CORPORATION SOURCE BOOK OF STATISTICS OF INCOME

INDUSTRY STATISTICS AND THEIR LIMITATIONS

The data in the Corporation Source Book of Statistics of Income are based on a carefully selected sample of corporation income tax returns for each year. Except for the largest corporations (generally those with assets of $10 million or more), it is not likely that tax returns of the same company are included in the sample from year to year. Even for large corporations, significant changes in the money amounts occur from year to year if one of the largest companies shifts from one industry to another owing to a merger, acquisition, or even filing of a consolidated return.

The industry groupings used for Statistics of Income, Corporation Income Tax Returns, conform with the 1974 Standard Enterprise Classification issued by the Office of Statistical Policy and Management Information Systems, Office of Management and Budget. The structure of the classification follows closely along the lines of the Standard Industrial Classification, which is designed as a means of classifying separate establishments rather than the companies of which establishments are part. Some departures from the enterprise classification system are made for Statistics of Income for the finance industries in order to reflect particular provisions of the Internal Revenue Code.

Even though the classification system is designed to apply to the company rather than the establishment, its application to corporation income tax return statistics has limitations. For corporations, industry statistics are generally governed by the returns of the larger companies. Since a return is classified by industry based on the activity accounting for the largest percentage of total receipts, this means that large corporations with diversified activities are included in only one industry even though many of their business operations are unrelated to the industry in which they are classified. It should therefore be noted in using the Source Book, especially for recent years, that statistics for an industry may be either understated by amounts reported by corporations whose principal activity lies elsewhere, or overstated by amounts reported by corporations classified in the industry but having substantial operations in other industries.

To an extent the effect of diversification on the statistics is mitigated by the reporting unit used by most corporations. Separate returns are generally filed for each member of a group of related companies even though for general financial purposes reports are filed for each group as a whole. When separate returns are filed, it becomes possible to classify each company within a group by industry. Also, when a company's operations are diversified among related minor industries, the effects of diversification may be mitigated somewhat when data for the related minor industries are accumulated into the major industries featured in the published Statistics of Income reports.

NOTES

* Indicates estimate is subject to high sampling variability and should therefore be used with caution.

** In order to avoid showing estimates based on too few sample returns, these data have been combined with the data in the next lower asset size class.

*** In order to avoid showing estimates based on too few sample returns, the estimate has been suppressed. Data are included in the appropriate totals.

✓ Column includes data from one or more higher size classes.

(-0) Less than $500 per return.

NOTE: The statistics at the major group level were derived by adding the appropriate minor industries after combinations of asset size classes or deletions had been made in order to avoid showing estimates based on too few sample returns. The statistics of industrial divisions were similarly derived by adding the appropriate major groups. For this reason, detail may not add to totals, and totals by asset size classes may differ from those published in the complete report, Statistics of Income--1975, Corporation Income Tax Returns.

1. Income year 1975 covers corporation accounting periods ended July 1975 through June 1976.

2. Constructive taxable income from related foreign corporations includes "Includable income of Controlled Foreign Corporations" and "Foreign dividend income resulting from foreign taxes deemed paid" (i.e., foreign taxes deemed paid by related foreign corporations in developed countries on the profits from which dividends were distributed).

3. Net income (less deficit) equals "Total receipts less total deductions" less "Interest on State and local Government obligations" plus "Constructive taxable income from related foreign corporations."

4. Income subject to tax

For most corporations, income subject to tax consisted of "Net income" less "Statutory special deductions." However, certain of these deductions (a) could exceed net income resulting in no income subject to tax and (b) could occur on returns without net income and therefore without income subject to tax. Other exceptions applied to life insurance companies, regulated investment companies, real estate investment trusts, and to Small Business Corporations electing to be taxed through stockholders. See "Income Subject to Tax" in Explanation of Terms, STATISTICS OF INCOME--1975, CORPORATION INCOME TAX RETURNS.

5. For 1975, a new industry code, 6530, Condominium management and cooperative housing associations, has been added. Industry code 8599, Miscellaneous services, not elsewhere classified, has been changed numerically to industry code 8799.

6. See the report STATISTICS OF INCOME--1975, CORPORATION INCOME TAX RETURNS, for a discussion of these statistics including:
