Diamonds

ALL OUR DIAMONDS ARE SOLD ON A 30-DAY MONEY BACK GUARANTEE!

DIAMOND CLASSIFICATIONS

Our Diamonds are carefully selected and much time and care put into the examination of these gems before purchasing. Our large diamond business is the result of the confidence of thousands of satisfied customers.

Remember weight only does not determine values. Other factors — such as Purity, Color and Perfection in Cutting — affect the prices of diamonds, regardless of size or weight.

PURITY

The degree of brilliance of a diamond is determined by the excellence of its proportions and the quality of cutting. A correctly proportioned diamond should have 2/5ths of its weight above the girdle and 3/5ths below. A properly proportioned diamond has maximum brilliance over its entire surface.

COLOR

There is a wide range of color from finest blue white to fine white, white, yellow and brown.

PERFECTION

The degree of perfection is a major factor in determining the value of a diamond. Some imperfections in diamonds can be seen by the naked eye; others can be seen only under strong magnification. A flawless diamond (often referred to and described by most jewelers as "perfect") is one without any imperfections whatsoever; that is, none that can be seen by a trained expert using a powerful magnifying glass (10X magnification).

GRADING OF DIAMONDS ILLUSTRATED IN CATALOG

AAA-1. Identifies extra fine quality and blue-white color. This grade is so fine that even under ten-power magnification it is very difficult for anyone except a diamond expert to detect the faintest type of imperfection. Proportions and quality of cutting are the very finest obtainable . . . resulting in the greatest beauty and brilliance possible. This grade is often sold for perfect or flawless.

AAA. Identifies very fine quality and color . . . equal to the AAA-1 Grade in every respect except in a slight degree of perfection and color. This grade under ten-power magnification reveals the faintest of flaws if critically examined. In appearance it is the equal of the absolutely perfect diamond.

AA. Identifies good color diamonds of slightly less perfection than Grade AAA but equal in quality of cutting and brilliancy. The two, or three, very small flaws in most cases can only be seen under a jeweler's magnifying glass and even then are not obvious. This grade of diamonds is especially appealing to those desiring a larger stone with no sacrifice in beauty and brilliancy.

A. Identifies diamonds of average quality and color. This grade has flaws, visible to the naked eye if critically examined. The quality of cutting and brilliance is of a slight degree under the above grade.

BEWARE OF MISREPRESENTATION

The term "perfectly cut" does not apply to the perfection of a diamond. It describes the cutting only, and is therefore misleading if used to infer quality. Do not be misled.

Oster Knife and Scissors Sharpeners

The finest made because of these exclusive features:

- **Double Action Sharpening Wheels** — Two overlapping wheels turn up from the edge of the knife blade. "Hollow Grind" both sides at once. Ordinary single wheel sharpeners grind one side at a time — turn down, leave feathered edge which soon dulls.
- **Aluminum Oxide Wheels** — softer... finer... more expensive abrasive hones the knife — no scratching. Coarse abrasives scratch and grind knives.
- **Geared Motor** — Expensive nylon gearing turns sharpening wheels slowly. Knife will not heat up and lose temper. All other sharpeners have direct drive motors.

Both sharpeners come complete with Oster exclusive "Cutlery Care" Book covering selection and care of knives — how to carve — how to sharpen tools and cutlery.

New Deluxe Model 522
