EAN/UPC	4718937620104

Description

Businesses striking a balance on productivity and security protection becomes a priority with growing number of devices. Whether it is a wired, wireless, or a IoT device, the Secure Wi-Fi service ensures the same network controls which can be applied to headquarters and other remote workplaces. Easily and securely extend working experience as if you were in the office with the adoption of secure tunneling and strict two-factor authentication.

Secure Wi-Fi service is used to build a secure L2 tunnel for Work-From-Home user to the office guaranteeing the same security level, the same user experience, the same Wi-Fi and even the same IP address in the office, which boosts up productivity and eases IT support. The Secure Wi-Fi service also unlocks the number of managed APs to maximum for the ATP/USG FLEX/VPN firewall.
