SLIDE BUSH

SLIDE BUSH

The NB slide bush is a linear motion mechanism utilizing the rotational motion of ball elements. Since linear motion is obtained using a simple mechanism, the slide bush can be used in a wide variety of applications, including transportation equipment, food processing equipment, and semiconductor manufacturing equipment.

STRUCTURE AND ADVANTAGES

The outer cylinder of slide bush contains a ball retainer that is perfectly designed to control the circulation of ball elements, resulting in smooth linear motion.

Compact Machanism

The NB slide bush uses a round shaft for the guiding axis, resulting in space-saving, which allows for compact designs.

A Wide Variety of Shapes and Installation Methods

The NB slide bush is available in various types, standard, clearance-adjustable, open, flange, etc., for a various applications.

Selection According to Environment

NB slide bushes are available in standard and anti-corrosion types. Available options include steel-retainer suitable for use in harsh environments and resin retainer for low acoustic, low-cost requirement. Other options can be specified according to the application requirements.

Compatibility

The NB slide bush is fully compatible with a variety of shaft types.

Doublelip-Seal

Doublelip-seals reduce the grease leakage, keeping the same function as UU seals which prevent the foreign particles from entering the bush. (see page C-11)

Low Friction

The raceway surface is precision ground. Since the contact surface between the ball elements and the raceway surface is minimized, the NB slide bush provides low friction compared to other linear motion mechanisms.

GM Series

The GM slide bush makes efficient use of resin sub-parts making it possible to achieve an overall weight reduction of 30～50% compared with the SM slide bush. The ball return section is made of resin material, which serves for low noise operation. Also, cost-effectiveness expands the use of slide bush in many applications.

Block Type Series

Block type series is a unit of NB slide bush and a block type housing. A variety of block types are available such as precision-machined blocks, resin-made blocks, and cost-effective units, each contributes to higher accuracy, light-weight, and low-cost and design-time saving, respectively.

FIT Series

FIT series is a combination of NB slide bush and precision-machined shaft. The best-fit between slide bush and shaft achieves a smooth, high-accuracy performance meeting the customer requirements. (see page C-13)

BLOCK SERIES

	single	double-wide
SMA・AK・SWA Type This type is the most commonly used standard type. The housing is made of aluminum alloy. The wide (W) type is also available for SMA and AK types.	SMA type  P.C-118	SMA-W type  P.C-120
	AK type  P.C-122	AK-W type  P.C-124
	SWA type  P.C-140	
SMP Type The housing has a self-aligning feature. This feature will absorb inaccuracy of the installation base so that a smooth movement is expected.	SMP type  P.C-126	
SMJ ・ SWJ Type Clearance-adjustment is achieved by creating a slit on the SMA/SWA type housing. Less clearance between block and shaft results in higher positioning accuracy by tightening the adjustment screw.	SMJ type  P.C-128	SWJ type  P.C-142
SME・SMD・SWD Type Open type housing allows a support from below so that a deflection of the shaft is minimized for high loading or long-stroke applications. The wide(W) type is also available for SME type.	SME type  P.C-130	SME-W type  P.C-132
	SMD type  P.C-134	SWD type  P.C-144
CE・CD Type This type is a unit of block(s), shaft, and support rail that contributes to a total cost reduction. The maximum length is 2,000mm for the support rail and for the shaft the maximum length is 4,500mm.	CE type  P.C-136	
	CD type  P.C-138	

SPECIFICATIONS

Series

The NB slide bush is available in three primary dimensional series, each with different dimensions and tolerances depending on the location of use. Please select the series that is most appropriate for your location.

Table C-5 Series and Use Location

series		location			
		Japan	Asia	Europe	North America
metric	SM	◎	◎	○	○
	GM				
	KB	○	○	◎	○
inch	SW	○	○	○	◎

◎ generally used ○ rarely used

Allowable Load

NB slide bushes are categorized into three functional types depending on the number and location of retainers: single, double, and triple. Table C-6 shows load ratings and static moment in comparison. The single type uses only one retainer, so when a moment load is to be applied, the double or triple type is recommended.

Table C-6 Load Comparison

type	basic dynamic load rating	basic static load rating	allowable static moment
single	1	1	1
long	1.3	1.8	approx. 4
GM-W	1.6	2	approx. 4
SM double	1.6	2	approx. 6
triple	1.6	2	approx.21

※ The single type is designated as "1" for comparison purposes.

Material

The outer cylinder of standard type is made of bearing steel and the outer cylinder of anti-corrosion type is made of Martensitic stainless steel. The retainer is available in steel (stainless steel for anti-corrosion), and resin for low acoustic operation. The steel retainer is made of one plate (seamless type).

Table C-7 Operating Environment Temperature

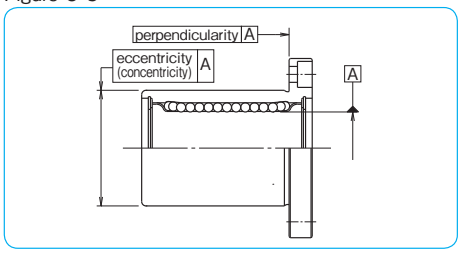
material		temperature range
outer cylinder	retainer	
steel	steel	−20℃～110℃
	resin	−20℃～ 80℃
stainless	steel	−20℃～140℃*
	resin	−20℃～ 80℃

* If a seal is used in the stainless steel slide bush, the temperature is up to 120℃. Please contact NB if a temperature range exceeds 140℃.

ACCURACY

The accuracy of the NB slide bush is represented as eccentricity (concentricity) and perpendicularity as shown in Fig. C-3.

Figure C-3



LIFE CALCULATION

Since ball elements are used as the rolling element in the NB slide bush, the following equation is used to calculate the travel life.

$$L=\left(\frac{f_H \cdot f_T \cdot f_C}{f_W} \cdot \frac{C}{P}\right)^3 \cdot 50$$

L: rated life (km) f_H: hardness coefficient
f_T: temperature coefficient f_C: contact coefficient
f_W: applied load coefficient C: basic dynamic load rating (N)
P: applied load (N)
*Refer to page Eng-5 for the coefficients.

If the stroke distance and number of strokes per unit time are constant, the life time is calculated using the following equation.

$$L_h=\frac{L \cdot 10^3}{2 \cdot \ell_s \cdot n_1 \cdot 60}$$

L_h: life time (hr) ℓ_s: stroke length (m)
L: rated life (km) n_1: number of cycles per minute (cpm)

LOAD RATING FOR OPEN TYPE SLIDE BUSH

For the open type slide bush an opening is provided to allow the shaft to be supported from underneath. In case a load is constantly applied in the direction of the opening (for example, being used with a vertical shaft or an overhang loading is applied), the load rating decreases due to less number of loaded rows of ball elements (Table C-8). Therefore, the load rating must be calibrated at the time of design based on the direction of the loading.

Table C-8 Direction of Load and Basic Static Load Rating

part number	SM10G～16G-OP KB10G～16G-OP SW 8G～10G-OP SME (D) 10G～16G CE (D) 16 (The loading from below cannot be received by retainer made of stainless steel.) loading from below	Load P 	Load P 	Load P 	Load P 	0.64C	0.54C	0.57C	0.35C

※ Excludes all 3-row steel retainer types. Please contact NB for 3-row steel retainer.

MOUNTING

Examples of Mounting methods are shown in Figures C-4～7.

Figure C-4 Standard Type

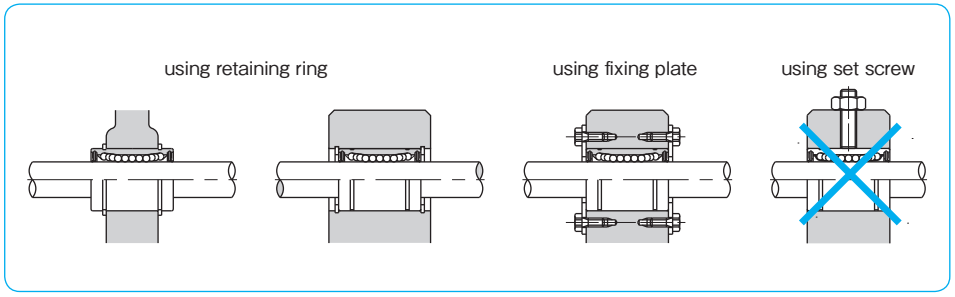

Figure C-5 Clearance Adjustable Type

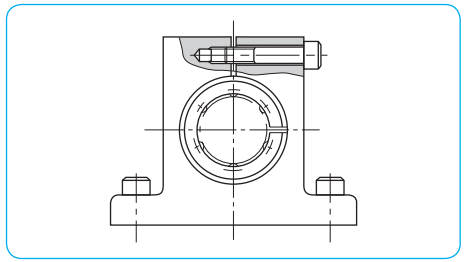

Figure C-6 Open Type

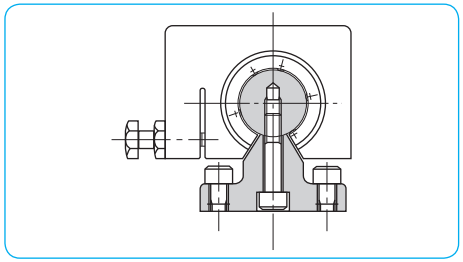

Figure C-7 Flange Type

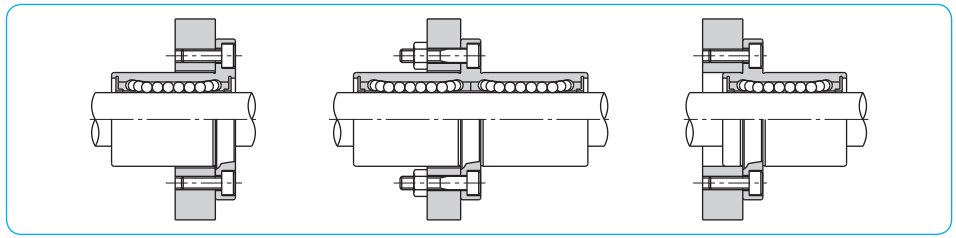

Fit

The normal clearance fit listed in Table C-9 is generally selected as a shaft outer diameter tolerance for the NB slide bush. The transition fit is selected for a higher accuracy by reducing clearance between slide bush and shaft. Matching bush and shaft (FIT series) is also available for customer's specified clearance. Please be cautious not to apply excess preloading with clearance adjustable and open types. Please keep pre-loading within the maximum radial clearance listed in the dimension table. The flange-type bush is generally inserted into an installation bore, which is slightly larger than the outer cylinder. However, if the outer cylinder is used as the pilot, H7 tolerance is recommended for housing.
The recommended clearances for the flange type are listed in Table C-10.

Table C-9 Recommended Fit

series	accuracy grade	shaft diameter		housing inner diameter	
		clearance fit	transition fit	clearance fit	transition fit
SM	high	g6	h6	H7	J7

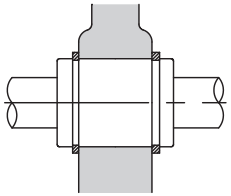
Notes on Shaft Selection:

In order to ensure a high accuracy motion of the bush, it is essential to select a high quality shaft.
In selecting a shaft, please take note of:
Hardness: 58HRC or more (refer to hardness coefficient on page Eng-5) recommended
Surface Roughness: less than Ra0.4 recommended

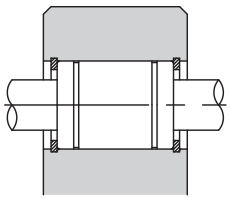
Retaining Ring for Mounting

It is possible to mount NB slide bush by retaining ring.It is recommended to select the retaining ring with reference to the Table C-11

Figure C-8 Retaining Ring



retaining ring for outer cylinder



retaining ring for housing

Table C-11 Applicable retaining ring

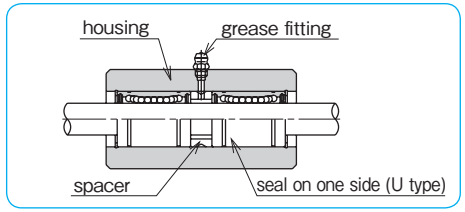
LUBRICATION

It is important to lubricate the slide bush for an accurate operation and for a long life. Anti-rust oil is applied to NB slide bush prior to shipment. The NB selected anti-rust oil has a little effect on the lubricant, however, please apply lubricant after cleaning the slide bush by, for example, kerosene, etc.

Grease Lubricant

Prior to usage, please apply grease, then re-lubricate periodically according to the operating conditions. (Lithium soap-based grease is recommended.) Re-lubrication can be done by directly applying grease inside the ball bush or by using a grease fitting as Figure C-9 shows.
A special low dust generating grease is optional for clean room application, please refer to page Eng-40.

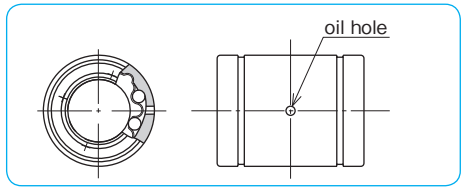
Figure C-9 Grease Fitting



Oil Lubricant

Prior to usage, please apply oil directly to the shaft surface or by using an oil hole as Figure C-10 shows. Turbine oil (ISO standard VG32-68) is recommended.
Oil holes can be machined (see Figure C-10) in the center portion of the outer cylinder. Please contact NB for oil hole specification.

Figure C-10 Oil Hole -Specification-

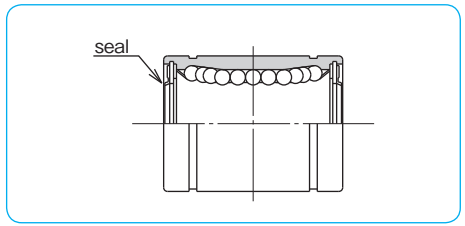


DUST PREVENTION

Seal

The seals prevent dust from entering the slide bush in order to retain the motion accuracy, resulting in a long life time. The UU type is a standard option that has seals on both sides. The U type has a seal on one side only and is available for the standard, clearance adjustable, and open types. Nitril rubber, which has low wear and good sealing characteristics, is used as the seal material.
* Resin seals are used for GM and GW series.

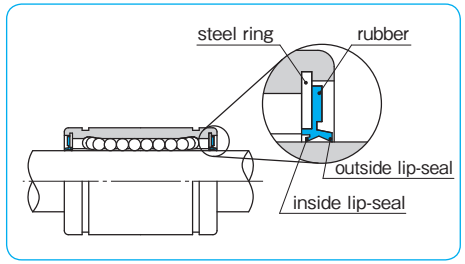
Figure C-11 Seal Profile



Doublelip-Seal

A doublelip-seal is a combination of outside lip-seal and inside lip-seal. Outside lip-seal prevents foreign particles from entering the bush and inside lip-seal prevents grease from leaking out of the bush.
By the doublelip-seal, the seal resistance shall be increased by some margin. Applicable Part Number: SM(S) 6 to 30, TRF 6 to 30.
Please refer to the dimension table for seal option.

Figure C-12 Doublelip-Seal



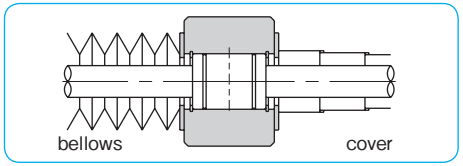
Fluororubber Seal

For a high temperature application, fluororubber seals are available on the SM series size 3 to 30. Please contact NB for details.

COUNTERMEASURE FOR DUST PREVENTION

A smooth ball circulation is hindered by dust or foreign particles inside the slide bush. Seals on both sides is a standard option for the NB slide bush, however, in a harsh environment it is necessary to attach bellows or protective covers.

Figure C-13 Example of Dust Prevention



Felt Seal (Except Flange Type)

If the above dust prevention mechanism is difficult to design, a felf seal is recommemded. Due to the oil impregnation effect of the felt, it is possible to extend the lubrication interval and to improve dust resistance.

●Instruction

The felt seal is used by press-fitting into a housing which is manufactured according to the recommended fits in Table C-9.

Stopper of slide bush is necessary other than felt seal.

Insert it between the slide bush and retaining ring as shown in the left figure of Fig. C15, or provide a place to press fit outside the retaining ring as shown in the right figure.

※At the time of shipment, the oil impregnation to the felt seal is not applied.

Figure C-14 Felt Seal

FIT SERIES

Due to the combined tolerances of the bush's bore and the shaft's diameter, accuracy can be affected by clearance or increased dynamic friction caused by preloading.

NB's FIT Series takes advantages of the lower cost slide bush and the precision ground shaft to achieve a target clearance in order for the linear system to produce a smooth, high-accuracy performance.

part number structure

example **F– SMS25GUU ×1 ／ SNS25×550**

- F– : FIT series
- SMS25GUU : slide bush part number
- ×1 : number of slide bush on one shaft
- SNS25×550 : shaft part number

・Please refer to corresponding catalog pages for details.

・Please specify on the drawing about the shaft machining, radial clearance, match-marking, etc.

Recommended Radial Clearance

Depending on the type of application, the clearance range varies, please use the chart below as a guideline.

target	clearance (+) ← 0 → clearance (−)
light motion	
high accuracy	
no play	

Slide Bush, Radial Clearance (−) , Negative Limit

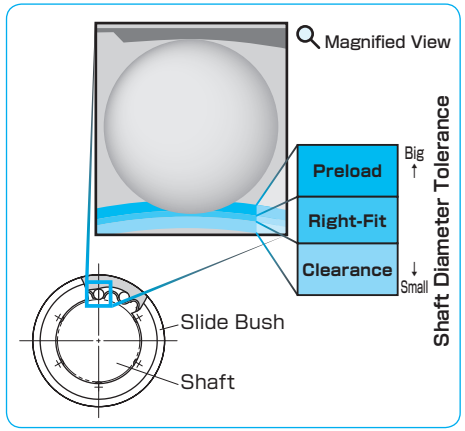
Negative clearance is opted to reduce backlash. Please refer to the chart below for the negative clearance limits.

size	3~8	10~13	16~25	30~35	40	50~60
radial clearance limit	−3μm	−4μm	−6μm	−8μm	−10μm	−13μm

・The off-center of the housing causes uneven loading on the slide bush, please pay special attention to the centering of the housing especially when negative clearance is a requirement.

・Please contact NB for details on the extra preloading requirement or on other part numbers like SRE, SR, etc.

Figure C-16 Radial Clearance between Slide Bush and Shaft



SURFACE TREATMENT AND ANTIRUST EFFECT

In order to adapt various kinds of environment, NB provides flange bushs with surface treatment as a standard.

Table C-13 Surface Treatment

part number	surface treatment	anti-rust effect	color
SK	electroless nickel plating	◎	silver
LF	low temperature black chrome treatment with fluoride coating	◎	black
SB	black oxide (excluding anti-corrosion type)	△	black
SC	industrial chrome plating	○	silver
standard	High-carbon chromium bearing steel (without surface treatment)	—※2	silver
anti-corrosion	Martensite stainless steel (without surface treatment)	○	silver

◎:excellent ◎:highly effective ○:effective △:mildly effective

※1 : Please note that tolerance of bushes with surface treatment may be different from the tolerance in dimension table. Please contact NB for details of thickness of plating.

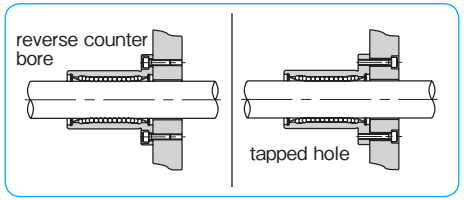
※2 : In order to prevent corrosion, please do not leave de-greased standard bush without surface treatment.

SPECIAL SPECIFICATIONS

●Special Specifications

Please contact NB for more information on surface treatment, oil hole (Figure C-10), flange mounting hole (Figure C-17), etc.

Figure C-17 Examples of Special Installation Hole



ACCURACY OF CE・CD TYPE

The accuracy of CE・CD-type support rails are measured as shown in Figure C-18.

Figure C-18 Accuracy Measurement

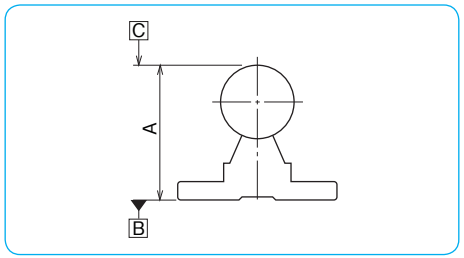


Figure C-19 Accuracy of CE・CD-type Support Rails

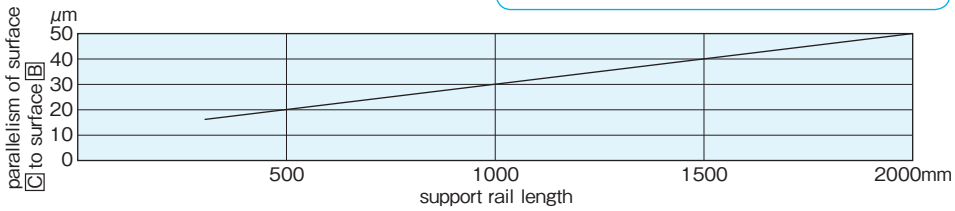

USE AND HANDLING PRECAUTIONS

The NB slide bush is a precision component, please handle with care to maintain its high motion accuracy.

The slide bush is designed for linear motion, so that for applications in which a combination of linear and rotational motion is a requirement, let us recommend Stroke Bush, Slide Rotary Bush, or Rotary Ball Spline.

Notes on Installation

When inserting a slide bush into a housing, carefully insert it by using a jig to apply a uniform pushing force at the end of the outer cylinder, as illustrated in Figure C-21. Motion performance may be diminished if an excessive force is applied to the resin portion of the outer cylinder, the side-ring, or the seal.

Ensure that all burrs are removed from the shaft and carefully install the bush by aligning it with the center of the bore. Excessive force may drop out the ball elements during insertion.

When two or more shafts are used, the parallelism of the shafts will greatly affect the motion characteristics and life of the slide bush. Please check the parallelism by moving the slide bush back and forth the length of stroke to check for freedom of movement before final fixing of the shaft.

Please refer to page F-3 for shaft specifications.

GM Standard Type

Please avoid a tension load when retaining rings are used for installation.

NOTES ON USAGE OF BLOCK SERIES

Reference Surface

The NB slide units have a reference surface as shown in Figure C-23. Accuracy is achieved by simply pushing the reference surface against the shoulder of the installation surface. (Excluding RBW and SMP types)

Clearance Adjustment

On the clearance adjustment type please avoid excessive preloading. In the same manner please do not apply excessive torque when tightening the screws.

Mounting of RBW Type

RBW type has a resin housing. Table C-14 shows proper torque values.

Recommended Fit

For clearance fit please use a shaft with g6 tolerance and for transition fit a shaft with h6 tolerance. (Excluding adjustable-clearance and open types)

Special Installation Case of SMJ Type

Special mouting holes will be required for installations such as Figure C-24 shows. Please contact NB for special requirements.

- outer cylinder surface treatment
  blank: no surface treatment
  SK: electroless nickel plating
  LF: low temperature black chrome treatment with fluoride coating
  SB: black oxide (not available on anti-corrosion type)
  SC: industrial chrome plating

Doublelip-seal is available for size 6 to 30.

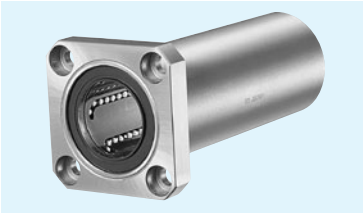
SMK-W TYPE

– Square Flange Double-Wide Type –



part number structure

example **SMSK 25 G W UU - SK**

- specification
  SMK: standard
  SMSK: anti-corrosion
- inner contact diameter (dr)
- retainer material
  blank: standard/steel
  anti-corrosion/stainless steel
  G: resin
- double-wide type
- seal
  blank: without seal
  UU: seals on both sides
  ZZ: doublelip-seals on both sides
- outer cylinder surface treatment
  blank: no surface treatment
  SK: electroless nickel plating
  LF: low temperature black chrome treatment with fluoride coating
  SB: black oxide (not available on anti-corrosion type)
  SC: industrial chrome plating

Doublelip-seal is available for size 6 to 30.

SMF-W-E TYPE

— Round Flange Double-Wide Pilot End Type —

part number structure

example **SMSF 25 G W UU - E - SK**

- specification — **SMF**: standard; **SMSF**: anti-corrosion
- inner contact diameter (dr)
- retainer material — **blank**: standard/steel; anti-corrosion/stainless steel; **G**: resin
- double-wide type
- seal — **UU**: seals on both sides; **ZZ**: doublelip-seals on both sides
- with pilot end
- outer cylinder surface treatment — **blank**: no surface treatment; **SK**: electroless nickel plating; **LF**: low temperature black chrome treatment with fluoride coating; **SB**: black oxide (not available on anti-corrosion type); **SC**: industrial chrome plating

Doublelip-seal is available for size 6 to 30.

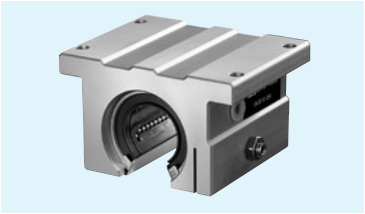
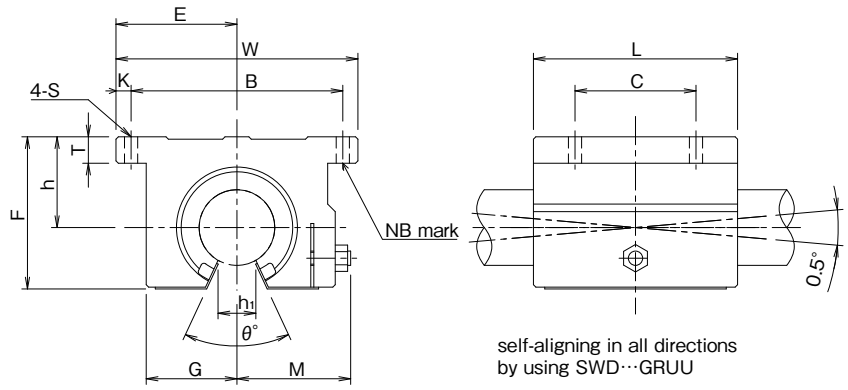
SWD TYPE (Inch Standard)
— Open Block Type —



part number structure

example **SWD 20 G R UU**

- specification
  SWD: standard
  SWSD: anti-corrosion
- size
- retainer material
  blank: standard/steel
  anti-corrosion/stainless steel
  G: resin
- self-aligning
  (SWD-resin retainer only)
- seal
  blank: without seal
  UU: seals on both sides



self-aligning in all directions
by using SWD···GRUU
