canada is a small proportion of the value of the diamond sawblades imported into the United States.³⁴

With respect to the value of the merchandise produced in China, pursuant to section 781(b)(1)(D) of the

¹⁹ *Id.*

³⁴ *Id.* at 21–22.

Act, the petitioner provided information indicating that the value of cores and segments produced in China represents the vast majority of the value of the products exported to the United States.³⁵ We find that the evidence presented by the petitioner address the requirements of this factor, as discussed above, for the purposes of initiating this anti-circumvention inquiry.

In the final determinations of the antidumping duty investigations of diamond sawblades from China and the Republic of Korea (Korea), we determined that the country in which cores and segments are joined is the country of origin of the finished diamond sawblades based on our factual findings that “the attachment process imparts the essential quality of the diamond sawblade, coupled with the substantial capital investment and technical expertise that is required for the attachment process.”³⁶ In making these factual findings, we relied on specific information provided by respondents in the investigations.³⁷ The CIT upheld our decisions with respect to the country of origin.³⁸ However, we do not have sufficient information on the record indicating whether substantial investments have been made to the Canadian companies in question for the joining process in Canada. Also, we do not have sufficient information on the record about the technical expertise required for the joining process in Canada.³⁹ Moreover, our findings in the *Final Determinations* were made in the context of a country-of-origin determination, whereas we are

considering the petitioner’s request under the anti-circumvention provisions of the statute contained in section 781(b) of the Act. Therefore, we do not find the *Final Determinations* foreclose initiation of an anti-circumvention inquiry in this instance.

Finally, with respect to the additional factors listed under section 781(b)(3) of the Act, we find that the petitioner presented evidence indicating that shipments of finished diamond sawblades from Canada to the United States increased since the imposition of the antidumping duty order, further supporting initiation of this anti-circumvention inquiry.⁴⁰ Therefore, in accordance with section 781(b) of the Act, we are initiating a formal anti-circumvention inquiry concerning the antidumping duty order on diamond sawblades from China with respect to diamond sawblades made in Canada with Chinese cores and Chinese segments and exported to the United States.

In connection with this anti-circumvention inquiry, in order to determine, among other things: (1) The extent to which China-sourced cores and segments are further processed into finished diamond sawblades in Canada by Protech before the finished diamond sawblades are exported to the United States; and (2) whether the process of turning China-sourced cores and segments into finished diamond sawblades is minor or insignificant, Commerce intends to issue questionnaires to solicit information from Protech related to these factors. Commerce also intends to issue questionnaires to solicit information from Protech concerning its shipments of finished diamond sawblades to the United States and the origin of the imported cores and segments being joined into finished diamond sawblades. Failure to respond completely to Commerce’s requests for information may result in the application of partial or total facts available pursuant to section 776(a) of the Act, which may include adverse inferences pursuant to section 776(b) of the Act.

Based on these allegations, we are initiating an anti-circumvention inquiry concerning the antidumping duty order on diamond sawblades from China, pursuant to section 781(b) of the Act and 19 CFR 351.225(h), with respect to such merchandise from Canada as described above. Because we are initiating this anti-circumvention

inquiry, we are not initiating a changed-circumstances review at this time.

An anti-circumvention inquiry is typically complicated by its nature and can require information regarding production in both the country subject to the order and the third country in which the production of finished merchandise is completed. As we explained above, Commerce intends to request additional information regarding the statutory criteria to determine whether shipments of finished diamond sawblades from Canada are circumventing the antidumping duty order on diamond sawblades from China. Thus, with further development of the record required before a preliminary ruling can be issued, Commerce does not find it appropriate to issue a preliminary ruling at this time. If Commerce issues a preliminary affirmative determination under section 781(b) of the Act, we intend to notify the International Trade Commission in accordance with section 781(e)(1)(B) of the Act and 19 CFR 351.225(f)(7)(i)(B).

In accordance with 19 CFR 351.225(l)(2), if Commerce issues a preliminary affirmative determination, we will then instruct CBP to suspend liquidation and require a cash deposit of estimated antidumping duties at the applicable rate for each unliquidated entry of the merchandise at issue, entered or withdrawn from warehouse for consumption on or after the date of initiation of the inquiry.

This notice serves as an invitation to interested parties to participate in this anti-circumvention inquiry. Commerce will establish a schedule for questionnaires and comments on the issues. In accordance with section 781(f) of the Act and 19 CFR 351.225(f)(5), Commerce intends to issue its final determination within 300 days of the date of publication of this initiation.

This notice is published in accordance with section 781(b) of the Act and 19 CFR 351.225(h).

Dated: April 29, 2019.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

DEPARTMENT OF COMMERCE**National Institute of Standards and Technology****Drafting the NIST Privacy Framework: Workshop #2**

AGENCY: National Institute of Standards and Technology, U.S. Department of Commerce.

ACTION: Notice; public workshop.

SUMMARY: The National Institute of Standards and Technology (NIST) will be hosting the second in a series of public workshops on the development of the Privacy Framework: An Enterprise Risk Management Tool ("Privacy Framework") on May 13–14, 2019 in Atlanta, Georgia. In this two-day event, attendees will have an opportunity to actively engage in facilitated discussions to advance the development of the Privacy Framework. NIST will release a discussion draft of the Privacy Framework prior to the workshop, and will use the breakout sessions at the workshop to inform revisions to the discussion draft.

DATES: The workshop will begin on May 13, 2019, at 8:30 a.m. ET, and will adjourn on May 14, 2019 at 4:30 p.m. ET. Registration will be open until midnight on May 6, 2019, or until registration reaches capacity.

ADDRESSES: The workshop will be held in Atlanta, Georgia, hosted by the Georgia Tech Scheller College of Business. The workshop will begin with check-in at the Biltmore Ballroom, at 817 West Peachtree Street NW, Atlanta, Georgia 30308. Breakout session location information will be available at check-in.

FOR FURTHER INFORMATION CONTACT: For questions about this workshop, contact: Naomi Lefkowitz, U.S. Department of Commerce, National Institute of Standards and Technology (NIST), MS 2000, 100 Bureau Drive, Gaithersburg, MD 20899, telephone (301) 975–2924, email privacyframework@nist.gov. Please direct media inquiries to NIST's Public Affairs Office at (301) 975–NIST.

SUPPLEMENTARY INFORMATION: The workshop schedule and registration information is posted online at: <https://www.nist.gov/news-events/events/2019/05/drafting-nist-privacy-framework-workshop-2>. Other opportunities to engage in the development of the Privacy Framework will be posted on the Privacy Framework Development Schedule as they are available (<https://www.nist.gov/privacy-framework/development-schedule>) and announced through the Privacy Framework mailing list (<https://groups.google.com/a/>

list.nist.gov/forum/#!/forum/privacy-framework).

Genesis of the Privacy Framework Development

It is a challenge to design, operate, or use technologies in ways that are mindful of diverse privacy needs in an increasingly connected and complex environment. Current and cutting-edge technologies such as mobile devices, social media, the Internet of Things and artificial intelligence are giving rise to increased concerns about their impacts on individuals' privacy. Inside and outside the U.S., there are multiple visions for how to address these concerns. Accordingly, the U.S. Department of Commerce (DOC) is developing a forward-thinking approach that supports both business innovation and strong privacy protections. As part of this effort, NIST is developing a voluntary Privacy Framework to help organizations: Better identify, assess, manage, and communicate privacy risks; foster the development of innovative approaches to protecting individuals' privacy; and increase trust in products and services.¹ The Privacy Framework is intended to be a tool that would assist with enterprise risk management.

Registration

To register for Drafting the Privacy Framework: Workshop #2, please visit <https://www.nist.gov/news-events/events/2019/05/drafting-nist-privacy-framework-workshop-2>. Registration will be open until midnight on May 6, 2019, or until registration reaches capacity.

Workshop Objectives

Prior to the workshop, NIST will publicly post a discussion draft of the Privacy Framework on the Privacy Framework website, and will email it to all registered attendees. NIST will use the breakout sessions at the workshop to inform revisions to the discussion draft.

- **Workshop Inputs:** Prior to the workshop, NIST will publish a discussion draft of the Privacy Framework.
- **Expected Workshop Outputs:** Revised discussion draft which will

¹ In parallel with this effort, the DOC's National Telecommunications and Information Administration is developing a set of privacy principles in support of a domestic policy approach that advances consumer privacy protections while protecting prosperity and innovation, in coordination with DOC's International Trade Administration to ensure consistency with international policy objectives: <https://www.ntia.doc.gov/federal-register-notice/2018/request-comments-developing-administration-s-approach-consumer-privacy>.

inform the further development of the draft Privacy Framework.

Kevin A. Kimball,
Chief of Staff.

BILLING CODE 3510–13–P

DEPARTMENT OF COMMERCE**National Oceanic and Atmospheric Administration**

RIN 0648–XH014

New England Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; public meeting.

SUMMARY: The New England Fishery Management Council (Council) is scheduling a public meeting of its Scallop Joint Advisory Panel and Plan Develop Team to consider actions affecting New England fisheries in the exclusive economic zone (EEZ). Recommendations from this group will be brought to the full Council for formal consideration and action, if appropriate. **DATES:** This meeting will be held on Tuesday, May 21, 2019 at 9 a.m.

ADDRESSES: The meeting will be held at the Hilton Providence, 21 Atwells Avenue, Providence, RI 02903; phone: (401) 831–3900.

Council address: New England Fishery Management Council, 50 Water Street, Mill 2, Newburyport, MA 01950.

FOR FURTHER INFORMATION CONTACT: Thomas A. Nies, Executive Director, New England Fishery Management Council; telephone: (978) 465–0492.

SUPPLEMENTARY INFORMATION:**Agenda**

The Scallop Advisory Panel (AP) and Plan Development Team (PDT) will receive a status update and summary of preliminary findings from recipients of recent Scallop Research Set-Aside (RSA) awards. This meeting is not a formal review of the methods or results of these projects. Instead, it is an overview to better inform the PDT and AP of current research status and help identify future research priority recommendations. **2020/21 Scallop RSA Research Priorities:** Group discussion on potential priorities. Also on the agenda is a discussion on the Council's RSA Program Review: Discuss findings and develop input to the Council. They also plan to discuss slow growing scallops in the Nantucket Lightship South and

consider recent research and management approaches. Other business may be discussed as necessary.

Although non-emergency issues not contained in this agenda may come before this group for discussion, those issues may not be the subject of formal action during these meetings. Action will be restricted to those issues specifically listed in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Act, provided the public has been notified of the Council's intent to take final action to address the emergency.

Special Accommodations

This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Thomas A. Nies, Executive Director, at (978) 465-0492, at least 5 days prior to the meeting date. This meeting will be recorded. Consistent with 16 U.S.C. 1852, a copy of the recording is available upon request.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: April 30, 2019.

Rey Israel Marquez,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

New England Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; public meeting.

SUMMARY: The New England Fishery Management Council (Council) is scheduling a public meeting of its Skate Advisory Panel to consider actions affecting New England fisheries in the exclusive economic zone (EEZ). Recommendations from this group will be brought to the full Council for formal consideration and action, if appropriate.

DATES: This meeting will be held on Tuesday, May 21, 2019 at 9 a.m.

ADDRESSES: The meeting will be held at the Hilton Providence, 21 Atwells Ave., Providence, RI 02903; telephone: (401) 831-3900.

Council address: New England Fishery Management Council, 50 Water Street, Mill 2, Newburyport, MA 01950.

FOR FURTHER INFORMATION CONTACT: Thomas A. Nies, Executive Director, New England Fishery Management Council; telephone: (978) 465-0492.

SUPPLEMENTARY INFORMATION: The Advisory Panel will discuss Amendment 5/Limited Access to the skate fishery—review Plan Development Team (PDT) analyses to date; continued discussion on the structure of a limited access program for the skate bait and wing fisheries including draft alternatives. The Panel will also make recommendations to the Skate Committee. Other business will be discussed as necessary.

Although non-emergency issues not contained on this agenda may come before this Council for discussion, those issues may not be the subject of formal action during this meeting. Council action will be restricted to those issues specifically listed in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Act, provided the public has been notified of the Council's intent to take final action to address the emergency.

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and

Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meeting.

SUMMARY: The North Pacific Fishery Management Council (Council) Fishery Monitoring Advisory Committee will meet May 20, 2019 through May 21, 2019.

DATES: The meeting will be held on Monday, May 20, 2019, from 8 a.m. to 5 p.m. and on Tuesday, May 21, 2019, from 8 a.m. to 5 p.m. Pacific Standard Time.

ADDRESSES: The meeting will be held in Building 4, at the Alaska Fisheries Science Center, 7600 Sand Point Way NE, Seattle, WA 98115. Teleconference number: (907) 245-3900; pin 2809.

Council address: North Pacific Fishery Management Council, 605 W 4th Ave. Suite 306, Anchorage, AK 99501-2252; telephone (907) 271-2809.

FOR FURTHER INFORMATION CONTACT: Elizabeth Figus, Council staff; telephone: (907) 271-2809.

SUPPLEMENTARY INFORMATION:

Agenda

Monday, May 20, 2019 to Tuesday, May 21, 2019

The agenda will include: presentation of the 2018 Observer Program Annual Report; discussion of EM updates (including latest developments from the trawl EM Committee and EM cost allocation); review of the FMAC partial coverage Subgroup report; updates about ongoing issues (e.g., contracting, insurance, the deck sorting proposed rule); review of the Analytical Task Status document; and, other items at the discretion of the Chair.

The Agenda is subject to change, and the latest version will be posted at meetings.npfmc.org/Meeting/Details/743 prior to the meeting, along with meeting materials.

Public Comment

Public comment letters will be accepted and should be submitted either electronically to meetings.npfmc.org/Meeting/Details/743 or through the mail: North Pacific Fishery Management Council, 605 W 4th Ave. Suite 306, Anchorage, AK 99501-2252. In-person oral public testimony will be accepted at the discretion of the chair.

Special Accommodations

These meetings are physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Shannon Gleason at (907) 271-2809 at least 7 working days prior to the meeting date.

Dated: April 30, 2019.

Pacific Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meeting (webinar).

SUMMARY: The Pacific Fishery Management Council's (Pacific Council) Ad Hoc Ecosystem Workgroup (EWG) will hold a webinar, which is open to the public.

DATES: The webinar will be held Wednesday, May 22, 2019, from 1:30 p.m. to 4:30 p.m., Pacific Daylight Time.

ADDRESSES: This meeting will be held via webinar. A public listening station is available at the Pacific Council office (address below). To attend the webinar: (1) join the GoToMeeting by visiting this link <https://global.gotomeeting.com/join/791200357> (Click "Join a Meeting" in top right corner of page), (2) Enter the Webinar ID: 791-200-357 and (3) enter your name and email address (required). After logging into the webinar, you must use your telephone for the audio portion of the meeting. Dial this TOLL number 1 (872) 240-3311, enter the Attendee phone audio access code 791-200-357, and enter your audio phone pin (shown after joining the webinar). System Requirements: for PC-based attendees: Required: Windows® 10, 8, 7, Vista, or XP; for Mac®-based attendees: Required: Mac OS® X 10.5 or newer; for Mobile attendees: Required: iPhone®, iPad®, Android™ phone or Android tablet (See the <https://www.gotomeeting.com/meeting/ipad-iphone-android-apps>). You may send an email to Mr. Kris Kleinschmidt or contact him at (503) 820-2280, extension 411 for technical assistance.

Council address: Pacific Fishery Management Council, 7700 NE Ambassador Place, Suite 101, Portland, OR 97220.

FOR FURTHER INFORMATION CONTACT: Dr. Kit Dahl, Pacific Council; telephone: (503) 820-2422.

SUPPLEMENTARY INFORMATION: The purpose of this webinar is for the EWG to discuss revisions to the Fishery Ecosystem Plan goals and objectives as part of the five-year review. In March 2019 the Council directed the EWG to submit, for the September 2019 advanced briefing book, alternative descriptions of the FEP Vision (including purpose, goals, and objectives), taking into account public and advisory body comments.

Although non-emergency issues not contained in the meeting agenda may be discussed, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically listed in this document and any issues arising after publication of this document that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the intent to take final action to address the emergency.

Special Accommodations

This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Mr. Kris Kleinschmidt, (503) 820-2411, at least 10 business days prior to the meeting date.

Dated: April 30, 2019.

National Oceanic and Atmospheric Administration

Evaluation of State Coastal Management Programs

AGENCY: Office for Coastal Management (OCM), National Ocean Service (NOS), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce (DOC).

ACTION: Notice of public meeting.

SUMMARY: The National Oceanic and Atmospheric Administration (NOAA), Office for Coastal Management will hold a public meeting to solicit comments as part of the performance evaluation of the Delaware Coastal Management Program.

DATES: *Delaware Management Program Evaluation:* The public meeting will be held on May 20, 2019, and written comments must be received on or before May 31, 2019.

For specific dates, times, and locations of the public meetings, see **SUPPLEMENTARY INFORMATION.**

ADDRESSES: You may submit comments on the coastal program NOAA intends to evaluate by any of the following methods:

Public Meeting and Oral Comments: A public meeting will be held in Dover, Delaware. For the specific location, see **SUPPLEMENTARY INFORMATION.**

Written Comments: Please direct written comments to Carrie Hall, Evaluator, Planning and Performance Measurement Program, Office for Coastal Management, NOS/NOAA, 1305 East-West Highway, 11th Floor, N/OCM1, Silver Spring, Maryland 20910, or email comments Carrie.Hall@noaa.gov.

FOR FURTHER INFORMATION CONTACT: Carrie Hall, Evaluator, Planning and Performance Measurement Program, Office for Coastal Management, NOS/NOAA, 1305 East-West Highway, 11th Floor, N/OCM1, Silver Spring, Maryland 20910, by phone at (240) 533-0730 or email comments to Carrie.Hall@noaa.gov. Copies of the previous evaluation findings and 2016-2020 Assessment and Strategy may be viewed and downloaded on the internet at <http://coast.noaa.gov/czm/evaluations>. A copy of the evaluation notification

letter and most recent progress report may be obtained upon request by contacting the person identified under **FOR FURTHER INFORMATION CONTACT.**

SUPPLEMENTARY INFORMATION: Section 312 of the Coastal Zone Management Act (CZMA) requires NOAA to conduct periodic evaluations of federally approved state and territorial coastal programs. The process includes one or more public meetings, consideration of written public comments, and consultations with interested Federal, state, and local agencies and members of the public. During the evaluation, NOAA will consider the extent to which the state has met the national objectives, adhered to the management program approved by the Secretary of Commerce, and adhered to the terms of financial assistance under the CZMA. When the evaluation is completed, NOAA's Office for Coastal Management will place a notice in the **Federal Register** announcing the availability of the Final Evaluation Findings.

You may participate or submit oral comments at the public meeting scheduled as follows:

Date: May 20, 2019.

Time: 5:30 p.m., local time.

Location: State Street Commons, Department of Natural Resources and Environmental Control, State Street Commons Training Room (First Floor), 100 W. Water Street, Suite 6A, Dover, Delaware 19904.

Written public comments must be received on or before May 31, 2019.

Dated: April 25, 2019.

Keelin Kuipers,

Acting Director, Office for Coastal Management, National Ocean Service, National Oceanic and Atmospheric Administration.

SUMMARY: The New England Fishery Management Council (Council) is scheduling a public meeting of its Skate Committee to consider actions affecting New England fisheries in the exclusive economic zone (EEZ).

Recommendations from this group will be brought to the full Council for formal consideration and action, if appropriate.

DATES: This meeting will be held on Wednesday, May 22, 2019 at 9 a.m.

ADDRESSES: The meeting will be held at the Hilton Providence, 21 Atwells Ave., Providence, RI 02903; telephone: (401) 831-3900.

Council address: New England Fishery Management Council, 50 Water Street, Mill 2, Newburyport, MA 01950.

FOR FURTHER INFORMATION CONTACT: Thomas A. Nies, Executive Director, New England Fishery Management Council; telephone: (978) 465-0492.

SUPPLEMENTARY INFORMATION: The Committee will discuss Amendment 5/ Limited Access to the skate fishery—review Plan Development Team (PDT) analyses to date; continued discussion on the structure of a limited access program for the skate bait and wing fisheries including draft alternatives. Other business will be discussed as necessary.

Although non-emergency issues not contained on this agenda may come before this Council for discussion, those issues may not be the subject of formal action during this meeting. Council action will be restricted to those issues specifically listed in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Act, provided the public has been notified of the Council's intent to take final action to address the emergency.

Special Accommodations

This meeting is physically accessible to people with disabilities. This meeting will be recorded. Consistent with 16 U.S.C. 1852, a copy of the recording is available upon request. Requests for sign language interpretation or other auxiliary aids should be directed to Thomas A. Nies, Executive Director, at (978) 465-0492, at least 5 days prior to the meeting date.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: April 30, 2019.

Rey Israel Marquez,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648-XE461

Marine Mammals; Pinniped Removal Authority; Revised Authorization

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration, Commerce (NOAA).

ACTION: Notice of availability.

SUMMARY: NMFS announces the availability of a revised authorization to the states of Oregon, Washington, and Idaho (states) for lethal removal of individually identifiable predatory California sea lions (*Zalophus californianus*) in the vicinity of Bonneville Dam to minimize pinniped predation on Pacific salmon and steelhead (*Oncorhynchus spp.*) listed as threatened or endangered under the Endangered Species Act (ESA) in the Columbia River in Washington and Oregon. This authorization is pursuant to the Marine Mammal Protection Act (MMPA).

ADDRESSES: Additional information about our determination may be obtained by visiting the NMFS West Coast Region's website: <http://www.westcoast.fisheries.noaa.gov>, or by writing to us at: NMFS West Coast Region, Protected Resources Division, 1201 Lloyd Blvd., Suite 1100, Portland, OR 97232.

FOR FURTHER INFORMATION CONTACT: Mr. Robert Anderson at the above address, by phone at (503) 231-2226, or by email at, robert.c.anderson@noaa.gov.

SUPPLEMENTARY INFORMATION:

Background

Section 120 of the MMPA (16 U.S.C. 1361, *et seq.*) allows the Secretary of Commerce, acting through the Assistant Administrator for Fisheries, and the West Coast Regional Administrator of NMFS, the discretion to authorize the intentional lethal taking of individually identifiable pinnipeds that are having a significant negative impact on salmonids that are either: (1) Listed under the ESA, (2) approaching a threatened or endangered status, or (3) migrate through the Ballard Locks in Seattle. The authorization applies only to pinnipeds that are not: (1) Listed under the ESA, (2) designated as depleted, or (3) designated a strategic stock.

On January 27, 2016, NMFS received an application from the states to reauthorize the 2012 MMPA section 120 authorization through June 30, 2021. On March 28, 2016, NMFS published a notice in the **Federal Register** (81 FR 17141), announcing receipt of the states' application, and soliciting public comments on the application and any additional information that NMFS should consider in making its decision. On May 31, 2016, NMFS reconvened the Pinniped-Fishery Interaction Task Force (Task Force), which was open to the public, and during which it reviewed the states' application, public comments on the application, and other information related to sea lion predation on salmonids at Bonneville Dam. The Task Force completed and submitted its report to NMFS on June 22, 2016. Thirteen of the fourteen members recommended that NMFS approve the states' extension request, with one member dissenting. All decision documents, including a copy of the new authorization, are available on NMFS's West Coast Region web page (see **ADDRESSES**).

As part of the MMPA section 120 process, subsection (c)(5) states that after implementation of an approved application, the Task Force shall evaluate the effectiveness of the permitted intentional lethal taking or alternative actions implemented. If implementation was ineffective in eliminating the problem interaction, the Task Force shall recommend additional actions. If the implementation was effective, the Task Force shall so advise the Secretary, and the Secretary shall disband the Task Force.

Because the results of the final year of implementation were not available at the time the 2012 authorization was set to expire, NMFS deferred the assessment of the effectiveness of the permitted intentional lethal taking until

that information became available. In the interim, NMFS granted the states' request for a renewal on June 28, 2016, resulting in a new 5-year authorization starting July 1, 2016.

On March 1 and 2, 2017, NMFS reconvened the Task Force to evaluate the effectiveness of the states permitted intentional lethal taking at Bonneville Dam during the years 2012 through 2016. One of the recommendations provided to NMFS by the Task Force was to change the criteria in Term and Condition 1 of the June 28, 2016, authorization to expedite adding California sea lions to Appendix 1, thus expediting the process for identifying specific California sea lions for removal (*i.e.*, placement in permanent captivity or killing).

Currently, the states' MMPA section 120 authorization permits the states to lethally remove no more than 92 California sea lions annually. The program has never been fully implemented to achieve that level and as a result many believed it has not been as effective as it could be. Some Task Force members thought that increasing the number of individual California sea lions on the list of animals approved for removal might allow for increases in removal and a decrease in predation, while others recognized that staffing and resource limitations may prevent full implementation. Because individual residence time of California sea lions has decreased, there are fewer days/time that observers may see an animal eating salmon at the dam. Consideration was given to changing the criteria in the current Authorization to one or more of the following:

a. An animal may be removed if it is individually identifiable and has been seen eating salmon, or has been observed in the observation area for x days. (See options below for new number of days).

Option 1: Use data to analyze the probability of consumption of at-risk salmonids based on how many days an animal has been in the area. Then use this number to determine the appropriate number of observation days needed.

Option 2: Reduce the number of days of observation from 5 days to 3 days, regardless of a probability analysis;

Option 3: Reduce the number of days of observation from 5 days to 2 days, regardless of a probability analysis.

Based on the Task Force recommendation (Option 1), the states requested that the U.S. Army Corps of Engineers Fisheries Field Unit (FFU) conduct an analysis to examine whether the changes proposed by the Task Force would improve the ability to identify

animals for removal. The FFU analyzed the data presented in 2015 by the states in the Bonneville Field Report for the number of California sea lions that could have been qualified for removal if the conditions of “five days observed and one salmonid kill” were changed to “five days observed or one salmonid kill.” Findings indicated that changing the criteria would have led to a 66 percent increase in the number of California sea lions added to the removal list. Changing criteria from “and” to “or” would therefore significantly improve the effectiveness of the state’s lethal removal program.

Findings

Based on the results of the FFU evaluation of the Task Force recommendation, on February 6, 2019, NMFS received a letter from the states and the Columbia River Intertribal Fish Commission requesting that we formally adopt the Task Force recommendation to change the “and” to “or” in Term and Condition 1 in the June 28, 2016, authorization. At the request of the states, NMFS adopts the Task Force recommendation to change the criteria in Term and Condition 1 of the state’s 2016 MMPA section 120 authorization. All other Terms and Conditions in the June 28, 2016, authorization remain unchanged. For the revised Term and Condition, NMFS incorporated provision “c” in Term and Condition 1 into both criteria “a” and “b” for clarity and readability.

As required under section 7(a)(2) under the ESA, NMFS has previously completed formal consultation, and in accordance with the National Environmental Policy Act (NEPA), in 2016 NMFS completed a supplemental environmental assessment (EA) to the 2008 EA with a finding of no significant impact. The proposed action (issuing the states a revised MMPA section 120 authorization) does not require reinitiation of consultation under ESA Section 7 (WCR–2016–4754) as none of the reinitiation requirements in 50 CFR 402.16 have been met. Similarly, we have determined that the existing 2016 Supplemental Environmental Assessment (EA) and Finding of No Significant Impact (FONSI) remain valid because the new circumstances and/or information relevant to environmental concerns and bearing on the proposed action or its impacts are not significant under NEPA because the changes to the proposed action that are relevant to environmental considerations are not substantial, and because the proposed changes will have no direct, indirect, or cumulative effects and are within the

range of effects on all resources considered in our 2016 EA and FONSI.

In considering a state’s application to lethally remove pinnipeds, NMFS is also required, pursuant to section 120(b)(1) of the MMPA, to determine that individually identifiable pinnipeds are having a significant negative impact on the decline or recovery of at-risk salmonid fishery stocks. We determined that changing criteria from “and” to “or” would not change our determination that the MMPA section 120 individually identifiable and significant negative impact requirements in section 120(b)(1) have been met. The proposed criteria only change the process, not the standard, by which such animals are deemed qualified for removal, and is consistent with our previous MMPA section 120 decisions that pinnipeds collectively are having a significant negative impact on ESA-listed salmon and steelhead in the vicinity of Bonneville Dam, and are also deemed to be major contributors to detrimental impacts on ESA-listed salmonids because they have been documented to prey on ESA-listed salmonids, are repeat offenders, and persist in the action area after being exposed to nonlethal deterrence.

Based on these requirements, considerations, and analyses, NMFS has determined that the requirements of section 120 of the MMPA have been met and it is therefore reasonable to issue a revised authorization to the states for the lethal removal in the vicinity of Bonneville Dam of individually identifiable predatory California sea lions through 2021.

Dated: April 30, 2019.

Donna S. Wieting,

*Director, Office of Protected Resources,
National Marine Fisheries Service.*

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

Patent and Trademark Office

[Docket No.: PTO–C–2019–0015]

National Medal of Technology and Innovation Nomination Evaluation Committee Meeting

AGENCY: United States Patent and Trademark Office, Department of Commerce.

ACTION: Notice of closed meeting.

SUMMARY: The National Medal of Technology and Innovation (NMTI) Nomination Evaluation Committee will meet in closed session on June 5, 2019. The primary purpose of the meeting is

to discuss the relative merits of persons, teams, and companies nominated for the NMTI.

DATES: The meeting will convene June 5, 2019, at approximately 9 a.m., and adjourn at approximately 5 p.m.

ADDRESSES: The meeting will be held at the United States Patent and Trademark Office, 600 Dulany St., Alexandria, VA 22314.

FOR FURTHER INFORMATION CONTACT: John Palafoutas, Program Manager, National Medal of Technology and Innovation Program, United States Patent and Trademark Office, P.O. Box, Alexandria, VA 22313; telephone (571) 272–9821; or by electronic mail: nmti@uspto.gov.

SUPPLEMENTARY INFORMATION: Pursuant to the Federal Advisory Committee Act (FACA), 5 U.S.C. App. 2, notice is hereby given that the NMTI Nomination Evaluation Committee, chartered to the United States Department of Commerce, will meet at the United States Patent and Trademark Office campus in Alexandria, Virginia.

The Secretary of Commerce is responsible for recommending to the President prospective NMTI recipients. The NMTI Nomination Evaluation Committee evaluates the nominations received pursuant to public solicitation and makes its recommendations for the Medal to the Secretary. Committee members are distinguished experts in the fields of science, technology, business, and patent law drawn from both the public and private sectors and are appointed by the Secretary for three-year terms.

The NMTI Nomination Evaluation Committee was established in accordance with the FACA. The Committee meeting will be closed to the public in accordance with the FACA and 5 U.S.C. 552b(c)(6) and (9)(B), because the discussion of the relative merit of the Medal nominations is likely to disclose information of a personal nature that would constitute a clearly unwarranted invasion of personal privacy of the nominees; and premature disclosure of the Committee’s recommendations would be likely to significantly frustrate implementation of the Medal Program.

The Chief Financial Officer and Assistant Secretary for Administration, United States Department of Commerce, formally determined on April 16, 2019, pursuant to Section 10(d) of the FACA, that the meeting may be closed because Committee members are concerned with matters that are within the purview of 5 U.S.C. 552b(c)(6) and (9)(B). Due to closure of this meeting, copies of any minutes of the meeting will not be available. A copy of the determination

is available for public inspection at the United States Patent and Trademark Office.

Dated: April 26, 2019.

Andrei Iancu,

Under Secretary of Commerce for Intellectual Property, and Director of the United States Patent and Trademark Office.

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Proposed Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed deletions from the Procurement List.

SUMMARY: The Committee is proposing to delete products and services from the Procurement List that were furnished by nonprofit agencies employing persons who are blind or have other severe disabilities.

DATES: Comments must be received on or before: June 2, 2019.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S Clark Street, Suite 715, Arlington, Virginia, 22202-4149.

FOR FURTHER INFORMATION CONTACT: For further information or to submit comments contact: Michael R. Jurkowski, Telephone: (703) 603-2117, Fax: (703) 603-0655, or email CMTEFedReg@AbilityOne.gov.

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C. 8503(a)(2) and 41 CFR 51-2.3. Its purpose is to provide interested persons an opportunity to submit comments on the proposed actions.

Deletions

The following products and services are proposed for deletion from the Procurement List:

Products

NSNs—Product Names:

7510-01-545-4433—DAYMAX System, 2018, Calendar Pad, Type II

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Additions and Deletion

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Additions to and deletion from the Procurement List.

SUMMARY: This action adds products to the Procurement List that will be furnished by nonprofit agencies employing persons who are blind or have other severe disabilities, and deletes a service from the Procurement List previously furnished by such agencies.

DATES: *Date added to and deleted from the Procurement List:* June 2, 2019.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S Clark Street, Suite 715, Arlington, Virginia 22202-4149.

FOR FURTHER INFORMATION CONTACT: Michael R. Jurkowski, Telephone: (703) 603-2117, Fax: (703) 603-0655, or email CMTEFedReg@AbilityOne.gov.

SUPPLEMENTARY INFORMATION:

Additions

On 3/15/2019, 3/22/2019 and 3/29/2019, the Committee for Purchase From People Who Are Blind or Severely Disabled published notice of proposed additions to the Procurement List.

After consideration of the material presented to it concerning capability of qualified nonprofit agencies to provide the products and impact of the additions on the current or most recent contractors, the Committee has determined that the products listed below are suitable for procurement by the Federal Government under 41 U.S.C. 8501-8506 and 41 CFR 51-2.4.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in any additional reporting, recordkeeping or other compliance requirements for small entities other than the small organizations that will furnish the products and services to the Government.

2. The action will result in authorizing small entities to furnish the products to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 8501-8506) in connection with the products proposed for addition to the Procurement List.

End of Certification

Accordingly, the following products are added to the Procurement List:

Products

NSNs—Product Names:

- MR 10777—Platters, Christmas, Red, Includes Shipper 20777
- MR 10778—Platters, Christmas, Blue, Includes Shipper 20777
- MR 11102—Bags, Roasting, Includes Shipper 21102
- MR 11103—Pan, Roasting, Oval, Includes Shipper 21103
- MR 11101—Paper, Parchment, Includes Shipper 21101

Mandatory Source of Supply: Winston-Salem Industries for the Blind, Inc., Winston-Salem, NC

Contracting Activity: Military Resale-Defense Commissary Agency

NSN—Product Name: 7930-00-NIB-2184—Towelettes, Lens Cleaning, Pocket Sized

Mandatory Source of Supply: West Texas Lighthouse for the Blind, San Angelo, TX

Mandatory Source of Supply: MidWest Enterprises for the Blind, Inc., Kalamazoo, MI

7240-00-NIB-0024—Dolly, Round, 5-Wheeled, Quiet Wheels, Black/Red

7240-00-NIB-0025—Dolly, Round, 5-Wheeled, Black/Grey

Mandatory Source of Supply: MidWest Enterprises for the Blind, Inc., Kalamazoo, MI

Mandatory For: Total Government Requirement

Contracting Activity: FEDERAL ACQUISITION SERVICE, GSA/FSS GREATER SOUTHWEST ACQUISITI

NSN—Product Name: 2815-01-464-5543—Parts Kit, Piston Assembly, HMMWV Engine

Mandatory Source of Supply: Georgia Industries for the Blind, Bainbridge, GA

Contracting Activity: DEFENSE LOGISTICS AGENCY, DLA LAND AND MARITIME

Deletions

On 3/22/2019, the Committee for Purchase From People Who Are Blind or Severely Disabled published notice of proposed deletions from the Procurement List.

After consideration of the relevant matter presented, the Committee has determined that the products and services listed below are no longer suitable for procurement by the Federal Government under 41 U.S.C. 8501-8506 and 41 CFR 51-2.4.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in additional reporting, recordkeeping or other compliance requirements for small entities.

2. The action may result in authorizing small entities to furnish the products and services to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 8501-8506) in connection with the products and services deleted from the Procurement List.

End of Certification

Accordingly, the following service is deleted from the Procurement List:

Service

Service Type: Supply and Warehousing Service

Mandatory for: The Dredge WHEELER Spare Parts Warehouse, Harahan, LA

Mandatory Source of Supply: The Lighthouse for the Blind in New Orleans, Inc., New Orleans, LA

Contracting Activity: DEPT OF THE ARMY,

W40M RHCO-ATLANTIC USAHCA

CORPORATION FOR NATIONAL AND COMMUNITY SERVICE

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Application Package for Data Collection Instruments for AmeriCorps NCCC Impact Studies

AGENCY: Corporation for National and Community Service (CNCS).

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, CNCS is proposing a new information collection.

DATES: Written comments must be submitted to the individual and office listed in the **ADDRESSES** section by July 2, 2019.

ADDRESSES: You may submit comments, identified by the title of the information collection activity, by any of the following methods:

(1) By mail sent to: Corporation for National and Community Service, Attention Laura Qin, 250 E Street SW, Washington, DC 20525.

(2) By hand delivery or by courier to the CNCS mailroom at the mail address given in paragraph (1) above, between 9:00 a.m. and 4:00 p.m. Eastern Time, Monday through Friday, except federal holidays.

(3) Electronically through www.regulations.gov.

Individuals who use a telecommunications device for the deaf (TTY-TDD) may use our web chat for alternative communication www.NationalService.gov/contact-us.

Comments submitted in response to this notice may be made available to the public through regulations.gov. For this reason, please do not include in your comments information of a confidential nature, such as sensitive personal information or proprietary information. If you send an email comment, your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the internet. Please note that responses to this public comment request containing any routine notice about the

confidentiality of the communication will be treated as public comment that may be made available to the public, notwithstanding the inclusion of the routine notice.

FOR FURTHER INFORMATION CONTACT:

Laura Qin, 202-606-6767, or by email at lqin@cns.gov.

SUPPLEMENTARY INFORMATION:

Title of Collection: Data Collection Instruments for AmeriCorps NCCC Impact Studies.

OMB Control Number: TBD. Type of Review: New.

Respondents/Affected Public: Individuals.

Total Estimated Number of Annual Responses: 7,990.

Total Estimated Number of Annual Burden Hours: 2,717.

Abstract: The purpose of the information collection is to gather data for the upcoming National Civilian Conservation Corps (NCCC) impact studies. The studies intend to assess the performance and impact of NCCC programs on members and communities served by the program. In particular, the studies will investigate three main components of NCCC:

1. The impact of NCCC on developing leaders
2. The impact of NCCC on strengthening communities
3. Retention at the different phases of the program, from application to completion

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; to develop, acquire, install and utilize technology and systems for the purpose of collecting, validating and verifying

information, processing and maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information, to search data sources, to complete and review the collection of information; and to transmit or otherwise disclose the information. All written comments will be available for public inspection on regulations.gov.

Dated: April 3, 2019.

Laura Qin,

Research Analyst, Office of Research and Evaluation.

BILLING CODE 6050-28-P

COUNCIL ON ENVIRONMENTAL QUALITY

Instructions for Implementing Efficient Federal Operations Executive Order (E.O.) 13834

AGENCY: Council on Environmental Quality.

ACTION: Notice of Availability of Instructions for Implementing Efficient Federal Operations Executive Order (E.O.) 13834.

SUMMARY: The Chairman of the Council on Environmental Quality (CEQ) has issued instructions to Federal agencies for meeting energy and environmental performance requirements in a manner that increases efficiency, optimizes performance, eliminates unnecessary use of resources, and protects the environment, as required under Executive Order (E.O.) 13834, "Efficient Federal Operations," signed by President Trump on May 17, 2018. The purpose of the Executive Order is to direct agencies on the management of Federal facilities, vehicles, and operations to achieve statutory requirements, while prioritizing actions to reduce waste, cut costs, and enhance resilience of Federal infrastructure and operations for effective accomplishment of agency missions.

DATES: The Implementing Instructions for E.O. 13834, Efficient Federal Operations were issued on April 30, 2019.

ADDRESSES: The *Implementing Instructions for E.O. 13834, Efficient Federal Operations* are available at: <https://www.sustainability.gov/resources.html>.

FOR FURTHER INFORMATION CONTACT: Dee Siegel, Office of Federal Sustainability, Council on Environmental Quality, at dsiegel@ceq.eop.gov or (202) 395-5750.

SUPPLEMENTARY INFORMATION: Section 3(d) of E.O. 13834, "Efficient Federal Operations," directs the Chairman of CEQ to issue implementing instructions. 83 FR 23771. The instructions apply only to Federal agencies, operations, and programs. Agencies are expected to implement the instructions as part of their compliance with E.O. 13834.

(Authority: E.O. 13834, 83 FR 23771)

Dated: April 30, 2019.

Mary B. Neumayr,

Chairman, Council on Environmental Quality.

BILLING CODE 3225-F9-P

DEPARTMENT OF DEFENSE

Department of the Army

Notice of Intended Disinterment

AGENCY: Department of the Army, DoD.

ACTION: Notice of intended disinterment.

SUMMARY: Army National Military Cemeteries (ANMC) is honoring the requests of six families to disinter the human remains of six Native American students from the Carlisle Barracks Post Cemetery, Carlisle, Pennsylvania. The decedent names are Ophelia Powless (aka Ophelia Powias), Sophia Caulon (aka Sophy Coulon), Jamima Metoxen (aka Jemima Meloxen), Henry Jones, Alice Springer, and Adam McCarty (aka Adam McCarthy). These students died in the 1880s and 1890s while attending the Carlisle Indian Industrial School. At the request of the closest living relative for each decedent, ANMC will disinter, transfer custody, transport, and reinter the remains in private cemeteries chosen by the families. This disinterment will be conducted in accordance with Army Regulation 210-190. This is not a Native American Graves Protection and Repatriation Act (NAGPRA) action because the remains are not part of a collection as they are interred in graves that are individually marked at the Carlisle Barracks Post Cemetery.

DATES: The disinterment is scheduled to begin on June 15, 2019. Transportation to and re-interment in private cemeteries will take place as soon as practical after the disinterment. If other living relatives object to the disinterment of these remains, please provide written objection to Mr. Thomas Mullen at the email address listed below prior to June 7, 2019. Such objections may delay the disinterment for the decedent in question.

ADDRESSES: Objections from family members and public comments can be mailed to Mr. Thomas Mullen, ANMC Project Manager, 1 Memorial Avenue, Arlington National Cemetery, Arlington, VA 22211 or emailed to usarmy.pentagon.hqda-anmc.mbx.accountability-coe@mail.mil (preferred).

FOR FURTHER INFORMATION CONTACT: Mr. Thomas Mullen, ANMC Project Manager at (703) 614-6315, or the email address listed above.

SUPPLEMENTARY INFORMATION:

Additional information related to Native Americans buried at the Carlisle Barracks Post Cemetery can be found at <https://armycemeteries.army.mil/Cemeteries/Carlisle-Barracks-Main-Post-Cemetery>.

Brenda S. Bowen,

Army Federal Register Liaison Officer.

BILLING CODE 5001-03-P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID DOD-2019-OS-0048]

Proposed Collection; Comment Request

AGENCY: Office of the Under Secretary of Defense for Personnel and Readiness, DoD.

ACTION: Information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995*, the Office of the Under Secretary of Defense for Personnel and Readiness announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by July 2, 2019.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: <http://www.regulations.gov>. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Chief Management Officer, Directorate for Oversight and Compliance, 4800 Mark Center Drive, Mailbox #24, Suite 08D09, Alexandria, VA 22350-1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Office of the Under Secretary of Defense (Personnel and Readiness) (Defense Human Resource Activity), ATTN: Bette Inch, SAPRO, 4800 Mark Center Drive, Alexandria, VA 22350-8000 or submit an email to whs.mc-alex.wso.mbx.SAPRO@mail.mil.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: DoD Safe Helpline/Victim-Related Inquiries; DD Form 2985 and DD Form 2985-1; OMB Control Number 0704-0565.

Needs and Uses: This information collection requirement is necessary to facilitate a timely response and appropriate resolution to inquiries from DoD sexual assault victims/survivors, support personnel and others. Collection of this information is used to support victims and survivors of sexual assault in their recovery and to maintain a database of inquiries that documents the nature and status of inquiries in order to provide adequate follow-up services and inform sexual assault prevention and response program and policy improvements while promoting victim recovery.

Affected Public: Individuals or households.

Annual Burden Hours: 75 hours.

Number of Respondents: 150.

Responses per Respondent: 1.

Annual Responses: 150.

Average Burden per Response: 30 minutes.

Frequency: As required.

Dated: April 29, 2019.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison
Officer, Department of Defense.

BILLING CODE 5001-06-P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DOD-2019-OS-0050]

Proposed Collection; Comment Request

AGENCY: Office of the Under Secretary of Defense for Personnel and Readiness, DoD.

ACTION: Information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995*, the Office of the Under Secretary of Defense for Personnel and Readiness announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by July 2, 2019.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: <http://www.regulations.gov>. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Chief Management Officer, Directorate for Oversight and Compliance, 4800 Mark Center Drive, Mailbox #24, Suite 08D09, Alexandria, VA 22350-1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Mr. Sam Peterson at Defense Manpower Data Center, 400 Gigling Road, Seaside, CA 93955-6771 or call (831) 583-2400.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Collection of Required Data Elements to Verify Eligibility; OMB Control Number 0704-0545.

Needs and Uses: The information collection requirement is necessary for the Government to verify whether or not an individual was impacted by the OPM cybersecurity incident involving background investigation records and to send a letter confirming status as "impacted" or "not impacted" by this incident. Once the minimally required information has been input into the OPM secure portal, it will be compared to an electronic master file and verification will be accomplished electronically. After the Government has validated the individual's status, the DoD Defense Manpower Data Center (DMDC) will generate and mail a response letter. This letter will either confirm eligibility and contain a PIN for impacted individuals, or confirm that the individual was not impacted by this cybersecurity incident.

Affected Public: Individuals or households.

Annual Burden Hours: 83,333.

Number of Respondents: 1,000,000.

Responses per Respondent: 1.

Annual Responses: 1,000,000.

Average Burden per Response: 5 minutes.

Frequency: On occasion.

For the purposes of this submission, the affected public is comprised of military applicants, and employees of government contractors, experts, instructors, and consultants to Federal programs who underwent a personnel background investigation after January 1, 1990. Additionally, other individuals whose Social Security Numbers (SSN) were provided on an SF 85, SF85-P or SF86 after January 1, 1990. Lastly, it also applies to individuals who submit a breach verification inquiry as well as minor children, who were minors as of July 1, 2015, of individuals described in this paragraph.

Dated: April 29, 2019.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison
Officer, Department of Defense.

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DOD-2019-OS-0052]

Proposed Collection; Comment Request

AGENCY: Office of the Under Secretary of Defense for Acquisition and Sustainment, DoD.

ACTION: Information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995*, the Office of the Under Secretary of Defense for Acquisition and Sustainment announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by July 2, 2019.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: <http://www.regulations.gov>. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Chief Management Officer, Directorate for Oversight and Compliance, 4800 Mark Center Drive, Mailbox #24, Suite 08D09, Alexandria, VA 22350-1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Assistant Secretary of Defense for Sustainment (Environment),

Attn: Alexandria Long, 3500 Defense Pentagon, Washington, DC 20301-3500 or email osd.pentagon.ousd-a-s.mbx.a-s.asd-sustainment-fo@mail.mil.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Technical Assistance for Public Participation (TAPP) Application; DD Form 2749; OMB Control Number 0704-0392.

Needs and Uses: The information collection requirement is necessary to identify products or services requested by community members of restoration advisory boards or technical review committees to aid in their participation in the Department of Defense's environmental restoration program, and to meet Congressional reporting requirements.

Affected Public: Individuals or households.

Annual Burden Hours: 200.
Number of Respondents: 25.
Responses per Respondent: 2.
Annual Responses: 50.
Average Burden per Response: 4 hours.

Frequency: On occasion.

Respondents are community members of restoration advisory boards or technical review committees requesting technical assistance to interpret scientific and engineering issues regarding the nature of environmental hazards at an installation. This assistance will assist communities in participating in the cleanup process. The information, directed by 10 U.S.C. 2705, will be used to determine the eligibility of the proposed project, begin the procurement process to obtain the requested products or services, and determine the satisfaction of community members of restoration advisory boards and technical review communities receiving the products and services.

Dated: April 30, 2019.

Aaron T. Siegel,

Alternate OSD Federal Register, Liaison Officer, Department of Defense.

Office of the Secretary

[Docket ID DOD-2019-HA-0051]

Proposed Collection; Comment Request

AGENCY: Office of the Assistant Secretary of Defense for Health Affairs, DoD.

ACTION: Information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995*, the Uniformed Services University of the Health Sciences announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by July 2, 2019.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: <http://www.regulations.gov>. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Chief Management Officer, Directorate for Oversight and Compliance, 4800 Mark Center Drive, Mailbox #24, Suite 08D09, Alexandria, VA 22350-1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Office of Accreditation and Organizational Assessment, Uniformed Services University of the Health Sciences, ATTN: Brian Rimm, 4301 Jones Bridge Rd., Bethesda, MD 20814 or call at 301-295-3681.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Applicant Record System Records; OMB Control Number 0720-XXXX.

Needs and Uses: The information collection requirement is necessary to allow the Uniformed Services University of the Health Sciences to

review admission applications and select students. Also used as a management tool for statistical analysis, tracking, reporting, evaluating program effectiveness and conducting research.

Affected Public: Individuals or households.

Frequency: Annually.

Supplemental Application

Annual Burden Hours: 10,350.
Number of Respondents: 2,070.
Responses per Respondent: 1.
Annual Responses: 2,070.
Average Burden per Response: 5 hours.

Preference Form

Annual Burden Hours: 62.1.
Number of Respondents: 2,070.
Responses per Respondent: 1.
Annual Responses: 2,070.
Average Burden per Response: 0.03 hours.

Update Sheet

Annual Burden Hours: 517.5.
Number of Respondents: 2,070.
Responses per Respondent: 1.
Annual Responses: 2,070.
Average Burden per Response: 0.25 hours.

Acceptance & Degree Form

Annual Burden Hours: 165.6.
Number of Respondents: 2,070.
Responses per Respondent: 1.
Annual Responses: 2,070.
Average Burden per Response: 0.08 hours.

Graduation Education Application

Annual Burden Hours: 200.
Number of Respondents: 200.
Responses per Respondent: 1.
Annual Responses: 200.
Average Burden per Response: 1 hour.
Total Burden Hours: 11,295.2.
Total Number of Respondents: 2,270.
Total Annual Responses: 2,270.

The information collection requirement is necessary for use by the Admissions Committee to select the annual class of 171 medical students. The majority of medical schools use the American Medical College Application Service. A secondary application is utilized for the school to gain further information from the applicant. Approximately 3,200 applications are received annually and take 30 hours to complete. This application process accounts for 96,000 of the reported annual burden hours.

This information collection is also necessary for the Graduate Education Office (GEO) to select its incoming students. The application is completed through a single online application.

GEO receives approximately 200 applications annually which each take 1 hour, for a total of 200 annual burden hours.

Dated: April 30, 2019.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 5001-06-P

DEPARTMENT OF DEFENSE

Department of the Army, Corps of Engineers

Intent To Prepare a Supplemental Draft Environmental Impact Statement for the Nebraska Highway 12 (N-12) Niobrara East and West Project

AGENCY: Department of the Army, U.S. Army Corps of Engineers, DoD.

ACTION: Notice of intent.

SUMMARY: The U.S. Army Corps of Engineers (Corps) is preparing a Supplemental Draft Environmental Impact Statement (SDEIS) to analyze the direct, indirect, and cumulative effects of a proposed transportation project, the Niobrara East and West Project. Construction of the proposed Project is expected to result in temporary and permanent impacts to jurisdictional waters of the United States, thereby requiring a Clean Water Act section 404 permit proposed by the Nebraska Department of Transportation (NDOT). NDOT proposes to rehabilitate two segments of N-12 east and west of Niobrara, between Verdell and Santee Spur 54-D (S-54D) in Knox County, Nebraska. A Draft EIS for this project was released on October 9, 2015. A public open house and hearing was held on November 9, 2015. After the public comment period ended, NDOT elected to withdraw its Section 404 permit application on November 20, 2015. Since that time, NDOT has developed a modified project purpose and need, and alternatives responsive to this purpose and need.

DATES: Written comments for scoping will be accepted until May 24, 2019.

ADDRESSES: Questions and comments regarding the proposed action and SDEIS should be addressed to Becky Latka, Regulatory Field Support, U.S. Army Corps of Engineers, 1616 Capitol Ave., Omaha, NE 68102.

FOR FURTHER INFORMATION CONTACT: Becky Latka, (402) 995-2681; Rebecca.J.Latka@usace.army.mil.

SUPPLEMENTARY INFORMATION: NDOT's stated project purpose is to rehabilitate

the existing roadway and to maximize utilization of existing transportation infrastructure and right-of-way, to improve the safety and reliability of the roadway, and bring the roadway up to current NDOT design standards for a major arterial highway. The project is needed due to ongoing risk of flooding, unreliable operations, and interruptions to regional connectivity.

The Corps is requesting scoping comments on the Project, preliminary alternatives, the NEPA compliance process, and to solicit input on the issues and alternatives to be evaluated and other related matters. Additional information and links related to the EIS can be found at <https://www.nwo.usace.army.mil/Missions/Regulatory-Program/Nebraska/EIS-Highway-12/>.

The Corps has invited the U.S. Environmental Protection Agency, National Park Service, U.S. Fish and Wildlife Service, the Federal Highway Administration, and Knox County to continue as cooperating agencies in the formulation of the EIS. Additionally, the Corps has invited the Nebraska Department of Environmental Quality and the Nebraska Department of Game and Parks to continue to serve as participating agencies during the preparation of the EIS.

The SDEIS will be prepared according to the Corps' procedures for implementing the National Environmental Policy Act (NEPA) of 1969, as amended, 42 U.S.C. 4332(2)(c), and consistent with the Corps' policy to facilitate public understanding and review of agency proposals. As part of the EIS process, a full range of reasonable alternatives, including the proposed Project and no action, will be evaluated.

John L. Moeschen,

Nebraska State Program Manager, Regulatory Branch.

BILLING CODE 3720-58-P

DEPARTMENT OF EDUCATION

Applications for New Awards; Comprehensive Literacy State Development Program

AGENCY: Office of Elementary and Secondary Education, Department of Education.

ACTION: Notice.

SUMMARY: The Department of Education is issuing a notice inviting applications for new awards for fiscal year (FY) 2019 for the Comprehensive Literacy State Development (CLSD) program, Catalog

of Federal Domestic Assistance (CFDA) number 84.371C. This notice relates to the approved information collection under OMB control number 1894-0006.

DATES:

Applications Available: May 3, 2019.

Deadline for Transmittal of Applications: June 3, 2019.

Deadline for Intergovernmental Review: August 1, 2019.

ADDRESSES: For the addresses for obtaining and submitting an application, please refer to our Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on February 13, 2019 (84 FR 3768), and available at www.govinfo.gov/content/pkg/FR-2019-02-13/pdf/2019-02206.pdf.

FOR FURTHER INFORMATION CONTACT:

Cindy Savage, U.S. Department of Education, 400 Maryland Avenue SW, Room 3E230, Washington, DC 20202-6450. Telephone: (202) 453-5998. Email: cindy.savage@ed.gov.

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service (FRS), toll free, at 1-800-877-8339.

SUPPLEMENTARY INFORMATION:

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: The Comprehensive Literacy State Development (CLSD) program awards competitive grants to advance literacy skills, through the use of evidence-based practices, activities and interventions, including pre-literacy skills, reading, and writing, for children from birth through grade 12, with an emphasis on disadvantaged children, including children living in poverty, English learners (as defined in this notice), and children with disabilities (as defined in this notice).

Background: The fiscal year 2019 competition for new CLSD awards fully transitions the program to the Elementary and Secondary Education Act of 1965, as amended by the Every Student Succeeds Act (ESEA). We have, therefore, focused this year's competition very closely on the requirements in the statute. In addition, we have included two competitive preference priorities that highlight key policy ideas on which we would like to see States focus their literacy plans or encourage eligible subgrant applicants to focus their local literacy plans. First, we give competitive preference to projects that would include evidence-based family literacy strategies as a key

component to their literacy plans. We believe that encouraging parents and families to read with their children and promote reading at home is critical to instilling a passion for reading early in a child's life. Second, we give competitive preference to projects that would focus on effective literacy interventions while also increasing educational options for groups of students who have traditionally been underserved. To the extent practicable, we encourage States to consider ways to design their subgrant competitions to promote literacy interventions for students in rural communities, with disabilities, who are English learners, or who are in foster care. These interventions may take place outside of the traditional public school setting, including, for example, through community partnerships.

Priorities: This competition includes two competitive preference priorities. The competitive preference priorities are from the Secretary's Final Supplemental Priorities and Definitions for Discretionary Grant Programs published in the **Federal Register** on March 2, 2018 (83 FR 9096) (Supplemental Priorities).

Competitive Preference Priorities: For FY 2019 and any subsequent year in which we make awards from the list of unfunded applications from this competition these priorities are competitive preference priorities. Under 34 CFR 75.105(c)(2)(i) we award up to an additional five points to an application depending on how well the application meets each of these priorities, for a maximum of 10 additional points if both priorities are adequately addressed.

These priorities are:

Priority 1—Promoting Literacy (up to 5 points).

Projects that are designed to provide families with evidence-based (as defined in this notice) strategies for promoting literacy. This may include providing families with access to books or other physical or digital materials or content about how to support their child's reading development, or providing family literacy activities (as defined in section 203(9) of the Workforce Innovation and Opportunity Act of 2014).

Priority 2—Empowering Families and Individuals to Choose a High-Quality Education That Meets Their Unique Needs (up to 5 points).

Projects that are designed to increase the proportion of students with access to educational choice (as defined in this notice) for one or more of the following groups of children or students:

(a) Children or students in communities served by rural local educational agencies (as defined in this notice).

(b) Children or students with disabilities (as defined in this notice).

(c) English learners (as defined in this notice).

(d) Children or students who are or were previously in foster care.

Application Requirements: These application requirements are from sections 2222 and 2223 of the ESEA (20 U.S.C. 6642–6643). For FY 2019, and any subsequent year in which we make awards from the list of unfunded applications from this competition, the following application requirements apply. In order to receive funding, an applicant must submit an application that meets the following requirements:

(a) **State Agency Early Childhood Program Collaboration.**

To be eligible under this program, an SEA must collaborate with the State agency responsible for administering early childhood education programs and the State agency responsible for administering child care programs in the State, as well as, if applicable, the State Advisory Council on Early Childhood Education and Care (SAC) designated or established pursuant to section 642B(b)(1)(A)(i) of the Head Start Act (42 U.S.C. 9837b(b)(1)(A)(i)), in writing and implementing the early childhood education portion of the grant application submitted for the CLSD program.

(b) **State Needs Assessment.**

To be eligible under this program, an SEA must include a needs assessment that analyzes literacy needs across the State and in high-need schools (as defined in this notice) and local educational agencies (LEAs) that serve high-need schools, including identifying the most significant gaps in literacy proficiency and inequities in student access to effective teachers of literacy, considering each of the subgroups of students, as defined in section 1111(c)(2) of the ESEA.

(c) **State Comprehensive Literacy Plan.**

To be eligible under this program, an SEA must include a description of how, in collaboration with its State literacy team, if applicable, it will develop a State comprehensive literacy instruction (as defined in this notice) plan or will revise and update an already existing State comprehensive literacy instruction plan.

(d) **State Implementation Plan.**

To be eligible under this program, an SEA must include an implementation plan that includes a description of how

it will carry out the State-level activities.

(e) **Assurances.**

To be eligible under this program, an SEA must include in its application the following assurances:

(1) **State Funding Allocations.**

An SEA must assure that it will subgrant not less than 95 percent of grant funds to eligible entities (as defined in this notice), based on their needs assessment and a competitive application process, for comprehensive literacy instruction (as defined in this notice) programs according to the funding allocations in Program Requirement (a).

(2) **Serving Low-Income and High-Need Students.**

An SEA must assure that it will give priority in awarding subgrants to eligible entities (as defined in this notice) that—

(i) Serve children from birth through age 5 who are from families with income levels at or below 200 percent of the Federal poverty line (as defined in this notice); or

(ii) Are LEAs serving a high number or percentage of high-need schools (as defined in this notice).

(3) **Geographic Diversity.**

An SEA must assure that it will provide subgrants to eligible entities (as defined in this notice) serving a diversity of geographic areas, giving priority to entities serving greater numbers or percentages of children from low-income families.

Program Requirements: These program requirements are from sections 2222–2225 and 2301 of the ESEA. For FY 2019 and any subsequent year in which we make awards from the list of unfunded applications from this competition, the following program requirements apply.

(a) **State Funding Allocations.**

(1) Grantees must use not less than 95 percent of grant funds to award subgrants to eligible entities (as defined in this notice), based on their needs assessment and a competitive application process;

(2) Grantees must subgrant funds as follows:

(i) Not less than 15 percent of the funds awarded to subgrantees must be used for State and local programs and activities pertaining to children from birth through kindergarten entry;

(ii) Not less than 40 percent of the funds awarded to subgrantees must be used for State and local programs and activities, allocated equitably among the grades of kindergarten through grade 5; and

(iii) Not less than 40 percent of the funds awarded to subgrantees must be

used for State and local programs and activities, allocated equitably among grades 6 through 12.

(b) *State-Level Activities.*

(1) A grantee may reserve not more than 5 percent of the CLSD funds it receives for activities identified through the needs assessment and comprehensive literacy plan, including the following activities:

(i) Providing technical assistance, or engaging qualified providers to provide technical assistance, to eligible entities (as defined in this notice) to enable the eligible entities to design and implement literacy programs.

(ii) Coordinating with institutions of higher education in the State to provide recommendations to strengthen and enhance pre-service courses for students preparing to teach children from birth through grade 12 in explicit, systematic, and intensive instruction in evidence-based (as defined in this notice) literacy methods.

(iii) Reviewing and updating, in collaboration with teachers and institutions of higher education, State licensure or certification standards in the area of literacy instruction in early education through grade 12.

(iv) Making publicly available, including on the SEA's website, information on promising instructional practices to improve child literacy achievement.

(v) Administering and monitoring the implementation of subgrants by eligible entities (as defined in this notice).

(2) After making awards to subgrantees and carrying out the State-level activities described in this notice, an SEA may use any remaining amount to carry out one or more of the following activities:

(i) Developing literacy coach training programs and training literacy coaches.

(ii) Administration and evaluation of CLSD activities.

(3) *Consultation requirement.*

A grantee must consult with the State agency responsible for administering early childhood education programs, the State agency responsible for administering child care programs, and, if applicable, the SAC in making and implementing subgrants under the early childhood education portion of the CLSD program.

(d) *Requirements that apply to subgrants to eligible entities (as defined in this notice) in support of birth through kindergarten entry literacy.*

(1) *Subgrantee application requirements.*

An eligible entity (as defined in this notice) desiring to receive a subgrant under CLSD must submit an application to the SEA, at such time, in such

manner, and containing such information as the SEA may require.

Such application must include a description of—

(i) How the CLSD funds will be used to enhance the language and literacy development and school readiness of children, from birth through kindergarten entry, in early childhood education programs, which must include an analysis of data that support the proposed use of CLSD funds;

(ii) How the CLSD funds will be used to prepare and provide ongoing assistance to staff in the programs, including through high-quality professional development (as defined in this notice);

(iii) How the activities assisted with the CLSD funds will be coordinated with comprehensive literacy instruction (as defined in this notice) at the kindergarten through grade 12 levels; and

(iv) How the CLSD funds will be used to evaluate the success of the activities assisted under the subgrant in enhancing the early language and literacy development of children from birth through kindergarten entry.

(2) *Priority.*

In awarding subgrants to eligible entities (as defined in this notice) in support of birth through kindergarten entry, section 2222(d)(2)(E) of the ESEA requires that an SEA must provide an assurance that it will—

(i) Give priority to an eligible entity (as defined in this notice) that will use CLSD funds to implement evidence-based (as defined in this notice) activities; and

(ii) Give priority to an eligible entity (as defined in this notice) that will use CLSD funds to serve children from birth through age 5 who are from families with income levels at or below 200 percent of the Federal poverty line (as defined in this notice) or is an LEA serving a high number or percentage of high-need schools (as defined in this notice).

(3) *Duration.*

The term of a subgrant must be determined by the grantee and must not exceed five years.

(4) *Sufficient size and scope.*

Each subgrant must be of sufficient size and scope to allow the eligible entity (as defined in this notice) to carry out high-quality early literacy initiatives for children from birth through kindergarten entry.

(5) *Local uses of funds.*

An eligible entity (as defined in this notice) that receives a subgrant from the SEA must use the CLSD funds, consistent with the entity's approved application, to—

(i) Carry out high-quality professional development (as defined in this notice) opportunities for early childhood educators, teachers, principals, other school leaders, paraprofessionals, specialized instructional support personnel, and instructional leaders;

(ii) Train providers and personnel to develop and administer evidence-based (as defined in this notice) early childhood education literacy initiatives; and

(iii) Coordinate the involvement of families, early childhood education program staff, principals, other school leaders, specialized instructional support personnel (as appropriate), and teachers in literacy development of children served under CLSD.

(e) *Requirements that apply to subgrants to eligible entities (as defined in this notice) in support of kindergarten through grade 12 literacy.*

(1) *Subgrantee application requirements.*

An eligible entity (as defined in this notice) desiring to receive a subgrant from the SEA under the CLSD program must submit an application to the SEA at such time, in such manner, and containing such information as the SEA may require. Such application must include, for each school that the eligible entity (as defined in this notice) identifies as participating in a CLSD program, the following information:

(i) A description of the eligible entity's (as defined in this notice) needs assessment conducted to identify how CLSD funds will be used to inform and improve comprehensive literacy instruction (as defined in this notice) at the school.

(ii) How the school, the LEA, or a provider of high-quality professional development (as defined in this notice) will provide ongoing high-quality professional development to all teachers, principals, other school leaders, specialized instructional support personnel (as appropriate), and other instructional leaders served by the school.

(iii) How the school will identify children in need of literacy interventions or other support services.

(iv) An explanation of how the school will integrate comprehensive literacy instruction (as defined in this notice) into a well-rounded education (as defined in this notice).

(v) A description of how the school will coordinate comprehensive literacy instruction (as defined in this notice) with early childhood education programs and activities and after-school programs and activities in the area served by the LEA.

(2) *Priority.*

In awarding subgrants to eligible entities (as defined in this notice) the SEA must—

(i) Give priority to an eligible entity (as defined in this notice) that will use grant funds to implement evidence-based (as defined in this notice) activities; and

(ii) Give priority to an eligible entity (as defined in this notice) that is an LEA serving a high number or percentage of high-need schools (as defined in this notice).

(3) *Duration.*

The term of a subgrant must be determined by the grantee and must not exceed five years.

(4) *Sufficient size and scope.*

Each subgrant must be of sufficient size and scope to allow the eligible entity (as defined in this notice) to carry out high-quality comprehensive literacy instruction (as defined in this notice) in each grade level for which the CLSD funds are provided.

(5) *Local uses of funds for kindergarten through grade 5.*

An eligible entity (as defined in this notice) that receives a subgrant from the SEA under the CLSD program must use the CLSD funds to carry out the following activities pertaining to children in kindergarten through grade 5:

(i) Developing and implementing a comprehensive literacy instruction (as defined in this notice) plan across content areas for such children that—

(A) Serves the needs of all children, including children with disabilities (as defined in this notice) and English learners (as defined in this notice), especially children who are reading or writing below grade level;

(B) Provides intensive, supplemental, accelerated, and explicit intervention and support in reading and writing for children whose literacy skills are below grade level; and

(C) Supports activities that are provided primarily during the regular school day but that may be augmented by after-school and out-of-school time instruction.

(ii) Providing high-quality professional development (as defined in this notice) opportunities for teachers, literacy coaches, literacy specialists, English as a second language specialists (as appropriate), principals, other school leaders, specialized instructional support personnel, school librarians, paraprofessionals, and other program staff.

(iii) Training principals, specialized instructional support personnel, and other LEA personnel to support, develop, administer, and evaluate high-

quality kindergarten through grade 5 literacy initiatives.

(iv) Coordinating the involvement of early childhood education program staff, principals, other instructional leaders, teachers, teacher literacy teams, English as a second language specialists (as appropriate), special educators, school personnel, and specialized instructional support personnel (as appropriate) in the literacy development of children served.

(v) Engaging families and encouraging family literacy experiences and practices to support literacy development.

(6) *Local uses of funds for grades 6 through 12.*

An eligible entity (as defined in this notice) that receives a subgrant from the SEA under CLSD must use CLSD funds to carry out the following activities pertaining to children in grades 6 through 12:

(i) Developing and implementing a comprehensive literacy instruction (as defined in this notice) plan across content areas for such children that—

(A) Serves the needs of all children, including children with disabilities (as defined in this notice) and English learners (as defined in this notice), especially children who are reading or writing below grade level;

(B) Provides intensive, supplemental, accelerated, and explicit intervention and support in reading and writing for children whose literacy skills are below grade level; and

(C) Supports activities that are provided primarily during the regular school day but that may be augmented by after-school and out-of-school time instruction.

(ii) Training principals, specialized instructional support personnel, school librarians, and other LEA personnel to support, develop, administer, and evaluate high-quality comprehensive literacy instruction (as defined in this notice) initiatives for grades 6 through 12.

(iii) Assessing the quality of adolescent comprehensive literacy instruction (as defined in this notice) as part of a well-rounded education (as defined in this notice).

(iv) Providing time for teachers to meet to plan evidence-based (as defined in this notice) adolescent comprehensive literacy instruction (as defined in this notice) to be delivered as part of a well-rounded education (as defined in this notice).

(v) Coordinating the involvement of principals, other instructional leaders, teachers, teacher literacy teams, English as a second language specialists (as appropriate), paraprofessionals, special

educators, specialized instructional support personnel (as appropriate), and school personnel in the literacy development of children served.

(7) *Additional local allowable uses of funds for kindergarten through grade 12.*

An eligible entity that receives a subgrant from an SEA under CLSD may, in addition to carrying out the activities described in paragraphs 5 and 6 of this requirement, use subgrant funds to carry out the following activities pertaining to children in kindergarten through grade 12:

(i) Recruiting, placing, training, and compensating literacy coaches.

(ii) Connecting out-of-school learning opportunities to in-school learning in order to improve children's literacy achievement.

(iii) Training families and caregivers to support the improvement of adolescent literacy.

(iv) Providing for a multi-tier system of supports for literacy services.

(v) Forming a school literacy leadership team to help implement, assess, and identify necessary changes to the literacy initiatives in 1 or more schools to ensure success.

(vi) Providing time for teachers (and other literacy staff, as appropriate, such as school librarians or specialized instructional support personnel) to meet to plan comprehensive literacy instruction (as defined in this notice).

(e) *Supplement not supplant.*

Grantees must use CLSD funds to supplement, and not supplant, non-Federal funds that would otherwise be used for activities authorized under the CLSD program.

(f) *Cooperation with national evaluation.*

Grantees must cooperate with a national evaluation of the CLSD program (34 CFR 75.591). The evaluation will include high-quality research that applies rigorous and systematic procedures to obtain valid knowledge relevant to the implementation and effect of the CLSD program. The evaluation will directly coordinate with individual State evaluations of the CLSD program implementation.

Definitions: These definitions are from sections 2221 and 8101 of the ESEA, as amended, and the Supplemental Priorities.

Children or students with disabilities means children with disabilities as defined in the Individuals with Disabilities Education Act (IDEA), which is—

(a) A child—

(i) With intellectual disabilities, hearing impairments (including

deafness), speech or language impairments, visual impairments (including blindness), serious emotional disturbance (referred to in the IDEA as “emotional disturbance”), orthopedic impairments, autism, traumatic brain injury, other health impairments, or specific learning disabilities; and

(ii) Who, by reason thereof, needs special education and related services.

(b) The term “child with a disability” for a child aged 3 through 9 (or any subset of that age range, including ages three through five), may, at the discretion of the State and the local educational agency, include a child—

(i) Experiencing developmental delays, as defined by the State and as measured by appropriate diagnostic instruments and procedures, in one or more of the following areas: Physical development; cognitive development; communication development; social or emotional development; or adaptive development; and

(ii) Who, by reason thereof, needs special education and related services.

Comprehensive literacy instruction means instruction that—

(a) Includes developmentally appropriate, contextually explicit, and systematic instruction, and frequent practice, in reading and writing across content areas;

(b) Includes age-appropriate, explicit, systematic and intentional instruction in phonological awareness, phonic decoding, vocabulary, language structure, reading fluency, and reading comprehension;

(c) Includes age-appropriate, explicit instruction in writing, including opportunities for children to write with clear purposes, with critical reasoning appropriate to the topic and purpose, and with specific instruction and feedback from instructional staff;

(d) Makes available and uses diverse, high-quality print materials that reflect the reading and development levels, and interests, of children;

(e) Uses differentiated instructional approaches, including individual and small group instruction and discussion;

(f) Provides opportunities for children to use language with peers and adults in order to develop language skills, including developing vocabulary;

(g) Includes frequent practice of reading and writing strategies;

(h) Uses age-appropriate, valid, and reliable screening assessments, diagnostic assessments, formative assessment processes, and summative assessments to identify a child’s learning needs, to inform instruction, and to monitor the child’s progress and the effects of instruction;

(i) Uses strategies to enhance children’s motivation to read and write and children’s engagement in self-directed learning;

(j) Incorporates the principles of universal design for learning;

(k) Depends on teachers’ collaboration in planning, instruction, and assessing a child’s progress and on continuous professional learning; and

(l) Links literacy instruction to the challenging State academic standards, including the ability to navigate, understand, and write about, complex print and digital subject matter.

Educational choice means the opportunity for a child or student (or a family member on their behalf) to create a high-quality personalized path for learning that is consistent with applicable Federal, State, and local laws; is in an educational setting that best meets the child’s or student’s needs; and, where possible, incorporates evidence-based activities, strategies, or interventions. Opportunities made available to a student through a grant program are those that supplement what is provided by a child’s or student’s geographically assigned school or the institution in which he or she is currently enrolled and may include one or more of the options listed below:

(1) Public educational programs or courses including those offered by traditional public schools, public charter schools, public magnet schools, public online education providers, or other public education providers.

(2) Internships, apprenticeships, or other programs offering access to learning in the workplace.

(3) Dual or concurrent enrollment programs or early college high schools (as defined in section 8101(15) and (17) of the ESEA), or other programs that enable secondary school students to begin earning credit toward a postsecondary degree or credential prior to high school graduation.

(4) Other educational services including credit-recovery, accelerated learning, or tutoring.

Eligible entity means an entity that consists of—

(a) One or more LEAs that serve a high percentage of high-need schools and—

(1) Have the highest number or proportion of children who are counted under section 1124(c) of the ESEA, in comparison to other LEAs in the State;

(2) Are among the LEAs in the State with the highest number or percentages of children reading or writing below grade level, based on the most currently available State academic assessment data under section 1111(b)(2) of the ESEA; or

(3) Serve a significant number or percentage of schools that are implementing comprehensive support and improvement activities and targeted support and improvement activities under section 1111(d) of the ESEA;

(b) One or more early childhood education programs serving low-income or otherwise disadvantaged children, which may include home-based literacy programs for pre-school-aged children, that have a demonstrated record of providing comprehensive literacy instruction for the age group such program proposes to serve; or

(c) An LEA, described in paragraph (a), or consortium of such LEAs, or an early childhood education program, which may include home-based literacy programs for preschool-aged children, acting in partnership with one or more public or private nonprofit organizations or agencies (which may include early childhood education programs) that have a demonstrated record of effectiveness in—

(1) Improving literacy achievement of children, consistent with the purposes of participation under the CLSD program, from birth through grade 12; and

(2) Providing professional development in comprehensive literacy instruction.

English learner means an individual—

(a) Who is aged 3 through 21;

(b) Who is enrolled or preparing to enroll in an elementary school or secondary school;

(c)(i) Who was not born in the United States or whose native language is a language other than English;

(ii)(I) Who is a Native American or Alaska Native, or a native resident of the outlying areas; and

(II) Who comes from an environment where a language other than English has had a significant impact on the individual’s level of English language proficiency; or

(iii) Who is migratory, whose native language is a language other than English, and who comes from an environment where a language other than English is dominant; and

(d) Whose difficulties in speaking, reading, writing, or understanding the English language may be sufficient to deny the individual—

(i) The ability to meet the challenging State academic standards;

(ii) The ability to successfully achieve in classrooms where the language of instruction is English; or

(iii) The opportunity to participate fully in society.

Evidence-based, when used with respect to a State, LEA, or school activity, means an activity, strategy, or

intervention that demonstrates a statistically significant effect on improving student outcomes or other relevant outcomes based on—

(a) Strong evidence from at least one well designed and well-implemented experimental study;

(b) Moderate evidence from at least one well-designed and well-implemented quasi-experimental study; or

(c) Promising evidence from at least one well-designed and well-implemented correlational study with statistical controls for selection bias.

High-need school means—

(a)(i) An elementary school or middle school in which not less than 50 percent of the enrolled students are children from low-income families; or

(ii) A high school in which not less than 40 percent of the enrolled students are children from low-income families, which may be calculated using comparable data from the schools that feed into the high school.

(b) For the purposes of subparagraph (a) of this definition, the term “low-income family” means a family—

(i) In which the children are eligible for a free or reduced-price lunch under the Richard B. Russell National School Lunch Act (42 U.S.C. 1751 *et seq.*);

(ii) Receiving assistance under the program of block grants to States for temporary assistance for needy families established under part A of title IV of the Social Security Act (42 U.S.C. 601 *et seq.*); or

(iii) In which the children are eligible to receive medical assistance under the Medicaid program under title XIX of the Social Security Act (42 U.S.C. 1396 *et seq.*).

Poverty line means the poverty line (as defined by the Office of Management and Budget and revised annually in accordance with section 673(2) of the Community Services Block Grant Act) applicable to a family of the size involved.

Professional development means activities that—

(a) Are an integral part of school and LEA strategies for providing educators (including teachers, principals, other school leaders, specialized instructional support personnel, paraprofessionals, and, as applicable, early childhood educators) with the knowledge and skills necessary to enable students to succeed in a well-rounded education (as defined in this notice) and to meet the challenging State academic standards; and

(b) Are sustained (not stand-alone, one-day, or short term workshops), intensive, collaborative, job-embedded,

data-driven, and classroom-focused, and may include activities that—

(1) Improve and increase teachers—
(i) Knowledge of the academic subjects the teachers teach;

(ii) Understanding of how students learn; or

(iii) Ability to analyze student work and achievement from multiple sources, including how to adjust instructional strategies, assessments, and materials based on such analysis;

(2) Are an integral part of broad schoolwide and districtwide educational improvement plans;

(3) Allow personalized plans for each educator to address the educator’s specific needs identified in observation or other feedback;

(4) Improve classroom management skills;

(5) Support the recruitment, hiring, and training of effective teachers, including teachers who became certified through State and local alternative routes to certification;

(6) Advance teacher understanding of—

(i) Effective instructional strategies that are evidence-based (as defined in this notice); or

(ii) Strategies for improving student academic achievement or substantially increasing the knowledge and teaching skills of teachers;

(7) Are aligned with, and directly related to, academic goals of the school or LEA;

(8) Are developed with extensive participation of teachers, principals, other school leaders, parents, representatives of Indian tribes (as applicable), and administrators of schools to be served under this program;

(9) Are designed to give teachers of English learners (as defined in this notice), and other teachers and instructional staff, the knowledge and skills to provide instruction and appropriate language and academic support services to those children, including the appropriate use of curricula and assessments;

(10) To the extent appropriate, provide training for teachers, principals, and other school and community-based early childhood program leaders in the use of technology (including education about the harms of copyright piracy), so that technology and technology applications are effectively used in the classroom to improve teaching and learning in the curricula and academic subjects in which the teachers teach;

(11) As a whole, are regularly evaluated for their impact on teacher effectiveness and student academic achievement, with the findings of the evaluations used to improve the quality of professional development;

(12) Are designed to give teachers of children with disabilities (as defined in this notice) or children with developmental delays, and other teachers and instructional staff, the knowledge and skills to provide instruction and academic support services to those children, including positive behavioral interventions and supports, multi-tier system of supports, and use of accommodations;

(13) Include instruction in the use of data and assessments to inform classroom practice;

(14) Include instruction in ways that teachers, principals, other school leaders, specialized instructional support personnel, and school administrators may work more effectively with parents and families;

(15) Involve the forming of partnerships with institutions of higher education, including, as applicable, Tribal Colleges and Universities as defined in section 316(b) of the HEA (20 U.S.C. 1059c(b)), to establish school-based teacher, principal, and other school leader training programs that provide prospective teachers, novice teachers, principals, and other school leaders with an opportunity to work under the guidance of experienced teachers, principals, other school leaders, and faculty of such institutions;

(16) Create programs to enable paraprofessionals (assisting teachers employed by an LEA receiving assistance under part A of title I) to obtain the education necessary for those paraprofessionals to become certified and licensed teachers;

(17) Provide follow-up training to teachers who have participated in activities described in this paragraph that are designed to ensure that the knowledge and skills learned by the teachers are implemented in the classroom; or

(18) Where practicable, provide for school staff and other early childhood education program providers to address jointly the transition to elementary school, including issues related to school readiness.

Rural local educational agency means an LEA that is eligible under the Small Rural School Achievement (SRSA) program or the Rural and Low-Income School (RLIS) program authorized under Title V, Part B of the ESEA. Eligible applicants may determine whether a particular district is eligible for these programs by referring to information on the Department’s website at www2.ed.gov/nclb/freedom/local/reap.html.

Well-rounded education means courses, activities, and programming in subjects such as English, reading or

language arts, writing, science, technology, engineering, mathematics, foreign languages, civics and government, economics, arts, history, geography, computer science, music, career and technical education, health, physical education, and any other subject, as determined by the State or LEA, with the purpose of providing all students access to an enriched curriculum and educational experience.

Program Authority: Sections 2221–2225 of the Elementary and Secondary Education Act of 1965, as amended by the Every Student Succeeds Act (Pub. L. 115–224).

Applicable Regulations: (a) The Education Department General Administrative Regulations in 34 CFR parts 75, 77, 79, 81, 82, 84, 86, 97, 98, and 99. (b) The Office of Management and Budget Guidelines to Agencies on Governmentwide Debarment and Suspension (Nonprocurement) in 2 CFR part 180, as adopted and amended as regulations of the Department in 2 CFR part 3485. (c) The Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards in 2 CFR part 200, as adopted and amended as regulations of the Department in 2 CFR part 3474. (d) The Supplemental Priorities.

II. Award Information

Type of Award: Discretionary grants.

Estimated Available Funds:
\$190,000,000.

Contingent upon the availability of funds and the quality of applications, we may make additional awards in subsequent years from the list of unfunded applications from this competition.

Estimated Range of Awards:
\$19,000,000 to \$38,000,000.

Estimated Average Size of Awards:
\$29,000,000.

Estimated Number of Awards: 5–10.

Note: The Department is not bound by any estimates in this notice.

Project Period: 60 months.

III. Eligibility Information

1. **Eligible Applicants:** SEAs of the 50 States, the District of Columbia, and Puerto Rico (referred to in this notice as State).

2.a. **Cost Sharing or Matching:** This program does not require cost sharing or matching.

b. **Supplement-Not-Supplant:** This program involves supplement-not-supplant funding requirements.

3. **Subgrantees:** Under 34 CFR 75.708(b) and (c) a grantee under this competition may award subgrants—to directly carry out project activities

described in its application—to eligible entities (as defined in this notice).

The grantee must award subgrants to entities it selects through a competition under procedures established by the grantee.

IV. Application and Submission Information

1. Application Submission

Instructions: For information and requirements on how to submit an application please refer to our Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on February 13, 2019 (84 FR 3768) and available at <https://www.govinfo.gov/content/pkg/FR-2019-02-13/pdf/2019-02206.pdf>, which contain requirements and information on how to submit an application.

2. **Submission of Proprietary Information:** Given the types of projects that may be proposed in applications for the CLSD program, an application may include business information that the applicant considers proprietary. In 34 CFR 5.11, we define “business information” and describe the process we use in determining whether any of that information is proprietary and, thus, protected from disclosure under Exemption 4 of the Freedom of Information Act (5 U.S.C. 552, as amended).

Because we plan to make successful applications available to the public, you may wish to request confidentiality of business information.

Consistent with Executive Order 12600, please designate in your application any information that you believe is exempt from disclosure under Exemption 4. In the appropriate Appendix section of your application, under “Other Attachments Form,” please list the page number or numbers on which we can find this information. For additional information please see 34 CFR 5.11(c).

3. **Intergovernmental Review:** This program is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this competition.

4. **Funding Restrictions:** We reference regulations outlining funding restrictions in the *Applicable Regulations* section of this notice.

5. **Recommended Page Limit:** The application narrative is where you, the applicant, address the selection criteria that reviewers use to evaluate your application. We recommend you (1) limit the application narrative to no

more than 30 pages and (2) use the following standards:

- A “page” is 8.5” x 11”, on one side only, with 1” margins at the top, bottom, and both sides.

- Double space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, references, and captions, as well as all text in charts, tables, figures and graphs
- Use a font that is either 12 point or larger or no smaller than 10 pitch (characters per inch).

- Use one of the following fonts: Times New Roman, Courier, Courier New, or Arial.

The recommended page limit does not apply to the cover sheet; the budget section, including the narrative budget justification; the assurances and certifications; or the one-page abstract, resumes, bibliography, or letters of support. However, the recommended page limit does apply to all of the application narrative section.

V. Application Review Information

1. **Selection Criteria:** The selection criteria for this competition are from 34 CFR 75.210. The maximum score for all selection criteria is 100. The maximum possible score for each selection criterion is indicated in parentheses. The selection criteria for this competition are as follows:

(a) **Need for project** (15 points).

The Secretary considers the need for the proposed project. In determining the need for the proposed project, the Secretary considers the extent to which specific gaps or weaknesses in services, infrastructure, or opportunities have been identified and will be addressed by the proposed project, including the nature and magnitude of those gaps or weaknesses.

(b) **Quality of the project design** (25 points).

The Secretary considers the quality of the design of the proposed project. In determining the quality of the design of the proposed project, the Secretary considers the following factors:

(1) The extent to which the goals, objectives, and outcomes to be achieved by the proposed project are clearly specified and measurable.

(2) The extent to which performance feedback and continuous improvement are integral to the design of the proposed project.

(c) **Quality of the management plan** (25 points).

The Secretary considers the quality of the management plan for the proposed project. In determining the quality of the management plan for the proposed project, the Secretary considers:

(1) The adequacy of the management plan to achieve the objectives of the proposed project on time and within budget, including clearly defined responsibilities, timelines, and milestones for accomplishing project tasks.

(2) The adequacy of procedures for ensuring feedback and continuous improvement in the operation of the proposed project.

(d) *Quality of project services* (35 points).

The Secretary considers the quality of the project services to be provided by the proposed project. In determining the quality of project services to be provided by the proposed project, the Secretary considers the quality and sufficiency of strategies for ensuring equal access and treatment for eligible project participants who are members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability. In addition, the Secretary considers:

(1) The likely impact of the services to be provided by the proposed project on the intended recipients of those services; and

(2) The extent to which the training or professional development services to be provided by the proposed project are of sufficient quality, intensity, and duration to lead to improvements in practice among the recipients of those services.

2. Review and Selection Process: We remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, achievement of project objectives, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary requires various assurances including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

3. Risk Assessment and Specific Conditions: Consistent with 2 CFR 200.205, before awarding grants under this program the Department conducts a review of the risks posed by applicants. Under 2 CFR 3474.10, the Secretary may impose specific conditions and, in appropriate circumstances, high-risk

conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 2 CFR part 200, subpart D; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

4. Integrity and Performance System: If you are selected under this competition to receive an award that over the course of the project period may exceed the simplified acquisition threshold (currently \$250,000), under 2 CFR 200.205(a)(2) we must make a judgment about your integrity, business ethics, and record of performance under Federal awards—that is, the risk posed by you as an applicant—before we make an award. In doing so, we must consider any information about you that is in the integrity and performance system (currently referred to as the Federal Awardee Performance and Integrity Information System (FAPIIS)), accessible through the System for Award Management. You may review and comment on any information about yourself that a Federal agency previously entered and that is currently in FAPIIS.

Please note that, if the total value of your currently active grants, cooperative agreements, and procurement contracts from the Federal Government exceeds \$10,000,000, the reporting requirements in 2 CFR part 200, Appendix XII, require you to report certain integrity information to FAPIIS semiannually. Please review the requirements in 2 CFR part 200, Appendix XII, if this grant plus all the other Federal funds you receive exceed \$10,000,000.

VI. Award Administration Information

1. Award Notices: If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN); or we may send you an email containing a link to access an electronic version of your GAN. We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. Administrative and National Policy Requirements: We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved

application as part of your binding commitments under the grant.

3. Open Licensing Requirements: Unless an exception applies, if you are awarded a grant under this competition, you will be required to openly license to the public grant deliverables created in whole, or in part, with Department grant funds. When the deliverable consists of modifications to pre-existing works, the license extends only to those modifications that can be separately identified and only to the extent that open licensing is permitted under the terms of any licenses or other legal restrictions on the use of pre-existing works. Additionally, a grantee or subgrantee that is awarded competitive grant funds must have a plan to disseminate these public grant deliverables. This dissemination plan can be developed and submitted after your application has been reviewed and selected for funding. For additional information on the open licensing requirements please refer to 2 CFR 3474.20(c).

4. Reporting: (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multiyear award, you must submit an annual performance report (APR) that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to www.ed.gov/fund/grant/apply/appforms/appforms.html.

5. Performance Measures: The Department has established the following Government Performance and Results Act of 1993 performance measures for the CLSD program:

(1) The percentage of participating four-year-old children who achieve significant gains in oral language skills, as determined by a State-approved measure.

(2) The percentage of participating fifth-grade students who meet or exceed proficiency on State reading/language arts assessments under section 1111(b)(2)(B)(v)(I) of the ESEA.

(3) The percentage of participating eighth-grade students who meet or

exceed proficiency on State reading/language arts assessments under section 1111(b)(2)(B)(v)(I) of the ESEA.

(4) The percentage of participating high school students who meet or exceed proficiency on State reading/language arts assessments under section 1111(b)(2)(B)(v)(I) of the ESEA.

All grantees will be expected to submit an APR that includes data addressing these performance measures to the extent that they apply to the grantee's project. Performance targets will be established by each grantee and must be made for each year of the five-year performance period.

6. *Continuation Awards:* In making a continuation award under 34 CFR 75.253, the Secretary considers, among other things: Whether a grantee has made substantial progress in achieving the goals and objectives of the project; whether the grantee has expended funds in a manner that is consistent with its approved application and budget; and, if the Secretary has established performance measurement requirements, the performance targets in the grantee's approved application.

In making a continuation award, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

VII. Other Information

Accessible Format: Individuals with disabilities can obtain this document and a copy of the application package in an accessible format (e.g., Braille, large print, audiotape, or compact disc) on request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations at www.govinfo.gov. At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at: www.federalregister.gov. Specifically, through the advanced search feature at this site, you can limit

your search to documents published by the Department.

Frank Brogan,

Assistant Secretary of the Office of Elementary and Secondary Education.

[FR Doc. 2019-09055 Filed 5-2-19; 8:45 am]

BILLING CODE 4000-01-P

DEPARTMENT OF EDUCATION

Applications for New Awards; Jacob K. Javits Gifted and Talented Students Education Program

AGENCY: Office of Elementary and Secondary Education, Department of Education.

ACTION: Notice.

SUMMARY: The Department of Education (Department) is issuing a notice inviting applications for new awards for fiscal year (FY) 2019 for the Jacob K. Javits Gifted and Talented Students Education (Javits) program, Catalog of Federal Domestic Assistance (CFDA) number 84.206A. This notice relates to the approved information collection under OMB control number 1894-0006.

DATES: *Applications Available:* May 3, 2019.

Deadline for Transmittal of Applications: June 3, 2019.

Deadline for Intergovernmental Review: August 1, 2019.

ADDRESSES: For the addresses for obtaining and submitting an application, please refer to our Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on February 13, 2019 (84 FR 3768) and available at www.govinfo.gov/content/pkg/FR-2019-02-13/pdf/2019-02206.pdf.

FOR FURTHER INFORMATION CONTACT: Jennifer Brianas, U.S. Department of Education, 400 Maryland Avenue SW, Room number 3E320, Washington, DC 20202-6200. Telephone: (202) 401-0299. Email: jennifer.brianas@ed.gov; or Sharon Burton, U.S. Department of Education, 400 Maryland Avenue SW, Room number 3E256, Washington, DC 20202-6200. Telephone: (202) 453-6569. Email: sharon.burton@ed.gov.

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service (FRS), toll free, at 1-800-877-8339.

SUPPLEMENTARY INFORMATION:

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: The Javits program supports *evidence-based*¹ research, demonstration projects, innovative strategies, and similar activities designed to build and enhance the ability of elementary schools and secondary schools nationwide to identify *gifted and talented* students and meet their special educational needs.

Priorities: This competition includes three competitive preference priorities. Competitive Preference Priority 1 is from section 4644(f)(1)(B) of the Elementary and Secondary Education Act of 1965, as amended by the Every Student Succeeds Act (ESEA), and Competitive Preference Priorities 2 and 3 are from the Secretary's Final Supplemental Priorities and Definitions for Discretionary Grant Programs published in the **Federal Register** on March 2, 2018 (83 FR 9096) (Supplemental Priorities).

Competitive Preference Priorities: For FY 2019 and any subsequent year in which we make awards from the list of unfunded applications from this competition, these priorities are competitive preference priorities. Under 34 CFR 75.105(c)(2)(i) we award up to an additional 13 points to an application, depending on how well the application meets these priorities.

These priorities are:

Priority 1—Identification of, and Provision of Services to, Gifted and Talented Students (up to 5 points).

Projects designed to develop new information that assists schools in the identification of, and provision of services to, *gifted and talented* students (including economically disadvantaged individuals, individuals who are *English learners*, and *children with disabilities*) who may not be identified and served through traditional assessment methods.

Priority 2—Promoting Science, Technology, Engineering, or Math (STEM) Education, With a Particular Focus on Computer Science (up to 5 points).

Projects designed to improve student achievement or other educational outcomes in *computer science*. These projects must be designed to expand access to and participation in rigorous *computer science* coursework for traditionally underrepresented students such as racial or ethnic minorities, women, students in communities served

¹ For the convenience of applicants, the definitions of italicized terms are provided in the Definitions section of this notice inviting applications.

by rural local educational agencies, children or students with disabilities, or low-income individuals (as defined under section 312(g) of the Higher Education Act of 1965, as amended).

Priority 3—Promoting Effective Instruction in Classrooms and Schools (up to 3 points).

Projects that are designed to promote innovative strategies to increase the number of students who have access to effective educators in one or both of the following:

(a) Schools that are located in communities served by *rural local educational agencies*.

(b) *High-poverty schools*.

Note: Examples of innovative strategies to increase the number of students who have access to effective educators may include, but are not limited to, universal screening of all students in one or more grade levels; assessment instruments that are culturally sensitive and account for language differences; preparation programs that are designed to enhance knowledge and academic skills; and identification committees that include representatives from various roles, responsibilities, and cultural backgrounds.

Application Requirements: These application requirements are from section 4644 of the ESEA (20 U.S.C. 7294). For FY 2019, and any subsequent year in which we make awards from the list of unfunded applications from this competition, the following application requirements apply:

Each application must describe how—

(1) The proposed identification methods, as well as *gifted and talented* services, materials, and methods, can be adapted, if appropriate, for use by all students;

(2) The proposed programs can be evaluated;

(3) The proposed project will, where appropriate, provide for the equitable participation of students and teachers in private nonprofit elementary schools and secondary schools, including the participation of teachers and other personnel in professional development programs serving such students;

(4) The proposed project will use funds to carry out one or more of the following activities:

(a) Conducting *evidence-based* research on methods and techniques for identifying and teaching *gifted and talented* students and for using *gifted and talented* programs and methods to identify and provide the opportunity for all students to be served, particularly low-income and at-risk students;

(b) Establishing and operating programs and projects for identifying and serving *gifted and talented* students, including innovative methods

and strategies (such as summer programs, mentoring programs, peer tutoring programs, service learning programs, and cooperative learning programs involving business, industry, and education) for identifying and educating students who may not be served by traditional *gifted and talented* programs;

(c) Providing technical assistance and disseminating information, which may include how *gifted and talented* programs and methods may be adapted for use by all students, particularly low-income and at-risk students; or

(d) Training of personnel in the identification and education of *gifted and talented* students and in the use, where appropriate, of *gifted and talented* services, materials, and methods for all students.

Definitions: The definitions listed below are from section 8101 of the ESEA, 34 CFR 77.1, and the Supplemental Priorities. These definitions apply to the FY 2019 Javits grant competition and any subsequent year in which we make awards from the list of unfunded applications from this competition.

Child with a disability, as defined in section 602 of the Individuals with Disabilities Education Act (IDEA), means—

(a) A child—

(i) With intellectual disabilities, hearing impairments (including deafness), speech or language impairments, visual impairments (including blindness), serious emotional disturbance (referred to in the IDEA as “emotional disturbance”), orthopedic impairments, autism, traumatic brain injury, other health impairments, or specific learning disabilities; and

(ii) Who, by reason thereof, needs special education and related services.

(b) The term “child with a disability,” for a child aged three through nine (or any subset of that age range, including ages three through five), may, at the discretion of the State and the local educational agency, include a child—

(i) Experiencing developmental delays, as defined by the State and as measured by appropriate diagnostic instruments and procedures, in one or more of the following areas: physical development; cognitive development; communication development; social or emotional development; or adaptive development; and

(ii) Who, by reason thereof, needs special education and related services.

Computer science means the study of computers and algorithmic processes and includes the study of computing principles and theories, computational thinking, computer hardware, software

design, coding, analytics, and computer applications.

Computer science often includes computer programming or coding as a tool to create software, including applications, games, websites, and tools to manage or manipulate data; or development and management of computer hardware and the other electronics related to sharing, securing, and using digital information.

In addition to coding, the expanding field of computer science emphasizes computational thinking and interdisciplinary problem-solving to equip students with the skills and abilities necessary to apply computation in our digital world.

Computer science does not include using a computer for everyday activities, such as browsing the internet; use of tools like word processing, spreadsheets, or presentation software; or using computers in the study and exploration of unrelated subjects.

English learner means an individual—

(a) Who is aged 3 through 21;

(b) Who is enrolled or preparing to enroll in an elementary school or secondary school;

(c)(1) Who was not born in the United States or whose native language is a language other than English;

(2)(i) Who is a Native American or Alaska Native, or a native resident of the outlying areas; and

(ii) Who comes from an environment where a language other than English has had a significant impact on the individual’s level of English language proficiency; or

(3) Who is migratory, whose native language is a language other than English, and who comes from an environment where a language other than English is dominant; and

(d) Whose difficulties in speaking, reading, writing, or understanding the English language may be sufficient to deny the individual—

(1) The ability to meet the challenging State academic standards;

(2) The ability to successfully achieve in classrooms where the language of instruction is English; or

(3) The opportunity to participate fully in society.

Evidence-based, when used with respect to a State, local educational agency, or school activity, means an activity, strategy, or intervention that demonstrates a statistically significant effect on improving student outcomes or other relevant outcomes based on—

(a) Strong evidence from at least one well-designed and well-implemented experimental study;

(b) Moderate evidence from at least one well-designed and well-

implemented quasi-experimental study; or

(c) Promising evidence from at least one well-designed and well-implemented correlational study with statistical controls for selection bias.

Experimental study means a study that is designed to compare outcomes between two groups of individuals (such as students) that are otherwise equivalent except for their assignment to either a treatment group receiving a *project component* or a control group that does not. Randomized controlled trials, regression discontinuity design studies, and single-case design studies are the specific types of *experimental studies* that, depending on their design and implementation (e.g., sample attrition in randomized controlled trials and regression discontinuity design studies), can meet What Works Clearinghouse (WWC) standards without reservations as described in the *What Works Clearinghouse Handbook (WWC Handbook)*:

(i) A randomized controlled trial employs random assignment of, for example, students, teachers, classrooms, or schools to receive the *project component* being evaluated (the treatment group) or not to receive the *project component* (the control group).

(ii) A regression discontinuity design study assigns the *project component* being evaluated using a measured variable (e.g., assigning students reading below a cutoff score to tutoring or developmental education classes) and controls for that variable in the analysis of outcomes.

(iii) A single-case design study uses observations of a single case (e.g., a student eligible for a behavioral intervention) over time in the absence and presence of a controlled treatment manipulation to determine whether the outcome is systematically related to the treatment.

Gifted and talented, when used with respect to students, children, or youth, means students, children, or youth who give evidence of high achievement capability in areas such as intellectual, creative, artistic, or leadership capacity, or in specific academic fields, and who need services or activities not ordinarily provided by the school in order to fully develop those capabilities.

High-poverty school means a school in which at least 50 percent of students are from low-income families as determined using one of the measures of poverty specified under section 1113(a)(5) of the ESEA. For middle and high schools, eligibility may be calculated on the basis of comparable data from feeder schools. Eligibility as a high-poverty school under this

definition is determined on the basis of the most currently available data.

Moderate evidence means that there is evidence of effectiveness of a key *project component* in improving a *relevant outcome* for a sample that overlaps with the populations or settings proposed to receive that component, based on a relevant finding from one of the following:

(i) A practice guide prepared by the WWC using version 2.1 or 3.0 of the *WWC Handbook* reporting a “strong evidence base” or “moderate evidence base” for the corresponding practice guide recommendation;

(ii) An intervention report prepared by the WWC using version 2.1 or 3.0 of the *WWC Handbook* reporting a “positive effect” or “potentially positive effect” on a *relevant outcome* based on a “medium to large” extent of evidence, with no reporting of a “negative effect” or “potentially negative effect” on a *relevant outcome*; or

(iii) A single *experimental study* or *quasi-experimental design study* reviewed and reported by the WWC using version 2.1 or 3.0 of the *WWC Handbook*, or otherwise assessed by the Department using version 3.0 of the *WWC Handbook*, as appropriate, and that—

(A) Meets WWC standards with or without reservations;

(B) Includes at least one statistically significant and positive (i.e., favorable) effect on a *relevant outcome*;

(C) Includes no overriding statistically significant and negative effects on *relevant outcomes* reported in the study or in a corresponding WWC intervention report prepared under version 2.1 or 3.0 of the *WWC Handbook*; and

(D) Is based on a sample from more than one site (e.g., State, county, city, school district, or postsecondary campus) and includes at least 350 students or other individuals across sites. Multiple studies of the same *project component* that each meet requirements in paragraphs (iii)(A), (B), and (C) of this definition may together satisfy this requirement.

Project component means an activity, strategy, intervention, process, product, practice, or policy included in a project. Evidence may pertain to an individual *project component* or to a combination of *project components* (e.g., training teachers on instructional practices for English learners and follow-on coaching for these teachers).

Promising evidence means that there is evidence of the effectiveness of a key *project component* in improving a *relevant outcome*, based on a relevant finding from one of the following:

(i) A practice guide prepared by WWC reporting a “strong evidence base” or “moderate evidence base” for the corresponding practice guide recommendation;

(ii) An intervention report prepared by the WWC reporting a “positive effect” or “potentially positive effect” on a *relevant outcome* with no reporting of a negative effect” or “potentially negative effect” on a *relevant outcome*; or

(iii) A single study assessed by the Department, as appropriate, that—

(A) Is an *experimental study*, a *quasi-experimental design study*, or a well-designed and well-implemented correlational study with statistical controls for selection bias (e.g., a study using regression methods to account for differences between a treatment group and a comparison group); and

(B) Includes at least one statistically significant and positive (i.e., favorable) effect on a *relevant outcome*.

Quasi-experimental design study means a study using a design that attempts to approximate an *experimental study* by identifying a comparison group that is similar to the treatment group in important respects. This type of study, depending on design and implementation (e.g., establishment of baseline equivalence of the groups being compared), can meet WWC standards with reservations, but cannot meet WWC standards without reservations, as described in the *WWC Handbook*.

Relevant outcome means the student outcome(s) or other outcome(s) the key *project component* is designed to improve, consistent with the specific goals of the program.

Rural local educational agency means a local educational agency that is eligible under the Small Rural School Achievement (SRSA) program or the Rural and Low-Income School (RLIS) program authorized under Title V, Part B of the ESEA. Eligible applicants may determine whether a particular district is eligible for these programs by referring to information on the Department’s website at www2.ed.gov/nclb/freedom/local/reap.html.

Strong evidence means that there is evidence of the effectiveness of a key *project component* in improving a *relevant outcome* for a sample that overlaps with the populations and settings proposed to receive that component, based on a relevant finding from one of the following:

(i) A practice guide prepared by the WWC using version 2.1 or 3.0 of the *WWC Handbook* reporting a “strong evidence base” for the corresponding practice guide recommendation;

(ii) An intervention report prepared by the WWC using version 2.1 or 3.0 of the *WWC Handbook* reporting a “positive effect” on a *relevant outcome* based on a “medium to large” extent of evidence, with no reporting of a “negative effect” or “potentially negative effect” on a *relevant outcome*; or

(iii) A single *experimental study* reviewed and reported by the WWC using version 2.1 or 3.0 of the *WWC Handbook*, or otherwise assessed by the Department using version 3.0 of the *WWC Handbook*, as appropriate, and that—

(A) Meets WWC standards without reservations;

(B) Includes at least one statistically significant and positive (*i.e.*, favorable) effect on a *relevant outcome*;

(C) Includes no overriding statistically significant and negative effects on *relevant outcomes* reported in the study or in a corresponding WWC intervention report prepared under version 2.1 or 3.0 of the *WWC Handbook*; and

(D) Is based on a sample from more than one site (*e.g.*, State, county, city, school district, or postsecondary campus) and includes at least 350 students or other individuals across sites. Multiple studies of the same *project component* that each meet requirements in paragraphs (iii)(A), (B), and (C) of this definition may together satisfy this requirement.

What Works Clearinghouse Handbook (WWC Handbook) means the standards and procedures set forth in the WWC Procedures and Standards Handbook, Version 3.0 or Version 2.1 (incorporated by reference, see 34 CFR 77.2). Study findings eligible for review under WWC standards can meet WWC standards without reservations, meet WWC standards with reservations, or not meet WWC standards. WWC practice guides and intervention reports include findings from systematic reviews of evidence as described in the Handbook documentation.

Program Authority: Section 4644 of the ESEA (20 U.S.C. 7294).

Applicable Regulations: (a) The Education Department General Administrative Regulations in 34 CFR parts 75, 77, 79, 81, 82, 84, 86, 97, 98, and 99. (b) The OMB Guidelines to Agencies on Governmentwide Debarment and Suspension (Nonprocurement) in 2 CFR part 180, as adopted and amended as regulations of the Department in 2 CFR part 3485. (c) The Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards

in 2 CFR part 200, as adopted and amended in 2 CFR part 3474. (d) The regulations in 34 CFR part 299. (e) The Supplemental Priorities.

Note: The regulations in 34 CFR part 79 apply to all applicants except federally recognized Indian Tribes. The regulations in 34 CFR part 86 apply to institutions of higher education (IHEs) only.

II. Award Information

Type of Award: Discretionary grants.

Estimated Available Funds: \$4,700,000.

Contingent upon the availability of funds and the quality of applications, we may make additional awards in subsequent years from the list of unfunded applications from this competition.

Estimated Range of Awards: \$450,000 to \$600,000.

Estimated Average Size of Awards: \$500,000.

Estimated Number of Awards: 8–11.

Note: The Department is not bound by any estimates in this notice.

Project Period: 60 months.

III. Eligibility Information

1. **Eligible Applicants:** State educational agencies; local educational agencies; the Bureau of Indian Education; IHEs; other public agencies; and other private agencies and organizations.

2. **Cost Sharing or Matching:** This program does not require cost sharing or matching.

IV. Application and Submission Information

1. Application Submission

Instructions: Applicants are required to follow the Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on February 13, 2019 (84 FR 3768) and available at www.govinfo.gov/content/pkg/FR-2019-02-13/pdf/2019-02206.pdf, which contain requirements and information on how to submit an application.

2. **Intergovernmental Review:** This program is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this competition.

3. **Funding Restrictions:** We reference regulations outlining funding restrictions in the *Applicable Regulations* section of this notice.

4. **Recommended Page Limit:** The application narrative is where you, the

applicant, address the selection criteria that reviewers use to evaluate your application. We recommend you (1) limit the application narrative to no more than 35 pages and (2) use the following standards:

- A “page” is 8.5” × 11”, on one side only, with 1” margins at the top, bottom, and both sides.

- Double space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, references, and captions, as well as all text in charts, tables, figures and graphs.

- Use a font that is either 12 point or larger or no smaller than 10 pitch (characters per inch).

- Use one of the following fonts: Times New Roman, Courier, Courier New, or Arial.

The recommended page limit does not apply to the cover sheet; the budget section, including the narrative budget justification; the assurances and certifications; or the one-page abstract, resumes, bibliography, or letters of support. However, the recommended page limit does apply to all of the application narrative section.

V. Application Review Information

1. **Selection Criteria:** The selection criteria for this competition are from 34 CFR 75.210. The maximum possible score for addressing all selection criteria is 100 points. The maximum possible score for addressing each criterion is indicated in parentheses. The selection criteria for this competition are as follows:

(a) **Quality of the Project Design** (30 points).

The Secretary considers the quality of the design of the proposed project. In determining the quality of the design of the proposed project, the Secretary considers—

(1) The extent to which the goals, objectives, and outcomes to be achieved by the proposed project are clearly specified and measurable;

(2) The extent to which the design of the proposed project is appropriate to, and will successfully address, the needs of the target population or other identified needs;

(3) The extent to which the proposed project represents an exceptional approach for meeting statutory purposes and requirements;

(4) The extent to which the proposed project is supported by *promising evidence*; and

(5) The extent to which performance feedback and continuous improvement are integral to the design of the proposed project.

(b) *Quality of Project Personnel* (25 points).

The Secretary considers the quality of the personnel who will carry out the proposed project. In determining the quality of project personnel, the Secretary considers the extent to which the applicant encourages applications for employment from persons who are members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability. In addition, the Secretary considers the following factors—

(1) The qualifications, including relevant training and experience, of the project director or principal investigator; and

(2) The qualifications, including relevant training and experience, of key project personnel.

(c) *Quality of the Management Plan* (15 points).

The Secretary considers the quality of the management plan for the proposed project. In determining the quality of the management plan for the proposed project, the Secretary considers the following factors—

(1) The adequacy of the management plan to achieve the objectives of the proposed project on time and within budget, including clearly defined responsibilities, timelines, and milestones for accomplishing project tasks; and

(2) The adequacy of procedures for ensuring feedback and continuous improvement in the operation of the proposed project.

(d) *Quality of Project Services* (30 points).

The Secretary considers the quality of the services to be provided by the proposed project. In determining the quality of the services to be provided by the proposed project, the Secretary considers the quality and sufficiency of strategies for ensuring equal access and treatment for eligible project participants who are members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability. In addition, the Secretary considers the likely impact of the services to be provided by the proposed project on the intended recipients of those services.

2. *Review and Selection Process:* We remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, achievement of project

objectives, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary requires various assurances, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

3. *Risk Assessment and Specific Conditions:* Consistent with 2 CFR 200.205, before awarding grants under this program the Department conducts a review of the risks posed by applicants. Under 2 CFR 3474.10, the Secretary may impose specific conditions and, in appropriate circumstances, high-risk conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 2 CFR part 200, subpart D; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

4. *Integrity and Performance System:* If you are selected under this competition to receive an award that over the course of the project period may exceed the simplified acquisition threshold (currently \$250,000), under 2 CFR 200.205(a)(2) we must make a judgment about your integrity, business ethics, and record of performance under Federal awards—that is, the risk posed by you as an applicant—before we make an award. In doing so, we must consider any information about you that is in the integrity and performance system (currently referred to as the Federal Awardee Performance and Integrity Information System (FAPIIS)), accessible through the System for Award Management. You may review and comment on any information about yourself that a Federal agency previously entered and that is currently in FAPIIS.

Please note that, if the total value of your currently active grants, cooperative agreements, and procurement contracts from the Federal Government exceeds \$10,000,000, the reporting requirements in 2 CFR part 200, Appendix XII, require you to report certain integrity information to FAPIIS semiannually. Please review the requirements in 2 CFR part 200, Appendix XII, if this grant plus all the other Federal funds you receive exceed \$10,000,000.

VI. Award Administration Information

1. *Award Notices:* If your application is successful, we notify your U.S.

Representative and U.S. Senators and send you a Grant Award Notification (GAN); or we may send you an email containing a link to access an electronic version of your GAN. We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements:* We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Open Licensing Requirements:* Unless an exception applies, if you are awarded a grant under this competition, you will be required to openly license to the public grant deliverables created in whole, or in part, with Department grant funds. When the deliverable consists of modifications to pre-existing works, the license extends only to those modifications that can be separately identified and only to the extent that open licensing is permitted under the terms of any licenses or other legal restrictions on the use of pre-existing works. Additionally, a grantee or subgrantee that is awarded competitive grant funds must have a plan to disseminate these public grant deliverables. This dissemination plan can be developed and submitted after your application has been reviewed and selected for funding. For additional information on the open licensing requirements please refer to 2 CFR 3474.20(c).

4. *Reporting:* (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multiyear award, you must submit an annual performance report (APR) that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR

75.720(c). For specific requirements on reporting, please go to www.ed.gov/fund/grant/apply/appforms/appforms.html.

(c) Under 34 CFR 75.250(b), the Secretary may provide a grantee with additional funding for data collection analysis and reporting. In this case the Secretary establishes a data collection period.

5. *Performance Measures*: Pursuant to the Government Performance and Results Act of 1993, the Department has developed the following measures for assessing progress toward achieving the purposes of this program:

(1) The number of students newly identified as *gifted and talented* under the program;

(2) The percentage of students newly identified as *gifted and talented* under the program who were served under the program;

(3) Of the students served under the program who were in tested grades, the percentage who made gains on State assessments in mathematics;

(4) Of the students served under the program who were in tested grades, the percentage who made gains on State assessments in science; and

(5) The number of teachers and other educators who received services that enable them to better identify and improve instruction for gifted and talented students.

Note: For performance measure #5, the Department is particularly interested in evidence, such as may be obtained through surveys of teachers and other educators, that the services provided are of high quality and contribute to improved efforts to both identify and improve outcomes for gifted and talented students.

All grantees must submit APRs that include data addressing these performance measures to the extent that they apply to the grantee's project. Performance targets must be established by each grantee for each year of the five-year performance period.

6. *Continuation Awards*: In making a continuation award under 34 CFR 75.253, the Secretary considers, among other things: Whether a grantee has made substantial progress in achieving the goals and objectives of the project; whether the grantee has expended funds in a manner that is consistent with its approved application and budget; and, if the Secretary has established performance measurement requirements, the performance targets in the grantee's approved application.

In making a continuation award, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit

discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

VII. Other Information

Accessible Format: Individuals with disabilities can obtain this document and a copy of the application package in an accessible format (e.g., braille, large print, audiotope, or compact disc) on request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations at www.govinfo.gov. At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at: www.federalregister.gov. Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Frank T. Brogan,

Assistant Secretary for Elementary and Secondary Education.

BILLING CODE 4000-01-P

DEPARTMENT OF EDUCATION

[Docket No. ED-2019-ICCD-0054]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Application for Grants Under the Strengthening Institutions Program, CFDA# 84.031A & 84.031F

AGENCY: Office of Postsecondary Education (OPE), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, ED is proposing a reinstatement of a previously approved information collection.

DATES: Interested persons are invited to submit comments on or before June 3, 2019.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use <http://www.regulations.gov> by searching the Docket ID number ED-2019-ICCD-0054. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at <http://www.regulations.gov> by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. If the [regulations.gov](http://www.regulations.gov) site is not available to the public for any reason, ED will temporarily accept comments at ICDocketMgr@ed.gov. Please include the docket ID number and the title of the information collection request when requesting documents or submitting comments. *Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted.* Written requests for information or comments submitted by postal mail or delivery should be addressed to the Director of the Information Collection Clearance Division, U.S. Department of Education, 550 12th Street SW, PCP, Room 9086, Washington, DC 20202-0023.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Nalina Lamba-Nieves, 202-453-7953.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in

response to this notice will be considered public records.

Title of Collection: Application for grants under the Strengthening Institutions Program, CFDA# 84.031A & 84.031F.

OMB Control Number: 1840-0114.

Type of Review: A reinstatement of a previously approved information collection.

Respondents/Affected Public: Private Sector.

Total Estimated Number of Annual Responses: 590.

Total Estimated Number of Annual Burden Hours: 38,350.

Abstract: This collection is the application booklet for the Strengthening Institutions Program (SIP), CFDA# 84.031A & 84.031F. SIP provides grants to eligible institutions of higher education (IHEs) to improve their academic programs, institutional management, and fiscal stability to increase their self-sufficiency and strengthen their capacity. Funding is targeted to institutions that enroll a large proportion of financially disadvantaged students and have low per-student expenditures. Section 311(b) and Section 391(a)(1) of Title III, Part A of the Higher Education Act of 1965, as amended (HEA), 20 US Code § 1057 and the governing regulations (34 CFR 607.1-607.31) require collection of the information identified in the application package, in order to make awards.

Dated: April 30, 2019.

Kate Mullan,

PRA Coordinator, Information Collection Clearance Program, Information Management Branch, Office of the Chief Information Officer.

ENVIRONMENTAL PROTECTION AGENCY

[ER-FRL-9044-6]

Environmental Impact Statements; Notice of Availability

Responsible Agency: Office of Federal Activities, General Information 202-564-5632 or <https://www.epa.gov/nepa/>.

Weekly receipt of Environmental Impact Statements
Filed 04/22/2019 Through 04/26/2019
Pursuant to 40 CFR 1506.9.

Notice

Section 309(a) of the Clean Air Act requires that EPA make public its comments on EISs issued by other

Federal agencies. EPA's comment letters on EISs are available at: <https://cdxnodengn.epa.gov/cdx-enepa-public/action/eis/search>.

EIS No. 20190072, Final, DOE, FL, Adoption—Eagle LNG Partners Jacksonville, LLC Jacksonville Project, Contact: Brian Lavoie 202-586-2459.

The Department of Energy (DOE) has adopted the Federal Energy Regulatory Commission's Final EIS No. 20190062, filed 04/19/2019 with the EPA. DOE was a cooperating agency on this project. Therefore, recirculation of the document is not necessary under Section 1506.3(c) of the CEQ regulations.

EIS No. 20190073, Final, USFS, AZ, Tonto National Forest Motorized Travel Management, Review Period Ends: 06/03/2019, Contact: Gregory Schuster 602-225-5362.

Due to an administrative error by the USFS, the Final EIS was not properly filed with the U.S. Environmental Protection Agency. USFS has confirmed that distribution of the Final EIS was made available to all federal agencies and interested parties for the 30-day wait period that will end on 06/03/2019.

EIS No. 20190074, Final, USFWS, CA, Green Diamond Forest Habitat Conservation Plan, Review Period Ends: 06/03/2019, Contact: Jennifer L. Norris 707-825-5123.

EIS No. 20190075, Final, USFS, ID, John Wood Forest Management Project, Review Period Ends: 06/03/2019, Contact: Bryan Fuell 208-547-4356.

EIS No. 20190076, Final, USACE, BLM, WY, Leavitt Reservoir Expansion Project, Review Period Ends: 06/03/2019, Contact: Holly Elliott 307-347-5193.

EIS No. 20190077, Draft Supplement, BLM, CA, Haiwee Geothermal Leasing Area Draft Supplemental Environmental Impact Statement and Draft Plan Amendment, Comment Period Ends: 08/01/2019, Contact: Gregory Miller 951-697-5216.

EIS No. 20190078, Final, FHWA, WV, US 340 Improvement Study, Review Period Ends: 06/07/2019, Contact: Jason Workman 304-347-5271.

EIS No. 20190079, Final, FERC, TX, Rio Grande LNG Project, Review Period Ends: 06/03/2019, Contact: Office of External Affairs 866-208-3372.

EIS No. 20190080, Final, USACE, BLM, WY, Alkali Creek Reservoir Project, Review Period Ends: 06/03/2019, Contact: Holly Elliott 307-347-5100.

EIS No. 20190081, Draft, USACE, IL, Draft Chicago Area Waterway System Dredged Material Management Plan, Comment Period Ends: 06/17/2019, Contact: Mike Padilla 312-846-5427.

EIS No. 20190082, Draft Supplement, BLM, AK, Supplemental Draft Environmental Impact Statement for the Haines Amendment to the Ring of Fire Resource Management Plan, Comment Period Ends: 07/25/2019, Contact: Marnie Graham 907-822-3217.

EIS No. 20190083, Final, DOE, MS, Adoption—Gulf LNG Liquefaction Project, Review Period, Contact: Brian Lavoie 202-586-2459.

The Department of Energy (DOE) has adopted the Federal Energy Regulatory Commission's Final EIS No. 20190065, filed 04/26/2019 with the EPA. DOE was a cooperating agency on this project. Therefore, recirculation of the document is not necessary under Section 1506.3(c) of the CEQ regulations.

EIS No. 20190084, Final, DOE, TX, Adoption—Annova LNG Brownsville Project, Contact: Brian Lavoie 202-586-2459.

The Department of Energy (DOE) has adopted the Federal Energy Regulatory Commission's Final EIS No. 20190069, filed 04/26/2019 with the EPA. DOE was a cooperating agency on this project. Therefore, recirculation of the document is not necessary under Section 1506.3(c) of the CEQ regulations.

Amended Notice

EIS No. 20190025, Draft, USFS, NM, South Sacramento Restoration Project, Comment Period Ends: 05/13/2019, Contact: Peggy Luensmann 575-434-7200.

Revision to FR Notice Published 03/15/2019; Extending the Comment Period from 04/29/2019 to 05/13/2019.

Dated: April 29, 2019.

Robert Tomiak,

Director, Office of Federal Activities.

BILLING CODE 6560-50-P

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060-0500, OMB 3060-0600, OMB 3060-0995 and OMB 3060-0999]

Information Collections Being Submitted for Review and Approval to the Office of Management and Budget

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as

required by the Paperwork Reduction Act (PRA) of 1995, the Federal Communication Commission (FCC or Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collections. Comments are requested concerning: Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees.

The FCC may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

DATES: Written comments should be submitted on or before June 3, 2019. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contacts below as soon as possible.

ADDRESSES: Direct all PRA comments to Nicholas A. Fraser, OMB, via email Nicholas.A.Fraser@omb.eop.gov; and to Cathy Williams, FCC, via email PRA@fcc.gov and to Cathy.Williams@fcc.gov. Include in the comments the OMB control number as shown in the **SUPPLEMENTARY INFORMATION** section below.

FOR FURTHER INFORMATION CONTACT: For additional information or copies of the information collection, contact Cathy Williams at (202) 418-2918. To view a copy of this information collection request (ICR) submitted to OMB: (1) Go to the web page <http://www.reginfo.gov/public/do/PRAMain>, (2) look for the section of the web page called "Currently Under Review," (3) click on the downward-pointing arrow in the "Select Agency" box below the "Currently Under Review" heading, (4) select "Federal Communications Commission" from the list of agencies presented in the "Select Agency" box, (5) click the "Submit" button to the right of the "Select Agency" box, (6)

when the list of FCC ICRs currently under review appears, look for the OMB control number of this ICR and then click on the ICR Reference Number. A copy of the FCC submission to OMB will be displayed.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060-0500.

Title: Section 76.1713, Resolution of Complaints.

Form Number: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for-profit entities.

Number of Respondents and Responses: 10,750 respondents and 21,500 responses.

Estimated Hours per Response: 1-17 hours.

Frequency of Response: Recordkeeping and third-party disclosure requirements; annual reporting requirement.

Total Annual Burden: 193,500 hours.

Total Annual Cost: None.

Obligation to Respond: Required to obtain or retain benefits. The statutory authority for this collection is contained in Sections 4(i), 303 and 308 of the Communications Act of 1934, as amended.

Nature and Extent of Confidentiality: There is no need for confidentiality with this collection of information.

Privacy Impact Assessment: No impact(s).

Needs and Uses: The information collection requirements contained in 47 CFR 76.1713 state cable system operators shall establish a process for resolving complaints from subscribers about the quality of the television signal delivered. Commission and franchising authorities, upon request. These records shall be maintained for at least a one-year period. Prior to being referred to the Commission, complaints from subscribers about the quality of the television signal delivered must be referred to the local franchising authority and the cable system operator.

OMB Control Number: 3060-0600.

Title: Application to Participate in an FCC Auction, FCC Form 175.

Form Number: FCC Form 175.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for-profit entities, not-for-profit institutions, and state, local or tribal governments.

Estimated Number of Respondents and Responses: 500 respondents and 500 responses.

Estimated Time per Response: 90 minutes.

Frequency of Response: On occasion reporting requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this information collection is contained in sections 154(i) and 309(j)(5) of the Communications Act, as amended, 47 U.S.C. 4(i), 309(j)(5), and sections 1.2105, 1.2110, 1.2112 of the Commission's rules, 47 CFR 1.2105, 1.2110, 1.2112.

Estimated Total Annual Burden: 750 hours.

Total Annual Costs: None.

Nature and Extent of Confidentiality: Information collected on FCC Form 175 is made available for public inspection, and the Commission is not requesting that respondents submit confidential information on FCC Form 175. Respondents seeking to have information collected on FCC Form 175 withheld from public inspection may request confidential treatment of such information pursuant to section 0.459 of the Commission's rules, 47 CFR 0.459.

Privacy Act Impact Assessment: No impact(s).

Needs and Uses: A request for extension of this information collection (no change in requirements) will be submitted to the Office of Management and Budget (OMB) in order to obtain the full three year clearance from OMB.

The Commission's auction rules and related requirements are designed to ensure that the competitive bidding process is limited to serious qualified applicants, deter possible abuse of the bidding and licensing process, and enhance the use of competitive bidding to assign Commission licenses in furtherance of the public interest. The information collected on FCC Form 175 is used by the Commission to determine if an applicant is legally, technically, and financially qualified to participate in a Commission auction. Additionally, if an applicant applies for status as a particular type of auction participant pursuant to Commission rules, the Commission uses information collected on FCC Form 175 to determine whether the applicant is eligible for the status requested. Commission staff reviews the information collected on FCC Form 175 for a particular auction as part of the pre-auction process, prior to the auction being held. Staff determines whether each applicant satisfies the Commission's requirements to participate in the auction and, if applicable, is eligible for the status as a particular type of auction participant requested. Without the information collected on FCC Form 175, the Commission will not be able to determine if an applicant is legally, technically, and financially qualified to participate in a Commission auction and has complied with the various

applicable regulatory and statutory auction requirements for such participation. The Commission plans to continue to use the FCC Form 175 for its upcoming non-reverse spectrum auctions, including the forward auction component of any incentive auction, collecting only the information necessary for each particular auction.

OMB Control Number: 3060–0995.

Title: Section 1.2105(c), Bidding Application and Certification Procedures; Sections 1.2105(c) and 1.2205, Prohibition of Certain Communications.

Form Number: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for-profit entities, not-for-profit institutions, and state, local or tribal governments.

Estimated Number of Respondents and Responses: 10 respondents and 10 responses.

Estimated Time per Response: 1.5 hours to 2 hours.

Frequency of Response: On occasion reporting requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this information collection is contained in sections 154(i), 309(j), and 1452(a)(3) of the Communications Act, as amended, 47 U.S.C. 4(i), 309(j)(5), 1452(a)(3), and sections 1.2105(c) and 1.2205 of the Commission's rules, 47 CFR 1.2105(c), 1.2205.

Estimated Total Annual Burden: 50 hours.

Total Annual Costs: \$9,000.

Nature and Extent of Confidentiality: The Commission will take all reasonable steps to protect the confidentiality of all Commission-held data of a reverse broadcast incentive auction applicant consistent with the confidentiality requirements of the Spectrum Act and the Commission's rules. See 47 U.S.C. 1452(a)(3); 47 CFR 1.2206. In addition, to the extent necessary, auction applicants and other covered parties may request confidential treatment pursuant to section 0.459 of the Commission's rules, 47 CFR 0.459, for any report of a prohibited communication submitted to the Commission that is not already being treated as confidential.

Privacy Act Impact Assessment: No impact(s).

Needs and Uses: A request for extension of this information collection (no change in requirements) will be submitted to the Office of Management and Budget (OMB) in order to obtain the full three year clearance from OMB.

The Commission's rules prohibiting certain communications in Commission

auctions are designed to reinforce existing antitrust laws, facilitate detection of collusive conduct, and deter anticompetitive behavior, without being so strict as to discourage pro-competitive arrangements between auction participants. They also help assure participants that the auction process will be fair and objective, and not subject to collusion. The information collected under this information collection allows the Commission to enforce the prohibition on auction applicants and other covered parties by making clear the responsibility of parties who receive information that potentially violates the rules to promptly report to the Commission. It also enables the Commission to ensure that no bidder gains an unfair advantage over other bidders in its auctions, thereby enhancing the competitiveness and fairness of Commission spectrum auctions. The information collected will be reviewed and, if warranted, referred to the Commission's Enforcement Bureau for possible investigation and administrative action. The Commission may also refer allegations of anticompetitive auction conduct to the Department of Justice for investigation.

OMB Control No.: 3060–0999.

Title: Hearing Aid Compatibility Status Report and Section 20.19, Hearing Aid-Compatible Mobile Handsets (Hearing Aid Compatibility Act).

Form Numbers: FCC Form 655 and FCC Form 855.

Type of Review: Revision of a currently approved collection.

Respondents: Business or other for-profit entities.

Number of Respondents: 934 respondents; 934 responses.

Estimated Time per Response: 13.9710921 hours per response (average).

Frequency of Response: On occasion and annual reporting requirements, Recordkeeping requirement and third-party disclosure requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this information collection is contained in 47 U.S.C. 151, 154(i), 157, 160, 201, 202, 214, 301, 303, 308, 309(j), 310 and 610 of the Communications Act of 1934, as amended.

Total Annual Burden: 13,049 hours.

Total Annual Cost: No cost.

Privacy Impact Assessment: No impact(s).

Nature and Extent of Confidentiality: Information requested in the reports and certifications may include confidential

information. However, covered entities are allowed to request that such materials submitted to the Commission be withheld from public inspection.

Needs and Uses: The Commission will submit the revised information collection to OMB to obtain a full three-year clearance. The changes being made to the information collection concern the obligations of wireless service providers to post certain information on their websites, retain information, and to file annual compliance certifications. The Commission is not proposing changes to the currently approved information collection as it relates to wireless service provider standard development, labeling, and disclosure requirements. Nor is the Commission proposing changes to the previously approved number of estimated service provider respondents and responses. Finally, the Commission is not proposing any changes to the currently approved information collection as it relates to wireless handset manufacturers.

These revisions to the information collection are necessitated by a Report and Order in WT Docket No. 17–228, FCC 18–167, adopted on November 15, 2018 (2018 Report and Order). In the 2018 Report and Order, the Commission revised its rules requiring wireless service providers to post on their publicly accessible websites information regarding the hearing aid compatibility of their offered handsets and required them to retain certain information regarding the hearing aid compatibility of the handsets they previously offered. These revised requirements will allow consumers to have access to the most recent data about hearing aid-compatible handsets and the Commission will be able to ensure service provider compliance with the hearing aid compatibility rules and requirements.

In addition, the 2018 Report and Order determined that service providers are no longer required to annually file FCC Form 655. This form was previously used to ensure service provider compliance with the Commission's hearing aid compatibility rules. Instead, service providers will be filing a streamlined certification with the Commission indicating whether or not they have been in full compliance with the Commission's hearing aid compatibility provisions during the relevant reporting period. Service providers will make this certification using new FCC Form 855. The Commission is seeking OMB approval of this new form and its related instructions. Wireless device manufacturers will continue to annually

file FCC Form 655 to demonstrate compliance with the Commission's hearing aid compatibility provisions.

Federal Communications Commission.

Marlene Dortch,

Secretary, Office of the Secretary.

[FR Doc. 2019-09054 Filed 5-2-19; 8:45 am]

BILLING CODE 6712-01-P

FEDERAL COMMUNICATIONS COMMISSION

Federal Advisory Committee Act; Technological Advisory Council

AGENCY: Federal Communications Commission.

ACTION: Notice of renewal of the Technological Advisory Council's charter.

SUMMARY: The Federal Communications Commission (Commission) hereby announces that the charter of the Technological Advisory Council (hereinafter Committee) has been renewed pursuant to the Federal Advisory Committee Act (FACA).

FOR FURTHER INFORMATION CONTACT: Michael Ha, Deputy Chief, Policy and Rules Division 202-418-2099; michael.ha@fcc.gov.

SUPPLEMENTARY INFORMATION: On April 16, 2019, the General Services Administration approved renewal of the charter of the Committee pursuant to provisions of the FACA. The Commission intends to renew the charter on or before May 17, 2019 and provide the Committee with authorization to operate for two years from the effective date.

Rapid advances in technology have resulted in innovations in how telecommunications services are provided to, and are accessed by, users of those services. Many of these advances are increasing the rate of convergence among categories of services that have traditionally been viewed as distinct, such as cable television services, telephony, data services, and internet services. Regulations must be examined in light of these technology advances, and the Commission must remain abreast of new developments in technology so that it can effectively fulfill its responsibilities under the Communications Act.

The Committee provides recommendations to the Commission on the issues and questions presented to it by the FCC. The Committee will focus on key issues affecting the deployment of new broadband technologies and services seeking to spur opportunities for innovation, greater efficiencies, and

job creation. The Committee will address questions referred to it through the Designated Federal Officer by the FCC Chairman, the Chief of the FCC Office of Engineering and Technology, or the FCC Chief Technology Officer. The questions referred to the TAC will be directed to technological and technical issues in the field of communications.

The Committee is organized under, and operates in accordance with, the provisions of the FACA. The Committee will be solely advisory in nature. Consistent with FACA and its requirements, each meeting of the Committee will be open to the public unless otherwise noticed. Records will be maintained of each meeting and made available for public inspection. All activities of the Committee will be conducted in an open, transparent, and accessible manner. The Committee shall terminate on May 17, 2021, or earlier upon the completion of its work as determined by the Chairman, unless its charter is renewed prior to the termination date.

The Committee will meet approximately three to five times per year in Washington, DC. The meetings of the TAC will be described in a Public Notice issued and published in the **Federal Register** at least fifteen (15) days prior to the first meeting date. In addition, as needed, working groups or subcommittees (ad hoc or steering) will be established to facilitate the Committee's work between meetings of the full Committee. All meetings, including those of working groups and subcommittees, will be fully accessible to individuals with disabilities.

Federal Communications Commission.

Marlene Dortch,

Secretary.

BILLING CODE 6712-01-P

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060-1215]

Information Collection Being Reviewed by the Federal Communications Commission

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act (PRA) of 1995, the Federal Communications Commission (FCC or

Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collections. Comments are requested concerning: Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees.

The FCC may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

DATES: Written PRA comments should be submitted on or before July 2, 2019. If you anticipate that you will be submitting comments but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Cathy Williams, FCC, via email PRA@fcc.gov and to Cathy.Williams@fcc.gov.

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Cathy Williams at (202) 418-2918.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060-1215.
Title: Use of Spectrum Bands Above 24 GHz for Mobile Radio Services.
Form Number: N/A.

Type of Review: Revision of an existing collection.

Respondents: Business or other for-profit, not-for-profit institutions, and state, local and tribal government.

Number of Respondents: 1,230 respondents; 1,230 responses.

Estimated Time per Response: .5-10 hours.

Frequency of Response: On occasion reporting requirement; third party disclosure requirement; upon commencement of service, or within 3 years of effective date of rules; and at end of license term, or 2024 for incumbent licensees.

Obligation to Respond: Statutory authority for this collection are

contained in sections 1, 2, 3, 4, 5, 7, 10, 201, 225, 227, 301, 302, 302a, 303, 304, 307, 309, 310, 316, 319, 332, and 336 of the Communications Act of 1934, 47 U.S.C. 151, 152, 153, 154, 155, 157, 160, 201, 225, 227, 301, 302, 302a, 303, 304, 307, 309, 310, 316, 319, 332, 336, Section 706 of the Telecommunications Act of 1996, as amended, 47 U.S.C. 1302.

Total Annual Burden: 735 hours.

Total Annual Cost: \$540,000.

Privacy Act Impact Assessment: No impact(s).

Nature and Extent of Confidentiality:

There is no need for confidentiality with this collection of information.

Needs and Uses: The Commission adopted the Use of Spectrum Bands Above 24 GHz for Mobile Radio services in a Fifth Report and Order (“Fifth R&O”), GN Docket No. 14–177, FCC 19–30, on April 15, 2019. In the Fifth R&O, the Commission amended Section 25.136 by revising the section heading and revising paragraphs (e), (f), and (g) and adding paragraphs (e)(1), (2), (3), and (4)(i), (ii), (iii), and (iv). The Commission added the 50 GHz band (50.4–51.4 GHz) to the bands that are subject to the framework for sharing between the Upper Microwave Flexible Use Service (UMFUS) and the Fixed-Satellite Service (FSS) established in that rule. In turn, since the rules now apply in additional bands, the number of respondents, the annual number of responses, annual burden hours and annual costs will increase for this collection. In addition, the Commission re-orders the paragraphs in § 25.136.

Federal Communications Commission.

Marlene Dortch,

Secretary.

BILLING CODE 6712–01–P

FEDERAL MARITIME COMMISSION

Notice of Agreements Filed

The Commission hereby gives notice of the filing of the following agreements under the Shipping Act of 1984. Interested parties may submit comments on the agreements to the Secretary by email at Secretary@fmc.gov, or by mail, Federal Maritime Commission, Washington, DC 20573, within twelve days of the date this notice appears in the **Federal Register**. Copies of agreements are available through the Commission’s website (www.fmc.gov) or by contacting the Office of Agreements at (202)–523–5793 or tradeanalysis@fmc.gov.

Agreement No.: 201267–001.

Agreement Name: CMA CGM/COSCO Shipping Slot Exchange Agreement China-U.S. West Coast.

Parties: CMA CGM S.A. and COSCO Shipping Lines Co., Ltd.

Filing Party: Draughn Arbona; CMA CGM.

Synopsis: The Amendment expands the geographic scope to include the trades between China and Vietnam on the one hand, and the U.S. West Coast on the other hand.

Proposed Effective Date: 6/10/2019.

Location: <https://www2.fmc.gov/FMC.Agreements.Web/Public/AgreementHistory/15267>.

Agreement No.: 201278–001.

Agreement Name: HLAG/ONE Gulf-Central America Slot Charter Agreement.

Parties: Hapag Lloyd AG and Ocean Network Express Pte.

Filing Party: Wayne Rohde; Cozen O’Connor.

Synopsis: The Amendment revises the amount of space to be chartered. It also changes the minimum duration of the Agreement and the notice required to terminate.

Proposed Effective Date: 6/7/2019.

Location: <https://www2.fmc.gov/FMC.Agreements.Web/Public/AgreementHistory/16301>.

Agreement No.: 201296.

Agreement Name: CMA CGM/COSCO Shipping Slot Exchange Agreement China-U.S. West Coast and Middle East-Asia.

Parties: CMA CGM S.A. and COSCO Shipping Lines Co., Ltd.

Filing Party: Draughn Arbona; CMA CGM.

Synopsis: The Agreement authorizes the Parties to exchange space in the trade between (1) China and the U.S. West Coast, and (2) China, Singapore, Malaysia, the United Arab Emirates and Saudi Arabia.

Proposed Effective Date: 6/10/2019.

Location: <https://www2.fmc.gov/FMC.Agreements.Web/Public/AgreementHistory/21396>.

Agreement No.: 201297.

Agreement Name: CMA CGM/COSCO Shipping Slot Exchange Agreement JAX/SEA.

Parties: CMA CGM S.A. and COSCO Shipping Lines Co., Ltd.

Filing Party: Draughn Arbona; CMA CGM.

Synopsis: This Agreement authorizes the Parties to charter slots to each other in the trades between China and Vietnam on the one hand, and the U.S. West Coast on the other hand.

Proposed Effective Date: 6/10/2019.

Location: <https://www2.fmc.gov/FMC.Agreements.Web/Public/AgreementHistory/21397>.

Agreement No.: 201298.

Agreement Name: CMA CGM/COSCO Shipping China-U.S. West Coast Service Slot Charter Agreement.

Filing Party: Draughn Arbona; CMA CGM.

Synopsis: The Agreement authorizes COSCO to charter space to CMA CGM in the trade between China and the U.S. West Coast.

Proposed Effective Date: 6/10/2019.

Location: <https://www2.fmc.gov/FMC.Agreements.Web/Public/AgreementHistory/21398>.

Dated: April 30, 2019.

Rachel Dickon,

Secretary.

BILLING CODE 6731–AA–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Meeting of the Community Preventive Services Task Force (CPSTF)

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of meeting.

SUMMARY: The Centers for Disease Control and Prevention within the Department of Health and Human Services announces the next meeting of the Community Preventive Services Task Force (CPSTF) on June 12–13, 2019, in Atlanta, Georgia.

DATES: The meeting will be held on Wednesday, June 12, 2019, from 8:30 a.m. to 6:00 p.m. EST, and Thursday, June 13, 2019, from 8:30 a.m. to 1:00 p.m. EST.

ADDRESSES: The CPSTF Meeting will be held at the CDC Edward R. Roybal Campus, Centers for Disease Control and Prevention Headquarters (Building 19), 1600 Clifton Road NE, Atlanta, GA 30329. You should be aware that the meeting location is in a Federal government building; therefore, Federal security measures are applicable. For additional information, please see Roybal Campus Security Guidelines under **SUPPLEMENTARY INFORMATION**. Information regarding meeting logistics will be available on the Community Guide website (www.thecommunityguide.org) closer to the date of the meeting.

FOR FURTHER INFORMATION CONTACT: Onslow Smith, Center for Surveillance, Epidemiology and Laboratory Services; Centers for Disease Control and

Prevention, 1600 Clifton Road NE, MS-E-69, Atlanta, GA 30329, phone: (404)498-6778, email: CPSTF@cdc.gov.

SUPPLEMENTARY INFORMATION:

Meeting Accessibility: This space-limited meeting is open to the public. All meeting attendees must register. To ensure completion of required security procedures and access to the CDC's Global Communications Center, U.S. citizens intending to attend in person must register by June 7, 2019, and non-U.S. citizens intending to attend in person must register by May 8, 2019. Failure to register by the dates identified could result in the inability to attend the CPSTF meeting in person.

Those unable to attend the meeting in person are able to do so via Webcast. CDC will send the Webcast URL to registrants upon receipt of their registration. All meeting attendees must register by June 7, 2019 to receive the webcast information. CDC will email webcast information from the CPSTF@cdc.gov mailbox.

To register for the meeting, whether to attend in person or via webcast, individuals should send an email to CPSTF@cdc.gov and include the following information: Name, title, organization name, organization address, phone, email, and whether attending in person or via webcast.

Public Comment: A public comment period, limited to three minutes per person, will follow the CPSTF's discussion of each systematic review. Individuals wishing to make public comments must indicate their desire to do so with their registration by providing their name, organizational affiliation, and the topic to be addressed (if known). Public comments will become part of the meeting summary. Public comment is not possible via Webcast.

Background on the CPSTF: The CPSTF is an independent, nonfederal panel whose members are appointed by the CDC Director. CPSTF members represent a broad range of research, practice, and policy expertise in prevention, wellness, health promotion, and public health. The CPSTF was convened in 1996 by the Department of Health and Human Services (HHS) to identify community preventive programs, services, and policies that increase healthy longevity, save lives and dollars, and improve Americans' quality of life. CDC is mandated to provide ongoing administrative, research, and technical support for the operations of the CPSTF. During its meetings, the CPSTF considers the findings of systematic reviews on existing research and practice-based

evidence and issues recommendations. CPSTF recommendations are not mandates for compliance or spending. Instead, they provide information about evidence-based options that decision makers and stakeholders can consider when they are determining what best meets the specific needs, preferences, available resources, and constraints of their jurisdictions and constituents. The CPSTF's recommendations, along with the systematic reviews of the evidence on which they are based, are compiled in the *The Community Guide*.

Matters Proposed for Discussion: Asthma (School-based Self-management Interventions for Asthma in Children and Adolescents); Health Equity (Supportive Housing Policies to Address Homelessness); and Obesity Prevention and Control (Effectiveness of Interventions that Include Technology to Address Weight-related Behaviors). The agenda is subject to change without notice.

Roybal Campus Security Guidelines: The Edward R. Roybal Campus is the headquarters of the CDC and is located at 1600 Clifton Road NE, Atlanta, Georgia. The meeting is being held in a Federal government building; therefore, Federal security measures are applicable.

All meeting attendees must register by the dates outlined under *Meeting Accessibility*. In planning your arrival time, please take into account the need to park and clear security. All visitors must enter the Edward R. Roybal Campus through the front entrance on Clifton Road. Vehicles may be searched, and the guard force will then direct visitors to the designated parking area. Upon arrival at the facility, visitors must present government-issued photo identification (e.g., a valid federal identification badge, state driver's license, state non-driver's identification card, or passport). Non-United States citizens must complete the required security paperwork prior to the meeting date and must present a valid passport, visa, Permanent Resident Card, or other type of work authorization document upon arrival at the facility. Instructions for completing the required security paperwork will be provided after registration. All persons entering the building must pass through a metal detector. CDC Security personnel will issue a visitor's ID badge at the entrance to Building 19. Visitors may receive an escort to the meeting room. All items brought to HHS/CDC are subject to inspection.

Dated: April 29, 2019.

Sandra Cashman,

Executive Secretary, Centers for Disease Control and Prevention.

[FR Doc. 2019-09001 Filed 5-2-19; 8:45 am]

BILLING CODE 4163-18-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

[OMB #0970-0463]

Proposed Information Collection Activity; Comprehensive Child Welfare Information System

AGENCY: Children's Bureau; Administration for Children and Families; HHS.

ACTION: Request for public comment.

SUMMARY: The Administration for Children and Families (ACF) is requesting a revision of the CCWIS information collection authorized by the CCWIS Final Rule (81 FR 35450-35482). The Automated Function List and the Data Quality Plan are revised to be annual submissions of updates with no change to the burden hours per year. Initial submission of the Automated Function List, the Data Quality Plan, and the Notice of Intent have been removed, as we do not expect to receive more than the Paperwork Reduction Act (PRA) threshold in a single year. There are no required instruments associated with this data collection.

DATES: *Comments due within 60 days of publication.* In compliance with the requirements of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Administration for Children and Families is soliciting public comment on the specific aspects of the information collection described above.

ADDRESSES: Copies of the proposed collection of information can be obtained and comments may be forwarded by emailing infocollection@acf.hhs.gov. Alternatively, copies can also be obtained by writing to the Administration for Children and Families, Office of Planning, Research, and Evaluation, 330 C Street SW, Washington, DC 20201, Attn: OPRE Reports Clearance Officer. All requests, emailed or written, should be identified by the title of the information collection.

SUPPLEMENTARY INFORMATION:

Description: The CCWIS information collection includes two components:

- The Automated Function List update required pursuant to § 1355.52(i)(2);

• The Data Quality Plan update required pursuant to § 1355.52(d)(5). The CCWIS regulations require updates of this information to confirm

that the project meets CCWIS requirements and that project costs are appropriately allocated to benefiting programs.

Respondents: Title IV–E agencies under the Social Security Act.

ANNUAL BURDEN ESTIMATES

Instrument	Number of respondents	Number of responses per respondent	Average burden hours per response	Annual burden hours
Automated Function List § 1355.52(i)(2)	55	1	10	550
Data Quality Plan § 1355.52(d)(5)	55	1	40	2,200

Estimated Total Annual Burden Hours: 2,750.

Comments: The Department specifically requests comments on (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency’s estimate of the burden of the proposed collection of information; (c) the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted within 60 days of this publication.

Authority: 42 U.S.C. 620 *et seq.*, 42 U.S.C. 670 *et seq.*, 42 U.S.C. 1301 and 1302.

Mary B. Jones,

ACF/OPRE Certifying Officer.

[FR Doc. 2019–09044 Filed 5–2–19; 8:45 am]

BILLING CODE 4184–25–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Proposed Information Collection Activity; Procedures for Requests From Tribal Lead Agencies To Use Child Care and Development Fund (CCDF) Funds for Construction or Major Renovation of Child Care Facilities (OMB #0970–0160)

AGENCY: Office of Child Care; Administration for Children and Families; HHS.

ACTION: Request for public comment.

SUMMARY: The Administration for Children and Families (ACF) is requesting proposed revisions with a three-year extension to an approved information collection: Procedures for Requests from Tribal Lead Agencies to use Child Care and Development Fund (CCDF) Funds for Construction or Major Renovation of Child Care Facilities (OMB #: 0970–0160, expiration date: 9/30/2019).

DATES: *Comments due within 60 days of publication.* In compliance with the requirements of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Administration for Children and Families is soliciting public comment on the specific aspects of the information collection described above.

ADDRESSES: Copies of the proposed collection of information can be

obtained and comments may be forwarded by emailing *infocollection@acf.hhs.gov*. Alternatively, copies can also be obtained by writing to the Administration for Children and Families, Office of Planning, Research, and Evaluation, 330 C Street SW, Washington, DC 20201, Attn: OPRE Reports Clearance Officer. All requests, emailed or written, should be identified by the title of the information collection.

SUPPLEMENTARY INFORMATION:

Description: The Child Care and Development Block Grant Act, as amended, allows federally-recognized Tribes to use Child Care and Development Fund (CCDF) grant awards for construction and renovation of child care facilities. A tribal grantee must first request and receive approval from the Administration for Children and Families (ACF) before using CCDF funds for construction or major renovation. This information collection contains the statutorily-mandated uniform procedures for the solicitation and consideration of requests, including instructions for preparation of environmental assessments in conjunction with the National Environmental Policy Act. The proposed draft procedures update the procedures that were originally issued in August 1997 (and revised periodically) by making minor technical and formatting changes.

Respondents: CCDF tribal grantees requesting to use CCDF funds for construction or major renovation.

ANNUAL BURDEN ESTIMATES

Instrument	Total number of respondents	Number of responses per respondent	Average burden hours per response	Annual burden hours
Construction or Major Renovation of Tribal Child Care Facilities	50	1	20	1,000

Estimated Total Annual Burden Hours: 1,000.

Comments: The Department specifically requests comments on (a) whether the proposed collection of

information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency’s estimate

of the burden of the proposed collection of information; (c) the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information

on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted within 60 days of this publication.

Authority: Act, 42 U.S.C. 9858(c)(6).

Mary B. Jones,

ACF/OPRE Certifying Officer.

BILLING CODE 4184-81-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2017-N-5925]

21st Century Cures Act: Annual Compilation of Notices of Updates From the Susceptibility Test Interpretive Criteria Web Page; Request for Comments

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice; request for comments.

SUMMARY: The Food and Drug Administration (FDA, the Agency, or we) is announcing the availability of the Agency's annual compilation of notices of updates to the Agency's Susceptibility Test Interpretive Criteria web page. The Agency established the Susceptibility Test Interpretive Criteria web page on December 13, 2017, and since establishment has provided updates to both the format of the web pages and to the susceptibility test interpretive criteria identified and recognized by FDA on the web pages. FDA is publishing this notice in accordance with procedures established by the 21st Century Cures Act (Cures Act).

DATES: This notice is published in the **Federal Register** on May 3, 2019.

ADDRESSES: You may submit either electronic or written comments and information as follows:

Electronic Submissions

Submit electronic comments in the following way:

- **Federal eRulemaking Portal:** <https://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted,

such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <https://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see "Written/Paper Submissions" and "Instructions").

Written/Paper Submissions

Submit written/paper submissions as follows:

- **Mail/Hand delivery/Courier (for written/paper submissions):** Dockets Management Staff (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in "Instructions."

Instructions: All submissions received must include the Docket No. FDA-2017-N-5925 for "Susceptibility Test Interpretive Criteria Recognized and Listed on the Susceptibility Test Interpretive web page; Request for Comments." Received comments will be placed in the docket and, except for those submitted as "Confidential Submissions," publicly viewable at <https://www.regulations.gov> or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday.

- **Confidential Submissions—**To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states "THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION." The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this

information on the cover sheet and not in the body of your comments and you must identify this information as "confidential." Any information marked as "confidential" will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <https://www.gpo.gov/fdsys/pkg/FR-2015-09-18/pdf/2015-23389.pdf>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <https://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Katherine Schumann, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 22, Rm. 6242, Silver Spring, MD 20993-0002, 301-796-1182, Katherine.Schumann@fda.hhs.gov.

SUPPLEMENTARY INFORMATION:

I. Background

Section 511A of the Federal Food, Drug, and Cosmetic Act (the FD&C Act) (21 U.S.C. 360a-2), as added by section 3044 of the Cures Act (Pub. L. 114-255), was signed into law on December 13, 2016. This provision clarifies FDA's authority to identify and efficiently update susceptibility test interpretive criteria, including through the recognition by FDA of standards established by standards development organizations (SDOs). It also clarifies that sponsors of antimicrobial susceptibility testing devices may rely upon listed susceptibility test interpretive criteria to support premarket authorization of their devices, provided they meet certain conditions, which allows for a more streamlined process for incorporating up-to-date information into such devices.

In the **Federal Register** notice of December 13, 2017 (82 FR 58617), FDA announced the establishment of the Susceptibility Test Interpretive Criteria web page. This web page recognizes susceptibility test interpretive criteria established by an SDO that fulfills the requirements under section 511A(b)(2)(A) of the FD&C Act; identifies when FDA does not recognize, in whole or in part, susceptibility test

interpretive criteria established by an SDO; and lists susceptibility test interpretive criteria identified by FDA outside the SDO process. The susceptibility test interpretive criteria listed by FDA on the Susceptibility Test Interpretive Criteria web page is deemed to be recognized as a standard under section 514(c)(1) of the FD&C Act (21 U.S.C. 360d(c)(1)). The Susceptibility Test Interpretive Criteria web page can be found at <https://www.fda.gov/STIC>.

On March 1, 2018, FDA published a notice in the **Federal Register** (83 FR 8883) requesting comments on FDA’s initial susceptibility test interpretive criteria recognition and listing determinations on the Susceptibility Test Interpretive Criteria web page (<https://www.federalregister.gov/documents/2018/03/01/2018-04175/susceptibility-test-interpretive-criteria-recognized-and-listed-on-the-susceptibility-test>). FDA may consider information provided by interested third parties as a basis for evaluating new or updated interpretive criteria standards (section 511A(c)(2)(B) of the FD&C Act); third parties should submit any information they wish to convey to the Agency to Docket No. FDA-2017-N-5925. If comments are received, FDA will review those comments and will make, as appropriate, updates to the recognized standards or susceptibility test interpretive criteria.

At least every 6 months after the establishment of the Susceptibility Test Interpretive Criteria web page, FDA is required, as appropriate to: (1) Publish on that web page a notice recognizing new or updated susceptibility test interpretive criteria standards, or recognizing or declining to recognize parts of standards; (2) withdraw recognition of susceptibility test interpretive criteria standards, or parts of standards; and (3) make any other necessary updates to the lists published on the Susceptibility Test Interpretive Criteria web page (section 511A(c)(1)(A) of the FD&C Act). FDA has provided notices of updates on the Susceptibility

Test Interpretive Criteria web page, which can be found here: <https://www.fda.gov/Drugs/DevelopmentApprovalProcess/DevelopmentResources/ucm593952.htm>. Interested parties may also sign up to receive emails informing them of these updates as they occur by using the link provided either on the main Susceptibility Test Interpretive Criteria web page (<https://www.fda.gov/STIC>) or on the updates page.

Once a year, FDA is required to compile the new notices published on the Susceptibility Test Interpretive Criteria web page and publish them in the **Federal Register** and provide for public comment (see section 511A(c)(3) of the FD&C Act). This **Federal Register** notice satisfies that requirement. If comments are received, FDA will review them and make updates to the recognized standards or susceptibility test interpretive criteria as needed.

II. Annual Compilation of Notices: Susceptibility Test Interpretive Criteria Web Page

A. Formatting Changes to the Susceptibility Test Interpretive Criteria Web Page

On October 4, 2018, FDA updated the format of the Antifungal Susceptibility Test Interpretive Criteria web pages for clarity, in response to stakeholder feedback.

On June 26, 2018, FDA updated the format of the Antibacterial Susceptibility Test Interpretive Criteria web pages for clarity, in response to stakeholder feedback.

B. Updates to Standards Recognition

As of October 4, 2018, the following susceptibility test interpretive criteria standards are no longer recognized (for information regarding recognition of methods and quality control standards see Recognized Consensus Standards):

- Clinical and Laboratory Standards Institute (CLSI). Reference Method for Broth Dilution Antifungal Susceptibility Testing of Yeasts; Fourth Informational

Supplement. CLSI document M27-S4 (2012). Clinical and Laboratory Standards Institute, 940 West Valley Rd., Suite 2500, Wayne, PA 19087, USA (CLSI M27-S4).

- Clinical and Laboratory Standards Institute (CLSI). Method for Antifungal Disk Diffusion Susceptibility Testing of Yeasts; Approved Guideline—Second Edition. CLSI document M44-S3 (2009). Clinical and Laboratory Standards Institute, 950 West Valley Rd., Suite 500, Wayne, PA 19087, USA (CLSI M44-S3).

- Clinical and Laboratory Standards Institute (CLSI). Reference Method for Broth Dilution Antifungal Susceptibility Testing of Yeasts; Fourth Informational Supplement. CLSI document M27-S3 (2008). Clinical and Laboratory Standards Institute, 940 West Valley Rd., Suite 2500, Wayne, PA 19087, USA (CLSI M27-S3).

As of October 4, 2018, with certain exceptions, FDA recognizes the following standard:

- Clinical and Laboratory Standards Institute (CLSI). Performance Standards for Antifungal Susceptibility Testing of Yeasts. 1st ed. CLSI supplement M60 (2017). Clinical and Laboratory Standards Institute, 940 West Valley Rd., Suite 2500, Wayne, PA 19087, USA (CLSI M60).

As of June 26, 2018, the following standard is no longer recognized:

- Clinical and Laboratory Standards Institute (CLSI). Performance Standards for Antimicrobial Susceptibility Testing. 27th ed. CLSI supplement M100. Wayne, PA: Clinical and Laboratory Standards Institute; 2017.

As of June 26, 2018, with certain exceptions, FDA recognizes the following standard:

- Clinical and Laboratory Standards Institute (CLSI). Performance Standards for Antimicrobial Susceptibility Testing. 28th ed. CLSI supplement M100. Wayne, PA: Clinical and Laboratory Standards Institute; 2018.

TABLE 1—NOTICES OF UPDATES TO RECOGNIZED OR UPDATED SUSCEPTIBILITY TEST INTERPRETIVE CRITERIA BY DRUG

Drug	Route of administration	Action taken	Therapeutic category	Date
Fluconazole	Injection, Oral	FDA identifies exceptions to the recognized standard for Fluconazole. The term “Susceptible-Dose Dependent” is not recognized pending further clarification of the definition of the term by standards development organizations.	Antifungal	10/3/18
Flucytosine	Injection	FDA withdraws recognition of Susceptibility Test Interpretive Criteria for Flucytosine as there are not sufficient clinical or other data to support these criteria.	Antifungal	10/3/18

TABLE 1—NOTICES OF UPDATES TO RECOGNIZED OR UPDATED SUSCEPTIBILITY TEST INTERPRETIVE CRITERIA BY DRUG—Continued

Drug	Route of administration	Action taken	Therapeutic category	Date
Itraconazole	Injection, Oral	FDA identifies Susceptibility Test Interpretive Criteria for itraconazole and <i>Candida albicans</i> . The current minimum inhibitory concentration distribution data demonstrates that the sensitivity of <i>C. albicans</i> to itraconazole has not changed over time. Therefore, the in-vitro activity and clinical response data reviewed previously by FDA and described in product labeling continue to support these interpretive criteria for <i>C. albicans</i> .	Antifungal	10/3/18
Omadacycline	Injection, Oral	Added drug to antibacterial susceptibility test interpretive criteria web page. FDA identified susceptibility test interpretive criteria for omadacycline injection.	Antifungal	10/3/18
Bismuth subcitrate potassium, Metronidazole, and Tetracycline hydrochloride.	Oral	Added drug to antibacterial susceptibility test interpretive criteria web page. No susceptibility test interpretive criteria recognized or added by FDA.	Antibacterial	2/09/18
Ceftazidime Avibactam	Injection	FDA recognizes M100 standard for <i>Enterobacteriaceae</i> and <i>Pseudomonas aeruginosa</i> .	Antibacterial	6/26/18
Ceftolozane Tazobactam	Injection	FDA recognizes M100 standard for disk diffusion for <i>Enterobacteriaceae</i> .	Antibacterial	6/26/18
Clarithromycin	Oral	FDA recognizes CLSI M45 standard for clarithromycin for <i>Helicobacter pylori</i> .	Antibacterial	2/09/18
Dalbavancin	Injection	FDA recognizes M100 standard for <i>Staphylococcus aureus</i> , <i>Enterococcus</i> spp. (vancomycin-susceptible isolates only), <i>Streptococcus</i> spp β -Hemolytic Group, <i>Streptococcus</i> spp Viridans Group.	Antibacterial	6/26/18
Eravacycline	Injection	Added drug to antibacterial susceptibility test interpretive criteria web page. FDA identified susceptibility test interpretive criteria for eravacycline injection.	Antibacterial	8/28/18
Isoniazid, Pyrazinamide, and Rifampin.	Oral	Added drug to antibacterial susceptibility test interpretive criteria web page. No susceptibility test interpretive criteria recognized or added by FDA.	Antibacterial	2/09/18
Lansoprazole, Amoxicillin, and Clarithromycin.	Oral	Added drug to antibacterial susceptibility test interpretive criteria web page. No susceptibility test interpretive criteria recognized or added by FDA.	Antibacterial	2/09/18
Piperacillin Tazobactam	Injection	FDA recognizes revised M100 standard for anaerobes.	Antibacterial	6/26/18
Plazomicin	Injection	Added drug to antibacterial susceptibility test interpretive criteria web page. FDA identified susceptibility test interpretive criteria for plazomicin injection.	Antibacterial	6/26/18
Rifabutin	Oral	Added drug to antibacterial susceptibility test interpretive criteria web page. No susceptibility test interpretive criteria recognized or added by FDA.	Antibacterial	4/26/18
Rifapentine	Oral	Added drug to antibacterial susceptibility test interpretive criteria web page. No susceptibility test interpretive criteria recognized or added by FDA.	Antibacterial	2/09/18
Rifaximin	Oral	Added drug to antibacterial susceptibility test interpretive criteria web page. No susceptibility test interpretive criteria recognized or added by FDA.	Antibacterial	2/09/18
Tedizolid	Oral, Injection	Due to test performance concerns, FDA withdraws recognition of all disk diffusion interpretive criteria.	Antibacterial	6/26/18

Dated: April 29, 2019.

Lowell J. Schiller,

Principal Associate Commissioner for Policy.

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2019-N-1619]

List of Patient Preference-Sensitive Priorities; Establishment of a Public Docket; Request for Comments

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice; establishment of a public docket; request for comments.

SUMMARY: The Food and Drug Administration (FDA or the Agency) is announcing the availability of the list of patient preference-sensitive priorities on FDA's website entitled, "Patient Preference-Sensitive Areas: Using Patient Preference Information (PPI) in Medical Device Evaluation." As part of FDA's commitments for the reauthorization of the Medical Device User Fee Amendments of 2017 (MDUFA IV), the Center for Devices and Radiological Health (CDRH) committed to publish a list of priority areas where preference-sensitive data can inform regulatory decision making. FDA is also establishing a docket to solicit public input on this list of preference-sensitive areas that may impact the design and conduct of premarket medical device clinical studies, benefit-risk assessments, and postmarket evaluation.

DATES: Submit either electronic or written comments on the notice by July 2, 2019 to ensure that the Agency considers your comment on the list of patient preference-sensitive priorities.

ADDRESSES: You may submit comments on this notice as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal:* <https://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or

confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <https://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see "Written/Paper Submissions" and "Instructions").

Written Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for paper submissions):* Dockets Management Staff (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in "Instructions."

Instructions: All submissions received must include the Docket No. FDA-2019-N-1619 for "List of Patient Preference-Sensitive Priorities; Establishment of a Public Docket; Requests for Comments" Received comments will be placed in the docket and, except for those submitted as "Confidential Submissions," publicly viewable at <https://www.regulations.gov> or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday.

- **Confidential Submissions—**To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states "THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION." The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as

"confidential." Any information marked as "confidential" will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <https://www.gpo.gov/fdsys/pkg/FR-2015-09-18/pdf/2015-23389.pdf>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <https://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT:

Anindita Saha, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 5414, Silver Spring, MD 20993-0002, 301-796-2537.

SUPPLEMENTARY INFORMATION:

I. Background

In 2016, the FDA issued guidance entitled, "Patient Preference Information—Voluntary Submission, Review in Premarket Approval Applications, Humanitarian Device Exemption Applications, and De Novo Requests, and Inclusion in Decision Summaries and Device Labeling—Guidance for Industry, Food and Drug Administration Staff, and Other Stakeholders" (Ref. 1), outlining how stakeholders, including industry and patient advocacy organizations, can voluntarily collect and submit PPI that may be used by FDA staff in regulatory decision making.

As part of FDA's commitment for the reauthorization of MDUFA IV), FDA committed to advancing patient input and involvement and to identify patient preference-sensitive priority areas that may inform regulatory decision making (Ref. 2). FDA seeks to successfully build on our strong commitment to patients by engaging them to understand and considering their experience and perspectives, as it relates to medical device clinical studies, benefit-risk assessments, and postmarket surveillance.

As such, on December 7–8, 2017, FDA cohosted a collaborative workshop with the Centers of Excellence in Regulatory Science and Innovation entitled, "Advancing Use of Patient Preference Information as Scientific Evidence in Medical Product Evaluation" (Ref. 3). This workshop discussed the current progress on incorporating PPI into

benefit-risk assessments and used case examples, explored PPI methods, and future research topics to improve the use of PPI in regulatory decisions.

Based on feedback attained during the workshop, FDA identified the following parameters to assist in the identification of the priority list of patient preference-sensitive areas for medical device review, where:

- FDA staff are looking to better understand the full impact of the disease or condition and treatment options on patients and/or caregivers;
- Patients may value the benefits and risks of a technology or treatment differently from healthcare professionals and/or caregivers;
- Population-level differences in patient perspectives are not well understood, due to differences in:
 - Demographic characteristics;
 - Stages of disease; or
 - Disease phenotype; and
- There is significant public health impact (such as high mortality or morbidity rates and high prevalence rates of the disease, or few treatment options available such as in rare diseases).

II. Patient Preference-Sensitive Priority Areas

Based on the above parameters, FDA generated a list of priority preference-sensitive areas, and organized the areas into the following categories:

- Patient values in diagnosis and treatment;
- Relevant clinical endpoints for specific patient populations;
- Patient benefit-risk trade-offs for treatment options or diagnostic approaches; and
- Impact of uncertainty in the benefit-risk tradeoffs.

The current collated list of identified patient preference-sensitive areas can be found on the FDA website at <https://www.fda.gov/about-fda/cdrh-patient-engagement/priority-list-patient-preference-sensitive-areas>. The priorities listed on the web page may be broadly applicable to many diagnostic/therapeutic areas, while others are specific to a disease/condition or technology. This is not an exhaustive list of all patient preference-sensitive areas, and the prioritization of these areas may shift over time as health technologies and patient preference methodologies advance.

III. Other Issues for Consideration

FDA is soliciting public input from interested persons on the identified priority list of patient preference-sensitive topics captured on the FDA website at <https://www.fda.gov/about->

[fda/cdrh-patient-engagement/priority-list-patient-preference-sensitive-areas](https://www.fda.gov/about-fda/cdrh-patient-engagement/priority-list-patient-preference-sensitive-areas). In addition, FDA is interested in responses to the following questions:

1. Do any existing topics on the Priority List of Patient Preference-Sensitive Areas need to be refined to better represent patient preference-sensitive areas important to regulatory efforts? And, if so, how? Please provide an explanation to support any recommended refinements.

2. Are there other areas not listed on the FDA website at <https://www.fda.gov/about-fda/cdrh-patient-engagement/priority-list-patient-preference-sensitive-areas> that FDA should consider as priority patient preference-sensitive areas? If there are additional areas for consideration, please identify and provide an explanation for each additional area using the parameters outlined in Section I: Background.

3. Are there ongoing studies or published studies that adequately address any of these patient preference-sensitive areas in a regulatory context? If so, please provide information or references regarding the studies.

IV. References

The following references are on display at the Dockets Management Staff (see **ADDRESSES**) and are available for viewing by interested persons between 9 a.m. and 4 p.m., Monday through Friday; they are also available electronically at <https://www.regulations.gov>. FDA has verified the website addresses, as of the date this document publishes in the **Federal Register**, but websites are subject to change over time.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2018–N–1262]

Notice of Approval of Product Under Voucher: Rare Pediatric Disease Priority Review Voucher

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the issuance of approval of a product redeeming a priority review voucher. The Federal Food, Drug, and Cosmetic Act (FD&C Act), as amended by the Food and Drug Administration Safety and Innovation Act (FDASIA), authorizes FDA to award priority review vouchers to sponsors of approved rare pediatric disease product applications that meet certain criteria. FDA is required to publish notice of the issuance of vouchers as well as the approval of products redeeming a voucher. FDA has determined that ULTOMIRIS (ravulizumab-cwvz) approved December 21, 2018, meets the redemption criteria.

FOR FURTHER INFORMATION CONTACT: Althea Cuff, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20993–0002, 301–796–4061, Fax: 301–796–9858, email: althea.cuff@fda.hhs.gov.

SUPPLEMENTARY INFORMATION: Under section 529 of the FD&C Act (21 U.S.C. 360ff), which was added by FDASIA, FDA will report the issuance of rare pediatric disease priority review vouchers and the approval of products for which a voucher was redeemed. FDA has determined that ULTOMIRIS (ravulizumab-cwvz) approved December 21, 2018, meets the redemption criteria.

For further information about the Rare Pediatric Disease Priority Review Voucher Program and for a link to the full text of section 529 of the FD&C Act, go to <https://www.fda.gov/ForIndustry/DevelopingProductsforRareDiseasesConditions/RarePediatricDiseasePriorityVoucherProgram/default.htm>. For further information about ULTOMIRIS (ravulizumab-cwvz) go to the “Drugs@FDA” website at <https://>

www.accessdata.fda.gov/scripts/cder/daf/.

Dated: April 29, 2019.

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Request for Information (RFI): Developing an STD Federal Action Plan

AGENCY: Office of HIV/AIDS and Infectious Disease Policy, Office of the Assistant Secretary for Health, Office of the Secretary, Department of Health and Human Services.

ACTION: Notice.

SUMMARY: To help inform the development of the Sexually Transmitted Diseases (STD) Federal Action Plan, HHS seeks input from stakeholders on what strategies can be implemented by federal agencies to improve the efficiency, effectiveness, coordination, accountability, and impact of our national response to increasing rates of STDs.

DATES: To be assured consideration, comments must be received at the address provided below, no later than 5:00 p.m. ET on June 3, 2019.

ADDRESSES: Electronic responses are strongly preferred and may be addressed to STDPlan@hhs.gov. Written responses should be addressed to: U.S. Department of Health and Human Services, 330 C Street SW, Room L001, Washington, DC 20024; Attention STD RFI.

FOR FURTHER INFORMATION CONTACT: Melissa Habel, MPH in the HHS Office of HIV/AIDS and Infectious Disease Policy, (202) 795-7697.

SUPPLEMENTARY INFORMATION: Rates of sexually transmitted diseases (STDs) in 2017 reached an all-time high among males and females and all racial and ethnic groups. Since 2013, reported chlamydia rates have increased 22%, gonorrhea rates 67%, syphilis rates 76%, and congenital syphilis rates 154%; the combined number of cases was 2.3 million up from 1.8 million in 2013.¹ These infections can lead to long-term health consequences such as infertility and can facilitate HIV transmission. While gonorrhea, chlamydia and syphilis infections have grown considerably over the past four years, human papillomavirus (HPV) remains the most commonly sexually transmitted infection in the U.S.,

affecting close to half of adults of reproductive age. HPV infections result in approximately 33,700 cases of certain types of cancer each year in the U.S.² Most of these cancers are preventable through the use of the HPV vaccination series. These numbers represent real people and expose hidden fragile populations who are not getting the preventive services and health care they need. While STDs affect all groups of the U.S. population, they disproportionately affect certain vulnerable groups such as pregnant women, youth ages 15–24 years, men who have sex with men, and racial and ethnic minorities. Beyond the impact on an individual's health, in 2013 it was estimated that STDs cost the U.S. health care system more than \$16 billion annually, and STDs have increased dramatically since then.³

To respond and address the STD public health epidemic, OHAIDP in collaboration with other federal partners is leading and coordinating development of a STD Federal Action Plan. The development process for the action plan will seek input from subject matter experts, nonfederal partners and stakeholders including health care providers and systems, state, tribal, and local health departments, community-based and faith-based organizations, national professional organizations, researchers, advocates, and persons whose lives have been affected by these infections. The action plan is expected to address prevention, diagnosis, care and treatment, as well as coordination of efforts, policies, and programs throughout the federal government. It will also address stigma, discrimination, co-infections (*e.g.*, HIV and viral hepatitis), and social determinants of health.

This request for information seeks public input on how the federal government should address the rising rates of STDs and what strategies can be implemented to improve the efficiency, effectiveness, coordination, accountability, and impact of the federal response to STD prevention, care and treatment policies, services and programs. The information received will inform the STD Federal Action Plan.

Topics of interest include but are not limited to the following:

1. How should the federal government address the rising rates of STDs?
2. What strategies can be implemented by federal agencies to improve the efficiency, effectiveness, coordination, accountability, and impact of our national response to increasing rates of STDs for all priority populations?

3. What are the barriers to people getting the quality STD health services they deserve? What strategies can be implemented by federal agencies to overcome these barriers?

4. How can federal agencies influence, design and implement STD-related policies, services and programs in innovative and culturally-responsive ways for priority populations?

5. How can the federal government help to reduce STD-associated stigma and discrimination?

Dated: April 11, 2019.

Tammy R. Beckham,

Director, Office of HIV/AIDS and Infectious Disease Policy.

BILLING CODE P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

[OMHA-1901-N]

Medicare Program; Administrative Law Judge Hearing Program for Medicare Claim and Entitlement Appeals; Quarterly Listing of Program Issuances—January Through March 2019

AGENCY: Office of Medicare Hearings and Appeals (OMHA), HHS.

ACTION: Notice.

SUMMARY: This quarterly notice lists the OMHA Case Processing Manual (OCPM) instructions that were published from January through March 2019. This manual standardizes the day-to-day procedures for carrying out adjudicative functions, in accordance with applicable statutes, regulations, and OMHA directives, and gives OMHA staff direction for processing appeals at the OMHA level of adjudication.

FOR FURTHER INFORMATION CONTACT: Jason Green, by telephone at (571) 777-2723, or by email at jason.green@hhs.gov.

SUPPLEMENTARY INFORMATION:**I. Background**

The Office of Medicare Hearings and Appeals (OMHA), a staff division within the Office of the Secretary within the U.S. Department of Health and Human Services (HHS), administers the nationwide Administrative Law Judge hearing program for Medicare claim; organization, coverage, and at-risk determination; and entitlement appeals under sections 1869, 1155, 1876(c)(5)(B), 1852(g)(5), and 1860D–4(h) of the Social Security Act (the Act). OMHA ensures that Medicare beneficiaries and the providers and suppliers that furnish items or services to Medicare beneficiaries, as well as Medicare Advantage organizations (MAOs), Medicaid State agencies, and applicable plans, have a fair and impartial forum to address disagreements with Medicare coverage and payment determinations made by Medicare contractors, MAOs, or Part D plan sponsors (PDPs), and determinations related to Medicare eligibility and entitlement, Part B late enrollment penalty, and income-related monthly adjustment amounts (IRMAA) made by the Social Security Administration (SSA).

The Medicare claim, organization determination, coverage determination, and at-risk determination appeals processes consist of four levels of administrative review, and a fifth level of review with the Federal district courts after administrative remedies under HHS regulations have been exhausted. The first two levels of review are administered by the Centers for Medicare & Medicaid Services (CMS) and conducted by Medicare contractors for claim appeals, by MAOs and an Independent Review Entity (IRE) for Part C organization determination appeals, or by PDPs and an IRE for Part D coverage determination and at-risk determination appeals. The third level of review is administered by OMHA and conducted by Administrative Law Judges and attorney adjudicators. The fourth level of review is administered by the HHS Departmental Appeals Board (DAB) and conducted by the Medicare Appeals Council (Council). In addition, OMHA and the DAB administer the second and third levels of appeal, respectively, for Medicare eligibility, entitlement, Part B late enrollment penalty, and IRMAA reconsiderations made by SSA; a fourth level of review with the Federal district courts is available after administrative remedies within SSA and HHS have been exhausted.

Sections 1869, 1155, 1876(c)(5)(B), 1852(g)(5), and 1860D–4(h) of the Act are implemented through the regulations at 42 CFR part 405 subparts I and J; part 417, subpart Q; part 422, subpart M; part 423, subparts M and U; and part 478, subpart B. As noted above, OMHA administers the nationwide Administrative Law Judge hearing program in accordance with these statutes and applicable regulations. To help ensure nationwide consistency in that effort, OMHA established a manual, the OCPM. Through the OCPM, the OMHA Chief Administrative Law Judge establishes the day-to-day procedures for carrying out adjudicative functions, in accordance with applicable statutes, regulations, and OMHA directives. The OCPM provides direction for processing appeals at the OMHA level of adjudication for Medicare Part A and B claims; Part C organization determinations; Part D coverage determinations and at-risk determinations; and SSA eligibility and entitlement, Part B late enrollment penalty, and IRMAA determinations.

Section 1871(c) of the Act requires that the Secretary publish a list of all Medicare manual instructions, interpretive rules, statements of policy, and guidelines of general applicability not issued as regulations at least every three months in the **Federal Register**.

II. Format for the Quarterly Issuance Notices

This quarterly notice provides the specific updates to the OCPM that have occurred in the three-month period of January through March 2019. A hyperlink to the available chapters on the OMHA website is provided below. The OMHA website contains the most current, up-to-date chapters and revisions to chapters, and will be available earlier than we publish our quarterly notice. We believe the OMHA website provides more timely access to the current OCPM chapters for those involved in the Medicare claim; organization, coverage, and at-risk determination; and entitlement appeals processes. We also believe the website offers the public a more convenient tool for real time access to current OCPM provisions. In addition, OMHA has a listserv to which the public can subscribe to receive notification of certain updates to the OMHA website, including when new or revised OCPM chapters are posted. If accessing the OMHA website proves to be difficult, the contact person listed above can provide the information.

III. How To Use the Notice

This notice lists the OCPM chapters and subjects published during the quarter covered by the notice so the reader may determine whether any are of particular interest. The OCPM can be accessed at <https://www.hhs.gov/about/agencies/omha/the-appeals-process/case-processing-manual/index.html>.

IV. OCPM Releases for January Through March 2019

The OCPM is used by OMHA adjudicators and staff to administer the OMHA program. It offers day-to-day operating instructions, policies, and procedures based on statutes and regulations, and OMHA directives.

The following is a list and description of OCPM provisions that were issued or revised in the three-month period of January through March 2019. This information is available on our website at <https://www.hhs.gov/about/agencies/omha/the-appeals-process/case-processing-manual/index.html>.

OCPM Chapter 4: Parties

The parties to an OMHA appeal are specified by regulation and vary based on the matter presented and the Medicare Part under which the appeal arises. This newly issued chapter identifies: (1) The different parties and potential parties to an appeal; (2) when an individual or entity may enter the proceedings as a substitute party; (3) when and how a beneficiary's appeal rights may be assigned to a provider or supplier; and (4) the procedures OMHA follows when an appellant's party status is unclear. There may be multiple parties to an appeal, and an individual's or entity's party status is generally not determined by the individual's or entity's financial interest in the outcome of the appeal, unless otherwise noted in this chapter.

OCPM Chapter 7: Adjudication Time Frames, Case Prioritization, and Escalations—Section 7.4.3

This chapter was initially released on July 27, 2018, and was included in a quarterly notice published in the November 14, 2018 **Federal Register** (83 FR 56859). After the initial publication, we discovered that certain language from OMHA's existing case prioritization policy had been inadvertently omitted when the policy was transferred to the OCPM. This revision to OCPM 7.4.3 corrects this error by clarifying that, if a beneficiary is represented by another party or by the same representative as another party, OMHA treats the beneficiary's case as a Priority 3 appeal (*see* OCPM 7.4.2), unless: (1) The beneficiary is or would

be liable for the costs (other than deductibles and coinsurance) of the items or services in dispute; (2) the case involves a pre-service request for coverage; or (3) one of the exceptions in OCPM 7.4.4 applies. The error we corrected was purely administrative, and had no effect on the manner in which OMHA prioritizes appeals.

OCPM Chapter 9: Request and Correspondence Intake, Docketing, and Assignment

A number of actions may initiate (or reinstate) proceedings at the OMHA level. This newly issued chapter provides information on where to direct appeal requests and submissions, and details the processes for docketing, acknowledging, and assigning cases. This chapter also explains when claims may be added or removed from an appeal and how to combine appeals. While this chapter deals primarily with processing appeals as paper files, it also includes guidelines for processing electronic case files in OMHA's Electronic Case Adjudication Processing Environment (ECAPE).

OCPM Chapter 19: Closing the Case—Sections 19.4.3, 19.5.1

This chapter was initially released on May 25, 2018, and was included in a quarterly notice published in the August 7, 2018 **Federal Register** (83 FR 38700). This revision to OCPM 19.4.3 clarifies that, in accordance with 42 CFR 405.1044(b) and 423.2044(b), if an adjudicator issues a consolidated decision, the adjudicator must also consolidate the administrative record and combine the appeals in the case processing system. OCPM 19.5.1 was also revised, to clarify that, when an appeal involves multiple beneficiaries, any copies of disposition documents (for example, a decision and any accompanying notices or enclosures), must be redacted to display only personally identifiable information (PII) that the recipient is entitled to receive.

Dated: April 25, 2019.

Jason M. Green,
Chief Advisor, Office of Medicare Hearings and Appeals.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Indian Health Service

Request for Public Comment: 60 Day Information Collection: Indian Health Service Forms To Implement the Privacy Rule

AGENCY: Indian Health Service, HHS.

ACTION: Notice and request for comments. Request for extension of approval.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, the Indian Health Service (IHS) invites the general public to comment on the information collection titled, "IHS Forms to Implement the Privacy Rule" Office of Management and Budget (OMB) Control Number 0917-0030.

This previously approved information collection project was last published in the **Federal Register** (81 FR 15347) on March 22, 2016, and allowed 30 days for public comment. No public comment was received in response to the notice. This notice announces our intent to submit the collection, which expires August 31, 2019, to OMB for approval of an extension, and to solicit comments on specific aspects of the information collection. A copy of the supporting statement is available at www.regulations.gov (see Docket ID IHS-2016-1).

Title of Collection: 0917-0030, IHS Forms to Implement the Privacy Rule (45 CFR parts 160 & 164). **Type of Information Collection Request:** Extension of the currently approved information collection, 0917-0030, IHS Forms to Implement the Privacy Rule (45 CFR parts 160 & 164). **Form(s):** IHS-810, IHS-912-1, IHS-912-2, IHS-913, and IHS-917. **Need and Use of Information Collection:** This collection of information is made necessary by the Department of Health and Human Services Rule entitled "Standards for Privacy of Individually Identifiable Health Information" (Privacy Rule) (45 CFR parts 160 and 164). The Privacy Rule implements the privacy requirements of the Administrative Simplification subtitle of the Health Insurance Portability and Accountability Act of 1996, creates national standards to protect individual's personal health information, and gives patients increased access to their medical records. 45 CFR 164.508, 164.522, 164.526 and 164.528 of the Rule require the collection of information to implement these protection standards and access requirements. The IHS will

continue to use the following data collection instruments to meet the information collection requirements contained in the Rule.

45 CFR 164.508: This provision generally requires covered entities to obtain or receive a valid authorization for its use or disclosure of protected health information, unless otherwise permitted or required by the Privacy Rule. (See, e.g., 45 CFR 164.506 for a common exception to this general rule, which involves uses and disclosure for treatment, payment, or healthcare operations.) Individuals may initiate a written authorization permitting covered entities to release their protected health information to entities of their choosing. The form IHS-810 "Authorization for Use or Disclosure of Protected Health Information" is used to document an individual's authorization to use or disclose their protected health information.

45 CFR 164.522: Section 164.522(a)(1) requires a covered entity to permit individuals to request that the covered entity restrict the use and disclosure of their protected health information. The covered entity may or may not agree to the restriction, and with a limited exception, a covered entity is not required to agree to a requested restriction. 45 CFR 164.522(a)(1)(vi). The form IHS-912-1 "Request for Restrictions(s)" is used to document an individual's request for restriction of their protected health information, and whether the IHS agreed or disagreed with the restriction. Section 164.522(a)(2) permits a covered entity to terminate its agreement to a restriction under certain conditions. For example, termination may occur if the individual agrees to or requests the termination in writing. 45 CFR 164.522(a)(2)(i). The form IHS-912-2 "Request for Revocation of Restriction(s)" is used to document the individual's request, the individual's agreement, and/or the agency's decision to terminate a formerly agreed to restriction regarding the use and disclosure of protected health information.

45 CFR 164.528: This provision requires covered entities to provide an accounting of certain disclosures of protected health information made by the covered entity. See also, 45 CFR 5b.9(c). The form IHS-913 "Request for an Accounting of Disclosures" is used to document an individual's request for an accounting of disclosures of their protected health information and the agency's handling of the request.

45 CFR 164.526: Under this provision, individuals have a right to amend protected health information or a record about the individual in a designated

record set, under certain conditions. 45 CFR 164.526(a). This provision further requires covered entities to permit an individual to request that the covered entity amend protected health information. 45 CFR 164.526(b). The covered entity must inform the individual if the covered entity accepts the requested amendment, in whole or in part. The covered entity must provide the individual with a written denial containing certain information if the

covered entity denies the requested amendment, in whole or in part. 45 CFR 164.526(d)(1). The form IHS-917 "Request for Correction/Amendment of Protected Health Information" will be used to document an individual's request to amend his/her protected health information and the agency's decision to accept or deny the request.

Completed forms used in this collection of information are filed in the IHS medical, health and billing record,

a Privacy Act System of Records Notice. *Affected Public:* Individuals and households. *Type of Respondents:* Individuals. *Burden Hours:* The table below provides for this information collection: types of data collection instruments, estimated number of respondents, number of responses per respondent, average burden hour per response, and total annual burden hour(s).

Data collection instrument	Number of respondents	Number of responses per respondent	Average burden hour per response *	Total annual burden hours
Authorization for Use or Disclosure of Protected Health Information (OMB Form No. 0917-0030, IHS-810)	210,954	1	10/60	35,159
Request for Restriction(s) (OMB Form No. 0917-0030, IHS-912-1)	214	1	10/60	36
Request for Revocation of Restriction(s) (OMB Form No. 0917-0030, IHS-912-2)	3	1	10/60	.5
Request for Accounting of Disclosures (OMB Form No. 0917-0030, IHS-913)	39	1	10/60	6.5
Request for Correction/Amendment of Protected Health Information (OMB Form No. 0917-0030, IHS-917)	54	1	10/60	9
Total Annual Burden	211,264	35,211

* For ease of understanding, burden hours are provided in actual minutes.

The total estimated burden for this collection of information is 35,211 hours.

There are no capital costs, operating costs and/or maintenance costs to respondents.

Requests for Comments: Your written comments and/or suggestions are invited on one or more of the following points:

(a) Whether the information collection activity is necessary to carry out an agency function;

(b) whether the agency processes the information collected in a useful and timely fashion;

(c) the accuracy of the public burden estimate (the estimated amount of time needed for individual respondents to provide the requested information);

(d) whether the methodology and assumptions used to determine the estimates are logical;

(e) ways to enhance the quality, utility, and clarity of the information being collected; and

(f) ways to minimize the public burden through the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

ADDRESSES: Send your written comments, requests for more information on the collection, or requests to obtain a copy of the data collection instrument and instructions to Evonne Bennett-Barnes by one of the following methods:

- *Mail:* Evonne Bennett-Barnes, Information Collection Clearance Officer, Indian Health Service, Office of Management Services, Division of Regulatory and Policy Coordination, 5600 Fishers Lane, Mail Stop 09E70, Rockville, MD 20857.

- *Phone:* 301-443-1116.

- *Email:* Evonne.Bennett-Barnes@ihs.gov.

Comment Due Date: July 2, 2019.

Your comments regarding this information collection are best assured of having full effect if received within 60 days of the date of this publication.

Michael D. Weahkee,

Assistant Surgeon General, U.S. Public Health Service, Principal Deputy Director, Indian Health Service.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute on Aging; Notice of Closed Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended, notice is hereby given of the following meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The contract proposals and

the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the contract proposals, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Institute on Aging Special Emphasis Panel; Imaging and Alzheimer's Contract Review, 2019/10 ZAG1 ZIJ-U (C1) 1.

Date: June 10, 2019.

Time: 12:00 p.m. to 2:00 p.m.

Agenda: To review and evaluate contract proposals.

Place: National Institute on Aging, Gateway Building, 7201 Wisconsin Avenue, Suite 2W200, Bethesda, MD 20814.

Contact Person: Anita H. Undale, M.D., Ph.D., Scientific Review Branch, National Institute on Aging, Gateway Building, Suite 2W200, 7201 Wisconsin Avenue, Bethesda, MD 20892, 240-747-7825, anita.undale@nih.gov.

BILLING CODE 4140–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES**National Institutes of Health****Prospective Grant of Exclusive Patent License: Scopolamine Therapeutics for Depression and Bipolar Disorder**

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: The National Institute of Mental Health (NIMH), National Institutes of Health, Department of Health and Human Services, is contemplating the grant of an exclusive patent license to Repurposed Therapeutics, Inc. (“Repurposed Therapeutics”) located in Tampa, Florida, to practice the inventions embodied in the patent application listed in the Supplementary Information section of this notice.

DATES: Only written comments and/or applications for a license which are received by the NIMH Technology Transfer Office May 20, 2019 will be considered.

ADDRESSES: Requests for copies of the patent applications, inquiries, and comments relating to the contemplated exclusive patent license should be directed to: Jennifer Wong, MS, Technology Development Coordinator, NIMH Technology Transfer Office, 35A Convent Drive, GE–400, Bethesda, MD 20892, phone number 301–480–4821, or wongje@mail.nih.gov.

SUPPLEMENTARY INFORMATION: The following patents/patent applications are the intellectual properties to be licensed under the prospective agreement to Repurposed Therapeutics: U.S. Patent 8,859,585, issued October 14, 2014, entitled “Scopolamine for the Treatment of Depression and Anxiety” [HHS Ref. No. E–175–2004–0–US–01]; Patent Cooperation Treaty (PCT) Application PCT/US2006/019335 filed May 18, 2006, entitled “Scopolamine for the Treatment of Depression and Anxiety” [HHS Ref. No. E–175–2004–0–PCT–02]; European Patent 1896025, issued December 28, 2011 entitled “Scopolamine for the Treatment of Depression and Anxiety” [HHS Ref. No. E–175–2004–0–EP–03]; Canadian Patent 2610025, issued July 22, 2014, entitled “Scopolamine for the Treatment of Depression and Anxiety” [HHS Ref. No. E–175–2004–0–CA–04]; German Patent 602006026717.7, issued December 28, 2011, entitled “Scopolamine for the Treatment of Depression and Anxiety” [HHS Ref. No. E–175–2004–0–DE–07]; French Patent 1896025, issued December 28, 2011, entitled “Scopolamine for the Treatment of Depression and Anxiety” [HHS Ref. No. E–175–2004–0–FR–08]; UK Patent 1896025, issued December 28, 2011, entitled “Scopolamine for the Treatment of Depression and Anxiety” [HHS Ref. No. E–175–2004–0–GB–09], and US Patent No. Patent 9,707,220, issued July 18, 2017, entitled “Scopolamine for the Treatment of Depression and Anxiety”

[HHS Ref. No. E-175-2004-0-US-10]. The patent rights in these inventions have been assigned to the Government of the United States of America.

The prospective patent license may be worldwide, and the field of use may be limited to intranasal and intravenous scopolamine therapeutics for depression and bipolar disorder.

The invention pertains to the use of scopolamine for the treatment of depression and other indications associated with depression, such as the depressive phase of bipolar disorder. Although scopolamine has been employed in the treatment of nausea and motion sickness, the suitability of scopolamine for treating depression was unrecognized prior to this invention. Current depression treatments can be ineffective in large percentage of patients and typically do not take effect until four weeks after administration. In contrast, treatment with scopolamine suggests it may be effective either as a stand-alone treatment or as a treatment for patients who are unresponsive to currently available drugs.

This notice is made in accordance with 35 U.S.C. 209 and 37 CFR part 404. The prospective exclusive patent license will be royalty bearing and may be granted unless within fifteen (15) days from the date of this published notice, the NIMH receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR part 404.

Complete applications for a license in the prospective field of use that are timely filed in response to this notice will be treated as objections to the grant of the contemplated exclusive patent license.

Comments and objections submitted to this notice will not be made available for public inspection and, to the extent permitted by law, will not be released under the *Freedom of Information Act*, 5 U.S.C. 552.

Jennifer S. Wong,

*Technology Development Coordinator,
Technology Transfer Office, National Institute
of Mental Health.*

BILLING CODE 4140-01-P

**DEPARTMENT OF HEALTH AND
HUMAN SERVICES**

National Institutes of Health

**National Toxicology Program Board of
Scientific Counselors; Announcement
of Meeting; Request for Comments**

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: This notice announces the next meeting of the National Toxicology Program (NTP) Board of Scientific Counselors (BSC). The BSC, a federally chartered, external advisory group composed of scientists from the public and private sectors, will review and provide advice on programmatic activities. The meeting is open to the public and registration is requested for both attendance and oral comment and required to access the webcast. Information about the meeting and registration are available at <http://ntp.niehs.nih.gov/go/165>.

DATES:

Meeting: Scheduled for June 17, 2019 at 8:30 a.m. to adjournment on June 18, 2019 at approximately 2:30 p.m. Eastern Daylight Time (EDT).

Written Public Comment

Submissions: Deadline is June 10, 2019.

Registration for Oral Comments:

Deadline is June 10, 2019.

Registration to Attend Meeting In-person or to View Webcast: Deadline is June 18, 2019.

Registration to view the meeting via the webcast is required.

ADDRESSES:

Meeting Location: Rodbell Auditorium, Rall Building, National Institute of Environmental Health Sciences (NIEHS), 111 T.W. Alexander Drive, Research Triangle Park, NC 27709.

Meeting Webpage: The preliminary agenda, registration, and other meeting materials are at <http://ntp.niehs.nih.gov/go/165>.

Webcast: The URL for viewing the meeting webcast will be provided to registrants.

FOR FURTHER INFORMATION CONTACT: Dr. Mary Wolfe, Designated Federal Official for the BSC, Office of Liaison, Policy and Review, Division of NTP, NIEHS, P.O. Box 12233, K2-03, Research Triangle Park, NC 27709. Phone: 984-287-3209, Fax: 301-451-5759, Email: wolfe@niehs.nih.gov. Hand Deliver/Courier address: 530 Davis Drive, Room K2130, Morrisville, NC 27560.

SUPPLEMENTARY INFORMATION: The BSC will provide input to the NTP on

programmatic activities and issues. The agenda on June 17 includes an update on status of NTP's strategic realignment with presentations by partner agencies on activities in support of NTP, as well as NTP's 40th anniversary recognition. On June 18, talks will focus on the new NTP Health Effects Innovation programs and reports on several meetings. Please see the preliminary agenda for information about the specific presentations. The preliminary agenda, roster of BSC members, background materials, public comments, and any additional information, when available, will be posted on the BSC meeting website (<http://ntp.niehs.nih.gov/go/165>) or may be requested in hardcopy from the Designated Federal Official for the BSC. Following the meeting, summary minutes will be prepared and made available on the BSC meeting website.

Meeting Attendance Registration: The meeting is open to the public with time set aside for oral public comment; in-person attendance at the NIEHS is limited by the space available (~100 attendees). Registration for in-person attendance is on a first-come, first-served basis, and registrants will be assigned a number in their confirmation email. After the first 100 registrants, persons will be placed on a wait list and notified should an opening become available. Registration to attend the meeting in-person or view the webcast is by June 18, 2019 at <http://ntp.niehs.nih.gov/go/165>. Registration is required to view the webcast; the URL for the webcast will be provided in the email confirming registration. Visitor and security information for those attending in-person is available at niehs.nih.gov/about/visiting/index.cfm. Individuals with disabilities who need accommodation to participate in this event should contact Ms. Robbin Guy at phone: (984) 287-3136 or email: guyr2@niehs.nih.gov. TTY users should contact the Federal TTY Relay Service at 800-877-8339. Requests should be made at least five business days in advance of the event.

Written Public Comments: NTP invites written public comments. Guidelines for public comments are available at https://ntp.niehs.nih.gov/ntp/about_ntp/guidelines_public_comments_508.pdf.

The deadline for submission of written comments is June 10, 2019. Written public comments should be submitted through the meeting website. Persons submitting written comments should include name, affiliation, mailing address, phone, email, and sponsoring organization (if any). Written comments received in response to this

notice will be posted on the NTP website, and the submitter will be identified by name, affiliation, and sponsoring organization (if any).

Oral Public Comment Registration:

The agenda allows for formal public comment periods for several topics (2 commenters per topic, up to 5 minutes per speaker); oral comments may be presented in person at NIEHS or by teleconference line. Registration for oral comments is on or before June 10, 2019, at <http://ntp.niehs.nih.gov/go/165>. Registration is on a first-come, first-served basis, and registrants will be assigned a number in their confirmation email. Each organization is allowed one time slot per comment period. After the maximum number of speakers per comment period is exceeded, individuals registered to provide oral comment will be placed on a wait list and notified should an opening become available. Commenters will be notified after June 10, 2019, about the actual time allotted per speaker, and the teleconference number will be sent to those registered to give oral comments by teleconference line.

If possible, oral public commenters should send a copy of their slides and/or statement or talking points to NTP-Meetings@icf.com by June 10, 2019.

Meeting Materials: The preliminary meeting agenda is available on the meeting web page (<http://ntp.niehs.nih.gov/go/165>) and will be updated one week before the meeting. Individuals are encouraged to access the meeting web page to stay abreast of the most current information regarding the meeting.

Background Information on the BSC: The BSC is a technical advisory body comprised of scientists from the public and private sectors that provides primary scientific oversight to the NTP. Specifically, the BSC advises the NTP on matters of scientific program content, both present and future, and conducts periodic review of the program for the purpose of determining and advising on the scientific merit of its activities and their overall scientific quality. Its members are selected from recognized authorities knowledgeable in fields such as toxicology, pharmacology, pathology, biochemistry, epidemiology, risk assessment, carcinogenesis, mutagenesis, molecular biology, behavioral toxicology, neurotoxicology, immunotoxicology, reproductive toxicology or teratology, and biostatistics. Members serve overlapping terms of up to four years. The BSC usually meets biannually. The authority for the BSC is provided by 42 U.S.C. 217a, section 222 of the Public Health Service Act (PHS), as amended.

The BSC is governed by the provisions of the Federal Advisory Committee Act, as amended (5 U.S.C. app.), which sets forth standards for the formation and use of advisory committees.

Dated: April 23, 2019.

Brian R. Berridge,

Associate Director, National Toxicology Program.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG-2019-0257]

Information Collection Request to Office of Management and Budget; OMB Control Number: 1625-0104

AGENCY: Coast Guard, DHS.

ACTION: Sixty-day notice requesting comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, the U.S. Coast Guard intends to submit an Information Collection Request (ICR) to the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs (OIRA), requesting an extension of its approval for the following collection of information: 1625-0104, Barges Carrying Bulk Hazardous Materials; without change. Our ICR describes the information we seek to collect from the public. Before submitting this ICR to OIRA, the Coast Guard is inviting comments as described below.

DATES: Comments must reach the Coast Guard on or before July 2, 2019.

ADDRESSES: You may submit comments identified by Coast Guard docket number [USCG-2019-0257] to the Coast Guard using the Federal eRulemaking Portal at <https://www.regulations.gov>. See the “Public participation and request for comments” portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

A copy of the ICR is available through the docket on the internet at <https://www.regulations.gov>. Additionally, copies are available from: Commandant (CG-612), Attn: Paperwork Reduction Act Manager, U.S. Coast Guard, 2703

Martin Luther King Jr. Ave. SE, Stop 7710, Washington, DC 20593-7710.

FOR FURTHER INFORMATION CONTACT: Mr. Anthony Smith, Office of Information Management, telephone 202-475-3532, or fax 202-372-8405, for questions on these documents.

SUPPLEMENTARY INFORMATION:

Public Participation and Request for Comments

This notice relies on the authority of the Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended. An ICR is an application to OIRA seeking the approval, extension, or renewal of a Coast Guard collection of information (Collection). The ICR contains information describing the Collection's purpose, the Collection's likely burden on the affected public, an explanation of the necessity of the Collection, and other important information describing the Collection. There is one ICR for each Collection.

The Coast Guard invites comments on whether this ICR should be granted based on the Collection being necessary for the proper performance of Departmental functions. In particular, the Coast Guard would appreciate comments addressing: (1) The practical utility of the Collection; (2) the accuracy of the estimated burden of the Collection; (3) ways to enhance the quality, utility, and clarity of information subject to the Collection; and (4) ways to minimize the burden of the Collection on respondents, including the use of automated collection techniques or other forms of information technology. Consistent with the requirements of Executive Order 13771, Reducing Regulation and Controlling Regulatory Costs, and Executive Order 13777, Enforcing the Regulatory Reform Agenda, the Coast Guard is also requesting comments on the extent to which this request for information could be modified to reduce the burden on respondents. In response to your comments, we may revise this ICR or decide not to seek an extension of approval for the Collection. We will consider all comments and material received during the comment period.

We encourage you to respond to this request by submitting comments and related materials. Comments must contain the OMB Control Number of the ICR and the docket number of this request, [USCG-2019-0257], and must be received by July 2, 2019.

Submitting Comments

We encourage you to submit comments through the Federal eRulemaking Portal at <https://www.regulations.gov>.

www.regulations.gov. If your material cannot be submitted using <https://www.regulations.gov>, contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions. Documents mentioned in this notice, and all public comments, are in our online docket at <https://www.regulations.gov> and can be viewed by following that website's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted.

We accept anonymous comments. All comments received will be posted without change to <https://www.regulations.gov> and will include any personal information you have provided. For more about privacy and the docket, you may review a Privacy Act notice regarding the Federal Docket Management System in the March 24, 2005, issue of the **Federal Register** (70 FR 15086).

Information Collection Request

Title: Barges Carrying Bulk Hazardous Materials.

OMB Control Number: 1625-0104.

Summary: This information is needed to ensure the safe shipment of bulk hazardous liquids in barges. The requirements are necessary to ensure that barges meet safety standards and to ensure that barge's crewmembers have the information necessary to operate barges safely.

Need: Title 46 U.S.C. 3703 authorizes the Coast Guard to prescribe rules related to the carriage of liquid bulk dangerous cargoes. Title 46 CFR 151 prescribes rules for barges carrying bulk liquid hazardous materials.

Forms: None.

Respondents: Owners and operators of tank barges.

Frequency: On occasion.

Hour Burden Estimate: The estimated burden has decreased from 40,307 hours to 24,752 hours a year, primarily due to a decrease in the estimated annual number of new construction tank barges.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended.

Dated: April 29, 2019.

James D. Roppel,
Chief, U.S. Coast Guard, Office of Information Management.

[Docket No. USCG-2019-0259]

Information Collection Request to Office of Management and Budget; OMB Control Number: 1625-0046

AGENCY: Coast Guard, DHS.

ACTION: Sixty-day notice requesting comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, the U.S. Coast Guard intends to submit an Information Collection Request (ICR) to the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs (OIRA), requesting approval for reinstatement, without change, of the following collection of information: 1625-0046, Certificates of Financial Responsibility under the Oil Pollution Act of 1990. Our ICR describes the information we seek to collect from the public. Before submitting this ICR to OIRA, the Coast Guard is inviting comments as described below.

DATES: Comments must reach the Coast Guard on or before July 2, 2019.

ADDRESSES: You may submit comments identified by Coast Guard docket number [USCG-2019-0259] to the Coast Guard using the Federal eRulemaking Portal at <https://www.regulations.gov>. See the "Public participation and request for comments" portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

A copy of the ICR is available through the docket on the internet at <https://www.regulations.gov>. Additionally, copies are available from: Commandant (CG-612), ATTN: Paperwork Reduction Act Manager, U.S. Coast Guard, 2703 Martin Luther King Jr. Ave. SE, STOP 7710, Washington, DC 20593-7710.

FOR FURTHER INFORMATION CONTACT: Mr. Anthony Smith, Office of Information Management, telephone 202-475-3532, or fax 202-372-8405, for questions on these documents.

SUPPLEMENTARY INFORMATION:

Public Participation and Request for Comments

This notice relies on the authority of the Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as amended. An ICR is an application to OIRA seeking the approval, extension, or renewal of a Coast Guard collection of information (Collection). The ICR contains information describing the Collection's purpose, the Collection's likely burden

on the affected public, an explanation of the necessity of the Collection, and other important information describing the Collection. There is one ICR for each Collection.

The Coast Guard invites comments on whether this ICR should be granted based on the Collection being necessary for the proper performance of Departmental functions. In particular, the Coast Guard would appreciate comments addressing: (1) The practical utility of the Collection; (2) the accuracy of the estimated burden of the Collection; (3) ways to enhance the quality, utility, and clarity of information subject to the Collection; and (4) ways to minimize the burden of the Collection on respondents, including the use of automated collection techniques or other forms of information technology. Consistent with the requirements of Executive Order 13771, Reducing Regulation and Controlling Regulatory Costs, and Executive Order 13777, Enforcing the Regulatory Reform Agenda, the Coast Guard is also requesting comments on the extent to which this request for information could be modified to reduce the burden on respondents. In response to your comments, we may revise this ICR or decide not to seek reinstatement of the Collection. We will consider all comments and material received during the comment period.

Information Collection Request

Title: Certificates of Financial Responsibility under the Oil Pollution Act of 1990.

OMB Control Number: 1625–0046.

Summary: The information collection requirements described in this supporting statement are necessary to provide evidence of a respondent's ability to pay for removal costs and damages associated with discharges of hazardous material or oil into the navigable waters, adjoining shorelines or the exclusive economic zone of the United States. The requirements are imposed generally on operators and financial guarantors of vessels over 300 gross tons.

Need: If the requested information is not collected, the Coast Guard will be unable to comply with the provisions of OPA and CERCLA to ensure that responsible parties have the ability to pay for cleanup costs and damages when there is an oil or hazardous material spill or threat of a spill.

Legal Authority: Section 1002 of OPA 90, as limited by section 1004(a), or section 107(a)(1) of CERCLA.

Forms: CG–5585, Application for Vessel Certificate of Financial Responsibility (Water Pollution); CG–5586, Insurance Guaranty; CG–5586–1, Master Insurance Guaranty; CG–5586–2, Surety Bond Guaranty; CG–5586–3, Financial Guaranty; and CG–5586–4, Master Financial Guaranty.

Respondents: Vessel operators and approved insurers.

Frequency: Annually, to include collection of information on a three year cycle.

Hour Burden Estimate: The estimated annual burden remains 3,400 hours a year.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as amended.

Dated: April 29, 2019.

James D. Roppel,

U.S. Coast Guard, Chief, Office of Information Management.

Information Collection Request to Office of Management and Budget; OMB Control Number: 1625–0065

AGENCY: Coast Guard, DHS.

ACTION: Sixty-day notice requesting comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, the U.S. Coast Guard intends to submit an Information Collection Request (ICR) to the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs (OIRA), requesting an extension of its approval for the following collection of information: 1625–0065, Offshore Supply Vessels—Title 46 CFR Subchapter L; without change. Our ICR describes the information we seek to collect from the public. Before submitting this ICR to OIRA, the Coast Guard is inviting comments as described below.

DATES: Comments must reach the Coast Guard on or before July 2, 2019.

ADDRESSES: You may submit comments identified by Coast Guard docket number [USCG–2019–0256] to the Coast Guard using the Federal eRulemaking Portal at <https://www.regulations.gov>. See the “Public participation and request for comments” portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

A copy of the ICR is available through the docket on the internet at <https://www.regulations.gov>. Additionally, copies are available from: Commandant (CG–612), ATTN: Paperwork Reduction Act Manager, U.S. Coast Guard, 2703 Martin Luther King Jr. Ave. SE, STOP 7710, Washington, DC 20593–7710.

Information Collection Request

Title: Offshore Supply Vessels—Title 46 CFR subchapter L.

OMB Control Number: 1625–0065.

Summary: Title 46 U.S.C. 3305 and 3306 authorizes the Coast Guard to prescribe safety regulations. Title 46 CFR subchapter L promulgates marine safety regulations for offshore supply vessels (OSV).

Need: The OSV posting/marking requirements are needed to provide instructions to those onboard of actions to be taken in the event of an emergency. The reporting/recordkeeping requirements verify compliance with regulations without Coast Guard presence to witness routine matters, including OSVs based overseas as an alternative to Coast Guard inspection.

Forms: None.

Respondents: Owners and operators of vessels.

Frequency: On occasion.

Hour Burden Estimate: The estimated burden has decreased from 2,368 hours to 1,230 hours a year, due to a decrease in the estimated annual number of respondents.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as amended.

Dated: April 29, 2019.

James D. Roppel,

U.S. Coast Guard, Chief, Office of Information Management.

[Docket No. USCG–2019–0038]

Collection of Information Under Review by Office of Management and Budget; OMB Control Number: 1625–0039

AGENCY: Coast Guard, DHS.

ACTION: Thirty-day notice requesting comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 the U.S. Coast Guard is forwarding an Information Collection Request (ICR), abstracted below, to the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs (OIRA), requesting approval for

reinstatement, without change, of the following collection of information: 1625–0039, Declaration of Inspection Before Transfer of Liquid Cargo in Bulk. Our ICR describes the information we seek to collect from the public. Review and comments by OIRA ensure we only impose paperwork burdens commensurate with our performance of duties.

DATES: Comments must reach the Coast Guard and OIRA on or before June 3, 2019.

ADDRESSES: You may submit comments identified by Coast Guard docket number [USCG–2019–0038] to the Coast Guard using the Federal eRulemaking Portal at <https://www.regulations.gov>. Alternatively, you may submit comments to OIRA using one of the following means:

(1) *Email:* dhsdeskofficer@omb.eop.gov.

(2) *Mail:* OIRA, 725 17th Street NW, Washington, DC 20503, attention Desk Officer for the Coast Guard.

A copy of the ICR is available through the docket on the internet at <https://www.regulations.gov>. Additionally, copies are available from: Commandant (CG–612), ATTN: Paperwork Reduction Act Manager, U.S. Coast Guard, 2703 Martin Luther King Jr. Ave. SE, STOP 7710, Washington, DC 20593–7710.

FOR FURTHER INFORMATION CONTACT: Mr. Anthony Smith, Office of Information Management, telephone 202–475–3532, or fax 202–372–8405, for questions on these documents.

SUPPLEMENTARY INFORMATION:

Public Participation and Request for Comments

This notice relies on the authority of the Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended. An ICR is an application to OIRA seeking the approval, extension, or renewal of a Coast Guard collection of information (Collection). The ICR contains information describing the Collection's purpose, the Collection's likely burden on the affected public, an explanation of the necessity of the Collection, and other important information describing the Collection. There is one ICR for each Collection. The Coast Guard invites comments on whether this ICR should be granted based on the Collection being necessary for the proper performance of Departmental functions. In particular, the Coast Guard would appreciate comments addressing: (1) The practical utility of the Collection; (2) the accuracy of the estimated burden of the Collection; (3) ways to enhance the quality, utility, and clarity of information subject to the Collection;

and (4) ways to minimize the burden of the Collection on respondents, including the use of automated collection techniques or other forms of information technology. Consistent with the requirements of Executive Order 13771, Reducing Regulation and Controlling Regulatory Costs, and Executive Order 13777, Enforcing the Regulatory Reform Agenda, the Coast Guard is also requesting comments on the extent to which this request for information could be modified to reduce the burden on respondents. These comments will help OIRA determine whether to approve the ICR referred to in this notice.

We encourage you to respond to this request by submitting comments and related materials. Comments to Coast Guard or OIRA must contain the OMB Control Number of the ICR. They must also contain the docket number of this request, [USCG–2019–0038], and must be received by June 3, 2019.

Submitting Comments

We encourage you to submit comments through the Federal eRulemaking Portal at <https://www.regulations.gov>. If your material cannot be submitted using <https://www.regulations.gov>, contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions. Documents mentioned in this notice, and all public comments, are in our online docket at <https://www.regulations.gov> and can be viewed by following that website's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted.

We accept anonymous comments. All comments received will be posted without change to <https://www.regulations.gov> and will include any personal information you have provided. For more about privacy and the docket, you may review a Privacy Act notice regarding the Federal Docket Management System in the March 24, 2005, issue of the **Federal Register** (70 FR 15086).

OIRA posts its decisions on ICRs online at <https://www.reginfo.gov/public/do/PRAMain> after the comment period for each ICR. An OMB notice of Action on each ICR will become available via a hyperlink in the OMB Control Number: 1625–0039.

Previous Request for Comments

This request provides a 30-day comment period required by OIRA. The Coast Guard published the 60-day notice (84 FR 5458, February 21, 2019) required by 44 U.S.C. 3506(c)(2). That

notice elicited no comments. Accordingly, no changes have been made to the Collections.

Information Collection Request

Title: Declaration of Inspection Before Transfer of Liquid Cargo in Bulk.

OMB Control Number: 1625–0039.

Summary: A Declaration of Inspection (DOI) documents the transfer of oil and hazardous materials, to help prevent spills and damage to a facility or vessel. Persons-in-charge of the transfer operations must review and certify compliance with procedures specified by the terms of the DOI.

Need: Title 33 U.S.C. 1321(j) authorizes the Coast Guard to establish regulations to prevent the discharge of oil and hazardous material from vessels and facilities. The DOI regulations appear at 33 CFR 156.150 and 46 CFR 35.35–30.

Forms: None.

Respondents: Persons-in-charge of transfers.

Frequency: On occasion.

Hour Burden Estimate: The estimated burden has increased from 77,973 hours to 80,051 hours a year, due to an increase in the estimated annual number of responses.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended.

Dated: April 29, 2019.

James D. Roppel,

U.S. Coast Guard, Chief, Office of Information Management.

Information Collection Request

Title: Vessel Reporting Requirements.
OMB Control Number: 1625-0048.

Summary: Owners, Charterers, Managing Operators, or Agents of U.S. vessels must immediately notify the Coast Guard if they believe the vessel may be lost or in danger. The Coast Guard uses this information to investigate the situation and, when necessary, plan appropriate search and rescue operations.

Need: Section 2306(a) of 46 U.S.C. requires the owner, charterer, managing operator, or agent of vessel of the United States to immediately notify the Coast Guard if: (1) There is reason to believe that the vessel may have been lost or imperiled, or (2) more than 48 hours have passed since last receiving communication from the vessel. These

reports must be followed by written confirmation submitted to the Coast Guard within 24 hours. The implementing regulations are contained in 46 CFR part 4.

Forms: None.

Respondents: Business or other for profit organizations.

Frequency: On occasion.

Hour Burden Estimate: The estimated annual burden remains 138 hours.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as amended.

Dated: April 29, 2019.

James D. Roppel,

U.S. Coast Guard, Chief, Office of Information Management.

SUPPLEMENTARY INFORMATION:

Public Participation and Request for Comments

This notice relies on the authority of the Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended. An ICR is an application to OIRA seeking the approval, extension, or renewal of a Coast Guard collection of information (Collection). The ICR contains information describing the Collection's purpose, the Collection's likely burden on the affected public, an explanation of the necessity of the Collection, and other important information describing the Collection. There is one ICR for each Collection. The Coast Guard invites comments on whether this ICR should be granted based on the Collection being necessary for the proper performance of Departmental functions. In particular, the Coast Guard would appreciate comments addressing: (1) The practical utility of the Collection; (2) the accuracy of the estimated burden of the Collection; (3) ways to enhance the quality, utility, and clarity of information subject to the Collection; and (4) ways to minimize the burden of the Collection on respondents, including the use of automated collection techniques or other forms of information technology. Consistent with the requirements of Executive Order 13771, Reducing Regulation and Controlling Regulatory Costs, and Executive Order 13777, Enforcing the Regulatory Reform Agenda, the Coast Guard is also requesting comments on the extent to which this request for information could be modified to reduce the burden on respondents. These comments will help OIRA determine whether to approve the ICR referred to in this notice.

We encourage you to respond to this request by submitting comments and related materials. Comments to Coast Guard or OIRA must contain the OMB Control Number of the ICR. They must also contain the docket number of this

request, [USCG–2018–0498], and must be received by June 3, 2019.

Submitting Comments

Documents mentioned in this notice, and all public comments, are in our online docket at <https://www.regulations.gov> and can be viewed by following that website's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted.

We accept anonymous comments. All comments received will be posted without change to <https://www.regulations.gov> and will include any personal information you have provided. For more about privacy and the docket, you may review a Privacy Act notice regarding the Federal Docket Management System in the March 24, 2005, issue of the **Federal Register** (70 FR 15086).

OIRA posts its decisions on ICRs online at <https://www.reginfo.gov/public/do/PRAMain> after the comment period for each ICR. An OMB notice of Action on each ICR will become available via a hyperlink in the OMB Control Number: 1625–0071.

Previous Request for Comments

This request provides a 30-day comment period required by OIRA. The Coast Guard published the 60-day notice (84 FR 5458, February 21, 2019) required by 44 U.S.C. 3506(c)(2). That notice elicited no comments. Accordingly, no changes have been made to the Collections.

Information Collection Request

Title: Boat Owner's Report, Possible Safety Defect.

OMB Control Number: 1625–0071.

Summary: The collection of information provides a means for consumers who believe their recreational boats or designated associated equipment contain substantial risk defects or fail to comply with Federal safety standards to report the deficiencies to the Coast Guard for investigation and possible remedy.

Need: Title 46 U.S.C. 4310 gives the Coast Guard the authority to require manufacturers of recreational boats and certain items of designated associated equipment to notify owners and remedy: (1) Defects that create a

substantial risk of personal injury to the public; and (2) failures to comply with applicable Federal safety standards.

Forms: CG–5578, Boat Owner's Report—Possible Safety Defect.

Respondents: Owners and users of recreational boats and items of designated associated equipment.

Frequency: One time.

Hour Burden Estimate: The estimated burden has decreased from 18 hours to 12 hours a year, due to a decrease in the estimated annual number of respondents.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended.

Dated: April 29, 2019.

James D. Roppel,

Chief, U.S. Coast Guard, Office of Information Management.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

U.S. Citizenship and Immigration Services

[OMB Control Number 1615–0067]

Agency Information Collection Activities; Extension, Without Change, of a Currently Approved Collection: Application for Asylum and for Withholding of Removal

AGENCY: U.S. Citizenship and Immigration Services, Department of Homeland Security.

ACTION: 30-day notice.

SUMMARY: The Department of Homeland Security (DHS), U.S. Citizenship and Immigration Services (USCIS) will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995. The purpose of this notice is to allow an additional 30 days for public comments.

DATES: The purpose of this notice is to allow an additional 30 days for public comments. Comments are encouraged and will be accepted until June 3, 2019.

ADDRESSES: Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, must be directed to the OMB USCIS Desk Officer via email at dhsdeskofficer@omb.eop.gov. All submissions received must include the agency name and the OMB Control Number 1615–0067 in the subject line.

You may wish to consider limiting the amount of personal information that you provide in any voluntary submission you make. For additional information please read the Privacy Act notice that is available via the link in the footer of <http://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: USCIS, Office of Policy and Strategy, Regulatory Coordination Division, Samantha Deshommes, Chief, 20 Massachusetts Avenue NW, Washington, DC 20529–2140, Telephone number (202) 272–8377 (This is not a toll-free number; comments are not accepted via telephone message.). Please note contact information provided here is solely for questions regarding this notice. It is not for individual case status inquiries. Applicants seeking information about the status of their individual cases can check Case Status Online, available at the USCIS website at <http://www.uscis.gov>, or call the USCIS National Customer Service Center at (800) 375–5283; TTY (800) 767–1833.

SUPPLEMENTARY INFORMATION:

Comments

The information collection notice was previously published in the **Federal Register** on November 27, 2018, at 83 FR 60889, allowing for a 60-day public comment period. USCIS did receive 2 comments in connection with the 60-day notice.

You may access the information collection instrument with instructions, or additional information by visiting the Federal eRulemaking Portal site at: <http://www.regulations.gov> and enter USCIS–2007–0034 in the search box. Written comments and suggestions from the public and affected agencies should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology,

e.g., permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection Request:* Extension, Without Change, of a Currently Approved Collection.

(2) *Title of the Form/Collection:* Application for Asylum and for Withholding of Removal.

(3) *Agency form number, if any, and the applicable component of the DHS sponsoring the collection:* I-589; USCIS.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract: Primary:* Individuals or households. Form I-589 is necessary to determine whether an alien applying for asylum and/or withholding of removal in the United States is classified as refugee, and is eligible to remain in the United States.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* The estimated total number of respondents for the information collection I-589 is approximately 114,000 and the estimated hour burden per response is 12 hours per response; and the estimated number of respondents providing biometrics is 110,000 and the estimated hour burden per response is 1.17 hours.

(6) *An estimate of the total public burden (in hours) associated with the collection:* The total estimated annual hour burden associated with this collection is 1,496,700 hours.

(7) *An estimate of the total public burden (in cost) associated with the collection:* The estimated total annual cost burden associated with this collection of information is \$46,968,000.

Dated: April 30, 2019

Samantha L. Deshommes,

Chief, Regulatory Coordination Division, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, Department of Homeland Security.

SUPPLEMENTARY INFORMATION:

Comments

The information collection notice was previously published in the **Federal Register** on February 15, 2019, at 84 FR 4522, allowing for a 60-day public comment period. USCIS did receive 8 comments in connection with the 60-day notice.

You may access the information collection instrument with instructions, or additional information by visiting the Federal eRulemaking Portal site at: <http://www.regulations.gov> and enter USCIS-2008-0015 in the search box. Written comments and suggestions from the public and affected agencies should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection Request:* Revision of a Currently Approved Collection.

(2) *Title of the Form/Collection:* Waiver of Rights, Privileges, Exemptions and Immunities.

(3) *Agency form number, if any, and the applicable component of the DHS sponsoring the collection:* I-508; USCIS.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract: Primary:* Individuals or households. This form is used by USCIS to determine eligibility of an applicant to retain the status of an alien lawfully admitted to the United States for permanent residence.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* The estimated total number of

respondents for the information collection I-508 is 1,928 and the estimated hour burden per response is .72 hours per response.

(6) *An estimate of the total public burden (in hours) associated with the collection:* The total estimated annual hour burden associated with this collection is 1,446 hours.

(7) *An estimate of the total public burden (in cost) associated with the collection:* The estimated total annual cost burden associated with this collection of information is \$15,424.

BILLING CODE 9111-97-P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-7014-N-14]

60-Day Notice of Proposed Information Collection: Form HUD-92266 Application for Transfer of Physical Assets (TPA)

AGENCY: Office of the Assistant Secretary for Housing—Federal Housing Commissioner, HUD.

ACTION: Notice.

SUMMARY: HUD is seeking approval from the Office of Management and Budget

(OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comment from all interested parties on the proposed collection of information. The purpose of this notice is to allow for 60 days of public comment.

DATES: *Comments Due Date:* July 2, 2019.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Colette Pollard, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street SW, Room 4176, Washington, DC 20410-5000; telephone 202-402-3400 (this is not a toll-free number) or email at Colette.Pollard@hud.gov for a copy of the proposed forms or other available information. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877-8339.

FOR FURTHER INFORMATION CONTACT: Department of Housing and Urban Development, 451 7th Street SW, Washington, DC 20410; email Harry Messner at harry.messner@hud.gov or telephone 202-402-2626. This is not a toll-free number. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877-8339.

Copies of available documents submitted to OMB may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

A. Overview of Information Collection

Title: Application for Transfer of Physical Assets (TPA).

OMB Approval Number: 2502-0275.

Type of Request: Extension of currently approved collection.

Form Number: HUD-92266.

Description of the need for the information and proposed use: When the sale and conveyance by deed to an insured mortgage necessitates a substitution of mortgagors, HUD approval of the substitution is required.

Respondents (i.e., affected public): Multifamily property owners with loans insured or held by HUD.

Estimated Number of Respondents: 27,127.

Estimated Number of Responses: 543.

Frequency of Response: Once per transfer of physical assets.

Average Hours per Response: 8.

Total Estimated Burdens: 4,340.

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions.

C. Authority

Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. Chapter 35.

Dated: April 29, 2019.

Vance T. Morris,

Special Assistant to the Assistant Secretary for Housing—Federal Housing Commissioner.

[FR Doc. 2019-09123 Filed 5-2-19; 8:45 am]

BILLING CODE 4210-67-P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-7018-N-02]

60-Day Notice of Proposed Information Collection: Standards for Success Reporting

AGENCY: Office of the Deputy Secretary, HUD.

ACTION: Notice.

SUMMARY: The Department of Housing and Urban Development (HUD) is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comment from all interested parties on the proposed collection of information. The purpose of this notice is to allow for 60 days of public comment.

DATES: *Comments Due Date:* July 2, 2019.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Colette Pollard, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street SW, Room 4176, Washington, DC 20410-5000; telephone number 202-402-3400 (this is not a toll-free number) or email at Colette.Pollard@hud.gov. Copies of the proposed forms and other information are available by contacting Ms. Pollard. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877-8339.

FOR FURTHER INFORMATION CONTACT:

Colette Pollard, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street SW, Washington, DC 20410; email Colette Pollard at Colette.Pollard@hud.gov or by telephone at 202-402-3400. This is not a toll-free number. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877-8339. Requests for copies of the proposed forms should be submitted to Ms. Pollard.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

A. Overview of Information Collection

Title of Information Collection: Standards for Success Reporting.

OMB Approval Number: 2501-0034.

Type of Request: Regular.

Type of Information Collection: Renewal.

Form Numbers: HUD-PRL.

Description of the need for the information and proposed use:

This request is for the continued clearance of data collection and reporting requirements to enable the U.S. Department of Housing and Urban Development (HUD) Office of Business Transformation (OBT) to better assess the effectiveness of discretionary-funded programs included in this information collection request (ICR). The discretionary-funded programs included in this ICR are the Multifamily Housing Service Coordinator Grant Program, the Multifamily Housing Budget-based Service Coordinator Program, and the Resident Opportunity

and Self Sufficiency Service Coordinator Grant Program (ROSS).

This proposed collection, titled Standards for Success, has three key tenets which vastly improve data collection and reporting for participating programs. First is the standardization of data collection and reporting requirements across programs which increases data comparability and utilization. Second is the ability to report on measurable outcomes and aligning them with higher-level agency objectives. And third is the collection of record-level data, instead of aggregate data. Collecting de-identified data at the level of the service recipient allows for more meaningful analysis, improved management, and the ability to demonstrate the progress and achievements of the funding recipients and the programs. Standards for Success accepts data submission by direct data input through the HUD-funded GrantSolutions online data collection and reporting tool (OLDC) and by data file upload, accommodating file formats in Microsoft Excel or Extensible Markup Language (XML).

Currently across HUD, there are several reporting models in place for its discretionary programs. The reporting models provide information on a wide variety of outputs and outcomes and are based on unique data definitions and outcome measures in program-specific performance and progress reports. In Federal Fiscal Year 2013, nine program offices at HUD used six systems and 15 reporting tools to collect over 700 data elements in support of varied metrics to assess the performance of their funding recipients. The proposed data collection and reporting requirements described in this notice are designed to provide HUD programs a tested alternative to their existing disparate reporting methodologies, forms, systems, and requirements.

The lack of standardized data collection and reporting requirements imposes an increased burden on funding recipients with multiple HUD funding streams. The need for a comprehensive standardized reporting approach is underscored by reviews

conducted by external oversight agencies, including the HUD Office of Inspector General (OIG) and the Government Accountability Office (GAO). These oversight agencies have questioned the soundness and comparability of data reported by HUD prior to Standards for Success. To address these issues, HUD is using its statutory and regulatory authority to improve and strengthen performance reporting for its discretionary programs, ultimately working towards a single comprehensive reporting approach.

The Secretary's statutory and regulatory authority to administer housing and urban development programs include provisions allowing for the requirement of performance reporting from funding recipients. This legal authority is codified at 42 U.S.C. 3535(r). The individual privacy of service recipients is of the highest priority. The reporting repository established at HUD to receive data submission from funding recipients will not include any personally identifiable information (PII). Additionally, if the data from a funding recipient has 25 or fewer individuals served during a fiscal year as reported in the record-level reports, then the results for the demographic data elements for the 25 or fewer individuals will also be redacted or removed from the public-use data file and any publicly available analytical products in order to ensure the inability to identify any individual.

Eligible entities receiving funding by HUD are expected to implement the proposed recordkeeping and reporting requirements with available HUD funds. It is important to note that affected HUD funding recipients only submit a subset of the universe of data elements presented. The participating HUD program offices determine the specific data collection and reporting requirements, which considers the type and level of service provided by the respective HUD program.

The reporting requirements in this proposal better organize the data that participating programs collected in the past, standardize outcomes and performance measures, and allow

program offices at HUD to select which data elements and performance indicators are relevant for their respective programs. Documents detailing the data elements, performance indicators, and programs are available for review by request from Colette Pollard (*Colette.Pollard@hud.gov*). All information reported to HUD will be submitted electronically. Funding recipients may use existing management information systems provided those systems collect all of the required data elements and can be exported for submission to HUD. Funding recipients that sub-award funds to other organizations will need to collect the required information from their sub-recipients.

Information collected and reported will be used by funding recipients and HUD for the following purposes:

- To provide program and performance information to recipients, general public, Congress, and other stakeholders;
- To continuously improve the quality, effectiveness, and efficiency of discretionary-funded programs;
- To provide management information for use by HUD in program administration and oversight, including the scoring of applications and the monitoring of funding-recipient participation, services, and outcomes; and
- To better measure and analyze performance information to identify successful practices to be replicated and prevent or correct problematic practices and improve outcomes in compliance with the Government Performance and Results Act (GPRA) and the GPRA Modernization Act.

The data collection and reporting requirements may expand to other HUD programs. Program implementation will be determined by the program. HUD will provide technical assistance to funding recipients throughout the implementation.

Respondents (i.e., affected public): Organizations receiving HUD funding as listed on page 2.

ANNUAL BURDEN ESTIMATE FOR THE REQUESTED REPORTING APPROACH

HUD program	Number of respondents (funding recipients)	Submission frequency	Hourly rate ¹	Average number of minutes (per record)	Estimated annual burden hours	Estimated annual burden dollars
Multifamily Housing Service Coordinator Grant Program	1,665	1	\$18.75	20	57,753	\$1,082,869
Multifamily Housing Budget-based Service Coordinator Program	2,835	1	\$18.75	20	98,336	1,843,800

ANNUAL BURDEN ESTIMATE FOR THE REQUESTED REPORTING APPROACH—Continued

HUD program	Number of respondents (funding recipients)	Submission frequency	Hourly rate ¹	Average number of minutes (per record)	Estimated annual burden hours	Estimated annual burden dollars
Resident Opportunities and Self-Sufficiency Service Coordinator Grant Program	353	1	\$18.75	20	12,244	229,581
Total	² 4,853	1	\$18.75	20	168,333	3,156,250

¹ The hourly rate of \$18.75 is the average wage for office and administrative support occupations as reported in the May 2018 *Occupational Employment and Wages* produced by the U.S. Department of Labor, Bureau of Labor Statistics.

² There are an estimated 505,000 individuals to be served by the 4,853 funding recipients.

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

HUD encourages interested parties to submit comments in response to these questions.

C. Authority

Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. Chapter 35.

Dated: April 23, 2019.

Christopher Walsh,

Presidential Management Fellows, Office of Business Transformation.

BILLING CODE 4210-67-P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[Docket No. FWS-HQ-IA-2019-0023; FXIA1671090000-190-FF09A30000]

Foreign Endangered Species; Receipt of Permit Applications

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of receipt of permit applications; request for comments.

SUMMARY: We, the U.S. Fish and Wildlife Service, invite the public to comment on applications to conduct certain activities with foreign species that are listed as endangered under the Endangered Species Act (ESA). With some exceptions, the ESA prohibits activities with listed species unless Federal authorization is issued that allows such activities. The ESA also requires that we invite public comment before issuing permits for any activity otherwise prohibited by the ESA with respect to any endangered species.

DATES: We must receive comments by June 3, 2019.

ADDRESSES: *Obtaining Documents:* The applications, application supporting materials, and any comments and other materials that we receive will be available for public inspection at <http://www.regulations.gov> in Docket No. FWS-HQ-IA-2019-0023.

Submitting Comments: When submitting comments, please specify the name of the applicant and the permit number at the beginning of your comment. You may submit comments by one of the following methods:

- *Internet:* <http://www.regulations.gov>. Search for and submit comments on Docket No. FWS-HQ-IA-2019-0023.

- *U.S. mail or hand-delivery:* Public Comments Processing, Attn: Docket No. FWS-HQ-IA-2019-0023; U.S. Fish and Wildlife Service Headquarters, MS: BPHC; 5275 Leesburg Pike; Falls Church, VA 22041-3803.

For more information, see Public Comment Procedures under **SUPPLEMENTARY INFORMATION.**

FOR FURTHER INFORMATION CONTACT: Brenda Tapia, by phone at 703-358-2104, via email at DMAFR@fws.gov, or via the Federal Relay Service at 800-877-8339.

SUPPLEMENTARY INFORMATION:

I. Public Comment Procedures

A. How do I comment on submitted applications?

We invite the public and local, State, Tribal, and Federal agencies to comment on these applications. Before issuing any of the requested permits, we will take into consideration any information that we receive during the public comment period.

You may submit your comments and materials by one of the methods in **ADDRESSES**. We will not consider comments sent by email or fax, or to an address not in **ADDRESSES**. We will not consider or include in our administrative record comments we receive after the close of the comment period (see **DATES**).

When submitting comments, please specify the name of the applicant and the permit number at the beginning of your comment. Provide sufficient information to allow us to authenticate any scientific or commercial data you include. The comments and recommendations that will be most useful and likely to influence agency decisions are: (1) Those supported by quantitative information or studies; and (2) those that include citations to, and analyses of, the applicable laws and regulations.

B. May I review comments submitted by others?

You may view and comment on others' public comments at <http://www.regulations.gov>, unless our allowing so would violate the Privacy Act (5 U.S.C. 552a) or Freedom of Information Act (5 U.S.C. 552).

C. Who will see my comments?

If you submit a comment at <http://www.regulations.gov>, your entire comment, including any personal identifying information, will be posted on the website. If you submit a hardcopy comment that includes personal identifying information, such as your address, phone number, or

email address, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. Moreover, all submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses, will be made available for public disclosure in their entirety.

II. Background

To help us carry out our conservation responsibilities for affected species, and in consideration of section 10(c) of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*), we invite public comments on permit applications before final action is taken. With some exceptions, the ESA prohibits certain activities with listed species unless Federal authorization is issued that allows such activities. Permits issued under section 10(a)(1)(A) of the ESA allow otherwise prohibited activities for scientific purposes or to enhance the propagation or survival of the affected species. Service regulations regarding prohibited activities with endangered species, captive-bred wildlife registrations, and permits for any activity otherwise prohibited by the ESA with respect to any endangered species are available in title 50 of the Code of Federal Regulations in part 17.

III. Permit Applications

We invite comments on the following applications.

Applicant: Big Cat Rescue Corp., Tampa, FL; Permit No. 05660D

The applicant requests a permit to import three male captive-bred tigers (*Panthera tigris*) from Antigua Exotic, Escuintla, Guatemala, for the purpose of enhancing the propagation or survival of the species. This notification is for a single import.

Applicant: Nicola Anthony, University of New Orleans, New Orleans, LA; Permit No. 22278D

The applicant requests a permit to import biological samples of wild mandrills (*Mandrillus sphinx*) from Gabon for the purpose of scientific research. This notification is for a single import.

Applicant: Duke University Lemur Center, Durham, NC; Permit No. 23665D

The applicant requests a permit to export one male and one female live captive-bred Coquerel's sifaka (*Propithecus coquereli*) to Cologne Zoo, Cologne, Germany, for the purpose of

enhancing the propagation or survival of the species. The notification is for a single export.

Applicant: Sedgwick County Zoological Society, Inc. Wichita, KS; Permit No. 08553D

The applicant requests a permit to import one captive-born female Bornean orangutan (*Pongo pygmaeus*) from Ecoparque Interactivo de Buenos Aires, Argentina, for the purpose of enhancing the propagation or survival of the species. This notification is for a single import.

Applicant: Archie Carr Center for Sea Turtles Research, University of Florida, Gainesville, FL; Permit No. 724540

The applicant requests authorization to import biological samples from captive-born green sea turtle (*Chelonia mydas*) and wild green sea turtle (*Chelonia mydas*), loggerhead sea turtle (*Caretta caretta*), hawksbill sea turtle (*Eretmochelys imbricata*), Kemp's ridley sea turtle (*Lepidochelys kempii*), leatherback sea turtle (*Dermochelys coriacea*), and olive ridley sea turtle (*Lepidochelys olivacea*) from throughout the world for the purpose of scientific research. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: University of South Carolina School of Medicine, Columbia, SC; Permit No. 16315D

The applicant requests authorization to import biological samples from wild hawksbill turtles (*Eretmochelys imbricata*) for the purpose of scientific research. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: La Coma Ranch, The Red Gate Corporation, Edinburg, TX; Permit No. 28567D

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for swamp deer (*Cervus duvaucelii*) to enhance the propagation or survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Masquerade Exotic Animals LLC., Milton, GA; Permit No. 05246B

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for the following species, to enhance the propagation or survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

Common name	Scientific name
White-headed lemur ..	<i>Eulemur albifrons.</i>
Ring-tailed lemur	<i>Lemur catta.</i>
Black-and-white ruffed lemur.	<i>Varecia variegata.</i>
Red-ruffed lemur	<i>Varecia rubra.</i>

Applicant: Nashville Zoo at Grassmere, Nashville, TN; Permit No. 95132C

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for the following species, to enhance the propagation or survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

Common name	Scientific name
Baird's tapir	<i>Tapirus bairdii.</i>
Clouded leopard	<i>Neofelis nebulosi.</i>
Cotton-top tamarin	<i>Saguinus oedipus.</i>
Red-ruffed lemur	<i>Varecia rubra.</i>
Ring-tailed lemur	<i>Lemur catta.</i>
Siamang	<i>Symphalangus syndactylus.</i>
Northern white-cheeked gibbon.	<i>Nomascus leucogenys.</i>

Applicant: Kyle Wildlife Limited Partnership, Bandera, TX; Permit No. 85048C

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for swamp deer (*Cervus duvaucelii*) to enhance the propagation or survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Delaware Museum of Natural History, Wilmington, DE; Permit No. 184718

The applicant requests a renewal of a permit to export and reimport nonliving museum specimens of endangered species previously accessioned into the applicant's collection for scientific research. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: La Coma Ranch, The Red Gate Corporation, Edinburg, TX; Permit No. 95196C

The applicant requests a permit authorizing the culling of excess of swamp deer (*Cervus duvaucelii*) from the captive herd maintained at the applicant's facility, to enhance the species' propagation and survival. This notification covers activities to be conducted by the applicant over a 5-year period.

IV. Next Steps

After the comment period closes, we will make decisions regarding permit

issuance. If we issue permits to any of the applicants listed in this notice, we will publish a notice in the **Federal Register**. You may locate the notice announcing the permit issuance by searching <http://www.regulations.gov> for the permit number listed above in this document. For example, to find information about the potential issuance of Permit No. 12345A, you would go to [regulations.gov](http://www.regulations.gov) and search for "12345A".

V. Authority

We issue this notice under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*), and its implementing regulations.

Brenda Tapia,

Program Analyst/Data Administrator, Branch of Permits, Division of Management Authority.

BILLING CODE 4333-15-P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[FWS-R8-ES-2019-N053;
FXES1114080000-190-FF08E00000]

Green Diamond Resource Company Final Forest Habitat Conservation Plan and Final Environmental Impact Statement; Humboldt and Del Norte Counties, CA

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability of final environmental impact statement and final habitat conservation plan.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), announce the availability of a final environmental impact statement (FEIS) under the National Environmental Policy Act. We also announce the availability of the final habitat conservation plan (HCP). These documents were prepared in support of a permit application submitted to us under the Endangered Species Act. We will use these documents to inform our decision regarding issuance of the permit.

DATES: A record of decision will be signed no sooner than 30 days after the publication of this notice of availability in the **Federal Register**.

ADDRESSES:

Obtaining Documents: You may obtain copies of the FEIS and other documents by the following methods.

- *Internet:* <https://www.fws.gov/arcata/es/HCP.htm>.
- *Public libraries:* Electronic copies of the documents will be available for

viewing at Del Norte and Humboldt County Libraries on their public access computer stations. In Del Norte County, the documents will be available at the Main Library in Crescent City and at the branch library in Smith River. In Humboldt County, the documents will be at the Eureka Main Library, and at branch libraries in Arcata, McKinleyville, and Willow Creek.

FOR FURTHER INFORMATION CONTACT:

Jennifer L. Norris, Deputy Field Supervisor, by phone at 707-822-7201, or via U.S. mail to U.S. Fish and Wildlife Service, 1655 Heindon Road, Arcata, CA 95521-4573.

SUPPLEMENTARY INFORMATION: Under the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*), Green Diamond Resource Company has applied for a 50-year incidental take permit (ITP); the applicant prepared the final Green Diamond Resource Company Forest Habitat Conservation Plan (HCP) pursuant to section 10(a)(1)(B) of the ESA. We, the U.S. Fish and Wildlife Service (Service), announce the availability of the HCP, and also announce the availability of the final environmental impact statement (FEIS) under the National Environmental Policy Act of 1967 (42 U.S.C. 4321 *et seq.*). These documents were both prepared in support of the permit application. We will use these documents to inform our decision regarding issuance of the permit.

Background

Section 9 of the ESA (16 U.S.C. 1531 *et seq.*) and our Federal regulations (50 CFR part 17) prohibit the taking of fish and wildlife species listed as endangered or threatened under section 4 of the ESA. Regulations governing permits for endangered and threatened species are at 50 CFR 17.22 and 17.32, respectively. For more information about the Federal habitat conservation plan program, go to <http://www.fws.gov/endangered/esa-library/pdf/hcp.pdf>.

The Migratory Bird Treaty Act of 1918 (MBTA; 16 U.S.C. 703-712) protects over 1,000 species of birds, including the barred owl. The MBTA provides that it is unlawful to pursue, hunt, take, capture, kill, possess, sell, purchase, barter, import, export, or transport any migratory bird, or any part, nest, or egg of any such bird, unless authorized under a permit issued by the Secretary of the Interior. As authorized by the MBTA, the Service may issue permits for scientific collecting (50 CFR 21.23).

Applicant's Final Habitat Conservation Plan

Proposed Action Alternative

The Proposed Action Alternative is implementation of the final HCP; issuance of a 50-year ITP authorizing incidental take of the northern spotted owl, fisher, red tree vole, and Sonoma tree vole that may occur as a result of implementation of the HCP; and issuance of an MBTA permit for barred owl experiments.

Plan Area

The HCP area encompasses 357,412 acres in Humboldt and Del Norte Counties, California.

Covered Activities

The HCP contains conservation measures considered necessary to minimize and mitigate the impacts, to the maximum extent practicable, of the potential taking of federally listed species to be covered by the HCP. The covered activities under the HCP are those associated with commercial forest management within the plan area.

Covered Species

The proposed ITP includes one bird species, the northern spotted owl (*Strix occidentalis caurina*), which is federally listed as threatened. Three mammal species with no Federal listing status are also proposed to be covered—The fisher (*Pekania pennanti*), red tree vole (*Arborimus longicaudus*), and Sonoma vole (*Arborimus pomus*). In addition, experiments on barred owl (*Strix varia*) will be conducted as part of implementation of the HCP for the benefit of northern spotted owls.

National Environmental Policy Act Compliance

The final EIS analyzed four land management alternatives. These include a "no action" alternative, which allows the existing 30-year incidental take permit to expire at the end of its term in 2022 with no permit replacement. The proposed action consists of a four-species HCP and associated permit with a 50-year term. Two other "action" alternatives are included. Alternatives A and B evaluate a single-species HCP and 50-year permit for the northern spotted owl only. Alternative B differs from Alternative A by proposing a shift in Green Diamond company policy from even-aged forest management toward uneven-aged forest management.

Public Review

The Service published a notice of intent to prepare an EIS in the **Federal Register** on April 16, 2010 (75 FR

19994), announcing a 30-day public scoping period, during which the public was invited to provide written comments. The Service published a notice of availability (NOA) of the draft EIS and draft HCP in the **Federal Register** on July 23, 2018 (83 FR 34861). The NOA announced a 45-day public comment period, during which the public was invited to provide written comments. In accordance with NEPA, the Environmental Protection Agency (EPA) will announce the final EIS in the **Federal Register**.

Next Steps

Issuance of an ITP is a Federal proposed action subject to compliance with NEPA. We will evaluate the application, associated documents, and the public comments we received to determine whether the requirements of NEPA regulations and section 10(a) of the ESA have been met. If we determine that those requirements are met, we will issue a record of decision no sooner than 30 days after the EPA publishes notice of the final EIS in the **Federal Register**. Subsequently, we will issue a permit to the applicant for the incidental take of the covered species.

Authority

We provide this notice under section 10(c) of the ESA (16 U.S.C. 1531 *et seq.*) and its implementing regulations (50 CFR 17.22), the MBTA (16 U.S.C. 703 *et seq.*) and its implementing regulations (50 CFR 21.23), and NEPA (42 U.S.C. 4321 *et seq.*) and its implementing regulations (40 CFR 1506.6).

Jody Holzworth,

Deputy Regional Director, Pacific Southwest Region, Sacramento, California.

BILLING CODE 4310-55-P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLCAD01000.L13400000.DO0000.19X]
MO#4500121894]

Notice of Availability of the Draft Supplemental Environmental Impact Statement for the Haiwee Geothermal Leasing Area, California, and the Proposed Amendment to the California Desert Conservation Area Plan

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of availability.

SUMMARY: In accordance with the National Environmental Policy Act of 1969, as amended, and the Federal Land Policy and Management Act of 1976, as

amended (FLPMA), the Bureau of Land Management (BLM) has prepared a Draft Amendment to the California Desert Conservation Area (CDCA) Plan and a Draft Supplemental Environmental Impact Statement (EIS) for the Haiwee Geothermal Leasing Area (HGLA), Inyo County, California, and is announcing the opening of the comment period. In order to comply with Federal regulations, the BLM is also announcing a comment period on changes to the management of four Areas of Critical Environmental Concern within the HGLA.

DATES: To ensure that all comments will be considered, the BLM must receive written comments on the Draft CDCA Plan Amendment and Draft Supplemental EIS within 90 days following the date the Environmental Protection Agency publishes its Notice of Availability in the **Federal Register**. The BLM will announce future meetings or hearings and any other public involvement activities at least 15 days in advance through public notices, media releases, and/or mailings.

ADDRESSES: The HGLA Draft CDCA Plan Amendment and Draft Supplemental EIS are available on the BLM ePlanning project website at <https://go.usa.gov/xEnvy>. Click the "Documents" link on the left side of the screen to find the electronic version of these materials. Hard copies of the Draft CDCA Plan Amendment and Draft Supplemental EIS are also available for public inspection at the BLM, California Desert District Office, 22835 Calle San Juan De Los Lagos, Moreno Valley, CA 92553.

You may submit comments related to the HGLA by any of the following methods:

- **Website:** <https://go.usa.gov/xEnvy>
- **Email:** BLM_CA_CD_Haiwee_Geothermal@blm.gov
- **Mail:** Haiwee Geothermal Leasing Project, c/o Greg Miller, 22835 Calle San Juan De Los Lagos, Moreno Valley, CA 92553.
- **Fax:** 951-697-5299.

FOR FURTHER INFORMATION CONTACT: Greg Miller, Deputy District Manager—Resources via telephone at (951) 697-5216; or via mail at 22835 Calle San Juan De Los Lagos, Moreno Valley, CA 92553; or via email at gmliller@blm.gov. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Relay Service (FRS) at 1-800-877-8339 to contact Mr. Miller during normal business hours. FRS is available 24 hours a day, 7 days a week, to leave a message or question. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The BLM published the HGLA Draft EIS and Draft

Proposed Amendment to the CDCA in the **Federal Register** on May 10, 2012 (77 FR 27478) and held public meetings in June 2012. The BLM prepared an Administrative Draft Final EIS in December 2013 that included public comments and responses to comments, updates to the alternatives descriptions, and internal review comments. As a result of the review of the comments, the BLM conducted a more detailed study to address projected water use by geothermal facilities should they be allowed in the HGLA. Argonne National Laboratories conducted the study and provided BLM a report in January 2016. Additionally, new land use designations approved with the Desert Renewable Energy Conservation Plan Amendment to the CDCA Plan in September of 2016 required analysis of a new alternative that considered the new land use designations. Based on these two developments, the BLM has prepared a CDCA Plan Amendment and Draft Supplemental EIS for the project. This new alternative would make Federal lands available for geothermal exploration, development, and utilization, within the entire HGLA.

The BLM received three geothermal lease applications for 4,460 acres of public land within the HGLA. In addition, the BLM identified approximately 18,345 acres of public lands, also within the Haiwee Proposed Project Area and adjacent to the three geothermal lease applications, which will be considered for competitive geothermal leasing under 43 CFR 3203.10(e). The proposed action is to amend the CDCA Plan to allow project-area lands to be leased under the authority of the Geothermal Steam Act of 1970, as amended (30 U.S.C. 1001 *et seq.*) The leasing of public lands for geothermal resources will require an amendment to the CDCA Plan, which is authorized by the FLPMA, Section 202 (43 U.S.C. 1712) and 43 CFR 1610.5-5. Total acreage being considered for geothermal leasing is approximately 22,805 acres.

Please note that public comments and information submitted including names, street addresses, and email addresses of persons who submit comments will be available for public review and disclosure at the address listed earlier during regular business hours (8 a.m. to 4 p.m.), Monday through Friday, except holidays.

Before including your address, phone number, email address, or other personally identifiable information in your comment, you should be aware that your entire comment—including your personally identifiable information—may be made publicly

available at any time. While you can ask us in your comment to withhold your personally identifiable information from public review, we cannot guarantee that we will be able to do so.

Authority: 40 CFR 1501.7 and 43 CFR 1610.2.

Danielle K. Chi,

BLM California Deputy State Director, Natural Resources, Planning and Fire.

[FR Doc. 2019-08846 Filed 5-2-19; 8:45 am]

BILLING CODE 4310-HC-P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[19X LLUTG01000 L91450000.EJ0000]

Notice of Termination of the Environmental Impact Statement for the Crescent Point Energy Utah Federal-Tribal Well Development Project, Duchesne and Uintah Counties, Utah

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of termination.

SUMMARY: In accordance with the National Environmental Policy Act, on April 8, 2016, the Bureau of Land Management (BLM) Vernal Field Office published a Notice of Intent (NOI) to prepare an Environmental Impact Statement (EIS) for the proposed Crescent Point Energy Utah Federal-Tribal Well Development Project in Duchesne and Uintah Counties, Utah. The Notice announced the beginning of the scoping process for solicitation of input on the identification of issues and evaluation of the effects of the proposed development by Crescent Point Energy. The proposed EIS would have evaluated the effects of the proposed development in the Uinta Basin. On December 12, 2018, Crescent Point Energy withdrew its proposed action. The BLM is therefore terminating the EIS process.

DATES: Termination of the EIS for the proposed Crescent Point Energy Utah Federal-Tribal Well Development Project in Duchesne and Uintah Counties, Utah, takes effect immediately.

FOR FURTHER INFORMATION CONTACT: Stephanie Howard, Project Manager, 170 S 500 E, Vernal, UT 84078; telephone: (435) 781-4469; email: showard@blm.gov. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Relay Service (FRS) at 1-800-877-8339 to contact Ms. Howard during normal business hours. FRS is available 24 hours a day, 7 days a week, to leave a

message or question. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The applicant, Crescent Point Energy, had filed a plan of development for their Federal, State, private, and tribal trust leases. Crescent Point proposed to drill up to 3,925 new oil and gas wells and build 863 miles of roads; 693 miles of pipelines co-located with the proposed roads; 170 miles of cross-country pipelines; 400 miles of trunk pipelines; 5 salt water disposal wells; 5 produced water treatment facilities; 20 central tank batteries; 4 gas processing plants; 8 oil storage areas; and 4 equipment storage areas. Since the BLM published a NOI in the **Federal Register** (81 FR 20668), the applicant has acquired significant additional assets, changed its drilling techniques, and revised its corporate strategy such that the original proposed action no longer reflects its plans for the project area. In accordance with the applicant's December 12, 2018, request, the BLM is terminating the EIS in accordance with BLM Manual Handbook H-1790-1 Section 9.8.

Edwin L. Roberson,

State Director.

Notice of Intent To Prepare an Environmental Impact Statement for the Proposed Plains Pipeline, L.P. Replacement Project in Santa Barbara, San Luis Obispo, and Kern Counties, California

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of intent.

SUMMARY: In accordance with the National Environmental Policy Act of 1969, as amended (NEPA), and the Federal Land Policy and Management Act of 1976, as amended, the Bureau of Land Management (BLM) Bakersfield Field Office, Bakersfield, California, intends to prepare an Environmental Impact Statement (EIS), analyzing the impacts of a proposal by Plains Pipeline, L.P. to replace its roughly 127-mile pipeline, which includes approximately 14 miles of Federal public lands, in Santa Barbara, San Luis Obispo and Kern counties. This notice announces the beginning of the scoping

process to solicit public comments and identify issues.

DATES: This notice initiates the public scoping process for the EIS. Comments on issues may be submitted in writing until June 3, 2019. In order to be included in the analysis, all scoping comments must be submitted in writing and received prior to the close of the 30-day scoping period. We will provide additional opportunities for public participation as appropriate.

ADDRESSES: You may submit comments related to this EIS by any of the following methods:

- **Website:** <https://go.usa.gov/xE5f2>.
- **Mail:** Bakersfield Field Office,

Bureau of Land Management, Attn: Plains Pipeline Replacement Project Analysis, 3801 Pegasus Drive, Bakersfield, CA 93308.

Documents pertinent to this proposal may be examined during regular business hours at the Bakersfield Field Office.

FOR FURTHER INFORMATION CONTACT:

Jeremy Caldwell, Assistant Field Manager, telephone 661-391-6000; address Bureau of Land Management, 3801 Pegasus Drive, Bakersfield, CA 93308; email BLM_CA_Web_BK@blm.gov. Contact Mr. Caldwell to have your name added to our mailing list. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Relay Service (FRS) at 1-800-877-8339 to contact the above individual during normal business hours. FRS is available 24 hours a day, 7 days a week, to leave a message or question. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: Plains Pipeline, L.P. filed a right-of-way application on January 9, 2018, for the replacement and abandonment of approximately 127 miles of existing oil pipelines. The project spans multiple local, State and Federal jurisdictions.

On August 7, 2018, the U.S. Department of the Interior determined the project would be addressed under the Fixing America's Surface Transportation Act (FAST-41).

The purpose of the public scoping process is to determine relevant issues that will influence the scope of the environmental analysis, including alternatives, if necessary, and guide the planning process. The BLM, other Federal, State, and local agencies and other stakeholders have identified the following preliminary issues: Air and atmospheric values, water quality and quantity, cultural resources, paleontological resources, and special status species. The BLM will address reasonably foreseeable impacts to

resources from approval of this project. Mitigation may include avoidance, minimization, rectification, reduction or elimination over time, and may be considered at multiple scales, including the landscape scale.

The BLM will use the NEPA scoping process to help fulfill public involvement requirements under the National Historic Preservation Act (54 U.S.C. 306108), as provided in 36 CFR 800.2(d)(3). Information about historic and cultural resources within the area potentially affected by the project will assist the BLM in identifying and evaluating impacts to such resources.

The BLM will consult with Indian tribes on a government-to-government basis in accordance with existing law, regulations, and policy. Tribal concerns, including impacts on Indian trust assets and potential impacts to cultural resources, will be given due consideration. Federal, State and local agencies, along with tribes and other stakeholders that may be interested in or affected by the project, are invited to participate in the scoping process and, if eligible, may request or be requested by the BLM to participate in the development of the environmental analysis as a cooperating agency.

The BLM will evaluate issues to be addressed in the analysis, and will place them into one of three categories:

1. Issues to be resolved in the analysis;
2. Issues to be resolved through policy or administrative action; or
3. Issues beyond the scope of the EIS.

The BLM will provide an explanation in the Draft EIS as to why an issue was placed in category two or three. The public is also encouraged to help identify any management questions and concerns that should be addressed in the analysis. The BLM will work collaboratively with interested parties to identify the management decisions that are best suited to local, regional and national needs and concerns.

Before including your address, phone number, email address, or other personally identifiable information in your comment, you should be aware that your entire comment—including your personally identifiable information—may be made publicly available at any time. While you can ask us in your comment to withhold your personally identifiable information from public review, we cannot guarantee that we will be able to do so.

Authority: 40 CFR 1501.7 and 43 CFR 1610.2).

Danielle K. Chi,

BLM California Deputy State Director, Natural Resources, Planning and Fire.

Notice of Public Meeting for the Bears Ears National Monument Advisory Committee, Utah

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of public meeting.

SUMMARY: In accordance with the Federal Land Policy and Management Act and the Federal Advisory Committee Act, the U.S. Department of Agriculture, U.S. Forest Service and the U.S. Department of the Interior, Bureau of Land Management's (BLM) Bears Ears National Monument Advisory Committee (BENM-MAC) will meet as indicated below.

DATES: The BENM-MAC will hold a public meeting on June 5-6, 2019. The meeting will be held on June 5, 2019 from 1:00 p.m. to 5:00 p.m. and continue on June 6, 2019 from 8:00 a.m. to 12:00 p.m.

ADDRESSES: The meeting will be held at the Hideout Community Center, 648 South Hideout Way, Monticello, Utah 84535. Written comments to address the BENM-MAC may be sent to the BLM Canyon Country District, 82 East Dogwood, Moab, Utah 84532, or via email with the subject line "BENM-MAC" to blm_ut_mt_mail@blm.gov. Written comments must be received by Friday, May 31, 2019 to be considered by BENM-MAC members in their first meeting.

FOR FURTHER INFORMATION CONTACT: Lisa Bryant, Public Affairs Specialist, BLM Canyon Country District, 82 East Dogwood, Moab, Utah 84532; phone 435-259-2187; or by email at lbryant@blm.gov. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Relay Service (FRS) at 1-800-877-8339 to leave a message or question for the above individual. The FRS is available 24 hours a day, seven days a week. Replies are provided during normal business hours.

SUPPLEMENTARY INFORMATION: The 15-member Committee will provide

information and advice regarding the development of the Monument Management Plan. Agenda topics will include welcoming new committee members, reviewing the charter, providing an overview to, and soliciting information and advice from, the BENM-MAC regarding the development of the Draft Monument Management Plans and Draft Environmental Impact Statement for the Shash Jaa and Indian Creek Units of the Bears Ears National Monument. BENM-MAC members will also select a person to serve as chair. The final agenda will be posted online at <https://www.blm.gov/get-involved/resource-advisory-council/near-me/utah/mac>.

The meeting is open to the public; however, transportation, lodging, and meals are the responsibility of the participating individuals. There will be an opportunity for public comment during the meeting. Depending on the number of people who wish to speak and the time available, the time for individual comments may be limited. Written comments may also be sent to the BLM Canyon Country District at the address listed in the **ADDRESSES** section of this notice. All comments received will be provided to the BENM-MAC for their consideration and posted on Committee's website.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask in your comment that the BLM withhold your personal identifying information from public review, the BLM cannot guarantee that it will be able to do so.

Detailed meeting minutes for the BENM-MAC meetings will be maintained in the BLM Canyon Country District and will be available for public inspection and reproduction during regular business hours within thirty (30) days following the meeting.

Authority: 43 CFR 1784.4-2.

Anita Bilbao,

Associate State Director.

BILLING CODE 4310-DQ-P

DEPARTMENT OF THE INTERIOR**National Park Service**[NPS-WASO-NAGPRA-NPS0027636;
PPWOCRADNO-PCU00RP14.R50000]**Notice of Inventory Completion: The San Diego Museum of Man, San Diego, CA****AGENCY:** National Park Service, Interior.**ACTION:** Notice.

SUMMARY: The San Diego Museum of Man has completed an inventory of human remains and associated funerary objects, in consultation with the appropriate Indian Tribes or Native Hawaiian organizations, and has determined that there is a cultural affiliation between the human remains and associated funerary objects and present-day Indian Tribes or Native Hawaiian organizations. Lineal descendants or representatives of any Indian Tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains and associated funerary objects should submit a written request to the San Diego Museum of Man. If no additional requestors come forward, transfer of control of the human remains and associated funerary objects to the lineal descendants, Indian Tribes, or Native Hawaiian organizations stated in this notice may proceed.

DATES: Lineal descendants or representatives of any Indian Tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains and associated funerary objects should submit a written request with information in support of the request to the San Diego Museum of Man at the address in this notice by June 3, 2019.

ADDRESSES: Ben Garcia, Deputy Director, San Diego Museum of Man, 1350 El Prado, Balboa Park, San Diego, CA 32101, telephone (619) 239-2001 Ext.17, email bgarcia@muesumofman.org.

SUPPLEMENTARY INFORMATION: Notice is here given in accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), 25 U.S.C. 3003, of the completion of an inventory of human remains and associated funerary objects under the control of the San Diego Museum of Man, San Diego, CA. The human remains and associated funerary objects were removed from San Diego County, CA.

This notice is published as part of the National Park Service's administrative

responsibilities under NAGPRA, 25 U.S.C. 3003(d)(3). The determinations in this notice are the sole responsibility of the museum, institution, or Federal agency that has control of the Native American human remains and associated funerary objects. The National Park Service is not responsible for the determinations in this notice.

Consultation

A detailed assessment of the human remains was made by the San Diego Museum of Man professional staff in consultation with representatives of the Campo Band of Diegueno Mission Indians of the Campo Indian Reservation, California; Capitan Grande Band of Diegueno Mission Indians of California (Barona Group of Capitan Grande Band of Mission Indians of the Barona Reservation, California; Viejas (Baron Long) Group of Capitan Grande Band of Mission Indians of the Viejas Reservation, California); Ewiiapaayp Band of Kumeyaay Indians, California; Iipay Nation of Santa Ysabel, California (previously listed as the Santa Ysabel Band of Diegueno Mission Indians of the Santa Ysabel Reservation); Inaja Band of Diegueno Indians of the Inaja and Cosmit Reservation, California; Jamul Indian Village of California; La Posta Band of Diegueno Mission Indians of the La Posta Indian Reservation, California; Manzanita Band of Diegueno Mission Indians of the Manzanita Reservation, California; Mesa Grande Band of Diegueno Mission Indians of the Mesa Grande Reservation, California; San Pasqual Band of Diegueno Mission Indians of California; and the Sycuan Band of the Kumeyaay Nation, (hereafter referred to as "The Tribes").

History and Description of the Remains

In April 1973, human remains representing, at minimum, one individual were removed from site W-896, near Olivenhain Road, in La Costa, San Diego County, CA. The human remains were excavated by Rose Tyson on behalf of the San Diego Museum of Man. No known individuals were identified. No associated funerary objects are present.

Sometime prior 1975, human remains representing, at minimum, four individuals were removed from an unknown location near Fox Point (Woodley), which is now Leucadia Boulevard, in Carlsbad, San Diego County, CA. On Nov. 8, 1974, these human remains and associated funerary objects were donated to the San Diego Museum of Man by Stan Berryman, a San Diego Archeologist. No known individuals were identified. The 20

associated funerary objects are one soil sample, five ecofacts, one lot of unmodified shell, one unmodified shell, three chipped stone core tools, three utilized flakes, three chipped stone scrapers, two chipped stone unworked flakes, and one mano.

On February 20, 1973, human remains representing, at minimum, one individual were removed from site W-91 near Woodley Road (now known as Leucadia Blvd.), in Carlsbad, San Diego County, CA. The human remains were excavated by Rose Tyson on behalf of the San Diego Museum of Man. No individuals were identified. The eight associated funerary objects are one chipped stone core, three chipped stone utilized flakes, one groundstone metate, and three stone ecofacts.

On November 18th, 1959, human remains representing, at minimum, two individuals were removed from the corner of San Elijo Drive and Kilkenny Drive in Cardiff, San Diego County, CA. The human remains were removed by Dr. Carl L. Hubbs, who designated that location as sites 1959:XI:20 and 1959:XI:18. Sometime in 1972, he donated the human remains and associated funerary objects to the San Diego Museum of Man. The area was re-designated site W-80 by Malcom Rogers, a former research associate at the San Diego Museum of Man following a visit by both Rogers and Hubbs. No individuals were identified. The eight associated funerary objects are one lot of unmodified shell, two stone core tools, one stone core, one unworked flake, one utilized flake, one ecofact, and one soil sample.

Between 1929 and 1938, human remains representing, at minimum, one individual were removed from CA-SDI-5110 (W-187 & W-187B), a site located on the south side of the La Jolla Valley, in San Diego County, CA. These human remains were removed on behalf of the San Diego Museum of Man by Malcom J. Rogers. No known individuals were identified. The 70 associated funerary objects are one metate, 29 chipped stone biface tools, six stone choppers, four stone cores, two stone crescentics, one projectile point, 18 stone scrapers, two lots of unworked flakes, two lots of utilized flakes, one lot of unmodified shell, one modified shell fragment, and three hammerstones.

Around 1938, human remains representing, at minimum, three individuals were removed from CA-SDI-149 & CA-SDI-4935A (W-198 and W-186), a site complex located east of Rancho Santa Fe, near the south bank of the San Dieguito River in San Diego County, CA. These human remains were removed on behalf of the San Diego

Museum of Man by Malcom J. Rogers. These sites are commonly referred to as the Harris Site Complex. No known individuals were identified. The 2,713 associated funerary objects are: One modified faunal bone, 46 unmodified faunal bones, 60 lots of faunal bone, two undecorated ceramic body sherds, 17 lots of undecorated body sherds, five undecorated ceramic rim sherds, three lots of undecorated ceramic rim sherds; 94 chipped stone biface tools; 61 chipped stone choppers; 40 chipped stone cores; 28 chipped stone core tools; one stone drill; two stone crescents; 15 projectile points; 174 stone scrapers; 947 unworked flakes; 633 lots of unworked flakes; 71 utilized flakes; 23 lots of utilized flakes; 30 manos; five metates; 16 historic ceramic sherds; seven lots of historic ceramic sherds; 28 fragments of historic glass; 35 lots of historic glass fragments; one metal clover ornament; one metal earring; one metal pig figurine; 71 lots of metal including nails, bail bearings, pins, buttons, bullets and various fragments; one spoon; three lots of wood; one lot of brick fragments; 11 lots of charcoal; two lots of plastic; four lots of leather sole fragments; six lots of seeds; one lot of pieces of rubber; 11 ecofacts; seven lots of ecofacts; one lot of red ochre; one modified shell; 23 unmodified shells; 51 lots of unmodified shell; 98 lots of soil; 38 pollen samples; 29 hammerstones; six battered stones; and one fire affected stone.

In 1926, human remains representing, at minimum, one individual were removed from W-201 in San Diego County, CA. This site is located in the vicinity of the intersection of Wildcat Canyon Road and San Vicente Road. At the time of excavation, this property was a ranch owned by J.W. Mycrantz. These human remains were collected by Mr. Glenn, a San Diego Museum of Man staff member. No known individuals were identified. The 14 associated funerary objects are one decorated ceramic body sherd, one decorated ceramic rim sherd, one lot of undecorated ceramic body sherds, one lot of undecorated ceramic rim sherds, one chipped stone core, three projectile points, one chipped stone scraper, one lot of unworked flakes, one utilized flake, one olivella shell bead, one hammerstone, and one lot of unmodified faunal bone.

At a date most likely prior to 1950, human remains representing, at minimum, one individual were removed from CA-SDI-4517 (W-231), a site located on the north side of the San Diego River near El Monte Park in Lakeside, San Diego County, CA. These human remains were recovered by

either George Carter or Malcom J. Rogers on behalf of the San Diego Museum of Man. No known individuals were identified. The 502 associated funerary objects are: One steatite pipe, one small ceramic jar, one bone pipe stem fragments, 19 awl fragments, one lot of unmodified faunal bone, four arrowshaft straightener, one lot of ceramic coil fragments, one miniature vessel fragments, one small ceramic dish with asphaltum, one ceramic pendant fragment, one ceramic sherd with basket impressions, one decorated ceramic rim sherd, one lot of undecorated ceramic body sherds, one lot of undecorated rim sherds, 18 chipped stone biface blades, three chipped stone core tools, one chipped stone ornament, one red ochre ornament, 402 projectile points, four stone scrapers, three lots of unworked flakes, one utilized flake, four manos, one pestle, one lot of metal eyelet fragments, one lot of yellow ochre, 18 olivella shell beads, five burned olivella beads, one horn shell bead, one shell bead, one burned shell bead, and one lot of unmodified shell.

At an unknown date, human remains representing, at minimum, one individual were removed from a rock shelter near El Monte Oak Park in Lakeside, San Diego County, CA. These human remains were removed by a Mr. Hoover, who donated them to the San Diego Museum of Man sometime prior to 1940. Based on the acquisition information provided by Mr. Hoover, Museum of Man staff determined that these human remains were most likely taken from the vicinity of site CA-SDI-8251 (W-680). No known individuals were identified. No associated funerary objects are present.

At a date most likely in 1929, human remains representing, at minimum, one individual were removed from CA-SDI-4697 (W-234& W-234A), in Jamul, San Diego County, CA. This site is a documented Kumeyaay village site located in Lee Valley, near Jamul Creek. These human remains were removed by Malcom J. Rogers. No known individuals were identified. The 174 associated funerary objects are: Two bone tip fragments, three lots of unmodified faunal bone, one ceramic pendant, one miniature ceramic vessel, one small ceramic ball (possibly a rattle), one ceramic ornament, one ceramic pipe, one lot of ceramic coils, one ceramic pipe tang, one lot of ceramic cast offs, six decorated ceramic sherds, five lots of undecorated ceramic sherds, 13 chipped stone blades, three stone chopper, four stone cores, seven chipped stone core tool, one stone pipe tang, 31 projectile points, 43 stone scrapers, three lots of unworked flakes,

three lots of utilized flakes, one utilized flake, 10 manos, two metates, two stone discoids, one stone ornament, one steatite arrowshaft straightener, one lot of historic beads, two olivella beads, one lot of unmodified shell, 19 hammerstone, one lot of feldspar, and one lot of stone ecofacts.

Geographically, these archeological sites within San Diego County, CA, are located within the traditional territory occupied by the Kumeyaay Nation. Evidence of continual, uninterrupted occupation of the Kumeyaay Nation within this territory from at least 12,000 years B.P. until the present is established by biological, linguistic, archeological, and ethnographical evidence. Documented burial practices, artifacts such as pottery, beads, shells, and tools are consistent with Kumeyaay oral history. Consequently, based upon oral history, geographic location, biologic, ethnographic, linguistic, archeological information, these human remains have been identified as Kumeyaay.

Determinations Made by the San Diego Museum of Man

Officials of the San Diego Museum of Man have determined that:

- Pursuant to 25 U.S.C. 3001(9), the human remains described in this notice represent the physical remains of 16 individuals of Native American ancestry.
- Pursuant to 25 U.S.C. 3001(3)(A), the 3,509 objects described in this notice are reasonably believed to have been placed with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- Pursuant to 25 U.S.C. 3001(2), there is a relationship of shared group identity that can be reasonably traced between the Native American human remains and associated funerary objects and The Tribes.

Additional Requestors and Disposition

Lineal descendants or representatives of any Indian Tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains and associated funerary objects should submit a written request with information in support of the request to Ben Garcia, Deputy Director, San Diego Museum of Man, 1350 El Prado, Balboa Park, San Diego, CA 32101, telephone (619) 239-2001 Ext.17, email bgarcia@muesumofman.org, by June 3, 2019. After that date, if no additional requestors have come forward, transfer of control of the human remains and

associated funerary objects to The Tribes may proceed.

The San Diego Museum of Man is responsible for notifying The Tribes that this notice has been published.

Dated: April 4, 2019.

Melanie O'Brien,

Manager, National NAGPRA Program.

Notice of Inventory Completion: Tennessee Valley Authority, Knoxville, TN

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: The Tennessee Valley Authority (TVA) has completed an inventory of human remains and associated funerary objects in consultation with the appropriate Indian Tribes or Native Hawaiian organizations, and has determined that there is no cultural affiliation between the human remains and associated funerary objects and any present-day Indian Tribes or Native Hawaiian organizations. Representatives of any Indian Tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains and associated funerary objects should submit a written request to TVA. If no additional requestors come forward, transfer of control of the human remains and associated funerary objects to the Indian Tribes or Native Hawaiian organizations stated in this notice may proceed.

DATES: Representatives of any Indian Tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains and associated funerary objects should submit a written request with information in support of the request to TVA at the address in this notice by June 3, 2019.

ADDRESSES: Dr. Thomas O. Maher, TVA, 400 West Summit Hill Drive, WT11C, Knoxville, TN 37902-1401, telephone (865) 632-7458, email tomaher@tva.gov.

SUPPLEMENTARY INFORMATION: Notice is here given in accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), 25 U.S.C. 3003, of the completion of an inventory of human remains and associated funerary objects under the control of

Tennessee Valley Authority, Knoxville, TN. The human remains and associated funerary objects were removed from archeological sites in Jackson and Marshall Counties, AL.

This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA, 25 U.S.C. 3003(d)(3) and 43 CFR 10.11(d). The determinations in this notice are the sole responsibility of the museum, institution, or Federal agency that has control of the Native American human remains and associated funerary objects. The National Park Service is not responsible for the determinations in this notice.

Consultation

A detailed assessment of the human remains was made by TVA professional staff in consultation with representatives of the Absentee-Shawnee Tribe of Oklahoma; Alabama-Coushatta Tribe of Texas (previously listed as the Alabama-Coushatta Tribes of Texas); Cherokee Nation; Coushatta Tribe of Louisiana; Eastern Band of Cherokee Indians; Poarch Band of Creeks (previously listed as the Poarch Band of Creek Indians of Alabama); The Chickasaw Nation; The Choctaw Nation of Oklahoma; The Muscogee (Creek) Nation; The Seminole Nation of Oklahoma; and the United Keetoowah Band of Cherokee Indians in Oklahoma (hereafter referred to as "The Consulted Tribes").

History and Description of the Remains

Many of the sites listed in this notice were excavated as part of TVA's Guntersville Reservoir project by the Alabama Museum of Natural History (AMNH) at the University of Alabama, using labor and funds provided by the Works Progress Administration. Details regarding these excavations and sites may be found in "An Archaeological Survey of Guntersville Basin on the Tennessee River in Northern Alabama," a report by William S. Webb and Charles G. Wilder. The human remains and associated funerary objects excavated from the sites listed in this notice have been in the physical custody of the AMNH at the University of Alabama since they were excavated.

From July to December of 1938, human remains representing, at minimum, five individuals were removed from the Snodgrass site (1JA101) in Jackson County, AL. TVA acquired the site on October 17, 1938. Excavations revealed occupations from the Late Woodland to the Mississippian period. The human remains include adults, juveniles, and infants. No known

individuals were identified. No associated funerary objects are present.

From July 1973 to September 1974, human remains representing, at minimum, 13 individuals were removed from the Bellefonte site, 1JA300, in Jackson County, AL, as part of the construction of the Bellefonte Nuclear plant. TVA purchased the land encompassing the site on June 21, 1937. Artifacts recovered from the site indicate occupations in the Archaic period (7500-1000 B.C.), Colbert phase (300 B.C.-A.D. 100), and Langston phase (A.D. 900-1200). The human remains include adults, juveniles, and children of both sexes. No known individuals were identified. The 18 associated funerary objects are 17 shell beads and one shell gorget.

In 1973, human remains representing, at minimum, 29 individuals were removed from the Widows Creek site, 1JA305, in Jackson County, AL, as part of the expansion of TVA's Widows Creek power plant. TVA purchased the land encompassing this site on September 12, 1943. Multiple calibrated radiocarbon dates from this site indicated Early Woodland (600-100 B.C.) and Late Woodland (A.D. 500-1100) occupations. The human remains include adults, juveniles, and infants of both sexes. No known individuals were identified. The 347 associated funerary objects are 98 copper beads; one bifurcated deer bone; 33 bivalvia; one bone fragment; one polished and carved bone fragment; one bone pin; five polished and burned bones; two modified deer bone; 28 gastropods; one greenstone celt fragment; one limestone biface; one limestone hoe; three chipped limestone tools; one ground limestone; 25 Long Branch Fabric Marked sherds; 28 Mulberry Creek Plain jar sherds; 112 shell beads; three shell gorget fragments; one tubular bone bead; and one unidentified bone.

In July 1973, human remains representing, at minimum, 94 individuals were removed from the Williams Landing site, 1JA306, Jackson County, AL, as part of a planned channelization of an adjacent creek. TVA purchased the site on August 18, 1937. A mound and sub-mound midden were excavated. Although there are no radiocarbon dates for this site, artifacts recovered from the site indicate a Middle Woodland burial mound with two intrusive Mississippian burials. The human remains include adults, juveniles, and infants of both sexes. No known individuals were identified. The 2,851 associated funerary objects are one bone awl; one limestone hoe; two PP/K; 2,846 shell beads; and one shell pendant.

From May to June 1938, human remains representing, at minimum, 21 individuals were removed from the Deposit Landing site, 1MS14, in Marshall County, AL. TVA acquired the site on April 10, 1937, as part of the Guntersville Reservoir project. Excavations revealed occupations from the Copena (A.D. 100–500) and Flint River (A.D. 500–1000) phases. The human remains include adults, juveniles, and infants of both sexes. No known individuals were identified. The 159 associated funerary objects are one bone awl; three modified bone fragments; one bone needle; one bone beamer fragment; 50 Mulberry Creek Plain sherds; and 103 shell beads.

From May to August, 1937, human remains representing, at minimum, 47 individuals were removed from the McKee Island site, 1MS32, in Marshall County, AL. TVA acquired the site on November 12, 1936, as part of the Guntersville Reservoir project. This midden-rich village extended 800 feet along a ridge of the now inundated McKee Island. Although there are no radiocarbon dates from this site, ceramics recovered from 1MS32 indicate occupations during the Colbert (300 B.C.–A.D. 100), Flint River (A.D. 500–1000), and Crow Creek (A.D. 1500–1650) phases. Trade goods from Euro-American origins indicate a historic Native American occupation. The human remains include adults, juveniles, and infants of both sexes. No known individuals were identified. The two associated funerary objects are one Sykes projectile and one shell pin.

From May to June, 1938, human remains representing, at minimum, 29 individuals were removed from the Houston site, 1MS43, in Marshall County, AL. TVA acquired the site on March 10, 1938 as part of the Guntersville Reservoir project. There was evidence that this prehistoric Native American site had been disturbed by pits dug during the Civil War. Although there are no radiocarbon dates from this site, the ceramics indicate occupations during the Copena (A.D. 100–500), Flint River (A.D. 500–1000), and Henrys Island (A.D. 1200–1450) phases. The human remains include adults, juveniles, and infants of both sexes. No known individuals were identified. The 87 associated funerary objects are one Hamilton PP/K; six iron cut nails; 79 shell beads; and one modern umbrella stretcher tip.

From March 3 to April 15, 1937, human remains representing, at minimum, two individuals were removed from site 1MS49 in Marshall County, AL. TVA initiated purchase of the site on June 12, 1936 as part of the

Guntersville Reservoir project. This was one of several mound sites that have become known as the Roden Mounds (1MS47, 1MS48, 1MS49, 1MS50, 1MS51, 1MS53 and 1MS53A). All these mounds are thought to date to the Copena phase (A.D. 100–500). In 1937, the mound was 40 x 60 feet at the base and 4.5 feet in height. Excavation was primarily by vertical slicing with occasional horizontal blocks. One fire pit was identified. Additional features might have once held human remains, but evidence of human remains was lacking at the time of excavation. One individual was 13–15 years of age and of unknown sex. The second was an adult 18 years of age or older, and of unknown sex. No known individuals were identified. No associated funerary objects are present.

From February 23 to March 18, 1939, human remains representing, at minimum, 12 individuals were removed from site 1MS51 in Marshall County, AL. TVA initiated purchase of the site on June 12, 1936 as part of the Guntersville Reservoir project. This was one of several mound sites that have become known as the Roden Mounds (1MS47, 1MS48, 1MS49, 1MS50, 1MS51, 1MS53 and 1MS53A). All these mounds are thought to date to the Copena phase (A.D. 100–500). In 1939, the mound was 60 feet in diameter at the base and 1.3 feet in height. Excavation was primarily by vertical slicing with occasional horizontal blocks. Two midden pits were identified. Additional features might have once held human remains, but evidence of human remains was lacking at the time of excavation. The human remains include adults, juveniles, and one infant, but were too fragmentary to determine sex. No known individuals were identified. The one associated funerary object is a Hamilton projectile point.

From February 26 to 29, 1937, human remains representing, at minimum, three individuals were removed from site 1MS53 in Marshall County, AL. TVA initiated purchase of the site on June 12, 1936, as part of the Guntersville Reservoir project. This was one of several mound sites that have become known as the Roden Mounds (1MS47, 1MS48, 1MS49, 1MS50, 1MS51, 1MS53 and 1MS53A). All these mounds are thought to date to the Copena phase (A.D. 100–500). In 1937, the mound was 60 feet in diameter at the base and 1.5 feet in height. Excavation was primarily by vertical slicing with occasional horizontal blocks. Rectangular features might have once held human remains, but evidence of human remains was lacking at the time of excavation. The

human remains represent adults, but were too fragmentary to determine sex. No known individuals were identified. No associated funerary objects are present.

From March 6 to 20, 1939, human remains representing, at minimum, eight individuals were removed from site 1MS53A in Marshall County, AL. TVA initiated purchase of the site on June 12, 1936, as part of the Guntersville Reservoir project. This was one of several mound sites that have become known as the Roden Mounds (1MS47, 1MS48, 1MS49, 1MS50, 1MS51, 1MS53 and 1MS53A). All these mounds are thought to date to the Copena phase (A.D. 100–500). In 1939, little evidence of the mound remained. Test trenches encountered a midden pit and features that might have held human remains. The human remains represent adults, but were too fragmentary to determine sex. No known individuals were identified. No associated funerary objects are present.

From September 1937 to May 1938, human remains representing, at minimum, 109 individuals were removed from the Henry Island site, 1MS55, in Marshall County, AL. TVA initiated purchase of the site on November 2, 1936, as part of the Guntersville Reservoir project. This site was composed of two earthen mounds and associated village midden. Although there are no radiocarbon dates from this site, artifacts from the excavation suggest occupations during the Copena (A.D. 100–500), Flint River (A.D. 500–1000), Henry Island (A.D. 1200–1500), and Crow Creek (A.D. 1500–1650) phases. The human remains represent adults, juveniles, and infants of both sexes. No known individuals were identified. The 209 associated funerary objects are one Baldwin Plain bowl; six bone awls; one bone billet; 15 bone needles; one bone pin; one unidentified bone; one ceramic elbow pipe; one ground hematite nodule; five Mississippi Plain sherds; 176 shell beads; and one shell cup.

From June to October 1938, human remains representing, at minimum, 141 individuals were removed from the Harris site, 1MS80, in Marshall County, AL. TVA purchased the site on January 26, 1937, as part of the Guntersville Reservoir project. This shell-midden site was excavated through trenches and horizontal blocks. Although there are no radiocarbon dates from this site, artifacts from the excavation suggest occupations during the Copena (A.D. 100–500), Flint River (A.D. 500–1000), and Henry Island (A.D. 1200–1500) phases. The human remains represent adults, juveniles, and infants of both

sexes. No known individuals were identified. The 6,501 associated funerary objects are two crinoid stems; one Hamilton PP/K; six freshwater pearl beads; two chert preforms; 6,489 shell beads; and one shell pendant.

In January 1939, human remains representing, at minimum, 32 individuals were removed from the Halls site, 1MS107, in Marshall County, AL. TVA purchased the site on April 14, 1937, as part of the Guntersville Reservoir project. This village site was shallow, and had been disturbed by river erosion. Although there are no radiocarbon dates from this site, artifacts from the excavation suggest occupations during the Colbert (300 B.C.–A.D. 100), Flint River (A.D. 500–1000), and Henry Island (A.D. 1200–1500) phases. The human remains represent adults, juveniles, and infants of both sexes. No known individuals were identified. No associated funerary objects are present.

From January to March, 1940, human remains representing, at minimum, 60 individuals were removed from the McDonald site, 1MS147, in Marshall County, AL. TVA acquired the site on August 5, 1938, as part of the Guntersville Reservoir project. This site was composed of both a village and a mound. Although there are no radiocarbon dates from this site, the artifacts indicate that it was primarily occupied during the Copena phase (A.D. 100–500). The human remains were fragmentary, but include adults, juveniles, and infants of both sexes. No known individuals were identified. The 64 associated funerary objects are four chert bifaces; one clay sample; one conch shell; one conch shell cup; one cortical chert debitage; one galena nodule; one greenstone hoe; eight chert preforms; 37 shell beads; three soil samples; one steatite bowl; and five vessel sherds.

From 1933 to 1934, human remains representing, at minimum, four individuals were removed from site 1JA17 in Jackson County, AL. A recent examination of the materials collected during surveys of north Alabama conducted in anticipation of the construction of TVA reservoirs identified human remains combined with animal bones. Although these north Alabama sites are prehistoric Native American, nothing else is known about them. No known individuals were identified. No associated funerary objects are present.

From 1933 to 1934, human remains representing, at minimum, seven individuals were removed from sites 1MS42, 1MS56, 1MS73, 1MS74, 1MS76, 1MS78, 1MS79, in Marshall County, AL.

A recent examination of the materials collected during surveys of north Alabama conducted in anticipation of the construction of TVA reservoirs identified human remains combined with animal bones. Although these north Alabama sites are prehistoric Native American, nothing else is known about them. No known individuals were identified. No associated funerary objects are present.

At the time of the excavation and removal of these human remains and associated funerary objects, the land from which the remains and objects were removed was not the tribal land of any Indian Tribe or Native Hawaiian organization. In May 2018, TVA consulted with all Indian Tribes who are recognized as aboriginal to the area from which these Native American human remains and associated funerary objects were removed. These Tribes are the Cherokee Nation; Eastern Band of Cherokee Indians; and the United Keetoowah Band of Cherokee Indians in Oklahoma. None of these Indian Tribes agreed to accept control of the human remains and associated funerary objects. In May 2018, TVA agreed to transfer control of the human remains and associated funerary objects to the Alabama-Coushatta Tribe of Texas (previously listed as the Alabama-Coushatta Tribes of Texas); Alabama-Quassarte Tribal Town; Coushatta Tribe of Louisiana; and The Muscogee (Creek) Nation.

Determinations Made by the Tennessee Valley Authority

Officials of the Tennessee Valley Authority have determined that:

- Pursuant to 25 U.S.C. 3001(9), the human remains described in this notice are Native American, based on their presence in prehistoric archeological sites and osteological analysis.
- Pursuant to 25 U.S.C. 3001(9), the human remains described in this notice represent the physical remains of 616 individuals of Native American ancestry.
- Pursuant to 25 U.S.C. 3001(3)(A), the 10,239 objects described in this notice are reasonably believed to have been placed with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- Pursuant to 25 U.S.C. 3001(2), a relationship of shared group identity cannot be reasonably traced between the Native American human remains and associated funerary objects and any present-day Indian Tribe.
- Pursuant to 43 CFR 10.11(c)(2)(i), the disposition of the human remains and associated funerary objects may be

to the Alabama-Coushatta Tribe of Texas (previously listed as the Alabama-Coushatta Tribes of Texas); Alabama-Quassarte Tribal Town; Coushatta Tribe of Louisiana; and The Muscogee (Creek) Nation.

Additional Requestors and Disposition

Representatives of any Indian Tribe or Native Hawaiian organization not identified in this notice that wish to request transfer of control of these human remains and associated funerary objects should submit a written request with information in support of the request to Dr. Thomas O. Maher, TVA, 400 West Summit Hill Drive, WT11C, Knoxville, TN 37902–1401, telephone (865) 632–7458, email tomaher@tva.gov, by June 3, 2019. After that date, if no additional requestors have come forward, transfer of control of the human remains and associated funerary objects to the Alabama-Coushatta Tribe of Texas (previously listed as the Alabama-Coushatta Tribes of Texas); Alabama-Quassarte Tribal Town; Coushatta Tribe of Louisiana; and The Muscogee (Creek) Nation may proceed.

The Tennessee Valley Authority is responsible for notifying The Consulted Tribes that this notice has been published.

Dated: April 4, 2019.

Notice of Intent To Repatriate Cultural Items: Autry Museum of the American West, Los Angeles, CA

AGENCY: National Park Service, Interior.
ACTION: Notice.

SUMMARY: The Autry Museum of the American West, in consultation with the appropriate Indian Tribes or Native Hawaiian organizations, has determined that the cultural items listed in this notice meet the definition of sacred objects and objects of cultural patrimony. Lineal descendants or representatives of any Indian Tribe or Native Hawaiian organization not identified in this notice that wish to claim these cultural items should submit a written request to the Autry Museum of the American West. If no additional claimants come forward, transfer of control of the cultural items

to the lineal descendants, Indian Tribes, or Native Hawaiian organizations stated in this notice may proceed.

DATES: Lineal descendants or representatives of any Indian Tribe or Native Hawaiian organization not identified in this notice that wish to claim these cultural items should submit a written request with information in support of the claim to the Autry Museum of the American West at the address in this notice by June 3, 2019.

ADDRESSES: Lylliam Posadas, Autry Museum of the American West, 4700 Western Heritage Way, Los Angeles, CA 90027, telephone (323) 495-4369, email lposadas@theautry.org.

SUPPLEMENTARY INFORMATION: Notice is here given in accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), 25 U.S.C. 3005, of the intent to repatriate cultural items under the control of the Autry Museum of the American West, Los Angeles, CA, that meet the definition of sacred objects and objects of cultural patrimony under 25 U.S.C. 3001.

This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA, 25 U.S.C. 3003(d)(3). The determinations in this notice are the sole responsibility of the museum, institution, or Federal agency that has control of the Native American cultural items. The National Park Service is not responsible for the determinations in this notice.

History and Description of the Cultural Items

In 1918, staff at the Southwest Museum of the American Indian acquired two dance belts through an exchange with a private collector, Mr. E.G. Johnson. Museum records state that both dance belts were collected from Somes Bar, in Siskiyou County, CA, and are Karuk. The collections from the Southwest Museum of the American Indian are now the Southwest Museum Collection at the Autry Museum of the American West. The two cultural items, an otter fur dance belt and a woven horsehair dance belt, have been identified as Karuk, and as both sacred objects and objects of cultural patrimony.

The two dance belts are culturally associated with the Karuk Tribe (previously listed as the Karuk Tribe of California). The otter fur dance belt is constructed of otter fur lined with deerskin. It is decorated with fringes of deerskin thongs attached in bunches and strung with deer hooves, olivella shells, pine nuts, and glass trade beads. The woven horsehair dance belt is

constructed of woven black horsehair with zigzag lines of deer thongs tied into a thick top and bottom border. The end loops are wrapped with braided porcupine quills dyed yellow. Consultation with Karuk representatives indicated that both belts were collected from Karuk ancestral territory. Karuk representatives further described how the style of the belts and the materials used to create them are typical of Karuk regalia. Anthropological, historical, and geographic information culturally associate the belts to the Karuk Tribe (previously listed as the Karuk Tribe of California).

Karuk representatives described during consultation that the ornamentation on the belts indicated they were made as regalia for the adolescent girls' coming of age ceremony, the Flower Dance. As they are specific ceremonial objects that are required by the Karuk Tribe (previously listed as the Karuk Tribe of California) to properly practice traditional religious ceremonial dances and prayers for the Flower Dance these two items are sacred objects.

The cultural information provided through consultation, supported by historical and anthropological sources, demonstrates that these belts are also objects of cultural patrimony. These belts have ongoing historical, traditional, and cultural importance to the Karuk Tribe (previously listed as the Karuk Tribe of California). Karuk representatives explained during consultation that regalia pieces, although cared for and used by individuals, were owned collectively and could not be sold or traded by individuals.

In 1934, Anita Baldwin donated one deerskin dress to the Southwest Museum of the American Indian as part of the Jane Virginia Dexter Baldwin Memorial Collection. That collection is now owned by the Autry Museum of the American West. Museum records state that the dress was collected in Sandy Bar in Humboldt County, CA, and is Karuk. This dress has been identified as Karuk, and as both a sacred object and object of cultural patrimony.

The dress is constructed from deerskin, with thick deerskin fringe at one end, and an ornamented row of large red abalone shell pendants and smaller chione shell pendants on the opposite end. The shell fringe also has brass thimbles, brass bells, coins, and tin and bronze pendants attached throughout the fringe. Above the shell fringe is a border of woven fibers dyed in a repeating pattern of plain, black, and red. Consultation with Karuk representatives identified this dress as

being from Karuk ancestral territory and possessing characteristics typical of Karuk regalia. According to the Karuk representatives, the unusually small size for a dress with such extensive and detailed ornamentation indicates the dress has been worn by a prominent Karuk doctor who began her training as a young child. The small dimensions of the dress and the great number and variety of shell and metal pendants on the fringe support this conclusion. Anthropological, historical, geographic and oral history information support a cultural affiliation of the Karuk Tribe (previously listed as the Karuk Tribe of California) with this dress.

Karuk representatives stated during consultation that this dress was used in doctoring ceremonies by its previous caretaker, including the Brush Dance, a healing ceremony. As this dress is a specific ceremonial object required by the Karuk Tribe (previously listed as the Karuk Tribe of California) to properly practice traditional religious dances, prayers, and healing ceremonies, including but not limited to the Brush Dance, this item is a sacred object.

The cultural information provided through consultation, and supported by historical and anthropological sources, demonstrates that this dress is also an object of cultural patrimony. This dress has ongoing historical, traditional, and cultural importance to the Karuk. Karuk representatives explained during consultation that regalia pieces, although cared for and used by individuals, were owned collectively and could not be sold or traded by individuals. This particular dress is made especially significant due to its association with a notable figure in Karuk history. Regalia of added significance, such as this dress, are granted considerable collective care, and are especially important to Karuk to maintain.

In 1938, Homer E. Sargent donated one pipe and one leather pouch (which are counted as one set) to the Southwest Museum of the American Indian. Museum records state that the pipe and its pouch are from Camp Creek in Humboldt County, CA, and are Karuk. The collections from the Southwest Museum of the American Indian are now the Southwest Museum Collection at the Autry Museum of the American West. The pipe and its case have been identified as Karuk, and as sacred objects and objects of cultural patrimony.

The pipe and its pouch are culturally associated with the Karuk Tribe (previously listed as the Karuk Tribe of California). The pipe is carved from a dark wood with a greenish steatite bowl

inserted at the end. The bowl contains tobacco residue. The pouch is made of deerskin sewn with sinew and with a thong tie. There is a small amount of tobacco at the bottom of the pouch. Karuk representatives explained during consultation that this pipe and its pouch were collected from ancestral Karuk territory, and that the design and construction materials were typical of Karuk ceremonial pipes and pouches. Anthropological, geographic, and historical information support a cultural affiliation of the Karuk Tribe (previously listed as the Karuk Tribe of California) to the pipe and pouch.

Karuk representatives explained during consultation that this pipe and pouch were primarily used during the War Dance. Karuk representatives also stated that the leather pouch is meant to keep the pipe safe, that it should not be treated as separate from the pipe, and therefore, that the pipe and pouch comprise one set. As both the pipe and its case are specific ceremonial objects required by the Karuk to properly perform traditional religious ceremonies and prayers for the War Dance, these items are sacred objects.

The cultural information provided through consultation, supported by historical and anthropological sources, demonstrates that this pipe and pouch are also objects of cultural patrimony. They have ongoing historical, traditional, and cultural importance to the Karuk Tribe (previously listed as the Karuk Tribe of California). Karuk representatives explained during consultation that medicine pieces, although cared for and used by individuals, were owned collectively, and could not be sold or traded by individuals.

In 1939, Ben and Everett Wilder sold one large obsidian blade to the Southwest Museum of the American Indian, whose collections are now owned by the Autry Museum of the American West. Museum records state that the blade was collected from Orleans in Humboldt County, CA, and is Karuk. The Museum purchased the blade for the General Charles McC. Reeves Collection, funded by General Reeves. The blade has been identified as Karuk, and as a sacred object and object of cultural patrimony.

The blade is made from flaked obsidian, and measures 33.5 inches in length and six inches at its widest. Karuk representatives stated that the blade was collected from ancestral Karuk territory, and that the size, material, and design of the blade is typical of Karuk ceremonial blades. Anthropological, historical and geographic information demonstrate

that the Karuk Tribe (previously listed as the Karuk Tribe of California) is culturally affiliated to this blade.

Karuk representatives explained during consultation that this blade was used during the White Deerskin Dance, where large ceremonial obsidian blades are carried by the participants who lead the dance. As it is a specific ceremonial object and is required by the Karuk Tribe (previously listed as the Karuk Tribe of California) to properly perform the traditional religious dances and prayers for the White Deerskin Dance, this item is a sacred object.

The cultural information provided through consultation, supported by historical, archeological and anthropological sources, demonstrates that this blade meets the category definition for objects of cultural patrimony. This blade has an ongoing historical, traditional, and cultural importance to the Karuk Tribe (previously listed as the Karuk Tribe of California). Karuk representatives explained during consultation that medicine pieces, although cared for and used by individuals, were owned collectively and could not be sold or traded by individuals.

In 1932, Grace Nicholson donated three cultural items consisting of one wooden stool, one bow, and one bone whistle to the Southwest Museum of the American Indian. Museum records note that these cultural items were collected from Northern California, and are Karuk. The collections from the Southwest Museum of the American Indian are now the Southwest Museum Collection at the Autry Museum of the American West. These cultural items have been identified as Karuk, and as sacred objects and objects of cultural patrimony.

The stool is made from carved wood and has no legs. Its flared flat base measures 28.5 inches, and its flat top measures 12.5 inches. Karuk representatives indicated during consultation that Karuk ancestral territory is located within Northern California, and that this stool, based on its style and shape, was used during the World Renewal Ceremony by Karuk priests in sweathouses. Karuk representatives also described a past theft of such a stool. Anthropological, historical, and oral history information support the cultural affiliation of the Karuk Tribe (previously listed as the Karuk Tribe of California) to this stool.

As this stool is a specific ceremonial object, and is required by the Karuk to properly perform the traditional religious practices associated with the World Renewal Ceremony, it is a sacred object.

The cultural information provided through consultation, supported by historical and anthropological sources, demonstrates that this stool is also an object of cultural patrimony. This stool has an ongoing historical, traditional, and cultural importance to the Karuk Tribe (previously listed as the Karuk Tribe of California). Karuk representatives explained during consultation that such medicine pieces, although cared for and used by individuals, were owned collectively and could not be sold or traded by individuals.

The bow is made of yew wood, wrapped with a deerskin strip in the center. A feather has been inserted into the wrapping. It is bound with sinew at the ends and is painted red, white and blue. Karuk representatives described during consultation how the markings on the bow differentiated it from utilitarian bows, and that the bow was used in ritual shooting for the War Dance. Anthropological, historical and oral history information support cultural affiliation of the Karuk Tribe (previously listed as the Karuk Tribe of California) to this bow.

This bow meets the definition for sacred objects because it is a specific ceremonial object required by the Karuk Tribe (previously listed as the Karuk Tribe of California) to properly perform the traditional religious practices associated with the War Dance.

The cultural information provided through consultation, supported by historical and anthropological sources, demonstrates that the bow is also an object of cultural patrimony. This bow has an ongoing historical, traditional, and cultural importance to the Karuk Tribe (previously listed as the Karuk Tribe of California). Karuk representatives explained during consultation that regalia pieces, although cared for and used by individuals, were owned collectively, and could not be sold or traded by individuals.

The bone whistle is made from bird bone, possibly California condor, and has a rectangular cut in the center that is bound with fiber around one edge of the cut. It has a notched resin plug inside one end. Karuk representatives indicated during consultation that bone whistles are used in many ceremonies to start dances, most notably the Brush Dance and the White Deerskin Dance. Archaeological, anthropological, historical and oral history information support the cultural affiliation of the Karuk Tribe (previously listed as the Karuk Tribe of California) to this whistle.

As the whistle is a specific ceremonial object that is required by the Karuk Tribe (previously listed as the Karuk Tribe of California) to properly practice traditional religious ceremonial dances and prayers for the Brush Dance and the White Deerskin Dance, it is a sacred object.

The cultural information provided through consultation, supported by historical and anthropological sources, demonstrates that this whistle is also an object of cultural patrimony. This whistle has an ongoing historical, traditional, and cultural importance to the Karuk Tribe (previously listed as the Karuk Tribe of California). Karuk representatives explained during consultation that such medicine items, although cared for and used by individuals, were owned collectively and could not be sold or traded by individuals.

In 1934, Anita Baldwin donated seven cultural items to the Southwest Museum of the American Indian, whose collections are now owned by the Autry Museum of the American West. The seven cultural items are one rattle wand, one deerskin, two netted hangers, one case for feathers, one grass apron, and one bow with six arrows. Museum records state that these items are from Northern California, and are Karuk. These cultural items have all been identified as culturally affiliated with the Karuk Tribe (previously listed as the Karuk Tribe of California), and as sacred objects and objects of cultural patrimony.

The rattle wand is made from a long wooden stick with one end split into several thin pieces that rattle when shaken. The deerskin head is stuffed with natural fibers, it has beads, woodpecker feathers and abalone shell pieces attached to it. The two netted hangers are made from natural fibers, with painted red and blue geometric designs and feathers attached at the end. The case for feathers is made from a mat of herbs that can be rolled to wrap feathers. The grass apron is made from cedar berries and beads strung on threads wrapped in woven grass. The threads are tipped with pine nuts, metal pendants and abalone shell pieces. The bow is made of yew wood with sinew wrapped in the center. It is painted with black and red designs. The six arrows are feathered, and have stone points. Karuk representatives stated during consultation that the bow and arrows were not to be separated, and therefore should be counted as one set. Karuk representatives also indicated during consultation that Karuk ancestral territory is located within Northern California, where these items were

collected. Karuk representatives also stated during consultation that all seven cultural items have stylistic and material characteristics typical of Karuk regalia and medicine items. Anthropological, historical and oral history information support the cultural affiliation of the Karuk Tribe (previously listed as the Karuk Tribe of California) to these seven cultural items.

As these seven items are specific ceremonial objects and are required by the Karuk Tribe (previously listed as the Karuk Tribe of California) to properly practice traditional religious ceremonial dances, they are sacred objects. Consultation with Karuk representatives established that the rattle wand was used in the Flower Dance, the deerskin, both netted hangers and the case for feathers were used in the White Deerskin Dance, the grass apron was used in the Brush Dance, and the bow and arrows were used in the War Dance.

The cultural information provided through consultation, supported by historical and anthropological sources, demonstrates that these seven cultural items are also objects of cultural patrimony. These items have ongoing historical, traditional, and cultural importance to the Karuk Tribe (previously listed as the Karuk Tribe of California). Karuk representatives explained during consultation that regalia and medicine pieces, although cared for and used by individuals, were owned collectively and could not be sold or traded by individuals.

In 1939, four jump dance baskets were donated to the Southwest Museum of the American Indian, whose collections are now owned by the Autry Museum of the American West. Museum records state that all four jump dance baskets were collected from Northern California, and are Karuk. Three of the four jump dance baskets were donated by Col. John Hudson Poole to create the Caroline Boeing Poole Collection, (named after his wife). One of the four jump dance baskets was donated by Florence Lee to create the H. Shumway Lee Collection, (named after her brother). These cultural items have all been identified as Karuk, and as sacred objects and objects of cultural patrimony.

Karuk representatives indicated during consultation that the four jump dance baskets have stylistic and materials characteristics typical of Karuk Jump Dance baskets. Karuk representatives also stated that ancestral Karuk territory is located in Northern California where these baskets were collected. Anthropological and historical information support the cultural affiliation of the Karuk Tribe

(previously listed as the Karuk Tribe of California) to these four jump dance baskets.

As these four jump baskets are specific ceremonial objects and are required by the Karuk Tribe (previously listed as the Karuk Tribe of California) to properly practice traditional religious ceremonial dances and prayers for the Jump Dance, they are sacred objects. Karuk representatives stated during consultation that due to the designs on the baskets, the characteristics of their construction, and evidence of wear from use, these jump dance baskets were used in the Jump Dance and were not made for sale. Anthropological and historical information also demonstrate that these objects are Karuk objects used in the Jump Dance.

The cultural information provided through consultation, supported by historical and anthropological sources, demonstrates that these four jump dance baskets are also objects of cultural patrimony. These jump dance baskets have ongoing historical, traditional, and cultural importance to the Karuk Tribe (previously listed as the Karuk Tribe of California). Karuk representatives explained during consultation that regalia and medicine pieces, although cared for and used by individuals, were owned collectively and could not be sold or traded by individuals.

In 1947, Dr. Rev. Charles W. Baker sold 11 cultural items to the Southwest Museum of the American Indian, whose collections are now owned by the Autry Museum of the American West. Museum records state that all 11 cultural items were collected from Northern California along the Klamath River, where Dr. Rev. Baker worked as a missionary. The 11 cultural items consist of one head ring made of deerskin and woodpecker feathers, two eagle down head plumes (which are counted as one set), one headband made from porcupine quills, two headbands made from sea lion teeth, one dance apron made from a ring-tail pelts, one quiver made from fisher pelt and eight arrows counted as one set, one wolf hair blinder, two otter fur blinders worn together (which are counted as one set), and two hangers made from woven plant fibers with feathers at the end. Museum records described all 11 items as Karuk. These cultural items have all been identified as Karuk and as sacred objects and objects of cultural patrimony.

Karuk representatives indicated during consultation that the 11 cultural items have stylistic and materials characteristics typical of Karuk regalia and medicine items. Karuk representatives also stated that ancestral

Karuk territory is located in Northern California, where these items were collected. Anthropological and historical information support the cultural affiliation of the Karuk Tribe (previously listed as the Karuk Tribe of California) to these 11 cultural items.

As these items are specific ceremonial objects, and are required by the Karuk Tribe (previously listed as the Karuk Tribe of California) to properly practice traditional religious ceremonial dances, they are sacred objects. Karuk representatives described during consultation that the head ring made from deerskin and woodpecker feathers, the pair of eagle down head plumes, and the pair of otter fur blinders were used in the Brush Dance. The two headbands made from sea lion teeth, the apron made from ring-tail pelts, the wolf hair blinder, and the two woven hangers were used in the White Deerskin Dance. The headband made from porcupine quills was used in the Jump Dance, and the quiver made from fisher pelt with its eight arrows was used in the War Dance. Anthropological and historical information also demonstrate that these items are Karuk objects used in specific ceremonies.

The cultural information provided through consultation, further supported by historical and anthropological sources, demonstrates that these 11 cultural items are also objects of cultural patrimony. These items have ongoing historical, traditional, and cultural importance to the Karuk Tribe (previously listed as the Karuk Tribe of California). Karuk representatives explained during consultation that regalia and medicine pieces, although cared for and used by individuals, were owned collectively and could not be sold or traded by individuals.

In 1934, Anita Baldwin donated one deerskin dress to the Southwest Museum of the American Indian, to be added to the Jane Virginia Dexter Baldwin Memorial Collection. This collection is now part of the Southwest Museum Collection owned by the Autry Museum of the American West. Museum records describe the dress as Karuk. There is no documentation for where the dress was collected. This cultural item has been identified as Karuk, and as a sacred object and object of cultural patrimony.

Consultation with Karuk representatives determined that this deerskin dress is Karuk due to the characteristics of its construction, its overall style, and the materials used to create it, which include brass thimbles and bivalve shells attached to a grass netting. Anthropological and historical sources support the cultural affiliation

of the Karuk Tribe (previously listed as the Karuk Tribe of California) to this dress.

As this deerskin dress is a specific ceremonial object, required by the Karuk Tribe (previously listed as the Karuk Tribe of California) to properly practice traditional religious ceremonial dances and prayers for the Brush Dance, it is a sacred object. Anthropological and historical information also demonstrate that this object is a Karuk object used in the Brush Dance.

The cultural information provided through consultation, further supported by historical and anthropological sources, demonstrates that this deerskin dress is also an object of cultural patrimony. This deerskin dress has an ongoing historical, traditional, and cultural importance to the Karuk. Karuk representatives explained during consultation that regalia pieces, although cared for and used by individuals, were owned collectively and could not be sold or traded by individuals.

In 1985, Craig Bates donated one dentalium necklace to the Southwest Museum of the American Indian, whose collections are now owned by the Autry Museum of the American West. Museum records state that Craig Bates acquired the necklace from a dealer in central Oregon, who described the necklace as Karuk. Museum records do not identify where the necklace was originally collected. This cultural item has been identified as Karuk, and as a sacred object and object of cultural patrimony.

Consultation with Karuk representatives determined that this dentalium necklace is Karuk due to the style of the necklace, and the materials used to create it, which include incised dentalium, glass trade beads, and strips of fur. Karuk representatives also indicated during consultation that this dentalium necklace is regalia use in the proper practice of the World Renewal Ceremony. Archaeological, anthropological and historical information support the cultural affiliation of the Karuk Tribe (previously listed as the Karuk Tribe of California) to this dentalium necklace.

As this dentalium necklace is a specific ceremonial object, and is required by the Karuk Tribe (previously listed as the Karuk Tribe of California) to properly practice traditional religious ceremonial dances and prayers for the World Renewal Ceremony, it is a sacred object. Anthropological and historical information also demonstrate that this necklace is a Karuk object used in a specific ceremony.

The cultural information provided through consultation, supported by historical and anthropological sources, demonstrates that this dentalium necklace meets the category definition for objects of cultural patrimony. This necklace has an ongoing historical, traditional, and cultural importance to the Karuk Tribe (previously listed as the Karuk Tribe of California). Karuk representatives explained during consultation that regalia pieces, although cared for and used by individuals, were owned collectively and could not be sold or traded by individuals.

Determinations Made by the Autry Museum of the American West

Officials of the Autry Museum of the American West have determined that:

- Pursuant to 25 U.S.C. 3001(3)(C), the 32 cultural items described above are specific ceremonial objects needed by traditional Native American religious leaders for the practice of traditional Native American religions by their present-day adherents.

- Pursuant to 25 U.S.C. 3001(3)(D), the 32 cultural items described above have ongoing historical, traditional, or cultural importance central to the Native American group or culture itself, rather than property owned by an individual.

- Pursuant to 25 U.S.C. 3001(2), there is a relationship of shared group identity that can be reasonably traced between the sacred objects and objects of cultural patrimony and the Karuk Tribe (previously listed as the Karuk Tribe of California).

Additional Requestors and Disposition

Lineal descendants or representatives of any Indian Tribe or Native Hawaiian organization not identified in this notice that wish to claim these cultural items should submit a written request with information in support of the claim to Lylliam Posadas, Autry Museum of the American West, 4700 Western Heritage Way, Los Angeles, CA 90027, telephone (323) 495-4369, email lposadas@theautry.org, by June 3, 2019. After that date, if no additional claimants have come forward, transfer of control of the sacred objects and objects of cultural patrimony to Karuk Tribe (previously listed as the Karuk Tribe of California) may proceed.

The Autry Museum of the American West is responsible for notifying the Karuk Tribe (previously listed as the Karuk Tribe of California) that this notice has been published.

Dated: April 9, 2019.

BILLING CODE 4312-52-P

DEPARTMENT OF JUSTICE

[OMB Number 1110-0006]

Agency Information Collection Activities; Proposed eCollection eComments Requested; Law Enforcement Officers Killed or Assaulted: Extension of a Currently Approved Collection

AGENCY: Federal Bureau of Investigation, Department of Justice.

ACTION: 60-Day notice.

SUMMARY: The Department of Justice (DOJ), Federal Bureau of Investigation (FBI), Criminal Justice Information Services Division (CJIS), will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995.

DATES: Comments are encouraged and will be accepted for 60 days until July 2, 2019.

FOR FURTHER INFORMATION CONTACT: Written comments and/or suggestions regarding the items contained in this notice, especially the estimated burden and associated response time, should be directed to Mrs. Amy C. Blasher, Unit Chief, Federal Bureau of Investigation, Criminal Justice Information Services Division, Module E-3, 1000 Custer Hollow Road, Clarksburg, West Virginia 26306. Written comments and/or suggestions can also be sent to the Office of Management and Budget, Office of Information and Regulatory Affairs, Attention: Department of Justice Desk Officer, Washington, DC 20503 or send to OIRA_submissions@omb.eop.gov.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information,

- including the validity of the methodology and assumptions used;
- Evaluate the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses.

Overview of This Information Collection

1. *Type of Information Collection:* Extension of a currently approved collection.

2. *The Title of the Form/Collection:* Law Enforcement Officers Killed or Assaulted.

3. *The agency form number, if any, and the applicable component of the Department sponsoring the collection:* Form Number: 1110-0006. Sponsor: Criminal Justice Information Services Division, Federal Bureau of Investigation, Department of Justice.

4. *Affected public who will be asked or required to respond, as well as a brief abstract:* City, county, state, tribal and federal law enforcement agencies. *Abstract:* Under Title 28, U.S. Code 534, Acquisition, Preservation, and Exchange of Identification Records; Appointments of Officials, 1930, this collection requests Law Enforcement Officers Killed and Assaulted data from city, county, state, federal, and tribal law enforcement agencies in order for the FBI UCR Program to serve as the national clearinghouse for the collection and dissemination of crime data and to publish these statistics in the Law Enforcement Officers Killed and Assaulted annual publication.

5. *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* There are approximately 18,547 law enforcement agency within the universe of potential respondents. Based on current reporting patterns, 10,721 law enforcement agencies would submit monthly resulting in 128,652 responses with an estimated response time of 7 minutes per response on this form. The remaining 7,826 agencies would provide responses through the National Incident-Based Reporting System covered under a different data collection.

6. *An estimate of the total public burden (in hours) associated with the collection:* There are approximately 15,009 hours, annual burden, associated with this information collection.

If additional information is required contact: Melody Braswell, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE, 3E.405A, Washington, DC 20530.

Dated: April 29, 2019.

Melody Braswell,

Department Clearance Officer for PRA, U.S. Department of Justice.

[FR Doc. 2019-08999 Filed 5-2-19; 8:45 am]

BILLING CODE 4410-02-P

DEPARTMENT OF JUSTICE

[OMB Number 1110-0069]

Agency Information Collection Activities; Proposed eCollection eComments Requested; Revision of a Currently Approved Collection Flash/Cancellation/Transfer Notice (I-12)

AGENCY: Department of Justice, Federal Bureau of Investigation, Criminal Justice Information Services Division.

ACTION: 30-Day notice.

SUMMARY: Department of Justice (DOJ), Federal Bureau of Investigation (FBI), Criminal Justice Information Services (CJIS) Division will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. This proposed information collection was previously published in the **Federal Register** Volume xx, Number xxx, pages xx-xx, on Month xx, 2019, allowing for a 60 day comment period.

DATES: Comments are encouraged and will be accepted for an additional 30 days until June 3, 2019.

FOR FURTHER INFORMATION CONTACT: Written comments and/or suggestions regarding the items contained in this notice, especially the estimated public burden and associated response time, should be directed to Gerry Lynn Brovey, Supervisory Information Liaison Specialist, Federal Bureau of Investigation, Criminal Justice Information Services Division, 1000 Custer Hollow Road, Clarksburg, WV 26306, phone: 304-625-4320 or email glbrovey@ic.fbi.gov. Written comments and/or suggestions can also be sent to the Office of Management and Budget, Office of Information and Regulatory Affairs, Attention Department of Justice Desk Officer, Washington, DC 20503 or sent to OIRA_submissions@omb.eop.gov.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Evaluate whether and if so how the quality, utility, and clarity of the information to be collected can be enhanced; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection:* Revision of a currently approved collection.

(2) *Title of the Form/Collection:* Flash/Cancellation/Transfer Notice.

(3) *The agency form number, if any, and the applicable component of the Department sponsoring the collection:* Agency form number I-12.

Sponsoring component: Department of Justice, Federal Bureau of Investigation, Criminal Justice Information Services Division.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: City, county, state, federal and tribal law enforcement agencies. This collection is needed to indicate on an individual's identity history that the individual is being supervised to ensure the supervisory agency is notified of any additional criminal activity. Acceptable data is stored as part of the Next Generation Identification (NGI) system of the FBI.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* It is estimated that 1,171 respondents will complete each form within approximately 8 minutes.

(6) *An estimate of the total public burden (in hours) associated with the collection:* There are an estimated

25,905 total annual burden hours associated with this collection.

If additional information is required contact: Melody Braswell, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE, Suite 3E.405B, Washington, DC 20530.

Dated: April 29, 2019.

Melody Braswell,

Department Clearance Officer for PRA, U.S. Department of Justice.

[FR Doc. 2019-09000 Filed 5-2-19; 8:45 am]

BILLING CODE 4410-02-P

DEPARTMENT OF LABOR

EMPLOYMENT AND TRAINING ADMINISTRATION

Agency Information Collection Activities; Comment Request; Worker Profiling and Reemployment Services Activity and Worker Profiling and Reemployment Services Outcomes

ACTION: Notice.

SUMMARY: The Department of Labor's (DOL's) Employment and Training Administration (ETA) is soliciting comments concerning a proposed extension for the authority to conduct the information collection request (ICR) titled, "Worker Profiling and Reemployment Services Activity and Worker Profiling and Reemployment Services Outcomes." This comment request is part of continuing Departmental efforts to reduce paperwork and respondent burden in accordance with the Paperwork Reduction Act of 1995 (PRA).

DATES: Consideration will be given to all written comments received by July 2, 2019.

ADDRESSES: A copy of this ICR with applicable supporting documentation, including a description of the likely respondents, proposed frequency of response, and estimated total burden, may be obtained free by contacting Lawrence Burns by telephone at 202-693-3141 (this is not a toll-free number), TTY 1-877-889-5627 (this is not a toll-free number), or by email at Burns.Lawrence@dol.gov.

Submit written comments about, or requests for a copy of, this ICR by mail or courier to the U.S. Department of Labor, Employment and Training Administration, Office of Unemployment Insurance Room S-4520, 200 Constitution Avenue NW, Washington, DC 20210, by email at

Burns.Lawrence@dol.gov, or by Fax at 202-693-3975.

SUPPLEMENTARY INFORMATION: DOL, as part of continuing efforts to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and Federal agencies an opportunity to comment on proposed and/or continuing collections of information before submitting them to the Office of Management and Budget (OMB) for final approval. This program helps to ensure requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements can be properly assessed.

ETA is soliciting comments concerning the collection of data in the ETA 9048, Worker Profiling and Reemployment Services Activity Report, and the ETA 9049, Worker Profiling and Reemployment Services Outcomes Report. Authorization for both reports expires on November 30, 2019. The Worker Profiling and Reemployment Services (WPRS) program, mandated by the Unemployment Compensation Amendments of 1993, Public Law 103-152, identifies and ranks unemployment insurance (UI) claimants by their potential for exhausting their benefits before returning to work and refers these claimants to appropriate reemployment services.

WPRS is a required UI activity that each state may operate as a standalone program or integrated within the state's Reemployment Services and Eligibility Assessment Program (RESEA), which is a voluntary reemployment program authorized by Section 306 of the Social Security Act (SSA). Specifically, states participating in the RESEA program may opt to integrate WPRS into the RESEA participant selection process. Additional information about the integration of WPRS into RESEA is available in Unemployment Insurance Program Letter No. 07-19, "Fiscal Year (FY) 2019 Funding Allotments and Operating Guidance for Unemployment Insurance (UI) Reemployment Services and Eligibility Assessment (RESEA) Grants."

The ETA 9048 and ETA 9049 reports are the only means of tracking the activities in the WPRS program. The ETA 9048 report describes the number of claimants at various points in the WPRS system from initial profiling through the completion of specific reemployment services. The ETA 9049 describes the reemployment experience of profiled claimants selected for referral to services by examining the

state's existing wage record files to capture which quarter the individuals who received reemployment services became employed, what wages they earned, and whether the individuals receiving services changed industries. Section 303(a)(6), SSA, authorizes this information collection.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is approved by OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. See 5 CFR 1320.5(a) and 1320.6.

Interested parties are encouraged to provide comments to the contact shown in the **ADDRESSES** section. Comments must be written to receive consideration, and they will be summarized and included in the request for OMB approval of the final ICR. In order to help ensure appropriate consideration, comments should mention OMB Control Number 1205-0353.

Submitted comments will also be a matter of public record for this ICR and posted on the internet, without redaction. DOL encourages commenters not to include personally identifiable information, confidential business data, or other sensitive statements/information in any comments.

DOL is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, (e.g., permitting electronic submission of responses).

Agency: DOL-ETA.

Type of Review: Extension without changes.

Title of Collection: Worker Profiling and Reemployment Services Activity and Worker Profiling and Reemployment Services Outcomes.

Forms: ETA 9048, ETA 9049.

OMB Control Number: 1205-0353.

Affected Public: State Workforce Agencies.

Estimated Number of Respondents: 53.

Frequency: Quarterly.

Total Estimated Annual Responses: 424.

Estimated Average Time per Response: 0.25 hours.

Estimated Total Annual Burden Hours: 106 hours.

Total Estimated Annual Other Cost Burden: \$0.

Authority: 44 U.S.C. 3506(c)(2)(A).

Molly E. Conway,

Acting Assistant Secretary for Employment and Training.

[FR Doc. 2019-09082 Filed 5-2-19; 8:45 am]

BILLING CODE 4510-FW-P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

[OMB Control No. 1219-0039]

Proposed Extension of Information Collection; Gamma Radiation Surveys

AGENCY: Mine Safety and Health Administration, Labor.

ACTION: Request for public comments.

SUMMARY: The Department of Labor, as part of its continuing effort to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed collections of information in accordance with the Paperwork Reduction Act of 1995. This program helps to assure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. Currently, the Mine Safety and Health Administration (MSHA) is soliciting comments on the information collection for Gamma Radiation Surveys.

DATES: All comments must be received on or before July 2, 2019.

ADDRESSES: Comments concerning the information collection requirements of this notice may be sent by any of the methods listed below.

• *Federal E-Rulemaking Portal:* <http://www.regulations.gov>. Follow the on-line instructions for submitting comments for docket number MSHA-2019-0012.

• *Regular Mail:* Send comments to USDOL-MSHA, Office of Standards, Regulations, and Variances, 201 12th Street South, Suite 4E401, Arlington, VA 22202-5452.

• *Hand Delivery:* USDOL-Mine Safety and Health Administration, 201 12th Street South, Suite 4E401, Arlington, VA 22202-5452. Sign in at the receptionist's desk on the 4th floor via the East elevator.

FOR FURTHER INFORMATION CONTACT:

Sheila McConnell, Director, Office of Standards, Regulations, and Variances, MSHA, at MSHA.information.collections@dol.gov (email); 202-693-9440 (voice); or 202-693-9441 (facsimile).

SUPPLEMENTARY INFORMATION:

I. Background

Gamma radiation occurs where radioactive materials are present. It has been associated with lung cancer and other debilitating occupational diseases. Natural sources include rocks, soils, and ground water. Gamma radiation hazards may be found near radiation sources at surface operations using X-ray machines, weightometers, nuclear and diffraction units. Nuclear gauges mounted outside tanks, pipes, bins, hoppers or other types of vessels; gamma rays are used to sense the level and density of liquids, slurries or solids. Gamma rays penetrate the body and can kill or damage cells in their path that can affect many of the body's organs. The adverse health effects from exposure to gamma radiation can vary depending upon the type of cell affected and the extent of damage.

Under Section 103(c) of the Federal Mine Safety and Health Act of 1977 (Mine Act), the Mine Safety and Health Administration (MSHA) is required to “. . . issue regulations requiring operators to maintain accurate records of employee exposures to potentially toxic materials or harmful physical agents which are required to be monitored or measured under any applicable mandatory health or safety standard promulgated under this Act.” In addition, 30 CFR 57.5047(a) requires that gamma radiation surveys be conducted annually in all underground mines where radioactive ores are mined. 30 CFR 57.5047(c) requires that gamma radiation dosimeters be provided for all persons exposed to average gamma radiation measurements in excess of 2.0 milliroentgens per hour in the working

place. This paragraph also requires the operator keep records of cumulative individual gamma radiation exposures.

II. Desired Focus of Comments

MSHA is soliciting comments concerning the proposed information collection related to Gamma Radiation Surveys. MSHA is particularly interested in comments that:

- Evaluate whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information has practical utility;
- Evaluate the accuracy of MSHA's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;
- Suggest methods to enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

The information collection request will be available on <http://www.regulations.gov>. MSHA cautions the commenter against providing any information in the submission that should not be publicly disclosed. Full comments, including personal information provided, will be made available on www.regulations.gov and www.reginfo.gov.

The public may also examine publicly available documents at USDOL–Mine Safety and Health Administration, 201 12th South, Suite 4E401, Arlington, VA 22202–5452. Sign in at the receptionist's desk on the 4th floor via the East elevator.

Questions about the information collection requirements may be directed to the person listed in the **FOR FURTHER INFORMATION** section of this notice.

III. Current Actions

This request for collection of information contains provisions for Gamma Radiation Surveys. MSHA has updated the data with respect to the number of respondents, responses, burden hours, and burden costs supporting this information collection request.

Type of Review: Extension, without change, of a currently approved collection.

Agency: Mine Safety and Health Administration.

OMB Number: 1219–0039.

Affected Public: Business or other for-profit.

Number of Respondents: 3.

Frequency: On occasion.

Number of Responses: 3.

Annual Burden Hours: 6 hours.

Annual Respondent or Recordkeeper

Cost: \$0.

Comments submitted in response to this notice will be summarized and included in the request for Office of Management and Budget approval of the information collection request; they will also become a matter of public record.

Sheila McConnell,

Certifying Officer.

• *Regular Mail:* Send comments to USDOL–MSHA, Office of Standards, Regulations, and Variances, 201 12th Street South, Suite 4E401, Arlington, VA 22202–5452.

• *Hand Delivery:* USDOL–Mine Safety and Health Administration, 201 12th Street South, Suite 4E401, Arlington, VA 22202–5452. Sign in at the receptionist's desk in Suite 4E401 on the 4th floor via the East elevator.

FOR FURTHER INFORMATION CONTACT: Sheila McConnell, Director, Office of Standards, Regulations, and Variances, MSHA, at MSHA.information.collections@dol.gov (email); 202–693–9440 (voice); or 202–693–9441 (facsimile).

SUPPLEMENTARY INFORMATION:

I. Background

On January 23, 2013, the Mine Safety and Health Administration (MSHA) published Pattern of Violations (POV) final rule (78 FR 5056). Under the Mine Act, MSHA is required to issue a pattern of violations notice to any mine operator that demonstrates a disregard for the health and safety of miners through a pattern of significant and substantial violations. A significant and substantial violation is one that contributes to a safety or health hazard that is reasonably likely to result in a reasonably serious injury or illness. The pattern of violations provision helps to ensure that mine operators manage health and safety conditions at mines and find and fix the root causes of significant and substantial violations before they become a hazard to miners. The final rule simplified the pattern of violations criteria, to improve consistency in applying the criteria, and increase the efficiency and effectiveness in issuance of a pattern of violations notice, which will result in a closure order for areas of a mine where a significant and substantial violation occurs. This collection encourages chronic violators to comply with the Mine Act and MSHA's safety and health standards. Paragraph 30 CFR 104.2(a)(8) provides that MSHA will consider mitigating circumstances in determining whether to issue a pattern of violations notice. Among the items MSHA could consider is an approved corrective action program to reduce significant and substantial violations accompanied by positive results.

II. Desired Focus of Comments

MSHA is soliciting comments concerning the proposed information collection related to Pattern of Violations. MSHA is particularly interested in comments that:

- Evaluate whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information has practical utility;

- Evaluate the accuracy of MSHA's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;
- Suggest methods to enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

The information collection request will be available on <http://www.regulations.gov>. MSHA cautions the commenter against providing any information in the submission that should not be publicly disclosed. Full comments, including personal information provided, will be made available on <http://www.regulations.gov> and <http://www.reginfo.gov>.

The public may also examine publicly available documents at USDOL–Mine Safety and Health Administration, 201 12th South, Suite 4E401, Arlington, VA 22202–5452. Sign in at the receptionist's desk in Suite 4E401 on the 4th floor via the East elevator.

Questions about the information collection requirements may be directed to the person listed in the **FOR FURTHER INFORMATION** section of this notice.

III. Current Actions

This request for collection of information contains provisions for Pattern of Violations. MSHA has updated the data with respect to the number of respondents, responses, burden hours, and burden costs supporting this information collection request.

Type of Review: Extension, without change, of a currently approved collection.

Agency: Mine Safety and Health Administration.

OMB Number: 1219–0150.

Affected Public: Business or other for-profit.

Number of Respondents: 44.

Frequency: On occasion.

Number of Responses: 44.

Annual Burden Hours: 5,984 hours.

Annual Respondent or Recordkeeper Cost: \$4,400.

Comments submitted in response to this notice will be summarized and included in the request for Office of Management and Budget approval of the

information collection request; they will also become a matter of public record.

SUPPLEMENTARY INFORMATION:

I. Background

Chronic exposure to respirable coal mine dust causes lung diseases including coal workers' pneumoconiosis (CWP), emphysema, silicosis, and chronic bronchitis, known collectively as "black lung." These diseases are debilitating and can result in disability and premature death. While considerable progress has been made in lowering dust levels since 1970 and, consequently, lowering the prevalence rate of black lung among coal miners, severe forms of black lung continue to be identified. Information from the federally funded Coal Workers' Health Surveillance Programs administered by the National Institute for Occupational Safety and Health (NIOSH) clearly indicates that black lung remains a key occupational health risk among our nation's coal miners. According to NIOSH, 933 or 3.7 percent of the 25,558 underground coal miners x-rayed between January 2003 and September 2011 were found to have CWP. Also, in FY 2011, over 28,600 former coal miners and the dependents of miners received \$417 million in "black lung" benefits. Since inception of the federal Black Lung Benefits Program in 1970, over \$45 billion in total benefits have been paid out to former miners and their dependents.

Section 103(h) of the Federal Mine Safety and Health Act of 1977 (Mine Act), 30 U.S.C. 813(h), authorizes MSHA to collect information necessary to carry out its duty to protect the safety and health of miners. Further, Section 101(a) of the Mine Act, 30 U.S.C. 811(a), authorizes the Secretary to develop, promulgate, and revise as may be appropriate, improved mandatory health or safety standards for the protection of life and prevention of injuries in coal or other mines. This Information Collection 1219–0011 reflects requirements of MSHA's final rule, Lowering Miners' Exposure to Respirable Coal Mine Dust, Including Continuous Personal Dust Monitors (79 FR 24814; May 1, 2014) related to respirable coal mine dust sampling in effect on February 1, 2016, and respirable dust standards in effect on August 1, 2016.

MSHA's standards in 30 CFR parts 70, 71, and 90 require each mine operator of an underground coal mine, surface coal mine and, surface work areas of an underground coal mine, and each coal mine operator who employs a Part 90

miner, to protect miners from exposure to excessive respirable coal mine dust levels. Parts 70 and 71 require each coal mine operator to continuously maintain the average concentration of respirable coal mine dust in the mine atmosphere where miners normally work or travel at or below 1.5 milligrams per cubic meter (mg/m^3). This standard is reduced using the formula 10 divided by the percent of quartz when the respirable dust contains more than 5 percent quartz. Overexposure to respirable coal mine dust containing quartz has been associated with silicosis (black lung). These lung diseases are irreversible and may be fatal, but they are preventable. Parts 70 and 71 also require each coal mine operator to continuously maintain the average concentration of respirable dust in intake airways at underground mines at or below $0.5 \text{ mg}/\text{m}^3$.

If a Part 90 miner is employed at the mine, the coal mine operator is required to continuously maintain the average concentration of respirable dust in the mine atmosphere during each shift to which the Part 90 miner in the active workings of the mine is exposed at or below $0.5 \text{ mg}/\text{m}^3$. This standard is also reduced if more than 5 percent quartz is found in the mine atmosphere during each shift to which the Part 90 miner is exposed.

MSHA's standards require that coal mine operators sample respirable coal mine dust quarterly and submit these samples to MSHA for analysis to determine if the mine is complying with the applicable dust standards. Underground coal mine operators must sample: The Designated Occupation (DO) and Other Designated Occupation (ODO) in each Mechanized Mining Unit (MMU) under 30 CFR 70.208 and each Designated Area (DA) at locations specified in the operator's approved mine ventilation plan under 30 CFR 70.209. In addition, Designated Work Positions (DWP) at surface coal mines and surface work areas of underground coal mines must be sampled under 30 CFR 71.206. Furthermore, each part 90 miner must be sampled under 30 CFR 90.207.

Sampling, General and Technical Requirements under Parts 70, 71, and 90: Section 70.201(b)(2) requires that DAs identified by the underground coal mine operator be sampled quarterly only with an approved Coal Mine Dust Personal Sampling Unit (CMDPSU) unless the operator notifies the District Manager in writing that only an approved Continuous Personal Dust Monitor (CPDM) will be used for all DA sampling at the mine. With respect to DWP sampling, section 71.201(a) requires each mine operator of a surface

coal mine and each mine operator of an underground coal mine with surface work areas who is sampling on the surface to sample with an approved CMDPSU, however, the operator may use an approved CPDM if the operator notifies the District Manager in writing that only an approved CPDM will be used for all DWP sampling at the mine. MSHA does not expect underground coal mine operators to use the CPDM to conduct DA sampling underground, or DWP sampling on the surface area of the underground mine. Also, MSHA does not expect surface coal mine operators to use the CPDM to conduct DWP sampling. Thus, there are no notifications to the MSHA District Manager and therefore no burdens to operators for sections 70.201(b)(2) and 71.201(a).

Sections 70.201(e), 71.201(d), and 90.201(f) require that coal mine operators make records showing the length of: Each production shift for each MMU; each normal work shift for each DWP; and each shift for each part 90 miner respectively. These provisions also require that the records be retained for at least six months, made available for inspection by authorized representatives of the Secretary and, except in the case of part 90 miners, by the representative of miners. The records must also be submitted to the District Manager when requested in writing.

Section 70.211(c)(5) requires that, when CPDMs are used for sampling, underground coal mine operators print, sign and post a paper record (Dust Data Card) with the shift length. Under section 90.209(c)(5), when CPDMs are used for sampling, coal mine operators must print, sign and provide to each part 90 miner a Dust Data Card with the shift length. Under sections 70.210(c) and 71.207(c), if using a CMDPSU, the operator must complete a dust card, which includes recording the shift length.

There are no separate burdens shown for recording shift lengths for sections 70.201(e) for underground coal mines and 90.201(f) related to part 90 miners when sampling is conducted because records of shift length are accounted for under sections 70.211(c) and 90.209(c) when a CPDM Dust Data Card is printed and signed. However, burdens for recording shift lengths when sampling is not conducted are shown under sections 70.201(e) and 90.201(f).

For surface work areas of underground coal mines and surface coal mines, there is no burden shown for section 71.201(d) when DWP sampling is conducted because records of shift length are accounted for under

section 71.207(c) when a CMDPSU Dust Data Card is completed. However, the burden for recording shift length when sampling is not conducted is shown under section 71.201(d).

Sections 70.201(f), 71.201(e), and 90.201(g) require that upon request from the District Manager, the operator must submit the date and time any respirable dust sampling required by part 70, 71, or 90 will begin. The mine operator must submit this information to MSHA at least 48 hours prior to scheduled sampling. In addition, under section 71.201(f), a mine operator may request, in writing, that the rain restriction for a normal work shift as defined in section 71.2 be waived by the District Manager.

Sections 70.210(d), 71.207(d), and 90.208(d) require that all operator samples be considered to be taken to fulfill the sampling requirements of parts 70, 71, and 90, respectively, unless the sample has been identified in writing by the operator to the District Manager, prior to the intended sampling shift, as a sample to be used for another purpose.

Section 70.201(g) requires that to establish a normal production shift, the operator must record the amount of run-of-mine material produced by each MMU during each shift to determine the average production for the most recent 30 production shifts or for all production shifts if fewer than 30 shifts of production data are available. It also requires that the production records must be retained for at least six months and be made available for inspection by authorized representatives of the Secretary and the representative of miners.

Sections 70.201(j) and 90.201(j) allow the mine operator of an anthracite mine that uses the full box, open breast, or slant breast mining method to use either a CPDM or a CMDPSU for respirable coal mine dust sampling required under part 70 or part 90. However, if the mine operator chooses not to use a CPDM, he must notify the District Manager in writing of this decision. To estimate the full cost impact upon coal mine operators, MSHA assumed that these operators will use the CPDM for the required sampling. Therefore, no burden was estimated at this time for these operators to notify the District Manager of their choice not to use the CPDM. Operators may reevaluate whether to use the CPDM. Therefore, future updates to this package may result in a burden for these provisions.

Sampling under Parts 70, and 71: Sections 70.205(b)(2) and 71.205(b)(2) require that if a CMDPSU is used to sample respirable coal mine dust, each approved sampling device must be

examined each shift by a person certified in sampling during the last hour of operation to assure that the sampling device is operating properly and at the proper flowrate. If the proper flowrate is not maintained, the respirable dust sample must be transmitted to MSHA with a notation by the certified person on the back of the Dust Data Card stating that the proper flowrate was not maintained. Other events occurring during the collection of respirable coal mine dust samples that may affect the validity of the sample, such as dropping of the sampling head assembly onto the mine floor, must also be noted on the back of the Dust Data Card. The burdens for these requirements are included in the burdens estimated to complete the Dust Data Cards under sections 70.210(c) and 71.207(c).

Quarterly Sampling Requirements for Parts 70, 71, and 90: Quarterly sampling requirements are in section 70.208 for MMUs, section 70.209 for DAs, and section 90.207 for part 90 miners. Sections 70.208(e)(3), 70.209(c)(3), and 90.207(c)(3) require that when a valid representative sample meets or exceeds the ECV that corresponds to the applicable standard and particular sampling device used for either an MMU or DA, respectively, or that corresponds to the applicable standard and particular sampling device used for part 90 miner sampling, the operator must make, upon implementation of corrective actions, a record of the actions taken. The record must be certified by the mine foreman or equivalent mine official, no later than the end of the mine foreman's or equivalent official's next regularly scheduled working shift. The record must be made in a secure book that is not susceptible to alteration or electronically in a computer system so as to be secure and not susceptible to alteration. Such records must be retained at a surface location at the mine for at least 1 year and be made available for inspection by authorized representatives of the Secretary and, except for part 90 miners, the representative of miners. Also, the records must be made available for inspection by the affected part 90 miner who was sampled.

Sections 70.208(h)(3), 70.209(f)(3), and 90.207(f)(3) require that mine operators, upon issuance of a citation for violation of the applicable standard for either an MMU, DA, or part 90 miner, respectively, must make, upon implementation of the corrective actions, a record of the actions taken. The record must be certified by the mine foreman or equivalent mine

official, no later than the end of the mine foreman's or equivalent official's next regularly scheduled working shift. The record must be made in a secure book that is not susceptible to alteration or electronically in a computer system so as to be secure and not susceptible to alteration. Such records must be retained at a surface location at the mine for at least 1 year and be made available for inspection by authorized representatives of the Secretary and, except for part 90 miners, the representative of miners. Also, the records must be made available for inspection by the affected part 90 miner who was sampled.

DWPs at surface coal mines and surface work areas of underground coal mines must be sampled quarterly under section 71.206. Under section 71.206(d), operators with multiple work positions that are specified in section 71.206(c)(2) and (c)(3) must sample the DWP exposed to the greatest respirable dust concentration in each work position performing the same activity or task at the same location at the mine and exposed to the same dust generation source. Each operator must provide the District Manager with a list identifying the specific work positions where DWP samples will be collected for: Active mines; new mines; and DWPs with a change in operational status that increases or reduces the number of active DWPs.

Section 71.206(e) requires that each DWP sample must be taken on a normal work shift. If a normal work shift is not achieved, the respirable dust sample must be transmitted to MSHA with a notation by the person certified in sampling on the back of the Dust Data Card stating that the sample was not taken on a normal work shift. Section 71.207(c) requires that a person certified in sampling properly complete the Dust Data Card that is provided by the manufacturer for each filter cassette. The card must have an identification number identical to that on the cassette used to take the sample and be submitted to MSHA with the sample. Each card must be signed by the certified person who actually performed the required examinations during the sampling shift and include that person's MSHA Individual Identification Number (MIIN). A separate burden has not been included for section 71.206(e) since MSHA assumed that any notations can be made at the same time that the Dust Data Card is completed under section 71.207(c).

Section 71.206(h)(3) requires that when a valid representative sample taken in accordance with this section meets or exceeds the ECV that

corresponds to the applicable standard and particular sampling device used, the operator must make, upon implementation of the corrective actions, a record of the actions taken. The record must be certified by the mine foreman or equivalent mine official, no later than the end of the mine foreman's or equivalent official's next regularly scheduled working shift. The record must be made in a secure book that is not susceptible to alteration or electronically in a computer system so as to be secure and not susceptible to alteration. Such records must be retained at a surface location at the mine for at least 1 year and be made available for inspection by authorized representatives of the Secretary and the representative of miners. There are no separate burden estimates projected for section 71.206(h)(3). MSHA assumed that surface samples that meet or exceed the applicable ECV will result in a citation, and this burden appears under section 71.206(k)(3).

Section 71.206(k)(3) requires that upon issuance of a citation for violation of the applicable standard, the operator must make, upon implementation of the corrective actions, a record of the actions taken. The record must be certified by the mine foreman or equivalent mine official, no later than the end of the mine foreman's or equivalent official's next regularly scheduled working shift. The record must be made in a secure book that is not susceptible to alteration or electronically in a computer system so as to be secure and not susceptible to alteration. Such records must be retained at a surface location at the mine for at least 1 year and be made available for inspection by authorized representatives of the Secretary and the representative of miners.

Transmission of Respirable Coal Mine Dust Samples by the Operator under Parts 70, 71, and 90: Sections 70.210(a) and 71.207(a) require that if a CMDPSU is used to sample, the operator must transmit within 24 hours after the end of the sampling shift all samples collected to fulfill the requirements of part 70, 71, or 90, including control filters, in containers provided by the manufacturer of the filter cassette to: Respirable Dust Processing Laboratory, Pittsburgh Safety and Health Technology Center, Cochrans Mill Road, Building 38, P.O. Box 18179, Pittsburgh, Pennsylvania 15236-0179, or to any other address designated by the District Manager.

Sections 70.210(c) and 71.207(c) require that a person certified in sampling properly complete the Dust Data Card that is provided by the

manufacturer for each filter cassette. The card must have an identification number identical to that on the cassette used to take the sample and be submitted to MSHA with the sample. Each card must be signed by the certified person who actually performed the required examinations during the sampling shift and include that person's MSHA Individual Identification Number (MIIN). Respirable dust samples with data cards not properly completed may be voided by MSHA.

Sections 70.210(f), 71.207(f), and 90.208(f) require that if a CPDM is used to sample, the person certified in sampling must validate, certify and transmit electronically to MSHA within 24 hours after the end of each sampling shift all sample data file information collected and stored in the CPDM, including the sampling status conditions encountered when sampling. All CPDM data files transmitted electronically to MSHA must be maintained by the operator for at least 12 months.

The burdens for sections 70.210(a), (c), and (f), 71.207(a) and (c), and 90.208(f) are included in the burdens for sections 70.210, 71.207, and 90.208. Section 71.207(f) pertains only to using the CPDM. However, operators of surface coal mines and operators of surface work areas of underground coal mines are only required to use the CPDM for part 90 miner sampling, and MSHA does not expect them to use the CPDM to conduct DWP sampling. Thus, the burden for section 71.207(f) is accounted for in the burden for section 90.208(f).

Report to the Operator of Respirable Dust Samples; Post or Provide Results and Report under Parts 70, 71, and 90: Sections 70.211(b) and 71.208(b) require that upon receipt of the sampling report that contains sampling results from MSHA, the operator must post the data for at least 31 days on the mine bulletin board. Sections 70.211(c) and 71.208(c) require, if using a CPDM, the person certified in sampling, within 12 hours after the end of each sampling shift, to print, sign, and post on the mine bulletin board a paper record (Dust Data Card) of each sample run. This hard-copy record must include the data entered when the sample run was first programmed and the following: The mine identification number; the locations within the mine or the DWP at the mine from which the samples were taken; the concentration of respirable dust, expressed as an equivalent concentration reported and stored for each sample; the sampling status conditions encountered for each sample; and the shift length. Section

71.208(c) requires that when CPDMs are used for DWP sampling, underground coal mine operators that have surface work areas and surface coal mine operators print, sign, and post a paper record (Dust Data Card) with the shift length and other information regarding sampling for each location sampled under Part 71. MSHA does not expect that the CPDM will be used for DWP sampling by underground coal mine operators on the surface area of the underground mine, or by surface coal mine operators. Therefore, no burden was estimated at this time for Section 71.208(c).

For part 90 miners, section 90.209(b) requires that upon receipt of the sampling report from MSHA, the operator must provide a copy to the part 90 miner only. Section 90.209(c) requires that if using a CPDM, the person certified in sampling must print, sign, and provide to each part 90 miner, a paper record (Dust Data Card) of the sample run within one hour after the start of the part 90 miner's next work shift. This hard copy record must include the data entered when the sample run was first programmed, and the following: The mine identification number; the location within the mine from which the sample was taken; the concentration of respirable dust, expressed as an equivalent concentration reported and stored for each sample; the sampling status conditions encountered for each sample; the shift length; and the part 90 miner's MSHA Individual Identification Number (MIIN).

Operational Status Changes under Parts 70, 71, and 90: Sections 70.212(a), 71.209(a), and 90.210 require that if there is a change in operational status that affects the respirable dust sampling requirements of part 70, 71, or 90, respectively, the operator must report the change in operational status of the mine, MMU, DA, DWP, or part 90 miner (such as the part 90 miner entering a terminated, injured or ill status, or returning to work) to the MSHA District Office or to any other MSHA office designated by the District Manager. Status changes must be reported in writing or electronically within 3 working days after the status change has occurred.

Revised Dust Control Parameters in the Mine Ventilation Plan in Response to Violations of the Applicable Standard under Part 70: Sections 70.208(i)(2) and 70.209(g)(2) provide that a citation for violation of the applicable standard shall be terminated by MSHA when the operator has submitted to the District Manager revised dust control parameters as part of the mine

ventilation plan applicable to the MMU, or the DA, respectively, in the citation and such changes have been approved by the District Manager. The revised parameters must reflect the control measures used by the operator to abate the violation.

Dust Control Plan Provisions in Response to Violations of the Applicable Standard under Part 71: Section 71.300(a) requires that the operator must submit to the District Manager for approval a written respirable dust control plan applicable to the DWP identified in the citation within 15 calendar days after the termination date of a citation for violation of the applicable standard. The respirable dust control plan and revisions must be suitable to the conditions and the mining system of the coal mine and be adequate to continuously maintain respirable dust within the applicable standard at the DWP identified in the citation.

Section 71.300(a)(1) requires that the mine operator must notify the representative of miners at least 5 days prior to submission to MSHA of a respirable dust control plan and any revision to a dust control plan. If requested, the mine operator must provide a copy to the representative of miners at the time of notification.

Section 71.300(a)(3) requires that a copy of the proposed respirable dust control plan, and a copy of any proposed revision, submitted for Agency approval must be posted on the mine bulletin board at the time of submittal. The proposed plan or proposed revision must remain posted until it is approved, withdrawn, or denied.

Under section 71.301(d)(1), the approved respirable dust control plan and any revisions must be provided upon request to the representative of the miners by the operator following notification of approval.

Under section 71.301(d)(3), the plan or revisions must be posted on the mine bulletin board within 1 working day following notification of approval and remain posted for the period that the plan is in effect.

Under section 71.301(e), the operator may review respirable dust control plans and submit proposed revisions to such plans to the District Manager for approval.

Dust Control Plan Provisions in Response to Violations of the Applicable Standard under Part 90: Section 90.300(a) requires that if an operator abates a violation of the applicable standard by reducing the respirable dust level in the position of the part 90 miner, the operator must

submit to the District Manager for approval a written respirable dust control plan for the part 90 miner in the position identified in the citation within 15 calendar days after the citation is terminated. The respirable dust control plan and revisions thereof must be suitable to the conditions and the mining system of the coal mine and be adequate to continuously maintain respirable dust within the applicable standard for that part 90 miner.

Section 90.301(d) requires the operator to provide a copy of the current respirable dust control plan to the part 90 miner.

Under section 90.301(e), the operator may review respirable dust control plans and submit proposed revisions to such plans to the District Manager for approval.

Mine Ventilation Plan, Revisions, Notify Miners' Representatives, Provide Copy, and Posting: Section 75.370(a)(3)(i) requires underground coal mine operators to notify the miners' representative at least 5 days prior to submission of mine ventilation plan and any revision and, if requested, provide a copy to the miners' representative at the time of notification. Section 75.370(a)(3)(iii) and (f)(3) require the operator to post a copy of the proposed plan and any proposed revision, and the MSHA-approved plan and any revisions, respectively, on the mine bulletin board. In addition, section 75.370(f)(1) requires the operator to provide a copy of the MSHA-approved plan and any revisions to the miners' representative, if requested.

II. Desired Focus of Comments

MSHA is soliciting comments concerning the proposed information collection related to Respirable Coal Mine Dust Sampling. MSHA is particularly interested in comments that:

- Evaluate whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information has practical utility;
- Evaluate the accuracy of MSHA's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;
- Suggest methods to enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology,

e.g., permitting electronic submission of responses.

The information collection request will be available on <http://www.regulations.gov>. MSHA cautions the commenter against providing any information in the submission that should not be publicly disclosed. Full comments, including personal information provided, will be made available on www.regulations.gov and www.reginfo.gov.

The public may also examine publicly available documents at USDOL-Mine Safety and Health Administration, 201 12th Street South, Suite 4E401, Arlington, VA 22202-5452. Sign in at the receptionist's desk on the 4th floor via the East elevator.

Questions about the information collection requirements may be directed to the person listed in the **FOR FURTHER INFORMATION** section of this notice.

III. Current Actions

This request for collection of information contains provisions for Respirable Coal Mine Dust Sampling. MSHA has updated the data with respect to the number of respondents, responses, burden hours, and burden costs supporting this information collection request.

Type of Review: Extension, without change, of a currently approved collection.

Agency: Mine Safety and Health Administration.

OMB Number: 1219-0011.

Affected Public: Business or other for-profit.

Number of Respondents: 1,035.

Frequency: On occasion.

Number of Responses: 1,291,236.

Annual Burden Hours: 62,748 hours.

Annual Respondent or Recordkeeper Cost: \$28,065.

MSHA Forms: Miner Operator Dust Data Card.

Comments submitted in response to this notice will be summarized and included in the request for Office of Management and Budget approval of the information collection request; they will also become a matter of public record.

Sheila McConnell,
Certifying Officer.

BILLING CODE 45210-43-P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

[OMB Control No. 1219-0078]

Proposed Extension of Information Collection; Mine Rescue Teams; Arrangements for Emergency Medical Assistance; and Arrangements for Transportation of Injured Persons

AGENCY: Mine Safety and Health Administration, Labor.

ACTION: Request for public comments.

SUMMARY: The Department of Labor, as part of its continuing effort to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed collections of information in accordance with the Paperwork Reduction Act of 1995. This program helps to assure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. Currently, the Mine Safety and Health Administration (MSHA) is soliciting comments on the information collection for Mine Rescue Teams; Arrangements for Emergency Medical Assistance; and Arrangements for Transportation of Injured Persons.

DATES: All comments must be received on or before July 2, 2019.

ADDRESSES: Comments concerning the information collection requirements of this notice may be sent by any of the methods listed below.

- *Federal E-Rulemaking Portal:* <http://www.regulations.gov>. Follow the on-line instructions for submitting comments for docket number MSHA-2019-0014.

- *Regular Mail:* Send comments to USDOL-MSHA, Office of Standards, Regulations, and Variances, 201 12th Street South, Suite 4E401, Arlington, VA 22202-5452.

- *Hand Delivery:* USDOL-Mine Safety and Health Administration, 201 12th Street South, Suite 4E401, Arlington, VA 22202-5452. Sign in at the receptionist's desk on the 4th floor via the East elevator.

FOR FURTHER INFORMATION CONTACT: Sheila McConnell, Director, Office of Standards, Regulations, and Variances, MSHA, at MSHA.information.collections@dol.gov (email); 202-693-9440 (voice); or 202-693-9441 (facsimile).

SUPPLEMENTARY INFORMATION:

I. Background

Section 115(e) of the Federal Mine Safety and Health Act of 1977 (Mine Act) requires the Secretary of Labor to publish regulations which provide that mine rescue teams be available for rescue and recovery work to each underground mine in the event of an emergency. In addition, the costs of making advance arrangements for such teams are to be borne by the operator of each such mine.

Under 30 CFR part 49 subpart A, Mine Rescue Teams for Underground Metal and Nonmetal Mines, requires every operator of an underground mine to assure the availability of mine rescue capability for purposes of emergency rescue and recovery. This collection of information relates to the availability of mine rescue teams; alternate mine rescue capability for small and remote mines and mines with special mining conditions; inspection and maintenance records of mine rescue equipment and apparatus; physical requirements for team members and alternates; and experience and training requirements for team members and alternates.

II. Desired Focus of Comments

MSHA is soliciting comments concerning the proposed information collection related to Mine Rescue Teams; Arrangements for Emergency Medical Assistance; and Arrangements for Transportation of Injured Persons. MSHA is particularly interested in comments that:

- Evaluate whether the collection of information is necessary for the proper performance of the functions of the Agency, including whether the information has practical utility;
- Evaluate the accuracy of MSHA's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;
- Suggest methods to enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

The information collection request will be available on <http://www.regulations.gov>. MSHA cautions the commenter against providing any information in the submission that should not be publicly disclosed. Full comments, including personal information provided, will be made

available on www.regulations.gov and www.reginfo.gov.

The public may also examine publicly available documents at USDOL-Mine Safety and Health Administration, 201 12th South, Suite 4E401, Arlington, VA 22202-5452. Sign in at the receptionist's desk on the 4th floor via the East elevator.

Questions about the information collection requirements may be directed to the person listed in the **FOR FURTHER INFORMATION** section of this notice.

III. Current Actions

This request for collection of information contains provisions for Mine Rescue Teams; Arrangements for Emergency Medical Assistance; and Arrangements for Transportation of Injured Persons. MSHA has updated the data with respect to the number of respondents, responses, burden hours, and burden costs supporting this information collection request.

Type of Review: Extension, without change, of a currently approved collection.

Agency: Mine Safety and Health Administration.

OMB Number: 1219-0078.

Affected Public: Business or other for-profit.

Number of Respondents: 202.

Frequency: On occasion.

Number of Responses: 19,973.

Annual Burden Hours: 9,941 hours.

Annual Respondent or Recordkeeper Cost: \$309,068.

MSHA Forms: MSHA Form 5000-3, Certificate of Physical Qualification for Mine Rescue Work.

Comments submitted in response to this notice will be summarized and included in the request for Office of Management and Budget approval of the information collection request; they will also become a matter of public record.

SUPPLEMENTARY INFORMATION:

I. Background

Fire protection standards for underground coal mines are based on section 311(a) of the Federal Mine Safety and Health Act of 1977 (Mine Act).

30 CFR 75.1100 requires that each coal mine be provided with suitable firefighting equipment adapted for the size and conditions of the mine, and that the Secretary of Labor shall establish minimum requirements of the type, quality, and quantity of such equipment.

30 CFR 75.1100-3 requires that chemical fire extinguishers be examined every 6 months and that the date of the examination be recorded on a

permanent tag attached to the extinguisher.

30 CFR 75.1103-5(a)(2)(ii) requires that a map or schematic be updated within 24 hours of any change in the locations of automatic fire warning sensors and the intended air flow direction at these locations. This map or schematic would be kept at a manned surface location where personnel have an assigned post of duty.

30 CFR 75.1103-8(a) requires that a qualified person examine the automatic fire sensor and warning device systems on a weekly basis and conduct a functional test of the complete system at least once every seven days.

Section 75.1103-8(b) requires that a record of the weekly automatic fire sensor functional tests be maintained by the mine operator and kept for a period of one year.

30 CFR 75.1103-8(c) requires that sensors be calibrated in accordance with the manufacturer's calibration instructions at intervals not to exceed 31 days. Records of the sensor calibrations must be maintained by the operator and kept for a period of one year.

30 CFR 75.1103-11 requires that each fire hydrant and hose be tested at least once a year and the records of those tests be maintained at an appropriate location.

30 CFR 75.1501(a)(3) requires the operator to certify that each responsible person is trained and that the certification is maintained at the mine for at least one year.

30 CFR 75.1502 requires each mine operator to adopt and follow a mine evacuation and firefighting program of instruction that addresses all mine emergencies created as a result of a fire, an explosion, or a gas or water inundation. In addition, this section requires mine operators to submit this program of instruction, and any revisions, to MSHA for its approval and to train miners regarding the use of the program of instruction, and any revisions to such program of instruction, after it is approved by MSHA.

II. Desired Focus of Comments

MSHA is soliciting comments concerning the proposed information collection related to Fire Protection (Underground Coal Mines). MSHA is particularly interested in comments that:

- Evaluate whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information has practical utility;
- Evaluate the accuracy of MSHA's estimate of the burden of the collection

of information, including the validity of the methodology and assumptions used;

- Suggest methods to enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

The information collection request will be available on <http://www.regulations.gov>. MSHA cautions the commenter against providing any information in the submission that should not be publicly disclosed. Full comments, including personal information provided, will be made available on www.regulations.gov and www.reginfo.gov.

The public may also examine publicly available documents at USDOL-Mine Safety and Health Administration, 201 12th South, Suite 4E401, Arlington, VA 22202-5452. Sign in at the receptionist's desk on the 4th floor via the East elevator.

Questions about the information collection requirements may be directed to the person listed in the **FOR FURTHER INFORMATION** section of this notice.

III. Current Actions

This request for collection of information contains provisions for Fire Protection (Underground Coal Mines). MSHA has updated the data with respect to the number of respondents, responses, burden hours, and burden costs supporting this information collection request.

Type of Review: Extension, without change, of a currently approved collection.

Agency: Mine Safety and Health Administration.

OMB Number: 1219-0054.

Affected Public: Business or other for-profit.

Number of Respondents: 204.

Frequency: On occasion.

Number of Responses: 121,486.

Annual Burden Hours: 19,305 hours.

Annual Respondent or Recordkeeper Cost: \$378.

Comments submitted in response to this notice will be summarized and included in the request for Office of Management and Budget approval of the information collection request; they will also become a matter of public record.

Sheila McConnell,

Certifying Officer.

[FR Doc. 2019-09090 Filed 5-2-19; 8:45 am]

BILLING CODE 4510-43-P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

[OMB Control No. 1219-0083]

Proposed Extension of Information Collection; Daily Inspection of Surface Coal Mines; Certified Person; Reports of Inspection (Pertains to Surface Coal Mines)

AGENCY: Mine Safety and Health Administration, Labor.

ACTION: Request for public comments.

SUMMARY: The Department of Labor, as part of its continuing effort to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed collections of information in accordance with the Paperwork Reduction Act of 1995. This program helps to assure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. Currently, the Mine Safety and Health Administration (MSHA) is soliciting comments on the information collection for Daily Inspection of Surface Coal Mines; Certified Person; Reports of Inspection (Pertains to Surface Coal Mines).

DATES: All comments must be received on or before July 2, 2019.

ADDRESSES: Comments concerning the information collection requirements of this notice may be sent by any of the methods listed below.

- *Federal E-Rulemaking Portal:* <http://www.regulations.gov>. Follow the on-line instructions for submitting comments for docket number MSHA-2019-0010.

- *Regular Mail:* Send comments to USDOL-MSHA, Office of Standards, Regulations, and Variances, 201 12th Street South, Suite 4E401, Arlington, VA 22202-5452.

- *Hand Delivery:* USDOL-Mine Safety and Health Administration, 201 12th Street South, Suite 4E401, Arlington, VA 22202-5452. Sign in at the receptionist's desk on the 4th floor via the East elevator.

FOR FURTHER INFORMATION CONTACT: Sheila McConnell, Director, Office of Standards, Regulations, and Variances, MSHA, at MSHA.information.collections@dol.gov (email); 202-693-9440 (voice); or 202-693-9441 (facsimile).

SUPPLEMENTARY INFORMATION:

I. Background

A number of potential hazards can exist at surface coal mines and facilities. Highwalls, mining equipment, travelways, and the handling of mining materials each present potentially hazardous conditions.

Section 103(h) of the Federal Mine Safety and Health Act of 1977 (Mine Act) 30 U.S.C. 813(h), authorizes MSHA to collect information necessary to carry out its duty in protecting the safety and health of miners. Further Section 101(a) of the Mine Act 30 U.S.C. 811 authorizes the Secretary to develop, promulgate, and revise as may be appropriate, improved mandatory health and safety for the protection of life and prevention of injuries in coal or other mines. 30 U.S.C. 811(a).

Section 77.1713, Title 30 of the Code of Federal Regulations requires coal mine operators to conduct examinations of each active working area of surface mines, active surface installations at these mines, facilities and preparation plants not associated with underground coal mines for hazardous conditions during each shift. A report of hazardous conditions detected must be entered into a record book along with a description of any corrective actions taken. By conducting an on shift examination for hazardous conditions, mine operators can better ensure a safe working environment for the miners and a reduction in accidents.

II. Desired Focus of Comments

MSHA is soliciting comments concerning the proposed information collection related to Daily Inspection of Surface Coal Mines; Certified Person; Reports of Inspection (Pertains to Surface Coal Mines). MSHA is particularly interested in comments that:

- Evaluate whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information has practical utility;
- Evaluate the accuracy of MSHA's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;
- Suggest methods to enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

The information collection request will be available on <http://www.regulations.gov>. MSHA cautions the commenter against providing any information in the submission that should not be publicly disclosed. Full comments, including personal information provided, will be made available on www.regulations.gov and www.reginfo.gov.

The public may also examine publicly available documents at USDOL-Mine Safety and Health Administration, 201 12th South, Suite 4E401, Arlington, VA 22202-5452. Sign in at the receptionist's desk on the 4th floor via the East elevator.

Questions about the information collection requirements may be directed to the person listed in the **FOR FURTHER INFORMATION** section of this notice.

III. Current Actions

This request for collection of information contains provisions for Daily Inspection of Surface Coal Mines; Certified Person; Reports of Inspection (Pertains to Surface Coal Mines). MSHA has updated the data with respect to the number of respondents, responses, burden hours, and burden costs supporting this information collection request.

Type of Review: Extension, without change, of a currently approved collection

Agency: Mine Safety and Health Administration.

OMB Number: 1219-0083.

Affected Public: Business or other for-profit.

Number of Respondents: 893.

Frequency: On occasion.

Number of Responses: 357,200.

Annual Burden Hours: 535,800 hours.

Annual Respondent or Recordkeeper Cost: \$0.

Comments submitted in response to this notice will be summarized and included in the request for Office of Management and Budget approval of the information collection request; they will also become a matter of public record.

BILLING CODE 4510-43-P

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

Susan Harwood Training Grant Program, FY 2019

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Notice of availability of funds and funding opportunity announcements (FOA) for Susan Harwood Training Grant Program grants.

Funding Opportunity Number: SHTG-FY-19-01 (Targeted Topic Training grants).

Funding Opportunity Number: SHTG-FY-19-02 (Training and Educational Materials Development grants).

Funding Opportunity Number: SHTG-FY-19-03 (Capacity Building grants).

Catalog of Federal Domestic Assistance Number: 17.502.

SUMMARY: This notice announces availability of approximately \$10.5 million for Susan Harwood Training Grant Program grants. Three separate funding opportunity announcements are available for Targeted Topic Training grants, Training and Educational Materials Development grants, and new Capacity Building grants (Funding Opportunity Number SHTG-FY-19-03 will cover two types of Capacity Building grants: (1) Capacity Building Pilot and (2) Capacity Building Developmental grants).

DATES: Grant applications for Susan Harwood Training Grant Program grants must be received electronically by the *Grants.gov* system no later than 11:59 p.m., ET, on July 2, 2019.

ADDRESSES: The complete Susan Harwood Training Grant Program funding opportunity announcement and all information needed to apply are available at the *Grants.gov* website, <https://www.grants.gov/>.

FOR FURTHER INFORMATION CONTACT: Questions regarding the funding opportunity announcement should be emailed to *HarwoodGrants@dol.gov* or by telephone at 847-725-7805. Personnel will not be available to answer questions after 5:00 p.m., ET. To obtain further information on the Susan Harwood Training Grant Program, visit the OSHA website at: <https://www.osha.gov/dte/sharwood/index.html>. Questions regarding *Grants.gov* should be emailed to *Support@grants.gov* or directed to Applicant Support toll free at 1-800-518-4726. Applicant Support is available 24 hours a day, 7 days a week except on Federal holidays.

Authority and Signature

Loren Sweatt, Acting Assistant Secretary of Labor for Occupational Safety and Health, directed the preparation of this notice. The authority for this notice is Section 21 of the

Occupational Safety and Health Act of 1970, (29 U.S.C. 670), Public Law 113-235, and Secretary of Labor's Order No. 1-2012 (77 FR 3912).

Signed at Washington, DC, on April 29, 2019.

Loren Sweatt,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

BILLING CODE 4510-26-P

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[Notice (19-023)]

Notice of Intent To Grant Exclusive License

AGENCY: National Aeronautics and Space Administration.

ACTION: Notice of intent to grant exclusive patent license.

SUMMARY: NASA hereby gives notice of its intent to grant an exclusive patent license in the United States to practice the inventions described and claimed in U.S. Patent Number 9,309,369 entitled, "Polyimide Aerogels with Three Dimensional Crosslinked Structure", LEW-18486-2; U.S. Patent Number 8,974,903 entitled, "Porous Cross-Linked Polyimide-Urea Networks", LEW-18825-1; U.S. Patent Number 9,109,088 entitled, "Porous Cross-Linked Polyimide Networks", LEW-18864-1; and U.S. Patent 9,434,832 entitled, "Polyimide Aerogels with Polyamide Cross-Links", LEW-19200-1 to Aerogel Technologies, LLC, having its principal place of business in Boston, Massachusetts. The fields of use may be limited to polyimide aerogel/fiber composites for use in apparel and soft goods.

DATES: The prospective exclusive license may be granted unless, no later than May 20, 2019, NASA receives written objections including evidence and argument that establish that the grant of the license would not be consistent with the requirements regarding the licensing of federally owned inventions as set forth in the Bayh-Dole Act and implementing regulations. Competing applications completed and received by NASA no later than May 20, 2019 will also be treated as objections to the grant of the contemplated exclusive license.

Objections submitted in response to this notice will not be made available to the public for inspection and, to the extent permitted by law, will not be released under the Freedom of Information Act.

ADDRESSES: Objections relating to the prospective license may be submitted to Patent Counsel, Office of Chief Counsel, MS 142-7, NASA Glenn Research Center, 21000 Brookpark Rd., Cleveland, OH 44135. Phone (216) 433-3663. Facsimile (216) 433-6790.

FOR FURTHER INFORMATION CONTACT: Robert Earp, Patent Counsel, Office of Chief Counsel, MS 142-7, NASA Glenn Research Center, 21000 Brookpark Rd., Cleveland, OH 44135. Phone (216) 433-3663. Facsimile (216) 433-6790.

SUPPLEMENTARY INFORMATION: This notice of intent to grant an exclusive patent license is issued in accordance with 35 U.S.C. 209(e) and 37 CFR 404.7(a)(1)(i). The patent rights in these inventions have been assigned to the United States of America as represented by the Administrator of the National Aeronautics and Space Administration. The prospective exclusive license will comply with the requirements of 35 U.S.C. 209 and 37 CFR. 404.7.

Information about other NASA inventions available for licensing can be found online at <http://technology.nasa.gov>.

Mark Dvorscak,

Agency Counsel for Intellectual Property.

BILLING CODE 7510-13-P

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

National Endowment for the Arts

Arts Advisory Panel Meetings

AGENCY: National Endowment for the Arts.

ACTION: Notice of meetings.

SUMMARY: Pursuant to the Federal Advisory Committee Act, as amended, notice is hereby given that 20 meetings of the Arts Advisory Panel to the National Council on the Arts will be held by teleconference.

DATES: See the **SUPPLEMENTARY INFORMATION** section for individual meeting times and dates. All meetings are Eastern time and ending times are approximate:

ADDRESSES: National Endowment for the Arts, Constitution Center, 400 7th St. SW, Washington, DC 20506.

FOR FURTHER INFORMATION CONTACT: Further information with reference to these meetings can be obtained from Ms. Sherry P. Hale, Office of Guidelines & Panel Operations, National Endowment for the Arts, Washington, DC 20506; hales@arts.gov, or call 202/682-5696.

SUPPLEMENTARY INFORMATION: The closed portions of meetings are for the purpose of Panel review, discussion, evaluation, and recommendations on financial assistance under the National Foundation on the Arts and the Humanities Act of 1965, as amended, including information given in confidence to the agency. In accordance with the determination of the Chairman of July 5, 2016, these sessions will be closed to the public pursuant to subsection (c)(6) of section 552b of title 5, United States Code.

The Upcoming Meetings Are

Dance (review of applications): This meeting will be closed.

Date and time: June 4, 2019; 12:00 p.m. to 2:00 p.m.

Dance (review of applications): This meeting will be closed.

BILLING CODE 7537-01-P

NATIONAL SCIENCE FOUNDATION

Proposal Review Panel for Ocean Sciences; Notice of Meeting

In accordance with the Federal Advisory Committee Act (Pub. L. 92-463, as amended), the National Science Foundation (NSF) announces the following meeting:

Name and Committee Code: Proposal Review Panel for Ocean Sciences (#10752)—Gump Research Station Site Visit.

Date and Time: June 24, 2019, 10:00 a.m. to 5:30 p.m., June 25, 2019, 8:00 a.m. to 6:30 p.m., June 26, 2019, 8:00 a.m. to 4:30 p.m., June 27, 2019, 8:00 a.m. to 2:00 p.m.

Place: Gump Research Station, UCB, BP 244, Maharepa—98728, Moorea, French Polynesia.

Type of Meeting: Part-Open.

Contact Person: David Garrison, Program Director, Division of Ocean

Science; National Science Foundation, 2415 Eisenhower Avenue, Alexandria, VA 22314; Telephone: (703) 292-7588.

Purpose of Meeting: Mandatory mid-term site-review of the Moorea Coral Reef Long-term Ecological Research (LTER) site.

Agenda: Site visit to provide guidance and advice to site and feedback to NSF regarding progress of the Moorea Coral Reef LTER site.

Moorea Coral Reef (MCR) Site Review

June 24, 2019

10:00 Transit from Tahiti to Moorea.
1:00–2:00—Welcome to Gump station/orientation (Open).

2:00–3:00—Preparation for field trips (Open).

3:00–4:00—NSF meeting with Mid Term Review Panel (Closed).

4:00–5:30—Overview of MCR LTER (Open).

June 25, 2019

8:00–12:00—Field Trip 1 (Closed).

1:00–4:30—Research Presentations (Open).

4:30–5:30—Demonstrations—MCR dry lab and wet lab (Closed).

5:30–6:30—Graduate student/Post doc poster session (Open).

June 26, 2019

8:00–12:00—Field Trip 2 (Closed).

1:00–4:30—Site presentations (Open).

June 27, 2019

8:00–12:00—Mid Term Review panel report (Closed).

1:00–2:00—Report to MCR (Closed).

2:00—End of Site Review.

Reason for Closing: Topics to be discussed and evaluated during closed portions of the site review will include information of a proprietary or confidential nature, including technical and financial information and information on personnel. These matters are exempt under 5 U.S.C. 552b(c), (4) and (6) of the Government in the Sunshine Act.

Dated: April 29, 2019.

Crystal Robinson,

Committee Management Officer.

NUCLEAR REGULATORY COMMISSION

[NRC-2019-0001]

Sunshine Act Meetings

TIME AND DATE: Weeks of May 6, 13, 20, 27, June 3, 10, 2019.

PLACE: Commissioners' Conference Room, 11555 Rockville Pike, Rockville, Maryland.

STATUS: Public and Closed.

MATTERS TO BE CONSIDERED:

Week of May 6, 2019

There are no meetings scheduled for the week of May 6, 2019.

Week of May 13, 2019—Tentative

Tuesday, May 14, 2019

9:00 a.m. Briefing on Digital Instrumentation and Control (Public Meeting) (Contact: Jason Paige: 301-415-1474)

This meeting will be webcast live at the Web address—<http://www.nrc.gov/>.

Thursday, May 16, 2019

10:00 a.m. Briefing on Security Issues (Closed Ex. 1)

2:00 p.m. Briefing on Security Issues (Closed Ex. 1)

Week of May 20, 2019—Tentative

There are no meetings scheduled for the week of May 20, 2019.

Week of May 27, 2019—Tentative

Thursday, May 30, 2019

9:00 a.m. Briefing on Nuclear Regulatory Research Program (Public Meeting) (Contact: Nicholas DiFrancesco: 301-415-1115)

This meeting will be webcast live at the Web address—<http://www.nrc.gov/>.

Week of June 3, 2019—Tentative

There are no meetings scheduled for the week of June 3, 2019.

Week of June 10, 2019—Tentative

There are no meetings scheduled for the week of June 10, 2019.

CONTACT PERSON FOR MORE INFORMATION:

For more information or to verify the status of meetings, contact Denise McGovern at 301-415-0681 or via email at Denise.McGovern@nrc.gov. The schedule for Commission meetings is subject to change on short notice.

The NRC Commission Meeting Schedule can be found on the internet at: <http://www.nrc.gov/public-involve/public-meetings/schedule.html>.

The NRC provides reasonable accommodation to individuals with disabilities where appropriate. If you need a reasonable accommodation to participate in these public meetings, or need this meeting notice or the transcript or other information from the public meetings in another format (e.g., braille, large print), please notify Kimberly Meyer-Chambers, NRC Disability Program Manager, at 301-287-0739, by videophone at 240-428-3217, or by email at Kimberly.Meyer-

Chambers@nrc.gov. Determinations on requests for reasonable accommodation will be made on a case-by-case basis.

Members of the public may request to receive this information electronically. If you would like to be added to the distribution, please contact the Nuclear Regulatory Commission, Office of the Secretary, Washington, DC 20555 (301-415-1969), or by email at *Wendy.Moore@nrc.gov*.

Dated at Rockville, Maryland, this 1st day of May, 2019.

For the Nuclear Regulatory Commission.

Denise L. McGovern,

Policy Coordinator, Office of the Secretary.

BILLING CODE 7590-01-P

NUCLEAR REGULATORY COMMISSION

[NRC-2019-0113]

Guidance for a Technology-Inclusive, Risk-Informed, and Performance-Based Methodology To Inform the Licensing Basis and Content of Applications for Licenses, Certifications, and Approvals for Non-Light Water Reactors

AGENCY: Nuclear Regulatory Commission.

ACTION: Draft regulatory guide; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing for public comment draft regulatory guide (DG), DG-1353, “Guidance for a Technology-Inclusive, Risk-Informed, and Performance-Based Methodology to Inform the Licensing Basis and Content of Applications for Licenses, Certifications, and Approvals for Non-Light Water Reactors.” This DG proposes new guidance for designers, applicants, and licensees of non-light water cooled nuclear reactors (non-LWRs) to inform the licensing basis and content of applications submittals to the NRC for licenses, certifications, or approvals. The DG provides guidance on using a technology-inclusive, risk-informed, and performance-based methodology to inform the licensing basis and content of applications for licenses, certifications, and approvals for non-LWRs.

DATES: Submit comments by July 2, 2019. Comments received after this date will be considered if it is practical to do so, but the NRC is able to ensure consideration only for comments received on or before this date. Although a time limit is given, comments and suggestions in

connection with items for inclusion in guides currently being developed or improvements in all published guides are encouraged at any time.

ADDRESSES: You may submit comments by any of the following methods:

- *Federal Rulemaking Website:* Go to <http://www.regulations.gov> and search for Docket ID NRC-2019-0113. Address questions about NRC docket IDs in *Regulations.gov* to Jennifer Borges; telephone: 301-287-9127; email: *Jennifer.Borges@nrc.gov*. For technical questions, contact the individuals listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

- *Mail comments to:* Office of Administration, Mail Stop: TWFN-7-A60M, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, ATTN: Program Management, Announcements and Editing Staff.

For additional direction on obtaining information and submitting comments, see “Obtaining Information and Submitting Comments” in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT:

William Reckley, Office of New Reactors, telephone: 301-415-7490, email: *William.Reckley@nrc.gov*, or Stanley Gardocki, Office of Nuclear Regulatory Research, telephone: 301-415-1067, email: *Stanley.Gardocki@nrc.gov*. Both are staff of the U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001.

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC-2019-0113 when contacting the NRC about the availability of information regarding this action. You may obtain publically-available information related to this action, by any of the following methods:

- *Federal Rulemaking Website:* Go to <http://www.regulations.gov> and search for Docket ID NRC-2019-0113.

- *NRC’s Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Document collection at <https://www.nrc.gov/reading-rm/adams.html>. To begin the search, select “Begin Web-based ADAMS Search.” For problems with ADAMS, contact the NRC’s Public Document Room (PDR) reference staff at 1-800-397-4209, 301-415-4737, or by email to *pdr.resource@nrc.gov*. The DG is electronically available in ADAMS under Accession No. ML18312A242. The related working draft of Nuclear Energy Institute (NEI)

guidance document NEI 18-04, “Risk-Informed Performance-Based Guidance for Non-Light Water Reactor Licensing Basis Development,” is available in ADAMS under Accession No. ML18271A172. The regulatory analysis for this DG is available in ADAMS under Accession No. ML18325A214.

- *NRC’s PDR:* You may examine and purchase copies of public documents at the NRC’s PDR, Room O1-F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

B. Submitting Comments

Please include Docket ID NRC-2019-0113 in your comment submission.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission. The NRC posts all comment submissions at <http://www.regulations.gov> as well as enters the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment submissions into ADAMS.

II. Additional Information

The NRC is issuing for public comment a DG in the NRC’s “Regulatory Guide” series. This series was developed to describe and make available to the public information regarding methods that are acceptable to the NRC staff for implementing specific parts of the NRC’s regulations, techniques that the staff uses in evaluating specific issues or postulated events, and data that the staff needs in its review of applications for permits and licenses.

The DG, entitled “Guidance for a Technology-Inclusive, Risk-Informed, and Performance-Based Methodology to Inform the Licensing Basis and Content of Applications for Licenses, Certifications, and Approvals for Non-Light Water Reactors,” is a proposed new RG. The proposed new RG is temporarily identified by its task number, DG-1353. The proposed new RG endorses, with clarifications, the principles and methodology in NEI 18-

04, "Risk-Informed Performance-Based Guidance for Non-Light Water Reactor Licensing Basis Development," as one acceptable method for determining the appropriate scope and level of detail for parts of applications for licenses, certifications, and approvals for non-LWRs. NEI 18-04 outlines an approach for use by reactor developers to select licensing basis events; classify structures, systems, and components; determine special treatments and programmatic controls; and assess the adequacy of a design in terms of providing layers of defense in depth. The methodology described in NEI 18-04 and the draft RG also provide a general methodology for identifying an appropriate scope and depth of information to be provided in applications to the NRC for licenses, certifications, and approvals for non-LWRs.

III. Backfitting and Issue Finality

Draft regulatory guide, DG-1353, if finalized as a new regulatory guide, would provide guidance for informing the licensing basis and content of applications for non-LWRs. The selection of licensing-basis events; classification and special treatments of structures, systems, and components; and assessment of defense in depth are fundamental to the safe design of non-LWRs. These activities also support identifying the appropriate scope and depth of information provided in applications for licenses, certifications, and approvals required under part 50 of title 10 of the *Code of Federal Regulations* (10 CFR), "Domestic Licensing of Production and Utilization Facilities," and 10 CFR part 52, "Licenses, Certifications, and Approvals for Nuclear Power Plants." The methodology outlined in DG-1353 and NEI 18-04 provide guidance intended to support the design and licensing of non-LWRs.

The DG, if finalized, would not constitute regulatory requirements. For this reason, issuance of DG-1353, if finalized, would not constitute backfitting under 10 CFR 50.109 (the "Backfit Rule"). Future applicants may choose to follow the guidance or utilize another approach in developing applications for licenses, certifications, or approvals. Applicants and potential applicants are not, with certain exceptions, protected by either the Backfit Rule or any issue finality provisions under 10 CFR part 52. Neither the Backfit Rule nor the issue finality provisions under 10 CFR part 52—with certain exclusions discussed below—were intended to apply to every NRC action which substantially changes

the expectations of current and future applicants. Therefore, the positions in any regulatory guide, if imposed on applicants under 10 CFR 50.34(a)(3), 52.47(a)(3), 52.79(a)(4), 52.137(a)(3), or 52.157(a), would not represent backfitting or a violation of issue finality (except as discussed below).

The exceptions to the general principle are applicable whenever a combined license applicant references a 10 CFR part 52 license (*i.e.*, an early site permit or a manufacturing license) and/or 10 CFR part 52 regulatory approval (*i.e.*, a design certification rule or design approval). There are no current non-LWR applicants or holders of licenses or design certifications for non-LWR designs. Therefore, issuance of DG-1353 in final form would not constitute a violation of issue finality.

Dated at Rockville, Maryland, this 30th day of April, 2019.

For the Nuclear Regulatory Commission.

Thomas H. Boyce,

Chief, Regulatory Guidance and Generic Issues Branch, Division of Engineering, Office of Nuclear Regulatory Research.

POSTAL SERVICE

Temporary Emergency Committee of the Board of Governors; Sunshine Act Meeting

DATES AND TIMES: Thursday, May 9, 2019, at 11:00 a.m.; and Friday, May 10, 2019, at 9:00 a.m.

PLACE: Indianapolis, Indiana, at the Hyatt Regency Indianapolis Hotel, 1 South Capitol Avenue, Indianapolis, Indiana 46204, in the Cosmopolitan A Room.

STATUS: Thursday, May 9, 2019, at 11:00 a.m.—Closed; Friday, May 10, 2019, at 9:00 a.m.—Open.

MATTERS TO BE CONSIDERED:

Thursday, May 9, 2019, at 11:00 a.m. (Closed)

1. Strategic Issues.
2. Financial Matters.
3. Compensation and Personnel Matters.
4. Executive Session—Discussion of prior agenda items and Board governance.

Friday, May 10, 2019, at 9:00 a.m. (Open)

1. Remarks of the Chairman of the Temporary Emergency Committee of the Board.
2. Remarks of the Postmaster General and CEO.

3. Approval of Minutes of Previous Meetings.

4. Committee Reports.

5. Quarterly Financial Report.

6. Quarterly Service Performance Report.

7. Approval of Tentative Agenda for August meetings.

A public comment period will begin immediately following the adjournment of the open session on May 10, 2019. During the public comment period, which shall not exceed 30 minutes, members of the public may comment on any item or subject listed on the agenda for the open session above. Registration of speakers at the public comment period is required. Speakers may register online at <https://www.surveymonkey.com/r/BOG-5-10-19>. Onsite registration will be available until thirty minutes before the meeting starts. No more than three minutes shall be allotted to each speaker. The time allotted to each speaker will be determined after registration closes. Participation in the public comment period is governed by 39 CFR 232.1(n).

CONTACT PERSON FOR MORE INFORMATION:

Acting Secretary of the Board, U.S. Postal Service, 475 L'Enfant Plaza SW, Washington, DC 20260-1000. Telephone: (202) 268-4800.

BILLING CODE 7710-12-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-85744; File No. SR-BOX-2019-14]

Self-Regulatory Organizations; BOX Exchange LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Fee Schedule on the BOX Options Market LLC ("BOX") Facility To Modify Its Strategy QOO Order Fee Cap and Rebate

April 29, 2019.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on April 17, 2019, BOX Exchange LLC (the "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

Exchange filed the proposed rule change pursuant to Section 19(b)(3)(A)(ii) of the Act,³ and Rule 19b-4(f)(2) thereunder,⁴ which renders the proposal effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

The Exchange is filing with the Securities and Exchange Commission ("Commission") a proposed rule change to amend the Fee Schedule on the BOX Options Market LLC ("BOX") options facility. While changes to the fee schedule pursuant to this proposal will be effective upon filing, the changes will become operative on May 1, 2019. The text of the proposed rule change is available from the principal office of the Exchange, at the Commission's Public Reference Room and also on the Exchange's internet website at <http://boxexchange.com>.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the Fee Schedule for trading on BOX to amend Section II.D (Strategy QOO Order Fee Cap and Rebate). Currently, the Exchange caps fees and offers rebates on all dividend, short stock interest, reversal, conversion, jelly roll, and box spread strategies on the BOX Trading Floor. The Exchange is now proposing to cap fees and offer a Floor Broker rebate for merger strategy transactions.

A "merger strategy" is defined as a transaction done to achieve a merger arbitrage involving the purchase, sale and exercise of options of the same class and expiration date, each executed prior

to the date on which shareholders of record are required to elect their respective form of consideration, *i.e.*, cash or stock. The Exchange proposes to include this definition in a footnote in the BOX Fee Schedule along with the other definitions of the strategies in Section II.D.

The Exchange proposes to offer a strategy cap for merger strategies. Today, Floor Participant transactions are capped at \$1,000 for all short stock interest, reversal, conversion, jelly roll, and box spread strategies executed on the same trading day.⁵ The Exchange proposes to include merger strategies in the daily Strategy QOO Order Fee Cap and Rebate. As such, Floor Participant transactions will also be capped at \$1,000 for all merger strategies executed on the same trading day. Further, the Exchange proposes to include merger strategies in the Floor Broker Strategy QOO Rebate. As proposed, on each trading day, Floor Brokers are eligible to receive a \$500 rebate for presenting certain Strategy QOO Orders on the Trading Floor. The rebate will be applied once the \$1,000 fee cap for all dividend, short stock interest, reversal, merger, conversion, jelly roll, and box spread strategies is met.

The Exchange notes that the fee cap discussed herein exists at another options exchange in the industry.⁶

2. Statutory Basis

The Exchange believes that the proposal is consistent with the requirements of Section 6(b) of the Act, in general, and Section 6(b)(4) and 6(b)(5) of the Act,⁷ in particular, in that it provides for the equitable allocation of reasonable dues, fees, and other charges among BOX Participants and other persons using its facilities and does not unfairly discriminate between customers, issuers, brokers or dealers.

The Exchange believes that including merger strategies in Section II.D of the BOX Fee Schedule is reasonable, as another exchange offers fee caps for merger strategies, namely Cboe.⁸ Moreover, the Exchange believes the proposed fees are reasonable in comparison because BOX's fee cap for merger strategies is identical to Cboe's fee cap. Further, the Exchange believes that including merger strategies in the

Strategy QOO Order rebate is appropriate as Floor Brokers are eligible to receive a \$500 rebate for presenting all other strategies to the BOX Trading Floor.

The Exchange believes that the proposed fee cap for merger strategies is equitable and not unfairly discriminatory because it provides incentives for all Participants to submit these types of strategy orders to the BOX Trading Floor, which brings increased liquidity and order flow to the floor for the benefit of all market participants. Further, the Exchange believes that including merger strategies in the Strategy QOO Order rebate is equitable and not unfairly discriminatory as the rebate is available to all Floor Brokers who submit such orders to the BOX Trading Floor.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act because the proposed change applies uniformly to all Participants that incur transaction fees for merger strategies. Further, another options exchange today offer [sic] caps on merger strategies; therefore, the Exchange believes that the proposal is consistent with robust competition and does not provide any unnecessary burden on competition. Further, because Floor Participants pay Floor Brokers to execute trades on the Exchange floor, the Exchange believes that offering fee caps on merger strategies to Participants executing floor transactions and not electronic executions does not create an unnecessary burden on competition because the fee cap defrays brokerage costs associated with executing merger strategy transactions, similar to other strategies today.

The Exchange operates in a highly competitive market in which market participants can easily and readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or rebates to be inadequate. Accordingly, the fee cap and Floor Broker rebate for short stock interest [sic] strategies proposed by the Exchange, as described in the proposal, are influenced by these robust market forces and therefore must remain competitive with fee caps at other venues and therefore must continue to be reasonable and equitably allocated to those Participants that opt to direct orders to the Exchange rather than competing venues.

⁵ Short stock interest, reversal, conversion, jelly roll and box spread transactions are not included in the monthly fee cap for Broker Dealers.

⁶ See Cboe Exchange Inc. ("Cboe") Fee Schedule Footnote 13. At Cboe, market-maker, Clearing Trading Permit Holder, JBO participant, broker-dealer and non-Trading Permit Holder market-maker transaction fees are capped at \$1,000 for all merger strategies.

⁷ 15 U.S.C. 78f(b)(4) and (5).

⁸ See *supra* note 6.

³ 15 U.S.C. 78s(b)(3)(A)(ii).

⁴ 17 CFR 240.19b-4(f)(2).

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Exchange Act⁹ and Rule 19b-4(f)(2) thereunder,¹⁰ because it establishes or changes a due, or fee.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend the rule change if it appears to the Commission that the action is necessary or appropriate in the public interest, for the protection of investors, or would otherwise further the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-BOX-2019-14 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to File Number SR-BOX-2019-14. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written

communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-BOX-2019-14, and should be submitted on or before May 24, 2019.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹¹

Eduardo A. Aleman,

Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-85745; File No. SR-NASDAQ-2019-032]

Self-Regulatory Organizations; The Nasdaq Stock Market LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Delay Implementation of the Early Order Imbalance Information Functionality

April 29, 2019.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on April 16, 2019, The Nasdaq Stock Market LLC ("Nasdaq" or "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

¹¹ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to delay implementation of the Early Order Imbalance Information functionality until Q3 2019.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

On February 27, 2019, the Exchange filed a proposed rule change to establish the Early Order Imbalance Indicator ("EOII"), which contains a subset of the information comprising the Net Order Imbalance Indicator ("NOII") that the Exchange will disseminate ten minutes prior to the market close and five minutes prior to the cutoff time for entering Market on Close and certain Limit on Close Orders into the Nasdaq Closing Cross.³ The proposed rule change indicated that the Exchange would implement EOII in Q2 2019.⁴ The Exchange proposes to delay the implementation of EOII functionality until Q3 2019. The Exchange will issue an Equity Trader Alert notifying participants prior to implementing the functionality. The Exchange proposes this delay to allow the Exchange time to consider whether to propose, as part of a separate rule filing, a related enhancement to the Closing Cross process that would be implemented in conjunction with EOII.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,⁵ in general, and furthers the

³ See Securities Exchange Act Release No. 34-85292 (Mar. 12, 2019), 84 FR 9848 (Mar. 18, 2019) (SR-NASDAQ-2019-010).

⁴ See *id.* at 9850.

⁵ 15 U.S.C. 78f(b).

⁹ 15 U.S.C. 78s(b)(3)(A)(ii).

¹⁰ 17 CFR 240.19b-4(f)(2).

objectives of Section 6(b)(5) of the Act,⁶ in particular, in that it is designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest by allowing the Exchange additional time to consider whether to propose, as part of a separate rule filing, a related enhancement to the Closing Cross process that would be implemented in conjunction with EOII.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The Exchange's proposal to delay the adoption of the EOII functionality does not impose an undue burden on competition. Delaying EOII will simply allow the Exchange additional time to determine whether to propose, as part of a separate rule filing, a related enhancement to the Closing Cross process that would be implemented in conjunction with EOII.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act⁷ and subparagraph (f)(6) of Rule 19b-4 thereunder.⁸

A proposed rule change filed under Rule 19b-4(f)(6)⁹ normally does not become operative prior to 30 days after

the date of the filing. However, pursuant to Rule 19b-4(f)(6)(iii),¹⁰ the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay so that the Exchange can provide notice of the implementation delay as soon as possible. For this reason, the Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission waives the 30-day operative delay and designates the proposed rule change operative upon filing.¹¹

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NASDAQ-2019-032 on the subject line.

Paper Comments

• Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090. All submissions should refer to File Number SR-NASDAQ-2019-032. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the

submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NASDAQ-2019-032 and should be submitted on or before May 24, 2019.

comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes relocate rules related to the trading floor into the new Rulebook shell at Options 8, entitled "Options Floor Trading."

The text of the proposed rule change is available on the Exchange's website at <http://nasdaqphlx.cchwallstreet.com/>, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of this rule change is to relocate all rules that relate to the Exchange's trading floor into the new Rulebook shell at Options 8, titled "Floor Trading." The Exchange proposes to relocate the various rules or portion of rules into sections with titles within Options 8. Each rule in the new Options 8 will be described in greater detail below. The Exchange notes that cross-references within the relocated rules have been amended where appropriate to reflect relocations. Also, with respect to the relocation of a portion of a rule, a reference was added to the original rule. The Exchange is not substantively amending rule text unless noted otherwise within this rule change.

General Provisions

The Exchange proposes to add a title "General Provisions" into Options 8 along with two sections, Section 1, titled "Applicability" and Section 2, titled "Definitions." The Exchange's new proposed Section 1 seeks to clarify the interplay between Options 8 and the remainder of the Phlx Rulebook. A member may execute a transaction on Phlx electronically or from the trading

floor. The Exchange seeks to identify which rules are applicable to the trading floor within Options 8. To the extent that a portion of a rule applied to the trading floor, the Exchange relocated only that portion of the rule to Options 8. The Exchange proposes to provide at Section 1,

(a) The Options 8 Rules shall apply to Exchange options transactions by and among members and member organizations physically located on the Exchange's options trading floor, including the trading crowds, and shall govern all activity that occurs in the physical space designated by the Exchange as "trading floor" as well as trading conducted through the Options Floor Based Management. All executions that occur automatically within the electronic system operated by the Exchange that receives and disseminates quotes, executes orders and reports transactions ("System" or "Electronic System") shall be governed by all other Options Rules except for the Options 8 Rules.

(b) All Options Rules shall apply to Exchange Floor Trading, in addition to the Options 8 Rules, however where the Options 8 Rules disagree with another Options Rule not within Options 8 a conflict shall be resolved in favor of the Options 8 Rule as it applies to the Exchange Trading Floor.

The Exchange seeks to make clear that the Options 8 Rules should be read together with rules in the remainder of the Rulebook and makes clear that in the event of a conflict, the Options 8 rules apply to the trading floor.

Today, Rules Applicable to Trading of Options on Indices are drafted in a similar fashion. With respect to the Rules Applicable to Trading of Options on Indices (Rules 1000A—1109A), Phlx Rule 1000A, "Applicability and Definitions," currently provides:

The Rules in this Section are applicable only to index options (options on indices of securities as defined below). In addition, except to the extent that specific rules in this Section govern, or unless the context otherwise requires, the provisions of the Option Rules applicable to stock options and of the By-Laws and all other Rules and Policies of the Board of Directors shall be applicable to the trading on the Exchange of index options.

Similarly, Cboe Exchange, Inc. ("Cboe") Rule 6.1A. Global Trading Hours has an applicability rule that is similarly drafted. The rule provides,

(a) Applicability of Rules. All Rules of the Exchange apply to trading during Global Trading Hours except as set forth in this Rule and except for Rules that by their terms are inapplicable during Global Trading Hours or where the context otherwise requires.³

³ Cboe Rule 613, Cboe Options Hybrid System Automatic Execution Feature, similarly has an applicability rule that provides, ". . . This rule is applicable only to those classes specifically designated for trading on the Cboe Options Hybrid System. The Cboe Options Hybrid System is a

Proposed Section 2 contains definitions applicable to the trading floor. Unless otherwise stated, the proposed relocations do not modify the existing definition. The term "floor" at proposed Section 2(1) is relocated from Rule 1(n). The term "Floor Broker" at proposed Section 2(2) is relocated from Rule 1060. The term is being modified to "Floor Broker" instead of "Options Floor Broker" because these rules appear in the Options section of the Phlx Rulebook. The term "Inactive Nominee" at proposed Section 2(3) is being relocated from Rule 1(p). The term "Presiding Exchange Officials" at proposed Section 2(4) is being relocated from Rule 1000(e). The term "Permit" at proposed Section 2(5) references Rule 1(z) and also relocates portions of Rule 908(b)(i). The term "Public Outcry" at proposed Section 2(6) is being relocated in part from Rule 1000(g). The term "Non-SQT ROT" at proposed Section 2(7) is being relocated from Rule 1014(b)(ii)(C) and renamed "Floor Market Maker." The Exchange proposes to rename the term "Non-SQT ROT" throughout Options 8 as "Floor Market Maker."

Administration

The Exchange proposes a new title "Administration" into new Options 8 along with new proposed Sections 3–10. Proposed Section 3, titled "Imposition" is being relocated from Rule 714. Proposed Section 4, titled "Rights and Privileges of A–1 Permits" is relocated in part from Rule 908(b)(i)⁴ with the addition of the sentence, "A Series A–1 permit holder shall be subject to Rule 908." Proposed Section 5, titled "Qualification as a Member Organization" is relocated in part from Rule 910(f)(3)⁵ with the addition of the phrase, "In addition to the requirements of Rule 910." Proposed Section 6, titled "Registration of Floor Brokers" is being relocated from Rule 1061. Proposed Section 7, titled "Inactive Nominees" is being relocated from Rule 925. Proposed Section 8, "Trading Floor Registration" is being relocated from Rule 1260. Proposed Section 9, "Trading Floor Admittance" is being relocated from Rule 443. Proposed Section 10, "Training" is being relocated from Rule

trading platform that allows automatic executions to occur electronically and open outcry trades to occur on the floor of the Exchange pursuant to the priority and allocation principles contained in Rule 6.45."

⁴ Specifically, the Exchange is relocating Rule 908(b)(i) and deleting (c)(i) which is now highlighted with proposed new Section 4.

⁵ Specifically, the Exchange is relocating a portion of Rule 910(f)(3).

625, in part⁶ with the addition of the phrase, “In addition to Rule 625 requirements.” The proposed rule changes are non-substantive rule changes that simply seek to relocate and add transparency to the current rule text.

Market Participants

The Exchange proposes a new title “Market Participants” into new Options 8 along with new proposed Sections 11 and 12. Proposed Section 11 titled “Specialist Appointment” is being relocated in part from Rule 501⁷ with the addition of the phrase, “In addition to the requirements specified in Rule 501 related to the appointment of a Specialist, each Specialist unit” Proposed Section 12, titled “Clerks” is being relocated from Rule 1090. The proposed rule changes are non-substantive rule changes that simply seek to relocate and add transparency to the current rule text.

Regulation

The Exchange proposes a new title “Regulation” into new Options 8 along with new proposed Sections 13–19. Proposed Section 13, titled “Acts Detrimental to the Interest or Welfare of the Exchange” is being relocated, in part, from Rule 708⁸ and adds the phrase, “In addition to Rule 708, acts which could be deemed detrimental to the interest or welfare of the Exchange include, but are not limited to.” Proposed Section 14, titled, “Financial Responsibility and Reporting” is being relocated, in part, from Rule 703 and adding the phrase, “In addition to the obligations specified within Rule 703.”⁹ Proposed Section 15, titled “Stopping” An Option” is being relocated from Rule 1018. Proposed Section 16, titled “Trading for Joint Account” is being relocated from Rule 772. Proposed Section 17, titled “Limitations on Members Trading Because of Customers’ Orders” is being relocated, in part, from Rule 452¹⁰ and adding phrase, “In addition to the limitations in Rule 452.” Proposed Section 18, titled “General Responsibility of Floor Brokers” is being relocated from Rule 155. Proposed Section 19, titled “Responsibilities of Floor Brokers—Treasury Securities Options” is being relocated from Rule

1017D. The proposed rule changes are non-substantive rule changes that simply seek to relocate and add transparency to the current rule text.

Floor Trading Rules

The Exchange proposes a new title “Floor Trading Rules” into new Options 8 along with new proposed Sections 20–35. Proposed Section 20, titled “Dealings on Floor—Hours” is being relocated from Rule 102. Proposed Section 21, titled “Dealings on Floor—Persons” is being relocated from Rule 104. Proposed Section 22, titled “Execution of Options Transactions on the Trading Floor” is being relocated, in part, from Rule 1000(f) and (g). Proposed Section 23, titled “Precedence of Highest Bid” is being relocated, in part, from Rule 119.¹¹ The Exchange proposes to replicate the first part of that rule, “The highest bid shall have precedence in all cases pursuant to Rule 119. Where bids are made at the same price, the priority and precedence shall be determined in accordance with the following rules:” before the relocated sections of Rule 119(e) and (f). Proposed Section 24, titled “Bids And Offers—Premium” is being relocated from Rule 1033.¹²

Proposed Section 25, titled “Floor Allocation” is being relocated, in part, from Rule 1014(g)(i)–(vi) into Options 8, Section 25.¹³ The Exchange proposes to add a sentence at the beginning of this rule as “a”, which states, “The following applies to the allocation of orders on the Trading Floor” to introduce the information which follows. The Exchange proposes to relocate the first paragraph of Commentary .01 to Rule 1014.¹⁴ Commentary .05(c) of Rule 1014 will be relocated to Options 8, Section 25(f). Commentary .07 and .08 of Rule 1014 are being relocated to Options 8, Section 25(d)(1) and (e). Commentary .09 of

¹¹ Specifically, rule text is being relocated from Rule 119(e) and (f).

¹² The Exchange is capitalizing the “The” before “Options Clearing Corporation” to properly represent the name.

¹³ The term “Options Floor Broker System” is being amended to “Options Floor Based System” to conform to the remainder of the rulebook. This term was amended in a prior rule change. See Securities Exchange Act Release No. 83656 (July 17, 2018), 83 FR 34899 (July 23, 2018) (SR-Phlx–2018–40). The same change was made to E–1, “Use of Identification Letters and Numbers.”

¹⁴ The paragraph of Commentary .01 of Rule 1014 will remain within this rule. Commentary .02–.04 and .06 of Rule 1014 rule text will remain within Rule 1014. Commentary .05(b) will remain within Rule 1014, except that “(a) RESERVED and (b)” will be deleted. Commentary .10 of Rule 1014 is being renumbered as “.07”. Commentary .15 and .16 of Rule 1014 are being renumbered as “.08” and “.09” respectively. Commentary .18 of Rule 1014 is being renumbered as “.10”.

Rule 1014 is being relocated to Options 8, Section 25(g). Commentary .11, .12, .13 and .14 of Rule 1014 are being relocated to Options 8, Section 25(h)–(k). Commentary .17 of Rule 1014 is being relocated to Options 8, Section 25(l). Commentary .19 of Rule 1014 is being relocated to Options 8, Section 25(m).

Proposed Section 26, titled “Trading Halts” is being relocated in part from Rule 1047¹⁵ and 1047A.¹⁶ Proposed Section 27, titled “Quoting Obligations and Required Transactions” is being relocated, in part, from Rule 1014 to Options 8, Section 27. Specifically, current Rule 1014(b)(ii)(E) and (c)(i)(A)(1) are being relocated.¹⁷ The Exchange proposes to add this sentence “Without limiting the foregoing, a Specialist and an ROT is expected to perform the following activities in the course of maintaining a fair and orderly market:” prior to the current text within Rule 1014(c)(i)(A)(2). The Exchange also proposes to relocate Rule 1014(d), in part, and to replicate the phrase “Furthermore, an ROT should not:” in relocating Rule 1014(d)(ii) to proposed Options 8, Section 27(d). The Exchange proposes to renumber current Rule 1014(d)(iii) as (ii). The Exchange proposes to relocate Rule 1014(e) to proposed Options 8, Section 27(e). The Exchange proposes to amend Rule 1014(g) to reserve the rule text in (i)–(vi).¹⁸ The Exchange proposes to relocate rule text from the second and third paragraphs of Commentary .01 to Rule 1014 into proposed Options 8, Section 27(f).

Proposed Section 28, titled “Responsibilities of Floor Brokers”, similar to current Rule 1063, is being relocated from “General Responsibility of Floor Brokers” in Rule 155, Rule 1063 and Rule 1069, titled “Snapshot Feature.” Current Rule 155 is relocated within Options 8, Section 28(a) in the first sentence. Current Rule 1069 is relocated at Options 8, Section 28(i). Proposed Section 29, titled “Use of Floor Based Management System by Registered Options Traders and Specialists” is being relocated from Rule

¹⁵ Specifically, the Commentary to Rule 1047 is being relocated.

¹⁶ Specifically, the Exchange proposes to relocate Rule 1047A(f)(ii) and renumber the remaining paragraphs in Rule 1047A(f). The Exchange proposes to add the phrase “in addition to Rule 1047A.”

¹⁷ The Exchange noted above that the term “non-SQT ROT” is being amended to Floor Market Maker throughout these rules.

¹⁸ As noted above, Rule 1014(g)(i)–(vi) as well as Commentaries .01 (in part), .05 (in part), .07, .08, .09, .11–.14, .17 and .19 is being relocated to Options 8, Section 25 and no changes are proposed for Rule 1014(g)(vii) and (viii).

⁶ Specifically, the last sentence of Rule 625 is being relocated.

⁷ Specifically, rule text is being relocated from Rule 501(d) and (f).

⁸ Specifically, Commentary .01(e) to Rule 708 is being relocated.

⁹ Specifically, sections of Rule 703(c)(vi) are being relocated.

¹⁰ Specifically, rule text is being relocated from Supplementary Material .03 to Rule 452.

1085. The Exchange is not relocating the following outdated rule text:¹⁹

The Exchange anticipates that it will make FBMS available to Registered Options Traders and Specialists during the Second Quarter of 2018. To facilitate the transition to FBMS, the Exchange will not require Registered Options Traders or Specialists to utilize FBMS until one month after the date on which the Commission approves the Exchange's proposal. The Exchange will notify members via an Options Trader Alert, to be posted on the Exchange's website, at least seven calendar days prior to the date when FBMS will be available for use by Registered Options Traders and Specialists. The alert will also contain the mandatory start date.

Proposed Section 30 is being "Reserved." The Exchange will relocate Rule 1064, titled "Crossing, Facilitation and Solicited Orders" to Section 30 at a later date. Proposed Section 31, titled "Discretionary Transactions" is being relocated from 1065. Proposed Section 32 titled, "Certain Types of Floor-Based (Non-System) Orders Defined" is being relocated from Rule 1066 and retitled from "Certain Types of Floor Based (Non-PHLX XL) Orders Defined." Proposed Section 33 titled, "Accommodation Transactions" is being relocated from Rule 1059. Proposed Section 34 is proposed to be reserved. The Exchange proposes to relocate current Rule 1079, titled "FLEX Index, Equity and Currency Options" into proposed Section 34. Proposed Section 35, titled "Disputes" is being relocated from Rule 124 and renamed from "Disputes-Options." The proposed rule changes are non-substantive rule changes that simply seek to relocate and add transparency to the current rule text.

Floor Trade Administration

The Exchange proposes a new title "Floor Trade Administration" into new Options 8 along with new proposed Sections 36–38. Proposed Section 36 is titled, "Resolution of Uncompared Trade" is being relocated from Rule 1039. Proposed Section 37, titled "Letters of Authorization" is being relocated from Rule 1062. Proposed Section 38 titled, "Communications and Equipment" is being relocated from Rule 606. The proposed rule changes are non-substantive rule changes that simply seek to relocate and add transparency to the current rule text.

Option Floor Procedure Advices and Order and Decorum Regulations

The currently titled "Option Floor Procedure Advices and Order and

Decorum Regulations" within the Rulebook is proposed to be renamed "Options Minor Rule Violations and Order and Decorum Regulations" and numbered Section 39.²⁰ The Options Floor Procedure Advices related to the trading floor are being relocated to proposed Section 39 and all Order and Decorum Regulations are also being relocated within Section 39. The Exchange proposes to re-letter and re-number the rules within the current Rulebook that will continue to be located within the section proposed to be renamed "Options Minor Rule Violations."

The Exchange proposes to delete reserved rules from this section. The following Option Floor Procedure Advices are proposed to be relocated into Section 39:

- A-2 "Options Floor Based Management System" (re-numbered as A-1);
- A-3 "Requesting Market Quotations" (re-numbered as A-2);
- A-9 "All-or-None Options Orders" (re-numbered as A-3);
- B-1 "Responsibility to Make Markets";
- B-2 "Crowd Courtesy";
- B-3 "Trading Requirements";
- B-4 "Entering Orders from On-Floor and Off-Floor for Execution on the Exchange";
- B-5 "Agency-Principal Restrictions";
- B-6 "Priority of Options Orders for Equity Options, Index Options and U.S. Dollar-Settled Foreign Currency Options by Account Type (EQUITY OPTION, INDEX OPTION AND U.S. DOLLAR-SETTLED FOREIGN CURRENCY OPTION ONLY)";
- B-7 "Options Floor Based Management System"
- B-8 "Use of Floor Brokers by an ROT While on the Floor" (renumbered as B-7);
- B-9 "Use of Tickets" (renumbered as B-8);
- B-10 "Responsibility for Mismatched or "Out" Trades
- B-11 "ROTs and Specialists Entering Orders for Execution on Other Exchanges in Multiply Traded Options" (renumbered as B-9);
- B-12 "ROTs and Specialists Entering Orders for Execution on Other Exchanges in Multiply Traded Options" (renumbered as B-11);
- C-1 "Ascertaining the Presence of Registered Options Traders in a Trading Crowd";
- C-2 "Options Floor Broker Management System";

- C-3 "Handling Orders of ROTs and Other Registered Options Market Makers";
- C-4 "Floor Brokers Handling Orders for Same Firm";
- C-5 "ROTs Acting as Floor Brokers";
- C-7 "Responsibility to Represent Orders to the Trading Crowd" (re-numbered as C-6);
- C-9 "Floor Brokers and Clerks Trading in their Customer Accounts" (renumbered as C-7);
- Staffing is re-lettered from "E" to "D";
- E-1 "Required Staffing of Options Floor" (re-lettered as D-1);
- Miscellaneous is re-lettered from "F" to "E";
- F-1 Use of Identification Letters and Numbers (re-lettered and re-numbered to E-1);
- F-2 Allocation, Time Stamping, Matching and Access to Matched Trades (re-lettered and re-numbered to E-2);
- F-4 "Orders Executed as Spreads, Straddles, Combinations or Synthetics and Other Order Ticket Marking Requirements" (re-lettered and re-numbered to E-3);
- F-5 "Changes or Corrections to Material Terms of a Matched Trade" (re-lettered and re-numbered to E-4);
- F-6 "Option Quote Parameters," in part, (re-lettered and re-numbered as E-5);
- F-8 "Failure to Comply with an Exchange Inquiry," in part, (re-lettered and renumbered as E-6);
- F-9 "Affiliations," in part, (re-lettered and renumbered as E-7);
- F-11 "Splitting Orders" (re-lettered and renumbered as E-8);
- F-12 "Responsibility for Assigning Participation" (re-lettered and renumbered as E-9);
- F-14 Executing Multi-leg and Synthetic Option Orders" (re-lettered and renumbered as E-10);
- F-16 Two-Way, Three Way and Multi-Spread Transactions (FOREIGN CURRENCY OPTION ONLY) (re-lettered and renumbered as E-11);
- F-22 Intra-Day Addition of Strike Prices (re-lettered and renumbered as E-12);
- F-23 Clerks in the Crowd (re-lettered and renumbered as E-13);
- F-25 Fingerprinting Floor Personnel (re-lettered and renumbered as E-14);
- F-30 Options Trading Floor Training (re-lettered and renumbered as E-15);
- F-31 Communications and Equipment (re-lettered and renumbered as E-16);
- F-32 Solicitation of Quotations (re-lettered and renumbered as E-17);

¹⁹This feature was made available in 2018 as per Options Trader Alert #2018-20.

²⁰The Exchange proposes to also retitle "Equity Floor Procedure Advices" as "Minor Rule Violations."

Finally, all Regulations are being relocated to Section 41 and re-lettered from “H” to “F”.

The Exchange is retaining the following rules in the new Options Minor Rule Plan Section:

- A-4 “Specialist as ROT” (re-numbered as A-1);
- F-6 “Option Quote Parameters” (re-numbered as F-1);
- F-8 “Failure to Comply with an Exchange Inquiry (re-numbered as (F-2));
- F-9 “Affiliations” (re-numbered as (F-3));
- F-10 “Unusual Market Conditions” (re-numbered as (F-4));
- F-13 “Supervisory Procedures Relating to ITSFEA” (re-numbered as (F-5));
- F-19 “Clearing Agents’ Responsibility for Carrying Positions in Market Maker Accounts” (re-numbered as (F-6));
- F-27 “Options Exchange Official Rulings” (re-numbered as (F-7));
- F-33 “Failure to Provide Notification of Changes in Business Operations” (re-numbered as (F-9));
- F-34 “Failure to Timely Submit Amendments to Form U4, Form U5 and Form BD” (re-numbered as (F-10)); and
- F-35 Violations of Exercise and Exercise Advice Rules for Noncash-Settled Equity Option Contracts (re-numbered as (F-11)).

The Exchange notes that were a rule applied to both the electronic market and floor trading, the rule was replicated in both the Options Minor Rule Violations and the options Floor Procedure Advice with the applicable parts.²¹ The proposed rule changes are non-substantive rule changes that simply seek to relocate and add transparency to the current rule text.

Other Administrative Changes

The Exchange proposes to amend references to “XL” or “Phlx XL” to “System” as the terms “XL” and “Phlx XL” are obsolete terms. The Exchange has removed “reserved” sections throughout the rules and also re-numbered and re-lettered various rules to bring conformity to the Rulebook. Finally, the Exchange proposes to capitalize the term “specialist” throughout the new proposed rules.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,²² in general, and furthers the

²¹ The following Options Floor Procedure Advices were replicated: F-6, “Option Quote Parameters;” F-8, “Failure to Comply with an Exchange Inquiry;” and F-9, “Affiliations.”

²² 15 U.S.C. 78f(b).

objectives of Section 6(b)(5) of the Act,²³ in particular, in that it is designed to promote just and equitable principles of trade and to protect investors and the public interest by bringing greater transparency to its rules. The Exchange is not substantively amending rule text unless noted otherwise within this rule change. The Exchange’s proposal to relocate trading floor rules to new Options 8 will make clear which rules are applicable to the trading floor. The renaming of the term “Non-ROT SQT” as “Floor Market Maker” is a non-substantive rule change. Finally, renumbering, re-lettering, deleting reserved rules and obsolete rule text and amending cross-references and other minor technical changes will bring greater transparency to Phlx’s Rules.

B. Self-Regulatory Organization’s Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes that the proposed amendments do not impose an undue burden on competition because the amendments to relocate the floor trading rules are non-substantive. This rule change is intended to bring greater clarity to the Exchange’s Rules. The renaming of the term “Non-ROT SQT” as “Floor Market Maker” is a non-substantive rule change. Finally, renumbering, re-lettering, deleting reserved rules and obsolete rule text and amending cross-references will bring greater transparency to Phlx’s Rules. The Exchange is not substantively amending rule text unless noted otherwise within this rule change.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section

²³ 15 U.S.C. 78f(b)(5).

19(b)(3)(A) of the Act²⁴ and Rule 19b-4(f)(6) thereunder.²⁵

A proposed rule change filed pursuant to Rule 19b-4(f)(6) under the Act²⁶ normally does not become operative for 30 days after the date of its filing. However, Rule 19b-4(f)(6)(iii)²⁷ permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay so that the proposed rule change may become operative upon filing. Waiver of the operative delay would allow the Exchange to promptly relocate rules relating to the Exchange’s trading floor, which the Exchange believes will improve the organization and readability of the Exchange’s Rulebook. Therefore, the Commission believes that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the operative delay and designates the proposed rule change operative upon filing.²⁸

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

²⁴ 15 U.S.C. 78s(b)(3)(A).

²⁵ 17 CFR 240.19b-4(f)(6). In addition, Rule 19b-4(f)(6)(iii) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

²⁶ 17 CFR 240.19b-4(f)(6).

²⁷ 17 CFR 240.19b-4(f)(6)(iii).

²⁸ For purposes only of waiving the 30-day operative delay, the Commission also has considered the proposed rule’s impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-Phlx-2019-17 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to File Number SR-Phlx-2019-17. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-Phlx-2019-17 and should be submitted on or before June 3, 2019.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²⁹

Eduardo A. Aleman,
Deputy Secretary.

[FR Doc. 2019-09019 Filed 5-2-19; 8:45 am]

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-85751; File No. SR-NYSEArca-2019-28]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing of Proposed Rule Change To List and Trade Shares of the Virtus WMC Risk-Managed Alternative Equity ETF

April 30, 2019.

Pursuant to Section 19(b)(1)¹ of the Securities Exchange Act of 1934 ("Act")² and Rule 19b-4 thereunder,³ notice is hereby given that, on April 15, 2019, NYSE Arca, Inc. ("NYSE Arca" or the "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to list and trade shares of the Virtus WMC Risk-Managed Alternative Equity ETF under NYSE Arca Rule 8.600-E. The proposed change is available on the Exchange's website at www.nyse.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to list and trade shares ("Shares") of the Virtus

WMC Risk-Managed Alternative Equity ETF (the "Fund") under NYSE Arca Rule 8.600-E, which provides generic criteria applicable to the listing and trading of Managed Fund Shares on the Exchange.⁴

The Fund is a series of ETFs Series I ("Trust"). Virtus ETF Advisors LLC (the "Adviser") is the investment adviser for the Fund. Wellington Management Company LLP is the sub-adviser to the Fund (the "Sub-Adviser"). The Trust and the Adviser have engaged the Sub-Adviser to manage the Fund's investments, subject to the oversight and supervision of the Adviser and the Board of Trustees of the Trust.⁵ ETF Distributors LLC ("Distributor"), a registered broker-dealer, will act as the distributor for the Fund's Shares. The Bank of New York Mellon ("BNY Mellon") will serve as the custodian, administrator and transfer agent ("Transfer Agent") for the Fund.

Commentary .06 to Rule 8.600-E provides that, if the investment adviser to the investment company issuing Managed Fund Shares is affiliated with a broker-dealer, such investment adviser shall erect and maintain a "fire wall" between the investment adviser and the broker-dealer with respect to access to information concerning the composition and/or changes to such investment company portfolio. In addition, Commentary .06 further requires that personnel who make decisions on the open-end fund's portfolio composition must be subject to procedures designed to prevent the use and dissemination of material non-public information

⁴ A Managed Fund Share is a security that represents an interest in an investment company registered under the Investment Company Act of 1940 (15 U.S.C. 80a-1) (the "1940 Act") organized as an open-end investment company or similar entity that invests in a portfolio of securities selected by its investment adviser consistent with its investment objectives and policies. In contrast, an open-end investment company that issues Investment Company Units, listed and traded on the Exchange under NYSE Arca Rule 5.2-E(j)(3), seeks to provide investment results that correspond generally to the price and yield performance of a specific foreign or domestic stock index, fixed income securities index or combination thereof.

⁵ The Trust is registered under the 1940 Act. On February 28, 2019, the Trust filed with the Commission Post-Effective Amendment No. 155 to the Trust's registration statement on Form N-1A under the Securities Act of 1933 (15 U.S.C. 77a) ("Securities Act"), and under the 1940 Act relating to the Fund (File Nos. 333-187668 and 811-22819) ("Registration Statement"). The Trust will file an amendment to the Registration Statement as necessary to conform to the representations in this filing. The description of the operation of the Trust and the Fund herein is based, in part, on the Registration Statement. In addition, the Commission has issued an order granting certain exemptive relief to the Trust under the 1940 Act. See Investment Company Act Release No. 30607 (July 23, 2013) (File No. 812-14080).

¹ 15 U.S.C. 78s(b)(1).

² 15 U.S.C. 78a.

³ 17 CFR 240.19b-4.

²⁹ 17 CFR 200.30-3(a)(12).

regarding the open-end fund's portfolio. Commentary .06 to Rule 8.600–E is similar to Commentary .03(a)(i) and (iii) to NYSE Arca Rule 5.2–E(j)(3); however, Commentary .06 in connection with the establishment and maintenance of a “fire wall” between the investment adviser and the broker-dealer reflects the applicable open-end fund's portfolio, not an underlying benchmark index, as is the case with index-based funds.

The Adviser and the Sub-Adviser are not registered as broker-dealers. The Adviser and Sub-Adviser are affiliated with one or more broker-dealers and have implemented and will maintain a “fire wall” with respect to each such broker-dealer regarding access to information concerning the composition and/or changes to the Fund's portfolio. In the event (a) the Adviser or the Sub-Adviser becomes registered as a broker-dealer or newly affiliated with a broker-dealer, or (b) any new adviser or sub-adviser is a registered broker-dealer or becomes affiliated with a broker-dealer, it will implement and maintain a “fire wall” with respect to its relevant personnel or broker-dealer affiliate regarding access to information concerning the composition and/or changes to the portfolio, and will be subject to procedures, each designed to prevent the use and dissemination of material non-public information regarding such portfolio.

Virtus WMC Risk-Managed Alternative Equity ETF

Principal Investments

According to the Registration Statement, the investment objective of the Fund is to seek to provide superior risk-adjusted total returns over the long term. The Fund will seek to achieve its investment objective, under normal market conditions,⁶ by (i) investing in a broadly diversified portfolio of global equity securities in both developed and emerging markets, and (ii) implementing a beta management strategy by shorting futures contracts and purchasing and selling options, as further described below. By combining these two strategies, the Sub-Adviser seeks to generate superior total returns (*i.e.*, returns in excess of the average returns of broad global equity market indexes) over a full market cycle with significant downside equity market protection (*i.e.*, protection intended to limit losses in a declining market), consistent with the risk/return profile of investments in long/short equity (also referred to as alternative equity) hedge

⁶ The term “normal market conditions” is defined in NYSE Arca Rule 8.600–E(c)(5).

funds. Although the Sub-Adviser will seek for the Fund's risk/return profile to be consistent with investments in long/short equity hedge funds, the Fund itself does not invest in hedge funds. Under normal market conditions, the Fund will invest at least 80% of its net assets (plus any borrowings for investment purposes) in equity securities (as discussed below), in derivatives,⁷ cash and cash equivalents and other instruments (as discussed below), that have economic characteristics similar to such investments (together, the “Principal Investments”).

The Fund will invest in the following U.S. and non-U.S. exchange-listed equity securities of U.S. and non-U.S. issuers: Common stock; preferred stock; convertible preferred stock; rights; warrants; American Depositary Receipts (“ADRs”) and Global Depositary Receipts (“GDRs”); and real estate investment trusts (“REITs”) of U.S. and foreign issuers.

The Fund may hold cash and cash equivalents.⁸

The Fund may hold U.S. and non-U.S. exchange-traded futures and options on equity securities, equity securities indices, and interest rates. Options held by the Fund may be either exchange-listed or traded over-the-counter (“OTC”).

The Fund may invest in forward foreign currency contracts and U.S. and non-U.S. exchange-traded foreign currency futures contracts.

The Fund may enter into short sales of any securities and financial instruments in which the Fund may invest.

The Fund may use derivative instruments described above as a substitute for investing directly in an underlying security or other financial instrument, to seek to enhance returns, to seek to manage or reduce exposure/risk, or to seek to manage foreign currency risk.

Non-Principal Investments

While the Fund, under normal market conditions, will invest at least 80% in the securities and financial instruments described above, the Fund may invest its remaining assets in the securities and financial instruments described below.

The Fund may invest in exchange-traded funds (“ETFs”).⁹

⁷ The Fund's investments in derivatives will include investments in both listed derivatives and over-the-counter (“OTC”) derivatives, as those terms are defined in Commentary .01(d) and (e) to NYSE Arca Rule 8.600–E.

⁸ The term “cash equivalents” is defined in Commentary .01(c) to NYSE Arca Rule 8.600–E.

⁹ For purposes of this filing, the term “ETFs” includes Investment Company Units (as described

The Fund may invest in convertible bonds.

In addition to U.S. government securities that are cash equivalents as defined in Commentary .01(c) to NYSE Arca Rule 8.600–E, the Fund may invest in other U.S. government securities, which are U.S. government obligations such as U.S. Treasury notes, U.S. Treasury bonds, and U.S. Treasury bills, obligations guaranteed by the U.S. government.

The Fund will not invest in securities or other financial instruments that have not been described in this proposed rule change.

Use of Derivatives by the Fund

Investments in derivative instruments will be made in accordance with the 1940 Act and consistent with the Fund's investment objective and policies.

To limit the potential risk associated with such transactions, the Fund may enter into offsetting transactions or segregate or “earmark” assets determined to be liquid by the Adviser in accordance with procedures established by the Trust's Board of Trustees (the “Board”) and in accordance with the 1940 Act or as permitted by applicable Commission guidance. These procedures have been adopted consistent with Section 18 of the 1940 Act and related Commission guidance. In addition, the Fund has included appropriate risk disclosure in its offering documents, including leveraging risk. Leveraging risk is the risk that certain transactions of the Fund, including the Fund's use of derivatives, may give rise to leverage, causing the Fund to be more volatile than if it had not been leveraged.

Other Restrictions

The Fund's investments, including derivatives, will be consistent with the Fund's investment objective and will not be used to enhance leverage (although certain derivatives and other investments may result in leverage). That is, the Fund's investments will not be used to seek performance that is the multiple or inverse multiple (*e.g.*, 2X or –3X) of the Fund's primary broad-based securities benchmark index (as defined in Form N–1A).¹⁰

in NYSE Arca Rule 5.2–E(j)(3)); Portfolio Depositary Receipts (as described in NYSE Arca Rule 8.100–E); and Managed Fund Shares (as described in NYSE Arca Rule 8.600–E). All ETFs will be listed and traded in the U.S. on a national securities exchange. While the Fund may invest in inverse ETFs, the Fund will not invest in leveraged (*e.g.*, 2X, –2X, 3X or –3X) ETFs.

¹⁰ The Fund's broad-based securities benchmark index will be identified in a future amendment to the Registration Statement following the Fund's first full calendar year of performance.

Impact on Arbitrage Mechanism

The Adviser and the Sub-Adviser believe there will be minimal, if any, impact to the arbitrage mechanism as a result of the Fund's use of derivatives. The Adviser and the Sub-Adviser understand that market makers and participants should be able to value derivatives as long as the positions are disclosed with relevant information. The Adviser and the Sub-Adviser believe that the price at which Shares of the Fund trade will continue to be disciplined by arbitrage opportunities created by the ability to purchase or redeem Shares of the Fund at their net asset value ("NAV"), which should ensure that Shares of the Fund will not trade at a material discount or premium in relation to their NAV.

Creation of Creation Units

The Trust issues and sells Shares of the Fund only in aggregations of 50,000 Shares (each aggregation is called a "Creation Unit") on a continuous basis through the Distributor at the NAV next determined after receipt of an order in proper form on any Business Day.¹¹ The size of a Creation Unit is subject to change.

The consideration for a purchase of Creation Units generally will consist of cash or an in-kind deposit of a portfolio of securities and other investments (the "Deposit Securities") for each Creation Unit constituting a substantial replication, or a representation, of the securities included in the Fund's portfolio and an amount of cash computed as described below (the "Cash Amount"). The Cash Amount together with the Deposit Securities, as applicable, are referred to as the "Fund Deposit," which represents the minimum initial and subsequent investment amount for a Creation Unit of the Fund.

The Cash Amount would be an amount equal to the difference between the NAV of the Shares (per Creation Unit) and the "Deposit Amount," which is an amount equal to the aggregate market value of the Deposit Securities, and serves to compensate for any differences between the NAV per Creation Unit and the Deposit Amount.

The Fund, through the National Securities Clearing Corporation ("NSCC"), makes available on each Business Day, immediately prior to the opening of business on the Exchange (currently 9:30 a.m. E.T.), the list of the names and the required number of securities for each Deposit Security to

be included in the current Fund Deposit (based on information at the end of the previous Business Day) for the Fund. Such Fund Deposit is applicable, subject to any adjustments as described below, in order to effect creations of Creation Units of the Fund until such time as the next-announced composition of the Deposit Securities is made available.

All orders to create Creation Units generally must be received by the Distributor no later than 3:00 p.m. E.T. on the date such order is placed in order for creation of Creation Units to be effected based on the NAV of the Fund as determined on such date.

In addition, the Trust reserves the right to permit the substitution of an amount of cash (*i.e.*, a "cash in lieu" amount) to be added to the Cash Component to replace any Deposit Security which may, among other reasons, not be available in sufficient quantity for delivery, or which may not be eligible for transfer through the Clearing Process (defined below), or which may not be eligible for trading by a Participating Party (defined below).

To be eligible to place orders with the Distributor to create Creation Units of the Fund, an entity or person either must be (1) a "Participating Party," *i.e.*, a broker-dealer or other participant in the clearing process through the Continuous Net Settlement System of the NSCC (the "Clearing Process"); or (2) a Depository Trust Company ("DTC") Participant; which, in either case, must have executed an agreement with the Trust, the Distributor and the Transfer Agent ("Participant Agreement"). A Participating Party and DTC Participant are collectively referred to as an "Authorized Participant."

Redemption of Creation Units

Shares may be redeemed only in Creation Units at their NAV next determined after receipt of a redemption request in proper form by the Distributor and only on a Business Day.

The Trust, through NSCC, makes available immediately prior to the opening of business on the Exchange (9:30 a.m. E.T.) on each Business Day, the Deposit Securities that will be applicable (subject to possible amendment or correction) to redemption requests received in proper form on that day. The Fund's securities received on redemption ("Redemption Instruments") may not be identical to Deposit Securities that are applicable to creations of Creation Units. Unless cash redemptions are permitted or required for the Fund, the redemption proceeds for a Creation Unit generally consist of Deposit Securities as announced by the

Trust on the Business Day of the request for redemption, plus cash in an amount equal to the difference between the NAV of the Shares being redeemed, as next determined after a receipt of a request in proper form, and the value of the Deposit Securities, less the redemption transaction fee.

In order to redeem Creation Units of the Fund, an Authorized Participant must submit an order to redeem for one or more Creation Units. An order to redeem Creation Units of a Fund using the Clearing Process generally must be received by the Trust not later than 3:00 p.m. E.T. on the Business Day of the request for redemption in order for such order to be effected based on the NAV of the Fund as next determined. An order to redeem Creation Units of the Fund using the NSCC Clearing Process made in proper form but received by the Fund after 3:00 p.m. E.T. will be deemed received on the next Business Day immediately following the day on which such order request is transmitted.

Application of Generic Listing Requirements

The Exchange is submitting this proposed rule change because the portfolio for the Fund will not meet all of the "generic" listing requirements of Commentary .01 to NYSE Arca Rule 8.600-E applicable to the listing of Managed Fund Shares. The Fund's portfolio will meet all such requirements except for those set forth in Commentary .01(e), as described below.

The Fund will not comply with the requirements set forth in Commentary .01(e) to NYSE Arca Rule 8.600-E with respect to the Fund's investments in OTC derivatives.¹² Specifically, the aggregate gross notional value of the Fund's investments in OTC derivatives may exceed 20% of Fund assets, calculated as the aggregate gross notional value of such OTC derivatives.¹³ The Exchange proposes that up to 50% of the Fund's assets (calculated as the aggregate gross notional value) may be invested in OTC

¹² Commentary .01(e) to NYSE Arca Rule 8.600-E provides that a portfolio may hold OTC derivatives, including forwards, options and swaps on commodities, currencies and financial instruments (*e.g.*, stocks, fixed income, interest rates, and volatility) or a basket or index of any of the foregoing; however, on both an initial and continuing basis, no more than 20% of the assets in the portfolio may be invested in OTC derivatives. For purposes of calculating this limitation, a portfolio's investment in OTC derivatives will be calculated as the aggregate gross notional value of the OTC derivatives.

¹³ The Adviser and Sub-Adviser monitor counterparty credit risk exposure (including for OTC derivatives) and evaluate counterparty credit quality on a continuous basis.

¹¹ A "Business Day" with respect to the Fund is any day on which the Exchange is open for business.

derivatives, that is, forwards and OTC options, that are used to reduce currency, interest rate or credit risk arising from the Fund's investments (that is, "hedge"). The Fund's investments in OTC derivatives, other than OTC derivatives used to hedge the Fund's portfolio against currency, interest rate, or credit risk, will be limited to 20% of the assets in the Fund's portfolio, calculated as the aggregate gross notional value of such OTC derivatives.

The Adviser and Sub-Adviser believe that it is important to provide the Fund with additional flexibility to manage risk associated with its investments. Depending on market conditions, it may be critical that the Fund be able to utilize available OTC derivatives for this purpose to attempt to reduce impact of currency, interest rate, or credit fluctuations on Fund assets. OTC derivatives provide the Fund with additional flexibility as well as a more precise means to effectively attempt to reduce currency, interest rate, or credit fluctuations on Fund assets. Generally, OTC derivatives can be customized to a greater degree than exchange-traded derivatives and can provide a better hedge on Fund assets, as well as allow for more control over the duration of the hedge which can also mitigate trading costs. Therefore, in addition to the Fund's ability to invest 20% of the assets in the Fund's portfolio in OTC derivatives pursuant to NYSE Arca Rule 8.600–E, Commentary .01(e), the Exchange believes it is appropriate to apply a limit of up to 50% of the Fund's assets to the Fund's investments in OTC derivatives (calculated as the aggregate gross notional value of such OTC derivatives), including forwards and options, that are used for hedging purposes, as described above.¹⁴

¹⁴ The Commission has previously approved an exception from requirements set forth in Commentary .01(e) relating to investments in OTC derivatives similar to those proposed with respect to the Fund in Securities Exchange Act Release Nos. 80657 (May 11, 2017), 82 FR 22702 (May 17, 2017) (SR–NYSEArca–2017–09) (Notice of Filing of Amendment No. 2 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment No. 2, Regarding Investments of the Janus Short Duration Income ETF Listed Under NYSE Arca Equities Rule 8.600). See also, Securities Exchange Act Release Nos. 84047 (September 6, 2018), 83 FR 46200 (September 12, 2018) (SR–NASDAQ–2017–128) (Notice of Filing of Amendment No. 3 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment No. 3, to List and Trade Shares of the Western Asset Total Return ETF), in which the Nasdaq Stock Market LLC proposed that there would be no limit on the fund's investments in Interest Rate and Currency Derivatives, and that the aggregate weight of all OTC Derivatives other than Interest Rate and Currency Derivatives will not exceed 10% of the fund's assets); 84818 (December 13, 2018), 83 FR 65189 (December 19, 2018) (SR–

The Adviser and Sub-Adviser represent that deviations from the generic requirements are necessary for the Fund to achieve its investment objective in a manner that is cost-effective and that maximizes investors' returns because OTC derivatives generally provide the Fund with more flexibility to negotiate the exact exposure that the Fund requires, and minimize trading costs because OTC derivatives are not subject to costs of rolling that are associated with listed derivatives.

The Adviser and Sub-Adviser represent that they intend to engage in strategies that utilize foreign currency forward transactions (which may be traded OTC) and OTC options, as described above, based on its investment strategies. Depending on market conditions, the exposure due to these strategies may exceed 20% of the Fund's assets. The Adviser represents further that the foreign exchange forward market is OTC, and, as such, it is not possible to implement these strategies efficiently using listed derivatives. In addition, use of OTC options on U.S. and non-U.S. exchange-listed equity securities may be an important means to reduce risk in the Fund's equity investments, or, depending on market conditions, to enhance returns of such investments. If the Fund were limited to investing up to 20% of assets in OTC derivatives, the Fund would have to exclude or underweight these strategies and would be less diversified, concentrating risk in the other strategies it will utilize.

In addition, by applying the 20% limitation in Commentary .01(e) to Rule 8.600–E, the Fund would be less able to protect its holdings from more than one risk simultaneously. For example, if the Fund's assets (on a gross notional basis) were \$100 million and the Fund held \$20 million in Principal Investments with two types of risks (e.g., currency and credit risk) which could not be hedged using listed derivatives, the Fund would be faced with the choice of either holding \$20 million aggregate gross notional value in OTC derivatives to mitigate one of the risks while passing the other risk to its shareholders, or, for example, holding \$10 million aggregate gross notional value in OTC derivatives on each of the

NYSEArca–2018–75) (Order Approving a Proposed Rule Change, as Modified by Amendment No. 1 Thereto, Regarding the Listing and Trading of Shares of the PGIM Ultra Short Bond ETF), note 13; 85022 (January 31, 2019), 84 FR 2265 (February 6, 2019) (SR–Nasdaq–2018–080) (Notice of Filing of Amendment No. 3 and Order Granting Accelerated Approval of a Proposed Rule Change to List and Trade Shares of the Brandywine GLOBAL-Global Total Return ETF).

risks while passing the remaining portion of each risk to the Fund's shareholders.

The Exchange notes that, other than Commentary .01(e), the Shares of the Fund will conform to the initial and continued listing criteria under NYSE Arca Rule 8.600–E and will meet all other requirements of NYSE Arca Rule 8.600–E.

The Adviser and Sub-Adviser represent that the proposed exception described above is consistent with the Fund's investment objective, and will further assist the Adviser and Sub-Adviser to achieve such investment objective.

Availability of Information

The Fund's website (www.virtusefunds.com) will include the prospectus for the Fund that may be downloaded. The Fund's website will include additional quantitative information updated on a daily basis including, for the Fund, (i) the prior Business Day's NAV; (ii) the reported midpoint of the bid-ask spread at the time of NAV calculation (the "Bid-Ask Price");¹⁵ (iii) a calculation of the premium or discount of the Bid-Ask Price against such NAV; and (iv) data in chart format displaying the frequency distribution of discounts and premiums of the Bid-Ask Price against the NAV, within appropriate ranges, for each of the four previous calendar quarters. On each Business Day, before commencement of trading in Shares in the Core Trading Session on the Exchange, the Fund will disclose on its website the Disclosed Portfolio as defined in NYSE Arca Rule 8.600–E(c)(2) that forms the basis for the Fund's calculation of NAV at the end of the Business Day.¹⁶

On a daily basis, the Fund will disclose the information required under NYSE Arca Rule 8.600–E(c)(2) to the extent applicable. The website information will be publicly available at no charge.

In addition, a basket composition file, which includes the security names and share quantities, if applicable, required to be delivered in exchange for the Fund's Shares, together with estimates

¹⁵ The Bid-Ask Price of the Fund's Shares will be determined using the mid-point of the highest bid and the lowest offer on the Exchange as of the time of calculation of the Fund's NAV. The records relating to Bid-Ask Prices will be retained by the Fund and its service providers.

¹⁶ Under accounting procedures followed by the Fund, trades made on the prior Business Day ("T") will be booked and reflected in NAV on the current Business Day ("T+1"). Accordingly, the Fund will be able to disclose at the beginning of the Business Day the portfolio that will form the basis for the NAV calculation at the end of the Business Day.

and actual cash components, will be publicly disseminated daily prior to the opening of the Exchange via the NSCC. The basket represents one Creation Unit of the Fund. Authorized Participants may refer to the basket composition file for information regarding any security, and any other instrument that may comprise the Fund's basket on a given day.

Investors can also obtain the Trust's Statement of Additional Information ("SAI"), the Fund's Shareholder Reports, and the Fund's Forms N-CSR and Forms N-SAR, filed twice a year. The Fund's SAI and Shareholder Reports will be available free upon request from the Trust, and those documents and the Form N-CSR, Form N-PX and Form N-SAR may be viewed on-screen or downloaded from the Commission's website at www.sec.gov.

Intra-day and closing price information regarding U.S. and non-U.S. exchange-traded options and futures will be available from the exchange on which such instruments are traded. Price information relating to OTC options will be available from major market data vendors. Intra-day price information for U.S. and non-U.S. exchange-traded options on futures will be available from the applicable exchange and from major market data vendors. For U.S. and non-U.S. exchange-listed equity securities, intraday price quotations will generally be available from broker-dealers and trading platforms (as applicable). Price information for cash equivalents and convertible bonds will be available from major market data vendors. Price information regarding U.S. government securities generally may be obtained from brokers and dealers who make markets in such securities or through nationally recognized pricing services through subscription agreements. Additionally, the Trade Reporting and Compliance Engine ("TRACE") of the Financial Industry Regulatory Authority ("FINRA") will be a source of price information for certain fixed income securities to the extent transactions in such securities are reported to TRACE.¹⁷

Information regarding market price and trading volume of the Shares will be

continually available on a real-time basis throughout the day on brokers' computer screens and other electronic services. Information regarding the previous day's closing price and trading volume information for the Shares will be published daily in the financial section of newspapers.

Quotation and last sale information for the Shares, ETFs, and other U.S. exchange-traded equity securities will be available via the Consolidated Tape Association ("CTA") high-speed line. Exchange-traded options quotation and last sale information for options cleared via the Options Clearing Corporation ("OCC") are available via the Options Price Reporting Authority ("OPRA"). In addition, the Portfolio Indicative Value ("PIV"), as defined in NYSE Arca Rule 8.600-E(c)(3), will be widely disseminated by one or more major market data vendors at least every 15 seconds during the Core Trading Session.

Trading Halts

With respect to trading halts, the Exchange may consider all relevant factors in exercising its discretion to halt or suspend trading in the Shares of the Fund. Trading in Shares of the Fund will be halted if the circuit breaker parameters in NYSE Arca Rule 7.12-E have been reached. Trading also may be halted because of market conditions or for reasons that, in the view of the Exchange, make trading in the Shares inadvisable. These may include: (1) The extent to which trading is not occurring in the securities and/or the financial instruments comprising the Disclosed Portfolio of the Fund; or (2) whether other unusual conditions or circumstances detrimental to the maintenance of a fair and orderly market are present. Trading in the Shares will be subject to NYSE Arca Rule 8.600-E(d)(2)(D), which sets forth circumstances under which Shares of the Fund may be halted.

Trading Rules

The Exchange deems the Shares to be equity securities, thus rendering trading in the Shares subject to the Exchange's existing rules governing the trading of equity securities. Shares will trade on the NYSE Arca Marketplace from 4:00 a.m. to 8:00 p.m. E.T. in accordance with NYSE Arca Rule 7.34-E (Trading Sessions). The Exchange has appropriate rules to facilitate transactions in the Shares during all trading sessions. As provided in NYSE Arca Rule 7.6-E, the minimum price variation ("MPV") for quoting and entry of orders in equity securities traded on the NYSE Arca Marketplace is \$0.01,

with the exception of securities that are priced less than \$1.00 for which the MPV for order entry is \$0.0001.

With the exception of the requirements of Commentary .01(e) as described above under "Application of Generic Listing Requirements," the Shares of the Fund will conform to the initial and continued listing criteria under NYSE Arca Rule 8.600-E. The Exchange represents that for initial and/or continued listing, the Fund will be in compliance with Rule 10A-3 under the Act, as provided by NYSE Arca Rule 5.3-E. A minimum of 100,000 Shares will be outstanding at the commencement of trading on the Exchange. The Exchange has obtained a representation from the issuer of the Shares that the NAV per Share will be calculated daily and that the NAV and the Disclosed Portfolio will be made available to all market participants at the same time.

Surveillance

The Exchange represents that trading in the Shares will be subject to the existing trading surveillances administered by the Exchange, as well as cross-market surveillances administered by FINRA on behalf of the Exchange, which are designed to detect violations of Exchange rules and applicable federal securities laws. The Exchange represents that these procedures are adequate to properly monitor Exchange trading of the Shares in all trading sessions and to deter and detect violations of Exchange rules and federal securities laws applicable to trading on the Exchange.

The surveillances referred to above generally focus on detecting securities trading outside their normal patterns, which could be indicative of manipulative or other violative activity. When such situations are detected, surveillance analysis follows and investigations are opened, where appropriate, to review the behavior of all relevant parties for all relevant trading violations.

The Exchange or FINRA, on behalf of the Exchange, or both, will communicate as needed regarding trading in the Shares, certain exchange-traded equity securities (including ETFs), certain exchange-traded options and certain futures with other markets and other entities that are members of the Intermarket Surveillance Group ("ISG"), and the Exchange or FINRA, on behalf of the Exchange, or both, may obtain trading information regarding trading in the Shares, certain exchange-traded equity securities (including ETFs), certain exchange-traded options and certain futures from such markets

¹⁷ Broker-dealers that are FINRA member firms have an obligation to report transactions in specified debt securities to TRACE to the extent required under applicable FINRA rules. Generally, such debt securities will have at issuance a maturity that exceeds one calendar year. For fixed income securities that are not reported to TRACE, (i) intraday price quotations will generally be available from broker-dealers and trading platforms (as applicable) and (ii) price information will be available from feeds from market data vendors, published or other public sources, or online information services, as described above.

and other entities. In addition, the Exchange may obtain information regarding trading in the Shares, certain exchange-traded equity securities (including ETFs), certain exchange-traded options and certain futures from markets and other entities that are members of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement (“CSSA”). In addition, FINRA, on behalf of the Exchange, is able to access, as needed, trade information for certain fixed income securities held by the Fund reported to FINRA’s TRACE.

In addition, the Exchange also has a general policy prohibiting the distribution of material, non-public information by its employees.

All statements and representations made in this filing regarding (a) the description of the portfolio, (b) limitations on portfolio holdings or reference assets, or (c) the applicability of Exchange listing rules specified in this rule filing shall constitute continued listing requirements for listing the Shares on the Exchange.

The issuer has represented to the Exchange that it will advise the Exchange of any failure by the Fund to comply with the continued listing requirements, and, pursuant to its obligations under Section 19(g)(1) of the Act, the Exchange will monitor for compliance with the continued listing requirements. If the Fund is not in compliance with the applicable listing requirements, the Exchange will commence delisting procedures under NYSE Arca Rule 5.5(m)–E.

Information Bulletin

Prior to the commencement of trading, the Exchange will inform its Equity Trading Permit (“ETP”) Holders in an Information Bulletin (“Bulletin”) of the special characteristics and risks associated with trading the Shares of the Fund. Specifically, the Bulletin will discuss the following: (1) The procedures for purchases and redemptions of Shares in Creation Units (and that Shares are not individually redeemable); (2) NYSE Arca 9.2–E(a), which imposes a duty of due diligence on its ETP Holders to learn the essential facts relating to every customer prior to trading the Shares; (3) the risks involved in trading the Shares during the Early and Late Trading Sessions when an updated PIV will not be calculated or publicly disseminated; (4) how information regarding the PIV and the Disclosed Portfolio is disseminated; (5) the requirement that ETP Holders deliver a prospectus to investors purchasing newly issued Shares prior to or concurrently with the confirmation of

a transaction; and (6) trading information.

In addition, the Bulletin will reference that the Fund is subject to various fees and expenses described in the Registration Statement. The Bulletin will discuss any exemptive, no-action, and interpretive relief granted by the Commission from any rules under the Act. The Bulletin will also disclose that the NAV for the Shares of the Fund will be calculated after 4:00 p.m. E.T. each trading day.

2. Statutory Basis

The basis under the Act for this proposed rule change is the requirement under Section 6(b)(5) of the Act that an exchange have rules that are designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to, and perfect the mechanism of a free and open market and, in general, to protect investors and the public interest.

The Exchange believes that the proposed rule change is designed to prevent fraudulent and manipulative acts and practices in that the Shares will be listed and traded on the Exchange pursuant to the initial and continued listing criteria in NYSE Arca Equities Rule 8.600–E. The Exchange has in place surveillance procedures that are adequate to properly monitor trading in the Shares in all trading sessions and to deter and detect violations of Exchange rules and federal securities laws applicable to trading on the Exchange. The Adviser and the Sub-Adviser are not registered as a broker-dealer but both the Adviser and the Sub-Adviser are affiliated with a broker-dealer and have implemented and will maintain a “fire wall” with respect to such broker-dealer regarding access to information concerning the composition and/or changes to the Fund’s portfolio. The Exchange or FINRA, on behalf of the Exchange, or both, will communicate as needed regarding trading in the Shares, certain exchange-traded options and certain futures with other markets and other entities that are members of the ISG, and the Exchange or FINRA, on behalf of the Exchange, or both, may obtain trading information regarding trading in the Shares, certain exchange-traded options and certain futures from such markets and other entities. In addition, the Exchange may obtain information regarding trading in the Shares, certain exchange-traded options and certain futures from markets and other entities that are members of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement. In addition, FINRA, on

behalf of the Exchange, is able to access, as needed, trade information for certain fixed income securities held by the Fund reported to FINRA’s TRACE.

The proposed rule change is designed to promote just and equitable principles of trade and to protect investors and the public interest in that the Exchange will obtain a representation from the issuer of the Shares that the NAV per Share will be calculated daily and that the NAV and the Disclosed Portfolio will be made available to all market participants at the same time. In addition, a large amount of information is publicly available regarding the Fund and the Shares, thereby promoting market transparency. The website for the Fund includes a form of the prospectus for the Fund and additional data relating to NAV and other applicable quantitative information. Trading in Shares of the Fund will be halted if the circuit breaker parameters in NYSE Arca Equities Rule 7.12–E have been reached or because of market conditions or for reasons that, in the view of the Exchange, make trading in the Shares inadvisable, and trading in the Shares will be subject to NYSE Arca Equities Rule 8.600–E(d)(2)(D), which sets forth circumstances under which trading in the Shares of the Fund may be halted. In addition, as noted above, investors have ready access to information regarding the Fund’s holdings, the PIV, the Disclosed Portfolio, and quotation and last sale information for the Shares.

The Exchange believes that it is appropriate and in the public interest to allow the Fund, for hedging purposes only, to exceed the 20% limit in Commentary .01(e) to Rule 8.600–E of portfolio assets that may be invested in OTC derivatives to a maximum of 50% of Fund assets (calculated as the gross notional value). As noted above, the Adviser and Sub-Adviser believe that it is in the best interests of the Fund’s shareholders for the Fund to be allowed to reduce the currency, interest rate, or credit risk arising from the Fund’s investments using the most efficient financial instruments. The proposed alternative requirements are narrowly tailored to allow the Fund to achieve its investment objective. In addition, the Fund’s investments in OTC derivatives, other than OTC derivatives used to hedge the Fund’s portfolio against currency, interest rate, or credit risk will be limited to 20% of the assets in the Fund’s portfolio, calculated as the aggregate gross notional value of such OTC derivatives. While certain risks can be hedged via listed derivatives, OTC derivatives (such as forwards and options) can be customized to hedge

against precise risks. Accordingly, the Adviser and Sub-Adviser believe that OTC derivatives may frequently be a more efficient hedging vehicle than listed derivatives. Depending on market conditions, it may be critical that the Fund be able to utilize available OTC derivatives for this purpose to attempt to reduce impact of currency, interest rate, or credit fluctuations on Fund assets. Therefore, the Exchange believes that increasing the percentage limit in Commentary .01(e), as described above, to the Fund's investments in OTC derivatives, including forwards and options, that are used specifically for hedging purposes would permit the Fund to satisfy its investment objective and reduce investment risks in a more cost-effective manner and, therefore, would help protect investors and the public interest.¹⁸

The proposed rule change is designed to perfect the mechanism of a free and open market and, in general, to protect investors and the public interest in that it will facilitate the continued listing and trading of an actively-managed exchange-traded product that, through permitted use of an increased level of OTC derivatives above than currently permitted by the generic listing requirements of Commentary .01 to NYSE Arca Rule 8.600–E, will enhance competition among market participants, to the benefit of investors and the marketplace.

The Exchange believes that it is appropriate and in the public interest to allow the Fund, for hedging purposes only, to exceed the 20% limit in Commentary .01(e) to Rule 8.600–E of portfolio assets that may be invested in OTC derivatives. Under Commentary .01(e), a series of Managed Fund Shares listed under the “generic” standards may invest up to 20% of its assets (calculated as the aggregate gross notional value) in OTC derivatives. Because the Fund, in furtherance of its investment objective, may invest a substantial percentage of its investments in Principal Investments, the 20% limit in Commentary .01(e) to Rule 8.600–E could result in the Fund being unable to fully pursue its investment objective while attempting to sufficiently mitigate investment risks. The inability of the Fund to adequately hedge its holdings would effectively limit the Fund's ability to invest in certain instruments,

¹⁸The Exchange notes that the Commission has previously approved listing and trading of Managed Fund Shares the investments of which are similar to those proposed herein for the Fund. See, e.g., Securities Exchange Act Release No. 82492 (January 12, 2018) 83 FR 2850 (January 19, 2018) (SR–NYSEArca–2017–87) (approving listing of shares of the JP Morgan Long/Short ETF).

or could expose the Fund to additional investment risk. For example, if the Fund's assets (on a gross notional value basis) were \$100 million and no listed derivative were suitable to hedge the Fund's risk, under the generic standards the Fund would be limited to holding up to \$20 million gross notional value in OTC derivatives (\$100 million * 20%). Accordingly, the maximum amount the Fund would be able to invest in Principal Investments while remaining adequately hedged would be \$20 million. The Fund then would hold \$60 million in assets that could not be hedged, other than with listed derivatives, which, as noted above, might not be sufficiently tailored to the specific instruments to be hedged.¹⁹

In addition, by applying the 20% limitation in Commentary .01(e) to Rule 8.600–E, the Fund would be less able to protect its holdings from more than one risk simultaneously. For example, if the Fund's assets (on a gross notional basis) were \$100 million and the Fund held \$20 million in Principal Investments and Non-Principal Investments with two types of risks (e.g., currency and credit risk) which could not be hedged using listed derivatives, the Fund would be faced with the choice of either holding \$20 million aggregate gross notional value in OTC derivatives to mitigate one of the risks while passing the other risk to its shareholders, or, for example, holding \$10 million aggregate gross notional value in OTC derivatives on each of the risks while passing the remaining portion of each risk to the Fund's shareholders.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purpose of the Act. The Exchange notes that the proposed rule change will facilitate the listing and trading of an issue of Managed Fund Shares that, through permitted use of an increased level of OTC derivatives above that currently permitted by the generic listing requirements of Commentary .01 to NYSE Arca Equities Rule 8.600–E will enhance competition among market participants, to the benefit of investors and the marketplace.

¹⁹Implicit in expanding the ability of the Fund to enter into OTC derivatives solely for hedging purposes is that OTC derivatives will never be 100% of the Fund's portfolio because there will always be an underlying asset that is being hedged.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

- (A) By order approve or disapprove the proposed rule change, or
- (B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR–NYSEArca–2019–28 on the subject line.

Paper Comments

- Send paper comments in triplicate to: Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEArca–2019–28. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the

provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSEArca-2019-28 and should be submitted on or before May 24, 2019.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²⁰

Eduardo A. Aleman,
Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-85743; File No. SR-NASDAQ-2019-031]

Self-Regulatory Organizations; The Nasdaq Stock Market LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Rule 5702 Concerning an Issuer's Obligation To Disclose Material Information About the Issuer's Listed Non-Convertible Bonds

April 29, 2019.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on April 15, 2019, The Nasdaq Stock Market LLC ("Nasdaq" or "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Rule 5702 to clarify the fact that Rule

5250(b)(1) and IM-5250-1, which presently obligate issuers of non-convertible bonds listed on the Nasdaq Bond Exchange to promptly disclose to Nasdaq any material information that would reasonably be expected to affect the value of their listed bonds or influence decisions to invest in such bonds, includes an obligation to disclose to Nasdaq material information about the company's equity securities, even if those securities are listed on a national securities exchange other than Nasdaq (including, for example, the New York Stock Exchange ("NYSE") or the NYSE American market), to the extent that information about such equity securities also would reasonably be expected to affect the value of or influence decisions to invest in the listed bonds.

The text of the proposed rule change is available on the Exchange's website at <http://nasdaq.cchwallstreet.com>, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

In November 2018, the Commission approved amendments to the Exchange's rules that permit the Exchange to list and trade non-convertible corporate debt securities (referred to herein as "bonds" or "non-convertible bonds") on the Nasdaq Bond Exchange.³ Under the Exchange's listing rules, at Rule 5702(a)(2), a non-convertible bond is eligible for listing on the Exchange only if its issuer concurrently lists at least one class of an equity security on Nasdaq, NYSE, or NYSE American. The Exchange noted in its proposal for the Nasdaq Bond Exchange that upon the effective date of

its proposal, the Exchange would be capable of listing and trading non-convertible bonds only of issuers that list equity securities on Nasdaq.⁴ The Exchange stated that it expected to be ready to list and trade bonds of issuers with equity securities listed on NYSE or NYSE American by the Second Quarter of 2019.⁵

As the Exchange prepares to begin listing and trading bonds of issuers of NYSE and NYSE American listed equity securities, it proposes to further amend its Rules to ensure that it will have access to all of the information it needs to evaluate whether and when to suspend, delist, or halt trading in such bonds. Specifically, the proposed amendment would highlight to issuers that their obligation, under Rule 5250(b)(1) and IM-5250-1, to promptly disclose to Nasdaq material information that could reasonably be expected to affect the value of or influence decisions to invest in their Nasdaq-listed bonds, includes an obligation to promptly notify the Exchange of material news about their NYSE or NYSE American listed equity securities, to the extent that such information about such NYSE or NYSE American listed securities could also reasonably be expected to affect the value of or influence decisions to invest in the Nasdaq-listed bonds.

Rule 4000B(i)(1) provides that the Exchange may halt or suspend trading in non-convertible bonds listed on the Nasdaq Bond Exchange when: (1) In the Exchange's regulatory capacity, it is necessary or appropriate to maintain a fair and orderly market, to protect investors, or is in the public interest, due to extraordinary circumstances or unusual market conditions; (2) a class of equity that is issued by the same issuer as the non-convertible bond has been halted or suspended by, or de-listed from, the Exchange or by its primary listing market (NYSE or NYSE American), as applicable; (3) news reports have a material impact on a non-convertible bond, its issuer, or related stock of its issuer; or (4) the non-convertible bond is to be called for redemption or will mature or become subject to retirement, and thereafter it will be subject to de-listing.

To assist the Exchange in determining when to halt or suspend trading in non-convertible bonds, Rule 5250(b)(1) and IM-5250-1 require that, except in unusual circumstances,⁶ Nasdaq listed

⁴ See SR-NASDAQ-2018-070 (as modified by Amendment Nos. 1-3).

⁵ See *id.*

⁶ As set forth in IM-5250-1, companies in unusual circumstances may not be required to make public disclosure of material events including, for example, where it is possible to maintain

²⁰ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ See Securities Exchange Act Release No. 34-84575 (Nov. 13, 2018), 83 FR 58309 (Nov. 19, 2018).

companies, including issuers of non-convertible bonds listed on the Nasdaq Bond Exchange, shall disclose promptly to the public through any Regulation FD compliant method (or combination of methods) any material information that would reasonably be expected to affect the value of their securities or influence investors' decisions. Under Rule 5250 and IM-5250-1, Nasdaq-listed companies must notify Nasdaq's MarketWatch Department⁷ prior to the distribution of certain material news at least ten minutes prior to public announcement of the news when the public release of the information is made, from 7:00 a.m. to 8:00 p.m. E.T, or prior to 6:50 a.m., if the company releases the news publicly other than between 7:00 a.m. and 8:00 p.m.⁸

The Exchange construes Rule 5250(b)(1) and IM-5250-1 as already obligating an issuer of a Nasdaq-listed bond to disclose and to provide notice of disclosure to the Nasdaq MarketWatch Department of any news information—including information about the issuer's equity securities—that is material to the value of or an decision to invest in the listed bond. For avoidance of doubt, however, the Exchange proposes to amend Rule 5702 to reiterate and make explicit this obligation.

Specifically, the Exchange proposes to reiterate, in new Rule 5702(c), that any company that has non-convertible bonds listed on the Exchange under Rule 5702 is concurrently obligated, under Rule 5250(b)(1) and IM-5250-1, to promptly disclose and provide notice of disclosure to Nasdaq's MarketWatch

confidentiality of those events and immediate public disclosure would prejudice the ability of the company to pursue its legitimate corporate objectives. However, IM-5250-1 states that companies remain obligated to disclose this information to Nasdaq upon request pursuant to Rule 5250(a).

⁷ Nasdaq's MarketWatch Department monitors real time trading in all Nasdaq securities during the trading day for price and volume activity.

⁸ As set forth in IM-5250-1, such events include: (1) Financial-related disclosures, including quarterly or yearly earnings, earnings restatements, pre-announcements or guidance; (2) corporate reorganizations and acquisitions, including mergers, tender offers, asset transactions and bankruptcies or receiverships; (3) new products or discoveries, or developments regarding customers or suppliers (e.g., significant developments in clinical or customer trials, and receipt or cancellation of a material contract or order); (4) senior management changes of a material nature or a change in control; (5) resignation or termination of independent auditors, or withdrawal of a previously issued audit report; (6) events regarding the Company's securities, such as defaults on senior securities, calls of securities for redemption, repurchase plans, stock splits or changes in dividends, changes to the rights of security holders, or public or private sales of additional securities; (7) significant legal or regulatory developments; or (8) any event requiring the filing of a Form 8-K.

Department of any material information that would reasonably be expected to affect the value of the bond or decisions to invest in the bond. The proposal would emphasize that this obligation extends to material information about the company's equity securities, even if those securities are listed on a national securities exchange other than Nasdaq, to the extent that information about such equity securities also would reasonably be expected to affect the value of or influence decisions to invest in the bond. Potentially relevant news about the NYSE- or NYSE American-listed equity securities would include, among other things, a voluntary or involuntary delisting of the equity securities, a bankruptcy of the issuer, a corporate reorganization, a call for redemption of the equity securities, or a significant legal or regulatory development, such as a regulatory investigation or action.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,⁹ in general, and furthers the objectives of Section 6(b)(5) of the Act,¹⁰ in particular, in that it is designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest. Specifically, the Exchange believes that the proposal will promote just and equitable principles of trade by helping to ensure that bond issuers provide prompt notice to Nasdaq's MarketWatch Department, in accordance with Rule 5250(b)(1) and IM-5250-1, of all material news—including material news about the issuer's equity securities listed on Nasdaq or another national securities exchange—that can reasonably be expected to affect the value of or influence a decision to invest in a Nasdaq-listed bond. The proposal will protect investors by ensuring that MarketWatch has the all of the information it reasonably requires to determine whether to suspend, delist, or halt trading in a listed bond, as set forth in Rule 4000B(i), and that it does not lack access to material information that is relevant to the value of or a decision to invest in the listed bonds due to the fact that the issuer has disclosed the information to another national securities exchange in connection with the listing of its equity securities on that other exchange.

⁹ 15 U.S.C. 78f(b).

¹⁰ 15 U.S.C. 78f(b)(5).

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The proposal is merely intended to help ensure that the Exchange has the information it needs in all instances to evaluate whether to suspend, delist, or halt trading in a Nasdaq-listed bond. The Exchange does not expect that its proposal will have any impact whatsoever on inter-industry competition. The Exchange also does not believe that the proposal will have an adverse impact on intra-industry competition. Although the proposal will specifically require bond issuers with equity securities listed on other national securities exchanges to promptly report material news about those equity securities to Nasdaq, bond issuers with Nasdaq-listed securities are subject to the same obligation. Moreover, the Exchange does not expect that its proposal will require issuers to disclose any information to Nasdaq that they would not otherwise be required to disclose to NYSE or NYSE American for similar purposes.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act¹¹ and Rule 19b-4(f)(6) thereunder.¹²

A proposed rule change filed under Rule 19b-4(f)(6)¹³ normally does not become operative prior to 30 days after the date of the filing. However, Rule

¹¹ 15 U.S.C. 78s(b)(3)(A).

¹² 17 CFR 240.19b-4(f)(6). In addition, Rule 19b-4(f)(6)(iii) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

¹³ 17 CFR 240.19b-4(f)(6).

19b-4(f)(6)(iii)¹⁴ permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposed rule change may become effective and operative immediately upon filing. The Exchange states that the waiver will allow the Exchange, as soon as it begins to list non-convertible bonds by issuers with equity securities listed on NYSE and NYSE American,¹⁵ to have access to information about such issuers' equity securities that is material to the Exchange's decisions to suspend, de-list, or halt trading in the bonds.

The Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest. The proposed rule change highlights in the Exchange bond listing rules the existing obligation of issuers listing non-convertible bonds to provide the Exchange with all material information that could reasonably be expected to affect the value of, or influence investors' decision, concerning Nasdaq listed non-convertible bonds including material information about an issuer's listed equity securities that could have such an affect, even if the equity security is listed on another national securities exchange.¹⁶ Such material information is important for the protection of investors and the public interest because this information will help the Exchange evaluate whether and when to suspend, de-list, or halt trading in the listed non-convertible bonds pursuant to Exchange rules. For these reasons, the Commission hereby waives the 30-day operative delay requirement and designates the proposed rule change as operative upon filing.¹⁷

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings

to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NASDAQ-2019-031 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090. All submissions should refer to File Number SR-NASDAQ-2019-031. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NASDAQ-2019-031 and should be submitted on or before May 24, 2019.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁸

Eduardo A. Aleman,

Deputy Secretary.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Notice of Intent To Prepare an Environmental Impact Statement (EIS) and Initiate Section 106 Consultation for the Proposed LaGuardia Access Improvement Project at LaGuardia Airport (LGA), New York City, Queens County, New York

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of Intent to Prepare an Environmental Impact Statement and Request for Scoping Comments.

SUMMARY: The Federal Aviation Administration (FAA) is issuing this notice under the provisions of the National Environmental Policy Act (NEPA) of 1969, as amended, to advise the public that an Environmental Impact Statement (EIS) will be prepared to assess the potential impacts of the proposed LaGuardia Airport Access Improvement Project and its enabling projects and connected actions (the proposed action). The Port Authority of New York and New Jersey (Port Authority) proposes to construct an elevated automated people mover (APM) that would provide direct access between LGA and two existing transit stations at Mets-Willets Point. Currently, LGA is accessible only by road. Passengers and employees face increasing and unreliable travel times and traffic congestion on off-Airport roadways. The project will provide air passengers and employees with a time-certain option for access to LGA and permit the Port Authority to provide adequate employee parking for the geographically constrained airport. Two (2) public scoping meetings and one (1)

governmental agency scoping meeting will be held to identify public and agency concerns related to the proposed action. FAA is the lead agency on the preparation of the EIS.

FOR FURTHER INFORMATION CONTACT: Mr. Andrew Brooks, Environmental Program Manager, Eastern Regional Office, AEA-610, Federal Aviation Administration, 1 Aviation Plaza, Jamaica, NY 11434. Telephone: 718-553-2511.

SUPPLEMENTARY INFORMATION: The purpose of this notice is to inform federal, state, and local government agencies and the public of the intent to prepare an EIS and to conduct a public and agency scoping process. Information, data, opinions, and substantive comments obtained throughout the scoping process will be considered in preparing the EIS.

The scoping process for this EIS will include scoping meetings and a comment period for interested agencies and members of the public to submit oral and/or written comments with respect to any potential environmental impacts associated with the proposed project, or comments representing the concerns, issues, and alternatives they believe should be addressed in the EIS. Please submit any written comments to the FAA no later than 5:00 p.m. Eastern Time, Monday, June 17, 2019.

The EIS will be prepared in accordance with the procedures described in FAA Order 1050.1F, *Environmental Impacts: Policies and Procedures*, and FAA Order 5050.4B, *National Environmental Policy Act (NEPA) Implementing Instructions for Airport Actions*. Additionally, pursuant to Executive Order 13807, Establishing Discipline and Accountability in the Environmental and Permitting Process for Infrastructure, this EIS will be used by all federal approving and permitting agencies. Accordingly, it will comply with any requirements of these cooperating and participating agencies. The FAA and cooperating and participating agencies intend to use the preparation of this EIS to comply with the concurrent statutory review process under Section 106 of the National Historic Preservation Act (NHPA), as amended, and its implementing regulations, *Protection of Historic Properties* (36 CFR part 800); Section 7 of the Endangered Species Act; the Magnuson-Stevens Fishery Conservation and Management Act; and Section 404 of the Clean Water Act. This Notice of Intent also serves to notify the public that this EIS process will satisfy the public notice and comment requirements of Section 106 of the NHPA, Section 4(f) of the Department of

Transportation (DOT) Act, DOT Order 5610.2(a), *Environmental Justice in Minority and Low-Income Populations*; Executive Order 11990, *Protection of Wetlands*; DOT Order 5660.1A, *Preservation of the Nation's Wetlands*; Executive Order 11988, *Floodplain Management*; and DOT Order 5650.2, *Floodplain Management and Protection*.

The Port Authority, the operator of LGA, proposes the following project components of the proposed action:

- Construction of an above ground fixed guideway automated people mover (APM) system approximately 2.3 miles in length that extends from the LGA Central Hall Building to the Metropolitan Transit Authority (MTA) Long Island Rail Road (LIRR) Mets-Willets Point Station and the New York City Transit (NYCT) 7 Line Mets-Willets Point Station;
 - construction of two on-Airport APM stations; construction of one off-Airport APM station at Mets-Willets Point that provides connections to the Mets-Willets Point LIRR and NYCT 7 Line stations;
 - construction of passenger walkway systems to connect the APM stations to the passenger terminals, parking garages, and ground transportation facilities;
 - construction of a multi-level APM operations, maintenance, and storage facility (OMSF) that includes 500 Airport employee parking spaces;
 - construction of three traction power substations: one located at the on-airport East Station, another at Willets Point Station, and the third at the OMSF to provide power to the APM guideway;
 - construction of a 27kV main substation located adjacent to the OMSF structure on MTA property; and
 - construction of utilities infrastructure, both new and modified, as needed, to support the proposed action.

The proposed action also includes various enabling projects to allow construction and connected actions, including: Utility relocation and demolition of certain existing facilities; reconstruction and/or relocation of the Passerelle Bridge; modifications to the MTA LIRR Mets-Willets Point Station, including service changes to the LIRR Port Washington Line; and the relocation of several Flushing Bay Marina facilities, including a boat lift, Marina office, and boat storage.

The FAA is required to consider a range of alternatives that could potentially meet the purpose and need to provide a time-certain transportation option that connects passengers and employees to LGA. As part of the information submittal process, the Port

Authority supplied an initial list of alternatives that they had considered. These alternatives are included below. After considering the public input from the scoping process, the FAA will identify a list of reasonable alternatives that will be evaluated through the EIS process.

Alternative One—Sponsor's Proposed Action: As previously described.

Alternative Two—Use of Other Existing Airports: Transfer or shifting of aviation activity to another existing public airport (or airports) in the New York metropolitan area.

Alternative Three—Use of Other Modes of Transportation: Use of other modes of transportation, including automobiles, buses, ferry service, existing passenger trains, proposed high-speed rail facilities or other emerging transportation technologies.

Alternative Four—Transportation Demand Management: Use of measures to reduce vehicular travel to and from the Airport.

Alternative Five—Off-Airport Roadway Expansion: Increase the capacity of roadways surrounding and providing access to the Airport, potentially including I-495, the Brooklyn-Queens Expressway (BQE), the Grand Central Parkway, Queens Boulevard, and/or Astoria Boulevard.

Alternative Six—Subway Extension from Astoria Boulevard Subway Station: Elevated Above Grand Central Parkway: Construction of an elevated subway structure that would extend service of the NYCT N and W Lines eastward from the existing Astoria Boulevard Subway Station to a new station at the Airport; the alignment would be along Grand Central Parkway.

Alternative Seven—Subway Extension from Astoria-Ditmars Boulevard Subway Station: Elevated Above 19th Avenue: Construction of an elevated subway structure that would extend service of the NYCT N and W Lines eastward from the existing Astoria-Ditmars Boulevard Subway Station to a new station at the Airport; the alignment would generally be along 31st Street north, 19th Avenue east, and Grand Central Parkway east.

Alternative Eight—Subway Extension from Astoria-Ditmars Boulevard Subway Station: Tunnel Beneath 19th Avenue: Construction of an underground subway structure that would extend service of the NYCT N and W Lines eastward from the existing Astoria-Ditmars Boulevard Subway Station to a new station at the Airport; the alignment generally would be in a tunnel beneath 31st Street north, 19th Avenue east, and Grand Central Parkway east.

Alternative Nine—Fixed Guideway from Astoria Boulevard Subway Station:

Construction of a fixed guideway APM system that would provide service from the existing Astoria Boulevard Subway Station to a new station at the Airport; the alignment generally would be along Grand Central Parkway east.

Alternative Ten—Fixed Guideway from Woodside LIRR and 61st Street-Woodside Subway Station: Construction of a fixed guideway APM system that would provide service from the existing LIRR Woodside Station and the NYCT 7 Line at the 61st Street/Woodside Subway Station to a new station at the Airport; the alignment generally would be along the existing railroad right-of-way north and then parallel the BQE north to the Grand Central Parkway east.

Alternative Eleven—Fixed Guideway from Roosevelt Avenue-Jackson Heights Subway Station: Construction of a fixed guideway APM system that would provide service from the existing NYCT 7, E, F, M, and R Lines at Roosevelt Avenue/Jackson Heights Subway Station to a new station at the Airport; the alignment generally would be along Broadway northwest to the BQE and then parallel the BQE north to the Grand Central Parkway east.

Alternative Twelve—Fixed Guideway from Jamaica Station Transportation Hub: Construction of a fixed guideway APM system that would provide service from the existing NYCT E, J, and Z Lines at Jamaica Station transportation hub to a new station at the Airport; the alignment generally would be along city streets to the Van Wyck Expressway and would continue northwesterly along the Van Wyck Expressway and Grand Central Parkway.

Alternative Thirteen—No Action Alternative: Under this alternative, the Port Authority would take no action to develop an APM system or other alternative form of transportation to and from the Airport.

Public Scoping and Governmental Agency Meetings: To ensure that the full range of issues related to the proposed action is addressed and that all significant issues are identified, comments and suggestions are invited from all interested parties. Public and governmental agency scoping meetings will be conducted to identify any significant issues associated with the proposed action.

A governmental agency scoping meeting for all federal, state, and local regulatory agencies that have jurisdiction by law or have special expertise with respect to any potential environmental impacts associated with the proposed action will be held on Wednesday, June 5, 2019. This meeting will take place at 10:00am Eastern Time, at the Port Authority of New York and

New Jersey Office at 4 World Trade Center, 23rd Floor, New York, New York. A notification letter will be sent in advance of the meeting.

Two public scoping meetings for the general public will be held. The public scoping meetings will be held from 6:30 p.m. to 8:30 p.m. Eastern Time on Wednesday, June 5, 2019 and from 6:30 p.m. to 8:30 p.m. Eastern Time on Thursday, June 6, 2019. The public scoping meetings will be conducted at the New York LaGuardia Airport Marriott Hotel at 102-05 Ditmars Boulevard, East Elmhurst, New York. A legal notice will also be placed in newspapers having general circulation in the study area. The newspaper notice will notify the public that scoping meetings will be held to gain their input concerning the alternatives to be considered and environmental impacts to be evaluated, with comments on the environmental impacts being used to help formulate the scope of analysis for the EIS. The Public Scoping Meetings will be open house format with project information displayed and representatives from the FAA and the Port Authority available to answer questions. Sign and oral interpretation can be made available at the meeting, as well as an assistive listening device, if requested 10 calendar days before the meeting. The meetings will be open to all persons on a space-available basis. There will be no admission fee or other charge, including parking, to attend and participate. Written and oral comments will be accepted at each of the meetings. The public comment period on the Scoping phase of the EIS will end on June 17, 2019.

The purpose of the Scoping Process, as stated above, is to receive input from the public, as well as from Federal, state, and local agencies that have legal jurisdiction and/or special expertise, with respect to any potential environmental impacts associated with the proposed project, as well as concerns, issues, and alternatives they believe should be addressed in the EIS. During this process, questions regarding the scope and process related to the EIS will be answered. More information about the sponsor's proposed project and the scoping meetings can be found at: www.LgaAccessEIS.com.

Comments should be addressed to the listed contact person, or by email to comments@lgaaccesseis.com. The Scoping comment period is from May 3, 2019 through June 17, 2019.

The FAA is aware that there may be Native American tribes with a historical interest in the area. The FAA will interact on a government-to-government basis, in accordance with all executive

orders, laws, regulations, and other memoranda. The tribes will also be invited to participate in accordance with NEPA and Section 106 of the National Historic Preservation Act.

Issued in Jamaica, New York, April 23, 2019.

Evelyn Martinez,

Manager, New York Airport District Office,
Airports Division, Eastern Region.

BILLING CODE 4910-13-P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

[Docket No. FHWA 2019-0015]

Agency Information Collection

Activities: Request for Comments for a New Information Collection

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice and request for comments.

SUMMARY: The FHWA invites public comments about our intention to request the Office of Management and Budget's (OMB) approval for a new information collection, which is summarized below under **SUPPLEMENTARY INFORMATION**. We are required to publish this notice in the **Federal Register** by the Paperwork Reduction Act of 1995.

DATES: Please submit comments by July 2, 2019.

ADDRESSES: You may submit comments identified by DOT Docket ID 2019-0015 by any of the following methods:

Website: For access to the docket to read background documents or comments received go to the Federal eRulemaking Portal: Go to <http://www.regulations.gov>. Follow the online instructions for submitting comments.

Fax: 1-202-493-2251.

Mail: Docket Management Facility, U.S. Department of Transportation, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590-0001.

Hand Delivery or Courier: U.S. Department of Transportation, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m. ET, Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT:

Damaris Santiago, 202-366-2034, Department of Transportation, FHWA, Office of Project Development and Environmental Review, E76-201, 1200 New Jersey Avenue SE, Washington, DC 20590. Office hours are from 8 a.m. to

5 p.m., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

Title: FHWA Environmental Excellence Awards.

Background: In 1995 FHWA established the biennial Environmental Excellence Awards to recognize partners, projects, and processes that use FHWA funding sources to go beyond environmental compliance and achieve environmental excellence. The Environmental Excellence Awards also recognize partners, projects, and processes that exemplify innovation and commitment to the human environment, and organization and process innovation. Awardees must make an outstanding contribution that goes beyond traditional transportation projects and that encourages environmental stewardship and partnerships to achieve a truly multifaceted, environmentally sensitive transportation solution.

Award: Anyone can nominate a project, process, person or group that has used FHWA funding sources to make an outstanding contribution to transportation and the environment. The nominator is responsible for submitting an application via the FHWA Environmental Excellence Awards website that gives a summary of the outstanding accomplishments of the entry. The collected information will be used by FHWA to evaluate the project, showcase environmental excellence, and enhance the public's knowledge of environmental stewardship in the planning and project development process. Nominations will be reviewed by a panel of judges from varying backgrounds. It is anticipated that awards will be given every 2 years. The winners are presented plaques at an awards ceremony.

Respondents: Anyone who has used FHWA funding sources in the 50 States, U.S. territories, and the District of Columbia.

Frequency: The information will be collected biennially.

Estimated Average Burden per Response: 8 hours per respondent per application.

Estimated Total Annual Burden Hours: It is expected that the respondents will complete approximately 150 applications for an estimated total of 1,200 annual burden hours.

Public Comments Invited: You are asked to comment on any aspect of this information collection, including: (1) Whether the proposed collection is necessary for the FHWA's performance; (2) the accuracy of the estimated

burdens; (3) ways for the FHWA to enhance the quality, usefulness, and clarity of the collected information; and (4) ways that the burden could be minimized, including the use of electronic technology, without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended; and 49 CFR 1.48.

Issued On: April 30, 2019.

Michael Howell,

Information Collection Officer.

BILLING CODE 4910-22-P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA-2018-0078]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Request for Comment; Pediatric Shoulder Response in Frontal Loading

AGENCY: National Highway Traffic Safety Administration, DOT.

ACTION: Notice and request for comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 this notice announces that the Information Collection Request (ICR) abstracted below is being forwarded to the Office of Management and Budget (OMB) for review and comments. A **Federal Register** Notice with a 60-day comment period soliciting comments on the following information collection was published on September 12, 2018 (83 FR 19836).

DATES: Written comments should be submitted on or before June 3, 2019.

ADDRESSES: Send comments to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725-17th Street NW, Washington, DC 20503, Attention: NHTSA Desk Officer.

FOR FURTHER INFORMATION CONTACT: For additional information or access to background documents, contact Jason Stammen, Applied Biomechanics Division, Vehicle Research and Test Center, NHTSA, 10820 State Route 347—Bldg. 60, East Liberty, Ohio 43319; Telephone (937) 666-4511; Facsimile:

(937) 666-3590; email address: jason.stammen@dot.gov.

SUPPLEMENTARY INFORMATION: Before a Federal agency can collect certain information from the public, it must receive approval from the Office of Management and Budget (OMB). In compliance with these requirements, this notice announces that the following information collection request has been forwarded to OMB. On September 12, 2018,¹ NHTSA published a 60-day notice requesting public comment on the proposed collection of information. No comments were received.

Title: Pediatric Shoulder Response in Frontal Loading.

OMB Control Number: New Collection.

Form Numbers: None.

Type of Request: New Information Collection.

Type of Review: Regular.

Abstract: NHTSA proposes to collect information from the public to support the development of design criteria for the mobility of the shoulder of a new child-size crash test dummy. Minors age 6–14 will participate after informed consent of the parent/guardian is received. After researchers measure the participant's anthropometry (height, weight, shoulder landmarks, etc.), the participant will undergo a fun, low-intensity exercise activity under the direction of the researchers while the parent/guardian observes. The activity will involve motion of the participant's shoulder while resisting forces are collected. The data from all participants will then be compiled to develop design criteria for the crash test dummy shoulder.

Respondents: Web-based and print newspaper advertisements will be used to obtain respondents who are parent/guardian of minors aged 6–14 years.

Estimated Number of Respondents: It is estimated that a total of 24 individuals will complete the research activity.

Estimated Time per Response:

Completion of the screening questions is estimated to take approximately 5 minutes for the first set and 10 minutes for the second set. The simulator discomfort questionnaire is estimated to take 2 minutes per participant.

Total Estimated Burden: 24 total hours, 1 hour per participant.

Frequency of Collection: The data collections described will be performed once to obtain the target number of valid test participants.

Public Comments Invited: You are asked to comment on any aspect of this information collection, including (a)

Whether the proposed collection of information is necessary for the Department's performance; (b) the accuracy of the estimated burden; (c) ways for the Department to enhance the quality, utility and clarity of the information collection; and (d) ways that the burden could be minimized without reducing the quality of the collected information.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended; and 49 CFR 1.95.

Issued in Washington, DC, on April 23, 2019.

Tim J. Johnson,

Acting Associate Administrator, Office of Vehicle Safety Research.

BILLING CODE 4910-59-P

DEPARTMENT OF TRANSPORTATION

Office of the Secretary of Transportation

[DOT-OST-2019-0051]

Demonstration of Backup and Complementary Positioning, Navigation, and Timing (PNT) Capabilities of Global Positioning System (GPS)

AGENCY: Office of the Secretary (OST), U.S. Department of Transportation (DOT).

ACTION: Request for information (RFI).

SUMMARY: The U.S. Department of Transportation (DOT) is planning to conduct a field demonstration of technologies with a Technology Readiness Level (TRL) of six or higher, as described in the Federal Highway Administration *Technology Readiness Level Guidebook*,¹ that are capable of providing backup positioning, navigation, and/or timing services to critical infrastructure (CI) in the event of a temporary disruption to GPS. This demonstration effort also is expected to encompass technologies capable of providing complementary PNT functions to GPS by either expanding PNT capabilities, including cross checks, or extending them to GPS or Global Navigation Satellite System (GNSS)-denied or degraded user environments. DOT is issuing this Request for Information (RFI) to seek levels of interest and additional information from PNT technology vendors on participation in the

¹Federal Highway Administration Exploratory Advanced Research Program *Technology Readiness Level Guidebook*, FHWA-HRT-17-047, September 2017.

demonstration. The information requested can be found in the supplemental information section of this RFI.

DATES: Responses should be filed by June 3, 2019.

ADDRESSES: You may file responses identified by the docket number DOT-OST-2019-0051 by any of the following methods:

- *Federal Rulemaking Portal:* Go to <http://www.regulations.gov> and follow the online instructions for submitting comments.

- *Mail:* Docket Management Facility, U.S. Department of Transportation, 1200 New Jersey Ave. SE, West Building Ground Floor, Room W12-140, Washington, DC 20590-0001.

- *Hand Delivery or Courier:* West Building Ground Floor, Room W12-140, 1200 New Jersey Ave. SE, between 9:00 a.m. and 5:00 p.m. ET, Monday through Friday, except Federal holidays.

- *Fax:* (202) 493-2251.

Instructions: You must include the agency name and docket number DOT-OST-2019-0051 at the beginning of your submission. All submissions received will be posted without change to <http://www.regulations.gov>, including any personal information provided, unless proprietary and other sensitive information is so marked with requested disposition instructions.

Privacy Act: Anyone is able to search the electronic form of all submissions received in any of our dockets by the name of the individual submitting the document (or signing the submission, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act statement in the **Federal Register** published on April 11, 2000 (65 FR 19477-78), or you may visit <http://DocketsInfo.dot.gov>.

Docket: For access to the docket and comments received, go to <http://www.regulations.gov> or to the street address listed above. Follow the online instructions for accessing the docket.

FOR FURTHER INFORMATION CONTACT:

Karen L. Van Dyke, Director, Positioning, Navigation, and Timing & Spectrum Management, Office of the Assistant Secretary for Research and Technology, U.S. Department of Transportation, 1200 New Jersey Ave. SE, Washington, DC 20590, 202-366-3180, karen.vandyke@dot.gov.

SUPPLEMENTARY INFORMATION:

1. Overview

As a co-chair and member of the National Executive Committee for Space-based PNT, a provider and user of U.S. critical infrastructure (CI) services,

¹ 83 FR 19836 (September 12, 2018).

and as the lead civil agency for PNT in the Federal Government, DOT is interested in leveraging PNT service technology initiatives currently being undertaken by industry.

Section 1606 of the National Defense Authorization Act for Fiscal Year 2018 (Pub. L. 115–91), directed the Secretary of Defense, the Secretary of Transportation, and the Secretary of Homeland Security to jointly develop a plan for carrying out a backup GPS capability and complementary PNT demonstration.

This RFI outlines the information requested for DOT, in coordination with the Department of Homeland Security and Department of Defense, to conduct a demonstration of candidate technologies capable of serving as a backup and/or complement to GPS in order to ensure resilient PNT services for U.S. CI operations.

2. Technical Information

DOT is seeking the following information from technology vendors for the purpose of conducting a successful demonstration, and to develop an efficient schedule for scenario development, deployment of demonstration systems, and completion of data collection and analysis. The respondents are being asked to provide the information below with respect to their proposed PNT backup technology(ies), and may also provide supplemental information that they believe to be relevant to a successful demonstration if they so choose. The information requested consists of the following:

1. A description of the technology(ies) and CI application(s), including cybersecurity and other security measures inherent in the system, and if the technology(ies) is/are for timing only, location only, or both timing and location.

2. Identify the TRL for the proposed technology(ies).

3. Identify whether the vendor is willing to participate in the demonstration by providing material (hardware and user equipment when applicable), engineering (technology deployment, configuration, and data collection support), and logistical support during the preparation and execution phases of the demonstration.

4. Identify whether this support is contingent on the government providing some funding.

5. Provide information about the needed infrastructure (*e.g.*, power, network, etc.) that would be necessary to deploy the vendor technology(ies) at a DOT-furnished demonstration site.

6. Identify any constraints on participation, *e.g.*, lead-time, demonstration timelines, funding, infrastructure (HVAC, power, shelter, and equipment space, etc.).

7. Identify radiofrequency bands and transmit power levels in terms of peak Effective Isotropic Radiated Power (EIRP). This is needed during the planning phase depending on the selected demonstration site(s).

8. Identify where the technology(ies) is/are currently deployed and in use, if applicable. Provide location, date of deployment, and if the deployment is available for examination.

Abbreviations should be defined either on first use or in a glossary. Charts and graphics should have quantitative data clearly labeled. Assumptions should be clearly identified. Proprietary and other sensitive information should be so marked with requested disposition instructions. Submitted responses shall be UNCLASSIFIED unless prior arrangements are made with the Contracting Office. Submitted materials will not be returned.

Responses are limited to fifteen (15) 8.5" x 11" pages with 1" margins, and 12-point font (Arial or Times New Roman), including any appendices and other supporting materials. Pages must be numbered and submitted electronically via email as Microsoft Word or Adobe Acrobat files. Please send responses to the contact information provided in the **FOR FURTHER INFORMATION CONTACT** section of the notice.

DOT will be developing a demonstration plan taking into consideration the information received pursuant to responses received under this RFI. This is an RFI *only*. This request is for planning purposes, and shall not be construed as a solicitation announcement, invitation for bids, request for proposals, quotes or an indication that the Government will contract for the items contained in this notice.

Additionally, responses will be treated only as information for the Government to consider. Respondents will not be entitled to payment for direct or indirect costs that are incurred in responding to this RFI. Further, this request does not constitute a solicitation for proposals or the authority to enter into negotiations to award a contract. Interested parties are responsible for adequately marking proprietary, restricted or competition sensitive information contained in their responses.

Issued This Day of April 29, 2019, In Washington, DC.

Diana Furchtgott-Roth,

Deputy Assistant Secretary for Research and Technology, U.S. Department of Transportation.

RIN 0938–AT73

Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Proposed Policy Changes and Fiscal Year 2020 Rates; Proposed Quality Reporting Requirements for Specific Providers; Medicare and Medicaid Promoting Interoperability Programs Proposed Requirements for Eligible Hospitals and Critical Access Hospitals

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Proposed rule.

SUMMARY: We are proposing to revise the Medicare hospital inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals to implement changes arising from our continuing experience with these systems for FY 2020 and to implement certain recent legislation. We also are proposing to make changes relating to Medicare graduate medical education (GME) for teaching hospitals and payments to critical access hospital (CAHs). In addition, we are proposing to provide the market basket update that would apply to the rate-of-increase limits for certain hospitals excluded from the IPPS that are paid on a reasonable cost basis, subject to these limits for FY 2020. We are proposing to update the payment policies and the annual payment rates for the Medicare prospective payment system (PPS) for inpatient hospital services provided by long-term care hospitals (LTCHs) for FY 2020. In this proposed rule, we are including proposals to address wage index disparities between high and low wage index hospitals; to provide for an alternative IPPS new technology add-on payment pathway for certain transformative new devices; and to revise the calculation of the IPPS new technology add-on payment. In addition, we are requesting public comments on the substantial clinical improvement criterion used for evaluating applications for both the IPPS new technology add-on payment and the OPPTS transitional pass-through payment for devices, and we discuss potential revisions that we are

considering adopting as final policies related to the substantial clinical improvement criterion for applications received beginning in FY 2020 for IPPS (that is, for FY 2021 and later new technology add-on payments) and beginning in CY 2020 for the OPPTS.

We are proposing to establish new requirements or revise existing requirements for quality reporting by specific Medicare providers (acute care hospitals, PPS-exempt cancer hospitals, and LTCHs). We also are proposing to establish new requirements and revise existing requirements for eligible hospitals and critical access hospitals (CAHs) participating in the Medicare and Medicaid Promoting Interoperability Programs. We are proposing to update policies for the Hospital Value-Based Purchasing (VBP) Program, the Hospital Readmissions Reduction Program, and the Hospital-Acquired Condition (HAC) Reduction Program.

DATES: To be assured consideration, comments must be received at one of the addresses provided in the **ADDRESSES** section, no later than 5 p.m. EDT on June 24, 2019.

ADDRESSES: In commenting, please refer to file code CMS–1716–P. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may (and we encourage you to) submit electronic comments on this regulation to <http://www.regulations.gov>. Follow the instructions under the “submit a comment” tab.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1716–P, P.O. Box 8013, Baltimore, MD 21244–1850.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments via express or overnight mail to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1716–P, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

Electronic Access

This **Federal Register** document is available from the **Federal Register** online database through Federal Digital System (FDsys), a service of the U.S. Government Printing Office. This database can be accessed via the internet at: <http://www.gpo.gov/fdsys>.

Tables Available Through the Internet on the CMS Website

In the past, a majority of the tables referred to throughout this preamble and in the Addendum to the proposed rule and the final rule were published in the **Federal Register** as part of the annual proposed and final rules. However, beginning in FY 2012, the majority of the IPPS tables and LTCH PPS tables are no longer published in the **Federal Register**. Instead, these tables, generally, will be available only through the internet. The IPPS tables for this FY 2020 proposed rule are available through the internet on the CMS website at: <http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>. Click on the link on the left side of the screen titled, "FY 2020 IPPS Proposed Rule Home Page" or "Acute Inpatient—Files for Download." The LTCH PPS tables for this FY 2020 proposed rule are available through the internet on the CMS website at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/LongTermCareHospitalPPS/index.html> under the list item for Regulation Number CMS-1716-P. For further details on the contents of the tables referenced in this proposed rule, we refer readers to section VI. of the Addendum to this proposed rule.

Readers who experience any problems accessing any of the tables that are posted on the CMS websites identified above should contact Michael Treitel at (410) 786-4552.

- III. Secretary's Recommendation
- IV. MedPAC Recommendation for Assessing Payment Adequacy and Updating Payments in Traditional Medicare

I. Executive Summary and Background

A. Executive Summary

1. Purpose and Legal Authority

This proposed rule would make payment and policy changes under the Medicare inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals as well as for certain hospitals and hospital units excluded from the IPPS. In addition, it would make payment and policy changes for inpatient hospital services provided by long-term care hospitals (LTCHs) under the long-term care hospital prospective payment system (LTCH PPS). This proposed rule also would make policy changes to programs associated with Medicare IPPS hospitals, IPPS-excluded hospitals, and LTCHs. In this proposed rule, we are including proposals to address wage index disparities between high and low wage index hospitals; to provide for an alternative IPPS new technology add-on payment pathway for certain transformative new devices; and to revise the calculation of the IPPS new technology add-on payment. In addition, we are requesting public comments on the substantial clinical improvement criterion for evaluating applications for both the IPPS new technology add-on payment and the OPSS transitional pass-through payment for devices, and we discuss potential revisions that we are considering

adopting as final policies related to the substantial clinical improvement criterion for FY 2020 for IPPS and CY 2020 for the OPSS.

We are proposing to establish new requirements and revise existing requirements for quality reporting by specific providers (acute care hospitals, PPS-exempt cancer hospitals, and LTCHs) that are participating in Medicare. We also are proposing to establish new requirements and revise existing requirements for eligible hospitals and CAHs participating in the Medicare and Medicaid Promoting Interoperability Programs. We are proposing to update policies for the Hospital Value-Based Purchasing (VBP) Program, the Hospital Readmissions Reduction Program, and the Hospital-Acquired Condition (HAC) Reduction Program.

Under various statutory authorities, we are proposing to make changes to the Medicare IPPS, to the LTCH PPS, and to other related payment methodologies and programs for FY 2020 and subsequent fiscal years. These statutory authorities include, but are not limited to, the following:

- Section 1886(d) of the Social Security Act (the Act), which sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires that, instead of paying for capital-related costs of inpatient hospital services on a reasonable cost basis, the Secretary use a prospective payment system (PPS).

- Section 1886(d)(1)(B) of the Act, which specifies that certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Rehabilitation hospitals and units; LTCHs; psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS.

- Sections 123(a) and (c) of the BBRA (Pub. L. 106–113) and section 307(b)(1) of the BIPA (Pub. L. 106–554) (as codified under section 1886(m)(1) of the Act), which provide for the development and implementation of a prospective payment system for payment for inpatient hospital services of LTCHs described in section 1886(d)(1)(B)(iv) of the Act.

- Sections 1814(l), 1820, and 1834(g) of the Act, which specify that payments are made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services and that these payments are generally based on 101 percent of reasonable cost.

- Section 1866(k) of the Act, which establishes a quality reporting program for hospitals described in section 1886(d)(1)(B)(v) of the Act, referred to as “PPS-exempt cancer hospitals.”

- Section 1886(a)(4) of the Act, which specifies that costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act.

- Section 1886(b)(3)(B)(viii) of the Act, which requires the Secretary to reduce the applicable percentage increase that would otherwise apply to the standardized amount applicable to a subsection (d) hospital for discharges occurring in a fiscal year if the hospital does not submit data on measures in a form and manner, and at a time, specified by the Secretary.

- Section 1886(o) of the Act, which requires the Secretary to establish a Hospital Value-Based Purchasing (VBP) Program, under which value-based incentive payments are made in a fiscal year to hospitals meeting performance standards established for a performance period for such fiscal year.

- Section 1886(p) of the Act, which establishes a Hospital-Acquired Condition (HAC) Reduction Program, under which payments to applicable hospitals are adjusted to provide an incentive to reduce hospital-acquired conditions.

- Section 1886(q) of the Act, as amended by section 15002 of the 21st Century Cures Act, which establishes the Hospital Readmissions Reduction Program. Under the program, payments for discharges from an applicable hospital as defined under section 1886(d) of the Act will be reduced to account for certain excess readmissions. Section 15002 of the 21st Century Cures Act requires the Secretary to compare hospitals with respect to the number of their Medicare-Medicaid dual-eligible beneficiaries (dual-eligibles) in determining the extent of excess readmissions.

- Section 1886(r) of the Act, as added by section 3133 of the Affordable Care Act, which provides for a reduction to disproportionate share hospital (DSH) payments under section 1886(d)(5)(F) of

the Act and for a new uncompensated care payment to eligible hospitals. Specifically, section 1886(r) of the Act requires that, for fiscal year 2014 and each subsequent fiscal year, subsection (d) hospitals that would otherwise receive a DSH payment made under section 1886(d)(5)(F) of the Act will receive two separate payments: (1) 25 percent of the amount they previously would have received under section 1886(d)(5)(F) of the Act for DSH (“the empirically justified amount”), and (2) an additional payment for the DSH hospital’s proportion of uncompensated care, determined as the product of three factors. These three factors are: (1) 75 percent of the payments that would otherwise be made under section 1886(d)(5)(F) of the Act; (2) 1 minus the percent change in the percent of individuals who are uninsured; and (3) a hospital’s uncompensated care amount relative to the uncompensated care amount of all DSH hospitals expressed as a percentage.

- Section 1886(m)(6) of the Act, as added by section 1206(a)(1) of the Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013 (Pub. L. 113–67) and amended by section 51005(a) of the Bipartisan Budget Act of 2018 (Pub. L. 115–123), which provided for the establishment of site neutral payment rate criteria under the LTCH PPS, with implementation beginning in FY 2016, and provides for a 4-year transitional blended payment rate for discharges occurring in LTCH cost reporting periods beginning in FYs 2016 through 2019. Section 51005(b) of the Bipartisan Budget Act of 2018 amended section 1886(m)(6)(B) by adding new clause (iv), which specifies that the IPPS comparable amount defined in clause (ii)(I) shall be reduced by 4.6 percent for FYs 2018 through 2026.

- Section 1886(m)(5)(D)(iv) of the Act, as added by section 1206(c) of the Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013 (Pub. L. 113–67), which provides for the establishment of a functional status quality measure in the LTCH QRP for change in mobility among inpatients requiring ventilator support.

- Section 1899B of the Act, as added by section 2(a) of the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185), which provides for the establishment of standardized data reporting for certain post-acute care providers, including LTCHs.

2. Summary of the Major Provisions

Below we provide a summary of the major provisions in this proposed rule. In general, these major provisions are

being proposed as part of the annual update to the payment policies and payment rates, consistent with the applicable statutory provisions. A general summary of the proposed changes in this proposed rule is presented in section I.D. of the preamble of this proposed rule.

a. Proposed MS–DRG Documentation and Coding Adjustment

Section 631 of the American Taxpayer Relief Act of 2012 (ATRA, Pub. L. 112–240) amended section 7(b)(1)(B) of Public Law 110–90 to require the Secretary to make a recoupment adjustment to the standardized amount of Medicare payments to acute care hospitals to account for changes in MS–DRG documentation and coding that do not reflect real changes in case-mix, totaling \$11 billion over a 4-year period of FYs 2014, 2015, 2016, and 2017. The FY 2014 through FY 2017 adjustments represented the amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110–90 until FY 2013. Prior to the ATRA, this amount could not have been recovered under Public Law 110 90. Section 414 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10) replaced the single positive adjustment we intended to make in FY 2018 with a 0.5 percent positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. (The FY 2018 adjustment was subsequently adjusted to 0.4588 percent by section 15005 of the 21st Century Cures Act.) Therefore, for FY 2020, we are proposing to make an adjustment of + 0.5 percent to the standardized amount.

b. Request for Information on the New Technology Add-On Payment and Transitional Device Pass-Through Payment Substantial Clinical Improvement Criterion and Discussion of Potential Revisions to the New Technology Add-On Payment and Transitional Device Pass-Through Payment Substantial Clinical Improvement Criterion

The substantial clinical improvement criterion that is used to evaluate a technology that is the subject of an application for the new technology add-on payment under the IPPS or an application for the transitional pass-through payment for additional costs of innovative devices under the OPSS is the subject of the request for information and the discussion of potential revisions included in this proposed rule.

We understand that greater clarity regarding what would substantiate the requirements of this criterion would help the public, including innovators, better understand how CMS evaluates new technology applications for add-on payments and provide greater predictability about which applications will meet the criterion for substantial clinical improvement. We are considering potential revisions to the substantial clinical improvement criterion under the IPPS new technology add-on payment policy and the OPPS transitional pass-through payment policy for devices policy, and are seeking public comments on the type of additional detail and guidance that the public and applicants for new technology add-on payments would find useful. The comments we receive in response to those general questions will inform future rulemaking after the FY 2020 IPPS/LTCH PPS final rule. This request for public comments is intended to be broad in scope and provide a foundation for potential rulemaking in future years.

In addition to this broad request for public comments for potential rulemaking in future years, in order to respond to stakeholder feedback requesting greater understanding of CMS' approach to evaluating substantial clinical improvement, we are soliciting public comments on specific changes or clarifications to the IPPS and OPPS substantial clinical improvement criterion that CMS might consider making in the FY 2020 IPPS/LTCH PPS final rule for applications received beginning in FY 2020 for the IPPS and CY 2020 for the OPPS to provide greater clarity and predictability.

c. Proposed Alternative Inpatient New Technology Add-On Payment Pathway for Transformative New Devices

After consideration of the issues discussed in section III.H.8. of the preamble of this proposed rule relating to the Food and Drug Administration's (FDA's) expedited programs, and consistent with the Administration's commitment to addressing barriers to health care innovation and ensuring that Medicare beneficiaries have access to critical and life-saving new cures and technologies that improve beneficiary health outcomes, we concluded that it would be appropriate to develop an alternative pathway for the inpatient new technology add-on payment for transformative medical devices. In situations where a new medical device is part of the FDA's Breakthrough Devices Program and has received FDA marketing authorization (that is, the device has received pre-market approval

(PMA); 510(k) clearance; or the granting of a De Novo classification request), we are proposing an alternative inpatient new technology add-on payment pathway to facilitate access to this technology for Medicare beneficiaries.

Specifically, we are proposing that, for applications received for IPPS new technology add-on payments for FY 2021 and subsequent fiscal years, if a medical device is part of the FDA's Breakthrough Devices Program and received FDA marketing authorization, such a device would be considered new and not substantially similar to an existing technology for purposes of new technology add-on payment under the IPPS. In light of the criteria applied under the FDA's Breakthrough Devices Program, and because the technology may not have a sufficient evidence base to demonstrate substantial clinical improvement at the time of FDA marketing authorization, we also are proposing that the medical device would not need to meet the requirement under 42 CFR 412.87(b)(1) that it represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries.

d. Proposed Revision of the Calculation of the Inpatient Hospital New Technology Add-On Payment

The current calculation of the new technology add-on payment is based on the cost to hospitals for the new medical service or technology. Under § 412.88, if the costs of the discharge (determined by applying cost-to-charge ratios (CCRs) as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 50 percent of the costs of the new medical service or technology; or (2) 50 percent of the amount by which the costs of the case exceed the standard DRG payment. Unless the discharge qualifies for an outlier payment, the additional Medicare payment is limited to the full MS-DRG payment plus 50 percent of the estimated costs of the new technology or medical service.

After consideration of the concerns raised by commenters and other stakeholders, we agree that there may be merit to the recommendations to increase the maximum add-on amount, and that capping the add-on payment amount at 50 percent could, in some cases, no longer provide a sufficient incentive for the use of new technology. To address this issue, we believe it would be appropriate to modify the current payment mechanism to increase the amount of the maximum add-on

payment amount to 65 percent. Therefore, we are proposing that, beginning with discharges occurring on or after October 1, 2019, if the costs of a discharge involving a new medical service or technology exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare would make an add-on payment equal to the lesser of: (1) 65 percent of the costs of the new medical service or technology; or (2) 65 percent of the amount by which the costs of the case exceed the standard DRG payment.

e. Proposals To Address Wage Index Disparities Between High and Low Wage Index Hospitals

In the FY 2019 IPPS/LTCH PPS proposed rule (83 FR 20372), we invited the public to submit further comments, suggestions, and recommendations for regulatory and policy changes to the Medicare wage index. Many of the responses received from this request for information (RFI) reflect a common concern that the current wage index system perpetuates and exacerbates the disparities between high and low wage index hospitals. Many respondents also expressed concern that the calculation of the rural floor has allowed a limited number of States to manipulate the wage index system to achieve higher wages for many urban hospitals in those States at the expense of hospitals in other States, which also contributes to wage index disparities.

To help mitigate these wage index disparities, including those resulting from the inclusion of hospitals with rural reclassifications under 42 CFR 412.103 in the rural floor, we are proposing to reduce the disparity between high and low wage index hospitals by increasing the wage index values for certain hospitals with low wage index values and decreasing the wage index values for certain hospitals with high wage index values for budget neutrality purposes, as well as changing the calculation of the rural floor. We also are proposing a transition for hospitals experiencing significant decreases in their wage index values as a result of these proposed changes. We are proposing to make these changes in a budget neutral manner.

In this proposed rule, we are proposing to increase the wage index for hospitals with a wage index value below the 25th percentile wage index value for a fiscal year by half the difference between the otherwise applicable final wage index value for a year for that hospital and the 25th percentile wage index value for that year across all hospitals. Furthermore, we are

proposing that this policy would be effective for at least 4 years, beginning in FY 2020, in order to allow employee compensation increases implemented by these hospitals sufficient time to be reflected in the wage index calculation. Under our proposal, in order to offset the estimated increase in IPPS payments to hospitals with wage index values below the 25th percentile wage index value, we are proposing to decrease the wage index values for certain hospitals with high wage index values (that is, hospitals with wage index values above the 75th percentile wage index value), but preserve the rank order among those values.

In addition, we are proposing to remove urban to rural reclassifications from the calculation of the rural floor, such that, beginning in FY 2020, the rural floor would be calculated without including the wage data of hospitals that have reclassified as rural under section 1886(d)(8)(E) of the Act (as implemented in the regulations at § 412.103). Also, for the purposes of applying the provisions of section 1886(d)(8)(C)(iii) of the Act, we are proposing to remove urban to rural reclassifications from the calculation of “the wage index for rural areas in the State in which the county is located” as referred to in the statute.

Lastly, for FY 2020, we are proposing to place a 5-percent cap on any decrease in a hospital’s wage index from the hospital’s final wage index in FY 2019. We are proposing to apply a budget neutrality adjustment to the standardized amount so that our proposed transition for hospitals that could be negatively impacted is implemented in a budget neutral manner.

f. Proposed DSH Payment Adjustment and Additional Payment for Uncompensated Care

Section 3133 of the Affordable Care Act modified the Medicare disproportionate share hospital (DSH) payment methodology beginning in FY 2014. Under section 1886(r) of the Act, which was added by section 3133 of the Affordable Care Act, starting in FY 2014, DSHs receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments in section 1886(d)(5)(F) of the Act. The remaining amount, equal to 75 percent of the amount that otherwise would have been paid as Medicare DSH payments, is paid as additional payments after the amount is reduced for changes in the percentage of individuals that are uninsured. Each Medicare DSH will receive an additional payment based on its share of

the total amount of uncompensated care for all Medicare DSHs for a given time period.

In this FY 2020 IPPS/LTCH PPS proposed rule, we are proposing to update our estimates of the three factors used to determine uncompensated care payments for FY 2020. We are proposing to continue to use uninsured estimates produced by CMS’ Office of the Actuary (OACT) as part of the development of the National Health Expenditure Accounts (NHEA) in the calculation of Factor 2. We also are proposing to use a single year of data on uncompensated care costs from Worksheet S–10 for FY 2015 to determine Factor 3 for FY 2020. We also are seeking public comments on whether we should, due to changes in the reporting instructions that became effective for FY 2017, alternatively use a single year of Worksheet S–10 data from the FY 2017 cost reports, instead of the FY 2015 Worksheet S–10 data, to calculate Factor 3 for FY 2020. In addition, we are proposing to continue to use only data regarding low-income insured days for FY 2013 to determine the amount of uncompensated care payments for Puerto Rico hospitals, and Indian Health Service and Tribal hospitals. We are not proposing specific Factor 3 policies for all-inclusive rate providers for FY 2020. In this proposed rule, we also are proposing to continue to use the following established policies: (1) For providers with multiple cost reports, beginning in the same fiscal year, to use the longest cost report and annualize Medicaid data and uncompensated care data if a hospital’s cost report does not equal 12 months of data; (2) in the rare case where a provider has multiple cost reports beginning in the same fiscal year, but one report also spans the entirety of the following fiscal year, such that the hospital has no cost report for that fiscal year, to use the cost report that spans both fiscal years for the latter fiscal year; and (3) to apply statistical trim methodologies to potentially aberrant cost-to-charge ratios (CCRs) and potentially aberrant uncompensated care costs reported on the Worksheet S–10.

g. Proposed Changes to the LTCH PPS

In this proposed rule, we set forth proposed changes to the LTCH PPS Federal payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2020. We also are proposing the payment adjustment for LTCH discharges when the LTCH does not meet the applicable discharge payment percentage and a proposed reinstatement process, as required by

section 1886(m)(6)(C) of the Act. An LTCH would be subject to this payment adjustment if, for cost reporting periods beginning in FY 2020 and subsequent fiscal years, the LTCH’s percentage of Medicare discharges that meet the criteria for exclusion from the site neutral payment rate (that is, discharges paid the LTCH PPS standard Federal payment rate) of its total number of Medicare FFS discharges paid under the LTCH PPS during the cost reporting period is not at least 50 percent.

h. Reduction of Hospital Payments for Excess Readmissions

We are proposing to make changes to policies for the Hospital Readmissions Reduction Program, which was established under section 1886(q) of the Act, as amended by section 15002 of the 21st Century Cures Act. The Hospital Readmissions Reduction Program requires a reduction to a hospital’s base operating DRG payment to account for excess readmissions of selected applicable conditions. For FY 2017 and subsequent years, the reduction is based on a hospital’s risk-adjusted readmission rate during a 3-year period for acute myocardial infarction (AMI), heart failure (HF), pneumonia, chronic obstructive pulmonary disease (COPD), elective primary total hip arthroplasty/total knee arthroplasty (THA/TKA), and coronary artery bypass graft (CABG) surgery. In this proposed rule, we are proposing the following policies: (1) A measure removal policy that aligns with the removal factor policies previously adopted in other quality reporting and quality payment programs; (2) an update to the Program’s definition of “dual-eligible” beginning with the FY 2021 program year to allow for a 1-month lookback period in data sourced from the State Medicare Modernization Act (MMA) files to determine dual-eligible status for beneficiaries who die in the month of discharge; (3) a subregulatory process to address any potential future nonsubstantive changes to the payment adjustment factor components; and (4) an update to the Program’s regulations at 42 CFR 412.152 and 412.154 to reflect proposed policies and to codify additional previously finalized policies.

i. Hospital Value-Based Purchasing (VBP) Program

Section 1886(o) of the Act requires the Secretary to establish a Hospital VBP Program under which value-based incentive payments are made in a fiscal year to hospitals based on their performance on measures established for a performance period for such fiscal year. In this proposed rule, we are proposing that the Hospital VBP

Program will use the same data used by the HAC Reduction Program for purposes of calculating the Centers for Disease Control and Prevention (CDC) National Health Safety Network (NHSN) Healthcare-Associated Infection (HAI) measures beginning with CY 2020 data collection, when the Hospital IQR Program will no longer collect data on those measures, and will rely on HAC Reduction Program validation to ensure the accuracy of CDC NHSN HAI measure data used in the Hospital VBP Program. We also are newly establishing certain performance standards.

j. Hospital-Acquired Condition (HAC) Reduction Program

Section 1886(p) of the Act establishes an incentive to hospitals to reduce the incidence of hospital-acquired conditions by requiring the Secretary to make an adjustment to payments to applicable hospitals effective for discharges beginning on October 1, 2014. This 1-percent payment reduction applies to hospitals that rank in the worst-performing quartile (25 percent) of all applicable hospitals, relative to the national average, of conditions acquired during the applicable period and on all of the hospital's discharges for the specified fiscal year. As part of our agency-wide Patients over Paperwork and Meaningful Measures Initiatives, discussed in section I.A.2. of the FY 2019 IPPS/LTCH PPS final rule (83 FR 41147 and 41148), we are proposing to: (1) Adopt a measure removal policy that aligns with the removal factor policies previously adopted in other quality reporting and quality payment programs; (2) clarify administrative policies for validation of the CDC NHSN HAI measures; (3) adopt the data collection periods for the FY 2022 program year; and (4) update 42 CFR 412.172(f) to reflect policies finalized in the FY 2019 IPPS/LTCH PPS final rule.

k. Hospital Inpatient Quality Reporting (IQR) Program

Under section 1886(b)(3)(B)(viii) of the Act, subsection (d) hospitals are required to report data on measures selected by the Secretary for a fiscal year in order to receive the full annual percentage increase that would otherwise apply to the standardized amount applicable to discharges occurring in that fiscal year.

In this proposed rule, we are proposing to make several changes. We are proposing to: (1) Adopt two opioid-related eCQMs (Safe Use of Opioids—Concurrent Prescribing eCQM (NQF #3316e) and Hospital Harm—Opioid-Related Adverse Events eCQM)

beginning with the CY 2021 reporting period/FY 2023 payment determination; (2) adopt the Hybrid Hospital-Wide All-Cause Readmission (Hybrid HWR) measure (NQF #2879) in a stepwise fashion, beginning with two voluntary reporting periods which would run from July 1, 2021 through June 30, 2022, and from July 1, 2022 through June 30, 2023, before requiring reporting of the measure for the reporting period that would run from July 1, 2023 through June 30, 2024, impacting the FY 2026 payment determination and for subsequent years; and (3) remove the Claims-Based Hospital-Wide All-Cause Unplanned Readmission Measure (NQF #1789) (HWR claims-only measure) beginning with the FY 2026 payment determination. We also are proposing reporting and submission requirements for eCQMs, including proposals to: (1) Extend current eCQM reporting and submission requirements for both the CY 2020 reporting period/FY 2022 payment determination and CY 2021 reporting period/FY 2023 payment determination; (2) change eCQM reporting and submission requirements for the CY 2022 reporting period/FY 2024 payment determination, such that hospitals would be required to report one, self-selected calendar quarter of data for three self-selected eCQMs and the proposed Safe Use of Opioids—Concurrent Prescribing eCQM (NQF #3316e), for a total of four eCQMs; and (3) continue requiring that EHRs be certified to all available eCQMs used in the Hospital IQR Program for the CY 2020 reporting period/FY 2022 payment determination and subsequent years. These proposals are in alignment with proposals under the Promoting Interoperability Program. We also are proposing reporting and submission requirements for the Hybrid HWR measure. In addition, we are seeking public comments on three measures for potential future inclusion in the Hospital IQR Program.

l. Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

The LTCH QRP is authorized by section 1886(m)(5) of the Act and applies to all hospitals certified by Medicare as long-term care hospitals (LTCHs). Under the LTCH QRP, the Secretary must reduce by 2 percentage points the annual update to the LTCH PPS standard Federal rate for discharges for an LTCH during a fiscal year if the LTCH fails to submit data in accordance with the LTCH QRP requirements specified for that fiscal year. As discussed in section VIII.C. of the preamble of this proposed rule, we are proposing to adopt two measures that

meet the requirements of section 1899B(c)(1)(E) of the Act, modify an existing measure, and adopt new standardized patient assessment data elements that satisfy section 1899B(b) of the Act. We also are proposing to move the implementation date of the LTCH Continuity Assessment Record and Evaluation Data Set (LTCH CARE Data Set or LCDS) from April to October to align with other post-acute care programs beginning October 1, 2020. Lastly, we are proposing updates related to the system used for the submission of data and related regulations.

m. Medicare and Medicaid Promoting Interoperability Programs

For purposes of an increased level of stability, reducing the burden on eligible hospitals and CAHs, and clarifying certain existing policies, we are proposing several changes to the Medicare Promoting Interoperability Program. Specifically, we are proposing to: (1) Eliminate requirement that, for the FY 2020 payment adjustment year, for an eligible hospital that has not successfully demonstrated it is a meaningful EHR user in a prior year, the EHR reporting period in CY 2019 must end before and the eligible hospital must successfully register for and attest to meaningful use no later than the October 1, 2019 deadline; (2) establish an EHR reporting period of a minimum of any continuous 90-day period in CY 2021 for new and returning participants (eligible hospitals and CAHs) in the Medicare Promoting Interoperability Program attesting to CMS; (3) require that the Medicare Promoting Interoperability Program measure actions must occur within the EHR reporting period beginning with the EHR reporting period in CY 2020; (4) revise the Query of PDMP measure to make it an optional measure worth 5 bonus points in CY 2020, remove the exclusions associated with this measure in CY 2020, require a yes/no response instead of a numerator and denominator for CY 2019 and CY 2020, and clearly state our intended policy that the measure is worth a full 5 bonus points in CY 2019 and CY 2020; (5) change the maximum points available for the e-Prescribing measure to 10 points beginning in CY 2020, in the event we finalize the proposed changes to the Query of PDMP measure; (6) remove the Verify Opioid Treatment Agreement measure beginning in CY 2020 and clearly state our intended policy that this measure is worth a full 5 bonus points in CY 2019; and (7) revise the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure to more clearly

capture the previously established policy regarding CEHRT use. We are also proposing to amend our regulations to incorporate several of these proposals.

For CQM reporting under the Medicare and Medicaid Promoting Interoperability Programs, we are generally proposing to align our requirements with requirements under the Hospital IQR Program. Specifically, we are proposing to: (1) Adopt two opioid-related eCQMs (Safe Use of Opioids—Concurrent Prescribing eCQM (NQF #3316e) and Hospital Harm—Opioid-Related Adverse Events eCQM) beginning with the reporting period in CY 2021; (2) extend current CQM reporting and submission requirements for the reporting periods in CY 2020 and CY 2021; and (3) establish CQM reporting and submission requirements for the reporting period in CY 2022, which would require all eligible hospitals and CAHs to report on the proposed Safe Use of Opioids—Concurrent Prescribing eCQM (NQF #3316e) beginning with the reporting period in CY 2022.

We are seeking public comments on whether we should consider proposing to adopt in future rulemaking the Hybrid Hospital-Wide All-Cause Readmission (Hybrid HWR) measure beginning with the reporting period in CY 2023, a measure which we are proposing to adopt under the Hospital IQR Program, and we are seeking information on a variety of issues regarding the future direction of the Medicare and Medicaid Promoting Interoperability Programs.

3. Summary of Costs and Benefits

- *Proposed Adjustment for MS-DRG Documentation and Coding Changes.* Section 414 of the MACRA replaced the single positive adjustment we intended to make in FY 2018 once the recoupment required by section 631 of the ATRA was complete with a 0.5 percentage point positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. (The FY 2018 adjustment was subsequently adjusted to 0.4588 percentage point by section 15005 of the 21st Century Cures Act.) For FY 2020, we are proposing to make an adjustment of +0.5 percentage point to the standardized amount consistent with the MACRA.

- *Proposed Alternative Inpatient New Technology Add-On Payment Pathway for Transformative New Devices:* In this proposed rule, we are proposing an alternative inpatient new technology add-on payment pathway for a new medical device that is part of the FDA

Breakthrough Devices Program and has received FDA marketing authorization, that is, received PMA approval, 510(k) clearance, or the granting of De Novo classification request.

Given the relatively recent introduction of FDA's Breakthrough Devices Program, there have not been any medical devices that were part of the Breakthrough Devices Program and received FDA marketing authorization and for which the applicant applied for a new technology add-on payment under the IPPS and was not approved. Therefore, it is not possible to quantify the impact of this proposal.

- *Proposed Changes to the Calculation of the Inpatient Hospital New Technology Add-On Payment:* The current calculation of the new technology add-on payment is based on the cost to hospitals for the new medical service or technology. Under existing § 412.88, if the costs of the discharge exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare makes an add-on payment equal to the lesser of: (1) 50 percent of the estimated costs of the new technology or medical service; or (2) 50 percent of the amount by which the costs of the case exceed the standard DRG payment. In this proposed rule, we are proposing to modify the current payment mechanism to increase the amount of the maximum add-on payment amount to 65 percent. Therefore, we are proposing that if the costs of a discharge involving a new technology exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare would make an add-on payment equal to the lesser of: (1) 65 percent of the costs of the new medical service or technology; or (2) 65 percent of the amount by which the costs of the case exceed the standard DRG payment.

We estimate that if we finalize our proposals for the 9 technologies for which we are proposing to continue to make new technology add-on payments in FY 2020 and if we determine that all 17 of the FY 2020 new technology add-on payment applications meet the specified criteria for new technology add-on payments for FY 2020, this proposal, if finalized, would increase IPPS spending by approximately \$110 million in FY 2020.

- *Proposed Changes to Address Wage Index Disparities Between High and Low Wage Index Hospitals.* As discussed in section III.N. of the preamble of this proposed rule, to help mitigate wage index disparities, including those resulting from the inclusion of hospitals with rural reclassifications under 42

CFR 412.103 in the rural floor, we are proposing to reduce the disparity between high and low wage index hospitals by increasing the wage index values for certain hospitals with low wage index values and decreasing the wage index values of certain hospitals with high wage index values for budget neutrality purposes, as well as changing the calculation of the rural floor. We also are proposing a transition for hospitals experiencing significant decreases in their wage index values as a result of these proposed changes. We are proposing to make these changes in a budget neutral manner.

We are proposing to apply a budget neutrality adjustment to the standardized amount so that our proposed transition for hospitals that could be negatively impacted is implemented in a budget neutral manner.

- *Proposed Medicare DSH Payment Adjustment and Additional Payment for Uncompensated Care.* For FY 2020, we are proposing to update our estimates of the three factors used to determine uncompensated care payments. We are proposing to continue to use uninsured estimates produced by OACT as part of the development of the NHEA in the calculation of Factor 2. We also are proposing to use a single year of data on uncompensated care costs from Worksheet S-10 for FY 2015 to determine Factor 3 for FY 2020. In addition, we are seeking public comments on whether we should, due to changes in the reporting instructions that became effective for FY 2017, alternatively use a single year of Worksheet S-10 data from the FY 2017 cost reports, instead of the FY 2015 Worksheet S-10 data, to calculate Factor 3 for FY 2020. To determine the amount of uncompensated care for purposes of calculating Factor 3 for Puerto Rico hospitals and Indian Health Service and Tribal hospitals, we are proposing to continue to use only data regarding low-income insured days for FY 2013.

We project that the amount available to distribute as payments for uncompensated care for FY 2020 would increase by approximately \$216 million, as compared to our estimate of the uncompensated care payments that will be distributed in FY 2019. The payments have redistributive effects, based on a hospital's uncompensated care amount relative to the uncompensated care amount for all hospitals that are projected to be eligible to receive Medicare DSH payments, and the calculated payment amount is not directly tied to a hospital's number of discharges.

- *Proposed Update to the LTCH PPS Payment Rates and Other Payment Policies.* Based on the best available data for the 384 LTCHs in our database, we estimate that the proposed changes to the payment rates and factors that we present in the preamble of and Addendum to this proposed rule, which reflect the end of the transition of the statutory application of the site neutral payment rate and the proposed update to the LTCH PPS standard Federal payment rate for FY 2020, would result in an estimated increase in payments in FY 2020 of approximately \$37 million.

- *Proposed Changes to the Hospital Readmissions Reduction Program.* For FY 2020 and subsequent years, the reduction is based on a hospital's risk-adjusted readmission rate during a 3-year period for acute myocardial infarction (AMI), heart failure (HF), pneumonia, chronic obstructive pulmonary disease (COPD), elective primary total hip arthroplasty/total knee arthroplasty (THA/TKA), and coronary artery bypass graft (CABG) surgery. Overall, in this proposed rule, we estimate that 2,599 hospitals would have their base operating DRG payments reduced by their determined proxy FY 2020 hospital-specific readmission adjustment. As a result, we estimate that the Hospital Readmissions Reduction Program would save approximately \$550 million in FY 2020.

- *Value-Based Incentive Payments Under the Hospital VBP Program.* We estimate that there would be no net financial impact to the Hospital VBP Program for the FY 2020 program year in the aggregate because, by law, the amount available for value-based incentive payments under the program in a given year must be equal to the total amount of base operating MS-DRG payment amount reductions for that year, as estimated by the Secretary. The estimated amount of base operating MS-DRG payment amount reductions for the FY 2020 program year and, therefore, the estimated amount available for value-based incentive payments for FY 2020 discharges is approximately \$1.9 billion.

- *Proposed Changes to the HAC Reduction Program.* A hospital's Total HAC score and its ranking in any given year depend on several different factors. The FY 2020 program year is the first year in which we will implement our equal measure weights scoring methodology. Any significant impact due to the HAC Reduction Program proposed changes for FY 2020, including which hospitals will receive the adjustment, would depend on the actual experience of hospitals in the

Program. We also are proposing to update the hourly wage rate associated with burden for CDC NHSN HAI validation under the HAC Reduction Program.

- *Proposed Changes to the Hospital Inpatient Quality Reporting (IQR) Program.* Across 3,300 IPPS hospitals, we estimate that our proposed changes for the Hospital IQR Program in this proposed rule would result in changes to the information collection burden compared to previously adopted requirements. The only proposal that would affect the information collection burden for the Hospital IQR Program is the proposal to adopt the Hybrid Hospital-Wide All-Cause Readmission (Hybrid HWR) measure (NQF #2879) in a stepwise fashion, beginning with two voluntary reporting periods which would run from July 1, 2021 through June 30, 2022, and from July 1, 2022 through June 30, 2023, before requiring reporting of the measure for the reporting period that would run from July 1, 2023 through June 30, 2024, impacting the FY 2026 payment determination and for subsequent years. We estimate that the impact of this proposed change is a total collection of information burden increase of 2,211 hours and a total cost increase of approximately \$83,266 for all participating IPPS hospitals annually.

- *Proposed Changes to the Medicare and Medicaid Promoting Interoperability Programs.* We believe that, overall, the proposals in this proposed rule would reduce burden, as described in detail in section X.B.9. of the preamble and Appendix A, section I.N. of this proposed rule.

B. Background Summary

1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)

Section 1886(d) of the Social Security Act (the Act) sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires the Secretary to use a prospective payment system (PPS) to pay for the capital-related costs of inpatient hospital services for these "subsection (d) hospitals." Under these PPSs, Medicare payment for hospital inpatient operating and capital-related costs is made at predetermined, specific rates for each hospital discharge. Discharges are classified according to a list of diagnosis-related groups (DRGs).

The base payment rate is comprised of a standardized amount that is divided into a labor-related share and a nonlabor-related share. The labor-

related share is adjusted by the wage index applicable to the area where the hospital is located. If the hospital is located in Alaska or Hawaii, the nonlabor-related share is adjusted by a cost-of-living adjustment factor. This base payment rate is multiplied by the DRG relative weight.

If the hospital treats a high percentage of certain low-income patients, it receives a percentage add-on payment applied to the DRG-adjusted base payment rate. This add-on payment, known as the disproportionate share hospital (DSH) adjustment, provides for a percentage increase in Medicare payments to hospitals that qualify under either of two statutory formulas designed to identify hospitals that serve a disproportionate share of low-income patients. For qualifying hospitals, the amount of this adjustment varies based on the outcome of the statutory calculations. The Affordable Care Act revised the Medicare DSH payment methodology and provides for a new additional Medicare payment beginning on October 1, 2013, that considers the amount of uncompensated care furnished by the hospital relative to all other qualifying hospitals.

If the hospital is training residents in an approved residency program(s), it receives a percentage add-on payment for each case paid under the IPPS, known as the indirect medical education (IME) adjustment. This percentage varies, depending on the ratio of residents to beds.

Additional payments may be made for cases that involve new technologies or medical services that have been approved for special add-on payments. To qualify, a new technology or medical service must demonstrate that it is a substantial clinical improvement over technologies or services otherwise available, and that, absent an add-on payment, it would be inadequately paid under the regular DRG payment.

The costs incurred by the hospital for a case are evaluated to determine whether the hospital is eligible for an additional payment as an outlier case. This additional payment is designed to protect the hospital from large financial losses due to unusually expensive cases. Any eligible outlier payment is added to the DRG-adjusted base payment rate, plus any DSH, IME, and new technology or medical service add-on adjustments.

Although payments to most hospitals under the IPPS are made on the basis of the standardized amounts, some categories of hospitals are paid in whole or in part based on their hospital-specific rate, which is determined from their costs in a base year. For example, sole community hospitals (SCHs)

receive the higher of a hospital-specific rate based on their costs in a base year (the highest of FY 1982, FY 1987, FY 1996, or FY 2006) or the IPPS Federal rate based on the standardized amount. SCHs are the sole source of care in their areas. Specifically, section 1886(d)(5)(D)(iii) of the Act defines an SCH as a hospital that is located more than 35 road miles from another hospital or that, by reason of factors such as an isolated location, weather conditions, travel conditions, or absence of other like hospitals (as determined by the Secretary), is the sole source of hospital inpatient services reasonably available to Medicare beneficiaries. In addition, certain rural hospitals previously designated by the Secretary as essential access community hospitals are considered SCHs.

Under current law, the Medicare-dependent, small rural hospital (MDH) program is effective through FY 2022. Through and including FY 2006, an MDH received the higher of the Federal rate or the Federal rate plus 50 percent of the amount by which the Federal rate was exceeded by the higher of its FY 1982 or FY 1987 hospital-specific rate. For discharges occurring on or after October 1, 2007, but before October 1, 2022, an MDH receives the higher of the Federal rate or the Federal rate plus 75 percent of the amount by which the Federal rate is exceeded by the highest of its FY 1982, FY 1987, or FY 2002 hospital-specific rate. MDHs are a major source of care for Medicare beneficiaries in their areas. Section 1886(d)(5)(G)(iv) of the Act defines an MDH as a hospital that is located in a rural area (or, as amended by the Bipartisan Budget Act of 2018, a hospital located in a State with no rural area that meets certain statutory criteria), has not more than 100 beds, is not an SCH, and has a high percentage of Medicare discharges (not less than 60 percent of its inpatient days or discharges in its cost reporting year beginning in FY 1987 or in two of its three most recently settled Medicare cost reporting years).

Section 1886(g) of the Act requires the Secretary to pay for the capital-related costs of inpatient hospital services in accordance with a prospective payment system established by the Secretary. The basic methodology for determining capital prospective payments is set forth in our regulations at 42 CFR 412.308 and 412.312. Under the capital IPPS, payments are adjusted by the same DRG for the case as they are under the operating IPPS. Capital IPPS payments are also adjusted for IME and DSH, similar to the adjustments made under the operating IPPS. In addition, hospitals may receive outlier payments

for those cases that have unusually high costs.

The existing regulations governing payments to hospitals under the IPPS are located in 42 CFR part 412, subparts A through M.

2. Hospitals and Hospital Units Excluded From the IPPS

Under section 1886(d)(1)(B) of the Act, as amended, certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Inpatient rehabilitation facility (IRF) hospitals and units; long-term care hospitals (LTCHs); psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS. Various sections of the Balanced Budget Act of 1997 (BBA, Pub. L. 105-33), the Medicare, Medicaid and SCHIP [State Children's Health Insurance Program] Balanced Budget Refinement Act of 1999 (BBRA, Pub. L. 106-113), and the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA, Pub. L. 106-554) provide for the implementation of PPSs for IRF hospitals and units, LTCHs, and psychiatric hospitals and units (referred to as inpatient psychiatric facilities (IPFs)). (We note that the annual updates to the LTCH PPS are included along with the IPPS annual update in this document. Updates to the IRF PPS and IPF PPS are issued as separate documents.) Children's hospitals, cancer hospitals, hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa), and RNHCIs continue to be paid solely under a reasonable cost-based system, subject to a rate-of-increase ceiling on inpatient operating costs. Similarly, extended neoplastic disease care hospitals are paid on a reasonable cost basis, subject to a rate-of-increase ceiling on inpatient operating costs.

The existing regulations governing payments to excluded hospitals and hospital units are located in 42 CFR parts 412 and 413.

3. Long-Term Care Hospital Prospective Payment System (LTCH PPS)

The Medicare prospective payment system (PPS) for LTCHs applies to

hospitals described in section 1886(d)(1)(B)(iv) of the Act, effective for cost reporting periods beginning on or after October 1, 2002. The LTCH PPS was established under the authority of sections 123 of the BBRA and section 307(b) of the BIPA (as codified under section 1886(m)(1) of the Act). During the 5-year (optional) transition period, a LTCH's payment under the PPS was based on an increasing proportion of the LTCH Federal rate with a corresponding decreasing proportion based on reasonable cost principles. Effective for cost reporting periods beginning on or after October 1, 2006 through September 30, 2015 all LTCHs were paid 100 percent of the Federal rate. Section 1206(a) of the Pathway for SGR Reform Act of 2013 (Pub. L. 113-67) established the site neutral payment rate under the LTCH PPS, which made the LTCH PPS a dual rate payment system beginning in FY 2016. Under this statute, based on a rolling effective date that is linked to the date on which a given LTCH's Federal FY 2016 cost reporting period begins, LTCHs are generally paid for discharges at the site neutral payment rate unless the discharge meets the patient criteria for payment at the LTCH PPS standard Federal payment rate. The existing regulations governing payment under the LTCH PPS are located in 42 CFR part 412, subpart O. Beginning October 1, 2009, we issue the annual updates to the LTCH PPS in the same documents that update the IPPS (73 FR 26797 through 26798).

4. Critical Access Hospitals (CAHs)

Under sections 1814(l), 1820, and 1834(g) of the Act, payments made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services are generally based on 101 percent of reasonable cost. Reasonable cost is determined under the provisions of section 1861(v) of the Act and existing regulations under 42 CFR part 413.

5. Payments for Graduate Medical Education (GME)

Under section 1886(a)(4) of the Act, costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. The amount of payment for direct GME costs for a cost reporting period is based on the hospital's number of residents in that period and the hospital's costs per resident in a base year. The existing regulations governing payments to the

various types of hospitals are located in 42 CFR part 413.

C. Summary of Provisions of Recent Legislation That Would Be Implemented in This Proposed Rule

1. Pathway for SGR Reform Act of 2013 (Pub. L. 113–67)

The Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) introduced new payment rules in the LTCH PPS. Under section 1206 of this law, discharges in cost reporting periods beginning on or after October 1, 2015, under the LTCH PPS, receive payment under a site neutral rate unless the discharge meets certain patient-specific criteria. In this proposed rule, we are proposing to continue to update certain policies that implemented provisions under section 1206 of the Pathway for SGR Reform Act.

2. Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185)

The Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185), enacted on October 6, 2014, made a number of changes that affect the Long-Term Care Hospital Quality Reporting Program (LTCH QRP). In this proposed rule, we are proposing to continue to implement portions of section 1899B of the Act, as added by section 2(a) of the IMPACT Act, which, in part, requires LTCHs, among other post-acute care providers, to report standardized patient assessment data, data on quality measures, and data on resource use and other measures.

3. The Medicare Access and CHIP Reauthorization Act of 2015 (Pub. L. 114–10)

Section 414 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA, Pub. L. 114–10) specifies a 0.5 percent positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. These adjustments follow the recoupment adjustment to the standardized amounts under section 1886(d) of the Act based upon the Secretary's estimates for discharges occurring from FYs 2014 through 2017 to fully offset \$11 billion, in accordance with section 631 of the ATRA. The FY 2018 adjustment was subsequently adjusted to 0.4588 percent by section 15005 of the 21st Century Cures Act.

4. The 21st Century Cures Act (Pub. L. 114–255)

The 21st Century Cures Act (Pub. L. 114–255), enacted on December 13, 2016, contained the following provision

affecting payments under the Hospital Readmissions Reduction Program, which we are proposing to continue to implement in this proposed rule:

- Section 15002, which amended section 1886(q)(3) of the Act by adding subparagraphs (D) and (E), which requires the Secretary to develop a methodology for calculating the excess readmissions adjustment factor for the Hospital Readmissions Reduction Program based on cohorts defined by the percentage of dual-eligible patients (that is, patients who are eligible for both Medicare and full-benefit Medicaid coverage) cared for by a hospital. In this proposed rule, we are proposing to continue to implement changes to the payment adjustment factor to assess penalties based on a hospital's performance, relative to other hospitals treating a similar proportion of dual-eligible patients.

D. Summary of the Provisions of This Proposed Rule

In this proposed rule, we set forth proposed payment and policy changes to the Medicare IPPS for FY 2020 operating costs and capital-related costs of acute care hospitals and certain hospitals and hospital units that are excluded from IPPS. In addition, we set forth proposed changes to the payment rates, factors, and other payment and policy-related changes to programs associated with payment rate policies under the LTCH PPS for FY 2020.

Below is a general summary of the changes that we are proposing to make in this proposed rule.

1. Proposed Changes to MS–DRG Classifications and Recalibrations of Relative Weights

In section II. of the preamble of this proposed rule, we include—

- Proposed changes to MS–DRG classifications based on our yearly review for FY 2020.
- Proposed adjustment to the standardized amounts under section 1886(d) of the Act for FY 2020 in accordance with the amendments made to section 7(b)(1)(B) of Public Law 110–90 by section 414 of the MACRA.
- Proposed recalibration of the MS–DRG relative weights.
- A discussion of the proposed FY 2020 status of new technologies approved for add-on payments for FY 2019 and a presentation of our evaluation and analysis of the FY 2020 applicants for add-on payments for high-cost new medical services and technologies (including public input, as directed by Pub. L. 108–173, obtained in a town hall meeting).

- A request for public comments on the substantial clinical improvement criterion used to evaluate applications for both the IPPS new technology add-on payments and the OPPS transitional pass-through payment for devices, and a discussion of potential revisions that we are considering adopting as final policies related to the substantial clinical improvement criterion for applications received beginning in FY 2020 for the IPPS (that is, for FY 2021 and later new technology add-on payments) and beginning in CY 2020 for the OPPS.

- A proposed alternative IPPS new technology add-on payment pathway for certain transformative new devices.

- Proposed changes to the calculation of the IPPS new technology add-on payment.

2. Proposed Changes to the Hospital Wage Index for Acute Care Hospitals

In section III. of the preamble to this proposed rule, we are proposing to make revisions to the wage index for acute care hospitals and the annual update of the wage data. Specific issues addressed include, but are not limited to, the following:

- The proposed FY 2020 wage index update using wage data from cost reporting periods beginning in FY 2016.

- Proposals to address wage index disparities between high and low wage index hospitals.

- Calculation, analysis, and implementation of the proposed occupational mix adjustment to the wage index for acute care hospitals for FY 2020 based on the 2016 Occupational Mix Survey.

- Proposed application of the rural floor and the frontier State floor.

- Proposed revisions to the wage index for acute care hospitals, based on hospital redesignations and reclassifications under sections 1886(d)(8)(B), (d)(8)(E), and (d)(10) of the Act.

- Proposed change to Lugar county assignments.

- Proposed adjustment to the wage index for acute care hospitals for FY 2020 based on commuting patterns of hospital employees who reside in a county and work in a different area with a higher wage index.

- Proposed labor-related share for the proposed FY 2020 wage index.

3. Other Decisions and Proposed Changes to the IPPS for Operating Costs

In section IV. of the preamble of this proposed rule, we discuss proposed changes or clarifications of a number of the provisions of the regulations in 42

CFR parts 412 and 413, including the following:

- Proposed changes to MS–DRGs subject to the postacute care transfer policy and special payment policy.
- Proposed changes to the inpatient hospital update for FY 2020.
- Proposed conforming changes to the regulations for the low-volume hospital payment adjustment policy.
- Proposed updated national and regional case-mix values and discharges for purposes of determining RRC status.
- The statutorily required IME adjustment factor for FY 2020.
- Proposed changes to the methodologies for determining Medicare DSH payments and the additional payments for uncompensated care.
- A request for public comments on PRRB appeals related to a hospital's Medicaid fraction in the DSH payment adjustment calculation.
- Proposed changes to the policies for payment adjustments under the Hospital Readmissions Reduction Program based on hospital readmission measures and the process for hospital review and correction of those rates for FY 2020.
- Proposed changes to the requirements and provision of value-based incentive payments under the Hospital Value-Based Purchasing Program.
- Proposed requirements for payment adjustments to hospitals under the HAC Reduction Program for FY 2020.
- Proposed changes related to CAHs as nonproviders for direct GME and IME payment purposes.
- Discussion of and proposals relating to the implementation of the Rural Community Hospital Demonstration Program in FY 2020.

4. Proposed FY 2020 Policy Governing the IPPS for Capital-Related Costs

In section V. of the preamble to this proposed rule, we discuss the proposed payment policy requirements for capital-related costs and capital payments to hospitals for FY 2020.

5. Proposed Changes to the Payment Rates for Certain Excluded Hospitals: Rate-of-Increase Percentages

In section VI. of the preamble of this proposed rule, we discuss—

- Proposed changes to payments to certain excluded hospitals for FY 2020.
- Proposed change related to CAH payment for ambulance services.
- Proposed continued implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration.

6. Proposed Changes to the LTCH PPS

In section VII. of the preamble of this proposed rule, we set forth—

- Proposed changes to the LTCH PPS Federal payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2020.
- Proposed payment adjustment for discharges of LTCHs that do not meet the applicable discharge payment percentage.

7. Proposed Changes Relating to Quality Data Reporting for Specific Providers and Suppliers

In section VIII. of the preamble of this proposed rule, we address—

- Proposed requirements for the Hospital Inpatient Quality Reporting (IQR) Program.
- Proposed changes to the requirements for the quality reporting program for PPS-exempt cancer hospitals (PCHQR Program).
- Proposed changes to the requirements under the LTCH Quality Reporting Program (LTCH QRP).
- Proposed changes to requirements pertaining to eligible hospitals and CAHs participating in the Medicare and Medicaid Promoting Interoperability Programs.

8. Provider Reimbursement Review Board Appeals

In section XI. of the preamble of this proposed rule, we discuss the growing number of Provider Reimbursement Review Board appeals made by providers and the action initiatives that are being implemented with the goal to: decrease the number of appeals submitted; decrease the number of appeals in inventory; reduce the time to resolution; and increase customer satisfaction.

9. Determining Prospective Payment Operating and Capital Rates and Rate-of-Increase Limits for Acute Care Hospitals

In sections II. and III. of the Addendum to this proposed rule, we set forth the proposed changes to the amounts and factors for determining the proposed FY 2020 prospective payment rates for operating costs and capital-related costs for acute care hospitals. We are proposing to establish the threshold amounts for outlier cases, including a proposed change to the methodology for calculating those threshold amounts for FY 2020 to incorporate a projection of outlier payment reconciliations. In addition, in section IV. of the Addendum to this proposed rule, we address the update factors for determining the rate-of-increase limits for cost reporting periods beginning in

FY 2020 for certain hospitals excluded from the IPPS.

10. Determining Prospective Payment Rates for LTCHs

In section V. of the Addendum to this proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2020 LTCH PPS standard Federal payment rate and other factors used to determine LTCH PPS payments under both the LTCH PPS standard Federal payment rate and the site neutral payment rate in FY 2020. We are proposing to establish the adjustments for wage levels, the labor-related share, the cost-of-living adjustment, and high-cost outliers, including the applicable fixed-loss amounts and the LTCH cost-to-charge ratios (CCRs) for both payment rates.

11. Impact Analysis

In Appendix A of this proposed rule, we set forth an analysis of the impact the proposed changes would have on affected acute care hospitals, CAHs, LTCHs, and PCHs.

12. Recommendation of Update Factors for Operating Cost Rates of Payment for Hospital Inpatient Services

In Appendix B of this proposed rule, as required by sections 1886(e)(4) and (e)(5) of the Act, we provide our recommendations of the appropriate percentage changes for FY 2020 for the following:

- A single average standardized amount for all areas for hospital inpatient services paid under the IPPS for operating costs of acute care hospitals (and hospital-specific rates applicable to SCHs and MDHs).
- Target rate-of-increase limits to the allowable operating costs of hospital inpatient services furnished by certain hospitals excluded from the IPPS.
- The LTCH PPS standard Federal payment rate and the site neutral payment rate for hospital inpatient services provided for LTCH PPS discharges.

13. Discussion of Medicare Payment Advisory Commission Recommendations

Under section 1805(b) of the Act, MedPAC is required to submit a report to Congress, no later than March 15 of each year, in which MedPAC reviews and makes recommendations on Medicare payment policies. MedPAC's March 2019 recommendations concerning hospital inpatient payment policies addressed the update factor for hospital inpatient operating costs and capital-related costs for hospitals under the IPPS. We address these

recommendations in Appendix B of this proposed rule. For further information relating specifically to the MedPAC March 2019 report or to obtain a copy of the report, contact MedPAC at (202) 220-3700 or visit MedPAC's website at: <http://www.medpac.gov>.

E. Advancing Health Information Exchange

The Department of Health and Human Services (HHS) has a number of initiatives designed to encourage and support the adoption of interoperable health information technology and to promote nationwide health information exchange to improve health care. The Office of the National Coordinator for Health Information Technology (ONC) and CMS work collaboratively to advance interoperability across settings of care, including post-acute care.

To further interoperability in post-acute care, we developed a Data Element Library (DEL) to serve as a publicly available centralized, authoritative resource for standardized data elements and their associated mappings to health IT standards. The DEL furthers CMS' goal of data standardization and interoperability, which is also a goal of the IMPACT Act. These interoperable data elements can reduce provider burden by allowing the use and exchange of health care data, support provider exchange of electronic health information for care coordination, person-centered care, and support real-time, data driven, clinical decision making. Standards in the Data Element Library (<https://del.cms.gov/>) can be referenced on the CMS website and in the ONC Interoperability Standards Advisory (ISA). The 2019 ISA is available at: <https://www.healthit.gov/isa>.

The 21st Century Cures Act (the Cures Act) (Pub. L. 114-255, enacted December 13, 2016) requires HHS to take new steps to enable the electronic sharing of health information ensuring interoperability for providers and settings across the care continuum. In an important provision, Congress defined "information blocking" as practices likely to interfere with, prevent, or materially discourage access, exchange, or use of electronic health information, and established new authority for HHS to discourage these practices. In March 2019, ONC and CMS published the proposed rules, "21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program" (84 FR 7424 through 7610) and "Interoperability and Patient Access" (84 FR 7610 through 7680), to promote secure and more immediate access to

health information for patients and health care providers through the implementation of information blocking provisions of the Cures Act and the use of standardized application programming interfaces (APIs) that enable easier access to electronic health information. These two proposed rules are open for public comments at: www.regulations.gov.

We invite providers to learn more about these important developments and how they are likely to affect hospitals paid under the IPPS and the LTCH PPS.

II. Proposed Changes to Medicare Severity Diagnosis-Related Group (MS-DRG) Classifications and Relative Weights

A. Background

Section 1886(d) of the Act specifies that the Secretary shall establish a classification system (referred to as diagnosis-related groups (DRGs)) for inpatient discharges and adjust payments under the IPPS based on appropriate weighting factors assigned to each DRG. Therefore, under the IPPS, Medicare pays for inpatient hospital services on a rate per discharge basis that varies according to the DRG to which a beneficiary's stay is assigned. The formula used to calculate payment for a specific case multiplies an individual hospital's payment rate per case by the weight of the DRG to which the case is assigned. Each DRG weight represents the average resources required to care for cases in that particular DRG, relative to the average resources used to treat cases in all DRGs.

Section 1886(d)(4)(C) of the Act requires that the Secretary adjust the DRG classifications and relative weights at least annually to account for changes in resource consumption. These adjustments are made to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources.

B. MS-DRG Reclassifications

For general information about the MS-DRG system, including yearly reviews and changes to the MS-DRGs, we refer readers to the previous discussions in the FY 2010 IPPS/RV 2010 LTCH PPS final rule (74 FR 43764 through 43766) and the FYs 2011 through 2019 IPPS/LTCH PPS final rules (75 FR 50053 through 50055; 76 FR 51485 through 51487; 77 FR 53273; 78 FR 50512; 79 FR 49871; 80 FR 49342; 81 FR 56787 through 56872; 82 FR 38010 through 38085, and 83 FR 41158 through 41258, respectively).

C. Adoption of the MS-DRGs in FY 2008

For information on the adoption of the MS-DRGs in FY 2008, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189).

D. Proposed FY 2020 MS-DRG Documentation and Coding Adjustment

1. Background on the Prospective MS-DRG Documentation and Coding Adjustments for FY 2008 and FY 2009 Authorized by Public Law 110-90 and the Recoupment or Repayment Adjustment Authorized by Section 631 of the American Taxpayer Relief Act of 2012 (ATRA)

In the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189), we adopted the MS-DRG patient classification system for the IPPS, effective October 1, 2007, to better recognize severity of illness in Medicare payment rates for acute care hospitals. The adoption of the MS-DRG system resulted in the expansion of the number of DRGs from 538 in FY 2007 to 745 in FY 2008. By increasing the number of MS-DRGs and more fully taking into account patient severity of illness in Medicare payment rates for acute care hospitals, MS-DRGs encourage hospitals to improve their documentation and coding of patient diagnoses.

In the FY 2008 IPPS final rule with comment period (72 FR 47175 through 47186), we indicated that the adoption of the MS-DRGs had the potential to lead to increases in aggregate payments without a corresponding increase in actual patient severity of illness due to the incentives for additional documentation and coding. In that final rule with comment period, we exercised our authority under section 1886(d)(3)(A)(vi) of the Act, which authorizes us to maintain budget neutrality by adjusting the national standardized amount, to eliminate the estimated effect of changes in coding or classification that do not reflect real changes in case-mix. Our actuaries estimated that maintaining budget neutrality required an adjustment of -4.8 percentage points to the national standardized amount. We provided for phasing in this -4.8 percentage point adjustment over 3 years. Specifically, we established prospective documentation and coding adjustments of -1.2 percentage points for FY 2008, -1.8 percentage points for FY 2009, and -1.8 percentage points for FY 2010.

On September 29, 2007, Congress enacted the TMA [Transitional Medical Assistance], Abstinence Education, and

QI [Qualifying Individuals] Programs Extension Act of 2007 (Pub. L. 110–90). Section 7(a) of Public Law 110–90 reduced the documentation and coding adjustment made as a result of the MS–DRG system that we adopted in the FY 2008 IPPS final rule with comment period to –0.6 percentage point for FY 2008 and –0.9 percentage point for FY 2009.

As discussed in prior year rulemakings, and most recently in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56780 through 56782), we implemented a series of adjustments required under sections 7(b)(1)(A) and 7(b)(1)(B) of Public Law 110–90, based on a retrospective review of FY 2008 and FY 2009 claims data. We completed these adjustments in FY 2013 but indicated in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53274 through 53275) that delaying full implementation of the adjustment required under section 7(b)(1)(A) of Public Law 110–90 until FY 2013 resulted in payments in FY 2010 through FY 2012 being overstated, and that these overpayments could not be recovered under Public Law 110–90.

In addition, as discussed in prior rulemakings and most recently in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38008 through 38009), section 631 of the ATRA amended section 7(b)(1)(B) of Public Law 110–90 to require the Secretary to make a recoupment adjustment or adjustments totaling \$11 billion by FY 2017. This adjustment represented the amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110–90 until FY 2013.

2. Adjustments Made for FY 2018 and FY 2019 as Required Under Section 414 of Public Law 114–10 (MACRA) and Section 15005 of Public Law 114–255

As stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56785), once the recoupment required under section 631 of the ATRA was complete, we had anticipated making a single positive adjustment in FY 2018 to offset the reductions required to recoup the \$11 billion under section 631 of the ATRA. However, section 414 of the MACRA (which was enacted on April 16, 2015) replaced the single positive adjustment we intended to make in FY 2018 with a 0.5 percentage point positive adjustment for each of FYs 2018 through 2023. In the FY 2017 rulemaking, we indicated that we would address the adjustments for FY 2018 and later fiscal years in future rulemaking. Section 15005 of the 21st Century Cures Act (Pub. L. 114–255), which was enacted

on December 13, 2016, amended section 7(b)(1)(B) of the TMA, as amended by section 631 of the ATRA and section 414 of the MACRA, to reduce the adjustment for FY 2018 from a 0.5 percentage point positive adjustment to a 0.4588 percentage point positive adjustment. As we discussed in the FY 2018 rulemaking, we believe the directive under section 15005 of Public Law 114–255 is clear. Therefore, in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38009) for FY 2018, we implemented the required +0.4588 percentage point adjustment to the standardized amount. In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41157), consistent with the requirements of section 414 of the MACRA, we implemented a 0.5 percentage point positive adjustment to the standardized amount for FY 2019. We indicated that both the FY 2018 and FY 2019 adjustments were permanent adjustments to payment rates. We also stated that we plan to propose future adjustments required under section 414 of the MACRA for FYs 2020 through 2023 in future rulemaking.

3. Proposed Adjustment for FY 2020

Consistent with the requirements of section 414 of the MACRA, we are proposing to implement a 0.5 percentage point positive adjustment to the standardized amount for FY 2020. This would constitute a permanent adjustment to payment rates. We plan to propose future adjustments required under section 414 of the MACRA for FYs 2021 through 2023 in future rulemaking.

E. Refinement of the MS–DRG Relative Weight Calculation

1. Background

Beginning in FY 2007, we implemented relative weights for DRGs based on cost report data instead of charge information. We refer readers to the FY 2007 IPPS final rule (71 FR 47882) for a detailed discussion of our final policy for calculating the cost-based DRG relative weights and to the FY 2008 IPPS final rule with comment period (72 FR 47199) for information on how we blended relative weights based on the CMS DRGs and MS–DRGs. We also refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56785 through 56787) for a detailed discussion of the history of changes to the number of cost centers used in calculating the DRG relative weights. Since FY 2014, we have calculated the IPPS MS–DRG relative weights using 19 CCRs, which now include distinct CCRs for implantable devices, MRIs, CT scans, and cardiac catheterization.

2. Discussion of Policy for FY 2020

Consistent with our established policy, we are calculating the proposed MS–DRG relative weights for FY 2020 using two data sources: The MedPAR file as the claims data source and the HCRIS as the cost report data source. We adjust the charges from the claims to costs by applying the 19 national average CCRs developed from the cost reports. The description of the calculation of the proposed 19 CCRs and the proposed MS–DRG relative weights for FY 2020 is included in section II.G. of the preamble to this FY 2020 IPPS/LTCH PPS proposed rule. As we did with the FY 2019 IPPS/LTCH PPS final rule, for this FY 2020 proposed rule, we are providing the version of the HCRIS from which we calculated these proposed 19 CCRs on the CMS website at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>. Click on the link on the left side of the screen titled “FY 2020 IPPS Proposed Rule Home Page” or “Acute Inpatient Files for Download.”

F. Proposed Changes to Specific MS–DRG Classifications

1. Discussion of Changes to Coding System and Basis for Proposed FY 2020 MS–DRG Updates

a. Conversion of MS–DRGs to the International Classification of Diseases, 10th Revision (ICD–10)

As of October 1, 2015, providers use the International Classification of Diseases, 10th Revision (ICD–10) coding system to report diagnoses and procedures for Medicare hospital inpatient services under the MS–DRG system instead of the ICD–9–CM coding system, which was used through September 30, 2015. The ICD–10 coding system includes the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) for diagnosis coding and the International Classification of Diseases, 10th Revision, Procedure Coding System (ICD–10–PCS) for inpatient hospital procedure coding, as well as the ICD–10–CM and ICD–10–PCS Official Guidelines for Coding and Reporting. For a detailed discussion of the conversion of the MS–DRGs to ICD–10, we refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56787 through 56789).

b. Basis for Proposed FY 2020 MS–DRG Updates

CMS has previously encouraged input from our stakeholders concerning the annual IPPS updates when that input was made available to us by December

7 of the year prior to the next annual proposed rule update. As discussed in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38010), as we work with the public to examine the ICD-10 claims data used for updates to the ICD-10 MS DRGs, we would like to examine areas where the MS-DRGs can be improved, which will require additional time for us to review requests from the public to make specific updates, analyze claims data, and consider any proposed updates. Given the need for more time to carefully evaluate requests and propose updates, we changed the deadline to request updates to the MS-DRGs to November 1 of each year. This will provide an additional 5 weeks for the data analysis and review process. Interested parties had to submit any comments and suggestions for FY 2020 by November 1, 2018, and should submit any comments and suggestions for FY 2021 by November 1, 2019 via the CMS MS-DRG Classification Change Request Mailbox located at: MSDRGClassificationChange@cms.hhs.gov. The comments that were submitted in a timely manner for FY 2020 are discussed in this section of the preamble of this proposed rule. As we discuss in the sections that follow, we may not be able to fully consider all of the requests that we receive for the upcoming fiscal year. We have found that, with the implementation of ICD-10, some types of requested changes to the MS-DRG classifications require more extensive research to identify and analyze all of the data that are relevant to evaluating the potential change. We note in the discussion that follows those topics for which further research and analysis are required, and which we will continue to consider in connection with future rulemaking.

Following are the changes that we are proposing to the MS-DRGs for FY 2020. We are inviting public comments on each of the MS-DRG classification proposed changes, as well as our proposals to maintain certain existing MS-DRG classifications discussed in this proposed rule. In some cases, we are proposing changes to the MS-DRG classifications based on our analysis of claims data and consultation with our clinical advisors. In other cases, we are proposing to maintain the existing MS-DRG classifications based on our analysis of claims data and consultation with our clinical advisors. For this FY 2020 IPPS/LTCH PPS proposed rule, our MS-DRG analysis was based on ICD-10 claims data from the September 2018 update of the FY 2018 MedPAR file, which contains hospital bills received through September 30, 2018, for

discharges occurring through September 30, 2018. In our discussion of the proposed MS-DRG reclassification changes, we refer to these claims data as the "September 2018 update of the FY 2018 MedPAR file."

As explained in previous rulemaking (76 FR 51487), in deciding whether to propose to make further modifications to the MS-DRGs for particular circumstances brought to our attention, we consider whether the resource consumption and clinical characteristics of the patients with a given set of conditions are significantly different than the remaining patients represented in the MS-DRG. We evaluate patient care costs using average costs and lengths of stay and rely on the judgment of our clinical advisors to determine whether patients are clinically distinct or similar to other patients represented in the MS-DRG. In evaluating resource costs, we consider both the absolute and percentage differences in average costs between the cases we select for review and the remainder of cases in the MS-DRG. We also consider variation in costs within these groups; that is, whether observed average differences are consistent across patients or attributable to cases that are extreme in terms of costs or length of stay, or both. Further, we consider the number of patients who will have a given set of characteristics and generally prefer not to create a new MS-DRG unless it would include a substantial number of cases.

In our examination of the claims data, we apply the following criteria established in FY 2008 (72 FR 47169) to determine if the creation of a new complication or comorbidity (CC) or major complication or comorbidity (MCC) subgroup within a base MS-DRG is warranted:

- A reduction in variance of costs of at least 3 percent;
- At least 5 percent of the patients in the MS-DRG fall within the CC or MCC subgroup;
- At least 500 cases are in the CC or MCC subgroup;
- There is at least a 20-percent difference in average costs between subgroups; and
- There is a \$2,000 difference in average costs between subgroups.

In order to warrant creation of a CC or MCC subgroup within a base MS-DRG, the subgroup must meet all five of the criteria.

2. Pre-MDC

a. Peripheral ECMO

In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41166 through 41169), we discussed a request we received to

review cases reporting the use of extracorporeal membrane oxygenation (ECMO) in combination with the insertion of a percutaneous short-term external heart assist device. We also noted that a separate request to create a new ICD-10-PCS procedure code specifically for percutaneous ECMO was discussed at the March 6-7, 2018 ICD-10 Coordination and Maintenance Committee Meeting for which we finalized the creation of three new procedure codes to identify and describe different types of ECMO treatments currently being utilized. These three new procedure codes were included in the FY 2019 ICD-10-PCS procedure codes files (which are available via the internet on the CMS website at: <https://www.cms.gov/Medicare/Coding/ICD10/2019-ICD-10-PCS.html>) and were made publicly available in May 2018. We received recommendations from commenters on suggested MS-DRG assignments for the two new procedure codes that uniquely identify percutaneous (peripheral) ECMO, including assignment to MS-DRG 215 (Other Heart Assist System Implant), or to Pre-MDC MS-DRG 004 (Tracheostomy with Mechanical Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth and Neck without Major O.R. Procedure) specifically for the new procedure code describing percutaneous veno-venous (VV) ECMO or an alternate MS-DRG within MDC 4 (Diseases and Disorders of the Respiratory System). In our response, we noted that because these codes were not finalized at the time of the proposed rule, there were no proposed MDC or MS-DRG assignments or O.R. and non-O.R. designations for these new procedure codes and they were not reflected in Table 6B.—New Procedure Codes (which is available via the internet on the CMS website at: <http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) associated with the FY 2019 IPPS/LTCH PPS proposed rule.

We further noted that, consistent with our annual process of assigning new procedure codes to MDCs and MS-DRGs, and designating a procedure as an O.R. or non-O.R. procedure, we reviewed the predecessor procedure code assignment. For the reasons discussed in the FY 2019 IPPS/LTCH PPS final rule, our clinical advisors did not support assigning the new procedure codes for the percutaneous (peripheral) ECMO procedures to the same MS-DRG as the predecessor code for open (central) ECMO in pre-MDC MS-DRG 003.

Effective with discharges occurring on and after October 1, 2018, the three ECMO procedure codes and their corresponding MS-DRG assignments are as shown in the following table.

ICD-10-PCS code	Code description	MS-DRG	MS-DRG description
5A1522F	Extracorporeal Oxygenation, Membrane, Central.	Pre-MDC MS-DRG 003	ECMO or Tracheostomy with Mechanical Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedure.
5A1522G	Extracorporeal Oxygenation, Membrane, Peripheral Venous-arterial.	MS-DRG 207	Respiratory System Diagnosis with Ventilator Support >96 Hours or Peripheral Extracorporeal Membrane Oxygenation (ECMO).
		MS-DRG 291	Heart Failure and Shock with MCC or Peripheral Extracorporeal Membrane Oxygenation (ECMO).
		MS-DRG 296	Cardiac Arrest, Unexplained with MCC or Peripheral Extracorporeal Membrane Oxygenation (ECMO).
		MS-DRG 870	Septicemia Or Severe Sepsis with Mechanical Ventilation >96 Hours Or Peripheral Extracorporeal Membrane Oxygenation (ECMO).
5A1522H	Extracorporeal Oxygenation, Membrane, Peripheral Venous-venous.	MS-DRG 207	Respiratory System Diagnosis with Ventilator Support >96 Hours or Peripheral Extracorporeal Membrane Oxygenation (ECMO).
		MS-DRG 291	Heart Failure and Shock with MCC or Peripheral Extracorporeal Membrane Oxygenation (ECMO).
		MS-DRG 296	Cardiac Arrest, Unexplained with MCC or Peripheral Extracorporeal Membrane Oxygenation (ECMO).
		MS-DRG 870	Septicemia Or Severe Sepsis with Mechanical Ventilation >96 Hours Or Peripheral Extracorporeal Membrane Oxygenation (ECMO).

After publication of the FY 2019 IPPS/LTCH PPS final rule, we received comments and feedback from stakeholders expressing concern with the MS-DRG assignments for the two new procedure codes describing peripheral ECMO. Specifically, these stakeholders stated that: (1) The MS-DRG assignments for ECMO should not be based on how the patient is cannulated (open versus peripheral) because most of the costs for both central and peripheral ECMO can be attributed to the severity of illness of the patient; (2) there was a lack of opportunity for public comment on the finalized MS-DRG assignments; (3) patient access to ECMO treatment and programs is now at risk because of inadequate payment; and (4) CMS did not appear to have access to enough patient data to evaluate for appropriate MS-DRG assignment consideration. They also stated that the new procedure codes do not account for an open cut-down approach that may be performed on a peripheral vessel during a peripheral ECMO procedure. These stakeholders recommended that, consistent with the usual process of assigning new procedure codes to the same MS-DRG as the predecessor code, the MS-DRG assignment for peripheral ECMO procedures should be revised to allow assignment of peripheral ECMO procedures to Pre-MDC MS-DRG 003 (ECMO or Tracheostomy with Mechanical Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth

and Neck with Major O.R. Procedure). They stated that this revision would also allow for the collection of further claims data for patients treated with ECMO and assist in determining the appropriateness of any future modifications in MS-DRG assignment.

We also received feedback from a few stakeholders that, for some cases involving peripheral ECMO, the current designation provides compensation that these stakeholders believe is “reasonable” (for example, for peripheral ECMO in certain patients admitted with acute respiratory failure and sepsis). Some of these stakeholders agreed with CMS that once claims data become available, the volume, length of stay and cost data of claims with these new codes can be examined to determine if modifications to MS-DRG assignment or O.R. and non-O.R. designation are warranted. However, some of these stakeholders also expressed concerns that the current assignments and designation do not appropriately compensate for the resources used when peripheral ECMO is used to treat certain patients (for example, patients who are admitted with cardiac arrest and cardiogenic shock of known cause or patients admitted with a different principal diagnosis or patients who develop a diagnosis after admission that requires ECMO). These stakeholders stated that the current MS-DRG assignments for such cases involving peripheral ECMO do not provide sufficient payment and

do not fully consider the severity of illness of the patient and the level of resources involved in treating such patients, such as surgical team, general anesthesia, and other ECMO support such as specialized monitoring.

With regard to stakeholders’ concerns that we did not allow the opportunity for public comment on the MS-DRG assignment for the three new procedure codes that describe central and peripheral ECMO, as noted above and as explained in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41168), these new procedure codes were not finalized at the time of the proposed rule. We note that although there were no proposed MDC or MS-DRG assignment or O.R. and non-O.R. designations for these three new procedure codes, we did, in fact, review and respond to comments on the recommended MDC and MS-DRG assignments and O.R./non-O.R. designations in the final rule (83 FR 41168 through 41169). For FY 2019, consistent with our annual process of assigning new procedure codes to MDCs and MS-DRGs and designating a procedure as an O.R. or non-O.R. procedure, we reviewed the predecessor procedure code assignments. Upon completing the review, our clinical advisors did not support assigning the two new ICD-10-PCS procedure codes for peripheral ECMO procedures to the same MS-DRG as the predecessor code for open (central) ECMO procedures. Further, our clinical advisors also did not agree with designating peripheral

ECMO procedures as O.R. procedures because they stated that these procedures are less resource intensive compared to open ECMO procedures.

As noted, our annual process for assigning new procedure codes involves review of the predecessor procedure code's MS-DRG assignment. However, this process does not automatically result in the new procedure code being assigned (or proposed for assignment) to the same MS-DRG as the predecessor code. There are several factors to consider during this process that our clinical advisors take into account. For

example, in the absence of volume, length of stay, and cost data, they may consider the specific service, procedure, or treatment being described by the new procedure code, the indications, treatment difficulty, and the resources utilized. We have continued to consider how these and other factors may apply in the context of classifying procedures under the ICD-10 MS-DRGs, including with regard to the specific concerns raised by stakeholders.

In the absence of claims data for the new ICD-10-PCS procedure codes describing peripheral ECMO, we

analyzed claims data from the September 2018 update of the FY 2018 MedPAR file for cases reporting the predecessor ICD-10-PCS procedure code 5A15223 (Extracorporeal membrane oxygenation, continuous) in Pre-MDC MS-DRG 003, including those cases reporting secondary diagnosis MCC and CC conditions, that were grouped under the ICD-10 MS-DRG Version 35 GROUPER. Our findings are shown in the table below.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 003—All cases	14,456	29.6	\$122,168
MS-DRG 003—Cases reporting procedure code 5A15223 (Extracorporeal membrane oxygenation, continuous)	2,086	20.2	128,168
MS-DRG 003—Cases reporting procedure code 5A15223 (Extracorporeal membrane oxygenation, continuous) with MCC	2,000	20.7	131,305
MS-DRG 003—Cases reporting procedure code 5A15223 (Extracorporeal membrane oxygenation, continuous) with CC	79	7.6	58,231

The total number of cases reported in MS-DRG 003 was 14,456, with an average length of stay of 29.6 days and average costs of \$122,168. For the cases reporting procedure code 5A15223 (Extracorporeal membrane oxygenation, continuous), there was a total of 2,086 cases, with an average length of stay of 20.2 days and average costs of \$128,168. For the cases reporting procedure code 5A15223 with an MCC, there was a total of 2,000 cases, with an average length of stay of 20.7 days and average costs of \$131,305. For the cases reporting procedure code 5A15223 with a CC, there was a total of 79 cases, with an average length of stay of 7.6 days and average costs of \$58,231.

Our clinical advisors reviewed these data and noted that the average length of stay for the cases reporting ECMO

with procedure code 5A15223 of 20.2 days may not necessarily be a reliable indicator of resources that can be attributed to ECMO treatment. Our clinical advisors believed that a more appropriate measure of resource consumption for ECMO would be the number of hours or days that a patient was specifically receiving ECMO treatment, rather than the length of hospital stay. However, they noted that this information is not currently available in the claims data. Our clinical advisors also stated that the average costs of \$128,168 for the cases reporting ECMO with procedure code 5A15223 are not necessarily reflective of the resources utilized for ECMO treatment alone, as the average costs represent a combination of factors, including the principal diagnosis, any secondary

diagnosis CC and/or MCC conditions necessitating initiation of ECMO, and potentially any other procedures that may be performed during the hospital stay. Our clinical advisors recognized that patients who require ECMO treatment are severely ill and recommended we review the claims data to identify the number (frequency) and types of principal and secondary diagnosis CC and/or MCC conditions that were reported among the 2,086 cases reporting procedure code 5A15223. Our findings are shown in the following tables for the top 10 principal diagnosis codes, followed by the top 10 secondary diagnosis MCC and secondary diagnosis CC conditions that were reported within the claims data with procedure code 5A15223.

TOP 10 PRINCIPAL DIAGNOSIS CODES REPORTED WITH PROCEDURE CODE 5A1223
[Extracorporeal membrane oxygenation, continuous]

ICD-10-CM code	Description	Number of times reported
A41.9	Sepsis, unspecified organism	145
I21.4	Non-ST elevation (NSTEMI) myocardial infarction	137
I35.0	Nonrheumatic aortic (valve) stenosis	81
J84.112	Idiopathic pulmonary fibrosis	68
I25.110	Atherosclerotic heart disease of native coronary artery with unstable angina pectoris	55
J96.01	Acute respiratory failure with hypoxia	52
I21.09	STEMI involving other coronary artery of anterior wall	49
I25.10	Atherosclerotic heart disease of native coronary artery w/o angina pectoris	48
I13.0	Hypertensive heart & chronic kidney disease w heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease.	46
I21.19	ST elevation (STEMI) myocardial infarction involving other coronary artery of inferior wall	43

TOP 10 SECONDARY DIAGNOSIS MCC CONDITIONS REPORTED WITH PROCEDURE CODE 5A1223

[Extracorporeal membrane oxygenation, continuous]

ICD-10-CM code	Description	Number of times reported	Average length of stay	Average costs
A41.9	Sepsis, unspecified organism	322	29.7	\$186,055
E43	Unspecified severe protein-calorie malnutrition	220	41.5	213,742
G93.40	Encephalopathy, unspecified	217	27.2	165,193
J18.9	Pneumonia, unspecified organism	220	23.5	150,242
J96.01	Acute respiratory failure with hypoxia	944	17.9	122,614
J96.02	Acute respiratory failure with hypercapnia	220	20.9	139,511
K72.00	Acute and subacute hepatic failure without coma	524	19	140,878
N17.0	Acute kidney failure with tubular necrosis	741	26.2	162,583
R57.0	Cardiogenic shock	448	27.7	153,878
R65.21	Severe sepsis with septic shock	504	29.7	177,992

TOP 10 SECONDARY DIAGNOSIS CC CONDITIONS REPORTED WITH PROCEDURE CODE 5A1223

[Extracorporeal membrane oxygenation, continuous]

ICD-10-CM code	Description	Number of times reported	Average length of stay	Average costs
D62	Acute posthemorrhagic anemia	1,139	21.8	\$144,033
D68.9	Coagulation defect, unspecified	402	20.5	138,417
E87.0	Hyperosmolality and hypernatremia	585	26.6	162,028
E87.1	Hypo-osmolality and hyponatremia	316	26.1	151,824
E87.2	Acidosis	937	17.3	120,881
E87.4	Mixed disorder of acid-base balance	268	26	150,257
I13.0	Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease.	314	18.4	121,962
I47.2	Ventricular tachycardia	384	17.5	123,383
J98.11	Atelectasis	273	26.9	158,812
N17.9	Acute kidney failure, unspecified	757	18.5	122,180

These data show that the conditions reported for these patients requiring treatment with ECMO and reported with predecessor ICD-10-PCS procedure code 5A1223 represent a greater severity of illness, present greater treatment difficulty, have poorer prognoses, and have a greater need for intervention. While the data analysis was based on the conditions reported with the predecessor ICD-10-PCS procedure code 5A1223 (Extracorporeal membrane oxygenation, continuous), our clinical advisors believe the data may provide an indication of how cases reporting the new procedure codes describing peripheral (percutaneous) ECMO may be represented in future claims data with regard to indications for treatment, a patient's severity of illness, resource utilization, and treatment difficulty.

Based on the results of our data analysis and further review of the cases reporting ECMO, including consideration of the stakeholders' concerns that the MS-DRG assignments for ECMO procedures should not be based on the method of cannulation, our clinical advisors agree that resource consumption for both central and peripheral ECMO cases can be primarily attributed to the severity of illness of the patient, and that the method of

cannulation is less relevant when considering the overall resources required to treat patients on ECMO. Specifically, our clinical advisors noted that consideration of resource consumption for cases reporting the use of ECMO may extend well beyond the duration of time that a patient was actively receiving ECMO treatment, which may range anywhere from less than 24 hours to 10 days or more. As noted above, in the absence of unique procedure codes that specify the duration of time that a patient was receiving ECMO treatment, we cannot ascertain from the claims data the resource use specifically attributable to treatment with ECMO during a hospital stay. However, when reviewing consumption of hospital resources for the cases in which ECMO was reported during a hospital stay, the claims data clearly show that the patients placed on ECMO typically have multiple MCC and CC conditions. These data provide additional information on the expanding indications for ECMO treatment as well as an indication of the complexities and the treatment difficulty associated with these patients. While our clinical advisors continue to believe that central (open) ECMO may be more resource intensive and carries

significant risks for complications, including bleeding, infection, and vessel injury because it requires an incision along the sternum (sternotomy) and is performed for open heart surgery, they believe that the subset of patients who require treatment with ECMO, regardless of the cannulation method, would be similar in terms of overall hospital resource consumption. We also note that while we do not yet have Medicare claims data to evaluate the new peripheral ECMO procedure codes, review of limited registry data provided by stakeholders for patients treated with a reported peripheral ECMO procedure did not contradict that costs for peripheral ECMO appear to be similar to the costs of overall resources required to treat patients on ECMO (regardless of method of cannulation) and appear to be attributable to the severity of illness of the patient.

With regard to stakeholders who stated that the two new procedure codes do not account for an open cut-down approach that may be performed on a peripheral vessel during a peripheral ECMO procedure, we note that a request and proposal to create ICD-10-PCS codes to differentiate between peripheral vessel percutaneous and peripheral vessel open cutdown

according to the indication (VA or VV) for ECMO was discussed at the March 5–6, 2019 ICD–10 Coordination and Maintenance Committee meeting. We refer readers to the website at: <https://www.cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/ICD-9-CM-C-and-M-Meeting-Materials.html> for the committee meeting materials and discussion regarding this proposal. We also note that, in this same proposal, another coding option to add duration values to allow the reporting of the number of hours or the number of days a patient received ECMO during the stay was also made available for public comment.

Upon further review and consideration of peripheral ECMO

procedures, including the indications, treatment difficulty, and the resources utilized, for the reasons discussed above, our clinical advisors support the assignment of the new ICD–10–PCS procedure codes for peripheral ECMO procedures to the same MS–DRG as the predecessor code for open (central) ECMO procedures for FY 2020. Therefore, based on our review, including consideration of the comments and input from our clinical advisors, we are proposing to reassign the following procedure codes describing peripheral ECMO procedures from their current MS–DRG assignments to Pre-MDC MS–DRG 003 (ECMO or Tracheostomy with Mechanical

Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedure) as shown in the table below. If this proposal is finalized, we also would make conforming changes to the titles for MS–DRGs 207, 291, 296, and 870 to no longer reflect the “or Peripheral Extracorporeal Membrane Oxygenation (ECMO)” terminology in the title. We note that this proposal includes maintaining the designation of these peripheral ECMO procedures as non-O.R. Therefore, if finalized, the procedures would be defined as non-O.R. affecting the MS–DRG assignment for Pre-MDC MS–DRG 003.

ICD–10–PCS code	Code description	Current MS–DRG	Proposed MS–DRG
5A1522G	Extracorporeal Oxygenation, Membrane, Peripheral Venous-arterial.	<p>MS–DRG 207 (Respiratory System Diagnosis with Ventilator Support >96 Hours or Peripheral Extracorporeal Membrane Oxygenation (ECMO)).</p> <p>MS–DRG 291 (Heart Failure and Shock with MCC or Peripheral Extracorporeal Membrane Oxygenation (ECMO)).</p> <p>MS–DRG 296 (Cardiac Arrest, Unexplained with MCC or Peripheral Extracorporeal Membrane Oxygenation (ECMO)).</p> <p>MS–DRG 870 (Septicemia or Severe Sepsis with Mechanical Ventilation >96 Hours or Peripheral Extracorporeal Membrane Oxygenation (ECMO)).</p>	<p>Pre-MDC MS–DRG 003 (ECMO or Tracheostomy with Mechanical Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedure).</p> <p>Pre-MDC MS–DRG 003 (ECMO or Tracheostomy with Mechanical Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedure).</p> <p>Pre-MDC MS–DRG 003 (ECMO or Tracheostomy with Mechanical Ventilation >96 Hours or Principal Diagnosis Except Face, Mouth and Neck with Major O.R. Procedure).</p>

b. Allogeneic Bone Marrow Transplant

We received a request to create new MS–DRGs for cases that would identify patients who undergo an allogeneic hematopoietic cell transplant (HCT) procedure. The requestor asked us to split MS–DRG 014 (Allogeneic Bone Marrow Transplant) into two new MS–DRGs and assign cases to the recommended new MS–DRGs according to the donor source, with cases for allogeneic *related* matched donor source assigned to one MS–DRG and cases for allogeneic *unrelated* matched donor

source assigned to the other MS–DRG. The requestor stated that by creating two new MS–DRGs for allogeneic related and allogeneic unrelated donor source, respectively, the MS–DRGs would more appropriately recognize the clinical characteristics and cost differences in allogeneic HCT cases.

The requestor stated that allogeneic related and allogeneic unrelated HCT cases are clinically different and have significantly different donor search and cell acquisition charges. According to the requestor, 70 percent of patients do not have a matched sibling donor (that

is, an allogeneic related matched donor) in their family. The requestor also stated that this rate is higher for Medicare beneficiaries. According to the requestor, the current payment for allogeneic HCT cases is inadequate and affects patient’s access to care.

The requestor performed its own analysis and stated that it found the average costs for HCT cases reporting revenue code 0815 (Stem cell acquisition) alone or revenue code 0819 (Other organ acquisition) in combination with revenue code 0815 with one of the ICD–10–PCS procedure

codes for allogeneic unrelated donor source were significantly higher than the average costs for HCT cases reporting revenue code 0815 alone or both revenue codes 0815 and 0819 in combination with one of the ICD-10-PCS procedure codes for allogeneic related donor source. Further, the requestor reported that, according to its analysis, the average costs for HCT cases reporting revenue code 0815 alone or both revenue codes 0815 and 0819 in combination with one of the ICD-10-PCS procedure codes for unspecified allogeneic donor source were also

significantly higher than the average costs for HCT cases reporting the ICD-10-PCS procedure codes for allogeneic related donor source. The requestor suggested that cases reporting the unspecified donor source procedure code are highly likely to represent unrelated donors, and recommended that, if the two new MS-DRGs are created as suggested, the cases reporting the procedure codes for unspecified donor source be included in the suggested new “unrelated donor” MS-DRG. The requestor also suggested that CMS apply a code edit through the

inpatient Medicare Code Editor (MCE), similar to the edit in the Integrated Outpatient Code Editor (I/OCE) which requires reporting of revenue code 0815 on the claim with the appropriate procedure code or the claim may be subject to being returned to the provider.

The ICD-10-PCS procedure codes assigned to MS-DRG 014 that identify related, unrelated and unspecified donor source for an allogeneic HCT are shown in the following table.

ICD-10-PCS code	Code description
30230G2	Transfusion of allogeneic related bone marrow into peripheral vein, open approach.
30230G3	Transfusion of allogeneic unrelated bone marrow into peripheral vein, open approach.
30230G4	Transfusion of allogeneic unspecified bone marrow into peripheral vein, open approach.
30230X2	Transfusion of allogeneic related cord blood stem cells into peripheral vein, open approach.
30230X3	Transfusion of allogeneic unrelated cord blood stem cells into peripheral vein, open approach.
30230X4	Transfusion of allogeneic unspecified cord blood stem cells into peripheral vein, open approach.
30230Y2	Transfusion of allogeneic related hematopoietic stem cells into peripheral vein, open approach.
30230Y3	Transfusion of allogeneic unrelated hematopoietic stem cells into peripheral vein, open approach.
30230Y4	Transfusion of allogeneic unspecified hematopoietic stem cells into peripheral vein, open approach.
30233G2	Transfusion of allogeneic related bone marrow into peripheral vein, percutaneous approach.
30233G3	Transfusion of allogeneic unrelated bone marrow into peripheral vein, percutaneous approach.
30233G4	Transfusion of allogeneic unspecified bone marrow into peripheral vein, percutaneous approach.
30233X2	Transfusion of allogeneic related cord blood stem cells into peripheral vein, percutaneous approach.
30233X3	Transfusion of allogeneic unrelated cord blood stem cells into peripheral vein, percutaneous approach.
30233X4	Transfusion of allogeneic unspecified cord blood stem cells into peripheral vein, percutaneous approach.
30233Y2	Transfusion of allogeneic related hematopoietic stem cells into peripheral vein, percutaneous approach.
30233Y3	Transfusion of allogeneic unrelated hematopoietic stem cells into peripheral vein, percutaneous approach.
30233Y4	Transfusion of allogeneic unspecified hematopoietic stem cells into peripheral vein, percutaneous approach.
30240G2	Transfusion of allogeneic related bone marrow into central vein, open approach.
30240G3	Transfusion of allogeneic unrelated bone marrow into central vein, open approach.
30240G4	Transfusion of allogeneic unspecified bone marrow into central vein, open approach.
30240X2	Transfusion of allogeneic related cord blood stem cells into central vein, open approach.
30240X3	Transfusion of allogeneic unrelated cord blood stem cells into central vein, open approach.
30240X4	Transfusion of allogeneic unspecified cord blood stem cells into central vein, open approach.
30240Y2	Transfusion of allogeneic related hematopoietic stem cells into central vein, open approach.
30240Y3	Transfusion of allogeneic unrelated hematopoietic stem cells into central vein, open approach.
30240Y4	Transfusion of allogeneic unspecified hematopoietic stem cells into central vein, open approach.
30243G2	Transfusion of allogeneic related bone marrow into central vein, percutaneous approach.
30243G3	Transfusion of allogeneic unrelated bone marrow into central vein, percutaneous approach.
30243G4	Transfusion of allogeneic unspecified bone marrow into central vein, percutaneous approach.
30243X2	Transfusion of allogeneic related cord blood stem cells into central vein, percutaneous approach.
30243X3	Transfusion of allogeneic unrelated cord blood stem cells into central vein, percutaneous approach.
30243X4	Transfusion of allogeneic unspecified cord blood stem cells into central vein, percutaneous approach.
30243Y2	Transfusion of allogeneic related hematopoietic stem cells into central vein, percutaneous approach.
30243Y3	Transfusion of allogeneic unrelated hematopoietic stem cells into central vein, percutaneous approach.
30243Y4	Transfusion of allogeneic unspecified hematopoietic stem cells into central vein, percutaneous approach.
30250G1	Transfusion of nonautologous bone marrow into peripheral artery, open approach.
30250X1	Transfusion of nonautologous cord blood stem cells into peripheral artery, open approach.
30250Y1	Transfusion of nonautologous hematopoietic stem cells into peripheral artery, open approach.
30253G1	Transfusion of nonautologous bone marrow into peripheral artery, percutaneous approach.
30253X1	Transfusion of nonautologous cord blood stem cells into peripheral artery, percutaneous approach.
30253Y1	Transfusion of nonautologous hematopoietic stem cells into peripheral artery, percutaneous approach.
30260G1	Transfusion of nonautologous bone marrow into central artery, open approach.
30260X1	Transfusion of nonautologous cord blood stem cells into central artery, open approach.
30260Y1	Transfusion of nonautologous hematopoietic stem cells into central artery, open approach.
30263G1	Transfusion of nonautologous bone marrow into central artery, percutaneous approach.
30263X1	Transfusion of nonautologous cord blood stem cells into central artery, percutaneous approach.
30263Y1	Transfusion of nonautologous hematopoietic stem cells into central artery, percutaneous approach.

We examined claims data from the September 2018 update of the FY 2018 MedPAR file for MS-DRG 014 and identified the subset of cases within

MS-DRG 014 reporting procedure codes for allogeneic HCT related donor source, allogeneic HCT unrelated donor source, and allogeneic HCT unspecified donor

source, respectively. Our findings are shown in the following table.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 014—All cases	854	28.2	\$91,446
MS-DRG 014—Cases reporting allogeneic HCT related donor source	292	29.5	87,444
MS-DRG 014—Cases reporting allogeneic HCT unrelated donor source	466	27.9	95,146
MS-DRG 014—Cases reporting allogeneic HCT unspecified donor source	90	26.2	90,945

The total number of cases reported in MS-DRG 014 was 854, with an average length of stay of 28.2 days and average costs of \$91,446. For the subset of cases reporting procedure codes for allogeneic HCT related donor source, there were a total of 292 cases with an average length of stay of 29.5 days and average costs of \$87,444. For the subset of cases reporting procedure codes for allogeneic HCT unrelated donor source, there was a total of 466 cases with an average length of stay of 27.9 days and average costs of \$95,146. For the subset of cases reporting procedure codes for allogeneic HCT unspecified donor source, there was a total of 90 cases with an average length of stay of 26.2 days and average costs of \$90,945.

Based on the analysis described above, the current MS-DRG assignment for the cases in MS-DRG 014 that identify patients who undergo an allogeneic HCT procedure, regardless of donor source, appears appropriate. The data analysis reflects that each subset of cases reporting a procedure code for an allogeneic HCT procedure (that is, related, unrelated, or unspecified donor source) has an average length of stay and average costs that are comparable to the average length of stay and average costs of all cases in MS-DRG 014. We also take this opportunity to note that, in deciding whether to propose to make further modifications to the MS-DRGs for particular circumstances brought to our attention, we do not consider the reported revenue codes. Rather, as stated previously, we consider whether the resource consumption and clinical characteristics of the patients with a given set of conditions are significantly different than the remaining patients represented in the MS-DRG. We do this by evaluating the ICD-10-CM diagnosis and/or ICD-10-PCS procedure codes that identify the patient conditions, procedures, and the relevant MS-DRG(s) that are the subject of a request. Specifically, for this request, as noted above, we analyzed the cases reporting the ICD-10-PCS procedure codes that identify an allogeneic HCT procedure according to the donor source. We then evaluated patient care costs using average costs and average lengths of stay (based on the MedPAR data) and rely on the judgment of our clinical advisors to determine whether the patients are

clinically distinct or similar to other patients represented in the MS-DRG. Because MS-DRG 014 is defined by patients who undergo an allogeneic HCT transplant procedure, our clinical advisors state they are all clinically similar in that regard. We also note that the ICD-10-PCS procedure codes that describe an allogeneic HCT procedure were revised effective October 1, 2016 to uniquely identify the donor source in response to a request and proposal that was discussed at the March 9-10, 2016 ICD-10 Coordination and Maintenance Committee meeting. We refer readers to the website at: <https://www.cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/ICD-9-CM-C-and-M-Meeting-Materials.html> for the committee meeting materials and discussion regarding this proposal.

In response to the requestor's statement that allogeneic related and allogeneic unrelated HCT cases are clinically different and have significantly different donor search and cell acquisition charges, our clinical advisors support maintaining the current structure for MS-DRG 014 because they believe that MS-DRG 014 appropriately classifies all patients who undergo an allogeneic HCT procedures and, therefore, it is clinically coherent. While the requestor stated that there are clinical differences in the related and unrelated HCT cases, they did not provide any specific examples of these clinical differences. With regard to the donor search and cell acquisition charges, the requestor noted that the unrelated donor cases are more expensive than the related donor cases because of the donor search process, which includes a registry search to identify the best donor source, extensive donor screenings, evaluation, and cell acquisition and transportation services for the patient. The requestor appeared to base that belief according to the donor source and average charges reported with revenue code 0815. As noted above, we use MedPAR data and do not consider the reported revenue codes in deciding whether to propose to make further modifications to the MS-DRGs. Based on our analysis of claims data for MS-DRG 014, our clinical advisors stated that the resources are similar for patients who undergo an

allogeneic HCT procedure regardless of the donor source.

In reviewing this request, we also reviewed the instructions on billing for stem cell transplantation in Chapter 3 of the Medicare Claims Processing Manual and found that there appears to be inadvertent duplication under Section 90.3.1 and Section 90.3.3 of Chapter 3, as both sections provide instructions on Billing for Stem Cell Transplantation. Therefore, we are further reviewing the Medicare Claims Processing Manual to identify potential revisions to address this duplication. However, we also note that section 90.3.1 and section 90.3.3 provide different instruction regarding which revenue code should be reported. Section 90.3.1 instructs providers to report revenue code 0815 and Section 90.3.3 instructs providers to report revenue code 0819. We note that we issued instructions as a One-Time Notification, Pub. No. 100-04, Transmittal 3571, Change Request 9674, effective January 1, 2017, which instructs that the appropriate revenue code to report on claims for allogeneic stem cell acquisition/donor services is revenue code 0815. Accordingly, we also are considering additional revisions as needed to conform the instructions for reporting these codes in the Medicare Claims Processing Manual.

With regard to the requestor's recommendation that we create a new code edit through the inpatient MCE similar to the edit in the I/OCE which requires reporting of revenue code 0815 on the claim, we note that the MCE is not designed to include revenue codes for claims editing purposes. Rather, as stated in section II.F.16. of the preamble of this proposed rule, it is a software program that detects and reports errors in the coding of Medicare claims data. The coding of Medicare claims data refers to diagnosis and procedure coding, as well as demographic information.

For the reasons described above, we are not proposing to change the current structure of MS-DRG 014. We are not proposing to split MS-DRG 014 into two new MS-DRGs that assign cases according to whether the allogeneic donor source is related or unrelated, as the requestor suggested.

In addition, while conducting our analysis of cases reporting ICD-10-PCS

procedure codes for allogeneic HCT procedures that are assigned to MS-DRG 014, we noted that 8 procedure codes for autologous HCT procedures are currently included in MS-DRG 014, as shown in the following table. These codes are not properly assigned because MS-DRG 014 is defined by cases reporting allogeneic HCT procedures.

ICD-10-PCS code	Code description
30230X0	Transfusion of autologous cord blood stem cells into peripheral vein, open approach.
30233X0	Transfusion of autologous cord blood stem cells into peripheral vein, percutaneous approach.
30240X0	Transfusion of autologous cord blood stem cells into central vein, open approach.
30243X0	Transfusion of autologous cord blood stem cells into central vein, percutaneous approach.
30250X0	Transfusion of autologous cord blood stem cells into peripheral artery, open approach.
30253X0	Transfusion of autologous cord blood stem cells into peripheral artery, percutaneous approach.
30260X0	Transfusion of autologous cord blood stem cells into central artery, open approach.
30263X0	Transfusion of autologous cord blood stem cells into central artery, percutaneous approach.

The 8 ICD-10-PCS procedure codes for autologous HCT procedures were inadvertently included in MS-DRG 014 as a result of efforts to replicate the ICD-9-CM MS-DRGs. Under the ICD-9-CM MS-DRGs, procedure code 41.06 (Cord blood stem cell transplant) was used to identify these procedures and was also assigned to MS-DRG 014. As shown in the ICD-9-CM code description, the reference to “autologous” is not included. However, because the ICD-10-PCS autologous HCT procedure

codes were considered as plausible translations of the ICD-9-CM procedure code (41.06), they were inadvertently included in MS-DRG 014. We also note that, of these 8 procedure codes, there are 4 procedure codes that describe a transfusion via arterial access. As described in more detail below, because a transfusion procedure always uses venous access rather than arterial access, these codes are considered clinically invalid and were the subject of a proposal discussed at the March 5-

6, 2019 ICD-10 Coordination and Maintenance Committee meeting to delete these codes effective October 1, 2019 (FY 2020).

The majority of ICD-10-PCS procedure codes specifying autologous HCT procedures are currently assigned to MS-DRGs 016 and 017 (Autologous Bone Marrow Transplant with CC/MCC or T-cell Immunotherapy and Autologous Bone Marrow Transplant without CC/MCC, respectively). These codes are listed in the following table.

ICD-10-PCS code	Code description
30230AZ	Transfusion of embryonic stem cells into peripheral vein, open approach.
30230G0	Transfusion of autologous bone marrow into peripheral vein, open approach.
30230Y0	Transfusion of autologous hematopoietic stem cells into peripheral vein, open approach.
30233AZ	Transfusion of embryonic stem cells into peripheral vein, percutaneous approach.
30233G0	Transfusion of autologous bone marrow into peripheral vein, percutaneous approach.
30233Y0	Transfusion of autologous hematopoietic stem cells into peripheral vein, percutaneous approach.
30240AZ	Transfusion of embryonic stem cells into central vein, open approach.
30240G0	Transfusion of autologous bone marrow into central vein, open approach.
30240Y0	Transfusion of autologous hematopoietic stem cells into central vein, open approach.
30243AZ	Transfusion of embryonic stem cells into central vein, percutaneous approach.
30243G0	Transfusion of autologous bone marrow into central vein, percutaneous approach.
30243Y0	Transfusion of autologous hematopoietic stem cells into central vein, percutaneous approach.
30250G0	Transfusion of autologous bone marrow into peripheral artery, open approach.
30250Y0	Transfusion of autologous hematopoietic stem cells into peripheral artery, open approach.
30253G0	Transfusion of autologous bone marrow into peripheral artery, percutaneous approach.
30253Y0	Transfusion of autologous hematopoietic stem cells into peripheral artery, percutaneous approach.
30260G0	Transfusion of autologous bone marrow into central artery, open approach.
30260Y0	Transfusion of autologous hematopoietic stem cells into central artery, open approach.
30263G0	Transfusion of autologous bone marrow into central artery, percutaneous approach.
30263Y0	Transfusion of autologous hematopoietic stem cells into central artery, percutaneous approach.

While we believe, as indicated, that the cases reporting ICD-10-PCS procedure codes for autologous HCT procedures may be improperly assigned

to MS-DRG 014, we also examined claims data for this subset of cases to determine the frequency with which they were reported and the relative

resource use as compared with all cases assigned to MS-DRGs 016 and 017. Our findings are shown in the following table.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 014—Cases reporting autologous cord blood stem cell donor source	6	23.5	\$38,319
MS-DRG 016—All cases	2,150	18	47,546
MS-DRG 017—All cases	104	11	33,540

For the subset of cases in MS-DRG 014 reporting ICD-10-PCS codes for autologous HCT procedures, there was a total of 6 cases with an average length

of stay of 23.5 days and average costs of \$38,319. The total number of cases reported in MS-DRG 016 was 2,150, with an average length of stay of 18 days

and average costs of \$47,546. The total number of cases reported in MS-DRG 017 was 104, with an average length of

stay of 11 days and average costs of \$33,540.

The results of our analysis indicate that the frequency with which these autologous HCT procedure codes was reported in MS-DRG 014 is low and that average costs of cases reporting autologous HCT procedures assigned to MS-DRG 014 are more aligned with the

average costs of cases assigned to MS-DRGs 016 and 017, with the average costs being lower than the average costs for all cases assigned to MS-DRG 016 and higher than the average costs for all cases assigned to MS-DRG 017. Our clinical advisors also indicated that the procedure codes for autologous HCT procedures are more clinically aligned

with cases that are assigned to MS-DRGs 016 and 017 that are comprised of autologous HCT procedures. Therefore, we are proposing to reassign the following 4 procedure codes for HCT procedures specifying autologous cord blood stem cell as the donor source via venous access to MS-DRGs 016 and 017 for FY 2020.

ICD-10-PCS code	Code description
30230X0	Transfusion of autologous cord blood stem cells into peripheral vein, open approach.
30233X0	Transfusion of autologous cord blood stem cells into peripheral vein, percutaneous approach.
30240X0	Transfusion of autologous cord blood stem cells into central vein, open approach.
30243X0	Transfusion of autologous cord blood stem cells into central vein, percutaneous approach.

As discussed earlier in this section, the 4 procedure codes for HCT procedures that describe an autologous cord blood stem cell transfusion via arterial access currently assigned to MS-DRG 014, as listed previously, are considered clinically invalid. These procedure codes were discussed at the March 5-6, 2019 ICD-10 Coordination and Maintenance Committee meeting, along with additional procedure codes that are also considered clinically invalid, as described in the section below.

During our analysis of procedure codes that describe a HCT procedure, we identified 128 clinically invalid codes from the transfusion table (table 302) in the ICD-10-PCS classification identifying a transfusion using arterial access, as listed in Table 6P.1a. associated with this proposed rule

(which is available via the internet on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>). As shown in Table 6P.1a., these 128 procedure codes describe transfusion procedures with body system/region values “5” Peripheral Artery and “6” Central Artery. Because a transfusion procedure always uses venous access rather than arterial access, these codes are considered clinically invalid and were proposed for deletion at the March 5-6, 2019 ICD-10 Coordination and Maintenance Committee meeting. We refer the reader to the website at: <https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials.html> for the Committee meeting materials regarding this proposal.

We examined claims data from the September 2018 update of the FY 2018 MedPAR file for MS-DRGs 014, 016, and 017 to determine if there were any cases that reported one of the 128 clinically invalid codes from the transfusion table in the ICD-10-PCS classification identifying a transfusion using arterial access, and as listed in Table 6P.1a. associated with this proposed rule. Our clinical advisors agree that because a transfusion procedure always uses venous access rather than arterial access, these codes are considered invalid. Because these procedure codes describe clinically invalid procedures, we would not expect these codes to be reported in any claims data. Our findings are shown in the following table.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRGs 014, 016, and 017—All cases	3,108	20.4	\$59,140
MS-DRGs 014, 016, and 017—Cases with invalid transfusion codes	31	19.6	52,912

As shown in this table, we found a total of 3,108 cases across MS-DRGs 014, 016, and 017 with an average length of stay of 20.4 days and average costs of \$59,140. We found a total of 31 cases (0.9 percent) reporting a procedure code for an invalid transfusion procedure, identifying the body system/region value “5” Peripheral Artery or “6” Central Artery, with an average length of stay of 19.6 days and average costs of \$52,912. The results of the data analysis demonstrate that these invalid transfusion procedures represent approximately 1 percent of all discharges across MS-DRGs 014, 016, and 017. To summarize, we are proposing to: (1) Reassign the four ICD-10-PCS codes for HCT procedures specifying autologous cord blood stem cell as the donor source from MS-DRG

014 to MS-DRGs 016 and 017 (procedure codes 30230X0, 30233X0, 30240X0, 30243X0); and (2) delete the 128 clinically invalid codes from the transfusion table in the ICD-10-PCS Classification describing a transfusion using arterial access that were discussed at the March 5-6, 2019 ICD-10 Coordination and Maintenance Committee meeting and are listed in Table 6P.1a associated with this proposed rule. As discussed previously, we are not proposing to split MS-DRG 014 into the two requested new MS DRGs that would assign cases according to whether the allogeneic donor source is related or unrelated.

c. Chimeric Antigen Receptor (CAR) T-Cell Therapies

We received a request to create a new MS-DRG for procedures involving CAR T-cell therapies. The requestor stated that creation of a new MS-DRG would improve payment for CAR T-cell therapies in the inpatient setting. According to the requestor, while cases involving CAR T-cell therapy may now be eligible for new technology add-on payments and outlier payments, there continue to be significant financial losses by providers. The requestor also suggested that CMS modify its existing payment mechanisms to use a CCR of 1.0 for charges associated with CAR T-cell therapy.

In addition, the requestor included technical and operational suggestions related to CAR T-cell therapy, such as

the development of unique CAR T-cell therapy revenue and cost centers for billing and cost reporting purposes. We will consider these technical and operational suggestions in the development of future billing and cost reporting guidelines and instructions.

Currently, procedures involving CAR T-cell therapies are identified with ICD-10-PCS procedure codes XW033C3 (Introduction of engineered autologous chimeric antigen receptor t-cell immunotherapy into peripheral vein, percutaneous approach, new technology group 3) and XW043C3 (Introduction of engineered autologous chimeric antigen receptor t-cell immunotherapy into central vein, percutaneous approach, new technology group 3), which became effective October 1, 2017. In the FY 2019 IPPS/LTCH PPS final rule, we finalized our proposal to assign cases reporting these ICD-10-PCS procedure codes to Pre-MDC MS-DRG 016 for FY 2019 and to revise the title of this MS-DRG to “Autologous Bone Marrow Transplant with CC/MCC or T-cell Immunotherapy”. We refer readers to section II.F.2.d. of the preamble of the FY 2019 IPPS/LTCH PPS final rule for a complete discussion of these final policies (83 FR 41172 through 41174).

As stated earlier, the current procedure codes for CAR T-cell therapies both became effective October 1, 2017. In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41172 through 41174), we indicated we should collect more comprehensive clinical and cost data before considering assignment of a new MS-DRG to these therapies. While the September 2018 update of the FY 2018 MedPAR data file does contain some claims that include those procedure codes that identify CAR T-cell therapies, the number of cases is limited, and the submitted costs vary widely due to differences in provider billing and charging practices for this therapy. Therefore, while these claims could potentially be used to create relative weights for a new MS-DRG, we do not have the comprehensive clinical and cost data that we generally believe are needed to do so. Furthermore, given the relative newness of CAR T-cell therapy and our proposal to continue new technology add-on payments for FY 2020 for the two CAR T-cell therapies that currently have FDA approval (KYMRIAH™ and YESCARTA™), as discussed in section II.G.4.d. of the preamble of this proposed rule, at this time we believe it may be premature to consider creation of a new MS-DRG specifically for cases involving CAR T-cell therapy for FY 2020.

Therefore, we are proposing not to modify the current MS-DRG assignment

for cases reporting CAR T-cell therapies for FY 2020. As noted earlier, cases reporting ICD-10-PCS codes XW033C3 and XW043C3 would continue to be eligible to receive new technology add-on payments for discharges occurring in FY 2020 if our proposal to continue such payments is finalized. Currently, we expect that, in future years, we would have additional data that exhibit more stability and greater consistency in charging and billing practices that could be used to evaluate the potential creation of a new MS-DRG specifically for cases involving CAR T-cell therapies.

Alternatively, notwithstanding our concerns regarding the claims data, and the concerns discussed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41172 to 41174), we are seeking public comments on payment alternatives for CAR T-cell therapies, including payment under any potential new MS-DRG. We also are inviting public comments on how these payment alternatives would affect access to care, as well as how they affect incentives to encourage lower drug prices, which is a high priority for this Administration. As discussed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41172 through 41174), we are considering approaches and authorities to encourage value-based care and lower drug prices. We are soliciting public comments on how the effective dates of any potential payment methodology alternatives, if any were to be adopted, may intersect and affect future participation in any such alternative approaches.

As part of our solicitation of public comment on the potential creation of a new MS-DRG for CAR T-cell therapy procedures, we are also seeking comment on the most appropriate way to develop the relative weight if we were to finalize the creation of a new MS-DRG. While the data are limited, it may be operationally possible to create a relative weight by dividing the average costs of cases that include the CAR T-cell procedures by the average costs of all cases, consistent with our current methodology for setting the relative weights for FY 2020 and using the same applicable data sources used for other MS-DRGs (for FY 2020, the FY 2018 MedPAR data and FY 2016 HCRIS data). We are seeking public comments on whether this is the most accurate method for determining the relative weight, given the current variation in the claims data for these procedures, and also on how to address the significant number of cases involving clinical trials. While we do not typically exclude cases in clinical trials when developing the relative weights, in this

case, the absence of the drug costs on claims for cases involving clinical trial claims could have a significant impact on the relative weight. It is unclear whether a relative weight calculated using cases for which hospitals do and do not incur drug costs would accurately reflect the resource costs of caring for patients who are not involved in clinical trials. A different approach might be to develop a relative weight using an appropriate portion of the average sales price (ASP) for these drugs as an alternative way to reflect the costs involved in treating patients receiving CAR T-cell therapies. We are requesting public comments on these approaches or other approaches for setting the relative weight if we were to finalize a new MS-DRG. We note that any such new MS-DRG would be established in a budget neutral manner, consistent with section 1886(d)(4)(C)(iii) of the Act, which specifies that the annual DRG reclassification and recalibration of the relative weights must be made in a manner that ensures that aggregate payments to hospitals are not affected.

Another potential consideration if we were to create a new MS-DRG is the extent to which it would be appropriate to geographically adjust the payment under any such new MS-DRG. Under the methodology for determining the Federal payment rate for operating costs under the IPPS, the labor-related proportion of the national standardized amounts is adjusted by the wage index to reflect the relative differences in labor costs among geographic areas. The IPPS Federal payment rate for operating costs is calculated as the MS-DRG relative weight \times [(labor-related applicable standardized amount \times applicable wage index) + (nonlabor-related applicable standardized amount \times cost-of-living adjustment)]. Given our understanding that the costs for CAR T-cell therapy drugs do not vary among geographic areas, and given that costs for CAR T-cell therapy would likely be an extremely high portion of the costs for the MS-DRG, we are seeking public comments on whether we should not geographically adjust the payment for cases assigned to any potential new MS-DRG for CAR T-cell therapy procedures. We also are seeking public comments on whether to instead apply the geographic adjustment to a lower proportion of payments under any potential new MS-DRG and, if so, how that lower proportion should be determined. We note that while the prices of other drugs may also not vary significantly among geographic areas, generally speaking, those other drugs would not have estimated costs as high

as those of CAR T-cell therapies, nor would they represent as significant a percentage of the average costs for the case. We are seeking public comments on the use of our exceptions and adjustments authority under section 1886(d)(5)(I) of the Act (or other relevant authorities) to implement any such potential changes.

Section 1886(d)(5)(B) of the Act provides that prospective payment hospitals that have residents in an approved graduate medical education (GME) program receive an additional payment for a Medicare discharge to reflect the higher patient care costs of teaching hospitals relative to nonteaching hospitals. The regulations regarding the calculation of this additional payment, known as the indirect medical education (IME) adjustment, are located at 42 CFR 412.105. The formula is traditionally described in terms of a certain percentage increase in payment for every 10-percent increase in the resident-to-bed ratio. For some hospitals, this percentage increase can exceed an additional 25 percent or more of the otherwise applicable payment. Some hospitals, sometimes the same hospitals, can also receive a large percentage increase in payments due to the Medicare disproportionate hospital (DSH) adjustment provision under section 1886(d)(5)(F) of the Act. The regulations regarding the calculation of the additional DSH payment are located at 42 CFR 412.106.

Given that the payment for cases assigned to a new MS-DRG for CAR T-cell therapy could significantly exceed the historical payment for any existing MS-DRG, these percentage add-on payments could arguably result in unreasonably high additional payments for CAR T-cell therapy cases unrelated in any significant empirical way to the costs of the hospital in providing care. For example, consider a teaching hospital that has an IME adjustment factor of 0.25, and a DSH adjustment factor of 0.10. If we were to create a new MS-DRG for CAR T-cell therapy procedures that resulted in an average IPPS Federal payment rate for operating costs of \$400,000, under the current payment mechanism, the hospital would receive an IME payment of \$100,000 ($\$400,000 \times 0.25$) and a DSH

payment of \$40,000 ($\$400,000 \times 0.10$), such that the total IPPS Federal payment rate for operating costs including IME and DSH payments would be \$540,000 ($\$400,000 + \$100,000 + \$40,000$). We are seeking public comments on whether the IME and DSH payments should not be made for cases assigned to any new MS-DRG for CAR T-cell therapy. We also are seeking public comments on whether we should instead reduce the applicable percentages used to determine these add-ons and, if so, how those lower percentages should be determined. We are seeking public comments on the use of our exceptions and adjustments authority under section 1886(d)(5)(I) of the Act (or other relevant authorities) to implement any potential changes.

As further discussed section II.G.7. of the preamble to this proposed rule, we are also requesting public comment on other payment alternatives for these cases, including eliminating the use of the CCR in calculating the new technology add-on payment for KYMRIA[®] and YESCARTA[®] by making a uniform add-on payment that equals the proposed maximum add-on payment, that is, 65 percent of the cost of the technology (in accordance with the proposed increase in the calculation of the maximum new technology add-on payment amount), which in this instance would be \$242,450; and/or using a higher percentage than the proposed 65 percent to calculate the maximum new technology add-on payment amount.

We are also requesting public comments on whether, in light of the additional experience with billing and payment for cases involving CAR T-cell therapies to Medicare patients, we should consider utilizing a specific CCR for ICD-10-PCS procedure codes used to report the performance of procedures involving the use of CAR T-cell therapies; for example, a CCR of 1.0, when determining outlier payments, when determining the new technology add-on payments, and when determining payments to IPPS-excluded cancer hospitals for CAR T-cell therapies.

We note that we also considered this payment alternative for FY 2019, as discussed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41172 through

41174). We indicated in that rulemaking that such a payment alternative might use a CCR of 1.0 for charges associated with ICD-10-PCS procedure codes XW033C3 and XW043C3, given that many public inquirers believed that hospitals would be unlikely to set charges different from the costs for KYMRIA[®] and YESCARTA[®] CAR T-cell therapies. We also indicated such a change would result in a higher outlier payment, higher new technology add-on payment, or the determination of higher costs for IPPS-excluded cancer hospital cases. For example, and as described in the FY 2019 IPPS LTCH PPS final rule (83 FR 41773), if a hospital charged \$400,000 for the procedure described by ICD-10-PCS procedure code XW033C3, the application of a hypothetical CCR of 0.25 results in a cost of \$100,000 ($= \$400,000 * 0.25$) while the application of a hypothetical CCR of 1.00 results in a cost of \$400,000 ($= \$400,000 * 1.0$).

3. MDC 1 (Diseases and Disorders of the Nervous System): Carotid Artery Stent Procedures

The logic for case assignment to MS-DRGs 034, 035, and 036 (Carotid Artery Stent Procedures with MCC, with CC, and without CC/MCC, respectively) as displayed in the ICD-10 MS-DRG Version 36 Definitions Manual (which is available via the internet on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html>) is comprised of two lists of logic that include procedure codes for operating room (O.R.) procedures involving dilation of a carotid artery (common, internal or external) with intraluminal device(s). The first list of logic is entitled "Operating Room Procedures" and the second list of logic is entitled "Operating Room Procedures with Operating Room Procedures". We identified 46 ICD-10-PCS procedure codes in the second logic list that do not describe dilation of a carotid artery with an intraluminal device. Of these 46 procedure codes, we identified 24 codes describing dilation of a carotid artery without an intraluminal device; 8 codes describing dilation of the vertebral artery; and 14 codes describing dilation of a vein (jugular, vertebral and face), as shown in the following table.

ICD-10 PCS CODES THAT INVOLVE DILATION OF A NECK ARTERY OR VEIN WITH AND WITHOUT AN INTRALUMINAL DEVICE

ICD-10-PCS code	Code description
037H3Z6	Dilation of right common carotid artery, bifurcation, percutaneous approach.
037H3ZZ	Dilation of right common carotid artery, percutaneous approach.

ICD-10 PCS CODES THAT INVOLVE DILATION OF A NECK ARTERY OR VEIN WITH AND WITHOUT AN INTRALUMINAL DEVICE—Continued

ICD-10-PCS code	Code description
037H4Z6	Dilation of right common carotid artery, bifurcation, percutaneous endoscopic approach.
037H4ZZ	Dilation of right common carotid artery, percutaneous endoscopic approach.
037J3Z6	Dilation of left common carotid artery, bifurcation, percutaneous approach.
037J3ZZ	Dilation of left common carotid artery, percutaneous approach.
037J4Z6	Dilation of left common carotid artery, bifurcation, percutaneous endoscopic approach.
037J4ZZ	Dilation of left common carotid artery, percutaneous endoscopic approach.
037K3Z6	Dilation of right internal carotid artery, bifurcation, percutaneous approach.
037K3ZZ	Dilation of right internal carotid artery, percutaneous approach.
037K4Z6	Dilation of right internal carotid artery, bifurcation, percutaneous endoscopic approach.
037K4ZZ	Dilation of right internal carotid artery, percutaneous endoscopic approach.
037L3Z6	Dilation of left internal carotid artery, bifurcation, percutaneous approach.
037L3ZZ	Dilation of left internal carotid artery, percutaneous approach.
037L4Z6	Dilation of left internal carotid artery, bifurcation, percutaneous endoscopic approach.
037L4ZZ	Dilation of left internal carotid artery, percutaneous endoscopic approach.
037M3Z6	Dilation of right external carotid artery, bifurcation, percutaneous approach.
037M3ZZ	Dilation of right external carotid artery, percutaneous approach.
037M4Z6	Dilation of right external carotid artery, bifurcation, percutaneous endoscopic approach.
037M4ZZ	Dilation of right external carotid artery, percutaneous endoscopic approach.
037N3Z6	Dilation of left external carotid artery, bifurcation, percutaneous approach.
037N3ZZ	Dilation of left external carotid artery, percutaneous approach.
037N4Z6	Dilation of left external carotid artery, bifurcation, percutaneous endoscopic approach.
037N4ZZ	Dilation of left external carotid artery, percutaneous endoscopic approach.
037P3Z6	Dilation of right vertebral artery, bifurcation, percutaneous approach.
037P3ZZ	Dilation of right vertebral artery, percutaneous approach.
037P4Z6	Dilation of right vertebral artery, bifurcation, percutaneous endoscopic approach.
037P4ZZ	Dilation of right vertebral artery, percutaneous endoscopic approach.
037Q3Z6	Dilation of left vertebral artery, bifurcation, percutaneous approach.
037Q3ZZ	Dilation of left vertebral artery, percutaneous approach.
037Q4Z6	Dilation of left vertebral artery, bifurcation, percutaneous endoscopic approach.
037Q4ZZ	Dilation of left vertebral artery, percutaneous endoscopic approach.
057M3DZ	Dilation of right internal jugular vein with intraluminal device, percutaneous approach.
057M4DZ	Dilation of right internal jugular vein with intraluminal device, percutaneous endoscopic approach.
057N3DZ	Dilation of left internal jugular vein with intraluminal device, percutaneous approach.
057N4DZ	Dilation of left internal jugular vein with intraluminal device, percutaneous endoscopic approach.
057P3DZ	Dilation of right external jugular vein with intraluminal device, percutaneous approach.
057P4DZ	Dilation of right external jugular vein with intraluminal device, percutaneous endoscopic approach.
057Q3DZ	Dilation of left external jugular vein with intraluminal device, percutaneous approach.
057Q4DZ	Dilation of left external jugular vein with intraluminal device, percutaneous endoscopic approach.
057R3DZ	Dilation of left vertebral vein with intraluminal device, percutaneous approach.
057R4DZ	Dilation of right vertebral vein with intraluminal device, percutaneous endoscopic approach.
057S3DZ	Dilation of left vertebral vein with intraluminal device, percutaneous approach.
057S4DZ	Dilation of left vertebral vein with intraluminal device, percutaneous endoscopic approach.
057T3DZ	Dilation of right face vein with intraluminal device, percutaneous approach.
057T4DZ	Dilation of right face vein with intraluminal device, percutaneous endoscopic approach.

We examined claims data from the September 2018 update of the FY 2018 MedPAR file for MS-DRGs 034, 035,

and 036 and identified cases reporting any one of the 46 ICD-10-PCS procedure codes listed in the tables

above. Our findings are shown in the following table.

MS-DRGs FOR CAROTID ARTERY STENT PROCEDURES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 034—All cases	863	6.8	\$27,600
MS-DRG 034—Cases with procedure code other than dilation of a carotid artery with an intraluminal device	15	8.8	36,596
MS-DRG 035—All cases	2,369	3	16,731
MS-DRG 035—Cases with procedure code other than dilation of a carotid artery with an intraluminal device	52	3.5	17,815
MS-DRG 036—All cases	3,481	1.4	12,637
MS-DRG 036—Cases with procedure code other than dilation of a carotid artery with an intraluminal device	67	1.4	12,621

As shown in the table above, we found a total of 863 cases with an

average length of stay of 6.8 days and average costs of \$27,600 in MS-DRG

034. There were 15 cases reporting at least one of the 46 procedure codes that

do not describe dilation of the carotid artery with an intraluminal device in MS-DRG 034 with an average length of stay of 8.8 days and average costs of \$36,596. For MS-DRG 035, we found a total of 2,369 cases with an average length of stay of 3 days and average costs of \$16,731. There were 52 cases reporting at least one of the 46 procedure codes that do not describe dilation of the carotid artery with an intraluminal device in MS-DRG 035 with an average length of stay of 3.5 days and average costs of \$17,815. For MS-DRG 036, we found a total of 3,481 cases with an average length of stay of

1.4 days and average costs of \$12,637. There were 67 cases reporting at least one of the 46 procedure codes that do not describe dilation of the carotid artery with an intraluminal device in MS-DRG 036 with an average length of stay of 1.4 days and average costs of \$12,621.

Our clinical advisors stated that MS-DRGs 034, 035, and 036 are defined to include only those procedure codes that describe procedures that involve dilation of a carotid artery with an intraluminal device. Therefore, we are proposing to remove the procedure codes listed in the table above from MS-DRGs 034, 035, and 036 that describe

procedures which (1) do not include an intraluminal device; (2) describe procedures performed on arteries other than a carotid; and (3) describe procedures performed on a vein.

The 46 ICD-10-PCS procedure codes listed in the table above are also assigned to MS-DRGs 037, 038, and 039 (Extracranial Procedures with MCC, with CC, and without CC/MCC, respectively). Therefore, we also examined claims data from the September 2018 update of the FY 2018 MedPAR file for MS-DRGs 037, 038, and 039. Our findings are shown in the following table.

MS-DRGs FOR EXTRACRANIAL PROCEDURES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 037—All cases	3,612	7.1	\$23,703
MS-DRG 038—All cases	11,406	3.1	12,480
MS-DRG 039—All cases	22,938	1.5	8,400

We found a total of 3,612 cases in MS-DRG 037 with an average length of stay of 7.1 days and average costs of \$23,703. We found a total of 11,406 cases in MS-DRG 038 with an average length of stay of 3.1 days and average costs of \$12,480. We found a total of 22,938 cases in MS-DRG 039 with an average length of stay of 1.5 days and average costs of \$8,400.

During our review of claims data for MS-DRGs 037, 038, and 039, we also discovered 96 ICD-10-PCS procedure codes describing dilation of a carotid artery with an intraluminal device that were inadvertently included as a result of efforts to replicate the ICD-9 based MS-DRGs. These procedure codes are also included in the logic for MS-DRGs 034, 035, and 036. Under ICD-9-CM, procedure codes 00.61 (Percutaneous angioplasty of extracranial vessel(s)) and 00.63 (Percutaneous insertion of carotid artery stent(s)) are both required to be reported on a claim to identify that a carotid artery stent procedure was performed and for assignment of the case to MS-DRGs 034, 035, and 036. Procedure code 00.61 is designated as an O.R. procedure, while procedure code 00.63 is designated as a non-O.R. procedure. Under ICD-10-PCS, a carotid artery stent procedure is described by one unique code that includes both clinical concepts of the angioplasty (dilation) and the insertion of the stent (intraluminal device). This “combination code” under ICD-10-PCS is designated as an O.R. procedure. Under ICD-9-CM, procedure code 00.61 reported in the absence of procedure

code 00.63 results in assignment to MS-DRGs 037, 038, and 039 according to the MS-DRG logic because procedure code 00.61 has an inclusion term for vertebral vessels, as well as for the carotid vessels. Therefore, when all of the comparable translations of procedure code 00.61 as an O.R. procedure were replicated from the ICD-9 based MS-DRGs to the ICD-10 based MS-DRGs, this replication inadvertently results in the assignment of ICD-10-PCS procedure codes that identify and describe a carotid artery stent procedure to MS-DRGs 037, 038, and 039. Therefore, we are proposing to remove the 96 ICD-10-PCS procedure codes describing dilation of a carotid artery with an intraluminal device from MS-DRGs 037, 038, and 039.

We also found 6 procedure codes describing dilation of a carotid artery with an intraluminal device in MS-DRGs 037, 038, and 039 that are not currently assigned to MS-DRGs 034, 035, and 036. Our clinical advisors recommended that these 6 procedure codes be reassigned from MS-DRGs 037, 038, and 039 to MS-DRGs 034, 035, and 036 because the 6 procedure codes are consistent with the other procedures describing dilation of a carotid artery with an intraluminal device that are currently assigned to MS-DRGs 034, 035, and 036. We refer readers to Table 6P.1b. associated with this proposed rule (which is available via the internet on the CMS website at: <http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) for the complete list of

procedure codes that we are proposing to remove from MS-DRGs 037, 038, and 039.

We also note that, as discussed in section II.F.14.f. of the preamble of this proposed rule, we are deleting a number of codes that include the ICD-10-PCS qualifier term “bifurcation” as the result of the finalized proposal discussed at the September 11–12, 2018 ICD-10 Coordination and Maintenance Committee meeting. We refer readers to the website at: <https://www.cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/ICD-9-CM-C-and-M-Meeting-Materials.html> for the committee meeting materials and discussion regarding this proposal. We note that, of the 96 procedure codes that we are proposing to remove from the logic for MS-DRGs 037, 038, and 039, there are 48 procedure codes that include the qualifier term “bifurcation”. Therefore, these 48 procedure codes will be deleted effective October 1, 2019. The 48 remaining valid procedure codes that do not include the term “bifurcation” that we are proposing to remove from MS-DRGs 037, 038, and 039 will continue to be assigned to MS-DRGs 034, 035, and 036.

Lastly, if the applicable proposed MS-DRG changes are finalized, we would make a conforming change to the ICD-10 MS-DRG Version 37 Definitions Manual for FY 2020 by combining all the procedure codes identifying a carotid artery stent procedure within MS-DRGs 034, 035, and 036 into one list entitled “Operating Room Procedures” to better reflect the

definition of these MS-DRGs based on the discussion and proposals described above.

4. MDC 4 (Diseases and Disorders of the Respiratory System): Pulmonary Embolism

We received a request to reassign three ICD-10-CM diagnosis codes for pulmonary embolism with acute cor

pulmonale from MS-DRG 176 (Pulmonary Embolism without MCC) to the higher severity level MS-DRG 175 (Pulmonary Embolism with MCC). The three diagnosis codes are identified in the following table.

ICD-10-CM code	Code description
I26.01	Septic pulmonary embolism with acute cor pulmonale.
I26.02	Saddle embolus of pulmonary artery with acute cor pulmonale.
I26.09	Other pulmonary embolism with acute cor pulmonale.

The requestor noted that, in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41231 through 41234), we finalized the proposal to remove the special logic in the GROUPER for processing claims containing a code on the Principal Diagnosis Is Its Own CC or MCC Lists and deleted the relevant tables from the ICD-10 MS-DRG Definitions Manual Version 36, effective October 1, 2018. As a result of this change, cases reporting any one of the three ICD-10-CM diagnosis codes describing a pulmonary embolism with acute cor pulmonale were reassigned from MS-DRG 175 to MS-DRG 176, absent a secondary diagnosis code to trigger assignment to

MS-DRG 175. The requestor stated that this change in the MS-DRG assignment for these cases resulted in a reduction in payment for cases involving pulmonary embolism with acute cor pulmonale and that the FY 2019 payment rate for MS-DRG 176 does not appropriately account for the costs and resource utilization associated with these cases because the subset of patients with pulmonary embolism with acute cor pulmonale often represents a more severe set of patients with pulmonary embolism.

The logic for case assignment to MS-DRGs 175 and 176 is displayed in the ICD-10 MS-DRG Version 36 Definitions Manual, which is available via the

internet on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html>.

We analyzed claims data from the September 2018 update of the FY 2018 MedPAR file for MS-DRGs 175 and 176 to identify cases reporting diagnosis codes describing pulmonary embolism with acute cor pulmonale as listed above (ICD-10-CM diagnosis codes I26.01, I26.02 or I26.09) as the principal diagnosis or as a secondary diagnosis. Our findings are shown in the following table.

MS-DRGS FOR PULMONARY EMBOLISM

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 175—All cases	24,389	5.2	\$10,294
MS-DRG 175—Cases with pulmonary embolism with acute cor pulmonale	2,326	5.7	13,034
MS-DRG 176—All cases	30,215	3.3	6,356
MS-DRG 176—Cases with pulmonary embolism with acute cor pulmonale	1,821	3.9	9,630

As shown in the table, for MS-DRG 175, there was a total of 24,389 cases with an average length of stay of 5.2 days and average costs of \$10,294. Of these 24,389 cases, there were 2,326 cases reporting pulmonary embolism with acute cor pulmonale, with an average length of stay 5.7 days and average costs of \$13,034. For MS-DRG 176, there was a total of 30,215 cases with an average length of stay of 3.3 days and average costs of \$6,356. Of these 30,215 cases, there were 1,821 cases reporting pulmonary embolism with acute cor pulmonale with an average length of stay of 3.9 days and average costs of \$9,630.

As stated in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41231 through 41234), available ICD-10 data can now be used to evaluate other indicators of resource utilization and, as shown by our claims analysis, the data indicate that the average costs of cases reporting pulmonary embolism or saddle embolus with acute cor pulmonale (\$9,630) in

MS-DRG 176 are closer to the average costs for all pulmonary embolism cases in MS-DRG 175 (\$10,294) as compared to the average costs for all cases in MS-DRG 176 (\$6,356). Our clinical advisors also agree that this subset of patients with acute cor pulmonale often represents a more severe set of patients and that these cases are more appropriately assigned to the higher severity level “with MCC” MS-DRG. Therefore, we are proposing to reassign cases reporting diagnosis code I26.01, I26.02, or I26.09 to the higher severity level MS-DRG 175 and to revise the title for MS-DRG 175 to “Pulmonary Embolism with MCC or Acute Cor Pulmonale” to more accurately reflect the diagnoses assigned there.

5. MDC 5 (Diseases and Disorders of the Circulatory System)

a. Transcatheter Mitral Valve Repair With Implant

As we did for the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28008

through 28010) and for the FY 2017 IPPS/LTCH PPS proposed rule (81 FR 24985 through 24989), for FY 2020, we received a request to modify the MS-DRG assignment for transcatheter mitral valve repair (TMVR) with implant procedures. ICD-10-PCS procedure code 02UG3JZ (Supplement mitral valve with synthetic substitute, percutaneous approach) identifies and describes this procedure. This request also included the suggestion that CMS give consideration to reclassifying other endovascular cardiac valve repair procedures. Specifically, the requestor recommended that cases reporting procedure codes describing an endovascular cardiac valve repair with implant be reassigned to MS-DRGs 266 and 267 (Endovascular Cardiac Valve Replacement with and without MCC, respectively) and that the MS-DRG titles be revised to Endovascular Cardiac Valve Interventions with Implant with and without MCC, respectively. We refer readers to detailed discussions of

the MitraClip® System (hereafter referred to as MitraClip®) for transcatheter mitral valve repair in previous rulemakings, including the FY 2012 IPPS/LTCH PPS proposed rule (76 FR 25822) and final rule (76 FR 51528 through 51529), the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27902 through 27903) and final rule (77 FR 53308 through 53310), the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28008 through 28010) and final rule (79 FR 49889 through 49892), the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24356 through 24359) and final rule (80 FR 49363 through 49367), and the FY 2017 IPPS/LTCH PPS proposed rule (81 FR 24985 through 24989) and final rule (81 FR 56809 through 56813), in response to requests for MS-DRG reclassification, as well as the FY 2014 IPPS/LTCH PPS proposed rule (78 FR 27547 through 27552), under the new technology add-on payment policy. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50575), we were unable to consider further the application for a new technology add-on payment for MitraClip® because the technology had not received FDA approval by the July 1, 2013 deadline.

In the FY 2015 IPPS/LTCH PPS final rule, we finalized our proposal to not create a new MS-DRG or to reassign cases reporting ICD-9-CM procedure code 35.97 that described procedures involving the MitraClip® to another MS-DRG (79 FR 49889 through 49892). Under a new application, the request for new technology add-on payments for

the MitraClip® System was approved for FY 2015 (79 FR 49941 through 49946). The new technology add-on payment for MitraClip® was subsequently discontinued effective FY 2017.

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49371), we finalized a modification to the MS-DRGs to which procedures involving the MitraClip® were assigned. For the ICD-10 based MS-DRGs to fully replicate the ICD-9-CM based MS-DRGs, ICD-10-PCS code 02UG3JZ (Supplement mitral valve with synthetic substitute, percutaneous approach), which identifies the MitraClip® technology and is the ICD-10-PCS code translation for ICD-9-CM procedure code 35.97 (Percutaneous mitral valve repair with implant), was assigned to new MS-DRGs 273 and 274 (Percutaneous Intracardiac Procedures with MCC and without MCC, respectively) and continued to be assigned to MS-DRGs 231 and 232 (Coronary Bypass with PTCA with MCC and without MCC, respectively).

In the FY 2017 IPPS/LTCH PPS proposed and final rules, we also discussed our analysis of MS-DRGs 228, 229, and 230 (Other Cardiothoracic Procedures with MCC, with CC, and without CC/MCC, respectively) with regard to the possible reassignment of cases reporting ICD-10-PCS procedure code 02UG3JZ (Supplement mitral valve with synthetic substitute, percutaneous approach). We finalized our proposal to collapse these MS-DRGs (228, 229, and 230) from three severity levels to two severity levels by deleting MS-DRG 230

and revising the structure of MS-DRG 229. We also finalized our proposal to reassign ICD-10-PCS procedure code 02UG3JZ (Supplement mitral valve with synthetic substitute, percutaneous approach) from MS-DRGs 273 and 274 to MS-DRG 228 and revised MS-DRG 229 (81 FR 56813).

According to the requestor, there are substantial clinical and resource differences between the transcatheter mitral valve repair (TMVR) procedure and other procedures currently grouping to MS-DRGs 228 and 229. The requestor noted that, currently, ICD-10-PCS procedure code 02UG3JZ is the only endovascular valve intervention with implant procedure that maps to MS-DRGs 228 and 229. The requestor also noted that other ICD-10-PCS procedure codes describing procedures for endovascular (transcatheter) cardiac valve repair with implant map to MS-DRGs 273 and 274 or to MS-DRGs 216, 217, 218, 219, 220, and 221 (Cardiac Valve and Other Major Cardiothoracic Procedures with and without Cardiac Catheterization with MCC, with CC and without CC/MCC, respectively). The requestor further noted that all ICD-10-PCS procedure codes for endovascular cardiac valve replacement procedures map to MS-DRGs 266 (Endovascular Cardiac Valve Replacement with MCC) and 267 (Endovascular Cardiac Valve Replacement without MCC).

The ICD-10-PCS procedure codes describing a transcatheter cardiac valve repair procedure with an implant are listed in the following table.

ICD-10-PCS code	Description
02UF37J	Supplement aortic valve created from truncal valve with autologous tissue substitute, percutaneous approach.
02UF37Z	Supplement aortic valve with autologous tissue substitute, percutaneous approach.
02UF38J	Supplement aortic valve created from truncal valve with zooplastic tissue, percutaneous approach.
02UF38Z	Supplement aortic valve with zooplastic tissue, percutaneous approach.
02UF3JJ	Supplement aortic valve created from truncal valve with synthetic substitute, percutaneous approach.
02UF3JZ	Supplement aortic valve with synthetic substitute, percutaneous approach.
02UF3KJ	Supplement aortic valve created from truncal valve with nonautologous tissue substitute, percutaneous approach.
02UF3KZ	Supplement aortic valve with nonautologous tissue substitute, percutaneous approach.
02UG37E	Supplement mitral valve created from left atrioventricular valve with autologous tissue substitute, percutaneous approach.
02UG37Z	Supplement mitral valve with autologous tissue substitute, percutaneous approach.
02UG38E	Supplement mitral valve created from left atrioventricular valve with zooplastic tissue, percutaneous approach.
02UG38Z	Supplement mitral valve with zooplastic tissue, percutaneous approach.
02UG3KE	Supplement mitral valve created from left atrioventricular valve with nonautologous tissue substitute, percutaneous approach.
02UG3KZ	Supplement mitral valve with nonautologous tissue substitute, percutaneous approach.
02UG3JE	Supplement mitral valve created from left atrioventricular valve with synthetic substitute, percutaneous approach.
02UG3JZ	Supplement mitral valve with synthetic substitute, percutaneous approach.
02UH37J	Supplement pulmonary valve with autologous tissue substitute, percutaneous approach.
02UH38Z	Supplement pulmonary valve with zooplastic tissue, percutaneous approach.
02UH3JZ	Supplement pulmonary valve with synthetic substitute, percutaneous approach.
02UH3KZ	Supplement pulmonary valve with nonautologous tissue substitute, percutaneous approach.
02UJ37G	Supplement tricuspid valve created from right atrioventricular valve with autologous tissue substitute, percutaneous approach.
02UJ37Z	Supplement tricuspid valve with autologous tissue substitute, percutaneous approach.
02UJ38G	Supplement tricuspid valve created from right atrioventricular valve with zooplastic tissue, percutaneous approach.
02UJ38Z	Supplement tricuspid valve with zooplastic tissue, percutaneous approach.
02UJ3JG	Supplement tricuspid valve created from right atrioventricular valve with synthetic substitute, percutaneous approach.
02UJ3JZ	Supplement tricuspid valve with synthetic substitute, percutaneous approach.

ICD-10-PCS code	Description
02UJ3KG	Supplement tricuspid valve created from right atrioventricular valve with nonautologous tissue substitute, percutaneous approach.
02UJ3KZ	Supplement tricuspid valve with nonautologous tissue substitute, percutaneous approach.

The ICD-10-PCS procedure codes describing a transcatheter cardiac valve replacement procedure are listed in the following table.

ICD-10-PCS code	Description
02RF37H	Replacement of aortic valve with autologous tissue substitute, transapical, percutaneous approach.
02RF37Z	Replacement of aortic valve with autologous tissue substitute, percutaneous approach.
02RF38H	Replacement of aortic valve with zooplastic tissue, transapical, percutaneous approach.
02RF38Z	Replacement of aortic valve with zooplastic tissue, percutaneous approach.
02RF3JH	Replacement of aortic valve with synthetic substitute, transapical, percutaneous approach.
02RF3JZ	Replacement of aortic valve with synthetic substitute, percutaneous approach.
02RF3KH	Replacement of aortic valve with nonautologous tissue substitute, transapical, percutaneous approach.
02RF3KZ	Replacement of aortic valve with nonautologous tissue substitute, percutaneous approach.
02RG37H	Replacement of mitral valve with autologous tissue substitute, transapical, percutaneous approach.
02RG37Z	Replacement of mitral valve with autologous tissue substitute, percutaneous approach.
02RG38H	Replacement of mitral valve with zooplastic tissue, transapical, percutaneous approach.
02RG38Z	Replacement of mitral valve with zooplastic tissue, percutaneous approach.
02RG3JH	Replacement of mitral valve with synthetic substitute, transapical, percutaneous approach.
02RG3JZ	Replacement of mitral valve with synthetic substitute, percutaneous approach.
02RG3KH	Replacement of mitral valve with nonautologous tissue substitute, transapical, percutaneous approach.
02RG3KZ	Replacement of mitral valve with nonautologous tissue substitute, percutaneous approach.
02RH37H	Replacement of pulmonary valve with autologous tissue substitute, transapical, percutaneous approach.
02RH37Z	Replacement of pulmonary valve with autologous tissue substitute, percutaneous approach.
02RH38H	Replacement of pulmonary valve with zooplastic tissue, transapical, percutaneous approach.
02RH38Z	Replacement of pulmonary valve with zooplastic tissue, percutaneous approach.
02RH3JH	Replacement of pulmonary valve with synthetic substitute, transapical, percutaneous approach.
02RH3JZ	Replacement of pulmonary valve with synthetic substitute, percutaneous approach.
02RH3KH	Replacement of pulmonary valve with nonautologous tissue substitute, transapical, percutaneous approach.
02RH3KZ	Replacement of pulmonary valve with nonautologous tissue substitute, percutaneous approach.
02RJ37H	Replacement of tricuspid valve with autologous tissue substitute, transapical, percutaneous approach.
02RJ37Z	Replacement of tricuspid valve with autologous tissue substitute, percutaneous approach.
02RJ38H	Replacement of tricuspid valve with zooplastic tissue, transapical, percutaneous approach.
02RJ38Z	Replacement of tricuspid valve with zooplastic tissue, percutaneous approach.
02RJ3JH	Replacement of tricuspid valve with synthetic substitute, transapical, percutaneous approach.
02RJ3JZ	Replacement of tricuspid valve with synthetic substitute, percutaneous approach.
02RJ3KH	Replacement of tricuspid valve with nonautologous tissue substitute, transapical, percutaneous approach.
02RJ3KZ	Replacement of tricuspid valve with nonautologous tissue substitute, percutaneous approach.
X2RF332	Replacement of aortic valve using zooplastic tissue, rapid deployment technique, percutaneous approach, new technology group 2.

The requestor performed its own analyses, first comparing TMVR procedures (ICD-10-PCS procedure code 02UG3JZ) to other procedures currently assigned to MS-DRGs 228 and 229, as well as to the transcatheter cardiac valve replacement procedures in MS-DRGs 266 and 267. We refer the reader to the ICD-10 MS-DRG Version 36 Definitions Manual for complete documentation of the logic for case assignment to MS-DRGs 228 and 229 (which is available via the internet on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html>).

According to the requestor, its findings indicate that TMVR is more closely aligned with MS-DRGs 266 and 267 than MS-DRGs 228 and 229 with regard to average length of stay and average [standardized] costs. The requestor also examined the impact of removing cases reporting a TMVR procedure (ICD-10-PCS procedure code 02UG3JZ) from MS-DRGs 228 and 229 and adding those cases to MS-DRGs 266 and 267. The requestor noted this movement would have minimal impact to MS-DRGs 266 and 267 based on its analysis. In addition, the requestor stated that its request is in alignment with CMS' policy goal of creating and maintaining clinically coherent MS-DRGs.

The requestor acknowledged that CMS has indicated in prior rulemaking that TMVR procedures are not clinically similar to endovascular cardiac valve replacement procedures, and the requestor agreed that they are distinct procedures. However, the requestor also believed that TMVR is more similar to the replacement procedures in MS-DRGs 266 and 267 compared to the other procedures currently assigned to MS-DRGs 228 and 229. The requestor provided the following table of procedures in volume order (highest to lowest) to illustrate the clinical differences between TMVR procedures and other procedures currently assigned to MS-DRGs 228 and 229.

Procedure	Approach	Anatomy treated	ICD-10-PCS root operation	Implanted device
TMVR	Percutaneous	Valves	Supplement	Substitute.
Destruction	Open	Atria	Destruction	None.

Procedure	Approach	Anatomy treated	ICD-10-PCS root operation	Implanted device
Coronary Atherectomy	Open	Coronary Artery	Extirpation	None.
Insertion	Percutaneous	Atria or Ventricles	Insertion	Pacemaker or Intraluminal Device.
Destruction	Percutaneous	Atria	Destructions	None.
Structural Heart Repair	Open	Septum, Heart, Chordae Tendinae, or Papillary Muscle.	Repair	None.
Structural Heart Excision ...	Open	Septum, Atria, Ventricles, Chordae Tendinae, or Papillary Muscle.	Excision	None.

The requestor noted that, among the procedures listed in the table, TMVR is the only procedure that involves treatment of a cardiac valve and is the

only procedure that involves implanting a synthetic substitute.

To illustrate the similarities between TMVR procedures and endovascular

cardiac valve replacements in MS-DRGs 266 and 267, the requestor provided the following table.

Procedure	Approach	Anatomy treated	ICD-10-PCS root operation	Implanted device
TMVR	Percutaneous	Valves	Supplement	Substitute.
Endovascular Cardiac Valve Replacement.	Percutaneous	Valves	Replacement	Substitute.

The requestor noted that both TMVR procedures and endovascular cardiac valve replacements use a percutaneous approach, treat cardiac valves, and use an implanted device for purposes of improving the function of the specified valve. The requestor believed that the analyses support the request to group TMVR procedures with endovascular cardiac valve replacements from a resource perspective and an improvement to clinical coherence could be achieved because TMVR procedures are more similar to the endovascular cardiac valve replacements compared to the other procedures in MS-DRGs 228 and 229, where TMVR is currently assigned.

As noted earlier in this section, the request also included the suggestion that CMS give consideration to reclassifying other endovascular cardiac valve repair with implant procedures to MS-DRGs 266 and 267; specifically, endovascular cardiac valve repair with implant procedures involving the aortic, pulmonary, tricuspid and other non-TMVR mitral valve procedures that currently group to MS-DRGs 273 and

274 or MS-DRGs 216, 217, 218, 219, 220 and 221. The requestor acknowledged that endovascular cardiac valve repair with implant procedures involving these other cardiac valves have lower volumes in comparison to the TMVR procedure (ICD-10-PCS procedure code 02UG3JZ), which makes analysis of these procedures a little more difficult. However, the requestor suggested that movement of these procedures to MS-DRGs 266 and 267 would enable the ability to maintain clinical coherence for all endovascular cardiac valve interventions. The requestor also stated that there is an anticipated increase in the volume of not only the TMVR procedure described by ICD-10-PCS procedure code 02UG3JZ (which has grown annually since the MitraClip® was approved for new technology add-on payment in FY 2015), but also for the other endovascular cardiac valve repair with implant procedures, such as those involving the tricuspid valve, which are currently under study in the United States and Europe. Based on this anticipated increase in volume for endovascular cardiac valve repair with

implant procedures, the requestor believed that it would be advantageous to take this opportunity to restructure the MS-DRGs by moving all the endovascular cardiac valve repair with implant procedures to MS-DRGs 266 and 267 with revised titles as noted previously, to improve clinical consistency beginning in FY 2020. The requestor further noted that while the requestor believes its request reflects the best approach for appropriate MS-DRG assignment for TMVR and other endovascular cardiac valve repair with implant procedures, the requestor understands that CMS may consider other alternatives.

We analyzed claims data from the September 2018 update of the FY 2018 MedPAR file for cases reporting ICD-10-PCS procedure code 02UG3JZ in MS-DRGs 228 and 229 as well as cases reporting one of the procedure codes listed above describing a transcatheter cardiac valve repair with implant procedure in MS-DRGs 216, 217, 218, 219, 220, 221, 273, and 274. Our findings are shown in the tables below.

MS-DRGs FOR TRANSCATHETER CARDIAC VALVE REPAIR WITH IMPLANT PROCEDURES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 216—All cases	5,909	16	\$70,435
MS-DRG 216—Cases with procedure codes for transcatheter cardiac valve repair	48	12.6	72,556
MS-DRG 217—All cases	2,166	9.4	47,299
MS-DRG 217—Cases with procedure codes for transcatheter cardiac valve repair	25	3.4	40,707
MS-DRG 218—All cases	268	6.8	39,501
MS-DRG 218—Cases with procedure codes for transcatheter cardiac valve repair	4	1.3	45,903
MS-DRG 219—All cases	15,105	10.9	55,423
MS-DRG 219—Cases with procedure codes for transcatheter cardiac valve repair	55	7.1	65,880

MS-DRGs FOR TRANSCATHETER CARDIAC VALVE REPAIR WITH IMPLANT PROCEDURES—Continued

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 220—All cases	15,889	6.6	38,313
MS-DRG 220—Cases with procedure codes for transcatheter cardiac valve repair	40	3	38,906
MS-DRG 221—All cases	2,652	4.7	33,577
MS-DRG 221—Cases with procedure codes for transcatheter cardiac valve repair	13	2.2	29,646
MS-DRG 228—All cases	5,583	9.2	46,613
MS-DRG 228—Cases with procedure code 02UG3JZ (Supplement mitral valve with synthetic substitute, percutaneous approach)	1,688	5.6	49,569
MS-DRG 229—All cases	6,593	4.3	32,322
MS-DRG 229—Cases with procedure code 02UG3JZ (Supplement mitral valve with synthetic substitute, percutaneous approach)	2,018	1.7	38,321
MS-DRG 273—All cases	7,785	6.9	27,200
MS-DRG 273—Cases with procedure codes for transcatheter cardiac valve repair	6	7.5	52,370
MS-DRG 274—All cases	20,434	2.3	22,771
MS-DRG 274—Cases with procedure codes for transcatheter cardiac valve repair	7	1.4	28,152

As shown in the table, we found a total of 5,909 cases for MS-DRG 216 with an average length of stay of 16 days and average costs of \$70,435. Of those 5,909 cases, there were 48 cases reporting a procedure code for a transcatheter cardiac valve repair with an average length of stay of 12.6 days and average costs of \$72,556. We found a total of 2,166 cases for MS-DRG 217 with an average length of stay of 9.4 days and average costs of \$47,299. Of those 2,166 cases, there was a total of 25 cases reporting a procedure for a transcatheter cardiac valve repair with an average length of stay of 3.4 days and average costs of \$40,707. We found a total of 268 cases for MS-DRG 218 with an average length of stay of 6.8 days and average costs of \$39,501. Of those 268 cases, there were 4 cases reporting a procedure code for a transcatheter cardiac valve repair with an average length of stay of 1.3 days and average costs of \$45,903. We found a total of 15,105 cases for MS-DRG 219 with an average length of stay of 10.9 days and average costs of \$55,423. Of those 15,105 cases, there were 55 cases reporting a procedure code for a transcatheter cardiac valve repair with

an average length of stay of 7.1 days and average costs of \$65,880. We found a total of 15,889 cases for MS-DRG 220 with an average length of stay of 6.6 days and average costs of \$38,313. Of those 15,889 cases, there were 40 cases reporting a procedure code for a transcatheter cardiac valve repair with an average length of stay of 3 days and average costs of \$38,906. We found a total of 2,652 cases for MS-DRG 221 with an average length of stay of 4.7 days and average costs of \$33,577. Of those 2,652 cases, there were 13 cases reporting a procedure code for a transcatheter cardiac valve repair with an average length of stay of 2.2 days and average costs of \$29,646.

For MS-DRG 228, we found a total of 5,583 cases with an average length of stay of 9.2 days and average costs of \$46,613. Of those 5,583 cases, there were 1,688 cases reporting ICD-10-PCS procedure code 02UG3JZ (Supplement mitral valve with synthetic substitute, percutaneous approach) with an average length of stay of 5.6 days and average costs of \$49,569. As noted previously, ICD-10-PCS procedure code 02UG3JZ is the only endovascular cardiac valve repair with implant procedure assigned

to MS-DRGs 228 and 229. We found a total of 6,593 cases for MS-DRG 229 with an average length of stay of 4.3 days and average costs of \$32,322. Of those 6,593 cases, there were 2,018 cases reporting ICD-10-PCS procedure code 02UG3JZ with an average length of stay of 1.7 days and average costs of \$38,321.

For MS-DRG 273, we found a total of 7,785 cases with an average length of stay of 6.9 days and average costs of \$27,200. Of those 7,785 cases, there were 6 cases reporting a procedure code for a transcatheter cardiac valve repair with an average length of stay of 7.5 days and average costs of \$52,370. We found a total of 20,434 cases in MS-DRG 274 with an average length of stay of 2.3 days and average costs of \$22,771. Of those 20,434 cases, there were 7 cases reporting a procedure code for a transcatheter cardiac valve repair with an average length of stay of 1.4 days and average costs of \$28,152.

We also analyzed cases reporting any one of the procedure codes listed above describing a transcatheter cardiac valve replacement procedure in MS-DRGs 266 and 267. Our findings are shown in the table below.

MS-DRGs FOR TRANSCATHETER CARDIAC VALVE REPLACEMENT PROCEDURES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 266—All cases	15,079	5.6	\$51,402
MS-DRG 267—All cases	20,845	2.4	41,891

As shown in the table, there was a total of 15,079 cases with an average length of stay of 5.6 days and average costs of \$51,402 in MS-DRG 266. For MS-DRG 267, there was a total of 20,845 cases with an average length of stay of 2.4 days and average costs of \$41,891.

As stated previously, the requestor noted that ICD-10-PCS procedure code 02UG3JZ describing a transcatheter mitral valve repair with implant procedure is the only endovascular cardiac valve intervention with implant procedure assigned to MS-DRGs 228 and 229. The data analysis shows that

for the cases reporting procedure code 02UG3JZ in MS-DRGs 228 and 229, the average length of stay and average costs are aligned with the average length of stay and average costs of cases in MS-DRGs 266 and 267, respectively.

The data also show that, for MS-DRGs 216, 217, 218, 219, 220, and 221 and for

MS-DRG 274, the average length of stay for cases reporting a transcatheter cardiac valve with implant procedure is shorter than the average length of stay for all the cases in their assigned MS-DRG. For MS-DRG 273, the average length of stay for cases reporting a transcatheter cardiac valve with implant procedure is slightly longer (7.5 days versus 6.9 days). In addition, the average costs for the cases reporting a transcatheter cardiac valve with implant procedure are higher when compared to all the cases in their assigned MS-DRG with the exception of MS-DRG 217 (\$40,707 versus \$47,299) and MS-DRG 221 (\$29,646 versus \$33,577).

Our clinical advisors continue to believe that transcatheter cardiac valve repair procedures are not the same as a transcatheter (endovascular) cardiac valve replacement. However, they agree with the requestor and, based on our data analysis, that these procedures are more clinically coherent in that they also describe endovascular cardiac valve interventions with implants and are similar in terms of average length of stay and average costs to cases in MS-DRGs 266 and 267 when compared to other procedures in their current MS-DRG assignment. For these reasons, our clinical advisors agree that we should propose to reassign the endovascular

cardiac valve repair procedures (supplement procedures) listed previously to the endovascular cardiac valve replacement MS-DRGs.

We analyzed the impact of grouping the endovascular cardiac valve repair with implant (supplement) procedures with the endovascular cardiac valve replacement procedures. The following table reflects our findings for the proposed revised endovascular cardiac valve (supplement) procedures with the endovascular cardiac valve replacement MS-DRGs with a 2-way severity level split.

PROPOSED REVISED MS-DRGs FOR ENDOVASCULAR CARDIAC VALVE REPLACEMENT AND SUPPLEMENT PROCEDURES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 266 (Endovascular Cardiac Valve Replacement and Supplement Procedures with MCC)	16,922	5.7	\$51,564
MS-DRG 267 (Endovascular Cardiac Valve Replacement and Supplement Procedures without MCC)	22,958	2.4	41,563.

As shown in the table, there was a total of 16,922 cases for the endovascular cardiac valve replacement and supplement procedures with MCC group, with an average length of stay of 5.7 days and average costs of \$51,564. There was a total of 22,958 cases for the endovascular cardiac valve replacement and supplement procedures without MCC group, with an average length of stay of 2.4 days and average costs of \$41,563. We applied the criteria to create subgroups for the two-way severity level split for the proposed revised MS-DRGs and found that all five criteria were met. For the proposed revised MS-DRGs, there is at least (1) 500 or more cases in the MCC group or

in the without MCC subgroup; (2) 5 percent or more of the cases in the MCC group or in the without MCC subgroup; (3) a 20 percent difference in average costs between the MCC group and the without MCC group; (4) a \$2,000 difference in average costs between the MCC group and the without MCC group; and (5) a 3-percent reduction in cost variance, indicating that the proposed severity level splits increase the explanatory power of the base MS-DRG in capturing differences in expected cost between the proposed MS-DRG severity level splits by at least 3 percent and thus improve the overall accuracy of the IPPS payment system.

During our review of the transcatheter cardiac valve repair (supplement) procedures in MS-DRGs 216, 217, 218, 219, 220, and 221, MS-DRGs 228 and 229, and MS-DRGs 273 and 274, our clinical advisors recommended that we also analyze the claims data to identify other (non-supplement) transcatheter (endovascular) procedures that involve the cardiac valves and are assigned to those same MS-DRGs to determine if additional modifications may be warranted, consistent with our ongoing efforts to refine the ICD-10 MS-DRGs.

We analyzed the following ICD-10-PCS procedure codes that are currently assigned to MS-DRGs 216, 217, 218, 219, 220, and 221.

ICD-10-PCS code	Description
02QF3ZJ	Repair aortic valve created from truncal valve, percutaneous approach.
02QF3ZZ	Repair aortic valve, percutaneous approach.
02QG3ZE	Repair mitral valve created from left atrioventricular valve, percutaneous approach.
02QG3ZZ	Repair mitral valve, percutaneous approach.
02QH3ZJ	Repair pulmonary valve, percutaneous approach.
02QJ3ZG	Repair tricuspid valve created from right atrioventricular valve, percutaneous approach.
02QJ3ZZ	Repair tricuspid valve, percutaneous approach.
02TH3ZZ	Resection of pulmonary valve, percutaneous approach.
02VG3ZZ	Restriction of mitral valve, percutaneous approach.
02WF38Z	Revision of zooplastic tissue in aortic valve, percutaneous approach.
02WF3JZ	Revision of synthetic substitute in aortic valve, percutaneous approach.
02WF3KZ	Revision of nonautologous tissue substitute in aortic valve, percutaneous approach.
02WG37Z	Revision of autologous tissue substitute in mitral valve, percutaneous approach.
02WG38Z	Revision of zooplastic tissue in mitral valve, percutaneous approach.
02WG3JZ	Revision of synthetic substitute in mitral valve, percutaneous approach.
02WG3KZ	Revision of nonautologous tissue substitute in mitral valve, percutaneous approach.
02WH37Z	Revision of autologous tissue substitute in pulmonary valve, percutaneous approach.
02WH38Z	Revision of zooplastic tissue in pulmonary valve, percutaneous approach.
02WH3JZ	Revision of synthetic substitute in pulmonary valve, percutaneous approach.
02WH3KZ	Revision of nonautologous tissue substitute in pulmonary valve, percutaneous approach.
02WJ37Z	Revision of autologous tissue substitute in tricuspid valve, percutaneous approach.

ICD-10-PCS code	Description
02WJ38Z	Revision of zooplasic tissue in tricuspid valve, percutaneous approach.
02WJ3JZ	Revision of synthetic substitute in tricuspid valve, percutaneous approach.
02WJ3KZ	Revision of nonautologous tissue substitute in tricuspid valve, percutaneous approach.

We also analyzed ICD-10-PCS procedure code 02TH3ZZ (Resection of pulmonary valve, percutaneous approach) that is currently assigned to MS-DRGs 228 and 229. Lastly, we analyzed the following ICD-10-PCS procedure codes that are currently assigned to MS-DRGs 273 and 274.

ICD-10-PCS code	Description
025F3ZZ	Destruction of aortic valve, percutaneous approach.
025G3ZZ	Destruction of mitral valve, percutaneous approach.
025H3ZZ	Destruction of pulmonary valve, percutaneous approach.
025J3ZZ	Destruction of tricuspid valve, percutaneous approach.
027F34Z	Dilation of aortic valve with drug-eluting intraluminal device, percutaneous approach.
027F3DZ	Dilation of aortic valve with intraluminal device, percutaneous approach.
027F3ZZ	Dilation of aortic valve, percutaneous approach.
027G34Z	Dilation of mitral valve with drug-eluting intraluminal device, percutaneous approach.
027G3DZ	Dilation of mitral valve with intraluminal device, percutaneous approach.
027G3ZZ	Dilation of mitral valve, percutaneous approach.
027H34Z	Dilation of pulmonary valve with drug-eluting intraluminal device, percutaneous approach.
027H3DZ	Dilation of pulmonary valve with intraluminal device, percutaneous approach.
027H3ZZ	Dilation of pulmonary valve, percutaneous approach.
027J34Z	Dilation of tricuspid valve with drug-eluting intraluminal device, percutaneous approach.
027J3DZ	Dilation of tricuspid valve with intraluminal device, percutaneous approach.
027J3ZZ	Dilation of tricuspid valve, percutaneous approach.
02BF3ZZ	Excision of aortic valve, percutaneous approach.
02BG3ZZ	Excision of mitral valve, percutaneous approach.
02BH3ZZ	Excision of pulmonary valve, percutaneous approach.
02BJ3ZZ	Excision of tricuspid valve, percutaneous approach.

We analyzed claims data from the September 2018 update of the FY 2018 MedPAR file for cases reporting any of the above listed procedure codes in MS-DRGs 216, 217, 218, 219, 220, and 221, MS-DRGs 228 and 229, and MS-DRGs 273 and 274. Our findings are shown in the following tables. We note that there were no cases found in MS-DRGs 228 and 229 reporting ICD-10-PCS procedure code 02TH3ZZ (Resection of pulmonary valve, percutaneous approach).

OTHER CARDIAC VALVE PROCEDURES IN MS-DRGs 216 THROUGH 221

ICD-10-PCS code	Description	Number of times reported	Average length of stay	Average costs
02QF3ZZ	Repair aortic valve, percutaneous approach	58	9.7	\$33,588
02QG3ZE	Repair mitral valve created from left atrioventricular valve, percutaneous approach.	4	1.3	38,680
02QG3ZZ	Repair mitral valve, percutaneous approach	40	3.4	30,160
02QH3ZZ	Repair pulmonary valve, percutaneous approach	1	1	33,014
02QJ3ZG	Repair tricuspid valve created from right atrioventricular valve, percutaneous approach.	1	9	51,294
02QJ3ZZ	Repair tricuspid valve, percutaneous approach	15	5	25,208
02VG3ZZ	Restriction of mitral valve, percutaneous approach	11	8.1	53,798
02WF38Z	Revision of zooplasic tissue in aortic valve, percutaneous approach	26	8.9	61,124
02WF3JZ	Revision of synthetic substitute in aortic valve, percutaneous approach ...	37	7.1	26,605
02WF3KZ	Revision of nonautologous tissue substitute in aortic valve, percutaneous approach.	2	1	69,030
02WG38Z	Revision of zooplasic tissue in mitral valve, percutaneous approach	2	7.5	16,982
02WG3JZ	Revision of synthetic substitute in mitral valve, percutaneous approach ...	31	7.3	28,682
02WH3JZ	Revision of synthetic substitute in pulmonary valve, percutaneous approach.	1	6	30,340
02WJ3JZ	Revision of synthetic substitute in tricuspid valve, percutaneous approach	1	3	14,145
Total	230	7.1	34,968

OTHER CARDIAC VALVE PROCEDURES IN MS-DRGs 273 AND 274

ICD-10-PCS code	Description	Number of times reported	Average length of stay	Average costs
025F3ZZ	Destruction of aortic valve, percutaneous approach	6	4.7	\$11,130

OTHER CARDIAC VALVE PROCEDURES IN MS-DRGs 273 AND 274—Continued

ICD-10-PCS code	Description	Number of times reported	Average length of stay	Average costs
025J3ZZ	Destruction of tricuspid valve, percutaneous approach	21	3.9	18,320
027F34Z	Dilation of aortic valve with drug-eluting intraluminal device, percutaneous approach.	1	16	53,786
027F3DZ	Dilation of aortic valve with intraluminal device, percutaneous approach ..	5	8.4	20,951
027F3ZZ	Dilation of aortic valve, percutaneous approach	1,720	8.6	25,265
027G3ZZ	Dilation of mitral valve, percutaneous approach	86	6.4	19,791
027H3ZZ	Dilation of pulmonary valve, percutaneous approach	5	3.8	10,506
02BJ3ZZ	Excision of tricuspid valve, percutaneous approach	1	4	30,843
Total	1,845	8.4	24,851

We found that the overall frequency with which cases reporting at least one of the above ICD-10-PCS procedure codes were reflected in the claims data was 2,075 times with an average length of stay of 8.5 days and average costs of \$27,838. ICD-10-PCS procedure code 027F3ZZ (Dilation of aortic valve, percutaneous approach) had the highest frequency of 1,720 times with an average length of stay of 8.6 days and average costs of \$25,265. We also found that cases reporting ICD-10-PCS procedure code 02WF3KZ (Revision of nonautologous tissue substitute in aortic valve, percutaneous approach) had the highest average costs of \$69,030 with an average length of stay of 1 day. While not displayed above, we also note that, of the 7,785 cases found in MS-DRG 273, from the remaining procedure codes describing procedures other than those performed on a cardiac valve, there were 4,920 cases reporting ICD-10-PCS procedure code 02583ZZ (Destruction of conduction mechanism, percutaneous approach) with an average length of stay of 6.6 days and average costs of \$26,800, representing approximately 63 percent of all the cases in that MS-DRG. In addition, of

the 20,434 cases in MS-DRG 274, from the remaining procedure codes describing procedures other than those performed on a cardiac valve, there were 9,268 cases reporting ICD-10-PCS procedure code 02583ZZ (Destruction of conduction mechanism, percutaneous approach) with an average length of stay of 3.2 days and average costs of \$21,689, and 8,775 cases reporting ICD-10-PCS procedure code 02L73DK (Occlusion of left atrial appendage with intraluminal device, percutaneous approach) with an average length of stay of 1.2 days and average costs of \$25,476, representing approximately 88 percent of all the cases in that MS-DRG.

After analyzing the claims data to identify the overall frequency with which the other (non-supplement) ICD-10-PCS procedure codes describing a transcatheter (endovascular) cardiac valve procedure were reported and assigned to MS-DRGs 216, 217, 218, 219, 220, and 221, MS-DRGs 228 and 229, and MS-DRGs 273 and 274, our clinical advisors suggested that these other cardiac valve procedures should be grouped together because the procedure codes are describing procedures performed on a cardiac valve with a percutaneous

(transcatheter/endovascular) approach, they can be performed in a cardiac catheterization laboratory, they require that the interventional cardiologist have special additional training and skills, and often require additional ancillary procedures and equipment, such as trans-esophageal echocardiography, be available at the time of the procedure. Our clinical advisors noted that these procedures are generally considered more complicated and resource-intensive, and form a clinically coherent group. They also noted that the majority of procedures currently being reported in MS-DRGs 273 and 274 are procedures other than those involving a cardiac valve and, therefore, believed that reassignment of the other (non-supplement) ICD-10-PCS procedure codes describing a transcatheter (endovascular) cardiac valve procedure would have minimal impact to those MS-DRGs.

We then analyzed the impact of grouping the other transcatheter cardiac valve procedures. The following table reflects our findings for the suggested other endovascular cardiac valve procedures MS-DRGs with a 2-way severity level split.

SUGGESTED MS-DRGs FOR OTHER ENDOVASCULAR CARDIAC VALVE PROCEDURES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG XXX (Other Endovascular Cardiac Valve Procedures with MCC)	1,527	9.7	\$27,801
MS-DRG XXX (Other Endovascular Cardiac Valve Procedures without MCC)	560	3.9	17,027

As shown in the table, there were 1,527 cases for the other endovascular cardiac valve procedures with MCC group, with an average length of stay of 9.7 days and average costs of \$27,801. There was a total of 560 cases for the other endovascular cardiac valve procedures without MCC group, with an average length of stay of 3.9 days and average costs of \$17,027. We applied the criteria to create subgroups for the two-

way severity level split for the suggested MS-DRGs and found that all five criteria were met. For the suggested MS-DRGs, there is at least (1) 500 or more cases in the MCC group or in the without MCC subgroup; (2) 5 percent or more of the cases in the MCC group or in the without MCC subgroup; (3) a 20 percent difference in average costs between the MCC group and the without MCC group; (4) at least a \$2,000

difference in average costs between the MCC group and the without MCC group; and (5) a 3-percent reduction in cost variance, indicating that the proposed severity level splits increase the explanatory power of the base MS-DRG in capturing differences in expected cost between the proposed MS-DRG severity level splits by at least 3 percent and thus improve the overall accuracy of the IPPS payment system.

For FY 2020, we are proposing to modify the structure of MS-DRGs 266 and 267 by reassigning the procedure codes describing a transcatheter cardiac valve repair (supplement) procedure from the list above and to revise the title of these MS-DRGs. We are proposing to revise the title of MS-DRGs 266 from “Endovascular Cardiac Valve Replacement with MCC” to “Endovascular Cardiac Valve Replacement and Supplement Procedures with MCC” and the title of MS-DRG 267 from “Endovascular Cardiac Valve Replacement without MCC” to “Endovascular Cardiac Valve Replacement and Supplement Procedures without MCC”, to reflect the proposed restructuring. We also are proposing to create two new MS-DRGs with a two-way severity level split for the remaining (non-supplement) transcatheter cardiac valve procedures listed above. These proposed new MS-DRGs are proposed new MS-DRG 319 (Other Endovascular Cardiac Valve Procedures with MCC) and proposed new MS-DRG 320 (Other Endovascular Cardiac Valve Procedures without MCC), which would also conform with the severity level split of MS-DRGs 266 and 267. We are proposing to reassign the procedure codes from their current MS-DRGs to the proposed new MS-DRGs.

b. Revision of Pacemaker Lead

In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41189 through 41190), we finalized our proposal to maintain the Version 35 ICD-10 MS-DRG Grouper logic for the Version 36 ICD-10 MS-DRG Grouper logic within MS-DRGs 260, 261, and 262 (Cardiac Pacemaker Revision Except Device Replacement with MCC, with CC and without CC/MCC, respectively) so that cases reporting any of the ICD-10-PCS procedure codes describing procedures involving pacemakers and related procedures and associated devices would continue to be assigned to those MS-DRGs under MDC 5 because they are reported when a pacemaker device requires revision and they have a corresponding circulatory system diagnosis. We also discussed and finalized the addition of ICD-10-PCS

procedure codes 02H63MZ (Insertion of cardiac lead into right atrium, percutaneous approach) and 02H73MZ (Insertion of cardiac lead into left atrium, percutaneous approach) to the GROUPE logic as non-O.R. procedures that impact the MS-DRG assignment when reported as stand-alone codes for the insertion of a pacemaker lead within MS-DRGs 260, 261, and 262 in response to a commenter’s suggestion.

After publication of the FY 2019 IPPS/LTCH PPS final rule, it was brought to our attention that ICD-10-PCS procedure code 02H60JZ (Insertion of pacemaker lead into right atrium, open approach) was inadvertently omitted from the GROUPE logic for MS-DRGs 260, 261, and 262. This procedure code is designated as a non-O.R. procedure. However, we note that, within MDC 5, in MS-DRGs 242, 243, and 244, this procedure code is part of a code pair that requires another procedure code (cluster). We are proposing to add procedure code 02H60JZ to the list of non-O.R. procedures that would impact MS-DRGs 260, 261, and 262 when reported as a stand-alone procedure code, consistent with ICD-10-PCS procedure codes 02H63JZ (Insertion of pacemaker lead into right atrium, percutaneous approach) and 02H64JZ (Insertion of pacemaker lead into right atrium, percutaneous endoscopic approach), which also describe the insertion of a pacemaker lead into the right atrium. If the proposal is finalized, we would make conforming changes to the ICD-10 MS-DRG Definitions Manual Version 37.

6. MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue)

a. Knee Procedures With Principal Diagnosis of Infection

We received a request to add ICD-10-CM diagnosis codes M00.9 (Pyogenic arthritis, unspecified) and A54.42 (Gonococcal arthritis) to the list of principal diagnoses for MS-DRGs 485, 486, and 487 (Knee Procedure with Principal Diagnosis of Infection with MCC, with CC, and without CC/MCC, respectively) in MDC 8. The requestor

believed that adding diagnosis code M00.9 is necessary to accurately recognize knee procedures that are performed with a principal diagnosis of infectious arthritis, including those procedures performed when the specific infectious agent is unknown. The requestor stated that, currently, only diagnosis codes describing infections caused by a specific bacterium are included in MS-DRGs 485, 486, and 487. The requestor stated that additional diagnosis codes such as M00.9 are indicated for knee procedures performed as a result of infection because pyogenic arthritis can reasonably be diagnosed based on the patient’s history and clinical symptoms, even if a bacterial infection is not confirmed by culture. For example, the requestor noted that a culture may present negative for infection if a patient has been treated with antibiotics prior to knee surgery, but other clinical signs may indicate a principal diagnosis of joint infection. In the absence of a culture identifying an infection by a specific bacterium, the requestor stated that ICD-10-CM diagnosis code M00.09 should also be included as a principal diagnosis in MS-DRGs 485, 486, and 487.

The requestor also asserted that ICD-10-CM diagnosis code A54.42 should be added to the list of principal diagnoses for MS-DRGs 485, 486, and 487 because gonococcal arthritis is also an infectious type of arthritis that can be an indication for a knee procedure.

Currently, cases reporting ICD-10-CM diagnosis codes M00.9 or A54.42 as a principal diagnosis group to MS-DRGs 488 and 489 (Knee Procedures without Principal Diagnosis of Infection with and without CC/MCC, respectively) when a knee procedure is also reported on the claim.

We analyzed claims data from the September 2018 update of the FY 2018 MedPAR file for ICD-10-CM diagnosis codes M00.9 and A54.42, which are currently assigned to medical MS-DRGs 548, 549, and 550 (Septic Arthritis with MCC, with CC, and without CC/MCC, respectively) in the absence of a surgical procedure. Our findings are shown in the following table.

MS-DRGs FOR SEPTIC ARTHRITIS WITH PYOGENIC ARTHRITIS OR GONOCOCCAL ARTHRITIS

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 548—All cases	601	8.1	\$13,974
MS-DRG 548—Cases with pyogenic arthritis as principal diagnosis	312	7.6	13,177
MS-DRG 549—All cases	1,169	5.0	8,547
MS-DRG 549—Cases with pyogenic arthritis as principal diagnosis	686	4.7	7,976
MS-DRG 549—Cases with gonococcal arthritis as principal diagnosis	2	8.0	7,070
MS-DRG 550—All cases	402	3.5	6,317

MS-DRGs FOR SEPTIC ARTHRITIS WITH PYOGENIC ARTHRITIS OR GONOCOCCAL ARTHRITIS—Continued

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 550—Cases with pyogenic arthritis as principal diagnosis	260	3.2	6,209
MS-DRG 550—Cases with gonococcal arthritis as principal diagnosis	3	2.3	3,929

As shown in the table, we found a total of 2,172 cases in MS-DRGs 548, 549, and 550. A total of 601 cases were reported in MS-DRG 548, with an average length of stay of 8.1 days and average costs of \$13,974. Cases in MS-DRG 548 with a principal diagnosis of pyogenic arthritis (ICD-10-CM diagnosis code M00.9) accounted for 312 of these 601 cases, and reported an average length of stay of 7.6 days and average costs of \$13,177. None of the cases in MS-DRG 548 had a principal diagnosis of gonococcal arthritis (ICD-10-CM diagnosis code A54.42).

The total number of cases reported in MS-DRG 549 was 1,169, with an average length of stay of 5 days and average costs of \$8,547. Within this MS-DRG, 686 cases had a principal diagnosis described by ICD-10-CM diagnosis code M00.9, with an average length of stay of 4.7 days and average costs of \$7,976. Two of the cases reported in MS-DRG 549 had a

principal diagnosis described by ICD-10-CM diagnosis code A54.42. These 2 cases had an average length of stay of 8 days and average costs of \$7,070.

The total number of cases reported in MS-DRG 550 was 402, with an average length of stay of 3.5 days and average costs of \$6,317. Within this MS-DRG, 260 cases had a principal diagnosis described by ICD-10-CM diagnosis code M00.9 with an average length of stay of 3.2 days and average costs of \$6,209. Three of the cases reported in MS-DRG 550 had a principal diagnosis described by ICD-10-CM diagnosis code A54.42. These 3 cases had an average length of stay of 2.3 days and average costs of \$3,929.

In summary, for MS-DRGs 548, 549, and 550, there were 1,258 cases that reported ICD-10-CM diagnosis code M00.9 as the principal diagnosis and 5 cases that reported ICD-10-CM diagnosis code A54.42 as the principal diagnosis. We note that, overall, our

data analysis suggests that the MS-DRG assignment for cases reporting ICD-10-CM diagnosis codes M00.9 and A54.42 is appropriate based on the average costs and average length of stay.

However, it is unclear how many of these cases involved infected knee joints because neither ICD-10-CM diagnosis code M00.9 nor A54.42 is specific to the knee. We then analyzed claims data for MS-DRGs 485, 486, and 487 (Knee Procedures with Principal Diagnosis of Infection with MCC, with CC, and without CC/MCC, respectively) and for MS-DRGs 488 and 489 (Knee Procedures without Principal Diagnosis of Infection with and without CC/MCC, respectively). For MS-DRGs 488 and 489, we also analyzed claims data for cases reporting a knee procedure with ICD-10-CM diagnosis code M00.9 or A54.42 as a principal diagnosis, as these are the MS-DRGs to which such cases would currently group. Our findings are shown in the following table.

MS-DRGs FOR KNEE PROCEDURES WITH AND WITHOUT INFECTION

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 485—All cases	1,021	9.7	\$23,980
MS-DRG 486—All cases	2,260	6	16,060
MS-DRG 487—All cases	614	4.2	12,396
MS-DRG 488—All cases	2,857	4.8	14,197
MS-DRG 488—Cases with pyogenic arthritis as principal diagnosis	524	7.1	16,894
MS-DRG 489—All cases	2,416	2.4	9,217
MS-DRG 489—Cases with pyogenic arthritis as principal diagnosis	195	4.1	9,526
MS-DRG 489—Cases with gonococcal arthritis as principal diagnosis	1	8	10,810

As shown in the table, we found a total of 1,021 cases reported in MS-DRG 485, with an average length of stay of 9.7 days and average costs of \$23,980. We found a total of 2,260 cases reported in MS-DRG 486, with an average length of stay of 6.0 days and average costs of \$16,060. The total number of cases reported in MS-DRG 487 was 614, with an average length of stay of 4.2 days and average costs of \$12,396. For MS-DRG 488, we found a total of 2,857 cases with an average length of stay of 4.8 days and average costs of \$14,197. Of these 2,857 cases, we found 524 cases that reported a principal diagnosis of pyogenic arthritis (ICD-10-CM diagnosis code M00.9), with an average length of stay of 7.1 days and average costs of \$16,894.

There were no cases found that reported a principal diagnosis of gonococcal arthritis (ICD-10-CM diagnosis code A54.42). For MS-DRG 489, we found a total of 2,416 cases with an average length of stay of 2.4 days and average costs of \$9,217. Of these 2,416 cases, we found 195 cases that reported a principal diagnosis of pyogenic arthritis (ICD-10-CM diagnosis code M00.9), with an average length of stay of 4.1 days and average costs of \$9,526. We found 1 case that reported a principal diagnosis of gonococcal arthritis (ICD-10-CM diagnosis code A54.42) in MS-DRG 489, with an average length of stay of 8 days and average costs of \$10,810.

Upon review of the data, we noted that the average costs and average length

of stay for cases reporting a principal diagnosis of pyogenic arthritis (ICD-10-CM diagnosis code M00.9) in MS-DRG 488 are higher than the average costs and average length of stay for all cases in MS-DRG 488. We found similar results for MS-DRG 489 for the cases reporting diagnosis code M00.9 or A54.42 as the principal diagnosis.

As stated earlier, the requestor recommended that ICD-10-CM diagnosis codes M00.9 and A54.42 be added to the list of principal diagnoses in MS-DRGs 485, 486, and 487 to recognize knee procedures that are performed with a principal diagnosis of an infectious type of arthritis. Because these diagnosis codes are not specific to the knee in the code description, we

examined the ICD-10-CM Alphabetic Index to review the entries that refer

and correspond to these diagnosis codes. Specifically, we searched the

Index for codes M00.9 and A54.42 and found the following entries.

Index entries referring to M00.9

Abscess (connective tissue) (embolic) (fistulous) (infective) (metastatic) (multiple) (pernicious) (pyogenic) (septic) > knee > joint

Arthritis, arthritic (acute) (chronic) (nonpyogenic) (subacute) > pyogenic or pyemic (any site except spine)

Disease, diseased > hip (joint) > suppurative

Infection, infected, infective (opportunistic) > acromioclavicular

Infection, infected, infective (opportunistic) > hip (joint) NEC

Infection, infected, infective (opportunistic) > joint NEC

Infection, infected, infective (opportunistic) > knee (joint) NEC

Infection, infected, infective (opportunistic) > knee (joint) NEC > joint

Infection, infected, infective (opportunistic) > metatarsophalangeal

Infection, infected, infective (opportunistic) > shoulder (joint) NEC

Index entries referring to A54.42

Arthritis, arthritic (acute) (chronic) (nonpyogenic) (subacute) > blennorrhagic (gonococcal)

Arthritis, arthritic (acute) (chronic) (nonpyogenic) (subacute) > gonococcal

Gonococcus, gonococcal (disease) (infection) > joint

Gonococcus, gonococcal (disease) (infection) > musculoskeletal > arthritis

Hydrarthrosis > gonococcal

Periarthritis (joint) > gonococcal

Our clinical advisors agreed that the results of our ICD-10-CM Alphabetic Index review combined with the data analysis results support the addition of ICD-10-CM diagnosis code M00.9 to the list of principal diagnoses of infection for MS-DRGs 485, 486, and 487. The entries for diagnosis code M00.9 include infection of the knee, and as discussed above, in our data analysis, we found cases reporting ICD-10-CM diagnosis code M00.9 as a principal diagnosis in MS-DRGs 488 and 489, indicating that knee procedures are, in fact, being performed for an infectious arthritis of

the knee. In addition, the average costs for cases reporting a principal diagnosis code of pyogenic arthritis (ICD-10-CM diagnosis code M00.9) in MS-DRG 488 are similar to the average costs of cases in MS-DRG 486 (\$16,894 and \$16,060, respectively). Because MS-DRG 488 includes cases with a CC or an MCC, we reviewed how many of the 524 cases reporting a principal diagnosis code of pyogenic arthritis (ICD-10-CM diagnosis code M00.9) were reported with a CC or an MCC. We found that there were 361 cases reporting a CC with an average length of stay of 6 days

and average costs of \$14,092 and 163 cases reporting an MCC with an average length of stay of 9.5 days and average costs of \$23,100. Therefore, the cases in MS-DRG 488 reporting a principal diagnosis code of pyogenic arthritis (ICD-10-CM diagnosis code M00.9) with an MCC have average costs that are consistent with the average costs of cases in MS-DRG 485 (\$23,100 and \$23,980, respectively), and the cases with a CC have average costs that are consistent with the average costs of cases in MS-DRG 486 (\$14,092 and \$16,060, respectively), as noted above.

We also note that the average length of stay for cases reporting a principal diagnosis code of pyogenic arthritis (ICD-10-CM diagnosis code M00.9) with an MCC in MS-DRG 488 is similar to the average length of stay for cases in MS-DRG 485 (9.5 days and 9.7 days, respectively), and the cases with a CC have an average length of stay that is equivalent to the average length of stay for cases in MS-DRG 486 (6 days and 6 days, respectively). We further note that the average length of stay for cases reporting a principal diagnosis code of pyogenic arthritis (ICD-10-CM diagnosis code M00.9) in MS-DRG 489 is similar to the average length of stay

for cases in MS DRG 487 (4.1 days and 4.2 days, respectively). Lastly, the average costs for cases reporting a principal diagnosis code of pyogenic arthritis (ICD-10-CM diagnosis code M00.9) in MS-DRG 489 are consistent with the average costs for cases in MS-DRG 487 (\$9,526 and \$12,396, respectively), with a difference of \$2,870. For these reasons, we are proposing to add ICD-10-CM diagnosis code M00.9 to the list of principal diagnosis codes for MS-DRGs 485, 486, and 487.

Our clinical advisors did not support the addition of ICD-10-CM diagnosis code A54.42 to the list of principal

diagnosis codes for MS-DRGs 485, 486, and 487 because ICD-10-CM diagnosis code A54.42 is not specifically indexed to include the knee or any infection in the knee. Therefore, we are not proposing to add ICD-10-CM diagnosis code A54.42 to the list of principal diagnosis codes for these MS-DRGs.

Upon review of the existing list of principal diagnosis codes for MS-DRGs 485, 486, and 487, our clinical advisors recommended that we review the following ICD-10-CM diagnosis codes currently included on the list of principal diagnosis codes because the codes are not specific to the knee.

ICD-10-CM code	Code description
M86.9	Osteomyelitis, unspecified.
T84.50XA	Infection and inflammatory reaction due to unspecified internal joint prosthesis, initial encounter.
T84.51XA	Infection and inflammatory reaction due to internal right hip prosthesis, initial encounter.
T84.52XA	Infection and inflammatory reaction due to internal left hip prosthesis, initial encounter.
T84.59XA	Infection and inflammatory reaction due to other internal joint prosthesis, initial encounter.
T84.60XA	Infection and inflammatory reaction due to internal fixation device of unspecified site, initial encounter.
T84.63XA	Infection and inflammatory reaction due to internal fixation device of spine, initial encounter.
T84.69XA	Infection and inflammatory reaction due to internal fixation device of other site, initial encounter.

These ICD-10-CM diagnosis codes are currently assigned to medical MS-DRGs 559, 560, and 561 (Aftercare, Musculoskeletal System and Connective Tissue with MCC, with CC, and without

CC/MCC, respectively) within MDC 8 in the absence of a surgical procedure. Similar to the process described above, we examined the ICD-10-CM Alphabetic Index to review the entries

that refer and correspond to the diagnosis codes shown in the table above. We found the following entries.

- Index entries referring to M86.9: Osteomyelitis (general) (infective) (localized) (neonatal) (purulent) (septic) (staphylococcal) (streptococcal) (suppurative) (with periostitis).
- Index entries referring to T84.50XA: Complication(s) (from) (of) > joint prosthesis, internal > infection or inflammation Infection, infected, infective (opportunistic) > joint NEC > due to internal joint prosthesis.
- Index entries referring to T84.51XA: Infection, infected, infective (opportunistic) > hip (joint) NEC > due to internal joint prosthesis > right.
- Index entries referring to T84.52XA: Infection, infected, infective (opportunistic) > hip (joint) NEC > due to internal joint prosthesis > left.
- Index entries referring to T84.59XA: Complication(s) (from) (of) > joint prosthesis, internal > infection or inflammation > specified joint NEC Infection, infected, infective (opportunistic) > shoulder (joint) NEC > due to internal joint prosthesis.
- Index entries referring to T84.60XA: Complication(s) (from) (of) > fixation device, internal (orthopedic) > infection and inflammation.
- Index entries referring to T84.63XA: Complication(s) (from) (of) > fixation device, internal (orthopedic) > infection and inflammation > spine.
- Index entries referring to T84.69XA: Complication(s) (from) (of) > fixation device, internal (orthopedic) > infection and inflammation > specified site NEC.

The Index entries for the ICD-10-CM diagnosis codes listed above reflect terms relating to an infection. However, none of the entries is specific to the knee. In addition, we note that there are other diagnosis codes in the subcategory T84.5- series (Infection and inflammatory reaction due to internal joint prosthesis) that are specific to the knee. For example, ICD-10-CM diagnosis code T84.53X- (Infection and inflammatory reaction due to internal right knee prosthesis) or ICD-10-CM diagnosis code T84.54X- (Infection and inflammatory reaction due to internal

left knee prosthesis) with the appropriate 7th digit character to identify initial encounter, subsequent encounter or sequela, would be reported to identify a documented infection of the right or left knee due to an internal prosthesis. We further note that these ICD-10-CM diagnosis codes (T84.53X- and T84.54X-) with the 7th character "A" for initial encounter are currently already in the list of principal diagnosis codes for MS-DRGs 485, 486, and 487.

Our clinical advisors support the removal of the above ICD-10-CM diagnosis codes from the list of principal diagnosis codes for MS-DRGs

485, 486, and 487 because they are not specifically indexed to include an infection of the knee and there are other diagnosis codes in the subcategory T84.5- series that uniquely identify an infection and inflammatory reaction of the right or left knee due to an internal prosthesis as noted above.

We also analyzed claims data for MS-DRGs 485, 486 and 487 to identify cases reporting one of the above listed ICD-10-CM diagnosis codes not specific to the knee as a principal diagnosis. Our findings are shown in the following table.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 485—Cases reporting principal diagnosis code not specific to the knee	13	11.2	\$30,765
MS-DRG 486—Cases reporting principal diagnosis code not specific to the knee	43	6.5	15,837
MS-DRG 487—Cases reporting principal diagnosis code not specific to the knee	7	2.6	11,362

For MS-DRG 485, we found 13 cases reporting one of the diagnosis codes not specific to the knee as a principal diagnosis with an average length of stay of 11.2 days and average costs of \$30,765. For MS-DRG 486, we found 43 cases reporting one of the diagnosis codes not specific to the knee as a principal diagnosis with an average length of stay of 6.5 days and average costs of \$15,837. For MS-DRG 487, we found 7 cases reporting one of the diagnosis codes not specific to the knee as a principal diagnosis with an average length of stay of 2.6 days and average costs of \$11,362.

Overall, for MS-DRGs 485, 486, and 487, there were a total of 63 cases reporting one of the ICD-10-CM diagnosis codes not specific to the knee as a principal diagnosis with an average length of stay of 7 days and average costs of \$18,421. Of those 63 cases, there were 32 cases reporting a principal diagnosis code from the ICD-10-CM subcategory T84.5-series (Infection and inflammatory reaction due to internal

joint prosthesis); 23 cases reporting a principal diagnosis code from the ICD-10-CM subcategory T84.6-series (Infection and inflammatory reaction due to internal fixation device), with 22 of the 23 cases reporting ICD-10-CM diagnosis code T84.69XA (Infection and inflammatory reaction due to internal fixation device of other site, initial encounter) and 1 case reporting ICD-10-CM diagnosis code T84.63XA (Infection and inflammatory reaction due to internal fixation device of spine, initial encounter); and 8 cases reporting ICD-10-CM diagnosis code M86.9 (Osteomyelitis, unspecified) as a principal diagnosis.

Our clinical advisors believe that there may have been coding errors among the 63 cases reporting a principal diagnosis of infection not specific to the knee. For example, 32 cases reported a principal diagnosis code from the ICD-10-CM subcategory T84.5-series (Infection and inflammatory reaction due to internal joint prosthesis) that was not specific to the knee and, as stated

previously, there are other codes in this subcategory that uniquely identify an infection and inflammatory reaction of the right or left knee due to an internal prosthesis.

Based on the results of our claims analysis and input from our clinical advisors, we are proposing to remove the following ICD-10-CM diagnosis codes that do not describe an infection of the knee from the list of principal diagnosis codes for MS-DRGs 485, 486, and 487: M86.9; T84.50XA; T84.51XA; T84.52XA; T84.59XA; T84.60XA; T84.63XA; and T84.69XA. We are not proposing to change the current assignment of these diagnosis codes in MS-DRGs 559, 560, and 561.

In addition, our clinical advisors recommended that we add the following ICD-10-CM diagnosis codes as principal diagnosis codes for MS-DRGs 485, 486, and 487 because they are specific to the knee and describe an infection.

ICD-10-CM code	Code description
A18.02	Tuberculous arthritis of other joints.
M01.X61	Direct infection of right knee in infectious and parasitic diseases classified elsewhere.
M01.X62	Direct infection of left knee in infectious and parasitic diseases classified elsewhere.
M01.X69	Direct infection of unspecified knee in infectious and parasitic diseases classified elsewhere.
M71.061	Abscess of bursa, right knee.
M71.062	Abscess of bursa, left knee.
M71.069	Abscess of bursa, unspecified knee.
M71.161	Other infective bursitis, right knee.
M71.162	Other infective bursitis, left knee.
M71.169	Other infective bursitis, unspecified knee.

ICD-10-CM diagnosis code A18.02 (Tuberculous arthritis of other joints) is currently assigned to medical MS-DRGs 548, 549, and 550 (Septic Arthritis with MCC, with CC, and without CC/MCC, respectively) within MDC 8 and MS-DRGs 974, 975, and 976 (HIV with Major Related Condition with MCC, with CC, and without CC/MCC, respectively) within MDC 25 (Human Immunodeficiency Virus Infections) in the absence of a surgical procedure. ICD-10-CM diagnosis codes M01.X61 (Direct infection of right knee in infectious and parasitic diseases classified elsewhere), M01.X62 (Direct

infection of left knee in infectious and parasitic diseases classified elsewhere), and M01.X69 (Direct infection of unspecified knee in infectious and parasitic diseases classified elsewhere) are currently assigned to medical MS-DRGs 548, 549, and 550 (Septic Arthritis with MCC, with CC, and without CC/MCC, respectively) within MDC 8 in the absence of a surgical procedure. ICD-10-CM diagnosis codes M71.061 (Abscess of bursa, right knee), M71.062 (Abscess of bursa, left knee), M71.069 (Abscess of bursa, unspecified knee), M71.161 (Other infective bursitis, right knee), M71.162 (Other infective bursitis,

left knee), and M71.169 (Other infective bursitis, unspecified knee) are currently assigned to medical MS-DRGs 557 and 558 (Tendonitis, Myositis and Bursitis with and without MCC, respectively) within MDC 8 in the absence of a surgical procedure.

Similar to the process described above, we examined the ICD-10-CM Alphabetic Index to review the entries that refer and correspond to the diagnosis codes shown in the table above. We found the following entries.

BILLING CODE 4120-01-P

Index entries referring to A18.02:

Arthritis, arthritic (acute) (chronic) (nonpyogenic) (subacute) > tuberculous

Caries > hip (tuberculous)

Caries > knee (tuberculous)

Chondritis > tuberculous NEC

Coxalgia, coxalgic (nontuberculous) > tuberculous

Cyst (colloid) (mucous) (simple) (retention) > Baker's > tuberculous

Disease, diseased > hip (joint) > tuberculous

Inflammation, inflamed, inflammatory (with exudation) > knee (joint) > tuberculous

Morbus > coxae senilis > tuberculous

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > abscess (respiratory) > bone > hip

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > abscess (respiratory) > bone > knee

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > abscess (respiratory) > hip

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > abscess (respiratory) > joint NEC

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > abscess (respiratory) > joint NEC > hip

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic

acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > abscess (respiratory) > joint NEC > knee

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > abscess (respiratory) > joint NEC > specified NEC

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > abscess (respiratory) > knee

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > ankle (joint) (bone)

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > arthritis (chronic) (synovial)

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > bone > hip

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > bone > knee

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > cartilage

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > coxae

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > coxalgia

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated

circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > elbow

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > genu

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > hip (joint) (disease) (bone)

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > joint

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > knee (joint)

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > shoulder (joint)

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > sternoclavicular joint

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > swelling, joint (see also category M01)

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > symphysis pubis

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > synovitis > articular

Tuberculosis, tubercular, tuberculous (calcification) (calcified) (caseous) (chromogenic acid-fast bacilli) (degeneration) (fibrocaceous) (fistula) (interstitial) (isolated circumscribed lesions) (necrosis) (parenchymatous) (ulcerative) > wrist (joint)

BILLING CODE 4120-01-C

We note that there were no Index entries specifically for ICD-10-CM

diagnosis codes M71.061, M71.062, M71.069, M71.161, M71.162, and M71.169. Rather, there were Index

entries at the subcategory levels of M71.06- and M71.16-. We found the following entries.

Index entry referring to M71.06--: (connective tissue) (embolic) (fistulous) (infective) (metastatic) (multiple) (pernicious) (pyogenic) (septic) > bursa > knee.
 Index entry referring to M71.16--: Infective NEC > knee.

Our clinical advisors agreed that the results of our review of the ICD-10-CM Alphabetic Index support the addition of these ICD-10-CM diagnosis codes to MS-DRGs 485, 486, and 487 because the Index entries and/or the code descriptions clearly describe or include an infection that is specific to the knee.

Therefore, we are proposing to add the following ICD-10-CM diagnosis

codes to the list of principal diagnosis codes for MS-DRGs 485, 486, and 487: A18.02; M01.X61; M01.X62; M01.X69; M71.061; M71.062; M71.069; M71.161; M71.162; and M71.169.

b. Neuromuscular Scoliosis

We received a request to add ICD-10-CM diagnosis codes describing neuromuscular scoliosis to the list of principal diagnosis codes for MS-DRGs

456, 457, and 458 (Spinal Fusion except Cervical with Spinal Curvature or Malignancy or Infection or Extensive Fusions with MCC, with CC, and without CC/MCC, respectively). Excluding the ICD-10-CM diagnosis codes that address the cervical spine, the following ICD-10-CM diagnosis codes are used to describe neuromuscular scoliosis.

ICD-10-CM code	Code description
M41.40	Neuromuscular scoliosis, site unspecified.
M41.44	Neuromuscular scoliosis, thoracic region.
M41.45	Neuromuscular scoliosis, thoracolumbar region.
M41.46	Neuromuscular scoliosis, lumbar region.
M41.47	Neuromuscular scoliosis, lumbosacral region.

The requestor asserted that all levels of neuromuscular scoliosis, except cervical, should group to the non-cervical spinal fusion MS-DRGs for spinal curvature (MS-DRGs 456, 457, and 458). The requestor also noted that the current MS-DRG logic only groups cases reporting neuromuscular scoliosis to MS-DRGs 456, 457, and 458 when neuromuscular scoliosis is reported as a secondary diagnosis. The requestor contended that it would be rare for a diagnosis of neuromuscular scoliosis to be reported as a secondary diagnosis because there is not a “code first” note

in the ICD-10-CM Tabular List of Diseases and Injuries indicating to “code first” the underlying cause. According to the requestor, when a diagnosis of neuromuscular scoliosis is the reason for an admission for non-cervical spinal fusion, neuromuscular scoliosis must be sequenced as the principal diagnosis because it is the chief condition responsible for the admission. However, this sequencing, which adheres to the ICD-10-CM Official Guidelines for Coding and Reporting, prevents the admission from grouping to the non-cervical spinal

fusion MS-DRGs for spinal curvature caused by neuromuscular scoliosis.

We analyzed claims data from the September 2018 update of the FY 2018 MedPAR file for cases reporting any of the ICD-10-CM diagnosis codes describing neuromuscular scoliosis (as listed previously) as a principal diagnosis with a non-cervical spinal fusion, which are currently assigned to MS-DRGs 459 and 460 (Spinal Fusion except Cervical with MCC and without MCC, respectively). Our findings are shown in the following table.

MS-DRGs FOR CASES INVOLVING NON-CERVICAL SPINAL FUSION WITH PRINCIPAL DIAGNOSIS OF NEUROMUSCULAR SCOLIOSIS

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 459—All cases	3,903	8.6	\$46,416
MS-DRG 459—Cases with principal diagnosis of neuromuscular scoliosis	3	15.3	95,745
MS-DRG 460—All cases	52,597	3.3	28,754
MS-DRG 460—Cases with principal diagnosis of neuromuscular scoliosis	8	4.3	71,406

The data reveal that there was a total of 56,500 cases in MS-DRGs 459 and 460. We found 3,903 cases reported in MS-DRG 459, with an average length of stay of 8.6 days and average costs of \$46,416. Of these 3,903 cases, 3 reported a principal diagnosis code of neuromuscular scoliosis, with an average length of stay of 15.3 days and average costs of \$95,745. We found a total of 52,597 cases in MS-DRG 460, with an average length of stay of 3.3

days and average costs of \$28,754. Of these 52,597 cases, 8 cases reported a principal diagnosis code describing neuromuscular scoliosis, with an average length of stay of 4.3 days and average costs of \$71,406. The data clearly demonstrate that the average costs and average length of stay for the small number of cases reporting a principal diagnosis of neuromuscular scoliosis are higher in comparison to all the cases in their assigned MS-DRG.

We also analyzed claims data for MS-DRGs 456, 457, and 458 (Spinal Fusion except Cervical with Spinal Curvature or Malignancy or Infection or Extensive Fusions with MCC, with CC, and without CC/MCC, respectively) to identify the spinal fusion cases reporting any of the ICD-10-CM codes describing neuromuscular scoliosis (as listed previously) as a secondary diagnosis. Our findings are shown in the following table.

MS-DRGs FOR CASES INVOLVING NON-CERVICAL SPINAL FUSION WITH SPINAL CURVATURE OR MALIGNANCY OR INFECTION OR EXTENSIVE FUSIONS WITH SECONDARY DIAGNOSIS OF NEUROMUSCULAR SCOLIOSIS

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 456—All cases	1,344	12.0	\$66,012
MS-DRG 456—Cases with secondary diagnosis of neuromuscular scoliosis	6	18.2	79,809
MS-DRG 457—All cases	3,654	6.2	47,577
MS-DRG 457—Cases with secondary diagnosis of neuromuscular scoliosis	12	4.5	31,646
MS-DRG 458—All cases	1,245	3.4	34,179
MS-DRG 458—Cases with secondary diagnosis of neuromuscular scoliosis	6	3.3	31,117

The data indicate that there were 1,344 cases reported in MS-DRG 456, with an average length of stay of 12 days and average costs of \$66,012. Of these 1,344 cases, 6 cases reported a secondary diagnosis code describing neuromuscular scoliosis, with an average length of stay of 18.2 days and average costs of \$79,809. We found a total of 3,654 cases in MS-DRG 457, with an average length of stay of 6.2 days and average costs of \$47,577. Twelve of these 3,654 cases reported a secondary diagnosis code describing neuromuscular scoliosis, with an average length of stay of 4.5 days and average costs of \$31,646. Finally, the 1,245 cases reported in MS-DRG 458 had an average length of stay of 3.4 days and average costs of \$34,179. Of these 1,245 cases, 6 cases reported neuromuscular scoliosis as a secondary diagnosis, with an average length of stay of 3.3 days and average costs of \$31,117.

We reviewed the ICD-10-CM Tabular List of Diseases for subcategory M41.4 and confirmed there is a “Code also underlying condition” note. We also reviewed the ICD-10-CM Official Guidelines for Coding and Reporting for

the “code also” note at Section 1.A.12.b., which states: “A ‘code also’ note instructs that two codes may be required to fully describe a condition, but this note does not provide sequencing direction.” Our clinical advisors agree that the sequencing of the ICD-10-CM diagnosis codes is determined by which condition leads to the encounter and is responsible for the admission. They also note that there may be instances in which the underlying cause of the diagnosis of neuromuscular scoliosis is not treated or responsible for the admission.

As discussed earlier, our review of the claims data shows that a small number of cases reported neuromuscular scoliosis either as a principal diagnosis in MS-DRGs 459 and 460 or as a secondary diagnosis in MS-DRGs 456, 457, and 458. Our clinical advisors agree that while the volume of cases is small, the average costs and average length of stay for the cases reporting neuromuscular scoliosis as a principal diagnosis with a non-cervical spinal fusion currently grouping to MS-DRGs 459 and 460 are more aligned with the average costs and average length of stay

for the cases reporting neuromuscular scoliosis as a secondary diagnosis with a non-cervical spinal fusion currently grouping to MS-DRGs 456, 457, and 458. Therefore, for the reasons described above, we are proposing to add the following ICD-10-CM codes describing neuromuscular scoliosis to the list of principal diagnosis codes for MS-DRGs 456, 457, and 458: M41.40; M41.44; M41.45; M41.46; and M41.47.

c. Secondary Scoliosis and Secondary Kyphosis

We received a request to add ICD-10-CM diagnosis codes describing secondary scoliosis and secondary kyphosis to the list of principal diagnoses for MS-DRGs 456, 457, and 458 (Spinal Fusion except Cervical with Spinal Curvature or Malignancy or Infection or Extensive Fusions with MCC, with CC, and without CC/MCC, respectively). Excluding the ICD-10-CM diagnosis codes that address the cervical spine, the following ICD-10-CM diagnosis codes are used to describe secondary scoliosis.

ICD-10-CM code	Code description
M41.50	Other secondary scoliosis, site unspecified.
M41.54	Other secondary scoliosis, thoracic region.
M41.55	Other secondary scoliosis, thoracolumbar region.
M41.56	Other secondary scoliosis, lumbar region.
M41.57	Other secondary scoliosis, lumbosacral region.

Excluding the ICD-10-CM diagnosis codes that address the cervical spine, the following ICD-10-CM diagnosis

codes are used to describe secondary kyphosis.

ICD-10-CM code	Code description
M40.10	Other secondary kyphosis, site unspecified.
M40.14	Other secondary kyphosis, thoracic region.
M40.15	Other secondary kyphosis, thoracolumbar region.

The requestor stated that generally in cases of diagnoses of secondary scoliosis or kyphosis, the underlying cause of the condition is not treated or is not

responsible for the admission. If a patient is admitted for surgery to correct non-cervical spinal curvature, it is appropriate to sequence the diagnosis of

secondary scoliosis or secondary kyphosis as principal diagnosis. However, reporting a diagnosis of secondary scoliosis or secondary

kyphosis as the principal diagnosis with a non-cervical spinal fusion procedure results in the case grouping to MS-DRG 459 or 460 (Spinal Fusion except Cervical with MCC and without MCC, respectively), instead of the spinal

fusion with spinal curvature MS-DRGs 456, 457, and 458.

We analyzed claims data from the September 2018 update of the FY 2018 MedPAR file for MS-DRGs 459 and 460 to determine the number of cases

reporting an ICD-10-CM diagnosis code describing secondary scoliosis or secondary kyphosis as the principal diagnosis. Our findings are shown in the following table.

MS-DRGs FOR CASES INVOLVING NON-CERVICAL SPINAL FUSION WITH A PRINCIPAL DIAGNOSIS OF SECONDARY SCOLIOSIS OR SECONDARY KYPHOSIS

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 459—All cases	3,903	8.6	\$46,416
MS-DRG 459—Cases with a principal diagnosis of secondary scoliosis	4	7.3	56,024
MS-DRG 459—Cases with a principal diagnosis of secondary kyphosis	4	5.8	41,883
MS-DRG 460—All cases	52,597	3.3	28,754
MS-DRG 460—Cases with a principal diagnosis of secondary scoliosis	34	3.6	34,424
MS-DRG 460—Cases with a principal diagnosis of secondary kyphosis	31	4.6	42,315

As shown in the table, we found a total of 3,903 cases in MS-DRG 459, with an average length of stay of 8.6 days and average costs of \$46,416. Of these 3,903 cases, we found 4 cases that reported a principal diagnosis of secondary scoliosis, with an average length of stay of 7.3 days and average costs of \$56,024. We also found 4 cases that reported a principal diagnosis of secondary kyphosis, with an average

length of stay of 5.8 days and average costs of \$41,883. For MS-DRG 460, we found a total of 52,597 cases with an average length of stay of 3.3 days and average costs of \$28,754. Of these 52,597 cases, we found 34 cases that reported a principal diagnosis of secondary scoliosis, with an average length of stay of 3.6 days and average costs of \$34,424. We found 31 cases that reported a principal diagnosis of

secondary kyphosis in MS-DRG 460, with an average length of stay of 4.6 days and average costs of \$42,315.

We also analyzed claims data for MS-DRGs 456, 457, and 458 to determine the number of cases reporting an ICD-10-CM diagnosis code describing secondary scoliosis or secondary kyphosis as a secondary diagnosis. Our findings are shown in the following table.

MS-DRGs FOR CASES INVOLVING NON-CERVICAL SPINAL FUSION WITH SPINAL CURVATURE OR MALIGNANCY OR INFECTION OR EXTENSIVE FUSIONS WITH SECONDARY DIAGNOSIS OF SECONDARY SCOLIOSIS OR SECONDARY KYPHOSIS

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 456—All cases	1,344	12	\$66,012
MS-DRG 456—Cases with a secondary diagnosis of secondary scoliosis	37	7.7	58,009
MS-DRG 456—Cases with a secondary diagnosis of secondary kyphosis	52	12	78,865
MS-DRG 457—All cases	3,654	6.2	47,577
MS-DRG 457—Cases with a secondary diagnosis of secondary scoliosis	187	4.9	37,655
MS-DRG 457—Cases with a secondary diagnosis of secondary kyphosis	114	5.2	37,357
MS-DRG 458—All cases	1,245	3.4	34,179
MS-DRG 458—Cases with a secondary diagnosis of secondary scoliosis	190	3.0	29,052
MS-DRG 458—Cases with a secondary diagnosis of secondary kyphosis	39	3.7	31,015

The data indicate that there were 1,344 cases in MS-DRG 456, with an average length of stay of 12 days and average costs of \$66,012. Of these 1,344 cases, there were 37 cases that reported a secondary diagnosis of secondary scoliosis, with an average length of stay of 7.7 days and average costs of \$58,009. There were also 52 cases in MS-DRG 456 reporting a secondary diagnosis of secondary kyphosis, with an average length of stay of 12 days and average costs of \$78,865. In MS-DRG 457, there was a total of 3,654 cases, with an average length of stay of 6.2 days and average costs of \$47,577. Of these 3,654 cases, there were 187 cases that reported secondary scoliosis as a secondary diagnosis, with an average length of stay of 4.9 days and average costs of \$37,655.

In MS-DRG 457, there were also 114 cases that reported a secondary diagnosis of secondary kyphosis, with an average length of stay of 5.2 days and average costs of \$37,357. Finally, there was a total of 1,245 cases in MS-DRG 458, with an average length of stay of 3.4 days and average costs of \$34,179. Of these 1,245 cases, there were 190 cases that reported a secondary diagnosis of secondary scoliosis, with an average length of stay of 3 days and average costs of \$29,052. There were 39 cases in MS-DRG 458 that reported a secondary diagnosis of secondary kyphosis, with an average length of stay of 3.7 days and average costs of \$31,015.

Our clinical advisors agree that the average length of stay and average costs for the small number of cases reporting

secondary scoliosis or secondary kyphosis as a principal diagnosis with a non-cervical spinal fusion currently grouping to MS-DRGs 459 and 460 are generally more aligned with the average length of stay and average costs for the cases reporting secondary scoliosis or secondary kyphosis as a secondary diagnosis with a non-cervical spinal fusion currently grouping to MS-DRGs 456, 457, and 458. They also note that there may be instances in which the underlying cause of the diagnosis of secondary scoliosis or secondary kyphosis is not treated or responsible for the admission.

Therefore, for the reasons described above, we are proposing to add the following ICD-10-CM diagnosis codes describing secondary scoliosis and

secondary kyphosis to the list of principal diagnosis codes for MS-DRGs 456, 457, and 458: M40.10; M40.14; M40.15; M41.50; M41.54; M41.55; M41.56; and M41.57. During our review of MS-DRGs 456, 457, and 458, we found the following diagnosis codes that describe conditions involving the cervical region.

ICD-10-CM code	Code description
M40.03	Postural kyphosis, cervicothoracic region.
M40.202	Unspecified kyphosis, cervical region.
M40.203	Unspecified kyphosis, cervicothoracic region.
M40.292	Other kyphosis, cervical region.
M40.293	Other kyphosis, cervicothoracic region.
M41.02	Infantile idiopathic scoliosis, cervical region.
M41.03	Infantile idiopathic scoliosis, cervicothoracic region.
M41.112	Juvenile idiopathic scoliosis, cervical region.
M41.113	Juvenile idiopathic scoliosis, cervicothoracic region.
M41.122	Adolescent idiopathic scoliosis, cervical region.
M41.123	Adolescent idiopathic scoliosis, cervicothoracic region.
M41.22	Other idiopathic scoliosis, cervical region.
M41.23	Other idiopathic scoliosis, cervicothoracic region.
M41.82	Other forms of scoliosis, cervical region.
M41.83	Other forms of scoliosis, cervicothoracic region.
M42.01	Juvenile osteochondrosis of spine, occipito-atlanto-axial region.
M42.02	Juvenile osteochondrosis of spine, cervical region.
M42.03	Juvenile osteochondrosis of spine, cervicothoracic region.
M43.8X1	Other specified deforming dorsopathies, occipito-atlanto-axial region.
M43.8X2	Other specified deforming dorsopathies, cervical region.
M43.8X3	Other specified deforming dorsopathies, cervicothoracic region.
M46.21	Osteomyelitis of vertebra, occipito-atlanto-axial region.
M46.22	Osteomyelitis of vertebra, cervical region.
M46.23	Osteomyelitis of vertebra, cervicothoracic region.
M48.51XA	Collapsed vertebra, not elsewhere classified, occipito-atlanto-axial region, initial encounter for fracture.
M48.52XA	Collapsed vertebra, not elsewhere classified, cervical region, initial encounter for fracture.
M48.53XA	Collapsed vertebra, not elsewhere classified, cervicothoracic region, initial encounter for fracture.
M40.12	Other secondary kyphosis, cervical region.
M40.13	Other secondary kyphosis, cervicothoracic region.
M41.41	Neuromuscular scoliosis, occipito-atlanto-axial region.
M4.142	Neuromuscular scoliosis, cervical region.
M4143	Neuromuscular scoliosis, cervicothoracic region.
M41.52	Other secondary scoliosis, cervical region.
M41.53	Other secondary scoliosis, cervicothoracic region.

Our clinical advisors noted that because the diagnosis codes shown in the table above describe conditions involving the cervical region, they are not clinically appropriate for assignment to MS-DRGs 456, 457, and 458, which are defined by non-cervical spinal fusion procedures (with spinal curvature or malignancy or infection or extensive fusions). Therefore, our clinical advisors recommended that these codes be removed from the MS-DRG logic for these MS-DRGs. As such, we are proposing to remove the diagnosis codes that describe conditions involving the cervical region as shown

in the table above from MS-DRGs 456, 457, and 458.

7. MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract): Extracorporeal Shock Wave Lithotripsy (ESWL)

We received two separate, but related requests to add ICD-10-CM diagnosis code N13.6 (Pyonephrosis) and ICD-10-CM diagnosis code T83.192A (Other mechanical complication of indwelling ureteral stent, initial encounter) to the list of principal diagnosis codes for MS-DRGs 691 and 692 (Urinary Stones with ESW Lithotripsy with CC/MCC and without CC/MCC, respectively) in MDC 11 so that cases are assigned more

appropriately when an Extracorporeal Shock Wave Lithotripsy (ESWL) procedure is performed.

ICD-10-CM diagnosis code N13.6 currently groups to MS-DRGs 689 and 690 (Kidney and Urinary Tract Infections with MCC and without MCC, respectively) and ICD-10-CM diagnosis code T83.192A currently groups to MS-DRGs 698, 699, and 700 (Other Kidney and Urinary Tract Diagnoses with MCC, with CC, and without CC/MCC, respectively).

The ICD-10-PCS procedure codes for identifying procedures involving ESWL are designated as non-O.R. procedures and are shown in the following table.

ICD-10-PCS code	Code description
OTF3XZZ	Fragmentation in right kidney pelvis, external approach.
OTF4XZZ	Fragmentation in left kidney pelvis, external approach.
OTF6XZZ	Fragmentation in right ureter, external approach.
OTF7XZZ	Fragmentation in left ureter, external approach.
OTFBXZZ	Fragmentation in bladder, external approach.
OTFCXZZ	Fragmentation in bladder neck, external approach.
OTFDXZZ	Fragmentation in urethra, external approach.

Pyonephrosis can be described as an infection of the kidney with pus in the upper collecting system which can progress to obstruction. Patients with an obstruction in the upper urinary tract due to urinary stones (calculi), tumors, fungus balls or ureteropelvic obstruction (UPJ) may also have a higher risk of developing pyonephrosis. If pyonephrosis is not recognized and treated promptly, it can result in serious complications, including fistulas, septic shock, irreversible damage to the kidneys, and death.

As noted above, the requestor recommended that ICD-10-CM diagnosis codes N13.6 and T83.192A be added to the list of principal diagnosis codes for MS-DRGs 691 and 692. There are currently four MS-DRGs that group cases for diagnoses involving urinary stones, which are subdivided to identify cases with and without an ESWL procedure: MS-DRGs 691 and 692 (Urinary Stones with ESW Lithotripsy with and without CC/MCC, respectively) and MS-DRGs 693 and 694 (Urinary Stones without ESW Lithotripsy with and without MCC, respectively).

The requestor stated that when patients who have been diagnosed with hydronephrosis secondary to renal and ureteral calculus obstruction undergo an ESWL procedure, ICD-10-CM diagnosis code N13.2 (Hydronephrosis with renal and ureteral calculous obstruction) is reported and groups to MS-DRGs 691 and 692. However, if a patient with a diagnosis of hydronephrosis has a urinary tract infection (UTI) in addition to a renal calculus obstruction and undergoes an ESWL procedure, ICD-10-CM diagnosis code N13.6 must be coded and reported as the principal diagnosis, which groups to MS-DRGs 689 and 690. The requestor stated that ICD-10-CM diagnosis code N13.6 should be grouped to MS-DRGs 691 and 692 when reported as a principal diagnosis

because this grouping will more appropriately reflect resource consumption for patients who undergo an ESWL procedure for obstructive urinary calculi, while also receiving treatment for urinary tract infections.

With regard to ICD-10-CM diagnosis code T83.192A, the requestor believed that when an ESWL procedure is performed for the treatment of calcifications within and around an indwelling ureteral stent, it is comparable to an ESWL procedure performed for the treatment of urinary calculi. Therefore, the requestor recommended adding ICD-10-CM diagnosis code T83.192A to MS-DRGs 691 and 692 when reported as a principal diagnosis and an ESWL procedure is also reported on the claim.

To analyze these separate, but related requests, we first reviewed the reporting of ICD-10-CM diagnosis code N13.6 within the ICD-10-CM classification. ICD-10-CM diagnosis code N13.6 is to be assigned for conditions identified in the code range N13.0-N13.5 with infection. (Codes in this range describe hydronephrosis with obstruction.) Infection may be documented by the patient's provider as urinary tract infection (UTI) or as specific as acute pyelonephritis. We agree with the requestor that if a patient with a diagnosis of hydronephrosis has a urinary tract infection (UTI) in addition to a renal calculus obstruction and undergoes an ESWL procedure, ICD-10-CM diagnosis code N13.6 must be coded and reported as the principal diagnosis, which groups to MS-DRGs 689 and 690. In this case scenario, the ESWL procedure is designated as a non-O.R. procedure and does not impact the MS-DRG assignment when reported with ICD-10-CM diagnosis code N13.6.

The ICD-10-CM classification instructs that when both a urinary obstruction and a genitourinary infection co-exist, the correct code

assignment for reporting is ICD-10-CM diagnosis code N13.6, which is appropriately grouped to MS-DRGs 689 and 690 (Kidney and Urinary Tract Infections with MCC and without MCC, respectively) because it describes a type of urinary tract infection. Therefore, in response to the requestor's suggestion that ICD-10-CM diagnosis code N13.6 be grouped to MS-DRGs 691 and 692 when reported as a principal diagnosis to more appropriately reflect resource consumption for patients who undergo an ESWL procedure for obstructive urinary calculi while also receiving treatment for urinary tract infections, we note that the ICD-10-CM classification provides instruction to identify the conditions reported with ICD-10-CM diagnosis code N13.6 as an infection, and not as urinary stones. Our clinical advisors agree with this classification and the corresponding MS-DRG assignment for diagnosis code N13.6. In addition, our clinical advisors noted that an ESWL procedure is a non-O.R. procedure and they do not believe that this procedure is a valid indicator of resource consumption for cases that involve an infection and obstruction. Our clinical advisors believe that the resources used for a case that involves an infection and an obstruction are clinically distinct from the cases that involve an obstruction only in the course of treatment. Therefore, our clinical advisors do not agree with the request to add ICD-10-CM diagnosis code N13.6 to the list of principal diagnoses for MS-DRGs 691 and 692.

We also performed various analyses of claims data to evaluate this request. We analyzed claims data from the September 2018 update of the FY 2018 MedPAR file for MS-DRGs 689 and 690 to identify cases reporting ICD-10-CM diagnosis code N13.6 as the principal diagnosis with and without an ESWL procedure. Our findings are reflected in the table below.

KIDNEY AND URINARY TRACT INFECTIONS WITH PRINCIPAL DIAGNOSIS OF PYONEPHROSIS WITH AND WITHOUT ESWL

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 689—All cases	68,020	4.8	\$7,873
MS-DRG 689—Cases with principal diagnosis of pyonephrosis	1,024	6.1	13,809
MS-DRG 689—Cases with principal diagnosis of pyonephrosis with ESWL	6	14.2	45,489
MS-DRG 690—All cases	131,999	3.5	5,692
MS-DRG 690—Cases with principal diagnosis of pyonephrosis	4,625	3.6	5,483
MS-DRG 690—Cases with principal diagnosis of pyonephrosis with ESWL	24	4.8	14,837

For MS-DRG 689, we found a total of 68,020 cases with an average length of stay of 4.8 days and average costs of \$7,873. Of those 68,020 cases, we found 1,024 cases reporting pyonephrosis

(ICD-10-CM diagnosis code N13.6) as a principal diagnosis with an average length of stay of 6.1 days and average costs of \$13,809. Of those 1,024 cases reporting pyonephrosis (ICD-10-CM

diagnosis code N13.6) as a principal diagnosis, there were 6 cases that also reported an ESWL procedure with an average length of stay of 14.2 days and average costs of \$45,489. For MS-DRG

690, we found a total of 131,999 cases with an average length of stay of 3.5 days and average costs of \$5,692. Of those 131,999 cases, we found 4,625 cases reporting pyonephrosis (ICD-10-CM diagnosis code N13.6) as a principal diagnosis with an average length of stay of 3.6 days and average costs of \$5,483. Of those 4,625 cases reporting pyonephrosis (ICD-10-CM diagnosis code N13.6) as a principal diagnosis, there were 24 cases that also reported an ESWL procedure with an average length of stay of 4.8 days and average costs of \$14,837.

The data indicate that the 1,024 cases reporting pyonephrosis (ICD-10-CM

diagnosis code N13.6) as a principal diagnosis in MS-DRG 689 have a longer average length of stay (6.1 days versus 4.8 days) and higher average costs (\$13,809 versus \$7,873) compared to all the cases in MS-DRG 689. The data also indicate that the 6 cases reporting pyonephrosis (ICD-10-CM diagnosis code N13.6) as a principal diagnosis that also reported an ESWL procedure have a longer average length of stay (14.2 days versus 4.8 days) and higher average costs (\$45,489 versus \$7,873) in comparison to all the cases in MS-DRG 689. We found similar results for cases reporting pyonephrosis (ICD-10-CM

diagnosis code N13.6) as a principal diagnosis with an ESWL procedure in MS-DRG 690, where the average length of stay was slightly longer (4.8 days versus 3.5 days) and the average costs were higher (\$14,837 versus \$5,692).

We then conducted further analysis for the six cases in MS-DRG 689 that reported a principal diagnosis of pyonephrosis with ESWL to determine what factors may be contributing to the longer lengths of stay and higher average costs. Specifically, we analyzed the MCC conditions that were reported across the six cases. Our findings are shown in the table below.

SECONDARY DIAGNOSIS MCC CONDITIONS REPORTED IN MS-DRG 689 WITH PRINCIPAL DIAGNOSIS OF PYONEPHROSIS WITH ESWL

ICD-10-CM code	Description	Number of times reported	Average length of stay	Average costs
A41.9	Sepsis, unspecified organism	2	26.5	96,525
G82.50	Quadriplegia, unspecified	1	7	13,782
I50.23	Acute on chronic systolic (congestive) heart failure	1	7	13,304
J96.01	Acute respiratory failure with hypoxia	1	7	13,304
K66.1	Hemoperitoneum	1	10	26,314
L89.153	Pressure ulcer of sacral region, stage 3	1	8	26,487
R57.1	Hypovolemic shock	1	10	26,314
Total		8	12.8	39,069

We found seven secondary diagnosis MCC conditions reported among the six cases in MS-DRG 689 that had a principal diagnosis of pyonephrosis with ESWL. These MCC conditions appear to have contributed to the longer lengths of stay and higher average costs for those six cases. As shown in the table above, the overall average length of

stay for the cases reporting these conditions is 12.8 days with average costs of \$39,069, which is consistent with the average length of stay of 14.2 days and average costs of \$45,489 for the cases in MS-DRG 689 that had a principal diagnosis of pyonephrosis with ESWL.

We then analyzed the 24 cases in MS-DRG 690 that reported a principal diagnosis of pyonephrosis with ESWL to determine what factors may be contributing to the longer lengths of stay and higher average costs. Specifically, we analyzed the CC conditions that were reported across the 24 cases. Our findings are shown in the table below.

SECONDARY DIAGNOSIS CC CONDITIONS REPORTED IN MS-DRG 690 WITH PRINCIPAL DIAGNOSIS OF PYONEPHROSIS WITH ESWL

ICD-10-CM code	Description	Number of times reported	Average length of stay	Average costs
B37.0	Candidal stomatitis	2	9.5	\$18,895
B37.49	Other urogenital candidiasis	2	7.5	30,458
C79.89	Secondary malignant neoplasm of other specified sites	1	3	5,882
E22.2	Syndrome of inappropriate secretion of antidiuretic hormone	1	2	5,979
E44.0	Moderate protein-calorie malnutrition	1	6	9,027
E46	Unspecified protein-calorie malnutrition	2	5.5	8,704
E87.0	Hyperosmolality and hypernatremia	1	6	9,027
E87.1	Hypo-osmolality and hyponatremia	1	5	12,339
F11.20	Opioid dependence, uncomplicated	1	1	8,209
F33.1	Major depressive disorder, recurrent, moderate	1	12	55,034
G81.94	Hemiplegia, unspecified affecting left nondominant side	3	9.3	25,390
G82.20	Paraplegia, unspecified	1	10	15,142
G93.40	Encephalopathy, unspecified	2	7	10,277
I13.0	Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney dis.	1	4	12,348
I48.1	Persistent atrial fibrillation	1	12	55,034
I50.22	Chronic systolic (congestive) heart failure	1	12	55,034
I50.32	Chronic diastolic (congestive) heart failure	2	3.5	9,115
I69.351	Hemiplegia and hemiparesis following cerebral infarction affecting right dominant side.	1	3	4,845

SECONDARY DIAGNOSIS CC CONDITIONS REPORTED IN MS-DRG 690 WITH PRINCIPAL DIAGNOSIS OF PYONEPHROSIS WITH ESWL—Continued

ICD-10-CM code	Description	Number of times reported	Average length of stay	Average costs
I69.859	Hemiplegia and hemiparesis following other cerebrovascular disease affecting unspecified side.	1	4	18,160
I97.791	Other intraoperative cardiac functional disturbances during other surgery	1	8	8,114
J44.0	Chronic obstructive pulmonary disease with acute lower respiratory infection.	1	11	25,641
J44.1	Chronic obstructive pulmonary disease with (acute) exacerbation	2	5	11,283
J96.10	Chronic respiratory failure, unspecified whether with hypoxia or hypercapnia.	1	12	55,034
J96.11	Chronic respiratory failure with hypoxia	2	7	15,243
K57.92	Diverticulitis of intestine, part unspecified, without perforation or abscess without bleeding.	1	8	12,150
N12	Tubulo-interstitial nephritis, not specified as acute or chronic	1	11	25,641
N13.8	Other obstructive and reflux uropathy	1	5	32,854
N17.9	Acute kidney failure, unspecified	1	2	21,329
N20.1	Calculus of ureter	1	10	15,142
N20.2	Calculus of kidney with calculus of ureter	1	6	9,027
R44.3	Hallucinations, unspecified	1	2	21,329
R47.01	Aphasia	1	4	10,161
R78.81	Bacteremia	1	11	4,849
S37.012A	Minor contusion of left kidney, initial encounter	1	2	21,329
T83.511A	Infection and inflammatory reaction due to indwelling urethral catheter, initial encounter.	1	10	15,142
Z68.1	Body mass index (BMI) 19.9 or less, adult	2	4.5	10,040
Z68.43	Body mass index (BMI) 50–59.9, adult	1	3	6,145
Total		47	6.6	18,173

We found 37 secondary diagnosis CC conditions reported among the 24 cases in MS-DRG 690 that had a principal diagnosis of pyonephrosis with ESWL. These CC conditions appear to have contributed to the longer length of stay and higher average costs for those 24 cases. As shown in the table above, the overall average length of stay for the cases reporting these conditions is 6.6 days with average costs of \$18,173, which is higher, although comparable, to the average length of stay of 4.8 days and average costs of \$14,837 for the cases in MS-DRG 690 that had a principal diagnosis of pyonephrosis

with ESWL. We note that it appears that 1 of the 24 cases had at least 4 secondary diagnosis CC conditions (F33.1, I48.1, I50.22, and J96.10) with an average length of stay of 12 days and average costs of \$55,034, which we believe contributed greatly overall to the longer length of stay and higher average costs for those secondary diagnosis CC conditions reported among the 24 cases.

Our clinical advisors agree that the resource consumption for the 6 cases in MS-DRG 689 and the 24 cases in MS-DRG 690 that reported a principal diagnosis of pyonephrosis with ESWL cannot be directly attributed to ESWL

and believe that it is the secondary diagnosis MCC and CC conditions that are the major contributing factors to the longer average length of stay and higher average costs for these cases.

We also analyzed claims data for MS-DRGs 691 and 692 (Urinary Stones with ESW Lithotripsy with CC/MCC and without CC/MCC, respectively) and MS-DRGs 693 and 694 (Urinary Stones without ESW Lithotripsy with MCC and without MCC, respectively) to identify claims reporting pyonephrosis (ICD-10-CM diagnosis code N13.6) as a secondary diagnosis. Our findings are shown in the following table.

MS-DRGs FOR URINARY STONES WITH SECONDARY DIAGNOSIS OF PYONEPHROSIS WITH AND WITHOUT ESWL

MS-DRG	Number of times reported	Average length of stay	Average costs
MS-DRG 691—All cases	140	3.9	\$11,997
MS-DRG 691—Cases with secondary diagnosis of pyonephrosis and ESWL	3	8	24,280
MS-DRG 692—All cases	124	2.1	8,326
MS-DRG 693—All cases	1,315	5.1	9,668
MS-DRG 693—Cases with secondary diagnosis of pyonephrosis	16	5.5	9,962
MS-DRG 694—All cases	7,240	2.7	5,263
MS-DRG 694—Cases with secondary diagnosis of pyonephrosis	89	3.5	6,678

As shown in the table above, in MS-DRG 691, there was a total of 140 cases with an average length of stay of 3.9 days and average costs of \$11,997. Of those 140 cases, there were 3 cases that reported pyonephrosis as a secondary

diagnosis and an ESWL procedure with an average length of stay of 8.0 days and average costs of \$24,280. There was a total of 124 cases found in MS-DRG 692 with an average length of stay of 2.1 days and average costs of \$8,326. There

were no cases in MS-DRG 692 that reported pyonephrosis as a secondary diagnosis with an ESWL procedure. For MS-DRG 693, there was a total of 1,315 cases with an average length of stay of 5.1 days and average costs of \$9,668. Of

those 1,315 cases, there were 16 cases reporting pyonephrosis as a secondary diagnosis with an average length of stay of 5.5 days and average costs of \$9,962. For MS-DRG 694, there was a total of 7,240 cases with an average length of stay of 2.7 days and average costs of \$5,263. Of those 7,240 cases, there were 89 cases reporting pyonephrosis as a

secondary diagnosis with an average length of stay of 3.5 days and average costs of \$6,678.

Similar to the process described above, we then conducted further analysis for the three cases in MS-DRG 691 that reported a secondary diagnosis of pyonephrosis with ESWL to determine what factors may be

contributing to the longer lengths of stay and higher average costs. Specifically, we analyzed what other MCC and CC conditions were reported across the three cases. We found no other MCC conditions reported for those three cases. Our findings for the CC conditions reported for those three cases are shown in the table below.

SECONDARY DIAGNOSIS CC CONDITIONS REPORTED IN MS-DRG 691

ICD-10-CM code	Description	Number of times reported	Average length of stay	Average costs
E44.0	Moderate protein-calorie malnutrition	1	15	\$52,384
J96.10	Chronic respiratory failure, unspecified whether with hypoxia or hypercapnia.	1	7	15,110
N13.6	Pyonephrosis	2	8.5	28,865
N17.9	Acute kidney failure, unspecified	1	2	5,346
N39.0	Urinary tract infection, site not specified	1	2	5,346
Q79.6	Ehlers-Danlos syndrome	1	2	5,346
Total		7	6.4	20,181

We found six secondary diagnosis CC conditions reported among the three cases in MS-DRG 691 that had a secondary diagnosis of pyonephrosis with ESWL. These CC conditions appear to have contributed to the longer lengths of stay and higher average costs for those three cases. As shown in the table above, the overall average length of stay for the cases reporting these conditions is 6.4 days with average costs of \$20,181, which is more consistent with the average length of stay of 8.0 days and average costs of \$24,280 for the cases in MS-DRG 691 that had a secondary diagnosis of pyonephrosis with ESWL.

Our clinical advisors believe that the resource consumption for those three cases cannot be directly attributed to ESWL and that it is the secondary diagnosis CC conditions reported in addition to pyonephrosis, which is also designated as a CC condition, that are the major contributing factors for the longer average lengths of stay and higher average costs for these cases in MS-DRG 691.

We did not conduct further analysis for the 16 cases in MS-DRG 693 or the 89 cases in MS-DRG 694 that reported

a secondary diagnosis of pyonephrosis because MS-DRGs 693 and 694 do not include ESWL procedures and the average length of stay and average costs for those cases were consistent with the data findings for all of the cases in their assigned MS-DRG.

As discussed earlier in this section, the requestor suggested that ICD-10-CM diagnosis code N13.6 should be grouped to MS-DRGs 691 and 692 when reported as a principal diagnosis because this grouping will more appropriately reflect resource consumption for patients who undergo an ESWL procedure for obstructive urinary calculi, while also receiving treatment for urinary tract infections. However, based on the results of the data analysis and input from our clinical advisors, we believe that cases for which ICD-10-CM diagnosis code N13.6 was reported as a principal diagnosis or as a secondary diagnosis with an ESWL procedure should not be utilized as an indicator for increased utilization of resources based on the performance of an ESWL procedure. Rather, we believe that the resource consumption is more likely the result of

secondary diagnosis CC and/or MCC diagnosis codes.

With respect to the requestor's concern that cases reporting ICD-10-CM diagnosis code T83.192A (Other mechanical complication of indwelling ureteral stent, initial encounter) and an ESWL procedure are not appropriately assigned and should be added to the list of principal diagnoses for MS-DRGs 691 and 692 (Urinary Stones with ESW Lithotripsy with CC/MCC and without CC/MCC, respectively), our clinical advisors note that ICD-10-CM diagnosis code T83.192A is not necessarily indicative of a patient having urinary stones. As such, they do not support adding ICD-10-CM diagnosis code T83.192A to the list of principal diagnosis codes for MS-DRGs 691 and 692.

We analyzed claims data to identify cases reporting ICD-10-CM diagnosis code T83.192A as a principal diagnosis with ESWL in MS-DRGs 698, 699, and 700 (Other Kidney and Urinary Tract Diagnoses with MCC, with CC, and without CC/MCC, respectively). Our findings are shown in the following table.

MS-DRGs FOR OTHER KIDNEY AND URINARY TRACT DIAGNOSES WITH PRINCIPAL DIAGNOSIS OF OTHER MECHANICAL COMPLICATIONS OF INDWELLING URETERAL STENT WITH ESWL

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 698—All cases	56,803	6.1	\$11,220
MS-DRG 698—Cases with diagnosis code T83.192A reported as principal diagnosis	35	7.1	14,574
MS-DRG 699—All cases	33,693	4.2	7,348
MS-DRG 699—Cases with diagnosis code T83.192A reported as principal diagnosis	63	4.1	7,652
MS-DRG 699—Cases with diagnosis code T83.192A reported as principal diagnosis with ESWL	1	3	7,986

MS-DRGs FOR OTHER KIDNEY AND URINARY TRACT DIAGNOSES WITH PRINCIPAL DIAGNOSIS OF OTHER MECHANICAL COMPLICATIONS OF INDWELLING URETERAL STENT WITH ESWL—Continued

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 700—All cases	3,719	3	5,356

For MS-DRG 698, there was a total of 56,803 cases reported, with an average length of stay of 6.1 days and average costs of \$11,220. Of these 56,803 cases, 35 cases reported ICD-10-CM diagnosis code T83.192A as the principal diagnosis, with an average length of stay of 7.1 days and average costs of \$14,574. There were no cases that reported an ESWL procedure with ICD-10-CM diagnosis code T83.192A as the principal diagnosis in MS-DRG 698. For MS-DRG 699, there was a total of 33,693 cases reported, with an average length of stay of 4.2 days and average costs of \$7,348. Of the 33,693 cases in MS-DRG 699, there were 63 cases that reported ICD-10-CM diagnosis code T83.192A as the principal diagnosis,

with an average length of stay of 4.1 days and average costs of \$7,652. There was only 1 case in MS-DRG 699 that reported ICD-10-CM diagnosis code T83.192A as the principal diagnosis with an ESWL procedure, with an average length of stay of 3 days and average costs of \$7,986. For MS-DRG 700, there was a total of 3,719 cases reported, with an average length of stay of 3 days and average costs of \$5,356. There were no cases that reported ICD-10-CM diagnosis code T83.192A as the principal diagnosis in MS-DRG 700. Of the 98 cases in MS-DRGs 698 and 699 that reported a principal diagnosis of other mechanical complication of indwelling ureteral stent (diagnosis code T83.192A), only 1 case also

reported an ESWL procedure. Based on the results of our data analysis and input from our clinical advisors, we are not proposing to add ICD-10-CM diagnosis code T83.192A to the list of principal diagnosis codes for MS-DRGs 691 and 692.

In connection with these requests, our clinical advisors recommended that we evaluate the frequency with which ESWL is reported in the inpatient setting across all the MS-DRGs. Therefore, we also analyzed claims data from the September 2018 update of the FY 2018 MedPAR file to identify the other MS-DRGs to which claims reporting an ESWL procedure were reported. Our findings are shown in the following table.

MS-DRGs	MS-DRG description
654	Major Bladder Procedures with CC.
657	Kidney and Ureter Procedures for Neoplasm with CC.
659, 660, 661	Kidney and Ureter Procedures for Non-Neoplasm with MCC, with CC, without CC/MCC, respectively.
662, 663	Minor Bladder Procedures with MCC and with CC, respectively.
665, 666	Prostatectomy with MCC and with CC, respectively.
668, 669, 670	Transurethral Procedures with MCC, with CC, and without CC/MCC, respectively.
671	Urethral Procedures with CC/MCC.
682, 683	Renal Failure with MCC and with CC, respectively.
689, 690	Kidney and Urinary Tract Infections with MCC and without MCC, respectively.
691, 692	Urinary Stones with ESW Lithotripsy with CC/MCC and without CC/MCC, respectively.
696	Kidney and Urinary Tract Signs and Symptoms without MCC.
698, 699, 700	Other Kidney and Urinary Tract Diagnoses with MCC, with CC, and without CC/MCC, respectively.
982	Extensive O.R. Procedure Unrelated to Principal Diagnosis with CC.

Our findings with respect to the cases reporting an ESWL procedure in each of these MS-DRGs, as compared to all cases in the applicable MS-DRG, are shown in the table below.

MS-DRG	Number of times reported	Average length of stay	Average costs
MS-DRG 654—All cases	3,838	6.7	\$19,805
MS-DRG 654—Cases reporting ESWL	1	5	9,102
MS-DRG 657—All cases	7,242	4.1	14,047
MS-DRG 657—Cases reporting ESWL	2	2	19,021
MS-DRG 659—All cases	7,761	8.1	18,717
MS-DRG 659—Cases reporting ESWL	71	11.1	26,366
MS-DRG 660—All cases	17,617	4.1	10,292
MS-DRG 660—Cases reporting ESWL	193	4	13,627
MS-DRG 661—All cases	12,434	2.3	7,997
MS-DRG 661—Cases reporting ESWL	154	2.7	12,639
MS-DRG 662—All cases	614	10.2	23,110
MS-DRG 662—Cases reporting ESWL	1	22	57,520
MS-DRG 663—All cases	1,349	5	11,213
MS-DRG 663—Cases reporting ESWL	2	3.5	15,870
MS-DRG 665—All cases	589	9.4	21,328
MS-DRG 665—Cases reporting ESWL	2	16.5	17,710
MS-DRG 666—All cases	1,517	5.6	13,060
MS-DRG 666—Cases reporting ESWL	2	9.5	16,521
MS-DRG 668—All cases	2,065	9	20,229

MS-DRG	Number of times reported	Average length of stay	Average costs
MS-DRG 668—Cases reporting ESWL	1	4	19,383
MS-DRG 669—All cases	5,259	4.9	11,217
MS-DRG 669—Cases reporting ESWL	5	2.4	13,006
MS-DRG 670—All cases	1,707	2.6	7,177
MS-DRG 670—Cases reporting ESWL	5	3	18,416
MS-DRG 671—All cases	367	6.4	13,519

MS-DRG 696—All cases	5,933	2.9	4,938
MS-DRG 696—Cases reporting ESWL	2	2.5	6,238
MS-DRG 698—All cases	56,803	6.1	11,220
MS-DRG 698—Cases reporting ESWL	18	9.2	27,818
MS-DRG 699—All cases	33,693	4.2	7,348
MS-DRG 699—Cases reporting ESWL	9	4.4	10,986
MS-DRG 700—All cases	3,719	3	5,356
MS-DRG 700—Cases reporting ESWL	1	1	7,580
MS-DRG 982—All cases	16,834	6.3	16,939
MS-DRG 982—Cases reporting ESWL	2	11	74,751

Our data analysis indicates that, generally, the subset of cases reporting an ESWL procedure appear to have a longer average length of stay and higher average costs when compared to all the cases in their assigned MS-DRG. However, we note that this same subset of cases also reported at least one O.R. procedure and/or diagnosis designated as a CC or an MCC, which our clinical advisors believe are contributing factors to the longer average lengths of stay and

higher average costs, with the exception of the case assigned to MS-DRG 700, which is a medical MS-DRG and has no CC or MCC conditions in the logic. Therefore, our clinical advisors do not believe that cases reporting an ESWL procedure should be considered as an indication of increased resource consumption for inpatient hospitalizations.

Our clinical advisors also suggested that we evaluate the reporting of ESWL

procedures in the inpatient setting over the past few years. We analyzed claims data for MS-DRGs 691 and 692 from the FY 2012 through the FY 2016 MedPAR files, which were used in our analysis of claims data for MS-DRG reclassification requests effective for FY 2014 through FY 2018. We note that the analysis findings shown in the following table reflect ICD-9-CM, ICD-10-CM and ICD-10-PCS coded claims data.

MS-DRG	FY 2014 (version 31)			FY 2015 (version 32)			FY 2016 (version 33)			FY 2017 (version 34)			FY 2018 (version 35)		
	Number of cases	Average length of stay	Average costs	Number of cases	Average length of stay	Average costs	Number of cases	Average length of stay	Average costs	Number of cases	Average length of stay	Average costs	Number of cases	Average length of stay	Average costs
MS-DRG 691—Urinary Stones with ESWL Lithotripsy w CC/MCC	898	3.77	\$10,274	832	3.81	\$11,141	812	3.72	\$11,534	750	4.06	\$11,907	448	3.4	\$11,502
MS-DRG 692—Urinary Stones with ESWL Lithotripsy without CC/MCC	231	2.02	7,292	197	2.14	8,041	133	2.32	9,273	103	2.39	9,398	61	2.3	8,702

The data show a steady decline in the number of cases reporting urinary stones with an ESWL procedure for the past 5 years. As previously noted, the total number of cases reporting urinary stones with an ESWL procedure for MS-DRGs 691 and 692 based on our analysis of the September 2018 update of the FY 2018 MedPAR file was 264, which again is a decline from the prior year's figures. As discussed throughout this section, an ESWL procedure is a non-O.R.

procedure which currently groups to medical MS-DRGs 691 and 692. Therefore, because an ESWL procedure is a non-O.R. procedure and due to decreased usage of this procedure in the inpatient setting for the treatment of urinary stones, our clinical advisors believe that there is no longer a clinical reason to subdivide the MS-DRGs for urinary stones (MS-DRGs 691, 692, 693, and 694) based on ESWL procedures.

Therefore, we are proposing to delete MS-DRGs 691 and 692 and to revise the

titles for MS-DRGs 693 and 694 from "Urinary Stones without ESWL Lithotripsy with MCC" and "Urinary Stones without ESWL Lithotripsy without MCC", respectively to "Urinary Stones with MCC" and "Urinary Stones without MCC", respectively.

8. MDC 12 (Diseases and Disorders of the Male Reproductive System): Diagnostic Imaging of Male Anatomy

We received a request to review four ICD-10-CM diagnosis codes describing

body parts associated with male anatomy that are currently assigned to MDC 5 (Diseases and Disorders of the

Circulatory System) in MS-DRGs 302 and 303 (Atherosclerosis with MCC and Atherosclerosis without MCC,

respectively). The four codes are listed in the following table.

ICD-10-CM code	Code description
R93.811	Abnormal radiologic findings on diagnostic imaging of right testicle.
R93.812	Abnormal radiologic findings on diagnostic imaging of left testicle.
R93.813	Abnormal radiologic findings on diagnostic imaging of testicles, bilateral.
R93.819	Abnormal radiologic findings on diagnostic imaging of unspecified testicle.

The requestor recommended that the four diagnosis codes shown in the table above be considered for assignment to MDC 12 (Diseases and Disorders of the Male Reproductive System), consistent with other diagnosis codes that include the male anatomy. However, the requestor did not suggest a specific MS-DRG assignment within MDC 12.

We examined claims data from the September 2018 update of the FY 2018 MedPAR file for MS-DRGs 302 and 303 to identify any cases reporting a diagnosis code for abnormal radiologic findings on diagnostic imaging of the testicles. We did not find any such cases.

Our clinical advisors reviewed this request and determined that the assignment of diagnosis codes R93.811, R93.812, R93.813, and R93.819 to MDC 5 in MS-DRGs 302 and 303 was a result of replication from ICD-9-CM diagnosis code 793.2 (Nonspecific (abnormal) findings on radiological and other examination of other intrathoracic organs) which was assigned to those MS-DRGs. Therefore, our clinical advisors support reassignment of these codes to MDC 12. Our clinical advisors agree that this reassignment is clinically appropriate because these diagnosis codes are specific to the male anatomy, consistent with other diagnosis codes in MDC 12 that include the male anatomy. Specifically, our clinical advisors suggest reassignment of the four diagnosis codes to MS-DRGs 729 and 730 (Other Male Reproductive System Diagnoses with CC/MCC and without CC/MCC, respectively). Therefore, we are proposing to reassign ICD-10-CM diagnosis codes R93.811, R93.812, R93.813, and R93.819 from MDC 5 in MS-DRGs 302 and 303 to MDC 12 in MS-DRGs 729 and 730.

9. MDC 14 (Pregnancy, Childbirth and the Puerperium): Proposed Reassignment of Diagnosis Code O99.89

We received a request to review the MS-DRG assignment for cases reporting ICD-10-CM diagnosis code O99.89 (Other specified diseases and conditions complicating pregnancy, childbirth and the puerperium). The requestor stated that it is experiencing MS-DRG shifts to MS-DRG 769 (Postpartum and Post Abortion Diagnoses with O.R. Procedure) as a result of the new obstetric MS-DRG logic when ICD-10-CM diagnosis code O99.89 is reported as a principal diagnosis in the absence of a delivery code on the claim (to indicate the patient delivered during that hospitalization), or when there is no other secondary diagnosis code on the claim indicating that the patient is in the postpartum period. According to the requestor, claims reporting ICD-10-CM diagnosis code O99.89 as a principal diagnosis for conditions described as occurring during the antepartum period that are reported with an O.R. procedure are grouping to MS-DRG 769. In the example provided by the requestor, ICD-10-CM diagnosis code O99.89 was reported as the principal diagnosis, with ICD-10-CM diagnosis codes N13.2 (Hydronephrosis with renal and ureteral calculous obstruction) and Z3A.25 (25 weeks of gestation of pregnancy) reported as secondary diagnoses with ICD-10-PCS procedure code 0T68DZ (Dilation of right ureter with intraluminal device, endoscopic approach), resulting in assignment to MS-DRG 769. The requestor noted that, in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41212), we stated “If there was not a principal diagnosis of abortion reported on the claim, the logic asks if there was a principal diagnosis of an antepartum condition reported on the claim. If yes, the logic then asks if there was an O.R. procedure reported on the claim. If yes, the logic assigns the case to one of the proposed new MS-

DRGs 817, 818, or 819.” In the requestor’s example, there were not any codes reported to indicate that the patient was in the postpartum period, nor was there a delivery code reported on the claim. Therefore, the requestor suggested that a more appropriate assignment for ICD-10-CM diagnosis code O99.89 may be MS-DRGs 817, 818, and 819 (Other Antepartum Diagnoses with O.R. Procedure with MCC, with CC and without CC/MCC, respectively).

In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41202 through 41216), we finalized our proposal to restructure the MS-DRGs within MDC 14 (Pregnancy, Childbirth and the Puerperium) which established new concepts for the GROUPER logic. As a result of the modifications made, ICD-10-CM diagnosis code O99.89 was classified as a postpartum condition and is currently assigned to MS-DRG 769 (Postpartum and Post Abortion Diagnoses with O.R. Procedure) and MS-DRG 776 (Postpartum and Post Abortion Diagnoses without O.R. Procedure) under the Version 36 ICD-10 MS-DRGs. As also discussed and displayed in Diagram 2 in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41212 through 41213), the logic asks if there was a principal diagnosis of a postpartum condition reported on the claim. If yes, the logic then asks if there was an O.R. procedure reported on the claim. If yes, the logic assigns the case to MS-DRG 769. If no, the logic assigns the case to MS-DRG 776. Therefore, the MS-DRG assignment for the example provided by the requestor is grouping accurately according to the current GROUPER logic.

We analyzed claims data from the September 2018 update of the FY 2018 MedPAR file for cases reporting diagnosis code O99.89 in MS-DRGs 769 and 776 as a principal diagnosis or as a secondary diagnosis. Our findings are shown in the following table.

POSTPARTUM MS-DRGs WITH PRINCIPAL OR SECONDARY DIAGNOSIS OF OTHER SPECIFIED DISEASES AND CONDITIONS COMPLICATING PREGNANCY, CHILDBIRTH AND THE PUERPERIUM

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 769—All cases	91	4.3	\$11,015
MS-DRG 769—Cases reporting diagnosis code O99.89 as principal diagnosis	7	5.6	19,059
MS-DRG 769—Cases reporting diagnosis code O99.89 as secondary diagnosis	61	12.1	41,717
MS-DRG 776—All cases	560	3.1	5,332
MS-DRG 776—Cases reporting diagnosis code O99.89 as principal diagnosis	57	3.5	6,439

As shown in the table above, we found a total of 91 cases in MS-DRG 769 with an average length of stay of 4.3 days and average costs of \$11,015. Of these 91 cases, 7 cases reported ICD-10-CM diagnosis code O99.89 as a principal diagnosis with an average length of stay of 5.6 days and average costs of \$19,059, and 61 cases reported ICD-10-CM diagnosis code O99.89 as a secondary diagnosis with an average length of stay of 12.1 days and average costs of \$41,717. For MS-DRG 776, we found a total of 560 cases with an average length of stay of 3.1 days and average costs of \$5,332. Of these 560 cases, 57 cases reported ICD-10-CM diagnosis code O99.89 as a principal diagnosis with an average length of stay of 3.5 days and average costs of \$6,439. There were no cases reporting ICD-10-CM diagnosis code O99.89 as a secondary diagnosis in MS-DRG 776.

For MS-DRG 769, the data show that the 68 cases reporting ICD-10-CM diagnosis code O99.89 as a principal or secondary diagnosis have a longer average length of stay and higher average costs compared to all the cases in MS-DRG 769. For MS-DRG 776, the data show that the 57 cases reporting a principal diagnosis of ICD-10-CM diagnosis code O99.89 have a similar average length of stay compared to all the cases in MS-DRG 776 (3.5 days

versus 3.1 days) and average costs that are consistent with the average costs of all cases in MS-DRG 776 (\$6,439 versus \$5,332).

We note that the description for ICD-10-CM diagnosis code O99.89 “Other specified diseases and conditions complicating pregnancy, childbirth and the puerperium”, describes conditions that may occur during the antepartum period (pregnancy), during childbirth, or during the postpartum period (puerperium). In addition, in the ICD-10-CM Tabular List of Diseases, there is an inclusion term at subcategory O99.8-instructing users that the reporting of any diagnosis codes in that subcategory is intended for conditions that are reported in certain ranges of the classification. Specifically, the inclusion term states “Conditions in D00-D48, H00-H95, M00-N99, and Q00-Q99.” There is also an instructional note to “Use additional code to identify condition.” As a result, ICD-10-CM diagnosis code O99.89 may be reported to identify conditions that occur during the antepartum period (pregnancy), during childbirth, or during the postpartum period (puerperium). However, it is not restricted to the reporting of obstetric specific conditions only. In the example provided by the requestor, ICD-10-CM diagnosis code O99.89 was reported as the principal

diagnosis with ICD-10-CM diagnosis code N13.2 (Hydronephrosis with renal and ureteral calculous obstruction) as a secondary diagnosis. ICD-10-CM diagnosis code N13.2 is within the code range referenced earlier in this section (M00-N99) and qualifies as an appropriate condition for reporting according to the instruction.

As noted earlier, ICD-10-CM diagnosis code O99.89 is intended to report conditions that occur during the antepartum period (pregnancy), during childbirth, or during the postpartum period (puerperium) and is not restricted to the reporting of obstetric specific conditions only. However, because the diagnosis code description includes three distinct obstetric related stages, it is not clear what stage the patient is in by this single code. For example, upon review of subcategory O99.8-, we recognized that the other ICD-10-CM diagnosis code sub-subcategories are expanded to include unique codes that identify the condition as occurring or complicating pregnancy, childbirth or the puerperium. Specifically, sub-subcategory O99.81- (Abnormal glucose complicating pregnancy, childbirth, and the puerperium) is expanded to include the following ICD-10-CM diagnosis codes.

ICD-10-CM code	Code description
O99.810	Abnormal glucose complicating pregnancy.
O99.814	Abnormal glucose complicating childbirth.
O99.815	Abnormal glucose complicating the puerperium.

The codes listed above specifically identify at what stage the abnormal glucose was a complicating condition. Because each code uniquely identifies a stage, the code can be easily classified under MDC 14 as an antepartum condition (ICD-10-CM diagnosis code O99.810), occurring during a delivery episode (ICD-10-CM diagnosis code

O99.814), or as a postpartum condition (ICD-10-CM diagnosis code O99.815). The same is not true for ICD-10-CM diagnosis code O99.89 because it includes all three stages in the single code.

Therefore, we examined the number and type of secondary diagnoses reported with ICD-10-CM diagnosis

code O99.89 as a principal diagnosis for MS-DRGs 769 and 776 to identify how many secondary diagnoses were related to other obstetric conditions and how many were related to non-obstetric conditions.

MS-DRG	Number of secondary diagnoses reported with O99.89 as principal	Number of secondary OB related diagnoses	Number of secondary OB related antepartum diagnoses	Number of secondary OB related postpartum diagnoses	Number of secondary OB related delivery diagnoses	Number of secondary non-OB related diagnoses
MS-DRG 769	59	13	11	1	1	46
MS-DRG 776	376	113	88	19	6	263

As shown in the table above, there was a total of 59 secondary diagnoses reported with diagnosis code O99.89 as the principal diagnosis for MS-DRG 769. Of those 59 secondary diagnoses, 13 were obstetric (OB) related diagnosis codes (11 antepartum, 1 postpartum and 1 delivery) and 46 were non-obstetric (Non-OB) related diagnosis codes. For MS-DRG 776, there was a total of 376 secondary diagnoses reported with diagnosis code O99.89 as the principal diagnosis. Of those 376 secondary diagnoses, 113 were obstetric (OB) related diagnosis codes (88 antepartum, 19 postpartum and 6 delivery) and 263 were non-obstetric (Non-OB) related diagnosis codes.

The data reflect that, for MS-DRGs 769 and 776, the number of secondary diagnoses identified as OB-related antepartum diagnoses is greater than the

number of secondary diagnoses identified as OB-related postpartum diagnoses (99 antepartum diagnoses versus 20 postpartum diagnoses). The data also indicate that, of the 435 secondary diagnoses reported with ICD-10-CM diagnosis code O99.89 as the principal diagnosis, 309 (71 percent) of those secondary diagnoses were non-OB-related diagnosis codes. Because there was a greater number of secondary diagnoses identified as OB-related antepartum diagnoses compared to the OB-related postpartum diagnoses within the postpartum MS-DRGs when ICD-10-CM diagnosis code O99.89 was reported as the principal diagnosis, we performed further analysis of diagnosis code O99.89 within the antepartum MS-DRGs.

Under the Version 35 ICD-10 MS-DRGs, diagnosis code O99.89 was

classified as an antepartum condition and was assigned to MS-DRG 781 (Other Antepartum Diagnoses with Medical Complications). Therefore, we also analyzed claims data for MS-DRGs 817, 818 and 819 (Other Antepartum Diagnoses with O.R. Procedure with MCC, with CC and without CC/MCC, respectively) and MS-DRGs 831, 832, and 833 (Other Antepartum Diagnoses without O.R. Procedure with MCC, with CC and without CC/MCC, respectively) for cases reporting ICD-10-CM diagnosis code O99.89 as a secondary diagnosis. We note that the analysis for the proposed FY 2020 ICD-10 MS-DRGs is based upon the September 2018 update of the FY 2018 MedPAR claims data that were grouped through the ICD-10 MS-DRG GROUPER Version 36. Our findings are shown in the table below.

ANTEPARTUM MS-DRGs WITH SECONDARY DIAGNOSIS OF OTHER SPECIFIED DISEASES AND CONDITIONS COMPLICATING PREGNANCY, CHILDBIRTH AND THE PUERPERIUM

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 817—All cases	63	5.7	\$14,948
MS-DRG 817—Cases reporting diagnosis code O99.89 as secondary diagnosis	8	10.8	24,359
MS-DRG 818—All cases	78	4.1	9,343
MS-DRG 818—Cases reporting diagnosis code O99.89 as secondary diagnosis	7	3.4	14,182
MS-DRG 819—All cases	25	2.2	5,893
MS-DRG 819—Cases reporting diagnosis code O99.89 as secondary diagnosis	1	1	4,990
MS-DRG 831—All cases	747	4.8	7,714
MS-DRG 831—Cases reporting diagnosis code O99.89 as secondary diagnosis	127	5.4	7,050
MS-DRG 832—All cases	1,142	3.6	5,159
MS-DRG 832—Cases reporting diagnosis code O99.89 as secondary diagnosis	145	4.2	5,656
MS-DRG 833—All cases	537	2.6	3,807
MS-DRG 833—Cases reporting diagnosis code O99.89 as secondary diagnosis	47	2.6	3,307

As shown in the table above, we found a total of 63 cases in MS-DRG 817 with an average length of stay of 5.7 days and average costs of \$14,948. Of these 63 cases, there were 8 cases reporting ICD-10-CM diagnosis code O99.89 as a secondary diagnosis with an average length of stay of 10.8 days and average costs of \$24,359. For MS-DRG 818, we found a total of 78 cases with an average length of stay of 4.1 days and average costs of \$9,343. Of these 78 cases, there were 7 cases reporting ICD-10-CM diagnosis code O99.89 as a secondary diagnosis with an average length of stay of 3.4 days and average

costs of \$14,182. For MS-DRG 819, we found a total of 25 cases with an average length of stay of 2.2 days and average costs of \$5,893. Of these 25 cases, there was 1 case reporting ICD-10-CM diagnosis code O99.89 as a secondary diagnosis with an average length of stay of 1 day and average costs of \$4,990.

For MS-DRG 831, we found a total of 747 cases with an average length of stay of 4.8 days and average costs of \$7,714. Of these 747 cases, there were 127 cases reporting ICD-10-CM diagnosis code O99.89 as a secondary diagnosis with an average length of stay of 5.4 days and average costs of \$7,050. For MS-DRG

832, we found a total of 1,142 cases with an average length of stay of 3.6 days and average costs of \$5,159. Of these 1,142 cases, there were 145 cases reporting ICD-10-CM diagnosis code O99.89 as a secondary diagnosis with an average length of stay of 4.2 days and average costs of \$5,656. For MS-DRG 833, we found a total of 537 cases with an average length of stay of 2.6 days and average costs of \$3,807. Of these 537 cases, there were 47 cases reporting ICD-10-CM diagnosis code O99.89 as a secondary diagnosis with an average length of stay of 2.6 days and average costs of \$3,307.

Overall, there was a total of 335 cases reporting ICD-10-CM diagnosis code O99.89 as a secondary diagnosis within the antepartum MS-DRGs. Of those 335 cases, 16 cases involved an O.R. procedure and 319 cases did not involve an O.R. procedure. The data indicate that ICD-10-CM diagnosis code O99.89 is reported more often as a secondary diagnosis within the antepartum MS-DRGs (335 cases) than it is reported as a principal or secondary diagnosis within the postpartum MS-DRGs (125 cases).

Our clinical advisors believe that, because ICD-10-CM diagnosis code O99.89 can be reported during the antepartum period (pregnancy), during childbirth, or during the postpartum period (puerperium), there is not a clear clinical indication as to which set of MS-DRGs (antepartum, delivery, or postpartum) would be the most appropriate assignment for this diagnosis code. They recommended that we collaborate with the National Center for Health Statistics (NCHS) at the Centers for Disease Control and Prevention (CDC), in consideration of a proposal to possibly expand ICD-10-CM diagnosis code O99.89 to become a sub-subcategory that would result in the creation of unique codes with a sixth digit character to specify which obstetric related stage the patient is in. For example, under subcategory O99.8-, a proposed new sub-subcategory for ICD-10-CM diagnosis code O99.89- could include the following proposed new diagnosis codes:

- O99.890 (Other specified diseases and conditions complicating pregnancy);

- O99.894 (Other specified diseases and conditions complicating childbirth); and
- O99.85 (Other specified diseases and conditions complicating the puerperium).

If such a proposal to create this new sub-subcategory and new diagnosis codes were approved and finalized, it would enable improved data collection and more appropriate MS-DRG assignment, consistent with the current MS-DRG assignments of the existing obstetric related diagnosis codes. For instance, a new diagnosis code described as “complicating pregnancy” would be clinically aligned with the antepartum MS-DRGs, a new diagnosis code described as “complicating childbirth” would be clinically aligned with the delivery MS-DRGs, and a new diagnosis code described as “complicating the puerperium” would be clinically aligned with the postpartum MS-DRGs. (We note that all requests for new diagnosis codes require that a proposal be approved for discussion at a future ICD-10 Coordination and Maintenance Committee meeting.)

While our clinical advisors could not provide a strong clinical justification for classifying ICD-10-CM diagnosis code O99.89 as an antepartum condition versus as a postpartum condition for the reasons described above, they did consider the claims data to be informative as to how the diagnosis code is being reported for obstetric patients. In analyzing both the postpartum MS-DRGs and the antepartum MS-DRGs discussed earlier in this section, they agreed that the data

clearly show that ICD-10-CM diagnosis code O99.89 is reported more frequently as a secondary diagnosis within the antepartum MS-DRGs than it is reported as a principal or secondary diagnosis within the postpartum MS-DRGs.

Based on our analysis of claims data and input from our clinical advisors, we are proposing to reclassify ICD-10-CM diagnosis code O99.89 from a postpartum condition to an antepartum condition under MDC 14. If finalized, ICD-10-CM diagnosis code O99.89 would follow the logic as described in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41212) which asks if there was a principal diagnosis of an antepartum condition reported on the claim. If yes, the logic then asks if there was an O.R. procedure reported on the claim. If yes, the logic assigns the case to MS-DRG 817, 818, or 819. If no (there was not an O.R. procedure reported on the claim), the logic assigns the case to MS-DRG 831, 832, or 833.

10. MDC 22 (Burns): Skin Graft to Perineum for Burn

We received a request to add seven ICD-10-PCS procedure codes that describe a skin graft to the perineum to MS-DRG 927 (Extensive Burns Or Full Thickness Burns with MV >96 Hours with Skin Graft) and MS-DRGs 928 and 929 (Full Thickness Burn with Skin Graft Or Inhalation Injury with CC/MCC and without CC/MCC, respectively) in MDC 22. The seven procedure codes are listed in the following table.

ICD-10-PCS code	Code description
0HR9X73	Replacement of perineum skin with autologous tissue substitute, full thickness, external approach.
0HR9X74	Replacement of perineum skin with autologous tissue substitute, partial thickness, external approach.
0HR9XJ3	Replacement of perineum skin with synthetic substitute, full thickness, external approach.
0HR9XJ4	Replacement of perineum skin with synthetic substitute, partial thickness, external approach.
0HR9XJZ	Replacement of perineum skin with synthetic substitute, external approach.
0HR9XK3	Replacement of perineum skin with non-autologous tissue substitute, full thickness, external approach.
0HR9XK4	Replacement of perineum skin with non-autologous tissue substitute, partial thickness, external approach.

These seven procedure codes are currently assigned to MS-DRGs 746 and 747 (Vagina, Cervix and Vulva Procedures with CC/MCC and without CC/MCC, respectively). In addition, when reported in conjunction with a principal diagnosis in MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs), these codes group to MS-DRGs 907, 908, and 909 (Other O.R. Procedures For Injuries with MCC, with CC and without CC/MCC, respectively), and when reported in conjunction with a principal diagnosis in MDC 24 (Multiple

Significant Trauma), these codes group to MS-DRGs 957, 958, and 959 (Other O.R. Procedures For Multiple Significant Trauma with MCC, with CC and without CC/MCC, respectively). In addition, these procedures are designated as non-extensive O.R. procedures and are assigned to MS-DRGs 987, 988 and 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) when a principal diagnosis that is unrelated to the procedure is reported on the claim.

The requestor provided an example in which it identified one case where a patient underwent debridement and split thickness skin graft (STSG) to the perineum area (only), and expressed concern that the case did not route to MS-DRGs 928 and 929 to recognize operating room resources. (We note that the requestor did not specify the diagnosis associated with this case nor the MS-DRG to which this one case was grouped.) The requestor stated that providers may document various terminologies for this anatomic site,

including *perineum, groin, and buttocks crease*; therefore, when a provider deems a burn to affect the perineum as opposed to the groin or buttock crease, cases should route to MS-DRGs which compensate hospitals for skin grafting operating room resources. Therefore, the

requestor recommended that the cited seven ICD-10-PCS codes be added to the list of procedure codes for a skin graft within MS-DRGs 927, 928, and 929.

We reviewed this request by analyzing claims data from the

September 2018 update of the FY 2018 MedPAR file for cases reporting any of the above seven procedure codes in MS-DRGs 746, 747, 907, 908, 909, 957, 958, 959, 987, 988, and 989. Our findings are shown in the following table.

CASES INVOLVING SKIN GRAFT TO THE PERINEUM

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 746—All cases	1,344	5	\$11,847
MS-DRG 746—Cases with skin graft to the perineum procedure	1	2	10,830
MS-DRG 907—All cases	7,843	10	28,919
MS-DRG 907—Cases with skin graft to the perineum procedure	1	8	21,909
MS-DRG 908—All cases	9,286	5.3	14,601
MS-DRG 908—Cases with skin graft to the perineum procedure	1	6	8,410
MS-DRG 988—All cases	8,391	5.7	12,294
MS-DRG 988—Cases with skin graft to the perineum procedure	2	3	6,906
MS-DRG 989—All cases	1,551	3.1	8,171
MS-DRG 989—Cases with skin graft to the perineum procedure	1	7	14,080

As shown in the table above, the overall volume of cases reporting a skin graft to the perineum procedure is low, with a total of 6 cases found. In MS-DRG 746, we found a total of 1,344 cases with an average length of stay of 5 days and average costs of \$11,847. The single case reporting a skin graft to the perineum procedure in MS-DRG 746 had a length of stay of 2 days and a cost of \$10,830. In MS-DRG 907, we found a total of 7,843 cases with an average length of stay of 10 days and average costs of \$28,919. The single case reporting a skin graft to the perineum procedure in MS-DRG 907 had a length of stay of 8 days and a cost of \$21,909. In MS-DRG 908, we found a total of 9,286 cases with an average length of

stay of 5.3 days and average costs of \$14,601. The single case reporting a skin graft to the perineum procedure in MS-DRG 908 had a length of stay of 6 days and a cost of \$8,410. In MS-DRG 988, we found a total of 8,391 cases with an average length of stay of 5.7 days and average costs of \$12,294. The 2 cases reporting a skin graft to the perineum procedure in MS-DRG 988 had an average length of stay of 3 days and average costs of \$6,906. In MS-DRG 989, we found a total of 1,551 cases with an average length of stay of 3.1 days and average costs of \$8,171. The single case reporting a skin graft to the perineum procedure in MS-DRG 989 had a length of stay of 7 day and a cost of \$14,080. We found no cases reporting a skin graft

to the perineum procedure in MS-DRG 747, 909, 957, 958, 959, or 987. Cases reporting a skin graft to the perineum procedure generally had shorter length of stays and lower average costs than those of their assigned MS-DRGs overall.

We then analyzed claims data for MS-DRGs 927, 928, and 929 (the MS-DRGs to which the requestor suggested that these cases group) for all cases reporting a procedure describing a skin graft to the perineum listed in the table above to consider how the resources involved in the cases reporting a procedure describing a skin graft to the perineum compared to those of all cases in MS-DRGs 927, 928, and 929. Our findings are shown in the following table.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 927—All cases	146	30.9	\$147,903
MS-DRG 928—All cases	1,149	15.7	45,523
MS-DRG 928—Cases with skin graft to the perineum procedure	5	39	64,041
MS-DRG 929—All cases	296	7.9	21,474

As shown in the table above, for MS-DRG 927, we found a total of 146 cases with an average length of stay of 30.9 days and average costs of \$147,903; no cases reporting a skin graft to the perineum procedure were found. For MS-DRG 928, we found a total of 1,149 cases with an average length of stay of 15.7 days and average costs of \$45,523. We found 5 cases reporting a skin graft to the perineum procedure with an average length of stay of 39 days and average costs of \$64,041. For MS-DRG 929, we found a total of 296 cases with an average length of stay of 7.9 days and average costs of \$21,474; and no cases

reporting a skin graft to the perineum procedure were found. We note that none of the 5 cases reporting a skin graft to the perineum in MS-DRGs 927, 928, and 929 reported a skin graft to the perineum procedure as the only operating room procedure. Therefore, it is not possible to determine how much of the operating room resources for these 5 cases were attributable to the skin graft to the perineum procedure.

Our clinical advisors reviewed the claims data described above and noted that none of the cases reporting the seven identified procedure codes that grouped to MS-DRGs 746, 907, 908,

988, and 989 (listed in the table above) had a principal or secondary diagnosis of a burn, which suggests that these skin grafts were not performed to treat a burn. Therefore, our clinical advisors believe that it would not be appropriate for these cases that report a skin graft to the perineum procedure to group to MS-DRGs 927, 928, and 929, which describe burns. Our clinical advisors state that the seven ICD-10-PCS procedure codes that describe a skin graft to the perineum are more clinically aligned with the other procedures in MS-DRGs 746 and 747, to which they are currently assigned. Therefore, we are

not proposing to add the seven identified procedure codes to MS-DRGs 927, 928, and 929.

11. MDC 23 (Factors Influencing Health Status and Other Contacts With Health Services): Proposed Assignment of Diagnosis Code R93.89

We received a request to consider reassignment of ICD-10-CM diagnosis code R93.89 (Abnormal finding on

diagnostic imaging of other specified body structures) from MDC 5 (Diseases and Disorders of the Circulatory System) in MS-DRGs 302 and 303 (Atherosclerosis with and without MCC and Atherosclerosis without MCC, respectively) to MDC 23 (Factors Influencing Health Status and Other Contact with Health Services), consistent with other diagnosis codes

that include abnormal findings. However, the requestor did not suggest a specific MS-DRG assignment within MDC 23.

We examined claims data from the September 2018 update of the FY 2018 MedPAR file for MS-DRGs 302 and 303 and identified cases reporting diagnosis code R93.89. Our findings are shown in the following table.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 302—All cases	3,750	3.8	\$7,956
MS-DRG 302—Cases reporting diagnosis code R93.89	3	7.7	10,818
MS-DRG 303—All cases	12,986	2.3	4,920
MS-DRG 303—Cases reporting diagnosis code R93.89	10	2	3,416

As shown in the table, for MS-DRG 302, there was a total of 3,750 cases with an average length of stay of 3.8 days and average costs of \$7,956. Of these 3,750 cases, there were 3 cases reporting abnormal finding on diagnostic imaging of other specified body structures, with an average length of stay 7.7 days and average costs of \$10,818. For MS-DRG 303, there was a total of 12,986 cases with an average length of stay of 2.3 days and average costs of \$4,920. Of these 12,986 cases, there were 10 cases reporting abnormal finding on diagnostic imaging of other specified body structures, with an average length of stay 2 days and average costs of \$3,416.

Our clinical advisors reviewed this request and determined that the assignment of diagnosis code R93.89 to MDC 5 in MS-DRGs 302 and 303 was a result of replication from ICD-9-CM diagnosis code 793.2 (Nonspecific (abnormal) findings on radiological and other examination of other intrathoracic organs), which was assigned to those MS-DRGs. Therefore, they support reassignment of diagnosis code R93.89 to MDC 23. Our clinical advisors agree this reassignment is clinically appropriate as it is consistent with other diagnosis codes in MDC 23 that include abnormal findings from other nonspecified sites. Specifically, our clinical advisors suggest reassignment of diagnosis code R89.93 to MS-DRGs 947

and 948 (Signs and Symptoms with and without MCC, respectively). Therefore, we are proposing to reassign ICD-10-CM diagnosis code R93.89 from MDC 5 in MS-DRGs 302 and 303 to MDC 23 in MS-DRGs 947 and 948.

12. Review of Procedure Codes in MS-DRGs 981 Through 983 and 987 Through 989

a. Adding Procedure Codes and Diagnosis Codes Currently Grouping to MS-DRGs 981 Through 983 or MS-DRGs 987 Through 989 into MDCs

We annually conduct a review of procedures producing assignment to MS-DRGs 981 through 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS-DRGs 987 through 989 (Nonextensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) on the basis of volume, by procedure, to see if it would be appropriate to move cases reporting these procedure codes out of these MS-DRGs into one of the surgical MS-DRGs for the MDC into which the principal diagnosis falls. The data are arrayed in two ways for comparison purposes. We look at a frequency count of each major operative procedure code. We also compare procedures across MDCs by volume of procedure codes within each MDC. We use this

information to determine which procedure codes and diagnosis codes to examine.

We identify those procedures occurring in conjunction with certain principal diagnoses with sufficient frequency to justify adding them to one of the surgical MS-DRGs for the MDC in which the diagnosis falls. We also consider whether it would be more appropriate to move the principal diagnosis codes into the MDC to which the procedure is currently assigned. Based on the results of our review of the claims data from the September 2018 update of the FY 2018 MedPAR file, we are proposing to move the cases reporting the procedures and/or principal diagnosis codes described below from MS-DRGs 981 through 983 or MS-DRGs 987 through 989 into one of the surgical MS-DRGs for the MDC into which the principal diagnosis or procedure is assigned.

(1) Gastrointestinal Stromal Tumors With Excision of Stomach and Small Intestine

Gastrointestinal stromal tumors (GIST) are tumors of connective tissue, and are currently assigned to MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue). The ICD-10-CM diagnosis codes describing GIST are listed in the table below.

ICD-10-CM diagnosis code	Code description
C49.A0	Gastrointestinal stromal tumor, unspecified site.
C49.A1	Gastrointestinal stromal tumor of esophagus.
C49.A2	Gastrointestinal stromal tumor of stomach.
C49.A3	Gastrointestinal stromal tumor of small intestine.
C49.A4	Gastrointestinal stromal tumor of large intestine.
C49.A5	Gastrointestinal stromal tumor of rectum.
C49.A9	Gastrointestinal stromal tumor of other sites.

During our review of cases that group to MS-DRGs 981 through 983, we noted that when procedures describing open excision of the stomach or small intestine (ICD-10-PCS procedure codes 0DB60ZZ (Excision of stomach, open approach) and 0DB80ZZ (Excision of

small intestine, open approach)) were reported with a principal diagnosis of GIST, the cases group to MS-DRGs 981 through 983. These two excision codes are assigned to several MDCs, as listed in the table below. Whenever there is a surgical procedure reported on the

claim, which is unrelated to the MDC to which the case was assigned based on the principal diagnosis, it results in an MS-DRG assignment to a surgical class referred to as "unrelated operating room procedures".

DRG ASSIGNMENTS FOR ICD-10-PCS PROCEDURE CODES 0DB60ZZ AND 0DB80ZZ

MDC	DRG	DRG Description
5	264	Other Circulatory O.R. Procedures.
6	326-328	Stomach, Esophageal and Duodenal Procedures.
10	619-621	Procedures for Obesity.
17	820-822	Lymphoma and Leukemia with Major Procedure.
17	826-828	Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Major Procedure.
21	907-909	Other O.R. Procedures for Injuries.
24	957-959	Other Procedures for Multiple Significant Trauma.

We first examined cases that reported a principal diagnosis of GIST and ICD-10-PCS procedure code 0DB60ZZ or

0DB80ZZ that currently group to MS-DRGs 981 through 983, as well as all

cases in MS-DRGs 981 through 983. Our findings are shown in the table below.

MS-DRGs 981-983: ALL CASES AND CASES WITH PRINCIPAL DIAGNOSIS OF GIST AND PROCEDURE CODE 0DB60ZZ OR 0DB80ZZ

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 981—All cases	29,192	11.3	\$29,862
MS-DRG 981—Cases with procedure code 0DB60ZZ	46	12.4	35,723
MS-DRG 981—Cases with procedure code 0DB80ZZ	12	10.8	28,059
MS-DRG 982—All cases	16,834	6.3	16,939
MS-DRG 982—Cases with procedure code 0DB60ZZ	104	6.8	17,442
MS-DRG 982—Cases with procedure code 0DB80ZZ	41	8	18,961
MS-DRG 983—All cases	3,166	3.3	11,872
MS-DRG 983—Cases with procedure code 0DB60ZZ	97	4.5	11,901
MS-DRG 983—Cases with procedure code 0DB80ZZ	19	4.5	9,971

Of the MDCs to which these gastrointestinal excision procedures are currently assigned, our clinical advisors indicated that cases with a principal diagnosis of GIST that also report an open gastrointestinal excision procedure code would logically be assigned to MDC 6 (Diseases and Disorders of the

Digestive System). Within MDC 6, ICD-10-PCS procedures codes 0DB60ZZ and 0DB80ZZ are currently assigned to MS-DRGs 326, 327, and 328 (Stomach, Esophageal and Duodenal Procedures with MCC, CC, and without CC/MCC, respectively). To understand how the resources associated with the subset of

cases reporting a principal diagnosis of GIST and procedure code 0DB60ZZ or 0DB80ZZ compare to those of cases in MS-DRGs 326, 327, and 328 as a whole, we examined the average costs and average length of stay for all cases in MS-DRGs 326, 327, and 328. Our findings are shown in the table below.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 326—All cases	9,898	13	\$36,129
MS-DRG 327—All cases	9,602	6.6	18,736
MS-DRG 328—All cases	7,634	2.9	11,555

Our clinical advisors reviewed these data and noted that the average length of stay and average costs of this subset of cases were similar to those of cases in MS-DRGs 326, 327, and 328 in MDC 6. To consider whether it was appropriate to move the GIST diagnosis codes from MDC 8, we examined the other procedure codes reported for cases that report a principal diagnosis of GIST and noted that almost all of the O.R.

procedures most frequently reported were assigned to MDC 6 rather than MDC 8. Our clinical advisors believe that, given the similarity in resource use between this subset of cases and cases in MS-DRGs 326, 327, and 328, and that the GIST diagnosis codes are gastrointestinal in nature, they would be more appropriately assigned to MS-DRGs 326, 327, and 328 in MDC 6 than their current assignment in MDC 8.

Therefore, we are proposing to move the GIST diagnosis codes listed above from MDC 8 to MDC 6 within MS-DRGs 326, 327, and 328. Under our proposal, cases reporting a principal diagnosis of GIST would group to MS-DRGs 326, 327, and 328.

(2) Peritoneal Dialysis Catheter Complications

During our review of the cases currently grouping to MS-DRGs 981-

983, we noted that cases reporting a principal diagnosis of complications of peritoneal dialysis catheters with procedure codes describing removal, revision, and/or insertion of new peritoneal dialysis catheters group to

MS-DRGs 981 through 983. The ICD-10-CM diagnosis codes that describe complications of peritoneal dialysis catheters, listed in the table below, are assigned to MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs).

These principal diagnoses are frequently reported with the procedure codes describing removal, revision, and/or insertion of new peritoneal dialysis catheters.

ICD-10-CM code	Code description
T85.611A	Breakdown (mechanical) of intraperitoneal dialysis catheter, initial encounter.
T85.621A	Displacement of intraperitoneal dialysis catheter, initial encounter.
T85.631A	Leakage of intraperitoneal dialysis catheter, initial encounter.
T85.691A	Other mechanical complication of intraperitoneal dialysis catheter, initial encounter.
T85.71XA	Infection and inflammatory reaction due to peritoneal dialysis catheter, initial encounter.
T85.898A	Other specified complication of other internal prosthetic devices, implants and graft, initial encounter.

The procedure codes in the table below describe removal, revision, and/or insertion of new peritoneal dialysis catheters or revision of synthetic

substitutes and are currently assigned to MDC 6 (Diseases and Disorders of the Digestive System) in MS-DRGs 356, 357, and 358 (Other Digestive System

O.R. Procedures with MCC, with CC, and without CC/MCC, respectively).

ICD-10-PCS procedure code	Code description
0WHG03Z	Insertion of infusion device into peritoneal cavity, open approach.
0WHG43Z	Insertion of infusion device into peritoneal cavity, percutaneous endoscopic approach.
0WPG03Z	Removal of infusion device from peritoneal cavity, open approach.
0WPG43Z	Removal of infusion device from peritoneal cavity, percutaneous endoscopic approach.
0WWG03Z	Revision of infusion device in peritoneal cavity, open approach.
0WWG0JZ	Revision of synthetic substitute in peritoneal cavity, open approach.
0WWG43Z	Revision of infusion device in peritoneal cavity, percutaneous endoscopic approach.
0WWG4JZ	Revision of synthetic substitute in peritoneal cavity, percutaneous endoscopic approach.

We examined the claims data from the September 2018 update of the FY 2018 MedPAR file for the average costs and length of stay for cases that report a principal diagnosis of complications of

peritoneal dialysis catheters with a procedure describing removal, revision, and/or insertion of new peritoneal dialysis catheters or revision of synthetic substitutes. Our findings are

shown in the table below. We note that we did not find any such cases in MS-DRG 983.

MS-DRG 981 THROUGH 982: PERITONEAL DIALYSIS CATHETER PROCEDURES WITH PRINCIPAL DIAGNOSIS OF COMPLICATIONS OF PERITONEAL DIALYSIS CATHETERS

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 981—Cases reporting peritoneal dialysis catheter procedures with a principal diagnosis of complications of peritoneal dialysis catheters	1,603	8.5	\$20,676
MS-DRG 982—Cases reporting peritoneal dialysis catheter procedures with a principal diagnosis of complications of peritoneal dialysis catheters	5	8.6	11,694

Our clinical advisors indicated that, within MDC 21, the procedures describing removal, revision, and/or insertion of new peritoneal dialysis catheters or revision of synthetic substitutes most suitably group to MS-

DRGs 907, 908, and 909, which contain all procedures for injuries that are not specific to the hand, skin, and wound debridement. To determine how the resources for this subset of cases compared to cases in MS-DRGs 907,

908, and 909 as a whole, we examined the average costs and length of stay for cases in MS-DRGs 907, 908, and 909. Our findings are shown in the table below.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 907—All cases	9,482	9.7	\$27,492
MS-DRG 908—All cases	9,305	5.3	14,597
MS-DRG 909—All cases	3,011	3	9,587

Our clinical advisors considered these data and noted that the average costs

and length of stay for this subset of cases, most of which group to MS-DRG

981, are lower than the average costs and length of stay for cases of the same

severity level in MS-DRGs 907. However, our clinical advisors believe that the procedures describing removal, revision, and/or insertion of new peritoneal dialysis catheters or revision of synthetic substitutes are clearly related to the principal diagnosis codes describing complications of peritoneal dialysis catheters and, therefore, it is clinically appropriate for the procedures to group to the same MS-DRGs as the principal diagnoses. Therefore, we are proposing to add the eight procedure codes listed in the table above that describe removal, revision, and/or insertion of new peritoneal dialysis catheters or revision of synthetic

substitutes to MDC 21 (Injuries, Poisonings & Toxic Effects of Drugs) in MS-DRGs 907, 908, and 909. Under this proposal, cases reporting a principal diagnosis of complications of peritoneal dialysis catheters with a procedure describing removal, revision, and/or insertion of new peritoneal dialysis catheters or revision of synthetic substitutes would group to MS-DRGs 907, 908, and 909.

(3) Bone Excision With Pressure Ulcers

During our review of the cases that group to MS-DRGs 981 through 983, we noted that when procedures describing excision of the sacrum, pelvic bones,

and coccyx (ICD-10-PCS procedure codes 0QB10ZZ (Excision of sacrum, open approach), 0QB20ZZ (Excision of right pelvic bone, open approach), 0QB30ZZ (Excision of left pelvic bone, open approach), and 0QBS0ZZ (Excision of coccyx, open approach)) are reported with a principal diagnosis of pressure ulcers in MDC 9 (Diseases and Disorders of the Skin, Subcutaneous Tissue and Breast), the cases group to MS-DRGs 981 through 983. The procedures describing excision of the sacrum, pelvic bones, and coccyx group to several MDCs, which are listed in the table below.

MS-DRG ASSIGNMENTS FOR ICD-10-PCS CODES 0QB10ZZ, 0QB20ZZ, 0QB30ZZ, AND 0QBS0ZZ

MDC	MS-DRG	MS-DRG description
3	133-134	Other Ear, Nose, Mouth and Throat O.R. Procedures with CC/MCC and without CC/MCC, respectively.
8	515-517	Other Musculoskeletal System and Connective Tissue O.R. Procedures with MCC, with CC, and without CC/MCC, respectively.
10	628-630	Other Endocrine, Nutritional and Metabolic O.R. Procedures with MCC, with CC, and without CC/MCC, respectively.
21	907-909	Other O.R. Procedures for Injuries.
24	957-959	Other Procedures for Multiple Significant Trauma.

When cases reporting procedure codes describing excision of the sacrum, pelvic bones, and coccyx report a

principal diagnosis from MDC 9, the ICD-10-CM diagnosis codes that are

most frequently reported as principal diagnoses are listed below.

ICD-10-CM diagnosis code	Code description
L89.150	Pressure ulcer of sacral region, unstageable.
L89.153	Pressure ulcer of sacral region, stage 3.
L89.154	Pressure ulcer of sacral region, stage 4.
L89.214	Pressure ulcer of right hip, stage 4.
L89.224	Pressure ulcer of left hip, stage 4.
L89.314	Pressure ulcer of right buttock, stage 4.
L89.324	Pressure ulcer of left buttock, stage 4.
L89.894	Pressure ulcer of other site, stage 4.

We examined the claims data from the September 2018 update of the FY 2018 MedPAR file for the average costs and

length of stay for cases that report procedures describing excision of the sacrum, pelvic bones, and coccyx in

conjunction with a principal diagnosis of pressure ulcers.

MS-DRGs 981 THROUGH 983: CASES REPORTING EXCISION OF THE SACRUM, PELVIC BONES, AND COCCYX REPORTED WITH A PRINCIPAL DIAGNOSIS OF PRESSURE ULCERS

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 981—Cases reporting excision of the sacrum, pelvic bones, and coccyx and a principal diagnosis of pressure ulcers	394	11.9	\$24,398
MS-DRG 982—Cases Reporting excision of the sacrum, pelvic bones, and coccyx and a principal diagnosis of pressure ulcers	477	9.4	16,464
MS-DRG 983—Cases Reporting excision of the sacrum, pelvic bones, and coccyx and a principal diagnosis of pressure ulcers	38	4.8	8,519

Our clinical advisors indicated that, given the nature of these procedures, they could not be appropriately assigned to the specific surgical MS-DRGs within MDC 9, which are: Skin

graft; skin debridement; mastectomy for malignancy; and breast biopsy, local excision, and other breast procedures. Therefore, our clinical advisors believe that these procedures would most

suitably group to MS-DRGs 579, 580, and 581 (Other Skin, Subcutaneous Tissue and Breast Procedures with MCC, with CC, and without CC/MCC, respectively), which contain procedures

assigned to MDC 9 that do not fit within the specific surgical MS-DRGs in MDC 9. Therefore, we examined the claims

data for the average length of stay and average costs for MS-DRGs 579, 580,

and 581 in MDC 9. Our findings are shown in the table below.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 579	4,091	9.2	\$19,873
MS-DRG 580	10,048	5.2	11,229
MS-DRG 581	4,364	3	8,987

Our clinical advisors reviewed these data and noted that, in this subset of cases, most cases group to MS-DRGs 981 and 982 and have greater average length of stay and average costs than those cases of the same severity level in MS-DRGs 579 and 580. The smaller number of cases that group to MS-DRG 983 have lower average costs than cases in MS-DRG 581. However, our clinical advisors believe that the procedure codes describing excision of the sacrum, pelvic bones, and coccyx are clearly related to the principal diagnosis codes describing pressure ulcers, as these procedures would be performed to treat

pressure ulcers in the sacrum, hip, and buttocks regions. Therefore, our clinical advisors believe that it is clinically appropriate for the procedures to group to the same MS-DRGs as the principal diagnoses. Therefore, we are proposing to add the ICD-10-PCS procedure codes describing excision of the sacrum, pelvic bones, and coccyx to MDC 9 in MS-DRGs 579, 580, and 581. Under this proposal, cases reporting a principal diagnosis in MDC 9 (such as pressure ulcers) with a procedure describing excision of the sacrum, pelvic bones, and coccyx would group to MS-DRGs 579, 580, and 581.

(4) Lower Extremity Muscle and Tendon Excision

During the review of the cases that group to MS-DRGs 981 through 983, we noted that when several ICD-10-PCS procedure codes describing excision of lower extremity muscles and tendons are reported in conjunction with ICD-10-CM diagnosis codes in MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders), the cases group to MS-DRGs 981 through 983. These ICD-10-PCS procedure codes are listed in the table below, and are assigned to several MS-DRGs, which are also listed below.

ICD-10-PCS procedure code	Code description
0KBN0ZZ	Excision of right hip muscle, open approach.
0KBPOZZ	Excision of left hip muscle, open approach.
0KBS0ZZ	Excision of right lower leg muscle, open approach.
0KBT0ZZ	Excision of left lower leg muscle, open approach.
0KBV0ZZ	Excision of right foot muscle, open approach.
0KBW0ZZ	Excision of left foot muscle, open approach.
0LBV0ZZ	Excision of right foot tendon, open approach.
0LBW0ZZ	Excision of left foot tendon, open approach.

MDC	MS-DRG	MS-DRG description
01	040-042	Peripheral, Cranial Nerve and Other Nervous System Procedures with MCC, with CC or Peripheral Neurostimulator, and without CC/MCC, respectively.
08	500-502	Soft Tissue Procedures with MCC, with CC, and without CC/MCC, respectively.
09	579-581	Other Skin, Subcutaneous Tissue and Breast Procedures with MCC, with CC, and without CC/MCC, respectively.
21	907-909	Other O.R. Procedures for Injuries.
24	957-959	Other Procedures for Multiple Significant Trauma.

The ICD-10-CM diagnosis codes in MDC 10 that are most frequently reported as the principal diagnosis with

a procedure describing excision of lower extremity muscles and tendons are listed in the table below. The

combination indicates debridement procedures for more complex diabetic ulcers.

ICD-10-CM procedure code	Code description
E11.621	Type 2 diabetes mellitus with foot ulcer.
E11.69	Type 2 diabetes mellitus with other specified complication.
E11.628	Type 2 diabetes mellitus with other skin complications.
E11.622	Type 2 diabetes mellitus with other skin ulcer.
E10.621	Type 1 diabetes mellitus with foot ulcer.

To understand the resource use for the subset of cases reporting procedure

codes describing excision of lower extremity muscles and tendons that are

currently grouping to MS-DRGs 981 through 983, we examined claims data

for the average length of stay and average costs for these cases. Our findings are shown in the table below.

MS-DRGs 981-983: CASES REPORTING PROCEDURES DESCRIBING EXCISION OF LOWER EXTREMITY MUSCLES AND TENDONS WITH A PRINCIPAL DIAGNOSIS IN MDC 10

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 981—Cases reporting excision of lower extremity muscles and tendons and a principal diagnosis in MDC 10	125	9.1	\$19,031
MS-DRG 982—Cases reporting excision of lower extremity muscles and tendons and a principal diagnosis in MDC 10	561	6.2	12,000
MS-DRG 983—Cases reporting excision of lower extremity muscles and tendons and a principal diagnosis in MDC 10	16	4.8	9,003

Our clinical advisors examined cases reporting procedures describing excision of lower extremity muscles and tendons with a principal diagnosis in the MS-DRGs within MDC 10 and determined that these cases would most suitably group to MS-DRGs 622, 623, and 624 (Skin Grafts and Wound Debridement for Endocrine, Nutritional and Metabolic Disorders with MCC, with CC, and without CC/MCC, respectively). Therefore, we examined

the average length of stay and average costs for cases assigned to MS-DRGs 622, 623, and 624. Our findings are shown in the table below.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 622	1,540	11.7	\$25,114
MS-DRG 623	4,849	6.6	13,490
MS-DRG 624	232	3.7	7,442

Our clinical advisors reviewed these data and noted that most of the cases reporting procedures describing excision of lower extremity muscles and tendons group to MS-DRGs 981 and 982. For these cases, the average length of stay and average costs are lower than those of cases that currently group to MS-DRGs 622 and 623. However, our clinical advisors believe that these procedures are clearly related to the principal diagnoses in MDC 10, as they would be performed to treat skin-related complications of diabetes and, therefore, it is clinically appropriate for the procedures to group to the same MS-DRGs as the principal diagnoses. Therefore, we are proposing to add the procedure codes listed previously describing excision of lower extremity muscles and tendons to MDC 10. Under

our proposal, cases reporting these procedure codes with a principal diagnosis in MDC 10 would group to MS-DRGs 622, 623, and 624.

(5) Kidney Transplantation Procedures

During our review of the cases that group to MS-DRGs 981 through 983, we noted that when procedures describing transplantation of kidneys (ICD-10-PCS procedure codes 0TY00Z0 (Transplantation of right kidney, allogeneic, open approach) and 0TY10Z0 (Transplantation of left kidney, allogeneic, open approach)) are reported in conjunction with ICD-10-CM diagnosis codes in MDC 5 (Diseases and Disorders of the Circulatory System), the cases group to MS-DRGs 981 through 983. The ICD-10-CM diagnosis codes in MDC 5 that are reported with the kidney

transplantation codes are I13.0 (Hypertensive heart and chronic kidney disease with heart failure and with stage 1 through stage 4 chronic kidney disease) and I13.2 (Hypertensive heart and chronic kidney disease with heart failure and with stage 5 chronic kidney disease), which group to MDC 5. Procedure codes describing transplantation of kidneys are assigned to MS-DRG 652 (Kidney Transplant) in MDC 11. We examined claims data to identify the average length of stay and average costs for cases reporting procedure codes describing transplantation of kidneys with a principal diagnosis in MDC 5, which are currently grouping to MS-DRGs 981 through 983. Our findings are shown in the table below. We did not find any such cases in MS-DRG 983.

MS-DRGs 981 THROUGH 983: CASES REPORTING PROCEDURES DESCRIBING TRANSPLANTATION OF KIDNEY WITH A PRINCIPAL DIAGNOSIS IN MDC 5

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 981—Cases reporting transplantation of kidney and a principal diagnosis in MDC 5	285	6.8	\$25,340
MS-DRG 982—Cases reporting transplantation of kidney and a principal diagnosis in MDC 5	2	3.5	21,678

Our clinical advisors examined the MS-DRGs within MDC 5 and indicated that, given the nature of the procedures compared to the specific surgical procedures contained in the other

surgical MS-DRGs in MDC 5, they could not be appropriately assigned to any of the specific surgical MS-DRGs. Therefore, they determined that these cases would most suitably group to MS-

DRG 264 (Other Circulatory System O.R. Procedures), which contains a broader range of procedures related to MDC 5 diagnoses. We examined claims data to determine the average length of stay and

average costs for cases assigned to MS-DRG 264. We found a total of 10,073 cases, with an average length of stay of 9.3 days and average costs of \$22,643.

Our clinical advisors reviewed these data and noted that the average costs for cases reporting transplantation of kidney with a diagnosis from MDC 5 are similar to the average costs of cases in MS-DRG 264 (\$22,643 in MS-DRG 264 compared to \$25,340 in MS-DRG 981), while the average length of stay is shorter than that of cases in MS-DRG 264 (9.3 days in MS-DRG 264 compared to 6.8 days in MS-DRG 981). Our clinical advisors noted that ICD-10-CM diagnosis codes describing hypertensive heart and chronic kidney disease without heart failure (I13.10 (Hypertensive heart and chronic kidney disease without heart failure, with stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease) and I13.11 (Hypertensive heart and chronic kidney disease without heart failure, with stage 5 chronic kidney disease, or end stage renal disease group) group to MS-DRG 652 (Kidney Transplant) in MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract). Our clinical advisors also noted that the counterpart codes describing hypertensive heart and chronic kidney disease with heart

failure are as related to the kidney transplantation codes as the codes without heart failure, but because the codes with heart failure group to MDC 5, cases reporting a kidney transplant procedure with a diagnosis code of hypertensive heart and chronic kidney disease with heart failure currently group to MS-DRGs 981 through 983. Therefore, we are proposing to add ICD-10-PCS procedure codes 0TY00Z0 and 0TY10Z0 to MS-DRG 264 in MDC 5. Under this proposal, cases reporting a principal diagnosis in MDC 5 with a procedure describing kidney transplantation would group to MS-DRG 264 in MDC 5. We note that because MDC 5 covers the circulatory system, and kidney transplants generally group to MDC 11, we are seeking public comments on whether the procedure codes should instead continue to group to MS-DRGs 981 through 983.

(6) Insertion of Feeding Device

During our review of the cases that group to MS-DRGs 981 through 983, we noted that when ICD-10-PCS procedure code 0DH60UZ (Insertion of feeding device into stomach, open approach) is reported with ICD-10-CM diagnosis codes assigned to MDC 1 (Diseases and Disorders of the Nervous System) or

MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders), the cases group to MS-DRGs 981 through 983. ICD-10-PCS procedure code 0DH60UZ is currently assigned to MDC 6 (Diseases and Disorders of the Digestive System) in MS-DRGs 326, 327, and 328 (Stomach, Esophageal and Duodenal Procedures) and MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs) in MS-DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries). We also noticed that: (1) When ICD-10-PCS procedure code 0DH60UZ is reported with a principal diagnosis in MDC 1, the ICD-10-CM diagnosis codes reported with this procedure code describe cerebral infarctions of various etiology and anatomic locations and resulting complications; and (2) when ICD-10-PCS procedure code 0DH60UZ is reported with a principal diagnosis in MDC 10, the ICD-10-CM diagnosis codes reported with this procedure code pertain to dehydration, failure to thrive, and various forms of malnutrition.

We examined claims data to identify the average length of stay and average costs for cases in MS-DRGs 981 through 983 reporting ICD-10-PCS procedure code 0DH60UZ in conjunction with a principal diagnosis from MDC 1 or MDC 10. Our findings are shown in the table below.

MS-DRGs 981 THROUGH 983: CASES REPORTING PROCEDURE CODE 0DH60UZ WITH A PRINCIPAL DIAGNOSIS IN MDC 1 OR MDC 10

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 981—Cases reporting procedure code 0DH60UZ and a principal diagnosis in MDC 1	115	19.3	\$40,598
MS-DRG 982—Cases reporting procedure code 0DH60UZ and a principal diagnosis in MDC 1	43	13.2	25,042
MS-DRG 983—Cases reporting procedure code 0DH60UZ and a principal diagnosis in MDC 1	4	14.3	26,954
MS-DRG 981—Cases reporting procedure code 0DH60UZ and a principal diagnosis in MDC 10	47	13.4	24,690
MS-DRG 982—Cases reporting procedure code 0DH60UZ and a principal diagnosis in MDC 10	20	7.2	12,792
MS-DRG 983—Cases reporting procedure code 0DH60UZ and a principal diagnosis in MDC 10	5	5.0	8,608

Our clinical advisors determined that the feeding tube procedure was related to specific diagnoses within MDC 1 and MDC 10 and, therefore, could be assigned to both MDCs. Therefore, they reviewed the MS-DRGs within MDC 1 and MDC 10. They determined that the most suitable MS-DRG assignment within MDC 1 would be MS-DRGs 040, 041, and 042 (Peripheral, Cranial Nerve and Other Nervous System Procedures with MCC, with CC or Peripheral

Neurostimulator, and without CC/MCC, respectively), which contain procedures assigned to MDC 1 that describe insertion of devices into anatomical areas that are not part of the nervous system. Our clinical advisors determined that the most suitable MS-DRG assignment within MDC 10 would be MS-DRGs 628, 629, and 630 (Other Endocrine, Nutritional and Metabolic O.R. Procedures with MCC, with CC, and without CC/MCC, respectively),

which contain the most clinically similar procedures assigned to MDC 10, such as those describing insertion of infusion pump into subcutaneous tissue and fascia. Therefore, we examined claims data to identify the average length of stay and average costs for cases assigned to MDC 1 in MS-DRGs 040, 041, and 042 and MDC 10 in MS-DRGs 628, 629, and 630. Our findings are shown in the tables below.

MS-DRGs in MDC 1	Number of cases	Average length of stay	Average costs
MS-DRG 040	4,211	10.2	\$27,096
MS-DRG 041	6,153	5.1	16,917
MS-DRG 042	2,249	3.0	13,365

MS-DRGs in MDC 10	Number of cases	Average length of stay	Average costs
MS-DRG 628	3,004	9.9	\$25,472
MS-DRG 629	5,435	7.2	16,391
MS-DRG 630	237	3.2	10,659

Our clinical advisors reviewed these data and noted that the average length of stay and average costs for the subset of cases reporting ICD-10-PCS procedure code 0DH60UZ with a principal diagnosis assigned to MDC 1 are higher than those cases in MS-DRGs 040, 041, and 042. For example, the cases reporting ICD-10-PCS procedure code 0DH60UZ and a principal diagnosis in MDC 1 that currently group to MS-DRG 981 have an average length of stay of 19.3 days and average costs of \$40,598, while the cases in MS-DRG 040 have an average length of stay of 10.2 days and average costs of \$27,096. Our clinical advisors noted that the average length of stay and average costs for the subset of cases reporting ICD-10-PCS procedure code 0DH60UZ with a principal diagnosis assigned to MDC 10 are more closely aligned with those cases in MS-DRGs 628, 629, and 630. In both cases, our clinical advisors believe

that the insertion of feeding device is clearly related to the principal diagnoses in MDC 1 and MDC 10 and, therefore, it is clinically appropriate for the procedures to group to the same MS-DRGs as the principal diagnoses. Therefore, we are proposing to add ICD-10-PCS procedure code 0DH60UZ to MDC 1 and MDC 10. Under this proposal, cases reporting procedure code 0DH60UZ with a principal diagnosis in MDC 1 would group to MS-DRGs 040, 041, and 042, while cases reporting ICD-10-PCS procedure code 0DH60UZ with a principal diagnosis in MDC 10 would group to MS-DRGs 628, 629, and 630.

(7) Basilic Vein Reposition in Chronic Kidney Disease

During our review of the cases that group to MS-DRGs 981 through 983, we noted that when procedures codes describing reposition of basilic vein

(ICD-10-PCS procedure codes 05SB0ZZ (Reposition right basilic vein, open approach), 05SB3ZZ (Reposition right basilic vein, percutaneous approach), 05SC0ZZ (Reposition left basilic vein, open approach), and 05SC3ZZ (Reposition left basilic vein, percutaneous approach)) are reported with a principal diagnosis in MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract) (typically describing chronic kidney disease), the cases group to MS-DRGs 981 through 983. This code combination suggests a revision of an arterio-venous fistula in a patient on chronic hemodialysis. We examined claims data to identify the average length of stay and average costs for cases reporting procedures describing reposition of basilic vein with a principal diagnosis in MDC 11, which are currently grouping to MS-DRGs 981 through 983. Our findings are shown in the table below.

MS-DRGs 981-983: CASES REPORTING PROCEDURES DESCRIBING REPOSITION OF BASILIC VEIN WITH PRINCIPAL DIAGNOSIS IN MDC 11

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 981—Cases reporting procedures describing reposition of basilic vein and a principal diagnosis in MDC 11	48	4.6	\$12,232
MS-DRG 982—Cases reporting procedures describing reposition of basilic vein and a principal diagnosis in MDC 11	10	6.9	18,481
MS-DRG 983—Cases reporting procedures describing reposition of basilic vein and a principal diagnosis in MDC 11	1	3.0	3,552

Our clinical advisors examined claims data for cases in the MS-DRGs within MDC 11 and determined that cases reporting procedures describing reposition of basilic vein with a principal diagnosis in MDC 11 would

most suitably group to MS-DRGs 673, 674, and 675 (Other Kidney and Urinary Tract Procedures with MCC, with CC, and without CC/MCC, respectively), to which MDC 11 procedures describing reposition of veins (other than renal

veins) are assigned. Therefore, we examined claims data to identify the average length of stay and average costs for cases assigned to MS-DRGs 673, 674, and 675. Our findings are shown in the table below.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 673	10,542	10.8	\$25,842
MS-DRG 674	6,167	7.4	17,685
MS-DRG 675	437	3.9	11,858

Our clinical advisors reviewed these data and noted that the average length of stay and average costs for cases reporting procedures describing reposition of basilic vein with a principal diagnosis in MDC 11 with an MCC are significantly lower than for those cases in MS-DRG 673. The average length of stay and average costs are similar for those cases with a CC, while the single case without a CC or MCC had significantly lower costs than the average costs of cases in MS-DRG 675. However, our clinical advisors believe that when the procedures describing reposition of basilic vein are reported with a principal diagnosis

describing chronic kidney disease, the procedure is likely related to arteriovenous fistulas for dialysis associated with the chronic kidney disease. Therefore, our clinical advisors believe that it is clinically appropriate for the procedures to group to the same MS-DRGs as the principal diagnoses. Therefore, we are proposing to add ICD-10-PCS procedure codes 05SB0ZZ, 05SB3ZZ, 05SC0ZZ, and 05SC3ZZ to MDC 11. Under our proposal, cases reporting procedure codes describing reposition of basilic vein with a principal diagnosis in MDC 11 would group to MS-DRGs 673, 674, and 675.

(8) Colon Resection With Fistula

During our review of the cases that group to MS-DRGs 981 through 983, we noted that when ICD-10-PCS procedure code 0DTN0ZZ (Resection of sigmoid colon, open approach) is reported with a principal diagnosis in MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract), the cases group to MS-DRGs 981 through 983. The principal diagnosis most frequently reported with ICD-10-PCS procedure code 0DTN0ZZ in MDC 11 is ICD-10-CM code N321 (Vesicointestinal fistula). ICD-10-PCS procedure code 0DTN0ZZ currently groups to several MDCs, which are listed in the table below.

MS-DRG ASSIGNMENTS FOR ICD-10-PCS PROCEDURE CODE 0DTN0ZZ

MDC	MS-DRG	MS-DRG description
6	329-331	Major Small and Large Bowel Procedures.
17	820-822	Lymphoma and Leukemia with Major Procedure.
17	826-828	Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Major Procedure.
21	907-909	Other O.R. Procedures for Injuries.
24	957-959	Other Procedures for Multiple Significant Trauma.

We examined claims data to identify the average length of stay and average costs for cases reporting procedure code

0DTN0ZZ with a principal diagnosis in MDC 11, which are currently grouping

to MS-DRGs 981 through 983. Our findings are shown in the table below.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 981—Cases reporting procedure code 0DTN0ZZ and a principal diagnosis in MDC 11	27	15.81	\$44,743
MS-DRG 982—Cases reporting procedure code 0DTN0ZZ and a principal diagnosis in MDC 11	33	8.48	20,105
MS-DRG 983—Cases reporting procedure code 0DTN0ZZ and a principal diagnosis in MDC 11	5	3.60	12,351

Our clinical advisors examined the MS-DRGs within MDC 11 and determined that the cases reporting procedure code 0DTN0ZZ with a principal diagnosis in MDC 11 would most suitably group to MS-DRGs 673, 674, and 675, which contain procedures performed on structures other than kidney and urinary tract anatomy. We note that the claims data describing the average length of stay and average costs for cases in these MS-DRGs are included in a table earlier in this section. Because vesicointestinal fistulas involve both the bladder and the bowel, some procedures in both MDC 6 (Diseases and Disorders of the Digestive System) and MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract) would be expected to be related to a principal diagnosis of vesicointestinal fistula (ICD-10-CM code N321). Our clinical advisors observed that procedure code 0DTN0ZZ is the second most common procedure

reported in conjunction with a principal diagnosis of code N321, after ICD-10-PCS procedure code 0TQB0ZZ (Repair bladder, open approach), which is assigned to both MDC 6 and MDC 11. Our clinical advisors reviewed the data and noted that the average length of stay and average costs for this subset of cases are generally higher for this subset of cases than for cases in MS-DRGs 673, 674, and 675. However, our clinical advisors believe that when ICD-10-PCS procedure code 0DTN0ZZ is reported with a principal diagnosis in MDC 11 (typically vesicointestinal fistula), the procedure is related to the principal diagnosis. Therefore, we are proposing to add ICD-10-PCS procedure code 0DTN0ZZ to MDC 11. Under our proposal, cases reporting procedure code 0DTN0ZZ with a principal diagnosis of vesicointestinal fistula (diagnosis code N321) in MDC 11 would group to MS-DRGs 673, 674, and 675.

b. Reassignment of Procedures Among MS-DRGs 981 Through 983 and 987 Through 989

We also review the list of ICD-10-PCS procedures that, when in combination with their principal diagnosis code, result in assignment to MS-DRGs 981 through 983, or 987 through 989, to ascertain whether any of those procedures should be reassigned from one of those two groups of MS-DRGs to the other group of MS-DRGs based on average costs and the length of stay. We look at the data for trends such as shifts in treatment practice or reporting practice that would make the resulting MS-DRG assignment illogical. If we find these shifts, we would propose to move cases to keep the MS-DRGs clinically similar or to provide payment for the cases in a similar manner. Generally, we move only those procedures for which we have an adequate number of discharges to analyze the data.

Based on the results of our review of claims data in the September 2018 update of the FY 2018 MedPAR file, we are not proposing to change the current structure of MS-DRGs 981 through 983 and MS-DRGs 987 through 989.

c. Proposed Additions for Diagnosis and Procedure Codes to MDCs

Below we summarize the requests we received to examine cases found to group to MS-DRGs 981 through 983 or MS-DRGs 987 through 989 to determine if it would be appropriate to add procedure codes to one of the surgical MS DRGs for the MDC into which the principal diagnosis falls or to move the principal diagnosis to the surgical MS-DRGs to which the procedure codes are assigned.

(1) Stage 3 Pressure Ulcers of the Hip

We received a request to reassign cases for a stage 3 pressure ulcer of the left hip when reported with procedures involving excision of pelvic bone or transfer of hip muscle from MS-DRGs 981, 982, and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) to MS-DRG 579 (Other Skin, Subcutaneous Tissue and Breast Procedures with MCC) in MDC 9. ICD-10-CM diagnosis code L89.223 (Pressure ulcer left hip, stage 3) is used to report this condition and is currently assigned to MDC 9

(Diseases and Disorders of the Skin, Subcutaneous Tissue and Breast). We refer readers to section II.12.a. of the preamble of this proposed rule, where we address ICD-10-PCS procedure code 0QB30ZZ (Excision of left pelvic bone, open approach), which was reviewed as part of our ongoing analysis of the unrelated MS-DRGs and which we are proposing to add to MS-DRGs 579, 580, and 581 in MDC 5. (While the requestor only referred to base MS-DRG 579, we believe it is appropriate to assign the cases to MS-DRGs 579, 580, and 581 by severity level.) ICD-10-PCS procedure codes 0KXP0ZZ (Transfer left hip muscle, open approach) and 0KXN0ZZ (Transfer right hip muscle, open approach) may be reported to describe transfer of hip muscle procedures and are currently assigned to MDC 1 (Diseases and Disorders of the Nervous System) and MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue). We included ICD-10-PCS procedure code 0KXN0ZZ in our analysis because it describes the identical procedure on the right side.

Our analysis of this grouping issue confirmed that, when a stage 3 pressure ulcer of the left hip (ICD-10-CM diagnosis code L89.223) is reported as a principal diagnosis with ICD-10-PCS procedure code 0KXP0ZZ or 0KXN0ZZ, these cases group to MS-DRGs 981, 982, and 983. The reason for this grouping is because whenever there is a surgical

procedure reported on a claim that is unrelated to the MDC to which the case was assigned based on the principal diagnosis, it results in an MS-DRG assignment to a surgical class referred to as “unrelated operating room procedures.” In the example provided, because ICD-10-CM diagnosis code L89.223 describing a stage 3 pressure ulcer of left hip is classified to MDC 9 and because ICD-10-PCS procedure codes 0KXP0ZZ and 0KXN0ZZ are classified to MDC 1 (Diseases and Disorders of the Nervous System) in MS-DRGs 040, 041, and 042 (Peripheral, Cranial Nerve and Other Nervous System Procedures with MCC, with CC or Peripheral Neurostimulator, and without CC/MCC, respectively) and MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue) in MS-DRGs 500, 501, and 502 (Soft Tissue Procedures with MCC, with CC, and without CC/MCC, respectively), the GROUPER logic assigns this case to the “unrelated operating room procedures” set of MS-DRGs.

For our review of this grouping issue and the request to have procedure code 0KXP0ZZ added to MDC 9, we examined claims data for cases reporting procedure code 0KXP0ZZ or 0KXN0ZZ in conjunction with a diagnosis code that typically groups to MDC 9. Our findings are shown in the table below.

MS-DRGs 981 THROUGH 983: CASES WITH HIP MUSCLE TRANSFER AND PRINCIPAL DIAGNOSIS IN MDC 9

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 981—Cases with procedure code 0KXP0ZZ or 0KXN0ZZ and principal diagnosis in MDC 9	72	12.6	\$25,023
MS-DRG 982—Cases with procedure code 0KXP0ZZ or 0KXN0ZZ and principal diagnosis in MDC 9	130	10.5	17,955
MS-DRG 983—Cases with procedure code 0KXP0ZZ or 0KXN0ZZ and principal diagnosis in MDC 9	16	6.5	13,196

As indicated earlier, the requestor suggested that we move ICD-10-PCS procedure code 0KXP0ZZ to MS-DRG 579. However, our clinical advisors believe that, within MDC 9, these procedure codes are more clinically aligned with the procedure codes

assigned to MS-DRGs 573, 574, and 575 (Skin Graft for Skin Ulcer or Cellulitis with MCC, with CC and without CC/MCC, respectively), which are more specific to the care of stage 3, 4 and unstageable pressure ulcers than MS-DRGs 579, 580, and 581. Therefore, we

examined claims data to identify the average length of stay and average costs for cases assigned to MS-DRGs 573, 574, and 575. Our findings are shown in the table below.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 573	548	15.4	\$34,549
MS-DRG 574	1,254	9.8	21,251
MS-DRG 575	238	5.4	12,006

We note that the average costs for cases in MS-DRGs 573 and 574 are higher than the average costs of the

subset of cases with the same severity reporting a hip muscle transfer and a principal diagnosis in MDC 9, while the

average costs of those cases in MS-DRG 575 are similar to the average costs of those cases that are currently grouping

to MS-DRG 983. However, our clinical advisors believe that the cases of hip muscle transfer represent a distinct, recognizable clinical group similar to those cases in MS-DRGs 573, 574, and 575, and that the procedures are clearly related to the principal diagnosis codes. Therefore, they believe that it is clinically appropriate for the procedures to group to the same MS-DRGs as the principal diagnoses. Therefore, we are proposing to add ICD-10-PCS procedure codes 0KXP0ZZ and 0KXN0ZZ to MDC 9. Under our proposal, cases reporting ICD-10-PCS procedure code 0KXP0ZZ or 0KXN0ZZ with a principal diagnosis in MDC 9 would group to MS-DRGs 573, 574, and 575.

(2) Gastrointestinal Stromal Tumor

We received a request to reassign cases for gastrointestinal stromal tumor of the stomach when reported with a procedure describing laparoscopic bypass of the stomach to jejunum from MS-DRGs 981, 982, and 983 to MS-DRGs 326, 327, and 328 (Stomach, Esophageal and Duodenal Procedures with MCC, with CC, and without CC/MCC, respectively) by adding ICD-10-PCS procedure code 0D164ZA (Bypass stomach to jejunum, percutaneous endoscopic approach) to MDC 6. ICD-10-CM diagnosis code C49.A2 (Gastrointestinal stromal tumor of stomach) is used to report this condition and is currently assigned to MDC 8. ICD-10-PCS procedure code 0D164ZA is used to report the stomach bypass procedure and is currently assigned to MDC 5 (Diseases and Disorders of the Circulatory System), MDC 6 (Diseases and Disorders of the Digestive System), MDC 7 (Diseases and Disorders of the Hepatobiliary System and Pancreas), MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders), and MDC 17 (Myeloproliferative Diseases and Disorders, Poorly Differentiated

Neoplasms). We refer readers to section II.12.a. of the preamble of this proposed rule where we discuss our proposal to move the listed diagnosis codes describing gastrointestinal stromal tumors, including ICD-10-CM diagnosis code C49.A2, into MDC 6. Therefore, this proposal, if finalized, would address the cases grouping to MS-DRGs 981 through 983 by instead moving the diagnosis codes to MDC 6, which would result in the diagnosis code and the procedure code referenced by the requestor grouping to the same MDC.

(3) Finger Cellulitis

We received a request to reassign cases for cellulitis of the right finger when reported with a procedure describing open excision of the right finger phalanx from MS-DRGs 981, 982, and 983 to MS-DRGs 579, 580, and 581 (Other Skin, Subcutaneous Tissue and Breast Procedures with MCC, with CC, and without CC/MCC, respectively). Currently, ICD-10-CM diagnosis code L03.011 (Cellulitis of right finger) is used to report this condition and is currently assigned to MDC 09 in MS-DRGs 573, 574, and 575 (Skin Graft for Skin Ulcer or Cellulitis with MCC, CC, and without CC/MCC, respectively), 576, 577, and 578 (Skin Graft except for Skin Ulcer or Cellulitis with MCC, CC, and without CC/MCC, respectively), and 602 and 603 (Cellulitis with MCC and without MCC, respectively). ICD-10-PCS procedure code 0PBT0ZZ (Excision of right finger phalanx, open approach) is used to identify the excision procedure, and is currently assigned to MDC 03 (Diseases and Disorders of the Ear, Nose, Mouth and Throat) in MS-DRGs 133 and 134 (Other Ear, Nose, Mouth and Throat O.R. Procedures with CC/MCC, and without CC/MCC, respectively); MDC 08 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue) in MS-DRGs 515, 516, and 517 (Other

Musculoskeletal System and Connective Tissue O.R. Procedures with MCC, with CC, and without CC/MCC, respectively); MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders) in MS-DRGs 628, 629, and 630 (Other Endocrine, Nutritional and Metabolic O.R. Procedures with MCC, with CC, and without CC/MCC, respectively); MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs) in MS-DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries with MCC, with CC, and without CC/MCC, respectively); and MDC 24 (Multiple Significant Trauma) in MS-DRGs 957, 958, and 959 (Other O.R. Procedures for Multiple Significant Trauma with MCC, with CC, and without CC/MCC, respectively).

Our analysis of this grouping issue confirmed that when a procedure such as open excision of right finger phalanx (ICD-10-PCS procedure code 0PBT0ZZ) is reported with a principal diagnosis from MDC 9, such as cellulitis of the right finger (ICD-10-CM diagnosis code L03.011), these cases group to MS-DRGs 981, 982, and 983. During our review of this issue, we also examined claims data for similar procedures describing excision of phalanges (which are listed in the table below) and noted the same pattern. We further noted that the ICD-10-PCS procedure codes describing excision of phalanx procedures with the diagnostic qualifier “X”, which are used to report these procedures when performed for diagnostic purposes, are already assigned to MS-DRGs 579, 580, and 581 (to which the requestor suggested these cases group). Our clinical advisors also believe that procedures describing resection of phalanges should be assigned to the same MS-DRG as the excisions, because the resection procedures would also group to MS-DRGs 981, 982, and 983 when reported with a principal diagnosis from MDC 9.

ICD-10-PCS procedure code	Code description
0PBR0ZZ	Excision of right thumb phalanx, open approach.
0PBR3ZZ	Excision of right thumb phalanx, percutaneous approach.
0PBR4ZZ	Excision of right thumb phalanx, percutaneous endoscopic approach.
0PBS0ZZ	Excision of left thumb phalanx, open approach.
0PBS3ZZ	Excision of left thumb phalanx, percutaneous approach.
0PBS4ZZ	Excision of left thumb phalanx, percutaneous endoscopic approach.
0PBT0ZZ	Excision of right finger phalanx, open approach.
0PBT3ZZ	Excision of right finger phalanx, percutaneous approach.
0PBT4ZZ	Excision of right finger phalanx, percutaneous endoscopic approach.
0PBV0ZZ	Excision of left finger phalanx, open approach.
0PBV3ZZ	Excision of left finger phalanx, percutaneous approach.
0PBV4ZZ	Excision of left finger phalanx, percutaneous endoscopic approach.
0PTR0ZZ	Resection of right thumb phalanx, open approach.
0PTS0ZZ	Resection of left thumb phalanx, open approach.
0PTT0ZZ	Resection of right finger phalanx, open approach.
0PTV0ZZ	Resection of left finger phalanx, open approach.
ORTW0ZZ	Resection of right finger phalangeal joint, open approach.

ICD-10-PCS procedure code	Code description
ORTX0ZZ	Resection of left finger phalangeal joint, open approach.

As noted in the previous discussion, whenever there is a surgical procedure reported on the claim that is unrelated to the MDC to which the case was assigned based on the principal diagnosis, it results in an MS-DRG assignment to a surgical class referred to as “unrelated operating room procedures”.

We examined the claims data for the three codes describing cellulitis of the finger (ICD-10-CM diagnosis codes L03.011 (Cellulitis of the right finger), L03.012 (Cellulitis of left finger), and L03.019 (Cellulitis of unspecified finger)) to identify the average length of stay and average costs for cases reporting a principal diagnosis of

cellulitis of the finger in conjunction with the excision of phalanx procedures listed in the table above. We note that there were no cases reporting a principal diagnosis of cellulitis of the finger in conjunction with the resection of phalanx procedures listed in the table above.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 981—Cases with principal diagnosis of cellulitis of the finger and excision of phalanx procedure	2	3.5	\$7,934
MS-DRG 982—Cases with principal diagnosis of cellulitis of the finger and excision of phalanx procedure	11	4.2	7,244
MS-DRG 983—Cases with principal diagnosis of cellulitis of the finger and excision of phalanx procedure	4	4.8	8,058

We also examined the claims data to identify the average length of stay and average costs for all cases in MS-DRGs 579, 580, and 581. Our findings are shown in the table in section II.12.A.3. of the preamble of this proposed rule.

While our clinical advisors noted that the average length of stay and average costs for cases in MS-DRGs 579, 580, and 581 are generally higher than the average length of stay and average costs for the subset of cases reporting a principal diagnosis of cellulitis of the finger and a procedure describing excision of phalanx, they believe that the procedures are clearly related to the principal diagnosis codes and, therefore, it is clinically appropriate for the procedures to group to the same MS-DRGs as the principal diagnoses, particularly given that procedures describing excision of phalanx with the diagnostic qualifier “X” are already assigned to these MS-DRGs. In addition, our clinical advisors believe it is clinically appropriate for the procedures describing resection of phalanx to be assigned to MS-DRGs 579, 580, and 581 as well. Therefore, we are proposing to add the procedure codes describing excision and resection of phalanx listed above to MS-DRGs 579, 580, and 581. Under this proposal, cases reporting one of the excision or resection procedures listed in the table above in conjunction with a principal diagnosis from MDC 9 would group to MS-DRGs 579, 580, and 581.

(4) Multiple Trauma With Internal Fixation of Joints

We received a request to reassign cases involving multiple significant trauma with internal fixation of joints from MS-DRGs 981, 982, and 983 to MS-DRGs 957, 958, and 959 (Other O.R. Procedures for Multiple Significant Trauma with MCC, with CC, and without CC/MCC, respectively). The requestor provided an example of several ICD-10-CM diagnosis codes that together described multiple significant trauma in conjunction with ICD-10-PCS procedure codes beginning with the prefix “0SH” and “0RH” that describe internal fixation of joints. The requestor provided several suggestions to address this assignment, including: Adding all ICD-10-PCS procedure codes in MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue) with the exception of codes that group to MS-DRG 956 (Limb Reattachment, Hip and Femur Procedures for Multiple Significant Trauma) to MS-DRGs 957, 958, and 959; adding codes within the “0SH” and “0RH” code ranges to MDC 24; and adding ICD-10-PCS procedure codes from all MDCs except those that currently group to MS-DRG 955 (Craniotomy for Multiple Significant Trauma) or MS-DRG 956 (Limb Reattachment, Hip and Femur Procedures for Multiple Significant Trauma) to MS-DRGs 957, 958, and 959.

While we understand the requestor’s concern about these multiple significant trauma cases, we believe any potential reassignment of these cases requires significant analysis. Similar to our

analysis of MDC 14 (initially discussed at 81 FR 56854), there are multiple logic lists in MDC 24 that would need to be reviewed. For example, to satisfy the logic for multiple significant trauma, the logic requires a diagnosis code from the significant trauma principal diagnosis list and two or more significant trauma diagnoses from different body sites. The significant trauma logic lists for the other body sites (which include head, chest, abdominal, kidney, urinary system, pelvis or spine, upper limb, and lower limb) allow the extensive list of diagnosis codes included in the logic to be reported as a principal or secondary diagnosis. The analysis of the reporting of all the codes as a principal and/or secondary diagnosis within MDC 24, combined with the analysis of all of the ICD-10-PCS procedure codes within MDC 8, is anticipated to be a multi-year effort. Therefore, we plan to consider this issue for future rulemaking as part of our ongoing analysis of the unrelated procedure MS-DRGs.

(5) Totally Implantable Vascular Access Devices

We received a request to reassign cases for insertion of totally implantable vascular access devices (TIVADs) listed in the table below when reported with principal diagnoses in MDCs other than MDC 9 (Diseases and Disorders of the Skin, Subcutaneous Tissue and Breast) and MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract) from MS-DRGs 981 through 983 to a surgical MS-DRG within the appropriate MDC based on the principal diagnosis. The requestor noted that the insertion of

TIVAD procedures are newly designated as O.R. procedures, effective October 1, 2018, and are assigned to MDCs 9 and 11. The requestor stated that TIVADs can be placed for a variety of purposes and are used to treat a wide range of malignancies at various sites and, therefore, would likely have a

relationship to the principal diagnosis within any MDC. The requestor suggested that procedures describing the insertion of TIVADs group to surgical MS-DRGs within every MDC (other than MDCs 2, 20, and 22, which do not contain surgical MS-DRGs). The requestor further stated that the surgical

hierarchy should assign more significant O.R. procedures within each MDC to a higher position than procedures describing the insertion of TIVADs because these procedures consume less O.R. resources than more invasive procedures.

ICD-PCS code	Code description
0JH60WZ	Insertion of totally implantable vascular access device into chest subcutaneous tissue and fascia, open approach.
0JH80WZ	Insertion of totally implantable vascular access device into abdomen subcutaneous tissue and fascia, open approach.
0JHD0WZ	Insertion of totally implantable vascular access device into right upper arm subcutaneous tissue and fascia, open approach.
0JHF0WZ	Insertion of totally implantable vascular access device into left upper arm subcutaneous tissue and fascia, open approach.
0JHG0WZ	Insertion of totally implantable vascular access device into right lower arm subcutaneous tissue and fascia, open approach.
0JHH0WZ	Insertion of totally implantable vascular access device into left lower arm subcutaneous tissue and fascia, open approach.
0JHL0WZ	Insertion of totally implantable vascular access device into right upper leg subcutaneous tissue and fascia, open approach.
0JHM0WZ	Insertion of totally implantable vascular access device into left upper leg subcutaneous tissue and fascia, open approach.
0JHN0WZ	Insertion of totally implantable vascular access device into right lower leg subcutaneous tissue and fascia, open approach.
0JHP0WZ	Insertion of totally implantable vascular access device into left lower leg subcutaneous tissue and fascia, open approach.

While we agree that TIVAD procedures may be performed in connection with a variety of principal diagnoses, we note that because these procedures are newly designated as O.R. procedures effective October 1, 2018, we do not yet have sufficient data to analyze this request. We plan to consider this issue in future rulemaking as part of our ongoing analysis of the unrelated procedure MS-DRGs.

(6) Gastric Band Procedure Complications or Infections

We received a request to reassign cases for infection or complications due to gastric band procedures when reported with a procedure describing revision of or removal of extraluminal device in/from the stomach from MS-DRGs 987, 988, and 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC and without MCC/CC, respectively) to MS-DRGs 326, 327, and 328 (Stomach, Esophageal, and Duodenal Procedures

with MCC, with CC, and without CC/MCC, respectively). ICD-10-CM diagnosis codes K95.01 (Infection due to gastric band procedure) and K95.09 (Other complications of gastric band procedure) are used to report these conditions and are currently assigned to MDC 6 (Diseases and Disorders of the Digestive System). ICD-10-PCS procedure codes 0DW64CZ (Revision of extraluminal device in stomach, percutaneous endoscopic approach) and 0DP64CZ (Removal of extraluminal device from stomach, percutaneous endoscopic approach) are used to report the revision of, or removal of, an extraluminal device in/from the stomach and are currently assigned to MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders) in MS-DRGs 619, 620, and 621 (O.R. Procedures for Obesity with MCC with CC, and without CC/MCC, respectively).

Our analysis of this grouping issue confirmed that when procedures

describing the revision of or removal of an extraluminal device in/from the stomach are reported with principal diagnoses in MDC 6 (such as ICD-10-CM diagnosis codes K95.01 and K95.09), in the absence of a procedure assigned to MDC 6, these cases group to MS-DRGs 987, 988, and 989. As noted in the previous discussion, whenever there is a surgical procedure reported on the claim that is unrelated to the MDC to which the case was assigned based on the principal diagnosis, it results in an MS-DRG assignment to a surgical class referred to as "unrelated operating room procedures".

We examined the claims data to identify cases involving ICD-10-PCS procedure codes 0DW64CZ and 0DP64CZ reported with a principal diagnosis of K95.01 or K95.09 that are currently grouping to MS-DRGs 987, 988, and 989. Our findings are shown in the table below.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 987—All cases	8,674	11	\$23,885
MS-DRG 987—Cases reporting procedure code 0DW64CZ or 0DP64CZ and principal diagnosis code K95.01 or K95.09	20	6.6	17,873
MS-DRG 988—All cases	8,391	5.7	12,294
MS-DRG 988—Cases reporting procedure code 0DW64CZ or 0DP64CZ and principal diagnosis code K95.01 or K95.09	105	2.2	7,253
MS-DRG 989—All cases	1,551	3.1	8,171
MS-DRG 989—Cases reporting procedure code 0DW64CZ or 0DP64CZ and principal diagnosis code K95.01 or K95.09	120	1.6	6,010

We also examined the data for cases in MS-DRGs 326, 327, and 328, and our findings are provided in a table presented in section II.12.a. of the preamble of this proposed rule. While our clinical advisors noted that the

average length of stay and average costs of cases in MS-DRGs 326, 327, and 328 are significantly higher than the average length of stay and average costs for the subset of cases reporting procedure code 0DW64CZ or 0DP64CZ and a principal

diagnosis code of K95.01 or K95.09, they believe that the procedures are clearly related to the principal diagnosis and, therefore, it is clinically appropriate for the procedures to group to the same MS-DRGs as the principal

diagnoses. In addition, our clinical advisors believe that because these procedures are intended to treat a complication of a procedure related to obesity, rather than the obesity itself, they are more appropriately assigned to stomach, esophageal, and duodenal procedures (MS-DRGs 326, 327, and 328) in MDC 6 than to procedures for obesity (MS-DRGs 619, 620, and 621) in MDC 10.

Therefore, we are proposing to add ICD-10-PCS procedure codes 0DW64CZ and 0DP64CZ to MDC 6 in MS-DRGs 326, 327, and 328. Under this proposal, cases reporting procedure code 0DW64CZ or 0DP64CZ in conjunction with a principal diagnosis code of K95.01 or K95.09 would group to MS-DRGs 326, 327, and 328.

(7) Peritoneal Dialysis Catheters

We received a request to reassign cases for complications of peritoneal dialysis catheters when reported with procedure codes describing removal, revision, and/or insertion of new peritoneal dialysis catheters from MS-DRGs 981 through 983 to MS-DRGs 356, 357, and 358 (Other Digestive System O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 6 by adding the diagnosis codes describing complications of peritoneal dialysis catheters to MDC 6. We refer readers to section II.12.a. of the preamble of this proposed rule in which we describe our analysis of this issue as part of our broader review of the unrelated MS-DRGs. Our clinical advisors believe it is more appropriate to add the procedure codes describing removal, revision, and/or insertion of new peritoneal dialysis catheters to MS-DRGs 907, 908, and 909 than to move the diagnosis codes describing complications of peritoneal dialysis catheters to MDC 6 because the diagnosis codes describe complications, rather than initial placement, of peritoneal dialysis catheters, and therefore, are most clinically aligned with the diagnosis codes assigned to MDC 21 (where they are currently assigned). In section II.12.a. of the preamble of this proposed rule, we are proposing to add procedures describing removal, revision, and/or insertion of peritoneal dialysis catheters to MS-DRGs 907, 908, and 909 in MDC 21.

(8) Occlusion of Left Renal Vein

We received a request to reassign cases for varicose veins in the pelvic region when reported with an embolization procedure from MS-DRGs 981, 982 and 983 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and

without CC/MCC, respectively) to MS-DRGs 715 and 716 (Other Male Reproductive System O.R. Procedures for Malignancy with CC/MCC and without CC/MCC, respectively) and MS-DRGs 717 and 718 (Other Male Reproductive System O.R. Procedures Except Malignancy with CC/MCC and without CC/MCC, respectively) in MDC 12 (Diseases and Disorders of the Male Reproductive System) and to MS-DRGs 749 and 750 (Other Female Reproductive System O.R. Procedures with CC/MCC and without CC/MCC, respectively) in MDC 13 (Diseases and Disorders of the Female Reproductive System). ICD-10-CM diagnosis code I86.2 (Pelvic varices) is reported to identify the condition of varicose veins in the pelvic region and is currently assigned to MDC 12 and to MDC 13. ICD-10-PCS procedure code 06LB3DZ (Occlusion of left renal vein with intraluminal device, percutaneous approach) may be reported to describe an embolization procedure performed for the treatment of pelvic varices and is currently assigned to MDC 5 (Diseases and Disorders of the Circulatory System) in MS-DRGs 270, 271, and 272 (Other Major Cardiovascular Procedures with MCC, with CC, and without CC/MCC, respectively), MDC 6 (Diseases and Disorders of the Digestive System) in MS-DRGs 356, 357, and 358 (Other Digestive System O.R. Procedures with MCC, with CC, and without CC/MCC, respectively), MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs) in MS-DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries with MCC, CC, without CC/MCC, respectively), and MDC 24 (Multiple Significant Trauma) in MS-DRGs 957, 958, 959 (Other O.R. Procedures for Multiple Significant Trauma with MCC, with CC, and without CC/MCC, respectively). The requestor also noted that when this procedure is performed on the right renal vein (which is reported with ICD-10-PCS code 06L03DZ (Occlusion of inferior vena cava with intraluminal device, percutaneous approach) for varicose veins in the pelvic region, the case groups to MS-DRGs 715 and 716 and MS-DRGs 717 and 718 in MDC 12 (for male patients) or MS-DRGs 749 and 750 in MDC 13 (for female patients).

Our analysis of this grouping issue confirmed that when ICD-10-CM diagnosis code I86.2 (Pelvic varices) is reported with ICD-10-PCS procedure code 06LB3DZ, the case groups to MS-DRGs 981, 982, and 983. As noted above in previous discussions, whenever there is a surgical procedure reported on the claim that is unrelated to the MDC to which the case was assigned based on

the principal diagnosis, it results in an MS-DRG assignment to a surgical class referred to as “unrelated operating room procedures.”

We examined the claims data to identify cases involving procedure code 06LB3DZ in MS-DRGs 981, 982, and 983 reported with a principal diagnosis code of I86.2. We found no cases in the claims data.

In the absence of data to examine, our clinical advisors reviewed this request and agree with the requestor that when the embolization procedure is performed on the left renal vein (reported with ICD-10-PCS procedure code 06LB3DZ), it should group to the same MS-DRGs as when it is performed on the right renal vein. Therefore, we are proposing to add ICD-10-PCS procedure code 06LB3DZ to MDC 12 in MS-DRGs 715, 716, 717, and 718 and to MDC 13 in MS-DRGs 749 and 750. Under this proposal, cases reporting ICD-10-CM diagnosis code I86.2 with ICD-10-PCS procedure code 06LB3DZ would group to MDC 12 (for male patients) or MDC 13 (for female patients).

13. Operating Room (O.R.) and Non-O.R. Issues

a. Background

Under the IPPS MS-DRGs (and former CMS MS-DRGs), we have a list of procedure codes that are considered operating room (O.R.) procedures. Historically, we developed this list using physician panels that classified each procedure code based on the procedure and its effect on consumption of hospital resources. For example, generally the presence of a surgical procedure which required the use of the operating room would be expected to have a significant effect on the type of hospital resources (for example, operating room, recovery room, and anesthesia) used by a patient, and therefore, these patients were considered surgical. Because the claims data generally available do not precisely indicate whether a patient was taken to the operating room, surgical patients were identified based on the procedures that were performed. Generally, if the procedure was not expected to require the use of the operating room, the patient would be considered medical (non-O.R.).

Currently, each ICD-10-PCS procedure code has designations that determine whether and in what way the presence of that procedure on a claim impacts the MS-DRG assignment. First, each ICD-10-PCS procedure code is either designated as an O.R. procedure for purposes of MS-DRG assignment

(“O.R. procedures”) or is not designated as an O.R. procedure for purposes of MS-DRG assignment (“non-O.R. procedures”). Second, for each procedure that is designated as an O.R. procedure, that O.R. procedure is further classified as either extensive or non-extensive. Third, for each procedure that is designated as a non-O.R. procedure, that non-O.R. procedure is further classified as either affecting the MS-DRG assignment or not affecting the MS-DRG assignment. We refer to these designations that do affect MS-DRG assignment as “non-O.R. affecting the MS-DRG.” For new procedure codes that have been finalized through the ICD-10 Coordination and Maintenance Committee meeting process and are proposed to be classified as O.R. procedures or non-O.R. procedures affecting the MS-DRG, our clinical advisors recommend the MS-DRG assignment which is then made available in association with the proposed rule (Table 6B.—New Procedure Codes) and subject to public comment. These proposed assignments are generally based on the assignment of predecessor codes or the assignment of similar codes. For example, we generally examine the MS-DRG assignment for similar procedures, such as the other approaches for that procedure, to determine the most appropriate MS-DRG assignment for procedures proposed to be newly designated as O.R. procedures. As discussed in section II.F.15. of the preamble of this proposed rule, we are making Table 6B.—New Procedure Codes—FY 2020 available on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>. We also refer readers to the ICD-10 MS-DRG Version 36 Definitions Manual at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html> for detailed information regarding the designation of procedures as O.R. or non-O.R. (affecting the MS-DRG) in Appendix E—Operating Room Procedures and Procedure Code/MS-DRG Index.

Given the long period of time that has elapsed since the original O.R. (extensive and non-extensive) and non-O.R. designations were established, the incremental changes that have occurred to these O.R. and non-O.R. procedure code lists, and changes in the way inpatient care is delivered, we plan to conduct a comprehensive, systematic review of the ICD-10-PCS procedure codes. This will be a multi-year project

during which we will also review the process for determining when a procedure is considered an operating room procedure. For example, we may restructure the current O.R. and non-O.R. designations for procedures by leveraging the detail that is now available in the ICD-10 claims data. We refer readers to the discussion regarding the designation of procedure codes in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38066) where we stated that the determination of when a procedure code should be designated as an O.R. procedure has become a much more complex task. This is, in part, due to the number of various approaches available in the ICD-10-PCS classification, as well as changes in medical practice. While we have typically evaluated procedures on the basis of whether or not they would be performed in an operating room, we believe that there may be other factors to consider with regard to resource utilization, particularly with the implementation of ICD-10. Therefore, we are again soliciting public comments on what factors or criteria to consider in determining whether a procedure is designated as an O.R. procedure in the ICD-10-PCS classification system for future consideration. Commenters should submit their recommendations to the following email address: MSDRGClassificationChange@cms.hhs.gov by November 1, 2019.

As a result of this planned review and potential restructuring, procedures that are currently designated as O.R. procedures may no longer warrant that designation, and conversely, procedures that are currently designated as non-O.R. procedures may warrant an O.R. type of designation. We intend to consider the resources used and how a procedure should affect the MS-DRG assignment. We may also consider the effect of specific surgical approaches to evaluate whether to subdivide specific MS-DRGs based on a specific surgical approach. We plan to utilize our available MedPAR claims data as a basis for this review and the input of our clinical advisors. As part of this comprehensive review of the procedure codes, we also intend to evaluate the MS-DRG assignment of the procedures and the current surgical hierarchy because both of these factor into the process of refining the ICD-10 MS-DRGs to better recognize complexity of service and resource utilization.

We will provide more detail on this analysis and the methodology for conducting this review in future rulemaking. As we continue to develop our process and methodology, as noted above, we are soliciting public

comments on other factors to consider in our refinement efforts to recognize and differentiate consumption of resources for the ICD-10 MS-DRGs.

In this proposed rule, we are addressing requests that we received regarding changing the designation of specific ICD-10-PCS procedure codes from non-O.R. to O.R. procedures, or changing the designation from O.R. procedure to non-O.R. procedure. Below we discuss the process that was utilized for evaluating the requests that were received for FY 2020 consideration. For each procedure, our clinical advisors considered:

- Whether the procedure would typically require the resources of an operating room;
- Whether it is an extensive or a nonextensive procedure; and
- To which MS-DRGs the procedure should be assigned.

We note that many MS-DRGs require the presence of any O.R. procedure. As a result, cases with a principal diagnosis associated with a particular MS-DRG would, by default, be grouped to that MS-DRG. Therefore, we do not list these MS-DRGs in our discussion below. Instead, we only discuss MS-DRGs that require explicitly adding the relevant procedure codes to the GROUPER logic in order for those procedure codes to affect the MS-DRG assignment as intended. In cases where we are proposing to change the designation of procedure codes from non-O.R. procedures to O.R. procedures, we also are proposing one or more MS-DRGs with which these procedures are clinically aligned and to which the procedure code would be assigned.

In addition, cases that contain O.R. procedures will map to MS-DRG 981, 982, or 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS-DRG 987, 988, or 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) when they do not contain a principal diagnosis that corresponds to one of the MDCs to which that procedure is assigned. These procedures need not be assigned to MS-DRGs 981 through 989 in order for this to occur. Therefore, if requestors included some or all of MS-DRGs 981 through 989 in their request or included MS-DRGs that require the presence of any O.R. procedure, we did not specifically address that aspect in summarizing their request or our response to the request in the section below.

For procedures that would not typically require the resources of an operating room, our clinical advisors

determined if the procedure should affect the MS-DRG assignment.

We received several requests to change the designation of specific ICD-10-PCS procedure codes from non-O.R. procedures to O.R. procedures, or to change the designation from O.R. procedures to non-O.R. procedures. Below we detail and respond to some of those requests. With regard to the remaining requests, our clinical advisors believe it is appropriate to consider these requests as part of our comprehensive review of the procedure codes discussed above.

b. O.R. Procedures to Non-O.R. Procedures

(1) Bronchoalveolar Lavage

Bronchoalveolar lavage (BAL) is a diagnostic procedure in which a bronchoscope is passed through the patient's mouth or nose into the lungs. A small amount of fluid is squirted into an area of the lung and then collected for examination. Two requestors identified 13 ICD-10-PCS procedure codes describing BAL procedures that generally can be performed at bedside and would not require the resources of an operating room. In the ICD-10 MS-DRG Version 36 Definitions Manual,

these 13 ICD-10-PCS procedure codes are currently recognized as O.R. procedures for purposes of MS-DRG assignment.

We agree with the requestors that these procedures do not typically require the resources of an operating room. Therefore, we are proposing to remove the following 13 procedure codes from the FY 2020 ICD-10 MS-DRGs Version 37 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS-DRG Index as O.R. procedures. Under this proposal, these procedures would no longer impact MS-DRG assignment.

ICD-10-PCS code	Code description
0B9H8ZX	Drainage of lung lingula, via natural or artificial opening endoscopic, diagnostic.
0B9K8ZX	Drainage of right lung, via natural or artificial opening endoscopic, diagnostic.
0B9L8ZX	Drainage of left lung, via natural or artificial opening endoscopic, diagnostic.
0B9M8ZX	Drainage of bilateral lungs, via natural or artificial opening endoscopic, diagnostic.
0B9C8ZZ	Drainage of right upper lung lobe, via natural or artificial opening endoscopic.
0B9D8ZZ	Drainage of right middle lung lobe, via natural or artificial opening endoscopic.
0B9F8ZZ	Drainage of right lower lung lobe, via natural or artificial opening endoscopic.
0B9G8ZZ	Drainage of left upper lung lobe, via natural or artificial opening endoscopic.
0B9H8ZZ	Drainage of Lung Lingula, via natural or artificial opening endoscopic.
0B9J8ZZ	Drainage of left lower lung lobe, via natural or artificial opening endoscopic.
0B9K8ZZ	Drainage of right lung, via natural or artificial opening endoscopic.
0B9L8ZZ	Drainage of left lung, via natural or artificial opening endoscopic.
0B9M8ZZ	Drainage of bilateral lungs, via natural or artificial opening endoscopic.

(2) Percutaneous Drainage of Pelvic Cavity

One requestor identified two ICD-10-PCS procedure codes that describe procedures involving percutaneous drainage of the pelvic cavity. The two ICD-10-PCS procedure codes are: 0W9J3ZX (Drainage of pelvic cavity, percutaneous approach, diagnostic) and 0W9J3ZZ (Drainage of pelvic cavity, percutaneous approach).

ICD-10-PCS procedure code 0W9J3ZX is currently recognized as an O.R. procedure for purposes of MS-DRG assignment, while the nondiagnostic ICD-10-PCS procedure code 0W9J3ZZ is not recognized as an O.R. procedure for purposes of MS-DRG assignment. The requestor stated that percutaneous drainage procedures of the pelvic cavity for both diagnostic and nondiagnostic purposes are not complex procedures and both types of procedures are usually performed in a radiology suite. The requestor stated that both procedures should be classified as non-O.R. procedures.

We agree with the requestor that these procedures do not typically require the resources of an operating room. Therefore, we are proposing to remove procedure code 0W9J3ZX from the FY 2020 ICD-10 MS-DRG Version 37 Definitions Manual in Appendix E—

Operating Room Procedures and Procedure Code/MS-DRG Index as an O.R. procedure. Under this proposal, this procedure would no longer impact MS-DRG assignment.

(3) Percutaneous Removal of Drainage Device

One requestor identified two ICD-10-PCS procedure codes that describe procedures involving the percutaneous placement and removal of drainage devices from the pancreas. These two ICD-10-PCS procedure codes are: 0FPG30Z (Removal of drainage device from pancreas, percutaneous approach) and 0F9G30Z (Drainage of pancreas with drainage device, percutaneous approach). ICD-10-PCS procedure code 0FPG30Z is currently recognized as an O.R. procedure for purposes of MS-DRG assignment, while ICD-10-PCS procedure code 0F9G30Z is not recognized as an O.R. procedure for purposes of MS-DRG assignment. The requestor stated that percutaneous placement of drains is typically performed in a radiology suite under image guidance and removal of a drain would not be more resource intensive than its placement.

We agree with the requestor that these procedures do not typically require the resources of an operating room. Therefore, we are proposing to remove

ICD-10-PCS procedure code 0FPG30Z from the FY 2020 ICD-10 MS-DRG Version 37 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS-DRG Index as an O.R. procedure. Under this proposal, this procedure would no longer impact MS-DRG assignment.

c. Non-O.R. Procedures to O.R. Procedures

(1) Percutaneous Occlusion of Gastric Artery

One requestor identified two ICD-10-PCS procedure codes that describe percutaneous occlusion and restriction of the gastric artery with intraluminal device, ICD-10-PCS procedure codes 04L23DZ (Occlusion of gastric artery with intraluminal device, percutaneous approach) and 04V23DZ (Restriction of gastric artery with intraluminal device, percutaneous approach), that the requestor stated are currently not recognized as O.R. procedures for purposes of MS-DRG assignment. The requestor noted that transcatheter endovascular embolization of the gastric artery with intraluminal devices uses comparable resources to transcatheter endovascular embolization of the gastroduodenal artery. The requestor stated that ICD-10-PCS procedure codes 04L33DZ (Occlusion of hepatic

artery with intraluminal device, percutaneous approach) and 04V33DZ (Restriction of hepatic artery with intraluminal device, percutaneous approach) are recognized as O.R. procedures for purposes of MS-DRG assignment, and ICD-10-PCS procedure codes 04L23DZ and 04V23DZ should therefore also be recognized as O.R. procedures for purposes of MS-DRG assignment. We note that, contrary to the requestor's statement, ICD-10-PCS procedure code 04V23DZ is already recognized as an O.R. procedure for purposes of MS-DRG assignment.

We agree with the requestor that ICD-10-PCS procedure code 04L23DZ typically requires the resources of an operating room. Therefore, we are

proposing to add this code to the FY 2020 ICD-10 MS-DRG Version 37 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS-DRG Index as an O.R. procedure assigned to MS-DRGs 270, 271, and 272 (Other Major Cardiovascular Procedures with MCC, CC, without CC/MCC, respectively) in MDC 05 (Diseases and Disorders of the Circulatory System); MS-DRGs 356, 357, and 358 (Other Digestive System O.R. Procedures, with MCC, CC, without CC/MCC, respectively) in MDC 06 (Diseases and Disorders of the Digestive System); MS-DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries with MCC, CC, without CC/MCC, respectively) in MDC 21 (Injuries,

Poisonings and Toxic Effects of Drugs); and MS-DRGs 957, 958, and 959 (Other O.R. Procedures for Multiple Significant Trauma with MCC, CC, without CC/MCC, respectively) in MDC 24 (Multiple Significant Trauma).

(2) Endoscopic Insertion of Endobronchial Valves

In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41257), we discussed a comment we received in response to the FY 2019 IPPS/LTCH PPS proposed rule regarding eight ICD-10-PCS procedure codes that describe endobronchial valve procedures that the commenter believed should be designated as O.R. procedures. The codes are identified in the following table.

ICD-10-PCS code	Code description
0BH38GZ	Insertion of endobronchial valve into right main bronchus, via natural or artificial opening endoscopic.
0BH48GZ	Insertion of endobronchial valve into right upper lobe bronchus, via natural or artificial opening endoscopic.
0BH58GZ	Insertion of endobronchial valve into right middle lobe bronchus, via natural or artificial opening endoscopic.
0BH68GZ	Insertion of endobronchial valve into right lower lobe bronchus, via natural or artificial opening endoscopic.
0BH78GZ	Insertion of endobronchial valve into left main bronchus, via natural or artificial opening endoscopic.
0BH88GZ	Insertion of endobronchial valve into left upper lobe bronchus, via natural or artificial opening endoscopic.
0BH98GZ	Insertion of endobronchial valve into lingula bronchus, via natural or artificial opening endoscopic.
0BHB8GZ	Insertion of endobronchial valve into left lower lobe bronchus, via natural or artificial opening endoscopic.

The commenter stated that these procedures are most commonly performed in the O.R., given the need for better monitoring and support through the process of identifying and occluding a prolonged air leak using endobronchial valve technology. The commenter also noted that other endobronchial valve procedures have an O.R. designation. We noted that, in the ICD-10 MS-DRGs Version 35, these eight ICD-10-PCS procedure codes are not recognized as O.R. procedures for purposes of MS-DRG assignment. The commenter requested that these eight procedure codes be assigned to MS-DRG 163 (Major Chest Procedures with MCC) due to similar cost and resource use. As discussed in the FY 2019 IPPS/LTCH PPS final rule, our clinical advisors disagreed with the commenter that the eight identified procedures typically require the use of an operating room, and believed that these procedures would typically be performed in an endoscopy suite. Therefore, we did not finalize a change to the eight procedure codes describing endoscopic insertion of an endobronchial valve listed in the table above for FY 2019 under the ICD-10 MS-DRGs Version 36.

After publication of the FY 2019 IPPS/LTCH PPS final rule, we received feedback from several stakeholders expressing continued concern with the designation of the eight ICD-10-PCS

procedure codes describing the endoscopic insertion of an endobronchial valve listed in the table above, including requests to reconsider the designation of these codes for FY 2020. Some requestors stated that while they appreciated CMS' attention to the issue, they believed that important clinical and financial factors had been overlooked. The requestors noted that while the site of care is an important consideration for MS-DRG assignment, there are other clinical factors such as case complexity, patient health risk and the need for anesthesia that also affect hospital resource consumption and should influence MS-DRG assignment. With regard to complexity, the requestors stated that many of these patients are high-risk, often recovering from major lung surgery and have significantly compromised respiratory function. According to one requestor, these patients may have major comorbidities, such as cancer or emphysema contributing to longer lengths of stay in the hospital. This requestor acknowledged that procedures performed for the endoscopic insertion of an endobronchial valve are often, but not always, performed in the O.R., however, the requestor also noted this should not preclude the designation of these procedures as O.R. procedures since there have been other examples of reclassification requests where the combination of factors, such as

treatment difficulty, resource utilization, patient health status, and anesthesia administration were considered in the decision to change the designation for a procedure from non-O.R. to O.R. Another requestor stated that CMS' current designation of a procedure involving the endoscopic insertion of an endobronchial valve as a non-O.R. procedure is not reflective of actual practice and this designation has payment consequences that may affect access to the treatment for a vulnerable patient population, with limited treatment options. The requestor recommended that procedures involving the endoscopic insertion of an endobronchial valve should be designated as O.R. procedures and assigned to MS-DRGs 163, 164, and 165 (Major Chest Procedures with MCC, with CC and without CC/MCC, respectively). In addition, a few of the requestors also conducted their own analyses and indicated that if procedures involving the endoscopic insertion of an endobronchial valve were to be assigned to MS-DRGs 163, 164, and 165, the average costs of the cases reporting a procedure code describing the endoscopic insertion of an endobronchial valve would still be higher compared to all the cases in the assigned MS-DRG.

We examined claims data from the September 2018 update of the FY 2018 MedPAR file for MS-DRGs 163, 164 and

165 to identify cases reporting any one of the eight procedure codes listed in the above table describing the endoscopic insertion of an endobronchial valve. Cases reporting one of these procedure codes would be

assigned to MS-DRG 163, 164, or 165 if at least one other procedure that is designated as an O.R. procedure and assigned to these MS-DRGs was also reported on the claim. In addition, cases reporting a procedure code describing

the endoscopic insertion of an endobronchial valve with a different surgical approach are assigned to MS-DRGs 163, 164, and 165. Our findings are shown in the following table.

MS-DRGs FOR MAJOR CHEST PROCEDURES WITH ENDOSCOPIC INSERTION OF ENDOBRONCHIAL VALVE PROCEDURES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 163—All cases	10,812	11.6	\$33,433
MS-DRG 163—Cases reporting a procedure for the endoscopic insertion of an endobronchial valve	49	21.1	53,641
MS-DRG 164—All cases	14,800	5.6	18,202
MS-DRG 164—Cases reporting a procedure for the endoscopic insertion of an endobronchial valve	23	14	37,287
MS-DRG 165—All cases	7,907	3.3	13,408
MS-DRG 165—Cases reporting a procedure for the endoscopic insertion of an endobronchial valve	3	18.3	39,249

We found a total of 10,812 cases in MS-DRG 163 with an average length of stay of 11.6 days and average costs of \$33,433. Of those 10,812 cases, we found 49 cases reporting a procedure for the endoscopic insertion of an endobronchial valve with an average length of stay of 21.1 days and average costs of \$53,641. For MS-DRG 164, we found a total of 14,800 cases with an average length of stay of 5.6 days and average costs of \$18,202. Of those 14,800 cases, we found 23 cases reporting a procedure for the endoscopic insertion of an

endobronchial valve with an average length of stay of 14 days and average costs of \$37,287. For MS-DRG 165, we found a total of 7,907 cases with an average length of stay of 3.3 days and average costs of \$13,408. Of those 7,907 cases, we found 3 cases reporting a procedure for the endoscopic insertion of an endobronchial valve with an average length of stay of 18.3 days and average costs of \$39,249.

We also examined claims data to identify any cases reporting any one of the eight procedure codes listed in the table above describing the endoscopic insertion of an endobronchial valve

within MS-DRGs 166, 167, and 168 (Other Respiratory System O.R. Procedures with MCC, with CC, and without CC/MCC, respectively). Cases reporting one of these procedure codes would be assigned to MS-DRG 166, 167, or 168 if at least one other procedure that is designated as an O.R. procedure and assigned to these MS-DRGs was also reported on the claim. In addition, MS-DRGs 166, 167, and 168 are the other surgical MS-DRGs where cases reporting a respiratory diagnosis within MDC 4 would be assigned. Our findings are shown in the following table.

MS-DRGs FOR OTHER RESPIRATORY SYSTEM O.R. PROCEDURES WITH ENDOSCOPIC INSERTION OF ENDOBRONCHIAL VALVE

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 166—All cases	16,050	10.6	\$26,645
MS-DRG 166—Cases reporting a procedure for the endoscopic insertion of an endobronchial valve	11	25.7	71,700
MS-DRG 167—All cases	8,165	5.3	13,687
MS-DRG 167—Cases reporting a procedure for the endoscopic insertion of an endobronchial valve	4	10	28,847
MS-DRG 168—All cases	2,430	2.8	9,645

We found a total of 16,050 cases in MS-DRG 166 with an average length of stay of 10.6 days and average costs of \$26,645. Of those 16,050 cases, we found 11 cases reporting a procedure for the endoscopic insertion of an endobronchial valve with an average length of stay of 25.7 days and average costs of \$71,700. For MS-DRG 167, we found a total of 8,165 cases with an average length of stay of 5.3 days and average costs of \$13,687. Of those 8,165 cases, we found 4 cases reporting a procedure for the endoscopic insertion of an endobronchial valve with an

average length of stay of 10 days and average costs of \$28,847. For MS-DRG 168, we found a total of 2,430 cases with an average length of stay of 2.8 days and average costs of \$9,645. Of those 2,430 cases, we did not find any cases reporting a procedure for the endoscopic insertion of an endobronchial valve.

The results of our data analysis indicate that cases reporting a procedure for the endoscopic insertion of an endobronchial valve in MS-DRGs 163, 164, 165, 166, and 167 have a longer length of stay and higher average costs

when compared to all the cases in their assigned MS-DRG. Because the data are based on surgical MS-DRGs 163, 164, 165, 166 and 167, and the procedure codes for endoscopic insertion of an endobronchial valve are currently designated as non-O.R. procedures, there was at least one other O.R. procedure reported on the claim resulting in case assignment to one of those MS-DRGs. Our clinical advisors indicated that because there was another O.R. procedure reported, the insertion of the endobronchial valve procedure may or may not have been

the main determinant of resource use for those cases. Therefore, we conducted further analysis to evaluate cases for which no other O.R. procedure was performed with the endoscopic insertion of an endobronchial valve and case assignment resulted in a medical MS-DRG. Our findings are shown in the following table.

MEDICAL MS-DRGS WITH INSERTION OF ENDOBRONCHIAL VALVE PROCEDURES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 069 (Transient Ischemia without Thrombolytic)	1	9	\$26,002
MS-DRG 177 (Respiratory Infections and Inflammations with MCC)	11	19.5	33,877
MS-DRG 178 (Respiratory Infections and Inflammations with CC)	4	10.8	20,109
MS-DRG 180 (Respiratory Neoplasms with MCC)	2	11.5	19,273
MS-DRG 181 (Respiratory Neoplasms with MCC)	1	3	12,641
MS-DRG 186 (Pleural Effusion with MCC)	1	8	23,609
MS-DRG 187 (Pleural Effusion with CC)	1	18	49,214
MS-DRG 189 (Pulmonary Edema and Respiratory Failure)	2	13.5	65,431
MS-DRG 190 (Chronic Obstructive Pulmonary Disease with MCC)	2	9	39,925
MS-DRG 191 (Chronic Obstructive Pulmonary Disease with CC)	1	15	55,958
MS-DRG 192 (Chronic Obstructive Pulmonary Disease without CC/MCC)	1	5	10,394
MS-DRG 193 (Simple Pneumonia and Pleurisy with MCC)	1	18	27,182
MS-DRG 197 (Interstitial Lung Disease with CC)	1	12	11,458
MS-DRG 199 (Pneumothorax with MCC)	28	16.4	38,384
MS-DRG 200 (Pneumothorax with CC)	11	8.3	20,764
MS-DRG 201 (Pneumothorax without CC/MCC)	2	10	20,243
MS-DRG 205 (Other Respiratory System Diagnoses with MCC)	2	4.5	10,851
MS-DRG 207 (Respiratory System Diagnosis with Ventilation Support >96 Hours or Peripheral Extracorporeal Membrane Oxygenation (ECMO))	4	20	67,299
MS-DRG 208 (Respiratory System Diagnosis with Ventilation Support ≤96 Hours or Peripheral Extracorporeal Membrane Oxygenation (ECMO))	8	13.6	32,533
MS-DRG 815 (Reticuloendothelial and Immunity Disorders with CC)	1	5	17,379
MS-DRG 871 (Septicemia or Severe Sepsis without Mechanical Ventilation >96 Hours with MCC)	3	15	39,706
MS-DRG 919 (Complications of Treatment with MCC)	2	5	36,143
MS-DRG 920 (Complications of Treatment with CC)	1	5	14,923
Total	91	13.7	33,377

The data indicate that there is a wide variation in the average length of stay and average costs for cases reporting a procedure for the endoscopic insertion of an endobronchial valve, with volume generally low across MS-DRGs. As shown in the table, for several of the medical MS-DRGs, there was only one case reporting a procedure for the endoscopic insertion of an endobronchial valve. The highest volume of cases reporting a procedure for the endoscopic insertion of an endobronchial valve was found in MS-DRG 199 (Pneumothorax with MCC) with a total of 28 cases with an average length of stay of 16.4 days and average costs of \$38,384. The highest average costs and longest average length of stay for cases reporting a procedure for the endoscopic insertion of an endobronchial valve was \$67,299 in MS-DRG 207 (Respiratory System Diagnosis with Ventilator Support >96 Hours or Peripheral Extracorporeal Membrane Oxygenation (ECMO)) where 4 cases were found with an average length of stay of 20 days. Overall, there was a total of 91 cases reporting the insertion of an endobronchial valve procedure with an average length of stay

of 13.7 days and average costs of \$33,377 across the medical MS-DRGs.

Our clinical advisors agree that the subset of patients who undergo endoscopic insertion of an endobronchial procedure are complex and may have multiple comorbidities such as severe underlying lung disease that impact the hospital length of stay. They also believe that, as we begin the process of refining how procedure codes may be classified under ICD-10-PCS, including designation of a procedure as O.R. or non-O.R., we should take into consideration whether the procedure is driving resource use for the admission. (We refer the reader to section II.F.13.a. of the preamble of this proposed rule for the discussion of our plans to conduct a comprehensive review of the ICD-10-PCS procedure codes). Based on the claims data analysis, which show a wide variation in average costs for cases reporting endoscopic insertion of an endobronchial valve without an O.R. procedure, our clinical advisors are not convinced that endoscopic insertion of an endobronchial valve is a key contributing factor to the consumption of resources as reflected in the data. They also believe, in review of the procedures that are currently assigned

to MS-DRGs 163, 164, 165, 166, 167, and 168, that further refinement of these MS-DRGs may be warranted. For these reasons, at this time, our clinical advisors do not support designating endoscopic insertion of an endobronchial valve as an O.R. procedure, nor do they support assignment of these procedures to MS-DRGs 163, 164, and 165 until additional analyses can be performed for this subset of patients as part of the comprehensive procedure code review.

For the reasons described above, we are not proposing to change the current non-O.R. designation of the eight ICD-10-PCS procedure codes that describe endoscopic insertion of an endobronchial valve. However, because we agree that endoscopic insertion of an endobronchial valve procedures are performed on clinically complex patients, we believe it may be appropriate to consider designating these procedures as non-O.R. affecting specific MS-DRGs for FY 2020. Therefore, we are requesting public comment on designating these procedure codes as non-O.R. procedures affecting the MS-DRG assignment, including the specific MS-DRGs that cases reporting the endoscopic insertion

of an endobronchial valve should affect for FY 2020. As noted, it is not clear based on the claims data to what degree the endoscopic insertion of an endobronchial valve is a contributing factor for the consumption of resources for these clinically complex patients and given the potential refinement that may be needed for MS-DRGs 163, 164, 165, 166, 167, and 168, we are soliciting comment on whether cases reporting the endoscopic insertion of an endobronchial valve should affect any of these MS-DRGs or other MS-DRGs.

14. Proposed Changes to the MS-DRG Diagnosis Codes for FY 2020

a. Background of the CC List and the CC Exclusions List

Under the IPPS MS-DRG classification system, we have developed a standard list of diagnoses that are considered CCs. Historically, we developed this list using physician panels that classified each diagnosis code based on whether the diagnosis, when present as a secondary condition, would be considered a substantial complication or comorbidity. A substantial complication or comorbidity was defined as a condition that, because of its presence with a specific principal diagnosis, would cause an increase in the length-of-stay by at least 1 day in at least 75 percent of the patients. However, depending on the principal diagnosis of the patient, some diagnoses on the basic list of complications and comorbidities may be excluded if they are closely related to the principal diagnosis. In FY 2008, we evaluated

each diagnosis code to determine its impact on resource use and to determine the most appropriate CC subclassification (non-CC, CC, or MCC) assignment. We refer readers to sections II.D.2. and 3. of the preamble of the FY 2008 IPPS final rule with comment period for a discussion of the refinement of CCs in relation to the MS-DRGs we adopted for FY 2008 (72 FR 47152 through 47171).

b. Overview of Comprehensive CC/MCC Analysis

In the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159), we described our process for establishing three different levels of CC severity into which we would subdivide the diagnosis codes. The categorization of diagnoses as an MCC, a CC, or a non-CC was accomplished using an iterative approach in which each diagnosis was evaluated to determine the extent to which its presence as a secondary diagnosis resulted in increased hospital resource use. We refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of our approach. Since this comprehensive analysis was completed for FY 2008, we have evaluated diagnosis codes individually when receiving requests to change the severity level of specific diagnosis codes. However, given the transition to ICD-10-CM and the significant changes that have occurred to diagnosis codes since this review, we believe it is necessary to conduct a comprehensive analysis once again. We have completed this analysis and we are discussing our findings in this proposed

rule. We used the same methodology utilized in FY 2008 to conduct this analysis, as described below.

For each secondary diagnosis, we measured the impact in resource use for the following three subsets of patients:

- (1) Patients with no other secondary diagnosis or with all other secondary diagnoses that are non-CCs.
- (2) Patients with at least one other secondary diagnosis that is a CC but none that is an MCC.
- (3) Patients with at least one other secondary diagnosis that is an MCC.

Numerical resource impact values were assigned for each diagnosis as follows:

Value	Meaning
0	Significantly below expected value for the non-CC subgroup.
1	Approximately equal to expected value for the non-CC subgroup.
2	Approximately equal to expected value for the CC subgroup.
3	Approximately equal to expected value for the MCC subgroup.
4	Significantly above the expected value for the MCC subgroup.

Each diagnosis for which Medicare data were available was evaluated to determine its impact on resource use and to determine the most appropriate CC subclass (non-CC, CC, or MCC) assignment. In order to make this determination, the average cost for each subset of cases was compared to the expected cost for cases in that subset. The following format was used to evaluate each diagnosis:

Code	Diagnosis	Cnt1	C1	Cnt2	C2	Cnt3	C3
------	-----------	------	----	------	----	------	----

Count (Cnt) is the number of patients in each subset and C1, C2, and C3 are a measure of the impact on resource use of patients in each of the subsets. The C1, C2, and C3 values are a measure of the ratio of average costs for patients with these conditions to the expected average cost across all cases. The C1 value reflects a patient with no other secondary diagnosis or with all other secondary diagnoses that are non-CCs. The C2 value reflects a patient with at least one other secondary diagnosis that is a CC but none that is a major CC. The C3 value reflects a patient with at least one other secondary diagnosis that is a major CC. A value close to 1.0 in the C1 field would suggest that the code produces the same expected value as a non-CC diagnosis. That is, average costs for the case are similar to the expected average costs for that subset and the

diagnosis is not expected to increase resource usage. A higher value in the C1 (or C2 and C3) field suggests more resource usage is associated with the diagnosis and an increased likelihood that it is more like a CC or major CC than a non-CC. Thus, a value close to 2.0 suggests the condition is more like a CC than a non-CC but not as significant in resource usage as an MCC. A value close to 3.0 suggests the condition is expected to consume resources more similar to an MCC than a CC or non-CC. For example, a C1 value of 1.8 for a secondary diagnosis means that for the subset of patients who have the secondary diagnosis and have either no other secondary diagnosis present, or all the other secondary diagnoses present are non-CCs, the impact on resource use of the secondary diagnoses is greater than the expected value for a

non-CC by an amount equal to 80 percent of the difference between the expected value of a CC and a non-CC (that is, the impact on resource use of the secondary diagnosis is closer to a CC than a non-CC).

These mathematical constructs are used as guides in conjunction with the judgment of our clinical advisors to classify each secondary diagnosis reviewed as an MCC, a CC, or a non-CC. Our clinical advisors reviewed the resource use impact reports and suggested modifications to the initial CC subclass assignments when clinically appropriate.

c. Proposed Changes to Severity Levels

(1) Summary of Proposed Changes

The diagnosis codes for which we are proposing a change in severity level designation as a result of the analysis

described in this proposed rule are shown in Table 6P.1c. (which is available via the internet on the CMS website at: <http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>). Using the method described above to perform our comprehensive CC/MCC analysis, our clinical advisors recommended a change in the severity level designation for 1,492 ICD-10-CM diagnosis codes. As shown in Table 6P.1c. associated with this proposed rule, the proposed changes to severity level resulting from our comprehensive analysis would move some diagnosis codes to a higher severity level designation and other diagnosis codes to a lower severity level designation, as indicated in the two

columns which display CMS' FY 2019 classification in column C and the proposed changes for FY 2020 in column D.

The table below shows the Version 36 ICD-10 MS-DRG categorization of diagnosis codes by severity level.

	Number of codes
MCC	3,244
CC	14,528
Non-CC	54,160
Total	71,932

The following table compares the Version 36 ICD-10 MS-DRG CC list and the proposed Version 37 ICD-10 MS-DRG CC list. There are 17,772 diagnosis codes on the Version 36 MCC/CC lists. The proposed MCC/CC severity level changes would reduce the number of diagnosis codes on the MCC/CC lists to 16,790 (3,099 + 13,691). Based on the Version 36 MCC/CC lists, 81.5 percent of cases have at least one MCC/CC present, using claims data from the September 2018 update of the FY 2018 MedPAR file. Based on the proposed Version 37 MCC/CC lists, the percent of cases having at least one MCC/CC present would be reduced to 76.6 percent.

COMPARISON OF CURRENT CC LIST AND PROPOSED CC LIST

	Current CC List	Proposed CC List
Codes designated as an MCC	3,244	3,099
Percent of cases with one or more MCCs	41.0%	36.3%
Average charge of cases with one or more MCCs	\$16,439	\$16,490
Codes designated as a CC	14,528	13,691
Percent of cases with one or more CCs	40.5%	40.3%
Average charge of cases with one or more CCs	\$10,332	\$10,518
Codes designated as non-CC	54,160	55,142
Percent of cases with no CC	18.5%	23.4%
Average charge of cases with no CCs	\$9,885	\$10,166

Using the method described above to perform our comprehensive analysis, we are proposing to modify the Version 36 CC subclass assignments for 2.1 percent of the ICD-10-CM diagnosis codes, as summarized in the table below.

PROPOSED MCC/CC SUBCLASS MODIFICATIONS

Severity level—CC subclass	Version 36 severity level number of codes	Proposed version 37 severity level number of codes	Percent change	Proposed version 37 change to MCC subclass, number of codes	Proposed version 37 change to CC subclass, number of codes	Proposed Version 37 change to non-CC subclass, number of codes
MCC	3,244	3,099	-4.5	N/A	136	17
CC	14,528	13,691	-5.8	8	N/A	1,148
Non-CC	54,160	55,142	1.8	0	183	N/A
Total	71,932	71,932	N/A	8	319	1,166

As a result of these proposed changes, of the 71,932 diagnosis codes included in the analysis, the net result would be a decrease of 145 (3,244-3,099) codes designated as an MCC, a decrease of 837 (14,528 - 13,691) codes designated as a CC, and an increase of 982 (55,142-54,160) codes designated as a non-CC.

(2) Illustrations of Proposed Severity Level Changes

As noted above, based on our comprehensive CC/MCC analysis as described previously in this section, we are proposing changes in the severity

level designations for 1,492 ICD-10-CM diagnosis codes, and the specific proposed changes to severity level designations for those diagnosis codes are shown in Table 6P.1c. associated with this proposed rule (which is available via the internet on the CMS website at: <http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>). Below we provide illustrative examples of certain categories of codes for which we are proposing changes to the severity level designations as a result of our

comprehensive analysis. As described above, these proposals are based on review of the data as well as consideration of the clinical nature of each of the secondary diagnoses and the severity level of clinically similar diagnoses. The first set of codes, from the Neoplasms chapter, encompasses more than half of all proposed severity level changes. The additional examples are from a variety of body systems and conditions, and they are illustrative of both proposed increases and proposed decreases in severity level designation. We note that we are making available a

supplementary file containing the data describing the impact on resource use when reported as a secondary diagnosis for all 1,492 ICD-10-CM diagnosis codes for which we are proposing a change in designation via the internet on the CMS website at: <http://www.cms.hhs.gov/Medicare/Fee-for-Service-Payment/AcuteInpatientPPS/index.html>.

(a) Neoplasms Chapter Codes

Of the total number of ICD-10-CM diagnosis codes for which we are

proposing a change of severity level designation, 767 are from the Neoplasms chapter of the ICD-10-CM classification (C00-D49) and are currently designated as a CC. We note that the Neoplasms chapter contains a total of 1,661 ICD-10-CM diagnosis codes. In Version 36 of the MS-DRGs, none of the 1,661 neoplasm codes are designated as an MCC, 767 are designated as a CC, and 894 are designated as a non-CC. For all 767 codes currently designated as a CC, our

clinical advisors recommended changing the severity level designation from CC to non-CC. The following table presents examples of some of the neoplasm codes for which we are proposing a severity level change to non-CC, and their impact on resource use when reported as a secondary diagnosis. As noted previously, the data analysis for the remainder of these neoplasm codes is included in the supplementary file that we are making available on the CMS website.

PROPOSED SEVERITY LEVEL CHANGES FOR NEOPLASM CODES AS SECONDARY DIAGNOSIS

ICD-10-CM diagnosis code	Cnt1	C1	Cnt2	C2	Cnt3	C3	Current CC subclass	Proposed CC subclass
C20 (Malignant neoplasm of rectum).	2,960	1.0485	7,561	2.2169	6,492	3.0790	CC	Non-CC.
C22.0 (Liver cell carcinoma)	1,672	1.2289	9,444	2.0638	12,503	3.0914	CC	Non-CC.
C25.0 (Malignant neoplasm of head of pancreas).	1,205	1.1357	3,834	2.1788	6,191	3.0229	CC	Non-CC.
C64.1 (Malignant neoplasm of right kidney, except renal pelvis).	1,512	1.2276	4,463	2.1600	4,593	3.1158	CC	Non-CC.
C64.2 (Malignant neoplasm of left kidney, except renal pelvis).	1,368	1.3407	4,517	2.1947	4,593	3.0947	CC	Non-CC.
C78.01 (Secondary malignant neoplasm of right lung).	4,149	1.0417	14,946	2.0888	20,324	3.0043	CC	Non-CC.
C78.02 (Secondary malignant neoplasm of left lung).	3,599	1.0078	13,456	2.0853	18,384	3.0024	CC	Non-CC.
C79.31 (Secondary malignant neoplasm of brain).	7,164	1.1895	22,989	2.1330	41,387	2.9116	CC	Non-CC.
C79.51 (Secondary malignant neoplasm of bone).	26,095	1.3048	88,022	2.2020	99,670	3.0449	CC	Non-CC.
C90.00 (Multiple myeloma not having achieved remission).	9,947	1.1588	34,155	2.2144	33,830	3.1281	CC	Non-CC.

As described in section II.F.15.b. of the preamble of this proposed rule, we examined the impact in resource use for three subsets of patients in order to evaluate the severity level designations for each secondary diagnosis. In the table above, the C1 values are generally close to 1, C2 values are generally close to 2, and C3 values are generally close to 3. As explained in section II.F.15.b. of the preamble of this proposed rule, these values suggest that when a neoplasm is reported as a secondary diagnosis, the resources involved in caring for a patient with this condition are more aligned with a non-CC severity level than a CC severity level. Our clinical advisors reviewed these data and believe the resources involved in caring for a patient with this condition are more aligned with a non-CC severity level. Our clinical advisors noted that

when a neoplasm is reported as a secondary diagnosis, because it is not the condition that occasioned the patient's admission to the hospital, it does not significantly impact resource use. Our clinical advisors noted that if these patients are admitted for treatment of the neoplasm, the neoplasm is the principal diagnosis, and other complicating or comorbid conditions reported as secondary diagnoses would determine the appropriate severity level designation for each particular case. For example, if a patient is admitted for resection of malignant neoplasm of the right kidney, ICD-10-CM diagnosis code C64.1 (Malignant neoplasm of right kidney, except renal pelvis) is reported as the principal diagnosis, and any complicating conditions reported as secondary diagnoses during the hospital

stay would determine the appropriate severity level designation for the case.

(b) Diseases of the Circulatory System Chapter Codes

In the Diseases of the Circulatory System chapter of the ICD-10-CM diagnosis classification (I00-I99), based on the results of our comprehensive review, we are proposing to change the severity level designation for 13 ICD-10-CM diagnosis codes from categories I21 (Acute myocardial infarction) and I22 (Subsequent ST elevation (STEMI) and non-ST elevation (NSTEMI) myocardial infarction) from an MCC to a CC.

The following table contains the ICD-10-CM diagnosis codes for which we are proposing a severity level change, and their impact on resource use when reported as a secondary diagnosis.

PROPOSED SEVERITY LEVEL CHANGES FOR MYOCARDIAL INFARCTION CODES AS SECONDARY DIAGNOSIS

ICD-10-CM diagnosis code	Cnt1	C1	Cnt2	C2	Cnt3	C3	Current CC subclass	Proposed CC subclass
I21.01 (ST elevation (STEMI) myocardial infarction involving left main coronary artery).	2	1.2010	17	2.9902	38	3.0195	MCC	CC.
I21.02 (ST elevation (STEMI) myocardial infarction involving left anterior descending coronary artery).	149	0.9326	322	1.6565	754	3.3157	MCC	CC.
I21.09 (ST elevation (STEMI) myocardial infarction involving other coronary artery of anterior wall).	583	1.2201	1,288	2.2225	3,744	3.1094	MCC	CC.
I21.11 (ST elevation (STEMI) myocardial infarction involving right coronary artery).	175	1.8486	326	2.0867	581	3.1141	MCC	CC.
I21.19 (ST elevation (STEMI) myocardial infarction involving other coronary artery of inferior wall).	913	1.5054	1,940	2.2641	4,081	3.1996	MCC	CC.
I21.21 (ST elevation (STEMI) myocardial infarction involving left circumflex coronary artery).	30	0.9445	56	2.4160	117	2.9965	MCC	CC.
I21.29 (ST elevation (STEMI) myocardial infarction involving other sites).	162	1.0143	417	2.2401	1,048	3.3341	MCC	CC.
I21.3 (ST elevation (STEMI) myocardial infarction of unspecified site).	1,271	1.6587	3,876	2.2420	10,168	3.2432	MCC	CC.
I22.0 (Subsequent ST elevation (STEMI) myocardial infarction of anterior wall).	10	0.9199	74	1.2558	165	2.6794	MCC	CC.
I22.1 (Subsequent ST elevation (STEMI) myocardial infarction of inferior wall).	4	0.0000	81	1.6022	143	3.3056	MCC	CC.
I22.2 (Subsequent non-ST elevation (NSTEMI) myocardial infarction).	94	2.1034	352	2.1291	1,916	3.0157	MCC	CC.
I22.8 (Subsequent ST elevation (STEMI) myocardial infarction of other sites).	5	2.2963	18	2.0589	53	3.1306	MCC	CC.
I22.9 (Subsequent ST elevation (STEMI) myocardial infarction of unspecified site).	27	1.7140	87	1.8737	293	2.9627	MCC	CC.

As shown in the table above, all of these myocardial infarction codes are currently assigned as MCCs. As explained earlier, values close to 2.0 in column C1 suggest that the condition is more like a CC than a non-CC but not as significant in resource usage as an MCC. The C1 values for the secondary diagnoses with the largest number of cases in this subset in the table above, ICD-10-CM codes I21.3 and I21.19, are closer to 2.0 than to 1.0, indicating that these secondary diagnoses are more aligned with a CC than either a non-CC or an MCC. Therefore, the data suggest that for patients for whom any of the myocardial infarction codes listed in the table above is reported as a secondary diagnosis, the resources involved in their care are not aligned with those of an MCC. Our clinical advisors reviewed these data and believe that the resources involved in caring for a patient with this condition are aligned with a CC. Patients with a secondary diagnosis of myocardial infarction may require additional diagnostic imaging,

monitoring, medications, and additional interventions, thereby consuming resources that are consistent with CC status. Our clinical advisors noted that while, for certain codes, the number of cases shown in the data may not be sufficient to reliably indicate impact on resource use as a secondary diagnosis, these codes are clinically similar to other codes for which the data are sufficient to indicate impact on resource use. Because our clinical advisors believe that it is appropriate to ensure consistency across codes describing similar diagnoses, we are proposing to reassign the severity level for all of the codes in the table above from an MCC to a CC.

(c) Diseases of the Skin and Subcutaneous Tissue Chapter Codes

In the Diseases of the Skin and Subcutaneous Tissue chapter of the ICD-10-CM diagnosis classification (L00-L99), based on the results of our comprehensive review, we are proposing a change to the severity level

for 150 ICD-10-CM diagnosis codes describing pressure ulcers. Pressure ulcers, which are also known as pressure injuries, involve damage to the skin and soft tissue. They may result from prolonged pressure over a bony prominence or result from a medical device. The ICD-10-CM classification includes 150 diagnosis codes that describe pressure ulcers across various anatomical regions and across the various possible stages (stages 1 through 4, unspecified stage, and unstageable). These codes are listed in Table 6P.1.d. associated with this proposed rule (which is available via the internet on the CMS website at: <http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>). In the course of our comprehensive review of the CC/MCC lists, our clinical advisors reviewed the current categorization of pressure ulcers, which designate all stage 3 and 4 pressure ulcers as MCCs, while stage 1, stage 2, unspecified stage,

and unstageable pressure ulcers are currently designated as non-CCs.

Our clinical advisors reviewed data on the relative contribution to the overall cost of hospital care for all stages of pressure ulcers coded as secondary diagnoses, and found (1) that there was little difference in the cost contribution regardless of stage, and (2) the cost contributions (cost weights) of all stages supported a designation of CC rather than MCC (for stage 3 and 4 ulcers), and CC rather than non-CC (for stages 1, 2, unspecified, and unstageable). Our clinical advisors noted that the apparent similar contribution of all pressure ulcer stages can be explained by the fact that pressure ulcers occur in patients with serious underlying illness, such as stroke, cancer, dementia, and end-stage cardiac or pulmonary disease that can

result in multiple factors (frailty, immobility, paralysis, malnutrition, and general debility) that predispose them to pressure ulcers. It is the serious underlying illness and debilitated state that causes the pressure ulcer that is the primary driver of resource use. Although a pressure ulcer at any stage requires care and preventive measures that make additional contributions to the overall cost of care, our clinical advisors believe that the fact that the ulcer developed in the first place is more important than the stage of the ulcer itself in determining the impact on the costs of hospitalization. The presence of a pressure ulcer may indicate an increase in resource use, but that increase is similar regardless of the stage of the ulcer.

The following table contains illustrations of pressure ulcer codes and their impact on resource use when reported as a secondary diagnosis. We selected secondary diagnosis codes describing pressure ulcer of the sacrum as examples because they account for almost half of all instances of pressure ulcers reported as secondary diagnoses, but note that the data for the codes describing pressure ulcer of other body parts generally show a similar pattern. As noted previously, the data analysis for the remainder of the pressure ulcer codes for which we are proposing a change in severity level designation is included in the supplementary file that we are making available on the CMS website.

PROPOSED SEVERITY LEVEL CHANGES FOR PRESSURE ULCER CODES AS SECONDARY DIAGNOSIS

ICD-10-CM diagnosis code	Cnt1	C1	Cnt2	C2	Cnt3	C3	Current CC subclass	Proposed CC subclass
L89.150 (Pressure ulcer of sacral region, unstageable).	605	2.003	6,247	2.560	24,047	3.254	Non-CC	CC.
L89.151 (Pressure ulcer of sacral region, stage 1).	2,374	1.691	16,688	2.404	36,428	3.182	Non-CC	CC.
L89.152 (Pressure ulcer of sacral region, stage 2).	4,238	1.737	35,608	2.497	95,832	3.274	Non-CC	CC.
L89.153 (Pressure ulcer of sacral region, stage 3).	1,722	1.832	15,266	2.522	48,414	3.289	MCC	CC.
L89.154 (Pressure ulcer of sacral region, stage 4).	1,237	1.755	14,306	2.438	56,619	3.196	MCC	CC.
L89.159 (Pressure ulcer of sacral region, unspecified stage).	1,453	1.387	12,466	2.311	35,020	3.176	Non-CC	CC.

As explained previously, a value in column C1 that is close to 2.0 suggests the condition is more like a CC than a non-CC but not as significant in resource usage as an MCC. Given that the values in column C1 in the table above are closer to 2.0 than to 1.0, the data suggest that when pressure ulcers of the sacral region are reported as a secondary diagnosis, the resources involved in caring for these patients are more consistent with a CC than either a non-CC or an MCC. Our clinical advisors reviewed these data and believe that it is appropriate to ensure consistency across codes involving similar diagnoses. Therefore, we are proposing to designate as CCs both the 50 ICD-10-CM diagnosis codes that are currently designated as MCCs and the 100 ICD-10-CM diagnosis codes currently designated as non-CCs.

We note that, under the Hospital-Acquired Condition (HAC) payment provision established by section 5001(c) of the Deficit Reduction Act (DRA) of 2005, hospitals no longer receive additional payment for cases in which one of the selected conditions occurred

but was not present on admission (POA). That is, the case is paid as though the condition were not present. The HAC-POA payment provision is applicable for secondary diagnosis code reporting only, as the selected conditions are designated as a CC or an MCC when reported as a secondary diagnosis. For the DRA HAC-POA payment provision, a payment adjustment is only applicable if there are no other CC/MCC conditions reported on the claim. Currently, there are 14 HAC categories subject to the HAC-POA payment provision, one of which is pressure ulcers. The pressure ulcer HAC category (HAC 04) specifically includes diagnosis codes describing a stage 3 or stage 4 pressure ulcer because they are designated as an MCC, as noted earlier in this section. If the proposed severity level designations for the pressure ulcer diagnosis codes are finalized, the 100 ICD-10-CM diagnosis codes describing pressure ulcers currently designated as non-CCs would be subject to the HAC-POA payment provision as CCs when reported as a secondary diagnosis and

not POA, effective beginning in FY 2020. The diagnosis codes describing a stage 3 or stage 4 pressure ulcer would continue to be subject to the HAC-POA payment provision as CCs.

In addition, consistent with the proposed changes to the severity level designation of the pressure ulcer codes, we are proposing to revise the title of the HAC 04 category from "Pressure Ulcer—Stages III & IV" to "Pressure Ulcers". We refer readers to the website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalAcqCond/index.html> for additional information regarding the HAC-POA payment provision under the DRA.

(d) Diseases of the Genitourinary System Chapter Codes

In the Diseases of the Genitourinary System chapter of the ICD-10-CM diagnosis classification (N00-N99), based on the results of our comprehensive analysis, we are proposing to change the severity level designation for eight ICD-10-CM diagnosis codes. For these eight

diagnosis codes, based on their clinical judgment and for the reasons described below, our clinical advisors recommended that we increase the severity level designation from a CC to

an MCC for one code, and from a non-CC to a CC for seven codes. The following table contains the Diseases of the Genitourinary System chapter codes that describe conditions for which we

are proposing a severity level designation change, and their impact on resource use when reported as a secondary diagnosis.

PROPOSED SEVERITY LEVEL CHANGES FOR GENITOURINARY CODES AS SECONDARY DIAGNOSIS

ICD-10-CM diagnosis code	Cnt1	C1	Cnt2	C2	Cnt3	C3	Current CC subclass	Proposed CC subclass
N10 (Acute pyelonephritis)	5,385	0.9639	20,476	1.9444	26,929	3.0413	Non-CC	CC.
N18.4 (Chronic kidney disease, stage 4 (severe)).	36,940	1.0919	219,482	2.0679	319,849	3.0840	Non-CC	CC.
N18.5 (Chronic kidney disease, stage 5).	1,158	1.0303	30,851	2.0841	34,733	3.1508	Non-CC	CC.
N18.6 (End stage renal disease)	26,276	1.5755	578,587	2.3010	492,710	3.2761	CC	MCC.
N30.00 (Acute cystitis without hematuria).	18,597	1.0576	53,820	1.9409	73,996	2.8976	Non-CC	CC.
N30.01 (Acute cystitis with hematuria).	4,872	0.9503	16,949	1.8514	24,422	2.8070	Non-CC	CC.
N41.0 (Acute prostatitis)	845	0.9519	3,031	1.8163	2,135	3.0450	Non-CC	CC.
N76.4 (Abscess of vulva)	368	0.8284	1,276	2.0906	1,049	3.1341	Non-CC	CC.

The C1, C2, and C3 values in the table above are generally close to 1.0, 2.0, and 3.0, respectively, which would indicate that these conditions are more aligned with a non-CC than with either a CC or an MCC. However, our clinical advisors believe that patients with a secondary diagnosis of one of the genitourinary conditions in the table above may consume additional resources, including but not limited to monitoring for hypertension, diagnostic tests, and balancing electrolytes. Patients with

end-stage renal disease (ICD-10-CM code N18.6) would typically require dialysis in addition to these resources, which our clinical advisors believe is more aligned with an MCC. Therefore, we are proposing to change the severity level designations for the eight codes as shown in the table above.

e. Injury, Poisoning and Certain Other Consequences of External Causes Chapter Codes

In subcategory S32.5 (Fracture of pubis) of the ICD-10-CM diagnosis

classification, based on our comprehensive analysis, we are proposing to change the severity level designation from CC to non-CC for 19 ICD-10-CM diagnosis codes that specify fractures of the pubic bone. The following table contains the diagnosis codes for which we are proposing a severity level designation change, and their impact on resource use when reported as a secondary diagnosis.

PROPOSED SEVERITY LEVEL CHANGES, PUBIS FRACTURE CODES AS SECONDARY DIAGNOSIS

ICD-10-CM diagnosis code	Cnt1	C1	Cnt2	C2	Cnt3	C3	Current CC subclass	Proposed CC subclass
S32.501A (Unspecified fracture of right pubis, initial encounter for closed fracture).	393	1.0234	1,171	2.1215	847	3.0423	CC	Non-CC.
S32.501K (Unspecified fracture of right pubis, subsequent encounter for fracture with nonunion).	1	1.5125	12	2.1144	2	1.8454	CC	Non-CC.
S32.502A (Unspecified fracture of left pubis, initial encounter for closed fracture).	398	1.3072	1,152	2.0593	914	3.0028	CC	Non-CC.
S32.502K (Unspecified fracture of left pubis, subsequent encounter for fracture with nonunion).	3	0.0000	7	2.8723	1	0.7401	CC	Non-CC.
S32.509A (Unspecified fracture of unspecified pubis, initial encounter for closed fracture).	49	1.1075	156	2.1066	154	3.1704	CC	Non-CC.
S32.509K (Unspecified fracture of unspecified pubis, subsequent encounter for fracture with nonunion).	0	0.0000	1	3.4022	1	2.1306	CC	Non-CC.
S32.511A (Fracture of superior rim of right pubis, initial encounter for closed fracture).	743	1.1812	2,132	2.1519	1,504	2.8763	CC	Non-CC.
S32.511K (Fracture of superior rim of right pubis, subsequent encounter for fracture with nonunion).	2	2.0354	5	0.0000	4	2.3425	CC	Non-CC.

PROPOSED SEVERITY LEVEL CHANGES, PUBIS FRACTURE CODES AS SECONDARY DIAGNOSIS—Continued

ICD-10-CM diagnosis code	Cnt1	C1	Cnt2	C2	Cnt3	C3	Current CC subclass	Proposed CC subclass
S32.512A (Fracture of superior rim of left pubis, initial encounter for closed fracture).	760	1.5738	2,098	2.0828	1,590	2.9020	CC	Non-CC.
S32.512K (Fracture of superior rim of left pubis, subsequent encounter for fracture with nonunion).	3	2.1915	3	2.4812	8	4.0000	CC	Non-CC.
S32.519A (Fracture of superior rim of unspecified pubis, initial encounter for closed fracture).	15	2.6829	53	1.5795	35	2.9052	CC	Non-CC.
S32.519K (Fracture of superior rim of unspecified pubis, subsequent encounter for fracture with nonunion).	0	0.000	0	0.000	0	0.000	CC	Non-CC.
S32.591A (Other specified fracture of right pubis, initial encounter for closed fracture).	2,427	1.2524	6,513	2.0970	4,397	2.9930	CC	Non-CC.
S32.591K (Other specified fracture of right pubis, subsequent encounter for fracture with nonunion).	7	2.7706	15	1.9772	5	0.8969	CC	Non-CC.
S32.592A (Other specified fracture of left pubis, initial encounter for closed fracture).	2,424	1.3691	6,604	2.0921	4,922	2.9428	CC	Non-CC.
S32.592K (Other specified fracture of left pubis, subsequent encounter for fracture with nonunion).	4	0.6970	24	2.5574	10	3.0015	CC	Non-CC.
S32.599A (Other specified fracture of unspecified pubis, initial encounter for closed fracture).	151	1.6748	457	2.0518	394	3.1844	CC	Non-CC.
S32.599K (Other specified fracture of unspecified pubis, subsequent encounter for fracture with nonunion).	1	0.0000	0	0.0000	3	1.4709	CC	Non-CC.

The C1, C2, and C3 values in the table above are generally close to 1.0, 2.0, and 3.0, respectively, particularly for those codes for which the highest number of cases were reported. This indicates that these conditions are more aligned with a non-CC than with either a CC or an MCC. Our clinical advisors reviewed these data, particularly with respect to ICD-10-CM diagnosis codes S32.591A and S32.592A which account for the majority of cases in this group, and believe the resources involved in caring for a patient with these conditions are more aligned with a non-CC. Our clinical advisors noted that, similar to the proposed severity level designation changes in the Neoplasms chapter of the

ICD-10-CM diagnosis classification discussed above, if patients are admitted for treatment of an acute or nonunion fracture of the pubic bone, the fracture is the principal diagnosis, and other complicating or comorbid conditions reported as secondary diagnoses would determine the appropriate severity level for each particular case. For example, if a patient is admitted for surgical treatment of the nonunion of a right pubic fracture at the superior rim, ICD-10-CM diagnosis code S32.511K (Fracture of superior rim of right pubis, subsequent encounter for fracture with nonunion) is reported as the principal diagnosis. Because our clinical advisors believe that it is appropriate to ensure

consistency across codes involving similar diagnoses, we are proposing to reassign the severity level for all of the codes in the table above from a CC to a non-CC.

In category S72 (Fracture of femur) of the ICD-10-CM classification, based on our comprehensive analysis, we are proposing to change the severity level designation from MCC to CC for 35 ICD-10-CM diagnosis codes specifying fractures of the hip. The following table contains the Injury, Poisoning and Certain Other Consequences of External Causes chapter codes for which we are proposing a severity level change, and their impact on resource use when reported as a secondary diagnosis.

PROPOSED SEVERITY LEVEL CHANGES, HIP FRACTURE CODES AS SECONDARY DIAGNOSIS

ICD-10-CM diagnosis code	Cnt1	C1	Cnt2	C2	Cnt3	C3	Current CC subclass	Proposed CC subclass
S72.011A (Unspecified intracapsular fracture of right femur, initial encounter for closed fracture).	145	2.1400	464	2.3419	700	2.9623	MCC	CC.
S72.012A (Unspecified intracapsular fracture of left femur, initial encounter for closed fracture).	155	2.0099	455	2.2738	754	3.0423	MCC	CC.

S72.136A (Nondisplaced apophyseal fracture of unspecified femur, initial encounter for closed fracture).	0	0.000	0	0.000	0	0.000	MCC	CC.

PROPOSED SEVERITY LEVEL CHANGES, HIP FRACTURE CODES AS SECONDARY DIAGNOSIS—Continued

ICD-10-CM diagnosis code	Cnt1	C1	Cnt2	C2	Cnt3	C3	Current CC subclass	Proposed CC subclass
S72.141A (Displaced intertrochanteric fracture of right femur, initial encounter for closed fracture).	289	2.2607	894	2.6329	1,293	3.1692	MCC	CC.
S72.142A (Displaced intertrochanteric fracture of left femur, initial encounter for closed fracture).	347	2.2587	972	2.5641	1,405	3.1003	MCC	CC.
S72.143A (Displaced intertrochanteric fracture of unspecified femur, initial encounter for closed fracture).	10	2.3446	21	1.0169	35	3.3080	MCC	CC.
S72.144A (Nondisplaced intertrochanteric fracture of right femur, initial encounter for closed fracture).	44	1.7331	149	2.4637	168	3.1302	MCC	CC.
S72.145A (Nondisplaced intertrochanteric fracture of left femur, initial encounter for closed fracture).	39	1.9170	112	2.8435	170	3.2612	MCC	CC.
S72.146A (Nondisplaced intertrochanteric fracture of unspecified femur, initial encounter for closed fracture).	0	0.0000	9	1.2250	2	0.0000	MCC	CC.
S72.21XA (Displaced subtrochanteric fracture of right femur, initial encounter for closed fracture).	57	1.7697	159	2.2460	205	3.1614	MCC	CC.
S72.22XA (Displaced subtrochanteric fracture of left femur, initial encounter for closed fracture).	70	2.3685	160	2.6079	184	3.2178	MCC	CC.
S72.23XA (Displaced subtrochanteric fracture of unspecified femur, initial encounter for closed fracture).	0	0.0000	9	3.4708	6	3.3401	MCC	CC.
S72.24XA (Nondisplaced subtrochanteric fracture of right femur, initial encounter for closed fracture).	12	0.5442	22	2.7275	11	3.6028	MCC	CC.
S72.25XA (Nondisplaced subtrochanteric fracture of left femur, initial encounter for closed fracture).	13	1.7115	25	2.1005	17	3.1686	MCC	CC.
S72.26XA (Nondisplaced subtrochanteric fracture of unspecified femur, initial encounter for closed fracture).	0	0.0000	1	2.0474	0	0.0000	MCC	CC.
S72.301A (Unspecified fracture of shaft of right femur, initial encounter for closed fracture).	61	2.3462	156	3.0491	159	3.5567	MCC	CC.
S72.302A (Unspecified fracture of shaft of left femur, initial encounter for closed fracture).	71	2.6314	186	2.4838	157	3.4436	MCC	CC.

As shown in the table above, all of these secondary diagnoses are currently designated as MCCs. The C2 values of the codes most frequently reported, ICD-10-CM codes S72.142A and S72.141A, are closer to 3.0 than 2.0, which indicates that they are more clinically aligned with a CC than an MCC. Therefore, the data suggest that when fracture of the hip codes are reported as a secondary diagnosis, the resources involved in caring for patients

with these conditions are more aligned with a CC than an MCC. Our clinical advisors reviewed these data and believe the resources involved in caring for patients with these conditions are more aligned with a CC. While we note that there is little to no data for some of these ICD-10-CM codes as secondary diagnoses, there is sufficient data for clinically similar secondary diagnoses. Therefore, because our clinical advisors believe that it is appropriate to ensure

consistency across codes involving similar diagnoses, we are proposing to reassign the severity level for all of the codes in the table above from an MCC to a CC.

(f) Factors Influencing Health Status and Contact With Health Services

The last chapter of the ICD-10-CM classification specifies other factors that influence a patient's health status or necessitate contact with health care

providers (Z00–Z99). Of these ICD–10–CM codes, based on our comprehensive review, we are proposing to change the severity level designation from non-CC to CC for four codes specifying anti-microbial drug resistance and one code specifying homelessness. Based on this same review, we also are proposing to

change the severity level designation from CC to non-CC for 3 ICD–10–CM codes specifying adult body mass index (BMI) ranges and 13 ICD–10–CM codes indicating that the patient has previously undergone an organ transplant or cardiac device implantation with no current

complications (the code indicates status only).

The following table contains the five codes for which we are proposing a severity level change from non-CC to CC and their impact on resource use when reported as a secondary diagnosis.

PROPOSED SEVERITY LEVEL CHANGES FOR Z CHAPTER CODES AS SECONDARY DIAGNOSIS

ICD–10–CM diagnosis code	Cnt1	C1	Cnt2	C2	Cnt3	C3	Current CC subclass	Proposed CC subclass
Z16.12 (Extended spectrum beta lactamase (ESBL) resistance).	3,082	2.1134	19,692	2.5995	25,544	3.1752	Non-CC	CC.
Z16.21 (Resistance to vancomycin)	692	2.1507	6,733	2.8659	11,672	3.3365	Non-CC	CC.
Z16.24 (Resistance to multiple anti-biotics).	2,970	1.5821	16,097	2.4086	20,738	3.1174	Non-CC	CC.
Z16.39 (Resistance to other specified antimicrobial drug).	448	1.2003	2,326	2.2555	2,494	3.1127	Non-CC	CC.
Z59.0 (Homelessness)	14,927	1.5964	41,328	2.3012	22,101	3.1256	Non-CC	CC.

As indicated above, a value close to 2.0 in column C1 suggests that the secondary diagnosis is more aligned with a CC than a non-CC. Because the C1 values in the table above are generally close to 2, the data suggest that when these five Z chapter diagnosis codes are reported as a secondary diagnosis, the resources involved in caring for a patient with other factors such as homelessness support increasing the severity level from a non-CC to a CC. Our clinical advisors

reviewed these data and believe the resources involved in caring for patients with these other reported factors are more aligned with a CC.

While we note that ICD–10–CM diagnosis code Z16.39 does not follow this pattern, our clinical advisors believe that this code is clinically similar to the other diagnoses in the table above describing anti-microbial drug resistance. Therefore, because our clinical advisors believe that it is appropriate to ensure consistency across

codes involving similar diagnoses, we are proposing to reassign the severity level for all four of the codes specifying anti-microbial drug resistance in the table above from a non-CC to a CC.

The following table contains the 14 BMI and transplant/cardiac device status codes for which we are proposing a severity level designation change from CC to non-CC, and their impact on resource use when reported as a secondary diagnosis.

PROPOSED SEVERITY LEVEL CHANGES FOR Z CHAPTER BMI AND TRANSPLANT/CARDIAC DEVICE STATUS CODES AS SECONDARY DIAGNOSIS

ICD–10–CM diagnosis code	Cnt1	C1	Cnt2	C2	Cnt3	C3	Current CC subclass	Proposed CC subclass
Z68.1 (Body mass index (BMI) 19.9 or less, adult).	18,983	1.1170	244,156	2.2082	350,731	3.0733	CC	Non-CC.
Z68.41 (Body mass index (BMI) 40.0–44.9, adult).	139,420	1.1139	209,300	2.0752	213,929	3.0814	CC	Non-CC.
Z68.42 (Body mass index (BMI) 45.0–49.9, adult).	60,408	1.1643	102,897	2.0783	109,928	3.0867	CC	Non-CC.
Z94.0 (Kidney transplant status)	18,649	1.0277	70,484	2.0573	45,382	3.1032	CC	Non-CC.
Z94.1 (Heart transplant status)	2,311	1.0649	8,138	2.2471	5,037	3.2653	CC	Non-CC.
Z94.2 (Lung transplant status)	1,461	1.0886	5,032	2.1898	3,466	3.1285	CC	Non-CC.
Z94.3 (Heart and lungs transplant status).	20	0.8287	88	3.0647	59	3.1675	CC	Non-CC.
Z94.4 (Liver transplant status)	6,050	0.9811	17,556	2.0323	12,970	3.1688	CC	Non-CC.
Z94.81 (Bone marrow transplant status).	1,655	0.9778	5,447	2.0919	5,150	3.1918	CC	Non-CC.
Z94.82 (Intestine transplant status)	119	1.5661	351	2.1844	230	3.2081	CC	Non-CC.
Z94.83 (Pancreas transplant status)	1,789	1.2032	7,788	2.0739	4,536	3.1381	CC	Non-CC.
Z94.84 (Stem cells transplant status).	3,083	1.1451	10,412	2.3041	8,835	3.2932	CC	Non-CC.
Z95.811 (Presence of heart assist device).	1,053	1.6453	7,373	2.3089	5,974	3.1198	CC	Non-CC.
Z95.812 (Presence of fully implantable artificial heart).	45	2.0467	132	2.5603	142	2.4139	CC	Non-CC.

The C1, C2, and C3 values in the table above are generally close to 1.0, 2.0, and 3.0, respectively. This indicates that these conditions are more aligned with a non-CC than with either a CC or an MCC. Therefore, the data suggest that when these BMI and transplant/cardiac device status codes are reported as a secondary diagnosis, the resources involved in caring for patients with these conditions indicating health status are not aligned with those of a CC. Our clinical advisors reviewed these data and believe the resources involved in caring for patients with these conditions indicating health status are more aligned with a non-CC. Our clinical advisors noted that, in the absence of a diagnosis that represents a complication of the patient's current status, the presence of a BMI within a stated range or the fact that a patient has previously undergone a transplant or cardiac device implant is not by itself a clinical indication of increased severity of illness. Therefore, we are proposing to reassign the severity level for all of the codes in the table above from a CC to a non-CC.

(3) Results of Impact Analysis

Using claims data from the September 2018 update of the FY 2018 MedPAR file, we employed the following method to determine the impact of changing severity level designation for the 1,492 ICD-10-CM diagnosis codes. Edits and cost estimations used for relative weight calculations were applied, resulting in 8,908,404 IPPS claims analyzed for this impact evaluation of our proposed changes to severity levels. We refer readers to section II.G. of the preamble of this proposed rule for further information regarding the methodology for calculation of the proposed relative weights.

First, we analyzed the 8,908,404 IPPS claims using the Version 36 ICD-10 MS-DRG GROUPER to determine the current distribution of severity level designation. We identified 3,648,331 cases (41.0 percent) reporting one or more secondary diagnosis codes assigned to the MCC severity level, 3,612,600 cases (40.5 percent) reporting one or more secondary diagnosis codes assigned to the CC severity level, and

1,647,473 cases (18.5 percent) not reporting a secondary diagnosis code assigned to the MCC or CC severity level.

Next, we reprocessed the 8,908,404 claims using the proposed change in severity level designation for the 1,492 ICD-10-CM diagnosis codes to determine the impact on the distribution of severity level designation. We identified 3,236,493 cases (36.3 percent) reporting one or more secondary diagnosis codes that would be assigned to the MCC severity level, 3,589,677 cases (40.3 percent) reporting one or more secondary diagnosis codes that would be assigned to the CC severity level, and 2,082,234 cases (23.4 percent) not reporting a secondary diagnosis code that would be assigned to the MCC or CC severity level.

Below we provide a summary of the steps followed for the analysis performed.

Step 1.—Analyzed 8,908,404 claims to determine the current distribution of severity level designation.

SEVERITY LEVEL DISTRIBUTION BEFORE PROPOSED CHANGES—8,908,404 CLAIMS ANALYZED

Number of cases reporting one or more secondary diagnosis codes assigned to the MCC severity level	3,648,331 (41.0%)
Number of cases reporting one or more secondary diagnosis codes assigned to the CC severity level	3,612,600 (40.5%)
Number of cases reporting no secondary diagnosis codes assigned to the MCC or CC severity level	1,647,473 (18.5%)

Step 2.—Made proposed severity level changes to 1,492 ICD-10-CM codes.

STEP 2—MADE PROPOSED SEVERITY LEVEL CHANGES TO 1,492 ICD-10-CM CODES.

Current version 36 severity level	Proposed version 37 severity level	Number of codes
Non-CC	CC	183
CC	Non-CC	1,148
CC	MCC	8
MCC	Non-CC	17
MCC	CC	136
Total	1,492

Step 3.—Reprocessed 8,908,404 claims to determine severity level distribution after changes.

SEVERITY LEVEL DISTRIBUTION AFTER PROPOSED CHANGES—8,908,404 CLAIMS ANALYZED

Number of cases reporting one or more secondary diagnosis codes assigned to the MCC severity level	3,236,493 (36.3%)
Number of cases reporting one or more secondary diagnosis codes assigned to the CC severity level	3,589,677 (40.3%)
Number of cases reporting no secondary diagnosis codes assigned to the MCC or CC severity level	2,082,234 (23.4%)

The overall statistics by CC subgroup for the proposed Version 37 MS-DRGs are contained in the table below. Cases

in the MCC subgroup have average costs that are 62 percent higher than the average costs for cases in the CC

subgroup. The CC subgroup with the largest number of cases is the CC subgroup with 40.3 percent of the cases.

OVERALL STATISTICS FOR PROPOSED MS-DRGS

CC subgroup	Number of cases	Percent	Average costs
Major	3,236,493	36.3	\$16,890
CC	3,589,677	40.3	10,518
Non-CC	2,082,234	23.4	10,166

The distribution of cases across the different types of CC subgroups in the proposed Version 37 MS-DRGs is contained in the table below. The table

shows that 91 percent of the cases would be assigned to base MS-DRGs with three CC subgroups, and only 9 percent of the cases would be assigned

to base MS-DRGs with no CC subgroups.

DISTRIBUTION OF PATIENT BY TYPE OF CC SUBGROUP IN PROPOSED VERSION 37 MS-DRGS

CC subgroup	Number	Percent
None	68	9
(MCC and CC), Non-CC	84	11
MCC, (CC and Non-CC)	132	17
MCC, CC, and Non-CC	477	63
Total	761

We performed regression analysis to compare the variance in the MS-DRGs with and without the proposed severity level designation changes and thereby the impact of payment to cost ratios. The results of the regression analysis showed a slight decrease in variance with the proposed severity level designation changes, showing an R-squared of 35.9 percent after making the severity level changes, compared with an R-squared of 35.6 percent in the current Version 36 ICD-10 MS-DRG GROUPER. This indicates that the proposed severity level changes increase the explanatory power of the GROUPER

in capturing differences in expected cost between the MS-DRGs and thus would improve the overall accuracy of the IPPS payment system.

After considering the results of our data analysis, the clinical judgment of our clinical advisors, and the overall aggregate impact of these changes, we are proposing a change to the severity level designations for 1,492 ICD-10-CM diagnosis codes as shown in Table 6P.1c. associated with this proposed rule (which is available via the internet on the CMS website at: <http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>.)

d. Requested Changes to Severity Levels

(1) Acute Right Heart Failure

We received a request to change the severity level for ICD-10-CM diagnosis codes I50.811 (Acute right heart failure) and I50.813 (Acute on chronic right heart failure) from a non-CC to an MCC. The requestor stated that similar diagnosis codes in the classification are designated as an MCC. We used the approach outlined earlier in this section to evaluate this request. The following table shows the claims data that were used to evaluate this request:

ICD-10-CM diagnosis code	Cnt1	C1	Cnt2	C2	Cnt3	C3	Current CC subclass	Requested CC subclass
I50.811 Acute right heart failure	92	1.3290	470	2.5375	1,632	3.1907	non-CC	MCC.
I50.813 Acute on chronic right heart failure.	183	1.4412	1,189	2.6036	3,099	3.2870	non-CC	MCC.

For ICD-10-CM diagnosis code I50.811, the data suggest that the resources involved in caring for a patient with this condition are 33 percent greater than expected when the patient has either no other secondary diagnosis present, or all the other secondary diagnoses present are non-CCs. The resources are 54 percent greater than expected when reported in conjunction with another secondary diagnosis that is a CC, and 19 percent greater than expected when reported in conjunction with another secondary diagnosis code that is an MCC. Our

clinical advisors reviewed this request and agree that the resources involved in caring for a patient with this condition are not aligned with those of an MCC.

For ICD-10-CM diagnosis code I50.813, the data suggest that the resources involved in caring for a patient with this condition are 44 percent greater than expected when the patient has either no other secondary diagnosis present or all the other secondary diagnoses present are non-CCs. The resources are 60 percent greater than expected when reported in conjunction with another secondary

diagnosis that is a CC, and 28 percent greater than expected when reported in conjunction with another secondary diagnosis code that is an MCC. Our clinical advisors reviewed this request and agree that the resources involved in caring for a patient with this condition are not aligned with those of an MCC.

However, we note that although the data suggest that the resources involved in caring for a patient with this condition are not aligned with those of an MCC, the data suggest and our clinical advisors believe that the resources appear to be aligned with

those of a CC. Therefore, we are soliciting public comment on whether a CC severity level designation for ICD-10-CM diagnosis codes I50.811 and I50.813 for FY 2020 is appropriate.

(2) Chronic Right Heart Failure

We received a request to change the severity level for ICD-10-CM diagnosis code I50.812 (Chronic right heart failure) from a non-CC to a CC. The requestor stated that this code warrants

CC classification because it indicates the presence and treatment of chronic heart failure. We used the approach outlined earlier to evaluate this request. The following table contains the data that we used to evaluate this request:

ICD-10-CM diagnosis code	Cnt1	C1	Cnt2	C2	Cnt3	C3	Current CC subclass	Requested CC subclass
I50.812 Chronic right heart failure ..	179	1.5114	1,533	2.1146	1,758	3.0549	non-CC	CC.

For ICD-10-CM diagnosis code I50.812, the data suggest that the resources involved in caring for a patient with this condition are 51 percent greater than expected when the patient has either no other secondary diagnosis present or all the other secondary diagnoses present are non-CCs. The resources are 11 percent greater than expected when reported in conjunction with another secondary diagnosis that is a CC, and 5 percent greater than expected when reported in

conjunction with another secondary diagnosis code that is an MCC. Our clinical advisors reviewed this request and agree that the resources involved in caring for a patient with this condition are not aligned with those of a CC. Therefore, we are not proposing a change to the severity level for ICD-10-CM diagnosis code I50.812.

(3) Ascites in Alcoholic Liver Disease and Toxic Liver Disease

We received a request to change the severity level for ICD-10-CM diagnosis

codes K70.11 (Alcoholic hepatitis with ascites), K70.31 (Alcoholic cirrhosis with ascites), and K71.51 (Toxic liver disease with chronic active hepatitis with ascites) from a non-CC to a CC. The requestor stated that these codes warrant CC classification because providers are not currently compensated for the ascites treatment. We used the approach outlined earlier to evaluate this request. The following table contains the data that we used to evaluate this request.

ICD-10-CM diagnosis code	Cnt1	C1	Cnt2	C2	Cnt3	C3	Current CC subclass	Requested CC subclass
K70.11 Alcoholic hepatitis with ascites.	134	1.2952	1,940	2.3444	3,331	3.3635	non-CC	CC.
K70.31 Alcoholic cirrhosis with ascites.	1,634	1.1129	18,675	2.2301	26,822	3.2479	non-CC	CC.
K71.51 Toxic liver disease with chronic active hepatitis with ascites.	16	0.8913	218	2.1743	274	3.1418	non-CC	CC.

For ICD-10-CM diagnosis code K70.11, the data suggest that the resources involved in caring for a patient with this condition are 29 percent greater than expected when the patient has either no other secondary diagnosis present or all the other secondary diagnoses present are non-CCs. The resources are 34 percent greater than expected when reported in conjunction with another secondary diagnosis that is a CC, and 36 percent greater than expected when reported in conjunction with another secondary diagnosis code that is an MCC. Our clinical advisors reviewed this request and agree that the resources involved in caring for a patient with this condition are not aligned with those of a CC. Therefore, we are not proposing a change to the severity level for ICD-10-CM diagnosis code K70.11.

patient with this condition are 11 percent greater than expected when the patient has either no other secondary diagnosis present or all the other secondary diagnoses present are non-CCs. The resources are 23 percent greater than expected when reported in conjunction with another secondary diagnosis that is a CC, and 25 percent greater than expected when reported in conjunction with another secondary diagnosis code that is an MCC. Our clinical advisors reviewed this request and agree that the resources involved in caring for a patient with this condition are not aligned with those of a CC. Therefore, we are not proposing a change to the severity level for ICD-10-CM diagnosis code K70.31.

For ICD-10-CM diagnosis code K71.51, the data suggest that the resources involved in caring for a patient with this condition are 11 percent lower than expected when the patient has either no other secondary

diagnosis present, or all the other secondary diagnoses present are non-CCs. The resources are 17 percent greater than expected when reported in conjunction with another secondary diagnosis that is a CC, and 14 percent greater than expected when reported in conjunction with another secondary diagnosis code that is an MCC. Our clinical advisors reviewed this request and agree that the resources involved in caring for a patient with this condition are not aligned with those of a CC. Therefore, we are not proposing a change to the severity level for ICD-10-CM diagnosis code K71.51.

(4) Factitious Disorder Imposed on Self

We received a request to change the severity level for ICD-10-CM diagnosis codes F68.11 (Factitious disorder imposed on self, with predominantly psychological signs and symptoms) and F68.13 (Factitious disorder imposed on self, with combined psychological and physical signs and symptoms) from a

For ICD-10-CM diagnosis code K70.31, the data suggest that the resources involved in caring for a

non-CC to a CC. The requestor stated that similar codes in the classification are designated as a CC. We used the

approach outlined earlier to evaluate this request. The following table

contains the data that we used to evaluate this request.

ICD-10-CM diagnosis code	Cnt1	C1	Cnt2	C2	Cnt3	C3	Current CC subclass	Requested CC subclass
F68.11 Factitious disorder imposed on self, with predominantly psychological signs and symptoms.	16	1.2040	59	0.9979	15	3.2395	non-CC	CC.
F68.13 Factitious disorder imposed on self, with combined psychological and physical signs and symptoms.	4	1.6226	32	1.9840	11	4.0000	non-CC	CC.

For ICD-10-CM diagnosis code F68.11, the number of patients found in the September 2018 update of the FY 2018 MedPAR data in each of the subsets is 16, 59, and 15, and for ICD-10-CM diagnosis code F68.13, the number of patients in each of the subsets is 4, 32, and 11. Our clinical advisors reviewed this request and believe that due to the small number of cases in the data, it is not possible to use statistical methods to evaluate the impact on resource use of patients. Our clinical advisors also do not believe there is a clinical basis to change the severity level in the absence of data. Our clinical advisors noted that if a patient was diagnosed with either one of these ICD-10-CM diagnoses (ICM-10-CM diagnosis code F68.11 or F68.13), there would more than likely be another diagnosis code reported that identifies the psychological and/or physical symptoms the patient is experiencing that may be a better indicator of resources utilized because these patients often fabricate their illness and inflict injuries on themselves to receive attention. For example, a patient may cut his or her finger, resulting in a wound which requires repair. It is the cut and need for repair that contribute to the resources consumed in caring for a patient with this diagnosis. Therefore, we are not proposing a change to the severity level for ICD-10-CM diagnosis codes F68.11 and F68.13 at this time.

(5) Nonunion and Malunion of Physeal Metatarsal Fractures

We received a request to change the severity level designations for the following six ICD-10-CM diagnosis codes from a non-CC to a CC: S99.101B (Unspecified physeal fracture of right metatarsal, initial encounter for open fracture); S99.101K (Unspecified physeal fracture of right metatarsal, subsequent encounter for fracture); S99.101P (Unspecified physeal fracture of right metatarsal, subsequent encounter for fracture with malunion); S99.132B (Salter-Harris Type III physeal fracture of left metatarsal, initial

encounter for open fracture), S99.132K (Salter-Harris Type III physeal fracture of left metatarsal, subsequent encounter for fracture with nonunion); and S99.132P (Salter-Harris Type III physeal fracture of left metatarsal, subsequent encounter for fracture with malunion with nonunion). The requestor stated that similar codes for open fractures, nonunions, and malunions of other sites currently are designated as CCs. However the requestor did not provide the specific ICD-10-CM diagnosis codes that are currently designated as CCs that the requestor believes are an appropriate comparator. There are a considerable number of fractures, nonunions, and malunions of other sites, some of which are designated as CCs and others that are not. In particular, in evaluating this request, we would want to review the appropriateness of designating unspecified codes (that is, ICD-10-CM diagnosis codes S99.101B, S99.101K, and S99.101P) as a CC, to avoid potentially discouraging more detailed coding. In addition, none of the other ICD-10-CM diagnosis codes describing Salter-Harris fractures (for example, ICD-10-CM diagnosis codes in sub-subcategory S99.11- (Salter-Harris Type I physeal fracture of metatarsal), S99.12- (Salter-Harris Type II physeal fracture of metatarsal), S99.13- (Salter-Harris Type III physeal fracture of metatarsal), and S99.14- (Salter-Harris Type IV physeal fracture of metatarsal)) currently have a CC designation.

Given the lack of supporting information for this request and because we believe this request may require further research and analysis to evaluate the relevant category of fracture codes and fully assess the claims data, we are unable to fully evaluate this request for FY 2020. Therefore, at this time, we are not proposing changes to the severity level designations for ICD-10-CM diagnosis codes S99.101B, S99.101K, S99.101P, S99.132B, S99.132K, and S99.132P as the requestor recommended.

(6) Other Encephalopathy

In the FY 2019 IPPS/LTCH PPS proposed rule (83 FR 20241), we discussed a request that we had received to change the severity level designation for ICD-10-CM diagnosis code G93.40 (Encephalopathy, unspecified) from an MCC to a non-CC. We did not propose a change based on the review of the claims data and input from our clinical advisors. However, after a review of public comments in response to that proposal, we finalized a change in the severity level designation for ICD-10-CM diagnosis code G93.40 from an MCC to a CC (83 FR 41239).

We received a request to reconsider the change in the severity level designation for ICD-10-CM diagnosis code G93.49 (Other encephalopathy) from an MCC to a CC, as reflected in Table 6I.2—Deletions to the MCC List and Table 6J.—Complete CC List that were associated with the FY 2019 IPPS/LTCH PPS final rule, because the requestor noted this diagnosis code was not discussed in the FY 2019 IPPS/LTCH PPS proposed or final rules along with the discussion of related ICD-10-CM diagnosis code G93.40. The requestor stated that diagnosis code G93.49 warrants an MCC classification to accurately reflect severity of illness and resources contributing to an extended length of stay for patients who have this condition.

Our clinical advisors reviewed the data for ICD-10-CM diagnosis code G93.49 (Other encephalopathy) as set forth in the table below, and noted that the C1 value is close to 2.0, which indicates that the resource use is aligned with that of a CC, while the C2 value is about halfway between 2.0 and 3.0, which is also consistent with the resource use of a CC. They also compared the C1, C2, and C3 values of diagnosis code G93.49 to those of diagnosis code G93.40, as also set forth in the table below, and noted that the values were similar for both codes. Our clinical advisors noted that similar to diagnosis code G93.40, diagnosis code

G93.49 (Other encephalopathy) is poorly defined, not all encephalopathies are MCCs, and the MCC status may create an incentive for coding personnel to not pursue specificity of encephalopathy. Therefore, they believe that these conditions are clinically similar and should be assigned the same CC severity level status. Therefore, we are not proposing any change to the severity level for ICD 10 CM diagnosis code G93.49 (Other encephalopathy) for FY 2020.

ICD-10-CM diagnosis code	Cnt1	C1	Cnt2	C2	Cnt3	C3
G93.40 (Encephalopathy, unspecified)	32,023	1.812	161,991	2.494	294,088	3.289
G93.49 (Other encephalopathy)	4,258	1.758	23,203	2.536	40,836	3.349

(7) Obstetrics Chapter Codes

We received a request to change the severity level for 94 ICD-10-CM diagnosis codes in the Obstetrics chapter of the ICD-10-CM diagnosis classification that describe a variety of complications of pregnancy, childbirth and the puerperium. The requestor stated that the reclassification of the 94 obstetric diagnosis codes would more appropriately reflect severity of illness and accurate MS-DRG grouping after CMS' FY 2019 creation of new obstetric MS-DRGs subdivided by severity level (with MCC, with CC, and without CC/MCC).

The 94 obstetrics codes associated with this request and their current and requested severity level designation are shown in Table 6P.1e. associated with this proposed rule (which is available via the internet on the CMS website at: <http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>). We are proposing to move some of these diagnosis codes to a higher severity level and some diagnosis codes to a lower severity level. Our proposals are shown in the table below.

Our clinical advisors indicated that the approach outlined elsewhere in this section to evaluate requested changes to severity levels, in which each diagnosis is evaluated using Medicare cost data to determine the extent to which its presence as a secondary diagnosis resulted in increased hospital resource use, could not be used to evaluate this request because the number of obstetric patients in the Medicare data was insufficient to perform evaluation using statistical methods. Instead, our clinical

advisors used their clinical judgment to evaluate the requested changes to the severity levels for the 94 obstetrics diagnosis codes. Our clinical advisors concur with the requestor that changes to the severity level for some of the obstetrics diagnosis codes would more appropriately reflect severity of illness and accurate MS-DRG grouping. Specifically, our clinical advisors agreed with the requested change to severity from a non-CC to a CC for 10 of the diagnosis codes identified by the requestor because they believe these conditions clinically warrant a CC designation. They noted that 6 of the 10 diagnosis codes describe gestational diabetes mellitus in pregnancy, gestational diabetes mellitus in childbirth, or gestational diabetes mellitus in the puerperium requiring control, either by insulin or oral hypoglycemic drugs and the condition would require additional monitoring and resources in the inpatient setting. They also noted that 2 of the 10 diagnosis codes describe maternal care for other isoimmunization in the first trimester for single or multiple gestations where the fetus is unspecified or fetus number 1 is specified. They indicated that although there are additional diagnosis codes describing maternal care for other isoimmunization in the first trimester that uniquely identify fetus number 2 through fetus number 5, as well as an "other" fetus beyond number 5, they do not believe these other diagnosis codes have any additional impact on resource use because treatment would be directed at the entire uterine cavity. They further noted that 1 of the 10 diagnosis codes

describes a conjoined twin pregnancy in the third trimester and, while conjoined twins occur rarely and carry a high risk of complications and mortality, they believe the complexities are greatest in the third trimester. Lastly, 1 of the 10 diagnosis codes describes unspecified diabetes mellitus in childbirth, and because the diagnosis codes describing unspecified diabetes mellitus in pregnancy and unspecified diabetes mellitus in the puerperium are designated as a CC, our clinical advisors agreed that clinically, the condition occurring in childbirth warrants a CC designation as well. Our clinical advisors also agreed with the requested change to severity level from an MCC to a CC for 4 other diagnosis codes identified by the requestor because, clinically, the CC designation is consistent with the other diagnosis codes within those diagnosis code families. For example, the diagnosis codes describing preexisting type 1 diabetes mellitus in pregnancy, preexisting type 2 diabetes mellitus in pregnancy and unspecified preexisting diabetes mellitus in pregnancy, regardless of trimester (first, second, third, and unspecified) are all designated as CCs. Our clinical advisors agreed that the diagnosis codes describing these same conditions "in childbirth" also warrant a CC designation because the conditions do not require additional resources or reflect a greater severity of illness compared to the conditions when they occur "in pregnancy". Therefore, we are proposing a change to the severity level for 14 ICD-10-CM diagnosis codes as shown in the following table.

ICD-10-CM diagnosis code	Current CC subclass	Proposed CC subclass
O24.02 (Pre-existing type 1 diabetes mellitus, in childbirth)	MCC	CC
O24.12 (Pre-existing type 2 diabetes mellitus, in childbirth)	MCC	CC
O24.32 (Unspecified pre-existing diabetes mellitus in childbirth)	MCC	CC
O24.414 (Gestational diabetes mellitus in pregnancy, insulin controlled)	Non-CC	CC
O24.415 (Gestational diabetes mellitus in pregnancy, controlled by oral hypoglycemic drugs)	Non-CC	CC
O24.424 (Gestational diabetes mellitus in childbirth, insulin controlled)	Non-CC	CC
O24.425 (Gestational diabetes mellitus in childbirth, controlled by oral hypoglycemic drugs)	Non-CC	CC
O24.434 (Gestational diabetes mellitus in the puerperium, insulin controlled)	Non-CC	CC
O24.435 (Gestational diabetes mellitus in puerperium, controlled by oral hypoglycemic drugs)	Non-CC	CC
O24.82 (Other pre-existing diabetes mellitus in childbirth)	MCC	CC
O24.92 (Unspecified diabetes mellitus in childbirth)	Non-CC	CC

ICD-10-CM diagnosis code	Current CC subclass	Proposed CC subclass
O30.023 (Conjoined twin pregnancy, third trimester)	Non-CC	CC.
O36.1910 (Maternal care for other isoimmunization, first trimester, not applicable or unspecified)	Non-CC	CC.
O36.1911 (Maternal care for other isoimmunization, first trimester, fetus 1)	Non-CC	CC.

Given the limited number of cases reporting ICD-10-CM obstetrical codes in the Medicare claims data, we note that use of datasets other than MedPAR cost data for future evaluation of severity level designation for the ICD-10-CM diagnosis codes from the Obstetrics chapter of the ICD-10-CM classification is under consideration.

e. Proposed Additions and Deletions to the Diagnosis Code Severity Levels for FY 2020

The following tables identify the proposed additions and deletions to the diagnosis code MCC severity levels list and the proposed additions and deletions to the diagnosis code CC severity levels list for FY 2020 and are available via the internet on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>.

Table 6I.1—Proposed Additions to the MCC List—FY 2020;

Table 6I.2—Proposed Deletions to the MCC List—FY 2020;

Table 6J.1—Proposed Additions to the CC List—FY 2020; and

Table 6J.2—Proposed Deletions to the CC List—FY 2020.

f. Proposed CC Exclusions List for FY 2020

In the September 1, 1987 final notice (52 FR 33143) concerning changes to the DRG classification system, we modified the GROUPER logic so that certain diagnoses included on the standard list of CCs would not be considered valid CCs in combination with a particular principal diagnosis. We created the CC Exclusions List for the following reasons: (1) To preclude coding of CCs for closely related conditions; (2) to preclude duplicative or inconsistent coding from being treated as CCs; and (3) to ensure that cases are appropriately classified between the complicated and uncomplicated DRGs in a pair.

In the May 19, 1987 proposed notice (52 FR 18877) and the September 1, 1987 final notice (52 FR 33154), we explained that the excluded secondary diagnoses were established using the following five principles:

- Chronic and acute manifestations of the same condition should not be considered CCs for one another;

- Specific and nonspecific (that is, not otherwise specified (NOS)) diagnosis codes for the same condition should not be considered CCs for one another;

- Codes for the same condition that cannot coexist, such as partial/total, unilateral/bilateral, obstructed/unobstructed, and benign/malignant, should not be considered CCs for one another;

- Codes for the same condition in anatomically proximal sites should not be considered CCs for one another; and
- Closely related conditions should not be considered CCs for one another.

The creation of the CC Exclusions List was a major project involving hundreds of codes. We have continued to review the remaining CCs to identify additional exclusions and to remove diagnoses from the master list that have been shown not to meet the definition of a CC. We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50541 through 50544) for detailed information regarding revisions that were made to the CC and CC Exclusion Lists under the ICD-9-CM MS-DRGs.

In this FY 2020 IPPS/LTCH PPS proposed rule, for FY 2020, we are proposing changes to the ICD-10 MS-DRGs Version 37 CC Exclusion List. Therefore, we have developed Table 6G.1.—Proposed Secondary Diagnosis Order Additions to the CC Exclusions List—FY 2020; Table 6G.2.—Proposed Principal Diagnosis Order Additions to the CC Exclusions List—FY 2020; Table 6H.1.—Proposed Secondary Diagnosis Order Deletions to the CC Exclusions List—FY 2020; and Table 6H.2.—Proposed Principal Diagnosis Order Deletions to the CC Exclusions List—FY 2020. For Table 6G.1, each secondary diagnosis code proposed for addition to the CC Exclusion List is shown with an asterisk and the principal diagnoses proposed to exclude the secondary diagnosis code are provided in the indented column immediately following it. For Table 6G.2, each of the principal diagnosis codes for which there is a CC exclusion is shown with an asterisk and the conditions proposed for addition to the CC Exclusion List that will not count as a CC are provided in an indented column immediately following the affected principal diagnosis. For Table 6H.1, each secondary diagnosis code proposed for deletion from the CC

Exclusion List is shown with an asterisk followed by the principal diagnosis codes that currently exclude it. For Table 6H.2, each of the principal diagnosis codes is shown with an asterisk and the proposed deletions to the CC Exclusions List are provided in an indented column immediately following the affected principal diagnosis. Tables 6G.1., 6G.2., 6H.1., and 6H.2. associated with this proposed rule are available via the internet on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>.

15. Proposed Changes to the ICD-10-CM and ICD-10-PCS Coding Systems

To identify new, revised and deleted diagnosis and procedure codes, for FY 2020, we have developed Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, Table 6D.—Invalid Procedure Codes, Table 6E.—Revised Diagnosis Code Titles, and Table 6F.—Revised Procedure Code Titles for this proposed rule.

These tables are not published in the Addendum to this proposed rule but are available via the internet on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html> as described in section VI. of the Addendum to this proposed rule. As discussed in section II.F.18. of the preamble of this proposed rule, the code titles are adopted as part of the ICD-10 (previously ICD-9-CM) Coordination and Maintenance Committee process. Therefore, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules.

We are proposing the MDC and MS-DRG assignments for the new diagnosis and procedure codes as set forth in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes. In addition, the proposed severity level designations for the new diagnosis codes are set forth in Table 6A. and the proposed O.R. status for the new procedure codes are set forth in Table 6B.

We are making available on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>

the following tables associated with this proposed rule:

- Table 6A.—New Diagnosis Codes—FY 2020;
- Table 6B.—New Procedure Codes—FY 2020;
- Table 6C.—Invalid Diagnosis Codes—FY 2020;
- Table 6D.—Invalid Procedure Codes—FY 2020;
- Table 6E.—Revised Diagnosis Code Titles—FY 2020;
- Table 6F.—Revised Procedure Code Titles—FY 2020;
- Table 6G.1.—Proposed Secondary Diagnosis Order Additions to the CC Exclusions List—FY 2020;
- Table 6G.2.—Proposed Principal Diagnosis Order Additions to the CC Exclusions List—FY 2020;
- Table 6H.1.—Proposed Secondary Diagnosis Order Deletions to the CC Exclusions List—FY 2020;
- Table 6H.2.—Proposed Principal Diagnosis Order Deletions to the CC Exclusions List—FY 2020;
- Table 6I.1.—Proposed Additions to the MCC List—FY 2020;
- Table 6I.2.—Proposed Deletions to the MCC List—FY 2020;
- Table 6J.1.—Proposed Additions to the CC List—FY 2020; and
- Table 6J.2.—Proposed Deletions to the CC List—FY 2020.

16. Proposed Changes to the Medicare Code Editor (MCE)

The Medicare Code Editor (MCE) is a software program that detects and reports errors in the coding of Medicare claims data. Patient diagnoses, procedure(s), and demographic information are entered into the Medicare claims processing systems and are subjected to a series of automated screens. The MCE screens are designed to identify cases that require further review before classification into an MS-DRG.

As discussed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41220), we made available the FY 2019 ICD-10 MCE Version 36 manual file. The link to this MCE manual file, along with the link to the mainframe and computer software for the MCE Version 36 (and ICD-10 MS-DRGs) are posted on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html>.

For this FY 2020 IPPS/LTCH PPS proposed rule, below we address the MCE requests we received by the November 1, 2018 deadline. We also discuss the proposals we are making based on our internal review and analysis.

a. Age Conflict Edit: Maternity Diagnoses

In the MCE, the Age conflict edit exists to detect inconsistencies between a patient's age and any diagnosis on the patient's record; for example, a 5-year-old patient with benign prostatic hypertrophy or a 78-year-old patient coded with a delivery. In these cases, the diagnosis is clinically and virtually impossible for a patient of the stated age. Therefore, either the diagnosis or the age is presumed to be incorrect. Currently, in the MCE, the following four age diagnosis categories appear under the Age conflict edit and are listed in the manual and written in the software program:

- Perinatal/Newborn—Age of 0 years only; a subset of diagnoses which will only occur during the perinatal or newborn period of age 0 (for example, tetanus neonatorum, health examination for newborn under 8 days old).
- Pediatric—Age is 0–17 years inclusive (for example, Reye's syndrome, routine child health exam).
- Maternity—Age range is 12–55 years inclusive (for example, diabetes in pregnancy, antepartum pulmonary complication).
- Adult—Age range is 15–124 years inclusive (for example, senile delirium, mature cataract).

Under the ICD-10 MCE, the maternity diagnoses category for the Age conflict edit considers the age range of 12 to 55 years inclusive. For that reason, the diagnosis codes on this Age conflict edit list would be expected to apply to conditions or disorders specific to that age group only.

We received a request to reconsider the age range associated with the maternity diagnoses category for the Age conflict edit. According to the requestor, pregnancies can and do occur prior to age 12 and after age 55. The requestor suggested that a more appropriate age range would be from age 9 to age 64 for the maternity diagnoses category.

We agree with the requestor that pregnancies can and do occur prior to the age of 12 and after the age of 55. We also agree that the suggested range, age 9 to age 64, is an appropriate age range. Therefore, we are proposing to revise the maternity diagnoses category for the Age conflict edit to consider the new age range of 9 to 64 years inclusive.

b. Sex Conflict Edit: Diagnoses for Females Only Edit

In the MCE, the Sex conflict edit detects inconsistencies between a patient's sex and any diagnosis or procedure on the patient's record; for example, a male patient with cervical

cancer (diagnosis) or a female patient with a prostatectomy (procedure). In both instances, the indicated diagnosis or the procedure conflicts with the stated sex of the patient. Therefore, the patient's diagnosis, procedure, or sex is presumed to be incorrect.

As discussed in section II.F.15. of the preamble of this proposed rule, Table 6A.—New Diagnosis Codes which is associated with this proposed rule (and is available via the internet on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) lists the new diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2019. ICD-10-CM diagnosis code N99.85 (Post endometrial ablation syndrome) is a new code that describes a condition consistent with the female sex. We are proposing to add this diagnosis code to the Diagnoses for Females Only edit code list under the Sex conflict edit.

c. Unacceptable Principal Diagnosis Edit

In the MCE, there are select codes that describe a circumstance that influences an individual's health status but does not actually describe a current illness or injury. There also are codes that are not specific manifestations but may be due to an underlying cause. These codes are considered unacceptable as a principal diagnosis. In limited situations, there are a few codes on the MCE Unacceptable Principal Diagnosis edit code list that are considered "acceptable" when a specified secondary diagnosis is also coded and reported on the claim.

ICD-10-CM diagnosis codes I46.2 (Cardiac arrest due to underlying cardiac condition) and I46.8 (Cardiac arrest due to other underlying condition) are codes that clearly specify cardiac arrest as being due to an underlying condition. Also, in the ICD-10-CM Tabular List, there are instructional notes to "Code first underlying cardiac condition" at ICD-10-CM diagnosis code I46.2 and to "Code first underlying condition" at ICD-10-CM diagnosis code I46.8. Therefore, we are proposing to add ICD-10-CM diagnosis codes I46.2 and I46.8 to the Unacceptable Principal Diagnosis Category edit code list.

As discussed in section II.F.15. of the preamble of this proposed rule, Table 6A.—New Diagnosis Codes associated with this proposed rule (which is available via the internet on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) lists the new diagnosis

codes that have been approved to date that will be effective with discharges occurring on and after October 1, 2019.

We are proposing to add the new ICD-10-CM diagnosis codes listed in

the following table to the Unacceptable Principal Diagnosis Category edit code list, as these codes are consistent with other ICD-10-CM diagnosis codes currently included on the Unacceptable

Principal Diagnosis Category edit code list.

ICD-10-CM code	Code description
T50.915A	Adverse effect of multiple unspecified drugs, medicaments and biological substances, initial encounter.
T50.915D	Adverse effect of multiple unspecified drugs, medicaments and biological substances, subsequent encounter.
T50.915S	Adverse effect of multiple unspecified drugs, medicaments and biological substances, sequela.
T50.916A	Underdosing of multiple unspecified drugs, medicaments and biological substances, initial encounter.
T50.916D	Underdosing of multiple unspecified drugs, medicaments and biological substances, subsequent encounter.
T50.916S	Underdosing of multiple unspecified drugs, medicaments and biological substances, sequela.
Z11.7	Encounter for testing for latent tuberculosis infection.
Z22.7	Latent tuberculosis.
Z71.84	Encounter for health counseling related to travel.
Z86.002	Personal history of in-situ neoplasm of other and unspecified genital organs.
Z86.003	Personal history of in-situ neoplasm of oral cavity, esophagus and stomach.
Z86.004	Personal history of in-situ neoplasm of other and unspecified digestive organs.
Z86.005	Personal history of in-situ neoplasm of middle ear and respiratory system.
Z86.006	Personal history of melanoma in-situ.

d. Non-Covered Procedure Edit

In the MCE, the Non-Covered Procedure edit identifies procedures for which Medicare does not provide payment. Payment is not provided due to specific criteria that are established in the National Coverage Determination (NCD) process. We refer readers to the website at: <https://www.cms.gov/Medicare/Coverage/Determination>

[Process/howtorequestanNCD.html](https://www.cms.gov/Medicare/Process/howtorequestanNCD.html) for additional information on this process. In addition, there are procedures that would normally not be paid by Medicare but, due to the presence of certain diagnoses, are paid.

As discussed in section II.F.15. of the preamble of this proposed rule, Table 6D.—Invalid Procedure Codes associated with this proposed rule

(which is available via the internet on the CMS website at: <https://www.cms.gov/Medicare/Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) lists the procedure codes that are no longer effective as of October 1, 2019. Included in this table are the following ICD-10-PCS procedure codes listed on the Non-Covered Procedure edit code list.

ICD-10-PCS code	Code description
037G3Z6	Dilation of intracranial artery, bifurcation, percutaneous approach.
037G4Z6	Dilation of intracranial artery, bifurcation, percutaneous endoscopic approach.

We are proposing to remove these codes from the Non-Covered Procedure edit code list. In addition, as discussed in section II.F.2.b. of the preamble of this proposed rule, a number of ICD-10-PCS procedure codes describing bone

marrow transplant procedures were the subject of a proposal discussed at the March 5-6, 2019 ICD-10 Coordination and Maintenance Committee meeting, to be deleted effective October 1, 2019. We are proposing that if the applicable

proposal is finalized, we would delete the subset of those ICD-10-PCS procedure codes that are currently listed on the Non-Covered Procedure edit code list as shown in the following table.

ICD-10-PCS code	Code description
30250G0	Transfusion of autologous bone marrow into peripheral artery, open approach.
30250Y0	Transfusion of autologous hematopoietic stem cells into peripheral artery, open approach.
30253G0	Transfusion of autologous bone marrow into peripheral artery, percutaneous approach.
30253Y0	Transfusion of autologous hematopoietic stem cells into peripheral artery, percutaneous approach.
30260G0	Transfusion of autologous bone marrow into central artery, open approach.
30260Y0	Transfusion of autologous hematopoietic stem cells into central artery, open approach.
30263G0	Transfusion of autologous bone marrow into central artery, percutaneous approach.
30263Y0	Transfusion of autologous hematopoietic stem cells into central artery, percutaneous approach.

e. Future Enhancement

In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38053 through 38054), we noted the importance of ensuring accuracy of the coded data from the reporting, collection, processing, coverage, payment, and analysis aspects. We have engaged a contractor to assist in the review of the limited coverage and noncovered procedure

edits in the MCE that may also be present in other claims processing systems that are utilized by our MACs. The MACs must adhere to criteria specified within the National Coverage Determinations (NCDs) and may implement their own edits in addition to what are already incorporated into the MCE, resulting in duplicate edits. The objective of this review is to

identify where duplicate edits may exist and to determine what the impact might be if these edits were to be removed from the MCE.

We have noted that the purpose of the MCE is to ensure that errors and inconsistencies in the coded data are recognized during Medicare claims processing. As we indicated in the FY 2019 IPPS/LTCH PPS final rule (83 FR

41228), we are considering whether the inclusion of coverage edits in the MCE necessarily aligns with that specific goal because the focus of coverage edits is on whether or not a particular service is covered for payment purposes and not whether it was coded correctly.

As we continue to evaluate the purpose and function of the MCE with respect to ICD-10, we encourage public input for future discussion. As we have discussed in prior rulemaking, we recognize a need to further examine the current list of edits and the definitions of those edits. We continue to encourage public comments on whether there are additional concerns with the current edits, including specific edits or language that should be removed or revised, edits that should be combined, or new edits that should be added to assist in detecting errors or inaccuracies in the coded data. Comments should be directed to the MS-DRG Classification Change Mailbox located at: MSDRGClassificationChange@cms.hhs.gov by November 1, 2019 for the FY 2021 rulemaking.

17. Proposed Changes to Surgical Hierarchies

Some inpatient stays entail multiple surgical procedures, each one of which, occurring by itself, could result in assignment of the case to a different MS-DRG within the MDC to which the principal diagnosis is assigned. Therefore, it is necessary to have a decision rule within the GROUPER by which these cases are assigned to a single MS-DRG. The surgical hierarchy, an ordering of surgical classes from most resource-intensive to least resource-intensive, performs that function. Application of this hierarchy ensures that cases involving multiple surgical procedures are assigned to the MS-DRG associated with the most resource-intensive surgical class.

A surgical class can be composed of one or more MS-DRGs. For example, in MDC 11, the surgical class “kidney transplant” consists of a single MS-DRG (MS-DRG 652) and the class “major bladder procedures” consists of three MS-DRGs (MS-DRGs 653, 654, and 655). Consequently, in many cases, the

surgical hierarchy has an impact on more than one MS-DRG. The methodology for determining the most resource-intensive surgical class involves weighting the average resources for each MS-DRG by frequency to determine the weighted average resources for each surgical class. For example, assume surgical class A includes MS-DRGs 001 and 002 and surgical class B includes MS-DRGs 003, 004, and 005. Assume also that the average costs of MS-DRG 001 are higher than that of MS-DRG 003, but the average costs of MS-DRGs 004 and 005 are higher than the average costs of MS-DRG 002. To determine whether surgical class A should be higher or lower than surgical class B in the surgical hierarchy, we would weigh the average costs of each MS-DRG in the class by frequency (that is, by the number of cases in the MS-DRG) to determine average resource consumption for the surgical class. The surgical classes would then be ordered from the class with the highest average resource utilization to that with the lowest, with the exception of “other O.R. procedures” as discussed in this proposed rule.

This methodology may occasionally result in assignment of a case involving multiple procedures to the lower-weighted MS-DRG (in the highest, most resource-intensive surgical class) of the available alternatives. However, given that the logic underlying the surgical hierarchy provides that the GROUPER search for the procedure in the most resource-intensive surgical class, in cases involving multiple procedures, this result is sometimes unavoidable.

We note that, notwithstanding the foregoing discussion, there are a few instances when a surgical class with a lower average cost is ordered above a surgical class with a higher average cost. For example, the “other O.R. procedures” surgical class is uniformly ordered last in the surgical hierarchy of each MDC in which it occurs, regardless of the fact that the average costs for the MS-DRG or MS-DRGs in that surgical class may be higher than those for other surgical classes in the MDC. The “other O.R. procedures” class is a group of

procedures that are only infrequently related to the diagnoses in the MDC, but are still occasionally performed on patients with cases assigned to the MDC with these diagnoses. Therefore, assignment to these surgical classes should only occur if no other surgical class more closely related to the diagnoses in the MDC is appropriate.

A second example occurs when the difference between the average costs for two surgical classes is very small. We have found that small differences generally do not warrant reordering of the hierarchy because, as a result of reassigning cases on the basis of the hierarchy change, the average costs are likely to shift such that the higher-ordered surgical class has lower average costs than the class ordered below it.

Based on the changes that we are proposing to make in this FY 2020 IPPS/LTCH PPS proposed rule, as discussed in section II.F.5. of this preamble of this proposed rule, we are proposing to revise the surgical hierarchy for MDC 5 (Diseases and Disorders of the Circulatory System) as follows: In MDC 5, we are proposing to sequence proposed new MS-DRGs 319 and 320 (Other Endovascular Cardiac Valve Procedures with and without MCC, respectively) above MS-DRGs 222, 223, 224, 225, 226, and 227 (Cardiac Defibrillator Implant with and without Cardiac Catheterization with and without AMI/HF/Shock with and without MCC, respectively) and below MS-DRGs 266 and 267 (Endovascular Cardiac Valve Replacement with and without MCC, respectively). We also note that, as discussed in section II.F.5.a. of this preamble of this proposed rule, we are proposing to revise the titles for MS-DRGs 266 and 267 to “Endovascular Cardiac Valve Replacement and Supplement Procedures with MCC” and “Endovascular Cardiac Valve Replacement and Supplement Procedures without MCC”, respectively.

Our proposal for Appendix D—MS-DRG Surgical Hierarchy by MDC and MS-DRG of the ICD-10 MS-DRG Definitions Manual Version 37 is illustrated in the following table.

PROPOSED SURGICAL HIERARCHY: MDC 5

MS-DRG 215	Other Heart Assist System Implant.
MS-DRGs 216–221	Cardiac Valve and Other Major Cardiothoracic Procedures.
MS-DRGs 266 and 267	Endovascular Cardiac Valve Procedures.
Proposed New MS-DRGs 319 and 320	Other Endovascular Cardiac Valve Procedures.
MS-DRGs 222–227	Cardiac Defibrillator Implant.

As with other MS-DRG related issues, we encourage commenters to submit requests to examine ICD-10 claims pertaining to the surgical hierarchy via the CMS MS-DRG Classification Change Request Mailbox located at: MSDRGClassificationChange@cms.hhs.gov by November 1, 2019 for consideration for FY 2021.

18. Maintenance of the ICD-10-CM and ICD-10-PCS Coding Systems

In September 1985, the ICD-9-CM Coordination and Maintenance Committee was formed. This is a Federal interdepartmental committee, co-chaired by the National Center for Health Statistics (NCHS), the Centers for Disease Control and Prevention (CDC), and CMS, charged with maintaining and updating the ICD-9-CM system. The final update to ICD-9-CM codes was made on October 1, 2013. Thereafter, the name of the Committee was changed to the ICD-10 Coordination and Maintenance Committee, effective with the March 19-20, 2014 meeting. The ICD-10 Coordination and Maintenance Committee addresses updates to the ICD-10-CM and ICD-10-PCS coding systems. The Committee is jointly responsible for approving coding changes, and developing errata, addenda, and other modifications to the coding systems to reflect newly developed procedures and technologies and newly identified diseases. The Committee is also responsible for promoting the use of Federal and non-Federal educational programs and other communication techniques with a view toward standardizing coding applications and upgrading the quality of the classification system.

The official list of ICD-9-CM diagnosis and procedure codes by fiscal year can be found on the CMS website at: <http://cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/codes.html>. The official list of ICD-10-CM and ICD-10-PCS codes can be found on the CMS website at: <http://www.cms.gov/Medicare/Coding/ICD10/index.html>.

The NCHS has lead responsibility for the ICD-10-CM and ICD-9-CM diagnosis codes included in the Tabular List and Alphabetic Index for Diseases, while CMS has lead responsibility for the ICD-10-PCS and ICD-9-CM procedure codes included in the Tabular List and Alphabetic Index for Procedures.

The Committee encourages participation in the previously mentioned process by health-related organizations. In this regard, the Committee holds public meetings for discussion of educational issues and

proposed coding changes. These meetings provide an opportunity for representatives of recognized organizations in the coding field, such as the American Health Information Management Association (AHIMA), the American Hospital Association (AHA), and various physician specialty groups, as well as individual physicians, health information management professionals, and other members of the public, to contribute ideas on coding matters. After considering the opinions expressed at the public meetings and in writing, the Committee formulates recommendations, which then must be approved by the agencies.

The Committee presented proposals for coding changes for implementation in FY 2020 at a public meeting held on September 11-12, 2018, and finalized the coding changes after consideration of comments received at the meetings and in writing by November 13, 2018.

The Committee held its 2019 meeting on March 5-6, 2019. The deadline for submitting comments on these code proposals is scheduled for April 5, 2019. It was announced at this meeting that any new diagnosis and procedure codes for which there was consensus of public support and for which complete tabular and indexing changes would be made by May 2019 would be included in the October 1, 2019 update to the ICD-10-CM diagnosis and ICD-10-PCS procedure code sets. As discussed in earlier sections of the preamble of this proposed rule, there are new, revised, and deleted ICD-10-CM diagnosis codes and ICD-10-PCS procedure codes that are captured in Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, Table 6D.—Invalid Procedure Codes, Table 6E.—Revised Diagnosis Code Titles, and Table 6F.—Revised Procedure Code Titles for this proposed rule, which are available via the internet on the CMS website at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>. The code titles are adopted as part of the ICD-10 (previously ICD-9-CM) Coordination and Maintenance Committee process. Therefore, although we make the code titles available for the IPPS proposed rule, they are not subject to comment in the proposed rule. Because of the length of these tables, they are not published in the Addendum to the proposed rule. Rather, they are available via the internet as discussed in section VI. of the Addendum to this proposed rule.

Live Webcast recordings of the discussions of the diagnosis and procedure codes at the Committee's

September 11-12, 2018 meeting can be obtained from the CMS website at: http://cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/index.html?redirect=/icd9ProviderDiagnosticCodes/03_meetings.asp. The live webcast recordings of the discussions of the diagnosis and procedure codes at the Committee's March 5-6, 2019 meeting can be obtained from the CMS website at: <https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials.html>.

The materials for the discussions relating to diagnosis codes at the September 11-12 2018 meeting and March 5-6, 2019 meeting can be found at: http://www.cdc.gov/nchs/icd/icd10cm_maintenance.html. These websites also provide detailed information about the Committee, including information on requesting a new code, attending a Committee meeting, and timeline requirements and meeting dates.

We encourage commenters to address suggestions on coding issues involving diagnosis codes to: Donna Pickett, Co-Chairperson, ICD-10 Coordination and Maintenance Committee, NCHS, Room 2402, 3311 Toledo Road, Hyattsville, MD 20782. Comments may be sent by Email to: nchsicd10cm@cdc.gov.

Questions and comments concerning the procedure codes should be submitted via Email to: ICDProcedureCodeRequest@cms.hhs.gov.

In the September 7, 2001 final rule implementing the IPPS new technology add-on payments (66 FR 46906), we indicated we would attempt to include proposals for procedure codes that would describe new technology discussed and approved at the Spring meeting as part of the code revisions effective the following October.

Section 503(a) of Public Law 108-173 included a requirement for updating diagnosis and procedure codes twice a year instead of a single update on October 1 of each year. This requirement was included as part of the amendments to the Act relating to recognition of new technology under the IPPS. Section 503(a) amended section 1886(d)(5)(K) of the Act by adding a clause (vii) which states that the Secretary shall provide for the addition of new diagnosis and procedure codes on April 1 of each year, but the addition of such codes shall not require the Secretary to adjust the payment (or diagnosis-related group classification) until the fiscal year that begins after such date. This requirement improves the recognition of new technologies under the IPPS by providing information on these new technologies

at an earlier date. Data will be available 6 months earlier than would be possible with updates occurring only once a year on October 1.

While section 1886(d)(5)(K)(vii) of the Act states that the addition of new diagnosis and procedure codes on April 1 of each year shall not require the Secretary to adjust the payment, or DRG classification, under section 1886(d) of the Act until the fiscal year that begins after such date, we have to update the DRG software and other systems in order to recognize and accept the new codes. We also publicize the code changes and the need for a mid-year systems update by providers to identify the new codes. Hospitals also have to obtain the new code books and encoder updates, and make other system changes in order to identify and report the new codes.

The ICD-10 (previously the ICD-9-CM) Coordination and Maintenance Committee holds its meetings in the spring and fall in order to update the codes and the applicable payment and reporting systems by October 1 of each year. Items are placed on the agenda for the Committee meeting if the request is received at least 3 months prior to the meeting. This requirement allows time for staff to review and research the coding issues and prepare material for discussion at the meeting. It also allows time for the topic to be publicized in meeting announcements in the **Federal Register** as well as on the CMS website. A complete addendum describing details of all diagnosis and procedure coding changes, both tabular and index, is published on the CMS and NCHS websites in June of each year. Publishers of coding books and software use this information to modify their products that are used by health care providers. This 5-month time period has proved to be necessary for hospitals and other providers to update their systems.

A discussion of this timeline and the need for changes are included in the December 4-5, 2005 ICD-9-CM Coordination and Maintenance Committee Meeting minutes. The public agreed that there was a need to hold the fall meetings earlier, in September or October, in order to meet the new implementation dates. The public provided comment that additional time would be needed to update hospital systems and obtain new code books and coding software. There was considerable concern expressed about the impact this April update would have on providers.

In the FY 2005 IPPS final rule, we implemented section 1886(d)(5)(K)(vii) of the Act, as added by section 503(a) of Public Law 108-173, by developing a mechanism for approving, in time for

the April update, diagnosis and procedure code revisions needed to describe new technologies and medical services for purposes of the new technology add-on payment process. We also established the following process for making these determinations. Topics considered during the Fall ICD-10 (previously ICD-9-CM) Coordination and Maintenance Committee meeting are considered for an April 1 update if a strong and convincing case is made by the requestor at the Committee's public meeting. The request must identify the reason why a new code is needed in April for purposes of the new technology process. The participants at the meeting and those reviewing the Committee meeting materials and live webcast are provided the opportunity to comment on this expedited request. All other topics are considered for the October 1 update. Participants at the Committee meeting are encouraged to comment on all such requests. There were not any requests approved for an expedited April 1, 2019 implementation of a code at the September 11-12, 2018 Committee meeting. Therefore, there were not any new codes for implementation on April 1, 2019.

ICD-9-CM addendum and code title information is published on the CMS website at: <http://www.cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/index.html?redirect=/icd9ProviderDiagnosticCodes/01overview.asp#TopofPage>. ICD-10-CM and ICD-10-PCS addendum and code title information is published on the CMS website at: <http://www.cms.gov/Medicare/Coding/ICD10/index.html>. CMS also sends copies of all ICD-10-CM and ICD-10-PCS coding changes to its Medicare contractors for use in updating their systems and providing education to providers.

Information on ICD-10-CM diagnosis codes, along with the Official ICD-10-CM Coding Guidelines, can also be found on the CDC website at: <http://www.cdc.gov/nchs/icd/icd10.htm>. Additionally, information on new, revised, and deleted ICD-10-CM diagnosis and ICD-10-PCS procedure codes is provided to the AHA for publication in the *Coding Clinic for ICD-10*. AHA also distributes coding update information to publishers and software vendors.

The following chart shows the number of ICD-10-CM and ICD-10-PCS codes and code changes since FY 2016 when ICD-10 was implemented.

TOTAL NUMBER OF CODES AND CHANGES IN TOTAL NUMBER OF CODES PER FISCAL YEAR ICD-10-CM AND ICD-10-PCS CODES

Fiscal year	Number	Change
FY 2016:		
ICD-10-CM	69,823
ICD-10-PCS	71,974
FY 2017:		
ICD-10-CM	71,486	+1,663
ICD-10-PCS	75,789	+3,815
FY 2018:		
ICD-10-CM	71,704	+218
ICD-10-PCS	78,705	+2,916
FY 2019:		
ICD-10-CM	71,932	+228
ICD-10-PCS	78,881	+176
FY 2020 (Proposed):		
ICD-10-CM	72,184	+252
ICD-10-PCS	77,221	-1,660

As mentioned previously, the public is provided the opportunity to comment on any requests for new diagnosis or procedure codes discussed at the ICD-10 Coordination and Maintenance Committee meeting.

19. Replaced Devices Offered Without Cost or With a Credit

a. Background

In the FY 2008 IPPS final rule with comment period (72 FR 47246 through 47251), we discussed the topic of Medicare payment for devices that are replaced without cost or where credit for a replaced device is furnished to the hospital. We implemented a policy to reduce a hospital's IPPS payment for certain MS-DRGs where the implantation of a device that subsequently failed or was recalled determined the base MS-DRG assignment. At that time, we specified that we will reduce a hospital's IPPS payment for those MS-DRGs where the hospital received a credit for a replaced device equal to 50 percent or more of the cost of the device.

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51556 through 51557), we clarified this policy to state that the policy applies if the hospital received a credit equal to 50 percent or more of the cost of the replacement device and issued instructions to hospitals accordingly.

b. Proposed Changes for FY 2020

As discussed in section II.F.5.a. of the preamble of this proposed rule, for FY 2020, we are proposing to create new MS-DRGs 319 and 320 (Other Endovascular Cardiac Valve Procedures with and without MCC, respectively) and to revise the title for MS-DRG 266 from "Endovascular Cardiac Valve Replacement with MCC" to

“Endovascular Cardiac Valve Replacement and Supplement Procedures with MCC” and the title for MS-DRG 267 from “Endovascular Cardiac Valve Replacement without MCC” to “Endovascular Cardiac Valve Replacement and Supplement Procedures without MCC”.

As stated in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24409), we generally map new MS-DRGs onto the list when they are formed from procedures previously assigned to MS-

DRGs that are already on the list. Currently, MS-DRGs 216 through 221 are on the list of MS-DRGs subject to the policy for payment under the IPPS for replaced devices offered without cost or with a credit as shown in the table below. A subset of the procedures currently assigned to MS-DRGs 216 through 221 is being proposed for assignment to proposed new MS-DRGs 319 and 320. Therefore, we are proposing that if the applicable proposed MS-DRG changes are

finalized, we also would add proposed new MS-DRGs 319 and 320 to the list of MS-DRGs subject to the policy for payment under the IPPS for replaced devices offered without cost or with a credit and make conforming changes to the titles of MS-DRGs 266 and 267 as reflected in the table below. We also are proposing to continue to include the existing MS-DRGs currently subject to the policy as also displayed in the table below.

MDC	MS-DRG	MS-DRG title
Pre-MDC	001	Heart Transplant or Implant of Heart Assist System with MCC.
Pre-MDC	002	Heart Transplant or Implant of Heart Assist System without MCC.
1	023	Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator.
1	024	Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis without MCC.
1	025	Craniotomy & Endovascular Intracranial Procedures with MCC.
1	026	Craniotomy & Endovascular Intracranial Procedures with CC.
1	027	Craniotomy & Endovascular Intracranial Procedures without CC/MCC.
1	040	Peripheral, Cranial Nerve & Other Nervous System Procedures with MCC.
1	041	Peripheral, Cranial Nerve & Other Nervous System Procedures with CC or Peripheral Neurostimulator.
1	042	Peripheral, Cranial Nerve & Other Nervous System Procedures without CC/MCC.
3	129	Major Head & Neck Procedures with CC/MCC or Major Device.
3	130	Major Head & Neck Procedures without CC/MCC.
5	215	Other Heart Assist System Implant.
5	216	Cardiac Valve & Other Major Cardiothoracic Procedure with Cardiac Catheterization with MCC.
5	217	Cardiac Valve & Other Major Cardiothoracic Procedure with Cardiac Catheterization with CC.
5	218	Cardiac Valve & Other Major Cardiothoracic Procedure with Cardiac Catheterization without CC/MCC.
5	219	Cardiac Valve & Other Major Cardiothoracic Procedure without Cardiac Catheterization with MCC.
5	220	Cardiac Valve & Other Major Cardiothoracic Procedure without Cardiac Catheterization with CC.
5	221	Cardiac Valve & Other Major Cardiothoracic Procedure without Cardiac Catheterization without CC/MCC.
5	222	Cardiac Defibrillator Implant with Cardiac Catheterization with AMI/Heart Failure/Shock with MCC.
5	223	Cardiac Defibrillator Implant with Cardiac Catheterization with AMI/Heart Failure/Shock without MCC.
5	224	Cardiac Defibrillator Implant with Cardiac Catheterization without AMI/Heart Failure/Shock with MCC.
5	225	Cardiac Defibrillator Implant with Cardiac Catheterization without AMI/Heart Failure/Shock without MCC.
5	226	Cardiac Defibrillator Implant without Cardiac Catheterization with MCC.
5	227	Cardiac Defibrillator Implant without Cardiac Catheterization without MCC.
5	242	Permanent Cardiac Pacemaker Implant with MCC.
5	243	Permanent Cardiac Pacemaker Implant with CC.
5	244	Permanent Cardiac Pacemaker Implant without CC/MCC.
5	245	AICD Generator Procedures.
5	258	Cardiac Pacemaker Device Replacement with MCC.
5	259	Cardiac Pacemaker Device Replacement without MCC.
5	260	Cardiac Pacemaker Revision Except Device Replacement with MCC.
5	261	Cardiac Pacemaker Revision Except Device Replacement with CC.
5	262	Cardiac Pacemaker Revision Except Device Replacement without CC/MCC.
5	265	AICD Lead Procedures.
5	266	Endovascular Cardiac Valve Replacement and Supplement Procedures with MCC.
5	267	Endovascular Cardiac Valve Replacement and Supplement Procedures without MCC.
5	268	Aortic and Heart Assist Procedures Except Pulsation Balloon with MCC.
5	269	Aortic and Heart Assist Procedures Except Pulsation Balloon without MCC.
5	270	Other Major Cardiovascular Procedures with MCC.
5	271	Other Major Cardiovascular Procedures with CC.
5	272	Other Major Cardiovascular Procedures without CC/MCC.
5	319	Other Endovascular Cardiac Valve Procedures with MCC.
5	320	Other Endovascular Cardiac Valve Procedures without MCC.
8	461	Bilateral or Multiple Major Joint Procedures of Lower Extremity with MCC.
8	462	Bilateral or Multiple Major Joint Procedures of Lower Extremity without MCC.
8	466	Revision of Hip or Knee Replacement with MCC.
8	467	Revision of Hip or Knee Replacement with CC.
8	468	Revision of Hip or Knee Replacement without CC/MCC.
8	469	Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity with MCC or Total Ankle Replacement.
8	470	Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity without MCC.

The final list of MS-DRGs subject to the IPPS policy for replaced devices

offered without cost or with a credit will be included in the FY 2020 IPPS/LTCH

PPS final rule and also will be issued to

providers in the form of a Change Request (CR).

G. Recalibration of the Proposed FY 2020 MS-DRG Relative Weights

1. Data Sources for Developing the Proposed Relative Weights

In developing the proposed FY 2020 system of weights, we are proposing to use two data sources: Claims data and cost report data. As in previous years, the claims data source is the MedPAR file. This file is based on fully coded diagnostic and procedure data for all Medicare inpatient hospital bills. The FY 2018 MedPAR data used in this proposed rule include discharges occurring on October 1, 2017, through September 30, 2018, based on bills received by CMS through December 31, 2018, from all hospitals subject to the IPPS and short-term, acute care hospitals in Maryland (which at that time were under a waiver from the IPPS). The FY 2018 MedPAR file used in calculating the proposed relative weights includes data for approximately 9,480,820 Medicare discharges from IPPS providers. Discharges for Medicare beneficiaries enrolled in a Medicare Advantage managed care plan are excluded from this analysis. These discharges are excluded when the MedPAR “GHO Paid” indicator field on the claim record is equal to “1” or when the MedPAR DRG payment field, which represents the total payment for the claim, is equal to the MedPAR “Indirect Medical Education (IME)” payment field, indicating that the claim was an “IME only” claim submitted by a teaching hospital on behalf of a beneficiary enrolled in a Medicare Advantage managed care plan. In addition, the December 31, 2018 update of the FY 2018 MedPAR file complies with version 5010 of the X12 HIPAA Transaction and Code Set Standards, and includes a variable called “claim type.” Claim type “60” indicates that the claim was an inpatient claim paid as fee-for-service. Claim types “61,” “62,” “63,” and “64” relate to encounter claims, Medicare Advantage IME claims, and HMO no-pay claims. Therefore, the calculation of the proposed relative weights for FY 2020 also excludes claims with claim type values not equal to “60.” The data exclude CAHs, including hospitals that subsequently became CAHs after the period from which the data were taken. We note that the proposed FY 2020 relative weights are based on the ICD-10-CM diagnosis codes and ICD-10-PCS procedure codes from the FY 2018 MedPAR claims data, grouped through

the ICD-10 version of the proposed FY 2020 GROUPE (Version 37).

The second data source used in the cost-based relative weighting methodology is the Medicare cost report data files from the HCRIS. Normally, we use the HCRIS dataset that is 3 years prior to the IPPS fiscal year.

Specifically, we used cost report data from the December 31, 2018 update of the FY 2017 HCRIS for calculating the proposed FY 2020 cost-based relative weights.

2. Methodology for Calculation of the Proposed Relative Weights

As we explain in section II.E.2. of the preamble of this proposed rule, we calculated the proposed FY 2020 relative weights based on 19 CCRs, as we did for FY 2019. The methodology we are proposing to use to calculate the FY 2020 MS-DRG cost-based relative weights based on claims data in the FY 2018 MedPAR file and data from the FY 2017 Medicare cost reports is as follows:

- To the extent possible, all the claims were regrouped using the proposed FY 2020 MS-DRG classifications discussed in sections II.B. and II.F. of the preamble of this proposed rule.

- The transplant cases that were used to establish the proposed relative weights for heart and heart-lung, liver and/or intestinal, and lung transplants (MS-DRGs 001, 002, 005, 006, and 007, respectively) were limited to those Medicare-approved transplant centers that have cases in the FY 2018 MedPAR file. (Medicare coverage for heart, heart-lung, liver and/or intestinal, and lung transplants is limited to those facilities that have received approval from CMS as transplant centers.)

- Organ acquisition costs for kidney, heart, heart-lung, liver, lung, pancreas, and intestinal (or multivisceral organs) transplants continue to be paid on a reasonable cost basis. Because these acquisition costs are paid separately from the prospective payment rate, it is necessary to subtract the acquisition charges from the total charges on each transplant bill that showed acquisition charges before computing the average cost for each MS-DRG and before eliminating statistical outliers.

- Claims with total charges or total lengths of stay less than or equal to zero were deleted. Claims that had an amount in the total charge field that differed by more than \$30.00 from the sum of the routine day charges, intensive care charges, pharmacy charges, implantable devices charges, supplies and equipment charges, therapy services charges, operating room charges, cardiology charges,

laboratory charges, radiology charges, other service charges, labor and delivery charges, inhalation therapy charges, emergency room charges, blood and blood products charges, anesthesia charges, cardiac catheterization charges, CT scan charges, and MRI charges were also deleted.

- At least 92.3 percent of the providers in the MedPAR file had charges for 14 of the 19 cost centers. All claims of providers that did not have charges greater than zero for at least 14 of the 19 cost centers were deleted. In other words, a provider must have no more than five blank cost centers. If a provider did not have charges greater than zero in more than five cost centers, the claims for the provider were deleted.

- Statistical outliers were eliminated by removing all cases that were beyond 3.0 standard deviations from the geometric mean of the log distribution of both the total charges per case and the total charges per day for each MS-DRG.

- Effective October 1, 2008, because hospital inpatient claims include a POA indicator field for each diagnosis present on the claim, only for purposes of relative weight-setting, the POA indicator field was reset to “Y” for “Yes” for all claims that otherwise have an “N” (No) or a “U” (documentation insufficient to determine if the condition was present at the time of inpatient admission) in the POA field.

Under current payment policy, the presence of specific HAC codes, as indicated by the POA field values, can generate a lower payment for the claim. Specifically, if the particular condition is present on admission (that is, a “Y” indicator is associated with the diagnosis on the claim), it is not a HAC, and the hospital is paid for the higher severity (and, therefore, the higher weighted MS-DRG). If the particular condition is not present on admission (that is, an “N” indicator is associated with the diagnosis on the claim) and there are no other complicating conditions, the DRG GROUPE assigns the claim to a lower severity (and, therefore, the lower weighted MS-DRG) as a penalty for allowing a Medicare inpatient to contract a HAC. While the POA reporting meets policy goals of encouraging quality care and generates program savings, it presents an issue for the relative weight-setting process. Because cases identified as HACs are likely to be more complex than similar cases that are not identified as HACs, the charges associated with HAC cases are likely to be higher as well. Therefore, if the higher charges of these HAC claims are grouped into lower severity MS-DRGs prior to the relative

weight-setting process, the relative weights of these particular MS-DRGs would become artificially inflated, potentially skewing the relative weights. In addition, we want to protect the integrity of the budget neutrality process by ensuring that, in estimating payments, no increase to the standardized amount occurs as a result of lower overall payments in a previous year that stem from using weights and case-mix that are based on lower severity MS-DRG assignments. If this would occur, the anticipated cost savings from the HAC policy would be lost.

To avoid these problems, we reset the POA indicator field to “Y” only for relative weight-setting purposes for all claims that otherwise have an “N” or a “U” in the POA field. This resetting “forced” the more costly HAC claims into the higher severity MS-DRGs as appropriate, and the relative weights calculated for each MS-DRG more closely reflect the true costs of those cases.

In addition, in the FY 2013 IPPS/LTCH PPS final rule, for FY 2013 and subsequent fiscal years, we finalized a policy to treat hospitals that participate in the Bundled Payments for Care Improvement (BPCI) initiative the same as prior fiscal years for the IPPS payment modeling and ratesetting process without regard to hospitals’ participation within these bundled payment models (77 FR 53341 through 53343). Specifically, because acute care hospitals participating in the BPCI Initiative still receive IPPS payments under section 1886(d) of the Act, we include all applicable data from these subsection (d) hospitals in our IPPS payment modeling and ratesetting calculations as if the hospitals were not participating in those models under the BPCI initiative. We refer readers to the FY 2013 IPPS/LTCH PPS final rule for a complete discussion on our final

policy for the treatment of hospitals participating in the BPCI initiative in our ratesetting process. For additional information on the BPCI initiative, we refer readers to the CMS’ Center for Medicare and Medicaid Innovation’s website at: <http://innovation.cms.gov/initiatives/Bundled-Payments/index.html> and to section IV.H.4. of the preamble of the FY 2013 IPPS/LTCH PPS final rule (77 FR 53341 through 53343).

The participation of hospitals in the BPCI initiative concluded on September 30, 2018. The participation of hospitals in the Bundled Payments for Care Improvement (BPCI) Advanced model started on October 1, 2018. The BPCI Advanced model, tested under the authority of section 3021 of the Affordable Care Act (codified at section 1115A of the Act), is comprised of a single payment and risk track, which bundles payments for multiple services beneficiaries receive during a Clinical Episode. Acute care hospitals may participate in BPCI Advanced in one of two capacities: As a model Participant or as a downstream Episode Initiator. Regardless of the capacity in which they participate in the BPCI Advanced model, participating acute care hospitals will continue to receive IPPS payments under section 1886(d) of the Act. Acute care hospitals that are Participants also assume financial and quality performance accountability for Clinical Episodes in the form of a reconciliation payment. For additional information on the BPCI Advanced model, we refer readers to the BPCI Advanced web page on the CMS Center for Medicare and Medicaid Innovation’s website at: <https://innovation.cms.gov/initiatives/bpci-advanced/>. Consistent with our policy for FY 2019, and consistent with how we have treated hospitals that participated in the BPCI Initiative, for FY 2020, we continue to believe it is

appropriate to include all applicable data from the subsection (d) hospitals participating in the BPCI Advanced model in our IPPS payment modeling and ratesetting calculations because, as noted above, these hospitals are still receiving IPPS payments under section 1886(d) of the Act.

The charges for each of the proposed 19 cost groups for each claim were standardized to remove the effects of differences in proposed area wage levels, IME and DSH payments, and for hospitals located in Alaska and Hawaii, the applicable proposed cost-of-living adjustment. Because hospital charges include charges for both operating and capital costs, we standardized total charges to remove the effects of differences in proposed geographic adjustment factors, cost-of-living adjustments, and DSH payments under the capital IPPS as well. Charges were then summed by MS-DRG for each of the proposed 19 cost groups so that each MS-DRG had 19 standardized charge totals. Statistical outliers were then removed. These charges were then adjusted to cost by applying the proposed national average CCRs developed from the FY 2017 cost report data.

The proposed 19 cost centers that we used in the proposed relative weight calculation are shown in the following table. The table shows the lines on the cost report and the corresponding revenue codes that we used to create the proposed 19 national cost center CCRs. If stakeholders have comments about the groupings in this table, we may consider those comments as we finalize our policy.

We are inviting public comments on our proposals related to recalibration of the proposed FY 2020 relative weights and the changes in relative weights from FY 2019.

BILLING CODE 4120-01-C**3. Development of Proposed National Average CCRs**

We developed the proposed national average CCRs as follows:

Using the FY 2017 cost report data, we removed CAHs, Indian Health Service hospitals, all-inclusive rate hospitals, and cost reports that represented time periods of less than 1 year (365 days). We included hospitals

located in Maryland because we include their charges in our claims database. We then created CCRs for each provider for each cost center (see prior table for line items used in the calculations) and removed any CCRs that were greater

than 10 or less than 0.01. We normalized the departmental CCRs by dividing the CCR for each department by the total CCR for the hospital for the purpose of trimming the data. We then took the logs of the normalized cost center CCRs and removed any cost center CCRs where the log of the cost center CCR was greater or less than the mean log plus/minus 3 times the standard deviation for the log of that cost center CCR. Once the cost report data were trimmed, we calculated a Medicare-specific CCR. The Medicare-specific CCR was determined by taking the Medicare charges for each line item from Worksheet D-3 and deriving the Medicare-specific costs by applying the hospital-specific departmental CCRs to the Medicare-specific charges for each line item from Worksheet D-3. Once each hospital's Medicare-specific costs were established, we summed the total Medicare-specific costs and divided by the sum of the total Medicare-specific charges to produce national average, charge-weighted CCRs.

After we multiplied the total charges for each MS-DRG in each of the proposed 19 cost centers by the corresponding national average CCR, we summed the 19 "costs" across each proposed MS-DRG to produce a total standardized cost for the proposed MS-DRG. The average standardized cost for each proposed MS-DRG was then

computed as the total standardized cost for the proposed MS-DRG divided by the transfer-adjusted case count for the proposed MS-DRG. The average cost for each proposed MS-DRG was then divided by the national average standardized cost per case to determine the proposed relative weight.

The proposed FY 2020 cost-based relative weights were then normalized by a proposed adjustment factor of 1.788337 so that the average case weight after recalibration was equal to the average case weight before recalibration. The proposed normalization adjustment is intended to ensure that recalibration by itself neither increases nor decreases total payments under the IPPS, as required by section 1886(d)(4)(C)(iii) of the Act.

The proposed 19 national average CCRs for FY 2020 are as follows:

Group	CCR
Routine Days	0.433
Intensive Days	0.362
Drugs	0.191
Supplies & Equipment	0.301
Implantable Devices	0.308
Therapy Services	0.297
Laboratory	0.109
Operating Room	0.175
Cardiology	0.099
Cardiac Catheterization	0.106
Radiology	0.140
MRIs	0.073

Group	CCR
CT Scans	0.035
Emergency Room	0.154
Blood and Blood Products	0.282
Other Services	0.344
Labor & Delivery	0.369
Inhalation Therapy	0.151
Anesthesia	0.077

Since FY 2009, the relative weights have been based on 100 percent cost weights based on our MS-DRG grouping system.

When we recalibrated the DRG weights for previous years, we set a threshold of 10 cases as the minimum number of cases required to compute a reasonable weight. We are proposing to use that same case threshold in recalibrating the proposed MS-DRG relative weights for FY 2020. Using data from the FY 2018 MedPAR file, there were 8 MS-DRGs that contain fewer than 10 cases. For FY 2020, because we do not have sufficient MedPAR data to set accurate and stable cost relative weights for these low-volume MS-DRGs, we are proposing to compute relative weights for the proposed low-volume MS-DRGs by adjusting their final FY 2019 relative weights by the percentage change in the average weight of the cases in other MS-DRGs from FY 2019 to FY 2020. The crosswalk table is shown below.

Low-volume MS-DRG	MS-DRG title	Crosswalk to MS-DRG
338	Appendectomy with Complicated Principal Diagnosis with MCC.	Final FY 2019 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).
789	Neonates, Died or Transferred to Another Acute Care Facility.	Final FY 2019 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).
790	Extreme Immaturity or Respiratory Distress Syndrome, Neonate.	Final FY 2019 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).
791	Prematurity with Major Problems	Final FY 2019 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).
792	Prematurity without Major Problems	Final FY 2019 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).
793	Full-Term Neonate with Major Problems	Final FY 2019 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).
794	Neonate with Other Significant Problems	Final FY 2019 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).
795	Normal Newborn	Final FY 2019 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).

H. Proposed Add-On Payments for New Services and Technologies for FY 2020

1. Background

Sections 1886(d)(5)(K) and (L) of the Act establish a process of identifying and ensuring adequate payment for new medical services and technologies (sometimes collectively referred to in this section as "new technologies") under the IPPS. Section 1886(d)(5)(K)(vi) of the Act specifies

that a medical service or technology will be considered new if it meets criteria established by the Secretary after notice and opportunity for public comment. Section 1886(d)(5)(K)(ii)(I) of the Act specifies that a new medical service or technology may be considered for new technology add-on payment if, based on the estimated costs incurred with respect to discharges involving such service or technology, the DRG prospective payment rate otherwise

applicable to such discharges under this subsection is inadequate. We note that, beginning with discharges occurring in FY 2008, CMS transitioned from CMS-DRGs to MS-DRGs. The regulations at 42 CFR 412.87 implement these provisions and specify three criteria for a new medical service or technology to receive the additional payment: (1) The medical service or technology must be new; (2) the medical service or technology must be costly such that the

DRG rate otherwise applicable to discharges involving the medical service or technology is determined to be inadequate; and (3) the service or technology must demonstrate a substantial clinical improvement over existing services or technologies. Below we highlight some of the major statutory and regulatory provisions relevant to the new technology add-on payment criteria, as well as other information. For a complete discussion on the new technology add-on payment criteria, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51572 through 51574).

Under the first criterion, as reflected in § 412.87(b)(2), a specific medical service or technology will be considered “new” for purposes of new medical service or technology add-on payments until such time as Medicare data are available to fully reflect the cost of the technology in the MS–DRG weights through recalibration. We note that we do not consider a service or technology to be new if it is substantially similar to one or more existing technologies. That is, even if a medical product receives a new FDA approval or clearance, it may not necessarily be considered “new” for purposes of new technology add-on payments if it is “substantially similar” to another medical product that was approved or cleared by FDA and has been on the market for more than 2 to 3 years. In the FY 2010 IPPS/RV 2010 LTCH PPS final rule (74 FR 43813 through 43814), we established criteria for evaluating whether a new technology is substantially similar to an existing technology, specifically: (1) Whether a product uses the same or a similar mechanism of action to achieve a therapeutic outcome; (2) whether a product is assigned to the same or a different MS–DRG; and (3) whether the new use of the technology involves the treatment of the same or similar type of disease and the same or similar patient population. If a technology meets all three of these criteria, it would be considered substantially similar to an existing technology and would not be considered “new” for purposes of new technology add-on payments. For a detailed discussion of the criteria for substantial similarity, we refer readers to the FY 2006 IPPS final rule (70 FR 47351 through 47352), and the FY 2010 IPPS/LTCH PPS final rule (74 FR 43813 through 43814).

Under the second criterion, § 412.87(b)(3) further provides that, to be eligible for the add-on payment for new medical services or technologies, the MS–DRG prospective payment rate otherwise applicable to discharges involving the new medical service or

technology must be assessed for adequacy. Under the cost criterion, consistent with the formula specified in section 1886(d)(5)(K)(ii)(I) of the Act, to assess the adequacy of payment for a new technology paid under the applicable MS–DRG prospective payment rate, we evaluate whether the charges for cases involving the new technology exceed certain threshold amounts. The MS–DRG threshold amounts used in evaluating new technology add-on payment applications for FY 2020 are presented in a data file that is available, along with the other data files associated with the FY 2019 IPPS/LTCH PPS final rule and correction notice, on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY2019-IPPS-Final-Rule-Home-Page-Items/FY2019-IPPS-Final-Rule-Data-Files.html?DLPage=1&DLEntries=10&DLSort=0&DLSortDir=ascending>. As finalized in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41275), beginning with FY 2020, we include the thresholds applicable to the next fiscal year (previously included in Table 10 of the annual IPPS/LTCH PPS proposed and final rules) in the data files associated with the prior fiscal year. Accordingly, the proposed thresholds for applications for new technology add-on payments for FY 2021 are presented in a data file that is available on the CMS website, along with the other data files associated with this FY 2020 proposed rule, by clicking on the FY 2020 IPPS Proposed Rule Home Page at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>.

In the September 7, 2001 final rule that established the new technology add-on payment regulations (66 FR 46917), we discussed the issue of whether the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule at 45 CFR parts 160 and 164 applies to claims information that providers submit with applications for new medical service or technology add-on payments. We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51573) for complete information on this issue.

Under the third criterion, § 412.87(b)(1) of our existing regulations provides that a new technology is an appropriate candidate for an additional payment when it represents an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. For example, a new technology represents a substantial clinical improvement when it reduces

mortality, decreases the number of hospitalizations or physician visits, or reduces recovery time compared to the technologies previously available. (We refer readers to the September 7, 2001 final rule for a more detailed discussion of this criterion (66 FR 46902). We also refer readers to section II.H.8. of the preamble of this proposed rule for a discussion of our proposed alternative inpatient new technology add-on payment pathway for transformative new devices.)

The new medical service or technology add-on payment policy under the IPPS provides additional payments for cases with relatively high costs involving eligible new medical services or technologies, while preserving some of the incentives inherent under an average-based prospective payment system. The payment mechanism is based on the cost to hospitals for the new medical service or technology. Under § 412.88, if the costs of the discharge (determined by applying cost-to-charge ratios (CCRs) as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 50 percent of the estimated costs of the new technology or medical service (if the estimated costs for the case including the new technology or medical service exceed Medicare’s payment); or (2) 50 percent of the difference between the full DRG payment and the hospital’s estimated cost for the case. Unless the discharge qualifies for an outlier payment, the additional Medicare payment is limited to the full MS–DRG payment plus 50 percent of the estimated costs of the new technology or medical service. We refer readers to section II.H.9. of the preamble of this proposed rule for a discussion of our proposed change to the calculation of the new technology add-on payment beginning in FY 2020, including our proposed amendments to § 412.88 of the regulations.

Section 503(d)(2) of Public Law 108–173 provides that there shall be no reduction or adjustment in aggregate payments under the IPPS due to add-on payments for new medical services and technologies. Therefore, in accordance with section 503(d)(2) of Public Law 108–173, add-on payments for new medical services or technologies for FY 2005 and later years have not been subjected to budget neutrality.

In the FY 2009 IPPS final rule (73 FR 48561 through 48563), we modified our regulations at § 412.87 to codify our longstanding practice of how CMS evaluates the eligibility criteria for new

medical service or technology add-on payment applications. That is, we first determine whether a medical service or technology meets the newness criterion, and only if so, do we then make a determination as to whether the technology meets the cost threshold and represents a substantial clinical improvement over existing medical services or technologies. We amended § 412.87(c) to specify that all applicants for new technology add-on payments must have FDA approval or clearance by July 1 of the year prior to the beginning of the fiscal year for which the application is being considered.

The Council on Technology and Innovation (CTI) at CMS oversees the agency's cross-cutting priority on coordinating coverage, coding and payment processes for Medicare with respect to new technologies and procedures, including new drug therapies, as well as promoting the exchange of information on new technologies and medical services between CMS and other entities. The CTI, composed of senior CMS staff and clinicians, was established under section 942(a) of Public Law 108–173. The Council is co-chaired by the Director of the Center for Clinical Standards and Quality (CCSQ) and the Director of the Center for Medicare (CM), who is also designated as the CTI's Executive Coordinator.

The specific processes for coverage, coding, and payment are implemented by CM, CCSQ, and the local Medicare Administrative Contractors (MACs) (in the case of local coverage and payment decisions). The CTI supplements, rather than replaces, these processes by working to assure that all of these activities reflect the agency-wide priority to promote high-quality, innovative care. At the same time, the CTI also works to streamline, accelerate, and improve coordination of these processes to ensure that they remain up to date as new issues arise. To achieve its goals, the CTI works to streamline and create a more transparent coding and payment process, improve the quality of medical decisions, and speed patient access to effective new treatments. It is also dedicated to supporting better decisions by patients and doctors in using Medicare-covered services through the promotion of better evidence development, which is critical for improving the quality of care for Medicare beneficiaries.

To improve the understanding of CMS' processes for coverage, coding, and payment and how to access them, the CTI has developed an "Innovator's Guide" to these processes. The intent is to consolidate this information, much of

which is already available in a variety of CMS documents and in various places on the CMS website, in a user friendly format. This guide was published in 2010 and is available on the CMS website at: <https://www.cms.gov/Medicare/Coverage/CouncilonTechInnov/Downloads/Innovators-Guide-Master-7-23-15.pdf>.

As we indicated in the FY 2009 IPPS final rule (73 FR 48554), we invite any product developers or manufacturers of new medical services or technologies to contact the agency early in the process of product development if they have questions or concerns about the evidence that would be needed later in the development process for the agency's coverage decisions for Medicare.

The CTI aims to provide useful information on its activities and initiatives to stakeholders, including Medicare beneficiaries, advocates, medical product manufacturers, providers, and health policy experts. Stakeholders with further questions about Medicare's coverage, coding, and payment processes, or who want further guidance about how they can navigate these processes, can contact the CTI at CTI@cms.hhs.gov.

We note that applicants for add-on payments for new medical services or technologies for FY 2021 must submit a formal request, including a full description of the clinical applications of the medical service or technology and the results of any clinical evaluations demonstrating that the new medical service or technology represents a substantial clinical improvement, along with a significant sample of data to demonstrate that the medical service or technology meets the high-cost threshold. Complete application information, along with final deadlines for submitting a full application, will be posted as it becomes available on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech.html>. To allow interested parties to identify the new medical services or technologies under review before the publication of the proposed rule for FY 2021, the CMS website also will post the tracking forms completed by each applicant. We note that the burden associated with this information collection requirement is the time and effort required to collect and submit the data in the formal request for add-on payments for new medical services and technologies to CMS. The aforementioned burden is subject to the PRA; it is currently approved under OMB control number 0938–1347, which expires on December 31, 2020.

2. Public Input Before Publication of a Notice of Proposed Rulemaking on Add-On Payments

Section 1886(d)(5)(K)(viii) of the Act, as amended by section 503(b)(2) of Public Law 108–173, provides for a mechanism for public input before publication of a notice of proposed rulemaking regarding whether a medical service or technology represents a substantial clinical improvement or advancement. The process for evaluating new medical service and technology applications requires the Secretary to—

- Provide, before publication of a proposed rule, for public input regarding whether a new service or technology represents an advance in medical technology that substantially improves the diagnosis or treatment of Medicare beneficiaries;
- Make public and periodically update a list of the services and technologies for which applications for add-on payments are pending;
- Accept comments, recommendations, and data from the public regarding whether a service or technology represents a substantial clinical improvement; and
- Provide, before publication of a proposed rule, for a meeting at which organizations representing hospitals, physicians, manufacturers, and any other interested party may present comments, recommendations, and data regarding whether a new medical service or technology represents a substantial clinical improvement to the clinical staff of CMS.

In order to provide an opportunity for public input regarding add-on payments for new medical services and technologies for FY 2020 prior to publication of this FY 2020 IPPS/LTCH PPS proposed rule, we published a notice in the **Federal Register** on October 5, 2018 (83 FR 50379), and held a town hall meeting at the CMS Headquarters Office in Baltimore, MD, on December 4, 2018. In the announcement notice for the meeting, we stated that the opinions and presentations provided during the meeting would assist us in our evaluations of applications by allowing public discussion of the substantial clinical improvement criterion for each of the FY 2020 new medical service and technology add-on payment applications before the publication of the FY 2020 IPPS/LTCH PPS proposed rule.

Approximately 100 individuals registered to attend the town hall meeting in person, while additional individuals listened over an open

telephone line. We also live-streamed the town hall meeting and posted the morning and afternoon sessions of the town hall on the CMS YouTube web page at: <https://www.youtube.com/watch?v=4z1AhEuGHqQ> and <https://www.youtube.com/watch?v=m26Xj1EzbiY>, respectively. We considered each applicant's presentation made at the town hall meeting, as well as written comments submitted on the applications that were received by the due date of December 14, 2018, in our evaluation of the new technology add-on payment applications for FY 2020 in this FY 2020 IPPS/LTCH PPS proposed rule.

In response to the published notice and the December 4, 2018 New Technology Town Hall meeting, we received written comments regarding the applications for FY 2020 new technology add-on payments. We note that we do not summarize comments that are unrelated to the "substantial clinical improvement" criterion. As explained earlier and in the **Federal Register** notice announcing the New Technology Town Hall meeting (83 FR 50379 through 50381), the purpose of the meeting was specifically to discuss the substantial clinical improvement criterion in regard to pending new technology add-on payment applications for FY 2020. Therefore, we are not summarizing those written comments in this proposed rule that are unrelated to the substantial clinical improvement criterion. In section II.H.5. of the preamble of this FY 2020 IPPS/LTCH PPS proposed rule, we are summarizing comments regarding individual applications, or, if applicable, indicating that there were no comments received in response to the New Technology Town Hall meeting notice, at the end of each discussion of the individual applications.

Comment: One commenter expressed appreciation for CMS' statements in the FY 2019 IPPS/LTCH PPS proposed rule (83 FR 20278 through 20279) relating to the similarity between data that satisfy the FDA's designations and data that satisfy the substantial clinical improvement criterion under the new technology add-on payment policy. The commenter stated that clarity was provided that will help future applicants understand which types of data can serve as the foundation for satisfying the substantial clinical improvement criterion. The commenter also expressed its appreciation that CMS further clarified that it accepts a wide range of data that would support the conclusion that the technology represents a substantial clinical improvement. The commenter

explained that it interpreted CMS' statements to mean that CMS appreciates and considers the patient's experience and point-of-view in its determination of a technology's substantial clinical improvement with respect to existing technologies, and stated that it hopes the agency will confirm this rationale in upcoming rulemaking.

Response: We appreciate the commenter's support of our clarifying statements in the FY 2019 IPPS/LTCH PPS proposed rule. Additionally, we refer the commenter to the September 7, 2001 final rule for a more detailed discussion of the substantial clinical improvement criterion (66 FR 46902). We also refer readers to section II.H.8. of the preamble of this proposed rule for a discussion of our proposed alternative inpatient new technology add-on payment pathway for transformative new devices, and sections II.H.6. and II.H.7. of the preamble of this proposed rule for a discussion of and request for comment on potential revisions to the new technology add-on payment substantial clinical improvement criterion.

Comment: Another commenter stated that the criteria for priority FDA review are very similar to the criteria to substantiate a technology's substantial clinical improvement under the new technology add-on payment policy and, therefore, devices used in the inpatient setting that are determined to be eligible for expedited review and approved by the FDA should automatically be considered as representing a substantial clinical improvement with respect to existing technologies, without further consideration by CMS.

Response: We refer readers to our response to this and similar comments in the FY 2019 IPPS/LTCH PPS proposed rule (83 FR 20278 through 20279).

Comment: One commenter stated that an entity submitting an application for new technology add-on payments should be entitled to administrative review of an adverse determination by an official of the Department of Health and Human Services other than an official of the CMS. The commenter believed that this will provide a safeguard both for the manufacturer submitting an application, as well as for beneficiaries who would benefit from access to the innovative technology that is the subject of the new technology add-on payment application. The commenter further recommended that administrative review of an adverse determination should not preclude resubmission of a modified application at a later point in the future.

Response: As discussed previously, the public has an opportunity at the New Technology Town Hall meeting to provide input regarding the substantial clinical improvement criterion for each new technology add-on payment application under review for the upcoming fiscal year. We summarize each application in the IPPS/LTCH PPS proposed rule, and consider the public comments received in response to the proposed rule in determining whether to approve an application for new technology add-on payments. Furthermore, we also accept additional supplemental information on all new technology add-on payment applications summarized in the proposed rule through the end of the comment period for the annual IPPS/LTCH PPS proposed rule. We conduct a thorough review of all applications and, as described above, allow a wide range of data that would support the conclusion of a representation of substantial clinical improvement. We also note that an applicant may always resubmit an application for new technology add-on payments for a subsequent year following a denial of an application submitted for a prior fiscal year.

3. ICD-10-PCS Section "X" Codes for Certain New Medical Services and Technologies

As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49434), the ICD-10-PCS includes a new section containing the new Section "X" codes, which began being used with discharges occurring on or after October 1, 2015. Decisions regarding changes to ICD-10-PCS Section "X" codes will be handled in the same manner as the decisions for all of the other ICD-10-PCS code changes. That is, proposals to create, delete, or revise Section "X" codes under the ICD-10-PCS structure will be referred to the ICD-10 Coordination and Maintenance Committee. In addition, several of the new medical services and technologies that have been, or may be, approved for new technology add-on payments may now, and in the future, be assigned a Section "X" code within the structure of the ICD-10-PCS. We posted ICD-10-PCS Guidelines on the CMS website at: <http://www.cms.gov/Medicare/Coding/ICD10/2016-ICD-10-PCS-and-GEMs.html>, including guidelines for ICD-10-PCS Section "X" codes. We encourage providers to view the material provided on ICD-10-PCS Section "X" codes.

4. Proposed FY 2020 Status of Technologies Approved for FY 2019 New Technology Add-On Payments

a. Defitelio® (Defibrotide)

Jazz Pharmaceuticals submitted an application for new technology add-on payments for FY 2017 for defibrotide (Defitelio®), a treatment for patients who have been diagnosed with hepatic veno-occlusive disease (VOD) with evidence of multi-organ dysfunction. VOD, also known as sinusoidal obstruction syndrome (SOS), is a potentially life-threatening complication of hematopoietic stem cell transplantation (HSCT), with an incidence rate of 8 percent to 15 percent. Diagnoses of VOD range in severity from what has been classically defined as a disease limited to the liver (mild) and reversible, to a severe syndrome associated with multi-organ dysfunction or failure and death. Patients who have received treatment involving HSCT who develop VOD with multi-organ failure face an immediate risk of death, with a mortality rate of more than 80 percent when only supportive care is used. The applicant asserted that Defitelio® improves the survival rate of patients who have been diagnosed with VOD with multi-organ failure by 23 percent.

Defitelio® received Orphan Drug Designation for the treatment of VOD in 2003 and for the prevention of VOD in 2007. It has been available to patients as an investigational drug through an Expanded Access Program since 2006. The applicant's New Drug Application (NDA) for Defitelio® received FDA approval on March 30, 2016. The applicant confirmed that Defitelio® was not available on the U.S. market as of the FDA NDA approval date of March 30, 2016. According to the applicant, commercial packaging could not be completed until the label for Defitelio® was finalized with FDA approval, and that commercial shipments of Defitelio® to hospitals and treatment centers began on April 4, 2016. Therefore, we agreed that, based on this information, the newness period for Defitelio® begins on April 4, 2016, the date of its first commercial availability.

The applicant received approval to use unique ICD-10-PCS procedure codes to describe the use of Defitelio®, with an effective date of October 1, 2016. The approved ICD-10-PCS procedure codes are: XW03392 (Introduction of defibrotide sodium anticoagulant into peripheral vein, percutaneous approach); and XW04392 (Introduction of defibrotide sodium anticoagulant into central vein, percutaneous approach). After

evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for Defitelio® and consideration of the public comments we received in response to the FY 2017 IPPS/LTCH PPS proposed rule, we approved Defitelio® for new technology add-on payments for FY 2017 (81 FR 56906). With the new technology add-on payment application, the applicant estimated that the average Medicare beneficiary would require a dosage of 25 mg/kg/day for a minimum of 21 days of treatment. The recommended dose is 6.25 mg/kg given as a 2-hour intravenous infusion every 6 hours. Dosing should be based on a patient's baseline body weight, which is assumed to be 70 kg for an average adult patient. All vials contain 200 mg at a cost of \$825 per vial. Therefore, we determined that cases involving the use of the Defitelio® technology would incur an average cost per case of \$151,800 (70 kg adult × 25 mg/kg/day × 21 days = 36,750 mg per patient/200 mg vial = 184 vials per patient × \$825 per vial = \$151,800). Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment amount for a case involving the use of Defitelio® is \$75,900 for FY 2019.

Our policy is that a medical service or technology may continue to be considered "new" for purposes of new technology add-on payments within 2 or 3 years after the point at which data begin to become available reflecting the inpatient hospital code assigned to the new service or technology. Our practice has been to begin and end new technology add-on payments on the basis of a fiscal year, and we have generally followed a guideline that uses a 6-month window before and after the start of the fiscal year to determine whether to extend the new technology add-on payment for an additional fiscal year. In general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the fiscal year (70 FR 47362).

With regard to the newness criterion for Defitelio®, we considered the beginning of the newness period to commence on the first day Defitelio® was commercially available (April 4, 2016). Because the 3-year anniversary date of the entry of the Defitelio® onto the U.S. market (April 4, 2019) will occur during FY 2019, we are proposing to discontinue new technology add-on

payments for this technology for FY 2020. We are inviting public comments on our proposal to discontinue new technology add-on payments for Defitelio® for FY 2020.

b. Ustekinumab (Stelara®)

Janssen Biotech submitted an application for new technology add-on payments for the Stelara® induction therapy for FY 2018. Stelara® received FDA approval on September 23, 2016 as an intravenous (IV) infusion treatment for adult patients who have been diagnosed with moderately to severely active Crohn's disease (CD) who have failed or were intolerant to treatment using immunomodulators or corticosteroids, but never failed a tumor necrosis factor (TNF) blocker, or failed or were intolerant to treatment using one or more TNF blockers. Stelara® IV is intended for induction—subcutaneous prefilled syringes are intended for maintenance dosing. Stelara® must be administered intravenously by a health care professional in either an inpatient hospital setting or an outpatient hospital setting.

Stelara® for IV infusion is packaged in single 130 mg vials. Induction therapy consists of a single IV infusion dose using the following weight-based dosing regimen: Patients weighing 55 kg or less than (<) 55 kg are administered 260 mg of Stelara® (2 vials); patients weighing more than (>) 55 kg, but 85 kg or less than (<) 85 kg are administered 390 mg of Stelara® (3 vials); and patients weighing more than (>) 85 kg are administered 520 mg of Stelara® (4 vials). An average dose of Stelara® administered through IV infusion is 390 mg (3 vials). Maintenance doses of Stelara® are administered at 90 mg, subcutaneously, at 8-week intervals and may occur in the outpatient hospital setting.

CD is an inflammatory bowel disease of unknown etiology, characterized by transmural inflammation of the gastrointestinal (GI) tract. Symptoms of CD may include fatigue, prolonged diarrhea with or without bleeding, abdominal pain, weight loss and fever. CD can affect any part of the GI tract including the mouth, esophagus, stomach, small intestine, and large intestine. Most commonly used pharmacologic treatments for CD include antibiotics, mesalamines, corticosteroids, immunomodulators, tumor necrosis alpha (TNFα) inhibitors, and anti-integrin agents. Surgery may be necessary for some patients who have been diagnosed with CD in which conventional therapies have failed. After evaluation of the newness, costs,

and substantial clinical improvement criteria for new technology add-on payments for Stelara® and consideration of the public comments we received in response to the FY 2018 IPPS/LTCH PPS proposed rule, we approved Stelara® for new technology add-on payments for FY 2018 (82 FR 38129). Cases involving Stelara® that are eligible for new technology add-on payments are identified by ICD-10-PCS procedure code XW033F3 (Introduction of other New Technology therapeutic substance into peripheral vein, percutaneous approach, new technology group 3). With the new technology add-on payment application, the applicant estimated that the average Medicare beneficiary would require a dosage of 390 mg (3 vials) at a hospital acquisition cost of \$1,600 per vial (for a total of \$4,800). Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment amount for a case involving the use of Stelara® is \$2,400 for FY 2019.

With regard to the newness criterion for Stelara®, we considered the beginning of the newness period to commence when Stelara® received FDA approval as an IV infusion treatment for Crohn's disease (CD) on September 23, 2016. Because the 3-year anniversary date of the entry of Stelara® onto the U.S. market (September 23, 2019) will occur during FY 2019, we are proposing to discontinue new technology add-on payments for this technology for FY 2020. We are inviting public comments on our proposal to discontinue new technology add-on payments for Stelara® for FY 2020.

c. Bezlotoxumab (ZINPLAVA™)

Merck & Co., Inc. submitted an application for new technology add-on payments for ZINPLAVA™ for FY 2018. ZINPLAVA™ is indicated as a treatment to reduce recurrence of *Clostridium difficile* infection (CDI) in adult patients who are receiving antibacterial drug treatment for a diagnosis of CDI and who are at high risk for CDI recurrence. ZINPLAVA™ is not indicated for the treatment of the presenting episode of CDI and is not an antibacterial drug. ZINPLAVA™ should only be used in conjunction with an antibacterial drug treatment for CDI.

Clostridium difficile (*C-diff*) is a disease-causing anaerobic, spore forming bacterium that affects the gastrointestinal (GI) tract. Some people carry the *C-diff* bacterium in their

intestines, but never develop symptoms of an infection. The difference between asymptomatic colonization and disease is caused primarily by the production of an enterotoxin (Toxin A) and/or a cytotoxin (Toxin B). The presence of either or both toxins can lead to symptomatic CDI, which is defined as the acute onset of diarrhea with a documented infection with toxigenic *C-diff*. The GI tract contains millions of bacteria, commonly referred to as "normal flora" or "good bacteria," which play a role in protecting the body from infection. Antibiotics can kill these good bacteria and allow *C-diff* to multiply and release toxins that damage the cells lining the intestinal wall, resulting in a CDI. CDI is a leading cause of hospital-associated gastrointestinal illnesses. Persons at increased risk for CDI include people who are currently on or who have recently been treated with antibiotics, people who have encountered current or recent hospitalization, people who are older than 65 years, immunocompromised patients, and people who have recently had a diagnosis of CDI. CDI symptoms include, but are not limited to, diarrhea, abdominal pain, and fever. CDI symptoms range in severity from mild (abdominal discomfort, loose stools) to severe (profuse, watery diarrhea, severe abdominal pain, and high fevers). Severe CDI can be life-threatening and, in rare cases, can cause bowel rupture, sepsis and organ failure. CDI is responsible for 14,000 deaths per year in the United States.

C-diff produces two virulent, pro-inflammatory toxins, Toxin A and Toxin B, which target host colonic endothelial cells by binding to endothelial cell surface receptors via combined repetitive oligopeptide (CROP) domains. These toxins cause the release of inflammatory cytokines leading to intestinal fluid secretion and intestinal inflammation. The applicant asserted that ZINPLAVA™ targets Toxin B sites within the CROP domain rather than the *C-diff* organism itself. According to the applicant, by targeting *C-diff* Toxin B, ZINPLAVA™ neutralizes Toxin B, prevents large intestine endothelial cell inflammation, symptoms associated with CDI, and reduces the recurrence of CDI. ZINPLAVA™ received FDA approval on October 21, 2016, as a treatment to reduce the recurrence of CDI in adult patients receiving antibacterial drug treatment for CDI and who are at high risk of CDI recurrence. As previously stated, ZINPLAVA™ is not indicated for the treatment of CDI. ZINPLAVA™ is not an antibacterial drug, and should only be used in

conjunction with an antibacterial drug treatment for CDI. ZINPLAVA™ became commercially available on February 10, 2017. Therefore, the newness period for ZINPLAVA™ began on February 10, 2017. The applicant submitted a request for a unique ICD-10-PCS procedure code and was granted approval for the following procedure codes: XW033A3 (Introduction of bezlotoxumab monoclonal antibody, into peripheral vein, percutaneous approach, new technology group 3) and XW043A3 (Introduction of bezlotoxumab monoclonal antibody, into central vein, percutaneous approach, new technology group 3).

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for ZINPLAVA™ and consideration of the public comments we received in response to the FY 2018 IPPS/LTCH PPS proposed rule, we approved ZINPLAVA™ for new technology add-on payments for FY 2018 (82 FR 38119). With the new technology add-on payment application, the applicant estimated that the average Medicare beneficiary would require a dosage of 10 mg/kg of ZINPLAVA™ administered as an IV infusion over 60 minutes as a single dose. According to the applicant, the WAC for one dose is \$3,800. Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment amount for a case involving the use of ZINPLAVA™ is \$1,900 for FY 2019.

With regard to the newness criterion for ZINPLAVA™, we considered the beginning of the newness period to commence on February 10, 2017. As discussed previously in this section, in general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the upcoming fiscal year. Because the 3-year anniversary date of the entry of ZINPLAVA™ onto the U.S. market (February 10, 2020) will occur in the first half of FY 2020, we are proposing to discontinue new technology add-on payments for this technology for FY 2020. We are inviting public comments on our proposal to discontinue new technology add-on payments for ZINPLAVA™ for FY 2020.

d. KYMRIA[®] (Tisagenlecleucel) and YESCARTA[®] (Axicabtagene Ciloleucel)

Two manufacturers, Novartis Pharmaceuticals Corporation and Kite Pharma, Inc., submitted separate applications for new technology add-on payments for FY 2019 for KYMRIA[®] (tisagenlecleucel) and YESCARTA[®] (axicabtagene ciloleucel), respectively. Both of these technologies are CD-19-directed T-cell immunotherapies used for the purposes of treating patients with aggressive variants of non-Hodgkin lymphoma (NHL).

On May 1, 2018, Novartis Pharmaceuticals Corporation received FDA approval for KYMRIA[®]'s second indication, the treatment of adult patients with relapsed or refractory (r/r) large B-cell lymphoma after two or more lines of systemic therapy including diffuse large B-cell lymphoma (DLBCL) not otherwise specified, high grade B-cell lymphoma and DLBCL arising from follicular lymphoma. On October 18, 2017, Kite Pharma, Inc. received FDA approval for the use of YESCARTA[®] indicated for the treatment of adult patients with r/r large B-cell lymphoma after two or more lines of systemic therapy, including DLBCL not otherwise specified, primary mediastinal large B-cell lymphoma, high grade B-cell lymphoma, and DLBCL arising from follicular lymphoma.

Procedures involving the KYMRIA[®] and YESCARTA[®] therapies are both reported using the following ICD-10-PCS procedure codes: XW033C3 (Introduction of engineered autologous chimeric antigen receptor t-cell immunotherapy into peripheral vein, percutaneous approach, new technology group 3); and XW043C3 (Introduction of engineered autologous chimeric antigen receptor t-cell immunotherapy into central vein, percutaneous approach, new technology group 3). In the FY 2019 IPPS/LTCH PPS final rule, we finalized our proposal to assign cases reporting these ICD-10-PCS procedure codes to Pre-MDC MS-DRG 016 for FY 2019 and to revise the title of this MS-DRG to Autologous Bone Marrow Transplant with CC/MCC or T-cell Immunotherapy. We refer readers to section II.F.2.d. of the preamble of the FY 2019 IPPS/LTCH PPS final rule for a complete discussion of these final policies (83 FR 41172 through 41174).

With respect to the newness criterion, according to both applicants, KYMRIA[®] and YESCARTA[®] are the first CAR T-cell immunotherapies of their kind. As discussed in the FY 2019 IPPS/LTCH PPS proposed and final rules, because potential cases representing patients who may be

eligible for treatment using KYMRIA[®] and YESCARTA[®] would group to the same MS-DRGs (because the same ICD-10-CM diagnosis codes and ICD-10-PCS procedure codes are used to report treatment using either KYMRIA[®] or YESCARTA[®]), and we believed that these technologies are intended to treat the same or similar disease in the same or similar patient population, and are purposed to achieve the same therapeutic outcome using the same or similar mechanism of action, we believed these two technologies are substantially similar to each other and that it was appropriate to evaluate both technologies as one application for new technology add-on payments under the IPPS. For these reasons, we stated that we intended to make one determination regarding approval for new technology add-on payments that would apply to both applications, and in accordance with our policy, would use the earliest market availability date submitted as the beginning of the newness period for both KYMRIA[®] and YESCARTA[®].

As summarized in the FY 2019 IPPS/LTCH PPS final rule, we received comments from the applicants for KYMRIA[®] and YESCARTA[®] regarding whether KYMRIA[®] and YESCARTA[®] were substantially similar to each other. The applicant for YESCARTA[®] stated that it believed each technology consists of notable differences in the construction, as well as manufacturing processes and successes that may lead to differences in activity. The applicant encouraged CMS to evaluate YESCARTA[®] as a separate new technology add-on payment application and approve separate new technology add-on payments for YESCARTA[®], effective October 1, 2018, and to not move forward with a single new technology add-on payment evaluation determination that covers both CAR T-cell therapies, YESCARTA[®] and KYMRIA[®]. The applicant for KYMRIA[®] indicated that, based on FDA's approval, it agreed with CMS that KYMRIA[®] is substantially similar to YESCARTA[®], as defined by the new technology add-on payment application evaluation criteria. We refer readers to the FY 2019 IPPS/LTCH PPS final rule for a more detailed summary of these and other public comments we received regarding substantial similarity for KYMRIA[®] and YESCARTA[®].

After consideration of the public comments we received and for the reasons discussed in the FY 2019 IPPS/LTCH PPS final rule, we stated that we believed that KYMRIA[®] and YESCARTA[®] are substantially similar to one another. We also noted that for FY 2019, there was no payment impact

regarding this determination of substantial similarity because the cost of the technologies is the same. However, we stated that we welcomed additional comments in future rulemaking regarding whether KYMRIA[®] and YESCARTA[®] are substantially similar and intended to revisit this issue in the FY 2020 IPPS/LTCH PPS proposed rule. For the reasons discussed in the FY 2019 IPPS/LTCH PPS final rule, we continue to believe that KYMRIA[®] and YESCARTA[®] are substantially similar to each other. We note that for FY 2020, the pricing for KYMRIA[®] and YESCARTA[®] remains the same and, therefore, for FY 2020, there would continue to be no payment impact regarding the determination that the two technologies are substantially similar to each other. Similar to last year, we welcome public comments regarding whether KYMRIA[®] and YESCARTA[®] are substantially similar to each other. We refer readers to the FY 2019 IPPS/LTCH PPS final rule for a complete discussion on newness and substantial similarity regarding KYMRIA[®] and YESCARTA[®].

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for KYMRIA[®] and YESCARTA[®] and consideration of the public comments we received in response to the FY 2019 IPPS/LTCH PPS proposed rule, we approved new technology add-on payments for KYMRIA[®] and YESCARTA[®] for FY 2019 (83 FR 41299). Cases involving KYMRIA[®] or YESCARTA[®] that are eligible for new technology add-on payments are identified by ICD-10-PCS procedure codes XW033C3 or XW043C3. The applicants for both KYMRIA[®] and YESCARTA[®] estimated that the average cost for an administered dose of KYMRIA[®] or YESCARTA[®] is \$373,000. Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, for FY 2019, the maximum new technology add-on payment for a case involving the use of KYMRIA[®] or YESCARTA[®] is \$186,500.

As stated above, our policy is that a medical service or technology may continue to be considered "new" for purposes of new technology add-on payments within 2 or 3 years after the point at which data begin to become available reflecting the inpatient hospital code assigned to the new service or technology. With regard to the newness criterion for KYMRIA[®] and YESCARTA[®], as discussed in the FY

2019 IPPS/LTCH PPS final rule, according to the applicant for YESCARTA®, the first commercial shipment of YESCARTA® was received by a certified treatment center on November 22, 2017. As stated above, we use the earliest market availability date submitted as the beginning of the newness period for both KYMRIA® and YESCARTA®. Therefore, we consider the beginning of the newness period for both KYMRIA® and YESCARTA® to commence November 22, 2017. Because the 3-year anniversary date of the entry of the technology onto the U.S. market (November 22, 2020) will occur after FY 2020, we are proposing to continue new technology add-on payments for KYMRIA® and YESCARTA® for FY 2020. Under the proposed change to the calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of this proposed rule, we are proposing that the maximum new technology add-on payment amount for a case involving the use of KYMRIA® and YESCARTA® would be increased to \$242,450 for FY 2020; that is, 65 percent of the average cost of the technology. However, if we do not finalize the proposed change to the calculation of the new technology add-on payment amount, we are proposing that the maximum new technology add-on payment for a case involving KYMRIA® or YESCARTA® would remain at \$186,500 for FY 2020. We are inviting public comments on our proposals to continue new technology add-on payments for KYMRIA® and YESCARTA® for FY 2020.

For the reasons discussed in section II.F.2.c. of this proposed rule, we are proposing not to modify the current MS-DRG assignment for cases reporting CAR T-cell therapies for FY 2020. Alternatively, we are seeking public comments on payment alternatives for CAR T-cell therapies. We also are inviting public comments on how these payment alternatives would affect access to care, as well as how they affect incentives to encourage lower drug prices, which is a high priority for this Administration. As discussed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41172 through 41174), we are considering approaches and authorities to encourage value-based care and lower drug prices. We are soliciting public comments on how the effective dates of any potential payment methodology alternatives, if any were to be adopted, may intersect and affect future participation in any such alternative approaches. Such payment alternatives could include adjusting the CCRs used

to calculate new technology add-on payments for cases involving the use of KYMRIA® and YESCARTA®. We note that we also considered this payment alternative for FY 2019, as discussed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41172 through 41174), and are revisiting this approach given the additional experience with CAR T-cell therapy being provided in hospitals paid under the IPPS and in IPPS-excluded cancer hospitals. We also are requesting public comments on other payment alternatives for these cases, including eliminating the use of CCRs in calculating the new technology add-on payments for cases involving the use of KYMRIA® and YESCARTA® by making a uniform add-on payment that equals the proposed maximum add-on payment, that is, 65 percent of the cost of the technology (in accordance with the proposed increase in the calculation of the maximum new technology add-on payment amount), which in this instance would be \$242,450; and/or using a higher percentage than the proposed 65 percent to calculate the maximum new technology add-on payment amount. If we were to finalize any such changes to the new technology add-on payment for cases involving the use of KYMRIA® and YESCARTA®, we would also revise our proposed amendments to § 412.88 accordingly.

e. VYXEOS™ (Cytarabine and Daunorubicin Liposome for Injection)

Jazz Pharmaceuticals, Inc. submitted an application for new technology add-on payments for the VYXEOS™ technology for FY 2019. VYXEOS™ was approved by FDA on August 3, 2017, for the treatment of adults with newly diagnosed therapy-related acute myeloid leukemia (t-AML) or AML with myelodysplasia-related changes (AML-MRC).

Treatment of AML diagnoses usually consists of two phases; remission induction and post-remission therapy. Phase one, remission induction, is aimed at eliminating as many myeloblasts as possible. The most common used remission induction regimens for AML diagnoses are the “7+3” regimens using an antineoplastic and an anthracycline. Cytarabine and daunorubicin are two commonly used drugs for “7+3” remission induction therapy. Cytarabine is continuously administered intravenously over the course of 7 days, while daunorubicin is intermittently administered intravenously for the first 3 days. The “7+3” regimen typically achieves a 70 to 80 percent complete remission (CR) rate in most patients under 60 years of age.

VYXEOS™ is a nano-scale liposomal formulation containing a fixed combination of cytarabine and daunorubicin in a 5:1 molar ratio. This formulation was developed by the applicant using a proprietary system known as CombiPlex. According to the applicant, CombiPlex addresses several fundamental shortcomings of conventional combination regimens, specifically the conventional “7+3” free drug dosing, as well as the challenges inherent in combination drug development, by identifying the most effective synergistic molar ratio of the drugs being combined in vitro, and fixing this ratio in a nano-scale drug delivery complex to maintain the optimized combination after administration and ensuring exposure of this ratio to the tumor.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for VYXEOS™ and consideration of the public comments we received in response to the FY 2019 IPPS/LTCH PPS proposed rule, we approved VYXEOS™ for new technology add-on payments for FY 2019 (83 FR 41304). Cases involving VYXEOS™ that are eligible for new technology add-on payments are identified by ICD-10-PCS procedure codes XW033B3 (Introduction of cytarabine and caunorubicin liposome antineoplastic into peripheral vein, percutaneous approach, new technology group 3) or XW043B3 (Introduction of cytarabine and daunorubicin liposome antineoplastic into central vein, percutaneous approach, new technology group 3). In its application, the applicant estimated that the average cost of a single vial for VYXEOS™ is \$7,750 (daunorubicin 44 mg/m² and cytarabine 100 mg/m²). As discussed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41305), we computed a maximum average of 9.4 vials used in the inpatient hospital setting with the maximum average cost for VYXEOS™ used in the inpatient hospital setting equaling \$72,850 (\$7,750 cost per vial * 9.4 vials). Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of VYXEOS™ is \$36,425 for FY 2019.

With regard to the newness criterion for VYXEOS™, we consider the beginning of the newness period to commence when VYXEOS™ was approved by the FDA (August 3, 2017). As discussed previously in this section,

in general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the upcoming fiscal year. Because the 3-year anniversary date of the entry of the VYXEOSTM onto the U.S. market (August 3, 2020) will occur in the second half of FY 2020, we are proposing to continue new technology add-on payments for this technology for FY 2020. Under the proposed change to the calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of this proposed rule, we are proposing that the maximum new technology add-on payment amount for a case involving the use of VYXEOSTM would be \$47,353.50 for FY 2020; that is, 65 percent of the average cost of the technology. However, if we do not finalize the proposed change to the calculation of the new technology add-on payment amount, we are proposing that the maximum new technology add-on payment for a case involving VYXEOSTM would remain at \$36,425 for FY 2020. We are inviting public comments on our proposals to continue new technology add-on payments for VYXEOSTM for FY 2020.

f. VABOMERETM (Meropenem-Vaborbactam)

Melinta Therapeutics, Inc., submitted an application for new technology add-on payments for VABOMERETM for FY 2019. VABOMERETM is indicated for use in the treatment of adult patients who have been diagnosed with complicated urinary tract infections (cUTIs), including pyelonephritis, caused by designated susceptible bacteria. VABOMERETM received FDA approval on August 29, 2017.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for VABOMERETM and consideration of the public comments we received in response to the FY 2019 IPPS/LTCH PPS proposed rule, we approved VABOMERETM for new technology add-on payments for FY 2019 (83 FR 41311). We noted in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41311) that the applicant did not request approval for the use of a unique ICD-10-PCS procedure code for VABOMERETM for FY 2019 and that as a result, hospitals would be unable to uniquely identify the use of VABOMERETM on an inpatient claim using the typical coding of an ICD-10-PCS procedure code. We noted that in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53352), with regard to the oral

drug DIFICIDTM, we revised our policy to allow for the use of an alternative code set to identify oral medications where no inpatient procedure is associated for the purposes of new technology add-on payments. We established the use of a NDC as the alternative code set for this purpose and described our rationale for this particular code set. This change was effective for payments for discharges occurring on or after October 1, 2012. In the FY 2019 IPPS/LTCH PPS final rule, we acknowledged that VABOMERETM is not an oral drug and is administered by IV infusion, but it was the first approved new technology aside from an oral drug with no uniquely assigned inpatient procedure code. Therefore, we believed that the circumstances with respect to the identification of eligible cases using VABOMERETM are similar to those addressed in the FY 2013 IPPS/LTCH PPS final rule with regard to DIFICIDTM because we did not have current ICD-10-PCS code(s) to uniquely identify the use of VABOMERETM to make the new technology add-on payment. We stated that because we have determined that VABOMERETM has met all of the new technology add-on payment criteria and cases involving the use of VABOMERETM would be eligible for such payments for FY 2019, we needed to use an alternative coding method to identify these cases and make the new technology add-on payment for use of VABOMERETM in FY 2019. Therefore, for the reasons discussed in the FY 2019 IPPS/LTCH PPS final rule and similar to the policy in the FY 2013 IPPS/LTCH PPS final rule, cases involving VABOMERETM that are eligible for new technology add-on payments for FY 2019 are identified by National Drug Codes (NDC) 65293-0009-01 or 70842-0120-01 (VABOMERETM Meropenem-Vaborbactam Vial).

According to the applicant, the cost of VABOMERETM is \$165 per vial. A patient receives two vials per dose and three doses per day. Therefore, the per-day cost of VABOMERETM is \$990 per patient. The duration of therapy, consistent with the Prescribing Information, is up to 14 days. Therefore, the estimated cost of VABOMERETM to the hospital, per patient, is \$13,860. We stated in the FY 2019 IPPS/LTCH PPS final rule that based on the limited data from the product's launch, approximately 80 percent of VABOMERETM's usage would be in the inpatient hospital setting, and approximately 20 percent of VABOMERETM's usage may take place outside of the inpatient hospital setting. Therefore, the average number of days

of VABOMERETM administration in the inpatient hospital setting is estimated at 80 percent of 14 days, or approximately 11.2 days. As a result, the total inpatient cost for VABOMERETM is \$11,088 (\$990 * 11.2 days). Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of VABOMERETM is \$5,544 for FY 2019.

With regard to the newness criterion for VABOMERETM, we consider the beginning of the newness period to commence when VABOMERETM received FDA approval (August 29, 2017). As discussed previously in this section, in general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the upcoming fiscal year. Because the 3-year anniversary date of the entry of VABOMERETM onto the U.S. market (August 29, 2020) will occur during the second half of FY 2020, we are proposing to continue new technology add-on payments for this technology for FY 2020. Under the proposed change to the calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of this proposed rule, we are proposing that the maximum new technology add-on payment amount for a case involving the use of VABOMERETM would be \$7,207.20 for FY 2020; that is, 65 percent of the average cost of the technology. However, if we do not finalize the proposed change to the calculation of the new technology add-on payment amount, we are proposing that the maximum new technology add-on payment for a case involving VABOMERETM would remain at \$5,544 for FY 2020.

As noted above, because there was no ICD-10-PCS code(s) to uniquely identify the use of VABOMERETM, we indicated in the FY 2019 IPPS/LTCH PPS final rule that FY 2019 cases involving the use of VABOMERETM that are eligible for the FY 2019 new technology add-on payments would be identified using an NDC code. Subsequent to the issuance of that final rule, new ICD-10-PCS codes XW033N5 (Introduction of Meropenem-vaborbactam Anti-infective into Peripheral Vein, Percutaneous Approach, New Technology Group 5) and XW043N5 (Introduction of Meropenem-vaborbactam Anti-infective

into Central Vein, Percutaneous Approach, New Technology Group 5) were finalized to identify cases involving the use of VABOMERE™, effective October 1, 2019, as shown in Table 6B—New Procedure Codes, associated with this proposed rule and available via the internet on the CMS website at: <http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>. Therefore, for FY 2020, we will use these two ICD-10-PCS codes (XW033N5 and XW043N5) to identify cases involving the use of VABOMERE™ that are eligible for the new technology add-on payments.

While these newly approved ICD-10-PCS procedure codes can be used to uniquely identify cases involving the use of VABOMERE™ for FY 2020, we are concerned that limiting new technology add-on payments only to cases reporting these new ICD-10-PCS codes for FY 2020 could cause confusion because it is possible that some providers may inadvertently continue to bill some claims with the NDC codes rather than the new ICD-10-PCS codes. Therefore, for FY 2020, we are proposing that in addition to using the new ICD-10-PCS codes to identify cases involving the use of VABOMERE™, we would also continue to use the NDC codes to identify cases and make the new technology add-on payments. As a result, we are proposing that cases involving the use of VABOMERE™ that are eligible for new technology add-on payments for FY 2020 would be identified by ICD-10-PCS codes XW033N5 or XW043N5 or NDCs 65293-0009-01 or 70842-0120-01.

We are inviting public comments on our proposal to continue new technology add-on payments for VABOMERE™ for FY 2020 and our proposals for identifying and making new technology add-on payments for cases involving the use of VABOMERE™.

g. remedē® System

Respicardia, Inc. submitted an application for new technology add-on payments for the remedē® System for FY 2019. According to the applicant, the remedē® System is indicated for use as a transvenous phrenic nerve stimulator in the treatment of adult patients who have been diagnosed with moderate to severe central sleep apnea. The remedē® System consists of an implantable pulse generator, and a stimulation and sensing lead. The pulse generator is placed under the skin, in either the right or left side of the chest, and it functions to monitor the patient's respiratory signals.

A transvenous lead for unilateral stimulation of the phrenic nerve is placed either in the left pericardiophrenic vein or the right brachiocephalic vein, and a second lead to sense respiration is placed in the azygos vein. Both leads, in combination with the pulse generator, function to sense respiration and, when appropriate, generate an electrical stimulation to the left or right phrenic nerve to restore regular breathing patterns. On October 6, 2017, the remedē® System was approved by the FDA as an implantable phrenic nerve stimulator indicated for the use in the treatment of adult patients who have been diagnosed with moderate to severe CSA. The device was available commercially upon FDA approval. Therefore, the newness period for the remedē® System is considered to begin on October 6, 2017.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for the remedē® System and consideration of the public comments we received in response to the FY 2019 IPPS/LTCH PPS proposed rule, we approved the remedē® System for new technology add-on payments for FY 2019. Cases involving the use of the remedē® System that are eligible for new technology add-on payments are identified by ICD-10-PCS procedures codes 0JH60DZ and 05H33MZ in combination with procedure code 05H03MZ (Insertion of neurostimulator lead into right innominate vein, percutaneous approach) or 05H43MZ (Insertion of neurostimulator lead into left innominate vein, percutaneous approach). According to the application, the cost of the remedē® System is \$34,500 per patient. Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of the remedē® System is \$17,250 for FY 2019 (83 FR 41320).

With regard to the newness criterion for the remedē® System, we consider the beginning of the newness period to commence when the remedē® System was approved by the FDA on October 6, 2017. Because the 3-year anniversary date of the entry of the remedē® System onto the U.S. market (October 6, 2020) will occur after FY 2020, we are proposing to continue new technology add-on payments for this technology for FY 2020. Under the proposed change to the calculation of the new technology

add-on payment amount discussed in section II.H.9. of the preamble of this proposed rule, we are proposing that the maximum new technology add-on payment amount for a case involving the use of the remedē® System would be \$22,425 for FY 2020; that is, 65 percent of the average cost of the technology. However, if we do not finalize the proposed change to the calculation of the new technology add-on payment amount, we are proposing that the maximum new technology add-on payment for a case involving the remedē® System would remain at \$17,250 for FY 2020. We are inviting public comments on our proposals to continue new technology add-on payments for the remedē® System for FY 2020.

h. ZEMDRI™ (Plazomicin)

Achaogen, Inc. submitted an application for new technology add-on payments for ZEMDRI™ (Plazomicin) for FY 2019. According to the applicant, ZEMDRI™ (Plazomicin) is a next-generation aminoglycoside antibiotic, which has been found in vitro to have enhanced activity against many multi-drug resistant (MDR) gram-negative bacteria. The applicant received approval from the FDA on June 25, 2018, for use in the treatment of adults who have been diagnosed with cUTIs, including pyelonephritis. After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for ZEMDRI™ and consideration of the public comments we received in response to the FY 2019 IPPS/LTCH PPS proposed rule, we approved ZEMDRI™ for new technology add-on payments for FY 2019 (83 FR 41334). Cases involving ZEMDRI™ that are eligible for new technology add-on payments are identified by ICD-10-PCS procedure codes XW033G4 (Introduction of Plazomicin anti-infective into peripheral vein, percutaneous approach, new technology group 4) or XW043G4 (Introduction of Plazomicin anti-infective into central vein, percutaneous approach, new technology group 4). In its application, the applicant estimated that the average Medicare beneficiary would require a dosage of 15 mg/kg administered as an IV infusion as a single dose. According to the applicant, the WAC for one dose is \$330, and patients will typically require 3 vials for the course of treatment with ZEMDRI™ per day for an average duration of 5.5 days. Therefore, the total cost of ZEMDRI™ per patient is \$5,445. Under existing § 412.88(a)(2), we limit new technology add-on payments to the

lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of ZEMDRI™ is \$2,722.50 for FY 2019. With regard to the newness criterion for ZEMDRI™, we consider the beginning of the newness period to commence when ZEMDRI™ was approved by the FDA on June 25, 2018. Because the 3-year anniversary date of the entry of ZEMDRI™ onto the U.S. market (June 25, 2021) will occur after FY 2020, we are proposing to continue new technology add-on payments for this technology for FY 2020. Under the proposed change to the calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of this proposed rule, we are proposing that the maximum new technology add-on payment amount for a case involving the use of ZEMDRI™ would be \$3,539.25 for FY 2020; that is, 65 percent of the average cost of the technology. However, if we do not finalize the proposed change to the calculation of the new technology add-on payment amount, we are proposing that the maximum new technology add-on payment for a case involving ZEMDRI™ would remain at \$2,722.50 for FY 2020. We are inviting public comments on our proposals to continue new technology add-on payments for ZEMDRI™ for FY 2020.

i. GIAPREZA™

The La Jolla Pharmaceutical Company submitted an application for new technology add-on payments for GIAPREZA™ for FY 2019. GIAPREZA™, a synthetic human angiotensin II, is administered through intravenous infusion to raise blood pressure in adult patients who have been diagnosed with septic or other distributive shock.

GIAPREZA™ was granted a Priority Review designation under FDA's expedited program and received FDA approval on December 21, 2017, for the use in the treatment of adults who have been diagnosed with septic or other distributive shock as an intravenous infusion to increase blood pressure. After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for GIAPREZA™ and consideration of the public comments we received in response to the FY 2019 IPPS/LTCH PPS proposed rule, we approved GIAPREZA™ for new technology add-on payments for FY 2019 (83 FR 41342). Cases involving GIAPREZA™ that are eligible for new

technology add-on payments are identified by ICD-10-PCS procedure codes XW033H4 (Introduction of synthetic human angiotensin II into peripheral vein, percutaneous approach, new technology, group 4) or XW043H4 (Introduction of synthetic human angiotensin II into central vein, percutaneous approach, new technology group 4). In its application, the applicant estimated that the average Medicare beneficiary would require a dosage of 20 ng/kg/min administered as an IV infusion over 48 hours, which would require 2 vials. The applicant explained that the WAC for one vial is \$1,500, with each episode-of-care costing \$3,000 per patient. Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of GIAPREZA™ is \$1,500 for FY 2019.

With regard to the newness criterion for GIAPREZA™, we consider the beginning of the newness period to commence when GIAPREZA™ was approved by the FDA (December 21, 2017). Because the 3-year anniversary date of the entry of GIAPREZA™ onto the U.S. market (December 21, 2020) would occur after FY 2020, we are proposing to continue new technology add-on payments for this technology for FY 2020. Under the proposed change to the calculation of the new technology add-on payment discussed in section II.H.9. of the preamble of this proposed rule, we are proposing that the maximum new technology add-on payment amount for a case involving the use of GIAPREZA™ would be \$1,950 for FY 2020; that is, 65 percent of the average cost of the technology. However, if we do not finalize the proposed change to the calculation of the new technology add-on payment amount, we are proposing that the maximum new technology add-on payment for a case involving GIAPREZA™ would remain at \$1,500 for FY 2020. We are inviting public comments on our proposals to continue new technology add-on payments for GIAPREZA™ for FY 2020.

j. Cerebral Protection System (Sentinel® Cerebral Protection System)

Claret Medical, Inc. submitted an application for new technology add-on payments for the Cerebral Protection System (Sentinel® Cerebral Protection System) for FY 2019. According to the applicant, the Sentinel Cerebral Protection System is indicated for the

use as an embolic protection (EP) device to capture and remove thrombus and debris while performing transcatheter aortic valve replacement (TAVR) procedures. The device is percutaneously delivered via the right radial artery and is removed upon completion of the TAVR procedure. The De Novo request for the Sentinel® Cerebral Protection System was granted by FDA on June 1, 2017 (DEN160043).

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for the Sentinel® Cerebral Protection System and consideration of the public comments we received in response to the FY 2019 IPPS/LTCH PPS proposed rule, we approved the Sentinel® Cerebral Protection System for new technology add-on payments for FY 2019 (83 FR 41348). Cases involving the Sentinel® Cerebral Protection System that are eligible for new technology add-on payments are identified by ICD-10-PCS code X2A5312 (Cerebral embolic filtration, dual filter in innominate artery and left common carotid artery, percutaneous approach). In its application, the applicant estimated that the cost of the Sentinel® Cerebral Protection System is \$2,800. Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of the Sentinel® Cerebral Protection System is \$1,400 for FY 2019.

With regard to the newness criterion for the Sentinel® Cerebral Protection System, we consider the beginning of the newness period to commence when the FDA granted the De Novo request for the Sentinel® Cerebral Protection System (June 1, 2017). As discussed previously in this section, in general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the upcoming fiscal year. Because the 3-year anniversary date of the entry of the Sentinel® Cerebral Protection System onto the U.S. market (June 1, 2020) will occur in the second half of FY 2020, we are proposing to continue new technology add-on payments for this technology for FY 2020. Under the proposed change to the calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of this proposed rule, we are proposing that the maximum new technology add-on payment amount for

a case involving the use of the Sentinel® Cerebral Protection System would be \$1,820 for FY 2020; that is, 65 percent of the average cost of the technology. However, if we do not finalize the proposed change to the calculation of the new technology add-on payment amount, we are proposing that the maximum new technology add-on payment for a case involving the Sentinel® Cerebral Protection System would remain at \$1,400 for FY 2020. We are inviting public comments on our proposals to continue new technology add-on payments for the Sentinel® Cerebral Protection System for FY 2020.

k. The AQUABEAM System (Aquablation)

PROCEPT BioRobotics Corporation submitted an application for new technology add-on payments for the AQUABEAM System (Aquablation) for FY 2019. According to the applicant, the AQUABEAM System is indicated for the use in the treatment of patients experiencing lower urinary tract symptoms caused by a diagnosis of benign prostatic hyperplasia (BPH). The AQUABEAM System consists of three main components: A console with two high-pressure pumps, a conformal surgical planning unit with trans-rectal ultrasound imaging, and a single-use robotic hand-piece. The applicant reported that the AQUABEAM System provides the operating surgeon a multi-dimensional view, using both ultrasound image guidance and endoscopic visualization, to clearly identify the prostatic adenoma and plan the surgical resection area. Based on the planning inputs from the surgeon, the system's robot delivers Aquablation, an autonomous waterjet ablation therapy that enables targeted, controlled, heat-free and immediate removal of prostate tissue used for the purpose of treating lower urinary tract symptoms caused by a diagnosis of BPH. The combination of surgical mapping and robotically-controlled resection of the prostate is designed to offer predictable and reproducible outcomes, independent of prostate size, prostate shape or surgeon experience.

The FDA granted the AQUABEAM System's De Novo request on December 21, 2017, for use in the resection and removal of prostate tissue in males suffering from lower urinary tract symptoms (LUTS) due to benign prostatic hyperplasia. The applicant stated that the AQUABEAM System was made available on the U.S. market immediately after the FDA granted the De Novo request.

After evaluation of the newness, costs, and substantial clinical improvement

criteria for new technology add-on payments for the AQUABEAM System and consideration of the public comments we received in response to the FY 2019 IPPS/LTCH PPS proposed rule, we approved the AQUABEAM System for new technology add-on payments for FY 2019 (83 FR 41355). Cases involving the AQUABEAM System that are eligible for new technology add-on payments are identified by ICD-10-PCS code XV508A4 (Destruction of prostate using robotic waterjet ablation, via natural or artificial opening endoscopic, new technology group 4). The applicant estimated that the average Medicare beneficiary would require the transurethral procedure of one AQUABEAM System per patient. According to the application, the cost of the AQUABEAM System is \$2,500 per procedure. Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of the AQUABEAM System's Aquablation System is \$1,250 for FY 2019.

With regard to the newness criterion for the AQUABEAM System, we consider the beginning of the newness period to commence on the date the FDA granted the De Novo request (December 21, 2017). As noted above and in the FY 2019 rulemaking, the applicant stated that the AQUABEAM System was made available on the U.S. market immediately after the FDA granted the De Novo request.

We note that in the FY 2019 IPPS/LTCH PPS final rule, we inadvertently misstated the newness period beginning date as April 19, 2018 (83 FR 41351). As discussed in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41350), in its public comment in response to the FY 2019 IPPS/LTCH PPS proposed rule, the applicant explained that, while the AQUABEAM System received approval from the FDA for its De Novo request on December 21, 2017, local non-coverage determinations in the Medicare population resulted in the first case being delayed until April 19, 2018. Therefore, the applicant believed that the newness period should begin on April 19, 2018, instead of the date FDA granted the De Novo request. In the final rule, we responded that with regard to the beginning of the technology's newness period, as discussed in the FY 2005 IPPS final rule (69 FR 49003), the timeframe that a new technology can be eligible to receive new technology add-

on payments begins when data begin to become available. While local non-coverage determinations may limit the use of a technology in different regions in the country, a technology may be available in regions where no local non-coverage decision existed (with data beginning to become available). We also explained that under our historical policy we do not consider how frequently the medical service or technology has been used in the Medicare population in our determination of newness (as discussed in the FY 2006 IPPS final rule (70 FR 47349)). Consistent with this response, and as indicated in the proposed rule and elsewhere in the final rule, we believe the beginning of the newness period to commence on the first day the AQUABEAM System was commercially available (December 21, 2017). As noted, the later statement that the newness period beginning date for the AQUABEAM System is April 19, 2018 was an inadvertent error. As we indicated in the FY 2019 IPPS/LTCH PPS final rule, we welcome further information from the applicant for consideration regarding the beginning of the newness period.

Because the 3-year anniversary date of the entry of the AQUABEAM System onto the U.S. market (December 21, 2020) will occur after FY 2020, we are proposing to continue new technology add-on payments for this technology for FY 2020. Under the proposed change to the calculation of the new technology add on payment amount discussed in section II.H.9. of the preamble of this proposed rule, we are proposing that the maximum new technology add-on payment amount for a case involving the use of the AQUABEAM System would be \$1,625 for FY 2020; that is, 65 percent of the average cost of the technology. However, if we do not finalize the proposed change to the calculation of the new technology add-on payment amount, we are proposing that the maximum new technology add-on payment for a case involving the AQUABEAM System would remain at \$1,250 for FY 2020. We are inviting public comments on our proposals to continue new technology add-on payments for the AQUABEAM System for FY 2020.

l. AndexXa™ (Andexanet alfa)

Portola Pharmaceuticals, Inc. (Portola) submitted an application for new technology add-on payments for FY 2019 for the use of AndexXa™ (Andexanet alfa).

AndexXa™ received FDA approval on May 3, 2018, and is indicated for use in the treatment of patients who are

receiving treatment with rivaroxaban and apixaban, when reversal of anticoagulation is needed due to life-threatening or uncontrolled bleeding.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for AndexXa™ and consideration of the public comments we received in response to the FY 2019 IPPS/LTCH PPS proposed rule, we approved AndexXa™ for new technology add-on payments for FY 2019 (83 FR 41362). Cases involving the use of AndexXa™ that are eligible for new technology add-on payments are identified by ICD-10-PCS procedure codes XW03372 (Introduction of Andexanet alfa, Factor Xa inhibitor reversal agent into peripheral vein, percutaneous approach, new technology group 2) or XW04372 (Introduction of Andexanet alfa, Factor Xa inhibitor reversal agent into central vein, percutaneous approach, new technology group 2). The applicant explained that the WAC for 1 vial is \$2,750, with the use of an average of 10 vials for the low dose and 18 vials for the high dose. The applicant noted that per the clinical trial data, 90 percent of cases were administered a low dose and 10 percent of cases were administered the high dose. The weighted average between the low and high dose is an average of 10.22727 vials. Therefore, the cost of a standard dosage of AndexXa™ is \$28,125 (\$2,750 x 10.22727). Under existing § 412.88(a)(2), we limit new technology add-on payments to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of AndexXa™ is \$14,062.50 for FY 2019.

With regard to the newness criterion for AndexXa™, we consider the beginning of the newness period to commence when AndexXa™ received FDA approval (May 3, 2018). Because the 3-year anniversary date of the entry of AndexXa™ onto the U.S. market (May 3, 2021) will occur after FY 2020, we are proposing to continue new technology add-on payments for this technology for FY 2020. Under the proposed change to the calculation of the new technology add-on payment amount discussed in section II.H.9. of the preamble of this proposed rule, we are proposing that the maximum new technology add-on payment amount for a case involving the use of AndexXa™ would be \$18,281.25 for FY 2020; that is, 65 percent of the average cost of the technology. However, if we do not finalize the proposed change to the

calculation of the new technology add-on payment amount, we are proposing that the maximum new technology add-on payment for a case involving AndexXa™ would remain at \$14,062.50 for FY 2020. We are inviting public comments on our proposals to continue new technology add-on payments for AndexXa™ for FY 2020.

5. Proposed FY 2020 Applications for New Technology Add-On Payments

We received 18 applications for new technology add-on payments for FY 2020. In accordance with the regulations under § 412.87(c), applicants for new technology add-on payments must have FDA approval or clearance by July 1 of the year prior to the beginning of the fiscal year for which the application is being considered. One applicant withdrew its application prior to the issuance of this proposed rule. A discussion of the 17 remaining applications is presented below.

a. AZEDRA® (Ultratrace® iobenguane Iodine-131) Solution

Progenics Pharmaceuticals, Inc. submitted an application for new technology add-on payments for AZEDRA® (Ultratrace® iobenguane Iodine-131) for FY 2020. (We note that Progenics Pharmaceuticals, Inc. previously submitted an application for new technology add-on payments for AZEDRA® for FY 2019, which was withdrawn prior to the issuance of the FY 2019 IPPS/LTCH PPS final rule.) AZEDRA® is a drug solution formulated for intravenous (IV) use in the treatment of patients who have been diagnosed with iobenguane avid malignant and/or recurrent and/or unresectable pheochromocytoma and paraganglioma. AZEDRA® contains a small molecule ligand consisting of meta-iodobenzylguanidine (MIBG) and ¹³¹Iodine (¹³¹I) (hereafter referred to as “¹³¹I-MIBG”). The applicant noted that iobenguane Iodine-131 is also known as ¹³¹I-MIBG.

The applicant reported that pheochromocytomas and paragangliomas are rare tumors with an incidence of approximately 2 to 8 people per million per year.^{1,2} Both tumors are catecholamine-secreting neuroendocrine tumors, with pheochromocytomas being the more common of the two and comprising 80

to 85 percent of cases. While 10 percent of pheochromocytomas are malignant, whereby “malignant” is defined by the World Health Organization (WHO) as “the presence of distant metastases,” paragangliomas have a malignancy frequency of 25 percent.^{3,4} Approximately one-half of malignant tumors are pronounced at diagnosis, while other malignant tumors develop slowly within 5 years.⁵ Pheochromocytomas and paragangliomas tend to be indistinguishable at the cellular level and frequently at the clinical level. For example catecholamine-secreting paragangliomas often present clinically like pheochromocytomas with hypertension, episodic headache, sweating, tremor, and forceful palpitations.⁶ Although pheochromocytomas and paragangliomas can share overlapping histopathology, epidemiology, and molecular pathobiology characteristics, there are differences between these two neuroendocrine tumors in clinical behavior, aggressiveness and metastatic potential, biochemical findings and association with inherited genetic syndrome differences, highlighting the importance of distinguishing between the presence of malignant pheochromocytoma and the presence of malignant paraganglioma. At this time, there is no curative treatment for malignant pheochromocytomas and paragangliomas. Successful management of these malignancies requires a multidisciplinary approach of decreasing tumor burden, controlling endocrine activity, and treating debilitating symptoms. According to the applicant, decreasing metastatic tumor burden would address the leading cause of mortality in this patient population, where the 5-year survival rate is 50 percent for patients with untreated malignant pheochromocytomas and paragangliomas.⁷ The applicant stated that controlling catecholamine

hypersecretion (for example, severe paroxysmal or sustained hypertension, palpitations and arrhythmias) would also mean decreasing morbidity associated with hypertension (for example, risk of stroke, myocardial infarction and renal failure), and begin to address the 30-percent cardiovascular mortality rate associated with malignant pheochromocytomas and paragangliomas.

The applicant reported that, prior to the introduction of AZEDRA®, controlling catecholamine activity in pheochromocytomas and paragangliomas was medically achieved with administration of combined alpha and beta-adrenergic blockade, and surgically with tumor tissue reduction. Because there is no curative treatment for malignant pheochromocytomas and paragangliomas, resecting both primary and metastatic lesions whenever possible to decrease tumor burden⁸ provides a methodology for controlling catecholamine activity and lowering cardiovascular mortality risk. Besides surgical removal of tumor tissue for lowering tumor burden, there are other treatment options that depend upon tumor type (that is, pheochromocytoma tumors versus paraganglioma tumors), anatomic location, and the number and size of the metastatic tumors. These treatment options include: (1) Radiation therapy; (2) nonsurgical local ablative therapy with radiofrequency ablation, cryoablation, and percutaneous ethanol injection; (3) transarterial chemoembolization for liver metastases; and (4) radionuclide therapy using metaiodobenzylguanidine (MIBG) or somatostatin. Regardless of the method to reduce local tumor burden, perioperative medical care is needed to prevent massive catecholamine secretion and hypertensive crisis.⁹

The applicant stated that AZEDRA® specifically targets neuroendocrine tumors arising from chromaffin cells of the adrenal medulla (in the case of pheochromocytomas) and from neuroendocrine cells of the extra-adrenal autonomic paraganglia (in the case of paragangliomas).¹⁰ According to the applicant, AZEDRA® is a more consistent form of ¹³¹I–MIBG compared

to compounded formulations of ¹³¹I–MIBG that are not approved by the FDA. AZEDRA® (iobenguane I 131) (AZEDRA) was approved by the FDA on July 30, 2018, and according to the applicant, is the first and only drug indicated for the treatment of adult and pediatric patients 12 years and older who have been diagnosed with iobenguane scan positive, unresectable, locally advanced or metastatic pheochromocytoma or paraganglioma who require systemic anticancer therapy. Among local tumor tissue reduction options, use of external beam radiation therapy (EBRT) at doses greater than 40 Gy can provide local pheochromocytoma and paraganglioma tumor control and relief of symptoms for tumors at a variety of sites, including the soft tissues of the skull base and neck, abdomen, and thorax, as well as painful bone metastases.¹¹ However, the applicant stated that EBRT irradiated tissues are unresponsive to subsequent treatment with ¹³¹I–MIBG radionuclide.¹² MIBG was initially used for the imaging of paragangliomas and pheochromocytomas because of its similarity to noradrenaline, which is taken up by chromaffin cells. Conventional MIBG used in imaging expanded to off-label use in patients who had been diagnosed with malignant pheochromocytomas and paragangliomas. Because ¹³¹I–MIBG is sequestered within pheochromocytoma and paraganglioma tumors, subsequent malignant cell death occurs from radioactivity. Approximately 50 percent of tumors are eligible for treatment involving ¹³¹I–MIBG therapy based on having MIBG uptake with diagnostic imaging. According to the applicant, despite uptake by tumors, studies have also found that ¹³¹I–MIBG therapy has been limited by total radiation dose, hematologic side effects, and hypertension. While the pathophysiology of total radiation dose and hematologic side effects are more readily understandable, hypertension is believed to be precipitated by large quantities of non-iodinated MIBG or “cold” MIBG being introduced along with radioactive ¹³¹I–MIBG therapy.¹³ The “cold” MIBG blocks synaptic

reuptake of norepinephrine, which can lead to tachycardia and paroxysmal hypertension within the first 24 hours, the majority of which occur within 30 minutes of administration and can be dose-limiting.¹⁴

The applicant asserted that its new proprietary manufacturing process called Ultratrace® allows AZEDRA® to be manufactured without the inclusion of unlabeled or “cold” MIBG in the final formulation. The applicant also noted that targeted radionuclide MIBG therapy to reduce tumor burden is one of two treatments that have been studied the most. The other treatment is cytotoxic chemotherapy and, specifically, Carboplatin, Vincristine, and Dacarbazine (CVD). The applicant stated that cytotoxic chemotherapy is an option for patients who experience symptoms with rapidly progressive, non-resectable, high tumor burden, and that cytotoxic chemotherapy is another option for a large number of metastatic bone lesions.¹⁵ According to the applicant, CVD was believed to have an effect on malignant pheochromocytomas and paragangliomas due to the embryonic origin being similar to neuroblastomas. The response rates to CVD have been variable between 25 percent and 50 percent.^{16 17} These patients experience side effects consistent with chemotherapeutic treatment with CVD, with the added concern of the precipitation of hormonal complications such as hypertensive crisis, thereby requiring close monitoring during cytotoxic chemotherapy.¹⁸ According to the applicant, use of CVD relative to other tumor burden reduction options is not

¹³ Loh, K.C., Fitzgerald, P.A., Matthey, K.K., Yeo, P.P., Price, DC., “The treatment of malignant pheochromocytoma with iodine-131 metaiodobenzylguanidine (¹³¹I–MIBG): a comprehensive review of 116 reported patients,” *J Endocrinol Invest*, 1997, vol. 20(11), pp. 648–658.

an ideal treatment because of nearly 100 percent recurrence rates, and the need for chemotherapy cycles to be continually readministered at the risk of increased systemic toxicities and eventual development of resistance. Finally, there is a subgroup of patients that are asymptomatic and have slower progressing tumors where frequent follow-up is an option for care.¹⁹ Therefore, the applicant believed that AZEDRA® offers cytotoxic radioactive therapy for the indicated population that avoids harmful side effects that typically result from use of low-specific activity products.

The applicant reported that the recommended AZEDRA® dosage and frequency for patients receiving treatment involving ¹³¹I-MIBG therapy for a diagnosis of avid malignant and/or recurrent and/or unresectable pheochromocytoma and paraganglioma tumors is:

- **Dosimetric Dosing**—5 to 6 micro curies (mCi) (185 to 222 MBq) for a patient weighing more than or equal to 50 kg, and 0.1 mCi/kg (3.7 MBq/kg) for patients weighing less than 50 kg. Each recommended dosimetric dose is administered as an IV injection.
- **Therapeutic Dosing**—500 mCi (18.5 GBq) for patients weighing more than 62.5 kg, and 8 mCi/kg (296 MBq/kg) for patients weighing less than or equal to 62.5 kg. Therapeutic doses are administered by IV infusion, in ~50 mL over a period of ~30 minutes (100 mL/hour), administered approximately 90 days apart.

With respect to the newness criterion, the applicant indicated that FDA granted Orphan Drug designation for AZEDRA® on January 18, 2006, followed by Fast Track designation on March 8, 2006, and Breakthrough Therapy designation on July 26, 2015. The applicant's New Drug Application (NDA) proceeded on a rolling basis, and was completed on November 2, 2017. AZEDRA® was approved by the FDA on July 30, 2018, for the treatment of adult and pediatric patients 12 years and older who have been diagnosed with iobenguane scan positive, unresectable, locally advanced or metastatic pheochromocytoma or paraganglioma who require systemic anticancer therapy through a New Drug Approval (NDA) filed under Section 505(b)(1) of the Federal Food, Drug and Cosmetic Act and 21 CFR 314.50. Currently, there are no approved ICD-10-PCS procedure

codes to uniquely identify procedures involving the administration of AZEDRA®. We note that the applicant submitted a request for approval for a unique ICD-10-PCS code for the administration of AZEDRA® beginning in FY 2020.

As discussed earlier, if a technology meets all three of the substantial similarity criteria, it would be considered substantially similar to an existing technology and would not be considered “new” for purposes of new technology add-on payments.

With regard to the first criterion, whether a product uses the same or similar mechanism of action, the applicant stated that while AZEDRA® and low-specific activity conventional I-131 MIBG both target the same transporter sites on the tumor cell surface, the therapies' safety and efficacy outcomes are different. These differences in outcomes are because AZEDRA® is manufactured using the proprietary Ultratrace® technology, which maximizes the molecules that carry the tumoricidal component (I-131 MIBG) and minimizes the extraneous unlabeled component (MIBG, free ligands), which could cause cardiovascular side effects. Therefore, according to the applicant, AZEDRA® is designed to increase efficacy and decrease safety risks, whereas conventional I-131 MIBG uses existing technologies and results in a product that overwhelms the normal reuptake system with excess free ligands, which leads to safety issues as well as decreasing the probability of the ¹³¹I-MIBG binding to the tumor cells.

With regard to the second criterion, whether a product is assigned to the same or a different MS-DRG, the applicant noted that there are no specific MS-DRGs for the assignment of cases involving the treatment of patients who have been diagnosed with pheochromocytoma and paraganglioma. We believe that potential cases representing patients who may be eligible for treatment involving the administration of AZEDRA® would be assigned to the same MS-DRGs as cases representing patients who receive treatment for a diagnosis of iobenguane avid malignant and/or recurrent and/or unresectable pheochromocytoma and paraganglioma. We also refer readers to the cost criterion discussion below, which includes the applicant's list of the MS-DRGs to which potential cases involving treatment with the administration of AZEDRA® most likely would map.

With regard to the third criterion, whether the new use of the technology involves the treatment of the same or

similar type of disease and the same or similar patient population, according to the applicant, AZEDRA® is the only FDA-approved drug indicated for use in the treatment of patients who have been diagnosed with malignant pheochromocytoma and paraganglioma tumors that avidly take up ¹³¹I-MIBG and are recurrent and/or unresectable. The applicant stated that these patients face serious mortality and morbidity risks if left untreated, as well as potentially suffer from side effects if treated by available off-label therapies.

The applicant also contended that AZEDRA® can be distinguished from other currently available treatments because it potentially provides the following advantages:

- AZEDRA® will have a very limited impact on normal norepinephrine reuptake due to the negligible amount of unlabeled MIBG present in the dose. Therefore, AZEDRA® is expected to pose a much lower risk of acute drug-induced hypertension.
- There is minimal unlabeled MIBG to compete for the norepinephrine transporter binding sites in the tumor, resulting in more effective delivery of radioactivity.
- Current off-label therapeutic use of ¹³¹I is compounded by individual pharmacies with varied quality and conformance standards.
- Because of its higher specific activity (the activity of a given radioisotope per unit mass), AZEDRA® infusion times are significantly shorter than conventional ¹³¹I administrations.

Therefore, with these potential advantages, the applicant maintained that AZEDRA® represents an option for the treatment of patients who have been diagnosed with malignant and/or recurrent and/or unresectable pheochromocytoma and paraganglioma tumors, where there is a clear, unmet medical need.

For the reasons cited earlier, the applicant believed that AZEDRA® is not substantially similar to other currently available therapies and/or technologies and meets the “newness” criterion. We are inviting public comments on whether AZEDRA® is substantially similar to other currently available therapies and/or technologies and meets the “newness” criterion.

With regard to the cost criterion, the applicant conducted an analysis using FY 2015 MedPAR data to demonstrate that AZEDRA® meets the cost criterion.

The applicant searched for potential cases representing patients who may be eligible for treatment involving AZEDRA® that had one of the following ICD-9-CM diagnosis codes (which the applicant believed is indicative of

¹⁹ Carty, SE, Young, W.F., Elfky, A., “Paraganglioma and pheochromocytoma: Management of malignant disease,” *UpToDate*. Available at: <https://www.uptodate.com/contents/paraganglioma-and-pheochromocytoma-management-of-malignant-disease>.

diagnosis appropriate for treatment involving AZEDRA®): 194.0 (Malignant neoplasm of adrenal gland), 194.6 (Malignant neoplasm of aortic body and other paraganglia), 209.29 (Malignant carcinoid tumor of other sites), 209.30 (Malignant poorly differentiated neuroendocrine carcinoma, any site), 227.0 (Benign neoplasm of adrenal gland), 237.3 (Neoplasm of uncertain behavior of paraganglia)—in combination with one of the following ICD-9-CM procedure codes describing the administration of a radiopharmaceutical: 00.15 (High-dose infusion interleukin-2); 92.20 (Infusion of liquid brachytherapy radioisotope); 92.23 (Radioisotopic teleradiotherapy); 92.27 (Implantation or insertion of radioactive elements); 92.28 (Injection or instillation of radioisotopes). The applicant reported that the potential cases used for this analysis mapped to MS-DRGs 054 and 055 (Nervous System Neoplasms with and without MCC, respectively), MS-DRG 271 (Other Major Cardiovascular Procedures with CC), MS-DRG 436 (Malignancy of Hepatobiliary System or Pancreas with CC), MS-DRG 827 (Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Major O.R. Procedure with CC), and MS-DRG 843 (Other Myeloproliferative Disorders or Poorly Differentiated Neoplastic Diagnosis with MCC). Due to patient privacy concerns, because the number of cases under each MS-DRG was less than 11 in total, the applicant assumed an equal distribution between these 6 MS-DRGs. Based on the FY 2019 IPPS/LTCH PPS final rule correction notice data file thresholds, the average case-weighted threshold amount was \$60,136. Using the identified cases, the applicant determined that the average unstandardized charge per case ranged from \$21,958 to \$152,238 for the 6 evaluated MS-DRGs. After removing charges estimated to be associated with precursor agents, the applicant used a 3-year inflation factor of 1.1436 (a yearly inflation factor of 1.04574 applied over 3 years), based on the FY 2018 IPPS/LTCH PPS final rule (82 FR 38527), to inflate the charges from FY 2015 to FY 2018. The applicant provided an estimated average of \$151,000 per therapeutic dose per patient, based on the wholesale acquisition cost of the drug and the average dosage amount for most patients, with a total cost per patient estimated to be approximately \$980,000. After including the cost of the technology, the applicant determined an inflated average case-weighted standardized charge per case of \$1,078,631.

We are concerned with the limited number of cases the applicant analyzed. However, we acknowledge the difficulty in obtaining cost data for such a rare condition. We are inviting public comments on whether the AZEDRA® technology meets the cost criterion.

With regard to substantial clinical improvement, the applicant maintained that the use of AZEDRA® has been shown to reduce the incidence of hypertensive episodes and use of antihypertensive medications, reduce tumor size, improve blood pressure control, and reduce secretion of tumor biomarkers. In addition, the applicant asserted that AZEDRA® provides a treatment option for those outlined in its indication patient population. The applicant asserted that AZEDRA® meets the substantial clinical improvement criterion based on the results from two clinical studies: (1) MIP-IB12 (IB12): A Phase I Study of Iobenguane (MIBG) I-131 in Patients With Malignant Pheochromocytoma/Paraganglioma;²⁰ and (2) MIP-IB12B (IB12B): A Study Evaluating Ultratrace® Iobenguane I-131 in Patients With Malignant Relapsed/Refractory Pheochromocytoma/Paraganglioma. The applicant explained that the IB12B study is similar to the IB12 study in that both studies evaluated two open-label, single-arm studies. The applicant reported that both studies included patients who had been diagnosed with malignant and/or recurrent and/or unresectable pheochromocytoma and paraganglioma tumors, and both studies assessed objective tumor response, biochemical tumor response, overall survival rates, occurrence of hypertensive crisis, and the long-term benefit of AZEDRA® treatment relative to the need for antihypertensives. However, according to the applicant, the study designs differed in dose regimens (1 dose administered to patients in the IB12 study, and 2 doses administered to patients in the IB12B study) and primary study endpoints. Differences in the designs of the studies prevented direct comparison of study endpoints and pooling of the data. In addition, the applicant stated that results from safety data from the IB12 study and the IB12B study were pooled and used to support substantial clinical improvement assertions. We note that neither the IB12 study nor the IB12B study compared the effects of the use of AZEDRA® to any of the other treatment options to decrease

tumor burden (for example, cytotoxic chemotherapy, radiation therapy, and surgical debulking).

Regarding the data results from the IB12 study, the applicant asserted that, based on the reported safety and tolerability, and primary endpoint of radiological response at 12 months, high-specific-activity I-131 MIBG may be an effective alternative therapeutic option for patients who have been diagnosed with iobenguane-avid, metastatic and/or recurrent pheochromocytoma and paraganglioma tumors for whom there are no other approved therapies and for those patients who have failed available treatment options. In addition, the applicant used the exploratory finding of decreased or discontinuation of antihypertensive medications relative to baseline medications as evidence that AZEDRA® has clinical benefit and positive impact on the long-term effects of hypertension induced norepinephrine producing malignant pheochromocytoma and paraganglioma tumors. We understand that the applicant used antihypertensive medications as a proxy to assess the long-term effects of hypertension such as renal, myocardial, and cerebral end organ damage. The applicant reported that it studied 15 of the original IB12 study's 21-patient cohort, and found 33 percent (n=5) had decreased or discontinuation of antihypertensive medications during the 12 months of follow-up. However, the applicant did not provide additional data on the incidence of renal insufficiency/failure, myocardial ischemic/infarction events, or transient ischemic attacks or strokes. Therefore, it is unclear to us if these five patients also had decreased urine metanephrines, changed their diet, lost significant weight, or if other underlying comorbidities that influence hypertension were resolved, making it difficult to understand the significance of this exploratory finding.

Regarding the applicant's assertion that the use of AZEDRA® is safer and more effective than alternative therapies, we note that the IB12 study was a dose-escalating study and did not compare current therapies with the use of AZEDRA®. We also note the following: (1) The average age of the 21 enrolled patients in the IB12 study was 50.4 years old (a range of 30 to 72 years old); (2) the gender distribution was 61.9 percent (n=13) male and 38.1 percent (n=8) female; and (3) 76.2 percent (n=16) were white, 14.3 percent (n=3) were black or African American, and 9.5 percent (n=2) were Asian. We

²⁰ Noto, Richard B., et. al., "Phase 1 Study of High-Specific-Activity I-131 MIBG for Metastatic and/or Recurrent Pheochromocytoma or Paraganglioma (IB12 Phase 1 Study)," *J Clin Endocrinol Metab*, vol. 103(1), pp. 213-220.

agree with the study's conductor²¹ that the size of the study is a limitation, and with a younger, predominately white, male patient population, generalization of study results to a more diverse population may be difficult. The applicant reported that one other aspect of the patient population indicated that all 21 patients received prior anti-cancer therapy for treatment of malignant pheochromocytoma and paraganglioma tumors, which included the following: 57.1 percent (n=12) received radiation therapy including external beam radiation and conventional MIBG; 28.6 percent (n=6) received cytotoxic chemotherapy (for example, CVD and other chemotherapeutic agents); and 14.3 percent (n=3) received Octreotide.²² Although this study's patient population illustrates a population that has failed some of the currently available therapy options, which may potentially support a finding of substantial clinical improvement for those with no other treatment options, we are unclear which patients benefited from treatment involving AZEDRA®, especially in view of the finding of a Fitzgerald, et al. study cited earlier²³ that concluded tissues previously irradiated by EBRT were found to be unresponsive to subsequent treatment with ¹³¹I-MIBG radionuclide. It was not clear in the application how previously EBRT-treated patients who failed EBRT fared with the Response Evaluation Criteria in Solid Tumors (RECIST) scores, biotumor marker results, and reduction in antihypertensive medications. We also lacked information to draw the same correlation between previously CVD-treated patients and their RECIST scores, biotumor marker results, and reduction in antihypertensive medications.

The applicant asserted that the use of AZEDRA® reduces tumor size and reduces the secretion of tumor biomarkers, thereby providing important clinical benefits to patients. The IB12 study assessed the overall best tumor response based on RECIST.²⁴

Tumor biomarker response was assessed as complete or partial response for serum chromogranin A and total metanephrines in 80 percent and 64 percent of patients, respectively. The applicant noted that both the overall best tumor response based on RECIST and tumor biomarker response favorable results are at doses higher than 500 mCi. We noticed that tumor burden improvement, as measured by RECIST criteria, showed that none of the 21 patients achieved a complete response. In addition, although 4 patients showed partial response, these 4 patients also experienced dose-limiting toxicity with hematological events, and all 4 patients received administered doses greater than 18.5 GBq (500 mCi). We also note that, regardless of total administered activity (for example, greater than or less than 18.5 GBq (500 mCi)), 61.9 percent (n=13) of the 21 patients enrolled in the study had stable disease and 14.3 percent (n=2) of the 14 patients who received greater than administered doses of 18.5 GBq (500 mCi) had progressive disease. Finally, we also noticed that, for most tumor biomarkers, there were no dose relationship trends. While we appreciate the applicant's contention that there is no other FDA-approved drug therapy for patients who have been diagnosed with ¹³¹I-MIBG avid malignant and/or recurrent and/or unresectable pheochromocytoma and paraganglioma tumors, we have questions as to whether the overall tumor best response and overall best tumor biomarker data results from the IB12 study support a finding that the use of the AZEDRA® technology represents a substantial clinical improvement.

Finally, regarding the applicant's assertion that, based on the IB12 study data, AZEDRA® provides a safe alternative therapy for those patients who have failed other currently available treatment therapies, we note that none of the patients experienced hypertensive crisis, and that 76 percent (n=16) of the 21 patients enrolled in the study experienced Grade III or IV adverse events. Although the applicant indicated the adverse events were related to the study drug, the applicant also noted that there was no statistically significant difference between the greater than or less than 18.5 GBq administered doses; both groups had adverse events rates greater than 75 percent. Specifically, 5 of 7 patients (76 percent) who received less than or equal to 18.5 GBq administered doses, and 11

of 14 patients (79 percent) who received greater than 18.5 GBq administered doses experienced Grade III or IV adverse events. The most common (greater than or equal to 10 percent) Grade III and IV adverse events were neutropenia, leukopenia, thrombocytopenia, nausea, and vomiting. We also note that: (1) There were 5 deaths during the study that occurred from approximately 2.5 months up to 22 months after treatment and there was no detailed data regarding the 5 deaths, especially related to the total activity received during the study; (2) there was no information about which patients received prior radiation therapy with EBRT and/or conventional MIBG relative to those who experienced Grade III or IV adverse events; and (3) the total lifetime radiation dose was not provided by the applicant. We are inviting public comments on whether the safety data profile from the IB12 study supports a finding that the use of AZEDRA® represents a substantial clinical improvement for patients who received treatment with ¹³¹I-MIBG for a diagnosis of avid malignant and/or recurrent and/or unresectable pheochromocytoma and paraganglioma tumors, given the risks for Grade III or IV adverse events.

The applicant provided study data results from the IB12B study (MIP-IB12B), an open-label, prospective 5-year follow-up, single-arm, multi-center, Phase II pivotal study to evaluate the safety and efficacy of the use of AZEDRA® for the treatment of patients who have been diagnosed with malignant and/or recurrent pheochromocytoma and paraganglioma tumors to support the assertion of substantial clinical improvement. The applicant reported that the IB12B's primary endpoint is the proportion of patients with a reduction (including discontinuation) of all anti-hypertensive medication by at least 50 percent for at least 6 months. Seventy-four patients who received at least 1 dosimetric dose of AZEDRA® were evaluated for safety and 68 patients who received at least 1 therapeutic dose of AZEDRA®, each at 500 mCi (or 8 mCi/kg for patients weighing less than or equal to 62.5 kg), were assessed for specific clinical outcomes. The applicant asserted that results from this prospective study met the primary endpoint (reduction or discontinuation of anti-hypertensive medications), as well as demonstrated strong supportive evidence from key secondary endpoints (overall tumor response, tumor biomarker response, and overall survival rates) that confers important clinical relevance to patients

²¹ Noto, Richard B., et al., "Phase 1 Study of High-Specific-Activity I-131 MIBG for Metastatic and/or Recurrent Pheochromocytoma or Paraganglioma (IB12 Phase 1 Study)," *J Clin Endocrinol Metab*, vol. 103(1), pp. 213–220.

²⁴ Therasse, P., Arbuck, S.G., Eisenhauer, J.W., Kaplan, R.S., Rubinsten, L., Verweij, J., Van Blabbeke, M., Van Oosterom, A.T., Christian, M.D., and Gwyther, S.G., "New guidelines to evaluate the

response to treatment in solid tumors." *J Natl Cancer Inst*, 2000, vol. 92(3), pp. 205–16. Available at: <http://www.eortc.be/Services/Doc/RECIST.pdf>.

who have been diagnosed with malignant pheochromocytoma and paraganglioma tumors. The applicant also indicated that the use of AZEDRA® was shown to be generally well tolerated at doses administered at 8 mCi/kg. We note that the data results from the IB12B study did not have a comparator arm, making it difficult to interpret the clinical outcome data relative to other currently available therapies.

As discussed for the IB12 study, the applicant reported that antihypertension treatment was a proxy for effectiveness of the use of AZEDRA® on norepinephrine induced hypertension producing tumors. In the IB12B study, 25 percent (17/68) of patients met the primary endpoint of having a greater than 50 percent reduction in anti-hypertensive agents for at least 6 months. The applicant further indicated that an additional 16 patients showed a greater than 50 percent reduction in anti-hypertensive agents for less than 6 months, and by pooling data results from these 33 patients the applicant concluded that 49 percent (33/68) of patients achieved a greater than 50 percent reduction at any time during the study's 12-month follow-up period. The study's primary endpoint data also revealed that 11 percent of the 88 patients who received a therapeutic dose of AZEDRA® experienced a worsening of preexisting hypertension defined as an increase in systolic blood pressure to ≥ 160 mmHg with an increase of 20 mmHg or an increase in diastolic blood pressure ≥ 00 mmHg with an increase of 10 mmHg. All changes in blood pressure occurred within the first 24 hours post infusion. The applicant further compared its data results from the IB12B study regarding antihypertension medication and the frequency of post-infusion hypertension with published studies on MIBG and CVD therapy. The applicant noted a retrospective analysis of CVD therapy of 52 patients who had been diagnosed with metastatic pheochromocytoma and paraganglioma tumors that found only 15 percent of CVD-treated patients achieved a 50-percent reduction in anti-hypertensive agents. The applicant also compared its data results for post-infusion hypertension with literature reporting on MIBG and found 14 and 19 percent (depending on the study) of patients receiving MIBG experience hypertension within 24 hours of infusion. Comparatively, the applicant stated that the use of AZEDRA® had no acute events of hypertension following infusion. We are inviting public comments on whether these data results

regarding hypertension support a finding that the use of the AZEDRA® technology represents a substantial clinical improvement, and if anti-hypertensive medication reduction is an adequate proxy for improvement in renal, cerebral, and myocardial end organ damage.

Regarding reduction in tumor burden (as defined by RECIST scores), the applicant indicated that at the conclusion of the IB12B study's 12-month follow-up period, 23.4 percent (n=15) of the 68 patients showed a partial response, 68.8 percent (n=44) of the 68 patients achieved stable disease, and 4.7 percent (n=3) of the 68 patients showed progressive disease. None of the patients showed completed response. The applicant maintained that achieving stable disease is important for patients who have been treated for malignant pheochromocytoma and paraganglioma tumors because this is a progressive disease without a cure at this time. The applicant also indicated that literature shows that stable disease is maintained in approximately 47 percent of treatment naïve patients who have been diagnosed with metastatic pheochromocytoma and paraganglioma tumors at 1 year due to the indolent nature of the disease.²⁵ In the IB12B study, the data results equated to 23 percent of patients achieving partial response and 69 percent of patients achieving stable disease. According to the applicant, this compares favorably to treatment with both conventional radiolabeled MIBG and CVD chemotherapy.

The applicant stated that the data results demonstrated effective tumor response rates. The applicant reported that the IB12 and IB12B study data showed overall tumor response rates of 80 percent and 92 percent, respectively. In addition, the applicant contended that the study data across both trials show that patients demonstrated improved blood pressure control, reductions in tumor biomarker secretion, and strong evidence in overall survival rates. The overall median time to death from the first dose was 36.7 months in all treated patients. Patients who received 2 therapeutic doses had an overall median survival rate of 48.7 months, compared to 17.5 months for patients who only received a single dose. We note that the IB12B study reported 12-month Kaplan-Meier

²⁵ Hescot, S., Leboulleux, S., Amar, L., Vezzosi, D., Borget, I., Bournaud-Salinas, C., de la Fouchardiere, C., Libé, R., Do Cao, C., Niccoli, P., Tabarin, A., "One-year progression-free survival of therapy-naïve patients with malignant pheochromocytoma and paraganglioma," *The J Clin Endocrinol Metab*, 2013, vol. 98(10), pp. 4006–4012.

estimate of survival of 91 percent, while the drug dosing study IB12 reported overall subject survival of 86 percent at 12 months, 62 percent at 24 months, 38 percent at 36 months, and 4.8 percent at 48 months. We also note that only 45 of 68 patients who received at least 1 therapeutic dose completed the 12-month efficacy phase.

The applicant indicated that comparison of the IB12B study data regarding overall survival rate with historical data is difficult due to the differences in the retrospective nature of the published clinical studies and heterogeneous patient characteristics, especially when overall survival is calculated from the time of initial diagnosis. We agree with the applicant regarding the difficulties in comparing the results of the published clinical studies, and also believe that the differences in these studies may make it more difficult to evaluate whether the use of the AZEDRA® technology improves overall survival rates relative to other therapies.

We acknowledge the challenges with constructing robust clinical studies due to the extremely rare occurrence of patients who have been diagnosed with pheochromocytoma and paraganglioma tumors. However, we are concerned that because the data for both of these studies is mainly based upon retrospective studies and small, heterogeneous patient cohorts, it is difficult to draw precise conclusions regarding efficacy. Only very limited unpublished data from two, single-arm, noncomparative studies are available to evaluate the safety and effectiveness of AZEDRA®, leading to a comparison of outcomes with historical controls.

We are inviting public comments on whether the use of the AZEDRA® technology meets the substantial clinical improvement criterion, including with respect to the specific concerns we have raised. We did not receive any written comments in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for AZEDRA® or at the New Technology Town Hall meeting.

b. CABLIVI® (caplacizumab-yhdp)

The Sanofi Company submitted an application for new technology add-on payments for CABLIVI® (caplacizumab-yhdp) for FY 2020. The applicant described CABLIVI® as a humanized bivalent nanobody consisting of two identical building blocks joined by a tri alanine linker, which is administered through intravenous and subcutaneous

injection to inhibit microclot formation in adult patients who have been diagnosed with acquired thrombotic thrombocytopenic purpura (aTTP). The applicant stated that aTTP is a life-threatening, immune-mediated thrombotic microangiopathy characterized by severe thrombocytopenia, hemolytic anemia, and organ ischemia with an estimated 3 to 11 cases per million per year in the U.K. and U.S.^{26 27 28} Further, the applicant stated that aTTP is an ultra-orphan disease caused by inhibitory autoantibodies to von Willebrand Factor-cleaving protease (vWFCP) also known as “a disintegrin and metalloprotease with thrombospondin type 1 motif, member 13 (ADAMTS13),” resulting in a severe deficiency in WFCP. The applicant further explained that von Willebrand Factor (vWF) is a key protein in hemostasis and is an adhesive, multimeric plasma glycoprotein with a pivotal role in the recruitment of platelets to sites of vascular injury. According to the applicant, more than 90 percent of circulating vWF is expressed by endothelial cells and secreted into the systemic circulation as ultra-large von Willebrand Factor (ULvWF) multimers. The applicant stated that decreased ADAMTS13 activity leads to an accumulation of ULvWF multimers, which bind to platelets and induce platelet aggregation. According to the applicant, the consumption of platelets in these microthrombi causes severe thrombocytopenia, tissue ischemia and organ dysfunction (commonly involving the brain, heart, and kidneys) and may result in acute thromboembolic events such as stroke, myocardial infarction, venous thrombosis, and early death. The applicant indicated that the aforementioned tissue and organ damage resulting from the ischemia leads to increased levels of lactate dehydrogenase (LDH), troponins, and creatinine (organ damage markers) and that faster normalization of these organ damage markers and platelet counts is believed to be linked with faster resolution of the ongoing

²⁶ Scully, M., et al., “Regional UK TTP registry: correlation with laboratory ADAMTS 13 analysis and clinical Features,” *Br. J. Haematol.*, 2008, vol. 142(5), pp. 819–26.

²⁷ Reese, J.A., et al., “Children and adults with thrombotic thrombocytopenic purpura associated with severe, acquired Adamts13 deficiency: comparison of incidence, demographic and clinical features,” *Pediatr. Blood Cancer*, 2013, vol. 60(10), pp. 1676–82.

²⁸ Terrell, D.R., et al., “The incidence of thrombotic thrombocytopenic purpura-hemolytic uremic syndrome: all patients, idiopathic patients, and patients with severe ADAMTS–13 deficiency,” *J. Thromb. Haemost.*, 2005, vol. 3(7), pp. 1432–6.

microthrombotic process and the associated tissue ischemia. According to the applicant, in diagnoses of aTTP there is no consensual, validated surrogate marker that defines the subpopulation at greatest risk of death or significant morbidity. Therefore, the applicant stated that all patients who have been diagnosed with aTTP should be considered severe cases and treated in order to prevent death and significant morbidity.

The applicant explained that the two standard-of-care (SOC) treatment options for a diagnosis of aTTP are plasma exchange (PE), in which a patient’s blood plasma is removed through apheresis and is replaced with donor plasma, and immunosuppression (for example, corticosteroids and increasingly also rituximab), which is often administered as adjunct to plasma exchange in the treatment for a diagnosis of aTTP.^{29 30} According to the applicant, despite the current SOC treatment options, acute aTTP episodes are still associated with a mortality rate of up to 20 percent, which generally occurs within the first weeks of diagnosis. The applicant asserted that, although the 20-percent mortality rate reflects substantial improvement because of PE treatment, in spite of greater understanding of disease pathogenesis and the use of newer immunosuppressants, the mortality rate has not been further improved.^{31 32 33 34 35 36} The applicant also noted that another important limitation of the currently available

therapies (PE and immunosuppression) is the delayed onset of effect of days to weeks of these therapies because such therapies do not directly address the pathophysiological platelet aggregation that leads to the formation of microthrombi, which is ultimately associated with death or with the severe outcomes reported with diagnoses of aTTP. The applicant explained that despite current treatment, exacerbation and relapse occur and frequently lead to hospitalization and the need to restart daily PE treatment and optimize immunosuppression. In addition, the applicant noted that patients may experience exacerbations after discontinuing plasma exchange treatment due to continuing formation of microthrombi as a result of unresolved underlying autoimmune disease, and patients remain at risk of thrombotic complications or early death until the episode is completely resolved.³⁷

According to the information provided by the applicant, CABLIVI® is administered as an adjunct to PE treatment and immunosuppressive therapy immediately upon diagnosis of aTTP through a bolus intravenous injection for the first dose and subcutaneous injection for all subsequent doses. The recommended treatment regimen and dosage of CABLIVI® consists of administering 10 mg on the first day of treatment via intravenous injection prior to the standard plasma exchange treatment. After completion of PE treatment on the first day, a 10 mg subcutaneous injection is administered. After the first day, and for the rest of the plasma exchange treatment period, a daily 10 mg subcutaneous injection is administered following each day’s PE treatment. After the PE treatment period is completed, a daily 10 mg subcutaneous injection is administered for 30 days. If the underlying immunological disease (aTTP) is not resolved, the treatment period should be extended beyond 30 days and be accompanied by optimization of immunosuppression (another SOC treatment option, in addition to PE treatment). According to the applicant and as discussed later, the use of CABLIVI® produces faster normalization of platelet count response compared to that of SOC treatment options alone. The applicant indicated that this contributes to a decrease in the

³⁷ Goel, R., et al., “Prognostic risk-stratified score for predicting mortality in hospitalized patients with thrombotic thrombocytopenic purpura: nationally representative data from 2007 to 2012,” *Transfusion*, 2016, vol. 56(6), pp. 1451–8.

length of the SOC treatment period with respect to the number of days of PE treatment, the mean length of intensive care unit stays, and the mean length of hospitalizations.

With respect to the newness criterion, CABLIVI® received FDA approval on February 6, 2019, for the treatment of adult patients who have been diagnosed with aTTP, in combination with plasma exchange and immunosuppressive therapy. According to information provided by the applicant, CABLIVI® was previously granted Fast Track and Orphan Drug designations in the United States for the treatment of aTTP by the FDA and Orphan Drug designation in Europe for the treatment of aTTP. Currently, there are no ICD-10-PCS procedure codes to uniquely identify procedures involving CABLIVI®. We note that the applicant submitted a request for approval for a unique ICD-10-PCS procedure code for the administration of CABLIVI® beginning in FY 2020.

As discussed above, if a technology meets all three of the substantial similarity criteria, it would be considered substantially similar to an existing technology and would not be considered “new” for purposes of new technology add-on payments.

With regard to the first criterion, whether a product uses the same or a similar mechanism of action to achieve a therapeutic outcome, according to the applicant, CABLIVI® is a first-in-class therapy with an innovative mechanism of action. The applicant explained that CABLIVI® binds to the A1 domain of vWF and specifically inhibits the interaction between vWF and platelets. Furthermore, the applicant indicated that in patients who have been diagnosed with aTTP, proteolysis of ULvWF multimers by ADAMTS13 is impaired due to the presence of inhibiting or clearing anti-ADAMTS13 auto-antibodies, resulting in the persistence of the constitutively active A1 domain and, as a consequence, platelets spontaneously bind to ULvWF and generate microvascular blood clots in high shear blood vessels. The applicant noted that CABLIVI® is able to interact with vWF in both its active (that is, ULvWF multimers or normal multimers activated through immobilization or shear stress) and inactive forms (that is, multimers prior to conformational change of the A1 domain), thereby immediately blocking the interaction of vWF with the platelet receptor (GPIb-IX-V) and further preventing spontaneous interaction of ULvWF with platelets that would lead to platelet microthrombi formation in the microvasculature, local ischemia and

platelet consumption. The applicant highlighted that this immediate platelet-protective effect differentiates CABLIVI® from slower-acting therapies, such as PE and immunosuppressants, which need days to exert their effect. The applicant explained that PE acts by removing ULvWF and the circulating auto-antibodies against ADAMTS13, thereby replenishing blood levels of ADAMTS13, while immunosuppressants aim to stop or reduce the formation of auto-antibodies against ADAMTS13.

With respect to the second criterion, whether a product is assigned to the same or a different MS-DRG, the applicant believed that potential cases representing patients who may be eligible for treatment involving CABLIVI® would be assigned to the same MS-DRGs as cases representing patients who receive SOC treatment for a diagnosis of aTTP. As explained below in the discussion of the cost criterion, the applicant believed that potential cases representing patients who may be eligible for treatment involving CABLIVI® would be assigned to MS-DRGs that contain cases representing patients who were diagnosed with aTTP and received therapeutic PE procedures during hospitalization.

With respect to the third criterion, whether the new use of the technology involves the treatment of the same or similar type of disease and the same or similar patient population, according to the applicant, there are no other specific therapies approved for the treatment of patients diagnosed with aTTP. As stated earlier, according to the applicant, patients who have been diagnosed with aTTP have two currently available SOC treatment options: PE, in which a patient's blood plasma is removed through apheresis and is replaced with donor plasma, and immunosuppression (for example, corticosteroids and increasingly rituximab), which is administered as an adjunct to PE in the treatment of aTTP. The applicant further explained that immunosuppression consisting of glucocorticoids is often administered as adjunct to PE in the initial treatment of a diagnosis of aTTP,^{38 39} but their use is based on historical evidence that some patients with limited symptoms might respond

to corticosteroids alone.^{40 41} The applicant noted that there have been no studies specifically comparing treatment involving the combination of PE with corticosteroids, versus PE alone; that they are not specifically approved for the treatment of a diagnosis of aTTP, and that other immunosuppressive agents used to treat a diagnosis of aTTP, such as rituximab, have not been studied in properly controlled, double-blind studies. The applicant also noted that rituximab, aside from not being licensed for the treatment of a diagnosis of aTTP, is not fully effective during the first 2 weeks of treatment, with a reported delay of onset of its effect that may extend up to 27 days, with at least 3 to 7 days needed to achieve adequate B-cell depletion (given the B-cells may also contain ADAMTS13 antibodies), and even longer to restore ADAMTS13 activity levels.^{42 43}

Based on the applicant's statements as summarized above, the applicant believes that CABLIVI® provides a new treatment option for patients who have been diagnosed with aTTP. However, it is not clear that CABLIVI® would involve the treatment of a different type of disease or a different patient population. As stated earlier, according to the applicant, patients who have been diagnosed with aTTP have two SOC treatment options for a diagnosis of aTTP: PE, in which a patient's blood plasma is removed through apheresis and is replaced with donor plasma, and immunosuppression (for example, corticosteroids and increasingly also rituximab), which is administered as an adjunct to PE in the initial treatment for a diagnosis of aTTP. Therefore, it appears that CABLIVI® is used to treat the same or similar type of disease (a diagnosis of aTTP) and a similar patient population as currently available treatment options.

We are inviting public comments on whether CABLIVI® is substantially similar to other technologies and whether CABLIVI® meets the newness criterion.

³⁸ Scully, M., et al., “Guidelines on the diagnosis and management of thrombotic thrombocytopenic purpura and other thrombotic microangiopathies,” *Br. J. Haematol.*, 2012, vol. 158(3), pp. 323–35.

³⁹ George, J.N., “Corticosteroids and rituximab as adjunctive treatments for thrombotic thrombocytopenic Purpura,” *Am. J. Hematol.*, 2012, vol. 87 Suppl 1, pp. S88–91.

With regard to the cost criterion, the applicant conducted the following analysis to demonstrate that the technology meets the cost criterion. In order to identify the range of MS-DRGs that cases representing potential patients who may be eligible for treatment using CABLIVI® may map to, the applicant identified all MS-DRGs for patients who had been hospitalized

for a diagnosis of aTTP. Specifically, the applicant searched the FY 2017 MedPAR file for Medicare fee-for-service inpatient hospital claims submitted between October 1, 2016 and September 30, 2017, and identified potential cases by ICD-10-CM diagnosis code M31.1 (Thrombotic microangiopathy) and ICD-10-PCS procedure codes 6A550Z3 (Pheresis of

plasma, single) and 6A551Z3 (Pheresis of plasma, multiple). The applicant noted that it excluded cases with an ICD-10-CM diagnosis code of D59.3 (Hemolytic-uremic syndrome).

This resulted in 360 cases spanning 61 MS-DRGs, with approximately 67.2 percent of all potential cases mapping to the following 5 MS-DRGs:

MS-DRG	MS-DRG title
MS-DRG 545	Connective Tissue Disorders with MCC.
MS-DRG 546	Connective Tissue Disorders without CC.
MS-DRG 547	Connective Tissue Disorders without CC/MCC.
MS-DRG 682	Renal Failure with MCC.
MS-DRG 698	Other Kidney and Urinary Tract Diagnoses with MCC.

Using the 242 identified cases that mapped to the top 5 MS-DRGs above, the average case-weighted unstandardized charge per case was \$188,765. The applicant then standardized the charges and then removed historic charges for items that are expected to be avoided for patients who receive treatment involving CABLIVI®. The applicant determined that 31 percent of historical routine bed charges, 65 percent of historical ICU charges, and 38 percent of historical blood administration charges (which includes charges for therapeutic PE) would be reduced because of the use of CABLIVI®, based on the findings from the Phase III clinical study HERCULES. The applicant indicated it used the FY 2017 MedPAR file to determine the appropriate amount of charges to remove. The applicant then inflated the adjusted standardized charges by 8.864 percent utilizing the 2-year inflation factor published by CMS in the FY 2019 IPPS/LTCH PPS final rule to adjust the outlier threshold (83 FR 41722). (We note that this figure was revised in the FY 2019 IPPS/LTCH PPS final rule correction notice. The corrected final 2-year inflation factor is 1.08986 (83 FR 49844). We further note that even when using the corrected final rule values to inflate the charges, the average case-weighted standardized charge per case exceeded the average case-weighted threshold amount.) The applicant explained that the anticipated price for CABLIVI®'s indication for the treatment of patients who have been diagnosed with aTTP, in combination with plasma exchange and immunosuppressive therapy, has yet to be determined and, therefore, no charges for CABLIVI® were added in the analysis. Based on the FY 2019 IPPS/LTCH PPS final rule correction notice data file thresholds for FY 2020, the applicant determined the average case-weighted threshold amount

was \$49,904. The final inflated average case-weighted standardized charge per case was \$145,543. Because the final inflated average case-weighted standardized charge per case exceeds the average case-weighted threshold amount, the applicant maintained that the technology meets the cost criterion. We are inviting public comments on whether CABLIVI® meets the cost criterion.

With respect to the substantial clinical improvement criterion, the applicant asserted that it believes that CABLIVI® represents a substantial clinical improvement compared to the use of currently available treatments (PE and immunosuppressants) because it: (1) Significantly reduces time to platelet count response, which is consistent with the halting of platelet consumption in microthrombi; (2) significantly reduces the number of patients with aTTP-related death, recurrence of aTTP-related episodes, or a major thromboembolic event; (3) reduces mortality; (4) reduces the proportion of patients with recurrence of aTTP diagnoses; (5) reduces the proportion of patients who develop refractory disease; (6) reduces the number of days of PE; (7) reduces the mean length of intensive care unit stay and the mean length of hospitalization; and (8) shows a trend of more rapid normalization of organ damage markers. The applicant provided further detail regarding these assertions, referencing the results of Phase II and Phase III studies and an integrated efficacy analysis of both studies.

The applicant reported that the Phase II study was a randomized, single-blind, placebo controlled study entitled ALX-0681-2.1/10 (TITAN) that examined the efficacy and safety of the use of CABLIVI® compared to a placebo, with the primary endpoint being achievement of a statistically significant

reduction in time to platelet count response. Seventy-five patients, 66 of which were white, (19 to 72 years old, with a mean of 41.6 years old; 44 women and 31 men) with an episode of aTTP were randomized 1:1 to receive either CABLIVI® (n=36) or placebo (n=39), in addition to daily PE.⁴⁴ Patients received their first dose of CABLIVI® administered through intravenous injection prior to the first PE, followed by daily doses administered subcutaneously after each PE. After discontinuing PE, daily doses of CABLIVI® administered through subcutaneous injection were continued for 30 days. The median treatment duration with CABLIVI® was 36 days.

According to the applicant, significantly more patients in the treatment arm met the primary endpoint [95 percent Confidence Interval (CI) (3.78, 1.28)]. The applicant indicated that the time to platelet count response improvement constitutes a significant substantial clinical improvement because it demonstrated that patients treated with CABLIVI® were 2.2 times more likely to achieve an acceptable time to platelet count response than patients receiving treatment with the placebo. Additionally, the applicant noted that exacerbation of aTTP occurred in fewer patients who were treated with CABLIVI® (8.3 percent) than placebo (28.2 percent). During the 1-month follow-up period, 8 relapses (defined as a recurrence more than 30 days after discontinuing PE) occurred in the CABLIVI® group with 7 of the relapses occurring within 10 days of

⁴⁴ Peyvandi, F., Scully, M., Kremer Hovinga, J.A., Cataland, S., Knöbl, P., Wu, H., Artoni, A., Westwood, J.P., Mansouri Taleghani, M., Jilma, B., Callewaert, F., Ulrichs, H., DUBY, C., Tersago, D., TITAN Investigators, "Caplacizumab for Acquired Thrombotic Thrombocytopenic Purpura," *N Engl J Med.*, February 11, 2016, vol. 374(6), pp. 511-22. PMID: 26863353.

discontinuing the study drug. In all seven of the relapses, ADAMTS13 activity was still severely suppressed at the end of the treatment period, evidence of ongoing underlying immunological disease and indicating an imminent risk of another relapse. The applicant explained that according to post-hoc analyses, the group of patients who were treated with CABLIVI® compared to placebo showed a decrease in the percentage of patients with refractory disease (0 percent versus 10.8 percent), a reduction in the number of days of PE (7.7 days versus 11.7 days) and a trend to more rapid normalization of organ damage markers (lactate dehydrogenase, cardiac troponin I and serum creatinine). Finally, the applicant noted that there were no deaths in the group of patients who were treated with CABLIVI®. However, 2 of the 39 placebo-treated patients (5.1 percent) died.

The applicant explained that the Phase III study was a randomized, double-blind, placebo controlled study entitled ALX0681-C301 (HERCULES) that examined the efficacy and safety of the use of CABLIVI® compared to a placebo, with the primary endpoint being achievement of a statistically significant reduction in time to platelet count response. One hundred forty-five patients (18 to 79 years old, with a mean of 46 years old, 100 women and 45 men), with an episode of aTTP were randomized 1:1 to receive either CABLIVI® (n=72) or placebo (n=73) in addition to daily PE and immunosuppression.⁴⁵ The applicant explained that patients received a single 10 mg CABLIVI® intravenous injection or placebo prior to the first PE, followed by a daily CABLIVI® 10 mg subcutaneous injection or placebo after completion of PE, for the duration of the daily PE treatment period and for 30 days thereafter. According to the applicant, if at the end of this treatment period (daily PE treatment period and 30 days after) there was evidence of persistent underlying immunological disease activity (indicative of an imminent risk for recurrence), treatment could be extended weekly for a maximum of 4 weeks, together with optimization of immunosuppression. The applicant indicated that patients who experienced a recurrence while undergoing study drug treatment were switched to open-label CABLIVI® and they were again treated for the duration of daily PE treatment and for 30 days thereafter. If at the end of this treatment

period (daily PE treatment period and 30 days after) there was evidence of ongoing underlying immunological disease, open-label treatment with CABLIVI® could be extended weekly for a maximum of 4 weeks, together with optimization of immunosuppression. Patients were followed for 28 days after discontinuation of treatment. Upon recurrence during the follow-up period (that is, after all study drug treatment had been discontinued), there was no re-initiation of the study drug because recurrence at this point was treated according to the SOC. The median treatment duration with CABLIVI® in the double-blind period was 35 days.

According to the applicant, patients in the treatment arm were more likely to achieve platelet count response at any given time point, compared to the placebo [95 percent CI (1.1, 2.2)]. The applicant believed that this constitutes a significant substantial clinical improvement because patients who were treated with CABLIVI® were 1.55 times more likely to achieve platelet count response at any given time point, compared to placebo. The applicant also indicated that, compared to placebo, treatment with CABLIVI® resulted in a 74 percent reduction in the number of patients with aTTP-related death, recurrence of aTTP diagnosis, or a major thromboembolic event, during the study drug treatment period ($p < 0.0001$).

The applicant noted that the proportion of patients with a recurrence of an aTTP diagnosis in the Phase III study period (that is, the drug treatment period plus the 28-day follow-up after discontinuation of the drug treatment) was 67 percent lower in the CABLIVI® group (12.7 percent) compared to the placebo group (38.4 percent) ($p < 0.001$). The applicant also indicated that in all 6 patients in the CABLIVI® group who experienced a recurrence of an aTTP diagnosis during the follow-up period (that is, a relapse), ADAMTS13 activity levels were less than 10 percent at the end of the study drug treatment, indicating that the underlying immunological disease was still active at the time CABLIVI® was discontinued. Furthermore, the applicant stated that there were no patients who were treated with CABLIVI® that had refractory disease (defined as absence of platelet count doubling after 4 days of standard treatment and elevated LDH), compared to 3 patients (4.2 percent) who had refractory disease that were treated with placebo. The applicant also explained that a trend to faster normalization of the organ damage markers lactate dehydrogenase, cardiac troponin I and serum creatinine was observed in patients who were treated with

CABLIVI®. The applicant noted that during the study drug treatment, there were no deaths in patients who were treated with CABLIVI®, while 3 of the 73 placebo-treated patients (4.1 percent) died. Finally, the applicant stated that during the Phase III study drug treatment period, treatment with CABLIVI® resulted in a 38 percent reduction in the mean number of PE treatment days versus placebo (reduction of 3.6 days) and a 41 percent reduction in the mean volume of PE (reduction of 14.6L). Furthermore, treatment with CABLIVI® resulted in a 65 percent reduction in the mean length of ICU stay (reduction of 6.3 days) and a 31 percent reduction in the mean length of hospitalization (reduction of 4.5 days) during the Phase III study drug treatment period.

The applicant submitted integrated data from the blinded periods of the Phase II and Phase III studies that show a statistically significant difference in favor of CABLIVI® (n=108) in time to platelet count response compared to placebo (n=112). The applicant indicated that patients who were treated with CABLIVI® were 1.65 times more likely to achieve platelet count response at any given time point during the blinded period than patients who were treated with placebo (95 percent CI: 1.23, 2.20; $p < 0.001$). Additionally, according to the applicant, integrated data from the blinded periods of the Phase II and Phase III studies showed that compared to placebo, treatment with CABLIVI® resulted in a 72.6 percent reduction in the percentage of patients with aTTP-related death, a recurrence of aTTP diagnosis, or at least one treatment-emergent major thromboembolic event during the blinded treatment period ($p < 0.0001$). More specifically, the applicant indicated that during the blinded treatment period no aTTP-related deaths occurred in the CABLIVI® group compared to 4 aTTP-related deaths in the placebo group ($p < 0.05$), treatment with CABLIVI® resulted in an 84.0 percent reduction in the proportion of patients with a recurrence of aTTP diagnosis (exacerbation, relapse) during the blinded treatment period ($p < 0.0001$), and treatment with CABLIVI® resulted in a reduction of 40.8 percent in the proportion of patients with at least one treatment-emergent major thromboembolic event during the blinded treatment period.

According to the applicant, pooled data from the two studies showed that none of the patients who were treated with CABLIVI® developed refractory disease (that is, absence of platelet count doubling after 4 days of standard

⁴⁵ Scully, M., et al., "Treatment of Acquired Thrombotic Thrombocytopenic Purpura with Caplacizumab," *N. Engl. J. Med.*, (In Press).

treatment and elevated LDH) compared to 7 patients (6.3 percent; 7/112) who were treated with placebo during the blinded period ($p < 0.01$). Finally, the applicant noted that across both studies, treatment with CABLIVI® resulted in a 37.5 percent reduction in the mean number of days of PE treatment (reduction of 3.9 days).

Although the applicant asserts that CABLIVI® represents a substantial clinical improvement compared to the use of currently available treatments (PE and immunosuppressants), we are concerned that the Phase II TITAN and Phase III HERCULES studies may not provide enough evidence to support that the use of CABLIVI® represents a substantial clinical improvement.

Regarding the Phase II TITAN study, we are concerned that because 66 of the 75 patients in the study population were white, the results of the study may not be generalizable to a more diverse population that may be at risk for diagnosis of aTTP. Additionally, we note that CABLIVI® was associated with fewer aTTP exacerbations during therapy, but was associated with more aTTP exacerbations after therapy was discontinued, suggesting a lack of effect on long-term anti-ADAMTS13 antibody levels. Although this is consistent with CABLIVI®'s mechanism of action, we are concerned that without long-term data to determine the impact of adjunct use of CABLIVI® on exacerbations and relapse it may be difficult to determine if the use of CABLIVI® represents a substantial clinical improvement over existing therapy.

Based on data from the Oklahoma TTP–HUS Registry, the incidence of aTTP is approximately three cases per 1 million adults per year.⁴⁶ Additionally, the median age for a diagnosis of aTTP is 41, with a wide range between 9 years old and 78 years old. We acknowledge the challenges with constructing robust clinical studies due to the extremely rare occurrence of patients who have been diagnosed with aTTP. However, regarding the Phase III HERCULES study, we are nonetheless concerned that the study population was small, 145 people. Additionally, it is unclear if the response rate may differ in those who have a *de novo* diagnosis versus those with recurrent disease. We note that PE treatment alone has been attributed to an 80 percent survival

rate,⁴⁷ and because CABLIVI® is given in combination with or after SOC therapies, we are concerned that we may not have sufficient information to determine the extent to which the study results are attributable to the use of CABLIVI®. Furthermore, with the follow-up period for the Phase III HERCULES study being only 28 days, we are concerned that there is a lack of long-term data. In the absence of long-term data, we are concerned about the impact of the use of CABLIVI® on the relapse rate beyond the overall study period, including the 28-day follow-up period.

Finally, although both the Phase II and III studies consisted of key secondary endpoints such as death or major thromboembolic events, we are concerned that these endpoints were not clearly defined. We also are concerned that the studies did not appear to account for other clearly defined endpoints such as heart attack, stroke, a bleeding episode, and power calculations for the expected differences in such endpoints that would be biologically important.

We are inviting public comments on whether CABLIVI® meets the substantial clinical improvement criterion.

Below we summarize and respond to a written comment we received in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for CABLIVI®.

Comment: The applicant stated that during the New Technology Town Hall meeting questions were asked regarding the design of the Phase III HERCULES study, specifically regarding treatments that were administered during the different arms of the study. To address those questions, the applicant summarized the methodology of the Phase III HERCULES study by indicating that 145 patients with an acute episode of aTTP who had received one PE treatment were randomized 1:1 to placebo (73 patients), or 10 mg of CABLIVI® (72 patients), in addition to receiving daily PE treatment and corticosteroids. The applicant explained that a single intravenous dose of 10 mg of the study drug was given before the first PE performed during the study and a single 10 mg subcutaneous dose was given the same day following completion of that day's PE treatment.

The applicant further stated that a subcutaneous dose was given daily during the PE treatment period and 30 days thereafter. The applicant noted that, if at the end of this period there was evidence of ongoing disease, such as suppressed ADAMTS13 activity, investigators were encouraged to extend the blinded treatment for a maximum of 4 weeks in combination with optimization of immunosuppression. In addition, the applicant indicated that all patients entered a 28-day treatment-free follow-up period after the last dose of the study drug. The applicant explained that the primary endpoint was time to platelet count response, defined as platelet count greater than or equal to $150 \times 10^9/L$ with discontinuation of daily PE treatment within 5 days. Further, the applicant stated that there were four key secondary endpoints, hierarchically ranked: (1) The proportion of patients with aTTP-related death, aTTP recurrence, or at least one major thromboembolic event during the study drug treatment period (a blinded, independent committee adjudicated aTTP-related deaths and major thromboembolic events); (2) the proportion of patients with a recurrence during the entire study period, including the follow-up period; (3) the proportion of patients with refractoriness to therapy, defined as absence of platelet count doubling after 4 days of treatment and LDH still above normal; and (4) the time to normalization of 3 organ damage markers: LDH, cardiac troponin I and serum creatinine.

Response: We appreciate the information provided by the applicant. We will take this information into consideration when deciding whether to approve new technology add-on payments for CABLIVI® for FY 2020.

c. CivaSheet®

CivaTech Oncology, Inc. submitted an application for new technology add-on payments for CivaSheet® for FY 2020. CivaSheet® received FDA clearance of a 510(k) premarket notification on August 29, 2014. CivaSheet® was approved as a “sealed source” by the Nuclear Regulatory Commission (NRC) and added to the Registry of Radioactive Sealed Source and Devices on October 24, 2014. On May 9, 2018, CivaSheet® was registered by the American Association of Physicists in Medicine (AAPM) on the “Joint AAPM/IROC Houston Registry of Brachytherapy Sources Complying with AAPM Dosimetric Prerequisites.” According to the applicant, inclusion on this AAPM registry is a long-standing requirement imposed on brachytherapy sources used

⁴⁶ Reese, J.A., Muthurajah, D.S., Kremer-Hovinga, J.A., Vesely, S.K., Terrell, D.R., George, J.N., “Children and adults with thrombotic thrombocytopenic purpura associated with severe, acquired Adams13 deficiency: comparison of incidence, demographic and clinical features,” *Pediatr Blood Cancer*, October 2013, vol. 60(10), pp. 1676–82, Epub June 1, 2013.

⁴⁷ Rock, G.A., Shumak, K.H., Buskard, N.A., et al., “Comparison of plasma exchange with plasma infusion in the treatment of thrombotic thrombocytopenic purpura. Canadian Apheresis Study Group,” *N Engl J Med*, 1991, vol. 325, pp. 393–397.

in all National Cancer Institute clinical trials and that all other available brachytherapy sources are included on this registry. According to the applicant, CivaSheet® was not commercially distributed among IPPS hospitals until May 2018, after meeting the requirements for inclusion in the AAPM registry. Therefore, according to the applicant the “newness” period for the CivaSheet®, if approved for FY 2020 new technology add-on payments, should commence on May 9, 2018. Based on this information, we believe the newness period for CivaSheet® would begin on May 9, 2018. However, we are seeking public comments on whether inclusion on the AAPM registry is an appropriate indicator of the first availability of the CivaSheet® brachytherapy sources on the U.S. market and whether the date of inclusion on the AAPM registry is appropriate to consider as the beginning of the newness period for CivaSheet®.

CivaSheet® is intended for medical purposes to be placed into a body cavity or tissue as a source for the delivery of radiation therapy. CivaSheet® is indicated for use as a brachytherapy source for the treatment of selected localized tumors. The device may be used either for primary treatment or for the treatment of residual disease after excision of the primary tumor. CivaSheet® may be used concurrently, or sequentially, with other treatment modalities, such as external beam radiation therapy or chemotherapy. We note that the applicant has submitted a request for approval for a unique ICD-10-PCS procedure code to describe procedures involving the use of the CivaSheet® device, beginning in FY 2020.

As discussed previously, if a technology meets all three of the substantial similarity criteria, it would be considered substantially similar to an existing technology and, therefore, would not be considered “new” for purposes of new technology add-on payments.

With regard to the first criterion, whether a product uses the same or a similar mechanism of action to achieve a therapeutic outcome, according to the applicant, CivaSheet® does not have a similar mechanism of action in comparison to existing brachytherapy technologies. The applicant asserted that the unique construction and configuration of the CivaSheet® device permits delivery of radiation intra-operatively in a highly targeted fashion. The applicant explained that the CivaSheet® is cut to size in the operation room (OR) and conformed to the patient’s anatomy and surgical site,

which allows radiation to be delivered to the resected tumor bed margins at the time of the original surgery. The applicant further explained that, it is generally believed that “hot” spots should be avoided in the delivery of radiotherapy because they lead to complications, citing the finding that “[i]n brachytherapy, dose homogeneity is difficult to achieve, but efforts to minimize “hot” spots have been regarded as virtuous and implant-planning guidelines were developed to assist in this regard.”⁴⁸ The applicant stated that implants are rarely geometrically perfect and, to avoid under-dosing some parts of the target volume, it may be necessary to create “hot spots” in other parts of the anatomy. However, as a result, a “hotter” dose compared to that achievable with external beam technologies can be delivered to the intended area. In contrast, the applicant indicated that CivaSheet®’s unidirectional configuration substantially reduces the dose delivered to neighboring radiosensitive structures. The applicant further stated that other forms of radiation delivery do not have these capabilities, and no other shielded low-dose radiation (LDR) sources are currently available on the market. According to the applicant, external beam radiation generally cannot be delivered intra-operatively, partly because dosage requirements make this impractical and potentially risky and because appropriate aiming cannot be computed in the timeframe of a performed surgery.

The applicant believed that, in the absence of the use of the CivaSheet® device, a patient requiring radiation therapy to accompany surgery would most likely receive radiation therapy as an outpatient service following the inpatient hospitalization after surgery. Moreover, the applicant stated that not only does this typically require multiple, fractionated treatments, in some cases, outpatient external beam radiation may not be possible due to excessive toxicity to normal surrounding tissues. According to the applicant, radiation therapy can be delivered intra-operatively directly to surgical margins through use of a linear accelerator. However, the applicant stated that these technologies deliver radiation in a single “flash,” whereas

the CivaSheet® device enables the delivery of radiation over time, increasing the efficacy of the radiation therapy.

Further, the applicant stated that external beam radiation devices have a fixed ball or cone-shaped applicator, which does not necessarily conform well to the irregular shapes of surgical cavities or permit effective screening of adjacent tissues. Additionally, the applicant stated that this form of radiation therapy requires a specialized linear accelerator and a specially shielded operating room, which the applicant believes restricts its use to IPPS-exempt cancer centers.

The applicant further stated that, in the past, cylindrical brachytherapy seeds have been used with various mesh products as a form of intra-operative radiation therapy (IORT). However, according to the applicant, the use of cylindrical brachytherapy seeds used with various mesh products has not developed as part of standard clinical practice. According to the applicant, patients treated with previous cylindrical brachytherapy seeds faced considerable challenges with toxicity from the unfocused, unshielded seed sources when placed in proximity of sensitive organs.⁴⁹ Additionally the surgical meshes previously used were not designed to maximize source orientation and spacing, and also ran the risk of source dispersion as the mesh degraded.⁵⁰

The applicant maintains that the CivaSheet® is the first low-dose radiation (LDR) brachytherapy device designed specifically for the delivery of IORT. CivaSheet®’s individual brachytherapy sources are flat with a gold shielding on one side of the seed, a design that focuses radiation in one direction, in contrast to the cylindrical shape of LDR brachytherapy seeds, which emit radiation in all directions. According to the applicant, properties of the flat, gold-shielded sources and the bioabsorbable polymer encapsulation make the CivaSheet® uniquely suited for intra-operative delivery. As such, the applicant asserted that the CivaSheet® does not have a similar mechanism of action when compared to existing LDR brachytherapies.

With regard to the second criterion, whether a product is assigned to the same or similar MS-DRG, the applicant

828	Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Major O.R. Procedure without CC/MCC.

We believe that cases involving the use of existing technologies would be assigned to these same MS-DRGs listed above.

With regard to the third criterion, whether the use of the technology involves the treatment of the same or similar type of disease and the same or similar patient population, according to the applicant, clinical conditions that may require use of the CivaSheet® include treatment of the same patient population as those who have been diagnosed with a variety of types of cancer, including pancreatic cancer, colorectal cancer, anal cancer, pelvic area/gynecological cancer, retroperitoneal sarcoma and head and neck cancers.

The applicant asserted that the CivaSheet® device is not substantially similar to any existing technology because it uses a unique mechanism of action, when compared to existing LDR brachytherapy technologies, to achieve a therapeutic outcome and, therefore, meets the newness criterion.

We are inviting public comments on whether the CivaSheet® device meets the newness criterion.

With regard to the cost criterion, the applicant conducted the following analysis to demonstrate that the technology meets the cost criterion. To determine the MS-DRGs that potential cases representing patients who may be eligible for treatment involving CivaSheet® would map to, the applicant identified all MS-DRGs for cases that included ICD-10-CM diagnosis codes for either pancreatic cancer, colorectal cancer, anal cancer, pelvic area/gynecological cancer, retroperitoneal sarcoma and head and neck cancers as a primary or secondary diagnosis. Based on the FY 2017 MedPAR Hospital Limited Data Set (LDS), the applicant identified a total of 22,835 potential cases. The applicant limited its analyses to the most relevant 32 MS-DRGs, which represented 80 percent of all the cases. The applicant excluded the following cases: Statistical outliers which the applicant defined as 3 standard deviations from the geometric mean, HMO cases and claims submitted only for graduate medical education payments and cases at hospitals that were not included in the FY 2019 IPPS/LTCH PPS final rule impact file (the

applicant noted that these are predominately cancer hospitals not subject to the IPPS). After applying the trims above, the applicant identified 17,173 remaining cases.

Using the 17,173 cases, the applicant determined an average case-weighted unstandardized charge per case of \$122,565. The applicant standardized the charges for each case and inflated each case's charges from FY 2017 to FY 2019 by applying the outlier charge inflation factor of 1.085868 from the FY 2019 IPPS/LTCH PPS proposed rule (83 FR 20581). The applicant indicated that the current average cost of the CivaSheet® device is \$24,132.86. The applicant then added charges for CivaSheet® by taking the cost of the device and converting it to a charge by dividing the costs by the national average CCR of 0.309 for implants from the FY 2019 IPPS/LTCH PPS final rule (83 FR 41273). The applicant calculated an average case-weighted standardized charge per case of \$188,897 using the percent distribution of MS-DRGs as case weights. Based on this analysis, the applicant determined that the final inflated average case-weighted

standardized charge per case for CivaSheet® exceeded the average case-weighted threshold amount of \$87,446 by \$101,451.

We note that the inflation factor used by the applicant was the proposed 2-year inflation factor, which was discussed in the FY 2019 IPPS/LTCH PPS final rule summation of the calculation of the FY 2019 IPPS outlier charge inflation factor for the proposed rule (83 FR 41718 through 41722). The final 2-year inflation factor published in the FY 2019 IPPS/LTCH PPS final rule was 1.08864 (83 FR 41722), which was revised in the FY 2019 IPPS/LTCH PPS final rule correction notice to 1.08986 (83 FR 49844). However, we note that even when using either the final rule values or the corrected final rule values published in the correction notice to inflate the charges, the final inflated average case-weighted standardized charge per case for CivaSheet® would exceed the average case-weighted threshold amount. We are inviting public comments on whether the CivaSheet® meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that CivaSheet® represents a substantial clinical improvement over existing technologies because it provides the following: (1) Improved local control of different cancers;⁵¹ (2) reduced rate of device-related complications;⁵² (3) reduced rate of radiation toxicity;⁵³ (4) decreased future hospitalizations;⁵⁴ (5) decreased rate of subsequent therapeutic interventions;⁵⁵ (6) improvement in back pain and appetite in pancreatic cancer patients⁵⁶ and (7) improved local control for pancreatic cancer patients.⁵⁷

With regard to improved local control of different cancers, the applicant provided the clinical outcomes results of a 20-month report of a patient who had been diagnosed with leiomyosarcoma of the pelvic sidewall.⁵⁸ According to the report, the purpose of the report was to document the experience of using the CivaSheet® implant as adjuvant intraoperative treatment in a patient who had been diagnosed with locally advanced leiomyosarcoma of the lateral pelvic sidewall. The patient analyzed in this report is a 62-year-old African American male who was found to have a mass incidentally in the left pelvic sidewall. The patient presented with lower abdominal pain, hematuria, and lower left flank pain radiating to the left groin. A CT scan revealed a mass in the left pelvic sidewall that measured 8.1 x 6.4 x 3.7 cm, with encasement of the left common iliac vein and no distant metastasis. A biopsy revealed a high-grade leiomyosarcoma. Given his advanced clinical stage and iliac vein encasement, neoadjuvant pelvic radiotherapy with IMRT, surgical resection with reconstruction, and a boost with intraoperative LDR brachytherapy were performed. The patient was treated with pelvic IMRT (50.4 Gy/28 fractions). The patient then underwent gross total resection and the CivaSheet® was implanted intraoperatively. The patient recovered well from the interventions, according to the report. At 20 months after implantation of the LDR brachytherapy device, clinical evaluations and CT imaging surveillance demonstrated no evidence of residual disease, according to the report.

With regard to reducing the rate of device-related complications, the applicant summarized four case series. In the four case series, the CivaSheet® device was used to treat: (1) Axillary squamous cell carcinoma;⁵⁹ (2) retroperitoneal sarcoma;⁶⁰ (3)

⁵⁸ Castaneda, S.A., Emrich, J., Bowne, W.B., Kemmerer, E.J., Sangani, R., Khalili, M., Rivard, M.J., Poli, J., "Clinical outcomes using a novel directional Pd-103 brachytherapy device: 20-month report of a patient with leiomyosarcoma of the pelvic sidewall," ACRO 2018 Annual Meeting.

⁶⁰ Zhen, H., Turian, J.V., Sen, N., et al., "Initial clinical experience using a novel Pd-103 surface applicator for the treatment of retroperitoneal and abdominal wall malignancies," *Advances in Radiation Oncology*, 2018, vol. 3, pp. 216–220.

⁶¹ Howell, K.J., Meyer, J.E., Rivard, M.J., et al., "Initial Clinical Experience with Directional LDR Brachytherapy for Retroperitoneal Sarcoma," submitted *Int J of Rad Onc Biol Phys*, 2018.

gastric signet ring adenocarcinoma; (4) pancreatic cancer; and (5) other abdominal malignancies. There were 13 patients associated with these 4 case series.

Seneviratne, et al.'s case series report documented experience with the use of the CivaSheet® device in a 78 year old male patient who had been diagnosed with axillary squamous cell carcinoma. According to the case series report, prior to surgery a dose of 58 Gy, prescribed to the 95 percent isodose line (±5 percent), was delivered in 2 Gy fractions with 3-dimensional conformal EBRT with concurrent weekly administration of cisplatin 40 mg/m² at an outside facility. Magnetic resonance imaging scans obtained 3 months post-treatment revealed that the mass had decreased in size to 3.8 cm x 2.5 cm x 3.9 cm, but maintained encasement of the axillary artery, axillary vein, and several inferior branches of the brachial plexus. Concerns with regard to increased toxicity to the axillary structures discouraged further EBRT, and the CivaSheet® device was implanted immediately post tumor resection. Given that microscopic disease within formerly irradiated tissue was being treated, a prescription dose of 20 Gy at 5 mm from the surface of the mesh was considered adequate because of its delivery of a biologically effective dose (BED)-10 of 39.8 Gy and equivalent dose (EQD)-2 of 33.2 Gy to the tumor bed, while limiting the D2cc for the brachial plexus to a BED3 of 27.9 Gy and EQD2 of 16.7 Gy, based on post implant analysis. According to the Seneviratne, et al. analysis, this approach allowed for a significantly limited dose to be delivered to the brachial plexus. A composite dose constraint of D2cc of 75 Gy was selected on the basis of recent data showing elevated clinical brachial plexopathy rates beyond this threshold. This constraint was met with an estimated composite EQD2 of 74.7 Gy, which, according to the applicant, would not have been obtainable with EBRT to a tumor bed EQD2 of greater than or equal to 30 Gy. The patient was discharged on the same day with instructions on wound care and radiation safety. According to the applicant, the incision healed well, with no signs of infection, seroma, or lymphadenopathy during monthly follow-up visits. At the 8-month follow-up visit, the patient was documented to only have minor shoulder pain. Seneviratne, et al., also discussed their views on the advantages of the use of

⁶² Turian, J.V., "Emerging Technologies for IORT: Unidirectional Planar Brachytherapy Sources," Presented at AAPM 2017 Annual Meeting.

the CivaSheet® device, which include its bio-absorbability, ease of visualization with imaging, potential for intra-operative customization, ability to complement various treatment approaches including EBRT and surgical resection, and ease of implantation with minimal training.

To further substantiate its assertions of a reduced rate of device-related complications regarding the CivaSheet® device, the applicant stated that its malleability is likely to be particularly useful in treating irregularly shaped surgical cavities, such as those created after breast lumpectomies or pelvic side wall resections. According to the applicant, the CivaSheet® device also overcomes several shortcomings observed even among those LDR mesh devices that use the same isotope. According to the applicant, as the vicryl sutures of traditional LDR mesh devices bend and curve around irregular surfaces during placement, the spacing and orientation of the radioactive seeds may be altered, leading to unpredictable variations in isodose geometry. The applicant stated that, in contrast, the polymer encapsulation of the Pd-103 Civa seeds before embedding within the membrane allows the sources to maintain their orientation in space and deliver radiation in accordance with the predetermined geometry. According to the applicant, additionally, unlike older LDR mesh devices that run the risk of source dispersion after mesh degradation, the polymer encapsulation allows the seeds to maintain their placement even as the membrane is absorbed over time. In this same case study, Seneviratne, et al., stated that a 3-month post implantation imaging of the CivaSheet® device demonstrated that the radioactive source geometry had remained stable since the initial implantation.

The applicant also provided Howell, et al.'s case series results of six patients diagnosed with recurrent retroperitoneal sarcoma who had been treated with the use of the CivaSheet® device to support its claims of reduced rate of toxicity and improved local control. Similar to the Seneviratne, et al. case series report, Howell, et al.'s case series' report also noted concerns regarding prior EBRT, costs associated with intra-operative radiation therapy both for the patient and the hospital, and concerns of at-risk surrounding anatomic structures. Given these concerns, Howell, et al.'s case series report also investigated LDR brachytherapy using CivaSheet®. Amongst the six patients observed, five patients had diagnoses of recurrent disease in the retroperitoneum or pelvic side wall; one patient had a diagnosis of

locally-advanced leiomyosarcoma with no previous treatment. Regarding prior treatment, two patients had prior EBRT at first diagnosis. Four patients received neoadjuvant EBRT prior to surgery in addition to treatment involving CivaSheet® brachytherapy. The LDR brachytherapy dose was determined using radiobiological calculations of biological effective dose (BED) based on the linear-quadratic model and EQD2 values. An LDR brachytherapy dose of 20 to 60 Gy (36 Gy mean) was administered, corresponding to BED values of 15 to 53 Gy (29 Gy mean) and EQD2 values of 12 to 43 Gy (23 Gy mean). Because the goal was to provide a conformal radiation boost for an additional 15 to 20 Gy EQD2, the prescribed absorbed doses were considered appropriate. All patients were followed by CT scan to assess implant migration, observed radiation-related toxicities, and evidence for local recurrence between 2.5 weeks and 3 months. No evidence of implant migration or radiation-related toxicities was found. Based on these results, the study concluded that LDR directional brachytherapy delivered a targeted dose distribution that was successfully used to treat retroperitoneal sarcoma, and that the utilized device is an important option for the treatment of patients who have been diagnosed with retroperitoneal sarcoma having close/positive surgical margins and/or in combination with EBRT to optimize local control.

Two other case series, by Zhen, H. et al.,⁶³ and Turian, et al.,⁶⁴ were submitted by the applicant to support the assertion of reduced rate of device-related complications. Both case series assessed the use of LDR brachytherapy using the CivaSheet® device in the tumor bed given the same clinical challenges outlined in case series observed and investigated in the Seneviratne, et al., and Howell, et al. analyses in patients previously treated with chemoradiation protocols and in patients who had been diagnosed with recurrent tumors close to important functional tissues. Both case series assessed LDR brachytherapy using the CivaSheet® device in the treatment of different cancers like retroperitoneal sarcomas, pancreatic cancers, and gastric signet ring adenocarcinoma or other abdominal carcinomas. Both case

⁶³ Zhen, H., Turian, J.V., Sen, N., et al., "Initial clinical experience using a novel Pd-103 surface applicator for the treatment of retroperitoneal and abdominal wall malignancies", *Advances in Radiation Oncology*, 2018, vol. 3, pp. 216–220.

⁶⁴ Turian, J.V., "Emerging Technologies for IORT: Unidirectional Planar Brachytherapy Sources," Presented at AAPM 2017 Annual Meeting.

series followed the patients with CT imaging sometime between 2.5 weeks and 86 weeks. Both case series' study concluded that LDR brachytherapy with the use of the CivaSheet® device was a feasible alternative treatment modality for the cancers treated in each case series. According to Zhen, et al., an advantage of using the CivaSheet® device is that the CivaDot sheets can be easily cut to any size and shape at the time of implant. The author further stated that the CivaDot sheet is malleable and can conform to curved surfaces. This device characteristic, according to the author, gives the physician more flexibility to treat tumor beds with irregular shapes and surface curvatures compared with electron beam cylindrical applicators, thereby reducing the rate of device-related complications. However, the analysis by Zhen, et al. also indicated that a limitation in dosimetric evaluation using CT imaging is related to the inability to identify the orientation of the individual CivaDot mainly because of limited resolution and metal artifact caused by the gold plating. CivaDot orientation is inferred from the fact that all dots are embedded in a membrane that is sutured to the tumor bed and because the post-implant CT scan shows the shape of the CivaSheet® seeds being maintained. Also, Zhen, et al. noted that surgical clips could be mistakenly identified as CivaDots. The analysis by Zhen, et al. recommended that the use of surgical clips should be minimized.

With regard to the reduced rate of toxicity, the applicant provided a clinical case series by Howell, et al.⁶⁵ to show that shielding healthy tissues while irradiating the tumor bed after surgical resection was achieved by providing a conformal radiotherapy, a novel Pd-103 low-dose rate (LDR) brachytherapy device. Methods and materials of the case include the following: The LDR brachytherapy device was considered for patients who had been diagnosed with recurrent retroperitoneal sarcoma, had received prior radiotherapy to the area, and/or had anatomy concerning for high-risk margins predicted for recurrence after resection. The case series included the clinical conclusions for five patients who had been diagnosed with recurrent disease in the retroperitoneum or pelvic side wall, one patient who had been diagnosed with locally-advanced leiomyosarcoma with no previous treatment, two patients who had prior

⁶⁵ Howell, K.J., Meyer, J.E., Rivard, M.J. et al., "Initial Clinical Experiences with Directional LDR Brachytherapy for Retroperitoneal Sarcoma," submitted to *Int J of Rad Onc Biol Phys*, 2018.

EBRT at first diagnosis, and four patients who received neoadjuvant EBRT prior to surgery in combination with brachytherapy. The LDR brachytherapy dose was determined using radiobiological calculations of biological effective dose (BED) based on the linear-quadratic model and EQD2 values. An LDR brachytherapy dose of 20 to 60 Gy (36 Gy mean) was administered, corresponding to BED values of 15 to 53 Gy (29 Gy mean) and EQD2 values of 12 to 43 Gy (23 Gy mean). Because the goal was to provide a conformal radiation boost for an additional 15 to 20 Gy EQD2, the prescribed absorbed doses were considered appropriate. According to the applicant, results showed that radiation was delivered to the at-risk tissues with minimal irradiation of adjacent healthy structures or structures occupying the surgical cavity after tumor resection. According to the applicant, clinical outcomes indicated feasibility for surgical implantation and promising results in comparison to current standards-of-care. The device did not migrate over the course of follow-up and there were no observed radiation-related toxicities.

The Howell, et al. clinical case series concluded that LDR directional brachytherapy delivered a targeted dose distribution that was successfully used to treat retroperitoneal sarcoma and that the utilized device is an important option for the treatment of patients who have been diagnosed with retroperitoneal sarcoma having close/positive surgical margins and/or in combination with EBRT to optimize local control.

The applicant also cited three additional case series to support their assertions of reduced rate of device-related complications and reduced rate of radiation toxicity. The first is on file at CivaTech in which they indicated that more than 60 patients, since 2015, had CivaSheet® implanted with no reported device-related toxicity in patients previously treated with maximal EBRT. No other details were provided by the applicant. The second case series by Taunk, et al.⁶⁶ assessed the use of CivaSheet® in three patients who had been diagnosed with colorectal adenocarcinoma who had undergone prior induction chemotherapy and neoadjuvant chemoradiation. CivaSheet® was placed in the tumor bed and patients were followed with CT imaging to assess implant migration, 30-

and 90-day radiation toxicity and local recurrence. One patient was deemed not a feasible candidate because the CivaSheet® could not be uniformly opposed to the sacrum due to the degree of concavity. The other two patients underwent successful CivaSheet® implantation, and at 30 days showed stability of the device and no apparent toxicity. In the final additional case series from Rivard, et al.,⁶⁷ a single patient who had been diagnosed with pelvic side wall cancer (type not indicated) was implanted with CivaSheet® and the CivaSheet® dose distributions were compared to those of conventional low-dose rate, low-energy photon-emitting brachytherapy seeds (that is, palladium 103, Iodine-125, and Cesium-131). According to the applicant, results suggest gold-shielding CivaDots attenuate radiation for directional brachytherapy and CivaSheet® provides a therapeutic target dose, while substantially minimizing critical structure doses. In this specific case study, the applicant stated that the use of CivaSheet® showed decreased radiation to adjacent organs, such as the bowel and the bladder.

With regard to decreasing the number of future hospital visits, the applicant provided a poster presentation presented at the American Brachytherapy Society 2017 Annual Meeting. The purpose of this study was to investigate the feasibility of using intra-operative directional brachytherapy for the treatment of squamous cell carcinoma of the oropharynx. The study included a single patient who had received a prior course of external beam radiation therapy of 70 Gy in 2015. Due to positive margins near the carotid after the resection, and the increased risk of additional external radiation, brachytherapy was considered as a treatment option. CivaSheet® was used for the implant. The Pd-103 sources were spaced 8 mm apart on a rectangular grid. Unidirectional dose was achieved by a 0.05 mm thick gold disk-shaped foil on the reverse side of each source. A dose of 120 Gy at 5 mm depth was prescribed. After the resection, the entire polymer sheet was placed on the treatment area to determine the needed dimensions. The CivaSheet® device was then removed and cut to size with scissors leaving 26 Pd-103 sources remaining. The surgeon used 3.0 vicryl sutures for attachment in a concave shape over the carotid artery, where there was a positive margin. The gold

foil was positioned to protect the neck flap and closure. The surgical team completed the procedure and the patient recovered without any complications.

Results of the study showed that the sources remained in position in a concave array pattern. Due to the dose fall-off of Pd-103, the calculated dose to critical structures was minimized. Because the surgical implant of the CivaDot sheet proceeded as expected with no complications and the post-implant plan indicated that the CivaSheet® remained in position with the radioactive side contacting the treatment area, the applicant asserts that future hospital visits will be decreased because the patient will not return for EBRT.
