# About Barracuda Networks

Barracuda Networks provides cloud-connected security and storage solutions that simplify IT. These powerful, easy-to-use, and affordable solutions are trusted by more than 150,000 organizations worldwide. Barracuda's expansive product portfolio delivers protection against threats targeting email, web, and network intrusions, as well as products that improve application delivery, network access, message archiving, backup, and data protection, on-premises or in the cloud.

Barracuda's high-value, subscription-based IT solutions provide end-toend network and data security that helps customers address security threats, improve network performance, and protect and store their data.

Barracuda's international headquarters are in the heart of northern California's Silicon Valley.

# Barracuda CloudGen Firewall

# The first cloud-generation firewall

More and more companies all over the world adopt and integrate public cloud offerings into their network. But "before you can work in the cloud, you have to get to cloud" has never been more true than today.

Shifting workloads to cloud based services, regardless if Software as a Service (SaaS), Platform as a Service (PaaS) or Infrastructure as a service (IaaS) exposed a different set of requirements WAN edge and network security devices today need to address: Optimizing connectivity for business critical applications, enforcing higher security levels than ever and reducing cost by moving away from expensive MPLS lines. Because traditional WAN edge and security products did not adapt to these new challenges, a new set of solutions enabling cost efficient connectivity across the cloud-enabled WAN has emerged: SD-WAN. Barracuda CloudGen Firewall is the first to combine full next-generation security with the connectivity optimization and cost savings potentials of a full SD-WAN solution onto one single easy to manage hardware, virtual or cloud based appliance. CloudGen Firewall improves site-to-site connectivity and enable uninterrupted access to applications hosted in the cloud all while simplifying the administration of network operations for enterprises and managed services providers.

CloudGen Firewall achieves this by tightly integrating a comprehensive set of next-generation firewall technologies, including layer 7 application profiling, intrusion prevention, web filtering, advanced threat and malware protection, spam protection, and network access control. Yet on top of these cutting-edge next-generation firewall capabilities, CloudGen Firewall's highly resilient VPN technology combined with intelligent traffic management and WAN compression capabilities allow customers to save line costs and increase overall network availability.

However, SD-WAN typically does not address securityrelated aspects. It is considered more like a connectivity solution that works besides the security solution - at best. Just like different species.

All pieces of the solution are centrally manageble across all platforms and release versions, reducing ongoing administrative overhead and ensuring policy compliance and enforcement across the wide area network.

# Benefits at a glance

**Consolidated security without compromise**: All Barracuda CloudGen Firewall models and deployment options provide comprehensive next-generation firewalling including application control and user awareness, full mail & web security gateway functionality, malware protection, botnet and spyware detection, typosquatting & link protection, sandboxing (Advanced Threat Protection), URL filter, and file type policy enforcement. All this combined with unbeatable network security and packed into a single, powerful appliance. The tight integration of web security and network security features enables advanced functionalities, such as prioritizing certain application traffic based on user/group info and time information, and allowing certain applications to go out via predefined uplinks only. Dynamic, on-the-fly adjustments of QoS and application usage policies depending on <u>dynamic bandwidth</u> <u>measurement</u> make sure there will always be enough bandwidth for business-critical applications. And with <u>zero-</u> <u>touch deployment</u> even the largest rollouts are easy to execute.

Unified remote access: Access to applications - regardless if hosted in the cloud or on premises - is commonly expected not only from within the company network but from any remote location or mobile device. Barracuda CloudGen Firewall includes <u>zero-touch for remote</u> access, unified remote-access clients for macOS, Windows, iOS, and Android devices to make sure employees enjoy

 $\mathbf{S}$ 

**Cloud ready**: The ongoing shift of IT workloads to cloud services in order to increase flexibility and reduce costs requires a reliable, cost-effective <u>extension of the company</u> WAN to the cloud. This applies to headquarters as well as direct Internet breakouts at every branch location. Barracuda CloudGen Firewall models come fully featured for <u>all</u> <u>common cloud laaS providers</u>, as virtual appliances, and in a variety of hardware appliances for even small offices. Hybrid WAN and cloud-only networks can thereby also benefit from the Barracuda CloudGen Firewall.

**Secure SD-WAN capabilities**: Significantly increase uplink and WAN network reliability and performance by using and aggregating up to 24 active, <u>load-sharing connections</u> of any type (broadband, 4G, MPLS between locations). <u>WAN</u> <u>optimization</u> functionality including data deduplication and caching, traffic compression and application acceleration increase available bandwidth far beyond the sum of all available physical uplinks combined. fast and reliable access to corporate applications from inside the network – and anywhere else, too.

**Once-only central management**: The entire Barracuda CloudGen Firewall infrastructure, regardless if only a few devices or a couple thousand distributed across thousands of locations and multiple deployment types, can be deployed, managed and monitored from a single pane of glass through the <u>Barracuda Firewall Control Center</u>. Managing several hundreds of firewalls requires the same effort as managing one firewall.

Unparalleled cost savings: Barracuda CloudGen Firewall consolidates security, SD-WAN, link balancing, and WAN compression disciplines into a single appliance that provides significant cost savings due to the reduction or elimination of expensive leased lines and consolidation of security devices. Even for small rollouts of only a few devices, customers achieve a return of investment after just a few months, while thousands of dollars can be saved over the course of the next few years.

### How much can you save on MPLS line costs with Barracuda CloudGen Firewall? Visit savings.barracuda.com and find out!

PERIMETER SECURITY

## NETWORK AND APP SECURITY

# **Perimeter security**

## Full application awareness

Mobile devices, online applications, social networks, and streaming media have caused an enormous increase in nonbusiness network data traffic, pushing bandwidth capacities to their limits and causing degradation in performance of business-critical applications. Application control built into every Barracuda CloudGen Firewall allows admins to accurately identify and control thousands of protocols and applications (like software updates, BitTorrent, Skype, instant messaging etc.) crossing the network and not visible with regular port-based firewalls. The Barracuda CloudGen Firewall gives administrators granular control over applications. They can define rules for forwarding application traffic using the most suitable uplink based on type of application, user, content, time of day, and even geographical location. Unsanctioned applications can be reliably blocked or bandwidth throttled to an acceptable level.

## **Application-based routing**

A unique combination of next-generation security and adaptive WAN routing technology allows CloudGen Firewall to dynamically assign available bandwidth, uplink, and routing information based not only on protocol, user, location, and content, but also on applications, application categories, and even web content categories. This keeps expensive, highly available lines free for business- and mission-critical applications, while significantly reducing response times and freeing up additional bandwidth. For more details, please click here...

## Deep application context

Deep application context analysis enables deeper inspection of the application data stream by continually evaluating the actual intentions of applications and the respective users. For example, if a user attempts to use an application like "hidemyass" to bypass traditional web filtering, Barracuda CloudGen Firewall cannot only block the application itself, but also report the website the user originally attempted to connect to. For more details, please click here...

### **Custom application definitions**

On top of thousands of applications that are delivered out of the box and constantly updated, Barracuda CloudGen Firewall provides an easy way to create user-defined application definitions. For example, admins can allow just a very limited set of Facebook apps while blocking all others, or assign

Figure 1 - Application-based routing with Barracuda CloudGen Firewall

### **Real-time application reporting and manipulation**

For on-the-fly reporting and drill-down capabilities, Barracuda CloudGen Firewall comes with real-time and historical application visibility that show live and recent application traffic on the corporate network that can be interactively filtered and drilled down. This helps admins to decide which application connections should be given bandwidth prioritization and who is currently violating acceptable use policies.

### more bandwidth to homegrown or legacy business systems.

For more details, please click here...

Figure 2 - Real-time application reporting

### Application risk and usage report

The application usage and risk report is one of many predefined reports in the free Barracuda Firewall Report Creator tool that provides automated reports and risk analysis based on the network traffic traversing the network. It gives an overview of how effective the currently deployed policies are in detecting and enforcing corporate application usage policies and even provides recommendations of what actions should be taken to improve these policies.

Barracuda CloudGen Firewall can easily be deployed risk free into existing networks to collect data required for generating such reports by using either a layer-2 network bridge or SPAN port / port mirroring deployment. No matter what method is used, collecting the traffic has no impact on the firewall performance at all. Application Usage and Risk Report

### FAKE

### Top Application Traffic traversing the Network

The Barracuda NG Firewall provides powerful and extremely reliable detection and classification of applications and sub-applications by combining Deep Packet Inspection (DPI) and behavioral traffic analysis - no matter if the protocols are using advanced obfuscation, port hopping techniques or encryption. The Barracuda NG Firewall comes with real-time and historical application visibility that shows application traffic on the corporate network. This provides a basis for deciding which connections should be given bandwidth prioritization, which is crucial for QoS optimization of business-critical applications. Furthermore, it allows for adjusting and refining the corporate application use policy.

Barracuda Networks provides a risk rating for any identified application and protocol crossing the network. Based in the conducted traffic analysis the overall risk rating is as follows:

Mister Y Application Traffic Risk Rating:

The following chart provides an overview of the top applications based on bandwidth consumption that are traversing the network of Mister Y:

#	APPLICATIONS	RISK	TRAFFIC	SESSIONS
1	Web browsing	0	10.9 GB	1232613
2	Microsoft Update	Ō	4.2 GB	4602
3	Google Play Base	0	495.1 MB	1511
4 🤇	Google Services Base	0	194.7 MB	3633
5	Amazon Webservices	0	180.7 MB	108
6	Tunes	0	179.4 MB	81
7 6	Apple Update	0	173.3 MB	3
80	🕻 Avira AV Update	0	134.3 MB	260
9	Facebook Base	2	78.9 MB	1016
10 🐌	Bing Search	0	33.1 MB	500
11 🐧	Google Safe Browsing	0	29.2 MB	228
12 🍕	👌 Ubuntu Update	0	27.0 MB	15
13 🜏	Google Update	0	18.1 MB	11
14 📕	Microsoft Account	0	13.8 MB	637
15 🍏	iCloud Base	0	12.2 MB	413
16 📢	MSN General	3	9.5 MB	4512
17 🛃	OneDrive	4	8.7 MB	209
18 🍟	Youtube Watch Video	3	7.6 MB	10
19 📲	ooyala	3	6.6 MB	21
20 🧑	Google AdSense	3	5.3 MB	152

Creating reports can be started manually (on-demand) or scheduled (including automated email distribution). And of course - reports are fully customizable to comply with possible branding requirements.

## Barracuda

Page 4 of 16

Figure 3 - Example for an application risk and usage report

## Full user identity awareness

Barracuda CloudGen Firewall combines application control with seamless support for all commonly used authentication schemes such as active directory, RADIUS, and LDAP/S. That means reporting can be done based on user and group membership (instead of source IP addresses), and firewall and application policy rules can easily be created for individual users and groups.

### Figure 4 - Seamless support for commonly used authentication schemes

#### PERIMETER SECURITY

## NETWORK AND APP SECURITY

# Web security gateway

### **Advanced Threat Protection**

Barracuda Advanced Threat Protection (ATP) uses nextgeneration sandbox technology including full-system emulation to catch advanced persistent threats, zero-day malware, and all advanced malware designed specifically to evade detection. ATP on Barracuda CloudGen Firewall ensures flexible and simple deployment into existing networks because no additional hardware is required. Resource-intensive sandboxing is offloaded to the Barracuda ATP Cloud with its multiple datacenters in the Americas, mainland Europe, and the UK. A hash fingerprint of each file and the good/bad classification of all sandboxed files are stored and cached for future use, effectively speeding up processing and guaranteeing near instantaneous results. Over 95% of all files checked by the ATP service have typically been seen before and only very few files need processing.

This also enables network activities such as establishing encrypted connections to botnet command and control centers for increased security posture to evade scaled botnet attacks.

Since the Barracuda ATP cloud database cache is continuously updated by tens of thousands of CloudGen Firewall deployments, Email Security Gateways, Web Security Gateways and Barracuda Essentials, the ATP service provides a true worldwide early detection grid for newly emerging malware.

With ATP on CloudGen Firewall, the firewall administrator has full policy control over how PDF documents, Microsoft Office Files, EXEs/MSIs/DLLs, Android APKs, compressed files, and archives are emulated and delivered to the client. Based on identified malware activity, infected users can be automatically quarantined, thereby preventing the malware from spreading within the network. Customizable, on-demand analysis reports for any emulated file provide full insight and details on malicious activities, file behavior, system-registry entries, and evasion and obfuscation techniques.

Figure 5 - Barracuda Advanced Threat Protection architecture

## Botnet and spyware protection

In combination with the ATP cloud database, all CloudGen Firewall models and deployment types provide protection against botnet infections and detect potentially infected clients based on DNS requests. Once an infected client is detected, it can be isolated automatically, and an alert can be created or reported with the <u>Barracuda Firewall Report</u> <u>Creator</u>.

## Typo squatting & link protection for email

This important feature of ATP adds protection for two rising threats: uncovering misleading and misspelled links.

The link protection component automatically rewrites deceptive URLs in email messages to a Barracuda-validated URL and informs the requesting user on this change via a warning page displaying all the details about the blocked URL.

Typo squatting is a common trick to fool users into clicking on a link to a known source although the link is misspelled (e.g., examlpe.com), comes with a different top-level domain (e.g., example.org), or contains special characters (e.g., greek character rho for "p" - example.com), etc.

### Safe Search enforcement

Many search engines have a safe search setting that filters out adult search results such as inappropriate images and videos in search query return traffic. On CloudGen Firewall customers can easily activate Safe Search enforcement so that the firewall will enforce safe search settings for all common search providers such as Google, Yahoo, and Bing, and even within YouTube. Search engines not supported can easily be blocked.

This functionality is even effective within SSL-encrypted search engines like google.com if SSL Inspection (included with all Barracuda CloudGen Firewall models and deployment types) is activated.

### Google Apps accounts enforcement

## Web filtering

Web filtering on CloudGen Firewall is included with the Energize Updates subscription and enables highly granular, real-time visibility into online activity, broken down by individual users and applications, thereby letting administrators create and enforce effective Internet content and access policies.

Web filter functionality with CloudGen Firewall protects user productivity, blocks malware downloads and other webbased threats, enables compliance by blocking access to inappropriate websites and servers, and provides an additional layer of security alongside application control. For more details, please click here...

In some cases, users with their own Google Apps account may be able to circumvent Safe Search enforcement settings by logging in from their workstation with their own Google Apps account. To prevent this, all CloudGen Firewall models and deployment types enforce and limit Google Apps accounts logins only for a list of predefined apps accounts easily created the administrator.

# Mail security gateway

Mail is still one of the most common ways of spreading malware. CloudGen Firewall includes all necessary means to prevent incoming email to the corporate mail server from being infected.

CloudGen Firewall's mail security includes malware scanning, Advanced Threat Protection, and basic spam filtering via DNS blacklisting of known mail senders and malware domains. For more details, please click here...

#### PERIMETER SECURITY

## NETWORK AND APP SECURITY

## Malware protection

The optional malware protection shields the internal network from malicious content by scanning web content (HTTP and HTTPs), email (SMTP, POP3), and file transfers (FTP) via two fully integrated antivirus engines. Malware protection is based on regular signature updates as well as heuristics to detect malware or other potentially unwanted programs even before signatures are available. The malware protection covers viruses, worms, Trojans, malicious Java applets, and programs using known exploits on PDF, pictures and office documents, macro viruses, and many more, even when using stealth or morphing techniques for obfuscation. For more details, please click here...

## File content enforcement

Figure 6 - Multi-layered security architecture

Barracuda CloudGen Firewall includes true file type detection and enforcement capabilities based not only on extension and MIME type, but also on sophisticated true file type detection algorithms. Bypassing executable files by renaming or compressing is detected and blocked. Besides blocking / allowing connections, the Barracuda CloudGen Firewall also lets admins change download priorities . For example, if an ISO image started downloading with normal web traffic priority, the admin can increase or decrease the assigned bandwidth for the download, even though the user started downloading via a regular web- browsing session.

*Figure 7 - True file type detection and enforcement* 

## **Network security**

## Intrusion detection and prevention

Every CloudGen Firewall includes a built-in intrusion detection and prevention system (IDS/IPS) that provides complete and comprehensive real-time network protection against a broad range of network threats, vulnerabilities, exploits, and exposures in operating systems, applications, and databases, thereby preventing network attacks such as:

- SQL injections and arbitrary code executions
- Access control attempts and privilege escalations
- Cross-site scripting and buffer overflows
- DoS and DDoS attacks
- Directory traversal and probing and scanning attempts
- Backdoor attacks, trojans, rootkits, viruses, worms, and

## **DoS/DDoS** attack protection

Every CloudGen Firewall comes with a host of built-in network protection functionalities beyond firewalling and IPS to protect networks and resources against malicious overexhaustion.

TCP SYN flooding attacks are automatically prevented by predefined connection attempt limits that are configurable separately for outbound and inbound accept policies.

To further guard against regular DoS/DDoS attacks, the maximum number of new sessions and the allowed total number of sessions from a single source can be specified. This protects against resource exhaustion of your firewalls as well as the servers and networks behind them. These

### spyware

By providing advanced attack and threat protection features such as stream segmentation and packet anomaly protection, TCP split handshake protection, IP and RPC defragmentation, FTP evasion protection, as well as URL and HTML decoding, CloudGen Firewall can identify and block advanced evasion attempts and obfuscation techniques that are used by attackers to circumvent and trick traditional intrusion prevention systems. As part of Barracuda's Energize Updates subscription automatic IPS signature updates are delivered on a regular schedule or on an emergency basis to ensure that CloudGen Firewall is constantly up-to-date. For more details, please click here... settings are configurable on a per-rule basis, thereby ensuring that protected servers with higher loads like web servers may be fully utilized.

CLOUD ENABLEMENT

## NETWORK AND APP SECURITY

# Cloud enablement

The exponential growth in cloud computing offerings has driven more and more organizations to consider adopting a hybrid network WAN with new workloads being deployed predominantly to the cloud. Potential cost savings and the ability to scale up and down are attractive cloud propositions, but the real reason companies move to the cloud is the ability to push products to the market much more quickly.

To fully experience cloud computing benefits, Barracuda CloudGen Firewall helps organizations apply the same levels of security and connectivity as if the new network were in

# Deploying multi-tier architectures

Segmenting cloud networks into multiple tiers provides security, visibility, and compliance for on-premises applications. Additionally, this can be leveraged when the applications are deployed in public cloud environments through Barracuda CloudGen Firewall. CloudGen Firewall secures, restricts, and monitors the communications between these tiers, and limits the potential damage to an organization in the event of an attack. By filling the functional gaps between cloud infrastructure security and a defensein-depth strategy, CloudGen Firewall provides protection

the local, on-premises datacenter.

# Secure connectivity to the cloud

CloudGen Firewall is designed from the ground up to enable access to cloud applications by utilizing a unique combination of link bonding, dynamic application prioritization, application-based uplink selection and WAN optimization techniques to improve the WAN network performance to the cloud, regardless of office type or remote mobile locations.

# Flexible licensing and consumption models

To be able to benefit of the elasticity of a cloud deployment, the licensing aspect has to taken into consideration as well. CloudGen Firewall provides regular Bring-Your-Own-License (BYOL) and highly flexible Pay-As-You-Go (PAYG) licensing based on either hourly- or volume-based (metered) between the application and data layers, rather than solely where the cloud network starts.

This architecture provides:

- Comprehensive security enforcement inside the cloud
- Threat detection and traffic monitoring between cloud application components
- Secure integration with on-premises resources
- Restricted and encrypted role-based administrative access to application infrastructure
- A mix of cloud hosted network tiers and on-premises tiers if required by compliance regulations

### CLOUD ENABLEMENT

## NETWORK AND APP SECURITY

# Enhancing ExpressRoute and Direct Connect security

Azure ExpressRoute and AWS Direct Connect allow organizations to establish high-performance private connections between Azure datacenters and on-premises infrastructure and provides low latencies, failure-resilient connectivity and consistent predictable performance.

For both public cloud services, CloudGen Firewall enhances security and boosts reliability as well as connectivity performance:

### Security

- Encrypt traffic across ExpressRoute and Direct Connect
- Check traffic for network threats and malware

### **Reliability & Performance**

- Provide transparent fallback to Internet VPN in case of MPLS uplink failure while preserving all running sessions
- Bond ExpressRoute/Direct Connect with up to 24 Internet uplinks using Barracuda TINA VPN technology for significantly enhanced cloud connection

### Intelligence

- Log all traffic for troubleshooting and reporting purposes
- Enforce priorities for protocols and applications utilizing ExpressRoute
- Enforce security policies based on user identity
- Prevent unwanted traffic from entering or leaving the cloud

SD-WAN AND PERFORMANCE

NETWORK AND APP SECURITY

# **SD-WAN** and performance

With the increasing adoption of virtualization, softwaredefined networks (a.k.a. SD-WAN) and cloud-native applications in today's business environment, the role of the firewall has evolved from a gateway-based, security-only device to a set of distributed solutions that make sure the WAN network is available any time for any type of endpoint. Regardless if the WAN endpoint is at headquarters, a remote office, a network in the laaS cloud, or a mobile endpoint, Barracuda CloudGen Firewall enables impeccable WAN performance.

Barracuda CloudGen Firewall units deployed to multiple

WAN compression is even included with CloudGen Firewall's virtual and cloud-based deployment options, effectively enabling secure, high-performance direct internet breakouts to cloud-hosted networks for every remote location. For more details, please click here...

# Failover and link balancing

Barracuda CloudGen Firewall provides a wide range of builtin uplink options such as leased lines, broadband (DHCP, DSL/cable, PPPoA, PPPoE, PPTP), and 3G/4G/UMTS. Up to 24 uplinks can be combined in load sharing or failover mode, eliminating the need to purchase additional devices for link balancing. CloudGen Firewall's unique combination of application awareness and traffic intelligence mechanisms automatically prioritizes business-critical applications, networks, and even distinct endpoints in case overall remaining bandwidth is degraded.

physical and cloud locations allow an organization to create a fault-tolerant, high-performance WAN network on top of low-cost broadband lines by combining full next-gen deep security inspection, smart policy-based adaptive traffic management, and WAN optimization technology into a single centrally manageable solution. Besides improved fault tolerance against outages and better WAN performance, the solution enables cost optimization strategies when multiple carriers/ISPs are combined to get the required bandwidth at an optimum price. This section highlights of CloudGen Firewall's WAN reliability and performance technologies.

## WAN compression

All Barracuda CloudGen Firewall models include data deduplication, and traffic compression. With built-in WAN compression, CloudGen Firewall significantly improves siteto-site WAN network throughput and accelerate the delivery of business applications - at no extra charge. Unlike typical firewall solutions, all uplinks can be utilized to distribute VPN traffic, effectively enabling extremely reliable site-to-site VPN connectivity with only inexpensive broadband or even 4G uplinks.

Figure 8 - Combine up to 24 uplinks load sharing or failover mode

### How much can you save on MPLS line costs with Barracuda CloudGen Firewall? Find out more at savings.barracuda.com.

# Dynamic bandwidth detection and performance-based transport selection

In order to achieve the highest possible quality of service, all CloudGen Firewall models pro-actively measure the available VPN bandwidths and - automatically - select the best uplink for a VPN connection based on bandwidth, latency, or combined quality metrics.

# Adaptive bandwidth reservation

If a measured bandwidth is not sufficient for business-critical traffic (e.g., VoIP), CloudGen Firewall can automatically adjust the allocated bandwidths for non-business-critical traffic to

# On-demand dynamic mesh VPN

CloudGen Firewall deployments in a centrally managed WAN network create VPN tunnels dynamically based on remote peer and application. The typical use case for this technology is on-demand VPN tunnels between two branch offices for a VoIP phone call, thereby improving call quality. For hybrid networks hosted in public cloud infrastructures like Microsoft Azure, Amazon Web Services, or Google Cloud Platform, this technology can be used easily to enable onthe-fly and direct access to cloud applications from remote offices that otherwise do not need a permanent connection to the cloud.

free up bandwidth for redistribution.

## Adaptive session balancing

Using multiple transports simultaneously might end up in some clogged transports and some hardly used ones. To avoid this inconvenience, CloudGen Firewall can dynamically balance not only newly created sessions but also already existing ones across the available uplinks.

## **Traffic replication**

Especially for VoIP traffic it is highly sensitive to paket loss. CloudGen Firewall mirrors VoIP/Video packets and sends these across multiple uplinks smiltaneously. At the destination, the packets are then again combined to provide best voice and video quality.

# **Azure Virtual WAN**

In cooperation with Microsoft, CloudGen Firewall automates the process of building a secure high performance branchto-branch network via Azure vWAN:

- Automatic branch to branch connectivity
- Automatic branch to Microsoft Azure connectivity
- Allow hundreds of remote locations to securely connect via Azure Virtual WAN
- Active-active IPsec VPN connections for uninterrupted connectivity
- Optimal routing and minimal latency for branch-to-branch and branch-to-Azure connectivity with Microsoft's global network
- Unified network and security policy management

UNIFIED REMOTE ACCESS

## NETWORK AND APP SECURITY

# Unified remote access

Barracuda CloudGen Firewall incorporates advanced client-to-site VPN capabilities, using SSL, IPsec, and TINA protocols to ensure remote users can easily and securely access network resources without time-consuming client configuration and management. The communication protocols used with our clients are optimized to be fully roaming-capable by quickly reconnecting upon loss of communication. Smart pathfinder technology determines the nearest point of entry to the corporate network. By using different ports encapsulated in either TCP or UDP, the advanced NAT traversal technology can easily pass through

Figure 9 - Secure remote access architecture

### web proxies.

The influx of private computing devices, be they smartphones, laptops, or tablets, into the workplace may help increase productivity, flexibility, and convenience. However, **BYOD** (Bring Your Own Device) adds new security challenges and risks, such as enabling and controlling access, as well as preventing data loss.

CloudGen Firewall provides strong capabilities that give users the full advantage of their devices while reducing possible risks to their business. Unwanted applications can be blocked, LAN segmentation can protect sensitive data, and network access control can check the health state of each device connecting to the corporate network.

### About TINA protocol

The TINA protocol encapsulates encrypted ESP payload in TCP or UDP packets, thus adapting to underlying transport network quality and providing failure resistant, high-speed VPN connections. It also improves VPN connectivity substantially by adding:

- Multiple concurrent physical transport paths per logical tunnel
- Session level or packet level transport aggregation for increased total tunnel throughput
- Adaptive traffic shaping depending on VPN transport availability
- Fallback transports in case of uplink failure
- Traffic compression and deduplication
- DHCP and NAT support

### UNIFIED REMOTE ACCESS

## NETWORK AND APP SECURITY

# Browser-based remote access (SSL VPN)

Barracuda's responsive SSL VPN portal enables you to provide simple browser-based remote access on desktop or mobile devices. When accessing the portal via the web browser on a desktop or mobile device, users can browse apps, network folders, and files as if they were connected to the office network.

The responsive portal supports most commonly used devices (Apple iOS, Android, Blackberry, etc.) and is part of the Advanced Remote Access subscription.

# 

## CudaLaunch

CudaLaunch is a simple-to-use remote connectivity application specifically designed to securely extend the company network to BYOD and mobile devices. The app is available for Windows, macOS, iOS, and Android, can be downloaded from the App Stores. End users can install the app without elevated privileges on the device. CudaLaunch looks and feels the same on every platform and provides fast, Java-independent access to commonly used applications in the company network, regardless if hosted on-premises or in the cloud. CudaLaunch's Zero Touch administration features drastically reduce support and administration costs for rapidly changing mobile and BYOD devices.

### CudaLaunch is available for download here:

For Windows enviroments, CudaLaunch is also available in a standalone version without requiring installation or local admin rights. This version is available via the <u>Barracuda Download Portal</u>.

### UNIFIED REMOTE ACCESS

## NETWORK AND APP SECURITY

# VPN clients (Network Access Client)

Every Barracuda CloudGen Firewall supports an unlimited number of VPN clients at no extra cost. The Barracuda Network Access VPN Client provides a sophisticated VPN client for Windows, macOS, and Linux that provides richer performance and functionality than standard IPsec client software. Benefits include quick restoration of VPN tunnels, "Always On" VPN connections for PCs, redundant VPN gateway support, selective routing of network traffic through the VPN tunnel, and optimal VPN-Gateway detection based on location. The Barracuda Network Access Client, when

Figure 10 - Barracuda VPN client for macOS

used with a Barracuda CloudGen Firewall, provides centrally managed Network Access Control (NAC) and an advanced Personal Firewall. This enforces client health and security policies for remote users connecting to the corporate network.

# Once-only central management

To centralize management across many different firewalls and remote access users, the **Barracuda Firewall Control Center** enables administrators to manage and configure security, content, traffic management, and network access policies from a single interface. Template-based configuration and globally available security objects enable efficient configuration across thousands of locations.

The Firewall Control Center helps significantly reduce the cost associated with security management while providing extra functionality both centrally and locally at the managed gateway. Software patches and version upgrades are Highly customizable administrative roles can be defined to delegate administrative capabilities for specific departments or locations.

# Lifecycle management

Scalable CloudGen Firewall deployments offer companies sustainable investment protection. Energize Updates automatically provide the latest firmware and threat definitions to keep the appliance up to date. With a maintained Instant Replacement subscription, organizations receive a new appliance with the latest specs every four

years.

and deployment can be applied to all managed devices.

Figure 12 - Firewall Control Center's Status Map displays a drill down status overview of all centrally managed CloudGen Firewall deployments.

# Scalable deployment

Managing the security issues in a widely distributed enterprise network can be painful and extremely time consuming. Managing a system may take only 15 minutes per day. But having 20 firewall systems in place results in five hours per day – just to manage the existing system.

With Barracuda Firewall Control Center, managing multiple Barracuda CloudGen Firewall deployments takes the same amount of time as managing one. For more details, please click here,

# **Cloud deployment**

Moving infrastructure to the cloud does not stop at

# Zero-touch deployment

Especially for large rollouts without having IT personnel on the ground at remote locations, CloudGen Firewall in conjunction with Firewall Control Center supports zerotouch deployment. This feature allows to send appliances to locations without having to pre-setup them beforehand. After unpacking the appliance and powering it up, the appliance automatically connects to the Barracuda Cloud Control where it receives are very basic set of information. This Information is just enough to create a high-secure TINA VPN connection to the private Firewall Control Center the appliance shall be assigned to.

The full configuration is sent to the appliance via the VPN tunnel and the appliance becomes part of the security infrastructure without the need of dedicated and trained IT security administrators at the location.

administration tools. Therefore, the Firewall Control Center is available for direct deployment in public cloud offerings like Microsoft Azure, Amazon Web Services, and Google Cloud Platform in a Bring-Your-Own-License model.

# Enterprise- and service provider licensing

The Firewall Control Center lets you centrally manage all CloudGen Firewall licensing flexible and interdependently of hardware. You can make best use of type of licensing for CloudGen Firewall deployments when you have a large number of firewalls running across a wide geographic area. For more information on this type of licensing, please see the dedicated whitepaper "Enterprise and Service-Provider Licensing" available on barracuda.com.

All performance values are measured under optimized conditions and are to be considered as "up to" values and may vary depending on system configuration and infrastructure:

- a Firewall throughput measured with large packets (MTU1500) UDP packets, bi-directional across multiple ports.
- b VPN performance is based on 1415 Byte UDP packets, bidirectional using BreakingPoint traffic generator.
- c IPS throughput is measured using large packets (MTU1500) UDP traffic and across multiple ports.
- d NGFW throughput is measured with IPS, application control, and web filter enabled, based on BreakingPoint Realworld-IPS-Enterprise-Traffic-Mix, bidirectional across multiple ports.
- e Threat protection throughput is measured with IPS, application control, web filter, and cloud-based antivirus enabled (as part of an active Advanced Threat Protection subscription), based on BreakingPoint Realworld-IPS-Enterprise-Traffic-Mix, bidirectional across multiple ports.
- f Depending on feature set; for more detailed information on sizing, please use the free sizing application "Firewall Blueprint" for iOS available for <u>iPhones</u> and <u>iPads</u>.
- g MTBF according to common usage. High load on SSD and extreme environmental conditions might reduce MTBF.

Errors and omissions excepted. Specifications subject to change without notice.

All performance values are measured under optimized conditions and are to be considered as "up to" values and may vary depending on system configuration and infrastructure:

- a Firewall throughput measured with large packets (MTU1500) UDP packets, bi-directional across multiple ports.
- b VPN performance is based on 1415 Byte UDP packets, bidirectional using BreakingPoint traffic generator.
- c IPS throughput is measured using large packets (MTU1500) UDP traffic and across multiple ports.
- d NGFW throughput is measured with IPS, application control, and web filter enabled, based on BreakingPoint Realworld-IPS-Enterprise-Traffic-Mix, bidirectional across multiple ports.
- e Threat protection throughput is measured with IPS, application control, web filter, and antivirus enabled, based on BreakingPoint Realworld-IPS-Enterprise-Traffic-Mix, bidirectional across multiple ports.
- f Depending on feature set; for more detailed information on sizing, please use the free sizing application "Firewall Blueprint" for iOS available for <u>iPhones</u> and <u>iPads</u>.
- g MTBF according to common usage. High load on SSD and extreme environmental conditions might reduce MTBF.

Errors and omissions excepted. Specifications subject to change without notice.

- c IPS throughput is measured using large packets (MTU1500) UDP traffic and across multiple ports.
- d NGFW throughput is measured with IPS, application control, and web filter enabled, based on BreakingPoint Realworld-IPS-Enterprise-Traffic-Mix, bidirectional across multiple ports.
- e Threat protection throughput is measured with IPS, application control, web filter, and antivirus enabled, based on BreakingPoint Realworld-IPS-Enterprise-Traffic-Mix, bidirectional across multiple ports.
- f Depending on feature set; for more detailed information on sizing, please use the free sizing application "Firewall Blueprint" for iOS available for <u>iPhones</u> and <u>iPads</u>.
- g MTBF according to common usage. High load on SSD and extreme environmental conditions might reduce MTBF.

### Errors and omissions excepted. Specifications subject to change without notice.

All performance values are measured under optimized conditions and are to be considered as "up to" values and may vary depending on system configuration and infrastructure:

- a Firewall throughput measured with large packets (MTU1500) UDP packets, bi-directional across multiple ports.
- b VPN performance is based on 1415 Byte UDP packets, bidirectional using BreakingPoint traffic generator.
- c IPS throughput is measured using large packets (MTU1500) UDP traffic and across multiple ports.
- d NGFW throughput is measured with IPS, application control, and web filter enabled, based on BreakingPoint Realworld-IPS-Enterprise-Traffic-Mix, bidirectional across multiple ports.
- e Threat protection throughput is measured with IPS, application control, web filter, and antivirus enabled, based on BreakingPoint Realworld-IPS-Enterprise-Traffic-Mix, bidirectional across multiple ports.
- f Depending on feature set; for more detailed information on sizing, please use the free sizing application "Firewall Blueprint" for iOS available for <u>iPhones</u> and <u>iPads</u>.
- g MTBF according to common usage. High load on SSD and extreme environmental conditions might reduce MTBF.

Errors and omissions excepted. Specifications subject to change without notice.

All performance values are measured under optimized conditions and are to be considered as "up to" values and may vary depending on system configuration and infrastructure:

- a Firewall throughput measured with large packets (MTU1500) UDP packets, bi-directional across multiple ports.
- b VPN performance is based on 1415 Byte UDP packets, bidirectional using BreakingPoint traffic generator.
- c IPS throughput is measured using large packets (MTU1500) UDP traffic and across multiple ports.
- d NGFW throughput is measured with IPS, application control, and web filter enabled, based on BreakingPoint Realworld-IPS-Enterprise-Traffic-Mix, bidirectional across multiple ports.
- e Threat protection throughput is measured with IPS, application control, web filter, and antivirus enabled, based on BreakingPoint Realworld-IPS-Enterprise-Traffic-Mix, bidirectional across multiple ports.
- f Depending on feature set; for more detailed information on sizing, please use the free sizing application "Firewall Blueprint" for iOS available for <u>iPhones</u> and <u>iPads</u>.
- g MTBF according to common usage. High load on SSD and extreme environmental conditions might reduce MTBF.

Errors and omissions excepted. Specifications subject to change without notice.

Barracuda rail kit	Yes			

\* Available sub models can be re-configured in the field. However, the re-configuration of network modules can be only applied to meet with available sub models. E.g., you may re-configure from model CCC to CCE or CCF but not to a model CFE as such a sub model is not available for F800. Network modules may be replaced in case of failure. Spare parts for redundant power supply can be ordered separately.

All performance values are measured under optimized conditions and are to be considered as "up to" values and may vary depending on system configuration and infrastructure:

- a Firewall throughput measured with large packets (MTU1500) UDP packets, bi-directional across multiple ports, measured with 10Gbps ports.
- b VPN performance is based on 1415 Byte UDP packets, bidirectional using BreakingPoint traffic generator, measured with 10Gbps ports.
- c IPS throughput is measured using large packets (MTU1500) UDP traffic and across multiple ports.
- d NGFW throughput is measured with IPS, application control, and web filter enabled, based on BreakingPoint Realworld-IPS-Enterprise-Traffic-Mix, bidirectional across multiple ports, measured with 10Gbps ports.
- e Threat protection throughput is measured with IPS, application control, web filter, and antivirus enabled, based on BreakingPoint Realworld-IPS-Enterprise-Traffic-Mix, bidirectional across multiple ports.

f Depending on feature set; for more detailed information on sizing, please use the free sizing application "Firewall Blueprint" for iOS - available for <u>iPhones</u> and <u>iPads</u>.
 g MTBF according to common usage. High load on SSD and extreme environmental conditions might reduce MTBF.

Errors and omissions excepted. Specifications subject to change without notice.

2x Barracuda L-shape rack mount bracket	Yes
Barracuda rail kit	Yes

\* Available sub models can be re-configured in the field. However, the re-configuration of network modules can be only applied to meet with available sub models. E.g., you may re-configure from model CCC to CCE or CFE or QC but not to a model CCF as such a sub model is not available for F900. Network modules may be replaced in case of failure. Spare parts for redundant power supply can be ordered separately.

All performance values are measured under optimized conditions and are to be considered as "up to" values and may vary depending on system configuration and infrastructure:

- a Firewall throughput measured with large packets (MTU1500) UDP packets, bi-directional across multiple ports.
- b VPN performance is based on 1415 Byte UDP packets, bidirectional using BreakingPoint traffic generator.
- c IPS throughput is measured using large packets (MTU1500) UDP traffic and across multiple ports.
- d NGFW throughput is measured with IPS, application control, and web filter enabled, based on BreakingPoint Realworld-IPS-Enterprise-Traffic-Mix, bidirectional across multiple ports.
- e Threat protection throughput is measured with IPS, application control, web filter, and antivirus enabled, based on BreakingPoint Realworld-IPS-Enterprise-Traffic-Mix, bidirectional across multiple ports.
- Depending on feature set; for more detailed information on sizing, please use the free

sizing application "Firewall Blueprint" for iOS - available for <u>iPhones</u> and <u>iPads</u>.
 MTBF according to common usage. High load on SSD and extreme environmental conditions might reduce MTBF.

Errors and omissions excepted. Specifications subject to change without notice.

\* Available sub models can be re-configured in the field. However, the re-configuration of network modules can be only applied to meet with available sub models. E.g., you may re-configure from model CE0 to CE2 or CFE but not to a model CF2 as such a sub model is not available for F1000. Network modules may be replaced in case of failure. Spare parts for redundant power supply can be ordered separately.

All performance values are measured under optimized conditions and are to be considered as "up to" values and may vary depending on system configuration and infrastructure:

- a Firewall throughput measured with large packets (MTU1500) UDP packets, bi-directional across multiple ports.
- b VPN performance is based on Barracuda TINA VPN protocol, 1415 Byte UDP packets, bidirectional using BreakingPoint traffic generator.
- c IPS throughput is measured using large packets (MTU1500) UDP traffic and across multiple ports.
- d NGFW throughput is measured with IPS, application control, and web filter enabled, based on BreakingPoint Realworld-IPS-Enterprise-Traffic-Mix, bidirectional across multiple ports.
- e Threat protection throughput is measured with IPS, application control, web filter, and antivirus enabled, based on BreakingPoint Realworld-IPS-Enterprise-Traffic-Mix,

	-5 10 +170 / -20 10 +75
Operating humidity (non-condensing)	10% to 85%

bidirectional across multiple ports.

f Depending on feature set; for more detailed information on sizing, please use the free sizing application "Firewall Blueprint" for iOS - available for <u>iPhones</u> and <u>iPads</u>.
 g MTBF according to common usage. High load on SSD and extreme environmental conditions might reduce MTBF.

Errors and omissions excepted. Specifications subject to change without notice.

# Maintenance kit

The maintenance kit for model F1000 consists of two fans and one power supply unit.

## Barracuda wall mount bracket

The Barracuda wall mount bracket allows mounting CloudGen Firewall F18, F80, F82. DSLA, F82.DSLB<sup>[1]</sup>, F180, and F280 on a wall or similar.

# Barracuda L-shape rack mount bracket

The L-shape rack mount brackets are used for mounting desktop models in 1U Standard 19" rack slots. For CloudGen Firewall F12, F18, and F80 the brackets are an optional item

#### and, thus, to be ordered separately.

Model F82 DSLB is only available in EMEA region. 5

## USB modem

Especially for remote sites a USB modem is a cost effective, rapidly deployable and ultra-reliable WAN backup solution which can protect businesses and organizations against outages caused by accidental cable or fiber link cuts during construction, moves or maintenance work.

#### Note:

Barracuda cannot guarantee signal reception. In case your server rooms are located in a basement or in a place with insufficient signal reception make sure that the signal quality is sufficient, especially prior to purchasing large quantities. SIM card is not included and has to be obtained Who can benefit from Barracuda USB modems?

- Enterprises looking for a cost effective secondary link in order to quickly increase total overall bandwidth and to reduce traffic volume on the primary link
- Enterprises relying on high quality WAN backup and WAN connectivity for business critical traffic
- Branch offices and remote sites looking for a cost effective alternative to earth bound uplinks
- Branch offices and remote sites looking to bridge the gap until cable connections become available
- Branch offices and remote sites residing in areas without a good selection of affordable or reliable Internet uplinks

through a mobile phone provider.

• Construction sites, retail, rapid deployments and portable

businesses requiring quick access to Internet

VIRTUAL APPLIANCES

NETWORK AND APP SECURITY

# Virtual appliances

As organizations have adopted virtualization for their server infrastructures, there has been a corresponding trend to extend the benefits of virtualization to the security layer. The CloudGen Firewall Vx provides the same powerful technology, comprehensive features, and ease-of-use found in a CloudGen Firewall hardware appliance. It is ideally suited for organizations that are standardizing hardware platforms or Beyond its powerful network firewall, IPS, and VPN technologies, CloudGen Firewall Vx integrates a comprehensive set of next-generation firewall technologies, including application control, availability, and traffic flow optimization across the wide area network, web filtering, antivirus, anti-spam, and network access control enforcement.

Total Protect PLUS hardware & Subscription bundle	Optional <sup>[22]</sup>	-	-	-

### High Availability ("HA"):

All subscriptions have to be licensed separately for the HA partner. For further information, please contact your local partner or

Barracuda Sales at <u>sales@barracuda.com</u>.

21 For model F12, malware protection utilizes cloud-based malware protection as part of an active Advanced Threat Protection subscription.
22 For model F12, the Total Protect PLUS bundle utilizes cloud-based malware protection; item Advanced Remote Access is not available.

## **Energize Updates**

Barracuda Energize Updates help you secure your investment in the ever-changing IT world. Benefit from security updates to patch or repair any security vulnerabilities, keep your Barracuda product up-to-date and fully functional at all times, and get access to our awardwinning support.

Energize Updates are available for all CloudGen Firewall hardware and virtual models. Available as 1, 3, and 5 year subscriptions. Purchasing at least 1 year of Energize Updates is required with every CloudGen Firewall.

## **On-Site Cold Spare Unit**

The cold spare unit provides Barracuda customers a cold standby appliance of the same type as the main unit. This cold standby unit can be activated quickly in case the active unit fails for any reason. The cold standby appliance includes a "Cold Standby License" for Barracuda CloudGen Firewall firmware only; no productive use for firewalling or other functions is possible. In this way, the firmware of the appliance can be upgraded to the patch level that corresponds to the main unit (fully licensed unit). If the main unit fails, the on-site cold spare unit may be used to temporarily host the license and backup file ("par" file, including the license) of the defective main unit for a period of

Energize Updates includes:

- Basic support, i.e., email support 24/7, and phone support Monday through Friday (9:00 am - 5:00 pm)
- Firmware maintenance including new firmware updates with feature enhancements and bug fixes
- Early Release Firmware program (optional)
- Unlimited number of client-to-site VPN connections
- Security updates to patch/repair any security vulnerabilities
- URL filter based on Barracuda Web Filter online URL categorization in single-pass as well as in proxy mode
- Regular updates for Application Control database
- IPS signature and pattern updates.

up to 15 days.

If the defective unit is covered under Instant Replacement or is still under warranty, Barracuda Networks will ship the customer a replacement unit of the same type as the defective unit. The former cold spare unit inherits the license features of the former main unit by a swap with a new license issued, effectively transforming the cold spare to the new main unit. The shipped unit includes a cold spare license and effectively become the new cold spare.

The customer needs to ship the defective unit to Barracuda Networks or certify destruction. If the customer fails to do so, Barracuda reserves the right to charge the customer for a full Barracuda CloudGen Firewall deployment.

## Warranty Extension

Provides an extended warranty, and ships a replacement unit on the next business day (best effort) with standard mail upon notification of a failed unit.

Must be purchased within 60 days of hardware purchase and is a continuous subscription from date of activation. Available as 1 and 3 year subscriptions with a maximum coverage of 5 years.

## Instant Replacement

One hundred percent uptime is important in corporate environments, but sometimes equipment can fail. In the rare case that a Barracuda product fails, Barracuda ships a replacement unit on the same or next business day. And by means of the Hardware Refresh Program, we ensure that customers benefit from the latest hardware improvements and firmware capabilities:

- Enhanced support providing phone and email support 24/7
- Hard disk replacement on models that have swappable
   RAID drives
- Free hardware refresh after four years of continuous IR coverage.

Must be purchased within 60 days of hardware purchase

and is a continuous subscription from date of activation.

Available as 1, 3, and 5 year subscriptions.

## **Comparison "Warranty Extension - Instant Replacement"**

	WARRANTY EXTENSION	INSTANT REPLACEMENT
Replacement	Next business day (best effort)	Same day or next business day
Shipment	Standard	Express
Hard disk replacement (swappable RAID)	Standard shipping	
Support	Basic Support (with EU)	Enhanced Support
Available subscriptions	1, 3 years	1, 3, 5 years
Free hardware refresh after 4 years	-	$\checkmark$

## **Premium Support**

Premium Support ensures that an organisation's network is running at its peak performance by providing the highest level of 24/7 technical support for mission-critical environments. A dedicated Premium Support Account Manager and a team of technical engineers provide fast solutions to high-priority support issues, thereby ensuring that Barracuda Networks equipment maintains continuous uptime.

#### Key benefits of Premium Support:

- Dedicated phone and email support 24/7
- Priority response time to resolve mission-critical issues
- Priority Level Agreement (PLAs) to guarantee that issues are handled, resolved, and closed quickly

## **Advanced Remote Access**

This optional subscription adds a customizable and easy-touse portal-based SSL VPN as well as sophisticated Network Access Control (NAC) functionality and CudaLaunch support. Barracuda's responsive **SSL VPN** Portal enables you to provide simple browser based remote access on desktop or mobile devices. When accessing the portal via the web browser on a desktop or mobile device, users can browse apps, network folders, and files as if they were connected to the office network.

**CudaLaunch** is a simple-to-use remote connectivity application specifically designed to securely extend the company network to BYOD and mobile devices. The app is available for Windows, macOS, iOS, and Android, can be downloaded from the App Stores.

- Dedicated Support Account Manager who is familiar with the customer's environment
- Proactive ticket monitoring and reporting to provide comprehensive information and control

#### Note:

Available for all Barracuda CloudGen Firewall hardware and virtual models. Premium Support for Barracuda CloudGen Firewall hardware appliances can only be purchased in combination with Instant Replacement. Premium Support may be purchased on Barracuda CloudGen Firewall virtual appliances without Instant Replacement. Available as 1, 3, and 5 year subscriptions. For more information on Premium Support please visit <u>www.barracuda.com/support</u>. The Barracuda **Network Access Client** provides a sophisticated VPN client for Windows, macOS, and Linux that provides richer performance and functionality than standard IPsec client software. The Barracuda Network Access Client, when used with a Barracuda CloudGen Firewall, provides centrally managed Network Access Control (NAC) and an advanced Personal Firewall. This enforces client health and security policies for remote users connecting to the corporate network.

For Barracuda CloudGen Firewall deployments in Public Cloud offerings like Amazon Web Services and/or Azure with Pay-As-You-Go licencing, this subscription is included.

#### **User Session Limits**

- Unlimited concurrent SSL VPN user sessions
- Unlimited concurrent CudaLaunch sessions

## **Advanced Threat Protection**

Prevent malicious files—even unknown ones—from entering the organization. Avoid network breaches, identify zeroday malware exploits, targeted attacks, advanced persistent threats and other advanced malware that routinely bypass traditional signature based IPS and antivirus engines before they do harm to your network.

#### Compatibility and Licensing:

Available for Barracuda CloudGen Firewall models F18 and higher, as well as all Barracuda CloudGen Firewall virtual appliances.

Available as 1, 3, and 5 years subscriptions. Requires a valid

## **Malware Protection**

The Malware Protection subscription provides gatewaybased protection against malware, viruses, spyware, and other unwanted programs inside SMTP/S, HTTP/S, POP3/S, FTP, and SFTP traffic.

Key Benefits of Malware Protection:

- Configurable archive recursion depth
- Quarantine functionality for proxy
- Configurable unknown archive policy
- Configurable maximum archive size
- Archiver package support
- Office file-types support
- Proactive detection of new threats

Web Security or Malware Protection subscription.

In case the monthly file capacity is reached, the system stops forwarding files to the ATP cloud for the rest of the current month.

HARD- WARE	# OF FILES	VIRTUAL	# OF FILES	PUBLIC CLOUD	# OF FILES
F12	108,000	VF10	n/a	Level 2	108,000

- Advanced heuristics detection techniques
- Hundreds of thousands signatures

Barracuda CloudGen Firewall model F12 features online malware protection as part of this subscription.

#### Compatibility and Licensing:

Available for Barracuda Barracuda CloudGen Firewall models F12 and higher, as well as all Barracuda Barracuda CloudGen Firewall virtual appliances. Unlimited user license if purchased with a CloudGen Firewall hardware appliance. If purchased for a virtual appliance the number of protected IPs (capacity) applies. Available as 1, 3, and 5 years subscriptions. In High Availability (HA) environments each unit needs to be licensed separately.

## **Advanced Threat and Malware Protection Bundle**

#### For your convenience, the subscriptions "Advanced Threat

#### Protection" and "Malware Protection" are also available in a

#### However, the specifications, compatibility, and licensing

restrictions are the same as for single licensing.

bundled subscription.

AVAILABLE SUBSCRIPTIONS

# **Total Protect Bundles**

For your convenience, Barracuda offers different preconfigured bundles **Total Protect** and **Total Protect PLUS** (listed below). Of course, you may configure subscriptions "à la carte" as required.

# Ordering information

# Barracuda CloudGen Firewall

### Calculation of co-terminus subscriptions:

To allow customers to consolidate their maintenance and subscription offerings to a single end or renewal date, daily rates for

all subscription types are offered. These daily rates should be used to extend expiring subscriptions to coincide with the dates

of subscriptions expiring in the future. Barracuda does credit early termination of subscriptions using these daily rates.

### Available bundles

For your convenience, Barracuda offers different preconfigured bundles (listed below). Of course, you may configure subscriptions "à la carte" as required.

HARDWARE & SUBSCRIPTION BUNDLE	
TOTAL PROTECT	TOTAL PROTECT PLUS
Hardware unit	Hardware unit
Warranty extension	Instant replacement
Energize Updates	Energize Updates
8x5 support	24x7 support
Application control	Application control
IPS	IPS
Web filter	Web filter
Anti-spam	Anti-spam
Antivirus	Advanced Threat and Malware Protection <sup>[23]</sup>
	Botnet protection
	Advanced Remote Access

23 The "Advanced Threat and Malware Protection" subscription bundles "Malware Protection" subscription and "Advanced Threat Protection" subscription.
