Automotive Products

Perfect Cable Solutions

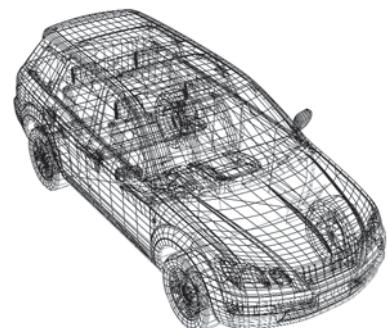

HellermannTyton

Contents

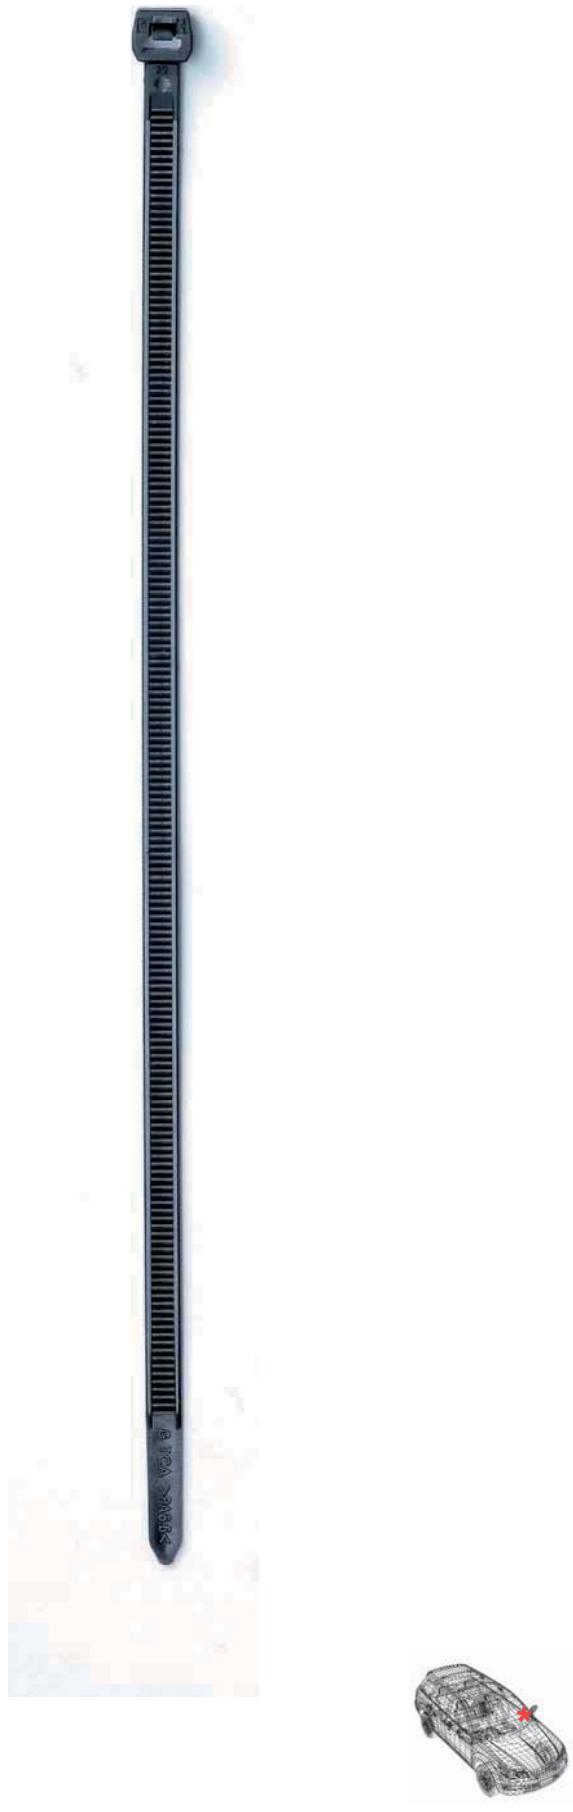

Welcome!

Our automotive catalogue is in your hands. HellermannTyton is one of the world's leading suppliers of cable management solutions. Our products are used for fastening, fixing, identification and protecting cables and their connecting components.

In this catalogue you will find our core product range for the automotive industry. It encompasses numerous standardised products and solutions, specially customised and optimised for the needs of the automotive industry. It includes cable ties, heat shrinkable tubing, braided sleeving and identification systems, together with the relevant application tooling. In addition to the "classic" cable tie, HellermannTyton also develops and produces many fastening systems, specifically created for the sophisticated demands of the automotive industry. This is why this catalogue not only presents our currently available products, but also explains how we can develop innovative products and how we can work for you.

Your Automotive Team

The-cable-tie-that-started-it-all.

This is a cable tie. One of a total of 60 000 HellermannTyton products for fastening, fixing, identification and protecting cables and wiring in the automotive industry. Cable ties exist in practically innumerable variations. Their lengths range between 83 and 1060 millimetres, available in a variety of colours. Some can be released and are re-useable. Some have serrations on the outside, others on the inside. There are some that don't have any serrations at all or can be tied in a double loop. It is easy to take the cable tie for granted but at HellermannTyton we are dedicated to ensuring that our cable ties are fully tried, tested and optimised. All HellermannTyton products, which you see in this catalogue, started at this point – even the most complex fastening solutions.

This page shows an example of a cable tie with the type description: T50ROS

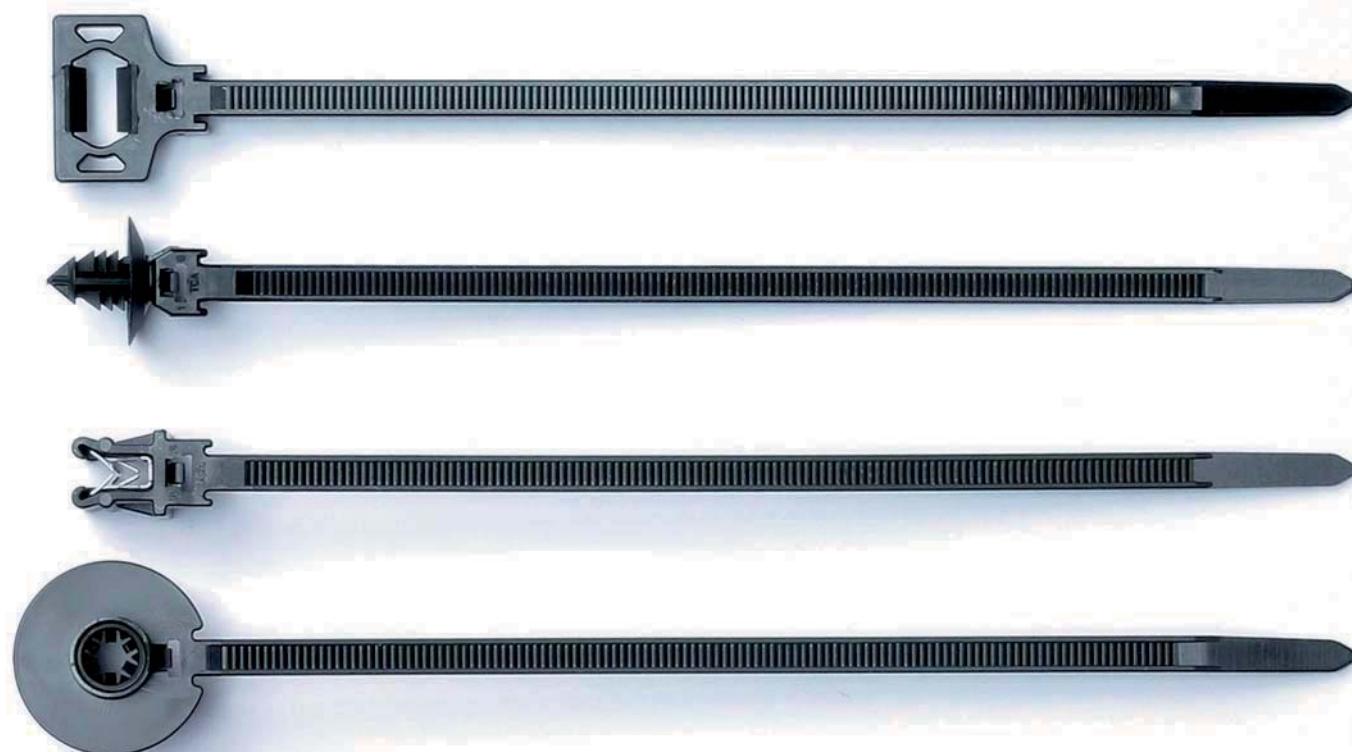

The-cable-fastener-specifically-developed-for-the-automotive-industry.

Final car door assembly: this one-piece push mount tie is the result of three decades of experience. Its arrowhead design ensures that the cable tie can be easily fitted without additional tools. In combination with a black foam rubber seal the plastic disc protects against the ingress of water. No wonder that these fixing ties can be found inside about every third car door produced in the world. In contrast to most of our other cable ties, they are green, so that workers can immediately spot a rare case where the black seal is missing. However, this almost never happens, as both parts are securely laser-welded to each other.

The green cable tie shown on this page has the type description:
T50SOSSFT6.5 16-2MD

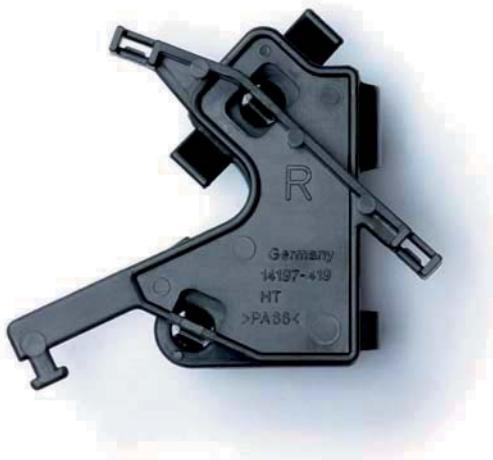

One-piece-fixing-ties-for-manual-mounting-in-drilled-holes-or-on-weld-studs-or-on-edges.

HellermannTyton standard fixing ties cover 90 % of main circuit applications in a car. These products have been proving their success for many years. Not least due to the fact that they are continually optimised. Each cable tie is a specialist in its own field: For attaching two cable ties to one weld stud. For applications, which require a particularly high tensile strength, for example in the production of heavy-duty vehicles. For quick and easy mounting on edges without drilled holes or studs. The elements with the "soft push" mechanism can be easily mounted by hand and without the aid of any tools.

As examples for many standard one-piece fixing ties this page shows cable ties with the type descriptions: T50SOSWSP5E, T50SOSFT6E1, T50SOSEC12E and T50SOSSBH5E

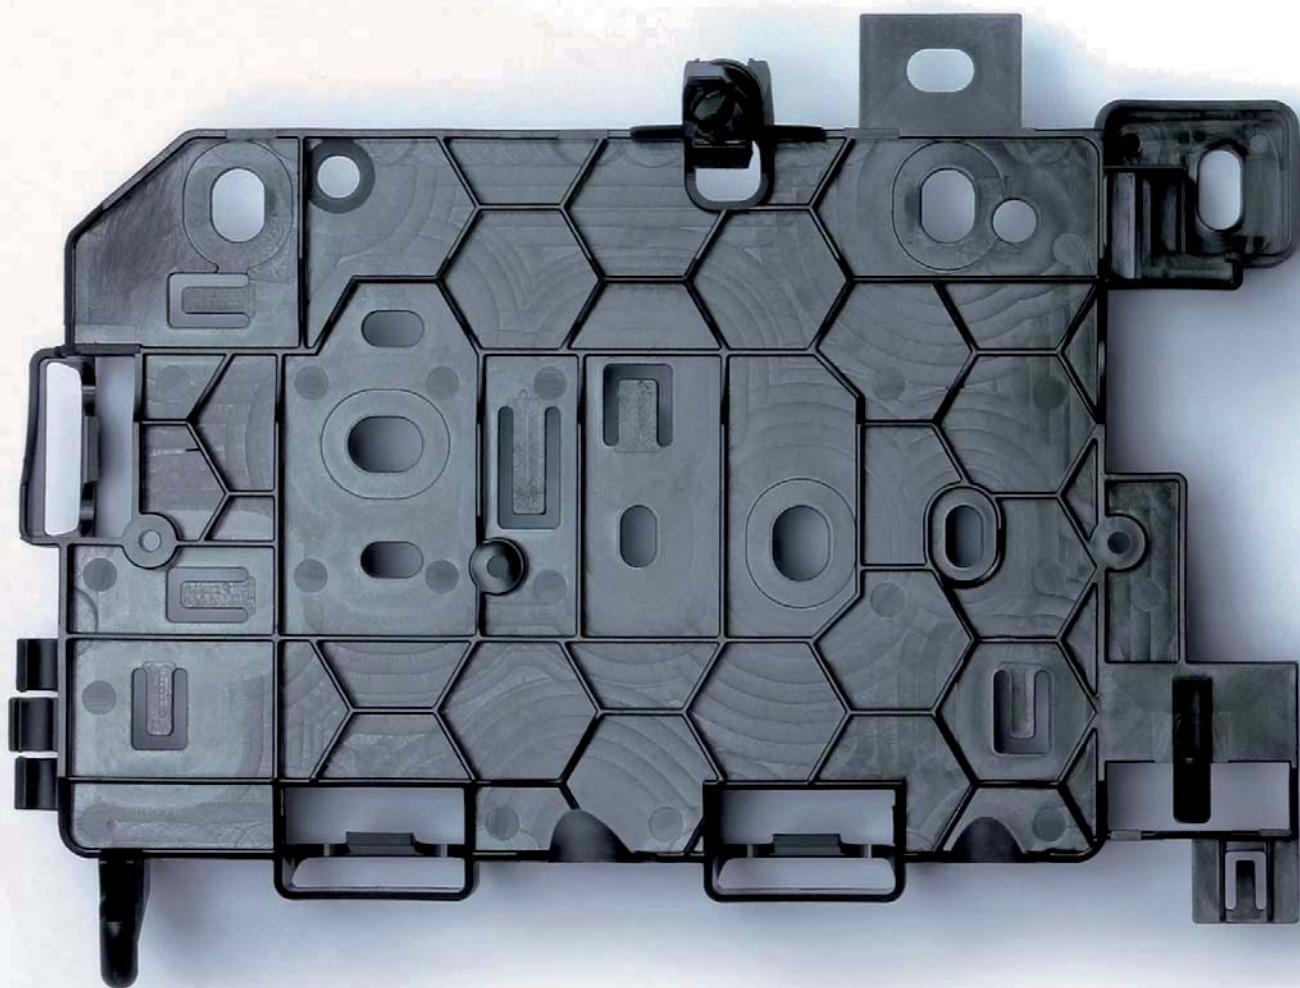

The-double-clip-that-holds-three-tubes-for-the-brake-and-antilock-brake-sensor-and-CDC-on-just-two-point-fastening-points-on-the-rear-axle.

An innovative solution, which combines two clips in one. The rear suspension construction requires a fastening element for which there are only two fastening points available and with which the lines for the brake, antilock brake sensor and CDC can be accurately routed. The result of our development is our double clip. Its arrowhead enables fast and easy mounting. The brake tube is easily assembled with a simple push. This kind of development is always accompanied by a team including a developer, a new parts project manager and key account manager – from the idea to serial production.

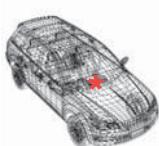

The-system-for-fastening-the-seat-adjustment-controlling-devices-and-lumbar-support-as-well-as-seat-heating-with-an-integrated-clip-bracket-and-cable-guide.

The unit for operating the numerous options of comfortable seat adjustment needs to be accommodated in a very small space. This bracket replaces the conventional metal construction for the operating unit under the seat. The innovative combination of design and

material made the development of this product possible. Its outstanding quality lies in the fact that the connector clip is also integrated in this bracket and therefore additional clips become superfluous. No question that this saves weight as well as costs.

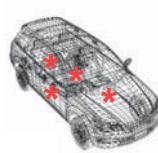

Granules-for-the-fastening-system-of-tomorrow.

We develop tailor-made products in direct collaboration with our customers – working with an international network of experienced specialists. The newest CAD- and Rapid-Prototyping-Systems and our expert knowledge flow together in our in-house mould and product development. Experienced engineers and the latest development tools guarantee you the superior quality of our products. Only this way we can provide innovative solutions to meet the most specific needs.

We look forward to developing a product for you!

The-three-points-to-start-the-thinking-process.

What is it that makes a fastening solution perfect? It's the added value that takes you and your company a step further. It can be the optimisation of a tiny detail that makes a profitable difference.

It can also be an idea for the development of a brand new product. We generally work according to three methods to get the most out of our product solutions for our customers.

1

Optimisation of existing products.

We understand the optimisation of our products as a completely independent re-engineering commitment. This means we constantly scrutinize the properties and possible applications of our complete product portfolios. In close dialogue with our customers, as only extensive market and competitive analysis keeps us up-to-date with our customers' requirements and demands. Direct collaboration with automotive manufacturers and suppliers allows us to constantly adapt and refine existing products according to contemporary manufacturing trends.

This consistent and continual development of our products allows HellermannTyton to be your reliable partner, today and in future.

2

Development of market-leading all-purpose products.

When integrated with care and consideration, plastic products are perfect substitutes for many complex fastening systems – especially multipart constructions manufactured from various materials. In this they offer prerequisites for concepts that effectively reduce costs and increase productivity in all stages of the manufacturing process. From the production process, to the functionality of the actual application through to recycling, which in most cases only involves a product made from only one engineering polymer, such as polyamide.

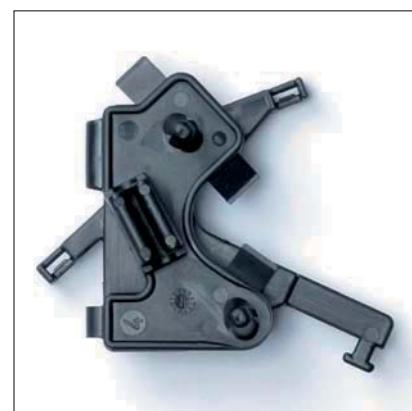

This is why we constantly invest in research and development. We are always aiming to set new global standards. Our success has proven us right: today we have over 60.000 products in our portfolio, which serve as international benchmarks.

3

Individual customer product developments.

HellermannTyton develops sophisticated engineering for complex and individual fastening solutions for a particular vehicle, series or platform in the automotive industry.

Innovative fastening solutions to meet your specific requirement profile.

Properties of polyamide PA66

Polyamides are among the most important thermoplastic synthetic materials.

Thermoplastics can be reshaped by heating as often as required without undergoing chemical decomposition or other negative changes. This makes polyamide ideal for processing via injection moulding into high-quality products. About 90% of cable ties and fixings from **HellermannTyton** are made from this material. Polyamide is also known under the brand name of Nylon®, which was introduced by the Dupont company.

The inner structure of polyamide displays a partial order of polymer chains, i.e. polyamides are partially crystalline. Due to the tighter packing of the individual molecular chains polyamide only has limited transparency to light. The plastic is therefore described as translucent.

The molecular chains of PA66 are made from two base units:

1st base unit with 6 C atoms 2nd base unit with 6 C atoms

Each base unit contains 6 carbon atoms (C). Hence the name PA66.

The polyamide PA66 has many properties which are highly advantageous for **HellermannTyton** cable ties and fixings, such as:

- High strength, rigidity and hardness
- High dimensional stability, even under the effect of heat
- High abrasion resistance

A wide-ranging selection of polyamides and additives allows for an optimum adaptation of the properties of the finished product to suit the respective requirements.

The following PA66 variants are used for **HellermannTyton** products:

- Polyamide 6.6 standard (PA66) for temperature conditions of up to +85°C
- Polyamide 6.6 heat-stabilised (PA66HS) for temperature conditions of up to +105°C
- Polyamide 6.6 UV-stabilised (PA66W) for exterior use
- Polyamide 6.6 heat-stabilised and UV-stabilised (PA66HSW) for exterior use up to +105°C
- Polyamide 6.6 impact-resistant (PA66HIR) for high elasticity requirements
- Polyamide 6.6 impact-resistant and heat-stabilised (PA66HIRHS) for high elasticity requirements and temperatures up to +105°C
- Polyamide 6.6 V0 for high standards of fire protection.

Water content in polyamide

Polyamide is a hygroscopic material - this means that it absorbs and releases water. The mechanical properties are significantly affected by the water content – especially flexibility and minimum tensile strength.

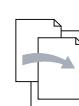

In a standard atmosphere of 23°C and 50% relative humidity, the degree of water saturation of polyamide is around 2.5%. For optimal processing of cable ties it is therefore important that the polyamide has a water content of approximately 2.5% in a state of equilibrium.

The quality and functionality of the products are thus affected by the water content, therefore the correct storage of our products is crucial. Please read our separate instructions on storage.

Since humidity is so critical to the quality of the tie, the question arises: What happens if the tie is installed and the water content in the tie alters?

The water content determines the flexibility and strength of a tie. At a water content of approximately 2.5% the tie has the ideal flexibility for installation. When the strap is being threaded through the head of the tie, the pawl must be flexible enough to "see-saw" over the serration of the strap without breaking. On the other hand, there must also be adequate material rigidity for the serrations of the pawl to engage with the serrations of the strap during the tying process so that a 'positive locking' action is achieved. After achieving the positive locking action the

tie is in a static condition. Changes in the mechanical properties of the tie as a function of water content are insignificant during this status.

For more details on the materials, see page 21.

Properties of UV-stabilised polyamide (PA66W)

The question constantly arises as to whether a black cable tie is suitable for use outside. This is dependant on the application of the tie, but in general the following statements can be made:

A black cable tie made of polyamide 6.6 standard (PA66) is only coloured black with a low proportion of carbon black. This is not sufficient to protect the material from damage caused by UV-radiation in the long term.

Products made from UV-stabilised polyamide PA66W are produced in accordance with ASTM standard D6779 with a higher carbon black percentage of approx. 2%. So they resist UV-radiation in the European area for a considerably longer period than standard PA66.

This is clearly illustrated by the comparison of the two images on the right:

After 500 hours of UV- radiation exposure

Polyamide 6.6 standard (PA66)
dyed black:

The joint has been damaged throughout by UV-radiation.

Polyamide 6.6 UV-stabilised (PA66W) with approx. 2% carbon black:

The joint has only been altered at isolated points by the UV-radiation.

For outdoor use, therefore, we recommend our range of products made from UV-stabilised polyamide (PA66W).

A simple practical test:

"the hammer test"

You can quickly determine whether or not a cable tie is UV stabilised. Strike with a hammer the tail of the strap on the tie. Hold up this flattened end to the light. Cable ties with a carbon black content of about 2% allow no light through and look black throughout. Standard black ties, however, are transparent on the flattened end.

Properties of polyamide PA12

Apart from PA66, there are polyamides which are less hygroscopic. These include PA12, which has a molecular chain made of a base unit with 12 carbon atoms:

PA12 has the following advantages over PA66:

- Less hygroscopic - saturation at 23°C and 50% relative humidity is approximately 1%.
- Better impact performance.
- Good weather resistance, even without a special additive.

These three properties make PA12 ideal for use outdoors, in particular when requirements may include impact resistance. The water absorption of PA12 is not only less than that of PA66 but also slower. This is the requirement where the mechanical properties need to remain relatively unaffected by changing environmental conditions.

Properties of polyamide PA46

Polyamide PA66, despite the use of additives, is not suitable for long-term use in temperatures of +105°C. Due to considerably better heat resistance, polyamide PA46 is more suitable for temperatures of up to and exceeding 150°C (depending on the length of time of operation).

The molecular chain of PA46 is composed of two base units:

1st base unit with 4 C atoms 2nd base unit with 6 C atoms

Advantages of PA46 over PA66:

- Greater rigidity, even at higher temperatures.
- Higher operating temperature ranges of up to +150°C (5,000 hours).
- Greater form stability at higher temperatures.
- Excellent chemical resistance.

Properties of Polyetheretherketone PEEK

PEEK, a linear aromatic polymer is semi-crystalline and is widely regarded as the highest performance thermoplastic material currently available. A summary of key physical properties is as follows:

High temperature performance

- Melting temperature of 343 °C (649 °F).
- Continuous Use Temperature of 240 °C (464 °F) (UL 746B).

Wear resistance

- Outstanding wear resistance over wide ranges of pressure, velocity, temperature and counter facial roughness.

Chemical resistance

- Excellent resistance to a wide range of chemical environments, even at elevated temperatures.
- The only common environment that dissolves it is concentrated sulfuric acid.

Fire, smoke and toxicity

- Highly stable and requires no flame-retardant additives to achieve a V-0 rating at 1.45 mm thickness.
- The composition and inherent purity of the material results in extremely low smoke and toxic gas emission in fire situations.

Hydrolysis resistance

- PEEK is not attacked by water or pressurized steam.
- Components that are constructed from these materials retain a high level of mechanical properties when continuously conditioned in water at elevated temperatures and pressures.

Purity

- PEEK materials are inherently pure with exceptionally low levels of ionic extractables.
- Excellent out gassing characteristics.

This makes PEEK the right choice for any high performance application in any industry with a clearly outstanding continuous use temperature of 260 °C.

Radiation Resistance

- Excellent Radiation Resistance due to the energetically stable chemical structure of PEEK.

Properties of Ethylenterafluorine-ethylen (E/TFE)

E/TFE can be best described as a rugged thermoplastic with an outstanding balance of properties.

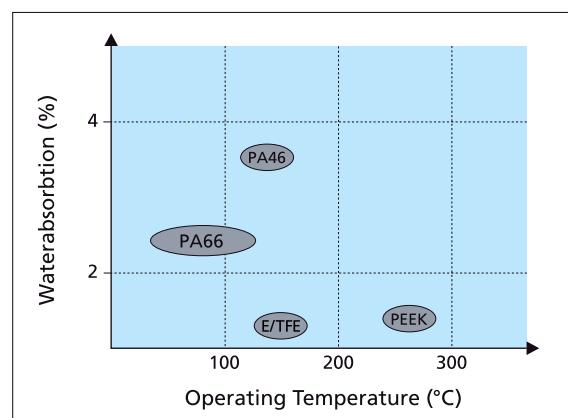

Mechanically, it is tough, has medium stiffness, impact and abrasion resistance.

Summary of key properties:

- No load continuous use temperature of 150 °C.
- Weather resistant
- Inert to most solvents and chemicals
- Hydrolytically stable
- Substantially better resistance to radiation than other plastic materials.

E/TFE can perform successfully in applications where other materials are lacking in mechanical toughness, broad thermal capability, ability to meet severe environmental conditions.

General linguistic usage for cable ties made from raw material E/TFE is Tefzel®-Tie. In addition to Tefzel® from DuPont HellermannTyton is also using equivalent E/TFE raw material from other suppliers. Tefzel® is a registered trademark of DuPont.

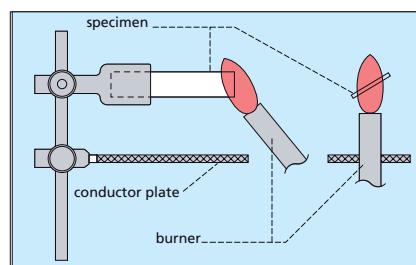

What does Flammability UL94 mean?

UL is the shortcut for Underwriters Laboratories. This is an independent organisation in the United States to control and certificate product safety.

Beside a lot of product standards UL also specified the flammability test UL94 for plastic materials. UL94 is a material burning test done on defined specimen of the raw material but not a test on final products.

UL94 differs between a horizontal burning test UL94 HB (picture 1) and a vertical burning test UL94 V (picture 2).

For the vertical test UL94 V there are three flame ratings defined: UL94 V0, UL94 V1 and UL94 V2.

UL94 HB:

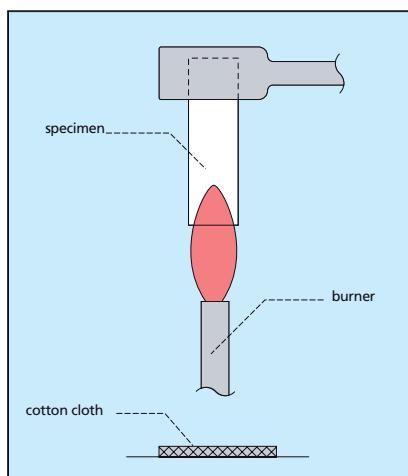

horizontal burning test

Test criteria:

- burning rate of specimen in mm/min.

Classification:

- according to HB

UL94 V:

Vertical burning test

Test criteria:

- afterflame time of specimen
- drip of flaming particles

Classification:

- according to V0, V1 or V2

In all these burning tests an open flame is applied for a certain time to the specimen. As the burning behaviour also depends on the thickness of the material it is important to classify the material not only according to HB, V0, V1 or V2 but also to mention the thickness of specimen.

Following table is a summary of test procedures and requirements of the above four UL94 classification.

	Horizontal Test UL94		Vertical Test UL94		
	HB		V0	V1	V2
Classification					
Number of specimen	3	3	5	5	5
Thickness of specimen	< 3 mm	3 to 13 mm		up to max. 13 mm	
1st flame application	30 sec.	30 sec.	10 sec.	10 sec.	10 sec.
2nd flame application	-	-	10 sec.	10 sec.	10 sec.
Burning rate	max. 75 mm/min	max. 40 mm/min	-	-	-
Afterflame time after 1st flame application for each individual specimen	-	-	max. 10 sec.	max. 30 sec.	max. 30 sec.
Afterflame time after 2nd flame application for each individual specimen	-	-	max. 30 sec.	max. 60 sec.	max. 60 sec.
Total afterflame time for all 5 specimen after 1st and 2nd flame application	-	-	max. 50 sec.	max. 250 sec.	max. 250 sec.
Afterflame or afterglow of any specimen up to its end allowed	yes	yes	no	no	no
Cotton indicator ignited by flaming particles or drops allowed	-	-	no	no	yes

Flammability behaviour on the following product pages are always related to the raw material burning rate according to UL94.

Most commonly used raw materials for cable ties and fixing elements are Polyamide 6.6 standard, Polyamide 6.6 weather resistant and Polyamide 6.6 heat stabilised. These materials normally fulfill UL94 V2 requirement.

Chemical resistances of various plastics

+ = resistant

o = partly resistant

- = not resistant

These values are only rough guides. They should be regarded as a material specification and are no substitute for a suitability test. Please see our technical datasheets for further details.

Tefzel® is a registered trademark of DuPont.

General linguistic usage for cable ties made from raw material E/TFE is Tefzel®-Tie. In additon to Tefzel® from DuPont HellermannTyton is also using equivalent E/TFE raw material from other suppliers.

Introduction to the main locking technologies used for cable ties

HellermannTyton offers a wide range of cable ties for use in different applications. By constantly refining our products and satisfying the ever-changing demands of the market, various locking technologies have been developed. Below you will find a brief overview of three most common locking technologies and their characteristics.

Cable ties with plastic pawls

This technology is used in 90% of all polyamide (PA) cable ties supplied by HellermannTyton. In order to cover a variety of applications, there are different variants of this system, for example: releasable versions, in-line versions, open head versions. These are one-piece cable ties, that is the pawl is moulded as an integral part of the cable tie, thereby building in inherent strengths.

Locking technology

Positive locking is achieved by engaging the pawl with the strap serrations. This allows the cable tie to perform to the published minimum tensile strength, that is the loading that the cable tie can hold under application (see page 0000).

KR series cable ties

This cable tie is distinguished by its smooth strap and unique locking mechanism. With the KR series the chamfered head achieves an especially firm fit around the bundled material.

Locking technology

This patented lock technology takes advantage of the excellent deformation properties of polyamide (PA). Here, the glass fibre-reinforced (GRP) locking pin (yellow) is forced into the strap by the use of an application tool - either the KR6/8 or KR8PNSE (see page 0000). The strap is deformed into the head of the tie by the application of the pin, thereby locking the cable tie in position and allowing for the bundling heavy loads.

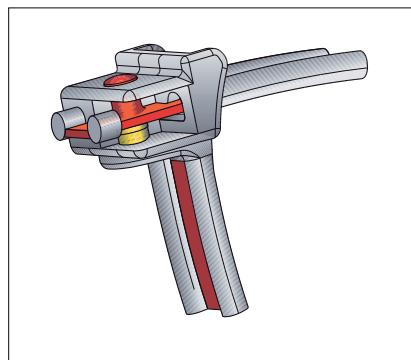

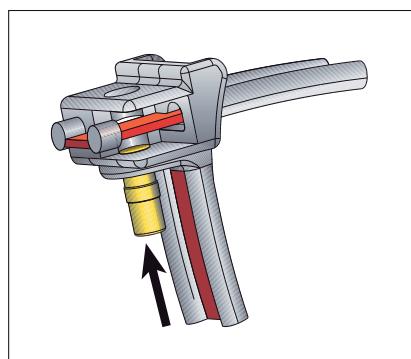

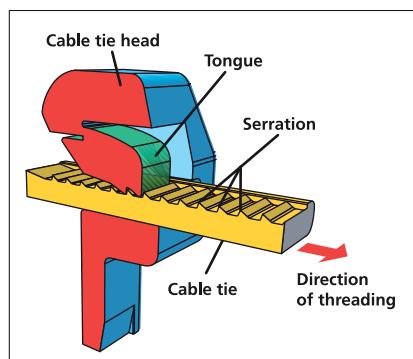

MBT series of cable ties

Made of stainless steel grades 304 or 316, the MBT range of cable ties have no serrations on the strap and are threaded parallel through the head, gliding under a metal ball-bearing locking mechanism. By using the MK9SST application tool the cable tie is tensioned and the strap cut to a flush finish.

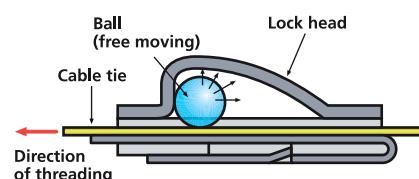

Locking technology

The strap is locked into the head by means of the small ball-bearing. The ball locks into the small end of the wedged shaped housing, forming a positive locking with the strap.

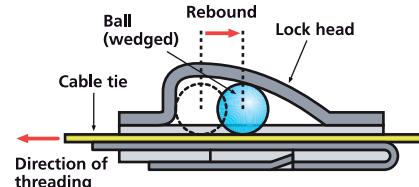

This cable tie is not suitable for rigid objects. Retraction of the ball-bearing (see drawing) is required into the small end of the wedged shaped housing to allow for a positive locking of the strap and also to make a flush cut of the end of the strap. Retraction, therefore, cannot take place with the bundling of inflexible materials. To bundle rigid objects LFPC channel should be laid as buffer between strap and bundled material to compensate for this retraction. This locking technology allows for minimum tensile strengths of up to 5400 Newton.

1. Initial position

2. Ball locks cable tie by wedging.

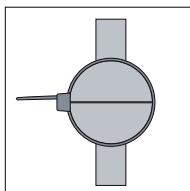

Determination of minimum tensile strength

The minimum tensile strength is a critical selection criterion for cable ties. It expresses how much loading a cable tie can bear. This minimum tensile strength is determined in

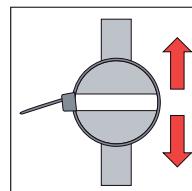

accordance with the Military Specification and Standards of the USA. Test conditions being laid down precisely in MIL-S-23190E:
 - Conditioning of the test pieces

- Construction of the test apparatus
- Application of the tie on a split test probe
- Test speed

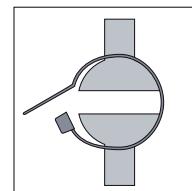

The test procedure to determine minimum tensile strength

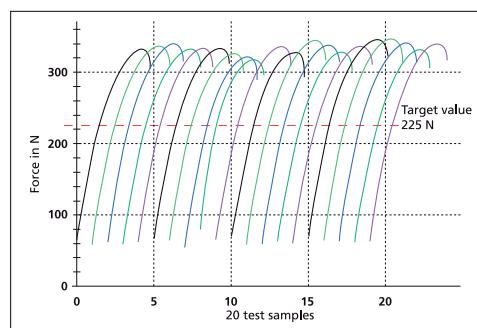

The cable tie is fixed onto a split mandrel test probe with the suitable cable tie application tool.

The mandril is opened at a defined speed.

The loading at which the cable tie fails is determined. This value is stated in Newtons (N) and is recorded through a computer programme reading the tests. This programme produces graphs as outlined below.

Typical measurement protocol of a T50R made of PA66 with a minimum tensile strength of 225 N.

Explanation of minimum tensile strengths

What does a minimum tensile strength of 225 N (50LBS) mean?

To explain what this value means, the mass with which the tie can be loaded is calculated. The unit of measurement of the mass is stated in kg. To do so, the unit Newton (N) is shown in the following way:

$$[N] = [kg \cdot m/s^2]$$

The formula for calculating the mass is:

$$\text{Mass} = \frac{\text{minimum tensile strength}}{\text{acceleration due to gravity}}$$

The acceleration due to gravity is 9.81 m/s^2 :

$$\text{Mass} = \frac{\text{minimum tensile strength}}{[kg \cdot m/s^2]} / 9.81 \text{ [m/s}^2]$$

At a minimum tensile strength of 225 N (50LBS) the mass is:

$$\text{Mass} = 225 \text{ [kg} \cdot \text{m/s}^2] / 9.81 \text{ [m/s}^2]$$

The units m/s^2 cancel each other out, leaving the unit [kg] for the mass. Thus:

$$\text{Mass} = 225 / 9.81 \text{ kg} = 22.9 \text{ kg}$$

Therefore, a T50R cable tie with a minimum tensile strength of 225 N (50LBS) can be loaded with 22.9 kg.

Conversely, with the required loading capacity the minimum tensile strength can be calculated by a mass:

$$\text{Min. tensile strength} = \text{mass} \cdot 9.81 \text{ [m/s}^2]$$

In order to withstand a load of 53 kg, the tie must therefore have a minimum tensile strength of 520 N. In this case, select our T120R with a minimum tensile strength of 535 N (120LBS).

$$225 \text{ N} / 9.81 = 22.9 \text{ kg}$$

If the tie is to be loaded with, for example, 53 kg this produces:

$$\text{Minimum tensile strength} = [53 \text{ kg}] \cdot 9.81 \text{ [m/s}^2] = 520 \text{ N}$$

$$53 \text{ kg} \cdot 9.81 = 520 \text{ N}$$

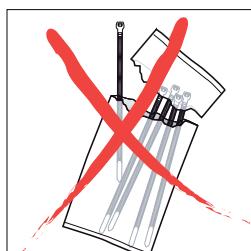

Optimum storage conditions for cable ties made of polyamide (PA)

HellermannTyton cable ties, fastenings and fixings are manufactured from high-quality polyamide (PA). This industrial synthetic material is mainly processed using injection moulding, but can also be extruded.

Polyamide is a hygroscopic material. This means that the material absorbs and loses moisture. For optimum handling of cable ties it is important that the material is in a condition of equilibrium with a water content of approximately 2.5%.

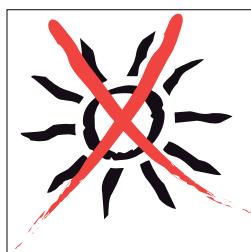

The packaging used by **HellermannTyton** ensures that the water content in the material remains constant. Therefore, it is important to store the products in their original packaging to preserve the quality of the ties.

Always store ties in the sealed plastic bag made of polyethylene!

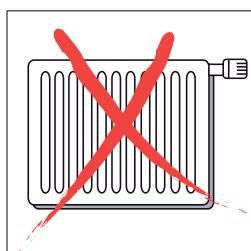

Once opened you should use the ties as quickly as possible.

Do not expose the product to direct sunlight

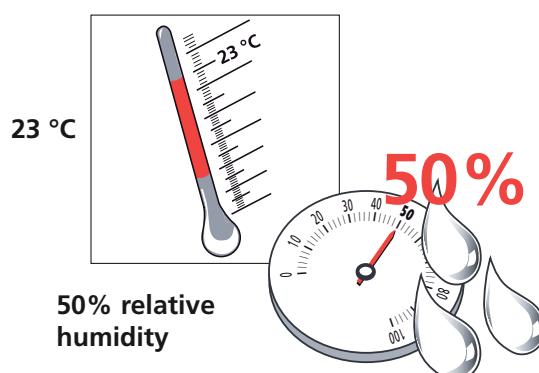

Do not store the product in sunlight; for example, on the windowsill.

Store the product away from direct sources of heat

Avoid contact with heat: for example, do not place on the radiators.

The ideal storage conditions are those of the central European standard climate:

HellermannTyton cable ties conform to DIN EN 50146 standard

HellermannTyton are a supplier of high-quality solutions for the routing, organising and securing of cables, hoses and pipes. The level of quality has been inspected by the VDE (Verband der Elektrotechnik, Elektronik, Informationstechnik e.V) [German Association for Electrical, Electronic and Information Technologies].

Cable ties from the inside-serrated T-Series and the outside-serrated OS-Series have been tested in accordance to the cable tie standard DIN EN 50146 (VDE 0604 PART 201):2000-12; EN 50146:1999-08. The result of this independent testing is complete compliance:

These cable ties therefore qualify to bear the VDE symbol.

In addition to cable ties made of the standard material polyamide 6.6 (PA66), ties made from heat-stabilised (PA66H) and UV-stabilised polyamide 6.6 (PA66W) have been successfully tested and approved.

HellermannTyton is the only manufacturer to offer cable ties with inside and outside serration with DIN approval. So all current applications in the field of electrical installation are covered.

The standard includes the following tests:

- Test of minimum installation temperature
- Test of minimum application temperature
- Minimum tensile strength
(in the standard this is described as the looping test)
- Load test and heat ageing test
- Temperature cycle test
- Contribution to spread of fire
- Corrosion resistance

The following HellermannTyton cable ties have been tested and certified:

T-Series inside-serrated cable ties

(see page 67-73) in the qualities:

Polyamide 6.6 (all colours) 38 types x 11 colours	=	418 cable ties
Polyamide 6.6 heat-stabilised (all colours) 38 types x 11 colours	=	418 cable ties
Polyamide 6.6 UV-stabilised (black) 38 types in black	=	38 cable ties

Total number of cable ties in T-Series to DIN standard 874 cable ties

OS-series outside-serrated cable ties

(see page 83-84)

Polyamide 6.6 heat-stabilised (all colours) 7 types x 11 colours	=	77 cable ties
Total number of cable ties in OS series to DIN standard	=	77 cable ties

Total number of HellermannTyton cable ties to DIN standard 951 cable ties

For further information on materials, see page 21.

Cable Ties inside serrated• **T-Series**

For the routing, bundling and securing of cables, pipes and hoses.

Features and Benefits

- Available in a wide range of material and sizes
- Made from 100% high quality plastic, allows for good recycling
- Inside serration for a strong hold onto bundles.
- Easy application either manually or with a processing tool
- Simply to insert due to bent tail

Material specification
please see page 21.

T-Series for bundling and securing of cables for a wide range of applications, available in various colours and materials.

Cable Ties for hose and garter

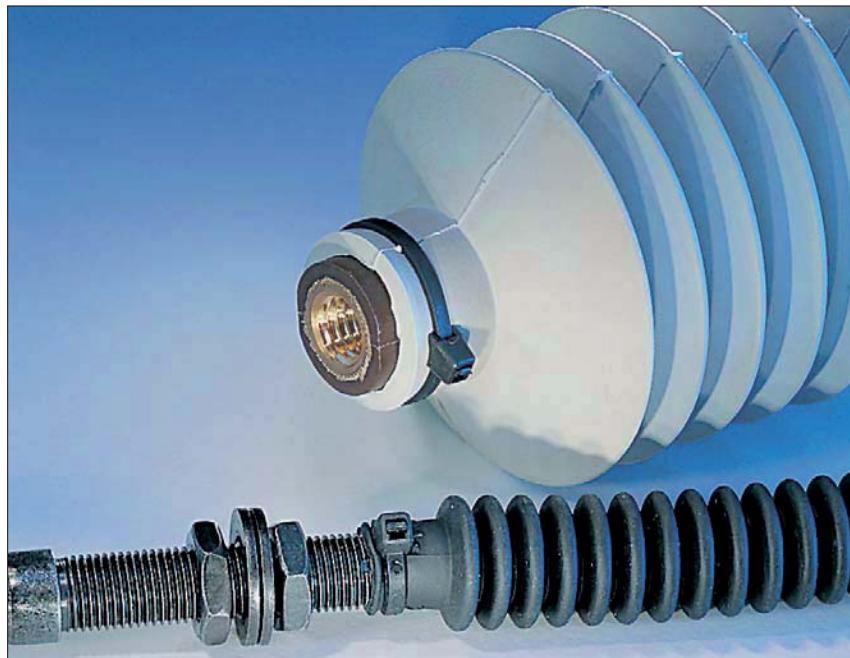

- CTT-Series up to 265 N loop tensile strength
- HT-Series up to 535 N loop tensile strength

Designed to secure pipes, hoses and gaiters, where low pressures are being secured.

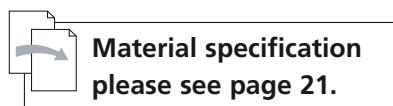

These ties can be used in many industries, including: automotive, white goods manufacturers and construction.

Features and Benefits

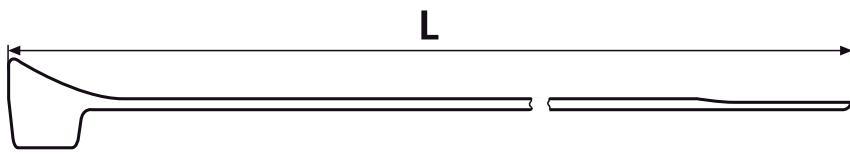

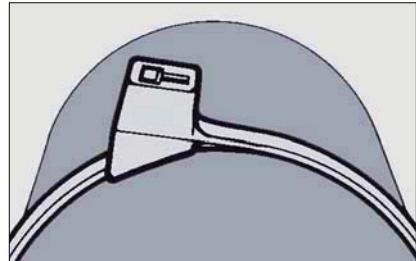

- Curved design of head offers a good fit to the bundle
- Inside serration for a positive hold onto bundles.
- Easy application either manually or with a processing tool

CTT ties installed on flexible gaiters.

Material specification
please see page 21.

For secure fixing of round and solid shapes.

Article-No.	Type	Length (L)	Width (W)	Bundle Ø max.	Min. Tensile Strength (N)	Material	Colour	Application Tool

Cable Ties for parallel routing

- DH-Series

Ideal for running two cables in parallel, but separated. These ties can be used for installation of a second cable run without the need for additional cable ties.

Features and Benefits

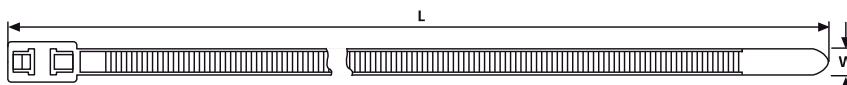

- Cable tie designed with a double head
- For parallel routing of two bundles with only one cable tie
- Bundles can be of different diameter
- Easy application either manually or with a processing tool

Parallel routing of two cable bundles using DH-Series. The double head creates an inside and an outside serrated loop.

Material specification
please see page 21.

Cable Ties for thin-walled bundles

• OS-Series

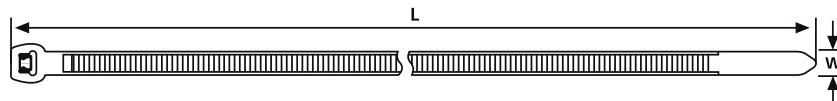

Designed originally for the automotive market these ties are now being used in many areas where thin-walled or soft insulation wires and cable are being installed, e.g. railways, aircraft, data cable installations, electronics.

Features and Benefits

- Outside serrated cable tie with smooth surface to the bundle
- Tie follows the contours of the cable bundle perfect
- Takes up less space due to curved head
- Easy insertion and high tensile strength
- For higher temperature or Limited Fire Hazard demand: Material PA46 or PA66V0
- Easy application either manually or with a processing tool

The contoured head needs less installation space, provides low insertion force and offers high strength.

The new head design of the OS Series

**Material specification

Cable Ties for high temperature application up to +240°C

- PEEK Ties

PEEK Ties have been designed for the use in hazardous environment.

Its suitability for high temperature applications makes it useful for the drilling industry, railway, offshore or automotive industry.

The excellent chemical and radium ray resistance is predestined for applications in medical engineering, chemical industry and power stations.

With regards to aerospace industry PEEK ties are suitable due to their good ratio weight to tensile strength.

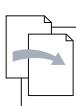

Because of this combination of different properties PEEK ties can replace metal solutions.

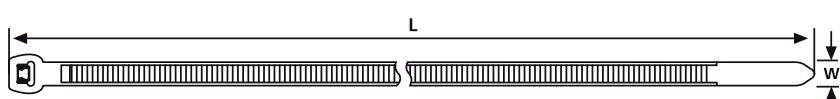

The contoured head takes up less space, gives a low insertion force and offers high strength.

Features and Benefits

- For high temperature application from -55° C up to +240° C
- Outside serrated cable tie with smooth surface to the bundle
- Close-fitting to the cable bundle due to the deepening head shape
- Easy insertion combined with high tensile strength
- Takes up less space due to curved head
- Combines performance of a metal tie with the ease of use of a polyamide cable tie.
- Easy application either manually or with a processing tool

**Material specification
please see page 21.**

Cable tie with 90° angled head• **V-Series**

The outside serrated V-Series are perfectly suitable with its low profile head for applications with restricted space like camera and alarmsystems and Automation systems (Remote I/O Systems)

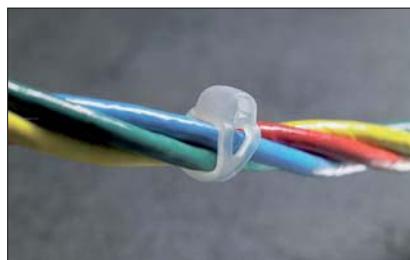

If bundles have to be fed through a grommet or ductwork the V-Series is due to its lentiform head and rounded design a practical solution.

Features and Benefits

- Outside serrated cable tie with smooth surface to the bundle
- Lentiform, 90° angled head
- Rounded head design minimizes risk to damage insulation especially of parallel routed bundles
- Head takes up less height above the bundle
- close-fitting to the cable bundle
- Easy insertion and high tensile strength
- Easy application either manually or with a processing tool

V-Series is perfect for parallel bundles.

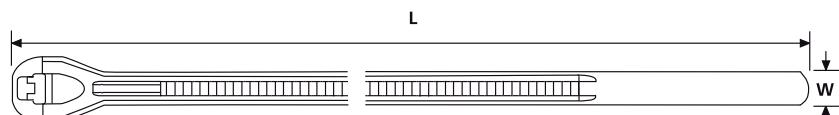

V-Series - less height above the bundle.

Outside serration means no damage of insulation.

**Material specification
please see page 21.**

Cable Tie locked by glass fibre pin

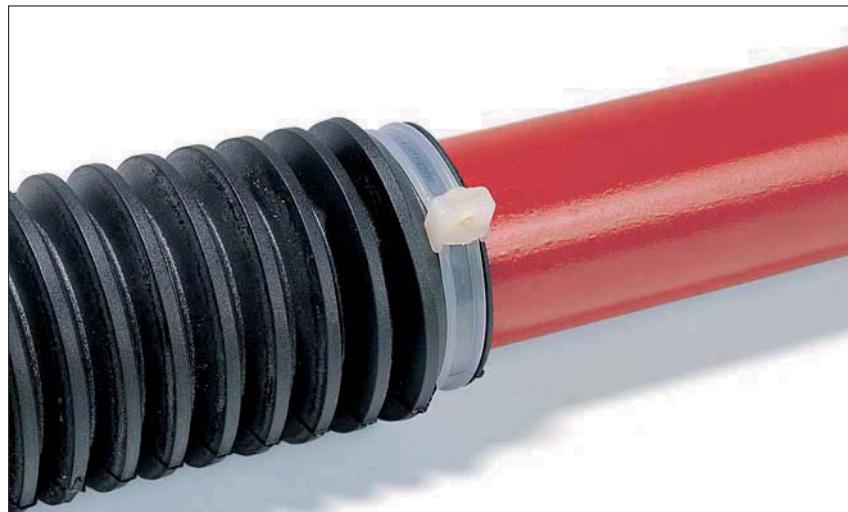

- KR-Series

In addition to offering a secure method of bundling cables the design of the KR ties make them ideal for use as a method of securing bellows on steering racks, water hoses and vacuum lines.

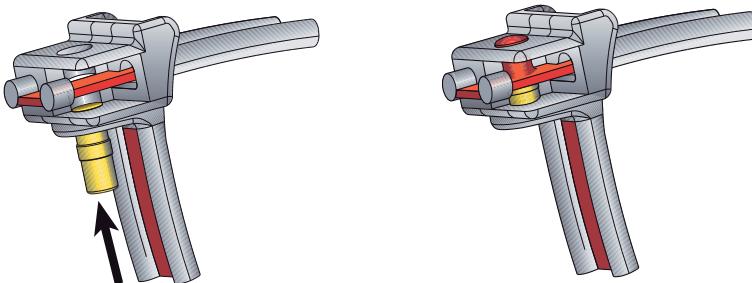

Material PA 12 is less hygroscopic and therefore constant in dimension and performance.

Features and Benefits

- Patented cable tie system consisting of:
- Smooth strap which is locked into place with a glass-fibre reinforced pin
- For assembly a special KR-tool is needed
- Very secure and vibration resistant fixing
- KR-ties up to 426 mm are made as one piece
- KR-ties 500 mm and longer have a ultra-sonic welded head
- Endless strap (50 m on reel) and separate heads KR8C5 for bundle diameters larger than 470 mm

The KR8/33 has been repeatedly proven in High Vibration applications.

The unlocked head of a KR-tie.

The cable tie (red) is locked into place with the pin.

**Material specification
please see page 21.**

Cable Ties for single hole application (Chassis Tie)

Using a single hole these 'chassis ties' are widely used in the automotive, truck and heavy equipment markets. Ideal for applications which have access to both sides of the hole - for example truck frames.

Features and Benefits

- Both sides serrated cable tie
- BHT-Series with round head for larger bearing area
- BHT375 for centered position
- CT- and DE-Series with small squared head for restricted space areas
- Tensioning with application tool

BHT375 - used for mounting cables via a single hole.

Double Band Cable Ties with Ball-Lock

• MBTXHD- / MBTUHD-Series

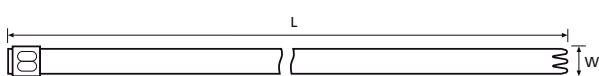

Metal ties are predestinated for all areas with requirements for high holding force, reliability and fire resistance. The double band ties of the MBT-series are used in applications where a fixing requires an extraordinary high tensile strength. This may be required on oil platform as well as in shipbuilding, mining and railway industry.

Cable Ties with Ball-Lock and Coating

- MBT-FC-Series

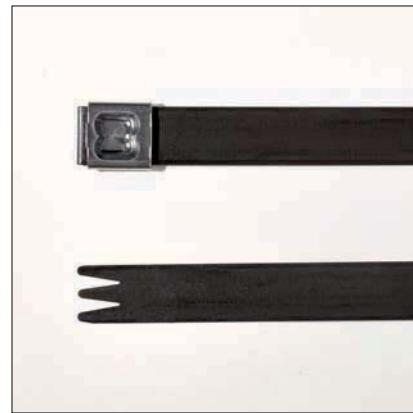

Metal ties are predestinated for all areas with requirements for high holding force, reliability and fire resistance. Stainless Steel cable ties with polyester coating provide a comfortable installation, especially when using at low temperatures. These products are chosen when high tensile strength is demanded and contact corrosion has to be avoided.

Features and Benefits

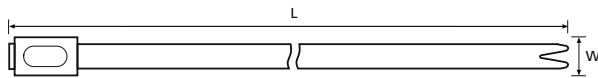

- MBT cable ties, Stainless steel SS316, fully polyester coated
- Improved installation comfort especially when used at low temperatures
- Strong tensile strength combined with the protection of plastic coating for sensitive harnesses
- Avoids contact corrosion

Cable Ties with Fold Locking

- MLT-Series
- MLT-C

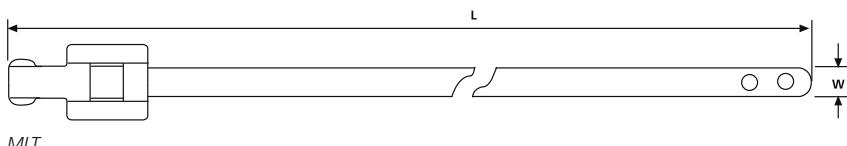

Metal ties are predestinated for all areas with requirements for high holding force, reliability and fire resistance. The MLT range of stainless steel cable ties can be used in all industries from Mass Transit, Ship building, oil rigs, mining, and chemical to theatres and exhibition halls.

Features and Benefits

- MLT metal cable ties, Stainless steel SS316
- Simple and effective locking mechanism
- Feed the strap through the locking head and tension it
- Bend the strap and crimp the buckle for closing
- Locking can be opened
- To avoid contact corrosion the MLT-Series are also available with polyester coating

These Metal ties are available with and without coating.

**Material specification
please see page 36.**

Cable Ties with Raster Locking

- MAT-Series
- MAT-C

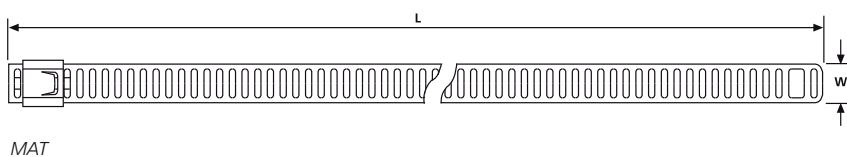

The MAT range of stainless steel cable ties can be used when durability and fire resistance is required. i.e.g. MassTransit or light and radio technology. The 12mm wide MAT ties offer a broad contact area and are therefore suitable for more damageable bundles.

Features and Benefits

- MAT metal cable ties, Stainless steel SS316
- Similar in design to conventional 'plastic' cable ties
- Locking mechanism works on a ratchet system
- To avoid contact corrosion the MLT-Series are also available with polyester coating

Stainless Steel Cable Ties can be used at temperatures up to 538° C.

 **Material specification**
please see page 36.

Protective Channel for Stainless Steel Ties

- **LFPC**

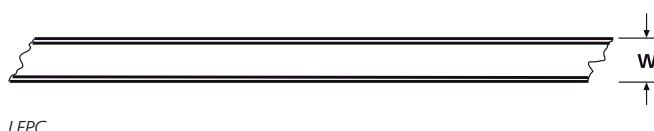

When used in conjunction with the MBT range of stainless steel cable ties this channel gives the cable protection against chafing, vibration and shock.

Features and Benefits

- LFPC channel, manufactured from Polyolefin
- Works with MBT-Series
- Smooth surface protects bundle against chafing due to vibrations
- Halogenfree
- Flame retardant

Cable tie MBTXH with LFPC Protective Channel.

LFPC

 **Material specification**
please see page 21.

 The fire protection properties of the material relate to the test performed on defined test samples. This is a test under laboratory conditions and not directly transferable to the product made from this material.

Please note! Not all products listed on this page may have this approval.
For product specific approvals please refer to the Appendix.

Application	Arrowhead	Fir Tree Mount	Rivet Wall Plug	Screw Mount	EdgeClip	Weld Stud Mount
	●	●		●		
			●	●	●	
					●	
						●

Arrowhead

This fixing tie is based on an arrowhead offering high extraction forces. The arrowhead is securely in place when a click can be heard and felt by the user.

Arrowhead with disc

The disc minimises the ingress of dust, dirt and water. Furthermore a safe fixation inside the drill hole is assured that withstands pressure from various directions.

Arrowhead with supporting legs

Arrowhead fixings with supporting legs offer good and stable fixation in drilled holes. The supporting legs generate additional pressure to assure a firm and secure fixing while taking up any variation in panel thickness. These ties are also suitable in high vibration applications.

Arrowhead without supporting legs

The arrowhead design assures good fixation while utilising lowest possible space.

Fir Tree Mount

Fir Tree Mounts can be pushed into pre-punched holes easily in panels or threaded, blind holes based on the low insertion forces. The design is ideally suited for a wide range of sheet thicknesses. The disc on top of the fir tree covers the hole and minimises the ingress of dust, dirt and water.

Weld Stud Mount

Various of the HellermannTyton weld stud mounts can easily be attached by hand ("soft push") the design offers very low insertion forces that require no tools.

The mounts can be removed by twisting to the left.

SB9 and SB14 are based on "hard push" technology and require a hammer to be applied.

Weld Stud Fixings with lateral adjustment

The special oval shape of these mounts provides a 5-6 mm lateral adjustment to cater for any misalignment of the stud or incorrect positioning of ties on the cables. The bundle can therefore be moved when mounted.

EdgeClip

The EdgeClips are specifically designed to bundle and guide cable and wires on edges. Cost intensive drill holes for fixing are no longer required. EdgeClips are easily mounted by hand, the integrated metal clamp, securely keeping the clips on the edge.

EdgeClip twistable

Ideally suited for fixations where bundles need to be flexibly guided. These EdgeClips are available with facilities for 90° or 360° rotation.

EdgeClip without metal clamp

These EdgeClips are easily attached. The holding tap snaps into the drill hole securely.

Cable & Hose Attachment

Excellent solution for subsequent attachment of pipes and wires to installed tubes.

Heavy Duty Application

These sturdy fixing ties can withstand vibrations. They are easy to apply and give a secure alignment to the bundle. There will be High tightening torque through metal bushing.

Two Piece Fixing Ties with Clip Coupler

The Coupler is an article to connect two cable ties maximum for parallel bundling of tubes, harnesses or cables. Its design enables the cable ties to rotate up to 90° and allows flexible installations.

1-Piece Fixing Ties with Arrowhead, with Disc

With a diverse range of fixing possibilities (from 4.4mm to 8.0mm hole diameters and 0.5mm to 8.0mm panel thickness) this range of fixing ties is ideal for use in many different industries, including automotive, aerospace and panel building.

Features and Benefits

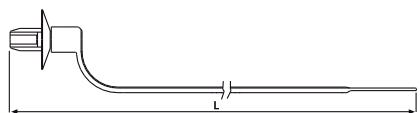

- Easy to install without the need for a tool
- Arrowhead simply locks into place
- Disc adjusts tie for pressures from various directions and minimises access of dust, dirt and water
- Cable tie head always situated in a defined position
- KSFT-types with specially rounded arrowhead minimise the assembly height

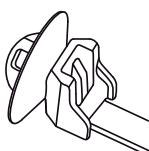

The flexible 'disc' adjusts to take up variations in panel thickness - ensuring a firm fixing at all times.

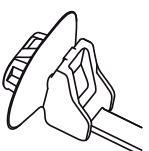

**Material specification
please see page 21.**

Special design without a gap between head and bundle; T50MD7.

1-Piece Fixing Ties with Arrowhead, with Disc, sealed

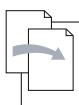

The parts are mainly used in the automotive industry, e.g. for door harnesses.

Features and Benefits

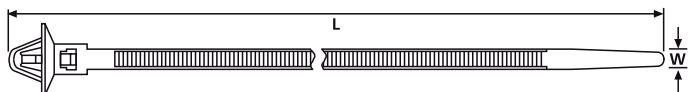

- Easy to assemble without the need for a tool
- Arrowhead simply locks into place
- Disc adjusts the tie for pressures from various directions
- Cable tie head always situated in defined position
- Cellular rubber seal minimises access of dust, dirt and water
- T50SOSSFT6,5E-MD with laser seal and T60SOSSFT6,5E-MD made from PA6.6 HS are tested acc. IEC60529 and fulfill IP67

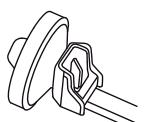

The additional seal protects against the ingress of moisture.

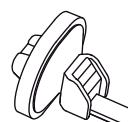

**Material specification
please see page 21.**

1-Piece Fixing Ties with Arrowhead, with Disc in the strap

These fixing ties are ideal for use in many different industries, including automotive, aerospace and panel building.

Features and Benefits

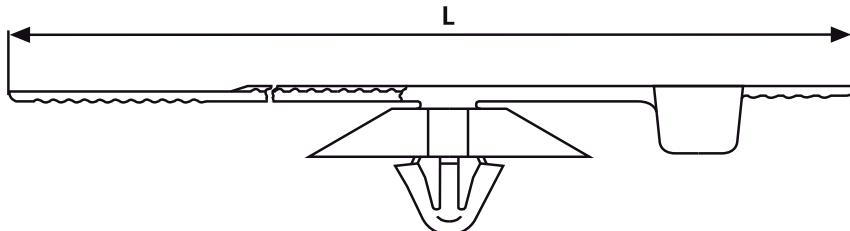

- Easy to assemble without the need for a tool
- Arrowhead simply locks into place
- Disc adjusts tie for pressures from various directions and minimises access of dust, dirt and water
- Cable tie head always situated in defined position
- Bundle runs directly across fixing point
- Simple assembly due to tab at the end of the head

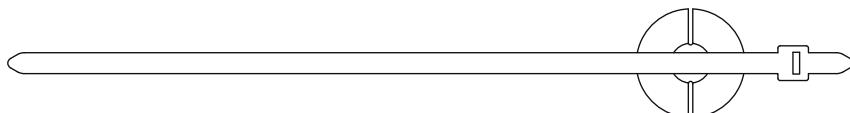

The 'tab' on the head of the tie makes it easy to locate and lift the head for assembly.

Material specification
please see page 21.

1-Piece Fixing Ties with Arrowhead, with Wings

For the bundling and fixing of cable harnesses, pipes and hoses in the automotive, aerospace, white goods industries and panel building.

Features and Benefits

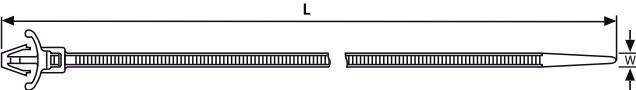

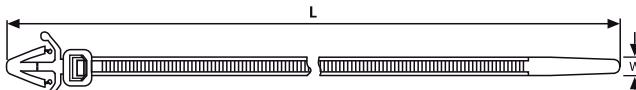

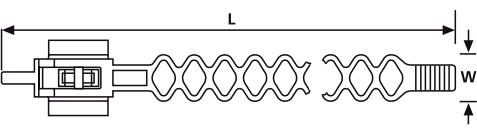

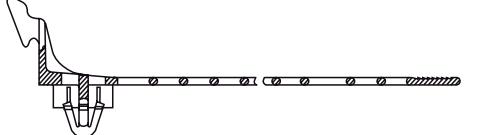

- Easy to assemble without the need for a tool
- Cable tie head always situated in defined position
- Arrowhead simply locks into place
- Supporting legs provide a secure and firm fixing in areas where space is limited
- Variations for round and oval holes are available
- "Ladder style" types are very flexible

A wide range of arrowhead fixing ties which are suitable for different panel thicknesses and hole diameters.

 **Material specification**
please see page 21.

1-Piece Fixing Ties with Arrowhead, with Wings in the strap

- **T80RSF6.5F**
- **T80RSF6.5FW with rib for convoluted tubes**

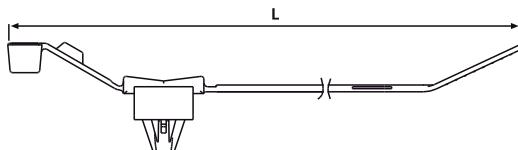

This range of fixing ties is ideal for use in many different industries, including automotive, aerospace and panel building. The T80RSF6.5FW feature a detent that fits securely into the profile of the tubing which assists from preventing lateral movement and slipping of the tubing.

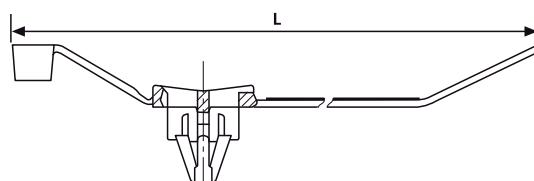

Designed to secure battery cables the T80RSF6.5F offers a simple and secure fixing.

Features and Benefits

- Easy to assemble without the need for a tool
- Arrowhead simply locks into place
- Supporting legs provide a secure and firm fixing in areas where space is limited
- Bundle runs central across fixing point
- Cable tie head always situated in defined position
- For parallel routing of two bundles

1-Piece Fixing Ties with Arrowhead

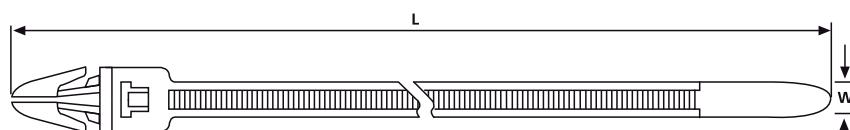

The arrowhead designs allows these fixing ties to be used in areas with limited space.

Features and Benefits

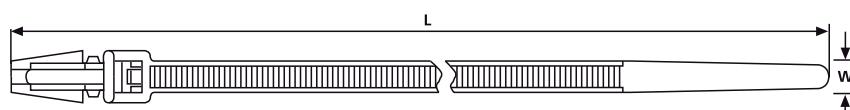

- Easy to assemble without the need for a tool
- Fixing tie with arrowhead without legs
- Arrowhead simply locks into place
- Cable tie head always situated in defined position

The arrowhead designs allows these ties to be used in areas with limited space.

2-Piece Fixing Ties with Arrowhead, with Disc

Primarily designed for fixing cable harnesses in the automotive industry, their simplicity and ease of use has resulted in these parts being used in other industries, for example: aviation, switch-gear manufacturers, white goods manufacturers.

Features and Benefits

- Pre-assembled 2-piece fixing tie with arrowhead foot part
- Cable tie head can be moved after bundling
- Easy to assemble without the need for a tool
- Arrowhead simply locks into place
- Disc adjusts tie for pressure from various directions and minimises access of dust, dirt and water

Being a two piece assembly allows the tie head to be located in the most convenient position.

**Material specification
please see page 21.**

2-Pieces Fixing Ties with Arrowhead, with Disc for high temperature applications

- **T50ROSP1SFT6.5** for panel thickness 0.7 - 1.3 mm
- **T50ROSP2SFT6.5** for panel thickness 1.7 - 2.3 mm

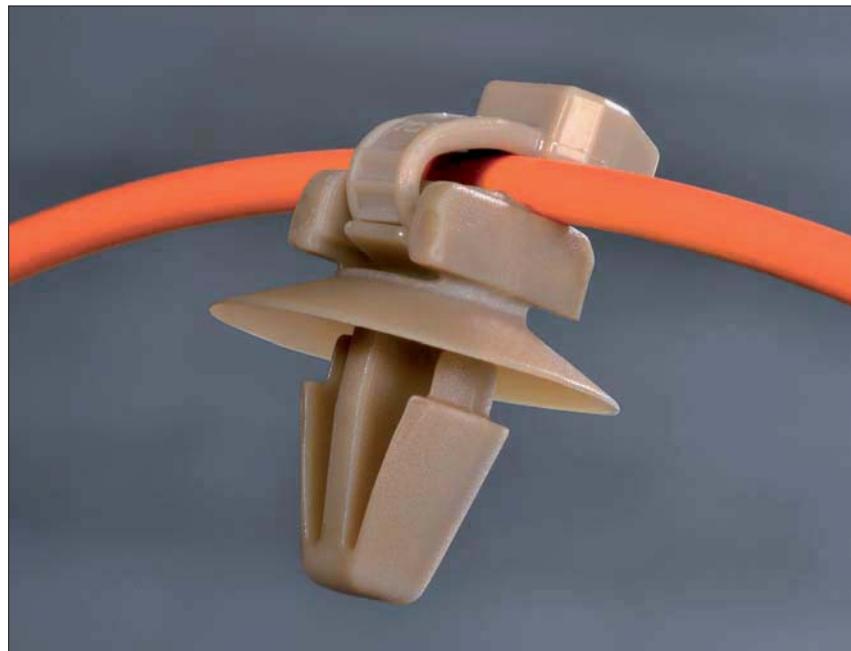

The Fixing-Ties with P1SFT6,5 and P2SFT6,5 are ideal when the requirements for temperature or chemical resistance are very high. They are used for cable harnesses in the automotive industry.

Features and Benefits

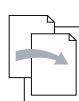

- Pre-assembled 2-piece fixing tie with arrowhead foot part
- Cable tie head can be moved after bundling
- Easy to assemble without the need for a tool
- Arrowhead simply locks into place
- Disc adjusts tie for pressure from various directions and minimises access of dust, dirt and water

Features material PEEK:

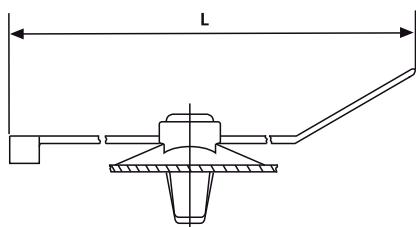

- -55 °C to 240 °C operating temperature
- Excellent resistance against chemicals and gamma radiation

PEEK FixingTies can be used for small diameters from 1.0 mm.

1-Piece Fixing Ties with Fir Tree, with Disc

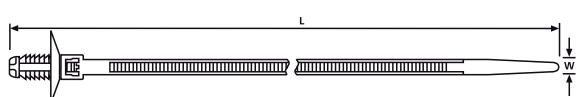

Primarily designed for fixing cable harnesses in the automotive industry their simplicity, and ease of use, has seen these parts used in everything from aircraft, to switch-gear, to washing machines.

Features and Benefits

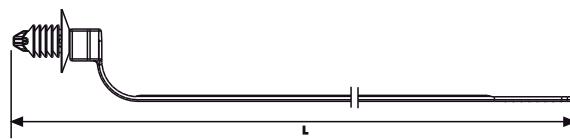

- Cable tie head always situated in defined position
- Easy to assemble without the need for a tool
- Disc adjusts tie for pressure from various directions and minimises access of dust, dirt and water
- Fir tree foot part can be used for a variety of panel thicknesses
- Suitable for use within threaded holes
- DOP versions for oval holes feature anti-twist protection

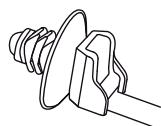

T50SOSFT6LGE

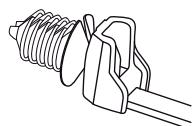

One piece fixing tie with fir tree mount, standard design.

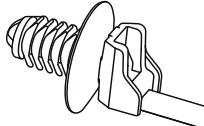

Special design without a gap between head and bundle; FT220DP7.

1-Piece Fixing Ties for Weld Studs

- **T50SOSSBH5E with plate to fix isolation material**

- Cable tie head always situated in defined position
- Easy to assemble without the need for a tool
- Can retain insulation materials while fixing a cable bundle

T50SOSSBH5E

The new head design offers additional fixing of soft materials.

Article-No.	Type	Length (L)	Width (W)	Bundle Ø max.	Min. Tensile strength for ties (N)	Stud Ø	Material	Colour
155-05701	T50SOSSBH5E	165	4.6	35.0	225	5.0	PA66HS	Black (BK)

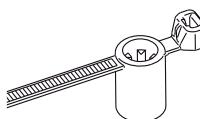

All dimensions in mm. Subject to technical changes.

**Material specification
please see page 21.**

- **T50SSBS5OTE for cable routing above the stud**

- Cable tie head always situated in defined position
- Easy to assemble without the need for a tool
- Bundle runs directly above weld stud with defined stand-off from the panel

T50SSBS5OTE

The T50SSBS5OTE allows very precise routing of cable bundles.

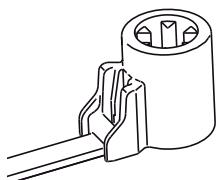

Article-No.	Type	Length (L)	Width (W)	Bundle Ø max.	Min. Tensile strength for ties (N)	Stud Ø	Material	Colour
155-30602	T50SSBS5OTE*	160	4.6	35.0	200	5.0	PA66HS	Black (BK)
157-00083	T50SSBS6OT-E*	160.0	4.6	35.0	200	6.0	PA66HS	Black (BK)

All dimensions in mm. Subject to technical changes.

* Since the bundled cables lie directly above or on the weld stud, care must be taken to ensure that the length of the weld stud does not exceed the height of the sheath. To avoid damage, we recommend a maximum weld stud length of 16.5 mm.

1-Piece Fixing Ties for Weld Studs

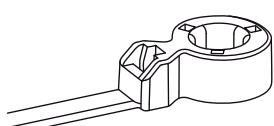

- Cable tie head always situated in defined position
- Easy to install without the need for a tool
- Bundles are routed very close to stud

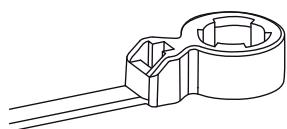

T50SOSSBS5E

This outside serrated cable tie with weld stud mounting keeps the cables close to the fixing stud.

T50SOSSBD-M8

1-Piece Fixing Ties for Weld, moveable

- WSP-Serie

- Cable tie head always situated in defined position
- Easy to install without the need for a tool
- Provides a 5 – 6 mm lateral adjustment possibility
- Very low profile, stackable design
- For bundles which need to be routed in different directions

T50SOSWSP5E-2

T50SOSWSP5E, parallel installation using two fixing ties.

**Material specification
please see page 21.**

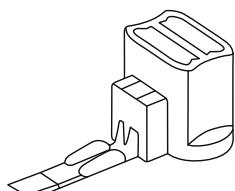

- T50SOSSB5-High-E-C-CC for 5 and 6 mm studs

- T50SOSSB6HE for 6 mm studs

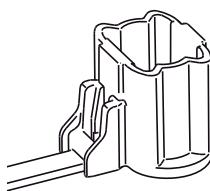

- Cable tie head always situated in defined position
- Easy to install without the need for a tool
- Provides a 5 – 6 mm lateral adjustment possibility

1-Piece Fixing Ties for Weld Studs

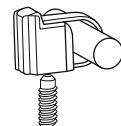

- LFC-Series for routing close to the stud

Features and Benefits

- 1-piece fixing tie for 5 mm studs
- Cable tie head always situated in defined position
- Easy to install without the need for a tool
- Bundle runs very close next to stud
- Closed stud retainer protects the bundle against damage
- Contact surface allows secure bundling with tensioning tool

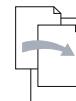

LFC165-2 for bundle diameters up to 35.0 mm

LFC165-2 can be put on by hand.

Article-No.	Type	Length (L)	Width (W)	Bundle Ø max.	Stud Ø	Min. Tensile strength for ties (N)	Material	Colour

**Material specification
please see page 21.**

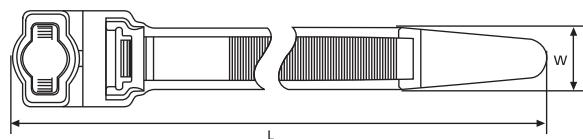

1-Piece Fixing Ties for Weld Studs, for Heavy Duty Applications

- WS-Series for 6.35 mm threaded studs
- WSI380 for 9.525 mm threaded studs

Wide strap stud-mounted cable ties are primarily designed for use in the automotive or truck industry.

The wide strap stud mount cable tie minimizes pinching on soft bundles.

Wide Strap Heavy Duty Stud Mount Cable Ties

Article-No.	Type	Length (L)	Width (W)	Bundle Ø max.	Stud Ø	Min. Tensile strength for ties (N)	Material	Colour

1-Piece Fixing Ties for Weld Studs (Softpush) in the strap

Features and Benefits

- For 5mm studs or 5mm ISO threaded studs
- "Soft-push" versions for easy assembly, without tool
- "Hard-push" versions for special firm fit need to be hammered onto the stud
- Releasable types: RT50RS5 and SB

With the RT50RS5 and the SB14/172 you can mount pipes or cables to a weldstud.

Simple fixing to a weld stud or 5mm ISO bolt.

Material specification
please see page 21.

Article-No.	Type	Length (L)	Width (W)	Height (H2)	Bundle Ø max.	Min. Tensile strength for ties (N)	Material	Colour

1-Piece Fixing Ties for Weld Studs, releasable, with flexible strap

Features and Benefits

- Releasable
- FBB-types for 5mm studs or 5mm ISO threaded studs
- SBR8S for M8 threaded studs
- "Soft-push" versions for easy assembly, without tool
- "Hard-push" versions for special firm fit need to be hammered onto the stud
- The versions FBB_M have a little recess for eventually welding burrs on the substructure

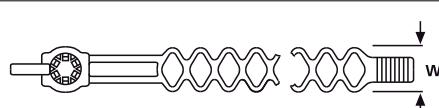

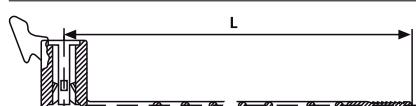

FBB one-piece fixing ties for weld studs, can be easily removed by unscrewing in an anti-clockwise direction.

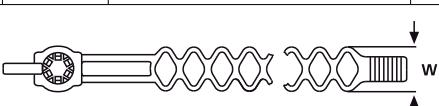

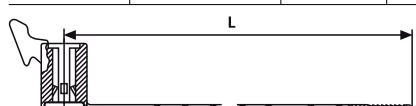

**Material specification
please see page 21.**

1-Piece Fixing Ties for Weld Studs, for Heavy Duty Applications, for parallel routing

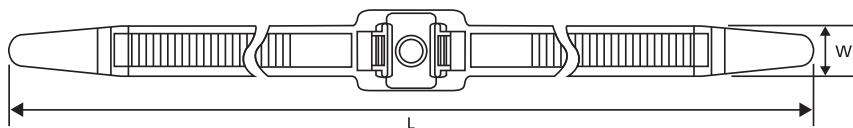

Primarily designed for use in the automotive industry, these parts can be used in a wide variety of applications where weld studs ISO bolts are used and cables need to be bundled and secured.

Features and Benefits

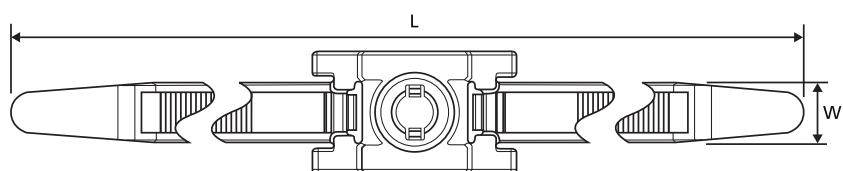

- For parallel routing of cables, wires and hoses
- Minimum pinching of soft hoses and convoluted tubing
- Easy to install without the need for a tool
- DCT9 and DCT11 are releasable
- SDCTR312 for defined standoff to substructure

Standoff Mounting Dual Clamp Ties.

2-Piece Fixing Ties for Weld Studs

Series SBH5 and SBH5SD are used mainly in the automotive industry. The SD variant is for the smallest bundle diameters, from 1.0 mm. Series SB5 and SBS5 are suitable for bundling and fastening cable looms and pipes in switch cabinet construction and automotive and construction machine industry.

Features and Benefits

- Pre-assembled 2-piece fixing tie with stud retainer
- Cable tie head can be moved after bundling
- Easy to install without the need for a tool
- SB5-types for 5mm studs or 5mm ISO threaded studs
- Types with discs can retain insulation materials while fixing a cable bundle
- Oval shape can be adjusted in a lateral position
- GBS8C for 8 mm retainer enables parallel routing

Cable ties illustrating the variety of application methods for weld stud fixing.

2-Piece Fixing Ties for Weld Studs, for parallel routing

Many applications require cables to be run parallel to each other but separated to avoid abrasion. The double mounting base, when used with two cable ties allow this to be achieved simply and quickly.

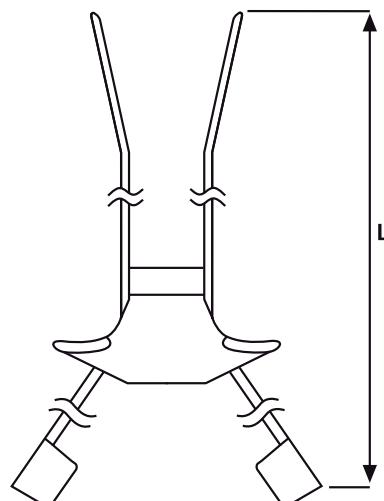

Features and Benefits

- Pre-assembled 2-piece fixing tie with stud retainer
- For parallel routing of cables, hoses or harnesses
- Cable tie head can be moved after bundling
- Easy to install without the need for a tool
- For 5 mm studs or 5 mm ISO threaded studs

Parallel fixation of two cables.

**Other dimensions

1-Piece Fixing Ties for Edges

EdgeClip-Family

These cable ties and Edge Clip assemblies are ideal for use where holes are not acceptable or where due to temperature problems adhesives will fail. These assemblies are widely used for fixing and bundling cables, pipes and hoses within the automotive industry, harness making, panel building and electrical industry.

Features and Benefits

- Easy assembly, just clip on per hand
- For edges of 1 – 3 mm or 3 – 6 mm
- Integrated metal clamp holds clip firmly in place
- Clamp consists of double tempered steel spring
- Ideal for applications where holes or adhesives are not suitable

T50ROSEC10 fitted onto a plastic panel to hold a door harness.

T50ROSEC23 - the cable bundle runs parallel with the edge.

1-Piece-Fixing Tie T50SOSEC12 can be pushed easily on edges.

The silver-grey clamp, the heart of our EdgeClips, consists of double-tempered spring steel in accordance with DIN EN 10132-4 C75S. The spring steel gives the clamp both the necessary rigidity to provide high pull-off forces and also sufficient flexibility for various possible applications. The double coating is applied initially with a zinc plate system followed by inorganic surface sealing. Naturally, no chromium (VI) is used in this process. The clamp therefore complies with the current EU Directive

200/53/EC on end of life vehicles and the prohibition on heavy metals. The refined spring-steel clamp also fulfils the requirements for resistance to salt spray stipulated in DIN EN ISO 9227 NSS (min. 840 h without corrosion of base metal) and DIN EN ISO 6270-Z-CH (min. 720 h without corrosion of base material). This solution has therefore been approved by many OEMs for exposed installation locations, e.g. in engine compartments and the running-gear area.

1-Piece Fixing Ties for Edges

- EdgeClip-Family

Features and Benefits

- Cable tie head always situated in defined position
- Suitable for minimum bundle diameters of 1 mm
- Outside serrated tie prevents bundle from being damaged
- For edges of 1 – 3 mm

EdgeClips are also available on request for panel thickness from 4 - 7mm.

2-Piece Fixing Ties for Edges,**1,0 - 3,0 mm**

- EdgeClip-Family

Features and Benefits

- Pre-assembled 2-piece fixing tie with EdgeClip
- Cable tie head can be moved after bundling
- EC9, EC10, EC21 and EC22 are for minimum bundle diameters of 1 mm
- For edges of 1 – 3 mm

**Material specification
please see page 21.**

Other combinations between cable tie and foot part available on request.

 **Material specification
please see page 21.**

2-Piece Fixing Ties for Edges, twistable

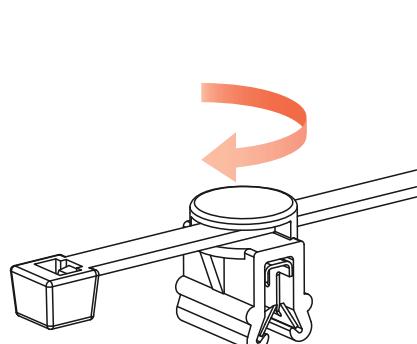

Features and Benefits

- Pre-assembled 2-piece fixing tie with EdgeClip
- Easy to assemble by hand
- Cable tie head can be moved after bundling
- For edges of 1 – 2.5 mm or 1 – 3 mm
- Can be rotated to the desired position during mounting

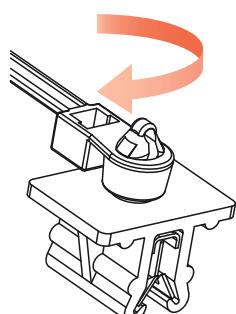

**Material specification
please see page 21.**

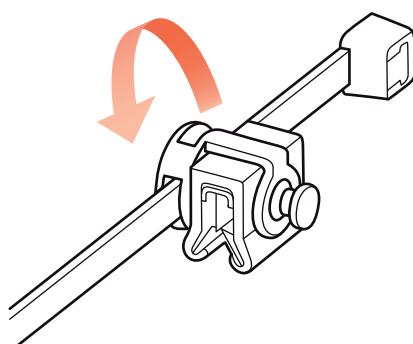

EdgeClip CBTO50R, rotatable 90°.

CBT50R - the bundle can run above an edge.

2-Piece Fixing Ties for Edges, for Holes

Ideal for use on 2.5 mm edges, the tie's reduced installation height makes it ideal for use wherever space is at a premium.

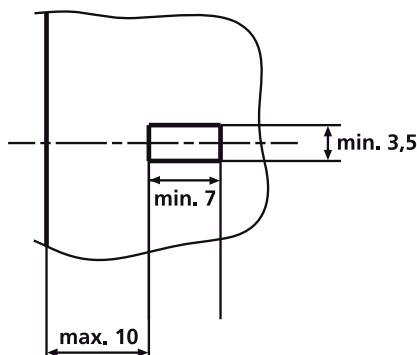

Features and Benefits

- Pre-assembled 2-piece fixing tie with EdgeClip
- Easy to assemble by hand
- Cable tie head can be moved after bundling
- For edges of 2.5 mm
- Secure fixing of the EdgeClip into drill hole
- Ideal for use wherever space is at its premium

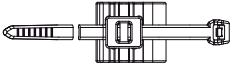

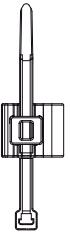

The holding tab increases the tensile strength additionally.

 **Material specification**
please see page 21.

One Piece Fixing Ties with Wire Clip

Features and Benefits

- Cable tie head always in defined position
- Easy to close by simply pressing the cover
- Firm sit as a variation of sizes for different wires is available
- Suitable for post-installation of bundles

T50SOSWA - the easy way for parallel guidance of cables next to a wire.

2-Piece Fixing Ties with Pipe Clip, twistable 360°

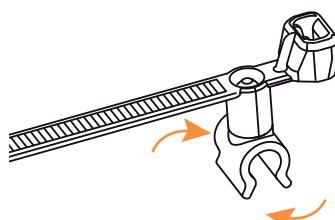

Features and Benefits

- Simply clip on a wire or hose
- Fixing clip offers full 360° rotation
- Routed cable can move in any direction in relation to the fixing point
- Inside serrated cable tie
- Ideally used in the Automotive Industry

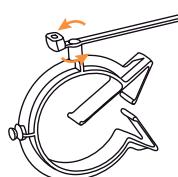

T50SVC65.

T50SVC5 rotates in any direction.

2-Piece Fixing Ties with Pipe Clip

Features and Benefits

- For post-installation of additional cables for preassembled cable looms
- Variety of twist angles and even different loop directions provide flexibility for cable routing
- For OC1 and 2A additional cable tie dimensions are available
- CBTO-series for cable ties up to 5 mm

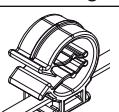

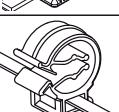

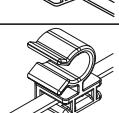

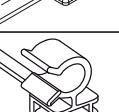

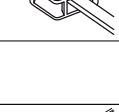

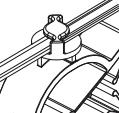

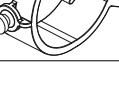

EdgeClip CBTO50R, verdrehbar um 90°.

 Other dimensions available on request.

2-Piece Fixing Ties for Heavy Duty Applications, for Screws

Used in the Automotive and Truck Industry for harness fixing in the engine body, these parts offer solutions in many other industrial applications with difficult environment.

Features and Benefits

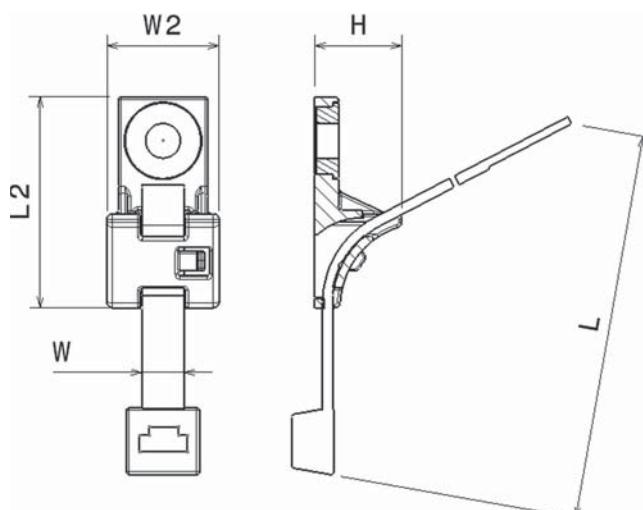

- Pre-assembled 2-piece fixing tie
- Cable tie head can be moved after bundling
- Secure alignment to the bundle due to H-design
- A suitable alternative for metal clamps
- Withstands vibrations and displacement forces
- High tightening torque through metal bushing

These HDM can be assembled on either screw or stud

Material specification
please see page 21.

2-Piece Fixing Ties for parallel separation

Features and Benefits

- Pre-assembled 2-piece fixing tie with coupler
- Cable tie head can be moved after bundling
- Easy addition of cables after assembly
- For parallel routing of bundles that can be twisted 90° even after setting

T120RCoupler can be used for parallel routing of two cable ties.

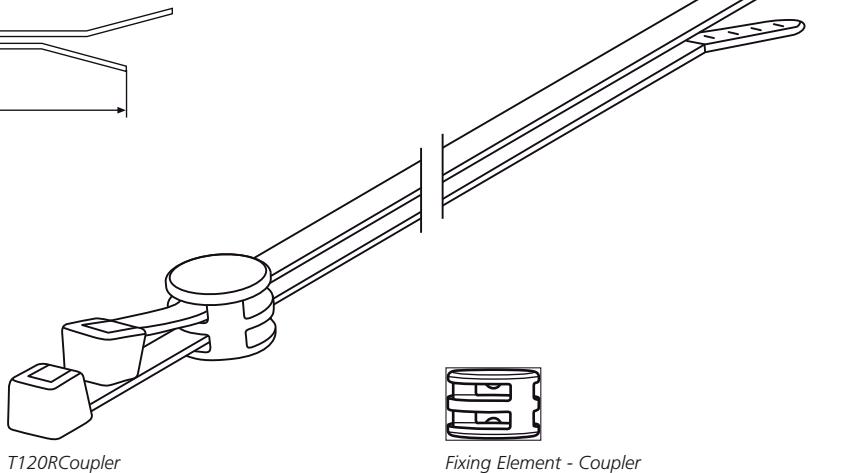

The second tie can be used for post-installations.

Material specification
please see page 21.

Bundling Clips with/without Arrowhead

Features and Benefits

- Easy to install without the need for a tool
- Cable tie head always situated in defined position
- Arrowhead simply locks into place
- Disc adjusts tie for pressure from various directions and minimises access of dust, dirt and water
- ATS fixing elements can be tied automatically with the ATS3080 tool
- Variants with pipe clips allow the addition of cables after installation

L to R: BundlingClip with OmegaClip, BundlingClip with foam, BundlingClip LRJ1.

*without arrowhead

Bundling Clips, moveable

An easy means of routing and securing cable sets in various parts of cars.

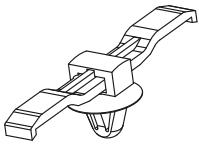

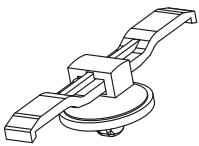

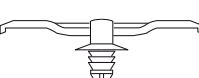

Features and Benefits

- Easy to install without the need for a tool
- Rubber seal stops dirt and water gaining access
- Horizontal length tolerance compensation
- Ideal if holes do not fit registration or bundles need to be routed round corners

The CHA2 with fir tree base and length tolerance compensation for precise cable routing even in difficult conditions.

Bundling Clips with Arrowhead for Distance Routing

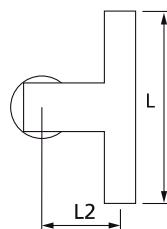

Features and Benefits

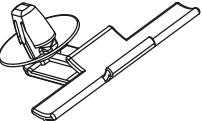

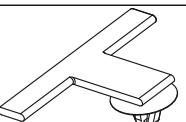

- Easy to install without the need for a tool
- Arrowhead simply locks into place
- Disc adjusts tie for pressure from various directions and minimises access of dust, dirt and water
- Versions for oval holes feature anti-twist protection

StandOff Clips allow cable looms to be routed at a set distance from the punched holes.

 **Material specification**
please see page 21.

Bundling Clips with Fir Tree

Widespread use in cable harness production; a quick and easy means of fixing cables and lines securely in various parts of cars.

Features and Benefits

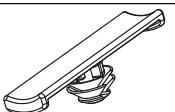

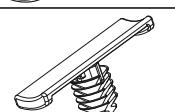

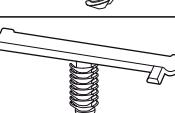

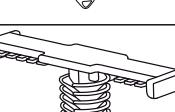

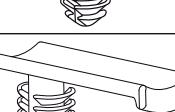

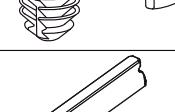

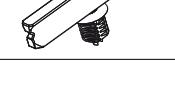

- Easy to install without the need for a tool
- One fir tree foot part can be used for a variety of panel thicknesses
- Suitable for use within threaded holes
- Holding tabs prevent the tie slipping sideways
- Versions for oval holes feature anti-twist protection

Bundling Clips with fir tree bases for a variety of applications with a wide range of metal thicknesses and drill holes.

**Material specification
please see page 21.**

Bundling Clips with Fir Tree, for Distance Routing

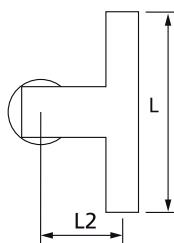

Originally designed for the Automotive industry these clips offer simple and easy methods of securing cables or pipes, they have many applications within a wide range of industries.

Features and Benefits

- Easy to install without the need for a tool
- One fir tree foot part can be used for a variety of panel thicknesses
- Suitable for use within threaded holes
- Disc covers the hole to prevent dirt and water gaining access
- Bundle runs in a set distance to the hole

COW Clip used as tape-on clip.

Bundling Clips for Weld Studs, movable

Features and Benefits

- Easy assembly, without tool
- Horizontal length tolerance compensation up to 4 mm
- BCUWS5-D5-25: for coarse thread studs
- If connector retainer is a request: TCSB5CYCC
- If post-installation of cables is a need: Bundling clip SB5
- For defined distance of bundles to surface: BCOS variants

TCSB5CYCC: Tapebar, Stud Retainer and ConnectorClip in just one article.

**Material specification
please see page 21.**

Article-No.	Type	Length (L)	Stud Ø	Colour	Material	Drawing

All dimensions in mm. Subject to technical changes.

Bundling Clips for Weld Studs, movable

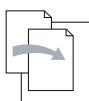

The BC series is proving very popular in the automotive industry as a means of installing cable sets easily in various areas of the vehicle.

Features and Benefits

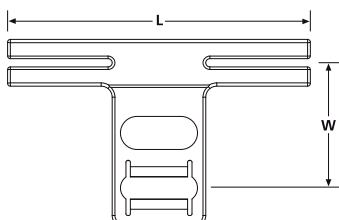

- Very flat bundling clip for 5mm weld stud
- Horizontal length tolerance compensation
- Suitable for cables of reduced weight and diameter

The slim line BS series is particularly compact and flexible.

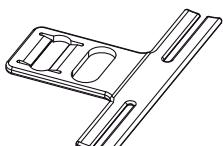

Material specification
please see page 21.

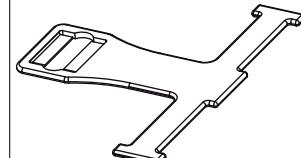

Article-No.	Type	Length (L)	Width (W)	Stud Ø	Colour	Material	Drawing

All dimensions in mm. Subject to technical changes.

Bundling Clips for Edges

- EdgeClip-Family

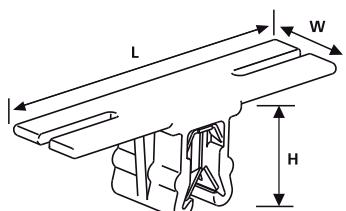

Edge Clips are used in the automotive industries and electrical industries and when it is impossible to drill holes or no other fixing points are available.

Cables and leads can be fastened with a cable tie or adhesive tape to the bars of the mounting element.

Features and Benefits

- Easy assembly, just shuffle manually
- Designed for edges of
1 - 3 resp. 1,5 - 4,5 mm
- Integrated metal clamp holds clip firmly in place
- Clamp consists of double tempered steel spring
- ATS fixing elements can be tied automatically with tools ATS3080 and AT2000

Bundling Clips for Connectors

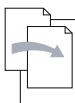

The ConnectorClips used here have been designed for cables and cable sets used in the automotive industry.

Features and Benefits

- Bundles are guided above connector plug
- Secure fixing of connector
- For horizontal length tolerance compensation up to 5 mm: CONNECTOR CLIP

ConnectorClips designed for cables and cable sets used in the automotive industry.

**Material specification
please see page 21.**

Fixing Elements with Arrowhead

Features and Benefits

- Fixing part with rounded arrowhead to minimise assembly height
- Ideal for applications where space is limited
- Bundle diameter is defined
- Suitable for post-installation of bundles

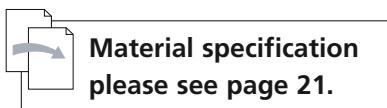

The very low Arrowhead is specially designed for narrow installation spaces.

The OmegaClip KSFT6,5OC7-9 can be used repeatedly and flexible to bundle cables, pipes or hoses.

Article-No.	Type	Height (H)	Attach to Ø	Fixing Hole Ø (FH)	Panel Thickness min.	Panel Thickness max.	Material	Colour	Drawing

Fixing Elements for Tubes and Harnesses

- PC-Series with Arrowhead
- PC-Series with Firtree

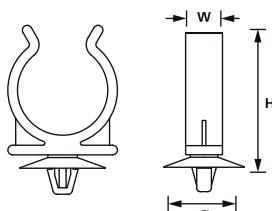

Pipe clips offering a simple and time saving fixing methode for hoses and pipes even when a cable tie can't be used.

For quick and simple routing of tubes and harnesses.

Features and Benefits

- Fixing elements with fir tree or arrow head
- Simply clip on a wire or hose
- Clips to be attached into bore hole
- Bundels can be released at any time

PC-Clip with Arrowhead

Fixing Elements for Tubes and Harnesses, interconnectable

- **IPC-Series**

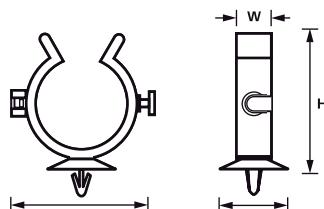

Originally designed for the automotive industry they are finding a wide and time saving variety of applications in all industries where the use of a cable tie is not suitable.

Features and Benefits

- Fixing elements with fir tree or arrow head
- Simply clip on a wire or hose
- Clips to be attached into bore hole
- Bundles can be released at any time

Simple and secure installation of pipes or hoses to panels.

IPC Clip with arrowhead

**IPC-Series can be combined with IAHC-Series on page 95.
Please contact us!**

Fixing Elements for Tubes and Harnesses with Automatic Locking Feature

- AHC-Serie

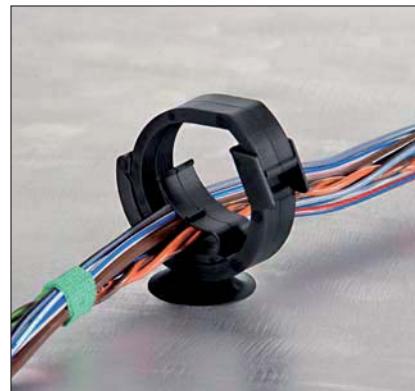

Offering a simple and secure method of attaching cables to panels. Originally designed for the automotive industry they are finding a wide variety of applications in all industries using sheet metal panels.

Features and Benefits

- Push and click closure for fixation of wires
- Clip is clicked into a specific hole
- AHC_SS und AHC_SB can be pushed onto a 5mm stud

Automatic Harness Clip open.

Automatic Harness Clip closed.

Fixing Elements for Tubes and Harnesses with Automatic Locking Feature

- **IAHC-Series**

Offering a simple and secure method of attaching cables to panels. Originally designed for the automotive industry they are finding a wide variety of applications in all industries using sheet metal panels.

IAHC elements can be connected.

**Material specification
please see page 21.**

Features and Benefits

- Push and click closure
- Coupling elements of the IAHC variants allow parts to interconnect
- Clip is clicked into a specific hole
- IAHC_T can only be connected with another (I)AHC element

Fixing Elements for Tubes and Harnesses, for Edges

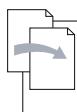

- EdgeClip-Family

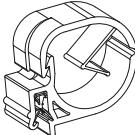

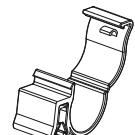

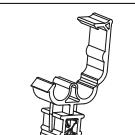

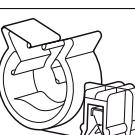

Features and Benefits

- Releasable fixing elements with EdgeClip
- Low-vibration routing of bigger bundle diameters
- Clips to be pushed onto an edge
- To be closed single handed, a snap can be felt
- Bundles can be released at any time
- EC27: fixing element enables usage of smaller bundle diameter
- EC41: for parallel guidance of two bundles

EdgeClip cable and tube clips are suitable for the low-vibration routing of cables and tubes with larger bundle diameters.

 **Material specification
please see page 21.**

Article-No.	Type	Panel Thickness min.	Panel Thickness max.	Bundle Ø max.	Colour	Material	Drawing

Fixing Elements for Corrugated Tubing, with Arrowhead

These clamps are used for example in the automotive industry, in the production of cable harnesses and in the electrical industry. Their quick and easy mounting is the reason for their universal success wherever corrugated tubing and pipes have to be fixed quickly and securely.

Features and Benefits

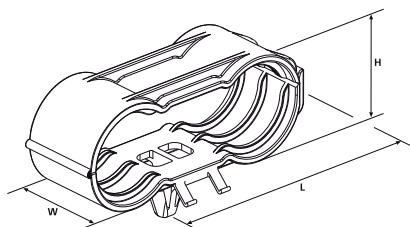

- Clamps for corrugated tubing for a variety of nominal diameters
- Arrowhead simply locks into place
- Tube is guided accurately by clicking
- Axial slipping is prevented by the inside profile of the clamp
- Type RCCD for oval holes 6.2 x 12.2 mm
- OCTCSFT6,5 clamp for corrugated tubes for nom. diameter of 55-80 mm.
- CTC-L profile clamp can also fastened to a metal edge

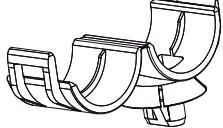

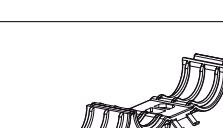

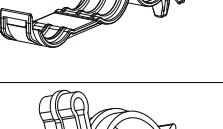

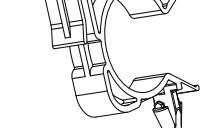

Simple and secure installation of pipes or hoses to panels.

**Material specification
please see page 21.**

* for oval hole

Fixing Elements for Corrugated Tubing, with Fir Tree

- CTC-Series

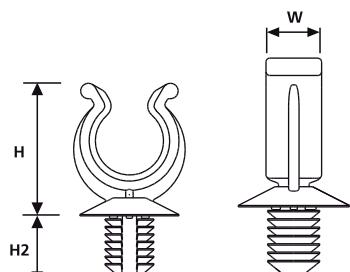

CTC clamps are used for example in the automobile, harness making, electrical industry and wherever corrugated tubing has to be quickly and firmly fixed.

Features and Benefits

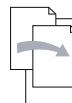

- CTC clamps for a variety of nominal diameters
- Fir tree foot part can be used for a variety of panel thicknesses
- Suitable for use within threaded holes
- Tube is guided accurately by clicking
- Axial slipping is prevented by the inside profile of the clamp

The tubing is clicked into the CTC clamp and is held firmly.

CTC10FT6LG

Fixing Elements for Corrugated Tubing, for Weld Studs

- CTC-Series

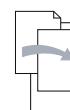

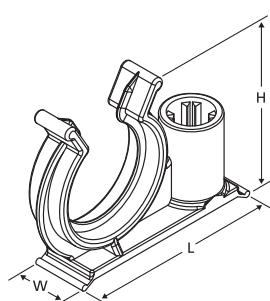

These holders are used for example in the automotive industry, in the production of cable harnesses and in the electrical industry. Their quick and easy mounting is the reason for their universal success wherever corrugated tubing and pipes have to be fixed quickly and securely.

Features and Benefits

- Fixing elements for corrugated tubing for nominal diameters from 4.5-17mm
- For M6 weld studs
- Soft-Push mechanic for simple assembly, without tool
- Tube is guided accurately by clicking
- Axial slipping is prevented by the inside profile of the clamp
- Clamp can be unscrewed and removed from the weld stud

The tubing is clicked into the CTC clamp and is held firmly.

**Material specification
please see page 21.**

Snapper Hose Clips for Tubes and Harnesses

- SNP-Series

SNP range may replace metal hose clamps. Snapper can be used in markets as diverse as automotive, agriculture, white goods, venting systems, pumps and hydraulic systems to medical engineering.

Features and Benefits

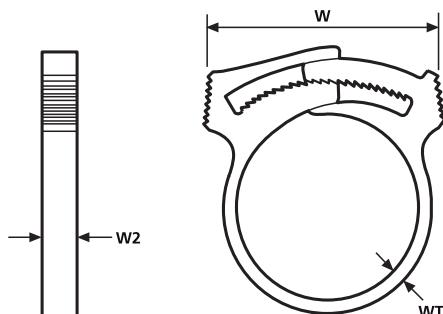

- Releasable and reusable plastic hose clamps
- Self-locking
- Releasable by giving a lateral movement to the 'head'
- Installation by hand possible
- Installation with processing tool for a secure tensioning
- For higher operating temperatures: Glass Filled PA66

SNP - Snapper Hose Clips range.

Application Tool	Registration Numbers
ASNP2-22	1
ASNP24-70	2
MSNP1-70	3

For detailed information on Application Tools please refer to page 140.

SNP - Snapper Hose Clips range

Snapper Hose Clips for Tubes and Harnesses

- SNP-Series

 SNP Snapper are also available on request in material PA66HS and PA46.

 Material specification please see page 21.

Blind Plugs

Products were developed especially for the automotive industry. Application in trunks, doors, wheel housing and dash panels. Parts are even used for optical reasons.

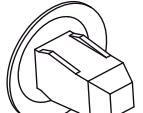

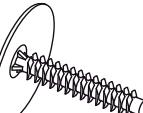

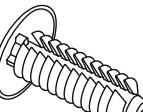

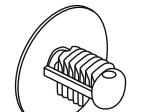

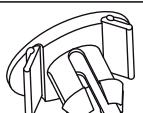

Features and Benefits

- Easy assembly without the need of a tool
- Disc of the part covers the hole and minimises ingress of dust, dirt and water
- Standard geometry for example fir tree or arrowhead

 **Material specification**
please see page 21.

Blindplugs are available in different shapes and material.

Cover Plugs and Open Plugs

Products were developed especially for the automotive industry. Application in trunks, doors, wheel housing and dash panels particularly where holes have to be covered and tubes must be guided securely. Parts are even used for optical reasons

Features and Benefits

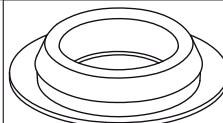

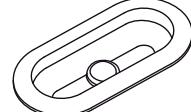

- Easy assembly without the need of a tool
- Protection of ingress of dust, dirt and water are offered by cover plugs.
- Open plugs cover and secure the edges of drilled holes

 **Material specification**
please see page 21.

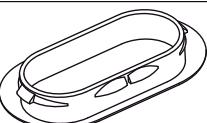

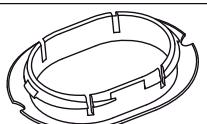

Cover Plugs are protecting and securing boreholes.

• Cover Plugs

All dimensions in mm. Subject to technical changes.

Connector Clips for round holes

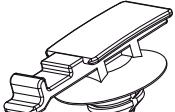

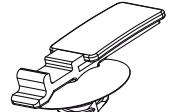

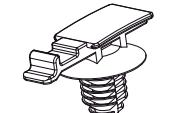

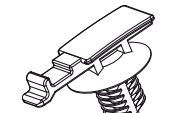

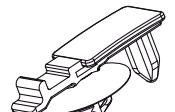

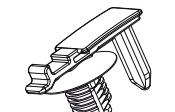

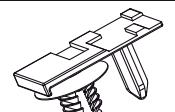

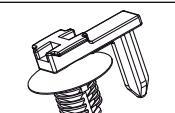

Features and Benefits

- Connector easily installed by simply pushing into place
- Connection can be released non-destructive
- One fir tree foot part can be used for a variety of panel thicknesses
- Arrowhead simply locks into place
- Disc covers the hole to prevent dirt and water gaining access
- For twist protection in round holes:
Variants with additional stick

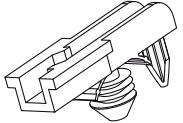

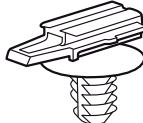

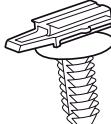

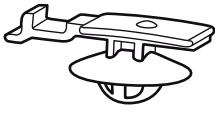

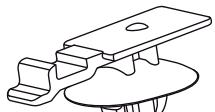

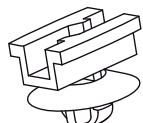

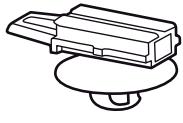

Connector Clips are available for many different connector types and fixing varieties.

 **Material specification**
please see page 21.

Connector Clips for oval holes

Features and Benefits

- Connector easily installed by simply pushing into place
- Connection can be released non-destructive
- Easy assembly, just shuffle manually
- Oval connectors offer twist protection

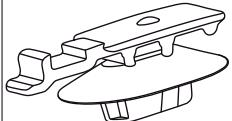

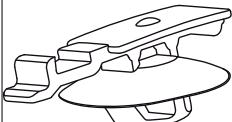

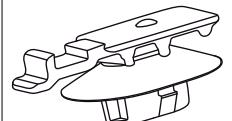

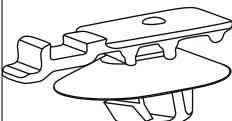

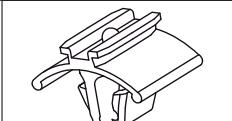

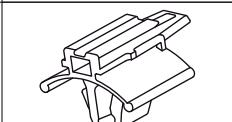

**Material specification
please see page 21.**

For a secure fixation simply push the connector by hand on our ConnectorClip YCCFT62x122.

Connector Clips for Edges

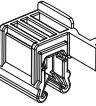

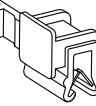

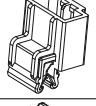

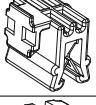

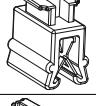

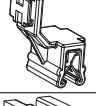

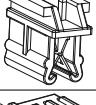

- EdgeClip-Family

Features and Benefits

- Connectors are mounted simply by pushing them into retainer
- Connector can be removed without damage
- Fastened to an edge, the EdgeClip ensures snug fit almost all types of connector

Information and installation instructions for self-adhesive mounting bases

HellermannTyton uses two different types of adhesives for self-adhesive bases: acrylate and synthetic rubber. These differ in the operating temperature range and the 'pull off' force of the adhesive. Synthetic rubber has an excellent initial grip, allowing for almost immediate use. Acrylate adhesive has

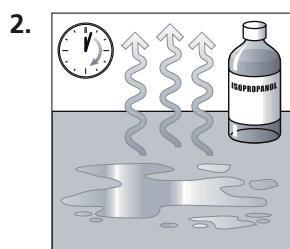

less initial grip, so there is a need to wait for a few hours before use, but has a higher 'pull off' force than synthetic rubber. This enables a permanent fixing lasting months or even years. To use these adhesives the surface must be dry, and free of dust, oil, oxides, parting agents and other impurities.

For this the use of isopropane/water (50/50) is recommended. After cleaning allow the surface to dry completely. Peel off the protective backing on the self-adhesive base, ensuring the adhesive is not touched. Apply the part to the surface and press down firmly for several seconds.

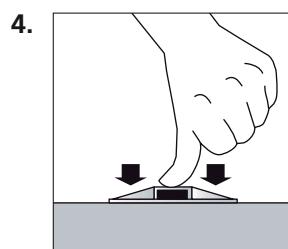

Instructions for use

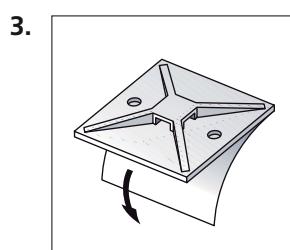

The surface must be dry, free from dust, oil, oxides, parting agents and other impurities. The surface to be glued should be cleaned using a clean cloth and isopropanol / water (50/50). When using other appropriate cleaning agents, ensure that they do not attack the surface nor leave any residues.

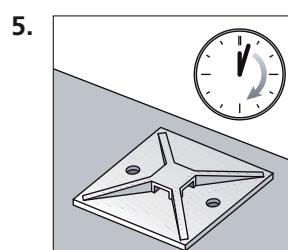

After cleaning allow the surface to air-dry completely.

Press down firmly on the base with the thumbs for several seconds.

Peel off protective backing and ensure the adhesive area is not touched.

Depending on the type of adhesive, wait for several minutes (synthetic rubber) or hours (acrylate) so that the adhesive can bond completely with the surface.

We will be happy to send you on request an up-to-date technical datasheet for whichever adhesive you are using.

Fixing Parts with Special Adhesive

- SolidTack-Series

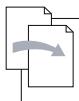

SolidTack mounts offering an innovative fixing solution especially for low energy surfaces like PP, PE or if drilling a hole is not possible. Suitable for a wide range of in- and outdoor applications on varnished or plastic or metal surfaces in many areas i.e.g. electrical cabinet, railway, aerospace, automotive and agriculture machinery.

Features and Benefits

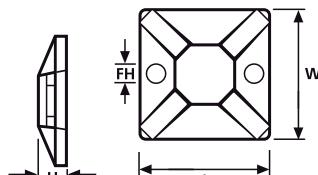

- MB mounts with homogeneous system of acrylic adhesive
- Very good initial adhesion, increases with time
- High cohesive strength combined with good weathering resistance
- Innovative fixing solution for low energy surfaces like PP, PE or painted/varnished surfaces
- Protection foil with finger lift for easy peel off

SolidTack products work on varnished and powder coated surfaces.

Paste Adhesive Mount• **PMB5**

PMB5 pasty mount offers a fixing solution wherever screw fixing is not allowed. Due to a larger diameter the mount can even be installed onto uneven surfaces. PMB5 pasty mount is used in the railway industry as well as in the renewable energy industry. Further applications are in the ship building industry, in the electrical industry and the production of switching cabinets.

Features and Benefits

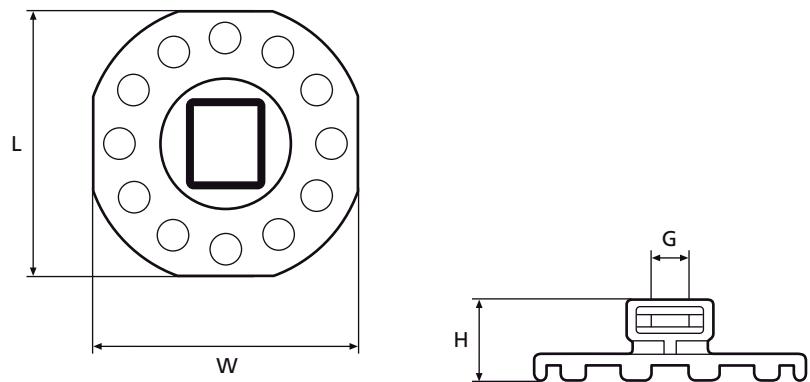

- PMB5 paste adhesive mount for fixings with paste/liquid adhesive.
- Mount geometry offers a good form closure with cured adhesive
- Can even be installed onto uneven surfaces due to large diameter
- Can also be applied in combination with hot-melt adhesive, as mount is made of heat resistant PA66

PMB5 mount with paste adhesive.

Harness Clip for Heavy Duty Applications, for Screws or Studs

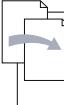

Primarily designed for use in the automotive/truck industry, these parts can be used in a wide variety of industries and applications where bundles need mounting.

Features and Benefits

- Secure alignment to the bundle due to H-design
- Pre-fixing of clip with integrated nose
- For cable ties up to 12.7 mm wide
- High tightening torque through metal bushing (Variants "For high strength" and "Double holder")
- Easy maintenance of bundle by simply changing the cable tie

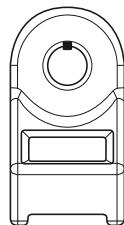

U.S. Patent Number 5,820,083

Harness Clip for Heavy Duty Applications. for Screws or Studs, for parallel separation

- S2HM25 with hexagonal retention feature
- S2CM25 with a socket counter bore

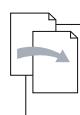

This heavy duty harness clip helps to fix and secure cable and wires in railway, truck and agriculture vehicle construction as well as in ship building.

Features and Benefits

- For parallel routing of bundles
- Secure alignment to the bundle due to H-design
- Cable tie head can be moved after bundling
- For cable ties up to 12.7 mm wide
- Easy maintenance of bundle by simply changing the cable tie

This saddle mount is installed between two bundles to separate them and prevent chafing and wear.

 **Material specification**
please see page 21.

- SAOM82 with Turnstop
- SAM83 with a socket counter bore

This heavy duty harness clip helps to fix and secure cable and wires in railway, truck and agriculture vehicle construction as well as in ship building.

Features and Benefits

- Guides bundles securely above sharp edges
- For bolts or screws of D = 8 mm
- Cable tie head can be moved after bundling
- Secure alignment to the bundle due to H-design
- For cable ties up to 12.7 mm wide

Axial oval mounts stand off bundles from frame rails and cross members to prevent them from rubbing and chafing.

Fixing elements for Parallel Routing, twistable

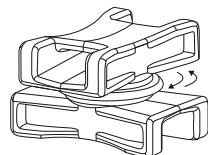

These fixing element for parallel routing can be used where bundles need separation from each other combined with the necessary functionality to support moving harnesses.

Features and Benefits

- For parallel routing of bundles that can be twisted 360° even after setting
- Secure alignment to the bundle due to H-design
- Cable tie head can be moved after bundling
- For cable ties up to 12.7 mm wide
- For post-installation of bundles

The spacers can be easily rotated by hand, allowing the bundles to be crossed and rotated at any angle.

Fixing Elements with Fir Tree, for Distance Routing**• S3STM50**

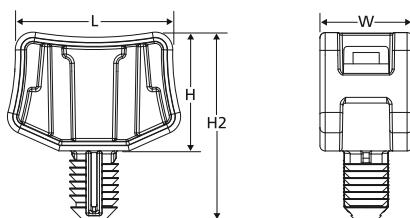

With its heavy duty fixing ability this product offers excellent performance for the truck, ship and construction vehicle industries.

Features and Benefits

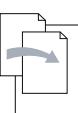

- For parallel routing of four bundles
- Secure alignment to the bundle due to H-design
- For cable ties up to 12.7 mm wide
- Pre-fixing of tie with integrated nose

The mount can secure up to 4 separate bundles, providing parallel spacing between the frame rail and adjacent bundles.

Fixing Elements for BHT-Ties for Distance Routing
• MSBT120

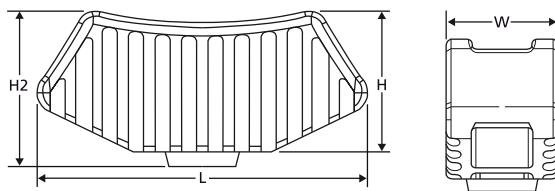

With its heavy duty fixing ability this product offers excellent performance for the truck, ship and construction vehicle industries.

Features and Benefits

- For parallel routing of three bundles
- Retainer is fixed in the hole with BHT-tie
- Socket centres retainer in the hole and can protect tie from sharp edges

Saddle Mount MSBT120.

• CGS1 for Convolved Tubes

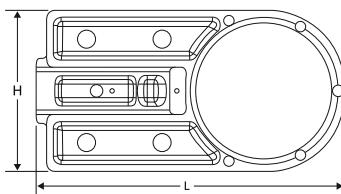

This heavy duty fixing element can be used to guide tubes in a defined distance to the substructure.

Features and Benefits

- Tubes are fixed a defined distance from the substructure
- Defined diameter for the wire entry
- Retainer is fixed in the hole with BHT-tie

This product perfectly secures convoluted tubings up to 26 mm diameter.

Autotool System 3080

- Waste-free bindings for diameters up to 80mm

The ATS3080 is an electrical bundling system from HellermannTyton. In about one second you get absolutely waste free bindings. The outside serrated strap and closures are each supplied on "endless reels". The ATS3080 is an outstanding innovation in bundling systems!

High quality standards in the production industry are requiring fully automatic, precise bundling. Only the automation of bindings allows efficient manufacturing of high quantities in a consistent workflow. A challenge which HellermannTyton solved successfully with the development of the ATS3080.

The ATS3080 can be used with an overhead dispenser, a bench mount system or integrated into a fully automated production line. This makes the tool flexible for different applications, especially in the Automotive and the white or brown goods industry, or even for packaging. It is a high-capacity tool with a very short cycle time (0.8 - 1.3 sec., depending on diameter of jaws).

For the stationary installation – the bench mount kit.

Article-No.	Type
102-00000	ATS3080 complete
102-00010	Power Pack
102-00040	Bench Mount Kit Flexible

102-00050	Overhead Dispenser
102-00052	Overhead Dispenser Lowering

Subject to technical changes.

Power Supply	Electrical
Cycle Time	max. 1.3 sec.
Weight (kg)	1.9
Application	Stationary or mobile

ATS3080 with overhead dispenser for mobile applications.

Power Supply unit	Input: 230/115 VAC, 50/60 Hz, Output: 48 VDC, max. 50 W
Bench mount kit	Tool- and tierelstand including footpedal
Overhead Suspender	Overhead dispenser and tierel- stand including balancer

The ATS 3080 is innovative for its strap and closures. The two-piece consumable consists of strap and closures, is waste-free and guarantees optimised material utilisation. You do not lose any time cleaning or opening any waste boxes. The bundle diameter is detected mechanically. This allows a flush cut off of the bindings and together with the plain inner surface of the strap prevents damage to wire insulation. The material is available in reels of 500m strap and reels of 5000 piece closures.

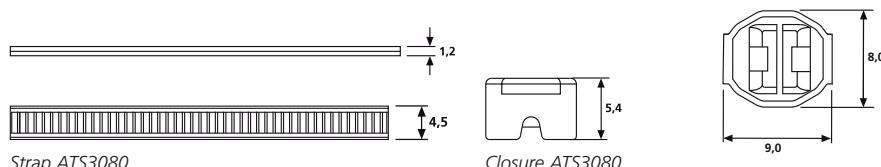

Another advantage of the ATS3080 is the three different jaw diameters which can be changed very quickly: 30mm, 50mm and 80mm are available. If your application needs ties from very small up to 80mm, you use the 80 s. If your max. is 45mm you choose the 50 s and save time. You don't have to adjust anything.

Closures and strap for ATS3080.

Three jaws optimise the cycle time for the different bundling diameters.

Strap ATS3080

102-66210	102-66210	Closures Black ATS3080	220	PA66HSUV	Black (BK)	5000 pcs.

Subject to technical changes.

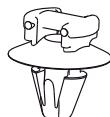

By assembling the ATS3080 into different devices the tool can be customised for various customer applications. For example, with the horizontal bench mount kit plastic bags can be closed in seconds. Also, because of the unique closing mechanism the plastic tie closing the bag can serve as a tamper evident seal and is compatible material for recycling.

For products with special requirements of cable tying e.g. a binding at an exact position, as shown on the picture with the medical hoses, the HellermannTyton development department can design and supply special jigs for the ATS3080.

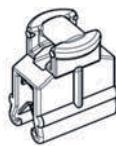

HellermannTyton developed an innovative solution for harnesses in the Automotive industry. With the ATS3080 it is now possible to fasten fixings, also known as foot parts, at the same time as the automatic binding. This simplifies the final assembly of harnesses, because the pre-assembled harness can be fixed directly to the metal edge or into a hole! This means that you can now produce a complex harness completely automatically.

Autotool 2000

- Automatic bundling up to 20mm diameter

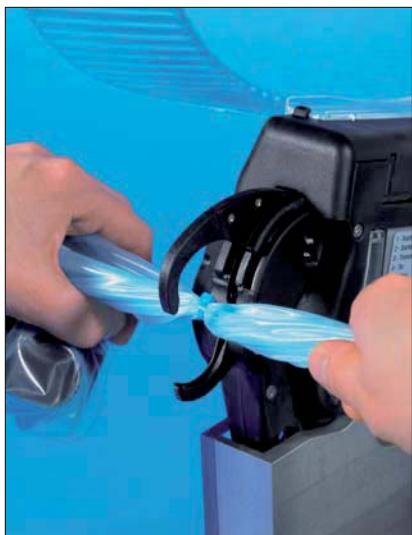

Features and Benefits

Autotool 2000 is an electronically operated automatic cable tying system which has been design to speed up the binding process. Consistency and quality in the process of bundling, threading and cutting is achieved at the touch of a button.

The HellermannTyton Autotool 2000 is very easy to use. The tool has a binding speed of 0,8 seconds per cycle. The tool handles both bands of 50 or reels of 3500 cable ties. The ties can bundle up to a diameter of 20 mm. Once fitted, the tie will have a flush cut off. The adjustable binding force and the electronic fault diagnosis system ensures that optimum results are achieved.

Autotool 2000.

Packaging application with the bench mount kit.

Bench mount kit, bandoleer reel, Autotool 2000 and power pack.

The reliability, ergonomics, simple handling and flexibility makes the HellermannTyton Autotool 2000 ideal for the diverse applications where high quantities are required, e.g. in cable assemblies for automotive, electronics, TV and domestic appliances, packaging of bags and the bundling of parts together. The system suits both the high volume use of ties or where flexible production practices are necessary. Overall the Autotool 2000 gives full, flexible and cost effective utilization of labour and maximises efficiency.

With the bench mount kit or the overhead dispenser the Autotool 2000 can be used stationary or mobile, depending on the customer's application.

Another opportunity is the integration of AT2000 into a fully automated production line. To do this you would need the control box, which is the interface between AT2000 and your production line.

For your assembly line situation we offer individual solutions.

Manual Processing Tool Metal Housing

- MK3SP up to 4.8 mm strap width

This tough metal tool MK3SP for plastic cable ties is used by harness makers for automotive industry and white goods as well as in the aerospace, railway and medical industry. An other range of application is the entire electrical installation i.e.g. in buildings or production plants.

Features and Benefits

- Tough metal tool for HellermannTyton plastic cable ties up to 4,8 mm width
- For consistent tensioning and automatically plane cutting of cable ties
- Infinitely adjustable tension force
- Reliable and low maintenance

MK3SP.

Manual Processing Tool Plastic Housing

- MK7 up to 4.8 mm strap width

The MK7 tension tool is used by harness makers. Based on the US Military Specification (MIL) and the German Military Specification (VG) MK7 is also used to apply cable ties in all military vehicles and aircrafts. An other range of application is the entire electrical installation i.e.g. in buildings or production plants.

Features and Benefits

- Light glass-fibre-reinforced housing
- Ergonomic design
- For ties up to 4,8 mm width
- Consistent tensioning and automatically plane cut of
- Infinitely adjustable tension force combined with three-step quick adjustment
- MIL and VG approved

Manual Processing Tool Plastic Housing

- MK7HT up to 4.8 mm strap width

MK7HT application tool is mainly used to apply cable ties in harness making industries.

Features and Benefits

- Light glass-fibre-reinforced housing
- Ergonomic design
- For cable ties up to 4.8 mm width
- MK7 HighTension-Version with higher tension force than MK7
- Consistent tensioning and automatically flush cutting
- Infinitely adjustable tension force combined with three-step quick adjustment

MK7HT.

Manual Processing Tool Metal Housing

- MK6 up to 9 mm strap width

This tough metal tool MK3SP for plastic cable ties is used by harness makers for automotive industry and white goods as well as in the aerospace, railway and medical industry. An other range of application is the entire electrical installation i.e.g. in buildings or production plants.

Features and Benefits

- Tough metal tool
- For cable ties up to 9 mm width
- For consistent tensioning and automatically flush cutting
- Infinitely adjustable tension force
- Reliable and low maintenance

MK6.

Article-No.	Type	Strap Width max. (G)	Strap Thickness max.	Weight (kg)

Manual Processing Tool Plastic Housing

- MK9 up to 13.5 mm strap width

MK9 tool is used to apply bigger cable ties as they are used in trucks and busses. MIL and VG certification allows the use of MK9 for military vehicle and aviation construction.

Features and Benefits

- Glass-fibre-reinforced housing
- Ergonomic design
- For HellermannTyton plastic cable ties up to 13,5 mm width
- Consistent tensioning and automatically cutting of cable ties
- Infinitely adjustable tension force combined with three-step quick adjustment
- Plane cut of the strap at cable tie head
- MIL and VG approved

MK9.

Manual Processing Tool Plastic Housing

- MK9HT up to 13.5 mm strap width

The MK9HT boasts especially high tensioning forces. Ideally when a very firm fit of bigger cable ties are required like in truck and bus construction.

Features and Benefits

- Glass-fibre-reinforced housing
- Ergonomic design
- For cable ties up to 13,5 mm width
- MK9 HighTension-Version with higher tension force than MK9
- Consistent tensioning and automatically flush cutting
- Infinitely adjustable tension force combined with two-step quick adjustment

MK9HT.

Article-No.	Type	Strap Width max. (G)	Strap Thickness max.	Weight (kg)

Pneumatic Tensioning Tool**Metal Housing**

- MK3PNSP2 up to 4.8 mm strap width

Powered by compressed air at a pressure of up to 6 bars, the MK3PNSP2 is most beneficial in mass production environments, whether on the assembly line or in cable fabrication.

Features and Benefits

- Pneumatic tensioning tool
- Tough metal housing
- For cable ties up to 4,8 mm width
- For consistent tensioning and automatically flush cutting
- Infinitely adjustable tension force
- High application speed
- Reliable and low maintenance

Pneumatic Tensioning Tool Plastic Housing

- MK7P up to 4.8 mm strap width

The MK7P pneumatic bundling tool sets a new benchmark for the rational application of ties in the industrial production process. Improved compressed air supply moves the tensioning piston faster than in comparable tools.

Features and Benefits

- Pneumatic tensioning tool
- Light glass-fibre-reinforced housing
- For cable ties up to 4,8 mm width
- For consistent tensioning and automatically flush cutting
- Infinitely adjustable tension force
- High application speed

MK7P.

Pneumatic Tensioning Tool**Plastic Housing**

- MK9P up to 13.5 mm strap width

The MK9 P is constructed with heavy duty parts to ensure optimum performance. It is ideally designed to apply heavy-duty ties like they are used in vehicle construction like trucks, busses and railways.

Features and Benefits

- Pneumatic tensioning tool
- Glass-fibre-reinforced housing
- For cable ties up to 13.5 mm width
- For consistent tensioning and automatically flush cutting
- Infinitely adjustable tension force
- High application speed
- Holding ring for a balancer
- Optional with lower or upper air attachment

MK9P.

MK9P is also available with upper air attachment.

Manual Tensioning Tool for KR-Series

• KR6/8

Application tool KR6/8 crimps the glass-fibre-reinforced locking pin of the KR seal and leads to plastic deformation of the tie ends. This produces a very proof permanent connection.

Features and Benefits

- Tough metal tool
- For applying KR-cable ties only
- For tensioning, fixing and cutting KR-cable ties
- Simply change the front plate to apply two different strap widths: 6 mm and 8mm

KR6/8.

Article-No.	Type	For Ties	Strap Width max. (G)	Weight (kg)
121-00680	KR6/8	KR6, KR8	8.0	0.52
122-68019	Replacement Blade	KR6, KR8	–	0.01

All dimensions in mm. Subject to technical changes.

Pneumatic Tensioning Tool for KR-Series

• KR8PNSE

Application tool KR8PNSE crimps the glass-fibre-reinforced locking pin of the KR seal and leads to plastic deformation of the tie ends. This produces a very proof permanent connection.

Features and Benefits

- Tough metal tool
- Pneumatic
- For applying KR-cable ties only
- For tensioning, fixing and automatically cutting KR-cable ties
- Tensoing force can be adapted in reliance on air pressure
- Holding ring for a balancer

KR8PNSE.

Air Supply	non oiled / oiled

Manual Processing Tool for Metal Ties MBT- and MAT-Series

- MK9SST up to 13 mm strap width

Features and Benefits

- Glass-fibre-reinforced housing
- Ergonomic design
- Consistent tensioning and automatically cutting of metal ties MBT/MAT-series
- Infinitely adjustable tension force combined with two-step quick adjustment

MK9SST.

- KST-STG200 up to 12.3 mm strap width

Features and Benefits

- Tough metal tool
- Operator controlled tensioning
- Cut off by pulling the hand lever

KST-STG200.

Manual Processing Tool for Metal Ties MLT-Series

- MTT4 up to 12 mm strap width

Features and Benefits

- Tough metal tool
- Simple ratchet operation, easy to use
- Operator controlled tensioning and cutting facility

MTT4.

Article-No.	Type	Strap Width max. (G)	Strap Thickness max.	Weight (kg)

Manual Cutting tool for plastic ties

• CUTties

The CUTties is a cutting tool for plastic ties, which ensures the cut of the strap while preserving wires and harnesses from being damaged in the process.

Its use is recommended in many applications for which wires and harnesses have a high value added, in particular for railway and aviation industries.

Features and Benefits

- Cutting tool for plastic ties
- Tie can be cut off at any part of the strap
- Ensures the cable isolation from being damaged
- Light-weighting aluminium housing, ergonomic designed
- Single-handed operation
- Three tools for cable tie width from 2.3 to 4.8 mm
- Coloured push rods allows their identification

The CUTties is a precise cutting tool for plastic ties.

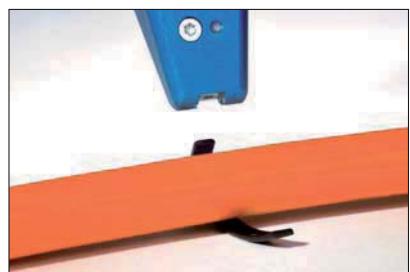

Bring the tool perpendicular on the tie...

... apply a light pressure...

... press on the push rod by maintaining the pressure on the tool...

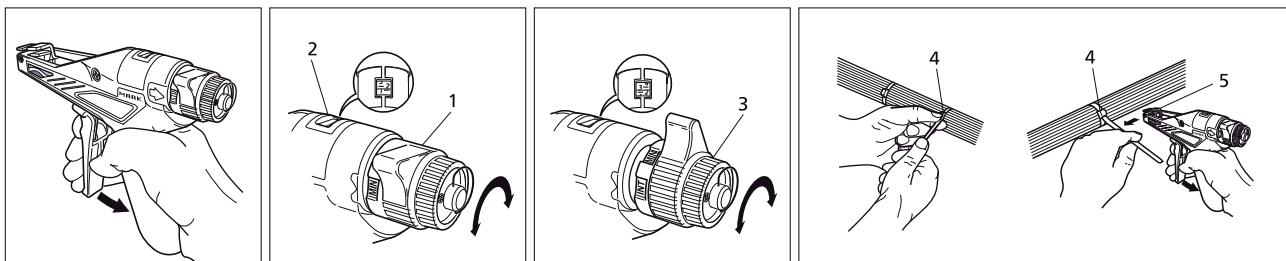

... release the push rod and remove the tool, the tie is cut.

Article-No.	Type	For Cable Tie Width	Colour
110-05000	CUTties-1	2.3 - 2.8	Blue (BU), Yellow (YE)
110-05001	CUTties-3	3.3 - 3.8	Blue (BU), Green (GN)
110-05002	CUTties-5	4.0 - 4.8	Blue (BU), Red (RD)

All dimensions in mm. Subject to technical changes.

How to use a cable tie tool (using an MK7 as an example)

1. Rough adjustment (1) depending on cable tie, and set according to details in the user instructions. Value is displayed in the viewing window (2).
2. Use fine adjustment (3), if necessary, to set the desired value.
3. Lay cable tie around the bundle and guide strap end through the cable tie head (4). Tighten tie firmly enough that one stroke of the tool is enough to tension and cut off.
4. Push the tool with the open side of the tool head (5) over the free strip end and guide in the direction of the bundle until the tool head buts on the tie head (4).
5. Pull manual lever through one or more times to the stop. Once the pre-selected tension is reached, the free tie end is automatically cut off flush with the tie head.

Tool testing - Determination of tensions

To date, no generally applicable test method has been established on the market. The companies within the HellermannTyton group work with the HT50 test device from MAV Prüftechnik (Berlin) to determine the tensile forces of the tools and to guarantee the quality of the tools.

It is more difficult to test cable tie tools than would appear at first glance. It is of supreme importance to comply with a standardised test procedure and consistent test conditions. This means e.g. the size and thus the cross-section of the cable ties, but also the water content of the tie. A test using different ties and/or different conditioning can easily lead to different values.

In general, the speed of cut-off, the position of the tool with respect to the cable tie, the condition of the wearing parts in the tool and the state of the cable tie play a fundamental role in the determination of tensile forces.

Therefore we must point out that any values we provide must only ever be regarded as guide values for your information. The values cannot be transferred into practice "one for one".

In our user instructions, we specify an adjustment range for each type of cable tie. If tension values must be documented or comply with a specification, we recommend that you adjust them with the aid of the MAV device. Also, as a guideline, half the minimum holding strength of the cable tie should be used as tensile force.

The minimum tensile strength (also referred to as minimum unlocking strength) is the least force which the cable tie can withstand before it tears or stretches (see also determination of minimum tensile strength on page 18). This strength is determined using a threaded tie, hence the following formula should be used for guidance as to the correct tensile force of the tool:

$$\frac{\text{Min. tensile strength}}{2} = \text{rec. tensile force}$$

Example:

$$\begin{aligned} \text{T50R} &= \frac{225 \text{ N min. tensile strength}}{2} \\ 225 \text{ N} &= 112,5 \text{ N rec. tensile force} \end{aligned}$$

according to formula

Electrical Hot Air Tool

- H5002 - handy tool

Features and Benefits

- Lightweight and compact hot air tool
- Enables comfortable, fatigue-free work
- Temperature electronically controlled from 100- 600 °C, cold air step of 50 °C
- Air-flow regulation adjusted in two stages (300 l/min and 500 l/min)

H5002 - The light, convenient hot-air tool.

- H5004 - for professional use

Features and Benefits

- Professional hot air gun
- Temperature electronically controlled
- Air flow regulation
- Equipped with LED temperature indication enabling precise temperature adjustment

H5004 - for professional use.

Accessories suitable for both H5002 and H5004.

Article-No.	Type	Air Flow l/min	Temp. °C	Standby Temp. °C	Wattage	Operational Voltage	Weight (kg)

Gas powered Hot Air Tool

• E4500

The E4500 hot-air gun is suitable for shrinking all types of heat shrink products including tubing, shapes and cable repair sleeves. It can also be used for the bending and shaping of PVC pipes, soft soldering of copper pipes, sealing, defrosting, heating and paint stripping.

Features and Benefits

- Cordless hot air gun
- With protective spring, two nozzles and a gas cartridge
- Does not need any power supply
- Allows precise working in any position even in restricted spaces
- Can be operated on its stand for hands free use
- Weight of tool: 760g
- Gas cartridge Type P445, 110ml/60 g
- Operating time: approx. 1.5 hours
- New 3-component gas mixture providing higher pressure, especially useful at low (< 0 °C) outdoor temperatures
- Piezo ignition
- Valve controlled temperature setting

E4500 the cordless hot air gun, ideal for service jobs.

Practical hot air gun kit E4500 with accessories.

Three-Pronged Pliers for Sleeves and Grommets

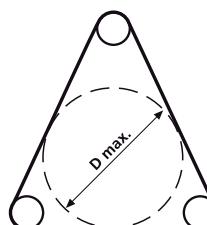

- NA

Features and Benefits

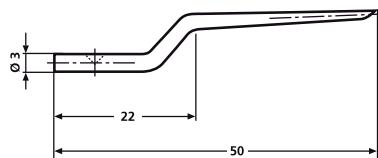

- To easily affix sleeves of every type onto cables
- Sleeve simply slide onto the prongs
- Push plier and pull over cable
- Close plier, sleeve is placed easily

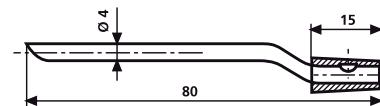

Fast, secure application with the NA three-pronged pliers.

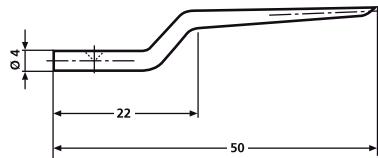

Three-prong pliers;
D = max. application diameter

Hot cutting tool

• HSG0

The HSG0 hand tool is used to cut braided sleeving cleanly and without fraying.

Features and Benefits

- Light and sturdy
- Heats up quickly with the press of button and cuts in seconds
- The yarn melts and fuses together
- No fraying of the sleeving

The HSG0 hot cutting tool prevents the braided sleeving from fraying.

Article-No.	Type	Weight (kg)	Colour
170-99001	HSG0	1.15	Blue (BU)

Subject to technical changes.

Use our flow chart to find the correct heat shrink tubing for your particular application.

Begin your search in the flow chart at the START point. You will be guided through Charts 1 to 4 to the target according to your heat shrink tubing requirements. Using the "yes/no" and "either/or" decisions, you will be able to select the correct heat shrinkable tubing with ease.

Of course, you can always call us whenever you wish on our usual telephone numbers.

Overview of applications for Heat Shrink Tubing

When selecting the correct heat shrink tubing size, it is important to bear in mind the 80:20 rule. The heat shrink tubing must shrink by at least 20% and not more than 80% of its complete shrinkage capacity to achieve the right result. In our overview of applications you will find the best heat shrink tube for every cable diameter. The 80:20 rule has of course been taken into account in the table.

Heat Shrinkable Tubing with a shrink ratio of 2:1

HIS-Pack; LVR; TF21; TL27; HFT-A; HFT-B;

The right Heat Shrink Tube

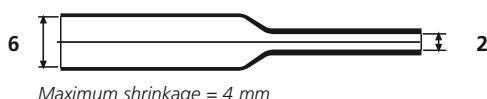

The **80:20 rule** means that a heat shrink tube should shrink by a **maximum of 80%** and a **minimum of 20%**.

For example:

A cable with a diameter of 5 mm is to be wrapped in heat shrinkable tubing. In theory both sizes 6/2 and 12/4 would be suitable, since the required diameter of 5 mm lies within the shrink range of both tube sizes.

Size 6/2

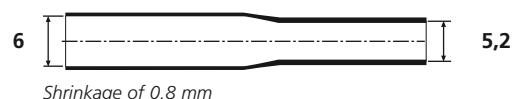

Maximal shrink (100%)

Optimum Shrinkage max. (80%)

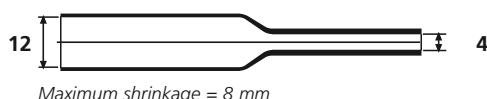

Optimum shrink min. (20%)

Size 6/2 has a range of application of between 2.8 mm and 5.2 mm and is therefore suitable for the cable diameter of 5 mm.

Size 12/4

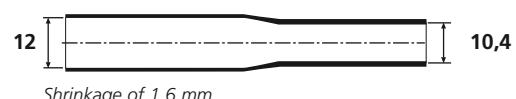

Maximum shrink (100%)

Optimum shrink max. (80%)

Optimum shrink min. (20%)

The smallest application diameter of size 12/4 is 5.6 mm. This size is therefore unsuitable for a cable diameter of 5 mm.

Calculator tool for Heat Shrink Tubing

The calculator tool for Heat Shrink Tubing is a selection guide for shrink tubing sizes based on the object to be covered. Fill in your specification and the calculator presents the right tubing size according to the 80:20 rule. Find more information under <http://www.hellermanntyton.co.uk/heatshrink-calculator>!

The calculator tool also checks if the Heat shrink tubing you have choosed is suitable for your application.

For example you can find the Heat shrink tubing with the Product Search on the HellermannTyton website.

Low-Heat Shrinkable Tubing 2:1

- TCN20 - self extinguishing

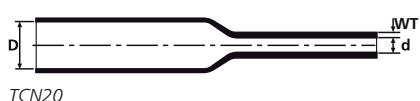

TCN20 is suitable for a wide range of applications like electrical insulations, mechanical protection, cable bundling, et cetera.

Features and Benefits

- Thin walled general purpose polyolefin tubing TCN20
- Shrink ratio 2:1
- Flame-retardant
- Fast shrinkable
- Low shrink temperature
- Good mechanical strength
- Resistance to common fluids and solvents

Heat shrink tubing TCN20.

Low-Heat Shrinkable Tubing 3:1

- TCN20 overexpanded - self extinguishing

Mechanical, electrical and corrosion protection applications for parts with high diameter variances. This fast shrinking tubing makes it suitable for high volume production.

Features and Benefits

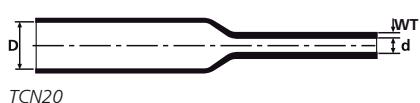

- Thin walled overexpanded polyolefin tubing TCN20X
- Shrink ratio 3:1
- Flame-retardant
- Extremely fast shrinkable
- Low shrink temperature
- Good mechanical strength
- Resistance to common fluids and solvents

Battery cables safely insulated with TCN20 overexpanded shrinkable tubing

Due to its thin wall TCN20 overexpanded is suitable for insulation of antennas.

TCN20

Material	Polyolefin, cross-linked (POX)
Colour	Black (BK)
Shrink Ratio	3:1
Longitudinal change after shrinkage	+/- 5%
Min. Shrink Temperature	+100 °C
Operating Temperature	-55 °C to +125 °C
Dielectric Strength	20 kV/mm
Flammability	self-extinguishing
Specification	UL224

Article-No.	Type	Supplied Ø D min.	Recov. Ø d max.	Wall (WT) nom.	Reel Length (m)

Low-Heat Shrinkable Tubing 2:1

- TL27 - halogen free

Its low shrink temperature offers very quick recovery. Application fields include covering of heat sensitive parts, mechanical protection and cosmetic covering.

Features and Benefits

- Thin walled and light weighting polyolefin tubing TL27
- Shrink ratio 2:1
- Halogenfree
- Very flexible
- Extremly fast shrinkable
- Very low shrink temperature

TL27 – a very flexible tubing for automotive applications.

TL27

Material	Polyolefin, cross-linked (POX)
Colour	Black (BK)
Shrink Ratio	2:1
Operating Temperature	-55 °C to +135 °C
Min. Shrink Temperature	+90 °C
Flammability	FMVSS 302
Longitudinal change after shrinkage	+5%/-15%

Heat Shrinkable Tubing 2:1 flexible and coloured

- **TF21**

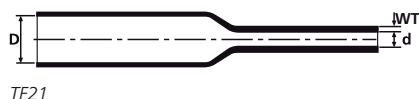

TF21 is due to its versatility suitable for a wide range of applications like electrical insulations, mechanical protection and marking.

Features and Benefits

- Thin walled, flexible polyolefin tubing TF21
- Shrink ratio 2:1
- Extremely fast shrinkable
- Very low shrink temperature
- Very good mechanical strength and strain relief
- Resistance to common fluids and solvents
- Meets and exceeds lots of industrial standards
- Big variety of different colours and sizes
- Printable

TF21 – available in a wide range of colours and sizes.

TF21

Material	Polyolefin, cross-linked (POX)
Shrink Ratio	2:1
Operating Temperature	-55 °C to +135 °C
Min. Shrink Temperature	+90 °C
Flammability	ASTM D876
Longitudinal change after shrinkage	+/- 5%
Dielectric Strength	37 kV/mm
Specification	UL224 125 °C 600V VW-1, CSA, SAE - AMS - DTL-23053/5 Class 1, NF F 00-608, JAR/FAR 25.853

TF21

Heat Shrinkable Tubing 2:1 flexible and transparent

- TF24

Features and Benefits

- Transparent, flexible polyolefin tubing
- TF24
- Protects identification marking perfect
- Shrink ratio 2:1
- Halogenfree
- Good mechanical and chemical resistance
- VG-approval and additional industrial approvals

TF24 – ideal to protect cable markers.

TF24

Material	Polyolefin, cross-linked (POX)
Shrink Ratio	2:1
Operating Temperature	-55 °C to +135 °C
Min. Shrink Temperature	+110 °C
Longitudinal change after shrinkage	+/-5% max.
Dielectric Strength	46 kV/mm
Specification	VG 95343, SAE - AMS - DTL-23053/5 Class 2, DEF STAN 59-97 Type 2B

Cut lengths available on request. Please contact us!

Heat Shrinkable Tubing 3:1 flexible and coloured

- **TF31**

If higher fire protection is a requirement heat shrinkable tubing TF31 is a good choice. It is used for protection insulation and identification wires, cables and light duty harnesses.

Features and Benefits

- Thin walled, flexible polyolefin tubing TF31
- Shrink ratio 3:1
- Flame-retardant
- Fast shrinkable
- Low shrink temperature
- Good mechanical strength and chemical resistance
- Resistance to common fluids and solvents

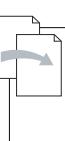

TF31 with 3:1 shrink ratio allowing for a wider range of application.

TF31

 Cut lengths available on request. Please contact us!

Heat Shrinkable Tubing 3:1 flexible and transparent

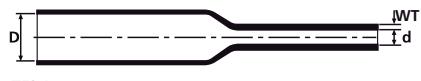

- TF34

Features and Benefits

- Transparent, highly flexible polyolefin tubing TF34
- Protects identification marking perfect
- Shrink ratio 3:1
- Halogenfree
- Good mechanical and chemical resistance

TF34 transparent tubing with 3:1 shrink ratio allowing for a wider range of application.

TF34

Cut lengths available on request. Please contact us!

Material	Polyolefin, cross-linked (POX)
Colour	Transparent (CL)
Shrink Ratio	3:1
Operating Temperature	-55 °C to +135 °C
Min. Shrink Temperature	+110 °C
Longitudinal change after shrinkage	-5% max.
Dielectric Strength	46 kV/mm

Heat Shrinkable Tubing adhesive lined

- EPS-300 3:1
- EPS-400 4:1

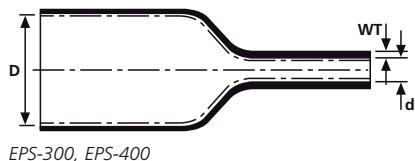

Heatshrinkable tubing EPS seals and protects a wide variety of electrical applications like back end connector sealing, connector-to-cable transitions and splices.

Features and Benefits

- Flexible, thin walled polyolefin tubing EPS
- With coextruded hot melt adhesive inner wall
- Shrink ratio 3:1 and 4:1
- Protects against moisture
- Provides an environmental sealing of complex parts

EPS offers high shrink ratios and protection against humidity.

EPS-300, EPS-400

Material	Polyolefin, cross-linked (POX)
Colour	Black (BK)
Shrink Ratio	3:1, 4:1
Longitudinal change after shrinkage	-10% max.
Min. Shrink Temperature	+120 °C
Operating Temperature	-55 °C to +110 °C
Softening Point Adhesive	+90 °C
Dielectric Strength	15 kV/mm according to IEC 684 P2
Flammability	ASTM D2671 (outer layer only)
Specification	SAE - AMS - DTL-23053/4 (EPS400)

Cut lengths available on request. Please contact us!

Heat Shrinkable Tubing 2:1 - Fluororubber

- **Viton®-E**

Viton®-E is used for reliable protection against aggressive chemicals in high temperature environments like engine compartments and turbines. It is also used when protective tubings are required to remain flexible at low temperatures.

Features and Benefits

- High resistant fluoroelastomeric heat shrink tubing Viton®-E
- Shrink ratio 2:1
- For high temperature applications
- Very low shrink temperature
- Flexible even at very low temperatures
- Very good electrical, chemical and mechanical features
- Resistance to fuels and lubricants
- Approved to VG 95343/5E

Viton®-E

Viton®-E for flexibility and protection against aggressive chemicals.

Cut lengths available on request. Please contact us!

Detailed Information about Heatguns please refer to page 137.

Material	Fluoropolymer cross-linked (FPMX)
Colour	Black (BK)
Shrink Ratio	2:1
Longitudinal change after shrinkage	-10% max.
Min. Shrink Temperature	+175 °C
Operating Temperature	-55 °C to +220 °C
Insulation Class	C (VDE 0530)
Dielectric Strength	15 kV/mm
Flammability	VG 95343
Specification	VG 95343

Heat Shrinkable Tubing 2:1 - PVDF

- **TK20**

Typical applications of this translucent tubing are where high-temperature performance is required. Also very suitable for applications that ask for visual inspection of covered components, or if low friction surface is needed. TK20 is also used as oil stop for energy cables.

This thin walled, translucent heat shrink tubing is often used for chemical applications.

Features and Benefits

- Transparent, semi-rigid heat shrinkable Tubing TK20
- Thin walled and tough
- Shrink ratio 2:1
- Self extinguishing
- For higher temperature applications
- Very good mechanical strength and chemical resistance
- Meets lots of industrial standards
- Cutted length: 1,20 m

TK20, TK29

This thin walled, translucent heat shrink tubing is often used for chemical applications.

Material	Polyvinylidene fluoride (PVDF)
Colour	Transparent (CL)
Shrink Ratio	2:1
Operating Temperature	-55 °C to +175 °C
Min. Shrink Temperature	+175 °C
Flammability	UL224 VW-1
Longitudinal change after shrinkage	+/-10% max
Dielectric Strength	≥ 30 kV/mm min. according to ASTM D2171
Specification	SAE - AMS - DTL-23053/8, UL224 150 °C 600V VW-1, VG 95343

Heat Shrinkable Tubing - PTFE

- TFE2 2:1
- TFE4 4:1

TFE is ideal for high temperature applications, when resistance to aggressive fluids is required or a very thin walled tubing is needed, for example in pH-measuring instruments. TFE tubing is also used to reduce movement due to friction, covering cylinders for example.

Features and Benefits

- Transparent, non-burning heat shrinkable Tubing TFE
- Very thin walled and tough
- Shrink ratio 2:1 and 4:1
- For operating temperatures up to +260° C
- Very good mechanical strength
- High chemical resistance

TFE is available in either 2:1 or 4:1 shrink ratios.

TFE2, TFE4

Cut lengths available on request. Please contact us!

Material	Polytetrafluoroethylene (PTFE)
Colour	Transparent (CL)
Shrink Ratio	2:1, 4:1
Operating Temperature	-70 °C to +260 °C
Min. Shrink Temperature	+330 °C
Flammability	non-burning
Longitudinal change after shrinkage	-20% max.
Dielectric Strength	40 kV/mm according to DIN 53481

Heat Shrinkable Tubing 2:1 - Flame retardant

- TR27

TR27 is used in applications where toxic emissions during a fire must be kept low, e.g. for heavily populated buildings or high security areas like tunnels, hospitals, schools, theatres, mass transit vehicles and computer centres.

Features and Benefits

- Thin walled, flexible polyolefin tubing TR27
- Shrink ratio 2:1
- Halogenfree
- Self-extinguishing
- Excellent flame-retardant properties
- Meets lots of industrial standards
- Optional available with adhesive or as thick walled version SR27

TR27 is ideal for safety sensitive areas.

 **Detailed Information
about Heatguns please
refer to page 106.**

Material	Polyolefin, cross-linked (POX)
Colour	Black (BK)
Shrink Ratio	2:1
Operating Temperature	-40 °C to +105 °C
Min. Shrink Temperature	+115 °C
Flammability	Limited Fire Hazard, halogen free, low generation of toxic gases and corrosive acid, low smoke generation
Longitudinal change after shrinkage	+5%/-10% max.
Dielectric Strength	15 kV/mm according to IEC 684 P2
Specification	DEF STAN 59-97 Type 8, LUL Engineering Standard E1042:A6, CEN TS 45545-2: HL3

Standard polyester braided sleeving

- Helagaine HEGP

Helagaine HEGP braided sleeving is used in the automotive industry, in machine building, in panel building and in electrical appliances to provide abrasion protection. Its open structure prevents pockets of high temperature. HEGP fulfils the requirements of DIN5510-2 and is therefore also optimal for railway applications.

Helagaine HEGP braided sleeving

Features and Benefits

- Made from sturdy polyester
- Highly flexible
- High abrasion resistance
- Eases application by expanding when compressed
- High surface coverage (approx. 81%)
- 13 sizes for diameters from 1 - 66 mm for an optimal fit

Material	Polyester (PET)
Colour	Black (BK)
Operating Temperature	-50 °C to +150 °C, intermittent +220 °C
Melting Point	+250 °C
Flammability	UL94 V2, FMVSS 302
Specification	DIN 5510-2

Article-No.	Type	Bundle Ø min.	Bundle Ø max.	Reel Length (m)

Standard polyester braided sleeving, expansion rate: 3:1

- Helagaine HEGPX

Helagaine HEGPX is used whenever a higher expansion ratio is required. HEGPX is particularly suitable for use in the automotive and railway industry and in electrical appliances.

Features and Benefits

- Made from sturdy polyester
- Expansion ratio of 3:1
- Easier application over irregular shapes
- Highly flexible
- High abrasion resistance
- 7 sizes for diameters from 3 - 70 mm for an optimal fit

Helagaine HEGPX braided sleeving

Material	Polyester (PET)
Colour	Black (BK)
Operating Temperature	-50 °C to +150 °C, intermittent +220 °C

Polyester braided sleeving, UL94V0 classification

- **Helagaine HEGPV0**

HEGPV0 braided sleeveings are used wherever fire protection is important such as in railway vehicles, machine tools, robotics and automatic equipment. HEGPV0 fulfill the requirements of DIN5510-2 and NFF-16 101.

Features and Benefits

- Made from sturdy polyester
- Self-extinguishing according to UL94 V0 for enhance fire protection
- Keeps out moisture and dirt
- Resistant to chemicals and acids
- High surface coverage

**Polyester braided sleeving,
expansion rate: 3:1, UL94V0
classification**

- Helagaine HEGPV0X

Helagaine HEGPV0X braided sleeving is especially suitable wherever fire protection and higher expansion ratio are important. Helagaine HEGPV0X offers superior cable protection for railway vehicle construction, machine tools, robotics and automatic equipment.

Features and Benefits

- Helagaine HEGPV0X braided sleeving made from polyester
- Self-extinguishing according to UL94 V0 for enhanced fire protection
- Easier application over irregular shapes due to expansion ratio of 3:1
- Good abrasion protection
- Keeps out moisture and dirt
- Resistant to acids

Polyamide braided sleeving for excellent abrasion resistance

- Helagaine HEGPA66

Helagaine HEGPA66 is particularly suitable for vehicle manufacturing as well as plant construction.

Features and Benefits

- Made from heavy-duty polyamide yarn
- Eases application by expanding when compressed
- High surface covering
- Excellent abrasion resistance

Helagaine HEGPA66 braided sleeving are made from Polyamid 6.6 and offer excellent abrasion resistance.

**To prevent fraying,
the sleeve can be cut
with the hot cutting tool
HSG0, see page 141.**

Material	Polyamide 6.6 (PA66)
Colour	Black (BK)
Operating Temperature	-60 °C to +150 °C, intermittent +200 °C
Melting Point	+255 °C
Flammability	UL94 V2, FMVSS 302

Polyester braided sleeving for reduction of vibration noise

- Helagaine HEGSAS

Helagaine HEGSAS braided sleeving is used primarily in the automotive sector and wherever vibration noise must be reduced. Helagaine HEGSAS can be supplied in pre-cut lengths on request.

Features and Benefits

- Made of sturdy polyester
- Superior noise reduction
- Easier application over irregular shapes due to expansion ratio of 3:1
- High surface coverage
- Excellent abrasion resistance

With its special yarn structure, Helagaine HEGSAS is very effective in reducing vibration noise.

**To prevent fraying,
the sleeve can be cut
with the hot cutting tool
HSG0, see page 141.**

Material	Polyester (PET)
Colour	Black (BK)
Operating Temperature	-50 °C to +150 °C, intermittent +200 °C
Flammability	FMVSS 302

Article-No.	Type	Bundle Ø min.	Bundle Ø max.	Reel Length (m)

Braided sleeving for electromagnetic protection

• Helagaine HEGEMIP

Helagaine HEGEMIP braided sleeving is used for highly sensitive electronics, such as electrical appliances and machines, radio equipment, military engineering and automobiles.

Features and Benefits

- Excellent electromagnetic protection
- Extremely flexible, expandable and easy to apply
- Superior abrasion protection
- No kinks or tears, even when bending the sleeve 90°
- Particularly suitable for applications with restricted space or requiring movement
- Fulfils the requirements of international EMI norm (10KHz to 1GHz)

HEGEMIP braided sleeving: reliable protection from electromagnetic radiation.

Material	Polyester (halogen free), Tin-plated copper (TNCU)
Colour	Tin-coloured and Black (TCBK)
Operating Temperature	-40 °C to +175 °C, intermittent +200 °C
Flammability	UL94 V2, FMVSS 302
EMI requirements	10 KHz to 1 GHz according to CISPR25 (DIN VDE 0879-2)

Article-No.	Type	Ø D	Bundle Ø min.	Bundle Ø max.	Reel Length (m)	Weight (g/m)

**Braided sleeving for electromagnetic protection,
UL94V0 classification**

- Helagaine HEGEMIPV0

Helagaine HEGEMIPV0 braided sleeving is used for protection of highly sensitive electronics in industries, wherever fire protection is important, such as mass transit, aerospace and military industry.

Features and Benefits

- Excellent electromagnetic protection
- Extremely flexible, expandable and easy to apply
- Self-extinguishing according to UL94 V0
- Superior abrasion protection
- No kinks or tears, even when bending the sleeve 90°
- Particularly suitable for applications with restricted space or requiring movement
- Fulfils the requirements of international EMI norm (10 KHz to 1 GHz)

HEGEMIPV0 braided sleeving: EMI protection for enhanced flame protection.

Material	Polyester (PBT), Tin-plated copper (TNCU)
Colour	Tin-coloured and Black (TCBK)
Operating Temperature	-40 °C to +175 °C, intermittent +200 °C
Flammability	UL94 V0, FMVSS 302
EMI requirements	10 KHz to 1 GHz according to CISPR25 (DIN VDE 0879-2)

Light weight standard polyester braided sleeving

- Helagaine HEGPL

Helagaine HEGPL is used primarily in automobile interiors, motor compartments, car bodies and underfloors.

Features and Benefits

- Made from sturdy polyester
- Expansion ratio of 3:1
- Easier application over irregular shapes
- Highly flexible
- High abrasion resistance

Helagaine HEGPL Braided Sleeving

To prevent fraying,
the sleeve can be cut
with the hot cutting tool
HSG0, see page 141.

Material	Polyester (PET)
Colour	Black (BK)

Re-sealable protective sleeving for post-termination cable organisation

- HELAHOOK

HELAHOOK is used in industrial machines, electrical appliances, shipbuilding, railway vehicles and in the aerospace industry. HELAHOOK is also employed in automobiles or commercial vehicles. It is the ideal solution for post-termination cable organisation and wherever repeated use is a necessity.

Features and Benefits

- Re-sealable cable protection made from polyester
- Very elastic, fits snugly around the cables
- Hook and loop sealing system can be used for retro-fitting
- Abrasion resistant

HELAHOOK protective sleeving allows for retrospective fitting and repeated use.

HELAHOOK provides excellent abrasion resistance.

Material	Polyester (PET)
Colour	Black (BK)
Operating Temperature	-50 °C to +150 °C, continuous
Flammability	UL94 V2, FMVSS 302
Specification	NF F 16-101

Polyester self-closing sleeving

- Helagaine Twist-In

Helagaine Twist-In has many applications in engineering, electronics and electrical installations.

Features and Benefits

- Self-closing sleeve made from polyester
- Ideal for retro-fitting
- Very easy, quick installation and removal
- Quick and easy access to bundle for inspection, maintenance and assembly
- Small range of sizes covers a wide range of applications

Helagaine Twist-In gives easy access to cables and wires for inspection, maintenance and assembly.

 To prevent fraying,
the sleeve can be cut
with the hot cutting tool
HSG0, see page 141.

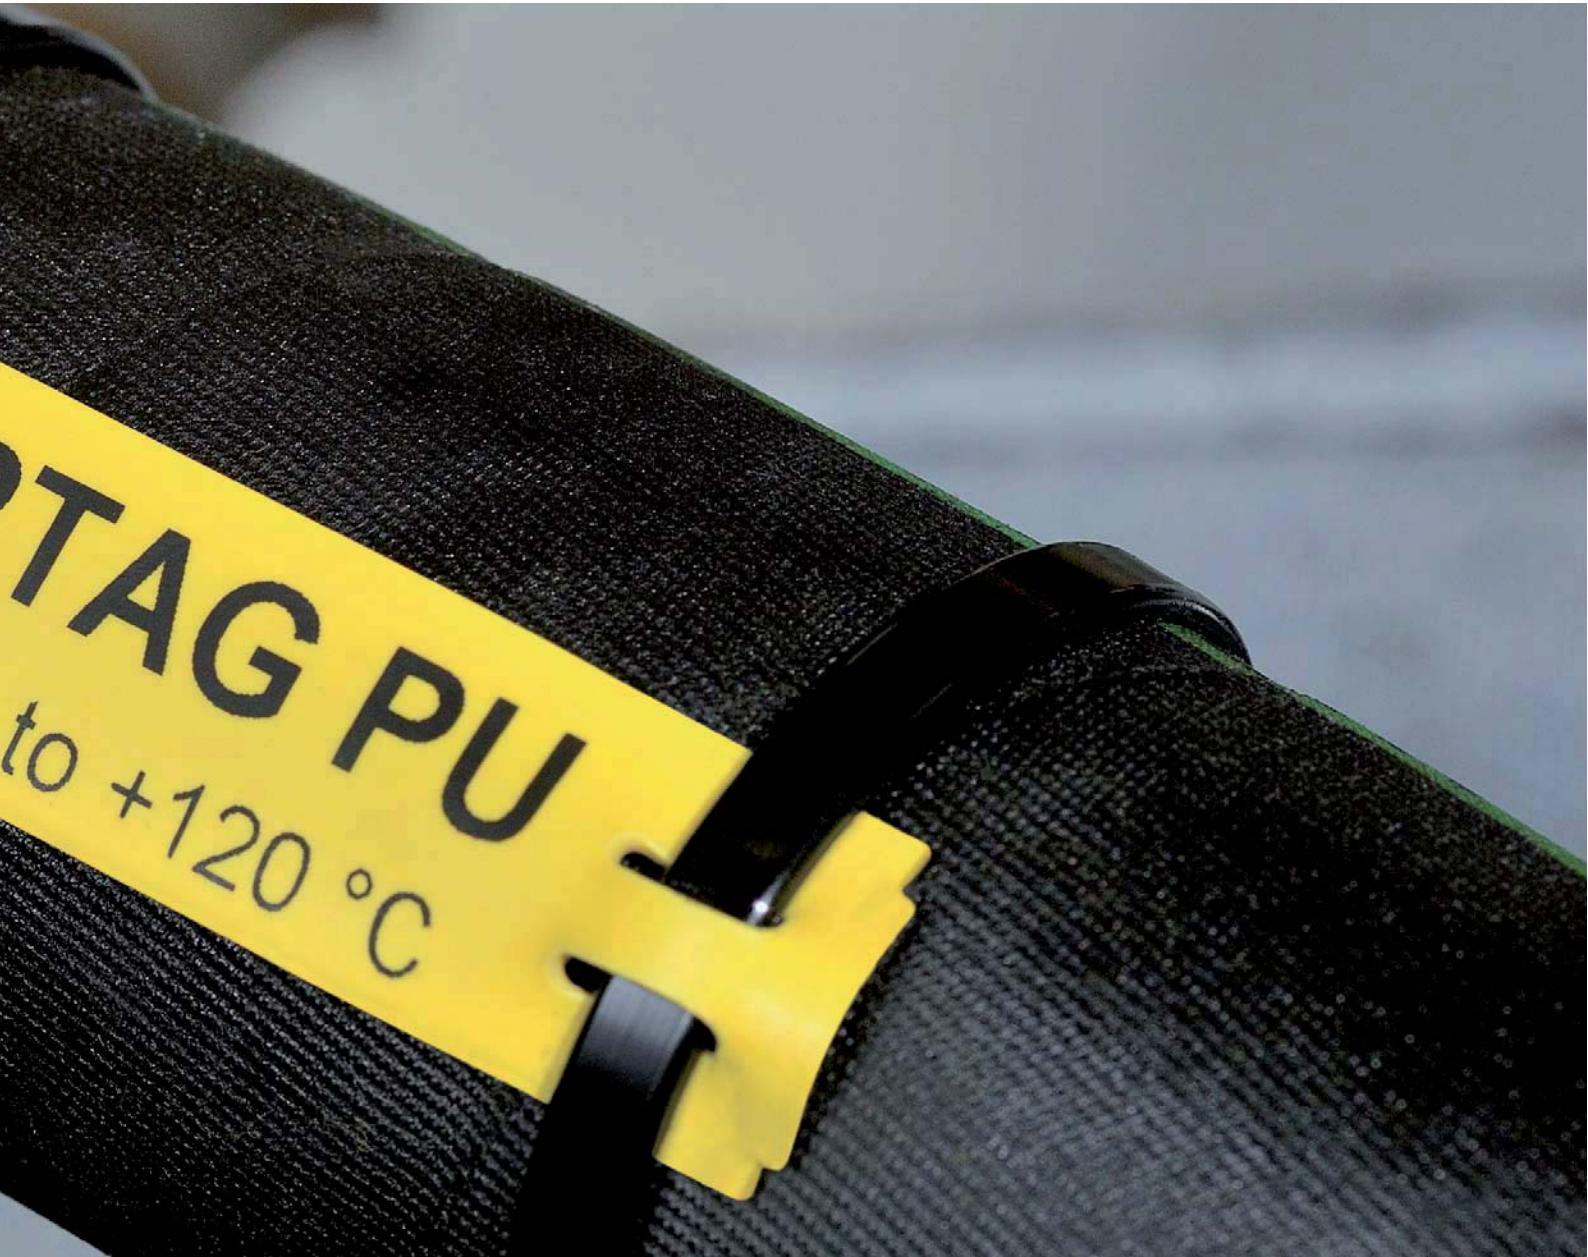

Material	Polyester (PET)
Colour	Black (BK)
Operating Temperature	-70 °C to +125 °C
Melting Point	+255 °C
Flammability	FMVSS 302, self-extinguishing

Article-No.	Type	Material	Bundle Ø min.	Bundle Ø max.	Weight (g/m)	Reel Length (m)

Thermal printer ribbons	201
Accessories, thermal transfer printer	202
Labelling software	203

Use our flowchart to find the right label or identification material.

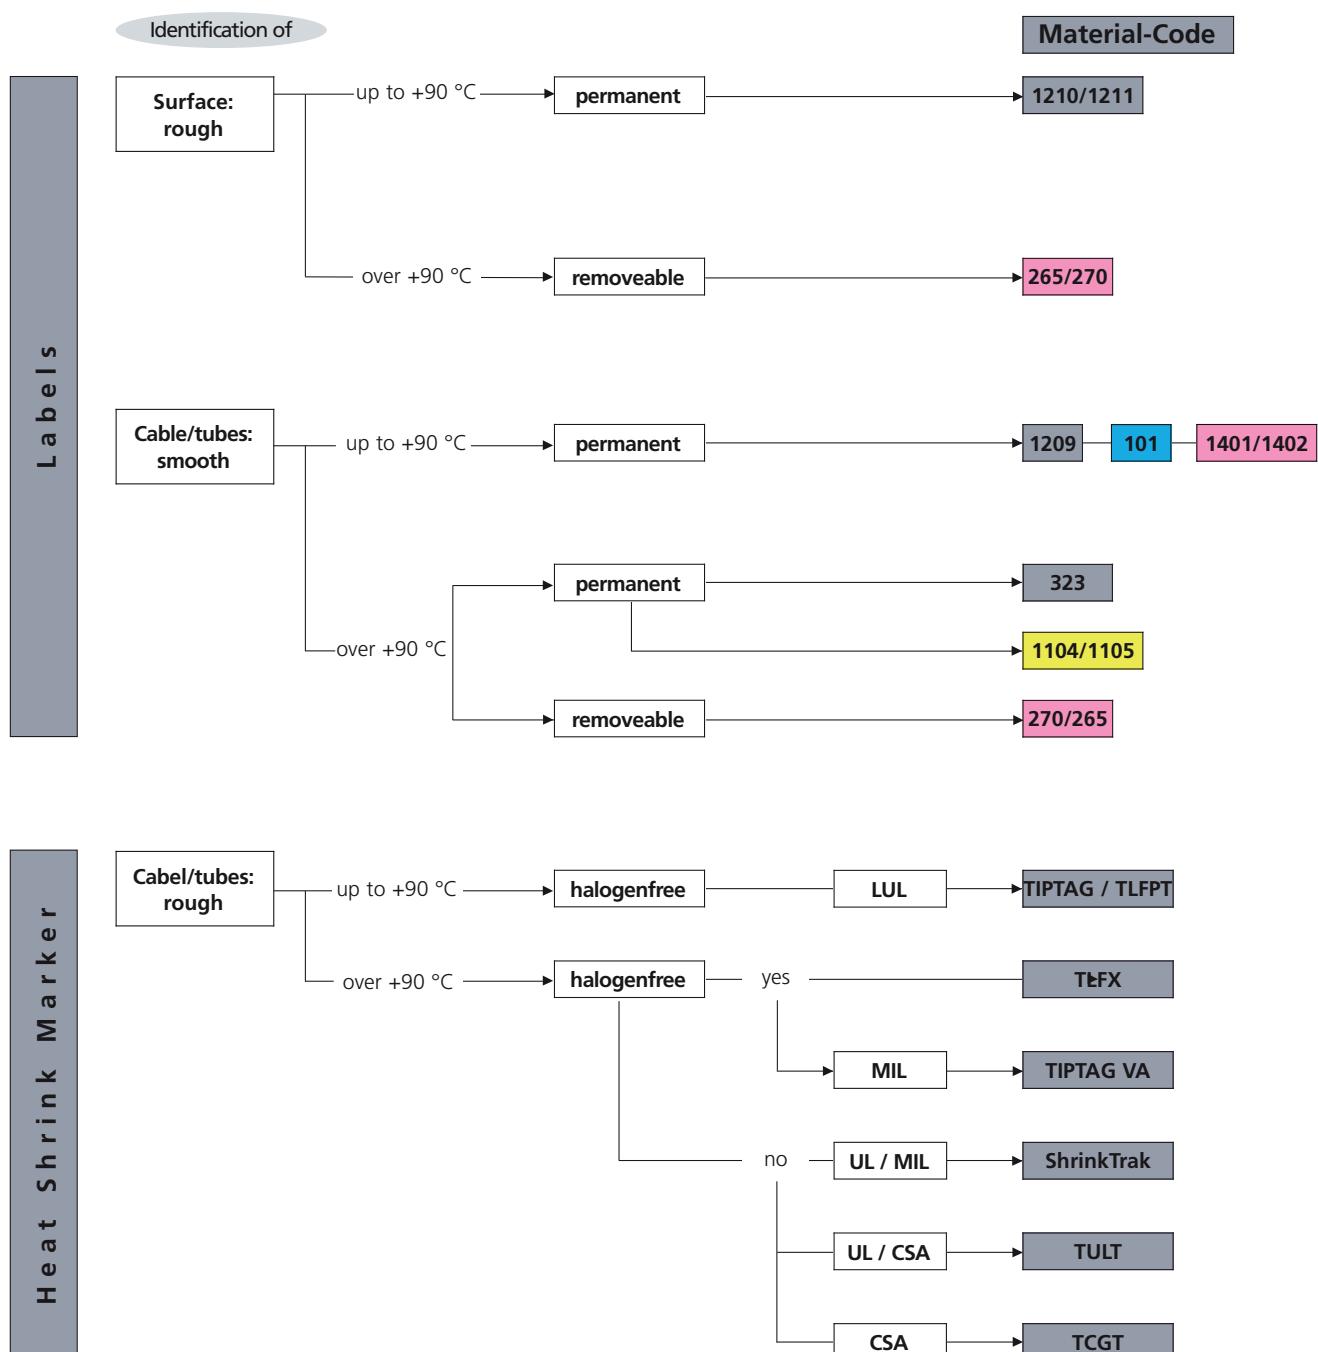

Select the object to be identified (flat or curved surface) and its surface quality (smooth or rough). Depending on what you require from our identification systems, you will be guided through the flowchart to the end. Please note that we have highlighted the respective printer technology (thermal transfer, matrix or laser printer, etc.) in colour.

figure 1

When selecting the material, the general rule is that a higher quality material can of course be used for lower requirements (e.g. a material for operating temperatures of over +90 °C can also be used for temperatures below +90 °C). And you can, of course, always ring us on our usual telephone numbers.

figure 2

Labelling material for:

- [Grey Box] TT printer
- [Blue Box] Matrix printer
- [Yellow Box] Laser printer
- [Pink Box] Handwritten identification

Approvals:

- 1) UL: Underwriter Laboratories
- 2) KBA: German Motor Transport Authority
- 3) MIL: Military Specification (USA)
- 4) LUL: London Underground RSE STD 013 (Großbritannien)
- 5) CSA: Canadian Standards Authority

Bonding properties of labels

The great variety of ways and places where labels can be used requires a broad range of combinations of different materials and adhesives. In the following text, a glimpse into the basic properties and differences between label adhesives will be provided.

To enable you to make the right choice for your particular application quickly and efficiently, we have set out the most important selection criteria diagrammatically in our flowchart.

Adhesion: powers of attraction between two materials

Adhesion can be described, in principle, as the ability of the adhesive to form a bond with the surface of the surface of the material (substrate). The influencing factors for optimum bonding of the label are the quality of the surface of the material and the creep ability of the adhesive. The crucial factor is the proportion of the surface which is actually to be wetted by the adhesive.

Initial and final bonding

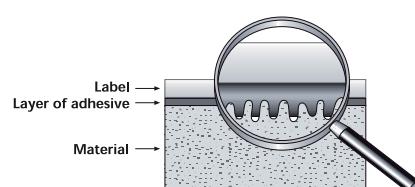

In principle there are two different bonding conditions for labels: The initial bonding which occurs immediately after the label and surface are brought together and the final bonding which represents the permanent bonding status between label and surface following the application, pressing on and curing of the adhesive. The bonding of labels is measured in a defined test process (FINATFTM) and stated in N/mm.

The initial bonding (or tack) describes the

bonding ability of the label after it has been applied to the surface, without being pressed down. The final bonding of labels is ultimately affected by the combined factors of material quality, adhesive basis, curing time, pressure applied and surface tension.

Most surfaces appear – from a microscopic point of view – like a mountain range with peaks and valleys; i.e. the effective surface is much bigger than that seen by the naked eye. No matter how smooth and flat a substrate may appear to be, there is always some roughness. The more thinly the adhesive flows into the valleys, the more bonding points it can form and the better the adhesive will bond to the surface. A thicker layer of adhesive does allow these uneven

areas to be filled in better, but a thicker coat of adhesive has negative effects when labels are processed by machine (e.g. leakage of the adhesive or limited storage life).

Adhesive basis

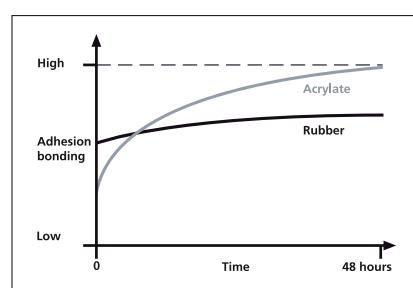

HellermannTyton currently uses acrylate and synthetic rubber as adhesive bases. Acrylate adhesives belong to the family of thermoplastic resins and at normal temperatures they provide high and lasting adhesion.

When considering the final bonding of acrylate adhesives, however, it must be noted that the relatively high final bonding is only attained after a certain curing period. This is especially true of labelling materials which may be used for rating plates.

So, for example, the adhesive for material types 1203 or 951 must harden for at least 48 hours on the surface without loading.

Only after this period does the safety measure become apparent; when an attempt is made to pull off the rating plate (check-board traces remain on the type 1203 and 951 materials).

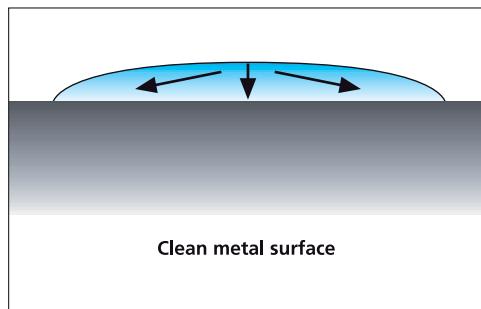

Synthetic rubber-based adhesives, unlike acrylate-based adhesives, are distinguished by their high initial bonding. But this adhesive technology does not achieve a final bonding comparable to acrylate adhesives (see graph). Special mixtures of synthetic rubber are used in labelling technology, for example for removable labels, e.g. HellermannTyton material type 265 and 270.

Effect of surface energy on bonding properties

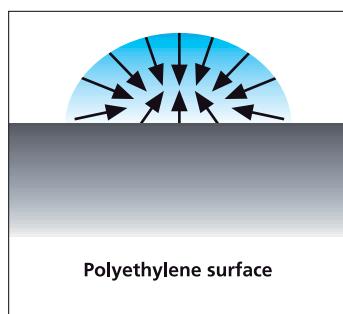

The surface energy (also known as surface tension) is an important factor in the selection of the right adhesive. Because of their chemical formulation, all surfaces have their own polarity and surface tension. The cause of surface tensions is the tendency of liquids to reduce their surface as far as possible, thus to form drops. When a surface which is to be marked (substrate) is wetted with an adhesive, in addition to the adhesive formulation and the surface quality (material, roughness, dampness etc.) the surface energy is also a decisive factor in the maximum attainable bonding force of the adhesive.

As a basic rule, it can be noted that the surface energy of the adhesive must be less than the surface energy of the material to be bonded (substrate). The adhesive should completely wet the substrate and not form any drops.

Flat drops

- High surface energy
- Good wetting
- Good bonding properties

Rounded drops

- Low surface energy
- Poor wetting
- Weak bonding properties

The material combination is the decisive factor

An acrylate-based adhesive is polar and therefore has a relatively high surface energy. Acrylate-based adhesives achieve optimum final bonding on polar substrates (e.g. glass or metals) with a high surface energy.

More critical is the application of labels using acrylate-based adhesives on materials with low surface energy (apolar substrates) such as, for example, silicon, polyethylene and polypropylene. The surface tensions of an acrylate-based adhesive can be reduced for particular applications by the addition of specific additives. However, this step brings with it some drawbacks, for example, a free-flowing adhesive and thus a limited life and storage ability of the labels.

The lower bonding force of low-energy surfaces must therefore be taken into account of when considering the end use.

Surface energies of different materials

Material	Surface energy [mN/m]*	
Polytetrafluoroethylene (PTFE)	18	For optimum marking using acrylate-based adhesive labels, HellermannTyton uses an improved adhesive formulation, which is co-ordinated to the most common materials in industry. In most cases it is possible to guarantee very good application of these labels. In borderline cases, a modified adhesive formulation may be necessary.

Instructions for using cable markers with protective laminate

Cable markers with protective laminate (also known as cable laminators) have a white or coloured label field which can be written on either manually using a marker pen (see RiteOn and Helasign) or using a matrix, laser or thermal transfer printer (see Helatag). Depending on the design for the respective type of printing, the title block has a special surface finish to achieve the optimum fixation of the printing ink.

This results in long-lasting, clear, sharp writing with text, graphics or barcode. A special feature is that the HellermannTyton protective laminate comes with rounded corners. This achieves greater final adhesion of the protective laminate and counteracts any undesirable removal of the label, especially with cables of small diameter and in heavy-duty applications.

Helatag self-laminating labels.

When calculating the minimum and maximum diameters, the following formula has been used:

$$\text{Diameter} = \frac{\text{Length of laminate}}{\pi}$$

Pi (π) is the constant 3.14.

Minimum diameter:

To save time, when wrapping the cable with the cable laminator, a limit of max. 2 windings has been set. The protective laminate length is calculated from: Height H2 – height H.

Minimum Diameter:

In this case the minimum requirement is complete coverage of the label field with the protective laminate with a single winding. The length of the protective laminate is again obtained from the formula: H2 – H.

By applying the "diameter" formula this produces the approx. minimum diameter:

$$\text{Diameter min.} = \frac{H2 - H}{2\pi}$$

$$\text{Diameter max.} = \frac{H2 - H}{\pi} = 2 * \text{Durchmesser min.}$$

Example: TAG136LA4

(H = 19,05 mm; H2 = 67,70 mm):

$$\text{Diameter min.} = \frac{67,7 - 19,05}{2 \cdot 3,14}$$

Example: TAG136LA4

(H = 19,05 mm; H2 = 67,70 mm):

$$\text{Diameter max.} = \frac{67,7 - 19,05}{3,14} = 2 * \text{Diameter min.}$$

Diameter max. = $(67,7 - 19,05) / 3,14 = 2 * \text{Diameter min.}$

Interesting facts about thermal transfer films (colour ribbons)

The thermal transfer ribbon is perhaps the most important consumable that is used in this printing system - using the right ribbon for a particular application is extremely important.

Not every transfer ribbon is equally suited to any purpose. Depending on the printing requirements (e.g. smudge- or scratchproof) to be met, what type of labels (paper or plastic) will be used, an appropriate thermal transfer ribbon must be used.

Another important consideration for the thermal transfer ribbon is the electrostatic charging which can arise during the printing process. Some transfer ribbons become statically charged during the printing process, which can damage an ESD-sensitive printer head in the long run.

To clarify: The thermal transfer printer head is in physical contact with the back of the thermal transfer ribbon and consists solely of electronic, voltage-sensitive elements, which are known as dots.

These can become damaged when the thermal transfer ribbon causes discharges, which usually results in dot drop-outs. At points where the print head is damaged, no more colour is transferred. This leaves gaps on the label.

Thermal transfer films usually consist of three layers:

- A polyester strip as supporting material
- A protective, gliding backing layer on one side
- A colour layer on the other side.

The colour remains solid at room temperature, but liquefies under the effect of heat. To manufacture the colour ribbons, the polyester ribbon is coated with a special backing and then the respective coloured ink is applied. Print characteristics and bonding ability on various materials depend mainly on the chemical composition of this colour ink.

The main distinguishing feature of thermal transfer ribbons is the so-called quality of the coating. There are three basic types of thermal transfer ribbons:

Wax-based films – economical and versatile

Economical wax-based thermal transfer films are most frequently used in logistics applications. Due to the softness of the coloured ink, they produce good printing results at standard print temperatures even at high print speeds. Wax based films are almost exclusively suited to simple or coated papers. Resistance to solvents, heat and general abrasion and scratch-resistance is only average.

Wax-resin based films – good synthesis

With this quality of a wax-resin mixture, the good print characteristics of the wax are essentially retained, but the resin content increases mechanical strength. The print image produced has high resistance to heat, solvents, abrasion and scratching and high print quality, e.g. for barcodes. These colour ribbons are suitable for use on synthetic materials. They can be used for most applications at standard print temperatures.

Resin-based films – for very heavy-duty purposes

The colour layer at this quality level is based entirely on synthetic resins, developed for industrial applications and extreme conditions. Resin-based colour ribbons guarantee maximum readability, even on the most difficult materials (e.g. barcodes). Depending on the backing material, medium to high print temperatures and slow print speeds are necessary when using these thermal transfer films. In return, a print image is obtained which stands out for its high resistance to abrasion and scratching and great solvent and heat resistance.

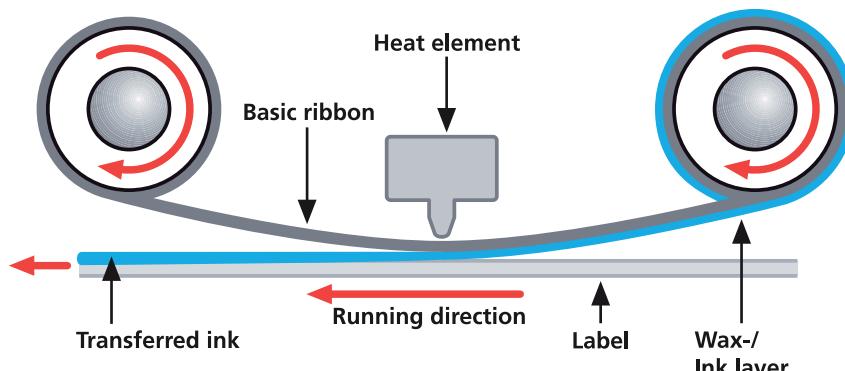

Interesting facts about thermal transfer printing

Although thermal transfer printing is still a relatively new technology, because it is so versatile, it promises a high rate of growth. Thermal transfer printing plays a central role, especially in the field of printing variable data, single-proofs and even for small series. This is largely due to the fact that thermal transfer printing is a non-impact printing (NIP) process. Unlike traditional printing processes, such as offset-printing, a NIP printing process does not require a fixed printing block and can therefore print out different data with consistent quality from print to print.

Due to the increasing spread and importance of one and two-dimensional barcodes in goods inventory systems, logistics and in the field of component identification, the market potential of thermal transfer printing is growing all the time. The same is also true of incremental serial numbers, inventory designations, entrance tickets, rating plates, wine labels and many more.

advantages of thermal transfer printing. It's good readability, resistance and abrasion resistance allow thermal transfer printing to be put to use in applications where the print results from laser, inkjet or dot matrix printers are not satisfactory.

Good print quality, high print speeds and the option of printing almost all backing materials permanently – these are the critical

Heated dots strike a special colour ribbon, the thermal transfer film, which transfers liquefied colour ink at exactly that point onto the backing material (labels, tubes, rating plates). Our modern printers use what is known as "thin film technology", in which the very brief liquid phase of the ink produces faster print speeds and better and more precise images than with the "thick film technology" formerly used.

Moreover, the linear orientation of the labels or of the heatshrink tubing makes it possible to print on demand. The printing is then carried out as required. This is especially useful in the production of rating plates in series production.

In thermal transfer printing, the print image is defined by the three components: printer, label material and thermal transfer film (colour ribbon).

The advantages at a glance:

- High print quality with a resolution of 8-12 dots/mm (12 dots/mm corresponds to approx. 300 dpi)
- Barcode printing in excellent quality, hence good optical readability
- High print speeds of between 50 mm/sec and 200 mm/sec
- Individual graphics capability

- Problem-free and rapid realisation of self-designed drafts
- Quiet and service-friendly printers
- Prints are UV-fast and permanent, with high definition and contrast and good resistance to mechanical and chemical influences.

Shrinkable tubing 3:1, continuous, thermal transfer

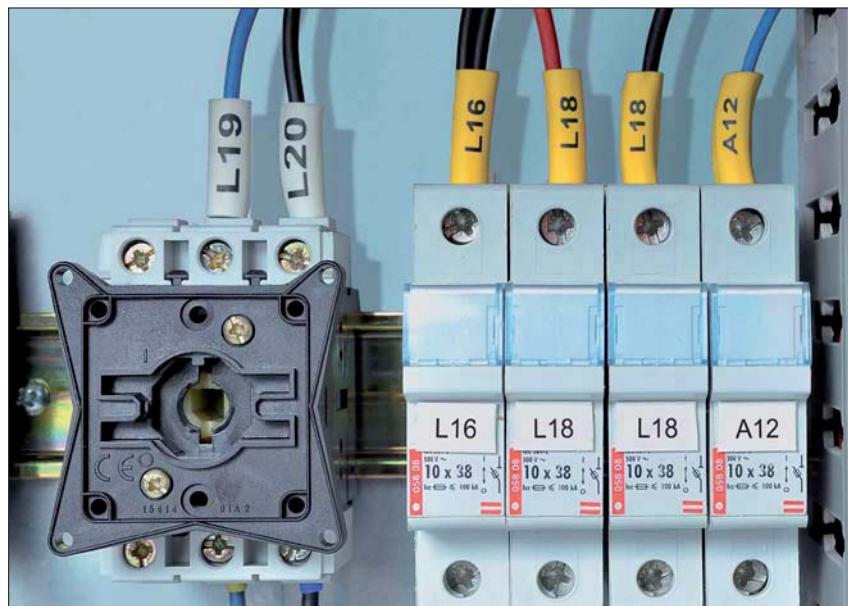

- TULT, UL listed

Features and Benefits

- Heat shrinkable tubing TULT - UL listed
- Shrink ratio 3:1
- Good mechanical strength and resistance to organic solvents and chemicals
- Unmeltable
- Self-extinguishing
- Highly flexible
- Delivery in convenient storage boxes
- Fulfils UL224 VW-1 und CSA requirements

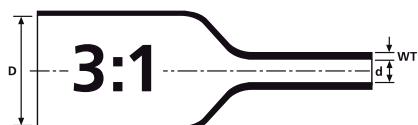

Thermal Transfer Printer

TULT – 5 colours of UL printable tube to cover a wide range of diameters

Certifications
please see Appendix.

Material	Polyolefin, cross-linked (POX)
Colour	White (WH), Yellow (YE), Red (RD), Blue (BU), Black (BK)
Shrink Ratio	3:1
Longitudinal change after shrinkage	-15% max.
Min. Shrink Temperature	+90 °C
Dielectric Strength	37 kV/mm according to ASTM D 876
Operating Temperature	-55 °C to +135 °C
Recommended Ribbon Type	TTRC+, TTDTHOUT, TTRW, TT822OUT8
Specification	UL224 VW-1, CSA

Type	Supplied Ø D min.	Recov. Ø d max.	Wall (WT)

Thermal Transfer Printer

Identification tags for cable bundle, continuous, thermal transfer

- TIPTAG PU for high temperature

Features and Benefits

- Identification tags TIPTAG, Polyurethane
- Very tough and flexible material
- For bigger cable bundles and wires
- For cable ties up to 4.7 mm width
- Delivery on reel, perforated
- Flame retardant
- Weather resistant
- Abrasion resistant
- Good resistance to chemicals

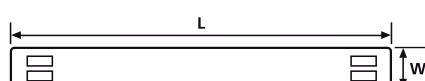

Thermal Transfer Printer

The printed mark has a tattoo-like permanency.

Material	Polyurethane (PUR)
Flammability	self-extinguishing
Operating Temperature	-65 °C to +120 °C, intermittent +150 °C
Recommended Ribbon Type	TTRC+, TTDTHOUT

Article-No.	Type	Colour	Length (L)	Width (W)	Quantity per reel

Self-laminating labels, thermal transfer

- Material 323 (White-clear/
yellow-clear) high temperature

Self-laminating labels are made for identification applications in outside environments like industry and defence technology.

Features and Benefits

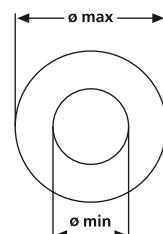

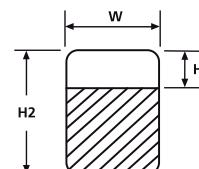

- Self-laminating labels for thermal transfer printing of polyvinyl fluorid
- Abrasion resistant
- UV- and weather resistant
- For durable outdoor applications
- Good resistance against chemicals
- Laminating foil ensures optimal protection against environmental influences

Thermal Transfer Printer

Easy marking of flexible, semi-rigid and rigid cables and wires.

Material	Type 323, Polyvinylfluoride, white/yellow-transparent (WH/YE-CL)
Operating Temperature	-40 °C to +140 °C, intermittent +160 °C
Curing Temperature	from +10 °C
Recommended Ribbon Type	TT932DOUT
Adhesive	Acrylic
Thickness of Foil (µm)	25
chem. material properties	excellent resistance against water, UV radiation, weather influence and solvents based on petroleum

Pre-printed Cable Markers

• ABR-Markers

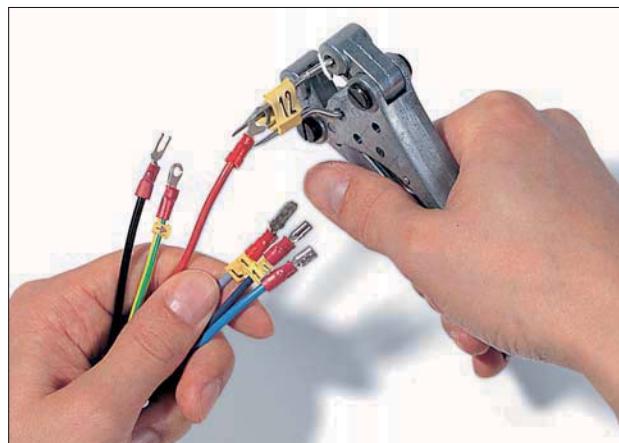

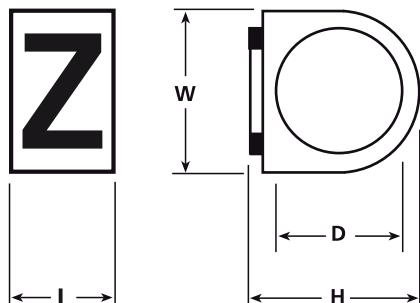

Ideally suited for the automotive industry for the identification coding of ignition cables. The embossed mark ensures clear legibility even in areas where dust and debris is found.

Features and Benefits

- Semi-severed markers made from chloroprene
- Highly elastic (up to 400%)
- Fits tightly onto bundles
- Embossed characters give excellent visibility even in dirty areas
- On request we offer already fully served markers
- Recommended applicator tool: Series NA or VA

Highly flexible, legible, and easy to apply.

The sleeve applicator tool allows markers to be fitted after crimping.

**For detailed information
on Application Tools please
refer to page 140.**

Identification ties and plates for marking cable bundles

- **IT Ties**

One of the major benefits is the ability to both secure and identify cable bundles at different times.

Features and Benefits

- Identification ties made of Polyamide 6.6
- For simple identification and securing of cable bundles in one step
- Can be marked either on-site or after bundling (Pen T82)
- In addition a large selection of labels are available

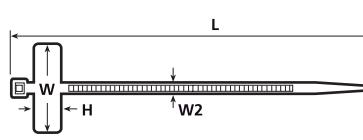

One operation with two user benefits.

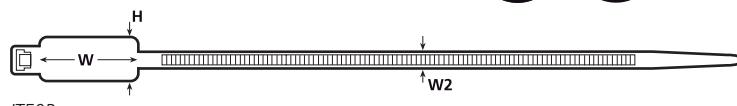

Material	Polyamide 6.6 (PA66)
Colour	Natural (NA), Black (BK), Various (DIV)
Operating Temperature	-40 °C to +85 °C, intermittent +105 °C (for 500 h)
Flammability	UL94 V2

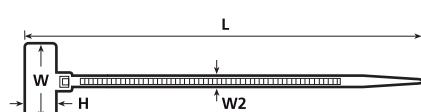

Certifications
please see Appendix.

Adhesive labels for plates and tags, thermal transfer

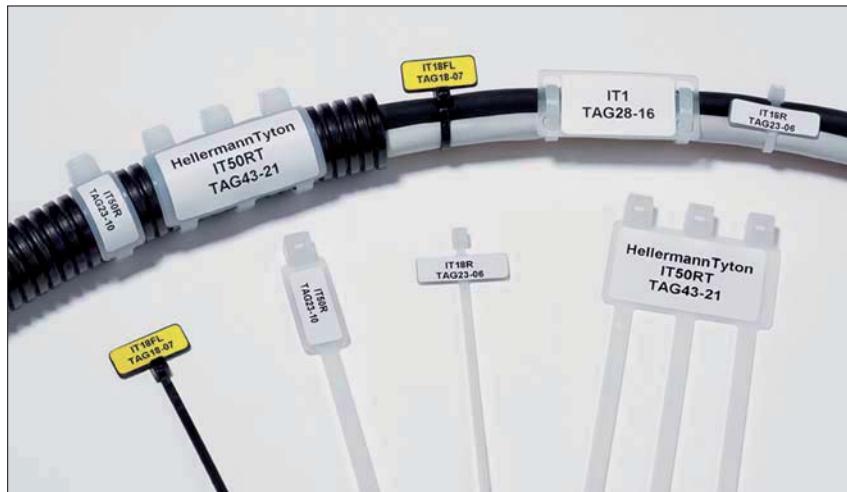

• Material 1210 (White)

These labels are especially used for cable and wire identification in computer and electronic business.

For problem-free printing, we recommend Tagprint Pro software, TT4000+ and TT420+ printers.

Features and Benefits

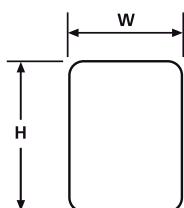

- Marking labels made of vinyl, white gloss
- Very flexible material
- Specially tailored to the sizes of IT marking ties and IMP tag range
- Suitable for permanent marking of components and devices on different surfaces
- Sticks even on rounded surfaces

Identification ties and tags.

Thermal Transfer Printer

Material	Type 1210, Vinyl (PVC), white gloss (WH)
Operating Temperature	-20 °C to +80 °C
Curing Temperature	from +5 °C
Adhesive	Acrylic
Recommended Ribbon Type	TT822OUT
Thickness of Foil (µm)	83
chem. material properties	Resistant to water, alcohol, most oils, greases, fuel, aliphatic solvents, weak acids, salts and alkalis.

Adhesive labels for plates and tags, thermal transfer

- Material 1211 (Yellow)

Features and Benefits

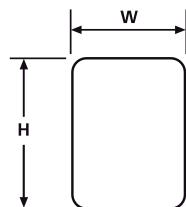

- Marking labels made of vinyl, yellow gloss
- Very flexible material
- Specially tailored to the sizes of IT marking ties and IMP tag range
- Suitable for permanent marking of components and devices on different surfaces
- Sticks even on rounded surfaces

Identification ties and tags.

Type label identification, thermal transfer

- Material 1204 (Silver)

Scratch-resistant type plates for the industry.
The adhesive is also suitable for critical
surfaces like plastic and varnish.

Features and Benefits

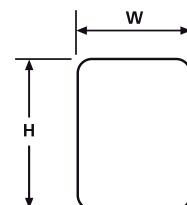

- Marking labels made of Polyester,
silver matt
- Replacement for aluminium plates
- For even and smooth surfaces
- Also for difficult surfaces like plastics and
varnish
- Operating temperature up to +150 °C
- Many different sizes are available

Thermal Transfer Printer

Professional type plate on a heating unit.

Material	Type 1204, Polyester (PET), silver matt (SR)
Operating Temperature	-40 °C to +150 °C, intermittent +200 °C
Curing Temperature	from +0 °C
Recommended Ribbon Type	TT822OUT
Adhesive	Acrylic
Thickness of Foil (µm)	55
chem. material properties	Excellent resistance to water, alcohol, most oils, greases, fuel, aliphatic solvents, weak acids, salts and alkalis.

Asset identification label, thermal transfer

- Material 1206 (White)

Glossy white polyester label suited for the generation of asset tracking labels. The white colour guarantees a suitable contrast for all barcode scanners to read printed barcodes.

Features and Benefits

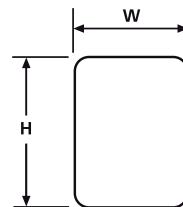

- Marking labels made of Polyester, white gloss
- For even and smooth surfaces
- Also for difficult surfaces like plastic and varnish
- Operating temperature up to +150 °C
- Many different sizes available

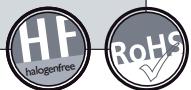

Thermal Transfer Printer

HELATAG label for a permanent asset identification.

Material	Type 1206, Polyester (PET), white (WH)
Operating Temperature	-40 °C to +150 °C, intermittent +200 °C
Curing Temperature	from +0 °C
Recommended Ribbon Type	TT822OUT
Adhesive	Acrylic
Thickness of Foil (µm)	50
chem. material properties	Excellent resistance to water, alcohol, most oils, greases, fuel, aliphatic solvents, weak acids, salts and alkalis.

Article-No.	Type	Colour	Width (W)	Height (H)	Width of Liner (WL)	Labels per Row	Pack Cont.

Tamper evident security labelling, thermal transfer

- Material 1208 (White), fragmenting

In nearly all areas, but especially suitable for cable and wire identification in computer and electronic businesses. For problem-free printing, we recommend our software Tagprint PRO.

Features and Benefits

- Marking labels made of acrylate foil, white, tamper proof
- Material will fragment when it is removed
- Construction has a weakness built in that will immediately indicate if anyone has been tampering with the label
- Adhesive must harden before tampering attempt
- Securely and unambiguously marking of assets

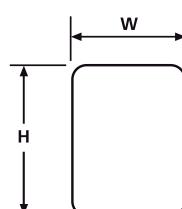

A secure way of identifying ...

... if an asset label has been tampered with.

Thermal Transfer Printer

Material	Type 1208, Acrylate foil (AC), white (WH), tamper proof
Operating Temperature	-40 °C to +150 °C
Curing Temperature	from +4 °C
Recommended Ribbon Type	TT822OUT
Adhesive	Acrylic
Thickness of Foil (µm)	56
chem. material properties	Resistant to oils, water and solvents

Article-No.	Type	Colour	Width (W)	Height (H)	Width of Liner (WL)	Labels per Row	Pack Cont.

Tamper evident security labelling, thermal transfer

- Material 951 (Silver), 2 parts

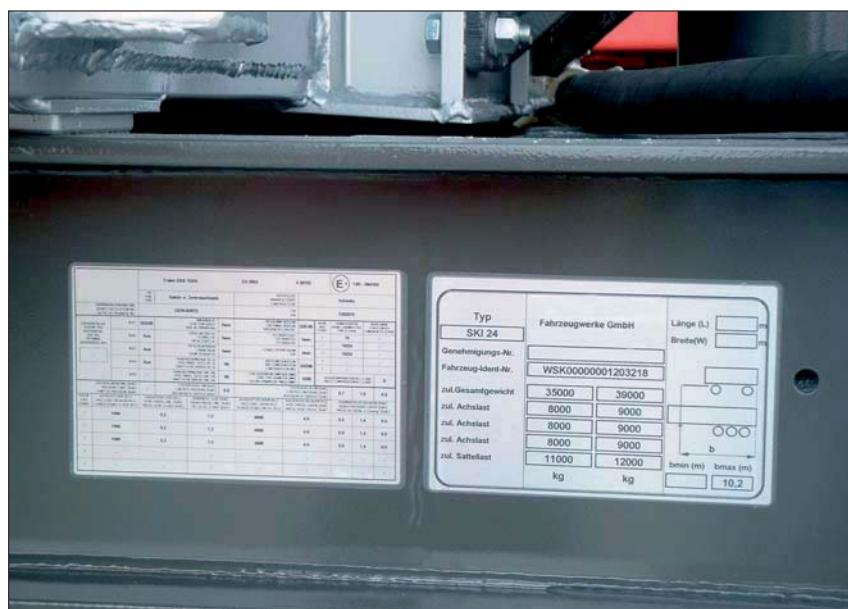

Marking label especially for applications in the automotive area for lasting, non-transferable and tamperproof application of type plates. Recommended for use on flat surfaces on the vehicle chassis. The transparent protective laminate, which overlaps by a few millimetres, guarantees high resistance and is simple and safe to apply by hand.

Features and Benefits

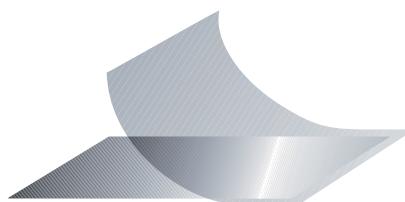

- Marking labels made of polyester, silver with protective laminate, tamper evident
- 2-part label, delivered on reel together with the protective label
- Tamper evident, when pulled off a checkered pattern will be visible as evident
- High durability in outside use
- Meets requirements of the KBA (Kraftfahrtbundesamt [Federal Motor Transport Authority]).
- Particularly suitable as type label for vehicles

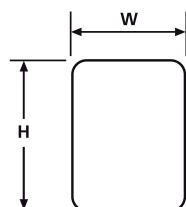

Thermal Transfer Printer

Type plate of an HGV trailer with protective laminate.

The printed silver type plate (Mat. 951A) is protected by the transparent laminate (Mat 951B).

Material	Type 951, Polyester, silver (SR) and Polyester, transparent (CL)
Adhesive	Acrylic
Application	For automotive and electric industries for tamper proof applications. Particularly suitable as type label according to norms of German Kraftfahrtbundesamt (KBA).
Recommended Ribbon Type	TT822OUT
Operating Temperature	-40 °C to +150 °C
Curing Temperature	from +0 °C

Thermal transfer printer

- TT4000+

Features and Benefits

- Thermal transfer printer, premium class, for medium and high printing volumes
- Print head resolution: 300 dpi
- Very high print accuracy, consistency, speed, and power
- Perfect use for printing high definition graphics such as 2D barcodes, standard bar codes, numbers and text
- Print speeds up to 125mm per second (5" per second)
- Materials to print on: adhesive labels, thermo plastics such as heatshrink and TIPTAG markers

TT4000+ series printer.

Accessories (optional)

- Perforator P4000
- Cutter S4000
- Tagprint Pro 2.0

 For problem-free printing
we recommend
Tagprint Pro, page 203.

Thermal Transfer Printers TT4000+ 300dpi, and TT420+

Print Method	Thermal Transfer
Print Head Type	300 dpi, flat type

Thermal transfer printer**• TT420+ Entry Level Printer**

The thermal transfer technology is ideally suited for precise printing results of bar codes or graphical icons

Features and Benefits

- Thermal transfer printer, for low and medium printing volumes
- Lightweight, solid housing, very easy to transport
- Print head resolution: 300 dpi
- Perfect use for printing standard bar codes, numbers and text
- Materials to print on: adhesive labels and ladder style pre-cut 3:1 heatshrink markers (ShrinkTrak) and TIPTAG markers

Thermal transfer printer (TT420+).

Thermal Transfer Printer TT420+

Print Method	Thermal Transfer
Print Head Type	300 dpi, flat type
Print Speed	up to 127 mm/sec.

Thermal Printer Ribbons for adhesive labels

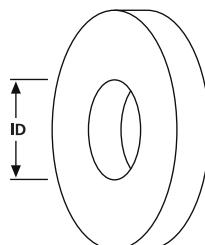

Features and Benefits

- Thermal transfer ribbons for highest quality and performance of printed markers
- The ribbons are specifically designed to maximise print performance for the recommended material (see below)

Ribbons for printing on labels.

Certifications please see Appendix.

ID: The standard inside core diameter is 25.4 mm. Other sizes are available on request.

All dimensions in mm. Subject to technical changes.

Other ribbon qualities and colours on inquiry.

Thermal transfer printer accessories

- S4000 Cutter

Features and Benefits

- To cut printed tubing and continuous label material at a desired length
- The cutter automatically initialises each time the printer is powered on
- The cutter tray ensures the cut pieces are collected in one place
- The plug and play cutter is simply attached with one Allen screw

Cutter S4000 for both TT4000+ and TrakMark DS.

Perforator P4000 for both TT4000+ and TrakMark DS.

- P4000 Perforator

Features and Benefits

- To perforate printed tubing and continuous label material at a desired length
- Perforation depth can be adjusted to different thicknesses of the material
- Very useful accessory if tubings are printed with serial numbers
- Plug and play perforator is simply attached with one Allen screw

Article-No.	Type
556-04025	S4000 Cutter
556-04024	P4000 Perforator

Labelling Software

- Tagprint Pro

Features and Benefits

Tagprint Pro label creation and printing software is powerful, multi-functional and extremely easy to use.

Used to provide solutions for industrial identification, Tagprint Pro speeds production and offers many options for a wide variety of labelling requirements.

"What You See Is What You Get" (WYSI-WYG) label creation, bar coding, serialization, label sets, wire lists, graphics and text choices are just some capabilities of Tagprint Pro software.

Tagprint Pro's functionality and simplicity of use makes it a market leading label creation software package and the ideal program for your printing needs.

Tagprint Pro can be utilized with HellermannTyton's wide array of label options including laser, ink jet, dot matrix and thermal transfer printable labels.

Tagprint Pro Label Creation Software.

New Features for Version 2.0

- Alphanumeric sequences
- Print to multiple printers at one time
- "Print later" feature allows user to save jobs in queue and print all at one time
- Print faster
- Connect or import directly from other databases including Excel, Access, text files
- More bar code types
- Inverse, flip, and mirror image options for graphic images
- Multi-lingual
- Print log available
- Manually adjust font size to 1/10 of a point
- Customize height and width of characters
- Customize line spacing
- Compatible with all Tagprint Pro version 1.0 files
- And much more!

System Requirements

- IBM compatible PC
- Microsoft Windows 98SE, ME, NT 4.0, 2000, XP, Vista, Windows 7
- 128 MB of RAM (recommended)
- 60 MB of available hard-disk space

BE	Beige
XX	Special colour
BV	Zinc-plated Metal
GC	Brass chromated
WC	White Chromated

*according to HellermannTyton

Definition of the degrees of protection according to DIN EN IEC 60529

The levels of protection are indicated by a code made up of two constant letters IP and two characteristic numbers for the degree of protection, e.g. IP54.

Example:

Code IP65 First index: ——— Protection against contact and ingress of foreign objects.
 Second index: ——— Protection against liquids.

Degree of protection against access and foreign bodies			Degrees of protection for water		
First Index	Designation	Scope of protection	Second Index	Designation	Scope of protection
0	Non-protected	No special protection for persons against direct contact with live or moving parts. No protection of the equipment against ingress of solid foreign objects.	0	Non-protected	No special protection.
1	Protection against large foreign bodies	Protection against accidental contact of large areas with live and internal moving parts, e.g. back of hand, but not protection against deliberate access to the parts. Protection against ingress of solid foreign objects with a diameter greater than 50 mm.	1	Protection against vertically dripping water	Water dripping vertically must cause no damage.
2	Protection against medium-sized foreign bodies	Protection against contact between the finger and live or internal moving parts. Protection against ingress of solid foreign objects with a diameter greater than 12.5 mm.	2	Protection against dripping water (tilted)	Water dripping at an angle of 15° to the vertical from any direction must cause no damage.
3	Protection against small foreign bodies	Protection against contact between live or internal moving parts and tools, wires and the like with a thickness greater than 2.5 mm. Protection against ingress of solid foreign objects with a diameter greater than 2.5 mm.	3	Protection against spraying water	Water dripping at an angle of 60° to the vertical from any direction must cause no damage.
4	Protection against granular foreign objects	Protection against contact between live or internal moving parts and tools, wires and the like with a thickness greater than 1 mm. Protection against ingress of solid foreign objects with a diameter greater than 1 mm.	4	Protection against splashing water	Water that splashes against the equipment from any direction must cause no damage.
5	Protection against dust deposits	Complete protection against contact with live or internal moving parts, protection against hazardous dust deposits. The ingress of dust is not completely prevented, but dust may not penetrate in such quantities as to impair the function.	5	Protection against water jets	A water jet from a nozzle that is directed against the equipment from any direction must cause no damage.
6	Protection against dust entry	Complete protection against contact with live or internal moving parts. Protection against the ingress of dust.	6	Protection against flooding	Water must not penetrate the equipment in hazardous quantities in cases of temporary flooding, e.g. due to heavy seas.
7			7	Protection during temporary immersion	Water must not penetrate the equipment in hazardous quantities if the equipment is immersed in water under the specified conditions of pressure and time (1m for 30 min.).
8			8	Protection during continuous immersion	Water must not penetrate the equipment in hazardous quantities if the equipment is immersed in water (at least 2 bar for 2 h for HelaGuard IP68 non-metallic fittings and 5 bar for 5 h for HelaGuard IP68 metallic fittings.)
9k			9k	Protection against high pressure/steam jet cleaning	Highly pressurised water directed at the enclosure from any direction must cause no damage.

General Terms and Conditions of Sale

1. General

1.1 The following General Terms of Sale and Supply ("GTSS") apply to all current and future supplies and other services including any consultancy services and information of HellermannTyton Holdings GmbH and branches ("the Company"). This will also apply even if the Company does not refer the Buyer to them again in subsequent transactions. The Buyer's terms and conditions shall not form part of a contract even if the Company does not expressly raise objections. Rather these GTSS shall apply exclusively.

1.2 Quotations by the Company are made without obligation. A duty to supply will not exist until the Company issues a written Company confirmation of order.

1.3 All agreements that are made between the Company and the Buyer shall be put in writing in the contract.

1.4 In case of doubt Incoterms 2000 shall prevail for the interpretation of trade terms.

1.5 The Buyer may only assign to third parties claims against the Company arising from this contract with the prior express consent of the Company.

1.6 Where individual provisions of these General Terms of Sale and Supply are or become ineffective, this shall not affect the validity of the rest of the provisions. The invalid provision shall be replaced by such existing provision as is common practice in the trade for this event and, where there is no permissible one that is common practice in the trade, the corresponding statutory provision.

2. Prices and payment conditions

2.1 Unless otherwise agreed in writing, prices are understood, ex works or ex Company warehouse exclusive of packaging. Value Added Tax at the current statutory rate will apply. For minimum orders under 150 Euros (net less Turnover Tax) the Company will charge a minimum order surcharge of 25 Euros (net) per order.

2.2 All invoices – subject to any divergent written agreement in individual cases – are payable within thirty days of date of invoice.

2.3 Payments must be made free of charge, in the agreed currency and with provision of the account number, exclusively to the Company's accounts shown in the invoice. They must be made on the date due free of charge and without any deduction. Completion for payments of all types is the date on which the Company has unrestricted access to the payment.

2.4 The Company is not obliged to accept bills of exchange or cheques. If permitted they will only be accepted subject to possible discounting against payment of all charges. The Company is not obliged to submit bills of exchange or cheques on time or to lodge protests.

2.5 In the event of payment default by the Buyer, default interest of 8 (eight) percentage points p.a. over the current basic interest rate according to § 247 BGB [German Civil Code] shall be chargeable. The claiming of further loss caused by default is reserved.

2.6 Rights of set-off or retention shall be available to the Buyer only if his counterclaims are legally established, unchallenged or recognised by the Company. This restriction shall not apply to the § 320 BGB right of retention.

2.7 In the event of a petition to commence insolvency proceedings against the Buyer's assets, if the Buyer has initiated out-of-court proceedings to settle the debt or has stopped payments, or if the Company is aware of other circumstances which substantially reduce the credit-worthiness of the Buyer and appears to threaten fulfilment by the

Buyer of the counter-performance, the Company is entitled to seek security by advance payment or bank guarantee (at the Buyer's choice) for outstanding supplies by fixing a period of at least one week and to delay supply until the security is made. The Company is further entitled after the fruitless expiry of a reasonable period of grace to withdraw from this contract or to demand compensation for non-fulfilment of contract. In this case the Company may also withdraw the authority to resell together with the authorisation to collect under 5.3 and 5.5 and the right to handle and process, combine and mix goods already supplied under 5.2 and 5.3 and also to demand the return of the goodssupplied.

3. Supply and acceptance

3.1 The Company's duty to supply is conditional on it receiving delivery that is complete, correct and on time in as far as the Company obtains he goods as complete or as components of the goods from a subcontractor. This does not apply if the Company is responsible for nondelivery or delay.

3.2 The Buyer shall bear the risk and cost of shipment of the goods ex works/ex warehouse as well as the cost of any transport insurance. This will also apply if shipment is by a carrier chosen by the Company.

3.3 The risk passes to the Buyer with the start of loading the goods onto the vehicle - even in the case of carriage-paid deliveries.

3.4 Should the goods be ready to be shipped and dispatch or assignment of space and/or acceptance is delayed on grounds beyond the Company's control, the risk passes to the Buyer upon receipt by the Buyer of notification of readiness to ship.

3.5 The Buyer may not return part shipments of a reasonable size and must pay for these immediately upon receipt of the part shipment. Objection to a part shipment does not entitle to a refusal of further supplies under the same or other contract. The Company reserves the right to over or under supply by 10% of the quantity ordered in the case of special orders. The actual quantity supplied will be invoiced in each case.

3.6 The Buyer will also be in default of acceptance if the supply is only offered by the Company in writing. Section 294 BGB is therefore contracted out. The other legal conditions for delay in acceptance are not affected.

3.7 The Buyer must promptly accept goods notified as ready for shipment under the terms of the contract. Otherwise the Company is entitled either to ship the goods at the risk and cost of the Buyer or place the goods in store and to invoice after a period of grace of one week has elapsed, as the Company chooses. The same will apply if the goods have not been retrieved in full or in part within the period agreed for retrieval.

3.8 If the Buyer falls more than one month behind in fulfilling the obligations resulting from the above arrangements the Company can, notwithstanding rights that extend further, demand from the Buyer a contract penalty of 5 (five) percent of the invoice value in place of fulfilment of contract, and sell the goods stored elsewhere. The contractual penalty must be calculated against the compensation the Buyer would have to pay if the situation arose. The Buyer must repay any quantity discount granted on earlier deliveries.

3.9 The Buyer must also notify the Company promptly of any damage in transit but no later than one week from receipt of the goods even if the Company is not responsible for shipping.

4. Delivery periods and deadlines

4.1 A condition of the due fulfilment of contractual obligations is observance of delivery periods and deadlines. Delivery periods start with the date of the Company's confirmation of order but not before clarification of all details for execution of the order and receipt of all materials required for execution of the order and of other details to be supplied by the Buyer and the receipt of any payment agreed. The delivery period will also be considered to have been met if the goods leave the works or warehouse at the time agreed or notification of readiness to ship has been sent to the Buyer but the goods have not been shipped on time for reasons for which the Company is not responsible. The above arrangements will apply to the delivery deadlines respectively.

4.2 Even when there is agreement on the definition of time for performance according to the calendar or a time is calculable according to the calendar after a preceding event, default will not apply until a reminder is received by the Company.

4.3 Unpredictable events outside the control of the Company such as war, risk of war, unrest, the use of violence by third parties against persons or property, intervention involving sovereignty including currency and commercial policy measures, employment disputes at the Company or its suppliers or shipping companies, interruptions to the transport links provided, fire, shortages of raw materials, shortage of energy and other non-fault operating problems at the company or its suppliers will extend fixed delivery periods and deadlines by the duration of the obstruction. This will also apply to the extent the Company is already behind with deliveries or to the extent that the foregoing obstructions to delivery were already present before conclusion of the contract but the Company was not aware of them. The Company will advise the Buyer immediately of obstructions of the type mentioned above.

4.4 If delivery delays caused by the above last longer than two months both parties will be entitled to withdraw from the contract. The Buyer may only withdraw if the Company, at the former's request, fails to state within a week whether it wishes to withdraw or make delivery within a reasonable period. The same right to withdraw arises independent of the above period, if completion of the contract has become unreasonable for one of the parties taking account of the delay.

5. Reservation of ownership

5.1 All goods delivered shall remain the property of the Company (reserved goods) until complete and final fulfilment (i.e. only after final release from any joint liability for bills of exchange or cheques) of all claims arising from the business connection for whatever legal reason. The same shall also apply in respect of any future or conditional claims arising from contracts entered into concurrently or later within the context of the business connection. Reserved ownership shall serve to secure Company claims arising from a competitive relationship where there is a current account.

5.2 Treatment and processing of reserved goods occur for the Company as manufacturer within the meaning of Section 950 BGB without placing an obligation on the latter. The treated/processed goods shall apply as reserved goods to secure Company claims within the meaning of 5.1. In the event of treatment/processing, linking or mixing of the reserved goods by the Buyer with other goods not belonging to the Company, the Company shall have joint ownership of the new item in the ratio of the invoice value of the reserved goods to the

invoice value of the other goods used. If Company ownership of the reserved goods expires by linking, mixing or treatment/processing of the reserved goods the Buyer will transfer the title held by him in the new part or item to the extent of the invoice value of the reserved goods and will hold it for the Company free-of-charge with the care of a diligent businessman. The joint title rights accruing will also apply as reserved goods as security for Company claims within the meaning of No. (5.1).

5.3 The Buyer may only sell the reserved goods in the normal course of his business and only on his normal terms of business provided that concurrently the claims under the resale pass to the Company as per 5.4 to 5.6. The Buyer is not entitled to other dispositions [disposals] of the reserved goods, in particular to a pledge or transfer by way of security. The above authorisation will expire in the event of the Buyer's default of payment. The authorisation may also be cancelled by the Company in the cases listed in 2.7, by a breach of the foregoing obligations and in the case of non-payment of an invoice when due. In these cases the Buyer is also prohibited from treating and processing the reserved goods and linking or mixing it with other goods.

5.4 The demands and other claims including the Buyer's collateral rights arising from the resale of the reserved goods are now, i.e. with the agreement of these GTSS, assigned to the Company, who hereby accepts the assignment. They will serve to secure the Company's claims to the same extent as the reserved goods. If the reserved goods are sold by the Buyer with other goods not supplied by the Company, the claim arising from the resale is assigned in the ratio of the invoice value of the reserved goods to the invoice value of the other goods. When goods are sold to which the Company has joint title under 5.2, the Company shall be assigned a part corresponding to its share under the joint title.

5.5 As long as the resale authority has not been cancelled, the Buyer meets his payment obligations towards the Company and is not in breach of any other fundamental contractual duties (cf. 7.2 in this connection), the Buyer is entitled to collect any claims from resale. The Buyer is not entitled to assign or pledge any claims to third parties – including the sale of any claims to factoring banks. The Buyer shall notify the Company immediately of any detriment to its rights through third parties by delivering any documents required for intervention. Any intervention costs incurred shall be borne by the Buyer.

5.6 After cancellation of the resale authority and/or the authorisation to collect the Buyer shall, at the Company's request, undertake to supply information on the status of the reserved goods and assigned claims and to inform his purchaser of the assignment to the Company (in as far as the Company does not do this itself) and to give the Company the information and documents necessary for collection. The Company may, if the Buyer is more than two weeks in arrears with his payment obligations to the Company, demand the return of the reserved goods and collect the demands and other claims assigned to the Company. Furthermore, the Company may use the reserved goods to satisfy its claims as soon as the Company has withdrawn from the contract or the conditions for a claim for compensation on the grounds of non-fulfilment have arisen. The right of the Buyer to possess the reserved goods expires under the foregoing conditions. In said cases the Company will be entitled to enter the Buyer's property and retrieve the reserved goods after giving notice in advance and arranging a time.

5.7 If the collectible value of the existing securities exceed the secured claims by a total of 10 (ten)

percent the Company, at the Buyer's request, will undertake to release securities to that extent as the Company elects.

6. Nature of the goods and warranty

6.1 To the extent that the Company places test pieces or sample at the disposal of the Buyer or receives them from the Buyer, or quotes analyses, DIN provisions, other domestic or foreign quality standards or gives other details on the quality of the goods these shall merely serve to specify in more detail the works the Company is to provide. No guarantee of quality is linked thereto.

6.2 In particular, the Company does not undertake to check whether the goods meet or are suitable for the specific purpose intended by the Buyer.

6.3 The Buyer must inspect the goods delivered without delay with the care it considers reasonable and (if necessary by way of a test process) check the quality of the goods supplied and raise a claim for any identifiable defects without delay but no later than 7 (seven) days of receipt of the goods in writing (as far as possible and reasonable enclosing samples) quoting the invoice, manufacture and shipping number. Hidden defects must be similarly notified immediately they are discovered.

Otherwise the goods will be deemed approved without reservation. Any further obligations of the Buyer under Section 377 HGB [German Commercial Code] will not be affected.

6.4 No claims for defects will apply if the Buyer fails to grant third party rights of recourse, processes defective goods without prior quality control or supplies goods claimed as defective to third parties without giving the Company the opportunity to check the claimed defects. The same will apply to inappropriate or improper use of the goods, faulty assembly or commissioning by the Buyer or third parties, improper modifications to the goods supplied, natural wear and tear and faulty or careless handling.

6.5 And if claims for defects or complaints are justified, the Company undertakes at its choice either to repair or remedy the defect or supply a replacement. In the event of repair, the Buyer shall pay the extra costs that are due to the goods delivered being taken to a place other than the place of performance.

6.6 Should the repair chosen by the Company repeatedly be unsuccessful; should it be unreasonable to expect such of the Buyer; should it be refused by the Company or be delayed beyond a reasonable period on grounds within the Company's control, the Buyer may – notwithstanding any claims for damages – withdraw from the contract or reduce the purchase price.

6.7 Warranty claims for the goods expire within one year after passing of the risk. This shall not apply where the law prescribes longer time limits pursuant to § 438, sub-section 1, No. 2 BGB (Building Works and Items for Building Works), § 479 sub-section 1 BGB (Recourse Claim) and § 634 a sub-section 1 No. 2 BGB (Structural Defects) or where the Company is liable for malice aforethought.

6.8 Further, claims for damages are limited under No. (7).

7. Limitation of claims for damages and reimbursement of expenses

7.1 The Buyer's claims for damages and reimbursement of expenses against the Company or the Company's employees, representatives and agents, on whatever legal grounds, are precluded, unless the aforementioned are held liable for malice aforethought, gross negligence, guarantee given, risk of

sourcing accepted, harm to life, body, health or fundamental contractual duties. This shall also apply to any claims for damages arising from incorrect supplier declarations. This ruling does not shift the burden of proof to the Buyer.

7.2 The Buyer's claims for damages and reimbursement of expenses against the Company or the Company's employees, representatives and agents, for breach of fundamental contractual duties are limited to the contractually typical, foreseeable harm, unless held liable for malice aforethought, gross negligence, guarantee given, risk of sourcing accepted or harm to life, body or health.

Fundamental contractua duties will be deemed to mean such duties as, when violated, threaten the purpose of the contract, e.g. in cases of substantial delay, considerable infringement of cooperation, notification or confidentiality obligations or in the case of considerable violation of obligations that may determine the success or failure of the contract. This arrangement does not shift the burden of proof to the Buyer.

7.3 Contractual claims for damages and reimbursement of expenses against the Company or its employees, representatives and agents, on whatever legal grounds, shall expire after one year at the latest. The special arrangement for warranty claims for the goods in No. (6.7) is not affected.

7.4 Where the Company is liable imperatively under the Product Liability Act of 15 December 1989 for damage to property or personal injury caused by a product's defects, the provisions of the Product Liability Act shall prevail. The foregoing rules shall still apply for an internal settlement under § 5 sentence 2 of the Product Liability Act.

8. Intellectual Property Rights and Data Protection

8.1 The Company reserves the copyright in drawings and other design materials. These may not be made accessible to third parties. Where the Company manufactures goods to the Buyer's drawings, samples or other details and infringes third-party intellectual property rights thereby, the Buyer shall indemnify the Company against all linked claims.

8.2 The Company is entitled to adapt and store within the meaning of the Federal Data Protection Act such data about the Buyer as is received in connection with the business association – even when such originates from third parties.

9. Place of performance, jurisdiction and applicable law.

9.1 Tornesch shall be the place of performance for delivery and payment.

9.2 Elmshorn shall be the forum for any legal disputes arising from or about the existence and validity of this contract including those arising from cheques or bills of exchange – insofar as the Buyer is a trader or a public corporation or a statutory undertaking. However, the Company may sue the Buyer at any other jurisdiction that is given under the Code of Civil Procedure.

9.3 The contractual relationship shall be governed by the law of the Federal Republic of Germany. The provisions of the UN Treaty on International Trade (CISG) are excluded.
