

9900 Series

MMS Monitoring System

User's Manual

U-ENM00038 Rev. 1

June 19, 2016

PREFACE

The following Manual describes the operation, display information and functions of the Monitoring System for the Mitsubishi Electric three-phase, continuous duty, on-line solid-state Uninterruptible Power Supply Multi-Module System, hereafter referred to as the UPS MMS and MMS Monitoring System respectively.

Figures depicted in this manual may differ from the screen images on an installed CLC configuration due to differences in revision level, UPS module quantity, CLC customization and user configurable selections. Please consult the installation's shop drawing submittal for comparison.

HOW TO USE

This manual is designed for ease of use, and for referencing information. Notes and pictures are used to create visuals on how to use the HMI screen.

For the creation of this manual multiple UPS MMS configuration has been illustrated to show different details on different example screens. Equivalent information is available for any permutation of UPS MMS configuration quantity. Actual screen display will be based on actual CLC configuration in accordance with the Setup Screen selections of UPS Quantity and System Configuration (2,3,4,5,6,7 or 8 UPS Modules: Capacity or Parallel redundant system, Breaker selections).

For this manual, the CLC HMI screen's operation has been simulated from the software package with actual CLC HMI and UPS Module screen data. For this reason some screen display data and measurements are not available and/or not displayed.

REVISIONS

This section is used to identify the originator and the specific changes made to a procedure as the result of a revision. Original procedures will be identified by the term 'ORIGINAL' in the Revision section of the footer and title page(s). Subsequent revisions will be identified by number. Recent revisions are highlighted.

Originator: M. Meinert
Original Date: 6/19/16
Revision Number: Original

- 52L#** - Output breaker for specific unit

WARNING

The UPS MMS Monitoring System described herein needs to be set up during UPS MMS installation and commissioning done by qualified and authorized Mitsubishi Electric Service personnel. UPS MMS Monitoring System software installation will be in accordance with the specific UPS MMS configuration.

Default UPS Module and Critical Load Cabinet. HMI's, target Names and IP Addresses shall be utilized in accordance with the standard Mitsubishi Electric system network configuration. Specific customer IP Address allocation can be configured in accordance with appropriate customer IT Department support and specification. Contact Mitsubishi Electric for guidance related to future UPS MMS configuration and network specification changes.

The operating procedure in this manual should be adhered to during configuration and operation of the UPS MMS Monitoring System. Please read this manual carefully and retain it for future reference.

Contact Mitsubishi Electric if further support and information is required.

1. BASIC FUNCTION

The MMS Monitoring System will monitor all UPS MMS components and display UPS MMS operational status and information on the HMI. The HMI will be a single user interface point allowing access for all UPS MMS Data. UPS MMS operation sequences shall also be possible from the Monitoring System HMI, and system summary alarm and user selectable system alarm contacts available. All information will be displayed and operator sequences initiated from the HMI. The CLC HMI will be IP interfaced to each UPS Module HMI via Modbus/TCP over Ethernet and will have access to all system UPS Module data via this network. Specific Target names and IP addresses will be allocated to each Monitoring System HMI for reference and identification. The CLC HMI will be Ethernet connected to the Monitoring System Auxiliary I/O Interface module communicating via Modbus/TCP. The Auxiliary I/O inputs will also accept the CLC circuit breaker status contacts for HMI display information. The Auxiliary I/O outputs shall be utilized for system summary alarm and user selectable system output contacts (selectable from the HMI). The CLC HMI software will create the Monitoring System user environment and operational architecture. UPS MMS configuration, UPS Module capacity and UPS quantity will be selectable for HMI display information.

Modbus/TCP: the Modbus protocol enables sharing, reading the variables of each HMI target machine through the TCP/IP network.

Additionally, the HMI UPS MMS Monitoring System shall serve as a Modbus Slave sharing the aggregate data parameters and MMS system information via Modbus/TCP to an IP connected Modbus Master

The following sections describe the Display Touch screens and Monitoring System functions that are available from the HMI.

2. MMS MONITORING SYSTEM – SOFTWARE

The MMS Monitoring System HMI will be a single user interface point allowing access for all UPS MMS Data and operation sequences. The following sub sections describe the Display Touch screens and Monitoring System functions that are available from the HMI. The subsequent sections then introduce the MMS Monitoring System Screen Display information and user orientation in detail, covering the HMI Display Screen Tree Diagram, seen in Figure 1, and each specific touch screen and user orientation.

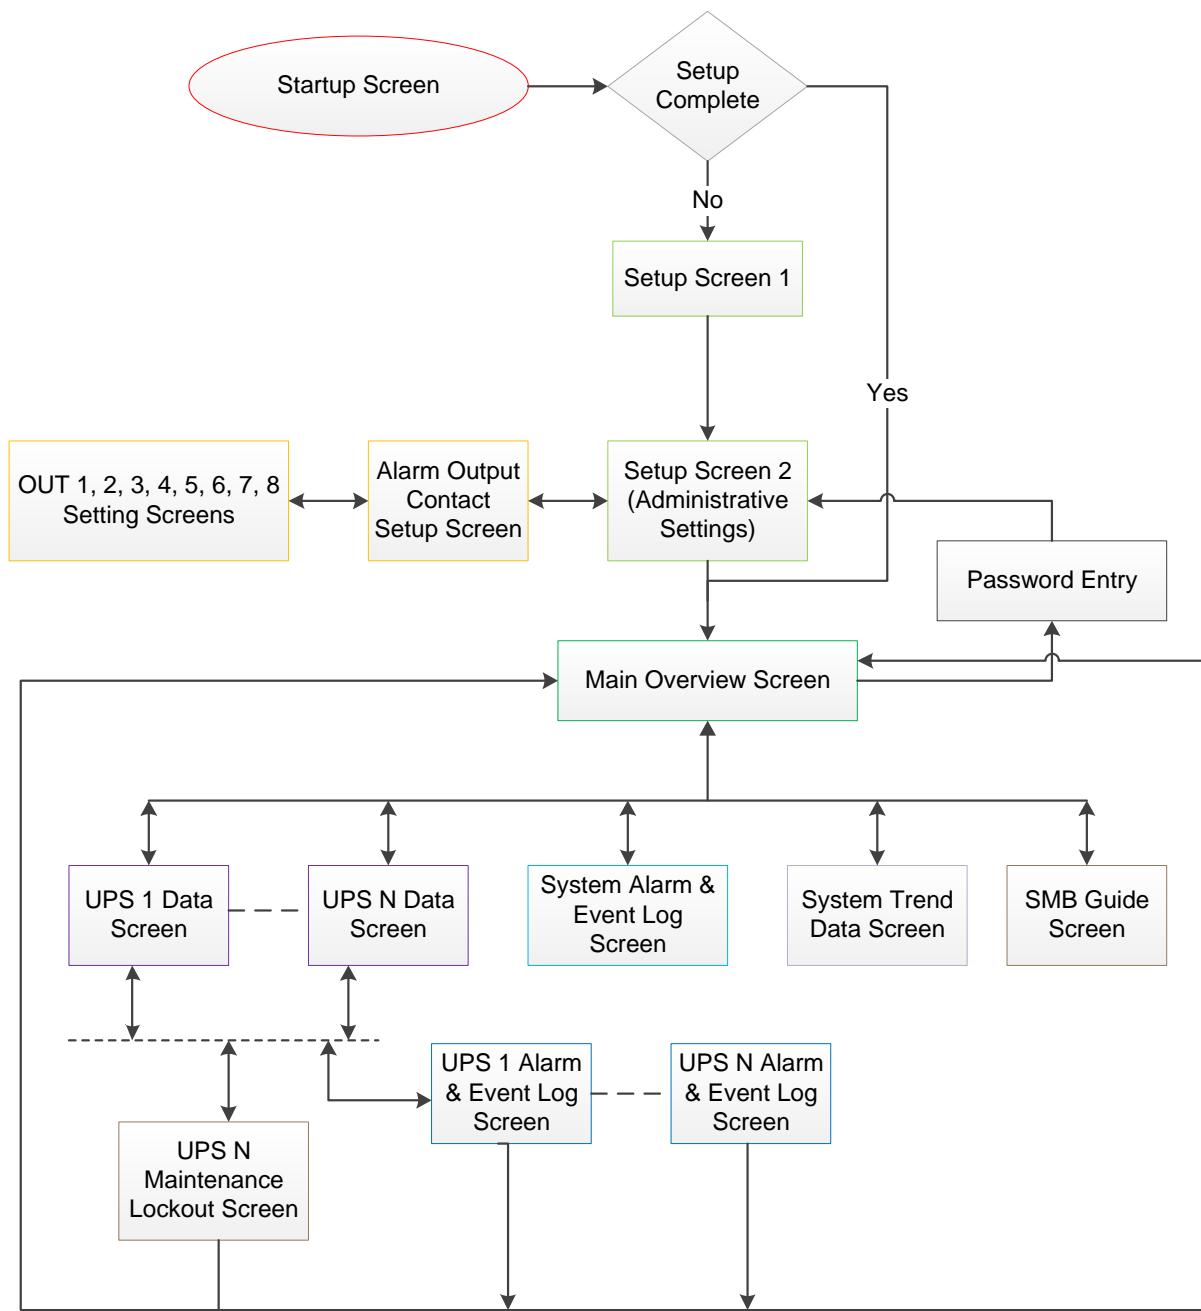

Figure 1: HMI Display Screen Tree Diagram

2.1 SETUP SCREENS

There are Two (2) Setup Screens that will initialize and configure the MMS Monitoring System:

- **Setup Screen 1:** UPS Module Quantity Capacity setting, KVA confirmation, and Configuration setting (Parallel Redundant, Capacity) (See Figure 8).
- **Administrative Settings:** Password setting, CLC Breaker configuration, Email settings, and Output Contact configuration (See Figure 9)

On initial CLC HMI software install and power up, the initial HMI display will be Monitoring System Setup Screen. The administrator inputs the requested Module Quantity Capacity of the CLC, and Parallel for Capacity or Redundancy per Setup Screen. This data will be stored in the non-volatile memory. Once the Setup Screen is completed, settings are saved and the Administrative Settings will be displayed. In order to access the Administrative Settings screen (Figure 3), the Administrator Password (Level 5) must be entered. Once on this page, any of the Administrative settings may be set before saving Administrative Settings. The Monitoring System HMI will automatically display the Main Overview Screen for the specific UPS MMS configuration required (Figure 4), and also set a Setup Complete Flag. In the event that the power supply to the Monitoring System (I/O module, etc.) is lost, on power restoration the HMI will confirm the Setup Complete Flag status and if set, start up with the Main Overview displayed (No need to set up MMS Monitoring System again as all data is stored and retrieved). In addition, if the administrator needs to change the UPS MMS Monitoring System Configuration (Future addition or reduction of UPS Modules to expand or reduce the MMS), the administrator can reset the Setup Complete Flag by initializing configuration in Administrative Settings. Setup Screens will again be displayed allowing the administrator to reconfigure the UPS MMS Monitoring System.

***Note:** The MMS Monitoring System should be set up during UPS MMS Installation and Commissioned by qualified/authorized Mitsubishi Electric personnel.

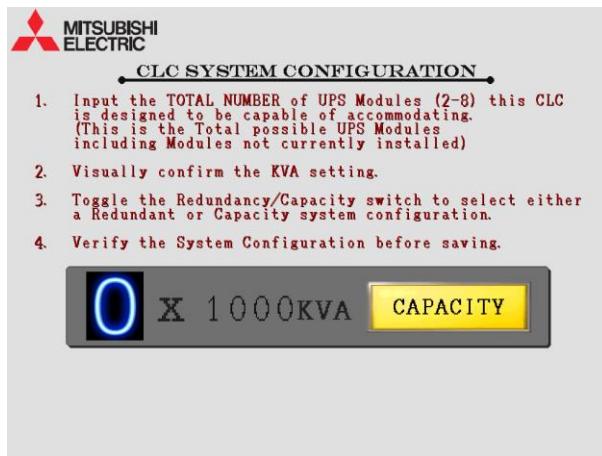

Figure 2: Setup Screen 1

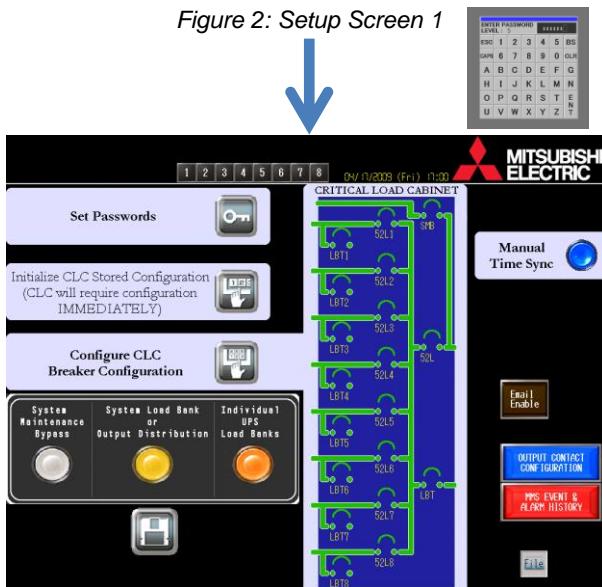

Figure 3: Administrative Settings Screen

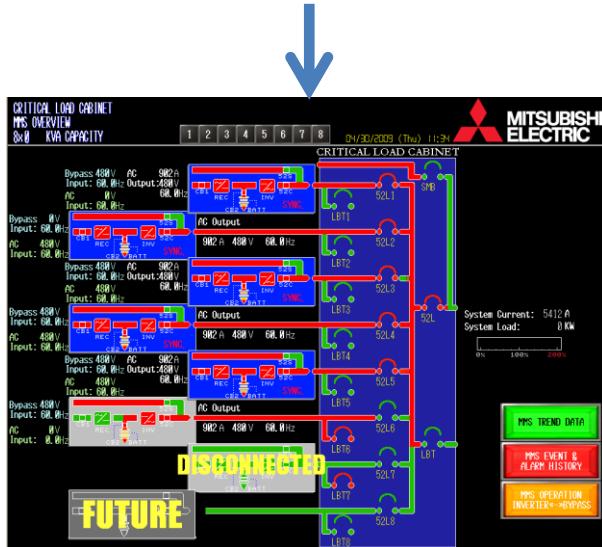

Figure 4: Main Overview Screen

2.1.1 DISPLAY DATA DETAILS

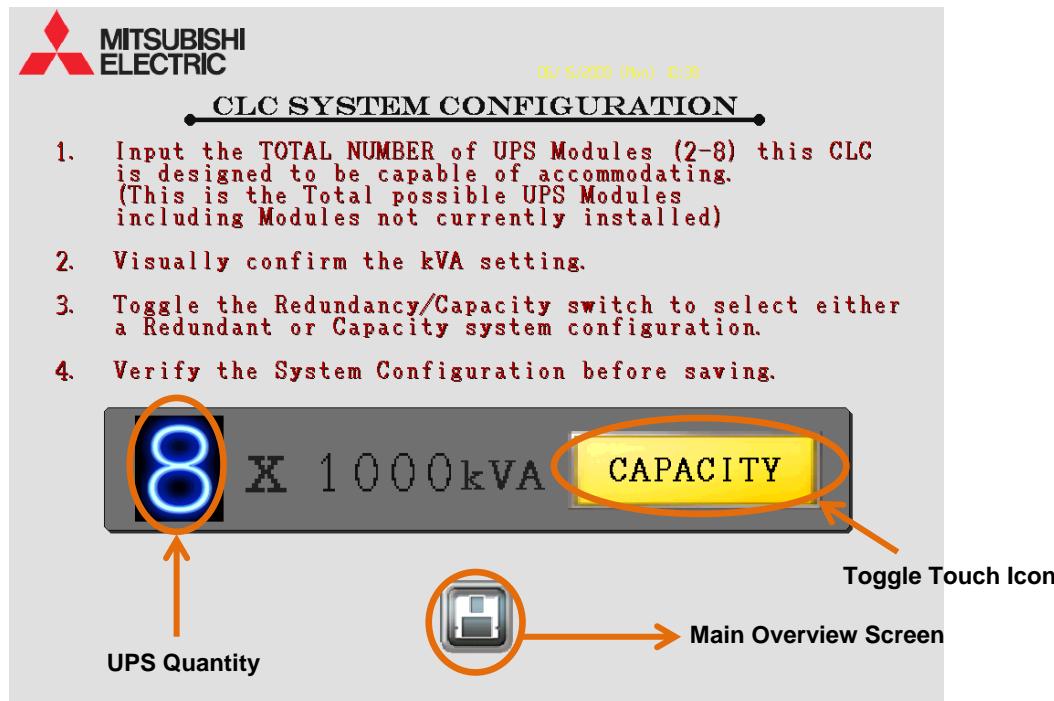

Figure 5: Setup Screen 1

***Note:** See Appendix A for definitions of touch icons.

***Note:** Default configuration of Redundant/Capacity is Redundant (N+1).

2.1.2 USER ORIENTATION DETAILS

On initialization of the HMI software and power up or following power up with the Setup Complete Flag reset to zero, the initial HMI display after the Startup Screen will be Monitoring System Setup Screen 1 (Figure 5). The user inputs the requested UPS module quantity and configuration data and follows the confirmation instructions per Setup Screen 1 (this data when saved is stored in the CF card non-volatile memory). Administrative settings must be confirmed immediately after saving the Setup Screen 1 settings. The Security Login screen will prompt for an Administrator Password, required before proceeding with setup. If an Administrator Password is not entered and Setup Screen 2 is not entered the Monitoring System HMI will automatically display the Main Overview Screen for the specific UPS MMS configuration required, and also set a Setup Complete Flag in the CF card. The administrative settings may be set after this point by accessing the Administrative Settings Touch Icon. Setup Screen 1: User selects System UPS Quantity, and confirms the acquired UPS KVA Capacity.

2.2 ADMINISTRATIVE SETTINGS SCREEN

The Administrative Settings Screen, seen in Figure 6, provides options to initialize and configure the UPS MMS Monitoring System. It has several window displays that pertain to specific configuration option. The screen also serves as the gateway to access other advanced settings such as password setting and output contact configuration.

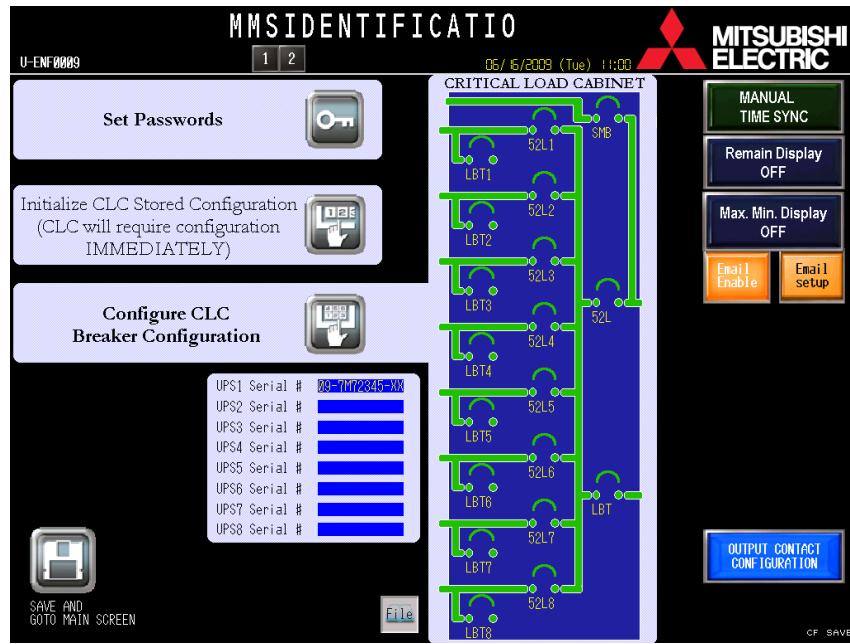

Figure 6: Administrative Settings Screen

2.2.1 INITIALIZE CONFIGURATION WINDOW

The Initialize Configuration Window, seen in Figure 7, displays the option to reset all configuration settings to default.

Figure 7: Initialize Configuration Window

***Note:** This does not affect the stored password settings.

2.2.2 CLC BREAKER CONFIGURATION WINDOW

The CLC Breaker Configuration Window, seen in Figure 8, provides options for adding/removing Critical Load Cabinet breaker displays from the Main Overview Screen mimic display. CLC Breaker labels can be modified from within the administrative settings, and will be saved, as long as they are displayed.

Figure 8: Breaker Configuration Window

2.2.3 EMAIL ENABLE

The Email Enable / Setup Window, seen in Figure 9 & 10, allows for SMTP configuration setting as well as test email initiation.

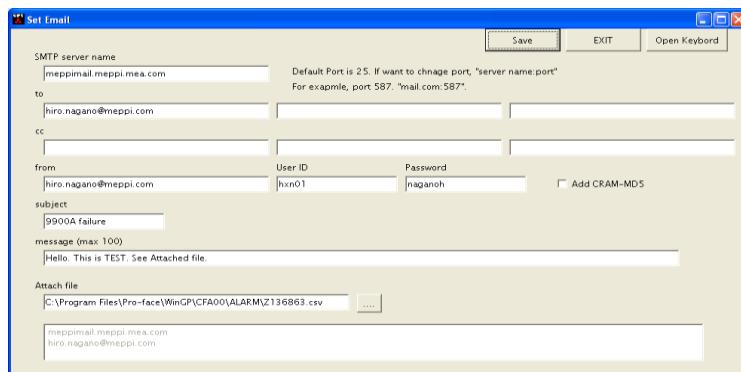

Figure 9: Email Setup Window

Figure 10: Select Trigger

2.2.4 SCREEN PASSWORD ENTRY

Access to the System Configuration Screen is password protected to stop unauthorized processes, seen in Figure 11. A Password Pop up window will request the user to input a six character Administrative Password to gain authorized access to the System Configuration Screen.

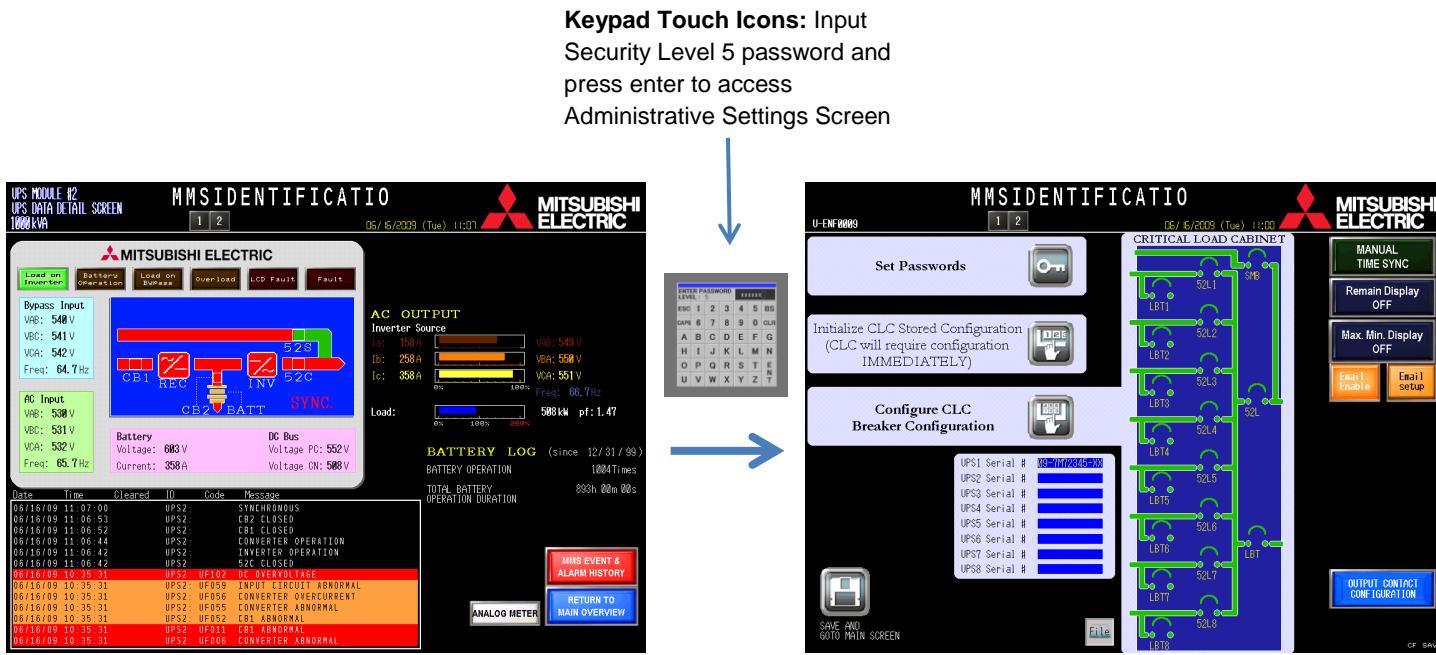

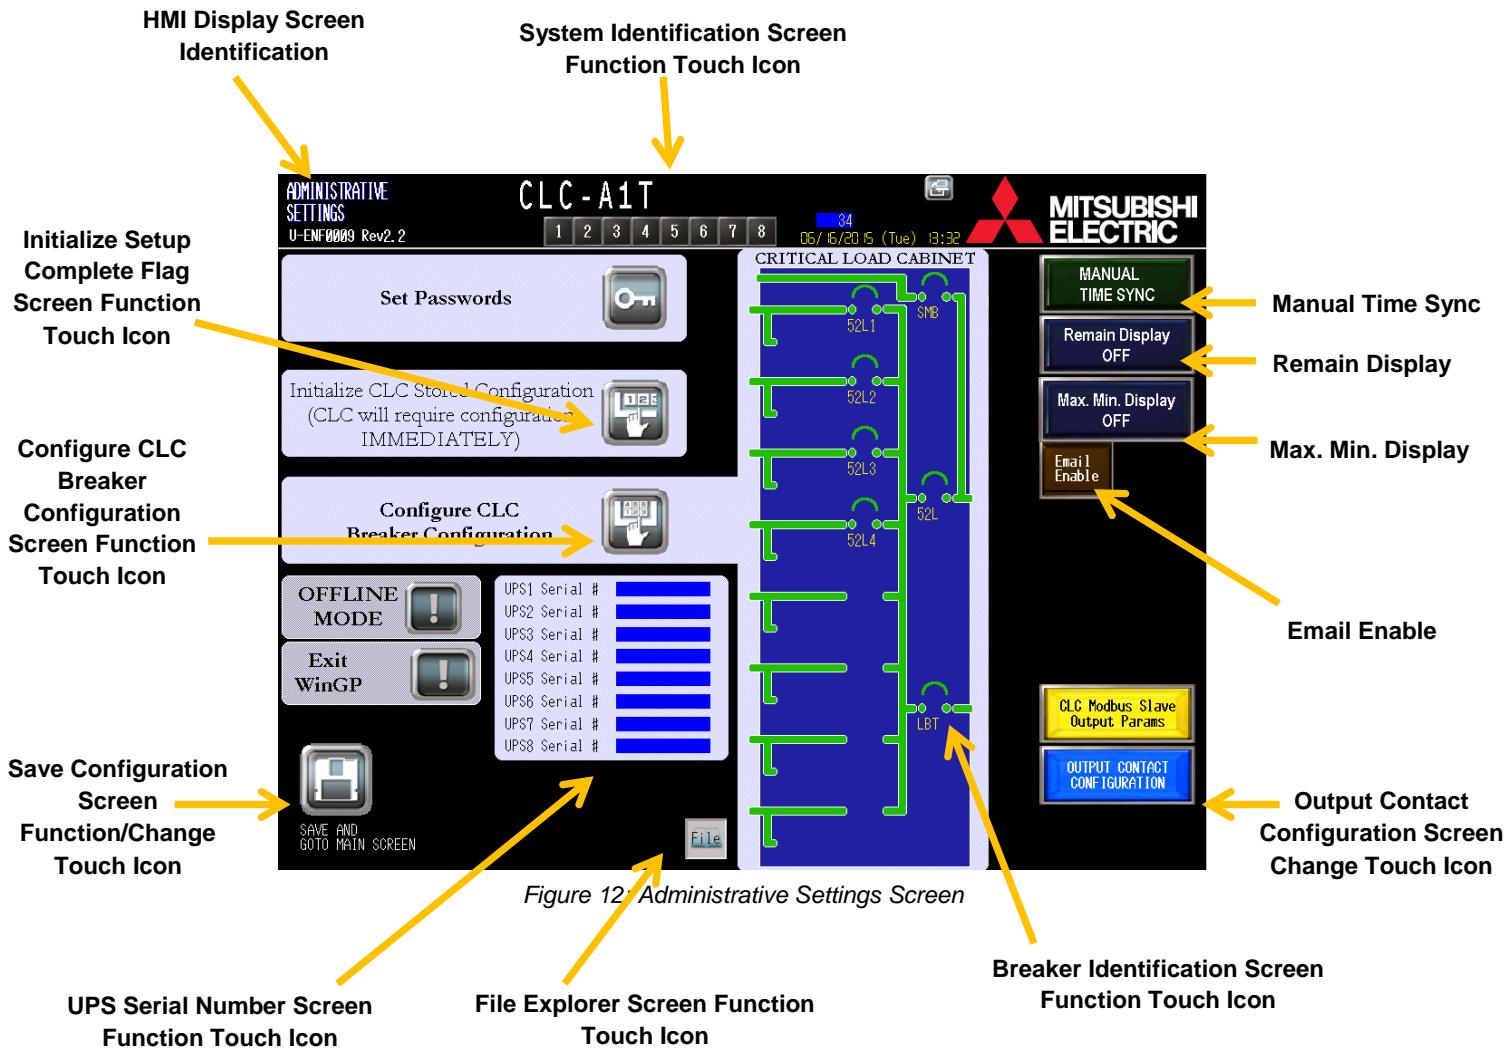

Figure 11: Accessing Administration Screen

2.2.5 SCREEN DETAILS

From the Administrative Settings Screen, seen in Figure 12, the user can reconfigure the CLC HMI and Monitoring System or reinitialize the MMS Monitor configuration setup. When initial UPS MMS Monitor System Setup is complete, a Setup Complete Flag is set and saved to the CF card. In the event that available power is lost, on power restoration, the HMI will confirm the Setup Complete Flag status and if set start up with the Main Overview displayed (MMS Monitoring System setup will not be necessary again as all data is stored and obtained from the CF card). In addition if the user needs to change the UPS MMS Monitoring System Configuration (Future addition or reduction of UPS Modules to expand or reduce the UPS MMS), the user can reset the Setup Complete Flag at the Administrative Settings Screen and the Setup Screens will immediately be displayed allowing the user to reconfigure the UPS MMS Monitoring System.

***Note:** See Appendix A for definitions of touch icons.

2.2.6 INITIALIZE CONFIGURATION WINDOW DETAILS

From the Administrative Settings Screen the user can reconfigure the CLC HMI or reinitialize the MMS Monitor configuration setup. When the initial MMS Monitor System Setup is complete, a Setup Complete Flag is set and saved to the CF card. In the event that available power is lost, on power restoration, the HMI will start-up with the Main Overview displayed. In addition, if the user needs to change the MMS Monitoring System Configuration, the user can reset the Setup Complete Flag at the Administrative Settings Screen and the Setup Screens will immediately be displayed allowing the user to reconfigure the MMS Monitoring System, through the window pictured in Figure 13.

Figure 13: Initialize Setup Complete Screen

***Note:** Pressing the Initialize CLC Stored Configuration icon will reset the monitor setup complete flag and return display to Setup Screen 1 (Figure 2).

2.2.7 CLC CONFIGURATION WINDOW DETAILS

From the Administrative Settings Screen the user can reconfigure the CLC diagram displayed on the Main Overview Screen. Each breaker label can be pressed to edit the label displayed. The Configure CLC Breaker Configuration Window Screen allows the optional breakers to be enabled/disabled to match the installation configuration. Both breaker labels and breaker configuration for the Main Overview CLC display are saved to the CF Card when the **Save and Goto Main Screen Touch Icon** is pressed, outlined in Figure 14.

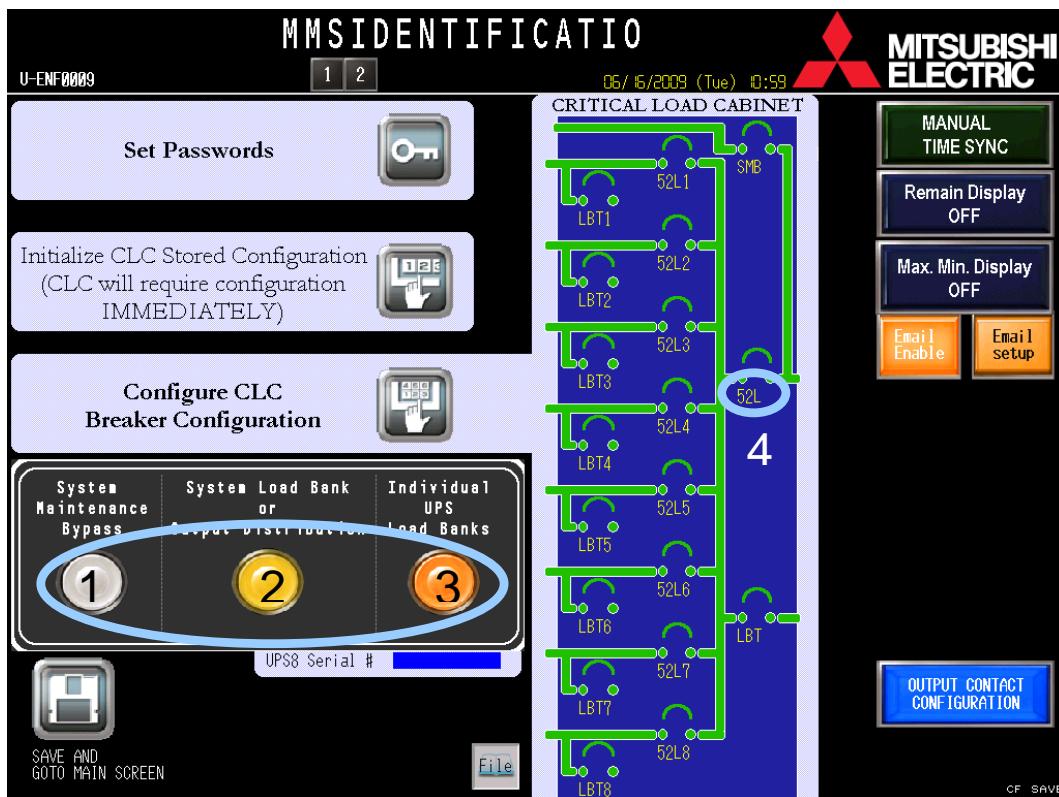

Figure 14: CLC Breaker Configuration

- 1. System Maintenance Bypass:** Activates the display of the SMB breaker and System Bypass path.
- 2. System Load Bank of Output Distribution:** Activates the display of the LBT breaker and System Load Bank Breaker Path.
- 3. Individual UPS Load Banks:** Activates the display of the LBTx breakers in parallel with the output isolation breakers, 52L(x).
- 4. Breaker Identification Screen Function Touch Icon:** Pressing any of the data display icons will display the text entry keypad to label the CLC breakers (5 character maximum).

2.3 PASSWORD SETTINGS SCREEN

The Password Settings Screen, seen in Figure 15, allows for customized OPERATOR and ADMINISTRATOR passwords for both Security Level 3 and Security Level 5, respectively. The passwords are input by pressing corresponding blue Password Setting Input Screen Function Touch Icon. The password can then be entered and once entered will be reflected in the corresponding Currently Configured Passwords Data Display. Changes must be saved in order for the previous password to be overwritten on the CF Card. If canceled, configured passwords will not be erased from the CF Card. Lost or forgotten passwords can be reset back to factory defaults by Mitsubishi Electric Service (please consult the service contact information on the labels of Mitsubishi Electric equipment).

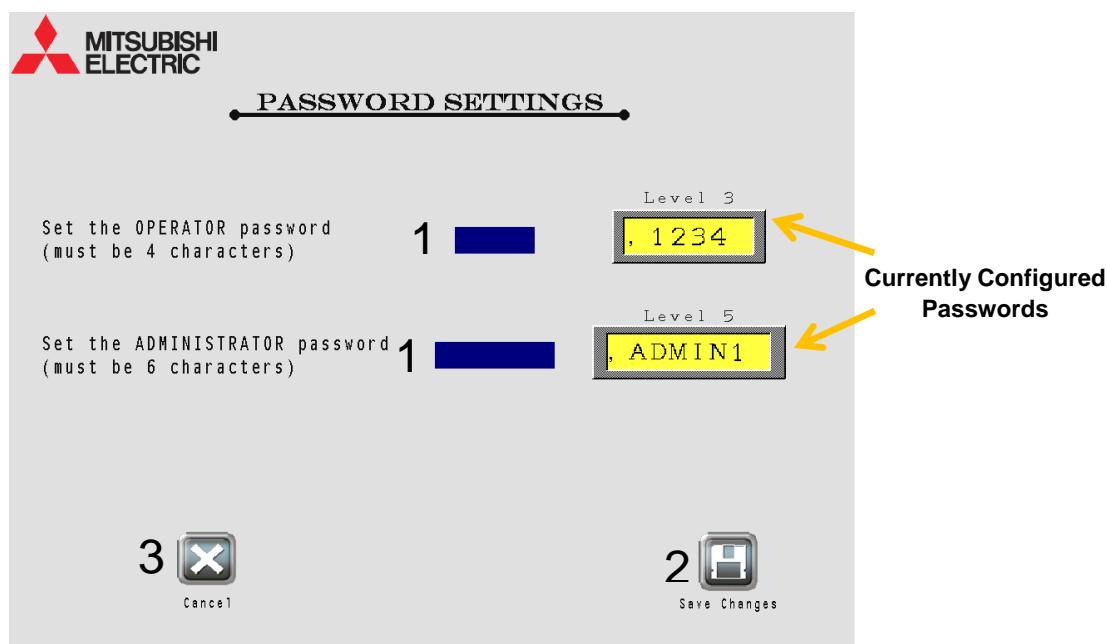

Figure 15: Password Settings Screen

- Entry of OPERATOR password (Security Level 3)
- Entry of ADMINISTRATIVE password (Security Level 5)
- Screen Function Touch Icons:
 1. Password entry fields
 2. Set Password button
 3. Cancel

2.3.1 PASSWORD SETTING INPUT SCREEN FUNCTION TOUCH ICONS

Pressing a Password Setting Input touch icon will display the input keyboard to change the desired password. The password is reflected in the Currently Configured Passwords data display and confirmed when the Save Changes Screen Change Icon is pressed.

2.4 ALARM OUTPUT / CONTACT SETTINGS SCREEN

MMS Monitoring System auxiliary I/O interface outputs are utilized for system dry contacts offering UPS MMS status and alarm notification. 8 user selectable outputs (Q0 through Q7) are available, being configured from the Alarm Output Contact Setting and Configuration Screens, as seen in Figures 16 &17.

2.4.2 DRY CONTACTS CONDITION TOUCH ICONS

Out 1,2,3,4,5,6 contacts can be configured so that they are closed (output energized) when the following conditions are satisfied, [seen in Figure 17](#):

System Conditions

- UPS MMS Inverter Operation
- UPS MMS Bypass Operation
- UPS MMS Overload
- UPS MMS Isolated
- System Maintenance Bypass Operation
- UPS MMS Sync to Bypass
- UPS MMS Alarm

UPS Module Conditions (For each UPS MMS UPS Module)

- UPS # Inverter Operation
- UPS # Bypass Operation
- UPS # Battery Operation
- UPS # Output Available
- UPS # Transfer Enable
- UPS # Inverter Sync
- UPS # Bypass Source available
- UPS # Battery Low Voltage
- UPS # Major Fault
- UPS # Overload

CLC Circuit Breaker Status

- 52L, 52L1,2,3,4,5,6,7,8, SMB CB

Miscellaneous

- System Maintenance Bypass Voltage Source Available
- No selection

2.4.1 SETTINGS SCREEN DETAILS

Pressing the Dry Contact Status Lamp icon (Q0,1,2,3,4,5,6,7) , seen in Figure 16, will display the Output Contacts Configuration Screen, seen in Figure 17 for the (Q0,1,2,3,4,5,6, or 7) specific Auxiliary I/O Output Contact. Pressing a Contact Selection Trigger Condition screen function touch icons will set the output contact condition variable. This Condition variable number will be stored in the CF card non-volatile memory.

Auxiliary I/O Outputs are utilized for system dry contacts offering UPS MMS status and alarm notification. As well as used in the Modbus register list.

2.4.3 CONDITIONS SCREEN FUNTION TOUCH ICON

Pressing a Contact Selection Trigger Condition Screen Function Touch Icon will set the output contact condition variable. The variable number will be stored in the CF card non-volatile memory. The selected condition will be briefly displayed in red before returning to the Output Contacts Settings Screen.

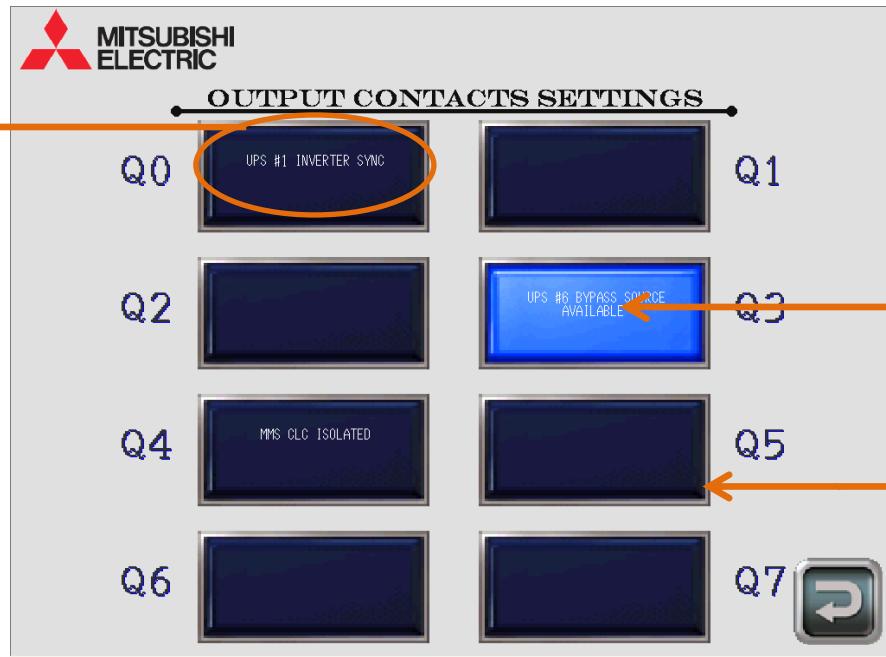

Figure 16: Output Contact Settings

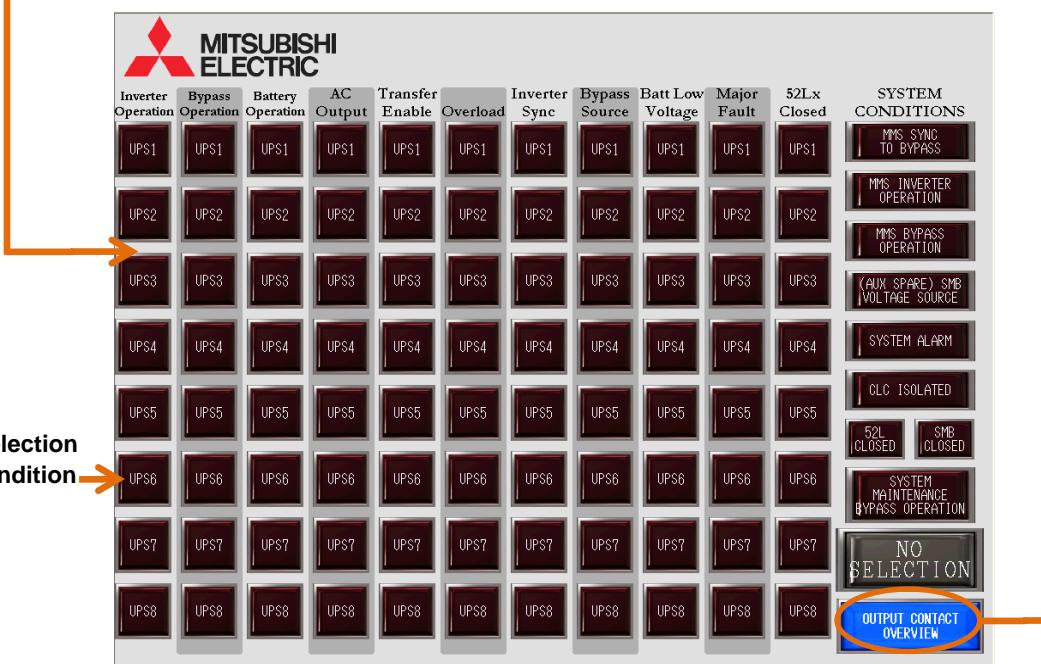

Figure 17: Output Contact Configuration

2.5 MAIN OVERVIEW SCREEN

The Main Overview Screen not only shows a complete Mimic diagram of the UPS's, but gives the user instant information and status of the complete MMS, and also offers orientation to other MMS Monitoring System Display Screens and functions. Features and functions of the Main Overview Screen are, as seen in Figure 18, 19 & 20:

- MMS Configuration Information
- Total MMS Mimic Display and Power Flow
- UPS Module component and CLC CB color status indication
- UPS Module and CLC Isolation Display
- Battery Discharge Data Window Display
- System Input and Output Measurement Data
- System Operation Status
 - UPS Module Alarm Indication
 - UPS Module Bypass Abnormal Alarm Indication (Including SYNC Alarm)
- UPS Maintenance Lockout Indication
- Date/Time Display
- Screen Selection Touch Icons
 - UPS Module Data Screen
 - System Alarm & Event Overview Data Screen
 - System Operation [Inverter↔Bypass] Transfer Window System Trend Data Screen
 - Administrative Settings Screen
 - Analog meter window Display Switch

2.5.1 DISPLAY DETAILS 1

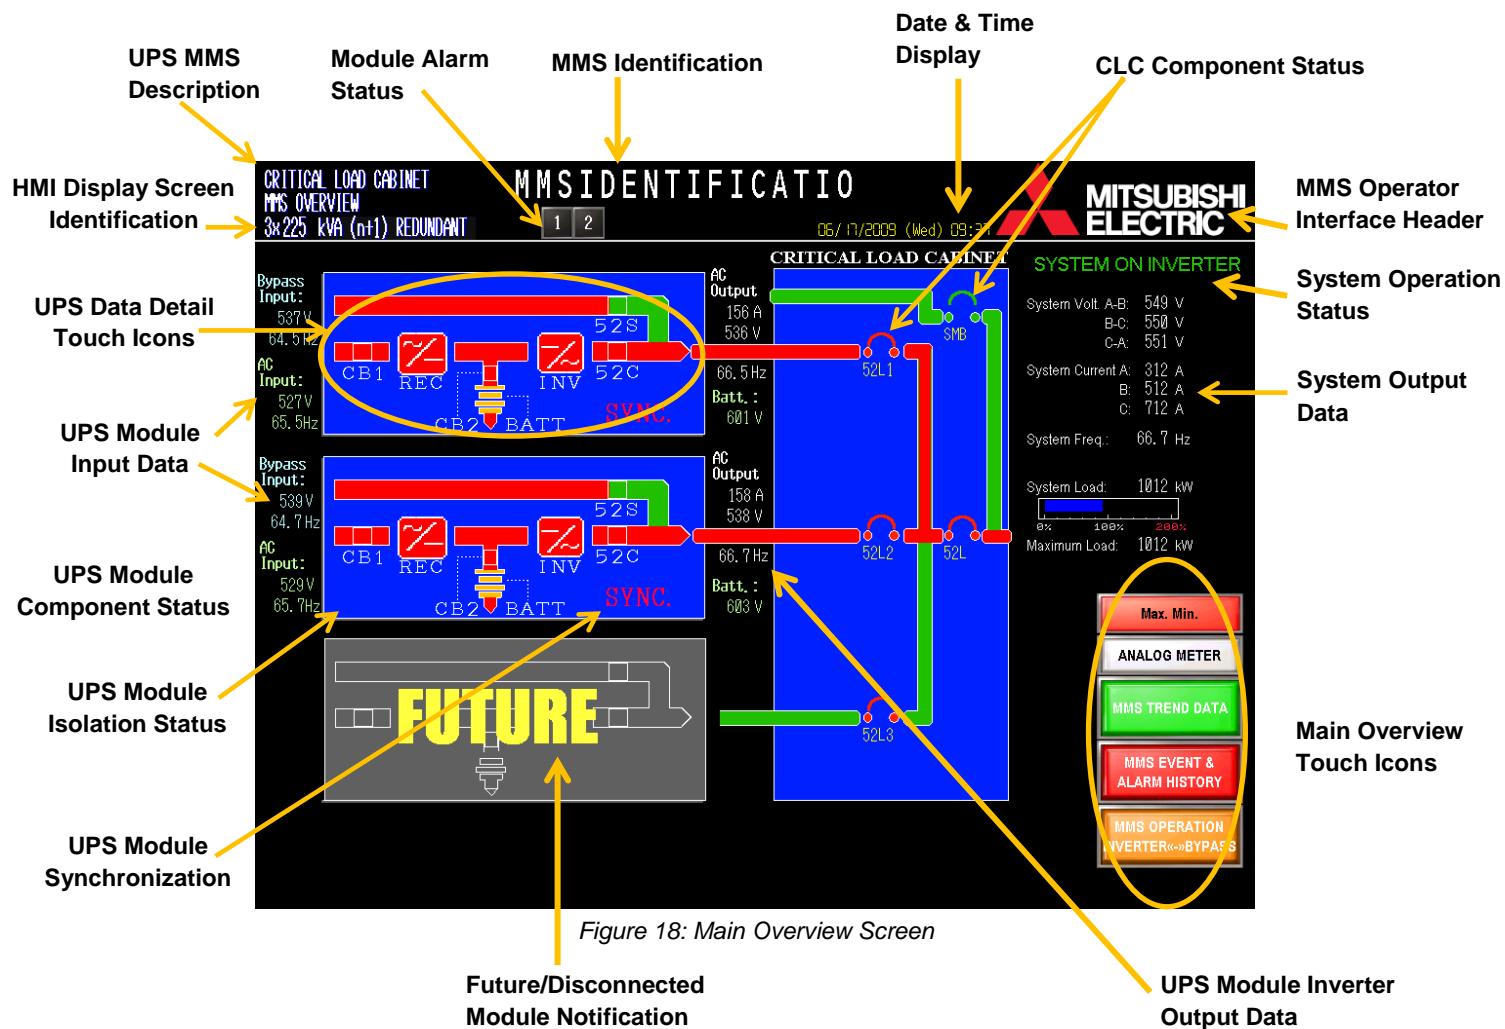

Figure 18: Main Overview Screen

*Note: See Appendix A for explanation of touch icons.

2.5.2 DISPLAY DETAILS 2

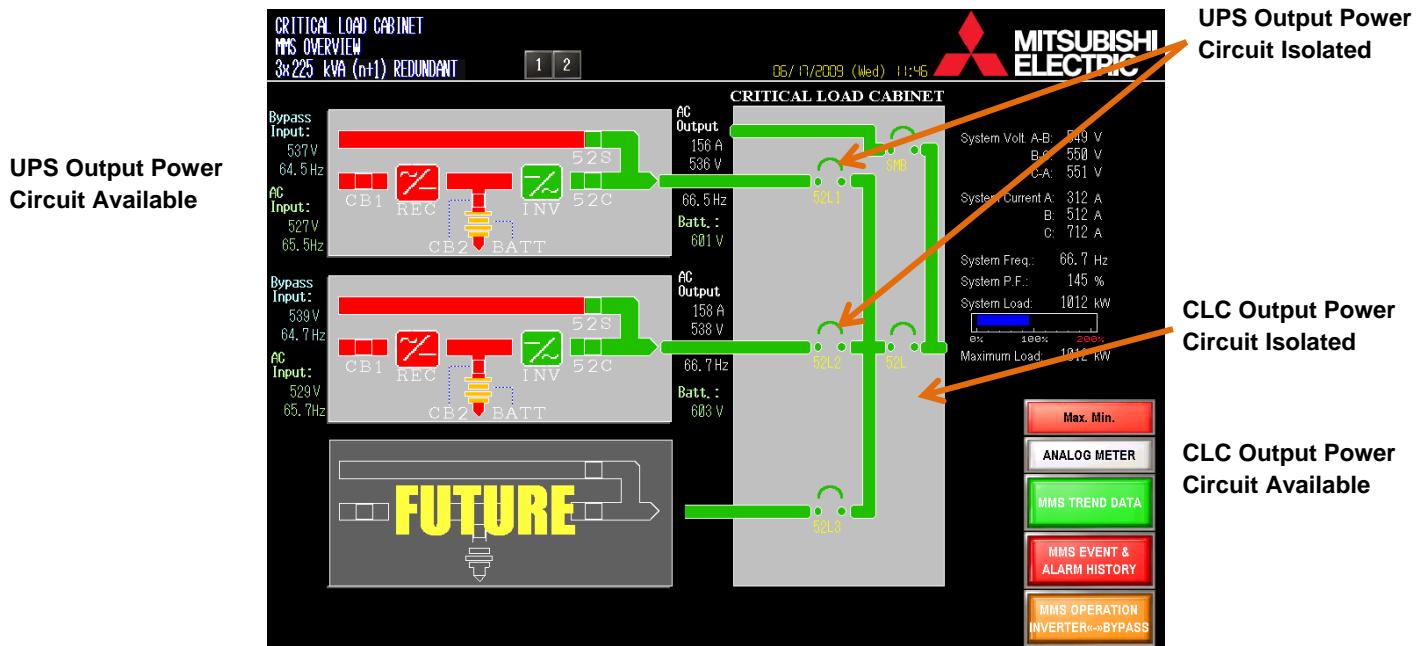

Figure 19: Main Overview Screen

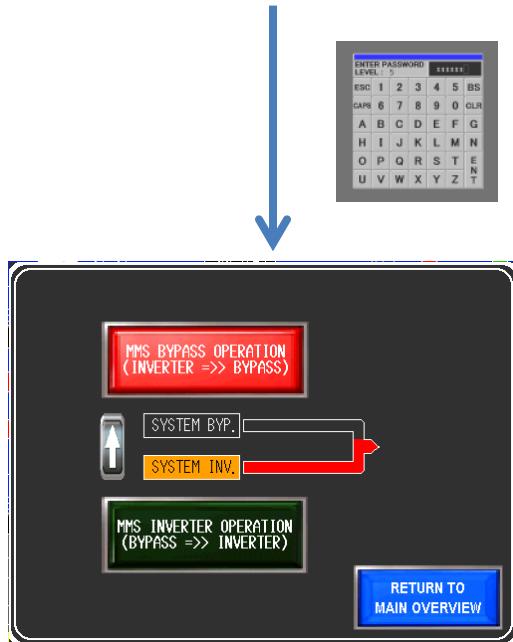

Figure 20: MMS Operation Inverter↔Bypass Window Display

*Note: See Appendix A for explanation of touch icons.

2.6 UPS MODULE DATA SCREEN

Individual UPS Module Data Screens desired (seen in Figure 21) can be accessed from the Main Overview Screen by touching the required UPS Module. More detailed information specific to each UPS Module is available on these screens. Features and functions of the UPS Module Data Screens are:

- UPS Module Characteristics and Information
- UPS Module Mimic Display and Power Flow
- UPS Module Component Color Status Indication
- UPS Module Input and Output Measurement Data
- UPS Module Indication
- UPS Module Battery Information and Log
- UPS Module Alarm Status
- UPS Module Bypass Abnormal Alarm Indication (Including SYNC Alarm) (*future*)
- UPS Module CLC Circuit Breaker Status
- UPS Maintenance Lockout Indication (*future*)
- Date/Time Display

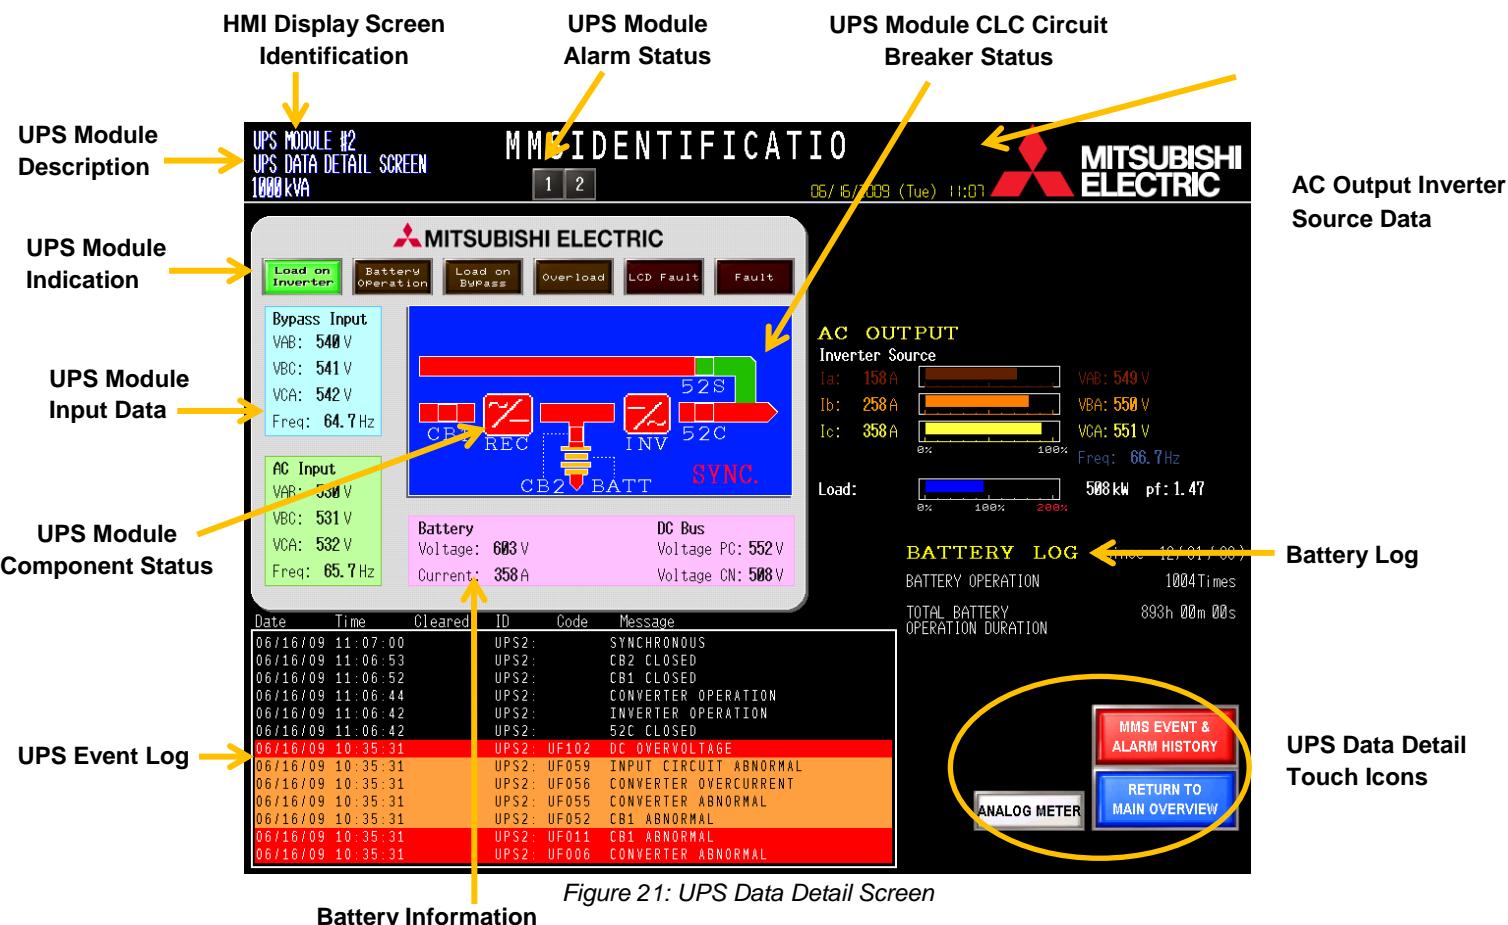

Figure 21: UPS Data Detail Screen

*Note: See Appendix A for explanation of touch icons.

2.6.2 USER ORIENTATION DETAILS

Pressing the HMI Screen Function Touch Icons will initiate the specific screen function action:

SMS Operation Bypass → Inverter Window Display

Pressing the SMS Inverter Operation Touch Icon starts the UPS inverter and closes the SMS Operation Bypass → Inverter Window Display.

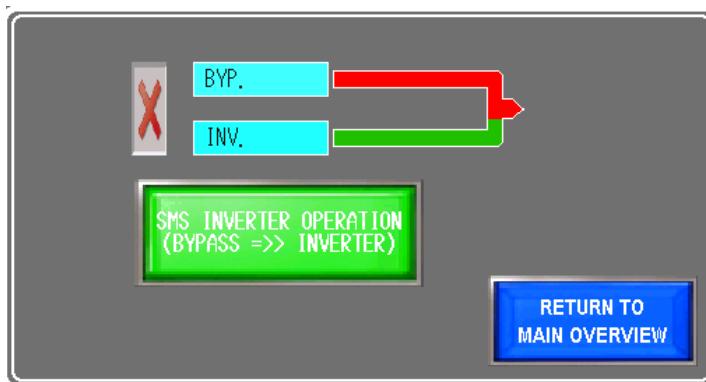

Figure 22: Inverter Window Display

SMS Analog Meter Window Display

Figure 23: Analog Meter Display

Touch Icons (Figure 23):

- Phase Selector: Changes the meters' displayed phase.
- Frequency Window Display: Toggles the Frequency Meter Window Display.

2.7 SYSTEM ALARM AND EVENT OVERVIEW DATA SCREEN

The System Alarm and Event Overview Data Screen display a history log of all active and restored UPS MMS Alarms and Events. Features and functions are:

- All UPS Module Alarm Groups
- Chronological recording and reverse chronological display of both Active and Restored Alarms
- UPS Module Alarm Fault Code and Message Display upon fault selection
- Date/Time Display
- Screen Function Touch Icons:
 - Show Cursor, Hide Cursor
 - Alarm Scrolling (Up, Down, Page Up, Page Down)
 - Export log to USB drive
- Screen Selection Touch Icons
 - UPS Module Alarm and Event Data Screens
 - Return To Main Overview Screen
 - System Trend Data Screen
 - Administrative Settings Screen (Security Level 5 required)

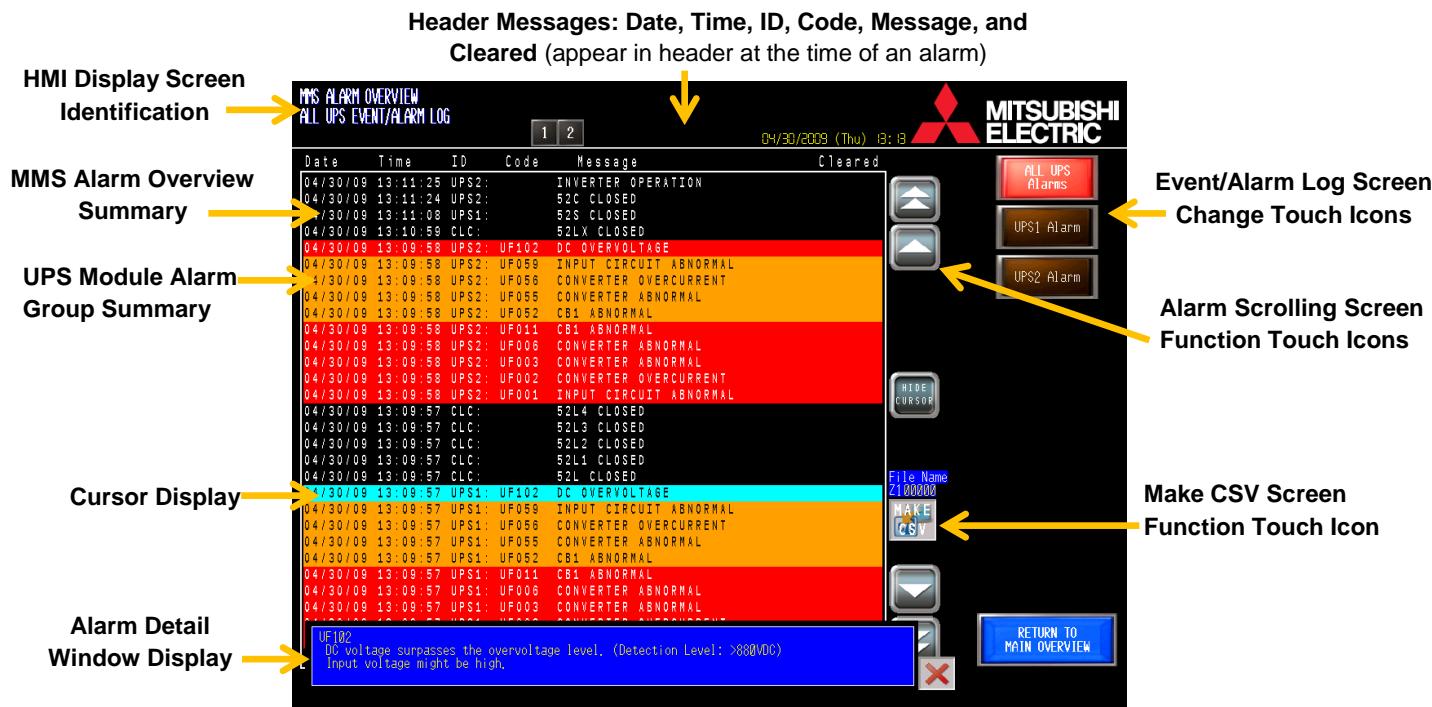

Figure 24: System Alarm and Event Overview Screen

*Note: See Appendix A for explanation of touch icons.

Total Number of log items that can be stored/displayed: 1000 (seen in Figure 24)

If total number of stored alarms exceeds 1000, the oldest stored log item will automatically be cleared (first in-first out queue).

Available Alarms:

- All UPS MMS UPS Module Alarms and associated Fault Codes.
- UPS MMS SYNC Alarm (UPS MMS Inverter Operation with Abnormal Bypass Source - Inverter Output not synchronized to bypass source)
- All UPS Module Battery Low Voltage Alarms

Event/Alarm Log Screen Change Touch Icons

The Event/Alarm Log of the current screen will be highlighted and pressing any of the available listed Event/Alarm Log Screen Change Touch Icon will display that particular log screen.

UPS Module Alarm Group Summary**Reverse Chronological UPS Module Alarm and Event Log**

Only Alarm Group associated with specific UPS Module is Displayed (UPS Module 1,2,3,4,5,6,7 or 8)

Available Events (subject to change):

- CLC Circuit Breaker Status (CB Closed active event, Open restored event)
- System Maintenance Bypass Voltage Available (Voltage active event)
- UPS MMS System Operation Status (Operation active event) [UPS MMS Inverter, Bypass, and SMB Operations, System Isolated, System Shutdown]
- All UPS Module Maintenance Lockout Status (Lockout condition active event)
- All UPS Module Component Status (On/energized active event)

2.8 UPS MODULE ALARM AND EVENT DATA SCREEN

The UPS Module Alarm and Event Data Screen, seen in Figure 25, display a history log of all active or restored UPS Module Alarms and Events. Features and functions are:

- Individual UPS Module Alarm Group
- Chronological recording and reverse chronological display of both Active and Restored Alarms
- Date/Time Display
- Screen Function Touch Icons:
 - Cursor Display
 - Alarm Scrolling (Up, Down, Page Up, Page Down, Top Alarm, Bottom Alarm)
 - Acknowledge All Visible/Cursor Selected Active Alarms
 - Clear All Cursor Selected Restored Alarm
 - Clear All Visible Restored Alarms
- Screen Selection Touch Icons
 - Main Overview Screen (Return to)
 - System Alarm and Event Data Screen
 - Other UPS Module Alarm Data Screens
 - System and UPS Status Event Data Screen
 - Administrative Settings Screen (Security Level 5 required)

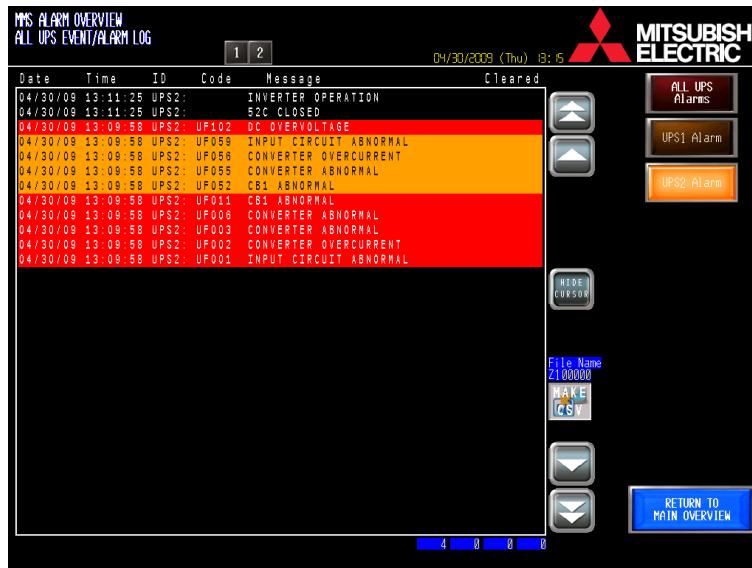

Figure 25: UPS Module Alarm Data Screen

*Note: Total Number of Alarms that can be stored/displayed: 1000

2.9 SYSTEM TREND DATA SCREEN

The System Trend Data Screen, seen in Figure 26, displays the System Output Power and Current Trends. Features and functions are:

- System Output Current Trend Data Display
- System Output Power Trend Data Display
- 1 min Sample Rate
- 12 hr. Visible Samples
- History Trend Data Display
- Date/Time Display
- Screen Function Touch Icons:
 - Forward/Back/Display Control Icons
 - Visible Scale Input
 - History Trend Date Selection
- Screen Selection Touch Icons
 - Main Overview Screen (Return to)

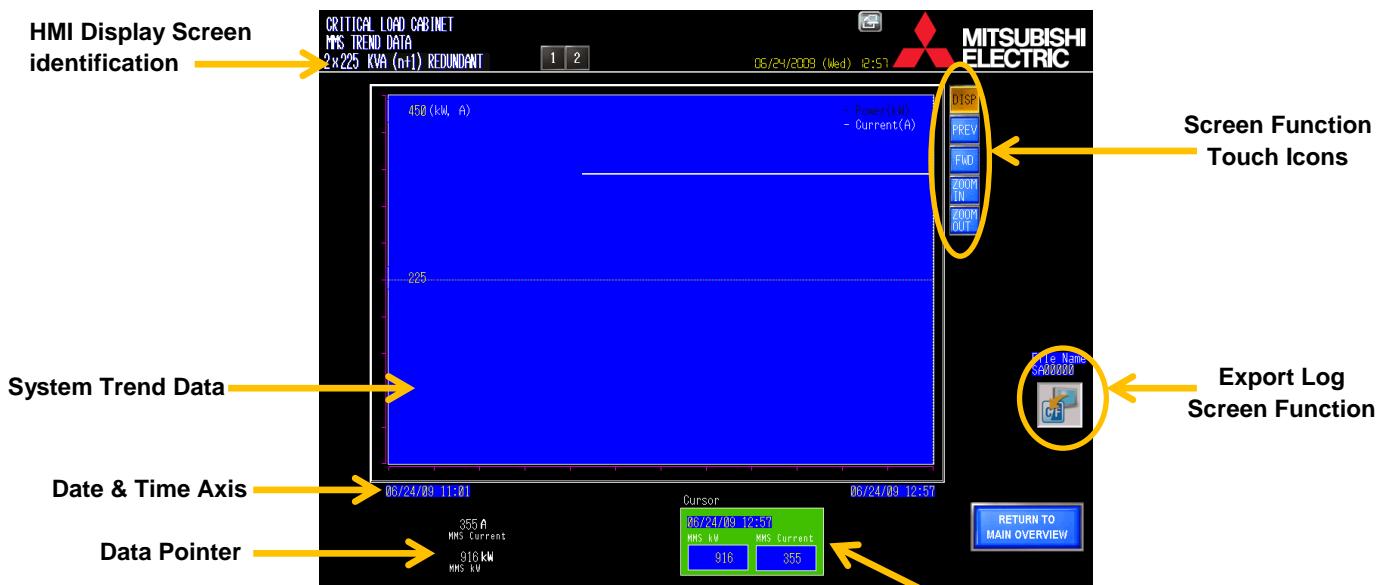

Figure 26: System Trend Data Screen

*Note: See Appendix A for definitions of touch icons.

*Note: Total number of samples that can be stored/displayed: 44200 (30 days)

2.10 SYSTEM OPERATION [INVERTER↔BYPASS] TRANSFER WINDOW

UPS MMS operation sequences are possible from the MMS Monitoring System HMI. System Bypass or Inverter Operation can be initiated from the System Operation [Inverter↔Bypass] Transfer Window, seen in Figure 27. System Operation Transfer sequences incorporates:

- Transfer from Normal UPS MMS Inverter Operation to UPS MMS Bypass Operation
- Retransfer from UPS MMS Bypass Operation to UPS MMS Inverter Operation

Access to the Bypass Operation Screens is Operator Password (Security Level 3) protected to stop unauthorized operation transfer of UPS MMS. System Operation [Inverter↔Bypass] Transfer Window has the following features and functions:

- Window Access OPERATOR Password Protected (Security Level 3)
- Single Initiation point for Operation Transfer Sequences
- Operation Transfer Sequences (Transfer Inverter↔Bypass, Bypass↔Inverter)
- Inverter Inhibit display
- Synchronization display prior to transfer operation (*future*)
- Individual UPS Module start up on Retransfer (Startup procedure displayed)
- UPS MMS Operation Status Display
- Screen Function Touch Icons:
 - Transfer Operations Initiation
- Screen Selection Touch Icons
- Return To Main Overview Screen

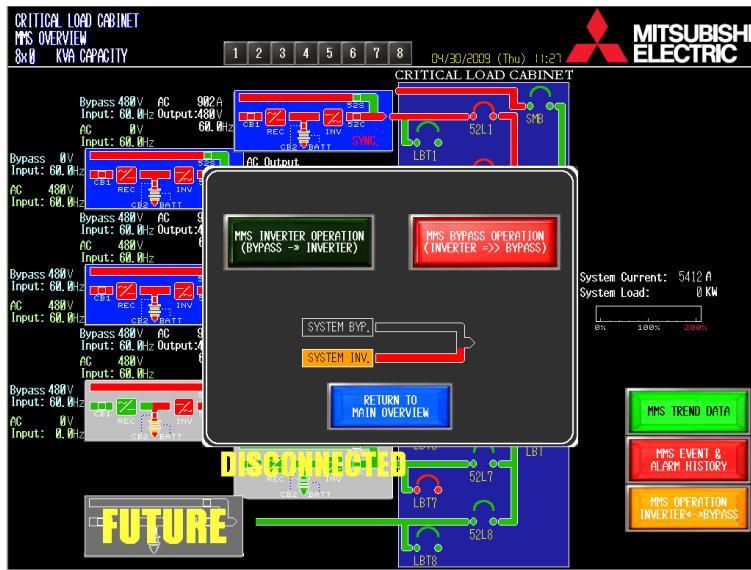

Figure 27: System Operation [Inverter↔Bypass] Transfer Window

Pressing the HMI MMS Operation Inverter ↔ Bypass Window Display Touch Icon on the UPS MMS Main Overview Screen will initiate access to the Transfer Operation Window. Access to the Transfer Operation Window requires the Operator Password [Security Level 3]

in order to prevent unauthorized operation of the UPS MMS, seen in Figure 28 & 29. Security Level 3 is required as a minimum (ADMINISTRATOR Password [Security Level 5] may also be used). When the window is closed the Security Level is immediately logged off (cleared).

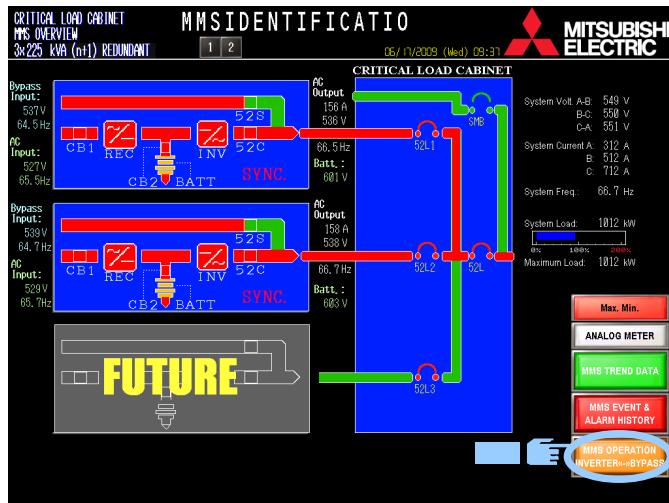

Figure 28: UPS MMS Main Overview Screen

Keypad Touch Icons

Input Security Level 3 password and press enter to access the Transfer Operation Window.

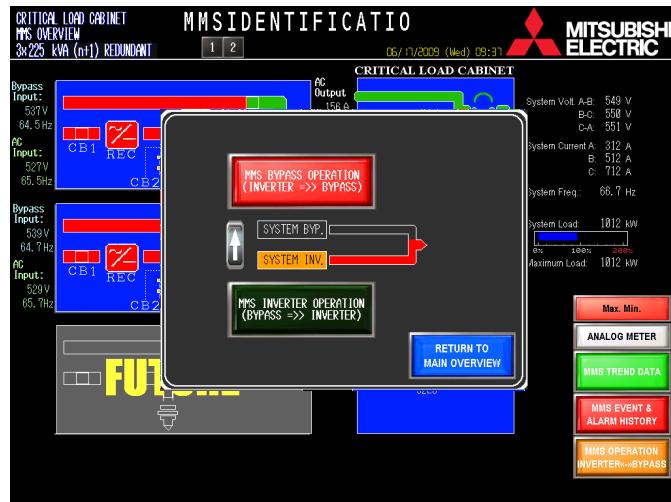

Figure 29: Transfer Operation Window

2.10.1 CONDITIONS

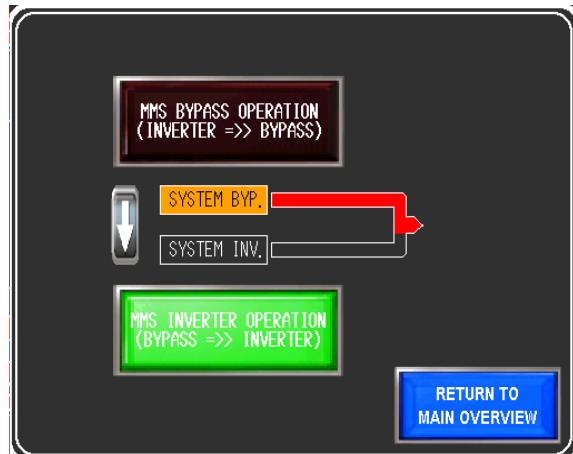

Figure 30: Bypass → Inverter (Transfer Enabled)

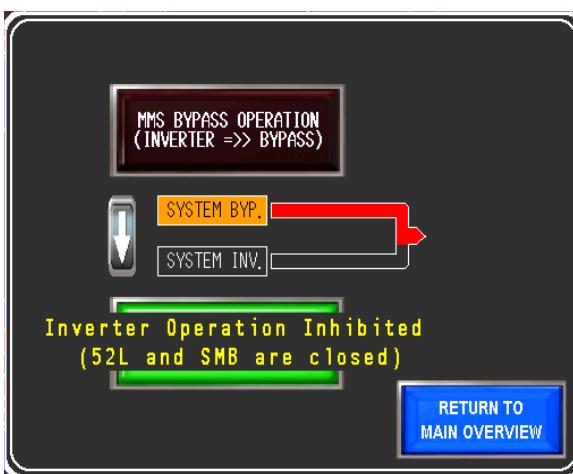

Figure 31: Paralleled Bypass & Maintenance Bypass (Transfer Inhibited)

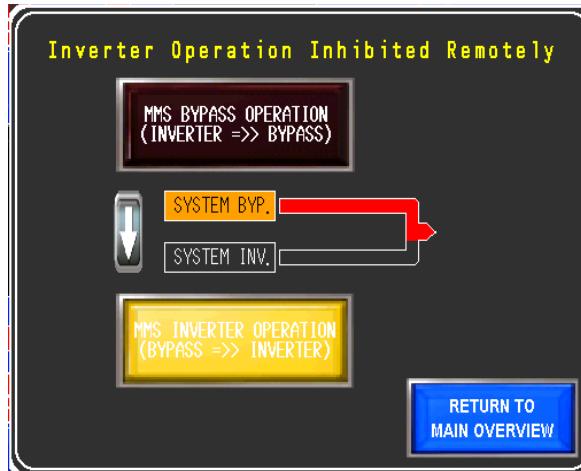

Figure 32: Bypass → Inverter (Transfer Inhibited)

2.10.2 SYSTEM INVERTER↔BYPASS OPERATION

The UPS MMS Transfer Operation Window allows transfer sequences dependent upon the current operation condition of the MMS. Inverter→Bypass transfers (Bypass Operation) is enabled when the MMS Bypass Operation Touch Icon is illuminated RED, seen in Figure 33. Bypass→Inverter transfers (Inverter Operation) is enabled when the MMS Inverter Operation Touch Icon is illuminated green. When the MMS Inverter Operation Touch Icon is illuminated yellow, transfer operation are inhibited from the HMI.

The mimic display in the center of the Transfer Operation Window illustrates in which operation condition the MMS is currently. The mimic display illuminates both the name and the power path of the current operation condition. Additionally the arrow guides the operator to which transfer operation may be enabled.

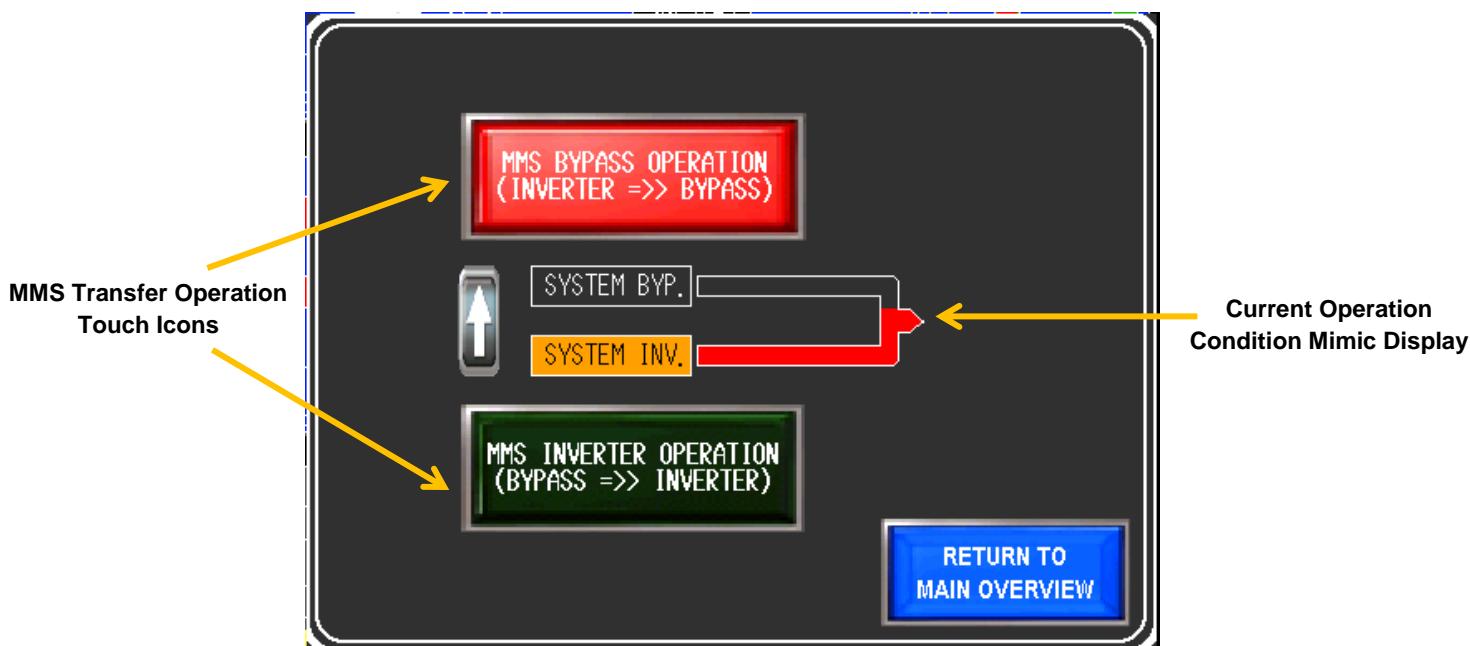

Figure 33: Bypass / Inverter Operation Window

UPS MMS Inverter to Bypass Operation Screen Function Touch Icon: Pressing either of the **UPS MMS Operation Screen Function Touch Icon** initiates the appropriate transfer operation sequence (if enabled), closes the Transfer Operation Window, and logs off (security level cleared).

***Note:** UPS MMS Inverter Output must be synchronized to the Bypass Source to allow transfer operation.

***Note:** See Appendix A for definitions of Touch Icons.

3. MMS MONITORING SYSTEM – HARDWARE

MMS shall consist of a CLC that parallel connects individual UPS module power circuits to offer system capacity or redundancy to support the critical load. The CLC consists of two sections, the power section and the monitoring section. The Monitoring Section shall be located in a separate enclosure to the Power Section and incorporate a monitoring system. The monitoring system consists of the following hardware and software:

- a.) PS-3711/PS4700ZA IP/AT Series Solid-state PC: 65,536 Colors, 15 inch touch screen with high communication capability – Gigabit Ethernet (1000 Base-TX) Ethernet (100 Base-TX).
 - [Model: Pro-face PS3711A-T42-24V-1G-XPC08-WG or PS47002]
 - The PS3711A IP/AT PC shall be the Monitoring System Human Machine Interface (HMI) and shall be located on the CLC door exterior.
- b.) Auxiliary I/O Modbus/TCP Interface – Telemecanique/Schneider-Electric Ethernet Distributed I/O Module.
 - [Model: Telemecanique/Schneider-Electric OTB 1E0DM9LP]
- c.) Ethernet Hub and cables (N Port depending on system UPS Module quantity).
 - Ethernet interface between PS-3711/PS4700ZA, Auxiliary I/O Modbus/TCP interface, and system UPS Module Graphic Operator Terminals (AGP-4200A/AGP-4300L GOTs)
 - [Model: Standard 10/100 Base-T(X) Ethernet Hub and cables (Phoenix unmanaged network switch 10/100 mbps hub or similar specification)]
- d.) PS-3711/PS4700ZA Runtime Software (WinGP) and Compact Flash Card (S/W Install, PS-3711/PS4700ZA Back Up Memory)
- e.) Associated power supplies

***Note:**

- 1.) UPS Module AGP-4200A/AGP-4300L GOT Software will be provided for each stand-alone UPS Module. Each UPS Module AGP-4200A/AGP-4300L GOT S/W will be specified a Target Name (UPS1, UPS2, UPSN etc.)
- 2.) IP Address allocation for each UPS MMS Monitoring System GOT device (CLC PS-3711/PS4700ZA and each UPS Module AGP-4200A/AGP-4300L GOT) will be default for Mitsubishi Electric standard system network configuration. For specific Customer IT department system configuration and interface, contact Mitsubishi Electric for details.
- 3.) Equivalent substitutes may replace above devices.

3.1 DEVICE CONFIGURATION

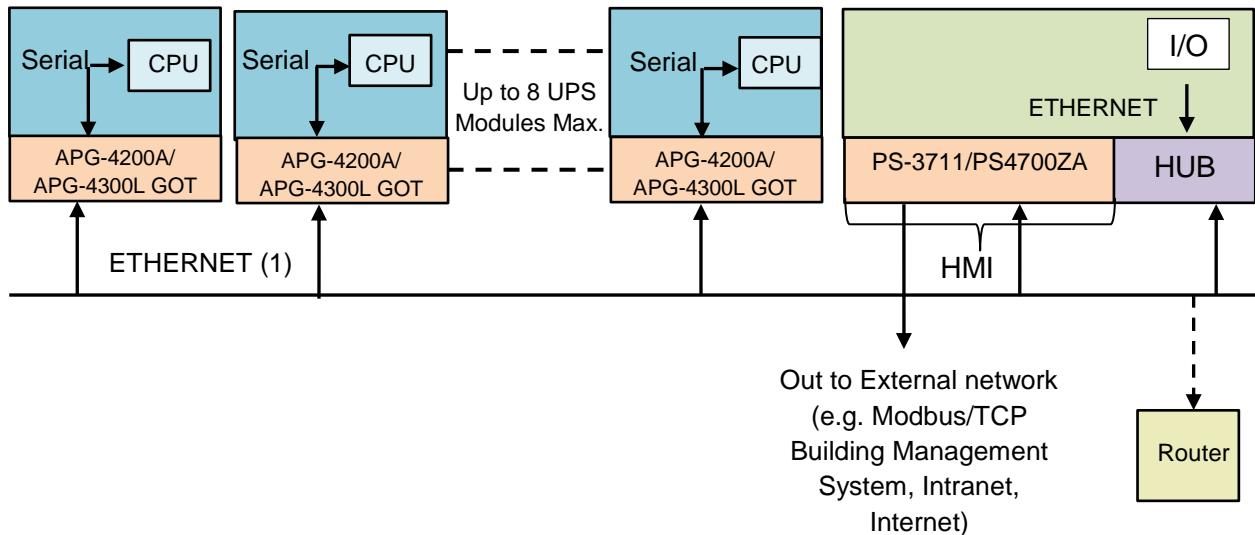

Figure 34: UPS MMS Monitoring System Configuration Block Diagram

***Note:** 1) Target name and IP Address allocation for each MMS Monitoring System GOT device (CLC PS3711A and each UPS Module AGP-4200A/AGP-4300L GOT) will be default for Mitsubishi Electric standard system Ethernet (1) network configuration. Ethernet (2) network configuration is configurable (e.g. DHCP). For specific Customer IT department system configuration and interface, contact Mitsubishi Electric for details. Refer to the following. UPS MMS Monitoring System Graphic Operator Terminals for Mitsubishi Electric Default Target Names and IP Address allocation.

2) Router and associated set-up and security are Customer Scope of work. Refer to Web Monitoring Function. See Figure 34.

3.3 AUXILIARY I/O MODBUS/TCP INTERFACE

Telemecanique Distributed I/O System for Network (OTB 1E0DM9LP)

High Speed Operation

Transfer Rate: 10/100 MB/s

Dual Twisted Pair or ConneXium medium

Reliable Connectivity

256 Maximum devices per segment, unlimited with switch

500 m (1640 ft.) Maximum network length; 1 km (3281) with ConneXium

Module Expandability

12 discrete inputs, 6 relay outputs, and 2 discrete outputs

Included 16 input discrete I/O expansion module (TM2 DDI 16DT)

Figure 38: Outside View - Auxiliary I/O Modbus/TCP Interface

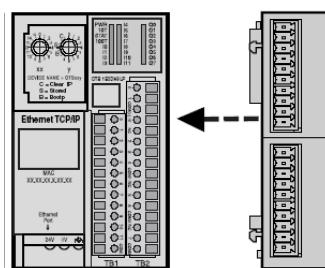

Figure 39: Connecting Points Input/Output

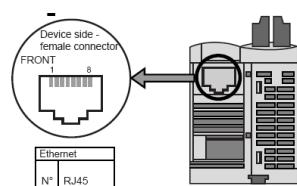

Figure 40: Ethernet Connecting Point

The following lists indicate the allocation for Auxiliary I/O Modbus/TCP Interface contacts within the UPS MMS Monitoring System.

Input/Output Specification

Total I/O: 36

Inputs: 28

Outputs: 8

UPS MMS Monitoring System I/O Configuration:

Input:

I0	CLC VMB (Spare)	2	CLC 52L7 CB
I1	CLC SMB CB	3	CLC 52L8 CB
I2	CLC 52L CB	4	CLC LBT5 CB
I3	CLC LBT (52LB) CB	5	CLC LBT6 CB
I4	CLC 52L1 CB	6	CLC LBT7 CB
I5	CLC 52L2 CB	7	CLC LBT8 CB

REVISIONS

This section is used to identify the originator and the specific changes made to a procedure as the result of a revision. Original procedures will be identified by the term 'ORIGINAL' in the Revision section of the footer and title page(s). Subsequent revisions will be identified by number. Recent revisions are highlighted.

Originator: M. Meinert
Original Date: 6/19/16
Revision Number: Original

REVISION	RELEASED	APPROVED BY	SIGNATURE	DESCRIPTION
ORIGINAL	6/19/16	M. Meinert		Original Release

AC Output Bypass Source Data:

- Bypass Input Voltage - VAB (V)
- Bypass Input Frequency (Hz)

AC Output Inverter Source Data:

- Inverter Output Current (Numerical and Bar Graph form)
- I_a, I_b, I_c (A)
- Inverter Output Line Voltage
- V_AB, V_BC, V_CA (V)
- Inverter Output Frequency (Hz)
- Inverter Load (kW) (Numerical and Bar Graph form)
- Inverter Output Power Factor

Battery Information:

- Battery Voltage (V)
- Battery Current (A)

Battery Status

- Charging
 - Discharging
- (REMAINING Battery Capacity % Displayed during Discharge Operation)

Battery Log:

- Battery Log Commencement Date
- Battery Operation Counter
- Total Battery Operation Duration
- Discharge Current Average

Breaker Identification Screen Function Touch Icon: Pressing any of the data display icons will display the text entry keypad to label the CLC breakers (5 character maximum).

CLC Circuit Breaker Status and UPS MMS Isolation: The Open/Close Status of the CLC circuit breakers depicts if UPS MMS power circuits are available or isolated. Color representation of each system UPS and the CLC is accordance with text displays indicate UPS MMS power circuit availability and isolation with respect to the critical load.

Default Settings:

- Blue: Power Circuit Available
- Grey: Power Circuit Isolated

CLC Component Status: Inputs/Outputs Circuit Breakers

- Red: On
- Green: Off (default settings)

CLC Output Power Circuit Available: The CLC output power circuit will be available if 52L and any one or more of the UPS Module output power circuit breakers (52L1, 52L2 and 52L3) are closed and powered - Red.

Or

CLC SMB circuit breaker is closed and powered - Red, supplying the critical load supplied from the System Maintenance Bypass source, that is UPS MMS SMB Operation.

The CLC output power circuit will be available and the CLC represented in blue.

CLC Output Power Circuit Isolated: CLC 52L and CLC SMB circuit breaker open - Green; or CLC 52L circuit breaker is closed - Red, but all UPS Module output power circuit breakers (52L1, 52L2 and 52L3 in this example) are open - Green: UPS MMS CLC output power circuit isolated. CLC Color represented in grey.

Configure CLC Breaker Configuration Screen Function Touch Icon: Pressing the **Configure CLC Breaker Configuration** window display icon will display the setup window to configure the breakers shown on Main Overview CLC diagram.

Current Operation Condition Mimic Display: Reflects the current operation condition (System Bypass Operation or System Inverter) of the MMS. The arrow indicates which Transfer Operation Touch Icon may be enabled.

Data Pointer: System Output Current Trend.

Date & Time Axis: Month/Day/Year Date Display
24 Hr., Min., Sec. Time Display scale the graph x-axis.

Date & Time Display: Month/Date/Year (Day) | 24 hr. Min., Time Display.

Email Enable: When enabled, email notification will occur and Email Setup is selectable.

Email Setup: Pressing the **Email Setup** icon will launch the Email settings external application.

Email Trigger Selection Touch Icons: Pressing any of the Email Trigger Touch icons will utilize that condition to initiate emails.

Export Log Screen Function: Pressing the Export Log Screen Function Touch Icon will generate a comma separated values text document of the entire trend log with the file name shown above. This log is stored on the CF card can be transferred to the USB media via file explorer.

File Explorer Screen Function Touch Icon: Pressing the **FILE** icon will display the file explorer for CF Card and USB file access.

Future/Disconnected Module Notification: Future UPS Module / Disconnected module Notification can be toggled by Mitsubishi Service.

History Trend Date Cursor Data: Touching the Trend data **Display** Touch Icon then touching the graph will place the cursor at that point on the graph. This will display the coordinate and trend parameters at the coordinate in the green cursor data display.

HMI Display Screen Identification: Administrative Settings Screen/Software Version/ UPS Module Data Screen/ MMS Trend Data Screen.

Initialize Setup Complete Flag Screen Function Touch Icon: Pressing the **Initialize CLC Stored Configuration** window icon will display the initialize configuration button.

Main Overview Screen: Return to Main Overview Touch Icon closes the Transfer Operation Window.

Main Overview Touch Icons

- Maximum/Minimum Reference Parameters Window Display

- Analog Meters Window Display
- MMS Trend Data Screen Change
- MMS Event & Alarm Log Screen Change
- MMS Operation Inverter ↔ Bypass Window Display

Manual Time Sync: When pressed will manual synchronize UPS modules to MMS Monitor Time (weekly auto-sync is uninterrupted).

Max. Min. Display: When enabled, maximum and minimum reference parameter are selectable from Main Overview Screen.

MMS Identification: Editable label for monitor.

MMS Operator Interface Header: Header repeated on every operator screen contains the Administrative Settings Touch Icon (Mitsubishi Logo) and other information repeated over Header.

MMS Transfer Operation Touch Icons:

- MMS Bypass Operation (Inverter→Bypass)
- MMS Bypass Operation (Bypass→Inverter)

Module Alarm Status

- No Active Alarms
- UPS Module Active Alarm

Output Contact Configuration Screen Change Touch Icon: Pressing the **Output Contact Configuration** icon will change the screen to the Output Contacts Settings Screen.

Remain Display: When enabled, Battery remaining calculations will be displayed on the Main Overview Screen during discharge operation.

Save Configuration Screen Function/Change Touch Icon: Pressing the **Save and go to Main Screen** icon will save Administrative Setting and change screen to the Main Overview Screen.

Screen Function Touch Icons: Pressing **Display** presents the current log data in graphical form on the graph, along with the ability to place the cursor by touch. Pressing the **Forward/Previous/Pause Control Screen Function Touch Icons** allows the user to scroll trend data.

System Identification Screen Function Touch Icon: Pressing this data display will display the text entry keypad to label the MMS Monitor.

System Output Data

- System Voltage (V)
- System Current (A)
- System Frequency (Hz)
- System Load (kW)
- Power Bar Graphical Representation
- System Load Capacity (kW)

System Trend Data: The System Trend Data Screen displays the System Output Trend Graph.

- System Output Current
- System Output Power
- 1 Min Sample Rate
- 12 Hr. Visible Samples
- Sample Rate Display
- History Trend Data

UPS Data Detail Touch Icons:

- SMS Operation Bypass → Inverter Window Display
- MMS Event & Alarm Log Screen Change
- Main Overview Screen Change
- Analog Meters Window Display
- UPS Module Data Detail Display Screen Change Icons

UPS Event Log: Event and Alarm Log.

UPS MMS Description

- UPS Module Quantity: 2,3,4,5,6,7,8
- UPS Module Capacity: kVA Rating
- UPS MMS Configuration: Parallel Redundant (N+1 etc.) or Capacity

UPS Module Alarm Status:

- Active Alarms (Refer to Alarm Data Screens) (Blinks when active)
- No Active Alarms

UPS Module CLC Circuit Breaker Status:

UPS Module CLC Circuit Breaker and power circuit status:

- UPS Module #1,2,3,4,5,6,7 or 8 Output Power Circuit Isolated. UPS Module Isolation color represented in Grey.

UPS Module Component Status:

- AC Input: Inverter
- CB1: 52C Output
- Rectifier: 52S Bypass
- CB2: Bypass Input
- DC Input: UPS Module Output
- Default Settings: Red (On), Green (Off)

UPS Module Description:

- UPS Module Target Name: 1,2,3,4,5,6,7,8
- UPS Module Capacity: kVA Rating

UPS Module Indication: Corresponds to 9900 UPS Module Operator Terminal LED

Indication Lamps. Lamps illuminates when signal is on:

- Load on Inverter (Green Lamp)
- Battery Operation (Yellow Lamp)
- Load on Bypass (Orange Lamp)
- Overload (Red Lamp)
- LCD Fault (Red Lamp)
- UPS Major Fault (Red Lamp)

UPS Module Input Data:

- Bypass Input Voltage – VAB (V)
- Bypass Input Frequency (Hz)
- AC Input Voltage – VAB (V)
- AC Input Frequency (Hz)
- Battery Voltage (V)

UPS Module Inverter Output Data: UPS Module Inverter Output Data is only displayed when UPS is on inverter (In Bypass Condition or UPS module shutdown no information is displayed):

- Inverter Output Voltage – VAB (V)
- Inverter Output Frequency (Hz)
- Inverter Output Current – Ia (A)

UPS Module Isolation Status: UPS Module Isolation Status Frame (Changes color to illustrate UPS isolation)

Settings:

- Blue: Active
- Grey: Isolated

UPS Module Synchronization: UPS Module Inverter Output Synchronization to Bypass Display (Only Displayed when in SYNC condition).

***Note:** Refer to UPS MMS Synchronization control description for details.

UPS Output Power Circuit Isolated: CLC 52L1/52L2 circuit breakers open - Green
UPS Modules #1 & #2 output power circuits isolated. UPS Isolation Color represented in grey.

UPS Output Power Circuit Available: CLC 52L1 circuit breaker closed - Red
UPS Module #1 output power circuit available. UPS Module Color represented in blue.

UPS Serial Number Screen Function Touch: Pressing any of the data display icons will display the text entry keypad to store module serial numbers for quick reference

Original Date: 6/19/16
Revision Number: Original

REVISION	RELEASED	APPROVED BY	SIGNATURE	DESCRIPTION
ORIGINAL	6/19/16	M. Meinert		Original Release

CLCII MONITOR SYSTEM MODBUS TCP REGISTER LIST

The data from the CLCII MMS Monitor System is presented as IEC61131 0-based holding registers (%MW). Several data parameters contain an implied decimal place for greater precision. For example, register 00078 indicates the bypass frequency of the bypass line and must be multiplied by 0.1 (a value of 599 indicates a frequency of 59.9Hz). These details are documented in the notes.

AUXILIARY I/O REGISTER LIST - OUTPUTS

Register	Bit	Description
%MW00005	:X08	[Q0] Discrete Output 1
	:X09	[Q1] Discrete Output 2
	:X10	[Q2] Relay Output 3
	:X11	[Q3] Relay Output 4
	:X12	[Q4] Relay Output 5
	:X13	[Q5] Relay Output 6
	:X14	[Q6] Relay Output 7
	:X15	[Q7] Relay Output 8

REVISIONS

This section is used to identify the originator and the specific changes made to a procedure as the result of a revision. Original procedures will be identified by the term 'ORIGINAL' in the Revision section of the footer and title page(s). Subsequent revisions will be identified by number. Recent revisions are highlighted.

Originator: M. Meinert
Original Date: 6/19/16
Revision Number: Original

REVISION	RELEASED	APPROVED BY	SIGNATURE	DESCRIPTION
ORIGINAL	6/19/16	M. Meinert		Original Release

Default Passwords

By default all security logins utilize Upper Case (CAPITAL) letters. When the “CAPS” button is selected lower case letters will be input.

<u>CREDENTIAL TYPE</u>	<u>SECURITY LEVEL</u>	<u>DEFAULT PASSWORD</u>
