1. GENERAL DESIGN

1.1 Product Overview

All Omega vertical stack heat pumps (VSHP) are engineered for quiet and reliable year round operation.

Reliability

Omega water-source heat pump systems provide reliable year round heating and cooling operation. Each unit features an advanced microprocessor controller for ensuring reliable and energy efficient heating and cooling comfort.

Serviceability

Omega VSHP units feature a slide out chassis and a blower assembly which are easily accessible through the front return air panel. For servicing or repairs, a spare replacement chassis can be temporarily swapped in allowing for uninterrupted operation.

Energy Efficient

A VSHP system can transfer energy to different zones in a building. During moderate weather, solar heat gain on the south side of a building may require cooling while the north side requires heating.

Customizable

Omega units can be customized to meet the specific requirements of any project. Some options include: variable cabinet height dimensions, choice of supply discharge air locations and sizes, outside fresh air duct locations, acoustic or perimeter return air panels, and remote thermostat control.

Two Phase Installation

The equipment is shipped to site in two stages for integration with the phases of construction. This avoids potential issues with storage, and on-site damage and allows mechanical units to be installed in acceptable environmental conditions.

Phase 1

- During the initial stages of construction, the cabinets are installed. As construction progresses, they become part of the interior wall structure. Cabinets can ship with risers attached, or risers

are shipped loose for installation prior to cabinet installation.

Phase 2

- The refrigeration chassis is shipped as required and installed into the cabinet after riser loop commissioning and majority of construction is completed. Riser loop must be cleaned and flushed and chemically treated prior to installing chassis units. Return air Panels and filters are installed to complete the installation.

Testing & Quality

To maintain the highest level of quality control, each refrigeration chassis is factory charged and tested before being shipped to the job site. The chassis production and testing line features a computer controlled 6-step quality control (QC) system to ensure that every stage of chassis production is tested and re-tested. Units are performance tested in Omega's state-of-the-art in-house test facility to ensure unit performance and reliability meets or exceeds industry standards. Each unit is AHRI certified and ETL listed.

1.2 Key Features

Energy Efficient Design

- High efficiency compressors and blower motors
- Optimized air-coil circuiting of refrigerant coils
- Refrigerant metering thermal expansion valves
- Low pressure drop water coaxial coils
- Coefficient of Performance (COP)/Energy Efficiency Ratio (EER) meets or exceeds ASHRAE 90.1

Quiet Operation

- High density sound insulated cabinet
- Noise attenuating return air panels
- Double isolated chassis base
- Compressor mounted on vibration isolators

Space Considerations

- Quiet operation
- Fire and mould resistant insulation
- Heavy duty cabinet construction
- Architectural supply grilles and return air panels
- Durable, long life gasketing on chassis
- Convenient room side, front access to the air filter
- Choice of discharge air opening configurations
- Riser mounting location flexibility

Acoustical Design Features—Standard Silver Series

- 1 inch high density sound insulation throughout
- Double isolated chassis base to isolate the refrigeration chassis from the cabinet
- Compressor elastomeric isolation mounts
- Unit base with closed cell foam isolation pads
- Optimized design of refrigerant piping for reduced compressor noise

Gold Series: Enhanced Acoustic Package

- Adds a flexible canvas duct connection between the base cabinet and discharge plenum prevents noise transmission to the supply discharge ducts and grilles.

Reliability

- Factory tested and charged with R-410A
- Industry leading rotary and scroll compressors
- Modern components and microprocessor controlled safety protection devices

Environment

- Eco-friendly refrigerant (R-410A)
- Recyclable materials used in unit construction
- Energy efficient fan motors
- High-efficient DX and water coils

Service

- Slide-out chassis for easy removal and servicing
- All control components are in one location
- Plug-n-play harnesses
- Capacitor in front of unit
- Easy disconnecting water connections
- Refrigerant service access ports
- Simple LED diagnostics on control board
- Plug-n-play Web browser diagnostics
- Test-mode and data logging for troubleshooting

Certification

All Omega products are listed by ETL (Intertek) Omega products conform to UL STD 1995 And certified to CSA C22.2 NO. 236.

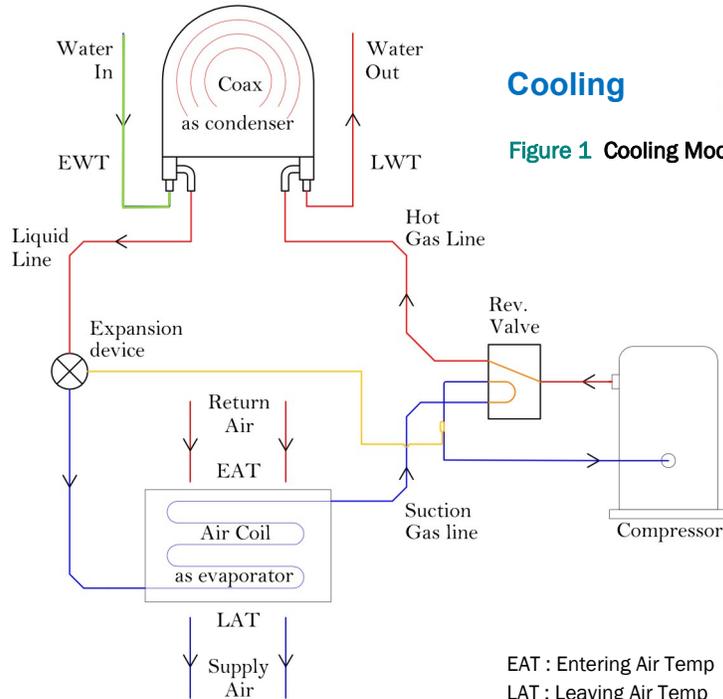

VSHP (HRP) units are AHRI certified as per ANSI/ASHRAE/ISO 13256 and conform to CAN/CSA-C13256-1.

2. PRODUCT DETAILS

2.1 Standard & Optional Features

STANDARD FEATURES

Cabinet

The galvanized sheet metal cabinet is designed for structural rigidity, installation flexibility, and serviceability. Cabinet interior is lined with 1" thick acoustic, thermal, mould and fire resistant insulation rated to meet NFPA 90.

Control Panel with Advanced Microprocessor

All controls and contactors are mounted in the electrical box connected with quick connect plugs. Each unit features an advanced microprocessor controller. Unit comes with four standard temperature sensors: entering and leaving water temperature sensors (WLST & WLDT), suction freeze-stat sensor (RST), and leaving air temperature (LAT) sensor. All controls are accessible from the front of the unit for easy service and troubleshooting. Controller features an ethernet port for quick web based access to system diagnostics, data logging and parameters setpoints.

Blower Fan & Motor

A centrifugal forward curved double width double inlet (DWDI) blower with a direct drive motor assembly with easy removal and servicing provides air delivery. Three-speed permanent split capacitor (PSC) type motors are standard complete with quick connect plugs for easy serviceability

Field Selectable Supply Air Discharge

Cabinets feature our standard "Knockout" style supply discharge openings for field selectable supply air openings in Left, Right, Front, Back, and/or Top configurations.

DX Coil

Air to refrigerant coils are multi-row with copper tubes and enhanced aluminum fins. Coil fins are mechanically bonded to the tubes. The coils are fully cased with a handy grip point for chassis removal.

Compressors

High efficient R-410A compressors are standard, rotary type 1/2 to 1.5 Ton (VSHP 020-060) and scroll type 2 to 3 Ton (VSHP 080-120). Compressors are mounted to the chassis frame with elastomer vibration isolators to minimize vibration transmission. Ad-

ditionally the compressor chassis is mounted on a double isolated base for enhanced noise attenuation to prevent vibration transmission into the occupied space.

Coax-Coil

The water to refrigerant coaxial coil is tube in tube with a convoluted inner copper tube design. The coaxial coil is selected for minimum water pressure drop and low fouling characteristics. The coils are optimized for heat pump operation.

Stainless Steel Drain Pan

Standard stainless steel drain pan provides corrosion resistance. Drain pan is positively sloped, externally insulated with a 7/8 inch O.D. connection and factory mounted p-trap condensate hose.

Reversing Valve

A 4-way reversing valve, pilot operated, sliding piston type with solenoid coil is installed in each heat pump chassis to change refrigerant flow. Reversing valve is installed in "Energized to Cool" mode and "Fails to Heating" mode.

Thermostatic Expansion Valve (TXV)

All units come with a bi-flow thermostatic expansion valve (TXV). TXV is precision machined brass assembly providing precise refrigerant flow metering.

Air Filter

Unit comes with standard 1-inch MERV 10 disposable media filters.

OPTIONAL FEATURES

Gold Series Cabinet

Cabinet comes in two sections to minimize noise transmission into duct system. The lower section includes all components, chassis, and risers. The upper section is an acoustic supply discharge plenum lined with 1-inch thick acoustic insulation. The plenum is connected to lower cabinet using a flexible duct connector for noise attenuation.

EC Fan Motors

High-efficient EC motors (ECM) for improved fan operating efficiency and fan performance across a

wider operating range over traditional PSC motors.

Auto Shut-Off Control Valve

Optional factory installed 2-way automatic shut-off control valves shut off water flow to the unit when compressor is not operating. This reduces pumping loads and power consumption in variable speed or staged pumping applications.

Automatic Balancing Valve

Optional automatic balancing valves are factory installed for automatically limiting water flow through the unit to the nominal rated flow rate by providing constant flow ($\pm 10\%$ of rated GPM) over a large differential pressure range of 2-80 psig (3-80 psig for VSHP 080 to 120 units).

Condensate Overflow Switch (COFS)

Condensate overflow switch (float switch or electronic) is mounted to the unit drain pan for detecting overflow conditions such as a clogged condensate drain. If condensate switch is tripped compressor operation is stopped.

Fresh Outside Air Duct

Fresh Outside Air Duct take-off is installed at the top of the cabinet for providing fresh air into the occupied space. Fresh air is dumped on the negative pressure side of the fan. Ideal for designs with a remote mounted ERV specified. Comes with Omega's "Whisper Mode" ultra-low fan speed continuous fan-on operation.

Return Air Panel

Omega offers 2 styles of return air panels. **Acoustic** panel, stamped blade style, is designed as a narrow, removable panel making it ideal for space constrained installations. **Perimeter**, enhanced aesthetic, is a noise attenuating insulated swing door style panel. Both are easily removed to access the air filter, chassis, blower and all controls.

Supply, Return & Condensate Risers

Risers are available in Type M and Type L copper. Factory supplied risers come standard with manual shut-off isolation ball valves soldered to the riser tee. Risers can be ordered swaged or as straight pipe.

Geothermal

A geothermal option package includes an insulated water circuit and condenser coil to prevent conden-

sation. Geothermal option is only intended for fluid loops containing a glycol mixture for freeze protection. If a water only loop is being utilized, it is recommended to select the Low Temperature Water option as it provides enhanced freeze protection.

Low Temperature Water

A low temperature water option is recommended for units running on water loops between 45F and 55F in heating. Units are fitted with high water pressure safety switches sensors, one on each water inlet and water outlet to stop compressor operation in the event of water freezing conditions.

SmartOne Communication Board

A RS-485 add-on communication board is supplied to communicate with SmartOne building automation systems. Includes remote temperature sensor (RTS). RTS acts as back-up thermostat air temperature sensor in the event of communication disruption with SmartOne wallpad.

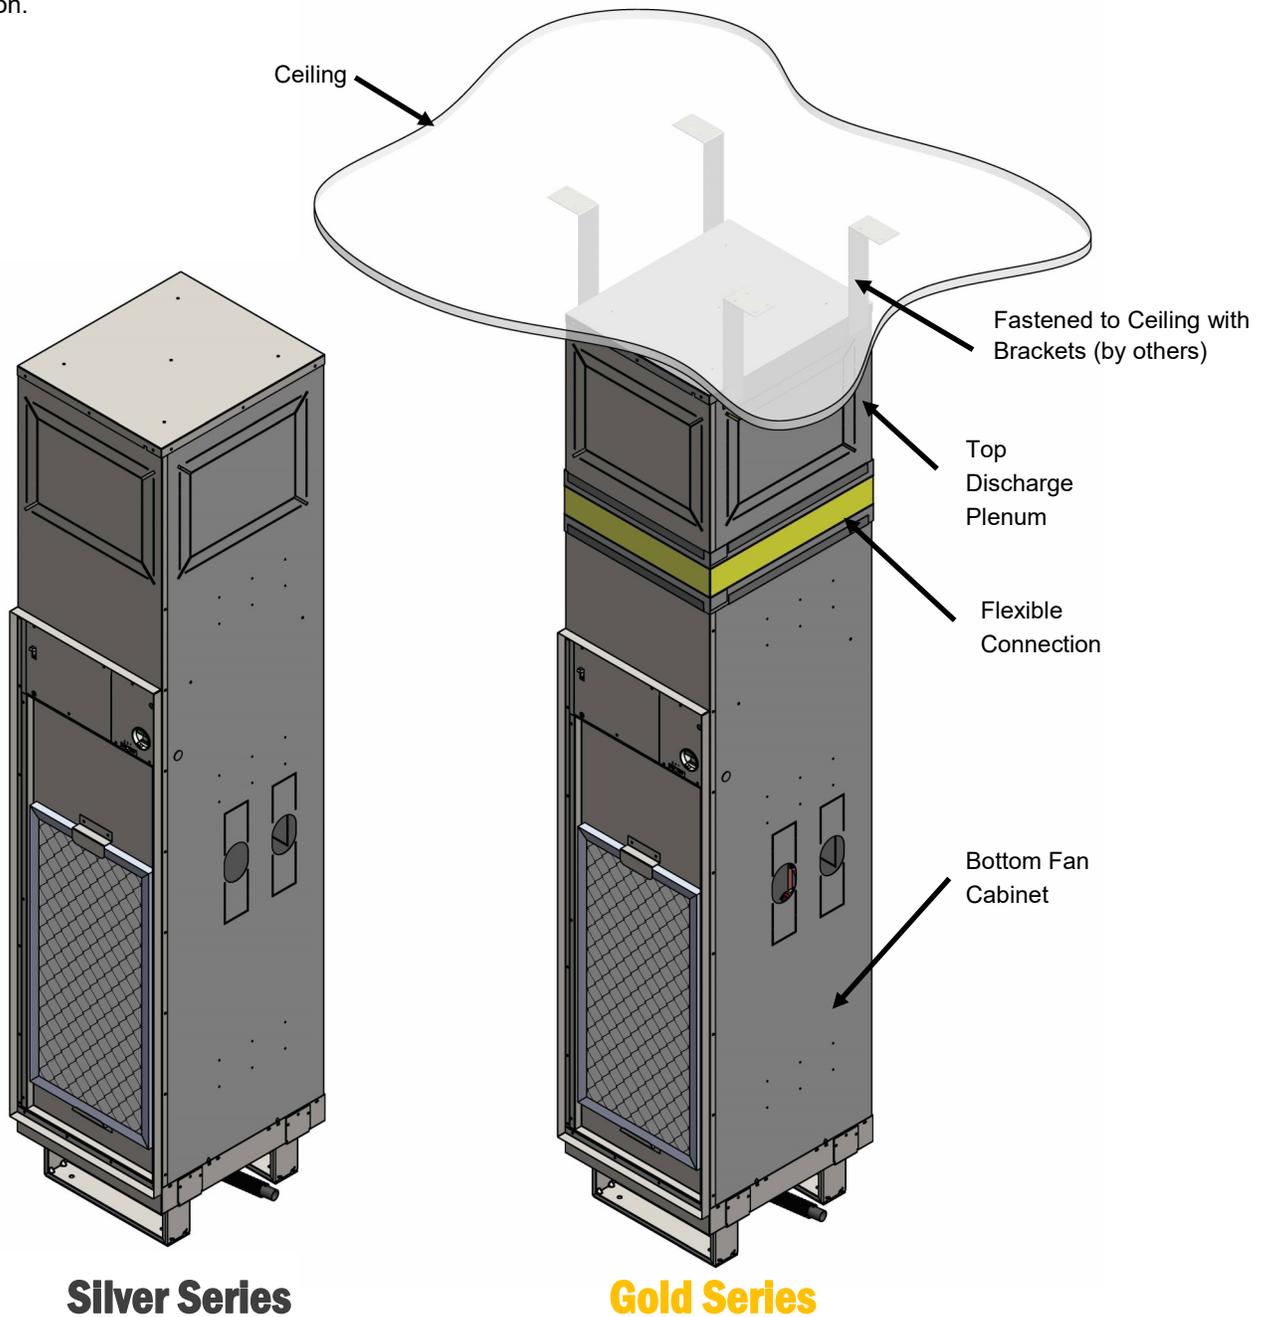

MERV 13 Filter

Unit comes with 2-inch filter rack with MERV 13 rated pleated filter for enhanced air filtration and performance. ECM fan option is recommended.

2.2 Cabinet Types—Silver & Gold Series

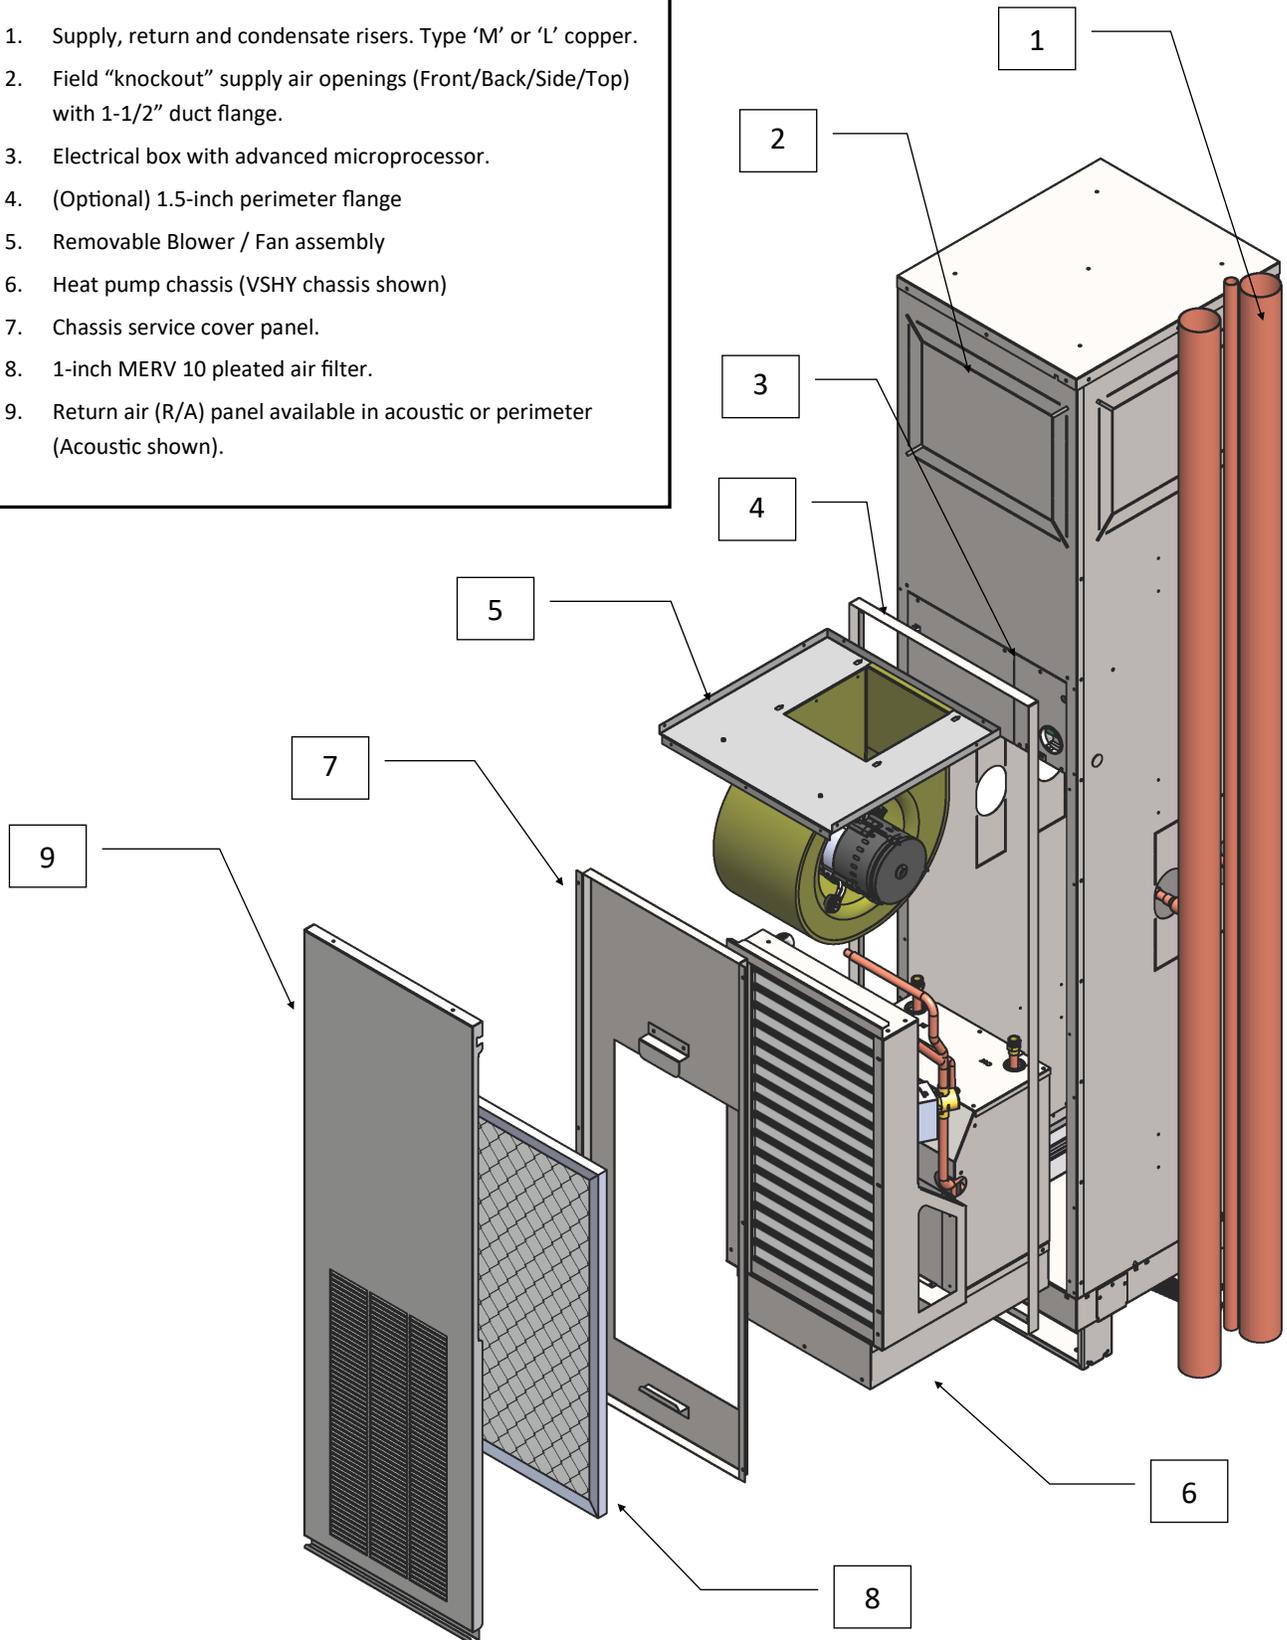

Omega offers two distinct cabinet options for VSHP units: the Silver and optional Gold series (see below). Silver series is the Omega standard product built as a free standing design. The optional Gold series cabinet includes a factory built-in canvas flex duct collar between the base chassis/blower section and upper discharge plenum. The upper discharge plenum is field mounted to the ceiling structure creating a non-rigid, acoustically isolated connection between the discharge plenum and the cabinet compressor and blower base section.

2.3 Assembly View

1. Supply, return and condensate risers. Type 'M' or 'L' copper.
2. Field "knockout" supply air openings (Front/Back/Side/Top) with 1-1/2" duct flange.
3. Electrical box with advanced microprocessor.
4. (Optional) 1.5-inch perimeter flange
5. Removable Blower / Fan assembly
6. Heat pump chassis (VSHY chassis shown)
7. Chassis service cover panel.
8. 1-inch MERV 10 pleated air filter.
9. Return air (R/A) panel available in acoustic or perimeter (Acoustic shown).

2.4 Noise Attenuation Features

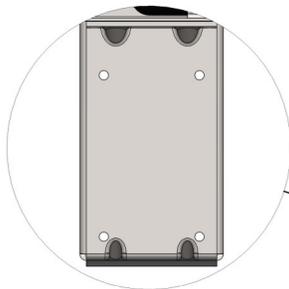

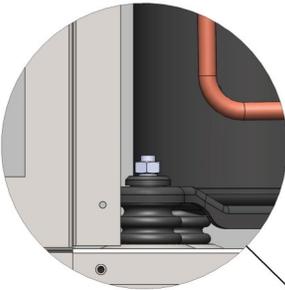

Omega Heat Pump units offer up to 5 separate methods of vibrational isolation (Shown below).

Flex Duct Isolator

Units with the optional **Gold Series** option feature a factory installed flexible canvas duct collar for added noise and vibration isolation.

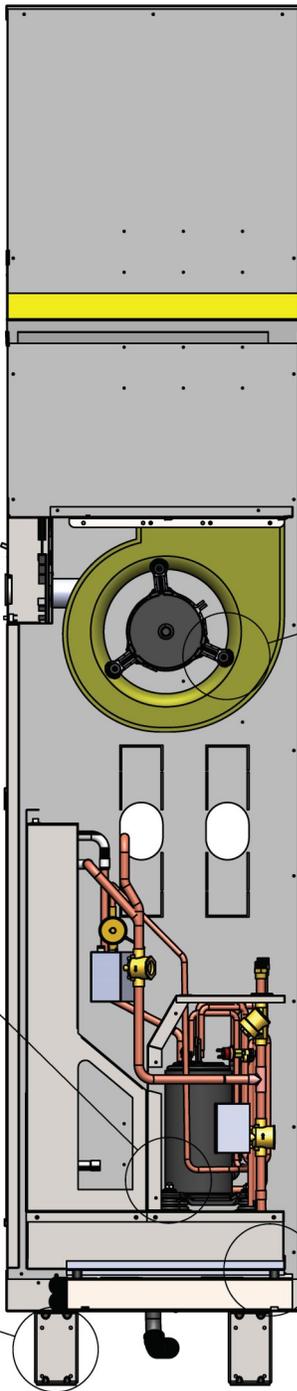

Compressor Mounts

All compressors are mounted to the chassis using vibration dampening inserts.

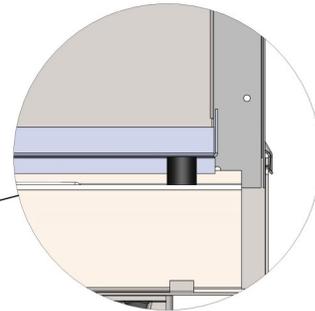

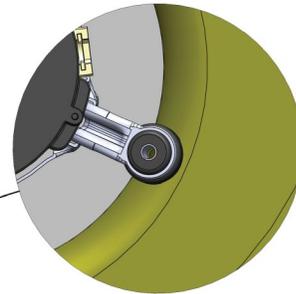

Unit Foot Insulation

1/4" closed cell foam pads are factory installed under the cabinet base to isolate the unit from the floor surface.

Motor Mount Isolators

Motors are attached to the blower housings with rubber isolation fasteners which reduces the vibration produced by the rotating fan assembly.

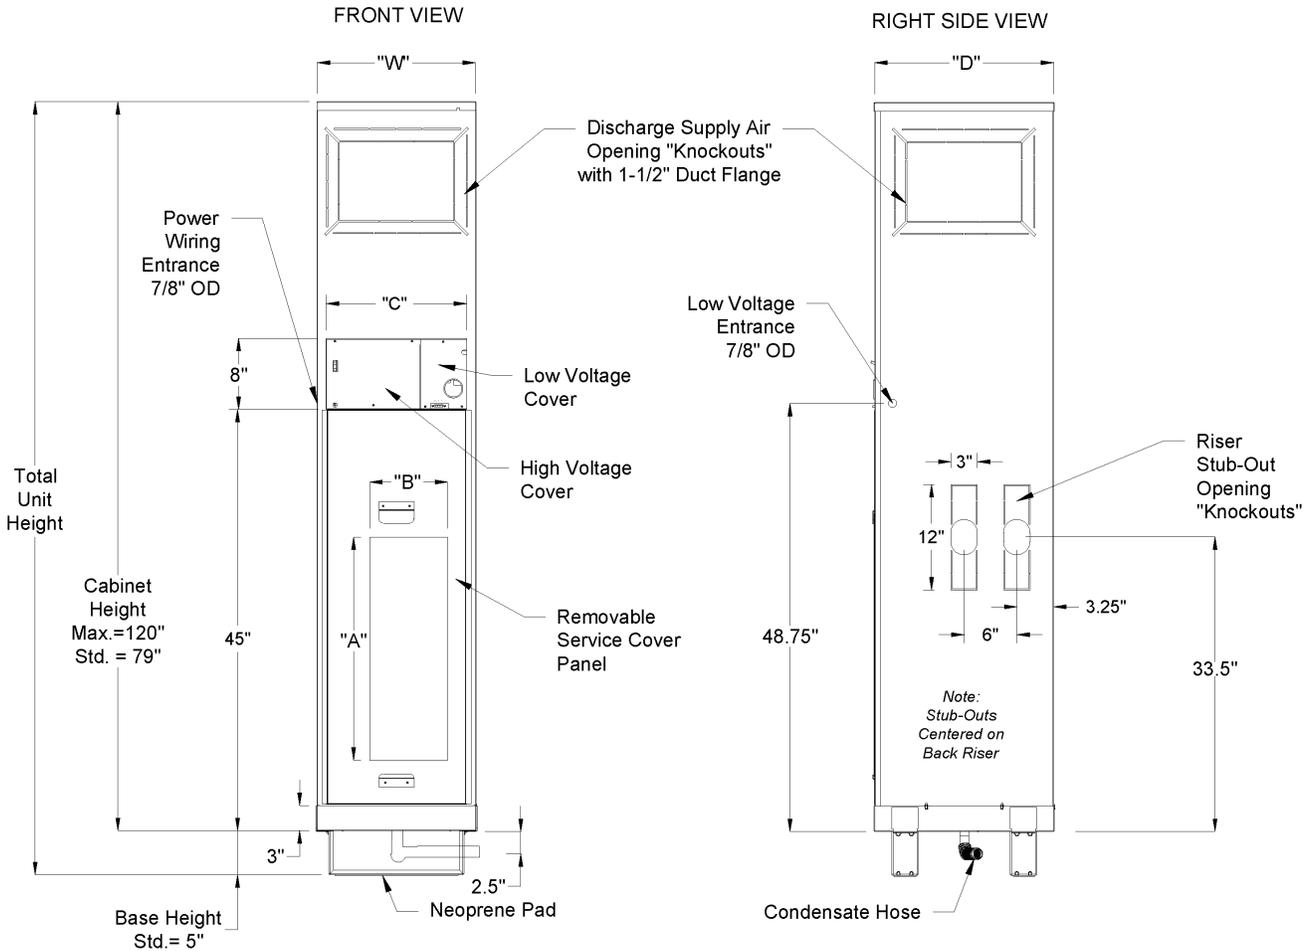

Vibrational Rail

The refrigeration chassis is mounted on a double isolated base with rubberized dampeners to isolate the chassis from the cabinet to minimize noise vibrations.

3. CABINET DIMENSIONS & SUPPLY DISCHARGES

3.1 Standard Silver Series Cabinet

(Drawing not to scale, dimensions are subject to change)

Table 1 VSHP Cabinet Dimensions (Silver & Gold Series)

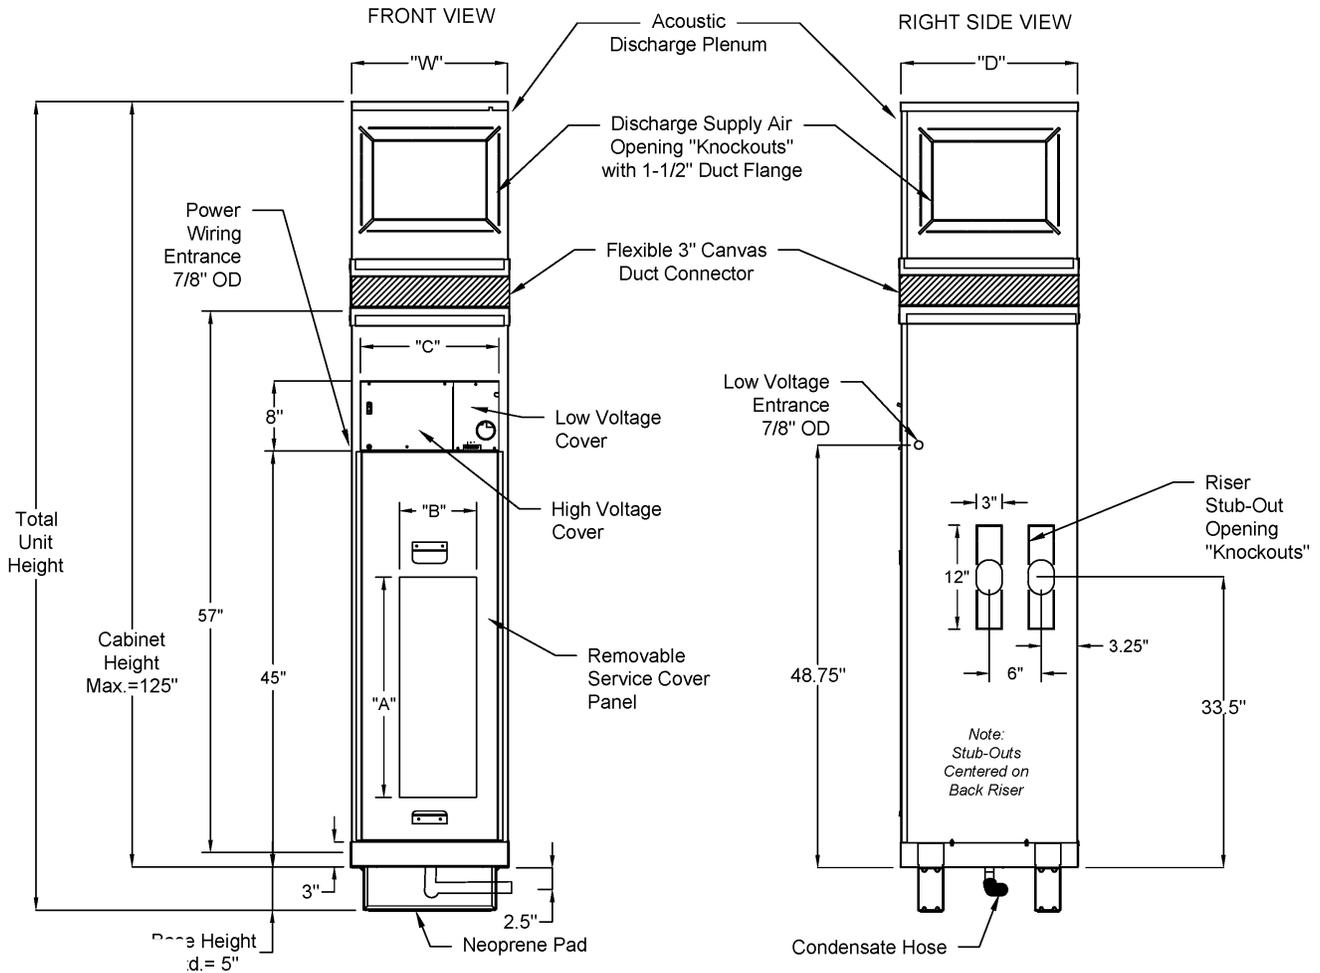

Model	Cabinet Size	Dimensions (in)			VSHP Supply Discharge Opening (W X H) inches	
		"W"	"D"	"C"	Horizontal	Top
VSHP 020G	X	16	17.5	14	14 x 8	12 x 12
VSHP 030G					14 x 8	12 x 12
VSHP 040G					14 x 10	12 x 12
VSHP 050G	Y	18	20.5	16	16 x 12	14 x 12
VSHP 060G					16 x 12	14 x 12
VSHP 080G	Z	22	24.5	20	18 x 14	14 x 14
VSHP 100G					18 x 16	16 x 14
VSHP 120G					18 x 16	16 x 16

Note: Discharge opening sizes are customer configurable. Published sizes shown are maximum factory default sizes. Customer to verify discharge opening sizes match design requirements for proper airflow and select appropriate discharge openings at time of order.

Lower riser knockout can be used to match previous generation fan cabinet riser stub-out locations.

3.2 Optional Gold Series Cabinet with Acoustic Plenum

(Drawing not to scale, dimensions are subject to change)

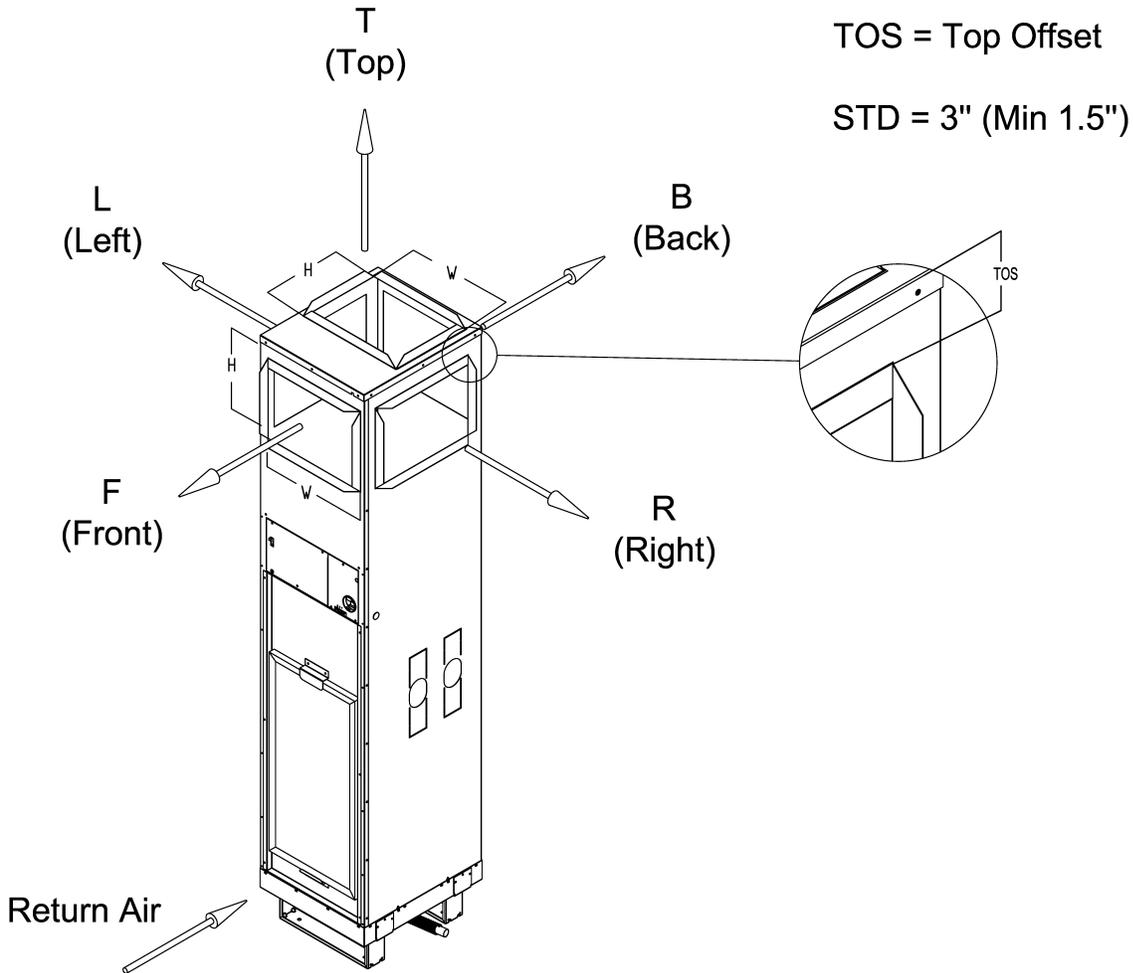

Model	Cabinet Size	Dimensions (in)			Minimum Cabinet Height (in)	
		"W"	"D"	"C"	Silver Series*	Gold Series
VSHP 020G	X	16	17.5	14	60 / 72	80
VSHP 030G						
VSHP 040G						
VSHP 050G	Y	18	20.5	16	60 / 74	82
VSHP 060G						
VSHP 080G	Z	22	24.5	20	60 / 74	86
VSHP 100G						
VSHP 120G						

* 60in without horizontal (side) discharges

3.3 Supply Discharge Openings

Units comes with standard “Knockout” style discharge openings on top and all sides for field configuration. This allows for custom discharge configurations based on site requirements. Discharge opening sizes are configurable to meet site design conditions.

Supply Air Opening Sizes

Model	VSHP Supply Discharge Opening (W X H) inches							
	020	030	040	050	060	080	100	120
Horizontal	14 x 8	14 x 8	14 x 10	16 x 12	16 x 12	18 x 14	18 x 16	18 x 16
Top	12 x 12	12 x 12	12 x 12	14 x 12	14 x 12	14 x 14	16 x 14	16 x 16

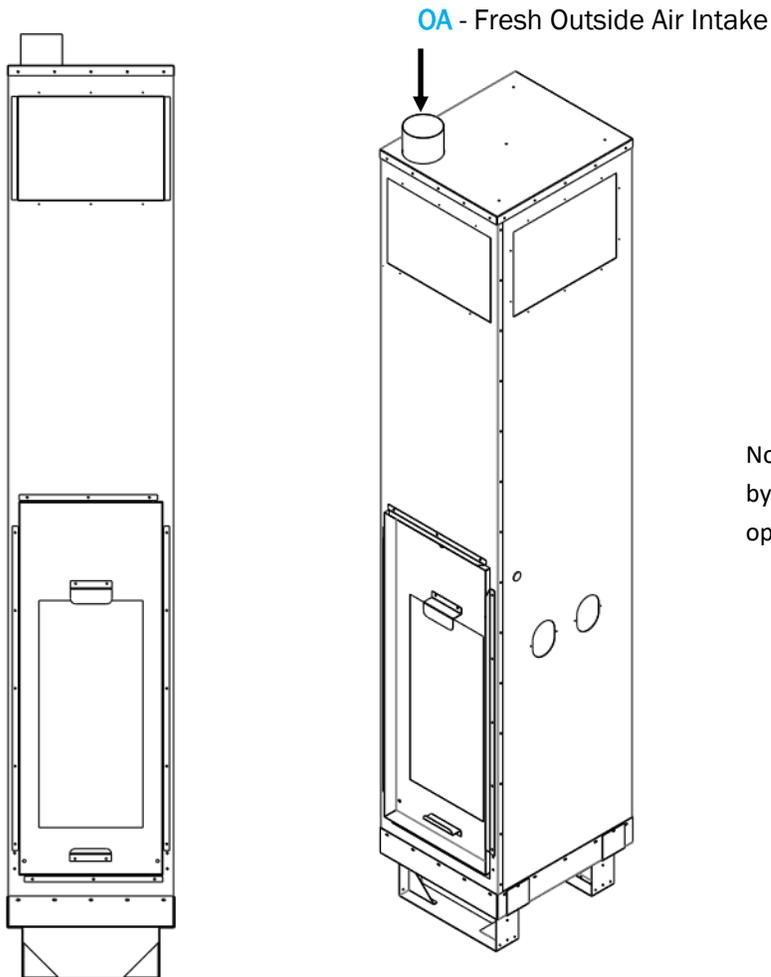

Notes:

- Discharge opening sizes are customer configurable. Published sizes shown are maximum factory default sizes. Customer to verify discharge opening sizes match design requirements for proper airflow and select appropriate discharge openings at time of order.
- Unit comes standard with field “knockout” style discharge openings on all sides. Discharge flanges are 1-1/2 inches.
- Line of Site Baffles (LOSBS) are available where two or more horizontal discharge (Front, Left, Right and/or Back) openings are specified.
- All handing's determined by facing return air opening
- Top Discharge is centered left and right, and offset 2 inches from the back.

3.4 Optional Fresh Outside Air Duct

Optional built-in Fresh Air Duct is suited for applications where the Energy Recovery Ventilator (ERV) unit is remote mounted. The factory installed fresh air intake accepts fresh air connection from a remote mounted ERV. Refer to Section 3.5 to see different configurations available for location of fresh outside air duct.

Note: Handling is referenced by facing the unit return air opening (front).

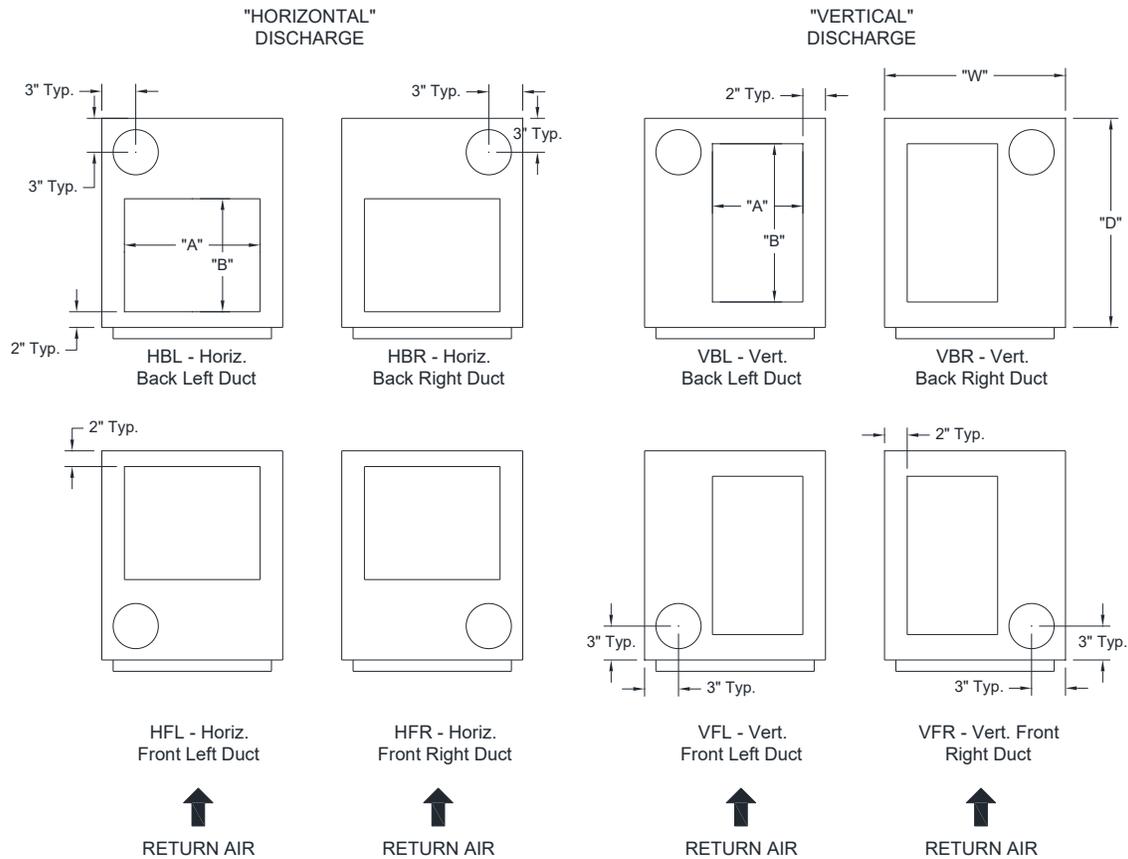

CAUTION

The introduction of cold conditioned outside air from a remote energy recovery ventilation device into the heat pump cabinet can result in potential freezing and bursting of mechanical components carrying water in the heat pump. Designer should take care to treat these considerations accordingly (e.g. utilize water glycol treatment or ensure ERV tempers Outside Air sufficiently above freezing point before entering the unit).

3.5 Top Supply Discharge Openings with Optional Fresh Outside Air Duct

Top discharge for VSHP cabinet with Fresh Outside Air duct is available in two orientations: “Horizontal” and “Vertical”. Each orientation contains four possible configuration options for fresh air duct location. Discharge openings are field “knockout” style with 1.5” duct flange.

Supply Air Opening Sizes with OA in Horizontal & Vertical Configurations

Supply Air Opening Sizes w/ Fresh Air Duct

Model	Cabinet Size	Dimensions (in)		Top Supply Opening w/ Fresh Air Duct (A x B) inches	
		"W"	"D"	"Horizontal"	"Vertical"
VSHP 020G	X	16	17.5	12 x 8	8 x 12
VSHP 030G				12 x 8	8 x 12
VSHP 040G				12 x 8	8 x 12
VSHP 050G	Y	18	20.5	14 x 12	10 x 16
VSHP 060G				14 x 12	10 x 16
VSHP 080G	Z	22	24.5	14 x 14	14 x 14
VSHP 100G				16 x 14	14 x 18
VSHP 120G				16 x 16	14 x 18

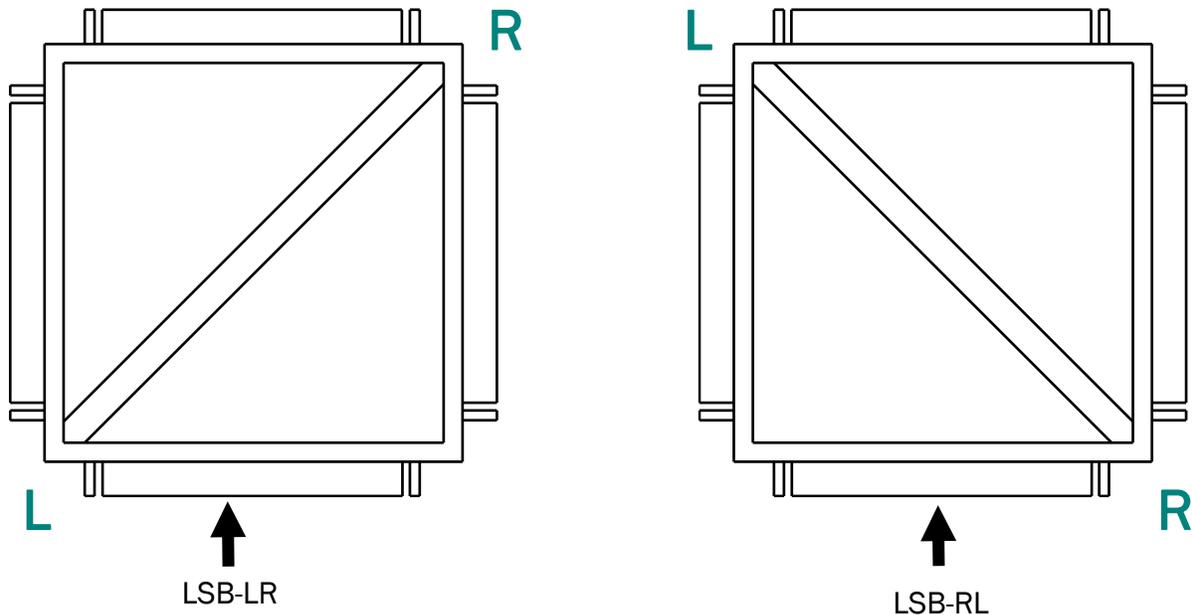

Note: Discharge opening sizes are customer configurable. Published sizes shown are maximum factory default sizes.

3.6 Line of Sight Baffle

Optional Line of Sight Baffles (LOSBS) can be supplied inside discharge plenums on units with (2) two or more horizontal discharge openings. The LOSBS provide occupant privacy between adjacent rooms. Two configurations (LSB-LR or LSB-RL) of LOSBS are available based on the unit discharge arrangement. LOSBS is not available with optional Fresh Outside Air Duct intake.

TOP VIEW

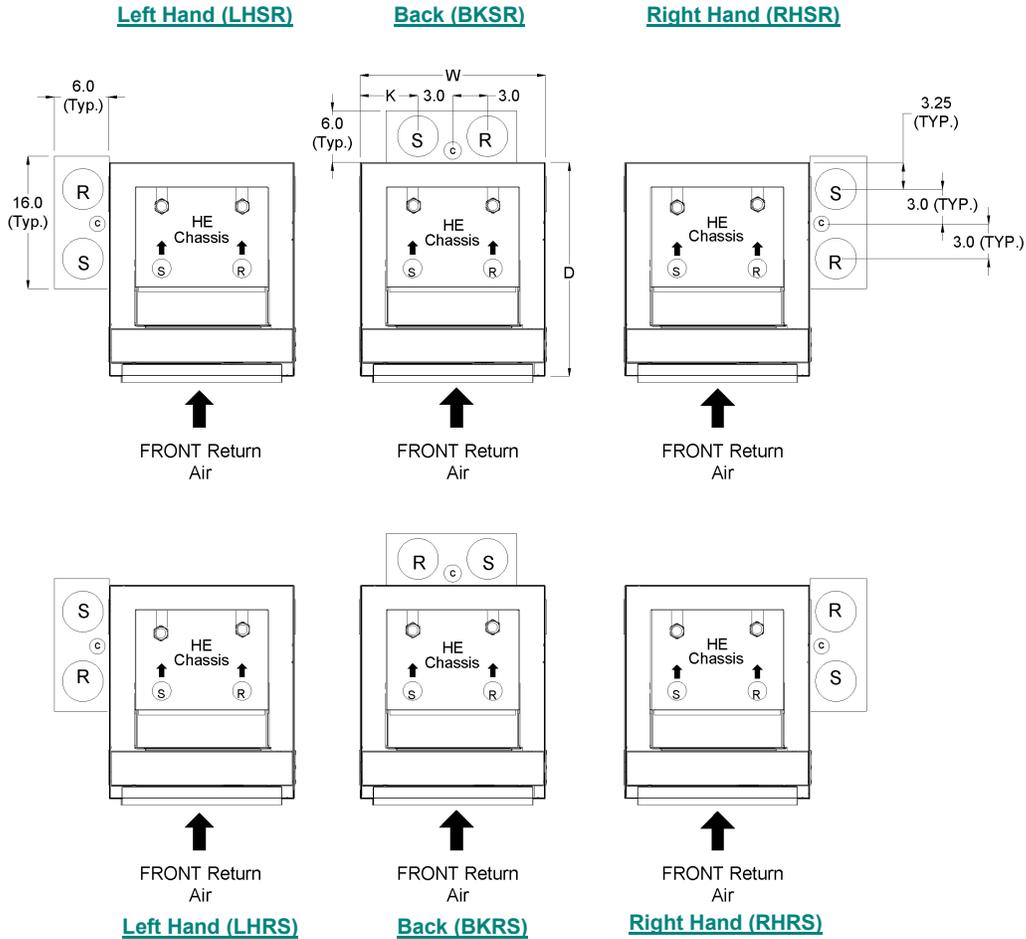

Line of Sight Baffle Configurations

4. RISERS & HOSE KITS

4.1 Riser Handling Conventions (Top View)

S = Supply Riser
 C = Condensate Riser
 R = Return Riser

Riser Handling Configurations

VSHP Cabinet Riser Dimensions

Unit Size	Cabinet Size	W	D	"K" (in)
020, 030, 040	X	16	17.5	5
050, 060	Y	18	20.5	6
080, 100, 120	Z	22	24.5	8

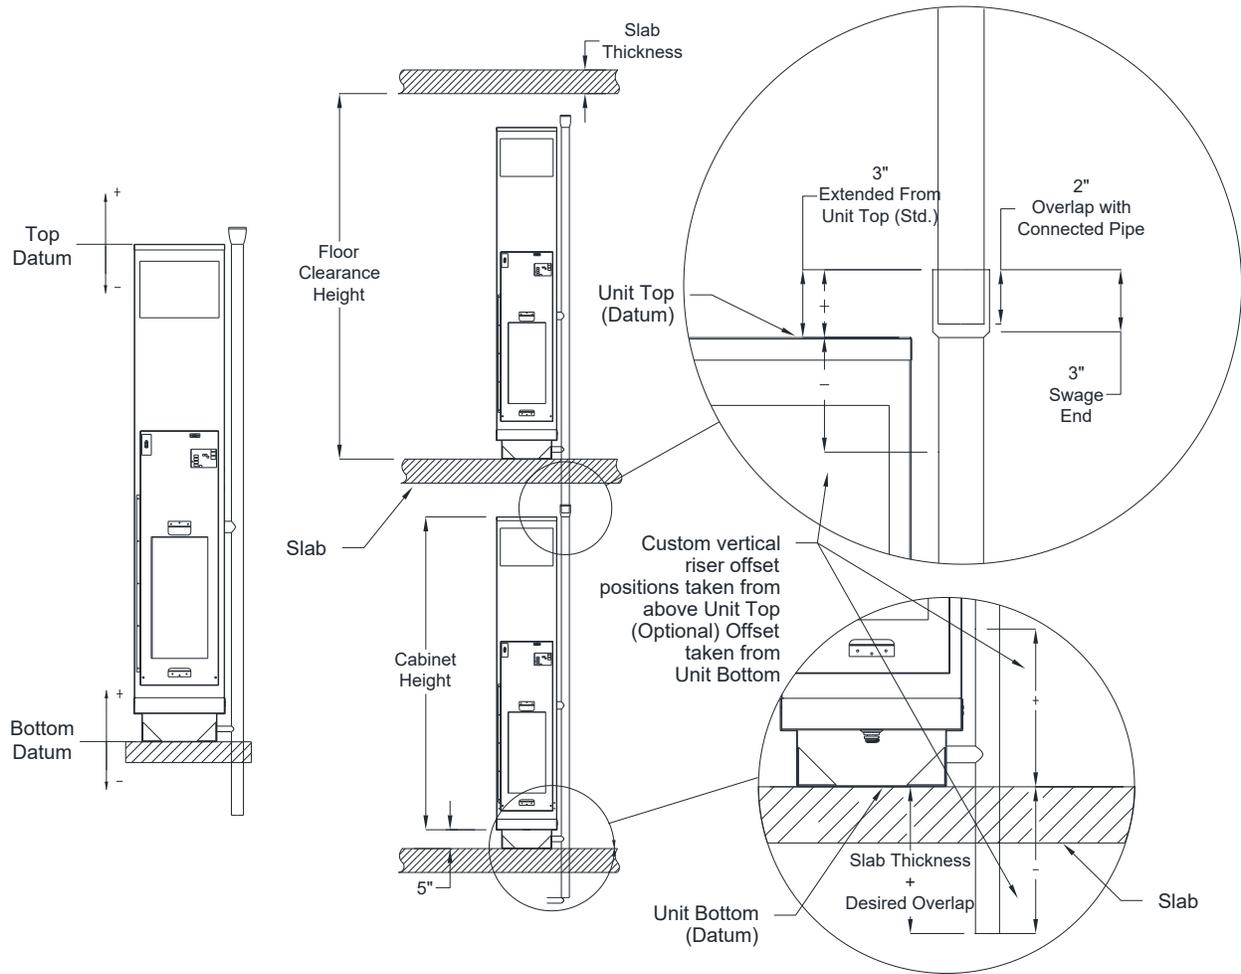

Note: Units do not come with a riser chase or riser sleeve. Depiction shown indicates typical coring openings.

Notes:

- As viewed from top, risers can be order in either SR configuration (supply, condensate, return) or RS (return, condensate, supply)
- Optional risers come in Type M or L copper . Risers can be ordered from factory with 3 inch deep swage.
- Contractor to provide riser transition pieces when joining dissimilar riser sizes.
- Risers available in sizes, 3/4" to 3". Consult factory for larger sizes.
- All handling's determined by facing front of the unit (return air opening)

4.2 Riser Sizing Reference

Riser Length Reference Measurements

Notes:

- Risers are positioned relative to cabinet using a standard “Top” Datum reference (optional “Base” Datum). Top Datum Offset indicates where the top of riser will be located relative to top of cabinet. A Base Datum indicates where bottom of riser will be located relative to base of cabinet.
- Upon request Omega will provide 3 inch deep swage on risers of same pipe size (optional for all risers) for connection to units on the floor below.
- Risers should insert 2 inches into the 3 inch deep swage connection (minimum 1 inch insertion is required)
- Riser Length = Floor Clearance Height + Slab Thickness + 2 inch (overlap) (Rounded up to 120” or 144”).
- Omega supplies two standard riser lengths, 120” (10’) and 144” (12’), to be field cut on-site.
- Omega does not supply extension tailpieces or transition riser pieces for joining dissimilar piping sizes. Items are field provided.
- Risers available in Type L and Type M/DWV copper.
- Condensate riser comes standard with 3/8 inch thick closed cell insulation to prevent condensation.
- Optional insulation on supply and return risers is available.

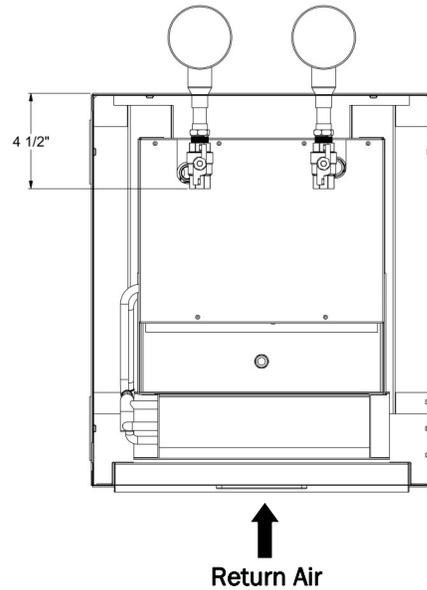

4.3 Hose Kit & Riser Stub Out Details

Hose Kit Sizes

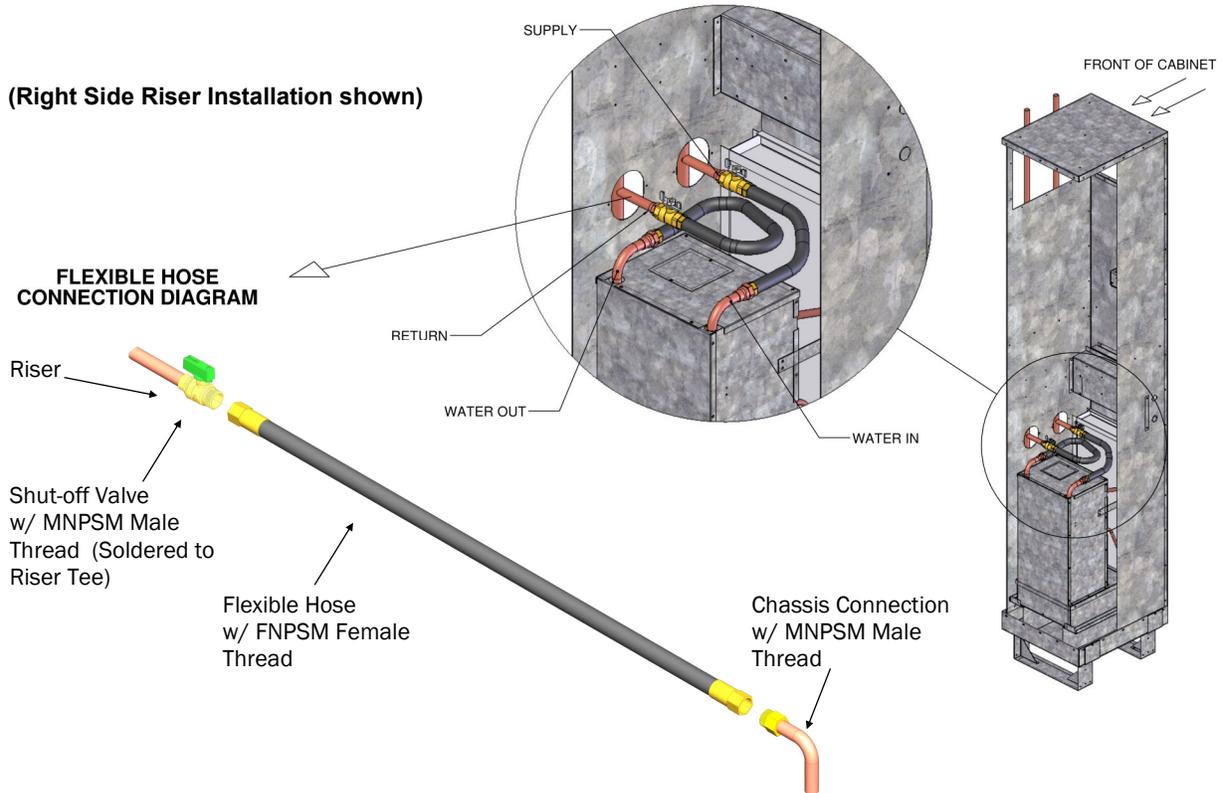

Model	Hose Kit	
	Size (in)	Length (in)
VSHP 020	1/2	24
VSHP 030	1/2	24
VSHP 040	1/2	24
VSHP 050	1/2	24
VSHP 060	1/2	24
VSHP 080	3/4	30
VSHP 100	3/4	30
VSHP 120	3/4	30

Hose kits are supplied with each unit. Hose kit configurations vary by unit size as shown.

Riser Stub Distance from Cabinet Wall

(Right Side Riser Installation shown)

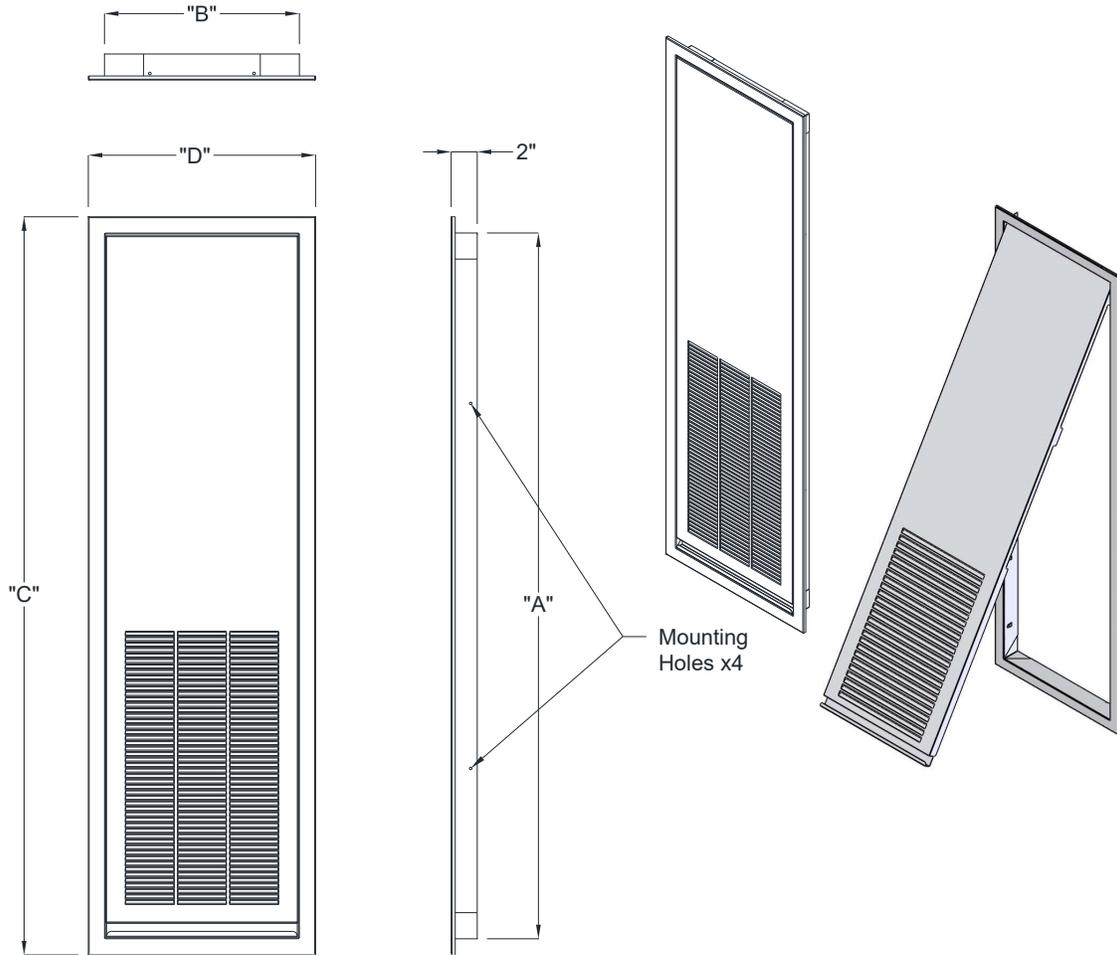

Hose Kit Details

5. RETURN AIR PANELS

5.1 Acoustic Front Return Air Panel

Acoustic Panel Sizes

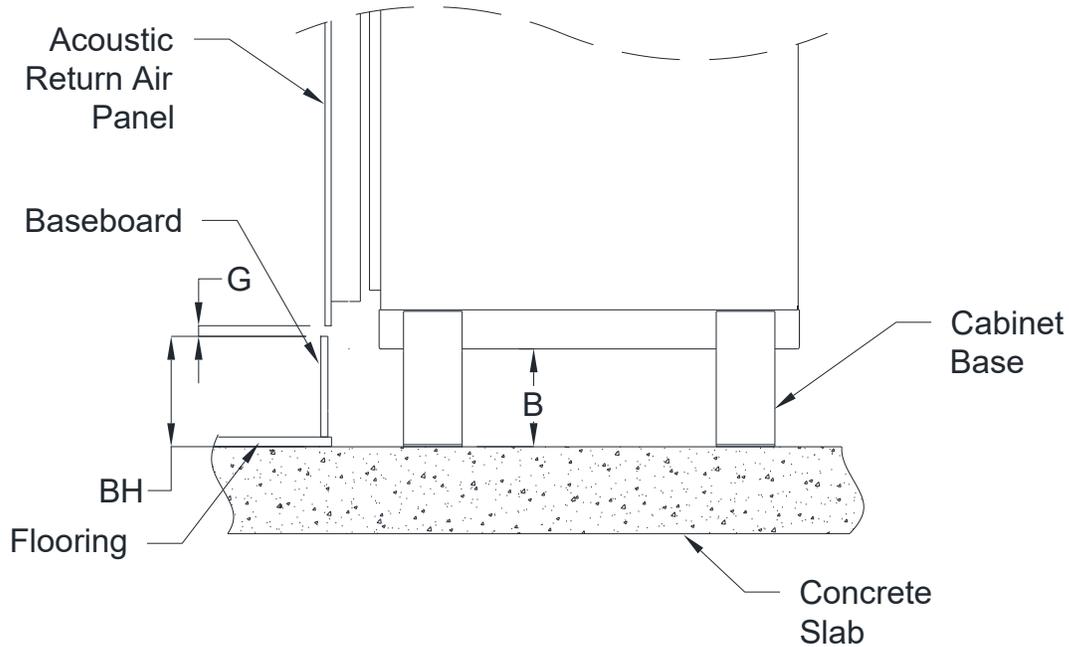

Model	Cabinet Size	Acoustic RA Panel Dimensions (inches)			
		A	B	C	D
VSHP 020	X	54	15 1/4	56 1/2	17 5/8
VSHP 030					
VSHP 040					
VSHP 050	Y	54	17 1/4	56 1/2	19 5/8
VSHP 060					
VSHP 080	Z	54	21 1/4	56 1/2	23 5/8
VSHP 100					
VSHP 120					

Notes:

- Panel is lined with acoustic insulation for enhanced sound attenuation.
- Return air panel supplied in standard powder coat appliance white finish.

5.2 Acoustic Panel Cabinet Base Height Calculation

Acoustic Panel Cabinet Base Height Calculation:

BH = Baseboard Height + Finish Floor Height*

G = Gap (min 0.5") between baseboard and panel.

B = Cabinet Base Height
(Min. 5", increases in 1" increments)

$$B = BH + G - 1.5''$$

Note: *Include flooring thickness, underlayment, and any concrete leveling as part of calculation.

Example:

If using a 5" baseboard, with 1" Finished Flooring height, and 0.5" gap:

$$B = (5'' + 1'') + (0.5'') - 1.5''$$

$$B = 5''$$

Therefore a 5" Cabinet Base is required.

Example: Baseboard to Base Height Table

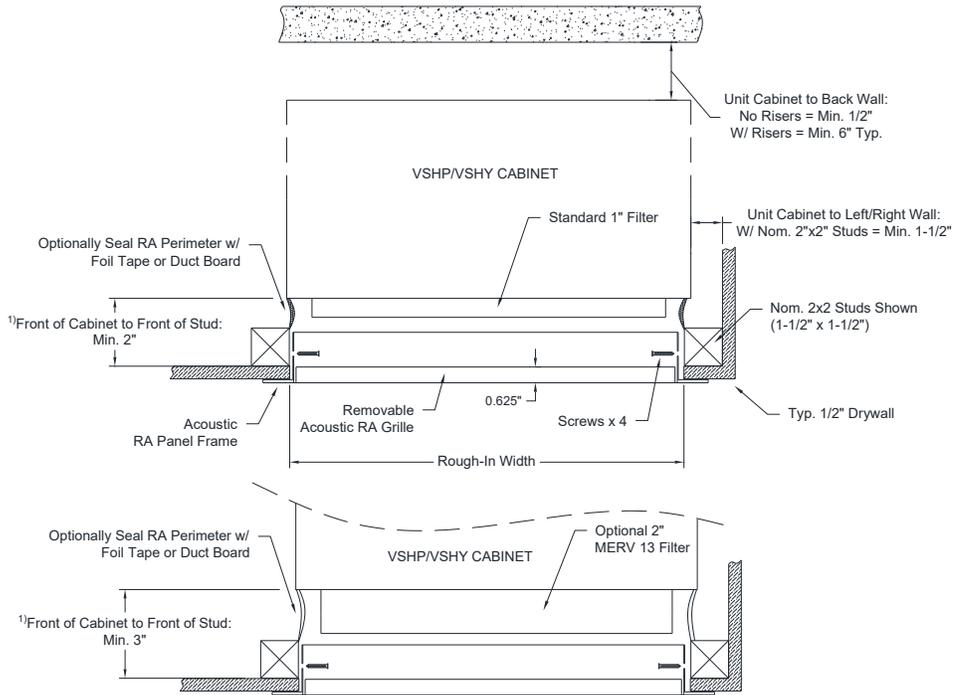

Baseboard Height*	Cabinet Base Height
Up to 5"	5"
>5" to 6"	6"
>6" to 7"	7"
>7" to 8"	8"

*Includes 1" Total Flooring

*Using gap G= 0.5" (from top of baseboard to return panel flange)

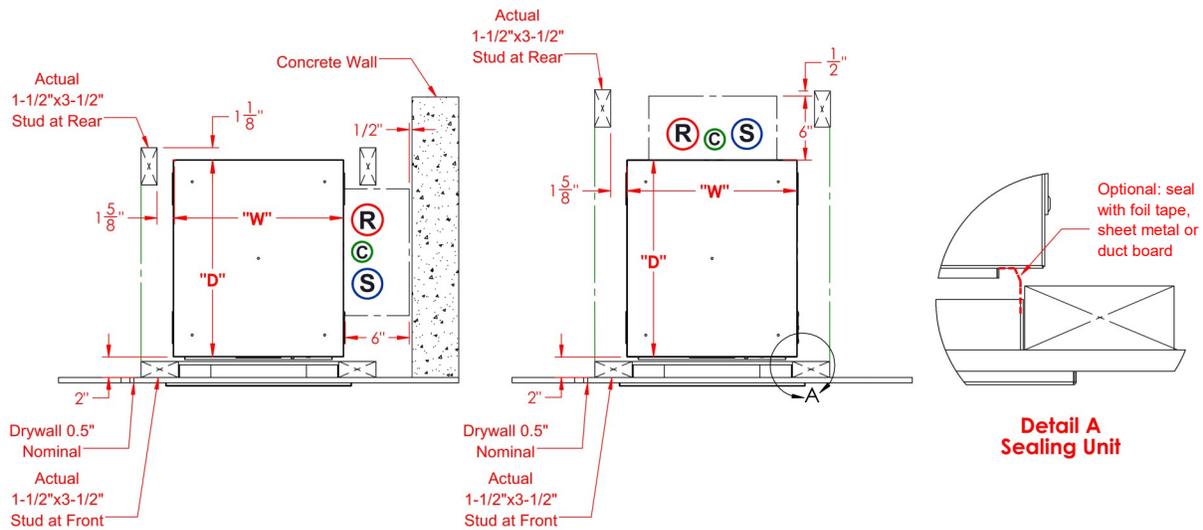

5.3 Acoustic Front R/A Panel Furring Details

Acoustic Panel Furring Detail—Typ. 2x2 Framing Plan View

Notes:

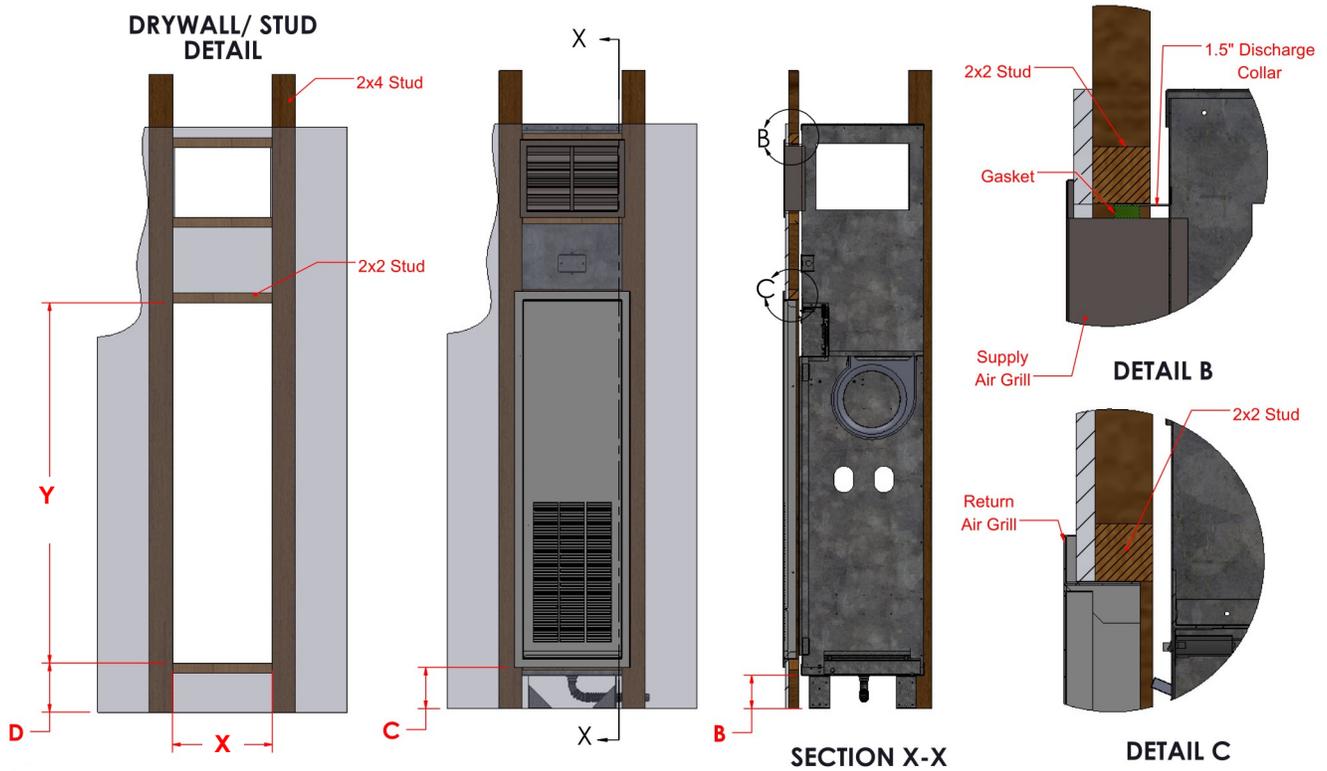

- 1) Provide 2" from framing stud to cabinet. With optional 2-inch MERV 13 filter provide 3" from front of stud or min 1-1/2" from back of stud to cabinet. With optional flange, provide gap min. 1/2" from stud to flange.
- 2) Return air panel should be centered in front of the unit return air opening.
- 3) With rear/side risers, allow for min. 6" typical clearance at the rear/side of the units.
- 4) For additional sound attenuation insulate the closet cavity with plenum rated acoustical insulation.

Acoustic Panel Furring Detail—Typ. 2x4 Framing Plan View

5.3 Acoustic Front R/A Panel Furring Details (Cont'd)

Acoustic Panel Furring Detail—Front & Side View

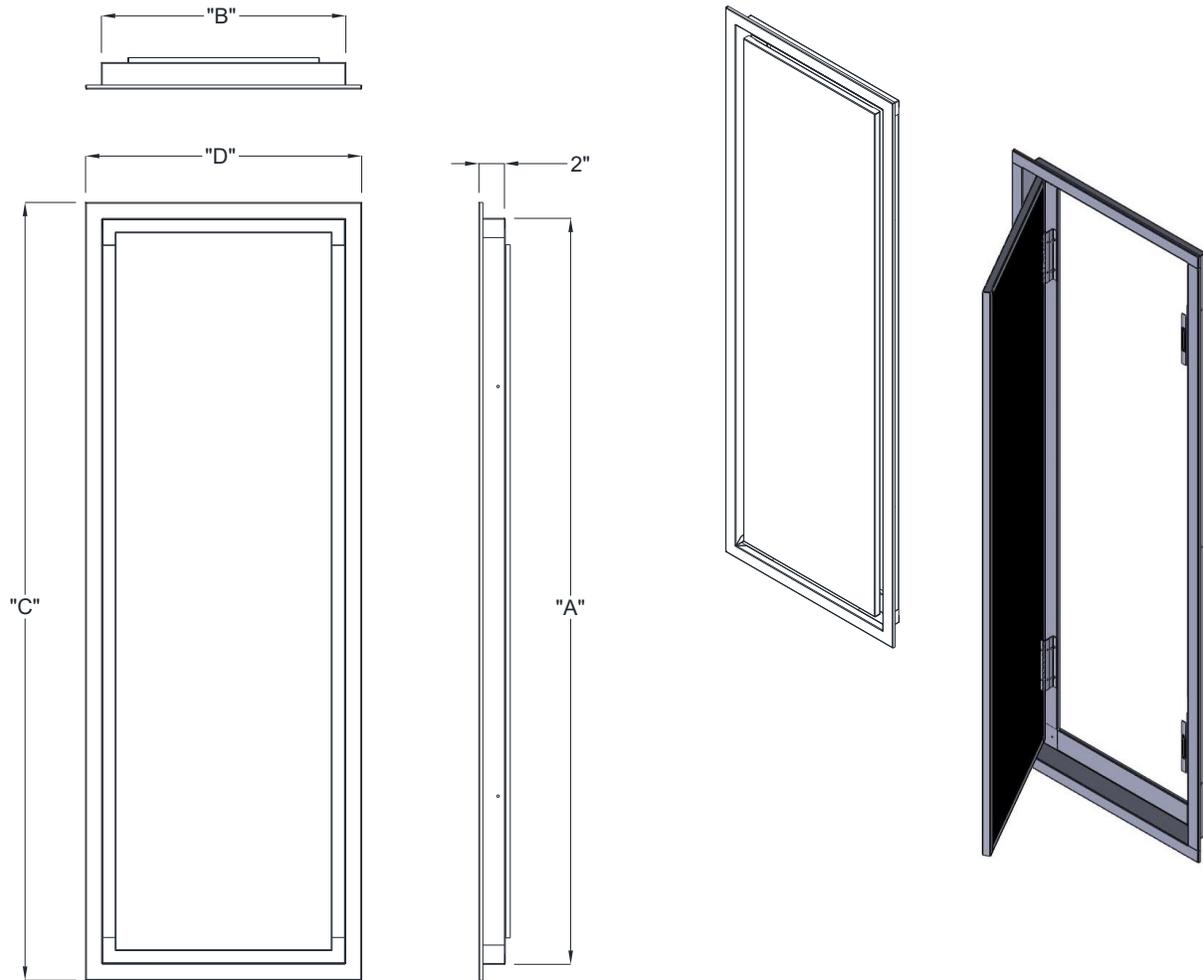

- B** = Cabinet Base Height (Min 5", increases in 1" increments)
- C** = Flange Height Above Floor (B + 1.25")
- D** = Rough-In Height Above Floor (B + 2.5")

Acoustic Panel Rough-In Dimensions

Model	Cabinet Size	Cabinet Dimensions (in)		Rough-In (in)	
		W	D	"X"	"Y"
VSHP 020G	X	16	17 1/2	15 3/4	54 1/2
VSHP 030G					
VSHP 040G					
VSHP 050G	Y	18	20 1/2	17 3/4	54 1/2
VSHP 060G					
VSHP 080G	Z	22	24 1/2	21 3/4	54 1/2
VSHP 100G					
VSHP 120G					

5.4 Perimeter Front Return Air Panel

Perimeter Panel Sizes

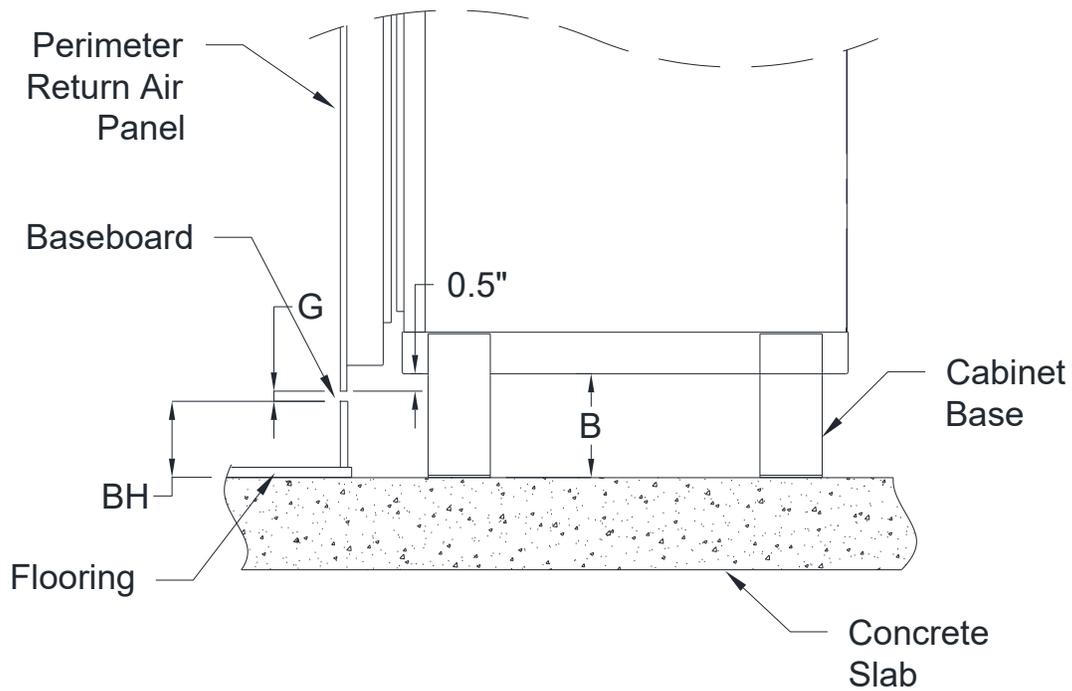

Model	Cabinet Size	Perimeter RA Panel Dimensions (inches)			
		A	B	C	D
VSHP 020	X	58 1/4	19 1/8	60 3/4	21 5/8
VSHP 030					
VSHP 040					
VSHP 050	Y	58 1/4	21 1/8	60 3/4	23 5/8
VSHP 060					
VSHP 080	Z	58 1/4	25 1/8	60 3/4	27 5/8
VSHP 100					
VSHP 120					

Notes:

- Return Panel interior is lined with 1/2 inch acoustic insulation for enhanced sound attenuation.
- Return air panel supplied in standard powder coat white finish.

5.5 Perimeter Panel Cabinet Base Height Calculation

Perimeter Panel Cabinet Base Height Calculation:

BH = Baseboard Height + Finish Floor Height*

G = Gap (min 0.5")

B = Cabinet Base Height
(Min. 5", increases in 1" increments)

$B = BH + G + 0.5"$

Note: *Include flooring thickness, underlayment, and any concrete leveling as part of calculation.

Example:

If using a 5" baseboard, with 1" Finished Flooring height, and 0.5" gap:

$B = (5" + 1") + (0.5") + 0.5"$

$B = 7"$

Therefore a 7" Cabinet Base is required.

Example: Baseboard to Base Height Table

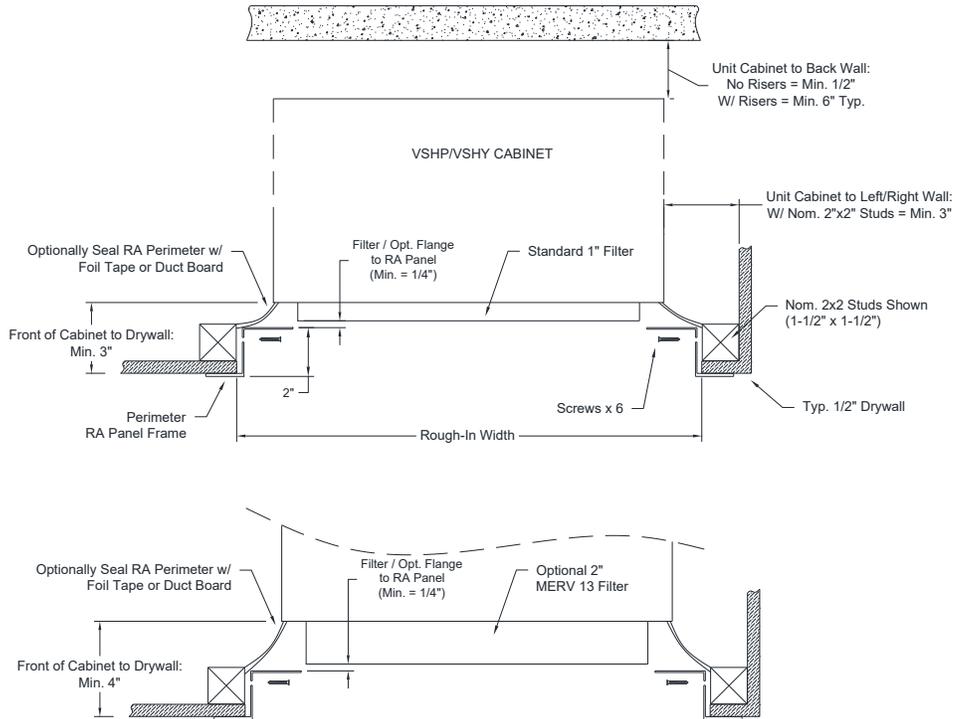

Baseboard Height*	Cabinet Base Height
Up to 3"	5"
>3" to 4"	6"
>4" to 5"	7"
>5" to 6"	8"

*Includes 1" Total Flooring

*Using gap G= 0.5" (from top of baseboard to return panel flange)

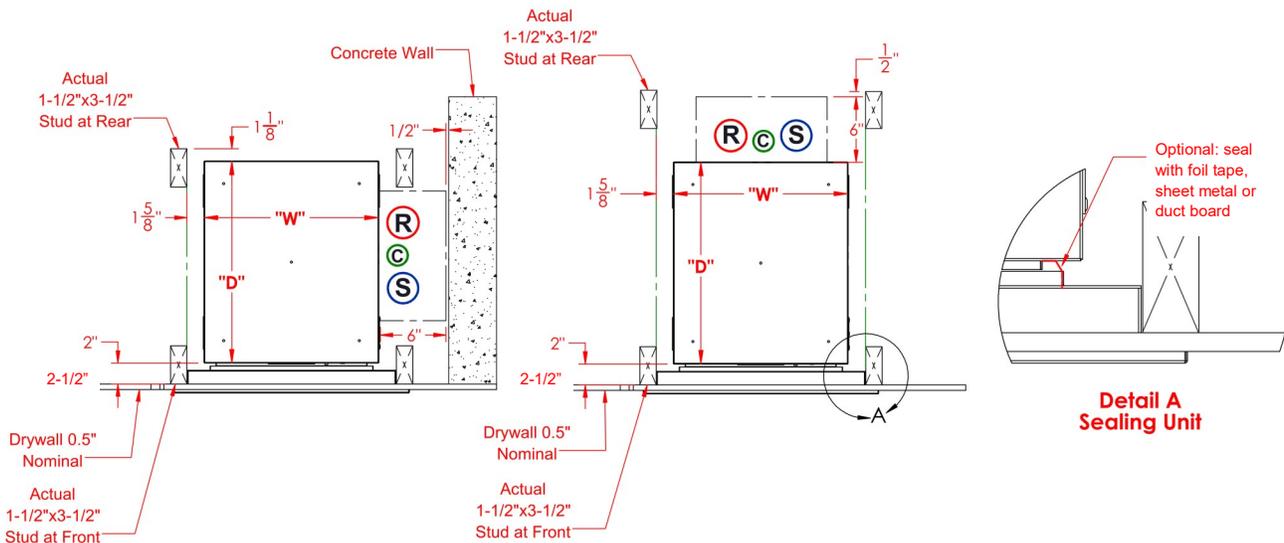

5.6 Perimeter Front R/A Panel Furring Details

Perimeter Panel Furring Drawing—Typ. 2x2 Framing Plan View

Notes:

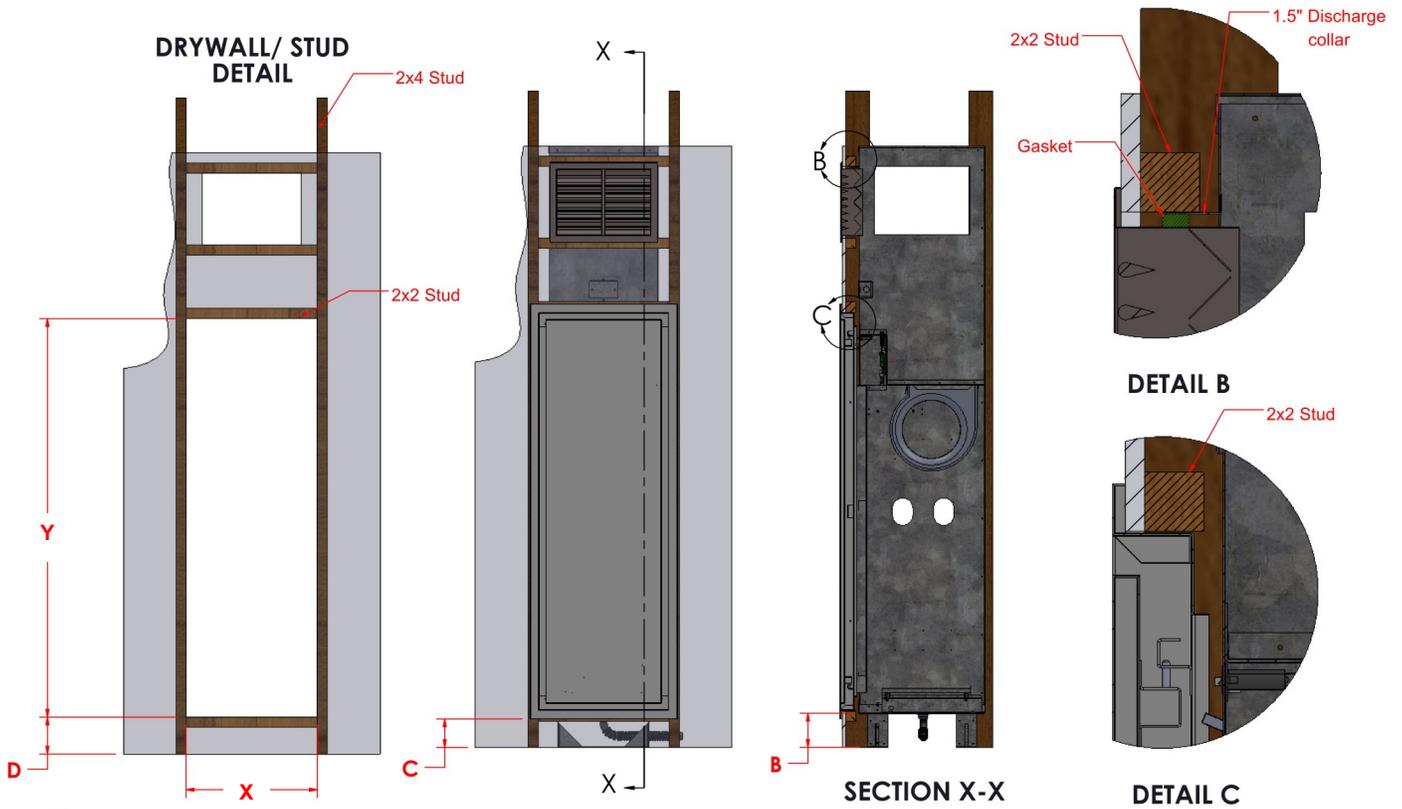

- 1) Provide gap of 3" from framing finished drywall to cabinet. With optional 2-inch MERV 13 filter provide 4" from finished drywall to cabinet. With optional flange, provide gap min. 1/4" from RA Panel to flange.
- 2) Return air panel should be centered in front of the unit return air opening.
- 3) With rear/side risers, allow for min. 6" typical clearance at the rear/side of the units.
- 4) For additional sound attenuation insulate the closet cavity with plenum rated acoustical insulation.

Perimeter Panel Furring Drawing—Typ. 2x4 Framing Plan View

5.6 Perimeter Front R/A Panel Furring Details (Cont'd)

- B** = Cabinet Base Height (Min 5", increases in 1" increments)
- C** = Flange Height Above Floor (B - 0.5")
- D** = Rough-In Height Above Floor (B + 0.625")

Perimeter Panel Rough-In Dimensions

Model	Cabinet Size	Cabinet Dimensions (in)		Rough-In (in)	
		W	D	"X"	"Y"
VSHP 020G	X	16	17 1/2	19 1/2	58 3/4
VSHP 030G					
VSHP 040G					
VSHP 050G	Y	18	20 1/2	21 1/2	58 3/4

¹Performance based on ARI/ISO 13256-1 Water Loop conditions at 86F EWT Cooling, 68F EWT Heating.

²Performance based on ARI/ISO 13256-1 Ground Loop conditions at 77F EWT Cooling, 32F EWT Heating.

Cooling performance shown is for 80.6F DB and 66.2F WB entering air.

Heating performance shown based on 68F entering air.

Cooling capacity is based on 80.6°F DB and 66.2°F WB entering air.
 Heating capacity is based on 68°F DB entering air.
 *See correction factor in section 8 for capacity multipliers at other conditions.

7. CORRECTION FACTORS & DESIGN LIMITS

7.1 Correction Factor Tables

Entering Air Correction Factors for Cooling Performance											
EAT Wet Bulb (°F)	COOLING										
	Total Cooling Capacity (BTUh)	Watts (W)	THR (BTUh)	Sensible Cooling (BTUh) @ EAT Dry Bulb (°F)							
				65	70	75	80	80.6	85	90	95
55	0.770	0.989	0.878	0.838	1.038	S	S	S	S	S	S
60	0.873	0.995	0.924	0.609	0.842	1.053	1.247	1.283	S	S	S
65	0.976	0.998	0.984		0.636	0.844	1.054	1.085	1.260	S	S
66.2	1.000	1.000	1.000		0.590	0.798	1.008	1.000	1.215	1.477	S
67	1.016	1.000	1.013		0.553	0.762	0.971	1.010	1.177	1.365	S
70	1.077	1.003	1.058			0.639	0.845	0.883	1.051	1.257	1.440
75	1.180	1.006	1.145				0.639	0.680	0.839	1.039	1.252

S = Sensible Cooling capacity is equal to Total cooling at conditions shown
The cooling capacity based on 80.6°F DB and 66.2°F WB entering air.

Actual = Catalog Data x Correction Factor (CF)

EAT- Entering Air Temperature
EWT - Entering Water Temperature
DB - Dry Bulb
WB - Wet Bulb
THR - Total Heat of Rejection
THA - Total Heat of Absorption

Entering Air Correction Factors for Heating Performance			
EAT Dry Bulb (°F)	HEATING		
	Total Heating Capacity (BTUh)	Watts (W)	THA (BTUh)
45	1.077	0.768	1.155
50	1.061	0.818	1.123
55	1.044	0.868	1.088
60	1.027	0.918	1.055
65	1.010	0.968	1.021
68	1.000	1.000	1.000
70	0.993	1.023	0.987
75	0.978	1.071	0.955
80	0.958	1.124	0.915

The heating capacity based on 68°F DB entering air.

Entering air correction factors table is used to correct the catalog values if the desired EAT is outside of rated EAT. Calculate desired EAT based on the "EAT Wet Bulb" and "EAT Dry Bulb" columns. Multiply the catalog results by the value corresponding to the design EAT and the desired output.

7.1 Correction Factor Tables (Cont'd)

Airflow Correction Factors							
Airflow	COOLING				HEATING		
% Rated CFM	Total Cooling (BTUh)	Sensible Cooling (BTUh)	Watts (W)	THR (BTUh)	Total Heating (BTUh)	Watts (W)	THA (BTUh)
70	0.93	0.82	0.97	0.94	0.94	1.08	0.93
75	0.94	0.85	0.98	0.95	0.95	1.06	0.94
80	0.95	0.88	0.98	0.96	0.96	1.05	0.96
85	0.97	0.91	0.99	0.97	0.97	1.03	0.97
90	0.98	0.94	0.99	0.98	0.98	1.02	0.98
95	0.99	0.97	1.00	0.99	0.99	1.01	0.99
100	1.00	1.00	1.00	1.00	1.00	1.00	1.00
105	1.01	1.03	1.00	1.01	1.01	0.99	1.01
110	1.02	1.06	1.01	1.02	1.02	0.98	1.02
115	1.03	1.09	1.01	1.03	1.02	0.98	1.03

Airflow correction factor table is used to correct the catalog values if the desired CFM is outside of rated CFM. Calculate desired CFM based on the "% Rated CFM" column. Multiply the catalog results by the value corresponding to the desired % Rated CFM and the desired output.

Antifreeze Correction Factors						
Glycol Type	% Glycol	COOLING			HEATING	
		Total Cooling (BTUh)	Sensible Cooling (BTUh)	Watts (W)	Total Heating (BTUh)	Watts (W)
Ethylene Glycol (E.G.)	0	1.000	1.000	1.000	1.000	1.000

Antifreeze correction factor table is used to correct the catalog values if glycol is being utilized. Calculate the required "% Glycol". Based on desired glycol type. Multiply the catalog results by the value corresponding to the desired glycol type and glycol ratio.

7.2 Design Limits

Air Limits	Cooling		Heating
	DB	WB	DB
Std. Entering Air Temperature (EAT)	75°F	63°F	68°F
Min. Entering Air Temperature (EAT)	65°F	55°F	50°F
Max. Entering Air Temperature (EAT)	85°F	71°F	80°F

Fluid Limits	Standard Range		Low Temp Water Range		Geothermal Range	
	Cooling	Heating	Cooling	Heating	Cooling	Heating
Std. Entering Fluid Temperature (EFT)	85°F	70°F	85°F	55°F	85°F	60°F
Min. Entering Fluid Temperature (EFT)	50°F	55°F	50°F	45°F	30°F	20°F
Max. Entering Fluid Temperature (EFT)	110°F	90°F	110°F	90°F	110°F	90°F

CFM Limits	
Min. CFM/Ton	300
Design CFM/Ton	400
Max. CFM/Ton	450

Fluid GPM Limits	
Min. GPM/Ton	1.5
Design GPM/Ton	3
Max. GPM/Ton	4

CAUTION

Design limits can not be combined. Combining maximum or minimum limits is not allowed. This could exceed the operation and design limits of the unit.

For example: It is not allowed to combine maximum entering air temperature (EAT) limits with maximum entering fluid temperature (EFT) limits.

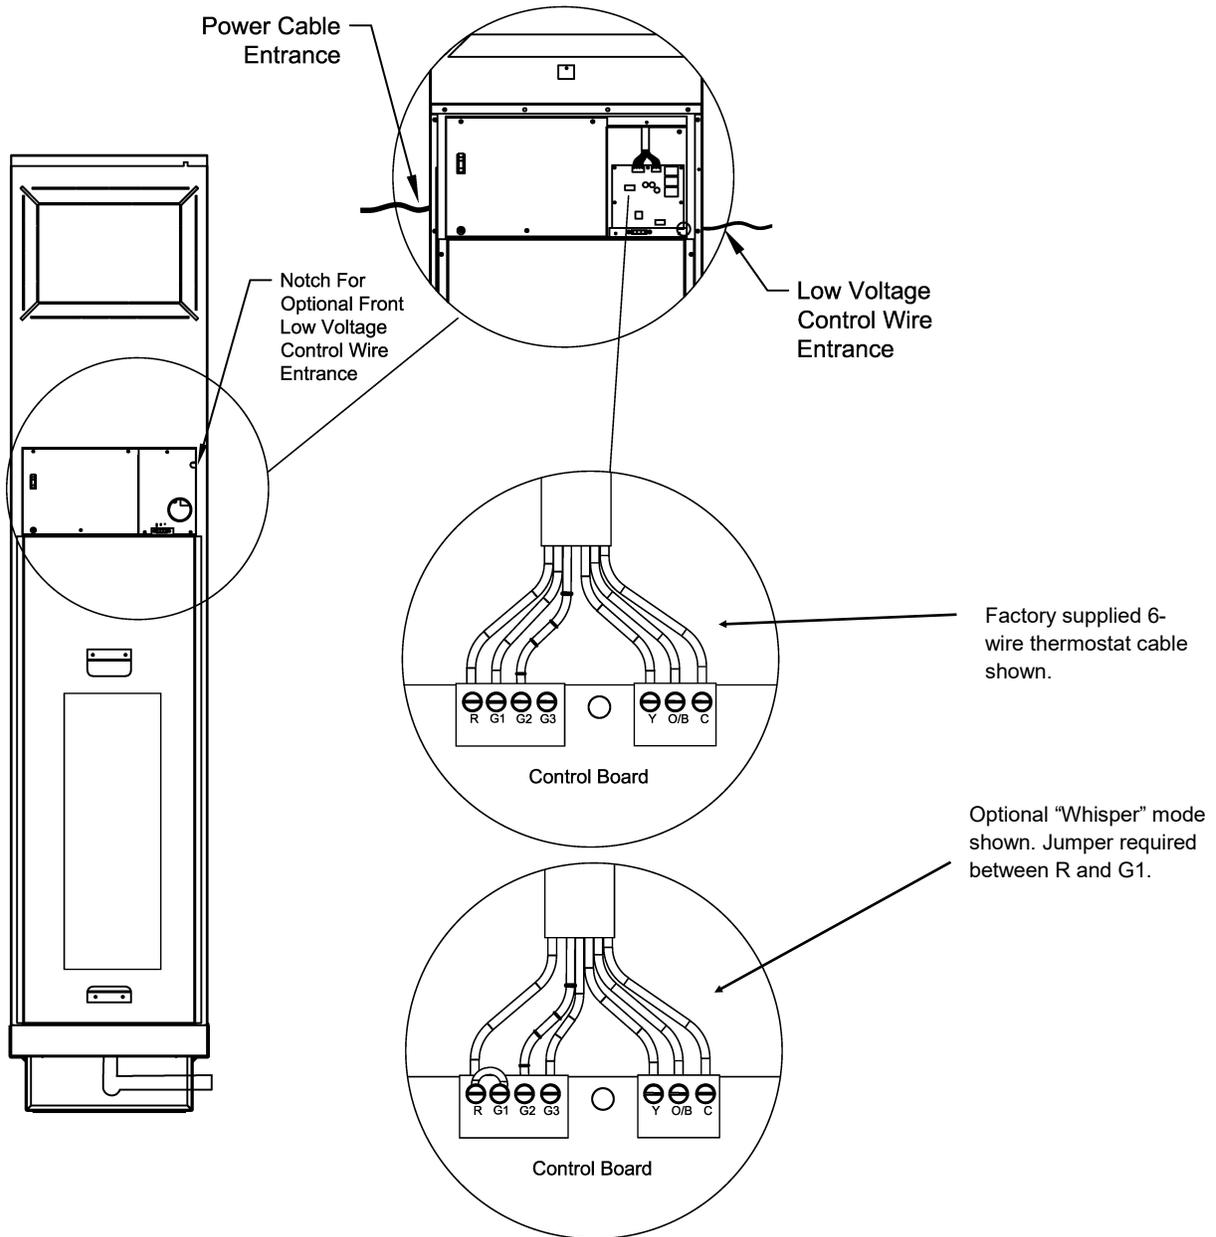

7.3 Antifreeze Percentages

ANTIFREEZE PERCENTAGE (by Volume)	Minimum Leaving Water Temperature F (°C)		
	25 F (-4°C)	30 F (-1°C)	35 F (1.5°C)
	Protects Fluid To:		
	10 F (-12°C)	15 F (-9°C)	20 F (-6.5°C)
Methanol	25%	22%	17%
Propylene Glycol	39%	25%	22%

Recommended to operate geothermal water loop systems with minimum 20% glycol.

8.3 Thermostat Wiring Details

Note: Factory supplied 6-wire 24 inch thermostat cable coiled up in low-voltage compartment of electrical box for field wiring to thermostat. Single speed thermostat thermostats require minimum 4-wire low voltage control wire harness when common is not required.

Heat Pump Thermostat:
R = 24VAC
G1 = Fan Speed 1
G2 = Fan Speed 2
G3 = Fan Speed 3
Y = Compressor On
O/B = Reversing Valve
C = Common

Heat/Cool Thermostat:
R = 24VAC
G1 = Fan Speed 1
G2 = Fan Speed 2
G3 = Fan Speed 3
Y = Cooling
O/B = Heating
C = Common

Thermostat with Whisper Mode:
R = 24VAC
G1 = Whisper Mode (Cont. Fan On)
G2 = Fan Speed 2
G3 = Fan Speed 3
Y = Compressor On
O/B = Reversing Valve
C = Common

9. SPECIFICATIONS

1 GENERAL

Install Omega series Vertical Stack Heat Pumps as indicated on the plans and capacities listed in the schedule and specifications.

Each unit shall be factory tested and ship factory-charged with R-410A refrigerant. All units from 1/2 to 3 Tons shall be tested and certified by ASHRAE/ANSI/AHRI/ ISO 13256-1 and ETL listed for United States and Canada. Each unit shall have factory affixed label showing ASHRAE/ANSI/AHRI/ISO and ETL logos. Cabinets and refrigeration chassis shall be factory wired and pre-piped.

2 CABINET

2.1 The vertical stacked heat pump units shall be **Omega VSHP Series, Standard Efficiency (SE) Series**. Units shall provide scheduled capacities at the ampacity and voltage specified. Specified airflow shall be at the scheduled external static pressure and shall include the effects of a wet coil and clean filter.

2.2 The cabinet shall be 20-gauge galvanized steel with riveted internal components for rigidity. Cabinet shall have internal surfaces insulated with 1 inch thick, 3.5 lbs. high-density, mould resistant, thermal and acoustic insulation. Insulation shall meet NFPA 90, UL-181, and ASTM-C1071 standards and insulation shall have a flame spread of less than 25, and a smoke developed classification of less than 50 per ASTM E-84 and UL 723.

The unit shall be a single cabinet construction. Contractor shall be responsible for isolating the supply duct and supply grille from the cabinet.

(Optional GOLD Series) The cabinet shall be sectionalized using a factory installed canvas duct collar for acoustic and installation purposes. The lower section shall include the risers, blower and fan motor assembly, all controls, and removable refrigeration chassis. The upper section shall be an acoustic discharge plenum lined with 1 inch thick, 3.5 lbs. high-density, mould resistant, thermal and acoustic insulation. Final cabinet height shall be coordinated with the installing contractor and architect. The discharge plenum shall be designed to be fastened to the underside of the concrete slab with field cut "Knockout" discharge openings. Rigid connections will not be accepted. A factory supplied flexible canvas connection shall be provided between the upper and lower sections. Heat pump manufacturer shall factory attach flexible connection to the plenum section.

2.3 (Optional) Provide optional line of site baffles (LOS) on all units with multiple unit outlets.

2.4 Physical dimensions of each unit shall be accommodated within furring / ceiling-slab spaces provided as shown on the architectural drawings

2.5 Provide a minimum 5" (optional 6", 7" and 8") high stand factory installed to the bottom of the sheet metal cabinet to elevate the unit 5" above the floor.

2.4 A removable inner chassis service panel allowing

service access to the fan and compressor compartment shall be provided with each unit.

2.5 The drain pan shall be 16-gauge stainless steel. The drain pan shall come an optional condensate overflow switch. The drain pan outlet shall be readily accessible for cleaning with a 7/8 inch OD copper drain connection. Unit shall be provided with a flexible p-trap condensate hose for connection to the condensate riser.

2.6 Factory installed supply and return risers shall be (Type L) (Type M) copper, with (factory) (field) mounted shut-off ball valves on each supply and return riser. Valves shall be brass and rated for 400 psig. A (Type L) (Type M) condensate riser shall be (factory) (field) installed. Risers sizes shall be installed according to building plans.

2.7 Risers shall have a (field) (factory) provided 3-inch deep swage. Transition pieces & expansion joints shall be field supplied.

2.8 Unit cabinet shall come with supply discharge opening "knockouts". An optional noise attenuating insulated privacy air baffle (LOS) shall be provided, if available, for horizontal supply discharge openings. All cabinet discharge openings shall include 1-1/2 inch drywall flange around the full opening perimeter.

2.9 Supply ducts shall not be rigidly attached to the cabinet and shall be acoustically isolated from cabinet using flexible canvas connections. Contractor shall install flex connection on all discharge openings. There shall be no rigid connection to supply-air discharge grilles or supply ducts except on Gold Series units designed with split casing.

2.10 Each unit shall have an (Acoustic) (Perimeter) return air panel. The panels shall be insulated with 1/2 inch thick, lined fiberglass insulation. The panel shall be easily removable without tools to allow access to the filter, chassis compartment and (optional) service disconnect switch.

2.11 (Optional) Unit shall have an optional Fresh Outside Air Duct intake located at the top of the unit for introducing fresh outside air into the unit.

2.12 Each unit shall be (field) (factory) supplied with double deflection supply grilles as shown on the plans. (Field) (Factory) provide opposed blade balancing dampers on units with multiple outlets as indicated on the plans.

2.13 (Optional) Unit shall have an optional 2-inch filter rack with MERV 13 rated pleated filter. ECM fan option shall be selected.

3 FAN & BLOWER

3.1 Each unit shall include a factory mounted forward curved, double inlet double width centrifugal direct drive fan and motor assembly with internal overload protection. The blower fan assembly shall be positioned horizontally from a sheet metal blower deck.

3.2 Units shall be supplied with a 3 speed PSC fan motor

SPECIFICATIONS (CONT'D)

with permanent split capacitor. Fan motors speeds shall be field selectable using unit mounted 3-speed fan switch or by 3-speed thermostat.

3.3 (Optional) Units shall be supplied with an ECM, controlled using a PWM signal. Fan motors speeds shall be field selectable using unit mounted 3-speed fan switch or by compatible multi-speed thermostat. Units with fresh air option shall have an ultra-low 'Whisper' mode fan speed for air circulation when there is no call for compressor.

4 REFRIGERATION CHASSIS

4.1. Provide high temperature and pressure rated water hoses for connection of the risers to the chassis. The hoses supplied shall be constructed with an inner core of rubber, a stainless-steel metal braid, and rubber outer covering. Fittings shall be brass construction. Hoses shall carry a pressure rating of 600 psig.

4.2. The compressor chassis shall be mounted and vibrationally isolated on 12-gauge slide rails using a double isolated base. Compressor shall have an acoustical enclosure ensuring compressor noise is isolated from air stream. Provide plug type electrical connections for chassis control and power connections allowing for easy removal of the chassis from the front of the cabinet.

4.3 The refrigeration circuit shall have two service valves, for measuring high and low refrigerant pressure, in the chassis compartment enclosure. The refrigerant circuit shall contain a thermal expansion valve (TXV) refrigerant metering device and a reversing valve.

4.4 Compressor shall be hermetically sealed type with internal thermal overload protection. Compressor shall be mounted on rubber vibration isolators.

4.5 Air side coils shall have copper tubes mechanically bonded to aluminum fins. Coil shall be sized to meet scheduled performance for cooling and heating. Provide 1" T/A filter on coil face.

4.6 Water side condenser heat exchanger shall be coaxial type with steel outer tube and copper inner tube. Condenser shall be rated at 500 psig water side and 650 psig refrigerant side.

4.7 (Optional) The chassis shall employ an optional motorized auto shut-off valve to shut off water to the unit when compressor is not running. Valve shall be mounted in the chassis compartment.

4.8 (Optional) The chassis shall employ optional autoflow balancing valve mounted in the chassis compartment to maintain specified unit water flow rate over 2-80 psig differential water pressure. Auto flow balancing valve shall be field serviceable.

4.9 (Optional) Low Temp Water option: The chassis shall be factory supplied with a Low Temperature Water (LTW) kit. The LTW option shall be utilized for system water loops between 45F and 55F in heating mode that do not contain any glycol

freeze protection. The chassis shall come with a high-pressure switch factory installed in the entering and leaving water side circuit to stop compressor operation in the event of ice formation in the coaxial coil. Pressure switch cut out is 400 psig and cut in at 250 psig.

4.10 (Optional) Geothermal option: The chassis shall be factory supplied with a geothermal kit. The geothermal option includes geothermal rated low-pressure switch, insulated coaxial and insulated water piping.

5 CONTROLS

5.1 Each unit shall be factory wired with all necessary controls. Each unit shall come standard with a microprocessor controller mounted in the electrical box. Electrical box shall contain compressor and fan motor contactor, 24-volt control power transformer, terminal block for low voltage field wiring connection, and terminal block for main power electrical connection, unit mounted service disconnect switch.

5.2 The operating and safety controls shall be monitored by the microprocessor controller. Sensor parameters and timers shall be field adjustable to meet site conditions. Controller shall have the following safety switches and sensors and timers:

- Low Pressure Safety Switch
- High Pressure Safety Switch
- **(Optional)** High Water Pressure Safety Switches
- **(Optional)** Condensate Overflow Switch
- Entering Water Temperature sensor
- Leaving Water Temperature sensor
- Suction line freeze-stat temperature sensor
- Supply Air Temperature sensor
- Compressor Anti-Short Cycle timer
- Water Valve Open and Closed timer
- Low-pressure bypass timer
- Random wait time on unit power up
- Fan-On and Fan-Off timer

5.3 Microprocessor controller shall have Web based test and diagnostic mode capability for quick servicing and troubleshooting on site. Controller shall have data logging with stored alarm states, supply and leaving water temperature, suction line temperature, and supply air temperature readings. Access to controller status and data log shall be available through a smart phone device, tablet or laptop.

5.4 Microprocessor controller shall have 'future proof' feature to accept software updates. Microprocessor board shall be capable of being field updated with newer software patches or custom software as needed.

5.5 Thermostats shall be remote mounted. Unit will come with a standard 24-inch thermostat whip factory wired to the controller board terminals. Thermostats can be either Heat/Cool or Heat Pump type. Thermostat shall provide 24V signal to G

(fan) terminal during a call for cooling.

5.6 Microprocessor board shall have a field selectable setting for use with multi-speed or single speed thermostats.

5.7 Electrical box shall have a factory mounted 3-speed selector switch allowing for unit to be field configurable to either manual speed mode (3-speed selector switch) or auto fan speed mode (thermostat controlled fan speed).

5.8 (Optional) ECM shall have field configurable torque speed settings using the imbedded Web based interface in cases where speed settings need to be field adjusted to meet site requirements.

5.9 (Optional) Units shall come with a SmartOne compatible RS-485 communication add-on board and remote temperature sensor (RTS). Integrates with SmartOne wall pad through PCB board RS485 terminals. RTS acts as back-up thermostat air temperature sensor in the event of communication disruption with SmartOne wallpad.

6 TESTING & WARRANTY

6.1 Each chassis unit shall be factory tested using a multi-step computer controlled testing equipment to prevent operator error during factory testing.

6.2 Warranty shall be for parts, 1 year not to exceed 18 months from date of shipment. (Optional) Provide 5 year compressor replacement parts warranty only.

7 EXECUTION

7.1 Units shall be installed neat and level on neoprene vibration isolation pads, supplied by heat pump manufacturer, and secured to floor.

7.2 Flush the system per manufacturer instructions before connecting chassis. Contractor shall join supply and return riser flexible hoses together in each cabinet for flushing purposes.

7.3 Installing contractor shall install risers and install riser transition piece connections where riser sizes change.

7.4 The hoses shall be installed in the field by the contractor. The flare fittings on the hoses shall be connected according to industry standard (Finger tighten then tighten with wrench while always using back-up wrench).

7.5 (Optional): Contractor shall make provisions for connecting fresh air duct to the optional fresh outside air duct intake located at the top of the unit cabinet.

7.6 (Add for Gold Units) Discharge plenum shall be fastened to the underside of the concrete slab for noise attenuation using appropriate industry accepted mounting practices.

7.7 Flush the system per manufacturer instructions before connecting chassis. The riser system shall be flushed, cleaned and commissioned before connecting chassis units to the riser system.

7.8 Contractor shall provide duct and grille canvas connections on all single piece (Silver Series) units.

7.9 Start-up of units shall be supervised by trained representatives of the equipment manufacturer.
