

RESOLUTION 2012 - 024

**A RESOLUTION OF THE CITY COUNCIL
OF THE CITY OF LINCOLN
AMENDING RESOLUTION 2006-183 WHICH SET
PUBLIC FACILITY FEES FOR ALL NEW DEVELOPMENT
WITHIN THE CITY OF LINCOLN**

WHEREAS, the City Council of the City of Lincoln has adopted Ordinance No. 517B, imposing and charging Public Facility Fees; and,

WHEREAS, the City Council adopted Resolution 1989-22 establishing a Public Facilities Fee for new development and section 5 called for the annual review of the fee structure relative to improvements needed to serve new development and related costs; and,

WHEREAS, the City Council adopted Resolution No 98-61 establishing Public Facility Fees based upon the Lincoln Public Facilities Plan which set forth the impacts of future development on public facilities and the need for new or expanded services and their costs; and,

WHEREAS, the City Council adopted Resolution 2000-40 amending Resolution 98-61; and,

WHEREAS, the City Council adopted Resolution 2001-157 amending Resolution 2000-40; and,

WHEREAS, the City Council adopted Resolution 2002-201 amending Resolution 2001-157; and,

WHEREAS, the City Council adopted Resolution 2006-183 amending Resolution 2002-201; and,

WHEREAS, a study entitled *City of Lincoln Public Facilities Element Fee Program Nexus Study Update* was commissioned in March 2010 with the intent of producing a comprehensive update of the Public Facility Element Fees last updated in 2006; and,

WHEREAS, the proposed fees do not exceed the estimated costs required to construct projects to serve new development within our community; and,

WHEREAS, a public workshop was held on November 15, 2011 on the Public Facilities Element Fee Program Nexus Study Update; and,

WHEREAS, the City has published notice of the February 28, 2012 public hearing in the Lincoln News Messenger; and,

WHEREAS, the City Council of the City of Lincoln finds as follows:

- a) The purpose of this fee is to finance public facilities to reduce the impacts of the anticipated population growth caused by new development within Lincoln.
- b) The public facility fees collected pursuant to this resolution shall be used to finance only the public facilities described or identified in the Public Facilities Element Master Improvement List, Appendix B, and incorporated by reference.
- c) After considering the study, staff reports and testimony received at the public hearing, the Council approves the Public Facility Fees and further finds that new development in Lincoln will generate additional population growth and will be benefited by the identified public facilities.
- d) There is a need in this impact area for public facilities which need to be expanded or have not been constructed and which existing facilities will not be able to support. Therefore, new development must contribute its fair share towards these facility costs and said public facilities are consistent with the City's General Plan.
- e) The Public Facilities Fees are consistent with the City's General Plan and, pursuant to Government Code Section 65913.2, the City has considered the effects of the fees with respect to the City's housing needs as established in the Housing Element of the General Plan.
- f) The facts and evidence presented establish that: (1) there is a need for the described public facilities and the types of development for which the corresponding fee is charged; (2) there is a reasonable relationship between the fees' use and the type of development for which the fee is charged; and (3) there is a reasonable relationship between the amount of the fee and the cost or portion of the costs of the public facility attributed to the type of development. These reasonable relationships or nexus are described in more detail in the Public Facilities Element Fee Program Nexus Study Update, incorporated by this reference.
- g) The cost estimates set forth in the Public Facilities Element Fee Program Nexus Study Update are reasonable cost estimates for constructing the facilities set forth in the Public Facilities Element Master Improvements List, and Appendix A of the fees expected to be generated by new development will not exceed the total of these costs.

NOW, THEREFORE, it is hereby resolved by the City Council of the City of Lincoln that the Public Facility Element (PFE) fees for sewer, drainage, water, transportation and community services set out in Resolution 2006-183 are hereby amended and shall be approved as follows:

Section 1. – Residential Fees

- a) A single family low density unit is assigned an EDU factor of 1.0 and each of the other land use categories is determined based on the anticipated demand expected for each land use category relative to the demand for a single family unit.
- b) The Public Facility Fee for basic sewer connections for residential type discharges shall be six thousand one hundred and thirty-four dollars (\$6,134) per EDU.

- c) The Public Facility Fee for drainage north of the Auburn Ravine for residential shall be one thousand seven hundred and nine dollars (\$1,709) per EDU; the Public Facilities Fee for drainage south of the Auburn Ravine for residential shall be one thousand and nine dollars (\$1,009) per EDU.
- d) The Public Facility Fee for water connections for residential shall be five thousand five hundred and fifty-eight dollars (\$5,558) per EDU.
- e) The Public Facility Fee for transportation for residential shall be three thousand four hundred and sixty-one dollars (\$3,461) per EDU.
- f) The Public Facility Fee for community services for residential shall be seven thousand two hundred and forty-two dollars (\$7,242) per EDU

Section 2. – Non-Residential Fees

- a) For each one thousand (1,000) square feet of constructed buildings, the minimum Public Facility Fee for basic sewer connections with residential type discharges from Commercial and Business/Professional uses shall be three thousand two hundred and eighty-five dollars (\$3,285) and from Industrial uses, shall be three thousand nine hundred and forty-two dollars (\$3,942). All sewer connections are subject to the fee calculation specified in Municipal Code Section 13.12.050 – Factors for Types of Service.
- b) For each one thousand (1,000) square feet of constructed buildings, the minimum Public Facility Fee for drainage north of the Auburn Ravine from Commercial and Business/Professional uses shall be eight hundred and thirty-seven dollars (\$837) and from Industrial uses, shall be one thousand and four dollars (\$1,004); the minimum Public Facilities Fee for drainage south of the Auburn Ravine from Commercial and Business/Professional uses shall be four hundred and ninety-four dollars (\$494) and from Industrial uses shall be five hundred and ninety-three dollars (\$593)
- c) For each one thousand (1,000) square feet of constructed buildings, the minimum Public Facility Fee for City water connections from Commercial and Business/Professional uses shall be two thousand two hundred and sixteen dollars (\$2,216) and from Industrial uses shall be two thousand six hundred and fifty-nine dollars (\$2,659). All water connections are subject to Municipal Code Section 13.04.150 and the fee calculation based on number of EDU's for the required water meter size, whereas one EDU is equal to one thousand one hundred and fifty (1,150) gallons per day.
- d) For each one thousand (1,000) square feet of constructed buildings, the minimum Public Facility Fee for transportation from Commercial uses shall be fifteen thousand four hundred and forty-seven dollars (\$15,447), from Business/Professional uses shall be six thousand seven hundred and sixty-nine dollars (\$6,769) and from Industrial uses shall be two thousand one hundred and twenty dollars (\$2,120). All transportation fees, also known as traffic impact mitigation fees, shall be calculated in accordance with Municipal Code Section 18.91.080 – Traffic Impact Mitigation Fee Calculation.

- e) For each one thousand (1,000) square feet of constructed buildings, the minimum Public Facility Fee for community services from Commercial and Business/Professional uses shall be two thousand two hundred and sixty-eight dollars (\$2,268) and from Industrial uses shall be two thousand eight hundred and ninety-five dollars (\$2,895).

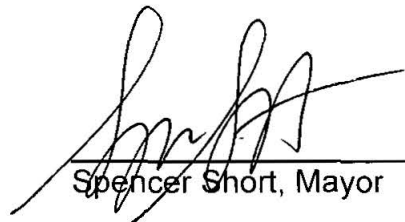

Section 3. – Effective Dates

- a) The amendment to the public facility fees established by this resolution shall become effective on May 1, 2012.
- b) The amendment to the basic sewer connection fee in Section 2a) and the water connection fee in section 2c) shall become effective on May 1, 2012 with the adoption of Ordinance No. 862B amending said fees.
- c) The amendment to the traffic impact mitigation fee calculation in Section 2d) shall become effective on May 1, 2012 with the adoption of Ordinance No. 863B.
- d) All fees set forth herein shall be subject to an annual adjustment up to the change in the San Francisco Construction Cost Index (CCI) as reported by the Engineering News Record (ENR) for the twelve month period beginning March 1st as determined by resolution of the City Council. Any annual adjustments shall be effective each May 1st, beginning in the year 2013.

PASSED AND ADOPTED this 28th day of February, 2012, by the following roll call vote:

EXECUTIVE SUMMARY

PURPOSE OF STUDY

As new development occurs within the City of Lincoln (City), new backbone infrastructure and capital facilities will be required to meet the demands from future development. Backbone infrastructure and capital facilities will be funded through the City's Public Facilities Element Fee Program (PFE Fee Program), which will contain separate fee categories for each type of infrastructure and capital facility. The PFE Fee Program will apply to all future growth within the City's 1988 General Plan boundary as well as the proposed Village 7 and Lincoln 270 developments, except where otherwise noted in this report. Furthermore, the fire fee component of the PFE Fee Program will also apply to future growth within the proposed Village 1 development. The infrastructure and capital facility impact fees categories incorporated in this report include:

- Wastewater Fee;
- Drainage Fee;
- Water Fee;
- Transportation Fee;
- Parks and Recreation Fee;
- City Administration Facility Fee;
- Fire Fee;
- Police Fee;
- Solid Waste Fee

The City retained Goodwin Consulting Group to assist it with the update of the PFE Fee Program, which will be established by the Lincoln City Council through the adoption of this PFE Fee Program Nexus Study Update (Nexus Study). The PFE Fee Program is compliant with the requirements set forth in the Mitigation Fee Act, also known as AB 1600, and ensures that a rational nexus exists between future development in the City and (i) the use and need of the proposed infrastructure and capital facilities, and (ii) the cost or portion of the cost of the infrastructure and capital facilities attributable to future development. This Nexus Study demonstrates that a reasonable relationship exists between the updated PFE fees and the cost of the facilities attributable to each land use type.

FACILITIES AND COSTS INCLUDED IN THE PFE FEE PROGRAM

Various types of infrastructure and capital facilities will be required to serve future development in the City. The City and its consultant have identified the necessary infrastructure and their costs and these are presented in detail in Appendix B of this report. Table ES-1 below summarizes the total cost for each infrastructure and facility category that will be funded through the PFE Fee Program.

**Table ES-1
Facilities Cost Summary**

| Facility Type | Total Cost | PFE Fee Acct Balances & Other Funding Sources | PFE Fee Program Cost |
|--|----------------------|--|-------------------------------------|
| Wastewater ¹ | \$20,576,000 | (\$1,928,000) | \$18,648,000 |
| Drainage | \$16,553,000 | (\$2,775,000) | \$13,778,000 |
| Water | \$66,240,000 | (\$8,884,000) | \$57,356,000 |
| Transportation | \$71,486,000 | (\$1,646,000) | \$69,840,000 |
| Parks and Recreation | \$43,704,000 | (\$12,156,000) | \$31,548,000 |
| Administration Facilities ² | \$9,470,000 | n/a | \$9,470,000 |
| Fire ² | \$9,624,000 | n/a | \$9,624,000 |
| Police ² | \$14,103,000 | n/a | \$14,103,000 |
| Solid Waste | \$5,960,000 | n/a | \$5,960,000 |
| Total | \$257,716,000 | (\$27,389,000) | \$230,327,000 |

¹ Includes wastewater collection and reclaimed water costs.

² Excludes existing development's share of any existing outstanding debt for these facilities. The City will need to find alternative funding sources to pay for existing development's share of the outstanding debt.

SUMMARY OF THE UPDATED PFE FEE SCHEDULE

The following Tables ES-2 and ES-3 summarize the fees for each component in the PFE Fee Program. Each fee includes a 2.5% charge to fund the City's administrative costs associated with fee collection, administration, accounting, and to fund future updates of the PFE Fee Program. Based on the City's past experience with administering the PFE Fee Program, the 2.5% charge should adequately fund these maintenance expenses.

Table ES-2
PFE Fee Summary for Residential Land Uses

| Fee Component | Very Low Density (per Unit) | Low Density (per Unit) | Medium Density (per Unit) | High Density (per Unit) |
|---|-----------------------------------|---------------------------|---------------------------------|-------------------------------|
| Wastewater ² | \$2,192 | \$1,726 | \$1,726 | \$1,380 |
| Wastewater – Treatment ³ | \$5,598 | \$4,408 | \$4,408 | \$3,526 |
| Drainage – North of Ravine ⁴ | \$2,222 | \$1,709 | \$1,196 | \$410 |
| Drainage – South of Ravine ⁴ | \$1,312 | \$1,009 | \$706 | \$242 |
| Water – Transmission | \$6,054 | \$2,554 | \$2,554 | \$1,379 ¹ |
| Water – Storage | \$7,119 | \$3,004 | \$3,004 | \$1,622 ¹ |
| Transportation | \$3,461 | \$3,461 | \$2,492 | \$2,492 |
| Parks and Recreation ⁵ | \$3,981 | \$3,981 | \$3,981 | \$2,866 |
| Parks and Recreation – Village 7 | \$896 | \$896 | \$896 | \$645 |
| Administration Facilities | \$924 | \$924 | \$924 | \$665 |
| Fire | \$530 | \$530 | \$530 | \$382 |
| Police | \$1,044 | \$1,044 | \$1,044 | \$752 |
| Solid Waste | \$763 | \$763 | \$763 | \$549 |
| Total – North of Ravine | \$33,886 | \$24,102 | \$22,621 | \$16,024 |
| Total – South of Ravine ⁶ | \$32,976 | \$23,403 | \$22,131 | \$15,856 |
| Total – Twelve Bridges | \$32,976 | \$23,403 | \$22,131 | \$16,023 |
| Total – Village 7 | \$29,891 | \$20,318 | \$19,046 | \$13,635 |

- 1 High density uses within the Twelve Bridges development are subject to a water transmission fee of \$1,456 and a water storage fee of \$1,712 per unit and not those shown in the table above.
- 2 This fee amount combines the separate fee components for wastewater collection and reclaimed water facilities.
- 3 The wastewater treatment fee shown in this table is an existing City fee and has not been updated as part of this Nexus Study. It is included in this table only to show the total overall fee burden.
- 4 Includes the existing citywide drainage fee to fund land acquisition costs related to the storm drainage retention facility. The fee equals \$101 per EDU. Development located north of the Auburn Ravine will be subject to the Drainage – North of Ravine fee while development located south of the Auburn Ravine will be subject to the Drainage – South of Ravine fee.
- 5 This fee will be applied to all development except that within Village 7, which will construct its own parks and trails.
- 6 Applies to all development south of the Auburn Ravine except that within Village 7 and Twelve Bridges.

Table ES-3
PFE Fee Summary for Non-Residential Land Uses

| Fee Component | Commercial (per 1,000 SF) | Business & Professional (per 1,000 SF) | Industrial (per 1,000 SF) |
|---|------------------------------|--|------------------------------|
| Wastewater ¹ | \$924 | \$924 | \$1,109 |
| Wastewater – Treatment ² | \$2,361 | \$2,361 | \$2,833 |
| Drainage – North of Ravine ³ | \$837 | \$837 | \$1,004 |
| Drainage – South of Ravine ³ | \$494 | \$494 | \$593 |
| Water – Transmission | \$1,018 | \$1,018 | \$1,222 |
| Water – Storage | \$1,198 | \$1,198 | \$1,437 |
| Transportation | \$15,447 | \$6,769 | \$2,120 |
| Parks and Recreation ⁴ | \$947 | \$947 | \$1,448 |
| Parks and Recreation – Village 7 | \$213 | \$213 | \$326 |
| Administration Facilities | \$220 | \$220 | \$336 |
| Fire | \$353 | \$353 | \$353 |
| Police | \$696 | \$696 | \$696 |
| Solid Waste | \$52 | \$52 | \$62 |
| Total – North of Ravine | \$24,054 | \$15,375 | \$12,621 |
| Total – South of Ravine ⁵ | \$23,711 | \$15,033 | \$12,210 |
| Total – Twelve Bridges | \$23,711 | \$15,033 | \$12,210 |
| Total – Village 7 | \$22,977 | \$14,299 | \$11,088 |

- 1 This fee amount combines the separate fee components for wastewater collection and reclaimed water facilities.
- 2 The treatment component of the wastewater fee is an existing fee and therefore is not included as part of this Nexus Study. It is identified for purposes of showing the total overall fee burden.
- 3 Includes the existing citywide drainage fee to fund land acquisition costs related to the storm drainage retention facility. The fee equals \$101 per EDU. Development located north of the Auburn Ravine will be subject to the Drainage – North of Ravine fee while development located south of the Auburn Ravine will be subject to the Drainage – South of Ravine fee.
- 4 Fee will be applied to all development except that within Village 7, which will construct its own parks and trails.
- 5 Applies to all development south of the Auburn Ravine except that within Village 7 and Twelve Bridges.

FEE ADJUSTMENTS

The fees may be adjusted in future years to reflect revised facility standards, receipt of funding from alternative sources (i.e., state or federal grants), revised facilities or costs, or changes in demographics or the land use plan. In addition to such adjustments, the fees will be inflated each year by the change in the San Francisco Construction Cost Index (CCI) as reported in the *Engineering News Record*.

I. INTRODUCTION

The City of Lincoln (City) is located approximately 25 miles north of Sacramento and is located in Placer County. Incorporated in 1890, the City has grown to a current population of more than 43,000. Corresponding to this population growth, it is estimated that there are approximately 16,000 private jobs in the City.

Increased population and employment in the City will lead to increased demand on public infrastructure and services and will ultimately impact infrastructure and the facilities required to provide such services. Where backbone infrastructure and capital facilities are inadequate, permitting development is contrary to the responsibility of local government to protect the public's health, safety, and welfare. Consequently, the City has planned for the construction of backbone infrastructure and capital facilities that will adequately serve its current as well as its future development.

Funding for these facilities will come from several sources, including the City's Public Facilities Element Fee Program (PFE Fee Program), federal and state programs, existing revenues in the impact fee funds, and other funding sources. The Public Facilities Element Fees (PFE Fees) discussed in this report will apply to all future growth within the development areas included in the City's 1988 General Plan boundary as well as the proposed Village 7 and Lincoln 270 developments, except where otherwise noted in this report. Although the City has recently updated its General Plan, this update to the PFE Fee Program incorporates the facilities that have been designed based on the 1988 General Plan boundaries and land use plan. When then the City updates its capital improvement plan based on the new General Plan, the City will then update the PFE Fee Program.

PURPOSE OF STUDY

As new development occurs within the City, new backbone infrastructure and capital facilities will be required to meet the demands of future development. The City identified these improvements in its Amended Public Facilities Element that was approved by City Council on October 27, 1998, and has updated that list of improvements for purposes of this PFE Fee Program update. Infrastructure and improvements include wastewater connection and reclaimed water, drainage, water, transportation, park and recreation, administration buildings, fire, police, and solid waste facilities. These facilities will be funded through the PFE Fee Program, which will contain separate fee categories for each type of backbone infrastructure and capital facility.

Goodwin Consulting Group, Inc. has prepared this PFE Fee Program Nexus Study Update (Nexus Study) to update the City's current PFE Fee Program, which was last updated in August 2006 (2006 Nexus Study). The PFE Fee Program is compliant with the regulations set forth in the Mitigation Fee Act (also commonly referred to as AB 1600) and ensures that a rational nexus exists between future development in the City and (i) the use and need of the proposed infrastructure and capital facilities and (ii) the amount of the PFE Fee assigned to future development. This Nexus Study demonstrates that a reasonable relationship exists between the PFE Fee to be levied on each type of land use and the cost of the facilities attributable to that land use.

CHANGES FROM THE 2006 NEXUS STUDY

This Nexus Study updates all fee components included in the City's 2006 Nexus Study, except for the treatment component of the wastewater fee and the library fee. The wastewater treatment facilities and costs have not been updated at this time and therefore the City's existing fee for these facilities will continue to be charged to new development. The library facility that was included in the 2006 Nexus Study has been fully constructed and funded through a state grant; therefore, this fee has been eliminated from the PFE Fee Program at this time. Appendix C includes brief descriptions of changes incorporated in this Nexus Study.

This Nexus Study updates all facilities and costs related to wastewater collection and reclaimed water, drainage, water, transportation, park and recreation, administration, fire, police, and solid waste facilities. In updating the facilities and costs, the City and its engineering consultant, Harris and Associates, reviewed all the facilities from the 2006 Nexus Study and eliminated those facilities that have been constructed or were no longer required. New facilities that the City determined are now needed are incorporated into this updated PFE Fee Program. In addition, the following changes are also incorporated in this updated Nexus Study:

- Land use tables include future development within the Village 7 and Lincoln 270 areas. The City selected these areas for inclusion in the PFE Fee Program due to their proximity to development included in the City's 1988 General Plan and because these areas will benefit from the facilities included in the PFE Fee Program. The City anticipates that these areas will develop concurrently with the other areas included in the PFE Fee Program.
- Includes future development within the Village 1 project in the calculation of the fire fee component of the PFE Fee Program. Based on a review of the service area related to the fire facilities, the City has determined that future development within Village 1 will benefit from these facilities and therefore, should fund its fair share of the fire facilities costs.

IMPACT FEE NEXUS REQUIREMENTS (AB 1600)

Assembly Bill (AB) 1600, which was enacted by the State of California in 1987, created Mitigation Fee Act - Section 66000 et seq. of the Government Code. The Mitigation Fee Act requires that all public agencies satisfy the following requirements when establishing, increasing, or imposing a fee as a condition of approval of a development project:

1. Identify the purpose of the fee.
2. Identify the use to which the fee is to be put.
3. Determine how there is a reasonable relationship between:
 - A. The fee's use and the type of development project on which the fee is imposed.
 - B. The need for the public facility and the type of development project on which the fee is imposed.
 - C. The amount of the fee and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed.

As stated above, the purpose of this Nexus Study is to demonstrate that all fee components of the updated PFE Fee Program comply with the Mitigation Fee Act. The assumptions, methodologies, facility standards, costs, and cost allocation factors that were used to establish the nexus between the fees and the development on which the fees will be levied are summarized in subsequent sections of this report.

ORGANIZATION OF REPORT

The remainder of this report has been organized into the following sections:

- | | |
|-------------|---|
| Section II | Provides a detailed explanation of the fee methodologies used to calculate the various individual fee components of the PFE Fee Program |
| Section III | Defines the demographic and land use assumptions used in the detailed calculations and in the application of the PFE Fee Program |
| Section IV | Summarizes backbone infrastructure and capital facilities costs included in the PFE Fee Program |

- Sections V-XIII Provides the detailed calculations for wastewater, drainage, water, transportation, park and recreation, administration, fire, police, and solid waste fees
- Section XIV Provides a summary of the individual fee components calculated in this Nexus Study
- Section XV Addresses future fee adjustments, fee implementation, annual administrative duties, fee credits or reimbursements, and other relevant items

II. FEE METHODOLOGY

When impact fees are calculated, an analysis must be presented in enough detail to demonstrate that a logical, thorough consideration was applied in the process of determining how the fees relate to the impacts from new development. Findings must be made to ensure that there is a reasonable relationship between the fee and the development on which the impact fee will be levied. There are several generally accepted methods of determining impact fees for future development. Following is a discussion of the two methods used in this report to calculate the individual fees in the PFE Fee Program.

PLAN-BASED FEE METHODOLOGY

The plan-based fee methodology is used for infrastructure and capital facilities that must be designed based on future demand projections and/or the geographic location of anticipated growth. For example, the need for transportation improvements depends specifically on the future area that will be served. An analysis of existing facilities, geographic constraints, and current levels of service must be completed in order to identify future facility needs. This information is analyzed in conjunction with a projection of the amount and location of future development in order to determine the adequacy of existing facilities and the demand for new improvements that will be required. The steps to calculate a PFE Fee component under the plan-based fee methodology include the following:

- Step 1* Determine the future development, by land use category, anticipated within the City's 1988 General Plan boundary, Village 7 area, and the Lincoln 270 project.
- Step 2* Determine facilities needed to serve the anticipated growth and determined the cost of these facilities.
- Step 3* Subtract expected revenues that will be available from alternative funding sources, if any, to determine the net facilities cost that will be allocated to future development.
- Step 4* Select the applicable equivalent dwelling unit (EDU) factor that will be used to allocate facilities costs based on a reasonable relationship basis; apply EDU factors to each of the land uses based on their expected level of service demand.

- Step 5* Calculate the total EDUs that will be generated from future development for all land use categories by multiplying each land use type by its EDU factor and taking the sum of the EDUs.
- Step 6* Divide the total EDUs for each land use category by the total EDUs for all future land uses to determine each land use's percentage share of the total EDUs.
- Step 7* Multiply each land use's percentage share of the total EDUs by the applicable infrastructure or facilities cost to determine the cost attributable to each land use category.
- Step 8* Divide the cost attributable to each land use category by the quantity (i.e., units or building square feet) of each land use type to determine the fee for each residential or non-residential land use category.

The plan-based fee methodology was used to calculate the full cost allocation, or a portion of the cost allocation for the wastewater, drainage, water, transportation, parks and recreation, and fire fee components of the PFE Fee Program.

STANDARD-BASED FEE METHODOLOGY

The standard-based fee methodology is used when a consistent level of service standard is to be applied to new development regardless of future demand projections or the geographic location of anticipated growth. The level of service standard used in calculating the impact fee under this method may be based on an existing service standard or a higher preferred standard identified in the General Plan or other City planning document. The steps to calculate a fee under the standard-based fee methodology include the following:

- Step 1* Define the required level of service standard (e.g., park acres per 1,000 residents, building square feet per employee, etc.) expressed in terms of residents, employees, or other standard appropriate for the type of facility for which the fee is being calculated.
- Step 2* Estimate the future growth and the additional facilities required by multiplying the applicable facility service standard by the future growth projection.

- Step 3* Determine a facility cost based on current costs; reduce the facility cost by subtracting existing fee fund revenue or alternative funding sources, if applicable. Calculate the net cost of the required additional facilities.
- Step 4* Select the applicable EDU factor that will be used to allocate facility costs on a reasonably related basis; apply EDU factors to each land use based on their expected service demand.
- Step 5* Calculate the total EDUs that will be generated from future development for all land use categories by multiplying each land use type by its EDU factor and taking the sum of the EDUs.
- Step 6* Divide the total EDUs for each land use category by the total EDUs for all future land uses to determine each land use's percentage share of the total EDUs.
- Step 7* Multiply each land use's percentage share of the total EDUs by the applicable infrastructure or facilities cost to determine the cost attributable to each land use category.
- Step 8* Divide the cost attributable to each land use category by the quantity (i.e., units or building square feet) of each land use type to determine the applicable fee for each residential and non-residential land use category.

The standard-based fee methodology was used to calculate the full cost allocation, or a portion of the cost allocation for parks and recreation, administration facilities, police, and solid waste fee components of the PFE Fee Program. Additional details of the calculation of each fee component in the PFE Fee Program are included in Sections V through XIII.

III. POPULATION AND LAND USES

POPULATION

Over the past decade, the City has experienced significant growth. In 2000, the City's population was estimated at approximately 11,200. Between 2000 and 2011, the City's population nearly quadrupled, bringing the total number of residents to approximately 43,200. At buildout of the 1988 General Plan, and including the Village 7 and Lincoln 270 developments, the City will grow to over 60,800 residents (see Table A-1 of Appendix A). This represents a 40% increase over the City's current population.

In addition to the significant increase in the City's population, employment within the City is projected to nearly triple from its current estimate of 15,700 private industry jobs to approximately 44,100 jobs at buildout. The City's land use plan includes approximately 870 acres of land zoned for commercial, office, and industrial development on which it is projected that nearly 10 million square feet of building space will be constructed.

LAND USE CATEGORIES

The Mitigation Fee Act requires that a reasonable relationship exist between the need for public facilities and the type of development on which an impact fee is imposed. The need for public facilities is related to the level of service demanded, which varies in proportion to the number of residents or employees generated by a particular land use type. Therefore, land use categories have been defined in order to distinguish between relative impacts on infrastructure and capital facilities. All fees in the PFE Fee Program have been calculated on a per dwelling unit basis for residential land use categories and per 1,000 square feet of building space for non-residential land use categories.

The following land use categories are identified for purposes of the PFE Fee Program:

| | |
|--------------------------|---|
| <u>Very Low Density:</u> | includes single family detached homes on very large lots with a density range of 0.1 to 2 units per acre. |
| <u>Low Density:</u> | includes single family detached homes with a density range of 2 to 5 dwelling units per acre. |
| <u>Medium Density:</u> | includes higher density single family uses, such as duplexes, triplexes, and condominiums at specified densities; and lower |

density multi-family development. Density ranges from 6 to 12 dwelling units per acre.

High Density: includes intense multi-family residential land uses, such as apartment complexes. Density ranges from 13 to 20 dwelling units per acre.

Commercial: includes retail and service businesses at neighborhood and community commercial centers.

Business & Professional: includes areas designated for office-type commercial development projects as opposed to retail, service, and wholesale type commercial activities.

Industrial: includes areas appropriate for manufacturing, general industrial, and warehousing uses.

The City will make the final determination as to which land use category a particular development will be assigned. If the City determines that no land use category adequately corresponds to the development in question, it may then determine applicable ad hoc impact fees.

LAND USE ADJUSTMENTS

Table A-2 in Appendix A identifies the City's estimated remaining future residential units and non-residential acreage for each development area included in the PFE Fee Program. However, the City has entered into development agreements with certain development areas that have already or will contribute or construct specific infrastructure or capital facilities. As a result, these development areas have received fee credits against their PFE Fee obligation. The outstanding credits for each fee component of the PFE Fee Program are presented in Table A-3 of Appendix A. The corresponding units that are allotted the fee credits are excluded from the calculation of the PFE Fees. In addition, the cost of the facilities associated with these fee credits is also excluded from the fee calculations.

EQUIVALENT DWELLING UNIT (EDU) FACTORS

Future development within the City will create demand for additional backbone infrastructure and capital facilities. For purposes of the PFE Fee, demand is measured by a set of existing Equivalent Dwelling Unit (EDU) factors. An Equivalent Dwelling Unit (EDU) is a factor that quantifies different land use types in terms of their equivalence to a single family unit. A single family unit is

assigned an EDU factor of 1.0 and the EDU factor for each of the other land use categories is determined based on the anticipated demand expected for each land use category relative to the demand for a single family unit. Table A-5 in Appendix A presents the City's existing EDU factors incorporated in the calculation of each PFE Fee. These EDU factors are derived from service demand factors presented in the Lincoln Public Facilities Plan prepared in 1988, the Lincoln General Plan Public Facilities Element Volume II prepared in 1990, and are also based on input and adjustments from City's engineers and engineering consultant.

IV. FACILITIES COST SUMMARY

Various types of infrastructure and capital facilities will be required to serve the future development included in the PFE Fee Program. Facilities cost estimates have been prepared by the City and its engineering consultant and these facilities are detailed in Appendix B of this report. Table IV-1 below summarizes the costs included in the PFE Fee Program by facility type.

**Table IV-1
PFE Fee Program Cost Summary**

| Facility Type | North of Auburn Ravine Cost | South of Auburn Ravine Cost | Citywide Cost | Total Cost in PFE Fee Program |
|---|--|--|--------------------------|--|
| Wastewater Collection & Reclaimed Water | n/a | n/a | \$18,648,000 | \$18,648,000 |
| Drainage | \$4,472,000 | \$946,000 | \$8,360,000 | \$13,778,000 |
| Water | n/a | n/a | \$57,356,000 | \$57,356,000 |
| Transportation | n/a | n/a | \$69,840,000 | \$69,840,000 |
| Parks and Recreation | n/a | n/a | \$31,548,000 | \$31,548,000 |
| Administration Facilities | n/a | n/a | \$9,470,000 | \$9,470,000 |
| Fire | n/a | n/a | \$9,624,000 | \$9,624,000 |
| Police | n/a | n/a | \$14,103,000 | \$14,103,000 |
| Solid Waste | n/a | n/a | \$5,960,000 | \$5,960,000 |
| Total | \$4,472,000 | \$946,000 | \$224,909,000 | \$230,327,000 |

The PFE Fee Program is anticipated to fund approximately \$230 million in backbone infrastructure and capital facilities costs. Details of how these costs are allocated amongst future development are presented in Sections V through XIII of this report.

V. WASTEWATER CONNECTION AND RECLAIMED WATER FEE

This section of the report addresses the nexus requirements as they relate to the calculation of the wastewater fee. It also summarizes the required wastewater and reclaimed water facilities, estimated costs, and updated fees. This Nexus Study does not include an update of the City's fee for wastewater treatment facilities and therefore, the current wastewater treatment fee will continue to be charged to new development.

NEXUS TEST

Identify the purpose of the fee. The purpose of the wastewater fee is to fund wastewater connection and reclaimed water facilities that are attributable to the impact from new development.

Identify the use of the fee. The wastewater connection and reclaimed water fee will be used to fund the fair share portion of the cost of construction of wastewater connection and reclaimed water facilities that have been identified by the City as necessary to serve new development. These facilities are identified in Table A-6 of Appendix A and detailed in Tables B-1 and B-2 of Appendix B.

Determine how there is a reasonable relationship between the fee's use and the type of development project on which the fee is imposed. The use of the fee to construct the wastewater connection and reclaimed water facilities that have been identified by the City as necessary to serve new development will ensure that such facilities will be available and have the capacity to serve new residential and non-residential development within the City.

Determine how there is a reasonable relationship between the need for the public facility and the type of development project on which the fee is imposed. New wastewater connection and reclaimed water facilities will be needed as new residential and non-residential development will generate additional residents and employees and increase the demand placed on existing facilities. The City has identified the facilities incorporated in Appendix B as those that are necessary to serve future development.

Determine how there is a reasonable relationship between the amount of the fee and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed. The wastewater connection and reclaimed water facilities identified by the City and presented in this report are necessary to serve future development in the City. Facilities costs are allocated to future development based on EDUs that were developed in prior City planning documents. The allocated costs translate into fees that are calculated on a fair-share basis to residential and nonresidential development. Future fee revenue will be sufficient to fully fund the construction of these facilities.

REQUIRED FACILITIES AND ESTIMATED COSTS

Table A-6 in Appendix A identifies the wastewater collection and reclaimed water facilities that will be required to serve future development included in the Nexus Study. As shown in this table, the net cost of these facilities is approximately \$18.6 million. Wastewater collection facilities have a cost of \$12.0 million and include various size pipelines for the north and south collection systems. Costs also include reimbursements for facilities that have been oversized. The City also expects to receive an estimated \$1.9 million from the sale of the decommissioned wastewater treatment plant; the revenue from this future sale is applied to reduce the total cost of the wastewater facilities. Reclaimed water facilities cost totals approximately \$8.5 million and include a retention site, pipelines, and pump stations.

WASTEWATER CONNECTION AND RECLAIMED WATER FEE COMPONENT

Table A-7 in Appendix A shows the calculation of the wastewater connection and reclaimed water fee component of the PFE Fee Program. The \$18.6 million cost is applied to future development, less development that has fee outstanding fee credits, in the PFE Fee Program based on the applicable EDU factor for each land use category. The resulting wastewater collection and reclaimed water fees, not including the City's 2.5% administration charge, are as follows:

- \$2,138 per unit of VLD Unit
- \$1,684 per unit of LD Unit
- \$1,684 per unit of MD Unit
- \$1,347 per unit of HD Unit
- \$902 per 1,000 square feet for Commercial
- \$902 per 1,000 square feet for Business and Professional
- \$1,082 per 1,000 square feet for Industrial

VI. DRAINAGE FEE

This section of the report addresses the nexus requirements related to the calculation of the drainage fee. It also summarizes the required drainage facilities, estimated costs, and updated fees.

NEXUS TEST

Identify the purpose of the fee. The purpose of the drainage fee is to fund drainage facilities that are attributable to the impact from new development

Identify the use of the fee. The drainage fee will be used to fund the construction of drainage facilities identified by the City as necessary to serve new development. These facilities are identified in Table A-8 of Appendix A and detailed in Table B-3 of Appendix B.

Determine how there is a reasonable relationship between the fee's use and the type of development project on which the fee is imposed. The use of the fee to construct the drainage facilities that have been identified by the City as necessary to serve new development will ensure that such facilities will be available and have the capacity to serve new residential and non-residential development within the City.

Determine how there is a reasonable relationship between the need for the public facility and the type of development project on which the fee is imposed. New drainage facilities will be needed as new residential and non-residential development will generate additional storm runoff. The City has identified the drainage facilities shown in Table B-3 in Appendix B as necessary to serve future development.

Determine how there is a reasonable relationship between the amount of the fee and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed. The drainage facilities identified by the City and presented in this report are necessary to serve future development in the City. Facilities costs are allocated to future development based on EDUs that were developed in prior City planning documents. The allocated costs translate into fees that are calculated on a fair-share basis to residential and nonresidential development.

REQUIRED FACILITIES AND ESTIMATED COSTS

Table A-8 in Appendix A identifies the drainage facilities required to serve future development in the City. The total cost of these facilities is approximately \$13.8 million. Drainage facilities are segregated into three categories: (i) facilities that will serve future development north of the Auburn Ravine, (ii) facilities that will serve future development south of the Auburn Ravine, and (iii) drainage facilities that will serve all future development included in PFE Fee Program boundary.

The total cost of drainage facilities that will serve future development north of the Auburn Ravine is approximately \$4.5 million and includes costs for drainage improvements along the Markham Ravine, Gladding Parkway, O Street, and 7th Street. Facilities required to serve future development south of the Auburn Ravine total approximately \$0.9 million and include bridge crossings along the Ingram Slough. Finally, citywide drainage facilities, totaling approximately \$8.4 million, include a variety of drainage improvements that will serve all new development in the City.

DRAINAGE FEE COMPONENT

Table A-9 shows the calculation of the drainage fee component of the PFE Fee Program. The \$4.4 million cost for facilities located north of the Auburn Ravine is allocated to future development planned for north of the Auburn Ravine. Similarly, the \$0.9 million for facilities located south of the Auburn Ravine is allocated to remaining development south of the Auburn Ravine. Finally, citywide drainage facilities totaling \$8.4 million will benefit all future development in the City so this cost is allocated to all remaining development within the PFE Program boundary. The resulting drainage fees, not including the City's 2.5% administration charge, are as follows:

North of the Auburn Ravine

\$2,036 per VLD unit
\$1,566 per LD unit
\$1,096 per MD unit
\$376 per HD unit
\$767 per 1,000 square feet for Commercial
\$767 per 1,000 square feet for Bus. and Prof.
\$920 per 1,000 square feet for Industrial

South of the Auburn Ravine

\$1,149 per VLD unit
\$884 per LD unit
\$619 per MD unit
\$212 per HD unit
\$433 per 1,000 square feet for Comm.
\$433 per 1,000 sq. feet for Bus. and Prof.
\$519 per 1,000 square feet for Industrial

VII. WATER FEE

This section of the report addresses the nexus requirements related to the calculation of the water fee and also summarizes the required water facilities, estimated costs, and updated fees.

NEXUS TEST

Identify the purpose of the fee. The purpose of the water fee is to fund water facilities that are attributable to the impact from new development

Identify the use of the fee. The water fee will be used to fund construction of water facilities that have been identified by the City as necessary to serve new development. These facilities are summarized in Table 10 of Appendix A and shown in detail in Table B-4 of Appendix B.

Determine how there is a reasonable relationship between the fee's use and the type of development project on which the fee is imposed. The use of fee revenue to fund construction of water facilities that the City has identified as necessary to serve new development ensures that these facilities will have the capacity to serve new residential and non-residential development within the City.

Determine how there is a reasonable relationship between the need for the public facility and the type of development project on which the fee is imposed. New water facilities will be needed as new residential and non-residential development will generate additional residents and employees who will increase the demand on the existing water facilities. The City has identified the facilities included in Appendix B as necessary to increase the capacity of the water system to serve future development.

Determine how there is a reasonable relationship between the amount of the fee and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed. The water facilities identified by the City and presented in this report are necessary to serve future development in the City. Facilities costs are allocated to future development based on EDUs that were developed in prior City planning documents and adjusted by City engineers. The allocated costs translate into fees that are calculated on a fair-share basis to residential and nonresidential development.

REQUIRED FACILITIES AND ESTIMATED COSTS

Table B-4 in Appendix B identifies the water facilities, which include wells, transmission pipelines, metering stations, and water storage tank facilities. In all, approximately \$57.4 million is required to construct water facilities to serve future development. Transmission and well facilities costs total approximately \$31.8 million; however, 50% of the balance in the water fee fund, or approximately \$2.2 million, will be applied to reduce the net cost to \$29.6 million.

The storage facilities costs total approximately \$34.4 million and include construction of three 10 Mg storage tanks. This total cost is reduced by application of approximately \$2.2 million in anticipated funding that will come from the water fee fund and also \$4.4 million from community facilities districts and assessment districts.

WATER FEE COMPONENT

Table A-11 in Appendix A shows the calculation of the water fee component of the PFE Fee Program. The \$29.6 million cost for transmission and well facilities is allocated to all future development included in the PFE Fee Program, less any development that has outstanding fee credits, based on the water EDU factors. Similarly, the \$27.8 million cost for water storage facilities is allocated to future development, less any development that has fee outstanding fee credits.

Note that the water EDU factor for high density development in Twelve Bridges has been adjusted slightly by City engineers. The EDU factor for high density development in Twelve Bridges is 0.57, compared to 0.54 for other high density development in the City. The resulting water fees for the transmission and storage fee components are combined, but not including the 2.5% administration charge, and are as follows:

- \$12,851 per VLD unit
- \$5,423 per LD unit
- \$5,423 per MD unit
- \$3,091 per HD unit in Twelve Bridges
- \$2,928 per HD unit outside of Twelve Bridges
- \$2,162 per 1,000 square feet for Commercial
- \$2,162 per 1,000 square feet for Business and Professional
- \$2,594 per 1,000 square feet for Industrial

VIII. TRANSPORTATION FEE

This section of the report addresses the nexus requirements related to the calculation of the transportation fee and also summarizes the required transportation facilities, estimated costs, and updated fees.

NEXUS TEST

Identify the purpose of the fee. The purpose of the transportation fee is to fund transportation facilities costs attributable to the impact from new development

Identify the use of the fee. The transportation fee will be used to fund the construction of transportation-related facilities identified by the City as necessary to serve new development. These facilities are summarized in Table A-12 of Appendix A and shown in detail in Table B-5 of Appendix B.

Determine how there is a reasonable relationship between the fee's use and the type of development project on which the fee is imposed. The use of the fee revenue to fund construction of transportation-related facilities ensures that the transportation system will have sufficient capacity to serve new residential and non-residential development within the City.

Determine how there is a reasonable relationship between the need for the public facility and the type of development project on which the fee is imposed. New transportation facilities will be needed as new residential and non-residential development will generate residents and employees who will generate additional trips on the transportation network and increase the demand placed on existing facilities. The City has identified the facilities that are necessary to serve future development and keep the transportation system at an acceptable level of service.

Determine how there is a reasonable relationship between the amount of the fee and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed. The transportation facilities identified by the City and presented in this report are necessary to serve future development in the City. Facilities costs are allocated to future development based on EDUs that were developed in prior City planning documents. The allocated costs translate into fees that are calculated on a fair-share basis to residential and nonresidential development.

REQUIRED FACILITIES AND ESTIMATED COSTS

Transportation facilities are estimated to cost approximately \$71.5 million, as shown in Table A-12 of Appendix A. However, after application of the \$1.6 million balance in the transportation fee fund, the net cost allocated to future development is reduced to \$69.8 million. The facilities and costs shown in Table B-5 include roadway improvements, traffic signals and street reconstruction, interchange improvements, and transit facilities.

TRANSPORTATION FEE COMPONENT

Table A-13 in Appendix A shows the calculation of the transportation fee component of the PFE Fee. The \$69.8 million cost for transportation facilities is allocated to all remaining development included in the PFE Fee Program, except those that have fee credits, based on the applicable EDU factor for each land use category. The resulting transportation fees, not including the 2.5% administration charge, are as follows:

- \$3,376 per VLD unit
- \$3,376 per LD unit
- \$2,431 per MD unit
- \$2,431 per HD unit
- \$15,070 per 1,000 square feet for Commercial
- \$6,604 per 1,000 square feet for Business and Professional
- \$2,068 per 1,000 square feet for Industrial

IX. PARK AND RECREATION FEE

This section of the report addresses the nexus requirements related to the calculation of the parks and recreation fee and also summarizes the required facilities, estimated costs, and updated fees.

NEXUS TEST

Identify the purpose of the fee. The purpose of the parks and recreation fee is to fund park and recreation facilities attributable to the impact from new development

Identify the use of the fee. The parks and recreation fee will be used to fund the construction of park and recreation facilities that have been identified by the City to serve new development. These park and recreation facilities are identified in Tables A-14 and A-16 of Appendix A.

Determine how there is a reasonable relationship between the fee's use and the type of development project on which the fee is imposed. The use of the fee to construct the park and recreation facilities ensures that these facilities will be available to serve new residential and non-residential development within the City.

Determine how there is a reasonable relationship between the need for the public facility and the type of development project on which the fee is imposed. New park and recreation facilities will be needed as new residential and non-residential development will generate additional residents and employees and increase the demand placed on existing park and recreation facilities. The City has identified the facilities shown in Tables A-14 and A-16 of Appendix A as necessary to serve future development and maintain the City's required level of service.

Determine how there is a reasonable relationship between the amount of the fee and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed. The park and recreation facilities identified by the City and presented in this report are necessary to serve future development in the City. Facilities costs are allocated to future development based on EDUs that were developed in prior City planning documents. The allocated costs translate into fees that are calculated on a fair-share basis to residential and nonresidential development.

REQUIRED FACILITIES AND ESTIMATED COSTS

Park, trail, and recreation facilities costs included in the PFE Fee Program are estimated to total approximately \$31.6 million, as shown in Tables A-14 and A-16 of Appendix A. The cost of park and trail facilities totals approximately \$22.5 million and is calculated using facilities standards of 5.0 park acres per 1,000 residents and 1.50 trail miles per 2,500 residents. At buildout, new development will require an additional 50 acres of parks and 6 miles of trails. Future development in Village 7 is excluded from the park and trails fee calculation since this development will construct its own parks and trails. Additionally, future development with park fee credits is also excluded from this fee calculation.

Table A-16 identifies the recreational facilities required to serve future development; these include community centers totaling 60,000 square feet of building space and a future aquatic center. The 60,000 square feet of total community center space includes the City's existing 19,000 square foot building and 41,000 square feet of future community center space. Approximately \$9.1 million, or 35% of the total \$26 million estimated cost for these facilities is allocated to future development. The cost allocation is based on the distribution between existing and future residents and employees in the City, as shown in Table 16. Future development within the Village 7 area is included in the calculation of the recreation fee component of the park and recreation fee since the development agreement applies to park and trail facilities only, and not recreation facilities.

PARKS AND RECREATION FEE COMPONENT

Tables A-15 and A-17 in Appendix A show the calculations of the park and trail fee component and other park facilities fee component, respectively. The park and recreation facilities costs are allocated to net future development included in the PFE Fee Program based on the applicable EDU factor for each land use category. The resulting park and recreation fees for remaining development outside of the Village 7 area, not including the City's 2.5% administration charge, are as follows:

- \$3,884 per VLD unit
- \$3,884 per LD unit
- \$3,884 per MD unit
- \$2,796 per HD unit
- \$924 per 1,000 square feet for Commercial
- \$924 per 1,000 square feet for Business and Professional
- \$1,412 per 1,000 square feet for Industrial

Park and recreation fees for future development within the Village 7 area, not including the City's 2.5% administration charge, are as follows:

- \$874 per VLD unit
- \$874 per LD unit
- \$874 per MD unit
- \$629 per HD unit
- \$208 per 1,000 square feet for Commercial
- \$208 per 1,000 square feet for Business and Professional
- \$318 per 1,000 square feet for Industrial

X. ADMINISTRATION FACILITIES FEE

This section of the report addresses the nexus requirements related to the calculation of the administration facilities fee and also summarizes the required facilities, estimated costs, and updated fees.

NEXUS TEST

Identify the purpose of the fee. The purpose of the administration facilities fee is to fund administration facilities costs attributable to the impact from new development

Identify the use of the fee. The administration facilities fee will be used to fund the construction of administration facilities that have been identified by the City to serve new development. These facilities are shown in Table A-18 of Appendix A.

Determine how there is a reasonable relationship between the fee's use and the type of development project on which the fee is imposed. The use of the fee to construct the administration facilities to serve new development ensures that such facilities will be available and have enough capacity to serve new residential and non-residential development within the City.

Determine how there is a reasonable relationship between the need for the public facility and the type of development project on which the fee is imposed. New administration facilities will be needed as new residential and non-residential development will generate additional residents and employees and increase the demand placed on existing facilities. The City has identified the facilities shown in Table A-18 of Appendix A as necessary to serve future development.

Determine how there is a reasonable relationship between the amount of the fee and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed. The administration facilities identified by the City and presented in this report are necessary to serve future development in the City. Facilities costs are allocated to future development based on EDUs that were developed in prior City planning documents. The allocated costs translate into fees that are calculated on a fair-share basis to residential and nonresidential development.

REQUIRED FACILITIES AND ESTIMATED COSTS

Prior City planning documents identified that 59,677 square feet of administration building facilities would be needed to serve existing and future development by buildout. The total building square footage includes 45,000 square feet of the City's existing city hall and another 1,500 square feet of office space at the corporation yard building. Another 12,672 square feet of space are planned for future construction at the corporation yard.

Based on an estimated building cost of \$350 per square foot, the total cost for administration facilities totals approximately \$20.9 million. Allocating the total cost between existing and future development using the number of persons served results in approximately \$13.5 million allocated to existing development and \$7.4 million to future development. Including an additional \$2.1 million for financing costs results in approximately \$9.5 million allocated to future development.

ADMINISTRATION FACILITIES FEE COMPONENT

Table A-19 in Appendix A shows the calculation of the administration fee component of the PFE Fee Program. The \$9.5 million cost is allocated to future development included in the PFE Fee Program based on the applicable EDU factor for each land use category. The resulting administration facilities fees, not including the City's 2.5% administration charge, are as follows:

- \$902 per VLD unit
- \$902 per LD unit
- \$902 per MD unit
- \$649 per HD unit
- \$215 per 1,000 square feet for Commercial
- \$215 per 1,000 square feet for Business and Professional
- \$328 per 1,000 square feet for Industrial

XI. FIRE IMPACT FEE

This section of the report addresses the nexus requirements related to the calculation of the fire fee and also summarizes the required facilities, estimated costs, and updated fees.

NEXUS TEST

Identify the purpose of the fee. The purpose of the fire fee is to fund fire facilities costs attributable to the impact of new development.

Identify the use of the fee. The fire fee will be used to fund the fair share portion of fire stations, fire vehicles and equipment. These facilities are identified in Table A-20 of Appendix A.

Determine how there is a reasonable relationship between the fee's use and the type of development project on which the fee is imposed. The use of the fee to purchase or construct the fire facilities identified by the City to serve new development ensures that such facilities will be available as new development occurs in the City.

Determine how there is a reasonable relationship between the need for the public facility and the type of development project on which the fee is imposed. Fire facilities will be needed as new residential and non-residential development will generate additional residents and employees and increase the demand placed on existing facilities. The City has identified the facilities shown in Table A-20 of Appendix A as necessary to serve future development.

Determine how there is a reasonable relationship between the amount of the fee and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed. The fire facilities and vehicles identified by the City and presented in this report are necessary to serve future development in the City. Facilities costs are allocated to future development based on EDUs that were developed in prior City planning documents. The allocated costs translate into fees that are calculated on a fair-share basis to residential and nonresidential development.

REQUIRED FACILITIES AND ESTIMATED COSTS

Table A-20 in Appendix A shows the City's existing three fire stations and vehicles and equipment that will meet the demands of existing and future development within the City's 1988 General Plan and future development within the Village 7, Lincoln 270, and Village 1 areas. The total cost of these facilities is approximately \$19.3 million and this cost is allocated between existing and future development using the number of persons served. Based on a persons served allocation, 43% of the cost, or approximately \$8.3 million, is allocated to future development. Including financing costs associated with the \$8.3 million results in an additional \$1.3 million cost which increases the total cost allocated to future development to \$9.6 million.

FIRE FEE COMPONENT

Table A-21 in Appendix A shows the calculation of the fire fee component of the PFE Fee Program. The \$9.6 million cost is allocated to future development included in the PFE Fee Program based on the applicable EDU factor for each land use category. The resulting fire fees, not including the City's 2.5% administration charge, for future development within the City, including the Village 1 area, are as follows:

- \$517 per VLD unit
- \$517 per LD unit
- \$517 per MD unit
- \$372 per HD unit
- \$345 per 1,000 square feet for Commercial
- \$345 per 1,000 square feet for Business and Professional
- \$345 per 1,000 square feet for Industrial

XII. POLICE FEE

This section of the report addresses the nexus requirements related to the calculation of the police fee and also summarizes the required facilities, estimated costs, and updated fees.

NEXUS TEST

Identify the purpose of the fee. The purpose of the police fee is to fund the fair share portion of police facilities, vehicles, and equipment costs attributable to the impact of new development

Identify the use of the fee. The police fee will be used to fund the purchase or construction of police facilities, vehicles, and equipment identified by the City to serve new development. These facilities are identified in Table A-22 of Appendix A.

Determine how there is a reasonable relationship between the fee's use and the type of development project on which the fee is imposed. The use of the fee to purchase or construct the police facilities identified by the City to serve new development ensures that these facilities will be available as development occurs within the City.

Determine how there is a reasonable relationship between the need for the public facility and the type of development project on which the fee is imposed. New police facilities will be needed as new residential and non-residential development generate additional residents and employees and increase the demand placed on existing facilities. The City has identified the facilities shown in Table A-22 of Appendix A to serve future development.

Determine how there is a reasonable relationship between the amount of the fee and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed. The police station, vehicles, and equipment identified by the City and presented in this report are necessary to serve future development in the City. Facilities costs are allocated to future development based on EDUs that were developed in prior City planning documents. The allocated costs translate into fees that are calculated on a fair-share basis to residential and nonresidential development.

REQUIRED FACILITIES AND ESTIMATED COSTS

Table A-22 in Appendix A shows the police facilities, vehicles, and equipment required to meet the demands of future development within the City. Based on the facility standards in the 2006 Nexus Study, a 65,526 square foot police station will be needed to serve the City by buildout. This station will be located at the existing facility on Flightline Drive at the airport. The existing building is 71,948 square feet, and since this is more than is required, the cost of 6,422 square feet will not be allocated to the PFE Fee Program. The cost of the extra building square footage will be allocated to development that occurs beyond the scope of this current fee update. The cost of the portion of the building, and including a financing cost, that is allocated to future development totals to approximately \$10.8 million. Vehicle and equipment costs total \$1.4 million and the animal shelter is approximately \$1.9 million. The fair share total cost for the police station, vehicles and equipment, and the animal shelter facility that is allocated to new development is approximately \$14.1 million.

POLICE FEE COMPONENT

Table A-23 in Appendix A shows the calculation of the police fee component of the PFE Fee Program. The \$14.1 million cost is allocated to future development based on the applicable EDU factor for each land use category. The resulting police fees, not including the City's 2.5% administration charge, are as follows:

- \$1,019 per VLD unit
- \$1,019 per LD unit
- \$1,019 per MD unit
- \$733 per HD unit
- \$679 per 1,000 square feet for Commercial
- \$679 per 1,000 square feet for Business and Professional
- \$679 per 1,000 square feet for Industrial

XIII. SOLID WASTE FEE

This section of the report addresses the nexus requirements related to the calculation of the solid waste fee and also summarizes the required vehicles, estimated costs, and updated fees.

NEXUS TEST

Identify the purpose of the fee. The purpose of the solid waste fee is to fund solid waste facilities costs attributable to the impact from new development

Identify the use of the fee. The solid waste fee will be used to fund the purchase of solid waste vehicles identified by the City to serve new development. These vehicles are identified in Table A-24 of Appendix A.

Determine how there is a reasonable relationship between the fee's use and the type of development project on which the fee is imposed. The use of the fee to purchase the solid waste vehicles to serve new development ensures that such vehicles will be available when development occurs in the City.

Determine how there is a reasonable relationship between the need for the public facility and the type of development project on which the fee is imposed. New solid waste vehicles will be needed as new residential and non-residential development will generate additional residents and employees and increase the demand placed on existing vehicles. The City has identified the vehicles shown in Table A-24 of Appendix A as necessary to serve future development.

Determine how there is a reasonable relationship between the amount of the fee and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed. The solid waste vehicles identified by the City and presented in this report are necessary to serve future development in the City. Costs are allocated to future development based on EDUs that were developed in prior City planning documents. The allocated costs translate into fees that are calculated on a fair-share basis to residential and nonresidential development.

REQUIRED FACILITIES AND ESTIMATED COSTS

Table A-24 in Appendix A shows the solid waste vehicles required to meet the demands from future development within the City. The level of service standards are those used in the 2006 Nexus Study. Solid waste vehicles and 90-gallon garbage containers totaling approximately \$6.0 million will be needed to serve future development in the City. Maintenance vehicles include side loader trucks, front-end/loaders, roll-off trucks, leaf trucks, street sweepers.

SOLID WASTE FEE COMPONENT

Table A-25 in Appendix A shows the calculation of the solid waste fee component of the PFE Fee Program. The \$6.0 million cost is allocated to future development included in the PFE Fee Program based on the applicable EDU factor for each land use category. The resulting solid waste fees, not including the City's 2.5% administration charge, are as follows:

- \$744 per VLD unit
- \$744 per LD unit
- \$744 per MD unit
- \$536 per HD unit
- \$51 per 1,000 square feet for Commercial;
- \$51 per 1,000 square feet for Business and Professional
- \$61 per 1,000 square feet for Industrial

XIV. FEE COMPONENT SUMMARY

Table XIV-1 and XIV-2 below summarize the fees for each component in the PFE Fee Program. Each fee includes a 2.5% charge to fund the City's administrative costs associated with fee collection, administration, accounting, and to fund future updates of the PFE Fee Program. Based on the City's past experience with administering the PFE Fee Program, the 2.5% charge should adequately fund these maintenance expenses.

Table XIV-1
PFE Fee Summary for Residential Land Uses

| Fee Component | Very Low Density (per Unit) | Low Density (per Unit) | Medium Density (per Unit) | High Density (per Unit) |
|---|-----------------------------------|---------------------------|---------------------------------|-------------------------------|
| Wastewater ² | \$2,192 | \$1,726 | \$1,726 | \$1,380 |
| Wastewater – Treatment ³ | \$5,598 | \$4,408 | \$4,408 | \$3,526 |
| Drainage – North of Ravine ⁴ | \$2,222 | \$1,709 | \$1,196 | \$410 |
| Drainage – South of Ravine ⁴ | \$1,312 | \$1,009 | \$706 | \$242 |
| Water – Transmission | \$6,054 | \$2,554 | \$2,554 | \$1,379 ¹ |
| Water – Storage | \$7,119 | \$3,004 | \$3,004 | \$1,622 ¹ |
| Transportation | \$3,461 | \$3,461 | \$2,492 | \$2,492 |
| Parks and Recreation ⁵ | \$3,981 | \$3,981 | \$3,981 | \$2,866 |
| Parks and Recreation – Village 7 | \$896 | \$896 | \$896 | \$645 |
| Administration Facilities | \$924 | \$924 | \$924 | \$665 |
| Fire | \$530 | \$530 | \$530 | \$382 |
| Police | \$1,044 | \$1,044 | \$1,044 | \$752 |
| Solid Waste | \$763 | \$763 | \$763 | \$549 |
| Total – North of Ravine | \$33,886 | \$24,102 | \$22,621 | \$16,024 |
| Total – South of Ravine ⁶ | \$32,976 | \$23,403 | \$22,131 | \$15,856 |
| Total – Twelve Bridges | \$32,976 | \$23,403 | \$22,131 | \$16,023 |
| Total – Village 7 | \$29,891 | \$20,318 | \$19,046 | \$13,635 |

- 1 High density uses within the Twelve Bridges development are subject to a water transmission fee of \$1,456 and a water storage fee of \$1,712 per unit and not those shown in the table above.
- 2 This fee amount combines the separate fee components for wastewater collection and reclaimed water facilities.
- 3 The wastewater treatment fee shown in this table is an existing City fee and has not been updated as part of this Nexus Study. It is included in this table only to show the total overall fee burden.
- 4 Includes the existing citywide drainage fee to fund land acquisition costs related to the storm drainage retention facility. The fee equals \$101 per EDU. Development located north of the Auburn Ravine will be subject to the Drainage – North of

- Ravine fee while development located south of the Auburn Ravine will be subject to the Drainage – South of Ravine fee.
- 5 This fee will be applied to all development except that within Village 7, which will construct its own parks and trails.
- 6 Applies to all development south of the Auburn Ravine except that within Village 7 and Twelve Bridges.

**Table XIV-2
PFE Fee Summary for Non-Residential Land Uses**

| Fee Component | Business & | | |
|---|------------------------------|--------------------------------|------------------------------|
| | Commercial (per 1,000 SF) | Professional (per 1,000 SF) | Industrial (per 1,000 SF) |
| Wastewater ¹ | \$924 | \$924 | \$1,109 |
| Wastewater – Treatment ² | \$2,361 | \$2,361 | \$2,833 |
| Drainage – North of Ravine ³ | \$837 | \$837 | \$1,004 |
| Drainage – South of Ravine ³ | \$494 | \$494 | \$593 |
| Water – Transmission | \$1,018 | \$1,018 | \$1,222 |
| Water – Storage | \$1,198 | \$1,198 | \$1,437 |
| Transportation | \$15,447 | \$6,769 | \$2,120 |
| Parks and Recreation ⁴ | \$947 | \$947 | \$1,448 |
| Parks and Recreation – Village 7 | \$213 | \$213 | \$326 |
| Administration Facilities | \$220 | \$220 | \$336 |
| Fire | \$353 | \$353 | \$353 |
| Police | \$696 | \$696 | \$696 |
| Solid Waste | \$52 | \$52 | \$62 |
| Total – North of Ravine | \$24,054 | \$15,375 | \$12,621 |
| Total – South of Ravine ⁵ | \$23,711 | \$15,033 | \$12,210 |
| Total – Twelve Bridges | \$23,711 | \$15,033 | \$12,210 |
| Total – Village 7 | \$22,977 | \$14,299 | \$11,088 |

- 1 This fee amount combines the separate fee components for wastewater collection and reclaimed water facilities.
- 2 The treatment component of the wastewater fee is an existing fee and therefore is not included as part of this Nexus Study. It is identified for purposes of showing the total overall fee burden.
- 3 Includes the existing citywide drainage fee to fund land acquisition costs related to the storm drainage retention facility. The fee equals \$101 per EDU. Development located north of the Auburn Ravine will be subject to the Drainage – North of Ravine fee while development located south of the Auburn Ravine will be subject to the Drainage – South of Ravine fee.
- 4 Fee will be applied to all development except that within Village 7, which will construct its own parks and trails.
- 5 Applies to all development south of the Auburn Ravine except that within Village 7 and Twelve Bridges.

XV. ONGOING ADMINISTRATION OF THE PFE FEE PROGRAM

FEE STUDY UPDATES AND FEE ADJUSTMENTS

The PFE Fee may be adjusted in future years to reflect revised facility standards, receipt of funding from alternative sources (i.e., state or federal grants), revised costs, or changes in demographics or the land use plan. It is recommended that the City consider updating the fee study if circumstances have materially been affected by events such as those listed above. If it is determined that a fee study update is not necessary, then the fees will be inflated each year by the change in the San Francisco Construction Cost Index (CCI) as reported in the *Engineering News Record*.

The fee categories summarized in the prior section may not be applicable to specialized development projects in the City. For example, development of a cemetery, golf course, or stadium would not fall under any of the fee categories in this study. For specialized development projects, the City will review the impacts and decide on an applicable ad hoc fee.

FEE IMPLEMENTATION

According to the California Government Code, prior to levying a new fee or increasing an existing fee, an agency must hold at least one open and public meeting. At least ten days prior to this meeting, the agency must make data on infrastructure costs and funding sources available to the public. Notice of the time and place of the meeting and a general explanation of the matter are to be published in accordance with Section 6062a of the Government Code, which states that publication of notice shall occur for ten days in a newspaper regularly published once a week or more. The City may then adopt the new fees at the second reading.

INFLATION ADJUSTMENTS

All fees calculated in this report are reflected in year 2012 dollars. In addition to the periodic adjustments mentioned earlier, the fees should be inflated each year by the change in the San Francisco Construction Cost Index (CCI) as reported in the *Engineering News Record*.

FEE PROGRAM ADMINISTRATIVE REQUIREMENTS

The Government Code requires the City to report every year and every fifth year certain financial information regarding the fees. The City must make available within 180 days after the last day of each fiscal year the following information from the prior fiscal year:

1. A brief description of the type of fee in the account or fund
2. The amount of the fee
3. The beginning and ending balance in the account or fund
4. The amount of the fee collected and the interest earned
5. An identification of each public improvement for which fees were expended and the amount of expenditures
6. An identification of an approximate date by which time construction on the improvement will commence if it is determined that sufficient funds exist to complete the project
7. A description of each interfund transfer or loan made from the account and when it will be repaid
8. Identification of any refunds made once it is determined that sufficient monies have been collected to fund all fee-related projects

The City must make this information available for public review and must also present it at the next regularly scheduled public meeting not less than 15 days after this information is made available to the public.

For the fifth fiscal year following the first deposit into the account or fund, and every five years thereafter, the City must make the following findings with respect to any remaining funds in the fee account, regardless of whether those funds are committed or uncommitted:

1. Identify the purpose to which the fee is to be put
2. Demonstrate a reasonable relationship between the fee and the purpose for which it is charged
3. Identify all sources and amounts of funding anticipated to complete financing any incomplete improvements

4. Designate the approximate dates on which funding in item (3) above is expected to be deposited into the fee account

As with the annual disclosure, the five-year report must be made public within 180 days after the end of the City's fiscal year and must be reviewed at the next regularly scheduled public meeting. The City must make these findings; otherwise, the law requires that the City refund the money on a prorated basis to the then current record owners of the development project.

FEE CREDITS OR REIMBURSEMENTS

The City may provide fee credits or possibly reimbursements to developers who dedicate land or construct facilities. Fee credits or reimbursements may be provided up to the cost of the improvement, as shown in an applicable improvement plan, subject to periodic inflation adjustments, or the actual cost paid by the developer, whichever is lower. For construction cost overruns, only that amount shown in the applicable improvement plan, subject to periodic inflation adjustments, should be credited or reimbursed. The City will evaluate the appropriate fee credit or reimbursement based on the value of the dedication or improvement. Credits or reimbursements may be repaid based on the priority of the capital improvements, as determined by the City. Fee credits and reimbursements will be determined by the City on a case-by-case basis and through a development agreement.

Page A-4

¹ Includes costs associated with project contingency, design/environmental, construction management, and project management.

² Includes wastewater collection and reclaimed water facilities costs.

³ Excludes existing development's share of any existing outstanding debt for these facilities. The City will need to find alternate funding sources to pay for existing development's share of outstanding debt.

- Notes:
 1) Projects are assumed to be built in new road at time of road construction.
 2) 2006 costs do not mention a mark-up for soft costs.
 3) Unit cost increased to account for 15' deep pipe.
 4) WWTP fee in 2012 to be calculated separately, costs not included.

Table B-2
Detailed Reclaimed Water Costs

| Project No. | Project Description | Funded Size | Qty | Unit | Unit Cost | 2012 Project Cost | 20% Contingency Mark Up | 15% Design/ Environmental Mark Up | 5% Construction Management Mark Up | 5% PM Mark Up | 2012 Total Project Cost |

- NOTES:
 1) Under 18" are developer's responsibility - PFE Policy 2-14. Oversizing is difference in cost from 16" pipe to size indicated.
 2) Projects are assumed to be built in the new road at the time of road construction and as such have a reduced per LF cost.
 3) A 30% mark up was used in 2006.
 4) Unit costs for wetland crossing are increased by 50%.

2011 PFE UPDATE

Description of Changes to 2006 Projects

The 2011 PFE Update included the review of all the projects included in the Master PFE Improvement List. The review verified the project's necessity to adequately serve future development included in the study based on constructed infrastructure to date. The descriptions below are for projects that were deleted, deferred to future development or added. These descriptions do not include projects that were modified to improve the current description. For example, projects could be split into more detailed components, combined for simplification or the proposed alignment may have changed.

TRANSPORTATION

DELETED PROJECTS:

- R-2B Lanes 5 & 6 Joiner Parkway – Nicolaus Road to 1st Street**
R-16B Lanes 5 & 6 Nicolaus Road – Intersection Imp. at Joiner Parkway
The traffic study completed for the General Plan (Exhibit A) projected that Joiner Parkway from Nicolaus Road to 1st Street and Nicolaus Road from Joiner Parkway to Airport Road will only require 4 traffic lanes.
- R-17 Lanes 3 & 4 Nicolaus Road – Joiner Parkway to “O” Street**
The traffic study completed for the General Plan (Exhibit A) projected that Nicolaus Road from Joiner Parkway to O Street will only require 2 traffic lanes.
- R-18B Lanes 3 & 4 Lakeside Drive – Venture Drive to Highway 65**
R-32F Traffic Signal Lakeside Drive and Venture Drive
The extension of Lakeside Drive from Venture Drive to Highway 65 is not economically feasible since this area is designated as Open Space. The related traffic signal is not necessary without the extension.
- R-28 Lanes 3 & 4 East Avenue – SR 193 to 12th Street**
R-29A Lanes 3 & 4 12th Street – East Avenue to Harrison Avenue
R-30 Lanes 3 & 4 Harrison Avenue – 12th Street to North City Limits
The traffic study completed for the General Plan (Exhibit A) projected that these streets will only require 2 traffic lanes.
- R-54 Lanes 3 & 4 Bella Breeze Drive**
This street has been designed and approved as a 2 lane roadway.
- R-57 Bridge SR 193**
All costs associated with the replacement of this bridge are shown in the Drainage PFE, project Dr-3d.

- R-58 **Bridge Extension of E Street**
The construction of this project is cost prohibitive. The current alternative is to construct enhancements with the replacement of the Highway 65 bridge for NEV, bike and pedestrian traffic.

DEFERRED PROJECTS:

- R-3B **Lanes 5 & 6 Joiner Parkway – 1st Street to Moore Road**
- R-4B **Lanes 5 & 6 Joiner Parkway – Moore Road to Ferrari Ranch Road**
- R-5B **Lanes 5 & 6 Joiner Parkway – Ferrari Ranch Road to 65 Overcrossing**
- R-6C **Lanes 5 & 6 Joiner Parkway – 65 Overcrossing to Sterling Parkway**

The traffic study completed for the General Plan (Exhibit A) projected that Joiner Parkway from 1st Street to Sterling Parkway requires 4 traffic lanes for development included in this PFE study and 6 lanes for build-out. The PFE studies applicable to future villages will include these improvements.

- R-12B **Lanes 5 & 6 Highway 65 – Auburn Ravine Bridge to SR 65 Bypass**
The traffic study completed for the General Plan (Exhibit A) projected three different requirements for this roadway; (1) from the Auburn Ravine Bridge to Ferrari Ranch Road requires 4 traffic lanes, (2) from Ferrari Ranch Road to Sterling Parkway 4 lanes are required with this PFE study and 6 lanes for build-out, and (3) from Sterling Parkway to the SR 65 Bypass 6 lanes are required with this PFE study and build-out. The PFE studies applicable to future villages will include the deferred improvements.

- R-46 **Interchange SR 65 at Nelson Lane**
The current PFE study includes improvements to Nelson Lane (R-31X and R-31Y) to provide adequate transportation requirements. Construction of an Interchange at Nelson Lane is related to future development beyond this study.

ADDED PROJECTS:

- R-20B **Lanes 3 & 4 Ferrari Ranch Road - Moore Road to Lincoln Crossing**
- R-20C **Bridge 2 lanes of the Ferrari Ranch Road Bridge in Village 7**
- R-44D **Traffic Signal Ferrari Ranch Road @ Central Blvd.**

These projects were added based on the current infrastructure plans of Village 7 developments.

- R-31W **2 Lanes Reconstruction of Moore Rd – Village 7 to Fiddyment Rd**
- R-31X **2 Lanes Reconstruction of Nelson Lane – Bypass to Nicolaus Rd**
- R-31Y **Bridge Nelson Lane Bridge Reconstruction**

Based on the developments included in the PFE study and the realignment of Highway 65, these improvements are necessary to provide an adequate and safe traffic system.

- R-44C **Traffic Signal Ferrari Ranch Road @ Sorrento Parkway**
The signal was included in the Sorrento Development Agreement.

WASTEWATER

The 2011 Update implements the Treatment Component costs on a per EDU basis. A separate analysis was completed and calculated a \$4,300 per EDU cost to expand the existing WWTRF. The Wastewater PFE Fee will include this amount.

DELETED PROJECTS:

Ss-13A Gravity sewer 12 Bridges Pump Station to Lincoln Blvd.

Ss-13B Gravity sewer Lincoln Blvd. to Casino

Ss-13C Gravity sewer Casino to WWTRF

This project would require the participation and support of the Casino and property owners along Athens Avenue, which currently does not exist. The costs to construct a gravity sewer from the 12 Bridges Pump Station to Lincoln Blvd. currently exceed the benefits of eliminating the pump station.

RECLAIMED WATER

DELETED PROJECTS:

RW-11A 18" Pipe Ferrari Ranch Rd. – Moore Road to L/C Boundary

The current construction plans for Lewis Communities (Village 7) includes a 12" pipeline along this alignment. In addition to serving their development, this pipeline will connect the existing 18" force main and the existing 8" pipeline in Lincoln Crossing. There are no PFE credits applicable to the 12" pipeline.

RW-11B 18" Pipe Ferrari Ranch Rd. – L/C Boundary to SR 65 Bypass

SunCal has constructed an 8" pipeline along this alignment. Future connections include the 12" pipeline to be constructed by Lewis Communities and an 8" -12" pipeline to be constructed by the Sorrento project. The future pipeline constructed by the Sorrento project will connect the existing 18" force main and the existing 8" pipeline in Lincoln Crossing. There are no PFE credits applicable to the future Sorrento pipeline.

RW-14 RBPS Pump Ferrari Ranch Road

The additional pump would have been installed at the WWTRF. With the elimination of a portion of the original proposed system, this additional pump is not required.

RW-15 24" Pipe Athens Avenue – MRF to Livingston Concrete

RW-16 24" Pipe Athens Avenue – Livingston Concrete to Lincoln Blvd.

RW-17 10" Pipe Lincoln Blvd. – Athens Avenue to Rio Bravo Plant

RW-18 10" Pipe Lincoln Blvd. – Rio Bravo Plant to Formica

RW-19a 12" Pipe Lincoln Blvd. – Athens to 12 Bridges Drive

This portion of the original proposed system was to coordinate with the proposed wastewater services for this area. With the elimination of the South Lincoln Sewer Project (Ss-13 above), these improvements are no longer required.

| | | |
|--------|---------|--|
| RW-25A | 6" Pipe | SR 65 – Twelve Bridges south to City Limit |
| RW-25B | 4" Pipe | SR 65 – Twelve Bridges south to City Limit |
| RW-26A | 6" Pipe | SR 65 – Twelve Bridges north to Ferrari Ranch Road |
| RW-26B | 4" Pipe | SR 65 – Twelve Bridges north to Ferrari Ranch Road |
| RW-27A | 6" Pipe | SR 65 – Ferrari Ranch Road north to Moore Road |
| RW-27B | 4" Pipe | SR 65 – Ferrari Ranch Road north to Moore Road |

This portion of the original proposed system was to provide services to the SR 65 median and frontage landscaping. The reclaimed water system was not included in the design and planning for the SR 65 Bypass project. It would be cost prohibitive to construct this project.

WATER

DELETED PROJECTS:

| | | |
|------|----------|--|
| W-23 | 24" Pipe | Crossing Highway 65 |
| W-24 | 18" Pipe | Highway 65 Crossing (W-23) north along RR |
| W-26 | 18" Pipe | From RR alignment (W-24) to Joiner Parkway |

The updated analysis of the water system and proposed use of reclaimed water indicated that this pipeline alignment was no longer required. The alignment included the open space along the northern edge of the Foskett Ranch Regional Park, which would be cost prohibitive.

| | | |
|------|----------|---|
| W-43 | 18" Pipe | Crossing Auburn Ravine - O Street to Lincoln Crossing |
|------|----------|---|

The updated analysis of the water system and proposed use of reclaimed water indicated that this pipeline alignment was no longer required. The alignment included the crossing of Auburn Ravine and some open space, which would be cost prohibitive.

| | | |
|------|----------|-------------------------------|
| W-48 | 18" Pipe | South from 18" WWTRF pipeline |
|------|----------|-------------------------------|

The updated analysis included the locations of the Fiddyment Well and the Moore/Nelson Well and their related connecting pipelines. Based on the wells and the proposed water infrastructure by Lewis Communities in Village 7, this project has been sized to a 16" pipeline. There are no PFE credits applicable to the 16" pipeline.

DEFERRED PROJECTS:

| | |
|-------|----------|
| W-11k | Well #16 |
| W-11l | Well #17 |

Based on the actual production of the four wells constructed and the additional capacity projected from City Well #2, these 2 wells can be deferred. The wells will be included in the analysis for future villages.

W-34f Storage 10 MG Tank

Based on the updated analysis of the water system and the water conservation requirements for new development, a portion of the water storage is deferred to future villages.

W-62 18" Pipe Athens Avenue – Lincoln Blvd. to Fiddymment Road

W-63 18" Pipe Fiddymment Road - Athens Avenue to Moore Road

Based on the updated analysis of the water system and the deferral of services to the properties along Athens Avenue, these pipelines are not required with the developments included in this PFE update. The pipelines will be included in the analysis for future villages.

ADDED PROJECTS:

W-110 Well #2 oversizing for additional capacity

The City is currently repairing City Well #2 and analysis indicates that it is cost effective to oversize the well facilities. This oversizing along with the other existing wells production enabled the PFE program to defer two new wells.

DRAINAGE

The projects described below are not noted as deleted, deferred or added; however, the City's actions in regards to funding the projects results in a significant savings to the PFE program.

MODIFIED FUNDING SOURCES:

Dr-3b Bridge Replacement of SR 65 Bridge at Auburn Ravine

Dr-3d Bridge Replacement of SR 193 Bridge at Auburn Ravine

The City has applied for Federal HBRRP (Highway Bridge Replacement and Rehabilitation Program) funds for the bridges at SR 65 and SR 193. The Federal funding would be for 88.53% of the eligible project costs. The PFE Update cost estimate reflects the City's 11.47% share.

Dr-4d Regional Retention – Lakeview Farms Phase 1A

The costs included in the update are for additional improvements to the land in developing the retention facility to serve the future development included in this study. In December of 2008, the City acquired 323 acres to enable the construction of a retention facility for build-out of the City per the adopted General Plan. The PFE update reflects a cost of \$101 per EDU for the equitable share of the acquisition costs.

Table 8
Traffic Volumes Under Village Alternative Verses No Project Alternative Within Lincoln Sphere of Influence

| Roadways | Segment | | Lanes | | Volumes | | Difference | | |
|-------------|------------------|------------------|-----------------|---------------|--------------|---------------|-------------------|------------------|------|
| | From | To | Current | 2050 Villages | Current | 2050 Villages | Volume Difference | Percent Increase | |

Notes:

- 1) Projects are assumed to be built in new road at time of road construction.
- 2) 2006 costs do not mention a mark-up for soft costs.
- 3) Unit cost increased to account for 15' deep pipe.
- 4) WWTRF Fee in 2011 to be calculated separately, costs not included.

NOTES:

- 1) Under 18" are developer's responsibility - PFE Policy 2-14. Oversizing is difference in cost from 16" pipe to size indicated.
- 2) Projects are assumed to be build in the new road at the time of road construction and as such have a reduced per LF cost.
- 3) A 30% mark up was used in 2006.
- 4) Unit costs for wetland crossing are increased by 50%.

Notes:

1. Updated project costs prepared by the City.
2. 2006 costs included a 30% mark up.

2011 PFE UPDATE

Description of Community Service Fees

The PFE studies completed in 1998, 2002 and 2006 were based on the previous General Plan and included six Community Services Fees in the PFE program. Each fee was based on assumptions described in the General Plan to meet specific service levels. The current General Plan uses the same assumptions, which have been applied in the 2011 update for consistency and compliance.

The 2011 PFE Update includes the former General Plan, plus the Lincoln 270 project and Village 7 ("Additional Areas"). The total estimated population for these areas is 60,787. The Fire Fee includes Village 1 since the area will primarily be served by Fire Station #33, located at McBean Park Drive.

Police

The permanent Police Headquarters currently planned to be located at 2000 Flightline Drive has been designed, but not constructed. The City acquired the 71,948 square foot building in 2005 to serve as the Police and Fire department headquarters. The City sold 30 year bonds to purchase the building and adjacent land.

The 2011 PFE Update indicates that a total of 65,544 square feet is required to serve the existing residents and future development included in the study. The capacity beyond this area is excluded from this study and will be included in future fee programs.

With the construction of three new fire stations that included administration facilities, the Fire department will no longer be located in the Flightline building.

Fire

The studies from 1998 through 2006 included the construction of fire stations totaling 33,929 square feet, 10 fire trucks, 2 ladder trucks and a training facility. The three fire stations constructed since 2002 total 31,478 square feet in size and the training facility is located at Station #35. Currently the City has 5 fire engines, 3 wildland engines and 1 ladder truck.

The 2011 PFE Update includes the remaining engines and trucks, as well those required with the Additional Areas and Village 1. An equitable share of the existing fire stations is also allocated to future development, based on the assumptions used in 2006.

Administration

The studies from 1998 and 2002 included the construction of facilities totaling 65,780 square feet, assuming 260 square feet per staff. The 1998 assumption of 4.6 administrative staff per 1,000 residents was based on a comparison of cities that included Roseville, Sacramento, Merced, Modesto and Stockton. The 2006 fee study modified the square feet per staff from 260 to 350, increasing the facility construction to 86,708 square feet.

The 2011 PFE Updates recognizes 59,677 square feet of administrative building space based on the 45,505 square feet in the City Hall building, the existing 1,500 square feet at the Corporation Yard and the future expansion of 12,672 at the Corporation Yard.

The 2011 PFE Update includes the reimbursement of approximately \$5.2 million to this PFE fee program for the improvements constructed at the Corporation Yard. The City will complete rate studies in 2012 for the three utilities and will include the implementation of the reimbursement.

Library

The studies from 1998 through 2006 included the construction of facilities totaling 37,699 square feet. The 2002 fee study added the stocking component ("collections") of approximately \$50 per square foot.

As of June 30, 2010 the City had constructed the 39,306 square foot Twelve Bridges Library through a joint effort with the WPUSD and Sierra College; qualifying the project for a \$10 million state grant. The successful funding program by the City has eliminated the required funding by future development in the 2011 Update as the available fund balance and future repayment of loans will fund the remaining costs for collections and minor additional improvements to the existing facilities.

Parks

The Park PFE includes five basic components, each with their own set of assumptions. Of the five components, the 2011 PFE Update eliminated the funding for a pedestrian bridge across the Auburn Ravine. The same assumptions were generally applied as used in the 2006 Study for consistency and equity.

The 2011 PFE Update assumes that Village 7 will construct the parks and trails within their project and will not pay the related fees. The proposed parks and trails by Lewis Communities in Village 7 exceed the City standards used in the fee program's assumptions.

For the swimming pool component, the City will use a line item for the Aquatics Center that is currently planned at the Foscett Ranch Regional Park.

Solid Waste

The program will continue with the same assumptions used in 2006 study and the implementation of current costs.

2011 PFE UPDATE

Description of Credits Earned

Table 4 of the 2011 PFE Update summarizes the PFE Credits earned by developers for either the construction of PFE projects or the funding of PFE fees through Community Facilities Districts (CFD's). Earned PFE credits can be a specific dollar amount or on an EDU basis. For example, the developers that funded the Phase 1 construction of the City's WWTRF earned a specific number of wastewater treatment connections.

Following is a description for each specific development included in the schedule.

Lincoln Highlands & Cypress Meadows

WASTEWATER PROJECTS CONSTRUCTED:

| | | |
|--------|----------|---|
| Sn-21a | 24" Pipe | 9 th Street – E Street to East Avenue |
| Sn-21b | 24" Pipe | East Avenue – 9 th Street to 12 th Street |
| Sn-21c | 24" Pipe | 12 th Street – East Avenue to McCourtney Road |

WATER PROJECTS CONSTRUCTED:

| | | |
|--------|----------|---|
| W-19a2 | 24" Pipe | 12 th Street – Buckboard to Liberty Lane |
| W-44 | 24" Pipe | East Avenue – SR 193 to 12 th Street |
| W-61 | 18" Pipe | McCourtney Road – North of 12 th Street |

Lakeside 6

Balance of Transportation and Drainage Credits earned from funding PFE fees included in CFD 2006-1.

Twelve Bridges

Placer Holdings Inc. (PHI) participated in funding the construction of several PFE projects in cooperation with Del Webb. The projects completed by PHI and Del Webb were removed in the 2006 Study. Wastewater connections were earned for participation in funding Phase I construction of the City's WWTRF.

Lincoln Crossing

Balance of Credits earned from funding PFE fees included in CFD 2003-1.

Village 7

Schedule reflects the current language in the draft Development Agreement with Lewis Communities, whereas the property owner will construct all park related facilities within their project.

Sterling Pointe

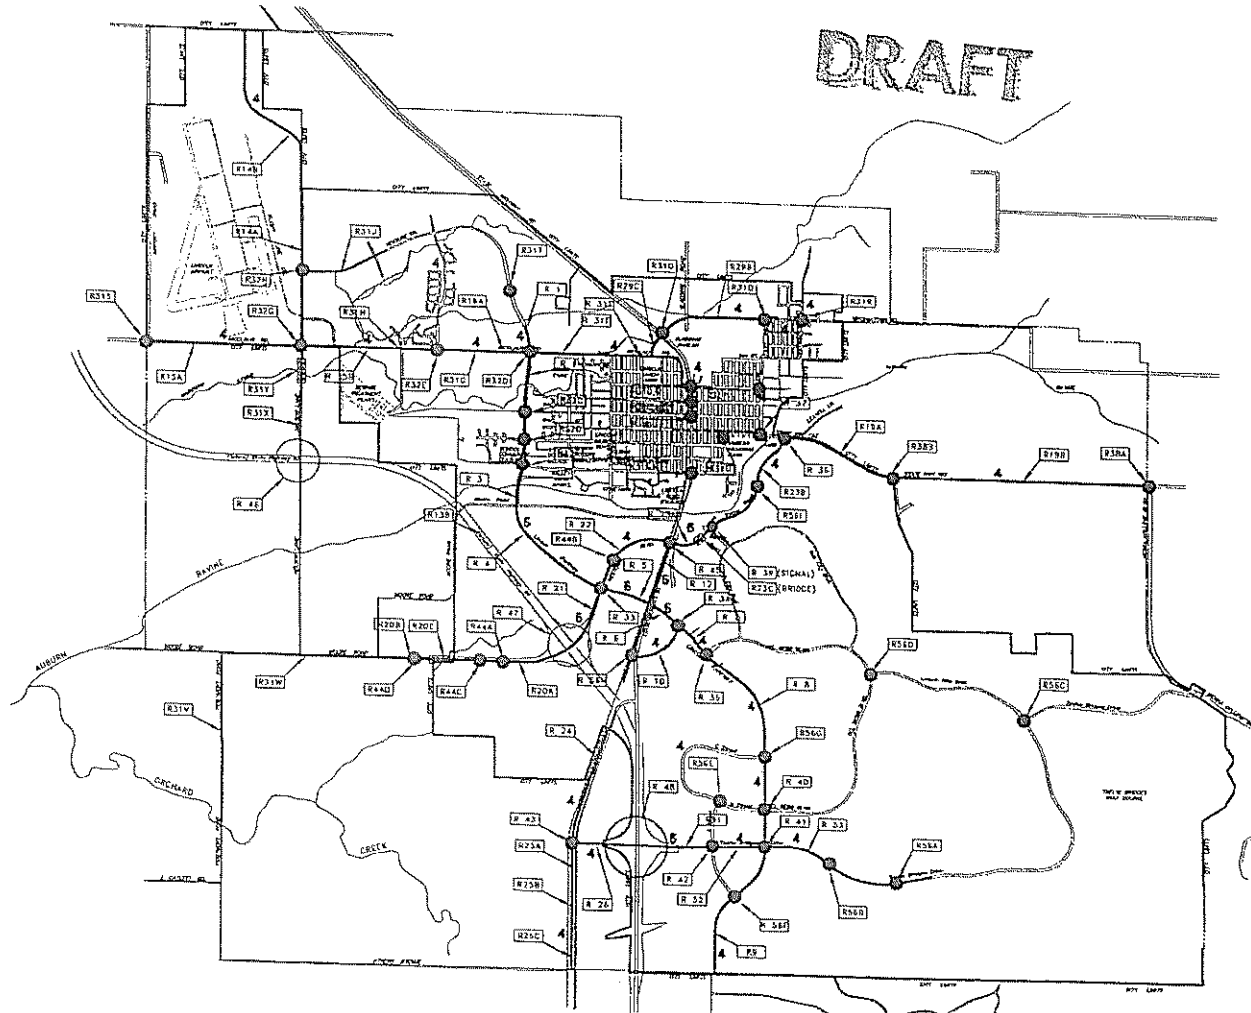

Wastewater connections were earned for participation in funding Phase I construction of the City's WWTRF.

Lincoln 270

The property owner funded the construction of the 18" water pipeline in the Twelve Bridges Drive interchange.
