(1) Thermal management shall include multiple temperature sensors within the housing to include:

c) LED array circuit board temperatures.

d) Temperature sensors placed on each individual LED color circuit.

e) Fixture ambient.

f) CPU.

(1) Fixture user shall permit monitoring of temperature sensors via a legible LCD multi-line backlit display.

(2) Fixtures that do not provide active thermal monitoring of LED circuits and other temperature readings shall not be acceptable.

g) The fixture shall operate in an ambient temperature range of - 20°C (-4°F) minimum, to 40° C (104°F) maximum ambient temperature.

8. Electrical:

a) The fixture shall be equipped with 100V to 240V 50/60 Hz internal power supply.

b) The fixture shall support power in and thru operation.

(1) Power in shall be via Neutrik® PowerCon™ input connector.

(2) Power thru shall be via Neutrik ® PowerCon ™ output connector.

(3) Fixture power wiring and accessory power cables shall be rated to support linking of multiple fixtures up to the capacity of a 15A breaker.

c) The fixture requires power from non-dim source.

d) Power supply outputs shall have self-resetting current limiting protection.

e) Power supply shall have power factor correction.

9. LED Emitters:

a) The fixture shall contain a minimum of 5 different LED colors to provide color characteristics as hereinafter described.

b) All LEDs used in the fixture shall be high brightness and proven quality from established and reputable LED manufacturers.

(1) Fixture shall utilize Luxeon® Rebel™ LED emitters.

c) Manufacturer of LED emitters shall utilize an advanced production LED binning process to maintain color consistency.

d) LED emitters should be rated for nominal 50,000 hour LED life to 70% intensity.

e) All LED fixtures (100% of each lot) shall undergo a minimum eight-hour burn-in test during manufacturing.

10. Calibration – Fixtures shall be calibrated at factory for achieve consistent color and intensity output between fixtures built at different times and/or from different LED lots or bins.

a) Calibration data shall be stored on the LED array as a permanent part of on-board operating system.

b) All arrays, including replacement arrays shall be calibrated to the same standard to insure consistency.

c) Fixtures not offering LED calibration shall not be acceptable.

11. Color – The fixture shall utilize a minimum of 40 LED emitters. The fixture shall be available in specialized LED arrays as outlined below:

    a) DESIRE D40

        (1) Red, Amber, Green, Cyan, Blue, Indigo and White LEDs in an array designed for broad spectrum color, light tints, and variable whites. This array shall be the Lustr+ array as manufactured by Electronic Theatre Controls, or approved equal.

    b) Measured brightness of the Lustr+ array shall be greater than 2900 field lumens

        (1) Red, Orange, Amber, Green, Cyan, Blue and Indigo LEDs in an array designed for broad spectrum deep colors. This array shall be the Vivid array as manufactured by Electronic Theatre Controls, or approved equal.

    c) Measured brightness of the Vivid array shall be greater than 2500 field lumens.

        (1) Red, Orange, Amber, Green and Indigo LEDs in an array designed for extra-high brightness output in red/warm end of the spectrum. This shall be the Fire array as manufactured by Electronic Theatre Controls, or approved equal.

    d) Measured brightness of the Fire array shall be greater than 2500 field lumens.

        (1) Red, Orange, Green, Cyan, Blue and Indigo LEDs in an array designed for extra-high brightness output in the blue/cool end of the spectrum. This shall be the Ice array as manufactured by Electronic Theatre Controls, or approved equal.

    e) Measured brightness of the Ice array shall be greater than 1800 field lumens.

12. Dimming:

    a) The LED system shall use 15-bit nonlinear scaling techniques for high-resolution dimming. At least four different dimming curve options

shall be accessible at the fixture's User Interface.

(1) Incandescent

(2) Standard

(3) Linear

(4) Quick

b) Dimming curves shall be optimized for smooth dimming over longer timed fades.

c) The LED system shall be digitally driven using high-speed pulse width modulation (PWM).

d) LED control shall be compatible with broadcast equipment in the following ways:

(1) PWM control of LED levels shall be imperceptible to video cameras and related equipment.

(2) PWM rates shall be adjustable by the user at the fixture if necessary to avoid any visible interference to video cameras and related equipment.

13. Control and User Interface:

a) The fixture shall be USITT DMX 512A-compatible via In and Thru 5-pin XLR connectors.

b) The fixture shall be compatible with the ANSI RDM E1.20 standard.

(1) All fixture functions shall accessible via RDM protocol for modification from suitably equipped control console.

(2) Temperature sensors within the luminaire shall be viewable in real time via RDM.

(3) Fixtures not offering RDM compatibility, feature set access or temperature monitoring via RDM shall not be compatible.

c) The fixture shall be equipped with multi-line LCD display for easy-to-read status reports and configuration changes.

d) The fixture shall be equipped with a six-button user-interface.

e) The fixture shall offer multiple DMX input profile options to include:

(1) RGB – control of all individual LED colors via a three- channel profile.

(2) Red, Green, Blue.

(3) HIS – control of all individual LED colors via a three- channel profile.

f) Hue, Saturation, and Intensity.

(1) HSIC – control of all LED colors via a four-channel profile.

g) Hue, Saturation, Intensity and Color Point.

h) Color point provides variable color temperature settings.

(1) Direct – control of each individual color channel via an independent channel.

(2) A variable-rate strobe channel shall be provided.

i) The fixture shall offer three output setting:

(1) Boost mode - powers LEDs at maximum intensity and provides no compensation against LED ‘droop’ or intensity loss.

(2) Regulated mode – slightly restricts maximum LED intensity levels to compensate against LED droop.

(3) Protected mode – further restricts maximum LED intensity levels to compensate against LED droop and offer color consistency at highest permissible ambient temperatures (40C).

(4) Fixtures that do not provide regulated and protected operation modes are not acceptable.

j) The fixture shall offer additional user-definable options to including but not limited to:

(1) Display time out options.

(2) Loss of data behavior options.

(3) White point settings.

(4) Red-shift option for tungsten dimming emulation.

k) The fixture shall offer five Quick Set-Ups to allow user to rapidly select different combinations of the numerous user options based on the desired usage situation, to include:

(1) General – for most situations.

(2) Stage – when emulating incandescent fixtures is desired.

(3) High Impact – when maximum output and effect is desired.

(4) XT Arch – when color consistency and architectural characteristics are desired.

(5) Studio - when DMX or stand-alone of white light output is required with intensity, color temperature and color tint control parameters.

l) The fixture shall offer stand-alone functionality eliminating the need for a console.

(1) Fixture shall ship with 24 preset colors accessible as a stand-alone feature.

(2) Fixture shall ship with 12 Sequences accessible as a stand-alone feature.

(3) Each color and sequence can be modified by the end user.

(4) Fixtures can be linked together with standard DMX cables and controlled from designated master fixture.

m) Up to 32 fixtures may be linked.

(1) Fixtures in a stand-alone state shall restore to the settings present prior to power cycling, eliminating the need for reprogramming.

(2) Fixtures without stand-alone operation features described in a, b, c, d, and e shall not be acceptable.

14. The Theatrical Lighting Instruments shall be ETC D40 LED lighting instruments. This Contractor shall furnish the following types and quantities of LED lighting instruments with C-clamp, safety chain and full lens sets:

a) Twelve (12) Desire D40™.

G. 90W MO LED Fresnel Spotlight

1. General

a) The product shall be 0 to 100% controllable by DMX (USITT DMX512-A). The dimming function shall be smooth and continuous. The LED shall turn off below 1%. Products with unstable dimming dynamics shall not be acceptable.

b) The unit shall have Power Factor Correction (PFC)

c) The unit shall be able to internally switch from 8 to 16 bit DMX resolution

d) The luminaire shall meet the UL standards and display a UL and cUL label on the lamphead. Luminaire that do not meet this requirement shall not be acceptable.

2. Physical

a) Its housing should be of lightweight design and finished with electrostatically applied black epoxy paint.

b) Its pan, tilt, and focus shall be manual operated.

c) Its mounting spigot shall be to B.S. standard i.e.: or 1-1/8” diameter, with top reduced diameter to fit directly onto c-clamps with 22mm receivers.

d) Its LED ARRAY, Optics, and Heat Sink shall sit on metal shafts with self-lubricating Teflon bushing for smooth focusing operation. Full focusing action i.e.: from full flood position to full spot position shall take less than 2 turns of the focusing knob or bell cup. Focusing mechanisms that require more than two turns for the complete spot to flood run shall not be acceptable.

e) The total self-weight of the LED Fresnel (Housing and manual operated yoke) shall be less than 17.6 lbs. Heavier units shall not be acceptable.

f) The maximum dimensions shall be (lighting fixture body and yoke)

(1) Maximum Housing length: 10.9”

(2) Maximum Height (measured from the top of the fixture to the bottom of the stirrup without spigot): 15.5”

(3) Maximum Width (including the maximum occupancy of the stirrup) 11.4”

g) Each unit shall be supplied with:

(1) 6” Glass Fresnel lens secured with springs for expansion. Plastic or acrylic lenses are not acceptable.

(2) 4-leaf rotating barndoor

(3) Color frame

h) Each unit shall be equipped with:

(1) POWERCON 20A In and Out panel mounted connectors

(2) XLR 5p In and Out panel mounted connectors in order to allow both Power and DMX Daisy Chain.

(3) Products supplied with non-removable power or DMX cables and without the Daisy Chain ability shall not be acceptable

i) The unit shall have a microprocessor built into the luminaire that shall allow for firmware upgrades as they are available.

XII. 3. Optical

a) The unit shall be equipped with a LED ARRAY of minimum 10X10 LEDS and a rated duration of minimum 50,000 hours. The LED Array shall be mounted on a special heat sink with a central round core and octagonal shape and it shall be equipped with a thermal stabilization system formed by a thermal sensor that activates a silent Sync Jet Fan in case the LED case temperature exceeds 60 degrees C. Products with only heat sinks and no thermal stabilization systems that would only rely on convection cooling shall not be acceptable, as such systems determine a significant variation during the operation time of the white light and therefore an unstable correlated color temperature.

b) The white light emitted shall have a Daylight Balanced Correlated Color Temperature and the white color point shall not change with time. Products with unstable CCT (Correlated Color Temperature) shall not be acceptable.

c) The LED ARRAY shall be supplied with direct current throughout its dimming range. Due to the stable color temperature through the dimming range it is required that the light emission is continuous at any dimming level. Products utilizing PWM for the dimming shall not be acceptable as they may introduce light flickering or flattering in some condition of camera settings (for instance with high speed electronics shutter).

d) Its beam angle when fully spotted shall be less than 12 degrees and when fully flooded shall be more than 60 degrees.

e) The light beam shall produce a central intensity that shall be more than 41.000 candles in spot and more than 5.700 candles in full flood.

f) The projected light beam shall have controllable characteristics as those of a Tungsten Fresnel, meaning softer shadows in spot and harder shadows in flood, with the appropriate barndoor control in flood position.

g) The units shall have a LED engine replacement module that is disassembled by two screws for future upgrade or replacement purposes of the LED engine. Units that cannot demonstrate the

upgrade/replacement of the LED engine shall not be accepted.

h) Provide six (6) 90W DeSisti Fresnel

Part 3 - Execution

I. GENERAL

A. Install equipment in accordance with the approved Shop Drawings, Manufacturer's instructions, and referenced quality standards as indicated herein.

B. Prior to installation inspect the installed work of other trades and verify it is complete to the point where lighting equipment can be installed in complete accordance with the original design and approved Shop Drawings. Ensure that all painting, wet, and dust-producing work is completed. Verify the supporting structures for lighting equipment are acceptable and that no obstructions are present that would preclude installing the devices. In the event of discrepancy, immediately notify the Architect in writing.

1. Verify that job conditions are ready to receive work of this section. Notify architect of any existing condition, which will adversely affect execution. Beginning of execution will constitute acceptance of existing conditions.

2. Verify that field measurements are as shown on shop drawings.

3. Verify that mechanical, electrical, and other items affecting work of this section are in place and ready to receive the work.

II. PREPARATION

A. Protect floor and wall surfaces, building equipment, ductwork, piping, and lights with covers or tarps to prevent damage when installing fixtures and connector strips.

B. All branch load circuits shall be live tested before connecting the power distribution lighting bars.

C. Verify field measurements at the site prior to installation and modify the system accordingly.

III. INSTALLATION

A. Install stage lighting and controls where shown, in accordance with manufacturer's written instructions and with recognized industry practice to ensure that stage lighting equipment complies with applicable requirements of NEW and UL standards and with the applicable portions of NECA's "Standard of Installation" and Trade Standards specified herein and before.

B. All wiring for lighting and control system shall be run in minimum ¾" conduit as hereinbefore specified. All junction box covers shall be identified as hereinbefore specified. All conduits, device mounting boxes, junction boxes, and enclosures shall be securely fastened with appropriate fittings to insure positive ground throughout the entire system.

C. This Contractor shall furnish and install all wiring and make all final connections as indicated in the system manufacturer's shop drawings and standard installation documents. Splices for dimming circuits shall be made only in junction boxes.

D. All wiring shall be checked and tested by this Contractor to ensure the system is free from grounds, opens, and shorts.

E. It shall be the responsibility of the Contractor performing the work in this section to coordinate with the theatrical rigging system Contractor for the proper installation and operation of the theatrical lighting, wiring devices, cables, supports, etc.

F. All work shall be under the supervision of a field engineering technician, accredited by the system manufacturer. It shall be the responsibility of this technician to check and inspect the installation to the Owner's and Architect/Engineer's satisfaction.

IV. PERSONNEL TRAINING

A. A field engineering technician, accredited by the system manufacturer shall provide a minimum of four (4) hours of training for the Owner's operating personnel on the proper operation and troubleshooting of the lighting control system equipment.

V. OPERATING AND MAINTENANCE INSTRUCTIONS

A. At the completion of the installation, the manufacturer shall furnish four (4) final sets of "as-built" drawings as well as manuals of instruction as to the proper operation and maintenance of the lighting control system. "As built" drawings shall include all field modifications. Formal turn-on and instruction shall be provided to the Owner's officially designated representative within fourteen (14) days of a written request by the Owner.

B. This Contractor shall furnish the Owner's officially designated representative(s) with a minimum of four (4) hours of on-the-job instructions in the operation, maintenance, and diagnostic testing of the system. (This shall not be part of the system turn-on specified above.) This Contractor shall also furnish the Architect/Engineer four (4) bound copies of complete operating and maintenance instruction manuals of the lighting control system including circuit diagrams and all other information necessary for proper operation and service maintenance.

VI. SYSTEM TEST

A. This Contractor shall conduct an operating test of the complete system. The system shall test free from grounds, shorts, and other faults. All connections shall be thoroughly checked for mechanical and electrical connections. All lighting control system equipment shall be demonstrated to operate in accordance with the requirements set forth in these Specifications and as shown on the Drawings.

B. This Contractor shall perform all tests in the presence of the Architect/Engineer. This Contractor shall furnish all personnel and test instruments for use in the test.

VII. WARRANTY

A. This Contractor shall deliver the work in a first-class operating condition in every respect.

B. This Contractor shall warrant that the material, equipment, and workmanship furnished shall be entirely free from defects. Any material, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractor's own expense. Refer to SECTION 01740 for the start of the warranty period. The Contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the Drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

C. The lighting control system manufacturer shall be prepared to offer a service contract for the maintenance of the system after the warranty period.

VIII. DEMONSTRATION

A. Operation and Maintenance Training: Provide a total of two (2) hours of training with this equipment.

END OF SECTION

Part 1 - General

I. REQUIREMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

II. SCOPE

A. The work covered under this Section shall include furnishing and installing Sports Field Lighting System(s), and Sports Field Lighting Control and Monitoring System(s) complete as shown on Drawings and as herein specified.

B. The Sports Field Lighting Systems shall include field lighting luminaires, egress/entry luminaires, and support structures to include: poles; foundations; crossarms; service platform cage assemblies; and other appurtenances, complete as shown on Drawings and as herein specified.

C. The Sports Field Lighting Control and Monitoring System shall be for the control of Sports Field Lighting System(s) and other equipment as shown or indicated on the Drawings, detailed in the manufacturer submittal and as further defined herein. Contractor is solely responsible to verify quantity, installation locations and wiring requirements for this project.

1. The systems shall include but not be limited to microprocessor controlled relay panels controlled via wireless communication based equipment, switches, and Digital Time Clock (DTC), and other devices to provide the required functionality of the system. The system shall also include contactors, cabinets, interface cards, and other devices or equipment as shown on the Drawings. Requirements are indicated elsewhere in these specifications for work including, but not limited to, raceways and electrical boxes and fittings required for installation of control equipment and wiring.

D. Specific manufacturers' catalog numbers, when listed in this section are for reference only. It is the responsibility of this Contractor to verify with the lighting control manufacturer all catalog information and specific product acceptability.

III. DEFINITIONS

A. Constant Light System:

1. A system with an automatic power adjustment to achieve a lumen maintenance control strategy as described in the IESNA Lighting Handbook, Ninth Edition, Chapter 27.

B. Coefficient of Variation (CV):

1. A measure of the weighted average of all relevant illuminance values. Defined by IESNA Lighting Handbook, Ninth Edition, Chapter 20.

C. Design Documents:

1. Documents, including drawings, calculations, and material and product specifications prepared to obtain acceptance by Owner and authorities having jurisdiction.

D. Horizontal Illuminance:

1. Illuminance measured in footcandles (FC), on a horizontal surface three (3) feet above the playing surface (ground), unless otherwise indicated.

E. Illuminance:

1. Concentration of incident light falling on a surface.

F. LC: Lighting Certified

G. Light Trespass: Light spill into areas and properties outside the playing areas, which is either annoying or unwanted.

H. LLD:

1. Lamp lumen depreciation. The fractional loss of lamp lumens at rated operating conditions that progressively occurs during lamp operation.

I. LLF:

1. Light loss factor. Factor used to adjust lighting calculations from initial values obtained in a controlled laboratory environment to maintained values in actual field conditions.

J. Support Assembly:

1. Includes poles or other support structures, brackets, arms, appurtenances, base, anchorage, and foundation.

K. Target Illuminance:

1. Illuminance level used for calculations during system design to determine if the system meets a desired performance standard.

L. Vertical Illuminance:

M. UG: Uniformity gradient; the rate of change of illuminance on the playing field, expressed as a ratio between the illuminances of adjacent measuring points on a uniform grid

1. Illuminance, measured in footcandles, in two (2) directions on a vertical surface, at an elevation coinciding with plane height of horizontal measurements, unless otherwise indicated.

IV. LIGHTING PERFORMANCE

A. Illumination Criteria:

1. BASEBALL/SOFTBALL

a) Minimum Average Target Illumination: 50 FC infield and 30 FC outfield.

b) Maximum-to-minimum Uniformity Ratio: 2:1 infield or less and 2.5:1 outfield or less.

c) CV: 0.17 or less infield and 0.21 or less outfield.

2. FOOTBALL/STADIUM*

a) Minimum Average Target Illumination: 30 FC

b) Maximum-to-minimum Uniformity Ratio: 3:1 or less.

c) CV: 0.25 or less.

3. TRACK AND FIELD*

a) Minimum Average Target Illumination: 20 FC track (at surface of track) and 30 FC for field event areas and all areas inside the track.

b) Maximum-to-minimum Uniformity Ratio: 4:1 or less.

c) CV: 0.3 or less.

d) *The football/stadium includes the track and field playing surfaces as well as other sports such as soccer and lacrosse. Stadiums shall have the entire area inside the track lighted to a minimum average target illumination of 30 FC and the track lit to a minimum average target illumination of 20 FC. FIELD EVENT areas (such as pole vaults, broad jumps, etc.) located outside of the track shall have these areas lit to a minimum average target illumination of 30 FC. This criterion is the same for standalone TRACK and FIELDS.

B. Illumination Calculations:Computer-analyzed point method complying with IESNA RP-6 to optimize selection, location, and aiming of luminaires. All calculations shall be measured 36 inches above the playing field, unless otherwise indicated. Manufacturers utilizing a constant light (or continuous light) system shall use automatic power adjustments to achieve a lumen maintenance control strategy as described in the IESNA Lighting Handbook Ninth Edition, Lighting Controls Section pages 27-2 and 27-3: “Lumen maintenance control strategy calls for reducing the initial illumination of a new system to the designed minimum level. As lumen depreciation occurs, more power is applied to the lamps in order to maintain constant output.” Manufacturers not using a constant light system shall base their calculations on a 0.69 LLF.

C. Computer-analyzed illumination calculations shall include, but not limited to, the following:

1. Grid Pattern Dimensions: For playing areas of each sport and areas of concern for spill-light control, correlate and reference calculated parameters to the grid areas. Each grid point represents the center of the grid area defined by the length and width of the grid spacing. The grid pattern dimensions shall generally be 30 feet by 30 feet, unless indicated otherwise. Each grid point shall be considered a field test station for purposes of field testing described later in these specifications.

2. Spill-Light Control: Minimize spill light for each playing area on adjacent and nearby areas. These levels shall be initial footcandles and shall be measured at a maximum distance of 150 feet from the boundary of the playing field(s). Alternative distance must be approved by owner in writing.

    a) Prevent light trespass on properties near the playing field(s) as defined by Prince George's County Lighting Ordinance [], Prince George's County's Outdoor Lighting Standards and these specifications.

    b) For areas indicated on the Drawings as "Spill-Light Critical", limit the level of luminance directed into the area from any luminaire or group of luminaires, and measured 36 inches above finished grade to the following:

        (1) Maximum Horizontal Illuminance: 0.5 FC.

        (2) Maximum Vertical Illuminance from the direction of the greatest contribution of light: 0.8 FC.

    c) Calculate the horizontal and vertical illuminance due to spill light for points spaced 20 feet apart in areas indicated on the Drawings as "spill-light critical" and 30 feet apart in other "non-critical" areas, to ensure that design meets above limits. Each spill-light point shall be considered a field test station for purposes of field testing described later in these specifications.

3. Glare Control: Minimize direct glare in adjacent and nearby areas and properties. These levels shall be measured at a maximum distance of 200 feet from the boundary of the playing field(s). Alternative distance must be approved by owner in writing.

    a) The intensity of luminaires that may be observed at an elevation of 60 inches above finished grade from nearby areas and properties shall be less than 12,000 candelas when so observed.

    b) The intensity of luminaires that may be observed at an elevation of 60 inches above finished grade from designated "spill-light critical" areas at nearby properties shall be less than 7,000 candelas when so observed.

    c) Calculate and measure the glare points spaced 20 feet apart in areas indicated on the Drawings as "spill-light critical" and 30 feet apart in other "non-critical" areas, to ensure that design meets above limits.

Each glare point shall be considered a field test station for purposes of field testing described later in these specifications.

4. Luminaire Mounting Height: Comply with IESNA RP-6 with consideration for requirements to minimize spill light and glare. Luminaire mounting heights are to the lowest sports lighting luminaire measured above the playing field elevation.

5. Luminaire clusters shall be located outside of the playing field glare zones defined by IESNA RP-6.

6. Egress/Entry Lighting: Provide tungsten-halogen luminaires to provide an average of 1.0 FC illumination measured at grade in spectator and spectator egress/entry areas. These luminaires shall operate upon initial activation of the sports field lights and upon deactivation of the sports field lights. Momentary power interruptions shall activate the egress/entry lighting immediately following restoration of power to the lighting circuits. The duration of these lights illumination shall not be less than 15 minutes, for each occurrence stated above, and then automatically extinguished.

V. QUALITY ASSURANCE

A. Sports field lighting systems and the control systems shall meet the requirements of the National Electrical Code (NEC), state and local codes, including Prince George's County's Outdoor Lighting Standards, and these Specifications.

B. The entire sports field lighting system, which includes the support assemblies, shall be listed by Underwriters Laboratories, Inc. (UL) as a system as well as each individual component having its own UL listing or classification.

C. The Sports Field Lighting Controls and Monitoring System lighting control panels (LCP) shall be UL 916 Listed. LCP's controlling emergency operation by a relay panel shall fully comply with NEC 700.9(B). This Contractor is responsible for verifying compliance.

1. Control wiring shall be in accordance with the NEC requirements for Class 2 remote control systems, Article 725 and manufacturer's specification and requirements.

D. All materials used shall be new and of good quality conforming to these specifications and the successfully reviewed submittals. Any material not successfully reviewed by the Architect/Engineer that is incorporated in the work, used or delivered to the site, shall be immediately removed upon the order of the Owner or Architect/Engineer and replaced to the satisfaction of the Owner and Architect/Engineer at this Contractor's expense.

VI. SUBMITTALS

A. This Contractor shall furnish submittals for the **Sports Field Lighting System(s)** in accordance with SECTION 16010 of these Specifications. Submittals for review shall include but not be limited to the following:

1. Design Calculations for the following:

a) Target Illuminance(s).

b) Complete computer-generated point-by-point photometric calculations of horizontal and vertical illuminance, at minimum grid size and area for each sports field(s).

(1) The exact quantities of luminaires may differ from the original design, but the required footcandle levels, CV, uniformity ratios, spill-light and glare control must be maintained using the same design criterion shown on the drawings and/or specified herein. Should the luminaire manufacturer require additional luminaires to achieve the stated footcandle levels, uniformity and/or require additional branch circuit wiring, supports, support assembly, etc., in conjunction with these additional luminaires, shall not cause additional expense to the Owner.

c) Computer-generated spill/glare analysis in accordance with the lighting performance specifications.

d) Total electrical load, in kilowatts, of lighting system and for each individual pole.

e) Calculations of source intensity of luminaires observed at eye level from indicated properties near the playing field.

2. Electrical system design calculations for the following:

a) Short-circuit current calculations for rating of panelboards.

b) Total connected and estimated peak-demand electrical load, in kilowatts, of lighting system.

c) Capacity of feeder required to supply lighting system.

3. Wiring requirements, including required conductors and cables and wiring methods.

4. Structural analysis data and calculations used for pole selection.

5. Provide an aiming plan for each sports luminaire.

6. Manufacturers bidding any form of a constant light system must include in the shop drawing submittal an independent test report certifying the system meets the lumen maintenance control strategy as hereinbefore described and verifying the field performance of the system for the duration of the useful life of the lamp based on lamp replacement hours. Report shall be signed by a licensed Professional Engineer with outdoor lighting experience who is additionally Lighting Certified (LC) by the National Council on Qualifications for the Lighting Professional.

7. Provide pole and foundation design drawings signed and sealed by a Professional Engineer registered in the state of Maryland. Pole drawings shall indicate the design criteria, assumptions, codes, standards, and all foundation reaction forces and moments. Foundation drawings shall indicate the design criteria allowable soils bearing pressures, codes, standards, all foundation reaction forces and moments, construction specifications, materials, and specific installation requirements such as shoring or de-watering. For the purpose of this bid, the Contractor shall assume the following type of sub-grade material specified in the current adopted edition of the International Building Code, Section 1804, Table 1804-2 – Allowable Foundation and Lateral Pressure:

    a) Soils – Class 5 (clay and sandy clay)

8. Provide data and drawings for all lighting system equipment, service platforms, crossarms and other accessories specified herein and as shown on the Drawings.

B. This Contractor shall furnish submittals for all components of the **Sports Field Lighting Control and Monitoring System(s)** in accordance with SECTION 16010 of these Specifications. Submittals for review shall include but not be limited to the following:

1. Shop Drawings: Submit dimensioned drawings of complete lighting control systems and accessories including, but not necessarily limited to, relay panels, switches, DTC, contactors, cabinets, and other interfaces. Shop drawings shall indicate exact location of each device. Plans shall be diagrammatical. “Cut Sheet” submittals not acceptable.

2. Product Data: Submit for approval manufacturer’s data on the specific lighting control and monitoring systems and components. Submittal shall be in both electronic and hard copy formats. To prevent departures from approved system operation, electronic file submitted shall be able to be directly downloaded to the specified system at the manufacturer’s facility. Submit a complete bill of materials with part numbers, description and voltage specifications.

3. One Line Diagram: Submit a project specific one-line diagram of the system configuration indicating the type, size and number of conductors between each component. Submittals that show typical one-line or riser diagrams are not acceptable.

4. Schematics: Submit wiring schematics for switches and remote control system including all relays and contactors.

5. Programming Forms: Submit programming forms with complete information describing the operation of the lighting control system and all other information necessary to show proper operation of the system.

VII. QUALITY ASSURANCE

A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.

B. Manufacturer Qualifications: Manufacturer's responsibilities include fabricating sports lighting and providing professional engineering services needed to assume engineering responsibility.

1. Engineering Responsibility: Preparation of delegated-design submittals and comprehensive engineering analysis by a qualified professional engineer.

C. Luminaire Photometric Data Testing Laboratory: By manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products.

D. Luminaire Photometric Data Testing Laboratory: By an independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL.

E. Field Testing Agency Qualifications: An independent testing agency that is accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products, or an NRTL as defined in 29 CFR 1910, with the experience and capability to conduct field testing according to IESNA LM-5.

F. Field Testing Agency Qualifications: A qualified independent professional engineer not associated with Contractor or lighting equipment manufacturer.

G. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel" and AWS D1.2/D1.2M, "Structural Welding Code -Aluminum."

H. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

VIII. SPARE PARTS AND LAMPS – SPORTS FIELD LIGHTING SYSTEM

A. The Contractor shall furnish to the Owner at the completion of the project, a minimum of 10% spare lamps for each type and wattage installed on the project. The quantities of spare lamps shall be by the case (minimum of six lamps per case for the quarts halogen and twelve lamps per case for the HID). Loose lamps, not in a case or in a partial case are not acceptable.

B. The Contractor shall furnish to the Owner at the completion of the project, a minimum of 10% spare fuses of each type used for the luminaires. Fuses shall be in manufacturer’s boxed containers. Loose fuses or partially boxed are not acceptable.

C. Spare lamps and fuses shall be stored on site as directed by the Owner.

IX. SPARE PARTS – SPORTS FIELD LIGHTING CONTROL AND MONITORING SYSTEM

A. Provide 10% spare relays per Lighting Control Panel, up to the maximum capacity of the LCP. If the LCP is fully populated provide a minimum of two relays per relay type (N.O. or N.C.) in the panel.

B. Provide CD version of manufacturer’s operating software to include graphical interface

software. Software shall be the latest version.

C. Provide 2 extra sets of as-built and operating manuals.

D. Provide 10 spare keys for each key operated switch.

X. DESCRIPTION – SPORTS FIELD LIGHTING SYSTEM

A. This Contractor shall furnish and install sports field luminaires complete with diffusers, louvers, glassware, gaskets, shims, wiring, control, conduit, hardware, ballasts, and other appropriate devices and parts for a complete exterior weatherproof sports field lighting system installation. Adjustable fixtures shall be aimed in accordance with the luminaire manufacturer's recommendations. Each luminaire shall be installed by this Contractor complete with the proper type of new lamp(s).

B. Poles and support assemblies shall be designed and constructed so that all wiring and grounding facilities are concealed. All handholes, wire inlets/outlets, inserts for pole steps, thru-bolt holes and ground wire shall be cast or fitted into the pole during the manufacturing process.

C. **For football/stadiums,** each pole design shall provide for a minimum of four (4) additional future luminaires per pole to allow future upgrades to the illumination levels on the playing fields. This shall include electrical loads and provisions for installing the future luminaires.

XI. DESCRIPTION – SPORTS FIELD LIGHTING CONTROL AND MONITORING SYSTEM

A. The Sports Field Lighting Control and Monitoring System shall be a microprocessor controlled wireless control system that controls and monitors the operation of sports field lighting. The system shall be comprised of Lighting Control Panel(s), suitable cabinet enclosures, contactors, relays, TCP/IP communication link and control software to provide the required functionality.

1. The system shall monitor lighting performance and notify the manufacturer if individual luminaire outage is detected so that appropriate maintenance can be scheduled. The manufacturer shall notify the Owner of outages within 24 hours, or the next business day. The controller shall determine switch position (Manual or Auto) and contactor status (open or closed).

2. The system shall allow the Owner and users with a security code to schedule on/off system operation via a web site, telephone, fax or email up to ten (10) years in advance. Manufacturer shall provide and maintain a two-way TCP/IP communication link. Trained staff shall be available 24/7 to provide scheduling support and assist with reporting needs. The Owner may assign various security levels to schedulers by function and/or fields. This function must be flexible to allow a range of privileges such as full scheduling and capabilities for sports fields, to only having permission to execute "early off" commands by telephone. The controller shall accept and store 7-day schedules, be protected against memoryloss during power outages, and shall reboot once power is restored and execute any commands that would have occurred during said power outage.

3. Manufacturer of the systems shall include communications costs for the operation of the controls and monitoring systems for the length of the warranty and maintenance period.

4. Manufacturer shall provide a web-based database of actual field usage and provide reports by facility and user group.

XII. ALTERNATIVE SYSTEMS

A. Compliance to Specifications: Acceptance of alternative (substitution) systems or equipment does not negate the Contractor and the lighting and control manufacturer's responsibility to comply fully with the requirements of these specifications. Any exceptions to the specifications must be clearly stated in the 10-day Prior Approval submittal documents. Refer to specification sections 16010 and 01630.

B. Lighting Performance Requirements: Manufacturer shall provide computer models guaranteeing the lighting performance, hereinbefore described under LIGHTING PERFORMACE, for a period of 25 years. If a constant light level cannot be provided, a maximum Recoverable Light Loss Factor of 0.69 shall be applied to the initial light level design to achieve the maintained light levels. For alternative systems, scans for both initial and maintained light levels shall be submitted. All computer-generated models shall also include the spill-light control and glare control criterion.

C. Revised Electrical Distribution: Manufacturer shall provide revised electrical distribution plans to include any changes to the electrical service entrance, panelboards, branch circuits, wire sizing, etc. associated with an alternative system or equipment.

D. Associated Costs: Contractor and the lighting system and controls manufacturer shall be responsible for any additional costs associated with an alternative system or equipment, including engineering costs from the engineer of record.

Part 2 - Products

I. MANUFACTURERS

A. It is the intent of these specifications that the Sports Field Lighting System and the Sports Field Lighting Control and Monitoring System manufacturer be the same manufacturer in order to have a complete sports field lighting system and control system from a single manufacturer. Such firms shall be regularly engaged in the manufacture of sports lighting equipment and lighting control equipment and ancillary equipment, of types and capacities necessary to provide the required functionality, whose products have been in satisfactory use in similar service for not less than 5 years.

B. Acceptable Sports Field Lighting System Manufacturers shall be: MUSCO LIGHTING, LLC (Light-Structure Green) or approved equal.

C. Acceptable Egress/Entry Luminaire Manufacturers shall be COOPER-LUMARK (LQL Series), DAY-BRITE (NQF Series), GENERAL ELECTRIC (QF Series), HUBBELL (QL Series), and LITHONIA (F1500 Series), or as shown on the Drawings.

D. Acceptable Hybrid Steel Pole with Pre-stressed concrete foundation base manufacturers shall be MUSCO LIGHTING, LLC, or approved equal.

E. Acceptable Service Platforms and Crossarm Brackets manufacturers shall be MUSCO LIGHTING, LLC or approved equal.

F. Acceptable Sports Field Lighting Controls and Monitoring System manufacturers shall be MUSCO LIGHTING, LLC [Basis of Design] or approved equal.

G. The listing of the above products and manufacturers does not constitute automatic approval or final acceptance. Products must meet the lighting performance and control requirements. It is the Contractor's responsibility to verify and document that any product selected from the above list does meet the requirements of these specifications.

II. LUMINAIRES

A. SPORTS LUMINAIRES

1. The sports luminaires shall be heavy-duty weather resistant floodlights for operation of one (1) 1500-watt metal halide lamp. The beam spreads (horizontal X vertical) shall be of the IES/NEMA types as necessary to provide an even illumination on the field. The floodlights shall be UL1572 listed SUITABLE FOR WET LOCATIONS. The floodlight shall have a decal indicating reflector identification viewable from the ground. Standard construction shall be IP55.

2. The sealed optical assembly shall include a hinged door with stainless spring steel door latches, tempered door glass, silicone rubber door gasket, a one-piece parabolic spun aluminum finished reflector protected inside and out by a protective finish, and a heavy duty, heavy gauge aluminum outer housing (shroud) or die cast housing protected inside and out with an electrocoat paint finish. All external hardware shall be of a corrosion-resistant material or protected by a corrosion-resistant finish. Each optic shall be filtered to optimum performance throughout the life of the luminaire. Luminaires shall include a spill-light/glare control reflector shields and/or visors.

3. Each floodlight luminaire shall operate from a remote ballast. Remote ballasts shall be provided in a weather resistant enclosure mounted on the same pole as the luminaires and have concealed wiring within the pole. Refer to the Electrical Component Enclosure section described hereinafter in these specifications for ballast information and fusing.

4. The mounting hardware shall be heavy-gauge steel protected by a weather-resistant coating. The mounting hardware shall be capable of allowing the floodlight to be moveable in all directions, containing degree markers and a repositioning stop. Each luminaire shall be pre-aimed. Each luminaire aiming location shall be verified in order to comply with IESNA recommendations. Each luminaire shall have a memory positioning device for automatic repositioning after re-lamping. To ensure added durability, luminaire visors/glare shields and platform/crossarm shall withstand 125 mph winds and maintain luminaire aiming alignment.

B. EGRESS/ENTRY WALK-WAY LUMINAIRES

1. Walkway luminaires shall be a heavy-duty, weather-resistant floodlight for operation of one (1) 1500-watt tungsten-halogen (quartz) lamp. The floodlight shall contain a complete optical assembly with 6x5 NEMA type beam spread (horizontal X vertical), prewired with leads for connection to the power source. The floodlight shall have a NEMA lamp identification decal. The floodlight shall be UL 1572 listed and labeled SUITABLE FOR WET LOCATIONS. Standard construction shall be IP55.

2. The floodlight shall include die-cast aluminum housing with an electrocoat paint finish, hinged front door frame, built-in aiming sight and ½-inch standard tapered pipe tread swivel mount. All external hardware shall be of a corrosion-resistant material or protected by a corrosion-resistant finish.

3. The optical assembly shall include a tempered, clear, heat and shock resistant door glass, a one-piece aluminum reflector and twin compressible sockets.

C. LAMPS

1. Lamps shall be furnished and installed by this Contractor in each of the luminaires as shown on the Drawings and as indicated in these specifications.

2. Lamps shall be manufactured by GENERAL ELECTRIC, OSRAM/SYLVANIA, or PHILLIPS unless otherwise noted.

3. All phosphor coated lamps shall be the color corrected type.

III. POLES

A. POLE STRUCTURES

1. Pole structures shall be multi-sectional and shall consist of one of two types, but only one type may be selected for use on this project. The types of pole structures are as follows:

   a) Hybrid Steel and prestressed concrete multi-section pole with the prestressed concrete base foundation designed for direct embedment.

   b) Steel multi-section pole with a cast-in-place concrete anchor bolt foundation.

2. Steel poles direct embedded are not acceptable.

3. Poles shall be designed considering the application of both dead load and wind load. The moment at any point along the length of the pole is to be the sum of moments resulting from dead loads and forces from wind loads. The wind force is to be computed by multiplying the specified wind pressure by the effective projected area (EPA) of the individual components.

4. The P-Delta secondary moments due to the deflected unbalance of the structure must be accounted for in the design and shown in the calculations submitted.

5. Poles shall be designed to meet AASHTO requirements for wind loading and shall be designed such that the deflection does not exceed 1.1% of the free height of the pole at its maximum EPA under a wind loading equivalent to ½ the designated ultimate wind speed, including a 1.3 gust factor.

    a) Each football/stadium poles EPA shall include an additional future four (4) sports luminaires and mounting hardware, including additional crossarms and/or larger platform cages, if necessary.

6. The natural frequency of the pole shall be limited to 0.8 cycles/sec. The manufacturer shall provide calculations verifying the above requirements.

7. Pole heights shall be determined to provide a mounting height above the playing field sufficient to meet the specified lighting requirements. Luminaire mounting heights are to the lowest mounted sports lighting luminaire(s) measured above the playing field, not the grade location of the pole(s).

B. POLE MATERIALS for PRESTRESSED CONCRETE POLE BASES

1. The specification contained herein shall be for the prestressed concrete foundation portion of hybrid steel and concrete multi-sectional pole.

2. The concrete mix shall be designed to achieve a minimum 28-day compressive strength of 9,500 psi. Concrete test reports shall be kept per ASTM C-39. Cement shall conform to the latest requirements of Type I or III Portland Cement in accordance with ASTM-C150. Maximum size aggregate may be ¾ inch or 75% of the clear spacing between main reinforcing steel and surface of pole. Any water reducers, retarders, or accelerating admixtures shall conform to ASTM-C494. Water shall be free from foreign materials in amounts harmful to concrete and embedded steel.

3. Reinforcing Steel – Deformed steel reinforcement shall conform to requirements of ASTM A615 for Grade 60 Rebar.

4. Pre-stressing Steel – Pre-stressing steel reinforcement shall conform to uncoated 7-wire, stress relieved strand (including low relaxation) per ASTM-A416.

5. Spiral Reinforcement – Steel spiral reinforcement shall conform to the requirements of ASTM-A82 and shall not be less than .150-inch diameter. The pitch of the spiral steel shall not be greater than 4 inches or the radius of the pole, whichever is less.

6. Hardware – All structural steel shall conform to ASTM-A36 and be hot- dipped galvanized in accordance with ASTM-A123 or ASTM-A153 as applicable. Zinc alloy AC41A for inserts, handhole frames and covers, shall conform to ASTM-B240. All bolts, nuts, washers and other fasteners must be either

stainless steel or hot-dipped galvanized to resist corrosion.

7. Manufacture of Pre-Stressed Concrete Poles:

    a) All manufacturing tolerances, details of reinforcement and finishes shall be in accordance with “Guide Specification for Prestressed Concrete Poles”, as published in the May-June, 1982 issue of the Journal of the Prestressed Concrete Institute.

    b) Poles shall be prestressed concrete poles, manufactured by the centrifugal spinning process. Poles shall be round in cross section with a hollow center.

    c) Forms shall be designed to provide a continuous taper of +/- 0.16 inches per foot of length and provide a minimum of ¾” of concrete coverage over the longitudinal steel.

    d) Poles shall have a smooth natural form finish, soft gray in color.

    e) The manufacturer shall have 10 years experience in the design and production of centrifugally spun concrete poles and be a “PCI-Certified Facility.”

    f) All cable entry holes shall be free from sharp edges for passage of electrical wiring. All handhole frames shall be composed of rugged high density cast zinc.

8. Pole Accessories:

    a) A nameplate shall be cast into the wall of the pole approximately 5 feet above the ground line identifying the name of the manufacturer, overall length, weight, manufacturer date, class and fabrication number.

    b) A 3” x 12” or 4” x 10” conduit entrance opening shall be centered 18” below grade (depending on pole size).

    c) A 3.5” x 10.5” handhole frame with flush cover shall be centered approximately 36” above grade.

    d) A 2.5” x 8.5” handhole frame with flush cover shall be located 180 degrees from disconnect switches and/or electrical equipment cabinets that are pole mounted.

    e) All poles shall be provided with pull cordage to facilitate cable installation.

    f) Provisions shall be made for attaching and wiring any disconnect switches or other electrical components not covered herein but required to complete the project.

C. POLE MATERIALS for MULTI-SECTION STEEL POLES

1. The specification contained herein shall be for full length multi-sectional steel poles or for the steel portion(s) of the hybrid steel and prestressed concrete foundation multi-sectional pole.

2. The pole shaft shall be constructed of low carbon, tapered tubular steel conforming to ASTM A595 Grade A or ASTM A572 Grade 65. A non- tapered section of pole conforming to ASTM A513 may be used at the top of the pole for luminaire crossarms and/or platforms. The overlap telescoping joint of pole sections shall be by slip fitting the top section over the lower section by a length that is the larger of 2 feet or 1.5 times the diameter of the inside of the female tube. All sections shall maintain a uniform taper from top to bottom.

3. There shall be at least one longitudinal seam weld in the tapered section of the shaft. The longitudinal seam weld shall have at least 60% penetration, except in the areas where the shaft section telescopes over another. In overlapping areas, the weld penetration shall be 100%. No circumferential weld splices may be used in fabricating the shafts.

4. The pole shaft shall be hot dip galvanized after fabrication to conform to ASTM A123. To ensure a high quality galvanized coating with good adherence, all steel components used for the pole shaft, luminaire crossarm, and other attachments must be of a steel content that conforms to ASTM A385.

5. All exposed steel components of the pole shall be at least 18 inches above the surface of the ground to avoid exposure of the steel to the heavily moisture and oxygen laden air, both above and below the surface. There shall be a cap to cover the top of the pole and covers for all access openings in the pole wall so that rain will not enter the interior of the pole. To avoid stress corrosion of the pole, there shall be no critical stress points of the steel portion of the pole within 18 inches of the ground.

6. All fasteners and attaching hardware shall either be stainless steel or be hot dip galvanized to conform to ASTM A153.

7. Hand Holes shall be peripherally reinforced with flat bar which shall be integrally welded to the plate shaft. Hand holes shall be minimum 4” x 6” and located at each platform/crossarm level for use during installation and maintenance of electrical wiring. Hand holes shall also be located 180 degrees from each disconnect switch and/or electrical equipment cabinet that are mounted to the pole. One 4” x 10.5” hand hole shall be located two to six feet above finished grade with a ground lug welded inside the pole opposite this hand hole. Cover plates shall be included with each hand hole and attached to the pole with a black bar and screw.

8. Top wiring shall be through a threaded coupling suitable for the diameter of the pole, with access by the way of a hand hole. A suitable wire hanger(s) shall be provided at top coupling locations for use with a wire mesh grip.

9. Pole assemblies which exceed 50 feet in height shall have an internal cable

guide and strain relief mechanism, which is typically attached at the mid-height of the pole assembly. The cable guide assembly shall consist of an offset bar, steel pipe sleeve with internal PVC sheathing to reduce wear, and a handhole opposite the offset bar access.

10. Steel poles using a cast-in-place concrete anchor bolt foundation design shall have a base plate. The base plate shall be a structural quality hot rolled carbon steel plate that meets or exceeds ASTM A36 with a minimum yield of strength of 42,000 psi. The base plate shall telescope the pole shaft and have a circumferential weld on the top and bottom or shall have a full penetration butt weld with a backup bar. The anchor bolt holes shall be slotted and be a minimum ¼" larger than the diameter of the anchor bolts used on the pole.

11. Anchor bolts shall be fabricated from a commercial quality hot rolled carbon steel bar that meets or exceeds minimum yield strength of 55,000 psi. Anchor bolts shall be sized according to each pole design and furnished with two (2) galvanized flat washers. Anchor bolts shall be galvanized a minimum of 6" on the threaded end in accordance with ASTM A153. Typically, the anchor bolts will ship with the poles.

D. POLE FIELD APPLIED LABELS

1. Labels shall be attached to each sports field lighting pole identifying each poles designation, as shown on the Drawings. Labels shall be pressure- sensitive type, suitable for exterior use. Labels shall have bright contrasting colors with letters minimum 2" high or greater. Locate labels at 10'-0" above finished grade on two sides of the poles, with one side visible from the field side. Poles located behind stadium bleachers or other structures shall have the labels located at a height visible from the field.

2. Labels shall be UV sunlight resistant.

IV. FOUNDATIONS

A. The sports field lighting system manufacturer shall provide foundation designs to suit their lighting system. Geotechnical information (Boring Logs) have been provided on the Boring Location Plan to assist in foundation design, if required.

B. For purposes of this Bid, or in the absence of geotechnical information, the Contractor shall assume the following type of sub-grade material specified in the current adopted edition of the International Building Code, Section 1804, Table 1804.2 "Allowable Foundation and Lateral Pressure":

1. Soils – Class 5 (Clay and Sandy Clay).

C. Foundation size, shape, depth of embedment, and backfill material shall be determined by the manufacturer's structural engineer. Manufacturer shall provide suitable concrete foundations to support anticipated pole loading based on load carrying capacity of existing soil conditions as hereinbefore described. The design of the support structure and foundation shall be signed and sealed by a licensed Professional Engineer registered in the state of Maryland. The design shall include the following minimum

requirements:

1. Use Broms safety factor of three (or IBC) in the foundation design.

2. Foundation strength shall allow the concrete to harden on any concrete portions of the pole in which steel components that provide tension strength are contained, for a minimum of 28 days before design loads of pole attachment are applied.

3. Concrete material:

   a) Cast-in-place concrete foundations shall be constructed of not less than 3,000 psi.

   b) Pre-stressed concrete poles as hereinbefore described.

   c) The steel reinforcement within the concrete shall be protected from slippage and exposure to oxidation through voids in the concrete or exposure of the steel through porous concrete material. Provide cover as specified in ACI-318.

D. Excavation is unclassified soil and includes excavation to sub-grade elevations indicated regardless of character of materials and obstructions.

V. SERVICE PLATFORM CAGE ASSEMBLY

A. Platform cages shall be provided on all sports field lighting poles, unless specifically shown on the Drawings as not requiring a platform cage. Poles that may be shown as not requiring a platform cage are based on a maximum of twelve (12) sports luminaires on stacked crossarms as described under CROSSARM ASSEMBLY below.

B. Platform cages shall be OSHA APPROVED and shall be constructed from either tubing or angle iron members, which meets the minimum requirements of ASTM A53 Grade B and ASTM A36 respectively. Tubular members shall have silicone gasketed end caps.

C. Top mounted platform cages shall be mechanically attached to the pole with plates meeting the requirements of ASTM A36 and connecting hardware meeting the requirements of ASTM A325.

D. Side mounted platform cages shall be mechanically fastened to the pole with plates conforming to ASTM A36 and U-bolts fabricated from round stock conforming to ASTM A36. Additional side mounted assemblies may be permitted to establish correct quantity of luminaires.

E. The platform floor shall consist of expanded metal grating and shall incorporate a hinged door for access to the platform. The hinged door shall be capable of closing prior to unlatching any safety climbing devices. Cage railings shall be constructed of flat bar stock or angle iron. Railings constructed of cable or steel rope materials will not be accepted. Cages shall also incorporate a bottom “kick- plate.”

F. The platform cage sections shall be hot dip galvanized in accordance with the

requirements of ASTM A123 specifications. Each cage assembly must be completely coated, inside and out, in a single dip. Double dipping will not be permitted to prevent acid entrapment in compliance with USGA recommended practices. All miscellaneous connecting hardware shall be galvanized in accordance with ASTM A153 specifications.

G. All wiring shall be factory pre-wired enclosed within the system assembly when required by the luminaire manufacturer's lighting system.

H. For ease of maintenance, the system must be capable of re-lamping the luminaires from the front or rear of the assembly.

VI. CROSSARM ASSEMBLY

A. The crossarm assembly shall be designed as a U-bolted, side mount connection. The assembly shall include a four-bolt plate, allowing two U-bolts per arm assembly. The crossarm shall be made of minimum 4" x 4" x 3/8" angle iron. At each luminaire or speaker location drilled holes shall be provided to accommodate the attachment of the luminaire or speaker assemblies. Near each crossarm attachment point a threaded coupling and handhole shall be provided at 90 degrees to allow for electrical wiring and access respectively.

B. The crossarm assembly shall be hot dip galvanized in accordance with the requirements of ASTM A123 specifications. Each assembly must be completely coated, inside and out, in a single dip. Double dipping will not be permitted to prevent acid entrapment in compliance with USGA recommended practices. All miscellaneous connecting hardware shall be galvanized in accordance with ASTM A153 specifications.

C. Luminaires requiring tubular type crossarms shall meet the requirements above and shall be 4" x 2" x 1/8" tubular steel (FTY-46 KSI, ASTM A500 GRADE B) and welded to a 6" C-channel support structure. Crossarms using steel less than 1/8" are unacceptable and length shall not exceed 155". Crossarms shall be hot dip galvanized after fabrication.

D. All wiring shall be factory pre-wired enclosed within the system assembly when required by the luminaire manufacturer's lighting system.

E. Poles not requiring platform cage assemblies, where specifically shown on the Drawings, shall use a stacked crossarm configuration for luminaire mounting with a maximum of three (3) sports luminaires per crossarm and a maximum of four (4) crossarms per pole. If additional sports luminaires or crossarms are required by the lighting system manufacturer, then a platform cage assembly shall be utilized as hereinbefore described.

1. Poles for football/stadium shall include the additional four (4) future sports luminaires in the total count of luminaires on the pole. **[Engineer: Delete this sub-paragraph if football/stadium is not included in this project]**

VII. WELDING

A. Welding shall be in accordance with AWS (American Welding Society) Structural Welding Code's most recent edition. Welders certified in accordance with the AWS

Code shall perform welding. Welds shall be free of cracks and under- cutting, and shall be 100% visually inspected with questionable areas inspected by the magnetic particle non-destructive process.

VIII. CLIMBING SYSTEM

A. Each pole shall have a Climbing System, whether or not the pole includes a platform cage assembly. The climbing system shall incorporate pole steps, safety climbing cable, and harness.

1. Pole step bolts shall be field installed. Each step shall utilize a minimum 5/8-inch diameter x 6.5-inch-long carriage bolt. Each bolt shall attach by means of a “nut-holder” cast or welded into the pole. Steps shall start 12 feet from the finished grade and continue to within 18 inches of the platform/crossarm. The steps shall be alternately spaced staggered on 15 inch intervals, 90-120 degrees apart. The first set of steps and last two sets of steps shall be “doubled” without staggering.

2. Safety climbing cable shall be 5/16-inch diameter, galvanized steel or stainless steel cable. The cable system shall incorporate a tension spring and intermediate cable guides(s) to insure the cable remains “tight” and offset from the pole shaft. Poles with a platform cage assembly shall have the cable transition into the caged platform assembly in a manner that does not require the climber to disengage the safety belt from the cable prior to entering the caged platform and closing the door.

3. The safety harness assembly shall be OSHA approved for climbing sports lighting support structures. The belt, lanyard, and respective attachment hardware shall be appropriate for the safety cable and step system. One (1) safety harness assembly shall be provided for each sports field lighted system.

IX. WIRING HARNESS

A. Strain Relief – The wiring harness shall be supported at the top of the pole by a stainless-steel wire mesh grip matched to the size of the harness. There shall be not more than 13 conductors supported by a single wire mesh grip. An interim wire mesh grip support shall be located approximately halfway down the pole.

B. Strain Relief Slippage – There shall be protection around the conductors, in addition to the insulation, to protect from damage from the wire mesh grip and also to avoid slippage of the grip on the wire harness. The wire mesh grip shall also be clamped to the harness with a cable tie at the bottom of the grip to avoid loosening.

C. Pole Attachment – The wire mesh grip shall be mechanically attached to the pole with an enclosed mounting loop so that it cannot be accidentally removed in any direction.

D. Spiral Winding – The harness being supported by the wire mesh grip shall consist of multiple #14 A.W.G. (minimum) conductors rated at 600V with 90°C insulation and shall be continuously spiral wound and bound with Mylar wrap to prevent slippage of individual conductors within the wiring harness. Additionally, a cable tie shall be tightly wrapped around the harness at not more than 10-foot increments.

E. Abrasion Bumper – There shall be provided at 2 feet below the wire mesh grip and then at not more than 10-foot intervals along the entire length of the wire harness an abrasion protective bumper device of soft, durable abrasive resistant material not less than 2 inches in diameter attached around the wiring harness to protect the harness from striking and being abraded by the interior surface of the pole.

F. Labeling – All wiring harness conductors shall be color-coded and clearly labeled.

G. Plug-ins – Each end of the wire harness shall be terminated into a plug-in device with conductors sequenced consistent with the pattern of the wiring schematic provided by the Manufacturer.

H. Testing – All conductors and plug-in devices shall be tested for resistance under load for continuity, schematic sequence, and for insulation integrity. Manufacturer shall ship a copy of the test results with the wire harness.

I. Grounding – There shall be included, within the wiring harness, one conductor for use as a grounding conductor. The grounding conductor shall be equal in size to the load carrying conductors.

X. ELECTRICAL COMPONENT ENCLOSURE (ECE)

A. The ECE shall be a NEMA 3R rated, gasketed enclosure to house the ballasts, capacitors, fuses, terminal strips, thermal magnetic circuit breakers and distribution lugs.

B. The ECE shall be divided into two (2) compartments. The upper compartment shall house the ballasts, capacitors, and fuses. The lower compartment shall provide for the thermal magnetic circuit breaker, distribution lugs, and connection of all circuits coming into and out of the ECE.

C. The ECE shall be heavy hot-dip galvanized to ASTM A123 standards after fabrication to a thickness of not less than 3 mils.

D. All latches, hinges and non-current carrying fasteners, outside or inside the enclosure, shall be stainless steel and shall further be coated with a clear thermoset polymer coating such as Empigard to prevent galvanic interaction.

E. The access door of the ECE shall be attached by a full-length stainless steel hinge and shall be secured, when closed, by lockable stainless steel latches.

F. The ECE shall attach to the pole by means of a device, which is sufficient to align the ECE and support its weight. There shall be a sealed joint with a non- threaded connection to provide wiring access from the pole to the ECE for both the primary and secondary circuits. The connection shall be gasketed for watertight protection. All wire passages shall be protected to prevent wire abrasion or damage.

G. In the ECE, capacitor cases shall be made from zinc coated steel or aluminum and top coated with enamel. Each capacitor shall have a ground terminal welded to its case and such terminal shall be connected to ground via a grounding wire. The capacitor case

shall not make direct contact with surface of the ECE.

H. There shall be provided, within the ECE, a UL listed thermal magnetic circuit breaker such that electrical power to all equipment on the pole served by the three-phase feeder circuit shall be disengaged by the operation of one switch. The circuit breaker shall be located in a compartment separated from any capacitors or ballasts.

I. The circuit breaker shall provide landing lugs for the conductors that provide power to the pole.

J. There shall be provided by the Manufacturer a set of distribution terminal blocks, which shall be factory wired from the breaker to the blocks. These blocks shall provide for termination of all ballast connection wiring.

K. There shall be provided an individual fuse for each ballast conductor except neutral conductors which shall not be fused or switched. Fusing must be UL listed. In-line fusing will NOT be acceptable.

L. All lamp supply circuits in the ECE shall be color-coded and labeled and shall be terminated into a UL recognized plug-in device in the lower compartment of the ECE in a manner suitable for plug-in to the wiring harness.

M. The wiring harness circuits from the lamps shall be attached to the ECE circuits by UL recognized plug-in connectors.

N. There shall be provided, in the ECE located in the lower compartment of the enclosure, one equipment-grounding lug rigidly fastened to the enclosure, sized to accept up to a 1/0 conductor. There shall also be provision in the upper compartment for a ground terminal of sufficient size to permit connection of the grounding conductors from the capacitors and the ground wire from the wiring harness.

O. There shall be an individual ballast for each luminaire. The ballast shall be a lead peaked, auto-regulating ballast and be available for use with 480 volt, 3 phase supply. The ballast shall be located remote from the luminaire cross arm and shall be placed approximately 10 feet above ground level. The ballast box must be a NEMA 3R enclosure and must be manufactured by the luminaire assembly manufacturer and all hardware shall be included with the ballast box assembly. The remote ballast system described above shall be located on the same pole as the luminaire assembly in the NEMA 3R enclosure with the capacitors and the capacitors shall operate in ambient air not to exceed 70 degrees Celsius. The assembly design shall be adaptable to various standard ballasts and must retain its U.L. listing.

P. The manufacturer shall provide an electrical schematic of the ECE circuits, which schematic shall be of a durable material and affixed to the inside of the ECE door for use by maintenance personnel.

Q. The ECE shall be attached to the pole with the lower end approximately 10 feet above grade.

R. The ECE shall be listed by UL both for use with 90°C-rated supply conductors and as suitable for use in wet locations.

S. Comply with ANSI C82.4 and be capable of starting at a temperature of minus 30 degrees Celsius.

XI. IN-GROUND CAST HANDHOLES

A. Provide open bottom in-ground cast handhole at each pole location and at location(s) shown on the drawings.

B. Each in-ground cast handhole shall be approximately 18 inches (length) x 11 inches (width) x 18 inches (depth) with a skid resistant cover.

C. The bases and covers for the handholes shall have a load of 22,568 lbs. minimum over a 10-inch square with a minimum test load of 33,852 lbs. The top of the box shall fit flush with the finished grade.

D. The base and covers shall be as manufactured by QUAZITE series “PG” or approved equal.

XII. LIGHTING CONTROL SYSTEM – MATERIALS and COMPONENTS

A. The Sports Field Lighting Control and Monitoring equipment shall include cabinets to house all lighting control panels (LCP), contactors, switches, terminals, digital cellular communications equipment and lighting controls required to control the Sports Field Lighting System(s) as shown on the Drawings and as specified herein.

B. Off-On-Auto switches shall be utilized to manually over-ride the lighting control system. One switch shall be required for each lighting zone or system. Switches shall be supplied with on, off, and auto nameplates and labels clearly identifying the zone by field or location.

C. The lighting system shall be controlled via remote system. In addition to the remote system, On/Off pushbutton control stations (user switch) shall be provided to allow users to turn the Sports Field Lighting System(s) on and off from the field. These on/off controls shall be provided in a weatherproof NEMA 3R pad-lockable box and located as shown on the Drawings. This user switch will allow the users to turn the lights on or off whenever the system is enabled by the remote system, on-site digital keypad, or time clock. The digital keypad enabling switch shall be located within the same weatherproof box as the on/Off control station, unless otherwise noted.

D. The remote lighting system shall include Digital Cellular Communication equipment using wireless technology avoiding both the ongoing and installation costs of utilizing telephone land lines at remote sites. The system shall utilize publicly available wireless communication infrastructure avoiding the cost associated with installing and maintaining a private wireless infrastructure.

1. Digital Cellular Communication Equipment shall have a main power switch for servicing convenience and safety.

E. The remote lighting control system shall also meet the following:

1. A security-code based, 24-hour, remote control system that enables Owner and/or authorized user to remotely enable the system on or off, control the sports field lighting schedule, and monitor the system, using telephone and web based or software driven computer.

2. The remote-control system shall be protected against power outages and memory loss, shall reboot to real-time once power is restored, and execute any commands issued prior to the power outage.

3. The remote-control system shall monitor and provide reports of actual lighting system luminaire usage.

4. On-site equipment shall include manual Off-On-Auto switches to allow for maintenance and manual operation.

5. System shall be capable of operating any given field from multiple computers via the Internet.

6. Zones shall have one or more outputs assigned to them, with the ability to have any outputs assigned to any zone. Outputs shall have the ability to be assigned to multiple zones.

7. System shall have delay-off capability on a per zone basis whereby some of the lighting for a given zone is turned off at the end of the lighting schedule time or the local user switch is turned to the off position, and the balance of the lights are turned off a number of minutes later (user definable), for safety and convenience.

8. LCP's shall allow for user settable overrides on an independent basis for each zone whereby the override is set for either duration of time or set to be cancelled at a specific time decided by the user. If the override is canceled for any reason, the underlying schedule shall run as normal. The override capabilities shall be available to the user remotely or manually at the field.

F. Manual Off-On-Auto Selector Switches

1. For on-site manual control, three position selector switches (Off-On-Auto) shall be factory-mounted in the Lighting Contactor Cabinet.

2. The OFF-ON-AUTO switches shall operate as follows: The three-position switch shall control each lighting zone. In the OFF position, all contactors are open and the local user switch is locked out. In the ON position all contactors are closed independent of or in conjunction with the position of the local user switch. In the AUTO position, the system is under control of the remote-control signal or the time clock and the local user switch is active. The contacts on the OFF-ON-AUTO switch shall be make-before- break so that the switch may be moved between ON and AUTO without de-energizing the circuit.

G. An adequate number of Lighting Control Panels (LCP) shall be supplied to control the required number of zones of control for this project.

H. LCP's shall utilize dry-contact type outputs for switching the control voltage to the lighting contactors.

I. LCP's shall incorporate the appropriate control mechanism to control the type of lighting contactors; regardless of whether the lighting contactors are continuous electrically held, mechanically held latching and unlatching (continuous power OK), mechanically held latching and unlatching (requiring momentary power), etc.; all combined within the same LCP if required.

J. LCP's shall permit the downloading of all data within the unit for analysis via laptop computer or PDA.

K. Override control may be achieved either via the remote manual control switches at the LCP's, or computer; none of which shall be mutually exclusive of the other (e.g., the user may set an override via Web Access, then cancel later at the keypad at the LCP's); all available 24 hours per day, 7 days per week, and all without the user having to contact manufacturer.

L. In *addition* to utilizing Web Access for scheduling, the user shall be able to contact Manufacturer support team 24/7 to enter schedules and request last minute changes.

M. The lighting control system shall automatically adjust for changes in Daylight Savings Time and changes in sunset and sunrise times, on a stand-alone basis not reliant upon a computer or some other system transmitting the information to the units.

N. UL listed Power supply shall be non-linear switching-type power supply.

XIII. LIGHTING CONTROL SYSTEM CABINETS

A. The Lighting Control and Monitor Systems equipment shall be housed in suitable cabinets, including lighting contactors. The manufacturer shall determine the quantity of cabinets needed for this project.

1. Lighting contactors shall be housed in a separate cabinet. The contactor cabinet shall contain custom configured contactor modules for 20, 30, 60, and 100 amps, labeled to match field diagrams and electrical design. Manual On-Off-Auto selector switches shall be provided as hereinbefore described. Refer to the Drawings for specific contactor sizes.

2. As an option, the contactors may be located within the Lighting Control and Monitoring Cabinet provided there is adequate space. However, all the contactors per system must be located in a single cabinet.

B. The final complete cabinet(s) with all electrical components shall bear the UL label.

C. The cabinet(s) shall be designed and produced to meet the criteria noted in this document. The supplier shall be capable of producing a premium grade product, which meets the quality, fit and finish noted in this document. The use of CNC (Computer Numerical Control) equipment is preferred. The supplier's shop shall be approved to produce UL listed products.

D. The cabinet(s) and doors shall be constructed to meet NEMA 1 standards. The cabinets shall have ventilation as required for the lighting controls and monitoring equipment and contactors.

E. All materials shall be new.

F. Unless otherwise noted, cabinet(s) shall be fabricated from 5052-H32 sheet aluminum of at least 1/8-inch thick. Alternate materials may be considered.

G. All materials shall be corrosion resistant for extended life.

H. The cabinet(s) and doors shall be fabricated to plus or minus 10-thousandths of an inch tolerance for proper fit. All bending shall be done using a suitable break press.

I. Connecting hardware screws, bolts, washers, nuts, etc. shall be stainless steel. The screws shall be stainless steel pan-head machine screw type. No sheet metal or self-tapping screws shall be permitted.

J. Welding:

1. All exterior seams shall be of continuously welded construction. All welds shall be free of slag and spatter. All exterior welds shall be ground smooth.

2. The supplier shall have suitable credentials to weld aluminum and shall adhere to all applicable ANSI standards.

3. The supplier shall use a suitable welding process and materials.

K. Doors shall be designed for maximum strength and snug fit. It is the supplier's responsibility to design and fabricate the doors to the fit and finish required in this specification. Doors shall be fabricated out of a single sheet of aluminum and have wrap-around return for strength and fit.

L. All equipment mounted in the cabinet shall be mounted on an inner wall.

XIV. LIGHTING CONTROL SYSTEM EQUIPMENT LABELING

A. All products shall be labeled (inside) with the supplier's company name, model number, panel rating and the date of manufacture.

B. The supplier shall also provide adhesive Lamicoid or vinyl labels on the inside of each cabinet for each component. Each contactor and output circuit shall also be labeled in accordance with the lighting design.

C. All ID labels shall have ¼" to ½" high black characters on a white background.

D. All wiring shall be labeled with computer generated sleeve type wire markers.

Part 3 - Execution

I. LAYOUT

A. This Contractor shall layout all equipment and review locations with the Architect/Engineer and/or Owner prior to construction. Poles shall be laid out based on pole locations on the suppliers lighting layout drawing. Pole locations shall be set by using a metal tape to the exact locations shown on the drawings (+/- 2 feet).

II. POLE HANDLING AND ERECTION

A. Transportation, site handling and erection shall be performed by qualified personnel with equipment and methods that are in accordance with standard industry practices.

B. Prior to unloading the pole, shop drawings shall be reviewed to identify proper pick-up points for unloading, storage and erection procedures. A thru-hole shall be provided at the proper pick-up point for the purpose of inserting a steel bar to act as a stop to the cable choker when erecting the pole.

C. Web fabric slings (not chain or cable) shall be used to raise and set structural members. Protect equipment during installation to prevent corrosion.

D. Step bolts, safety cable and internal wiring may be installed while the pole is in a horizontal position on the ground. If the service platform/crossarms are to be attached prior to erection, the pole tip must be supported to prevent undesirable deflection.

E. Install poles and other structural units level, plumb and square. Orientation of the prestressed concrete pole base or the cast-in-place foundation anchor bolts in relation to the direction of the lighting must be checked carefully using the Manufacturer's drawings, contract drawings and specifications.

F. For base plate style poles, the steel shall not be installed until concrete has reached the specified 28-day strength. For direct bury prestressed concrete foundations the steel pole portion shall not be installed until backfill has reached 98% of the specified compaction all around the prestressed foundation as per ASTM D698.

G. Prestressed concrete poles shall be the direct embedment foundation.

H. After installation is complete, the Contractor shall plug with suitable semi- permanent material any alignment or installation aid or other unused holes or cavities in the poles to prevent them serving as harboring for insects and to prevent tampering. Material used shall be the same color as the pole.

III. SITE PROTECTION AND RESTORATION

A. Protect existing site, plantings, trees, pavements, facilities, structures, grounds, playing fields, and all other site amenities designated or intended to remain, temporarily or permanently, from damage during demolition or construction activities, including delivery of poles and equipment. Repair items damaged during demolition or construction activities to their original condition, or replace with new, by qualified personnel and technicians, at no additional cost to the Owner. Repairs, reinforcement or structural replacement shall be approved by the Architect and/or Owner.

B. Refer to Specification Section 02100 for additional requirements, if necessary.

IV. STORAGE

A. Poles and foundations may be stored on-site (for a short time period) if they do not impact the day-to-day operations of the facility. Poles and bases shall be placed on suitable supports.

B. Luminaires, platforms, crossarms, wiring, electrical enclosures and control equipment shall be stored off-site until they are ready for assembly and erection. On-site storage is permitted provided all items are stored in secure and DRY locations.

C. This Contractor is responsible for any damage or theft to any materials left on- site.

V. FOUNDATIONS

A. Foundations shall be the directly embedded pre-stressed concrete or cast-in- place concrete (directly embedded steel in ground is not acceptable). The foundation shall have suitable conduit entrance holes and wiring access hand holes and shall have a suitable wire way into the pole.

B. Top of cast-in-place concrete bases shall be trowel finished smooth and level with beveled edges. Top surface shall not vary by more than 1/8 inch in depth as measured across the widest surface.

C. All concrete shall be fully vibrated.

D. Reinforcing steel shall meet ASTM A615 and Grade 60.

E. Cast-in-place foundations anchor bolt projections must allow for the thickness of the base plate, nuts (including leveling nuts), and raking if required. Adjust leveling nuts before installing the pole. They should be in a horizontal plane.

F. Reinforcing steel in cast-in-place foundations must not be welded to the anchor bolts. Care must be taken not to disturb the position of the anchor bolts while pouring concrete.

G. Steel poles shall have grout in the void between pole base and foundation. Use approved non-shrinking or expanding concrete grout firmly packed in entire void space. Use a short piece of ½ inch diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of pole.

VI. POLE/FOUNDATION EXCAVATION

A. The Contractor may excavate by any means he prefers, insofar as these methods conform to these specifications. Holes shall be excavated with diameters not less than 8 inches greater than the largest dimension of the pole foundations being installed. Required depth of pole holes shall be as recommended by the pole manufacturer and the support assemblies Professional Engineer.

B. The bottom of the pole holes shall be on undisturbed earth. If a pole hole is excavated

to a depth greater than required, it shall be backfilled with specified crushed stone, placed in 6 inch layers, and thoroughly machine tamped to an approximate compaction of 95%.

C. All excavations must be free of loose soil and debris prior to foundation installation and concrete pour and backfill placement.

D. Backfill:

1. Prestressed concrete foundations shall include poured concrete backfill. Temporary casings or drillers slurry may be used to stabilize the excavation during installation. Casings must be removed during concrete backfill placement. Concrete backfill must be placed with a tremie when slurry or water is present within the excavation or when the free drop exceeds 6'-0".

2. Cast-in-place foundations backfill shall be Maryland Department of Transportation (MDOT) specification 21-A bluestone placed from the bottom of the pole hole to a distance of 18 inches below the top of the hole and topped with excavated soil. All backfill shall be placed in 6 inch layers and each layer shall be thoroughly tamped to an approximate compaction of 95%. The soil backfill shall be banked and tamped around the poles/foundations to a height of 12 inches above the finished grade.

E. Subject to the Owner's approval, excavated surplus material shall be uniformly spread at the site or removed and disposed of at this Contractor's expense. Care shall be taken that the spreading of surplus material does not result in the channeling of run-off water past pole locations.

VII. LIGHTNING PROTECTION/GROUNDING

A. All pole structures shall be equipped with lightning protection meeting NFPA 780 standards and as shown on the Drawings. Contractor shall furnish and install a ground rod at each pole structure. Ground rod shall not be less than 3/4 inches in diameter and 10 feet in length, with a minimum of 12 feet embedment and connected to the pole structure in an approved method.

1. Concrete poles shall have a #4 A.W.G. ground conductor connected from the ground rod to the copper tank ground cast into the pole.

2. Steel poles less than 75 feet in height above the finished grade shall have a #2 A.W.G. ground conductor connected from the ground rod to the ground lug welded inside the pole. Steel poles 75 feet or greater in height above the finished grade shall have a #2/0 A.W.G. ground conductor connected from the ground rod to the ground lug welded inside the pole.

B. Ground rod conductor connections shall be with exothermal welds.

VIII. IN-GROUND HANDHOLES

A. Excavation

1. Excavation for the handhole shall be approximately eight inches deeper than the depth of the handhole box. The bottom of the hole shall be on undisturbed earth. Provide eight to ten inches of gravel for drainage.

2. Box shall be placed in the excavated hole with the top level with the finished grade.

B. Backfill

1. Backfill around the box shall be with excavated soil placed in six-inch layers and each layer thoroughly tamped to approximate compaction of 95%.

IX. LIGHTING CONTROL SYSTEMS EQUIPMENT INSTALLATION

A. Lighting Control Panels

1. Before installing the Sports Field Lighting Control and Monitoring Systems equipment check all of the Drawings for possible conflict of space and adjust the location of the system's equipment to prevent such conflict with other items. Equipment locations shall closely follow the layouts shown on the Drawings, leaving sufficient space for installations of panelboards and/or other electrical equipment.

2. Equipment shall be securely mounted at locations shown on the Drawings. Construction shall be such that additional conduits can be added for future requirements.

3. The cabinets and enclosures shall be mounted and grounded in accordance with the NEC. This Contractor shall furnish all materials necessary for mounting the cabinets.

4. Lighting control equipment will generally be located adjacent to respective lighting panelboards. During the construction process, protect all interior components of each relay panel and each digital switch from dust and debris. Any damage done to electronic components due to non- protection shall be the sole responsibility of this Contractor.

B. Pull boxes and wireways may be used for ease of field wiring and trouble shooting. All wireways shall have removable covers.

C. Switches: Provide outlet boxes, single or multi-gang, as shown on the Drawings for the control switches. Provide cover plates for all switches.

D. Wiring:

1. All vertical wiring for the lighting control systems shall be installed by this Contractor in conduit and/or surface metal raceway as shown on the Drawings.

2. All horizontal wiring for the lighting control systems to be installed in areas without a ceiling or in areas without an accessible ceiling shall be installed by this Contractor in minimum ½ inch conduit.

3. All horizontal wiring for the lighting control systems shall be run at right angles to the building structure.

4. All wiring for the lighting control systems shall be furnished and installed by this Contractor as hereinbefore specified and as shown on the Drawings. All junction box covers shall be stenciled for distinct identification.

5. All low voltage wiring connections shall be made by this Contractor accordance to manufacturer recommendations. Cables shall be run free of splices from the equipment enclosures to the outlets.

6. All wiring shall be checked and tested by this Contractor to insure the system is free from grounds, opens, and shorts.

7. Do not mix low voltage and high voltage conductors; power limited and non-power limited in the same conduit.

8. Ensure low voltage conductors, conduits or control wires do not run parallel to current carrying conduits.

9. All control wiring shall be labeled in accordance with the schematic diagram.

E. Terminal Blocks:

1. Terminal blocks, fuses, relays, etc. shall be din-rail mounted.

2. Output wiring shall be connected via terminal blocks to accept field wiring.

3. Terminals for bonding conductors shall also be provided.

F. Installation and Set-up

1. Verify that conduit for line voltage wires enters the panel in line voltage areas and conduit for low voltage control wires enters the panel on low- voltage areas. Refer to manufacturer's plans and approved shop drawings for location of line and low-voltage areas. It is the responsibility of this Contractor to verify with the lighting control manufacturer all catalog information and specific product acceptability.

2. Unused openings in cabinets shall be effectively closed.

3. Lugs shall be suitable and listed for installation with the conductor being connected.

4. Neatly group, lace and rack wiring in cabinets. Conductor lengths shall be maintained to a minimum within the wiring gutter space, but long enough to allow for future changes within the cabinet without splicing. Conductors shall be arranged in a manner that avoids strain on the connecting lugs and maintain the required bending radius of conductors inside cabinets.

5. Follow the manufacturer's torque values to tighten lugs.

6. Follow manufacturer's instructions for installation and for all low voltage wiring.

G. Service and Support

1. Start Up: This Contractor shall contact the manufacturer at least 7 days before activation of the system. Manufacturer shall remotely connect into the lighting control system, run diagnostics and confirm system programming. This Contractor shall be available at the time to perform any corrections required by the manufacturer.

2. Telephone factory support shall be available at no additional cost to the Contractor or Owner both during and after the warranty period. Factory shall pre-program the lighting control system per plans and approved submittal, to the extent data is available. The specified manufacturer, at no added cost, shall provide additional remote programming via Web Access as required by the Contractor or Owner for the operational life of the system.

X. FIELD QUALITY CONTROL

A. Inspect each installation for damage. Replace damaged luminaires and components. All luminaires shall be cleaned and completely lamped and wired.

B. Before energizing the system, the following steps shall be taken:

1. Retighten connections to the manufacturer's torque specifications. Verify that required connections have been furnished.

2. Remove shipping blocks from component devices and panel interiors.

3. Inspect each installed unit for damage. Replace damaged components.

4. Remove debris from the panels and cabinets, wipe dust and dirt from all components, and repaint marred surfaces with touch-up paint to match the original finish.

C. After installation and connection of sports field lights to their permanent power supply, the Contractor shall verify supply voltages and currents at the disconnecting device in the electrical enclosure and at the main circuit breaker. Branch circuit and feeder voltage drop shall not exceed three (3) percent. Ensure that the three phases are balanced between phases at each support structure to minimize flicker. Measurements shall be taken phase to phase.

D. Prior to the Architect/Engineer's and/or Owner's final site visitation, and acceptance of each construction phase, this Contractor shall conduct a complete operating test of each system, including each device. The system shall test free from grounds, shorts, and other faults. All connections shall be thoroughly checked for mechanical and electrical connections. Replace or repair damaged and malfunctioning units, make necessary adjustments, and retest. Repeat procedure until all units operate properly.

E. This Contractor shall perform all tests in the presence of the Architect/Engineer and/or

Owner. This Contractor shall furnish all personnel and test instruments for use in the tests. Give advance notice of dates and times for field tests to the Architect/Engineer and Owner and coordinate a mutually agreed time and date. All equipment shall be demonstrated to operate in accordance with the requirements set forth in these Specifications and as shown on the Drawings.

F. Testing and Measuring of Field Illuminance

1. Contractor shall perform proof-of-performance field measurements and analysis for compliance with lighting requirements hereinbefore described in Part 1.04 LIGHTING PERFORMANCE. Initial footcandle readings for the sports lighting luminaires shall be taken after 100 hours of lamp operation. Testing shall not begin until the HID lamps have been operating for a minimum of one (1) hour and complete night time darkness.

2. Field measurements shall be taken on appropriate grid spacing test stations and at the appropriate spill-light and glare points test stations. Test stations shall be the points hereinbefore specified in the “Lighting Performance” section.

3. Ambient light levels shall be measured at the specified test stations with the facility luminaires turned off. Once the maximum spill-light readings have been recorded, subtract the ambient light readings from the respective footcandle readings at each test station to determine spill-light due to facility luminaires only.

4. Testing equipment for measuring footcandle levels shall be a Gossen Panlux meter or equal. Meter must show proof of calibration as required by its manufacturer.

5. After all photometric testing has been completed, a final report shall be provided to the Architect/Engineer and the Owner. This report should indicate footcandle levels taken on the playing field, spill-light locations (including and deducting ambient light levels at spill-light locations), candela levels for glare measurements at the spill-light locations, total number of hours on the system, average initial illumination as tested, CV and uniformity ratios. Report shall also include computer-generated values. Computer-generated values shall use Manufacturer’s lamp lumens that are adjusted to lamp age at time of field testing.

6. Correcting Non-Conformance – If, in the opinion of the Architect/Engineer and/or Owner, the actual performance levels and uniformity do not meet the requirements of the performance specifications and submitted information, the Contractor shall be liable to any of the following:

    a) Contractor shall, at his expense, provide and install any necessary additional luminaires and/or re-aim luminaires so that specified levels are achieved. If additional luminaires are installed the Contractor shall also either replace the existing poles to meet the new wind load (EPA) requirements or verify by certification by a licensed Professional Engineer registered in state of Maryland that the existing poles will withstand the additional wind loading.

b) Contactor shall remove the entire unacceptable lighting system and install a new lighting system to meet the specifications.

XI. WARRANTY AND MAINTENANCE REQUIREMENTS

A. This Contractor shall deliver the work in a first-class operating condition in every respect.

B. The Contractor/lighting system and controls system manufacturer shall warrant that the material, equipment, and workmanship furnished shall be entirely free from defects for a minimum 25-year Warranty Period based on 500 hours of use per year for diamond fields (baseball/softball) and 900 hours of use per year for rectangular fields. Any material, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractor/Manufacturer's own expense. Refer to SECTION 01740 for the start of the warranty period.

C. In addition to the Warranty Provisions, the sports field lighting and controls system manufacturer shall provide a signed maintenance agreement covering the entire lighting and control systems for a minimum period of 25 years based on 500 hours of use per year for diamond fields (baseball/softball) and 900 hours of use per year for rectangular fields. The maintenance agreement shall guarantee light levels; lamp replacements; monitoring; communications; maintenance and control services; spill-light control, and structural integrity. During the maintenance period the manufacturer shall:

1. Maintain lighting levels within +/-10% of the maintained horizontal average illuminance level for the entire field.

2. Group-replace all lamps when they reach the end of their service life as specified by the lamp manufacturer. The sports field lighting and controls system manufacturer shall submit a re-lamping schedule for the maintenance period based on the lamp manufacturer's lamp lumen depreciation curve and hours of use per year.

3. Spot-replace individual lamps when 10% of the lamps are extinguished on the entire athletic field or more than one lamp is extinguished on any one pole.

4. All repairs shall be completed within seventy-two (72) hours of notification, unless otherwise approved by the Owner.

D. Manufacturer shall maintain specifically-funded financial reserves for this project to assure fulfillment of the warranty and maintenance for the full term. Warranty may exclude fuses, storm damage, vandalism, abuse and unauthorized repairs or alterations. Warranty may not exclude means and methods to access any part of the lighting and controls systems.

XII. OPERATING AND MAINTENANCE INSTRUCTIONS

A. At the completion of the installation, this Contractor shall furnish four (4) final sets of "as-built" drawings as well as manuals of instruction as to the proper operation and maintenance of the sports field lighting system and control system.

B. The “As-Built” documentation shall include wiring diagrams for the lighting control and monitoring systems. Diagrams must indicate exact mounting location of each system and their devices. This accurate “as built” shall indicate the loads controlled by each relay and contactor and the identification number for that relay and contactor, and placement of switches. Original shall be given to Owner, copies placed inside the door of each lighting control cabinet.

C. This Contractor shall also furnish the Architect/Engineer four (4) bound copies of complete operating and maintenance instruction manuals of the complete sports field lighting system and the sports field lighting control and monitoring system. These manuals shall include factory service manuals with complete parts lists, wiring and component schematics including circuit diagrams, programming forms with complete information and all other information necessary for proper operation, service, and maintenance of the systems.

XIII. TRAINING

A. This Contractor shall furnish the Owner’s officially designed representative(s) with a minimum of four (4) hours of on-the-job instructions in the operation, maintenance, and testing of the systems, using the factory operation manuals previously specified, for proper operation, maintenance and testing of the systems. The lighting controls supplier shall undertake all required set-up, programming, testing, commissioning and training of the Owner’s Representative as required for the proper operation of the lighting control and monitoring system.

B. This Contractor shall furnish four (4) hours of operating and programming training to the Owner’s operating staff to be scheduled at the Owner’s convenience during the warranty period.

C. All training specified herein shall be performed by a factory certified technician.

END OF SECTION

Part 1 - General

I. REQUIREMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

II. SCOPE

A. The work covered under this Section shall include the materials and equipment necessary for this Contractor to furnish and install a performance lighting control system(s), wiring devices and performance lighting instruments herein specified for the television studio. It shall also include the services of qualified field engineer/technicians regularly employed by the manufacturer of the system(s) who shall review the installation(s) to ensure its proper operation and provide Owner training.

B. The Television Studio Performance Lighting Systems and Controls shall be furnished by a factory authorized Theatrical Contractor/Distributor certified to design, program and service the systems. The Theatrical Contractor shall be responsible for coordination between the electrical installation and other trades installing theatrical equipment and for control terminations, system startup, system training, and warranty repair. A Theatrical Contractor is defined as a dealer who regularly engages in the sale and installation of theatrical supplies and equipment. The Theatrical Contractor/Distributor must show evidence of successfully furnishing theatrical systems specified for at least five (5) years.

C. This Contractor shall furnish and install all necessary equipment as hereinafter detailed for a complete and functional performance lighting control system(s) including the theatrical lighting instruments. Although not every component is called out in every detail, it shall be the responsibility of the manufacturer providing the system to assure that the intended function is furnished.

D. The system specified herein shall consist of a dimmer-per-circuit high density dimming system equipment panel, performance lighting control console, distribution equipment, performance lighting instruments, and all required interconnecting wiring.

E. This Contractor shall furnish and install in accordance with the lighting control manufacturer's instructions, all conduits, wiring, and outlet boxes required for the erection and operation of the complete system(s) as herein specified and as shown on the Drawings.

F. The performance lighting control system shall be supplied as a single integral unit with all dimmer modules, control circuits, circuit breakers, and the like factory wired. Field wiring shall consist of connecting input feeders, dimmer circuits, and remote control wiring to the distribution devices and control console.

G. It is the intention of this specification section that the entire Television Studio

performance lighting control system be available to all bidders and not “Packaged or Bundled” with any other lighting systems or equipment.

III. QUALITY ASSURANCE

A. The contractor shall furnish submittals for all components of the performance lighting and lighting control system(s) in accordance with SECTION 16010 of these Specifications. The submittals should include the manufacturers working drawings and shall include, but not be limited to the following:

1. Manufacturer's catalog data for all lighting instruments, equipment, and components that shall include all technical data to demonstrate conformance with these Specifications.

2. Complete physical drawings of all items of equipment showing dimensions, metal gauges, etc.

3. Complete load schedules which shall clearly indicate actual connected loads and control channel assignment (where applicable), cross- reference of internal equipment identifications to circuit numbers shown on the Drawings, and all other scheduled information which shall relate the equipment to the project requirements.

4. Complete internal and interconnection wiring diagrams showing number, size, and types of conductors between equipment and from equipment to loads, and feeder quantity and sizes.

B. The lighting control system equipment specified herein shall be the sole responsibility of a single manufacturer. The manufacturer shall have been producing theatrical lighting and SCR type lighting control systems for at least fifteen (15) years.

C. All work shall be in accordance with good engineering practices. All equipment for this system shall be listed by Underwriter's Laboratories, Inc. (UL), bear the UL label, and shall be installed in accordance with all requirements of the National Electrical Code (NEC), state and local codes, and these Specifications.

D. The entire performance lighting control system shall be completely factory assembled and tested under load conditions prior to shipment of the system.

IV. QUALIFICATIONS

A. The Contractor and the Theatrical Contractor/Distributor shall be required to furnish satisfactory proof of their competence as evidenced by successfully completed previous contracts where control equipment of this nature has been specified.

B. The Contractor is encouraged to visit the site, shall become familiar with the Drawings outlining this work, and shall become completely familiar with the various items of equipment being furnished under other Divisions of these Specifications related to this

work. The Contractor shall make all necessary investigations relative to the conditions that may be encountered on this project.

V. SPARE PARTS

A. This Contractor shall furnish to the Owner spare parts as follows. Spare parts shall be furnished prior to the installation of the system.

1. One (1) dual 2.4 kW dimmer module.

2. One (1) set of component level wiring schematics.

3. One (1) spare of each type solid-state control card (or circuit board) used in the dimming system equipment rack.

4. One (1) spare of each type dimmer control module (or circuit board) used in the dimming system equipment rack.

5. One (1) set of equipment software package.

B. This Contractor shall furnish to the Owner, at the completion of the project, 20% (minimum of two) spare lamps for each type and wattage of lamps used in the theatrical lighting instruments.

Part 2 - Products

I. MANUFACTURERS

A. The performance lighting control system(s) as shown on the Drawings and herein specified shall be as manufactured by ELECTRONICS DIVERSIFIED, INC. (EDI) as listed or the pre-approved equivalent as manufactured by ELECTRONIC THEATRE CONTROLS, INC. (ETC), LEHIGH ELECTRIC PRODUCTS CO. (LEHIGH) or STRAND LIGHTING, INC. which meets all of the requirements of these Specifications. The system shall utilize the manufacturer's standard products and components with modifications as required to meet the construction and performance requirements of this section.

B. The theatrical lighting instruments as shown on the drawings and herein specified shall be as manufactured by ALTMAN as listed or the equivalents as manufactured by ELECTRONIC THEATER CONTROLS, INC. (ETC), or STRAND LIGHTING, INC. which must meet all of the construction and performance requirements of these specifications.

II. DIMMING SYSTEM EQUIPMENT RACK

A. This Contractor shall furnish and install where shown on the Drawings, a performance lighting dimming system equipment rack. The rack shall be EDI "MX" Dimmer Rack System and shall consist of a wall mounted factory assembly constructed of tubular steel or steel angle frames and enclosed with code gauge metal panels. All rack

components shall be properly treated, primed and finished. Exterior surfaces shall be finely textured with scratch resistant, two-part polyurethane or equal. Removable cover panels shall be provided for each end and top of the dimmer bank to facilitate conduit terminations. Rack components shall be designed for easy removal and installation so that the dimming system equipment rack is completely open and empty during field wiring. Rear access to the rack for installation or servicing shall not be required. Racks shall be designed for front access to allow for wall mounting and side-by-side installation.

B. The dimming system equipment rack shall have factory wired provisions for a minimum of twenty-four (24) 20 amp plug-in dimmers. Dimmers shall be contained in a module. Each module shall house two (2) dimmers. The dimmer modules shall be sequentially numbered, labeled and addressed from top to bottom. No two physically consecutive dimmer modules shall be on the same phase. Guides shall be provided on the dimmer trays for ease of insertion and withdrawal of the dimmer modules without the use of tools. Positive means shall enable the rack and the dimmer module connectors to assure precise alignment of the module into power and signal connector blocks and to protect the connector pins from insertion damage. The dimmer module shall connect the high voltage output pins prior to the low voltage signal pins to ensure proper connections and to protect the module from arcing should control signals be activated during the insertion process. Connecting pins mating high and low voltage signals simultaneously shall not be accepted. All power and signal connections shall be factory wired and neatly dressed. Adequate space shall be provided for field wiring alongside factory installed wiring. Terminals shall be provided for multiplexed signal wires consisting of two (2) over-temperature wires and auxiliary wires as required by the manufacturer. All terminals shall be clearly marked and connectors and wiring shall be accessible from the front of the rack. The removal of any dimmer module from the rack shall not expose line or low voltage terminals or surfaces to the touch. Electrically live surfaces shall be not less than six (6) inches from the front of the rack with dimmer modules removed. Racks that require removable panels to access load, neutral or control terminations shall not be acceptable.

C. All control wiring shall conform to the recommended practices for DMX-512A E1.11 as published by the United States Institute for Theatre Technology (USITT) and the Entertainment Services and Technology Association (ESTA).

D. The rack shall be configured to accept mixed dimmer types and ratings throughout the rack.

E. Forced air cooling of the rack shall be provided by a low noise fan(s). Fan(s) shall be mounted in the dimming system equipment rack to maintain the temperature of all components at proper operating levels with all dimmers under full load. The fan(s) shall turn on whenever any dimmer in the system is activated. In the event of an over temperature condition, only the affected dimmer module(s) shall shut down and an LED indicator shall appear on the affected dimmer module(s) and shall not cause the entire rack to shut down. An automatic fan shut-off shall be furnished, activated when the control console is turned OFF, but shall remain ON during thermal shutdown of individual dimmer modules until the rack has cooled to an acceptable point.

F. The dimmer rack shall be supplied with a circuit breaker protected panel containing a 20A, 120VAC, 60 Hz, grounded duplex receptacle.

G. The dimmer rack shall be equipped with an illuminated LCD status beacon. The LCD status beacon shall display rack status and messages.

H. The dimmer rack shall be furnished complete with a full height lockable metal door containing an electrostatic air filter that shall be removable for easy cleaning and an engraved nameplate as herein before specified. The nameplate shall be lettered TELEVISION STUDIO LIGHTING DIMMING SYSTEM EQUIPMENT RACK.

I. The dimming system equipment rack shall be suitable for operation at 120/208 volt, three phase, four wire, sixty hertz, 200 amp, and have busing rated for 100% continuous duty, suitable lugs for a single point connection, a system minimum fault current rating of 22,000 AIC, and UL listed with appropriate factory applied labels.

III. DIMMER CONTROL MODULE

A. All control electronics shall be contained in a single plug-in control module mounted in the rack.

B. The control module shall contain rack status indicators to include, but not be limited to, the following LED user indicators:

1. DMX port “A” or “B” status.

2. Electrical phase “A”, “B”, or “C” is above or below safe operating voltage.

3. Dimmer rack has shutdown due to improper startup voltage.

4. Over-temperature protection has caused a dimmer to shut down.

C. Ambient temperature is above safe operating temperature.

D. Ambient temperature is below safe operating temperature.

1. Dimmer rack’s “service mode” is activated.

E. The control module shall respond to control changes in less than twenty-five (25) milliseconds. Dimmer outputs shall exhibit no oscillating or hunting for levels.

F. Dimmer output shall be regulated for incoming line voltages. The control module shall monitor and adjust each dimmer’s output to maintain a constant power to the load. Regulation shall maintain the desired output voltage for the entire operating range (90-140VAC) with the exception that the maximum output will be no greater that the line voltage minus dimmer insertion loss. There shall be no interaction between dimmers or any other equipment in the system. Line compensation shall be field adjustable on a

dimmer-by-dimmer basis to allow for varying cable length.

G. The control module shall include a minimum of two (2) optically isolated DMX512A inputs allowing overlapping or separation of any control level. Twenty- five hundred volts (2500V) of optical isolation shall be provided between the DMX512A inputs from a failed control module and shall protect the control module from failed DMX512A inputs. Systems that do not have optical isolation will not be acceptable.

H. The control module shall provide for a minimum of twelve (12) 0-10 volt analog inputs to allow for analog control of the rack. It shall be possible to assign each dimmer to any one of the twelve (12) analog inputs. The analog input shall not reduce the number of incoming DMX512A signals.

I. With the exception of the analog inputs, the control module shall be completely digital without employing any digital-to-analog de-multiplexing schemes or analog ramping circuits. The rack shall, in the event of signal loss, maintain the last level for a user programmable time period. Systems that do not include this feature will not be acceptable.

J. The control module shall contain diagnostic routines to allow the user to test and troubleshoot the system.

K. The control module shall include a system-wide panic circuit. Any dimmer or group of dimmers in the rack may be assigned proportionally to the panic circuit.

L. Each dimmer shall be capable of being assigned a specific address for each DMX512A input.

M. The control module shall be capable of recording backup looks. It shall be possible to program backup looks by any of the following methods: recording current dimmer levels (as set by the console or other remote programming device); entering dimmer levels on the control module directly via a handheld remote.

N. It shall be possible to have multiple backup looks active simultaneously with inputs operating on a highest take precedence basis.

O. Two (2) separate and distinct patches shall be available. Selection between the patches shall be possible from the remote-control keypad.

P. The control module shall include a single function service switch that shall allow the end user to bypass the control electronics configuration. When activated, the service switch shall drive all circuits to full output.

Q. The control module shall accommodate remote control devices via a multi-link network.

R. The control module shall include a port for connection of a remote-control keypad.

IV. REMOTE CONTROL KEYPAD

A. The system shall include a hand-held remote control keypad complete with cord for connecting to the dimmer control module and a LCD display for system configuration, testing, and diagnostics. The LCD shall also display rack status and messages.

B. The remote-control keypad shall include, but not be limited to, the following displays.

1. Dimmer display shall allow a dimmer or dimmers to be set at a level.

2. Backup display to program and activate system-wide backup looks.

3. Display information shall allow monitoring of system, rack, or dimmer status.

4. System information shall provide information about DMX outputs, panic circuits, backup looks, and system name.

5. Rack information shall provide information about rack voltage, starting addresses, ambient temperature, and rack type.

6. Dimmer information shall provide information about dimmer size, type, location, output levels, and control source. Setup display shall allow, but not be limited to, configuring of rack addresses, dimmer firing mode, and line compensation values.

C. The remote-control keypad shall be capable of activating all of the control module system functions. Systems that do not offer this feature will not be acceptable.

V. DIMMER MODULES

A. This Contractor shall furnish dimmer modules as part of the dimming system equipment rack. Dimmer modules shall be fully plug-in, factory-wired units designed to slide into the dimmer trays. No tools shall be required for module removal and insertion. Modules shall be of rugged, heavy-duty construction with all electrical and electronic components fully enclosed, all sides and top and bottom, by a formed aluminum chassis. Dimmer modules constructed of molded plastic for structural support are not equivalent and are not acceptable. Dimmer modules shall not have any protruding connector pins subject to physical damage when the module is not inserted. Dimmer modules shall be UL listed devices and shall carry the appropriate label. The front panel of each dimmer module shall be factory marked with the manufacturer's name, model number, quantity and capacity of dimmers, and power line voltage and frequency.

B. Each dimmer module shall contain a circuit breaker for each circuit, a solid state switching module, associated toroidal filters, status indicators, and power and control connections.

C. Each dimmer module shall use a solid-state module (SSM) consisting of two (2) silicon-controlled rectifiers (SCRs) in an inverse parallel configuration and all required gating circuitry on the high voltage side of an integral, opto-coupled control voltage isolator. The SSM shall be thermally protected, independent of the control module. SSM shall provide minimum of 10,000V RMS isolation between the line and control sides of the device. The full load of the circuit shall be carried and controlled solely by the silicon-controlled rectifiers. Dimmers employing triacs shall not be acceptable.

D. Dimmer modules shall be 2.4kW and shall have a minimum capacity of 40 amps, with a rating of 500 amps peak single cycle surge current and 600 volt transient capacity. Dimmer modules shall be available to accommodate incandescent, low voltage, and non-incandescent loads.

E. Each dimmer module shall have an integral inductive high performance toroidal copper-wound choke filter mounted within the plug-in module. The choke filter shall be designed to reduce the rate of current rise resulting from the SCR switching in order to: limit objectionable harmonics; reduce acoustical noise in the dimmer load which would create lamp filament noise in the output circuit; limit conducted radio frequency interference on the AC line and on the load wires; and isolate the dimmer from the AC line to prevent interaction with other dimmers. Dimmers with "E-I" or double "e" filters shall not be acceptable.

F. Each dimmer shall be protected by a fully magnetic single pole, 20 amp, one hundred percent (100%) rated circuit breaker listed at 10,000 amps interruptible current mounted on the face plate of the dimmer. The breaker shall be used as a dimmer disconnect and shall be a UL listed device. Under overload conditions, the circuit breaker shall disconnect power to the dimmer module before damage can be done to the power devices. The trip current shall not be affected by ambient temperature within the operational specifications of the system.

G. Current limiting feedback techniques shall not be acceptable as a means of protecting a main power device. Under no circumstances shall dimmers allowing continued operation with a load substantially in excess of the rated capacity be acceptable. The protective devices shall have a maximum "must trip" rating of one hundred twenty five percent (125%) of the rated capacity.

H. The rise time rating for a 2.4kW dimmer shall be as noted in the manufacturer’s oscilloscope data, but in no case less than five hundred (500) microseconds (µS) measured at ninety (90) degrees conducted angle from ten percent (10%) to ninety percent (90%) of the output wave form with the dimmer at fifty percent (50%). Alternate manufacturers must also supply either high performance chokes or certified test data ensuring compliance. The manufacturer shall furnish a documented photograph of the scope measured rise time with the submittals.

I. The high-performance dimmer (500 µS) shall have an insertion voltage drop of no more than 5.5 volts RMS at the maximum rated load with 120 volts input.

J. The dimmer module shall be designed to operate on a 100 to 140-volt AC line at 50 to 60 Hz. Adequate heat sinking shall be provided so that all components remain at a safe operating temperature with the dimmer properly installed in the dimming system equipment rack.

K. The dimmer module shall be capable of "hot patching" cold incandescent loads up to its full rated capacity without malfunction with the control signal ON.

L. Dimmers shall maintain output RMS voltage within two percent (2%) with changes in load from 10 watts to full rated load at any point on the dimming curve.

M. Switch-on versus switch-off response time shall be within 0.1 seconds for all loads.

N. The output RMS voltage versus control console setting shall follow the "square law dimmer curve". Dimmer curve shall be stable without the need for curve adjustment.

O. The power efficiency of the dimmer shall be a minimum of ninety five percent (95%) at full load. Power consumption shall not exceed 0.1 watt per dimmer.

P. Dimmer modules of the same capacity shall be interchangeable. Connectors and receptacles of modules of different capacity shall be polarized so that modules of different capacity cannot be interchanged.

Q. This Contractor shall furnish and install in the dimmer rack, 2.4 kW dimmers in the quantity required for all of the performance lighting indicated on the Drawings plus the spares required elsewhere in this Specifications. Dimmers shall be EDI "MX" SCR Dimmer Modules or approved equal.

VI. PERFORMANCE LIGHTING CONTROL CONSOLE

A. This Contractor shall furnish and install a Performance Lighting Control Console, where shown on the Drawings. The console shall be “Lite-24" as manufactured by ELECTRONICS DIVERSIFIED, INC. (EDI) as listed and described herein, or the pre-approved equivalent as manufactured by ELECTRONIC THEATRE CONTROLS, INC. (ETC), LEHIGH or STRAND LIGHTING, INC. which must meet all of the requirements of these Specifications. Other console manufacturers may be acceptable provided the console is pre-approved in accordance with specification Section 16010.

B. A micro-processor based controller specifically designed for the live performance market. The Console shall be modular by design and have the capacity to address 12 or 24 control channels in a two-scene preset configuration. The standard communication protocol shall be USITT DMX-512 and Analog 0-10 VDC at 5mA.

C. The Console shall be housed in a heavy-duty aluminum enclosure substantially framed for portable use with a sloped front control surface clearly marked for operation. All nomenclature shall be silk-screened for high contrast low light-level viewing. All control connectors integrated into the chassis shall be of locking type to insure proper

operation.

D. The Console program shall be secured in a non-volatile read only memory. The program operation shall not be dependent upon any peripheral device for operation. Recorded memory shall be protected by a ten-year lithium battery.

E. The Console shall provide, but not be limited to the following as standard features:

1. Forty-eight (48) channel faders - Individual slider controls, arranged in two rows of 24, with individual control for manual intensity selection.

2. Bump Buttons, assigned to individual channel and submaster controllers for instant output when touched. Solo, On and Off output is selected and controlled by the bump mode selector and intensity fader. LED status indicators mimic the assigned channel output level.

3. Split Dipless Cross faders, allowing operator control of the two manual preset scenes with separate fader and time controls for each scene. An LED array shall indicate the status of the fader at all times.

4. Grand Master and Blackout Switch: All channel, submaster, effect and fader outputs shall be assigned and proportionally controlled by this potentiometer and switch.

5. Submasters: Overlapping, pile-on, programmable submasters, with bump buttons for individual control of recorded outputs. Up to three (3) pages of individual submaster outputs can be recorded in the submaster memories.

6. Effect Controls: Allow access to special chase effects. Step/Hold key accesses step mode while order of bump button input determines the order of the steps. Individual tare and level controls allows variable playback options. Effects direction offers forward, reverse and bounce options.

7. Program Key: Allows access to record functions for submaster and effects memories.

8. Power Indicator: Confirms power is connected and switched On for operation.

F. The Console shall provide, but not be limited to the following operating functions:

1. The level setting capacity shall be accessed through the linear potentiometers available on the channel sliders.

2. The channel playback capacity shall be accessed through the timed Cross Faders which shall execute the individual levels set on the channel modules.

3. The Submaster capacity shall be accessed through the Program Key. Any fader output can be captured for storage on the submaster by selecting the

submaster page and number for the record and by pressing and holding the Program Key and pressing the bump button under the submaster to be recorded.

4. The Effects capacity shall be accessed by pressing the Program Key to access the effect. Select the output to be included in the effect step. Capture the by step pressing the Step/Hold key. Each successive step is created in this method. Up to 96 steps shall be available for each Effect. The direction, level and rate of the Effect may be altered at any time. Effects interact with memories on a highest takes precedence basis.

5. Soft Pack: Up to 192 individual DMX-512 dimmers may be accessed. Any dimmer may be assigned to any channel.

G. Low voltage control wiring shall be per system manufacturer recommendations and included in the shop drawing submittals.

H. The Console shall house an integral power supply which shall regulate power within plus or minus 1% of incoming line voltage between 105 and 125 VAC. The console shall have the capacity to operate on 120 VAC, 60 Hz. The power consumption shall not be greater than 1 amp.

VII. PERFORMANCE LIGHTING CONTROL RECEPTACLE STATIONS

A. Remote Control Connector (RCC) stations for control consoles shall be provided at locations shown on the drawings. The RCC's shall be the five (5) pin XLR type receptacle with cover plate, fitted with twelve (12) inch labeled leads. The leads shall be labeled to correspond to the terminals of the dimmer bank. The RCC shall be installed in a standard flush or surface mounted outlet box as shown on the drawings. The remote-control connector shall be EDI Model No. RCC/5XLR or approved equal.

B. This Contractor shall provide two (2) matching twenty-five (25) foot long control cables, each with USITT standard five (5) pin DMX male and female connectors.

VIII. ELECTRICAL DISTRIBUTION EQUIPMENT

A. All distribution equipment shall be furnished by the manufacturer of the dimming equipment. Hanging and support hardware shall be furnished and installed under SECTION 11064 "THEATRE AND STAGE EQUIPMENT – RIGGING SYSTEMS".

B. This Contractor shall furnish and install plug-in boxes where shown on the Drawings as follows:

1. The lighting plug-in boxes shall comply with the requirements specified herein and shall be of the type specifically recognized, manufactured, and listed for this purpose. Each box shall be of sixteen (16) gauge steel with two (2) sets of knockouts on each side. Female receptacles shall be three pole, 20 amp,

grounded stage-pin (GSP) connector type attached to twenty-four (24) inch long rubber covered cable pigtails. Exterior finish shall be baked flat black enamel.

2. The lighting plug-in boxes shall be three or four-gang suitable for pipe mounting, supplied with a malleable iron clamp to grip up to a two (2) inch ID pipe, with exact configuration, pigtails, and grounded stage-pin receptacles as noted on the Drawings. The entire plug-in box shall be UL listed. The lighting plug-in box shall be the EDI Model No. PB-4133 (three-gang) or PB-4143 (four-gang) or approved equal.

IX. THEATRICAL LIGHTING INSTRUMENT PACKAGE

A. Theatrical lighting instruments manufactured by ALTMAN are specified herein to provide a basis of quality. Other acceptable manufacturers are ETC and STRAND LIGHTING, INC.

B. Theatrical lighting instruments shall be capable of performing with tungsten halogen lamps as indicated herein with proper heat sink cooling. Phenolic materials shall be employed on the fixtures in order to protect the operator from potential burns.

C. Each theatrical lighting instrument shall be supplied with a malleable iron clamp to grip up to a two (2) inch ID pipe, a fixture yoke with locking clutch handle, and three (3) foot long SF2 leads in a fiberglass sleeve.

D. Minimum performance criterion for all theatrical lighting instruments shall be as herein specified. Each instrument shall be furnished with a three pole, grounded stage-pin (GSP) connector and safety cable. UL listing is required on all theatrical lighting instruments.

E. Scoop ellipsoidal reflector floodlights (SERF):

1. The SERF shall be a 14-inch scoop ellipsoidal reflector floodlight with a medium prefocus socket designed to accept 500 to 1,000-watt Tungsten Halogen lamps. The socket shall be mounted in a spun aluminum housing to reduce heat buildup and to properly align the lamp in the reflector. The interior reflector surface shall be finished in a matte Alzak aluminum process for maximum illumination uniformity. A crank focus handle shall be provided to allow travel of the socket and lamp assembly along the center axis of the reflector for beam adjustment form spot to flood focus. An integral rotating color frame, closed on three sides, shall be supplied for mounting of the color/diffuser frame supplied with the unit. Re-lamping shall be accomplished by unseating the lamp from the medium prefocus base lampholder. Re-lamping shall be accomplished without disturbing the prefocused lamp alignment. The fixture shall have a baked black finish using an electrostatic application process.

2. Performance requirements for the variable focus 14” scoop units shall be as follows based on a 1,000 watt EGK lamp: The light output of the luminaire shall have a variable beam angle for from 32° to 70° and a variable field angle of

from 84° to 108° and shall produce 444 footcandles at centerbeam in spot and 156 footcandles at centerbeam in flood with an EGK lamp at rated lumens at a distance of 7.5 feet. The luminaire shall be UL listed and labeled for use with up to a 1,000-watt lamp.

3. This Contractor shall furnish total of five (5) fourteen (14) inch scoop variable focus SERS, each with a color/diffuser frame, safety chain and a 1,000 watt EGK lamp. The theatrical lighting instruments shall be ALTMAN catalog No. 160 or approved equal.

F. Fresnel Spotlights:

1. The instrument shall be a variable focus fresnel spotlight designed to accommodate a tungsten-halogen prefocus lamp up to 1,000 watts. The socket shall be mounted on an adjustable burner in front of a spherical specular high aluminum reflector. The instrument shall be provided with a heat resisting six (6) inch diameter molded high quality heat resistant borosilicate glass lens retained by a minimum of three (3) molded plastic stand-off pieces. These stand-off pieces shall allow air flow around the lens for additional ventilation of lens and color media.

2. The socket and burner assembly shall be readily moveable from spot to flood focus by means of a thermally insulated sweep arm. Focus position shall be indicated by a calibrated label. Lamp and reflector access shall be through a hinged front door. The front door assembly shall also house a positive lock for a barndoor and color frame.

3. Performance requirements for the six (6) inch fresnels shall be as follows based on a 1,000 watt BTR lamp: The light output of the luminaire shall have a field angle from 12.2 degrees to 73.8 degrees and shall produce one hundred ninety-nine (199) footcandles at center beam in spot focus and fifty-three (53) footcandles at center beam in flood focus at a distance of fifteen (15) feet at rated lamp lumens.

4. This Contractor shall furnish a total of eight (8) six (6) inch fresnel spotlights each with a color frame, four-way barndoor, safety chain, and 1,000 BTR lamp. The theatrical lighting instrument shall be ALTMAN Catalog No. 1KAF-MEPF or approved equal.

Part 3 - Execution

I. INSTALLATION

A. All wiring for lighting and control system shall be run in conduit as hereinbefore specified. All junction box covers shall be identified as hereinbefore specified. All conduits, device mounting boxes, junction boxes, and enclosures shall be securely fastened with appropriate fittings to insure positive ground throughout the entire system.

B. This Contractor shall furnish and install all wiring and make all final connections as indicated in the system manufacturer's shop drawings and standard installation documents. Splices for dimming circuits shall be made only in junction boxes.

C. All wiring shall be checked and tested by this Contractor to ensure the system is free from grounds, opens, and shorts.

D. All work shall be under the supervision of a field engineering technician, accredited by the system manufacturer. It shall be the responsibility of this technician to check and inspect the installation to the Owner's and Architect/Engineer's satisfaction. This technician shall also provide a minimum of four (4) hours of training for the Owner's operating personnel on the proper operation and maintenance of the lighting control system equipment.

II. OPERATING AND MAINTENANCE INSTRUCTIONS

A. At the completion of the installation, the manufacturer shall furnish four (4) final sets of "as-built" drawings as well as manuals of instruction as to the proper operation and maintenance of the lighting control system. "As built" drawings shall include all field modifications. Formal turn-on and instruction shall be provided to the Owner's officially designated representative within fourteen (14) days of a written request by the Owner.

B. This Contractor shall furnish the Owner's officially designated representative(s) with a minimum of three (3) hours of on-the-job instructions in the operation, maintenance, and diagnostic testing of the system. (This shall not be part of the system turn-on specified above.) This Contractor shall also furnish the Architect/Engineer four (4) bound copies of complete operating and maintenance instruction manuals of the lighting control system including circuit diagrams and all other information necessary for proper operation and service maintenance.

III. SYSTEM TEST

A. This Contractor shall conduct an operating test of the complete system. The system shall test free from grounds, shorts, and other faults. All connections shall be thoroughly checked for mechanical and electrical connections. All lighting control system equipment shall be demonstrated to operate in accordance with the requirements set forth in these Specifications and as shown on the Drawings.

B. This Contractor shall perform all tests in the presence of the Architect/Engineer. This Contractor shall furnish all personnel and test instruments for use in the test.

IV. WARRANTY

A. This Contractor shall deliver the work in a first-class operating condition in every respect.

B. This Contractor shall warrant that the material, equipment, and workmanship furnished

shall be entirely free from defects. Any material, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractor's own expense. Refer to SECTION 01740 for the start of the warranty period. The Contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the Drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

C. All materials used shall be new and of good quality conforming to these specifications and the successfully reviewed submittals. Any material not successfully reviewed by the Architect/Engineer that is incorporated in the work, used or delivered to the site, shall be immediately removed upon the order of the Owner or Architect/Engineer and replaced to the satisfaction of the Architect/Engineer at this Contractor's expense.

D. It shall be this Contractor’s responsibility to include costs incurred in other trades for any work disarranged by such replacements described above. This will include replacement of work and damaged equipment during the progress of construction.

E. The lighting control system manufacturer shall be prepared to offer a service contract for the maintenance of the system after the warranty period.

END OF SECTION

Part 1 - General

I. REQUIREMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

II. SCOPE

A. The work covered under this Section shall include furnishing and installing exterior/security light-emitting diode (LED) luminaires complete as shown on Drawings, as described in the “Luminaires (Lighting Fixture) Schedule”, and as herein specified.

III. QUALITY ASSURANCE

A. This contractor shall provide luminaires that are of a manufacturer engaged in the production of luminaires that are equal in material, design and workmanship. The manufacturer’s luminaire shall have been in satisfactory commercial or industrial use for a minimum of three (3) years. The manufacturer’s luminaire shall have been available on the commercial market during the three (3) year period.

B. Exterior/security LED luminaires shall meet requirements of the National Electrical Code (NEC), state and local codes including Prince George’s County’s Outdoor Lighting Standards and these Specifications.

C. The luminaires shall be listed by Underwriters Laboratories, Inc. (UL) or listed by a nationally recognized testing laboratory acceptable to Prince George’s County (DoE).

D. Submittals are required in accordance with SECTION 260500 of these specifications.

E. In addition to the submittal requirements of Section 260500, submittals shall include but not be limited to the following:

1. Complete point-by-point photometric footcandle calculations of the parking lots on a scaled plan(s) (scaled to match the electrical site plan). The scaled plan must include points thirty (30) feet beyond the property lines. The calculations must include contributions from the building mounted luminaires and the pole mounted site luminaires.

2. Calculations must be based on “one (1) footcandle minimum maintained” with no more than 0.5 footcandles at the property line with a maximum of 0.01 footcandles ten (10) feet beyond the property line and a “light loss factor” (LLF) of 0.85. Luminaire photometry shall be designed using the I.E.S.N.A. LM-79-08 absolute photometric principles for LED lighting. The 0.5 footcandles maximum at the property line(s) and 0.01 footcandles ten (10) feet beyond the property line(s) must not be compromised.

3. The exact quantities, locations, and I.E.S.N.A. photometric distribution types of pole mounted luminaries, may differ from the original basis of design layout, but

the required footcandle levels must be maintained. Should the luminaire manufacturer require additional luminaires to achieve the stated footcandle levels and/or require additional branch circuit wiring, supports, poles, etc., in conjunction with these additional luminaires, shall not cause additional expense to the Owner.

4. The Architect/Engineer may require changes to the submitted point-by- point photometric plans, if in their opinion the plans do not meet the requirements of this project or do to conflicts with other site issues not addressed in the submittal.

F. Precast concrete pole base foundations may be used in lieu of the cast-in-place concrete foundations shown on the Drawings. If precast bases are used, submittals shall be provided and shall include but not be limited to the following:

1. Provide pole base foundation design drawings signed and sealed by a Professional Engineer registered in the state of Maryland. Foundation drawings shall indicate the design criteria, assumptions, codes, standards, and all foundation reaction forces and moments. Foundation drawings shall indicate the design criteria allowable soils bearing pressures, codes, standards, all foundation reaction forces and moments, construction specifications, materials, and specific installation requirements such as shoring or de-watering. For the purpose of this bid, the Contractor shall assume the following type of sub-grade material specified in the current adopted edition of the International Building Code, Section 1804, Table 1804-2 – Allowable Foundation and Lateral Pressure:

a) Soils – Class 5 (clay and sandy clay)

IV. DESCRIPTION

A. This Contractor shall furnish and install LED luminaires complete with proper reflectors, diffusers, louvers, glassware, concrete bases, gaskets, shims, wiring, control, conduit, hardware, photocontrols, and other appropriate devices and parts for a complete exterior weatherproof lighting installation. Adjustable luminaires shall be aimed as directed by the Architect/Engineer. Each luminaire shall be complete with prewired integral drivers and optical (LED) assemblies.

B. Luminaires that require remote mounting of any components needed for its operation, such as drivers, or light engine electronics are not permitted. All components needed to make the luminaire operational shall be integral to the fixture housing.

C. Luminaires shall have a minimum IP rating of IP65 or IP66.

V. WARRANTY

A. This Contractor shall deliver the work described herein in a first class operating condition in every respect. This Contractor shall also warrant that the material and workmanship shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall

be repaired or replaced at the Contractors own expense. Refer to Division 1 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the Drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

B. All luminaires shall have a minimum five (5) year factory warranty for defective or non-starting power supply units (driver), and LED source assemblies, which includes, but not limited to: LED package, LED arrays, LED modules, LED die, encapsulate, and phosphor.

Part 2 - Products

I. MATERIALS AND COMPONENTS

A. Exterior/security LED luminaires supplied shall be complete with the proper reflectors, diffusers, house side shields, louvers, glassware, gaskets, pole arms, collars, shims, wiring, control, conduit, hardware, drivers, photocontrols, and other appropriate devices, parts and accessories to be properly installed for an exterior weatherproof lighting installation.

II. POLES AND STANDARDS

A. Poles for LED luminaires shall be aluminum or as indicated on the Drawings with factory finish as shown in the "Luminaire (Lighting Fixture) Schedule". Aluminum poles shall be factory wrapped with heavy weatherproof paper for protection during handling and shipping.

B. This Contractor shall furnish hot-dipped galvanized anchor bolts, templates, ground rods, conduit elbows, and base information, etc., for the installation of concrete bases as detailed on the Drawings.

C. Poles shall be of the height and with brackets, etc. as indicated in the "Luminaire (Lighting Fixture) Schedule".

D. All aluminum poles shall be seamless with all edges and parts factory polished and ground to a smooth congruous finish.

E. Poles greater than twenty (20) feet in length shall be complete with vibration dampers installed.

III. POWER SUPPLY UNIT (DRIVERS)

A. Luminaires shall be equipped with an LED driver(s) that accepts the voltage as indicated on the "Luminaire (Lighting Fixture) Schedule". Individual driver(s) shall be replaceable.

B. Driver(s) shall be UL8750 class 2 listed for their intended purpose.

C. Individual driver(s) shall be equipped with surge protection (6kV minimum for building mounted units and 10kV minimum for pole mounted units) in accordance with IEEE/ANSI C62.4.1 and shall be rated for a category “C” environment.

D. Driver(s) shall have a minimum efficiency of 85%.

E. Driver(s) shall reliably start at minimum ambient temperatures from -40 deg. C to 40 deg. C with THD of <=20%.

F. Drivers shall deliver full-range dimming from 0-10V control signal.

IV. LED LIGHT SOURCE (LIGHT ENGINE)

A. All LED light engine(s) shall be set to achieve IES, Type III, Type IV or Type V distribution as shown on the "Luminaire (Lighting Fixture) Schedule". Individual light engine(s) shall be replaceable

B. LED light engine(s) shall have a minimum lifetime of 50,000+ hours at 40deg.C and shall have a minimum efficacy of 80 lumens per watt.

C. All LED’s shall be installed with 0 lumens above 90° up from nadir (full cut-off) performance.

D. LED dies shall be tested in accordance with I.E.S.N.A. LM-80-08 standards.

E. Thermal management shall be passive by design and shall consist of heat sinks with no fans, pumps, or liquids.

V. DIMMING CONTROLS

A. Provide, in addition to the lighting control system, after hours dimming controls which reduces light levels to approximately 50% of full lumen output at a predetermined time. Controls shall be designed to fail to the “OFF” position. Dimming controls shall be compatible with the lighting control system. Refer to specification section 16505 or 16505A and details for lighting control system information.

VI. SPARE PARTS

A. The Contractor shall furnish to the Owner at the completion of the project, a minimum of 20% (minimum of 4) spare LED driver assemblies. LED drivers shall be turned over to the Owner representative in their manufacturer’s protective packaging. LED drivers not in their protective packaging will not be acceptable.

B. The Contractor shall furnish to the Owner at the completion of the project, a minimum of 20% (minimum of 4) spare LED light engine assemblies. LED light engines shall be turned over to the Owner representative in their manufacturer’s protective packaging. LED light engines not in their protective packaging will not be acceptable.

VII. FOUNDATIONS

A. Pole base foundations shall be cast-in-place as detailed on the Drawings and as specified herein.

B. Contractor may at his option use precast concrete base foundations in lieu of the cast-in-place foundations.

1. Precast concrete foundations shall be designed and fabricated by an experienced and acceptable precast concrete manufacturer. The manufacturer shall have been regularly and continuously engaged in the manufacture of precast concrete units for at least 10 years. In addition, the manufacturer shall employ a Professional Engineer registered in the state of Maryland.

2. The precast concrete units shall be designed to withstand design load conditions in accordance with the applicable industry design standards. Design must also consider stress induced during handling, shipping, and installation in order to avoid product cracking or other handling damage. Design loads for precast concrete units shall be indicated on the shop drawings, and designed by a licensed Professional Engineer registered in the state of Maryland.

Part 3 - Execution

I. INSTALLATION

A. The exterior/security LED luminaires shall be installed as shown on the Drawings and in accordance with the manufacturer's recommendations.

II. POLE LAYOUT

A. This Contractor shall layout all equipment and review locations with the Architect/Engineer and/or Owner prior to construction. Pole locations shall be set by using a metal tape to the exact locations shown on the Drawings.

III. POLE HANDLING AND ERECTION

A. Transportation, site handling and erection shall be performed by qualified personnel with equipment and methods that are in accordance with standard industry practices.

B. Prior to unloading the pole, shop drawings shall be reviewed to identify proper pick-up points for unloading, storage and erection procedures. A thru-hole shall be provided at the proper pick-up point for the purpose of inserting a steel bar to act as a stop to the cable choker when erecting the pole.

C. Web fabric slings (not chain or cable) shall be used to raise and set structural members. Protect equipment during installation to prevent corrosion.

D. Install poles and other structural units level, plumb and square. Orientation of the cast-in-place foundation anchor bolts in relation to the direction of the lighting must be checked carefully using the manufacturer’s drawings, contract drawings and specifications.

E. Pole steel base plates shall not be installed until concrete has reached the specified 28-day strength.

F. After installation is complete, the Contractor shall plug with suitable semi- permanent material any alignment or installation aid or other unused holes or cavities in the poles to prevent them serving as harboring for insects and to prevent tampering. Material used shall be the same color as the pole.

IV. SITE PROTECTION AND RESTORATION

A. Protect existing site, plantings, trees, pavements, facilities, structures, grounds, playing fields, and all other site amenities designated or intended to remain, temporarily or permanently, from damage during demolition or construction activities, including delivery of poles and equipment. Repair items damaged during demolition or construction activities to their original condition, or replace with new, by qualified personnel and technicians, at no additional cost to the Owner. Repairs, reinforcement or structural replacement shall be approved by the Architect and/or Owner.

B. Refer to Specification Section 02100 for additional requirements if necessary.

V. STORAGE

A. Poles and precast bases may be stored on-site (for a short time period) if they do not impact the day-to-day operations of the facility. Poles and bases shall be placed on suitable supports.

B. Luminaires, wiring, control equipment, etc. shall be stored off-site until they are ready for assembly and erection. On-site storage is permitted provided all items are stored in secure and DRY locations.

C. This Contractor is responsible for any damage or theft to any materials left on- site.

VI. FOUNDATIONS – CAST-IN-PLACE CONCRETE

A. Foundations shall be poured in place concrete. Concrete foundations shall be constructed of not less than 3,000 psi.

1. The steel reinforcement within the concrete shall be protected from slippage and exposure to oxidation through voids in the concrete or exposure of the steel through porous concrete material. Provide cover as specified in ACI-318.

B. All exposed areas of concrete bases shall be trowel finished smooth and level with beveled edges. Top surface shall not vary by more than 1/8 inch in depth as measured across the widest surface. Concrete base forms leaving any imperfections shall be ground down to have a smooth finish. Concrete bases shall be finished to remove all concrete form imperfections. Refer to Specification Section 16010.

C. All concrete shall be fully vibrated.

D. Reinforcing steel shall meet ASTM A615 and Grade 60.

E. Cast-in-place foundations anchor bolt projections must allow for the thickness of the base plate, nuts (including leveling nuts), and raking if required. Adjust leveling nuts before installing the pole. They should be in a horizontal plane.

F. Reinforcing steel in cast-in-place foundations must not be welded to the anchor bolts. Care must be taken not to disturb the position of the anchor bolts while pouring concrete.

G. Orientation of the foundation anchor bolts in relation to the direction of the lighting must be checked carefully using the manufacturer's drawings, contract drawings and specifications.

VII. FOUNDATIONS – PRECAST CONCRETE

A. The installation Contractor shall be responsible for ensuring that the subgrade is compacted to 95% of ASTM D558 density. The subgrade shall be a minimum of six (6) inches in depth.

B. Precast concrete units shall be: installed in accordance with the precast concrete producers installation instructions for direct embedment; installed to the lines and grades shown on the Drawings; be lifted by suitable lifting devices at points provided by the precast concrete producer; in accordance with applicable industry standards.

1. The precast concrete producer shall provide installation instructions.

2. Backfilling shall be done as soon as possible after the unit has been set in place.

C. Orientation of the foundation anchor bolts in relation to the direction of the lighting must be checked carefully using the manufacturer's drawings, contract drawings and specifications before placement of precast foundations into the ground.

VIII. POLE/FOUNDATION EXCAVATION

A. The Contractor may excavate by any means he prefers, insofar as these methods conform to these specifications. Holes shall be excavated with diameters not less than 8 inches greater than the largest dimension of the pole foundations being installed. Depth of pole holes shall be as detailed on the Drawings for cast-in-place foundations or as required for precast direct embedment units.

B. The bottom of the pole holes shall be on undisturbed earth. If a pole hole is excavated to a depth greater than required, it shall be backfilled with specified crushed stone, placed in 6 inch layers, and thoroughly machine tamped to an approximate compaction of 95%.

C. Backfill

1. The backfill for poles and foundations shall be Maryland Department of

Transportation (MDOT) specification 21-A bluestone placed from the bottom of the pole hole to a distance of 18 inches below the top of the hole and topped with excavated soil. All backfill shall be placed in 6 inch layers and each layer shall be thoroughly tamped to an approximate compaction of 95%.

2. Subject to the Owner's approval, surplus material shall be uniformly spread at the site or removed and disposed of at this Contractor's expense. Care shall be taken that the spreading of surplus material does not result in the channeling of run-off water past pole locations.

3. Follow up inspections for settlements are required. Should settlement occur, the Contractor shall be responsible for all necessary repairs.

IX. LIGHTING CONTROL

A. The exterior/security LED luminaires shall be controlled through the building lighting control system as shown on the plans. If the exterior/security LED luminaires are installed and energized prior to the lighting control system and/or prior to the lighting control system being properly programmed, this contractor shall install TEMPORARY photo control sensor(s) for the lighting fixtures circuit(s) so that the exterior/security LED luminaires operate dusk till dawn. At no time shall the exterior/security LED luminaires operate 24 hours a day. Once the lighting control system is installed and properly programmed the TEMPORARY photo control sensors shall be removed.

X. FIELD QUALITY CONTROL

A. Prior to final inspection, this Contractor shall check all exterior/security LED luminaires, poles and concrete bases for damages during construction and replace the damaged luminaires or poles and repair or replace the concrete bases where necessary at no additional expense to the Owner. All exterior/security LED luminaires shall be cleaned and complete with all light engines and drivers at the time of final acceptance of the building.

B. Luminaires shall be checked for proper orientation on pole, proper reflector orientation and proper IES distribution type.

END OF SECTION

NOTE: SECTION IS STILL UNDER REVIEW. FINAL COORDINATION SHALL OCCUR WITH PGCPS IT DEPARTMENT.

Part 1 - General

I. REQUIREMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

B. All contractors performing low voltage wiring must be approved by the PGCPS Information Technology office. In all cases wiring must conform to these specifications as well as the "Standards for Telecommunications Distribution Systems" as published by the Maryland State Department of Education Instructional Technology Unit.

II. SCOPE

A. The work covered under this Section shall include furnishing and installing fully operational and complete data network systems (including LAN wiring and network cabling) as shown on the Drawings and herein specified.

III. QUALITY ASSURANCE

A. All equipment, materials, and their installation shall conform to the requirements of the National Electrical Code (NEC), local code requirements, and these Specifications.

B. All equipment and materials shall be listed by Underwriters Laboratories, Inc. (UL) for their intended use and shall bear the UL label.

C. Equipment shall be constructed in accordance with National Electrical Manufacturer's Association (NEMA) standards.

D. Submittals are required in accordance with SECTION 260500 of these Specifications.

1. Submittals shall include a preliminary schedule to perform the infrared scans described in Part 3 of this specification. The schedule shall be based on the contractual substantial completion date for this project.

E. All infrastructure cabling must be part of an end to end solution complete with manufacturers’ warranties.

Part 2 - Products

I. GENERAL STANDARDS:

A. All wireless equipment must be HPE/Aruba Networks, specified in the scope of work. All PDUs must be rack mounted APC units with network interface cards (NIC) and must be configured to PGCPS configuration standards. It is strongly recommended that all electronics be purchased at the latest possible time in order to insure acquiring the latest

technology.

B. Installation of low voltage cables shall comply with Articles 725, 800, 810 and the following listed articles of the National Electrical Code and articles EIA/TIA 568A (Commercial Building Telecommunications Standards), EIA/TIA 569 (Pathways & Spaces Standards), EIA/TIA 606 (Administration Standards), EIA/TIA 607 (Grounding & Bonding Standards), and local, city, the State of Maryland and Prince George's County laws and regulations.

C. All projects must comply with the "Standards for Telecommunications Distribution Systems" as published by the Maryland State Department of Education Instructional Technology Unit.

D. No splices of any type are permitted in Category 6a Wire or Fiber Optic Cable. If other types of lines such as public address, video, or telephone wires require splicing only crimp type wire connectors shall be used for open unprotected splices, such as Scotch Lock connectors made by 3M Company or approved equal. Standard screw on type wire nuts will not be accepted. Where low voltage cables other than Category 6a Wire or Fiber Optic Cable as specified above, should require splicing above accessible ceiling areas, the cables shall be laid side by side and supported to the building structure approximately 6 to 8 inches behind the splice to prevent any strain from being applied to the splice device and conductors. NOTE: Wire nut type screw-on connectors can be used in approved electrical box for high voltage applications with approved connectors.

E. When materials are provided by PGCPS, the contractor must accept shipment of the said materials at a PGCPS approved location.

F. Due to the volatility of the technology, electronic equipment required will be bid to the Board's most current specifications immediately prior to the required installation date for the material.

G. Advancing technology convergence requires that the data specifications enumerated above must be carefully considered along with: the relevant EdSpec, Video specifications, Audio specifications, Television specifications, Public Address specifications, Security specifications, Fire annunciator and any other low voltage application.

H. All routers shall be manufactured by Cisco. All switches must be manufactured by HPE/Aruba Networks and configured to PGCPS standards.

II. Equipment

A. Connection Drops

1. Individual drops in each instructional space must be placed as far away from each other as possible to allow maximum flexibility for future room use.

2. Each data drop is defined as three (3) Category 6a cables. Each instructional space must have a minimum of three, 3 cable drops.

3. All drops must be within six feet of an operating electrical outlet, as far from water

(sinks, bathrooms, etc.) as possible, as far from outside doors as possible and approximately 18 to 24 inches from the floor.

4. Drops shall not be placed on movable, removable, sliding walls, or on furniture.

5. Connectivity between all drops and closets must be confirmed by the contractor for links to be considered complete. All cable runs must be tested individually using an industry standard Category 6a scanning tester. Fiber and A/V cables should also be tested accordingly. Test results are to be provided on paper and electronically (CAD) along with “as built” diagrams to the OTD. All cables must be labeled at the drop and the patch panel. Fiber ties must be labeled on the fiber patch cables themselves as well as the fiber cans. All network racks must be labeled as well.

6. The outlet box for each network outlet connection must be identified with a unique number(s) assigned for that cable for the facility being wired according to a numbering scheme agreed to by PGCPS and the Contractor. The other end of each cable that has been terminated in an outlet box will be clearly and permanently marked on the RJ-45 patch panel to which the network cable will be attached. The unique number assigned to this cable will be clearly marked on the riser diagram described above, and the wire itself will be clearly marked with a wraparound labeled piece of tape on the cable inside the terminating outlet box and within two feet of that cable’s termination at an RJ-45 patch panel.

B. Pathways:

1. Main services for TV/DATA/VOICE coming into the building from the street, should be housed in 4 inch rigid conduits, from the street to the MDF of the building, and should be terminated either on the wall or in the appropriate rack.

2. When low voltage cables are run through solid walls; a conduit sleeve shall be installed for the cables to pass through. This conduit sleeve shall have either insulated throat connectors, insuliners or bushings installed on both ends of the sleeve. Where a conduit sleeve or other through- penetration device is installed through a fire rated assembly, the opening around the sleeve and the hole through the sleeve shall be sealed with an Underwriters Laboratory approved fire rated sealant material after the cables have been installed. Conduits must be sized appropriately for the amount of cable being pulled through.

C. Copper Cabling:

1. All service and patch cables, unless otherwise specified, will be Four Pair Category 6a Plenum Rated Cable, blue in color. Wireless cables must be green in color. Security Systems must be white in color. All cables should be Hitachi, Hubbell, General, Leviton, Belden, or equivalent quality or better, as approved by PGCPS.

2. No service cable is to exceed 90 meters.

3. All cables should be terminated with appropriate Category 6a equipment in the closet and at the user’s station. RJ-45 Category 6a Patch panels (Hubbell,

Leviton, Belden or equivalent or better quality approved by PGCPS) are required in all closets. Single source end to end solutions are required with a manufacturer's warranty of at least fifteen (15) years.

4. If class two and class three cables are installed in a cable tray they must be type PLTC (Power Limited Tray Cable). (NEC, Art. 725-38).

5. Low voltage cables must be installed/run with the building structure, such as along metal beams, through open web type metal beams and over or below solid metal beams as job conditions permit. If no building structure as mentioned above is available, then some type of approved supporting system shall be installed to support the cable(s). When low voltage cables are installed over, through or below any type of metal beams that have rough surfaces or sharp edges the cables shall not rest on or be secured to these surfaces. For example, open web type metal beams with rough surfaces or sharp edges, support the cable(s) with plastic ties from the round or smooth sided steel cross braces or by other approved means. Also do not strap or let low voltage cables rest on all thread rods. When bends, turns, and splices are made in cable runs allow sufficient slack in the cables at these points and adequately support at these points. (NEC, Article 300-14).

D. Fiber:

1. The new construction team should follow up with Prince Georges county government as well as PGCPS to formulate a plan of using ICBN fiber at new sites.

2. Multi-mode Fiber optic horizontal cables must be aqua in color and consist of 12 strands of multi-mode, plenum rated, 50 micron, OM4, laser certified fiber that is capable of supporting 10Ge data rates up to 550 meters. If the distance is over 550 meters, single mode fiber must be used. Fiber must be terminated in a rack mount cable box using LC style connectors, and must follow all low voltage cable installation rules as specified elsewhere in this contract document.

3. Single-mode fiber optic cables must be yellow in color and consist of 12 stands of single- mode, plenum rated, 9 micron, laser certified fiber that is capable of supporting 100Ge for up to a minimum of 80km. Single-mode fiber cable must be installed and terminated in the MDF on either the wall or in the appropriate rack.

4. All fiber pulled throughout the building must be run in 1 ¼ inch plenum rated, appropriately colored, (yellow for single-mode, orange for multi-mode) innerduct. Furthermore, terminated fiber bulk heads must be labeled accordingly.

5. Use fiber optic 50 micron patch cables, blue in color, to connect remote closets to the main closet to create a collapsed fiber optic backbone. The use of a fiber SFP+ installed internally in the switch is required and will require the use of LC to LC 50 micron patch cords. The fiber backbone will consist of home run fiber to the MDF operating at 10Ge. This will require the use of 10Ge connections in the IDF and a 10Ge fiber switch /switches in the MDF. The switch stack in the MDF must be connected to the 10Ge fiber switch/switches as well.

E. MDF/IDF Configuration:

1. Multiple wiring closets within one installation must be connected directly to a designated main distribution facility (MDF), in a star topology, via 10gb fiber optic cable. Fiber optic cable runs must have a Category 6a cable as specified in item 'C' pulled parallel with the fiber for redundancy regardless of the length of the run.

2. The MDF must contain a router which is to be a Cisco 3650G layer 3, 10/100/1000 switch or newer, with a minimum of 2, 10Ge fiber ports for uplinks for the WAN and LAN. The Router is to also include IP OSPF routing software.

3. Electronic installations will connect incoming high speed digital circuits to a router, typically with a standard RJ45 Category 6a patch cord of the appropriate length, yellow in color, or with a single mode fiber and GBIC, at the proper 1Ge or 10Ge speed, into the main router.

4. For a new High School configuration, connect the router to an approved 10Ge managed fiber switch (Aruba 24/48 port 10Ge SFP+ Fiber switch) with a LC to LC fiber patch cord of the appropriate length. A 10Ge SFP+ uplink will be required by the scope of work for any individual job. If this is a middle school or elementary school configuration, fiber ties can be connected to a fiber module in the switch stack. A fiber switch is not necessary.

5. The Primary switch in the stack of an IDF must be an HPE/Aruba 2930M or most current or better make and model, and must be linked back to the MDF at 10Ge via fiber backbone. A Special module tray and SFP+ will be required to provide this connection, along with the appropriate length patch cord. This switch must house all, wireless access points and will require dual 1050W power supplies.

6. Connect each approved 10/100/1000 managed switch (must HPE/Aruba 2930M or most current or better make and model) in the stack to the primary switch in the stack with the appropriate 40Ge DAC stacking cables, in a braided fashion. The switches have limitations on how many can stack together. They must not be stacked higher than what is recommended by the manufacturer.

7. The MDF will require a Netbotz 455 unit connected to PGCPS network to APC Struxureware software for monitoring of video, door contact, high/low temperature and HVAC general fault alarm.

8. All installed electronic equipment must be configured according to the PGCPS office of Technology Operations specification. All electronic equipment installed must be accounted for and tagged with the appropriate PGCPS asset tag to be entered into the PGCPS Asset Management Systems. Documentation for all electronic equipment must be provided upon completion of the project. Documentation will conform to the Office of Telecommunication Design standards and will include information such as exact equipment location, mac address, IP address, closet name, serial number, part number, complete network diagram and wiring schematic, etc. Please coordinate with the OTD to provide this said documentation. No exceptions. Contractor must have a Network engineer on board to perform these tasks.

9. An APC AP7802 Metered Rack PDU will be installed in each telecomm rack in lieu of a UPS. This PDU will also be connected to the primary network switch via Ethernet patch cable and configured to PGPCS standards for remote management.

9 x 1M 40Gbps DAC Cable
10 x 54VDC 1050W 110-240 VAC PS
Stack Information:
-Aruba Stack of Switches managed by a single IP Address.
-A Stack can support up to 8 Aruba 2930m switches.
-Front Plane Stacking will be in a future software release with Direct Attached Cable.
- Fiber Aggregation switch with redundant Power
-10GbE uplink to Fiber switch
-Redundant Power Supply on Top Switch. -1440w POE+ Power Budget
-Module with 4 ports of 1/10Gbps SFP+ ports
-10GeSFP+ transceivers
-No Software Licenses
10Gb Fiber Switch
WAN
WAN/Internet

Customer: Princes Georges Co Pub Sch
Drawing Description: 10 IDFs, 1 MDF, Design Template -v2
Date 09/25/16
Engineer

III. ELECTRICAL REQUIREMENTS:

A. Telecomm closets in new construction or renovations must provide for two, 30 ampere L530R electrical outlets per rack, each on dedicated circuits that are on a backup power generator. Each circuit must be on separate phases.

B. Each rack will also require 2, 20 ampere duplex dedicated circuits, also tied to a backup power generator.

C. It is recommended that a Flywheel(s) with a bypass cabinet be installed. It should power the MDF and all LAN closets, main office including Principles office, building HVAC including pumps and boiler room equipment, main fire alarm panel, burglar and alarm monitoring systems, security camera system, and building security badge access devices. (Note: An entire building Flywheel solution is also acceptable and maybe more cost effective.)

D. APC AP7802 Metered Rack PDU will be installed in each telecomm rack in lieu of a UPS. This PDU will also be connected to the primary network switch via Ethernet patch cable and configured to PGPCS standards for remote management.

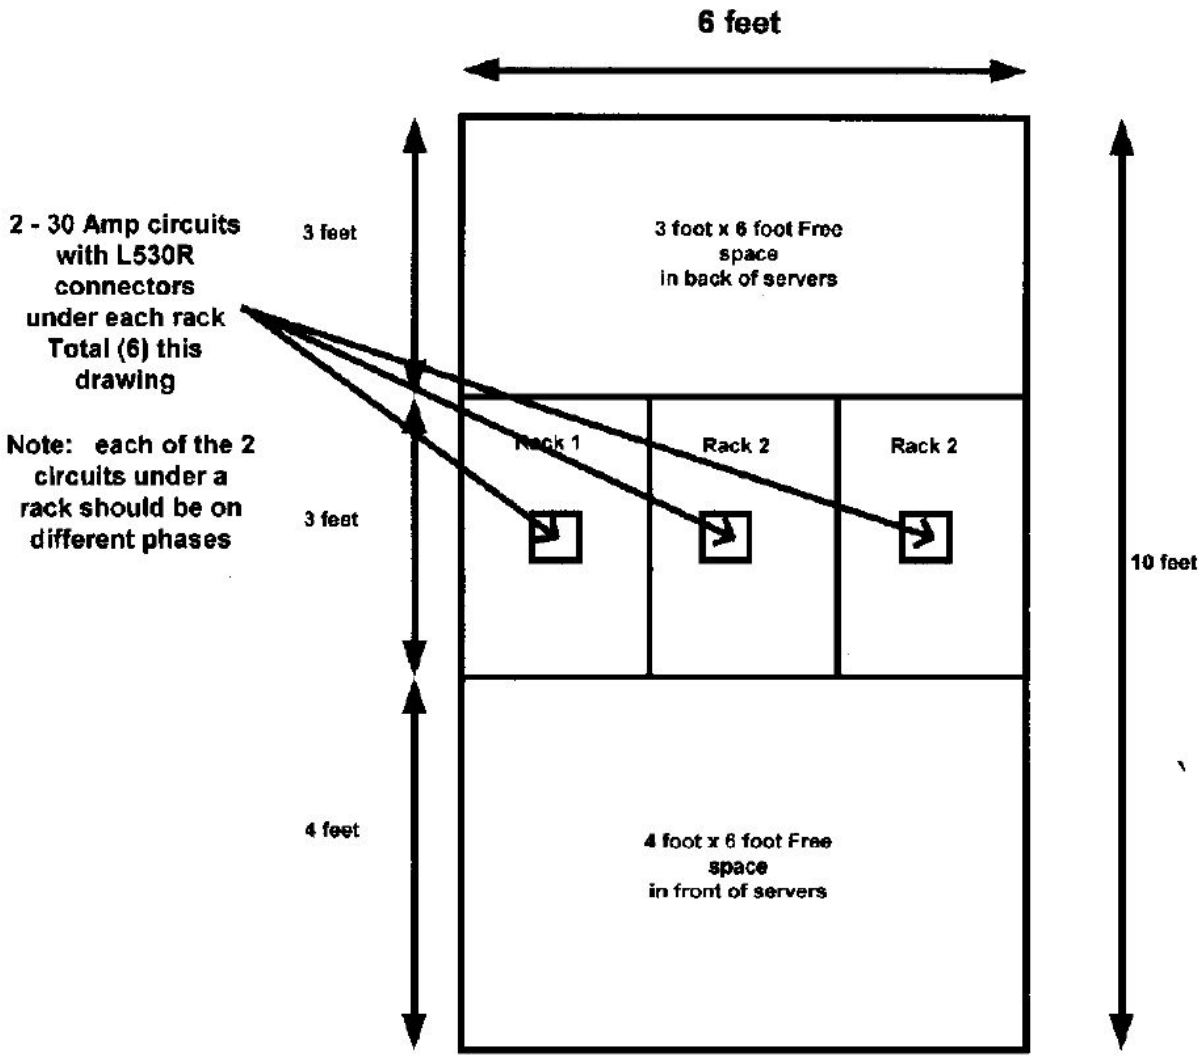
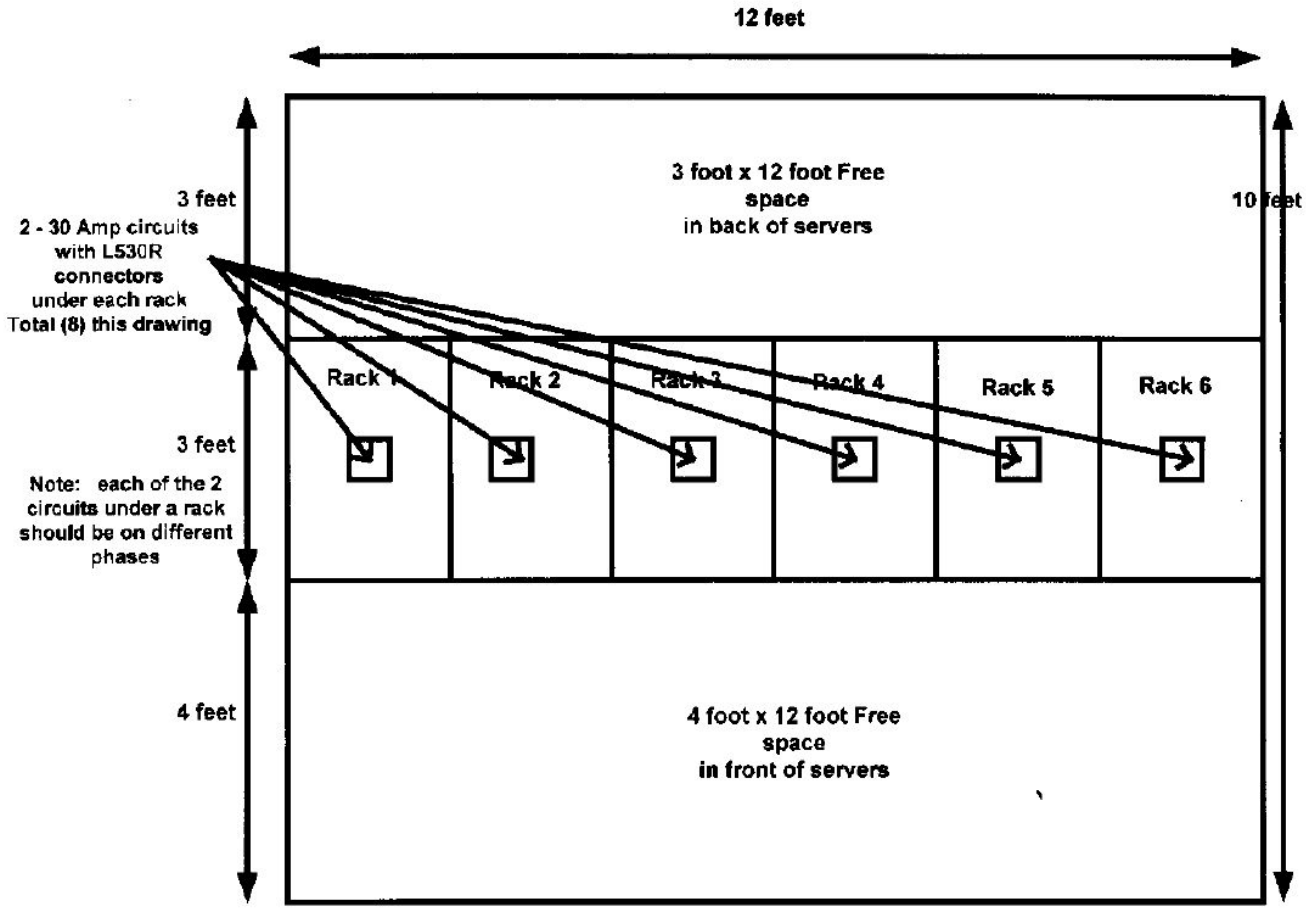
Server Space/ Electrical Requirements - New Middle Schools Top View



Server Space/ Electrical Requirements - New High Schools Top View



IV. VOICE NETWORK REQUIREMENTS:

A. PGCPS requires the use of Polycom Soundpoint Voice Over IP telephones. These telephones must be purchased, configured, and installed by an approved PGCPS vendor.

B. VoIP telephones must be powered by POE switches (HPE/Aruba 2930M).

C. Each instructional space and office requires a VoIP telephone. Each telephone type will vary depending on type of use. All Classroom and Instructional spaces require a Polycom VVX311 or most current or better, All admin offices, conference rooms, work rooms, etc... require a VVX411 or most current or better. The Main office area and principal's office will require the VVX411 with the equivalent color expansion module. A patch cable of the appropriate length, must be supplied to connect each telephone at the user's work space. Please see the most current PGCPS Telephone specification for further details

D. POTS lines for emergency systems, gas or electric monitoring, elevators, and backup emergency main lines are required. The number of lines will depend on the school type and number of systems that require an analogue line. A 25 pair copper is the minimum required for the analog lines. A phone jack for each device is required in the specified area. If incoming lines come to the building through Fios or similar system, the electric back-up device MUST be connected to the emergency generator, as part of the emergency system.

V. WIRELESS NETWORK REQUIREMENTS:

A. All wiring projects for Prince George's County projects must include wireless communication for laptops, mobile devices, etc. A wireless survey must be conducted prior to construction. This survey will indicate where additional data drops must be installed for wireless access points in order to support seamless, building wide, all-inclusive wireless data communications, and what type of Aruba Networks controller is needed. Cat 6a drops must be calculated and installed in addition to any existing data drops as may be indicated by the survey. The survey and any supporting documentation shall be provided. Please coordinate with OTD for documentation requirements.

B. Following installation and before acceptance of any wireless system an additional wireless survey must be conducted. This survey must confirm complete building wide wireless service. Any areas failing to properly support wireless communication must be provided with additional data drops and equipment to bring an area into compliance. The survey and any supporting documentation shall be provided to the OTD.

C. Data drops must be labeled at the drop and at the patch panel at the appropriate closet.

D. PGCPS telecommunications department requires that Aruba Networks equipment be used for all wireless installations. Aruba technology consists of a central controller (7210 or better) equipped with a fully functional firewall paired with Aruba AP-315 and AP-335/334 Qualified 802.11ac thin access points. A 5-year maintenance plan must be purchased along with the controller. Also the appropriate AP licensing and PEF licensing must be purchased, 1 license of each for each access point.

E. Each access point will require a two cable Cat 6a drop not to exceed 300ft (90 meters)

from a wiring closet. Two cables at each drop are required for redundancy or for future expansion. Cables must be green in color.

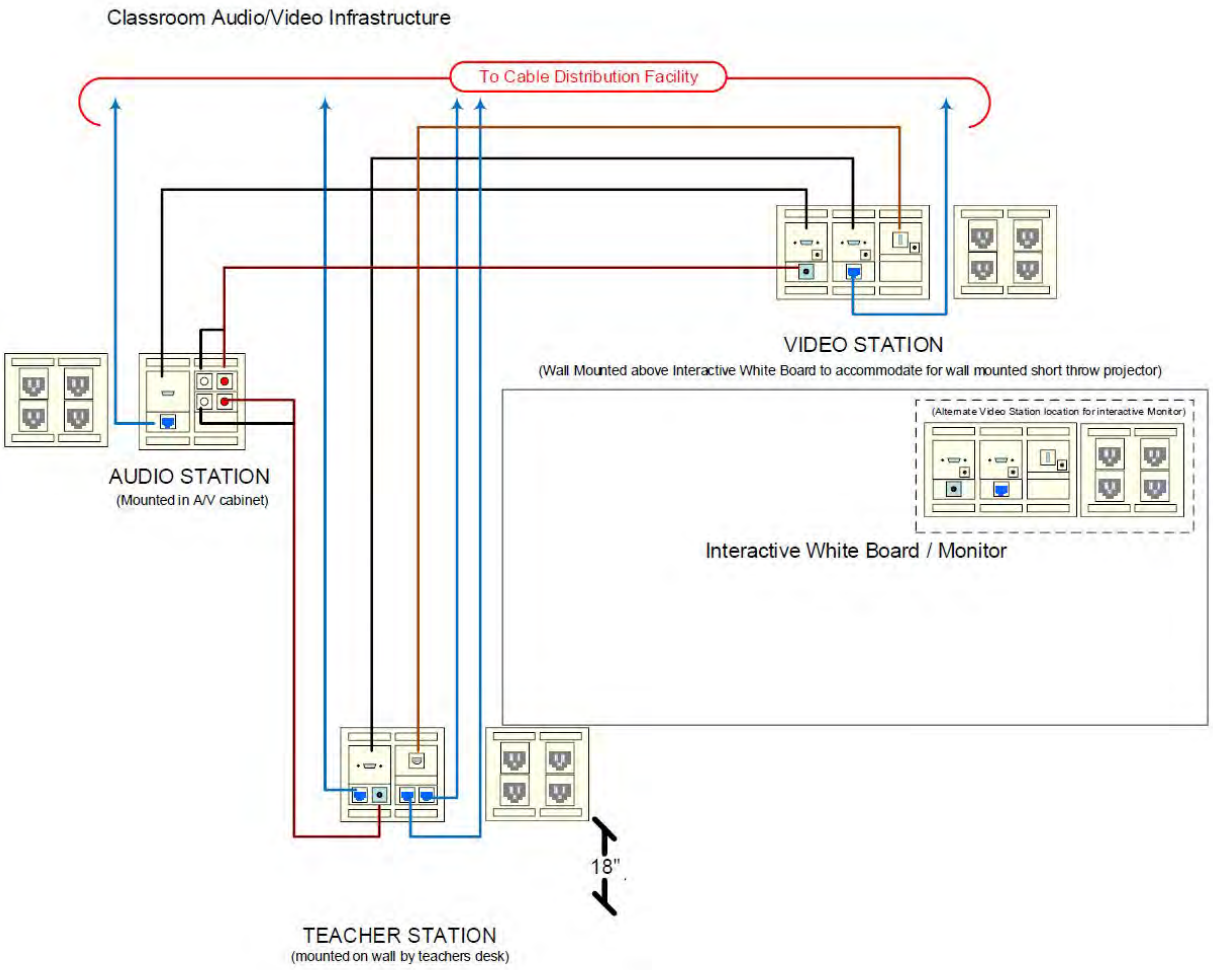
F. Aruba access points require power via PoE (power over Ethernet). A PoE switch (Aruba/HPE 2930M with dual 1050w power supplies) will be required in the appropriate wiring closet, which will supply power to the access points. The switch will be clearly labeled for Power and WIFI at the patch panel along with location of the access point. All cables for each wireless access location must be terminated on their own unique patch panel in the wiring closet. If this is a small installation and cost is an issue, power injectors can be purchased through Aruba instead of a PoE switch.

G. Each instructional space must have an installed Aruba AP-315 Qualified 802.11ac Access point or most current to accommodate for client/user density rather than just radio coverage. Larger rooms such as lecture halls, conference rooms, band rooms, choral rooms, auditoriums, general office areas etc... require the installation of an AP-335. Gyms, Media Centers, Auditoriums, and Cafeterias will require the installation of multiple AP-334s with the appropriate high gain antennae. The total number of AP-334s will be determined by the physical capacity of the space. Example, 60 users per access point.

H. Installation and configuration must be well documented. As-builts will be required with Room location, layout, make, model, s/n, MAC address etc. A floorplan must be submitted with the mac address sticker from the access point in place in the proper location. The contractor must provide an engineer on staff to coordinate documentation and configuration with the PGCPS OTD.

VI. INSTALLATION SPECIFICATIONS FOR A/V TECHNOLOGY SUPPORT

A. Every instructional space must be provided with the infrastructure to support most instructional technology devices such as projectors, digital television tuners, audio enhancement, digital visualizers, interactive white boards, apple TV’s, etc. The required infrastructure provided will allow all of these electronic devices to work seamlessly together.



Classroom Audio/Video Infrastructure
To Cable Distribution Facility
VIDEO STATION
(Wall Mounted above Interactive White Board to accommodate for wall mounted short throw projector)
(Alternate Video Station location for interactive Monitor)
Interactive White Board / Monitor
AUDIO STATION
(Mounted in A/V cabinet)
18"
TEACHER STATION
(mounted on wall by teachers desk)

VII. TEACHER STATION REQUIREMENTS

A. Each instructional space must include a teacher station. A teacher station is composed of the following connectors with appropriate length cables:

1. 3 CAT 6a data jacks, blue in color, that terminate in the nearest cable distribution facility

2. 1 female 3.5mm Audio Jack that ties to the Audio station splitting to RCA left and right Audio

3. 1 female USB B-A connection that ties to the Video station. (may require signal extender for lengthy runs)

4. 1 female HDMI connection that ties to the Video station. (may require signal extender for lengthy runs)

B. A Quad power receptacle must be installed near the teacher station to accommodate for various powered devices.

C. All A/V cables should be terminated in an appropriate “all in one” 2 gang extra deep box that can support two, 2 inch conduits that run above ceiling tiles.

D. Teacher stations cannot be placed on moveable or sliding walls or on furniture and must be on the wall four to six feet to the left or right of interactive white board installation, or white board near a quad electrical outlet and 18 inches from the ground.

E. The appropriate cables must tie back to an Audio station within a cabinet or to a Video station wall mounted above interactive white board to accommodate for a wall mounted short throw projector or at the appropriate height behind a wall mounted interactive monitor. In cases where cables cannot be fished through walls or ceiling tiles, appropriate cable trays/conduit/wire mold must be used to hide all cable runs.

F. The following appropriate gendered patch cords must be provided at the teacher station, for the user to connect their devices:

1. 1 Male to Male 15 ft, HDMI cable

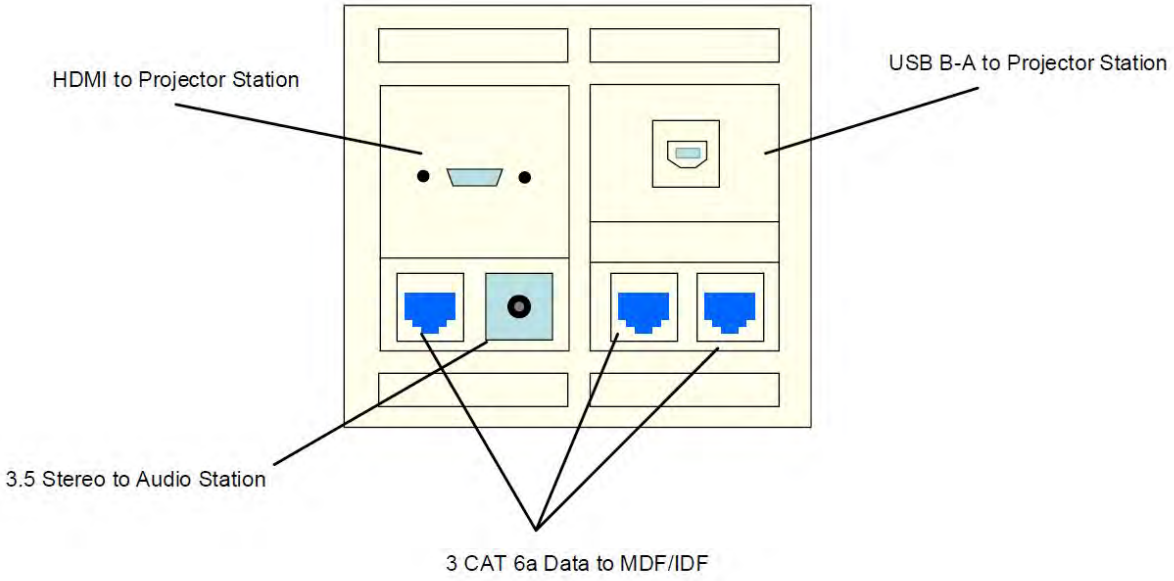
2. 1 Male to Male 15 ft, stereo 3.5mm cable

3. 1 Male to Male 15 ft, USB-A to USB-B cable

4. 3 Male to Male 15 ft, booted CAT6a cables

G. All connectors, cables, plates and necessary materials must be manufactured by Hubbell. PGCPS prefers Hubbell iStation products that use CAT6a as the main mode of A/V data transfer.

Teacher Station



VIII. AUDIO STATION REQUIREMENTS

A. Each instructional space must include an audio station. An audio station is composed of the following connectors with the appropriate length cables and should be located in an approved lockable cabinet or fixed shelf:

1. 1 female CAT 6a data jack, blue in color, that terminates in the nearest cable distribution facility

2. 1 female left and right, red and white RCA jack, that ties to the teacher station condensing to a single 3.5mm jack

3. 1 female left and right, red and white RCA Jack that ties to the video station condensing to a single 3.5mm jack

4. 1 female HDMI connection to the video station (may require signal extender for lengthy runs)

B. A Quad power receptacle must be installed near the audio station to accommodate for various powered devices.

C. All A/V cables should be terminated in an appropriate “all in one” 2 gang extra deep box that can support 2, 2 inch conduits that run above ceiling tiles.

D. Audio stations shall not be placed on moveable or sliding walls or on furniture and must be on a wall either directly above the teacher station with a mounted shelf, or on the wall behind some sort of audio cabinet.

E. The appropriate cables must tie back to a teacher station wall mounted near the teacher’s desk and electrical outlet, or to a video station wall mounted above interactive white board to accommodate for a wall mounted short throw projector or the appropriate height behind a wall mounted interactive monitor. In cases where cables cannot be fished through walls or ceiling tiles, appropriate cable trays/conduit/wire mold must be used to hide all cable runs.

F. The following appropriate gendered patch cords must be provided at the Audio station, for the user to connect their devices:

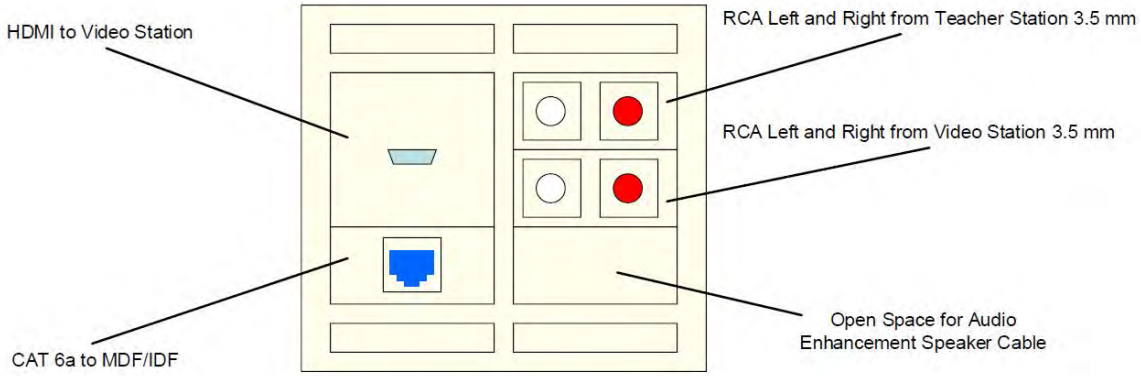
1. 2 Male to Male red and white 6ft, RCA cables

2. 1 Male to Male 6ft, HDMI cable

3. 1 Male to Male 6ft, booted CAT6a cable

G. All connectors, cables, plates and necessary materials must be manufactured by Hubbell. PGCPS prefers Hubbell iStation products that use CAT6a as the main mode of A/V data transfer.

Audio Station



IX. VIDEO STATION REQUIREMENTS

A. Each instructional space must include a Video station. A Video station is composed of the following connectors with the appropriate length cables:

1. 1 female CAT 6a data jack, blue in color, that terminates in the nearest cable distribution facility

2. 1 female USB A-B that ties back to the teacher station (may require signal extender for lengthy runs)

3. 2 female HDMI connections, 1 tying back to the audio station, and one tying back to the teacher station. (may require signal extender for lengthy runs)

4. 1 female 3.5mm Audio Jack that ties to the Audio station splitting to RCA left and right Audio

B. A Quad power receptacle must be installed near the audio station to accommodate for various powered devices.

C. All A/V cables should be terminated in an appropriate “all in one” 3 gang extra deep box that can support 3, 1 1/2 inch conduits that run above ceiling tiles.

D. In cases where cables cannot be fished through walls or ceiling tiles, appropriate cable trays/conduit/wire mold must be used to hide all cable runs.

E. Interactive white boards, projectors, or Monitors will be provided by PGCPS. Contractors are urged to install these devices in order to fulfill the warranty of the defined infrastructure.

F. The following appropriate gendered patch cords must be provided at the Audio station, for the user to connect their devices:

1. 2 Male to Male 6ft, HDMI cables.

2. 1 Male to Male 6ft, 3.5mm to 3.5mm audio cable.

3. 1 Male to Male 6ft, USB-A to USB-B cable

4. 1 Male to Male 6ft, booted CAT6a cable

G. All connectors, cables, plates and necessary materials must be manufactured by Hubbell. PGCPS prefers Hubbell iStation products that use CAT6a as the main mode of A/V data transfer.

Part 3 - Execution

I. INSTALLATION

A. The installation will be implemented without exception according to this contract or on the drawings that specify quantities and types of material, necessary devices, and specifies whether these items are to be provided by the contractor or by PGCPS.

B. All low voltage and fiber optic cables shall be supported and strapped in an approved manner. The spacing of these supports must be from 4-1/2 to 8 feet depending on job conditions and code requirements. These supports must be installed to provide adequate support and to prevent excess sagging of these cables.

C. All voice and data terminations must be made on patch panels and must be clearly labeled.

D. Copper Cabling Installation

1. All copper wiring will be Category 6a or better Plenum rated cable. Each instructional space will have not less than nine (9) Cat-6a plenum rated cables installed in groups of three. All other spaces will have cables as specified in the scope of work provided by the Office of Telecommunications Design (OTD).

2. All cables must be protected against physical damage. (NEC, Article 300-14).

3. All low voltage cables shall be individually identified every 20 to 30 feet by an approved and easily readable means such as string type name tags, etc. to identify what type of systems the cables are used for.

4. If low voltage cables are installed through a ceiling space system that is used for environmental air and or a return air system, the cables must be labeled “PLENUM OR ENVIRONMENTAL AIR TYPE”.

5. Open, exposed low voltage cables must be installed so that they are a minimum 2 inches away from all electrical power conduits and conductors. (NEC, Article 725-38-al).

6. Low voltage cables must not lay on or be supported by metal duct systems, metal plumbing pipes, sprinkler pipes or other metal-structural surfaces that could cause the cable to be damaged if excessive strain-pressure was put upon the cables.

7. The Contractor must provide and install patch cords for all closet connections using 1 foot patch cables (Blue for data, Green for wireless, White for Security Systems). In addition the contractor must provide one additional 15 foot patch cord for each port in each closet, gray and blue accordingly for use at the user station.

8. Hardware, patch panels, and all local area network electronic support equipment, shall be mounted in a wall mounted or floor standing rack.

E. MDF/IDF Installation

1. Closet installations will use properly secured wall or floor mounted racks containing all patch panels and electronic equipment. Cables must be in ladder racks for a more secure and cleaner installation.

2. Industry standard vertical wire management in each closet must be provided and installed by the vendor. 1 ft. patch cables must be used between patch panels and switches. Horizontal wire management is not needed. 10Ge stacking cables must be used between switches in a braided fashion.

3. All low voltage cables must be installed and secured in a neat, orderly, and code compliant manner. (NEC, Article 110-12). The Contractor is to furnish and install all conduit, sleeves, wire- mold, cable trays, wire ties, Velcro (for patch cables), ladder racks, etc. required to support and protect said wiring in a code compliant fashion.

4. All wiring closets will be supplied with 19" rack(s) capable of supporting specified and needed electronic equipment. Where such racks are not already available, a ¾ inch thick plywood panel can be installed in each wiring closet that is adequate for the mounting of wall mount racks, patch panels and any other specified and necessary electronic equipment that is normally attached to the wall and not placed on a rack. An example of such equipment, but not limited to such equipment, is a POTS patch panel. All wall or floor mount racks shall be grounded with a 4 gauge copper cable.

F. Wireless Network Installation

1. Access points must be ceiling mounted or wall mounted high, below ceiling tiles with the antennae pointing in the down direction.

2. Concealed access points shall be marked with some type of specific tag on the ceiling tile to identify the location of the access point.

END OF SECTION

Part 1 - General

I. REQUIREMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

II. SCOPE

A. The work covered under this Section shall include furnishing and installing a complete telecommunications system as shown on the Drawings and herein specified for the distribution of telephone and/or networked data signals.

B. The telephone service into the building shall be provided by VERIZON COMMUNICATIONS. It shall be the responsibility of this Contractor to coordinate with the telephone utility to insure timely delivery of permanent telephone service.

C. The electronic telephone switch and all telephone instruments shall be furnished and installed by the Owner.

D. The existing telecommunications service and system shall remain in operation during the construction period until the new service and system has been installed and tested, ready for operation. After the new service and system has been placed in operation, the existing service and system shall be removed as shown on the Drawings.

III. QUALITY ASSURANCE

A. All equipment and materials for this system shall be listed by Underwriter's Laboratories, Inc. (UL), bear the UL label, and shall be installed in accordance with all requirements of the National Electrical Code (NEC), all state and local codes, and these Specifications.

B. Equipment shall be constructed in accordance with National Electrical Manufacturer's Association (NEMA) standards.

C. All work relating to the telephone service entrance shall comply with the requirements of the telephone utility company.

D. Shop drawing submittals are required per Section 260500 and shall include the following for review. Submittals not containing all of the information listed below will be rejected.

1. Manufacturer's shop drawings for the networking main and sub-distribution frames including the equipment mounting rack and all associated accessories, components, and equipment to be installed therein.

2. Manufacturer's data sheets for the telecommunications outlets and the telecommunications cable.

3. A detailed set of floor plans for the complete building shall be furnished showing

the locations of all equipment and devices and their required interconnections. The interconnections shown shall indicate the number, size, and type of wires as described in this Specification. The layout of all telecommunications system equipment, devices, and conduit routings shall closely follow that shown on the Drawings.

E. This Contractor shall be prepared, upon request by the Owner, to provide proof of the ability to provide the above listed drawings in a mechanical form.

F. This Contractor shall be an AMP, HUBBELL, P&S ACTIVATE, LEVITON, PANDUIT, ORTRONICS, OPTICAL CABLE CORPORATION, and BICSI certified installer of copper and fiber optic cabling systems and have a fully equipped and trained service organization that will have a response time of thirty-six (36) hours or less to the job site. This contractor shall have a minimum of one (1) certified installer on site during construction of this project. This contractor must show evidence of successfully furnishing systems specified for at least five (5) years. This Contractor shall be prepared to show proof of such certification upon request by the Owner. This Contractor shall also be prepared to offer to the Owner upon request, a fifteen (15) year manufacturer's warranty covering defects in material and workmanship in the passive components of the telecommunications wiring system (outlets, patch panels, etc.).

G. Prior to final inspection, this Contractor shall furnish two (2) complete as-built sets of drawings prepared by mechanical drafting methods.

IV. SYSTEM TEST AND ACCEPTANCE

A. Prior to the final site visitation, and acceptance of each construction phased spaces, this Contractor shall conduct an operating test of all telecommunications system cabling. The cabling shall test free from grounds, shorts, and other faults. All connections shall be checked for mechanical and electrical connection. Phased space test results shall be furnished to the Owner in bound binders prior to acceptance.

B. This Contractor shall perform the following tests certifying each telecommunications outlet cable. Test results shall be tabulated listing each outlet (by number), the cable, and the test results.

TEST	FREQUENCY	REQUIREMENTS
1. Impedance:	1 MHz 10 MHz 25 MHz 100 MHz 250 MHz	100 ohms ± 15%

2. Attenuation:	1 MHz	2 dB max. per 100m 6 dB
	10 MHz	max. per 100m
	25 MHz	9.5 dB max. per 100m
	100 MHz	19.8 dB max. per 100m
	250 MHz	32.8 dB max. per 100m
3. Crosstalk (Next):	1 MHz	min. 62 dB
	10 MHz	min. 47 dB
	25 MHz	min. 41 dB
	100 MHz	min. 32 dB

1. Mutual Capacitance: less than 46 pf per meter

2. Cable Length: less than 100 meters

C. Each fiber optic cable shall have a FOIRL specification, bi-directional testing at both 850 nm and 1300 nm with 3 dB light signal loss per km and 2000/500 MHz- km bandwidth at 850/1300nm.

D. This Contractor shall perform all tests in the presence of the Architect/Engineer. This Contractor shall furnish all personnel and test instruments required for use in the test.

E. This Contractor shall be prepared, upon request by the Owner, to show current ownership of all instruments and equipment necessary to perform all of the tests listed above.

V. TRAINING

A. This Contractor shall furnish to the Owner's designated representatives project specific cable plant layout orientation (4 hours).

VI. WARRANTY

A. This Contractor shall deliver the work described herein in a first class operating condition in every respect. This Contractor shall also warrant that the material and workmanship shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractors own expense. Refer to SECTION 01740 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the Drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

Part 2 - Products

I. CONDUITS

A. This Contractor shall furnish and install underground telephone service entrance conduit(s) as shown on the Drawings and as hereinbefore specified.

B. This Contractor shall furnish and install telephone distribution conduits, minimum 1/2 inch, only as shown on the Drawings and as hereinbefore specified.

C. This Contractor shall furnish and install all fiber optic cable in conduit for the entire run. Minimum conduit size for fiber optic cable shall be ½ inch.

II. TELECOMMUNICATIONS EQUIPMENT LOCATIONS

A. This Contractor shall furnish and install where shown on the Drawings, wall mounted main and sub-distribution telecommunications equipment locations consisting of fire resistant ¾ inch thick plywood backboards and networking hubs as hereinafter described and as detailed on the Drawings.

III. TELECOMMUNICATIONS OUTLETS

A. This Contractor shall furnish and install where shown on the Drawings, wall mounted telecommunications outlets each consisting of: one (1) ORTRONICS Part No. OR-40300270 single-gang faceplate; one (1) ORTRONICS Part No. OR- 41900018 TrackJack frame; one (1) ORTRONICS Part No. OR-TJ600-00 (black) single category 6, RJ-45 (568A/B) TrackJack insert; two (2) ORTRONICS Part No. OR-63700005 single RJ-25C TrackJack inserts; and one (1) ORTRONICS Part No. OR-42100002 blank TrackJack insert mounted in a single-gang outlet box. The equivalent outlets as manufactured by AMP, HUBBELL, P&S ACTIVATE, LEVITON, PANDUIT, or OPTICAL CABLE CORPORATION. Will also be considered provided they are fully equal to the type specified herein.

B. This Contractor shall furnish and install where shown on the Drawings, wall mounted data only outlets each consisting of: one (1) ORTRONICS Part No. Part No. OR-40300270 single-gang faceplate; one (1) ORTRONICS Part No. OR- 41900017 TrackJack frame; two (2) ORTRONICS Part No. OR-TJ600-00 (black) single category 6, RJ-45 (568A/B) TrackJack inserts; and one (1) ORTRONICS Part No. OR-42100002 blank TrackJack insert mounted in a single-gang outlet box. The equivalent outlets as manufactured by AMP, HUBBELL, P&S ACTIVATE, LEVITON, PANDUIT, or OPTICAL CABLE CORPORATION. will also be considered provided they are fully equal to the type specified herein.

C. This Contractor shall furnish and install where shown on the Drawings, flush floor telecommunications outlets consisting of a telecommunications jack assembly mounted in a flush floor outlet box as described on the Drawings and elsewhere in these Specifications.

D. This Contractor shall furnish and install were detailed on the drawings, telecommunications and data only outlets in the surface raceway manufactured by

ORTRONICS or EQUAL AS MANUFACTURED BY PASS AND SEYMOUR ACTIVATE SERIES, or PANDUIT.

E. This Contractor shall furnish and install where shown on the Drawings, wall mounted telephone outlets consisting of a four (4) inch square flush outlet box with plaster cover and a single gang stainless steel cover plate with a 3/8-inch diameter bushed opening.

IV. NETWORKING MAIN DISTRIBUTION FRAME (MDF)

A. This Contractor shall furnish and install where shown on the Drawings, a floor mounted networking main distribution frame as detailed on the Drawings. Components shall be as shown or equivalent as manufactured by ADC, AMP, HUBBELL, P&S ACTIVATES, LEVITON, PANDUIT, or OPTICAL CABLE CORPORATION.

1. Furnish and install ORTRONICS Part No. OR-604004600 heavy duty EIA compliant nineteen (19) inch wide, seven (7) foot tall equipment racks (of the quantity detailed on the Drawings) each consisting of fifteen (15) inch self-supporting base; two (2) three (3) inch wide side channels; top angle; and assembly hardware. All components shall have a brushed aluminum finish. Side channels shall be drilled and tapped on both sides.

2. Furnish and install ORTRONICS Part No. OR-FCM-19-2L horizontal cable management modules (CM-1) including all required mounting hardware in the locations and of the quantity detailed on the Drawings.

3. Furnish and install ORTRONICS Part No. OR-DVMS704 vertical cable management modules (CM-2) with cover including all required mounting hardware in the locations and of the quantity detailed on the Drawings.

4. Furnish and install ORTRONICS Part No. OR-60400405 cable management shelves (CM-3) including all required mounting hardware in the locations and of the quantity detailed on the Drawings.

5. Furnish and install ORTRONICS Part No. OR-DVMS706 vertical cable management modules (CM-4) with cover including all required mounting hardware in the locations and of the quantity detailed on the Drawings.

6. Furnish and install light interface unit(s). The unit(s) shall be rack mounted type with a strain bracket for securing cables. A light interface unit, which meets this specification, shall be CORNING Part No. CCH-01U with Two (2) Part No. CCH-CP12-E4 chamber connector panel and part no. 95- 050-99-X type "LC" multimode bulkhead interconnects of the quantity indicated. Other acceptable manufacturers are RADIANT COMMUNICATIONS, FONS, and PASS and SEYMOUR ACTIVATE.

7. Furnish and install ORTRONICS Part No. OR-PHD68U96 ninety-six (96) port, RJ-45 (568A/B) type patch panel(s) suitable for rack mounting in the quantity required to cross connect all of the telecommunications and/or data only outlet RJ-45 ports.

8. Furnish and install ORTRONICS Part No. OR-PHD68U48 forty-eight (48) port.

RJ-45 (568A/B) type patch panel(s) suitable for rack mounting in the quantity required to cross connect all of the wireless access point wiring. Label patch panel as "MAIN DISTRIBUTION WIRELESS ACCESS POINT PATCH PANEL (MD-WAPP)."

9. Furnish and install ORTRONICS Part No. OR-PHD68U48 forty-eight (48) port. RJ-45 (568A) type patch panel(s) suitable for rack mounting in the quantity required to cross connect all of the CCTV wiring. Label patch panel as "CCTV CAMERAS".

10. Furnish and install ORTRONICS Part No. OR-30200145 one hundred (100) pair rack mounted 110 punch down blocks including all necessary mounting hardware in the locations detailed on the Drawings, in the quantity required to terminate all of the 100 pair distribution cables and 4 pair station cables from the RJ-25C ports.

11. Furnish and install ORTRONICS Part. No. OR-8050F157B fifty (50) pair “66” clip connecting blocks mounted by this Contractor on a blank rack mounting panel including all necessary mounting hardware in the locations and of the quantity detailed on the Drawings.

12. The networking main distribution frame shall include one (1) rack mounted 110-volt power strip/surge suppressor in each floor-mounted rack. Each power strip/surge suppressor shall consist of eight (8) front mounted outlets, and eight (8) foot long AC power cord. The rack mounted 110-volt power strip/surge suppressor shall be AMERICAN POWER CONVERSION (APC) Part No. AP7900.

13. The networking main distribution frame shall have a nameplate of 1/16- inch thick laminated plastic with 3/16-inch high white engraved letters on a black background. The nameplate shall identify the frame as indicated on the Drawings and shall be mounted on the front top of the frame.

V. NETWORKING SUB-DISTRIBUTION FRAME(S) (SDF)

A. This Contractor shall furnish and install where shown on the Drawings, a floor mounted networking sub-distribution frame as detailed on the Drawings. Components shall be as shown or equivalent as manufactured by AMP, HUBBELL, P&S ACTIVATE, LEVITON, PANDUIT, or OPTICAL CABLE CORPORATION.

1. Furnish and install ORTRONICS Part No. OR-604004600 heavy duty EIA compliant nineteen (19) inch wide, seven (7) foot tall equipment rack each consisting of fifteen (15) inch self-supporting base; two (2) three (3) inch wide side channels; top angle; and assembly hardware. All components shall have a brushed aluminum finish. Side channels shall be drilled and tapped on both sides.

2. Furnish and install ORTRONICS Part No. OR-FCM-19-2L horizontal cable management modules (CM-1) including all required mounting hardware in the locations and of the quantity detailed on the Drawings.

3. Furnish and install ORTRONICS Part No. OR-DVMS704 vertical cable management modules (CM-2) with cover including all required mounting hardware in the locations and of the quantity detailed on the Drawings.

4. Furnish and install ORTRONICS Part No. OR-DVMS706 vertical cable management modules (CM-4) with cover including all required mounting hardware in the locations and of the quantity detailed on the Drawings.

5. Furnish and install light interface unit(s). The unit(s) shall be rack mounted type with a strain bracket for securing cables. A light interface unit, which meets this specification, shall be CORNING Part No. CCH-01U with Two (2) Part No. CCH-CP12-E4 chamber connector panel and part no. 95- 050-99-X type "LC" multimode bulkhead interconnects of the quantity indicated. Other acceptable manufacturers are RADIANT COMMUNICATIONS, FONS, and PASS and SEYMOUR ACTIVATE.

6. Furnish and install ORTRONICS Part No. OR-PHD68U96 ninety-six (96) port, RJ-45 (568A) type patch panel(s) suitable for rack mounting in the quantity required to cross connect all of the telecommunications and/or data only outlet RJ-45 ports.

7. Furnish and install ORTRONICS Part No. OR-PHD68U48 forty-eight (48) port. RJ-45 (568A) type patch panel(s) suitable for rack mounting in the quantity required to cross connect all of the wireless access point wiring. Label patch panel as "SUB DISTRIBUTION WIRELESS ACCESS POINT PATCH PANEL (SD-WAPP)."

8. Furnish and install ORTRONICS Part No. OR-PHD68U48 forty-eight (48) port. RJ-45 (568A) type patch panel(s) suitable for rack mounting in the quantity required to cross connect all of the CCTV wiring. Label patch panel as "CCTV CAMERAS”.

9. Furnish and install ORTRONICS Part No. OR-30200145 one hundred (100) pair rack mounted 110 punch down blocks including all necessary mounting hardware in the locations detailed on the Drawings, in the quantity required to terminate all of the 100 pair distribution cables and 4 pair station cables from the RJ-25C ports.

10. The networking sub-distribution frame shall include one (1) rack mounted 110-volt power strip/surge suppressor in each floor-mounted rack. Each power strip/surge suppressor shall consist of eight (8) front mounted outlets, and eight (8) foot long AC power cord. The rack mounted 110-volt power strip/surge suppressor shall be AMERICAN POWER CONVERSION (APC) Part No. AP7900.

11. The networking sub-distribution frame shall have a nameplate of 1/16-inch-thick laminated plastic with 3/16-inch-high white engraved letters on a black background. The nameplate shall identify the frame as indicated on the Drawings and shall be mounted on the front top of the frame.

VI. NETWORKING SPORTS FIELD SUB-DISTRIBUTION FRAME(S) (SDF) **- HIGH SCHOOLS ONLY**

A. This Contractor shall furnish and install where shown on the Drawings, wall mounted networking sports field sub-distribution frame(s) arranged as detailed on the Drawings. Components shall be as shown or equivalent as manufactured by AMP, HUBBELL, P&S ACTIVATES, LEVITON, PANDUIT, or OPTICAL CABLE CORPORATION.

1. Furnish and install ORTRONICS Part No. OR-604004600 heavy duty EIA compliant nineteen (19) inch wide, seven (7) foot tall equipment rack each consisting of fifteen (15) inch self-supporting base; two (2) three (3) inch wide side channels; top angle; and assembly hardware. All components shall have a brushed aluminum finish. Side channels shall be drilled and tapped on both sides.

2. Furnish and install ORTRONICS Part No. OR-FCM-19-2L horizontal cable management modules (CM-1) including all required mounting hardware.

3. Furnish and install light interface unit(s). The unit(s) shall be rack mounted type with a strain bracket for securing cables. A light interface unit, which meets this specification, shall be CORNING Part No. CCH-01U with Two (2) Part No. CCH-CP12-E4 chamber connector panel and part no. 95- 050-99-X type "LC" multimode bulkhead interconnects of the quantity indicated. Other acceptable manufacturers are RADIANT COMMUNICATIONS, FONS, and PASS and SEYMOUR ACTIVATE

4. Furnish and install ORTRONICS Part No. OR-PHD5E8U24 twenty-four (24) port, RJ-45 (568A/B) type patch panel suitable for rack mounting in the quantity required to cross connect all of the telecommunications and/or data only outlet RJ-45 ports.

5. Furnish and install ORTRONICS Part No. OR-PSD5E6U12 twelve (12) port, RJ-45 (568A/B) type patch panel suitable for rack mounting to cross connect all future wireless access point wiring. Label patch panel as "SUB DISTRIBUTION WIRELESS ACCESS POINT PATCH PANEL (SD- WAPP)."

6. Furnish and install ORTRONICS Part No. OR-30200145 one hundred (100) pair rack mounted 110 punch down block with legs including all necessary mounting hardware in the quantity required to terminate all of the 25 pair outside plant distribution cables and 4 pair station cables from the RJ-25C ports.

7. The networking sub-distribution frame shall include one (1) rack mounted 110-volt power strip/surge suppressor in each floor-mounted rack. Each power strip/surge suppressor shall consist of eight (8) front mounted outlets, and eight (8) foot long AC power cord. The rack mounted 110-volt power strip/surge suppressor shall be AMERICAN POWER CONVERSION (APC) Part No. AP7900.

8. The networking sub-distribution frame shall have a nameplate of 1/16-inch-thick laminated plastic with 3/16-inch-high white engraved letters on a black background. The nameplate shall identify the frame as indicated on the

Drawings and shall be mounted on the front top of the frame.

VII. CABLE

A. This Contractor shall furnish and install telecommunications distribution cables as shown on the Drawings and specified herein. The cable shall be UL listed, plenum rated, unshielded, fifty (50) twisted pairs, No. 24 AWG, category 3, UTP/100 type with a flame retardant polyvinyl chloride jacket and a temperature range for dry locations of minus ten (10) degrees C to sixty (60) degrees C. A telecommunications distribution cable, which meets this specification, is BERK- TEK Cat. No. 10032112 or equal as manufactured by AMP, AT&T, BELDEN, THE CABLE COMPANY, GENERAL CABLE, GENISIS, HITACHI, MOHAWK, NORTHERN TELECOM, PAIGE, or OPTICAL CABLE CORPORATION.

B. This Contractor shall furnish and install telecommunications and data only station cables where shown on the Drawings and specified herein. The cable shall be UL listed, plenum rated, unshielded, four (4) twisted pairs, No. 23 AWG, category 6, extended distance, high speed data type with a flame retardant polyvinyl chloride jacket and a temperature range for dry locations of minus ten (10) degrees C to sixty (60) degrees C. A telecommunications cable, which meets this specification, is BERK-TEK Cat. No. 10132983 (Gray) or equal as manufactured by AMP, AT&T, BELDEN, THE CABLE COMPANY, GENERAL CABLE, GENISIS, HITACHI, MOHAWK, NORTHERN TELECOM, PAIGE, or OPTICAL

VIII. CABLE CORPORATION.

A. This Contractor shall furnish and install wireless access point station cable where shown on the Drawings and specified herein. The cable shall be UL listed, plenum rated, unshielded, four (4) twisted pairs, No. 23 AWG, category 6, extended distance, high speed data type with a flame retardant polyvinyl chloride jacket and a temperature range for dry locations of minus ten (10) degrees C to sixty (60) degrees C. A telecommunications cable, which meets this specification, is BERK-TEK Cat. No. 10136749 (Yellow) or equal as manufactured by AMP, AT&T, BELDEN, THE CABLE COMPANY, GENERAL CABLE, GENISIS, HITACHI, MOHAWK, NORTHERN TELECOM, PAIGE, or OPTICAL CABLE CORPORATION.

B. This Contractor shall furnish and install outside plant telecommunications distribution cables (flooded) as shown on the Drawings and specified herein. The cable shall be UL listed, shielded, twenty-five (25) twisted pairs, No. 24 AWG, category 3, UTP/25 type with a temperature range for wet locations and a UV resistant jacket. An outside plant telecommunications distribution cable, which meets this specification, is PAIGE Cat. No. 700190 or equal as manufactured by AMP, AT&T, BELDEN, BERK TEK, THE CABLE COMPANY, GENERAL CABLE, GENISIS, HITACHI, MOHAWK, NORTHERN TELECOM, or OPTICAL CABLE CORPORATION.

C. This Contractor shall furnish and install outside plant telecommunications and data only cables (flooded) as shown on the Drawings and specified herein. The cable shall be UL listed, unshielded, four (4) twisted pairs, No. 23 AWG, category 6, extended distance, high speed data type with a temperature range for wet locations and a UV resistant jacket. An outside plant telecommunications and data only cable, which meets this

specification, is BERK TEK Cat. No. 10139885 or equal as manufactured by AMP, AT&T, BELDEN, THE CABLE COMPANY, GENERAL CABLE, GENISIS, HITACHI, MOHAWK, NORTHERN TELECOM, PAIGE, or OPTICAL CABLE CORPORATION.

D. This Contractor shall furnish and install indoor, plenum rated, fiber optic distribution cables, from Main Distribution Frame (MDF) to Sub Distribution Frame(s) (SDF), in conduit as shown on the Drawings and as specified herein. The cables shall be UL listed, twenty-four (24) strand, tight buffer, 50/125 laser optimized type with a thermoplastic jacket and a temperature range for dry locations of minus forty (40) degrees C to eighty-five (85) degrees C. A fiber optic distribution cable, which meets this specification, is BERK-TEK Part No. PDP024XB3010-X5 or equal as manufactured by AMP, BELDEN, CORNING, GENERAL CABLE, MOHAWK, OPTICAL CABLE CORP., PAIGE, SIECOR, SUMITOMO ELECTRIC, or WEST PENN.

E. This Contractor shall furnish and install outside plant (flooded), indoor/outdoor, plenum rated, fiber optic distribution cables in conduit as shown on the Drawings and as specified herein. The cables shall be UL listed, twenty-four (24) strand, loose tube, 50/125 laser optimized type with dry gel filled tubes and a temperature range for wet or dry locations of minus forty (40) degrees C to seventy-five (75) degrees C. A fiber optic distribution cable, which meets this specification, is BERK-TEK Part No. LTP024XB3010/X5 or equal as manufactured by AMP, BELDEN, CORNING, GENERAL CABLE, MOHAWK, OPTICAL CABLE CORP., PAIGE, SIECOR, SUMITOMO ELECTRIC, or WEST PENN.

F. This Contractor shall furnish and install CCTV camera cables where shown on the Drawings and specified herein. The cable shall be UL listed, plenum rated, unshielded, four (4) twisted pairs, No. 23 AWG, category 6, extended distance, high speed data type with a flame retardant polyvinyl chloride jacket and a temperature range for dry locations of minus ten (10) degrees C to sixty (60) degrees C. A telecommunications cable, which meets this specification, is BERK-TEK Cat. No. 10136748 (Green) or equal as manufactured by AMP, BELDEN, CORNING, GENERAL CABLE, MOHAWK, OPTICAL CABLE CORP., PAIGE, SIECOR, SUMITOMO ELECTRIC, or WEST PENN.

G. Telecommunication’s system service entrance cables shall be furnished and installed by the telephone utility company. It shall be the responsibility of this Contractor to coordinate with the telephone utility to insure timely delivery of permanent telephone service.

IX. LIGHTNING PROTECTION

A. This contractor shall furnish and install for all outside plant telecommunications distribution, telecommunications and data only cables, lightning protection unit(s). The unit(s) shall be located as shown on the drawings and shall be installed no greater than fifty (50) feet from the exterior of the building(s). A Lightning Protection unit, which meets this specification:

1. For telecommunications distribution cables - CIRCA TELECOM Model No. 1880ECA1-25 or approved equal.

2. For Telecommunications and data only cables - CIRCA TELECOM Model No. 1880ENA1/NSC-12 or approved equal.

X. TELEPHONE RINGER BELL/CHIME

A. This contractor shall furnish and install in the kitchen area, one (1) wall mounted bell/chime ringer. The bell/chime ringer shall be connected to telephone ringing voltage circuit of the Kitchen managers telephone located in the kitchen office. Connect to the ringing voltage circuit in strict conformance with the manufacturer's recommendation. A bell/chime that meets this specification is: PRIEMERE Cat. No. PT-400 or equal. Coordinate exact mounting location with Owner.

Part 3 - Execution

I. WIRING METHODS

A. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets desks, and counters and except in accessible ceiling spaces, in attics, and in gypsum board partitions where unenclosed wiring method may be use. Conceal raceway and cables except in unfinished spaces.

1. Install plenum cable in environmental air spaces, including plenum ceilings.

2. Comply with requirements for raceways and boxes specified in Division 16 Section "Raceways and Boxes."

B. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

C. Wiring within Enclosures: Bundle, lace, and train cables to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

II. INSTALLATION

A. All fiber optic cable shall be installed in conduit as hereinbefore specified for the entire run. Minimum conduit size for the fiber optic cable shall be ¾" inch.

B. All vertical wiring for the telecommunications system shall be installed by this Contractor in conduit and/or surface metal raceway as shown on the Drawings.

C. All horizontal wiring for the telecommunications system to be installed in areas without a ceiling or in areas without an accessible ceiling shall be installed by this Contractor in 1/2-inch conduit. Conduit is not required in areas designated on the Drawings as "Electric/Communications" rooms or closets.

D. All horizontal wiring for the telecommunications system to be installed in areas with accessible ceilings shall be installed by this Contractor bundled together and run exposed above the ceiling. Bundles shall be supported by "J" hooks mounted not more than four (4) feet on center. "J" hooks to be dedicated to the wiring specified in this specification section.

E. All horizontal wiring for the telecommunications system shall be run at right angles to the building structure.

F. All horizontal wiring for the telecommunications system shall be installed below the roof/floor structural supports (joists, beams, girders, etc.). Wiring installed between the structural supports mentioned above and the roof or floor deck will not be acceptable.

G. All horizontal wiring penetrations for the telecommunications system through new and/or existing walls shall be sleeved. Minimum sleeve size shall be 3/4 inch. All sleeves shall be bushed both sides.

H. All wiring for the telecommunication system in millwork or casework only shall be installed in flexible metal conduit complete with an additional 200-pound pull string.

I. All wiring for the telecommunications system shall be furnished and installed by this Contractor as hereinbefore specified and as showed on the Drawings. All junction box covers shall be stenciled for distinct identification.

J. All wiring connections shall be made by this Contractor as detailed on the Drawings. Cables shall be run free of splices from the equipment enclosures to the telecommunications outlets.

K. All wiring shall be checked and tested by this Contractor to insure the system is free from grounds, opens, and shorts.

L. All wiring installed outside the footprint of a building shall be outside plant (flooded), indoor/outdoor, type cables.

M. All fiber optic outside plant (flooded), indoor/outdoor, type cables shall be installed in min. 3/4” conduit below finished grade with a single No. 10 AWG bare copper conductor. Copper conductor shall run the entire length of the conduit.

III. INSTALLATION OF CABLES

A. Comply with NECA 1.

B. General Requirements for Cabling:

1. Comply with TIA/EIA-568-B.1.

2. Comply with BICSI ITSIM, Ch. 6, "Cable Termination Practices."

3. Install 110-style IDC termination hardware unless otherwise indicated

4. Terminate conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, cross-connects, and patch panels.

5. Cables may not be spliced. Secure and support cables at intervals not exceeding 3 inches (760 mm) and not more than 6 inches (150 mm) from

cabinets, boxes, fittings, outlets, racks, frames, and terminals.

6. Install lacing bars to restrain cables, to prevent straining connections, and to prevent bending cables to smaller radii than minimums recommended by manufacturer.

7. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIM, "Cabling Termination Practices" Chapter. Install lacing bars and distribution spools.

8. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.

9. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used for heating.

10. In the communications equipment room, install a 10-foot- (3-m-) long service loop on each end of cable.

11. Pulling Cable: Comply with BICSI ITSIM, Ch. 4, "Pulling Cable." Monitor cable pull tensions.

C. UTP Cable Installation:

1. Comply with TIA/EIA-568-B.2-10.

2. Do not untwist UTP cables more than 1/2 inch (12 mm) from the point of termination to maintain cable geometry.

D. Optical Fiber Cable Installation:

1. Comply with TIA/EIA-568-B.3.

2. Cable may be terminated on connecting hardware that is rack or cabinet mounted.

E. Open-Cable Installation:

1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.

2. Suspend UTP cable not in a wireway or pathway a minimum of 8 inches (200 mm) above ceilings by cable supports not more than [**60 inches (1524 mm)**] apart.

3. Cable shall not be run through structural members or in contact with pipes, ducts, or other potentially damaging items.

F. Group connecting hardware for cables into separate logical fields.

G. Separation from EMI Sources:

1. Comply with BICSI TDMM and TIA/EIA-569-A for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.

2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:

    a) Electrical Equipment Rating Less Than 2 kVA: A minimum of 5 inches (127 mm).

    b) Electrical Equipment Rating between 2 and 5 kVA: A minimum of 12 inches (300 mm).

    c) Electrical Equipment Rating More Than 5 kVA: A minimum of 24 inches (610 mm).

3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:

    a) Electrical Equipment Rating Less Than 2 kVA: A minimum of 2-1/2 inches (64 mm).

    b) Electrical Equipment Rating between 2 and 5 kVA: A minimum of 6 inches (150 mm).

    c) Electrical Equipment Rating More Than 5 kVA: A minimum of 12 inches (300 mm).

4. Separation between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:

    a) Electrical Equipment Rating Less Than 2 kVA: No requirement.

    b) Electrical Equipment Rating between 2 and 5 kVA: A minimum of 3 inches (76 mm).

    c) Electrical Equipment Rating More Than 5 kVA: A minimum of 6 inches (150 mm).

5. Separation between Communications Cables and Electrical Motors and Transformers, 5 kVA or HP and Larger: A minimum of 48 inches (1200 mm).

6. Separation between Communications Cables and Fluorescent Fixtures: A minimum of 5 inches (127 mm)

IV. TELECOMMUNICATIONS OUTLETS

A. This Contractor shall assemble telecommunications outlets and install, connect, and label as shown on the Drawings.

V. RACK MOUNTED EQUIPMENT

A. The networking main distribution frame and the networking sub-distribution frame(s) shall be furnished and installed by this Contractor in the equipment rack(s) as detailed on the Drawings using the proper adapters, rack mounting kits, and brackets. All of this required mounting hardware shall be furnished and installed by this Contractor. All internal wiring shall be labeled, bundled, secured using the cable management modules, and terminated by this Contractor in a neat and professional manner.

B. All frame mounted equipment AC power cords shall be plugged into the adjacent duplex receptacle by the Owner.

VI. WIRELESS ACCESS POINT WIRING

A. All wiring for the wireless access point system shall be terminated in the main and sub distribution frames on the designated wireless access point patch panel(s) as shown on the drawings and herein specified.

B. All wiring for the future wireless access points located in the classrooms, office areas, etc., shall be terminated with a RJ-45 (568A) connector. This contractor shall leave six (6) inches of slack in the wiring for future wireless access point installation.

VII. CCTV WIRING

A. All wiring for the CCTV system shall be terminated in the main and sub distribution frames on the designated CCTV patch panel as shown on the drawings and herein specified.

B. All wiring for the future CCTV camera(s) shall be terminated with a RJ-45 (568A) connector. This contractor shall leave twenty-five (25) feet of slack in the wiring for future CCTV camera installation. Label junction box with the CCTV designation.

VIII. OWNER FURNISHED EQUIPMENT

A. The networking electronic hub equipment and wireless access points shall be furnished and installed by the Owner.

IX. ON-SITE PRECONSTRUCTION MEETING

A. Prior to the beginning of construction, this contractor shall contact Prince George's County Public Schools Office of Safety and Security and schedule a pre-construction meeting to discuss removal and or relocation of any existing CCTV system equipment. This contractor shall not remove or relocate any equipment without first coordinating with the Office of Safety and Security. [NEED NAMES AND PHONE NUMBERS]

X. ON-SITE AS-BUILT DRAWINGS

A. The Contractor shall provide one (1) set of the telecommunications system supplier's as-built drawings for permanent use on-site. The Contractor shall: laminate each page of these drawings; provide a rigid means for mounting such as 1/4-inch-thick x two (2) inch wide x width of the drawings through-bolted wood along the left edge of the drawings; furnish and install hanging hooks on the back of the Communications Room door; and hang the bound set of drawings.

END OF SECTION

Part 1 - General

I. REQUIREMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

II. SCOPE

A. The work covered under this Section shall include furnishing and installing a complete bi-directional cable television/broadband distribution system to distribute both analog and digital RF carriers up to a frequency of 860 MHz, utilizing 860 MHz passive and 860 MHz active components and hardware, as shown on the Drawings and herein specified for the distribution of cable television and/or broadband data signals.

B. The cable television/broadband distribution system shall deliver the following minimum performance requirements:

1. Sub-split, (Return): Inbound: 5MHz – 36MHz.

2. Outbound, (Forward): 44 MHz – 860 MHz.

3. Drop cable Outlet Level: + 10dBmv, +/- 5dB.

4. Minimal distribution system Carrier to noise ratio (CNR): 49 dB.

5. Composite Second Order, (CSO), Distortion: 53 dBc or greater.

6. Composite triple Beat, (CTB), Distortion: 53dBc or greater, 49 dBc or greater (HRC & IRC carrier systems).

7. No more than +/- 3.0 dB difference between adjacent channel video carriers.

8. Maximum Outlet Spectral Bandwidth tilt: +/- 10dB on any visual carrier on system up to 300MHz with a +/- 1 dB of separation for every additional 100MHz of total system bandwidth.

9. RF channel Aural carrier level: -15dB below RF channel visual carrier.

10. HUM: Maximum of 3% of visual signal level.

11. RF leakage: per FCC, part 76

C. Cable television service into the building shall be provided by (COX COMMUNICATION) (COMCAST COMMUNICATIONS). It shall be the responsibility of this Contractor to coordinate with the cable television utility to insure timely delivery of permanent cable television service.

D. The cable television head end equipment rack exists and shall be relocated by the Owner.

E. The cable television head-end equipment and cabinet shall be furnished by the Owner and installed by this Contractor as directed by the Owner.

F. The existing cable television/broadband distribution system shall remain in operation throughout the construction period until the new system has been installed and tested, ready for operation. After the new system has become operational, the existing system shall be removed as shown on the Drawings.

III. QUALITY ASSURANCE

A. All active devices for this system shall be listed by Underwriters Laboratories, Inc. (UL), bear the UL label, and shall be installed in accordance with all requirements of the National Electrical Code (NEC), all state and local codes, and these Specifications.

B. Equipment shall be constructed with National Electrical Manufacturer's Association (NEMA) standards.

C. All work relating to the cable television service entrance shall comply with the requirements of the cable television utility company.

D. Shop drawing submittals are required per SECTION 16010 and shall include the following for review. Submittals not containing all of the information listed below will be rejected.

1. Manufacturer's shop drawings for the main and sub-distribution equipment location layouts and equipment.

2. Manufacturer's data sheets for all system components including cables.

3. A detailed set of engineered floor plans for the complete bi-directional system for building shall be furnished showing the locations of all equipment and devices and their required interconnections. The shop drawings shall include the cable path from each wall outlet to its respective main or sub-distribution location. The interconnections shown shall indicate the device designation number, size, type of devices and wires as described in this Specification. The layout of all cable television/broadband distribution system equipment and devices shall include the engineered Db levels at each designated wall outlet as described below in this specification section and shall closely follow that shown on the Drawings.

E. Prior to final inspection, this Contractor shall furnish two (2) complete sets of as- built drawings prepared by mechanical drafting methods. The Drawings shall include: the measured Db level at each outlet on Channel 2 and Channel 9; and the exact locations and descriptions of all outlets, tap equipment, and the like and the location and number of all spare ports.

F. The entire cable television/broadband distribution system installation with the exception of pulling of cable shall be performed by a factory certified installer having a minimum record of five (5) years of successful installations. The installer must show evidence of

successfully furnishing systems specified for at least five (5) years. The installer of the cable television/broadband distribution system shall be named within fourteen (14) days of the bid opening. The contractor shall be prepared, upon the Owners request, to provide proof of factory certifications.

IV. SYSTEM TEST

A. Prior to the final acceptance of each phase of construction and at total completion of project, this Contractor shall conduct an operating test of the complete system. The system must test free from grounds, shorts, and other faults. The system shall provide ten (10) dBmV (+/- 5 dBmV) at each outlet when a signal of 50 DBMV is applied from the headend cable. This Contractor shall inform the Owner of any slope injected into the system during testing. All connections shall be thoroughly checked for mechanical and electrical connections. All equipment shall be demonstrated by this Contractor to operate in accordance with the requirements set forth in these Specifications and shown on the Drawings.

B. This Contractor shall perform all tests in the presence of the Architect/Engineer. This Contractor shall furnish all personnel and test instruments required for use in the test, including signal generator and amplifier. This contractor is not permitted to use building CATV headend equipment for testing purposes.

C. The maximum deviation of drop signals between 50 and 860 MHz (slope) shall not exceed fifteen (15) dBmV. This Contractor shall furnish to the Owner, in the final test documents, the exact slope setting used. Upon request of the owner this contractor shall test the bi-directional system at a maximum of five (5) locations, selected by the owner, to show compliance.

V. WARRANTY

A. This Contractor shall deliver the work described herein in a first class operating condition in every respect. This Contractor shall also warrant that the material, equipment, and workmanship shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractors own expense. Refer to SECTION 01740 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the Drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

Part 2 - Products

I. MANUFACTURER

A. The cable television/broadband distribution system equipment shall be manufactured by BLONDER-TONGUE, PPC., PICO MACOM, INC., TONER CABLE EQUIPMENT, INC.

II. EQUIPMENT LOCATIONS

A. This Contractor shall furnish and install where shown on the Drawings, wall mounted main and sub-distribution equipment locations consisting of fire resistant 3/4-inch-thick plywood backboards and the distribution equipment as detailed on the Drawings.

III. MODULAR TAP DEVICES

A. This Contractor shall furnish and install modular tap units in each CATV equipment location as shown on the drawings, in the quantity required to terminate all of the CATV wall outlets. The modular tap units shall consist of the following:

1. Modular tap unit shall have a die cast aluminum housing with six (6) tap cavities for the installation of six (6) plug in tap plates to provide service for up to 48 CATV wall outlets. The housing shall have a cable entry fitting at each end so it can be fed from one end using a terminator plate in the last position or fed from one end with the other end being an output. The modular tap unit shall have a bandwidth of 5 to 1,000 MHz. The modular tap unit shall be TONER CABLE EQUIPMENT, INC., “TOTAL TAP” MODEL No. TXMT-6H with GILBERT ENGINEERING CO., PART No. GF-625-CH KS to F female adaptors.

2. Plug-in tap plates shall have 8 ports each for insertion into the modular tap unit. The tap values of the 8-port plug-in tap plates shall range from 11.5 dB to 26 dB at 5 to 1,000 MHz and shall be selected by this Contractor to meet the test requirements hereinbefore described. The 8-port plug-in tap plates shall be TONER CABLE EQUIPMENT, INC., Model No. TXMT108 series; terminator plates Model No. TXMT108-T series; blank plates Model No. TXMT-B for insertion into unused cavities of the modular tap unit housing; and Equalizer Plates Model No. TXMT- EQ series.

IV. AMPLIFIERS

A. This Contractor shall furnish and install bi-directional, self-attenuating amplifiers as required to complete the system. Amplifiers shall be BLONDER-TONGUE series “5800” and shall have all necessary internal components for a complete bi- directional system. Amplifiers shall only be installed in CATV main and sub- distribution equipment locations.

V. CONNECTORS

A. This contractor shall furnish and install CATV compression type, color coded cable connectors to complete the system. Connectors shall be specifically designed for plenum rated cable. The connectors shall be PPC Model No. EX6, and EX11 as appropriate for RG-6 and RG-11 coaxial cables.

B. The connectors shall be compressed by the appropriate compression tool. The compression tool shall be PPC Model No. VT300 for RG-6 and RG-11 cable.

VI. CABLE TELEVISION/BROADBAND DISTRIBUTION WALL OUTLETS

A. This Contractor shall furnish and install where shown on the Drawings, wall outlets consisting of "F" type connectors complete with stainless steel outlet cover plates. The

cable television/broadband wall outlets shall be TONER CABLE EQUIPMENT, INC., Model No. F-81-NW.

VII. TERMINATORS

A. This Contractor shall furnish and install terminators on all unused female “F” connector jacks throughout the system. The terminator shall be PICO MACOM, INC., Model No. F-59T.

VIII. CABLE

A. This Contractor shall furnish and install all cable television/broadband distribution system zone cables as shown on the Drawings. The cables shall be UL listed, plenum type, coaxial RG-6/U, No. 18 AWG, seventy-five (75) degree C solid bare copper with a maximum resistance of 6.5 ohms per 1,000 feet, foam polyethylene insulation with a tape barrier, and a bifoil (100% coverage) plus an aluminum braid (65% coverage) shield. The television/broadband distribution system zone cable shall be WEST PENN Cat. No. 25841 or equal as manufactured by BELDEN, PAIGE, GENERAL CABLE, or THE CABLE COMPANY.

B. This Contractor shall furnish and install all cable television/broadband distribution system trunk cables as shown on the Drawings. The cables shall be UL listed, plenum type, coaxial RG-11/U, No. 14 AWG, one hundred twenty-five (125) degree C solid bare copper with a maximum resistance of 6.5 ohms per 1,000 feet, foam polyethylene insulation with a tape barrier, and a bifoil (100% coverage) plus an aluminum braid (65% coverage) shield. The television/broadband distribution system trunk cable shall be WEST PENN Cat. No. 25821 or equal as manufactured by BELDEN, GENERAL CABLE, PAIGE, or THE CABLE COMPANY.

C. This Contractor shall furnish and install all outside plant (flooded) cable television/broadband distribution system trunk cables as shown on the Drawings. The cables shall be UL listed, plenum type, coaxial RG-11/U, No. 14 AWG, one hundred twenty-five (125) degree C solid bare copper with a maximum resistance of 11.0 ohms per 1,000 feet, foam polyethylene insulation with a tape barrier, and a bifoil (100% coverage) plus an aluminum braid (61% coverage) shield and flooding. The outside plant (flooded) television/broadband distribution system trunk cable shall be WEST PENN Cat. No. 1110 or equal as manufactured by BELDEN, GENERAL CABLE, PAIGE, or THE CABLE COMPANY.

D. Cable television system service entrance cables shall be furnished and installed by the cable television utility company. It shall be the responsibility of this Contractor to coordinate with the cable television utility to insure timely delivery of permanent cable television service.

IX. MISCELLANEOUS EQUIPMENT

A. This Contractor shall furnish the following items of equipment for installation by the Owner in the headend equipment rack. There shall be no substitutions for this equipment.

1. One (1) BLONDER TONGUE Model No. AM-60-550 w/option 4 Channelized Agile Audio/Video Modulator +60 dBmv, 54-300 MHz complete with ANVIL CASES "Forge II" model carrying case, 20 inches wide x 4-1/2 inches high x 19-1/4 inches deep with handle, removable front and rear, and interior rack mounting rails on the handle end.

X. LABELING

A. This Contractor shall label all cable television/broadband distribution wall outlets as shown on the drawings.

B. This Contractor shall label all cable television/broadband distribution system zone and trunk cables at each main and sub distribution equipment location.

1. Each zone cable shall be clearly labeled with the correct corresponding wall outlet designation. Each zone cable shall be labeled using a labeling machine with minimum ¼" high letters. Each label shall be wrapped around the zone cable and securely fastened.

2. Each trunk cable shall be clearly labeled with the correct corresponding main or sub distribution equipment location. Each trunk cable shall be labeled using a labeling machine with minimum ¼" high letters. Each label shall be wrapped around the trunk cable and securely fastened.

Part 3 - Execution

I. INSTALLATION

A. All cable television/broadband distribution system homerun cables shall be routed from each catv outlet to the main or sub distribution equipment location indicated through the corridors. Routing homerun cables through adjacent spaces is not acceptable.

B. All vertical cable television/broadband distribution system cable shall be installed by this Contractor in conduit and/or surface metal raceway as shown on the Drawings.

C. All horizontal cable television/broadband distribution system cable to be installed in areas without a ceiling or in areas without an accessible ceiling shall be installed by this Contractor in 3/4-inch conduit. Conduit is not required in areas designated on the Drawings as "Electric/Communications" rooms or closets.

D. All horizontal cable television/broadband distribution system cable to be installed in areas with accessible ceilings shall be installed by this Contractor bundled together and run exposed above the ceilings. Bundles shall be supported by "J" hooks mounted not more than four (4) feet on center. "J" hooks to be dedicated to the wiring specified in this specification section.

E. All horizontal cable television/broadband distribution system cable shall be run at right angles to the building structure.

F. All horizontal cable television/broadband distribution system penetrations through new

and/or existing walls shall be sleeved. Minimum sleeve size shall be 3/4 inch. All sleeves shall be bushed both sides.

G. All cable television/broadband distribution system cable shall be terminated and labeled by this Contractor as shown on the Drawings. Cables shall not be nicked, strained, or damaged during the pulling operation. Cables shall be run free of splices from the equipment enclosures to the outlets. All junction box covers shall be stenciled for distinct identification.

H. All cables shall be checked and tested by this Contractor to insure the system is free from grounds, opens, and shorts.

I. This Contractor shall notify the Owner when the service entrance conduit system is complete, ready for installation of the service entrance cable.

J. All work shall be under the direct supervision of a factory accredited engineer. It shall be the responsibility of the Contractor to check and inspect this installation to the Architect/Engineer's approval.

K. This Contractor shall demonstrate, to the Owners technical staff, the ability to properly terminate RG-6 and RG-11 connectors prior to commencement of work.

L. This Contractor shall demonstrate the capabilities of the upstream modulator for up to five (5) locations. The Owner shall select locations. Signal shall be demonstrated to flow back to the headend equipment and then through the entire system for distribution.

M. All wiring installed outside the footprint of a building shall be outside plant (flooded), indoor/outdoor, type cables.

II. WALL MOUNTED EQUIPMENT

III. A. Cable television/broadband distribution system equipment shown on the Drawings or otherwise required to be mounted at a main or sub-distribution equipment location shall be furnished and installed by this Contractor with the proper adapters, mounting kits, and brackets.

A. All equipment enclosure mounted equipment AC power cords shall be plugged into the associated duplex receptacle by this Contractor.

IV. CABLE TELEVISION/BROADBAND DISTRIBUTION OUTLETS

A. This Contractor shall install, connect, and label all cable television/broadband wall outlets, as shown on the Drawings.

V. ON-SITE AS-BUILT DRAWINGS

A. The Contractor shall provide one (1) set of the cable television/broadband distribution system supplier’s as-built drawings for permanent use on-site. The Contractor shall: laminate each page of these drawings; provide a rigid means for mounting such as 1/4-inch thick x two (2) inch wide x width of the drawings through-bolted wood along the left edge of the drawings; furnish and install hanging hooks on the back of the

Communications Room door; and hang the bound set of drawings.

END OF SECTION

Part 1 - General

I. REQUIREMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

II. SCOPE

A. The work covered under this Section shall include furnishing and installing a multi-media system as shown on the Drawings and herein specified for the distribution of audio/visual signals from cable television and/or broadband data signals.

III. QUALITY ASSURANCE

A. All active devices for this system shall be listed by Underwriters Laboratories, Inc. (UL), bear the UL label, and shall be installed in accordance with all requirements of the National Electrical Code (NEC), all state and local codes, and these Specifications.

B. Equipment shall be constructed with National Electrical Manufacturer's Association (NEMA) standards.

C. Shop drawing submittals are required per SECTION 16010 and shall include the following for review. Submittals not containing all of the information listed below will be rejected.

1. Manufacturer's data sheets for all system components including cables.

2. A detailed set of engineered floor plans for the complete multi-media system for the building shall be furnished showing the locations of all equipment and devices and their required interconnections. The shop drawings shall be including the cable path from each wall outlet to its respective ceiling outlet location. The interconnections shown shall indicate the device configuration, number, size, type of devices and wires as described in this Specification and detailed on the Drawings. The device locations and wiring shall closely follow that shown on the Drawings.

IV. SYSTEM TEST

A. Prior to the final acceptance of each phase of construction and at total completion of project, this Contractor shall conduct an operating test of the complete system. The system must test free from grounds, shorts, and other faults. All connections shall be thoroughly checked for mechanical and electrical connections.

V. WARRANTY

A. This Contractor shall deliver the work described herein in a first class operating condition in every respect. This Contractor shall also warrant that the material, equipment, and workmanship shall be entirely free from defects. Any materials,

equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractors own expense. Refer to SECTION 01740 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the Drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

Part 2 - Products

I. MANUFACTURER

A. The multi-media system equipment shall be manufactured by QUICKTRON and PEERLESS or approved equals.

II. MULTI-MEDIA SYSTEM OUTLET, CABLES AND CORD KIT

A. Multi-Media System Outlet and Cable Kit 35 foot: Part number DMVSS35-OP. The Contractor shall furnish and install all multi-media system kits as shown on the Drawings. The outlet and cords shall be UL listed and shall consist of the following:

1. One (1) multi-media system outlet consisting of a single-gang horizontal brushed aluminum faceplate with female HD15, 3.5mm audio, HDMI and USB port.

2. One (1) RAPID RUN Multi-Format Runner Cable, CMP rated, 35 foot in length. Orange identification.

3. One (1) RAPID RUN Optical Runner Cable, CMP rated, 35 foot in length.

4. One (1) RAPID RUN HD15 VGA Flying Lead, 1.5 ft. length, consisting of male HD15 and 3.5mm audio. For connection to Owner furnished Multi- Media device. Orange identification.

5. One (1) RAPID RUN HDMI Optical TX Flying Lead, 4-inch length with 19 inch USB connection. For connection to Owner furnished Multi-Media device. Red identification.

6. One (1) USB 2.0 A/B center boost format, active extension cable. Twelve (12) meters in length.

7. One (1) Flexima HD15 SXGA + 3.5mm patch cable Male/Male, 12 ft in length.

8. High Speed HDMI patch cable, 3 meters in length.

B. Multi-Media System Outlet and Cable Kit 50 foot: Part number DMVSS50-OP. The Contractor shall furnish and install all multi-media system kits as shown on the Drawings. The outlet and cords shall be UL listed and shall consist of the following:

1. One (1) multi-media system outlet consisting of a single-gang horizontal brushed aluminum faceplate with female HD15, 3.5mm audio, HDMI and USB port.

2. One (1) RAPID RUN Multi-Format Runner Cable, CMP rated, 50 foot in length. Orange identification.

3. One (1) RAPID RUN Optical Runner Cable, CMP rated, 50 foot in length.

4. One (1) RAPID RUN HD15 VGA Flying Lead, 1.5 ft. length, consisting of male HD15 and 3.5mm audio. For connection to Owner furnished Multi- Media device. Orange identification.

5. One (1) RAPID RUN Optical HDMI TX Flying Lead, 4-inch length with 19 inch USB connection. For connection to Owner furnished Multi-Media device. Red identification.

6. One (1) USB 2.0 A/B center boost format, active extension cable. Twelve (12) meters in length.

7. One (1) Flexima HD15 SXGA + 3.5mm patch cable Male/Male, 12 ft in length.

8. High Speed HDMI patch cable, 3 meters in length.

III. MULTI – MEDIA CEILING INTERFACE ADAPTOR AND PROJECTOR UNIVERSAL MOUNTING BRACKET

A. This contractor shall furnish and install at each ceiling mounted projector location shown on the Drawings, one (1) lightweight, adjustable, suspended ceiling plate complete with turn buckles, fasteners, escutcheon ring and 1-1/2” diameter extension column. A multi-media ceiling interface adaptor that meets this specification is PEERLESS Model No. CMJ500RI or approved equal. Refer to floor plans for ceiling mounted projector locations.

B. This contractor shall furnish and install at each ceiling mounted projector location shown on the Drawings, one (1) lightweight, adjustable, universal multi-media projector mounting bracket. A universal multi-media projector mounting bracket that meets this specification is PEERLESS Model No. PRG-UNV or approved equal. Refer to floor plans for ceiling mounted projector locations.

Part 3 - Execution

I. INSTALLATION

A. All vertical multi-media system cable shall be installed by this Contractor in conduit and/or surface metal raceway as shown on the Drawings.

B. All horizontal wiring for the multi-media system to be installed in areas without a ceiling or in areas without an accessible ceiling or below finished floor shall be installed by this

Contractor in minimum 1”-inch conduit.

C. All horizontal multi-media system cable to be installed in areas with accessible ceilings shall be installed by this Contractor bundled together and run exposed above the ceilings. Bundles shall be supported by "J" hooks mounted not more than four (4) feet on center. “J” hooks to be dedicated to the wiring specified in this specification section.

D. All horizontal multi-media system cable shall be run at right angles to the building structure.

E. All multi-media system cable shall be terminated and labeled by this Contractor as shown on the Drawings. Cables shall not be nicked, strained, or damaged during the pulling operation. Cables shall be run free of splices. All junction box covers shall be stenciled for distinct identification.

F. All cables shall be checked and tested by this Contractor to insure the system is free from grounds, opens, and shorts.

G. The exact length of the extension column shall be field determined by this contractor prior to installation.

H. This Contractor shall install, Owner furnished, ceiling mounted LCD projector(s). This Contractor shall make all final connections and leave a complete, tested and operational multi-media system.

I. This Contractor shall select a classroom, approved by the owner, to serve as a mock-up/prototype for all LCD projector ceiling mounted installations. This Contractor shall install a typical ceiling mount and LCD projector (LCD projector furnished by owner) to determine the focal length/location and extension column length required. Prior to continuing with the installation(s), coordinate with Owner’s representative for review and approval of installation.

J. This contractor shall install the multi-media cables as indicated for the conditions below. Coordinate the exact installation condition, with the owner, in each area prior to installation:

1. At all ceiling mounted projector locations, install the multi-media cables as follows. The PC runner and HDMI cables shall be extended above the ceiling to the ceiling mounted projector location and connected to the projector with their associated flying leads. The USB active extension cable shall be extended above the ceiling and through the wall mounted Power Column No. 2 to the wall mounted interactive white board and connected to the USB port of the interactive device. Coordinate with Owner prior to installation.

2. At all wall mounted interactive projector locations, install the multi-media cables as follows. The PC runner, USB active extension and HDMI cables shall be extended above the ceiling and through the wall mounted Power Column No. 2 to the wall mounted interactive projector. The PC runner and HDMI cables shall be connected to the interactive device with their associated flying leads. The USB active extension cable shall be connected to the USB port of the interactive projector. Coordinate with Owner prior to installation.

3. At all wall, mounted projector with separate interactive white board locations, install the multi-media cables as follows. The PC runner and HDMI cables shall be extended above the ceiling and through the wall mounted Power Column No. 2 to the wall mounted projector. The PC runner and HDMI cables shall be connected to the projector with their associated flying leads. The USB active extension cable shall be extended above the ceiling and through the wall mounted Power Column No. 2 to the wall mounted interactive white board and connected to the USB port of the interactive device. Coordinate with Owner prior to installation.

4. At all wall mounted flat screen interactive display locations, install the multi-media cables as follows. The PC runner, USB active extension and HDMI cables shall be extended above the ceiling and through the wall mounted Power Column No. 2 to the wall mounted interactive display. The PC runner and HDMI cables shall be connected to the interactive display with their associated flying leads. The USB active extension cable shall be connected to the USB port of the interactive display. Coordinate with Owner prior to installation.

K. All projection and interactive devices are furnished by the Owner, installed by this Contractor. Coordinate with Owner for exact projection and interactive devices to be installed for this project prior to start of work.

II. ON-SITE AS-BUILT DRAWINGS

A. The Contractor shall provide one (1) set of the multi-media system supplier's as-built drawings for permanent use on-site. The Contractor shall: laminate each page of these drawings; provide a rigid means for mounting such as 1/4-inch thick x two (2) inch wide x width of the drawings through-bolted wood along the left edge of the drawings; furnish and install hanging hooks on the back of the Communications Room door; and hang the bound set of drawings.

END OF SECTION

Part 1 - General

I. REQUIREMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

II. SCOPE

A. The work covered under this Section shall include furnishing and installing a multi-media presentation control system as shown on the Drawings and herein specified for the distribution of audio/visual signals from cable television and/or broadband data signals.

III. QUALITY ASSURANCE

A. All active devices for this system shall be listed by Underwriters Laboratories, Inc. (UL), bear the UL label, and shall be installed in accordance with all requirements of the National Electrical Code (NEC), all state and local codes, and these Specifications.

B. Equipment shall be constructed with National Electrical Manufacturer's Association (NEMA) standards.

C. Shop drawing submittals are required per SECTION 260500 and shall include the following for review. Submittals not containing all of the information listed below will be rejected.

1. Manufacturer's data sheets for all system components including cables.

2. A detailed set of engineered floor plans for the complete multi-media presentation control system for the building shall be furnished showing the locations of all equipment and devices and their required interconnections. The shop drawings shall be including the cable path from each wall outlet to its respective ceiling outlet location. The interconnections shown shall indicate the device configuration, number, size, type of devices and wires as described in this Specification and detailed on the Drawings. The device locations and wiring shall closely follow that shown on the Drawings.

IV. SYSTEM TEST

A. Prior to the final acceptance of each phase of construction and at total completion of project, this Contractor shall conduct an operating test of the complete system. The system must test free from grounds, shorts, and other faults. All connections shall be thoroughly checked for mechanical and electrical connections.

V. WARRANTY

A. This Contractor shall deliver the work described herein in a first class operating condition in every respect. This Contractor shall also warrant that the material,

equipment, and workmanship shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractors own expense. Refer to SECTION 01740 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the Drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

Part 2 - Products

I. MANUFACTURER

A. The multi-media presentation control system equipment shall be manufactured by BTX TECHNOLOGIES, CRESTRON, PEERLESS or approved equals.

II. MULTI-MEDIA PRESENTATION CONTROL SYSTEM

A. MULTI-MEDIA PRESENTATION CONTROL SYSTEM RECEIVER

1. This Contractor shall furnish and install where shown on the Drawings, ceiling mounted multi-media receiver complete with three (3) IM transmitter inputs: XGA resolution up to 84 feet and UXGA up to 34 feet: built-in LAN, RS-232, IR relays and digital input control ports: built-in 20-watt stereo amplifier and line level inputs. A receiver processor that meets this specification is CRESTRON Model No. IM-RXV3-M complete with PW1830RU power supply and MK-IM-RX pole mounting kit or approved equal by EXTRON.

B. MULTI-MEDIA PRESENTATION CONTROL SYSTEM INTERFACE/CONTROL PANEL

1. This Contractor shall furnish and install where shown on the Drawings, wall mounted multi-media control system interface and control panels. The system interface panel shall come complete with: one (1) DB15HD female VGA connection; one (1) 3.5mm mini-jack connector; one (1) RCA-type female connector for composite video input; two (2) RCA-type female connectors for audio composite input. The system control panel shall come complete with a volume control and computer/video source selection button. A multi-media control system interface and control panel that meets this specification is CRESTRON Model No. IM-WCCV -M or approved equal by EXTRON. Where shown on the Drawing to be flush mounted, the devices shall be installed in a three gang, extra deep (min 2.5” depth) device box, refer to floor plans and details.

C. MULTI-MEDIA PRESENTATION CONTROL SYSTEM CABLE

1. This Contractor shall furnish and install all multi-media presentation control system cables as shown on the Drawings. The cables shall be complete with male RJ45 connector at both ends. The cable shall be UL listed, plenum rated, unshielded, four (4) twisted pairs, No. 24 AWG, category 5e with drain wire, extended distance, high speed data type with a flame retardant polyvinyl

chloride jacket and a temperature range for dry locations of minus ten (10) degrees C to sixty (60) degrees C. A multimedia cable, which meets this specification, is CRESTRON, Cat. No. CRESCAT-IM-P-DRN or equal as manufactured by AMP, AT&T, BELDON, BERK-TEK, THE CABLE COMPANY, GENERAL CABLE, GENISIS, HITACHI, MOHAWK, NORTHERN TELECOM, OPTICAL CABLE CORP., or PAIGE.

2. This Contractor shall furnish and install field wiring for multi-media presentation control sound system cables as shown on the Drawings. Wiring shall be two (2) conductor, No. 16 AWG stranded and shielded cable. A cable that meets this Specification is WEST PENN Cat. No.25294B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

D. MULTI-MEDIA PRESENTATION CONTROL SYSTEM PATCH CABLES

1. This Contractor shall furnish and install all multi-media presentation control system patch cables as shown on the Drawings. The cables shall be UL listed, plenum type, and shall consist of the following.

a) One (1) VGA patch cable - BTX Technologies Cat. No. YD-HD15MMT3 or approved equal. Maximum 3 feet length.

b) One (1) composite video cable with RCA male connectors - BTX Technologies Cat. No. YV-RR01 or approved equal. Maximum 12 inches' length.

c) All multi-media system patch cables shall be complete with factory terminated male connectors. Field terminated connectors shall not be acceptable.

III. MULTI – MEDIA CEILING INTERFACE ADAPTOR AND PROJECTOR UNIVERSAL MOUNTING BRACKET

A. This contractor shall furnish and install at each ceiling mounted projector location shown on the Drawings, one (1) lightweight, adjustable, suspended ceiling plate complete with turn buckles, fasteners, escutcheon ring and 1-1/2" diameter extension column. A multi-media ceiling interface adaptor that meets this specification is PEERLESS Model No. CMJ500 or approved equal. Refer to floor plans for ceiling mounted projector locations.

B. This contractor shall furnish and install at each ceiling mounted projector location shown on the Drawings, one (1) lightweight, adjustable, universal multi-media projector mounting bracket. A universal multi-media projector mounting bracket that meets this specification is PEERLESS Model No. PRG-UNV or approved equal. Refer to floor plans for ceiling mounted projector locations.

Part 3 - Execution

I. INSTALLATION

A. All vertical multi-media presentation control system cables shall be installed by this Contractor in conduit and/or surface metal raceway as shown on the Drawings.

B. All horizontal multi-media presentation control system cables to be installed in areas with accessible ceilings shall be installed by this Contractor bundled together and run exposed above the ceilings. Bundles shall be supported by "J" hooks mounted not more than four (4) feet on center. “J” hooks shall be dedicated to the wiring specified in this specification section.

C. All horizontal multi-media presentation control system cables shall be run at right angles to the building structure.

D. All multi-media presentation control system cables shall be terminated and labeled by this Contractor as shown on the Drawings. Cables shall not be nicked, strained, or damaged during the pulling operation. Cables shall be run free of splices. All junction box covers shall be stenciled for distinct identification.

E. All cables shall be checked and tested by this Contractor to insure the system is free from grounds, opens, and shorts.

F. The exact length of the extension column shall be field determined by this contractor prior to installation.

G. This Contractor shall install, Owner furnished, ceiling mounted LCD projector(s). This Contractor shall make all final connections and leave a complete, tested and operational multi-media system.

H. This Contractor shall select a classroom, approved by the owner, to serve as a mock-up/prototype for all LCD projector ceiling mounted installations. This Contractor shall install a typical ceiling mount and LCD projector (LCD projector furnished by Owner) to determine the focal length/location and extension column length required. Prior to continuing with the installation(s), coordinate with Owner’s representative for review and approval of installation.

II. ON-SITE AS-BUILT DRAWINGS

A. The Contractor shall provide one (1) set of the multi-media system supplier’s as- built drawings for permanent use on-site. The Contractor shall: laminate each page of these drawings; provide a rigid means for mounting such as 1/4-inch thick x two (2) inch wide x width of the drawings through-bolted wood along the left edge of the drawings; furnish and install hanging hooks on the back of the Communications Room door; and hang the bound set of drawings.

END OF SECTION

Part 1 - General

I. REQUIREMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

B. SCOPE

C. The work covered under this Section shall include furnishing and installing a centrally controlled complete and satisfactorily operating sound and intercommunications system within the building and around the building's perimeter as shown on the Drawings and herein specified for: the pick-up, amplification, reproduction, and distribution of voice and/or music; intercommunications between areas.

D. The existing sound and intercommunications system shall remain in operation during the construction period until the new system has been installed and tested, ready for operation. After the new system has been placed in operation, the existing system shall be removed as shown on the Drawings.

E. All systems shall be complete, including any materials not specifically enumerated herein or shown on the drawings, in order to provide the functions, features, and operations as described. The Contractor is forewarned to confirm product availability with the manufacturer. No claim for payment of additional cost incurred due to discontinued or superseded equipment will be honored.

F. The work covered under this Section shall include furnishing and installing the components only for sound reproduction and reinforcement systems as indicated on the Drawings and described herein.

G. The Sound System Contractor is responsible to coordinate with the Electrical Contractor and verify the existence or impending installation of all conduit, penetrations, backboxes, floorboxes, and electrical circuits in the quantities, sizes, and locations necessary for the system(s) covered herein.

H. System acceptance is contingent upon the Authority’s inspection and verification that all equipment has been provided and that all work, including documentation, has been completed in accordance with the Contract Documents.

II. QUALITY ASSURANCE

A. All equipment described herein shall be the product of a manufacturer of established reputation and experience who shall have produced similar apparatus for a period of at least ten (10) years and who shall be able to, upon request, refer to similar installations now rendering satisfactory service.

B. The sound and intercommunications system shall be furnished by a factory authorized distributor certified to design, program, and service the system. The distributor must show evidence of successfully furnishing systems specified for at least five (5) years

C. All equipment for this system shall be listed by Underwriters Laboratories, Inc. (UL), bear the UL label, and shall be installed in accordance with all requirements of the National Electrical Code (NEC), all state and local codes, and these Specifications.

D. Sound System(s) shall be installed by a separate Sound System Contractor who specializes in this type of work. The Sound System Contractor shall have been a fully licensed business for five (5) years or longer, and shall be able to demonstrate five (5) similar system installations meeting the following requirements:

1. Installed within the last five (5) years.

2. Providing satisfactory service.

3. Within a fifty (50) mile radius of the jobsite

E. All equipment with digital apparatus (microprocessors) that generates and utilizes timing signals at a rate in excess of ten thousand (10,000) pulses per second to compute and operate shall be Federal Communications Commission (FCC) approved. Equipment without the above approval will not be accepted.

F. The entire sound and intercommunications system installation shall be performed under the direct supervision of a factory trained service specialist.

G. Shop drawing submittals are required per SECTION 16010 and shall include the following for review. Submittals not containing all of the information listed below will be rejected.

1. A complete list of equipment shall be furnished indicating the specific quantities to be furnished by the manufacturer. The catalog or model number for each module of the system shall be listed next to the quantities. This shall be provided in the front of the submittal.

2. A specific description of the system shall be furnished describing each module and how it shall function in the system.

3. A detailed set of floor plans for the complete building shall be furnished showing the locations of all equipment, loudspeakers, and devices and their required interconnections. The interconnections shown shall indicate the number, size, and type of wires as described in this Specification. Loudspeakers shall be zoned as shown on the Drawings. The layout of all sound and intercommunications system equipment, and devices, shall closely follow that shown on the Drawings. Electronic microdisks or disquettes containing the building's background (only) will be available from the Architect for this purpose. However, this Contractor will be responsible for maintaining the accuracy of these Drawings.

4. A specific drawing shall be furnished of the main sound equipment rack. Each module shall be shown in its location with its terminal designation shown.

5. A data sheet shall be furnished for each module, component, and device. The information shall be highlighted that applies to the module or device.

6. A detailed diagram on how to connect each device shall be furnished showing exact hook-up information.

III. QUALITY ASSURANCE

A. Conditions for Consideration of "Or Equal" Products: Where products are specified by name and accompanied by the term "or equal", the proposed "or equal" product will be considered when the following conditions are satisfied. If all the following conditions are not satisfied, Design Consultant will return requests without action, except to record noncompliance with these requirements:

1. Proposed product does not require extensive revisions to the Contract Documents.

2. With the exception of the product name or number and manufacturer's name, proposed product conforms with requirements indicated on the Drawings and in the Specifications in every respect and will produce indicated results.

3. Proposed product t is fully documented and properly submitted.

4. Proposed product has received necessary approvals of authorities having jurisdiction.

5. Proposed product is compatible with AND has been coordinated with other portions of the Work.

6. Proposed product provides specified warranty.

7. If proposed product involves more than one contractor, proposed product has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

8. Submission is accompanied with detailed comparison of significant qualities of proposed product with those named in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.

9. Submission is accompanied with a list of similar installations for completed projects with project names and addresses and names and addresses of design consultants and authorities, if requested.

10. Submission is accompanied with proposed product's Manufacturer signed written statement on Manufacturer's letterhead, certifying that manufacturer complies with requirements in the Contract Documents.

IV. DOCUMENTATION

A. This Contractor shall furnish to the Contractor one (2) sets of "As Built" drawings depicting the complete field wiring system and component interconnections in the system equipment rack.

B. This Contractor shall furnish to the Contractor four (4) sets of factory service manuals. These manuals shall include factory service manuals with complete parts lists, wiring and component schematics including circuit diagrams, and other information necessary for the proper operation, service, and maintenance of the system.

C. This Contractor shall furnish to the Owner a typed written sound system zone legend. This legend shall include the following; zone card numbers, default numbers, dial numbers, room locations, comments, ACS, paging zone numbers, mic cable numbers, and zone cable numbers.

V. TRAINING

A. This Contractor shall furnish eight (8) hours of technical service training to the Owner's technical and operating personal i.e., Principal, Vice Principal, Office Secretaries and others that have requirements for operating the system. Operational Training shall be delivered in two (2) four (4) hour sessions scheduled at the Principle's convenience during the warranty period staff using the factory service manuals previously specified.

B. This Contractor shall furnish twenty-four (24) hours of operating and programming training to the Owner's operating staff which shall be delivered in six (6) four (4) hour sessions to be scheduled at the Owner's convenience over the warranty period.

C. All training specified herein shall be performed by a factory certified technician.

VI. DESCRIPTION OF OPERATION

A. This Contractor shall furnish and install a microprocessor controlled voice communication system with all low voltage wiring and equipment as shown on the Drawings and as herein specified to furnish a complete sound, program, distribution, and intercommunication system in the building.

B. System Capacity:

1. It shall be possible to field program any Owner furnished telephone instrument to function as part of the sound and intercommunications system.

2. This Contractor shall furnish and install one (1) desk mounted Administrative Control Station (ACS) in the Communications Room.

3. The system shall provide a minimum of one (1) conversation path for each programmed telephone instrument and/or Administrative Control Station (ACS).

4. Room stations reporting to different programmed telephone instruments and/or an ACS shall be capable of calling simultaneously without interference.

5. Programmed telephone instruments and/or an ACS calling to assigned rooms shall be capable of calling simultaneously without interference.

VII. System Configuration:

1. Programmed telephone instruments and/or an Administrative Control Station (ACS) shall receive calls from classrooms and other indicated areas as shown on the Drawings.

2. Specific classrooms and other areas as shown on the Drawings shall contain a flush wall mounted callback switch to signal the designated programmed telephone instrument and/or ACS.

3. Classrooms, corridors, and other areas as indicated on the Drawings shall contain flush ceiling mounted speakers.

4. Mechanical rooms and other similar type areas, and the building exterior shall contain surface mounted horn type speakers as shown on the Drawings.

5. A hand-held microphone and a flush mounted microphone outlet shall be furnished and installed by this Contractor at the bus loading area as shown on the Drawings. Keying this microphone shall automatically annunciate over the ALL CALL system without the assistance of an operator.

B. Calling sequence of operation:

1. Classroom station calls shall initiate manually a preset status of call to the designated programmed telephone instrument and/or ACS.

2. Programmed telephone instrument and/or ACS to classroom calls shall establish two-way voice communication with classrooms and/or any or all other areas equipped with a loudspeaker.

3. ACS to ACS, or programmed telephone instrument to ACS, or programmed telephone instrument to programmed telephone instrument calls shall establish a two-way telephone conversation.

VIII. SYSTEM OPERATION

A. The system shall allow for user-programmable room number assignment in the form of 3, 4, 5 or 6-digit alphanumeric format for architectural room numbering and a 60-character alpha-numeric caller ID description associated with each audio port.

B. The system shall allow for a minimum of 64 page/time/program zones that can be assigned and configured as desired.

C. The system shall allow for the assigning of each call-in button to one or more of 32 distinct call-in destination groups.

D. The system's administrative telephone shall allow for the user to view the alphanumeric room address and the caller-ID information of the calling station and the call priority (e.g., emergency, normal) on the display. The administrative telephone shall use distinctive ringing patterns to annunciate the type of call.

E. The system shall be capable of receiving 2048 call-ins simultaneously without data collisions or loss of any call-ins. Call-ins shall remain in the system call queue until

answered. Emergency Call-ins shall automatically move to the top of the call-in queue and annunciated in the in-use telephone earpiece to notify the user of an emergency call.

F. The system shall provide priority override capability to all remote independent sound systems (auxiliary, auditorium, gymnasium, etc.) located inside the building. Independent sound systems located outside the building (baseball, football, stadium, etc.) shall not require priority override capabilities.

G. The system shall communicate with each classroom phone. The classroom phone shall be integrated with the classroom speaker. If the staff member or occupant in the classroom lifts the classroom phone while in communication over the classroom loud speaker classroom audio will automatically be transferred to the classroom phone.

H. The system shall contain an integral master clock. The system master clock shall correct secondary clocks, analog or digital or both. The system master clock shall be capable of being synchronized by a Network Time Server (NTP). The system master clock shall provide for automatic daylight saving time adjustment with leap year programming and shall support unlimited schedules with unlimited events on said schedules. The system master clock shall be calendar based capable of future event programming at least 30 years in the future. The system master clock shall allow for scheduling tone events, output events, program source events, and video camera events.

1. The system shall operate under the following audio priority scheme.

a) An emergency page suspends all other audio

b) An emergency tone suspends all other audio except the above

c) A normal page suspends all other audio except the above

d) A tone suspends all other audio except the above

e) A program source audio event suspends nothing

f) Interrupted lower priority functions shall be restored after conclusion of the higher priority function.

I. The system shall allow a call-in to be escalated from a normal call-in to an emergency call-in at any time by pressing the call button twice within 2 seconds.

J. The system shall allow for any connected telephone to place an emergency voice paging announcement.

K. The system shall allow for operation via a GUI based PC based application. The PC application shall allow for emergency paging, normal paging, intercom, activation of any system/user tone, schedule changes, program distribution, call-in management, and on the fly room exclusion.

L. The system shall use a PC based GUI scheduling tool for schedules and tone

management. This tool shall not allow access to any system configuration controls. This tool shall not prevent the system from operating when being used. This tool shall allow the user to schedule events and manage tones over the local LAN/WAN and the Internet. It shall not be required to be directly connected to the central system to use this tool.

M. The system shall have a built in 30-day log of every system function and access.

N. The system shall have a built in real time system diagnostics application.

O. The system shall allow for system diagnostics, system log access firmware updates, and programming over the local LAN/WAN or over the Internet.

IX. SYSTEM TEST AND ACCEPTANCE

A. Prior to the final site visitation, and acceptance of each construction phase, this Contractor shall conduct an operating test of the complete sound and intercommunications systems. The system shall test free from grounds, shorts, and other faults. All connections shall be thoroughly checked for mechanical and electrical connections. All equipment shall be demonstrated to operate in accordance with the requirements set forth in these Specifications and as shown on the Drawings.

B. This Contractor shall perform all tests in the presence of the Architect/Engineer and Owner. This Contractor shall furnish all personnel and test instruments for use in the test.

C. When the work on the entire sound and intercommunications system has been completed and is ready for final review, this Contractor shall demonstrate that the requirements of the Contract as it applies to this work have been carried out and that the system has been adjusted and operated in accordance therewith.

X. EQUIPMENT LOCATIONS

A. This Contractor shall furnish and install where shown on the Drawings, wall mounted main and sub-distribution equipment locations consisting of fire resistant 3/4-inch-thick plywood backboards and the distribution equipment as detailed on the Drawings.

XI. WARRANTY

A. This Contractor shall deliver the work described herein in a first-class operating condition in every respect. This Contractor shall also warrant that the material, equipment, and workmanship furnished shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractors own expense. Refer to SECTION 01740 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the Drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

Part 2 - Products

I. General:

A. Equipment included shall meet or exceed all of the features, functions, performance requirements and specifications, outlined herein. Product acceptance as meeting these specifications shall be determined by the Design consultant and Owner. Their decision shall be final.

B. To guarantee to Owner of all factory warranties, all equipment shall be obtained from the Local Factory Authorized Vender/Distributor for the jobsite's geographic location. Vender shall be able to prove this, at the Design consultant/Design consultant's request.

C. Portable Equipment herein referred to shall include any equipment, which may be easily removed from the jobsite. This includes any device with few or no bolt or screw connections and easily disconnected cable terminations.

D. Deliverables or Deliverable Equipment herein referred to shall include any small equipment, which is not physically mounted to the jobsite, or is connected only by a single cable hook-up. This includes any Microphones, Microphone Stands, Patch Cables, Headsets, Phones, etc. Some equipment, or parts of packaged components, is included in this section for simplicity of specification. Where noted these must be installed.

II. MANUFACTURER

A. The sound and intercommunications system shall be the DUKANE "CareHawk" system, or equal as manufactured by RAULAND-BORG or BOGAN (Elementary and Middle Schools Only) system as shown on the Drawings and herein specified. (ENGINEER TO EDIT)

III. ADMINISTRATIVE CONTROL STATION

A. The Administrative Control Station (ACS) shall be desk mounted and contain a matching telephone handset with retractable coiled cord and conductive rubber button switches with clearly designated touch points. The housing shall be constructed of high impact flame-retardant plastic and shall terminate using a RJ- 45 modular telephone type jack. Additional features shall include:

1. Conductive rubber moisture sealed buttons.

2. Twenty (20) character alphanumeric LCD back lit display.

3. Menu driven display.

4. Handset and hands-free intercom with a "Push-to-Talk" button for manual audio direction control in the hands-free mode.

5. Alphanumeric three (3), four (4), or five (5) digit dialing.

6. Distinctive electronic ring signals.

7. Twelve (12) button keypad.

8. SPEAKER PHONE, TALK, ringer VOLUME UP/DOWN, EMERGENCY, TONE, PAGE, PROGRAM, MENU, and eight (8) additional user- programmable special function keys.

9. Telephone type modular connector.

10. Sensitive loudspeaker.

11. Built-in condenser microphone.

12. Queuing.

13. Data communications; local operating networks (LON), RS-485.

14. Telephone style handset with dynamic receiver and electret transmitter.

15. HOLD button.

B. The ACS shall provide the following functions and features.

1. User programmable two, three, four, or five-digit alpha-numeric direct dialing number assignment to the following locations: ACS to classroom speaker(s); ACS to programmed telephone instrument; or ACS to ACS.

2. The ACS shall employ membrane switches that shall provide the user with a positive feel of switch activation.

3. The ACS shall be equipped with a large sixteen (16) character LCD alpha-numeric readout which shall provide the following:

a) Queuing of calling room numbers and telephones.

b) Sequential displays of calls “waiting” with no limit to the number of calls.

c) EMERGENCY, PRIORITY, and NORMAL calls shall be displayed in order received and according to their priority.

d) Display of the alphanumeric room number or location of the calling station.

e) Display of current time in twelve (12) or twenty-four (24) hour format in idle state.

f) Full menu driven display of operator function dialing.

g) Full menu driven display of menu prompting.

C. The ACS shall provide two (2) modes of communication to classroom loudspeakers. Communications shall be via handset or microphone/speaker, activated by a hands-free

speakerphone or built-in talk/listen switch.

D. Answering calls from loudspeaker locations shall be accomplished by picking up the handset or depressing the SPEAKERPHONE button.

E. Call-in from an ACS, programmed telephone instrument, or callback switch shall be displayed in the following manner.

1. The first call entered shall appear in the display window of the ACS that shall display the dial number of the calling station.

2. Any number of calls shall be stored in memory, up to the total capacity of the system with the quantity of those calls waiting displayed at the ACS.

3. NORMAL and lower level calls shall annunciate with slower, repetitive rate, audio tone than EMERGENCY calls. Calls shall sort and stack automatically according to the preprogrammed priority level assignments. Each incoming call shall be automatically registered first in order of priority and then by order placed.

4. Calls that have been upgraded by the caller shall automatically move to the EMERGENCY level and appear in proper sequence.

5. EMERGENCY calls shall be distinguishable from NORMAL calls by designation and unique tone pattern. It shall be possible to visually or audibly determine whether the call-in is an emergency or normal call-in.

6. The ACS shall have the ability to forward its call-in coverage to another ACS or programmed telephone instrument. This shall be a manual operation or at a predetermined time, automatically forwarded.

7. It shall be possible to manually activate and sound the time tone event signal to any of the thirty-two (32) multi-purpose zones from any ACS and/or programmed telephone instrument.

8. The ACS shall include a PROGRAM button for selection and distribution of each of the program channels to loudspeaker zones. The program channels shall be distributed via the ACS to a loudspeaker zones, a group of loudspeaker zones, or all loudspeaker zones. It shall be possible to initiate changes to the distribution of the programs while program distribution is already in progress without having to first defeat the current distribution.

F. The ACS shall be provided with an interconnecting cord set with modular connectors at each end.

G. The system shall provide for transferring a call from the ACS to any other ACS and/or programmed telephone instrument.

H. The system shall be equipped with the necessary ports that shall allow diagnostics via any standard computer terminal and modem interface that shall allow remote engineering assistance from the system manufacturer.

I. The ACS shall provide for review of call-in coverage assignments to an ACS including review of identification numbers of remote stations assigned to either of the two (2) program channels and review of which ACS is forwarding coverage.

J. The System shall, through a standard telephone card, allow for the installation of a standard 1.9 GHz cordless telephone as an ACS.

K. An ACS which will meet this Specification is DUKANE Model No.DA1

IV. CORDLESS ADMINISTRATIVE CONTROL STATION

A. The Administrative Control Station (ACS) shall be desk mounted and contain a matching cordless handset with weatherproof casing, rubber side grips. The unit shall terminate using a RJ-45 modular telephone type jack.

B. Furnish and install one (1) digital waterproof 1.9 GHz cordless ACS. A cordless ACS that meets this specification is a UNIDEN Model No. WXI3077 or approved equal. Install cordless ACS as directed by PGCPS.

V. CENTRAL EQUIPMENT

A. This Contractor shall furnish and install (a) standard nineteen (19) inch wall mounted cabinet(s) for housing the central equipment. The central equipment shall be furnished and installed in the cabinet(s) by this Contractor and shall consist of the following items of equipment in the quantities required to perform the hereinbefore specified functions.

1. Atlas Sound Model No. WMA24-23 wall mounted equipment cabinet. Cabinet shall be complete with locking front door.

2. DUKANE Model No. CH1000-2I-8T Central Controller with two (2) Intercom paths and eight (8) telephone paths.

3. DUKANE Model No. RK100 Rack Mount Kit for the CH1000.

4. The system shall contain natively RS232, RS485, USB and Ethernet ports for communication to any third-party system. The system shall contain five open collectors, three dry contacts, and six general purpose inputs for third party system integration or for general panic buttons. The system shall have integrated surge protection for all audio ports and switching/line card ports.

5. The system shall use class D digital amplifiers(s) with at least 250 Watts RMS and 300 Watts peak output. Amplifier distortion shall not exceed 0.2% at 90% load. The class D amplifier shall be direct drive 25V constant voltage type. The system shall filter all voice signals through a Digital Signal Processor (DSP) to maximize voice intelligibility. System amplifiers shall go to sleep mode thus reducing their current draw when not used and shall have a built in pink noise generators for testing speaker quality and audio levels.

6. The system shall have at least 25 tones available for bells, reminders and other events and shall support WAV type audio files. The user shall be able to add 25+

custom WAV files for use as pre-recorded announcements, bells, reminders, pre-announced tones, or any other system tones.

7. The system shall support remote switching/line cards with 16 and 32 audio ports available Dukane Model No. SS16/SS32. A single central cabinet shall support up to 32 port cards. The remote switching/line cards shall be powered from the central cabinet out to 2700 feet away from the central cabinet.

8. DUKANE Model No. RCD350P AM/FM tuner/CD MP3 player assembly complete with pre-amp, monitor speaker and rack mount kit.

9. Middle Atlantic Model No. PD-920R power panel.

VI. SYSTEM INTEGRITY AND MEMORY

A. The user programmable functions of the sound and intercommunications system shall be protected by a manufacturer supplied lithium battery with a life expectancy of at least ten (10) years.

VII. EQUIPMENT LOCATIONS

A. This Contractor shall furnish and install where shown on the Drawings, wall mounted main and sub-distribution equipment locations consisting of fire resistant 3/4-inch thick plywood backboards.

VIII. ADMINISTRATIVE CONTROL STATION RECEPTACLES

A. This Contractor shall furnish and install where shown on the Drawings, administrative control station receptacles each consisting of: one (1) ORTRONICS Part No. OR-40300549 single-gang faceplate; and one (1) ORTRONICS Part No. OR-TJ5E00- 22 (red) single, category 5e, RJ-45 (568A/B) TrackJack insert suitable for flush or surface mounting in a single-gang outlet box as noted on the Drawings. Faceplate shall be labeled "Sound System Only". The equivalent outlets as manufactured by AMP, HUBBELL, P&S ACTIVATE, LEVITON, OPTICAL CABLE CORP., or PANDUIT, will also be considered provided they are fully equal to the type specified herein.

IX. CLASSROOM CALLBACK SWITCHES

A. This Contractor shall furnish and install where shown on the Drawings, wall mounted callback switches suitable for flush or surface mounting in a single gang outlet box as noted on the Drawings. The call-back switches shall have a call-in push button to provide a method to annunciate a normal intercom call or an emergency intercom call that is received by the DA1 Display Administrative Console. The call switch shall interface with a SS16/SS32 switching card audio port and shall provide RJ45 connectivity for a Cat 6 cable from the SS16/SS32 switching card port. A classroom callback switch that meets this Specification is DUKANE Model No. CS100.

X. FLUSH CEILING MOUNTED SPEAKER ASSEMBLIES

A. This Contractor shall furnish and install where shown on the Drawings, flush 1’x2’ drop-in ceiling speaker assemblies consisting of a loudspeaker, backbox, and baffle. A

flush 1'x2' drop-in ceiling speaker assembly that meets this specification is Quam Model No. System 5 (complete with 2' T-Bar) or equal by Atlas Sound. Each corridor speaker circuit shall have ONE Quam Model. No. System 5/25RSRJ speaker (for the first speaker on the circuit and the closest to the closet) to allow connectivity the SS16/SS32 switching audio ports by using a Cat 6 cable. Corridor circuits shall have maximum FIVE speakers per zone.

B. Flush ceiling mounted speaker assemblies for drywall type ceiling construction shall be the following: Loudspeaker shall be Atlas Sound Model No. C803AT72 or equal by Quam; Baffle shall be Atlas Sound Model No. 51-8 or equal by Quam; Back box shall be Atlas Sound Model No. BMT95-8-7 or equal by Quam for drywall type ceiling installations.

XI. SURFACE CEILING MOUNTED SPEAKER ASSEMBLIES

A. This Contractor shall furnish and install where shown on the Drawings, surface mounted speaker assemblies consisting of an Atlas Sound Model No. C803AT72 loudspeaker and an Atlas Sound Model No. Q428-SA backbox complete with regressed speaker grille and a matte white finish (or equal by Quam).

XII. SURFACE WALL MOUNTED SPEAKER ASSEMBLIES

A. This Contractor shall furnish and install where shown on the Drawings, surface mounted speaker/transformer/baffle assemblies (vandal resistant). With durable 14-gauge steel construction, impermeable security grille, 8" diameter speaker with a frequency response of 50Hz to 18kHz, factory wired 25/70.7-volt transformer with multi power taps. An assembly that meets this specification is Atlas Sound Model No. VP14 or equal by Quam.

XIII. HORN TYPE SPEAKERS

A. This Contractor shall furnish and install where shown on the Drawings, horn type speakers as shown on the Drawings and as herein specified.

B. Horn type speakers shall be wall mounted and have the following characteristics: a full range power rating of 15 watts; frequency response of 275-14,000 Hz; 110-degree dispersion; power taps at 2, 4, 8, and 15 watts; axial sensitivity of 121 dB at 4 feet for 15-watt input; beige baked enamel finish over a corrosion resistant coating; three-way adjustable mounting bracket; and screw type terminals with a transparent cover and strain relief clamp. A horn type speaker that meets this Specification is Atlas model AP-15TC.

C. Horn type speakers for use in gymnasiums shall be surface mounted as shown on the Drawings and shall have the following characteristics: a full range power rating of 30 watts; frequency response of 225-14,000 Hz; 100 degree dispersion; power taps at 2, 4, 8, 15, and 30 watts; axial sensitivity of 125dB at four (4) feet for 30 watt input; beige baked enamel finish over a corrosion resistant coating; three-way adjustable mounting bracket; and screw type terminals with a transparent cover and strain relief clamp. A horn type speaker for use in gymnasiums that meets this Specification is DUKANE Model No. 5A296.

XIV. VOLUME CONTROLS

A. This Contractor shall furnish and install where shown on the Drawings, wall mounted speaker volume controls as specified herein.

B. Volume controls shall provide for control of area speaker volume on 25 volt or 70-volt speaker distribution lines controlling up to 10 watts of audio power. Attenuation shall be accomplished in eleven (11) steps, including "0". The switch shall be a twelve (12) position rotary type. Volume controls shall be complete with a satin finished, stainless steel cover plate and the knob shall have a clearly visible white indicator line. The volume control shall mount in a single gang outlet box, flush or surface mounted as noted on the Drawings. A volume control that meets this Specification is ATLAS SOUDOLIER Model AT-10.

XV. MICROPHONES

A. This Contractor shall furnish one (1) unidirectional, dynamic, dual impedance microphone with the following features: frequency response of 80 to 13,000 Hz; uniform cardioid polar pattern; built-in windscreen; shock mount; on-off switch with lockplate; and swivel adapter. A microphone which meets this Specification is SHURE Model No. SM58S, dynamic cardioid microphones. This microphone shall be furnished by this Contractor complete with a twenty-five (25) foot connector cord with CANNON XLR connectors, and an ATLAS SOUNDOLIER Model MS-20 floor stand.

B. Elementary Schools only: This Contractor shall furnish one (1) bus call station hand-held communications type, noise-canceling, dynamic, noise-canceling microphone with the following features: frequency response of 100 to 7,500 Hz; double pole, double throw touch-to-talk switch with spring return; wall clip; and a six (6) foot long, four (4) conductor cable having two (2) conductors shieA microphone which meets this Specification is ASTATIC Model No. 611L complete with Model No. 40-315 mounting bracket.

XVI. MICROPHONE OUTLETS

A. This Contractor shall furnish and install where shown on the Drawings, wall mounted microphone outlets suitable for flush or surface mounting in a single gang outlet box as noted on the Drawings. Microphone outlets shall consist of CANNON “XLR” series audio jacks of the type required so as to be compatible with the type of microphone cable connector furnished, and a stainless-steel cover plate. A microphone outlet that meets this Specification is Pro Co WP1049DF complete with a five-pin XLR.

XVII. SOUND AND INTERCOMMUNICATIONS SYSTEM CABLE

A. This Contractor shall furnish and install the following cables for each speaker zone shown. One (1) two (2) conductor, twisted shielded pair, No. 18 AWG stranded plenum rated cable with a temperature range for dry locations of minus ten (10) degrees C to sixty (60) degrees C. A cable, which meets this Specification, is WEST PENN Cat. No. 25293B or equal as manufactured by BELDEN, BERK TEK, CONSULIDATED WIRE, and GENERAL CABLE, PAIGE, or TAPPAN.

B. This Contractor shall furnish and install the following cables for each microphone outlet

shown.

1. One (1) stranded, No. 20 AWG, shielded, single twisted pair plenum rated cable with a temperature range for dry locations of minus ten (10) degrees C to sixty (60) degrees C. A cable that meets this Specification is WEST PENN Cat. No. 25292B or equal as manufactured by BELDEN, BERK TEK, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

C. Outside plant (flooded) cable, one (1) two (2) conductor, No. 18 AWG stranded, having two (2) twisted conductors shielded. A cable, which meets this Specification, is WEST PENN Cat. No. AQC293 or equal as manufactured by BELDEN, BERK TEK, CONSULIDATED WIRE, and GENERAL CABLE, PAIGE, or TAPPAN

D. This Contractor shall furnish and install the following cables for each ACS shown.

1. One Cat 6 4-pair UTP Cable, plenum with White Jacket, West Penn Model No. 254246WH or equal as manufactured by BELDEN, BERK TEK, CONSULIDATED WIRE, and GENERAL CABLE, PAIGE, or TAPPAN.

2. This Contractor shall furnish and install the following cables for each callback switch. One Cat 6 4-pair UTP Cable, plenum with White Jacket, West Penn Model No. 254246WH or equal as manufactured by BELDEN, BERK TEK, CONSULIDATED WIRE, and GENERAL CABLE, PAIGE, or TAPPAN.

E. This Contractor shall furnish and install the following cables for each volume control shown.

1. One (1) four (4) conductor, No. 20 AWG stranded plenum rated cables with a temperature range for dry locations of minus ten (10) degrees C to sixty (60) degrees C having two (2) twisted conductors shielded and two (2) twisted conductors unshielded. A cable that meets this Specification is WEST PENN Cat. No. 25359B or equal as manufactured by BELDEN, BERK TEK, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

F. This Contractor shall furnish and install the following cables for priority override for each independent sound system (i.e. auxiliary, auditorium, gymnasium, etc.) within the building.

1. One (1) two (2) conductor No. 14 AWG stranded, plenum rated cable, unshielded (contact or voltage trigger) with a temperature range for dry locations of minus ten (10) degrees C. to sixty (60) degrees C. A cable that meets this specification is WEST PENN Cat. No. 25226B or equal as manufactured by BELDEN, BERK TEK, CONSULIDATED WIRE, and GENERAL CABLE, PAIGE, or TAPPAN (for priority override).

2. One (1) stranded, No. 18 AWG, shielded, single twisted pair, plenum rated (voice) with a temperature range for dry locations of minus ten (10) degrees C. to sixty (60) degrees C. A cable that meets this specification is WEST PENN Cat. No. 25293B or equal as manufactured by BELDEN, BERK TEK, CONSULIDATED WIRE, and GENERAL CABLE, PAIGE, or TAPPAN (for priority override).

G. This Contractor shall furnish and install the following cables for connection between sub-closets and main closet within the building.

1. One Cat 6 4-pair UTP Cable, plenum with White Jacket, West Penn Model No. 254246WH or equal as manufactured by BELDEN, BERK TEK, CONSULIDATED WIRE, and GENERAL CABLE, PAIGE, or TAPPAN (from each SS16/SS32 back to the Central Cabinet plus one additional Cat 6 cable per sub-closet for future spare).

XVIII. AM/FM ANTENNA

A. This Contractor shall furnish and install a PIXEL TECHNOLOGIES Model No. AFHD-4 AM/FM and HD antenna complete with: L mounting bracket; weather boot; surge protector; 20dB attenuator; 10dB attenuator; AM/FM separator; U- bolts with washers and nuts; pole mount saddle brackets; F-female to twin-lead adaptor and push-on-F-female to DIN adaptor. This Contractor shall furnish and install a weatherhead, rigid steel conduit mast, and two (2) RG-6 plenum rated cables from the antennas to the tuner located in the sound and intercommunication system equipment rack. This Contractor shall ground the antenna in accordance with the following specification.

Part 3 - Execution

I. RACK MOUNTED EQUIPMENT

A. Rack mounted equipment shall be installed by this Contractor with the proper adapters, rack mounting kits, brackets, and closure panels for unused spaces. All interconnecting wiring shall be labeled, bundled, secured, and terminated by this Contractor in a neat and professional manner.

B. All rack mounted equipment AC power cords shall be plugged into the mounted power strip by this Contractor.

II. ADMINISTRATIVE CONTROL STATIONS

A. Administrative Control Station (ACS) shall be wired to locations shown on Drawings or described herein by this Contractor and provided with twelve (12) feet of slack cable from the outlet point to the ACS

III. ADMINISTRATIVE TELEPHONE RECEPTACLES

A. Administrative control station receptacles shall be assembled and installed by this Contractor at mounting heights and locations as shown on the Drawings, in outlet boxes appropriate for the location and wire ready for use.

IV. SPEAKERS

A. Flush ceiling mounted speaker assemblies shall be supported by this Contractor from the building structure with a minimum of two (2) steel wires. Ceiling baffles shall be finished flush with the ceiling. The T-Bar shall be securely attached to the ceiling grid

with pop-rivets at both ends. Flush ceiling mounted speakers shall be tapped at 0.5 watts unless otherwise indicated.

B. Surface mounted speaker assemblies shall be securely fastened to the building structure by this Contractor with threaded rod or bolts as appropriate for the application. Surface mounted speakers shall be tapped at 0.5 watts unless otherwise indicated.

C. Surface wall mounted speaker assemblies shall be securely fastened to the building structure by this Contractor with bolts as appropriate for the application. Surface mounted speakers shall be tapped at 4.0 watts unless otherwise indicated.

D. Horn type speaker shall be securely fastened to the building structure by this Contractor with threaded rod, bolts and/or bridging as required for the mounting location. Horn type speakers shall be tapped as directed by the Owner.

V. MICROPHONES

A. This Contractor shall unpack each microphone and assemble with cables and stands and connect ready for operation. Microphones shown for permanent installation shall be mounted by this Contractor in accordance with the Drawings in a manner appropriate for the location.

VI. MICROPHONES OUTLETS

A. This Contractor shall assemble microphone outlets and install, connect, and label as shown on the Drawings.

VII. CALL-BACK SWITCHES

A. Call-back switches shall be installed by this Contractor at mounting heights and locations as shown on the Drawings, in outlet boxes appropriate for the location and wire ready for operation.

VIII. FIELD WIRING

A. All vertical low-voltage field wiring shall be installed by this Contractor in conduit and/or surface metal raceway as shown on the Drawings. Conduit fill shall not exceed the conduit space capacity.

B. All horizontal to be installed in areas without a ceiling or in areas without an accessible ceiling shall be installed by this Contractor in ½-inch conduit. Conduit is not required in areas designed on the Drawings as “Communications” rooms or closets.

C. All horizontal low voltage field wiring to be installed in areas with accessible ceilings shall be installed by this Contractor bundled together and run exposed above the ceilings. Bundles shall be supported by "J" hooks mounted not more than four (4) feet on center. “J” hooks to be dedicated to the wiring specified in this specification section.

D. All horizontal low-voltage field wiring shall be run at right angles to the building structure.

E. All horizontal low voltage field wiring shall be installed below the roof/floor structural supports (joists, beams, girders, etc.). Wiring installed between the structural supports mentioned above and the roof or floor deck will not be acceptable.

F. All horizontal low voltage field wiring penetrations through new and/or existing walls shall be sleeved. Minimum sleeve size shall be 3/4 inch. All sleeves shall be bushed both sides.

G. All low voltage field wiring shall be installed, terminated, and labeled by this Contractor as shown on the Drawings. Cables shall not be nicked, strained, or damaged during the pulling operation. Splices shall be permitted at equipment enclosures and junction boxes only. All splices shall utilize insulated crimp type connectors. All junction box covers shall be stenciled for distinct identification.

H. Microphone cabling shall be installed by this Contractor in accordance with requirements for special cables, however terminations at connectors shall be solder connected.

I. All low voltage wiring shall be checked and tested by this Contractor to insure the system is free from grounds, opens, and shorts.

J. All work shall be under the supervision of a factory accredited sound engineer. It shall be the responsibility of the sound engineer and this contractor to check and inspect this installation to the Owner's and Architect/Engineer's approval.

K. All wiring installed outside the footprint of a building shall be outside plant (flooded), indoor/outdoor, type cables.

IX. ANTENNA INSTALLATION

A. The antenna shall be bracket mounted by this Contractor above the roof at a location approved by the Owner. The antenna cables shall be run by this Contractor to the equipment rack and connected ready for operation.

B. The antenna shall be grounded by this Contractor to the secondary building ground system with one (1) No. 10 AWG in 1/2-inch conduit.

X. ON-SITE AS-BUILT DRAWINGS

A. The Contractor shall provide one (1) set of the sound and intercommunications and system supplier’s as-built drawings for permanent use on-site. The Contractor shall: laminate each page of these drawings; provide a rigid means for mounting such as 1/4-inch-thick x two (2) inch wide x width of the drawings through-bolted wood along the left edge of the drawings; furnish and install hanging hooks on the back of the Communications Room door; and hang the bound set of drawings.

END OF SECTION

Part 1 - General

I. REQUIREMENTS

A. The general provisions of the Contracts, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

II. SCOPE

A. The work covered under this Section shall include furnishing and installing locally controlled complete and satisfactorily operating auxiliary stereo sound reinforcement systems in the **Cafeteria (Elementary, Middle and High Schools), Gymnasium (Elementary and Middle Schools) and Lecture Halls (Middle and High Schools)** for the pickup, amplification, and reproduction of voice and/or music at a remote location.

B. All systems shall be complete, including any materials not specifically enumerated herein or shown on the drawings, in order to provide the functions, features, and operations as described. The Contractor is forewarned to confirm product availability with the manufacturer. No claim for payment of additional cost incurred due to discontinued or superseded equipment will be honored.

C. The work covered under this Section shall include furnishing and installing the components only for Auxillary Sound reinforcement systems as indicated on the Drawings and described herein.

D. The Sound System Contractor is responsible to coordinate with the Electrical Contractor and verify the existence or impending installation of all conduit, penetrations, backboxes, floorboxes, and electrical circuits in the quantities, sizes, and locations necessary for the system(s) covered herein.

E. System acceptance is contingent upon the Authority's inspection and verification that all equipment has been provided and that all work, including documentation, has been completed in accordance with the Contract Documents.

III. QUALITY ASSURANCE

A. All equipment specified herein shall be the product of a manufacturer of established reputation and experience who shall have produced similar apparatus for a period of at least ten (10) years and who shall be able to refer to similar installations now rendering satisfactory service.

B. The auxiliary sound reinforcement system(s) shall be furnished by a factory authorized distributor certified to design, program, and service the system. The distributor must show evidence of successfully furnishing systems specified for at least five (5) years

C. All equipment for this system shall be listed by Underwriters Laboratories, Inc. (UL), bear the UL label and shall be installed in accordance with all requirements of the National Electrical Code (NEC), state and local codes, and these Specifications.

D. The auxiliary sound reinforcement system(s) shall be furnished and installed by this Contractor as shown on the Drawings and as specified herein.

E. Shop drawing submittals are required per SECTION 16010 and shall include the following for review. Submittals not containing all of the information listed below will be rejected.

1. A complete list of equipment shall be furnished indicating the specific quantities to be furnished by this Contractor. The catalog or model number for each module of the system(s) shall be listed next to the quantities. This information shall be furnished in the front of the submittal.

2. A specific description of the system(s) shall be furnished describing each module and how it shall function in the system.

3. A specific drawing shall be furnished of the (each) equipment rack. Each module shall be shown in its proper location with its terminal designations shown.

4. A data sheet shall be furnished for each module and device. The information shall be highlighted that applies to the particular module or device to be furnished.

5. A detailed diagram showing how to connect each device shall be furnished indicating the exact final connection information.

6. A detailed set of floor plans for the area(s) where the (each) auxiliary sound system(s) is (are) to be installed shall be furnished. The plans shall show the locations of all equipment, loudspeakers, and devices and their required interconnections. The interconnections shown shall indicate the number, size, and type of wires as described in this Specification. Loudspeakers shall be zoned as shown on the Drawings. The layout of all auxiliary sound reinforcement system(s) equipment, devices, and conduit routing shall closely follow that shown on the Drawings.

IV. QUALITY ASSURANCE

A. Conditions for Consideration of "Or Equal" Products: Where products are specified by name and accompanied by the term "or equal", the proposed "or equal" product will be considered when the following conditions are satisfied. If all the following conditions are not satisfied, Design Consultant will return requests without action, except to record noncompliance with these requirements:

1. Proposed product does not require extensive revisions to the Contract Documents.

2. With the exception of the product name or number and manufacturer's name, proposed product conforms with requirements indicated on the Drawings and in the Specifications in every respect and will produce indicated results.

3. Proposed product t is fully documented and properly submitted.

4. Proposed product has received necessary approvals of authorities having jurisdiction.

5. Proposed product is compatible with AND has been coordinated with other portions of the Work.

6. Proposed product provides specified warranty.

7. If proposed product involves more than one contractor, proposed product has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

8. Submission is accompanied with detailed comparison of significant qualities of proposed product with those named in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.

9. Submission is accompanied with a list of similar installations for completed projects with project names and addresses and names and addresses of design consultants and authorities, if requested.

10. Submission is accompanied with proposed product's Manufacturer signed written statement on Manufacturer's letterhead, certifying that manufacturer complies with requirements in the Contract Documents.

V. DOCUMENTATION

A. This Contractor shall furnish to the Contractor, one (1) set of "As Built" drawings depicting the complete field wiring system and component interconnections in the system equipment rack.

B. This Contractor shall furnish to the Contractor four (4) sets of factory operation and maintenance manuals. These manuals shall include factory service manuals with complete parts lists, wiring and component schematics including circuit diagrams, and all other information necessary for the proper operation and service maintenance of the system.

VI. TRAINING

A. This Contractor shall furnish eight (8) hours of technical service training to the Owner's technical staff using the factory operation manuals previously specified.

B. This Contractor shall furnish eight (8) hours of operating and programming training to the Owner's operating staff which shall be delivered in two (2) separate four (4) hour sessions to be scheduled at the Owner's convenience over the warranty period.

C. All training specified herein shall be performed by a factory certified technician.

VII. DESCRIPTION OF OPERATION

A. Each system shall provide for the distribution of voice and music to all associated loudspeakers.

B. Each system shall provide for the reproduction of standard cassette tapes and compact disc recordings and distribute them to all associated loudspeakers.

C. Each system shall provide for the input and output of an external tape recorder.

D. Each system shall provide for individual bass and treble controls.

E. Each system shall provide a personal listening system for use by hearing impaired listeners.

F. Each Auxiliary sound reinforcement system shall accept a priority override signal to mute the system when the main building Sound and Intercommunications System activates the priority override function.

VIII. SYSTEM TEST AND ACCEPTANCE

A. Prior to the final site visitation, and acceptance of each construction phased spaces, this Contractor shall conduct an operating test of each complete auxiliary sound reinforcement system. Each system shall test free from grounds, shorts, and other faults. All connections shall be checked for mechanical and electrical connection. All equipment shall be demonstrated to operate in accordance with the requirements set forth in these Specifications and as shown on the Drawings.

B. This Contractor shall perform all tests in the presence of the Architect/Engineer. This Contractor shall furnish all personnel and test instruments required for use in the test.

IX. WARRANTY

A. This Contractor shall deliver the work described herein in a first class operating condition in every respect. This Contractor shall also warrant that the material, equipment, and workmanship shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractors own expense. Refer to SECTION 01740 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the Drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

Part 2 - Products

I. MANUFACTURER

A. The auxiliary sound reinforcement system(s) equipment shall be manufactured by ATLAS SOUND, CROWN, PASO, SHURE, TASCAM and WILLIAMS SOUND as listed.

or equal equipment as manufactured by and RAULAND.

II. AUXILIARY SOUND REINFORCEMENT SYSTEM EQUIPMENT RACKS

A. This Contractor shall furnish and install sectional wall mounted auxiliary sound system equipment racks as shown on the Drawings and herein specified. Each rack shall be ATLAS SOUND Model No. WMA24-23 providing a minimum of forty-two (42) vertical inches of standard nineteen (19) inch wide rack mounting space. Each rack shall be complete with a cylinder lock and textured black finish. Each auxiliary sound system equipment rack shall have a sign mounted to the front stating, “Personal Listening Devices Stored Here”. The sign shall be 1/16-inch-thick laminated plastic with 3/16-inch-high white letters on a black background. The following equipment shall be furnished and installed by this Contractor in each rack:

1. One (1) TOA Model No. D-901 twelve (12) input, eight (8) output, digital mixer. Mixer shall come complete with:

    a) One (1) D936R four (4) stereo input module (tuner, CD, MP3 outlets).

    b) One (1) D971E four (4) channel line output module (personal listening system, amplifier).

    c) Four (4) D921E 2-channel input modules (microphone/MP3 outlets).

2. One (1) TASCAM Model No. CD-200i, rack mounted CD player with MP3 dock.

3. One (1) PYLE Model No. PT504 rack mounted stereo AM/FM tuner.

4. One (1) CROWN Model No. CTs 600 dual channel amplifier with three hundred (300) watts per channel at eight (8) ohms. Amplifier shall be suitable for rack mounting.

5. One (1) ATLAS SOUND Model No. ACS-1 power strip completes with six (6) NEMA 5-15R duplex receptacles and mounting hardware.

6. One (1) WILLIAMS SOUND Model No. PPA T35 personal listening system base station transmitter complete with WILLIAMS SOUND Model No. RPK 005 rack mounting kit and ANT 005 coaxial antenna.

7. This Contractor shall furnish and install in the charging stations thirteen (13) WILLIAMS SOUND Model No. PPA R37, seventeen (17) channel personal listening system receivers each complete with: WILLIAMS SOUND Model No. EAR 013 single earbud, rechargeable batteries, and belt clip.

8. This contractor shall furnish to the owner’s representative, four (4) WILLIAMS SOUND Model NKL 001 neckloops.

9. This Contractor shall furnish and install one (1) WILLIAMS SOUND Model No. CHG 3512 twelve (12) unit charging station and one 3502 two (2) unit charging station for the personal listening system receivers complete with one (1) ATLAS

SOUND Model No. VTD1-16 rack sliding shelf.

10. One (1) SHURE “SLX” series UHF Wireless Microphone System complete with Model No. SLX4 wireless receiver complete with rack mounting hardware and detachable antennas.

III. MICROPHONES

A. This Contractor shall furnish a total of four (4) SHURE Model No. SM58S dynamic cardioid microphones complete with ON-OFF switch and lockplate for each system. Each microphone shall be furnished by this Contractor complete with a twenty-five (25) foot connector cord with CANNON XLR connectors.

B. This Contractor shall furnish to the Owner’s representative, one (1) SHURE Model No. SLX2/SM58 dynamic cardioid wireless handheld microphone, and one (1) SHURE Model No WL183 lapel microphone with SLX1 transmitter. Each complete with an ON/OFF switch and batteries.

IV. MICROPHONE FLOOR STANDS

A. This Contractor shall furnish a total of four (4) ATLAS SOUNDOLIER Model No. MS-20 adjustable microphone floor stands for each system.

V. MICROPHONE OUTLETS

A. This Contractor shall furnish and install where shown on the Drawings, flush or surface wall and/or ceiling mounted microphone outlets (Type “A”) consisting of CANNON "XLR" complete with 3 pin XLR (female) series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, and a stainless steel cover plate. A microphone outlet, which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

B. This Contractor shall furnish and install where shown on the Drawings, flush or surface wall mounted Microphone outlets (Type “B”) consisting of one (1) CANNON "XLR", complete with 3 pin XLR (female), series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, one (1) 3.5mm stereo audio jack (MP3), and a stainless-steel cover plate. A Microphone/MP3 outlet which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

VI. FLUSH CEILING MOUNTED SPEAKER ASSEMBLIES

A. This Contractor shall furnish and install where shown on the Drawings, flush 1’x2’ drop-in ceiling speaker assemblies consisting of a loudspeaker, backbox, and baffle. A flush 1’x2’ drop-in ceiling speaker assembly that meets this specification is ATLAS SOUND Model No. IS125SYS complete with 2’ T-Bar.

B. Flush ceiling mounted speaker assemblies for drywall type ceiling construction shall be the following: Loudspeaker shall be ATLAS SOUNDOLIER Model No. C803AT72; Baffle shall be ATLAS SOUND Model No. 51-8; Backbox shall be ATLAS SOUND Model No.

95-8 and Model No. 8MT95-8-7 for drywall type ceiling installations.

VII. SURFACE CEILING MOUNTED SPEAKER ASSEMBLIES

A. This Contractor shall furnish and install where shown on the Drawings, surface mounted speaker assemblies consisting of an ATLAS SOUND Model No. C803AT72 loudspeaker and an ATLAS SOUND Model No. Q428-SA backbox complete with regressed speaker grille and matte white finish.

VIII. AM/FM ANTENNA

A. This Contractor shall furnish and install a PIXEL TECHNOLOGIES Model No. AFHD- 4 AM/FM and HD antenna complete with: L mounting bracket; weather boot; surge protector; 20dB attenuator; 10dB attenuator; AM/FM separator; U-bolts with washers and nuts; pole mount saddle brackets; F-female to twin-lead adaptor and push-on-F-female to DIN adaptor. This Contractor shall furnish and install a weatherhead, rigid steel conduit mast, and two (2) RG-6 plenum rated cables from the antennas to the tuner located in the sound and intercommunication system equipment rack. This Contractor shall ground the antenna in accordance with the following specification.

IX. AUXILLARY SOUND SYSTEM CABLE

A. This Contractor shall furnish and install field wiring for auxiliary sound systems loudspeakers as shown on the Drawings. Wiring shall be two (2) conductor, No. 16 AWG stranded and shielded cable. A cable that meets this Specification is WEST PENN Cat. No.25294B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

B. This Contractor shall furnish and install field wiring for microphone outlets as shown on the Drawings. Wiring shall be two (2) conductor, No. 20 AWG stranded and shielded cable. A cable that meets this Specification is WEST PENN Cat. No. 25292B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

C. This Contractor shall furnish and install field wiring for MP3 outlets as shown on the Drawings. Wiring shall be two (2) conductor, No. 20 AWG stranded and shielded cable. A cable that meets this Specification is WEST PENN Cat. No. 25292B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

D. This Contractor shall furnish and install antenna cable consisting of one (1) RG/59U coaxial cable installed by this Contractor in conduit.

E. If required, This Contractor shall furnish and install, for bridge cabling between auxiliary sound systems as shown on the drawings, two (2) conductor, No. 16 AWG stranded and shielded cable. A cable that meets this Specification is WEST PENN Cat. No. 25294B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

Part 3 - Execution

I. EXAMINATION

A. Site Verification of Conditions

1. Examine site conditions, with the Installer present, for compliance with requirements and other conditions affecting the performance of the Integrated Electronic Communications Network system.

2. Do not proceed until unsatisfactory conditions have been corrected.

II. INSTALLATION

A. All vertical low-voltage field wiring shall be installed by this Contractor in conduit and/or surface metal raceway as shown on the Drawings. Conduit fill shall not exceed the conduit space capacity.

B. All horizontal to be installed in areas without a ceiling or in areas without an accessible ceiling shall be installed by this Contractor in ½-inch conduit.

C. All horizontal low voltage field wiring to be installed in areas with accessible ceilings shall be installed by this Contractor bundled together and run exposed above the ceilings. Bundles shall be supported by "J" hooks mounted not more than four (4) feet on center. “J” hooks to be dedicated to the wiring specified in.

D. All low voltage wiring connections shall be made by this Contractor as directed by the manufacturer. Splices for circuits shall be made only in junction boxes and shall be crimp connected.

E. All wiring for the auxiliary sound reinforcement systems shall be checked and tested by this Contractor to insure the system is free from grounds, opens, and shorts.

F. All work shall be under the direct supervision of an accredited factory sound engineer. It shall be the responsibility of the sound engineer and this Contractor to check and inspect this installation to the Architect/Engineer's approval.

G. Flush mounted speaker assembly support bridges shall be supported by this Contractor from the building structure with a minimum of two (2) steel wires. Ceiling baffles shall be finished flush with the ceiling by this Contractor.

H. Surface mounted speakers shall be mounted by this Contractor between bar joists on 1-1/2" x 1-1/2" bridging, flush to the roof deck.

III. RACK MOUNTED EQUIPMENT

A. The auxiliary sound reinforcement system(s) rack mounted equipment shall be installed by this Contractor with the proper adapters, rack mounting kits, brackets, and closure panels for unused spaces. All interconnecting wiring shall be labeled, bundled, secured, and terminated by this Contractor in a neat and professional manner.

B. All rack mounted equipment AC power cords shall be plugged into the mounted power strip by this Contractor.

IV. SPEAKER

A. Flush ceiling mounted speaker assemblies shall be supported by this Contractor from the building structure with a minimum of two (2) steel wires. Ceiling baffles shall be finished flush with the ceiling. The T-Bar shall be securely attached to the ceiling grid with pop-rivets at both ends. Flush ceiling mounted speaker assemblies shall be tapped at 2.0 watts unless otherwise indicated.

B. Surface ceiling mounted speaker assemblies shall be securely fastened to the building structure by this Contractor with threaded rod, bolts and/or bridging as required for the mounting location. Surface ceiling mounted speaker assemblies shall be tapped at 2.0 watts unless otherwise indicated.

V. MICROPHONES

A. This Contractor shall unpack each microphone and assemble with cables and stands and connect ready for operation.

VI. MICROPHONE OUTLETS

A. This Contractor shall assemble microphone outlets and install, connect, and label as shown on the Drawings.

VII. ANTENNA INSTALLATION

A. The antenna shall be bracket mounted by this Contractor above the roof at a location approved by the Owner. The antenna cables shall be run by this Contractor to the equipment rack and connected ready for operation.

B. The antenna shall be grounded by this Contractor to the secondary building ground system with one (1) No. 10 AWG in 1/2-inch conduit.

END OF SECTION

Part 1 - General

I. REQUIREMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

II. SCOPE

A. The work covered under this Section shall include furnishing and installing a locally controlled complete and satisfactorily operating sound reinforcement system in the Auditorium for the pickup, amplification, and reproduction of voice and/or music.

III. QUALITY ASSURANCE

A. All equipment described shall be the product of a manufacturer of established reputation and experience produced similar apparatus for a period of at least ten (10) years and shall be able to refer to similar installations now rendering satisfactory service.

B. The auditorium sound reinforcement system shall be furnished by a factory- authorized distributor certified to design, program, and service the system. The distributor must show evidence of successfully furnishing systems specified for at least five (5) years.

C. All equipment for this system shall be listed Underwriters Laboratories, Inc. (UL) bear the UL label and shall be installed in accordance with all requirements of the National Electrical Code (NEC), state and local codes, and these Specifications.

D. The entire Auditorium sound reinforcement system installation shall be performed under the direct supervision of a factory trained service specialist.

E. Shop drawing submittals are required per SECTION 260500 and shall include the following for review. Submittals not containing all of the information listed below will be rejected.

1. A complete list of equipment shall be furnished indicating the specific quantities to be furnished by this Contractor. The catalog or model number for each module of the system shall be listed next to the quantities. This information shall be furnished in the front of the submittal.

2. A specific description of the system shall be furnished describing each module and how it shall function in the system.

3. A specific drawing shall be furnished of the Auditorium sound reinforcement system equipment rack. Each module shall be shown in its proper location with its terminal designation shown.

4. A data sheet shall be furnished for each module and device. The information shall be highlighted that applies to the particular module or device to be furnished.

5. A detailed diagram showing how to connect each device shall be furnished indicating exact final connection information.

6. A detailed drawing showing how to mount the Main House Speakers shall be furnished, including necessary hardware and mounting devices.

7. A detailed floor plan for the Auditorium and associated surrounding areas shall be furnished. The plan shall show the locations of all equipment, loudspeakers, and devices and their required interconnections. The interconnections shown shall indicate the number, size, and type of wires as described in this Specification. Loudspeakers shall be zoned as shown on the Drawings. The layout of all Auditorium sound reinforcement system equipment, devices, and conduit routings shall closely follow that shown on the Drawings.

IV. DOCUMENTATION

A. This Contractor shall furnish to the Contractor, one (1) set of "As Built" drawings depicting the complete field wiring system and component interconnections in the system equipment rack.

B. This Contractor shall furnish to the Contractor, four (4) sets of factory operation and maintenance manuals. These manuals shall include factory service manuals with complete parts lists, wiring and component schematics including circuit diagrams, and all other information necessary for the proper operation, service, and maintenance of the system.

V. TRAINING

A. This Contractor shall furnish eight (8) hours of technical service training to the Owner's technical staff using the factory service manuals previously specified.

B. This Contractor shall furnish eight (8) hours of operating and programming training to the Owner's operating staff which shall be delivered in two (2) separate four (4) hours sessions to be scheduled at the Owner's convenience over the two (2) year warranty period.

C. All training specified herein shall be performed by a factory certified technician.

VI. DESCRIPTION OF OPERATION

A. This Contractor shall furnish and install an Auditorium sound reinforcement system with all conduit, cable, outlets, devices, and equipment as shown on the Drawings and as herein specified to furnish a complete system.

B. The Auditorium sound reinforcement system shall provide for reception of AM or FM radio broadcasts, the amplification of music and voice, and the reproduction of recorded music or other program materials, and their distribution to all associated loudspeakers.

C. The Auditorium sound reinforcement system shall provide a personal listening system

for use by hearing impaired listeners.

D. The Auditorium sound reinforcement system shall also provide for a two (2) channel intercommunications system. The intercommunications system shall provide hands-free, two-way voice communications between areas shown on the Drawings to be equipped with intercommunications system headset outlets.

E. The Auditorium sound reinforcement system shall accept a priority override signal to mute the system when the main building Sound and Intercommunications System activates the priority override function.

VII. SYSTEM TEST AND ACCEPTANCE

A. Prior to the final site visitation this Contractor shall conduct an operating test of the complete Auditorium sound reinforcement system. The system shall test free from grounds, shorts, and other faults. All connections shall be thoroughly checked for mechanical and electrical connections. All equipment shall be demonstrated to operate in accordance with the requirements set forth in these Specifications and as shown on the Drawings.

B. This Contractor shall perform all tests in the presence of the Architect/Engineer. This Contractor shall furnish all personnel and test instruments for use in the test.

C. When the work on entire Auditorium sound reinforcement system has been completed and is ready for final review, this Contractor shall demonstrate that the requirements of the Contract as it applies to this work have been carried out and that the system has been adjusted and operated in accordance therewith.

VIII. WARRANTY

A. This Contractor shall deliver the work described herein in a first-class operating condition in every respect. This Contractor shall also warrant that the material, equipment, and workmanship furnished shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractors own expense. Refer to SECTION 01740 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the Drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

Part 2 - Products

I. MAIN EQUIPMENT RACK

A. This Contractor shall furnish and install (a) floor mounted equipment rack(s) for the Auditorium sound reinforcement system as shown on the Drawings and as specified herein. The rack(s) shall be ATLAS SOUND Cat. No. WA200-77B (each) providing a minimum of seventy-seven (77) inches of standard nineteen (19) inch rack mounting space. The rack(s) shall be complete with a hinged front door with cylinder lock and

handle, and a flush spring-hinged rear door with cylinder lock (front and rear locks shall be keyed differently) and handle. Each auditorium sound system equipment rack shall have a sign mounted to the front stating, “Personal Listening Devices Stored Here”. The sign shall be 1/16-inch-thick laminated plastic with 3/16-inch-high white letters on a black background. The rack(s) shall house the following equipment:

1. Four (4) CROWN Model No. CTs3000 dual channel amplifiers, (1500 watts at 8 ohms per channel) one for each main house speaker arrays and one for each main house subwoofer.

2. One (1) CROWN Model No. CTs 600 dual channel amplifier, (300 watts at 8 ohms per channel), for the stage monitor speakers.

3. One (1) PASO Model No. T3115BGM amplifiers with 27/3500 rack mounting kit for the dressing room speakers.

4. One (1) DBX DriveRack 4820 loudspeaker management system.

5. One (1) ATLAS SOUND Model No. MVX-193, monitor panel.

6. One (1) DBX model No. DriveRack 260, digital signal processor with built- in graphic equalizer.

7. One (1) WILLIAMS SOUND Model No. PPA T35 personal listening system base station transmitter complete with WILLIAMS SOUND Model No. RPK 005 rack mounting kit and ANT 005 coaxial antenna.

8. This Contractor shall furnish and install in the charging stations, thirty (30) WILLIAMS SOUND Model No. No. PPA R37, seventeen (17) channel personal listening system receivers each complete with WILLIAMS SOUND Model No. EAR 013 single ear bud, rechargeable batteries, and belt clip.

9. This contractor shall furnish to the owner’s representative, eight (8) WILLIAMS SOUND Model NKL 001 neckloops.

10. This Contractor shall furnish and install, three (3) WILLIAMS SOUND Model No. CHG 3512 twelve (12) unit charging stations for the personal listening system receivers complete with three (3) ATLAS SOUND Model No. VTD1-16 rack sliding shelves.

11. One (1) PYLE Model No. PT504 rack mounted stereo AM/FM tuner.

12. One (1) TASCAM Model No. CD-200i, rack mounted CD player with MP3 dock.

13. One (1) ATLAS SOUND Model No. ACRL-191A AC power control panel suitable for rack mounting.

14. One (1) ATLAS SOUND Model No. ACS-1 AC power strip suitable for rack mounting.

15. One (1) TELEX Model Audiocom MS-2002, rack mounted, two (2) channel intercom master station and power supply.

16. Two (2) Shure ULXD4Q Quad digital receiver, rack mounted four channel microphone receivers complete with two (2) Shure UA8100, 100ft. UHF remote antenna cable and two (2) Shure UA830USTV, In-Line Antenna Amplifiers.

17. One (1) Henry Engineering Model Autoswitch Stereo Audio Switcher for connection to the main school PA/Intercom Emergency Override Function.

II. REMOTE SOUND MIXING EQUIPMENT RACK

A. This Contractor shall furnish and install a floor mounted secure roll-top, semi- portable equipment rack for the remote operation of the sound mixer and peripherals for the Auditorium sound reinforcement system as shown on the Drawings and as specified herein. The rack shall be RAXXESS Cat. No. ERT-ST having all steel construction with two locking pocket doors that cover two 14- space rack bays, locking rear doors and lockable, heavy duty industrial casters. The unit shall have a lockable clear anodized aluminum roll top to secure a sound mixer. The rack shall house the following equipment:

1. One (1) SOUNDCRAFT Model No. GB4, twenty-four (24) channel mixing console.

2. One (1) TASCAM Model No. CD-200i, rack mounted CD player with MP3 dock.

3. One (1) ATLAS SOUND Model no. ACRL-191B AC power control panel suitable for rack mounting.

III. MAIN HOUSE SPEAKER ARRAY

A. This contract shall furnish and install where shown on the Drawings a ceiling mounted speaker array consisting of the following:

1. One (1) JBL Model No. VRX918S18” enclosed, suspended sound reinforcement subwoofer. With a frequency range of 31Hz to 220Hz and a program rating of 1600 watts. The subwoofer shall be complete with mounting hardware and NEUTRIK SPEAKRON connectors.

2. Three (3) JBL Model No. VRX932LA-1 12” two-way constant curvature line array speakers with a frequency range of 57Hz to 20 kHz and a power rating of 1600 watts. The main house speakers shall come complete with mounting hardware and NEUTRIK SPEAKON connectors.

3. One (1) JBL Model No. VRX-AF array mounting bracket.

IV. STAGE MONITOR SPEAKERS

A. This Contractor shall furnish and install where shown on the Drawings, JBL Model No. C29AV-1 eight (8) inch wall mounted stage monitor speakers.

V. DRESSING ROOM FLUSH CEILING MOUNTED STAGE MONITOR SPEAKER ASSEMBLIES

A. This Contractor shall furnish and install where shown on the Drawings, flush 1'x2' drop-in ceiling speaker assemblies consisting of a loudspeaker, back box, and baffle. A flush 1'x2' drop-in ceiling speaker assembly that meets this specification is ATLAS SOUNDOLIER Model No. IS125SYS complete with 2' T-Bar.

VI. DRESSING ROOM SPEAKER VOLUME CONTROLS

A. This Contractor shall furnish and install where shown on the Drawings, ATLAS SOUND Model AT-10.flush or surface (as indicated on the Drawings) wall mounted dressing room speaker volume controls.

VII. MICROPHONES

A. This Contractor shall furnish to the Owner's representative, six (6) SHURE Model No. SM58S dynamic cardioids microphones each complete with an ON/OFF switch. Each microphone shall be furnished by this Contractor complete with a twenty-five (25) foot connector cord with CANNON XLR connectors.

B. This Contractor shall furnish and install six (6) SHURE Model No. MX202B/C hanging microphones at locations shown on the drawings.

C. This Contractor shall furnish and install the following wireless microphones and accessories.

1. Eight (8) Shure ULXD2/SM58 Handheld Transmitter with SM58 capsule.

2. Eight (8) Shure ULXD1 Digital Wireless Body pack.

3. Eight (8) Shure MX1508 Cardioid 5mm subminiature microphone.

4. Two (2) Shure SC800-US, 8-bay Shure Battery Charging Station.

VIII. MICROPHONE STANDS

A. This Contractor shall furnish to the Owner's representative, six (6) ATLAS SOUND Model No. MS-20E microphone floor stands.

B. This Contractor shall furnish to the Owner's representative, six (6) ATLAS SOUND Model No. PB15EB microphone booms.

IX. MICROPHONE OUTLETS

A. This Contractor shall furnish and install where shown on the Drawings, flush or surface wall and/or ceiling mounted microphone outlets (Type "A") consisting of CANNON "XLR" complete with 3 pin XLR (female) series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, and a stainless-steel cover plate. A microphone outlet, which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

B. This Contractor shall furnish and install where shown on the Drawings, flush or surface wall mounted Microphone outlets (Type “B”) consisting of one (1) CANNON "XLR", complete with 3 pin XLR (female), series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, one (1) 3.5mm stereo audio jack (MP3), and a stainless-steel cover plate. A Microphone/MP3 outlet, which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

C. This Contractor shall furnish and install where shown on the Drawings, flush floor mounted microphone outlets (Type “A”) consisting of a CANNON XLR complete with 3 pin XLR (female) series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished mounted by this Contractor in a MAXICOM "Telematic" floor box with one (1) NEMA 5-20R duplex receptacle (as hereinbefore specified), non-skid top, and tamperproof screws.

X. AM/FM ANTENNA

A. This Contractor shall furnish and install a PIXEL TECHNOLOGIES Model No. AFHD-4 AM/FM and HD antenna complete with: L mounting bracket; weather boot; surge protector; 20dB attenuator; 10dB attenuator; AM/FM separator; U- bolts with washers and nuts; pole mount saddle brackets; F-female to twin-lead adaptor and push-on-F-female to DIN adaptor. This Contractor shall furnish and install a weatherhead, rigid steel conduit mast, and two (2) RG-6 plenum rated cables from the antennas to the tuner located in the sound and intercommunication system equipment rack. This Contractor shall ground the antenna in accordance with the following specification

XI. INTERCOM SUB-STATIONS

A. This Contractor shall furnish and install where shown on the Drawings, TELEX AUDIOCOM Model No. WM-2000 remote headset intercom sub-stations mounted in a two-gang flush or surface wall outlet box as indicated on the Drawings.

XII. INTERCOM HEADSETS

A. This Contractor shall furnish to the Owner’s representative TELEX Model No. PH- 88 single-sided intercom headsets. One (1) headset for every master and sub- station intercom, plus one (1) spare headset.

B. This Contractor shall furnish to the Owner’s representative, six (6) TELEX Model No. HE-15 fifteen (15) foot headset extension cables and two (2) TELEX Model No. HE-30 thirty (30) foot headset extension cables.

XIII. AUDITORIUM SOUND SYSTEM CABLE

A. This Contractor shall furnish and install one (1) two (2) conductor, No. 12 AWG stranded plenum rated cable with a temperature range for dry locations of minus ten (10) degrees C to sixty (60) degrees C for each speaker zone. A cable that meets this Specification is WEST PENN Cat. No. 25227B or equal as manufactured by BELDEN,

CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

B. This Contractor shall furnish and install one (1) stranded, No. 18 AWG, shielded, single twisted pair plenum rated cable with a temperature range for dry locations of minus ten (10) degrees C to sixty (60) degrees C for each microphone outlet. A cable that meets this Specification is WEST PENN Cat. No. 25293B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

C. This Contractor shall furnish and install field wiring for MP3 outlets as shown on the Drawings. Wiring shall be two (2) conductor, No. 20 AWG stranded and shielded cable. A cable that meets this Specification is WEST PENN Cat. No. 25292B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

D. This Contractor shall furnish and install two (2) three conductor, No. 18 AWG shielded plenum rated cable with a temperature range for dry locations of minus ten (10) degrees C to seventy-five (75) degrees C for the intercom system. A cable that meets this Specification is WEST PENN Cat. No. 25303 or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

Part 3 - Execution

I. INSTALLATION

A. All vertical low voltage field wiring shall be installed by this Contractor in 1/2-inch conduit and/or surface metal raceway as shown on the Drawings. Conduit fill shall not exceed the conduit space capacity.

B. All horizontal low voltage field wiring to be installed in areas without a ceiling or in areas without an accessible ceiling shall be installed by this Contractor in 1/2-inch conduit.

C. All horizontal low voltage field wiring to be installed in areas with accessible ceilings shall be installed by this Contractor bundled together and run exposed above the ceilings. Bundles shall be supported by "J" hooks mounted not more than four (4) feet on center. “J” hooks shall be dedicated to the wiring specified in this specification section.

D. All horizontal low voltage field wiring shall be run at right angles to the building structure.

E. All horizontal low voltage field wiring shall be installed below the roof/floor structural supports (joist, beams, girders, etc.). Wiring installed between the structural supports mentioned above and the roof or floor deck will not be acceptable.

F. All horizontal low voltage field-wiring penetrations through new and/or existing walls shall be sleeved. Minimum sleeve size shall be 3/4 inch. All sleeves shall be bushed both sides.

G. All low voltage field wiring for the Auditorium sound reinforcement system shall be furnished and installed by this Contractor. All junction box covers shall be stenciled for distinct identification.

H. All wiring connections shall be made by this Contractor as directed by the equipment manufacturer. Splices for circuits shall be made only in junction boxes and shall be crimp connected.

I. All Auditorium sound reinforcement system wiring shall be checked and tested by this Contractor to insure the system is free from grounds, opens, and shorts.

J. All work shall be under the supervision of a factory accredited sound engineer. It shall be the responsibility of the sound engineer and this contractor to check and inspect this installation to the Owner's and Architect/Engineer's approval.

II. RACK MOUNTED EQUIPMENT

A. The Auditorium sound reinforcement system's rack mounted equipment shall be installed by this Contractor with the proper adapters, rack mounting kits, brackets, and closure panels for unused spaces. All interconnecting wiring shall be labeled, bundled, secured, and terminated by this Contractor in a neat and professional manner.

B. All rack mounted equipment AC power cords shall be plugged into the mounted power strip by this Contractor.

C. All interconnecting patch cables within equipment rack shall factory manufactured.

D. This contractor shall turn over to the owner all existing wireless microphone rack mounted equipment, microphones and all associated accessories.

III. SPEAKER MOUNTING

A. Ceiling mounted speaker arrays shall be securely fastened to the building structure by this Contractor with threaded rod or bolts as appropriate for the application and in strict conformance with the manufacturer’s recommendations.

B. Surface mounted speakers shall be securely fastened to the building structure by this Contractor with threaded rod or bolts as appropriate for the application and in strict conformance with the manufacturer’s recommendations.

C. Flush ceiling mounted speaker assemblies shall be supported by this Contractor from the building structure with a minimum of two (2) steel wires. Ceiling baffles shall be finished flush with the ceiling. T-Bar type ceiling assemblies also shall be securely attached to the ceiling grid with pop-rivets at both ends. Flush ceiling mounted speaker assemblies shall be tapped at 0.5 watts unless otherwise indicated.

IV. MICROPHONES

A. This Contractor shall unpack microphone and assemble with cables and stands and connect ready for operation. Microphones shown for permanent installation shall be mounted by this Contractor in accordance with the Drawings in a manner appropriate for the location.

V. MICROPHONES OUTLETS

A. This Contractor shall assemble microphone outlets and install, connect, and label as shown on Drawings.

VI. ANTENNA INSTALLATION

A. The antenna shall be bracket mounted by this Contractor above the roof at a location approved by the Owner. The antenna cables shall be run by this Contractor to the equipment rack and connected ready for operation.

B. The antenna shall be grounded by this Contractor to the secondary building ground system with one (1) No. 10 AWG in 1/2-inch conduit.

VII. SPEAKER TESTING AND ADJUSTMENT

A. The main house speaker arrays shall be configured and tested to provide 95 decibels of pink noise with a “C” weighting when measured from the rear seating area of the auditorium.

END OF SECTION

Part 1 - General

I. REQUIREMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

II. SCOPE

A. The work covered under this Section shall include furnishing and installing a locally controlled complete and satisfactorily operating sound system in the Black Box Theater for the pickup, amplification, reproduction, and distribution of voice and/or music to associated loudspeakers within the Black Box Theater.

III. QUALITY ASSURANCE

A. All equipment described shall be the product of a manufacturer of established reputation and experience produced similar apparatus for a period of at least ten (10) years and shall be able to refer to similar installations now rendering satisfactory service.

B. The Black Box Theater sound reinforcement system shall be furnished by a factory authorized distributor certified to design, program, and service the system. The distributor must show evidence of successfully furnishing systems specified for at least five (5) years

C. All equipment for this system shall be listed Underwriters Laboratories, Inc. (UL) bear the UL label and shall be installed in accordance with all requirements of the National Electrical Code (NEC), state and local codes, and these Specifications.

D. The entire Black Box Theater sound reinforcement system installation shall be performed under the direct supervision of a factory trained service specialist.

E. Shop drawing submittals are required per SECTION 260500 and shall include the following for review. Submittals not containing all of the information listed below will be rejected.

1. A complete list of equipment shall be furnished indicating the specific quantities to be furnished by this Contractor. The catalog or model number for each module of the system shall be listed next to the quantities. This information shall be furnished in the front of the submittal.

2. A specific description of the system shall be furnished describing each module and how it shall function in the system.

3. A specific drawing shall be furnished of the sound equipment rack. Each module shall be shown in its proper location with its terminal designation shown.

4. A data sheet shall be furnished for each module and device. The information shall be highlighted that applies to the particular module or device to be

furnished.

5. A detailed diagram showing how to connect each device shall be furnished indicating exact final connection information.

6. A detailed floor plan for the Black Box Theater shall be furnished. The plan shall show the locations of all equipment, loudspeakers, and devices and their required interconnections. The interconnections shown shall indicate the number, size, and type of wires as described in this Specification. Loudspeakers shall be zoned as shown on the Drawings. The layout of all Black Box Theater sound system equipment, devices, and conduit routings shall closely follow that shown on the Drawings.

IV. DOCUMENTATION

A. This Contractor shall furnish to the Contractor, one (1) set of "As Built" drawings depicting the complete field wiring system and component interconnections in the system equipment rack.

B. This Contractor shall furnish to the Contractor, four (4) sets of factory operation and maintenance manuals. These manuals shall include factory service manuals with complete parts lists, wiring and component schematics including circuit diagrams, and all other information necessary for the proper operation, service, and maintenance of the Black Box Theater sound reinforcement system.

V. TRAINING

A. This Contractor shall furnish eight (8) hours of technical service training to the Owner's technical staff using the factory service manuals previously specified.

B. This Contractor shall furnish eight (8) hours of operating and programming training to the Owner's operating staff which shall be delivered in two (2) separate four (4) hours sessions to be scheduled at the Owner's convenience over the warranty period.

C. All training specified herein shall be performed by a factory certified technician.

VI. DESCRIPTION OF OPERATION

A. This Contractor shall furnish and install a Black Box Theater sound reinforcement system with all conduit, cable, outlets, devices, and equipment as shown on the Drawings and as herein specified to furnish a complete system.

B. The Black Box Theater sound reinforcement system shall provide for reception of AM or FM radio broadcasts, the amplification of music and voice, and the reproduction of recorded music or other program materials, and their distribution to all associated speakers within the Black Box Theater.

C. The Black Box Theater sound reinforcement system shall accept both the input and output of an external tape recorder.

D. Each Black Box sound reinforcement system shall accept a priority override signal to mute the system when the main building Sound and Intercommunications System activates the priority override function.

VII. SYSTEM TEST AND ACCEPTANCE

A. Prior to the final site visitation this Contractor shall conduct an operating test of the complete Black Box Theater sound reinforcement system. The system shall test free from grounds, shorts, and other faults. All connections shall be thoroughly checked for mechanical and electrical connections. All equipment shall be demonstrated to operate in accordance with the requirements set forth in these Specifications and as shown on the Drawings.

B. This Contractor shall perform all tests in the presence of the Architect/Engineer. This Contractor shall furnish all personnel and test instruments for use in the test.

C. When the work on the entire Black Box Theater sound reinforcement system has been completed and is ready for final review, this Contractor shall demonstrate that the requirements of the Contract as it applies to this work have been carried out and that the system has been adjusted and operated in accordance therewith.

VIII. WARRANTY

A. This Contractor shall deliver the work described herein in a first-class operating condition in every respect. This Contractor shall also warrant that the material, equipment, and workmanship furnished shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractors own expense. Refer to SECTION 01740 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the Drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

Part 2 - Products

I. EQUIPMENT RACK

A. This Contractor shall furnish and install where shown on the Drawings, a wall mounted equipment rack for the Black Box Theater sound reinforcement system as specified herein. The rack shall be ATLAS SOUNDOLIER Cat. No. WMA24- 23 sectional, wall mounting type with a textured black finish providing a minimum of sixty-one (61) inches of vertical rack mounting space. The rack shall be complete with a continuous piano hinged front door with a cylinder lock and handle. The following equipment shall be furnished and installed by this Contractor in the rack:

1. One (1) TOA Model No. D-901 twelve (12) input, eight (8) output, digital mixer. Mixer shall come complete with:

a) One (1) D936R four (4) stereo input module (tuner, CD, MP3 outlets).

b) One (1) D971E four (4) channel line output module (personal listening system, amplifier).

c) Four (4) D921E 2-channel input modules (microphone outlets).

2. One (1) Crown Model No. CTs 600 dual channel amplifier with three hundred (300) watts per channel at eight (8) ohms. Amplifier shall be suitable for rack mounting.

3. One (1) TASCAM Model No. CD-200i, rack mounted CD player with MP3 dock.

4. One (1) PYLE Model No. PT504 rack mounted stereo AM/FM tuner.

5. One (1) SHURE “SLX” series UHF Wireless Microphone System complete with Model No. SLX4 wireless receiver complete with rack mounting hardware and detachable antennas.

6. One (1) ATLAS SOUND Model No. ACS-1 AC power strip suitable for rack mounting.

II. WALL MOUNTED STEREO SPEAKERS

A. This contractor shall furnish and install where shown on the Drawings, two (2) JBL Model No “C29AV-1” enclosed wall mounted stereo speakers. The stereo speakers shall be 300 watt, 8 ohms. Each stereo speaker shall be complete with wall mounting bracket.

III. MICROPHONES

A. This Contractor shall furnish to the Owner’s representative, one (1) SHURE Model No. SLX2/SM58S dynamic cardioid wireless handheld microphone, and one (1) SHURE Model No WL183 lapel microphone with SLX1 transmitter. Each complete with an ON/OFF switch and batteries.

B. This Contractor shall furnish to the Owner’s representative, four (4) SHURE Model No. SM58S dynamic cardioid microphones each complete with an ON/OFF switch. Each microphone shall be furnished by this Contractor complete with a twenty-five (25) foot connector cord with CANNON XLR connectors.

IV. MICROPHONE STANDS

A. This Contractor shall furnish to the Owner’s representative, four (4) ATLAS SOUNDOLIER Model No. MS-20 microphone floor stands.

B. This Contractor shall furnish to the Owner’s representative, four (4) ATLAS SOUNDOLIER Model No. PB15CH microphone booms.

V. MICROPHONE OUTLETS

A. This Contractor shall furnish and install where shown on the Drawings, flush or surface wall and/or ceiling mounted microphone outlets (Type “A”) consisting of CANNON "XLR" complete with 3 pin XLR (female) series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, and a stainless-steel cover plate. A microphone outlet, which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

B. This Contractor shall furnish and install where shown on the Drawings, flush or surface wall mounted Microphone outlets (Type “B”) consisting of one (1) CANNON "XLR", complete with 3 pin XLR (female), series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, one (1) 3.5mm stereo audio jack (MP3), and a stainless-steel cover plate. A Microphone/MP3 outlet, which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

VI. AM/FM ANTENNA

A. This Contractor shall furnish and install a PIXEL TECHNOLOGIES Model No. AFHD-4 AM/FM and HD antenna complete with: L mounting bracket; weather boot; surge protector; 20dB attenuator; 10dB attenuator; AM/FM separator; U- bolts with washers and nuts; pole mount saddle brackets; F-female to twin-lead adaptor and push-on-F-female to DIN adaptor. This Contractor shall furnish and install a weatherhead, rigid steel conduit mast, and two (2) RG-6 plenum rated cables from the antennas to the tuner located in the sound and intercommunication system equipment rack. This Contractor shall ground the antenna in accordance with the following specification.

VII. BLACK BOX THEATER SOUND SYSTEM CABLE

A. This Contractor shall furnish and install one (1) two (2) conductor, No. 12 AWG stranded plenum rated cable with a temperature range for dry locations of minus ten (10) degrees C to sixty (60) degrees C for each stereo speaker. A cable that meets this Specification is WEST PENN Cat. No. 25227B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

B. This Contractor shall furnish and install one (1) stranded, No. 20 AWG, shielded, single twisted pair plenum rated cable with a temperature range for dry locations of minus ten (10) degrees C to sixty (60) degrees C for each microphone outlet. A cable that meets this Specification is WEST PENN Cat. No. 25292B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

Part 3 - Execution

I. INSTALLATION

A. All vertical low voltage field wiring shall be installed by this Contractor in 1/2-inch conduit and/or surface metal raceway as shown on the Drawings. Conduit fill shall not exceed the conduit space capacity.

B. All horizontal, low voltage field wiring to be installed in areas without a ceiling or in areas without an accessible ceiling shall be installed by this Contractor in 1/2-inch conduit.

C. All horizontal, low voltage field wiring to be installed in areas with accessible ceilings shall be installed by this Contractor bundled together and run exposed above the ceilings. Bundles shall be supported by "J" hooks mounted not more than four (4) feet on center. “J” hooks shall be dedicated to the wiring specified in this specification section.

D. All horizontal, low voltage field wiring shall be run at right angles to the building structure.

E. All horizontal, low voltage field wiring shall be installed below the roof/floor structural supports (joists, beams, girders, etc.). Wiring installed between the structural supports mentioned above and the roof or floor deck will not be acceptable.

F. All horizontal, low voltage field wiring penetrations through new and/or existing walls shall be sleeved. Minimum sleeve size shall be 3/4 inch. All sleeves shall be bushed both sides.

G. All low voltage field wiring for the Black Box Theater sound reinforcement system shall be furnished and installed by this Contractor. All junction box covers shall be stenciled for distinct identification.

H. All wiring connections shall be made by this Contractor as directed by the equipment manufacturer. Splices for circuits shall be made only in junction boxes and shall be crimp connected.

I. All Black Box Theater sound reinforcement system wiring shall be checked and tested by this Contractor to insure the system is free from grounds, opens, and shorts.

J. All work shall be under the supervision of a factory accredited sound engineer. It shall be the responsibility of the sound engineer and this contractor to check and inspect this installation to the Owner's and Architect/Engineer's approval.

II. RACK MOUNTED EQUIPMENT

A. The Black Box Theater sound system's rack mounted equipment shall be installed by this Contractor with the proper adapters, rack mounting kits, brackets, and closure panels for unused spaces. All interconnecting wiring shall be labeled, bundled, secured, and terminated by this Contractor in a neat and professional manner.

B. All rack mounted equipment AC power cords shall be plugged into the mounted power strip by this Contractor.

III. SPEAKER

A. Wall mounted stereo speakers shall be securely fastened to the building structure by this Contractor with threaded rod or bolts as appropriate for the application.

IV. MICROPHONES

A. This Contractor shall unpack microphone and assemble with cables and stands and connect ready for operation. Microphones shown for permanent installation shall be mounted by this Contractor in accordance with the Drawings in a manner appropriate for the location.

V. MICROPHONES OUTLETS

A. This Contractor shall assemble microphone outlets and install, connect, and label as shown on Drawings.

VI. ANTENNA INSTALLATION

A. The antenna shall be bracket mounted by this Contractor above the roof at a location approved by the Owner. The antenna cables shall be run by this Contractor to the equipment rack and connected ready for operation.

B. The antenna shall be grounded by this Contractor to the secondary building ground system with one (1) No. 10 AWG in 1/2-inch conduit.

END OF SECTION

Part 1 - General

I. REQUIREMENT

A. The general provisions of the Contract, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

II. SCOPE

A. The work covered under this Section shall include furnishing and installing a locally controlled complete and satisfactorily operating system for the pickup, amplification, reproduction, and distribution of voice and/or music to loudspeakers within the Gymnasium as shown on the Drawings and herein specified.

III. QUALITY ASSURANCE

A. All equipment described shall be the product of a manufacturer of established reputation and experience producing similar apparatus for a period of at least ten (10) years and shall be able to refer to similar installations now rendering satisfactory service.

B. The Gymnasium sound reinforcement system shall be furnished by a factory authorized distributor certified to design, program, and service the system. The distributor must show evidence of successfully furnishing systems specified for at least five (5) years.

C. All equipment for this system shall be listed by Underwriters Laboratories, Inc. (UL), bear the UL label, and shall be installed in accordance with all requirements of the National Electrical Code (NEC), state and local codes, and these Specifications.

D. The entire Gymnasium sound reinforcement system installation shall be performed under the direct supervision of a factory trained service specialist.

E. Shop drawing submittals are required per SECTION 260500 and shall include the following for review:

1. A complete list of equipment shall be furnished indicating the specific quantities to be furnished by the manufacturer. The catalog or model number for each module of the system shall be listed next to the quantities. This information shall be furnished in the front of the submittal.

2. A specific description of the system shall be furnished describing each module and how it shall function in the system.

3. A detailed floor plan of the Gymnasium area shall be furnished showing the locations of all equipment, loudspeakers, and devices and their required interconnections. The interconnections shown shall indicate the number, size, and type of cable as described in this Specification. The layout of all Gymnasium sound reinforcement system equipment, devices, and conduit routings shall closely follow that shown on the Drawings.

4. A specific drawing of the Gymnasium sound reinforcement system rack shall be made by the equipment supplier. Each module shall be shown in its proper location with its terminal designation shown.

5. A data sheet shall be furnished for each module and device. The information shall be highlighted that applies to the particular module or device to be furnished.

6. A detailed diagram showing how to connect each device shall be furnished indicating exact final connection information.

7. A detailed drawing showing how to mount the Gymnasium speakers shall be furnished, including necessary hardware and mounting devices.

IV. DOCUMENTATION

A. This Contractor shall furnish to the Contractor, one (1) set of "As Built" drawings depicting the complete field wiring system and component interconnections in the Gymnasium sound reinforcement system equipment rack.

B. This Contractor shall furnish to the Contractor, four (4) sets of factory operation and maintenance manuals. These manuals shall include factory service manuals with complete parts lists, wiring and component schematics including circuit diagrams, and all other information necessary for the proper operation, service, and maintenance of the Gymnasium sound reinforcement system.

V. TRAINING

A. This Contractor shall furnish eight (8) hours of technical service training to the Owner's technical staff using the factory operation manuals previously specified.

B. This Contractor shall furnish eight (8) hours of operating and programming training to the Owner's operating staff which shall be delivered in two (2) separate four (4) hour sessions to be scheduled at the Owner's convenience over the warranty period.

C. All training specified herein shall be performed by a factory certified technician.

VI. DESCRIPTION OF OPERATION

A. This Contractor shall furnish and install a Gymnasium sound reinforcement system with all cable and equipment as shown on the Drawings and as herein specified to furnish a complete system.

B. The Gymnasium sound reinforcement system shall provide for the reception of AM or FM radio broadcasts, the amplification of music and/or voice, and the reproduction of recorded music or other program materials, and their distribution to all associated loudspeakers.

C. The Gymnasium sound reinforcement system shall provide a personal listening system for use by hearing impaired listeners.

D. Each Gymnasium sound reinforcement system shall accept a priority override signal to mute the system when the main building Sound and Intercommunications System activates the priority override function.

VII. SYSTEM TEST AND ACCEPTANCE

A. Prior to the final site visitation this Contractor shall conduct an operating test of the complete Gymnasium sound reinforcement system. The system shall test free from grounds, shorts, and other faults. All connections shall be thoroughly checked for mechanical and electrical connections. All equipment shall be demonstrated to operate in accordance with the requirements set forth in these Specifications and as shown on the Drawings.

B. This Contractor shall perform all tests in the presence of the Architect/Engineer. This Contractor shall furnish all personnel and test instruments for use in the test.

C. When the work on the entire Gymnasium sound reinforcement system has been completed and is ready for final review, this Contractor shall demonstrate that the requirements of the Contract as it applies to this work have been carried out and that the system has been adjusted and operated in accordance therewith.

VIII. WARRANTY

A. This Contractor shall deliver the work described herein in a first-class operating condition in every respect. This Contractor shall also warrant that the material, equipment, and workmanship furnished shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractors own expense. Refer to SECTION 01740 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the Drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

Part 2 - Products

I. EQUIPMENT RACK

A. This Contractor shall furnish and install where shown on the Drawings, a wall mounted equipment rack for the Gymnasium sound reinforcement system as specified herein. The rack shall be ATLAS SOUND Cat. No. WMA35-23 sectional wall mounting type with a textured black finish providing a minimum of thirty-five (35) vertical rack units of mounting space. The rack shall be complete with a continuous piano hinged front door with a cylinder lock and handle. The gymnasium sound system equipment rack shall have a sign mounted to the front stating, “Personal Listening Devices Stored Here”. The sign shall be 1/16-inch-thick laminated plastic with 3/16-inch-high white letters on a black background. The following equipment shall be furnished and installed by this Contractor in the rack:

1. Two (2) dual channel power amplifiers with a minimum rating of 600 watts' continuous sine wave per channel into an eight (8) ohm output at twenty (20) Hz to twenty (20) kHz with a maximum 0.1 percent (0.1%) distortion. A power amplifier that will meet this Specification is CROWN Model No. CTs 1200.

2. One (1) TOA Model No. D-901 twelve (12) input, eight (8) output, digital mixer. Mixer shall come complete with:

    a) One (1) D936R four (4) stereo input module (tuner, CD, MP3 outlets).

    b) One (1) D971E four (4) channel line output module (personal listening system, amplifier).

    c) Four (4) D921E 2-channel input modules (microphone outlets).

3. One (1) PYLE Model No. PT504 rack mounted stereo AM/FM tuner.

4. One (1) TASCAM Model No. CD-200i, rack mounted CD player with MP3 dock.

5. One (1) WILLIAMS SOUND Model No. PPA T35 personal listening system base station transmitter complete with WILLIAMS SOUND Model No. RPK 005 rack mounting kit and ANT 005 coaxial antennae.

6. This Contractor shall furnish and install in the charging stations, thirty-two (32) WILLIAMS SOUND Model No. No. PPA R37, seventeen (17) channel personal listening system receivers each complete with WILLIAMS SOUND Model No. EAR 013 single ear bud, rechargeable batteries, and belt clip.

7. This contractor shall furnish to the owners representative, eight (8) WILLIAMS SOUND Model NKL 001 neckloops.

8. This Contractor shall furnish and install, three (3) WILLIAMS SOUND Model No. CHG 3512 twelve (12) unit charging stations for the personal listening system receivers complete with three (3) ATLAS SOUND Model No. VTD1-16 rack sliding shelves.

9. One (1) SHURE "SLX" series UHF Wireless Microphone System complete with Model No. SLX4 wireless receiver complete with rack mounting hardware and detachable antennas

10. One (1) ATLAS SOUND Model No. RAC-9 AC power strip suitable for rack mounting.

II. SPEAKER SYSTEMS

A. This Contractor shall furnish and install where shown on the Drawings 2-way loudspeakers (number as shown on drawings) with a frequency response of 90 Hz - 16 kHz and shall include drivers. The speakers shall be COMMUNITY Model No. R5.99 complete with COMMUNITY mounting yoke kit and ATM PM-Series pole mounts where required or equal as manufactured by JBL.

III. MICROPHONES

A. This Contractor shall furnish to the Owner's representative, four (4) SHURE Model No. SM58S dynamic cardioid microphones. Each complete with an ON/OFF switch. Each microphone shall be furnished by this Contractor complete with a twenty-five (25) foot connector cord with CANNON XLR connectors

B. This Contractor shall furnish to the Owner's representative, one (1) SHURE Model No. SLX2/SM58 dynamic cardioid wireless handheld microphone, and one (1) SHURE Model No WL183 lapel microphone with SLX1 transmitter. Each complete with an ON/OFF switch and batteries

IV. MICROPHONE STANDS

A. This Contractor shall furnish to the Owner's representative, two (2) ATLAS SOUND Model No. MS-20 microphone floor stands.

B. This Contractor shall furnish to the Owner's representative, two (2) ATLAS SOUND Model No. DS-2 microphone desk stands.

V. MICROPHONE OUTLETS

A. This Contractor shall furnish and install where shown on the Drawings, flush or surface wall and/or ceiling mounted microphone outlets (Type "A") consisting of CANNON "XLR" complete with 3 pin XLR (female) series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, and a stainless-steel cover plate. A microphone outlet, which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

B. This Contractor shall furnish and install where shown on the Drawings, flush or surface wall mounted Microphone outlets (Type "B") consisting of one (1) CANNON "XLR", complete with 3 pin XLR (female), series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, one (1) 3.5mm stereo audio jack (MP3), and a stainless-steel cover plate. A Microphone/MP3 outlet, which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

C. This Contractor shall furnish and install where shown on the Drawings, flush floor mounted microphone outlets (Type "B") consisting of a CANNON "XLR" complete with 3 pin XLR (female) series audio jack, of the type required so as to be compatible with the type of microphone cable connector furnished, and one (1) 3.5mm stereo audio jack (MP3) mounted in a MAXICOM "Telematic" floor box with one (1) NEMA 5-20R duplex receptacle as hereinbefore specified, non-skid top, and tamperproof screws.

VI. GYMNASIUM SOUND SYSTEM CABLE

A. This Contractor shall furnish and install speaker cable consisting of one (1) twisted pair, No. 12 AWG unshielded with a temperature range for dry locations of minus ten (10) degrees C to seventy-five (75) degrees C. A cable that meets this Specification is

WEST PENN Cat. No. 25227B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

B. This Contractor shall furnish and install field wiring for Microphone outlets as shown on the Drawings. Wiring shall be two (2) conductor, No. 20 AWG stranded and shielded cable. A cable that meets this Specification is WEST PENN Cat. No. 25292B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

C. This Contractor shall furnish and install field wiring for MP3 outlets as shown on the Drawings. Wiring shall be two (2) conductor, No. 20 AWG stranded and shielded cable. A cable that meets this Specification is WEST PENN Cat. No. 25292B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

VII. AM/FM ANTENNA

A. This Contractor shall furnish and install a PIXEL TECHNOLOGIES Model No. AFHD-4 AM/FM and HD antenna complete with: L mounting bracket; weather boot; surge protector; 20dB attenuator; 10dB attenuator; AM/FM separator; U- bolts with washers and nuts; pole mount saddle brackets; F-female to twin-lead adaptor and push-on-F-female to DIN adaptor. This Contractor shall furnish and install a weatherhead, rigid steel conduit mast, and two (2) RG-6 plenum rated cables from the antennas to the tuner located in the sound and intercommunication system equipment rack. This Contractor shall ground the antenna in accordance with the following specification.

Part 3 - Execution

I. INSTALLATION

A. All wiring for the Gymnasium sound reinforcement system shall be installed by this Contractor in minimum 1/2-inch conduit as hereinbefore specified. All junction box covers shall be stenciled by this Contractor for distinct identification. All conduit, device mounting boxes, junction boxes, and enclosures shall be securely fastened with appropriate fittings to insure a positive ground throughout the entire system.

B. All low voltage wiring connections shall be made by this Contractor as directed by the manufacturer. Splices for circuits shall be made only in junction boxes and shall be crimp connected.

C. All low voltage wiring shall be checked and tested by this Contractor to insure the system is free from grounds, opens, and shorts.

D. All work shall be under the direct supervision of an accredited factory sound engineer. It shall be the responsibility of the sound engineer and this Contractor to check and inspect this installation to the Architect/Engineer's approval.

II. RACK MOUNTED EQUIPMENT

A. The Gymnasium sound system's rack mounted equipment shall be furnished and installed by this Contractor with the proper adapters, rack mounting kits, brackets, and closure panels for unused space. All interconnecting wiring shall be labeled, bundled, secured, and terminated by this Contractor in a neat and professional manner.

B. All rack mounted equipment AC power cords shall be plugged into the rack mounted power strip.

III. SPEAKERS

A. The speaker systems shall be securely mounted to the building structure by this Contractor at the locations shown and as detailed on the Drawings. All bracing shall be painted to match the surrounding structure. This Contractor shall coordinate the exact hanging angles with the system supplier and the Owner prior to the installation.

IV. MICROPHONES

A. This Contractor shall unpack and assemble microphones complete with all cables, connectors, and stands and connect ready for operation.

V. MICROPHONE OUTLETS

A. This Contractor shall assemble microphone outlets and install, connect, and label as shown on the Drawings.

VI. CABLES

A. All wiring and cable for the Gymnasium sound reinforcement system shall be pulled continuously through conduits without splices or abrasions and shall be terminated at their appropriate devices as shown on the Drawings, specified herein, and as directed by the system supplier. All cables shall be labeled. Input and output cabling shall not be installed in the same raceway.

VII. ANTENNA INSTALLATION

A. The antenna shall be bracket mounted by this Contractor above the roof at a location approved by the Owner. The antenna cables shall be run by this Contractor to the equipment rack and connected ready for operation.

B. The antenna shall be grounded by this Contractor to the secondary building ground system with one (1) No. 10 AWG in ½ inch conduit.

END OF SECTION

Part 1 - General

I. REQUIREMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

II. SCOPE

A. The work covered under this Section shall include furnishing and installing a locally controlled complete and satisfactorily operating sound system in each of the Band, Choral, Orchestra and General Music Rooms for the pickup, amplification, reproduction, and distribution of voice and/or music to associated loudspeakers within each room.

B. Existing Band, Choral, Orchestra and General Music Rooms sound reinforcement systems equipment may be reused as noted on the Drawings. This Contractor shall exercise extreme care not to damage the equipment while following the instructions on the Drawings. The equipment to be reused shall be protected from construction before, during, and after work has been completed.

III. QUALITY ASSURANCE

A. All equipment described shall be the product of a manufacturer of established reputation and experience produced similar apparatus for a period of at least ten (10) years and shall be able to refer to similar installations now rendering satisfactory service.

B. The Band, Choral, Orchestra and General Music Rooms sound reinforcement systems shall be furnished by a factory authorized distributor certified to design, program, and service the system. The distributor must show evidence of successfully furnishing systems specified for at least five (5) years.

C. All equipment for the Band, Choral, Orchestra and General Music Rooms sound reinforcement systems shall be listed Underwriters Laboratories, Inc. (UL) bear the UL label and shall be installed in accordance with all requirements of the National Electrical Code (NEC), state and local codes, and these Specifications.

D. Each of the Band, Choral, Orchestra and General Music Rooms sound reinforcement systems installation shall be performed under the direct supervision of a factory trained service specialist.

E. Shop drawing submittals are required per SECTION 230500 and shall include the following for review. Submittals not containing all of the information listed below will be rejected.

1. A complete list of equipment for each Band, Choral, Orchestra and General Music Rooms sound reinforcement system shall be furnished indicating the specific quantities to be furnished by this Contractor. The catalog or model number for each module of each system shall be listed next to the quantities. This information shall be furnished in the front of the submittal.

2. A specific description of each of the Band, Choral, Orchestra and General Music Rooms sound reinforcement systems shall be furnished describing each module and how it shall function within each system.

3. A specific drawing shall be furnished of each Band, Choral, Orchestra and General Music Rooms sound reinforcement system equipment rack. Each module shall be shown in its proper location with its terminal designation shown.

4. A data sheet shall be furnished for each module and device. The information shall be highlighted that applies to the particular module or device to be furnished.

5. A detailed diagram showing how to connect each device shall be furnished indicating exact final connection information.

6. A detailed floor plan for each Band, Choral, Orchestra and General Music Room shall be furnished. The plans shall show the locations of all equipment, loudspeakers, and devices and their required interconnections. The interconnections shown shall indicate the number, size, and type of wires as described in this Specification. Loudspeakers shall be zoned as shown on the Drawings. The layout of all Band, Choral, Orchestra and General Music Rooms sound reinforcement system equipment, devices, and conduit routings shall closely follow that shown on the Drawings.

IV. DOCUMENTATION

A. This Contractor shall furnish to the Contractor, one (1) set of "As Built" drawings for each Band, Choral, Orchestra and General Music Room sound reinforcement system depicting the complete field wiring system and component interconnections in each system equipment rack.

B. This Contractor shall furnish to the Contractor, four (4) sets of factory operation and maintenance manuals. These manuals shall include factory service manuals with complete parts lists, wiring and component schematics including circuit diagrams, and all other information necessary for the proper operation, service, and maintenance of each Band, Choral, Orchestra and General Music Room sound reinforcement system.

V. TRAINING

A. This Contractor shall furnish eight (8) hours (total for all rooms) of technical service training to the Owner's technical staff using the factory service manuals previously specified.

B. This Contractor shall furnish eight (8) hours (total for all rooms) of operating and programming training to the Owner's operating staff which shall be delivered in two (2) separate four (4) hours sessions to be scheduled at the Owner's convenience over the warranty period.

C. All training specified herein shall be performed by a factory certified technician.

VI. DESCRIPTION OF OPERATION

A. This Contractor shall furnish and install Band, Choral, Orchestra and General Music Rooms sound reinforcement systems with all conduit, cable, outlets, devices, and equipment as shown on the Drawings and as herein specified to furnish complete systems.

B. Each Band, Choral, Orchestra and General Music Rooms sound reinforcement system shall provide for reception of AM or FM radio broadcasts, the amplification of music and voice, and the reproduction of recorded music or other program materials, and their distribution to all associated speakers within each Band, Choral, and Orchestra Room.

C. Each Band, Choral, Orchestra and General Music Room sound reinforcement system shall accept both the input and output of an external tape recorder.

D. Each Band, Choral, Orchestra and General Music Room sound reinforcement system shall accept a priority override signal to mute the system when the main building Sound and Intercommunications System activates the priority override function.

VII. SYSTEM TEST AND ACCEPTANCE

A. Prior to the final site visitation this Contractor shall conduct an operating test of each complete Band, Choral, Orchestra and General Music Rooms sound reinforcement system. Each system shall test free from grounds, shorts, and other faults. All connections shall be thoroughly checked for mechanical and electrical connections. All equipment shall be demonstrated to operate in accordance with the requirements set forth in these Specifications and as shown on the Drawings.

B. This Contractor shall perform all tests in the presence of the Architect/Engineer. This Contractor shall furnish all personnel and test instruments for use in the test.

C. When the work on each Band, Choral, Orchestra and General Music Room sound reinforcement system has been completed and is ready for final review, this Contractor shall demonstrate that the requirements of the Contract as it applies to this work have been carried out and that the system has been adjusted and operated in accordance therewith.

VIII. WARRANTY

A. This Contractor shall deliver the work described herein in a first-class operating condition in every respect. This Contractor shall also warrant that the material, equipment, and workmanship furnished shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractors own expense. Refer to SECTION 01740 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the Drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

Part 2 - Products

I. EQUIPMENT RACKS

A. This Contractor shall furnish and install in each Band, Choral, Orchestra and General Music Room where shown on the Drawings, a wall mounted equipment rack for the room's sound reinforcement system as specified herein. Each rack shall be ATLAS SOUND Cat. No. WMA24-23 sectional, wall mounting type with a textured black finish providing a minimum of sixty-one (61) inches of vertical rack mounting space. Each rack shall be complete with a continuous piano hinged front door with a cylinder lock and handle. The following equipment shall be furnished and installed by this Contractor in each rack:

1. One (1) TOA Model No. D-901 twelve (12) input, eight (8) output, digital mixer. Mixer shall come complete with:

   a) One (1) D936R four (4) stereo input module (tuner, CD, MP3 outlets).

   b) One (1) D971E four (4) channel line output module (personal listening system, amplifier).

   c) Four (4) D921E 2-channel input modules (microphone outlets).

2. One (1) CROWN Model No. CTs 600 dual channel amplifier with three hundred (300) watts per channel at eight (8) ohms. Amplifier shall be suitable

3. One (1) TASCAM Model No. SS-CDR200 rack mounted MP3/CD recorder workstation complete with minimum 8GB compact flash card.

4. One (1) PYLE Model No. PT504 rack mounted stereo AM/FM tuner.

5. One (1) ATLAS SOUND Model No. ACS-1 AC power strip suitable for rack mounting.

6. One (1) SHURE "SLX" series UHF Wireless Microphone System complete with Model No. SLX4 wireless receiver complete with rack mounting hardware and detachable antennas

II. WALL MOUNTED STEREO SPEAKERS

A. This Contractor shall furnish and install where shown on the Drawings, two (2) JBL Model No "C29AV-1" enclosed wall mounted stereo speakers. The stereo speakers shall be 300 watts, 8 ohms. Each stereo speaker shall be complete with wall mounting bracket.

III. MICROPHONES

A. This Contractor shall furnish to the Owner's representative, four (4) SHURE Model No. SM58S dynamic cardioid microphones for each Band, Choral, Orchestra and General

Music Room sound reinforcement system (total of **CONSULTANT SHALL EDIT**). Each microphone shall be furnished by this Contractor complete with a twenty-five (25) foot connector cord with CANNON XLR connectors.

B. This Contractor shall furnish to the Owner's representative, one (1) SHURE Model No. SLX2/SM58 dynamic cardioid wireless handheld microphone and one (1) SHURE Model No WL183 lapel microphone with SLX1 transmitter for each Band, Choral, Orchestra and General Music Room sound reinforcement system. Each complete with an ON/OFF switch and batteries

C. This Contractor shall furnish and install in the Choral Room three (3) SHURE Model No. MX202B/C hanging microphones at locations shown on the Drawings.

IV. MICROPHONE STANDS

A. This Contractor shall furnish to the Owner's representative, four (4) ATLAS SOUNDOLIER Model No. MS-20 microphone floor stands for each Band, Choral, Orchestra and General Music Room sound reinforcement system.

B. This Contractor shall furnish to the Owner's representative, four (4) ATLAS SOUNDOLIER Model No. PB15CH microphone booms for each Band, Choral, Orchestra and General Music Room sound reinforcement systems.

V. MICROPHONE OUTLETS

A. This Contractor shall furnish and install where shown on the Drawings, flush or surface wall and/or ceiling mounted microphone outlets (Type "A") consisting of CANNON "XLR" complete with 3 pin XLR (female) series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, and a stainless-steel cover plate. A microphone outlet, which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

B. This Contractor shall furnish and install where shown on the Drawings, flush or surface wall mounted Microphone outlets (Type "B") consisting of one (1) CANNON "XLR", complete with 3 pin XLR (female), series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, one (1) 3.5mmstereo audio jack (MP3), and a stainless-steel cover plate. A Microphone/MP3 outlet, which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

VI. AM/FM ANTENNA

A. This Contractor shall furnish and install a PIXEL TECHNOLOGIES Model No. AFHD-4 AM/FM and HD antenna complete with: L mounting bracket; weather boot; surge protector; 20dB attenuator; 10dB attenuator; AM/FM separator; U- bolts with washers and nuts; pole mount saddle brackets; F-female to twin-lead adaptor and push-on-F-female to DIN adaptor. This Contractor shall furnish and install a weatherhead, rigid steel conduit mast, and two (2) RG-6 plenum rated cables from the antennas to the tuner located in the sound and intercommunication system equipment rack. This Contractor shall ground the antenna in accordance with the following

specification.

VII. BAND, CHORAL, ORCHESTRA AND GENERAL MUSIC ROOMS SOUND SYSTEM CABLE

A. This Contractor shall furnish and install one (1) two (2) conductor, No. 12 AWG stranded plenum rated cable with a temperature range for dry locations of minus ten (10) degrees C to sixty (60) degrees C for each stereo speaker. A cable that meets this Specification is WEST PENN Cat. No. 25227B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

B. This Contractor shall furnish and install one (1) stranded, No. 20 AWG, shielded, single twisted pair plenum rated cable with a temperature range for dry locations of minus ten (10) degrees C to sixty (60) degrees C for each microphone outlet. A cable that meets this Specification is WEST PENN Cat. No. 25292B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

VIII. CEILING MOUNTED PROJECTOR LOCATIONS

A. This contractor shall furnish and install one (1) two (2) conductor No. 12 AWG stranded, plenum rated cable from the audio out port of the ceiling mounted projector to an audio in port for each Band, Choral, Orchestra and General Music Room sound reinforcement systems shown on the drawings.

Part 3 - Execution

I. INSTALLATION

A. All vertical, low voltage field wiring shall be installed by this Contractor in 1/2-inch conduit and/or surface metal raceway as shown on the Drawings. Conduit fill shall not exceed the conduit space capacity.

B. All horizontal, low voltage field wiring to be installed in areas without a ceiling or in areas without an accessible ceiling shall be installed by this Contractor in 1/2-inch conduit.

C. All horizontal low voltage field wiring to be installed in areas with accessible ceilings shall be installed by this Contractor bundled together and run exposed above the ceilings. Bundles shall be supported by "J" hooks mounted not more than four (4) feet on center. “J” hooks shall be dedicated to the wiring specified in this specification section.

D. All horizontal, low voltage field wiring shall be run at right angles to the building structure.

E. All horizontal low voltage field wiring shall be installed below the roof/floor structural supports (joist, beams, girders, etc.). Wiring installed between the structural supports mentioned above and the roof or floor deck will not be acceptable.

F. All horizontal low voltage field wiring penetrations through new and/or existing walls shall be sleeved. Minimum sleeve size shall be 3/4 inch. All sleeves shall be bushed both sides.

G. All low voltage field wiring for the Band, Choral, Orchestra and General Music Room sound reinforcement systems shall be furnished and installed by this Contractor. All junction box covers shall be stenciled for distinct identification.

H. This Contractor as directed by the equipment manufacturer shall make all wiring connections. Splices for circuits shall be made only in junction boxes and shall be crimp connected.

I. All Band, Choral, Orchestra and General Music Room sound reinforcement systems wiring shall be checked and tested by this Contractor to insure the system is free from grounds, opens, and shorts.

J. All work shall be under the supervision of a factory accredited sound engineer. It shall be the responsibility of the sound engineer and this contractor to check and inspect this installation to the Owner's and Architect/Engineer's approval.

II. RACK MOUNTED EQUIPMENT

A. Each Band, Choral, Orchestra and General Music Room sound reinforcement system's rack mounted equipment shall be installed by this Contractor with the proper adapters, rack mounting kits, brackets, and closure panels for unused spaces. All interconnecting wiring shall be labeled, bundled, secured, and terminated by this Contractor in a neat and professional manner.

B. All rack mounted equipment AC power cords shall be plugged into the mounted power strip by this Contractor.

III. SPEAKER

A. Wall mounted stereo speakers shall be securely fastened to the building structure by this Contractor with threaded rod or bolts as appropriate for the application.

B. This Contractor shall furnish and install a NEMA 5-20R duplex receptacle (as hereinbefore specified) at each stereo speaker location whether shown on the Drawings or not. Duplex receptacles shall be on their own circuit.

IV. MICROPHONES

A. This Contractor shall unpack microphone and assemble with cables and stands and connect ready for operation. Microphones shown for permanent installation shall be mounted by this Contractor in accordance with the Drawings in a manner appropriate for the location.

V. MICROPHONES OUTLETS

A. This Contractor shall assemble microphone outlets and install, connect, and label as shown on Drawings.

VI. ANTENNA INSTALLATION

A. The antenna shall be bracket mounted by this Contractor above the roof at a location approved by the Owner. The antenna cables shall be run by this Contractor to the equipment rack and connected ready for operation.

B. The antenna shall be grounded by this Contractor to the secondary building ground system with one (1) No. 10 AWG in 1/2-inch conduit.

END OF SECTION

Part 1 - General

I. REQUIREMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

II. SCOPE

A. The work covered under this Section shall include furnishing and installing a separate locally controlled complete and satisfactorily operating Athletic Field sound reinforcement system for the pickup, amplification, reproduction, and distribution of voice and/or music to associated loudspeakers for each of the following: Baseball Field; Football Stadium; Softball Field; and Track and Field area.

III. QUALITY ASSURANCE

A. All equipment described shall be the product of a manufacturer of established reputation and experience producing similar apparatus for a period of at least ten (10) years and shall be able to refer to similar installations now rendering satisfactory service.

B. The Athletic Fields sound reinforcement systems shall be furnished by a factory authorized distributor certified to design, program, and service the system. The distributor must show evidence of successfully furnishing systems specified for at least five (5) years.

C. All equipment for the Athletic Fields sound reinforcement systems shall be listed by Underwriters Laboratories, Inc. (UL), bear the UL label, and shall be installed in accordance with all requirements of the National Electrical Code (NEC), state and local codes, and these Specifications.

D. Each Athletic Field sound reinforcement system installation shall be performed under the direct supervision of a factory trained service specialist.

E. Shop drawing submittals are required per SECTION 260500 and shall include the following for review:

1. A complete list of equipment for each Athletic Field area shall be furnished indicating the specific quantities for each area to be furnished by the manufacturer. The catalog or model number for each module of each system shall be listed next to the quantities. This information shall be furnished in the front of the submittal.

2. A specific description of each Athletic Field sound reinforcement system shall be furnished describing each module and how it shall function in the associated system.

3. A detailed plan of each Athletic Field area shall be furnished showing the locations of all equipment, loudspeakers, and devices and their required

interconnections. The interconnections shown shall indicate the number, size, and type of wires as described in this Specification. The layout of all equipment, devices, and conduit routings shall closely follow that shown on the Drawings.

4. A specific drawing of each Athletic Field sound reinforcement system rack shall be made by the equipment supplier. Each module shall be shown in its proper location with its terminal designation shown.

5. A data sheet shall be furnished for each module and device. The information shall be highlighted that applies to the particular module or device to be furnished.

6. A detailed diagram showing how to connect each device shall be furnished indicating exact final connection information.

7. A detailed drawing showing how to mount the Football, Baseball, Softball, and Track and Field Speakers, shall be furnished, including necessary hardware and mounting devices.

IV. DOCUMENTATION

A. This Contractor shall furnish to the Contractor, one (1) set of "As Built" drawings for each Athletic Field area depicting the complete wiring system and component interconnections in each system equipment rack.

B. This Contractor shall furnish to the Contractor, four (4) sets of factory operation and maintenance manuals for each Athletic Field sound reinforcement system. These manuals shall be including factory service manuals with complete parts lists, wiring and component schematics including circuit diagrams, and all other information necessary for the proper operation and service maintenance of the system.

V. TRAINING

A. This Contractor shall furnish eight (8) hours (total for all Athletic Fields) of technical service training to the Owner's technical staff using the factory service manuals previously specified.

B. This Contractor shall furnish eight (8) hours (total for all Athletic Fields) of operating and programming training to the Owner's operating staff which shall be delivered in two (2) separate four (4) hour sessions to be scheduled at the Owner's convenience over the warranty period.

C. All training specified herein shall be performed by a factory certified technician.

VI. DESCRIPTION OF OPERATION

A. This Contractor shall furnish and install Athletic Fields sound reinforcement systems with all conduit, wiring, outlets, and equipment as shown on the Drawings and as herein specified to furnish complete systems.

B. Each Athletic Field sound reinforcement system shall provide for the amplification of music and voice, and the reproduction of recorded music or other program materials, and their distribution to all associated speakers.

C. Each Athletic Field sound reinforcement system shall provide a personal listening system for use by hearing impaired listeners.

VII. SYSTEM TEST AND ACCEPTANCE

A. Prior to the final site visitation this Contractor shall conduct an operating test of each complete Athletic Field sound reinforcement system. Each system shall test free from grounds, shorts, and other faults. All connections shall be thoroughly checked for mechanical and electrical connections. All equipment shall be demonstrated to operate in accordance with the requirements set forth in these Specifications and as shown on the Drawings.

B. This Contractor shall perform all tests in the presence of the Architect/Engineer. This Contractor shall furnish all personnel and test instruments for use in the test.

C. When the work on each Athletic Field sound reinforcement system has been completed and is ready for final review, this Contractor shall demonstrate that the requirements of the Contract as it applies to this work have been carried out and that each system has been adjusted and operated in accordance therewith.

VIII. WARRANTY

A. This Contractor shall deliver the work described herein in a first-class operating condition in every respect. This Contractor shall also warrant that the material, equipment, and workmanship furnished shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractors own expense. Refer to SECTION 01740 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the Drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

Part 2 - Products

I. BASEBALL FIELD SOUND REINFORCEMENT SYSTEM

A. EQUIPMENT RACK

1. This Contractor shall furnish and install a sectional wall mounted Baseball Field sound reinforcement system equipment rack as shown on the Drawings and as specified herein. The rack shall be ATLAS SOUND Cat. No. WMA24-23 sectional, wall mounting type with a textured black finish providing a minimum of forty-two (42) inches of vertical rack mounting space. The rack shall be complete with a continuous piano hinged front door with a cylinder lock and

handle. The baseball field sound system equipment rack shall have a sign mounted to the front stating, “Personal Listening Devices Stored Here”. The sign shall be 1/16-inch-thick laminated plastic with 3/16-inch-high white letters on a black background. The following equipment shall be furnished and installed by this Contractor in the rack:

a) One (1) dual channel power amplifier suitable for rack mounting with a minimum rating of 300 watts’ continuous sine wave per channel into an eight (8) ohm output at twenty (20) Hz to twenty (20) kHz with a maximum 0.1 percent (0.1%) distortion. A power amplifier that will meet this specification is CROWN Model No. CTs 600.

b) One (1) PASO Model No. DMS260P ten (10) channel, digital mixer/preamplifier with 27/3501 Rack Mount Kit.

c) One (1) PASO Model No. PM01ML Mic/Line input module

d) One (1) PYLE Model No. PT504 rack mounted stereo AM/FM tuner.

e) One (1) TASCAM Model No. CD-200i, rack mounted CD player with MP3 dock.

f) One (1) WILLIAMS SOUND Model No. PPA T35 personal listening system base station transmitter complete with WILLIAMS SOUND Model No. RPK 005 rack mounting kit and ANT 005 coaxial antennae.

g) The Contractor shall furnish and install in the charging stations, twelve (12) WILLIAMS SOUND Model No. No. PPA R37, seventeen (17) channel personal listening system receivers each complete with WILLIAMS SOUND Model No. EAR 013 single earbud, rechargeable batteries, and belt clip.

h) This contractor shall furnish to the owner’s representative, four (4) WILLIAMS SOUND Model NKL 001 neckloops.

i) The Contractor shall furnish and install one (1) WILLIAMS SOUND Model No. CHG 3512 twelve (12) unit charging station for the personal listening system receivers complete with one (1) ATLAS SOUND Model No. VTD1-16 rack sliding shelf

j) One (1) ATLAS SOUND Model No. ACRL-191 AC power supply module suitable for rack mounting.

k) One (1) ATLAS SOUND Model No. ACS-1 AC power strip.

l) One (1) SHURE “SLX” series UHF Wireless Microphone System complete with Model No. SLX4 wireless receiver complete with rack mounting hardware and detachable antennas.

B. Speaker Systems:

1. This Contractor shall furnish and install two (2), horn type loudspeakers of the compound diffraction design rated 15W to 120 watts, 70.0 volts with a frequency response of 90 Hz - 16 kHz and shall include a driver. A horn type loudspeaker that will meet this Specification is COMMUNITY Model No. R.5-66T or equal as manufactured by JBL.

C. Microphones:

1. This Contractor shall furnish to the Owner's representative, one (1) SHURE Model No. SM58S dynamic cardioid microphone complete with an ON/OFF switch. The microphone shall be furnished by this Contractor complete with a twenty-five (25) foot connector cord with CANNON XLR connectors.

2. This Contractor shall furnish to the Owner's representative, one (1) SHURE Model No. SLX2/SM58 dynamic cardioid wireless handheld microphone, and one (1) SHURE Model No WL183 lapel microphone with SLX1 transmitter. Each complete with an ON/OFF switch and batteries

D. Microphone Stand:

1. This Contractor shall furnish to the Owner's representative, one (1) ATLAS SOUND Model No. DS-2 microphone desk stand.

E. Microphone Outlets:

1. This Contractor shall furnish and install where shown on the Drawings, flush or surface wall and/or ceiling mounted microphone outlets (Type "A") consisting of CANNON "XLR" complete with 3 pin XLR (female) series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, and a stainless-steel cover plate. A microphone outlet, which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

2. This Contractor shall furnish and install where shown on the Drawings, flush or surface wall mounted Microphone outlets (Type "B") consisting of one (1) CANNON "XLR", complete with 3 pin XLR (female), series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, one (1) 3.5mmstereo audio jack (MP3), and a stainless-steel cover plate. A Microphone/MP3 outlet, which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

F. Baseball Field System Cable:

1. This Contractor shall furnish and install speaker cable consisting of one (1) twisted pair, No. 12 AWG unshielded with a temperature range for dry locations of minus twenty-five (25) degrees C to one hundred five (105) degrees C and seventy-five (75) degrees C for wet locations. A cable that meets this Specification is WEST PENN Cat. No. AQ227 or equal as manufactured by

BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

2. This Contractor shall furnish and install field wiring for microphone outlets as shown on the Drawings. Wiring shall be two (2) conductor, No. 20 AWG stranded and shielded cable. A cable that meets this Specification is WEST PENN Cat. No. 25292B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

3. This Contractor shall furnish and install field wiring for MP3 outlets as shown on the Drawings. Wiring shall be two (2) conductor, No. 20 AWG stranded and shielded cable. A cable that meets this Specification is WEST PENN Cat. No. 25292B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

II. FOOTBALL FIELD SOUND REINFORCEMENT SYSTEM

A. Equipment Rack:

1. This Contractor shall furnish and install a floor mounted equipment rack for the football field sound reinforcement system as shown on the Drawings and as specified herein. The rack(s) shall be ATLAS SOUND Cat. No. WA200-77B providing a minimum of seventy-seven (77) inches of standard nineteen (19) inch rack mounting space. The rack(s) shall be complete with a hinged front door with cylinder lock and handle, and a flush spring-hinged rear door with cylinder lock (front and rear locks shall be keyed differently) and handle. The football field sound system equipment rack shall have a sign mounted to the front stating, “Personal Listening Devices Stored Here”. The sign shall be 1/16-inch-thick laminated plastic with 3/16-inch-high white letters on a black background. The following equipment shall be furnished and installed by this Contractor in the rack:

a) One (1) dual channel power amplifier (Home) suitable for rack mounting with a minimum rating of 2400 watts’ continuous sine wave per channel into a four (4) ohm output at twenty (20) Hz to twenty (20) kHz with a maximum 0.1 percent (0.1%) distortion. A power amplifier, which will meet this specification, is CROWN Model No. CTs-2000.

b) One (1) dual channel power amplifier (Visitor) suitable for rack mounting with a minimum rating of 1200 watts’ continuous sine wave per channel into a four (4) ohm output at twenty (20) Hz to twenty (20) kHz with a maximum 0.1 percent (0.1%) distortion. A power amplifier, which will meet this specification, is CROWN Model No. CTs-1200.

c) One (1) PASO Model No. DMS260P ten (10) channel, digital mixer/preamplifier with 27/3501 Rack Mount Kit.

d) One (1) PASO Model No. PM01ML Mic/Line input module.

e) One (1) PYLE Model No. PT504 rack mounted stereo AM/FM tuner.

f) One (1) TASCAM Model No. CD-200i, rack mounted CD player with MP3 dock.

g) One (1) WILLIAMS SOUND Model No. PPA T35 personal listening system base station transmitter complete with WILLIAMS SOUND Model No. RPK 005 rack mounting kit and ANT 005 coaxial antenna.

h) The Contractor shall furnish and install in the charging stations, thirty-six (36) WILLIAMS SOUND Model No. No. PPA R37, seventeen (17) channel personal listening system receivers each complete with WILLIAMS SOUND Model No. EAR 013 single earbud, rechargeable batteries, and belt clip.

i) This contractor shall furnish to the owner's representative, nine (9) WILLIAMS SOUND Model NKL 001 neckloops.

j) The Contractor shall furnish and install three (3) WILLIAMS SOUND Model No. CHG 3512 twelve (12) unit charging stations for the personal listening system receivers complete with three (3) ATLAS SOUND Model No. VTD1-16 rack sliding shelf

k) One (1) ATLAS SOUND Model No. ACRL-191 AC power supply module suitable for rack mounting.

l) One (1) ATLAS SOUND Model No. ACS-1 AC power strip.

m) One (1) SHURE "SLX" series UHF Wireless Microphone System complete with Model No. SLX4 wireless receiver complete with rack mounting hardware and detachable antennas

B. Speaker Systems:

1. This Contractor shall furnish and install two (2), 3-way loudspeaker system (Home) with a frequency response of 70 Hz - 4 kHz and shall include a driver. A speaker, which will meet this Specification, is COMMUNITY Model No. R2-474 complete with COMMUNITY Model No. R2YOKE mounting yoke kit or equal as manufactured by JBL.

2. This Contractor shall furnish and install one (1), 3-way loudspeaker system (Visitor) with a frequency response of 70 Hz - 4 kHz and shall include a driver. A speaker, which will meet this Specification, is COMMUNITY Model No. R2-52 complete with COMMUNITY Model No. R2YOKE mounting yoke kit or equal as manufactured by JBL.

C. Microphones:

1. This Contractor shall furnish to the Owner's representative, four (4) SHURE Model No. SM58S dynamic cardioid microphones. Each complete with an ON/OFF switch. Each microphone shall be furnished by this Contractor complete with a twenty-five (25) foot connector cord with CANNON XLR

connectors

2. This Contractor shall furnish to the Owner's representative, one (1) SHURE Model No. SLX2/SM58 dynamic cardioid wireless handheld microphone, and one (1) SHURE Model No WL183 lapel microphone with SLX1 transmitter. Each complete with an ON/OFF switch and batteries

D. Microphone Stands:

1. This Contractor shall furnish to the Owner's representative, two (2) ATLAS SOUND Model No. DS-2 microphone desk stands.

2. This Contractor shall furnish to the Owner's representative, two (2) ATLAS SOUND Model No. MS-20 microphone floor stands.

E. Microphone Outlets:

1. This Contractor shall furnish and install where shown on the Drawings, flush or surface wall and/or ceiling mounted microphone outlets (Type "A") consisting of CANNON "XLR" complete with 3 pin XLR (female) series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, and a stainless-steel cover plate. A microphone outlet, which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

2. This Contractor shall furnish and install where shown on the Drawings, flush or surface wall mounted Microphone outlets (Type "B") consisting of one (1) CANNON "XLR", complete with 3 pin XLR (female), series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, one (1) 3.5mmstereo audio jack (MP3), and a stainless-steel cover plate. A Microphone/MP3 outlet, which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

F. Football Field System Cable:

1. This Contractor shall furnish and install speaker cable consisting of one (1) twisted pair, No. 12 AWG unshielded with a temperature range for dry locations of minus twenty-five (25) degrees C to one hundred five (105) degrees C and seventy-five (75) degrees C for wet locations. A cable that meets this Specification is WEST PENN Cat. No. AQ227 or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

2. This Contractor shall furnish and install field wiring for microphone outlets as shown on the Drawings. Wiring shall be two (2) conductor, No. 20 AWG stranded and shielded cable. A cable that meets this Specification is WEST PENN Cat. No. 25292B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

3. This Contractor shall furnish and install field wiring for MP3 outlets as shown on

the Drawings. Wiring shall be two (2) conductor, No. 20 AWG stranded and shielded cable. A cable that meets this Specification is WEST PENN Cat. No. 25292B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or APPAN.

III. SOFTBALL FIELD SOUND REINFORCEMENT SYSTEM

A. EQUIPMENT RACK

1. This Contractor shall furnish and install a sectional wall mounted Softball Field sound reinforcement system equipment rack as shown on the Drawings and as specified herein. The rack shall be ATLAS SOUND Cat. No. WMA24-23 sectional, wall mounting type with a textured black finish providing a minimum of forty-two (42) inches of vertical rack mounting space. The rack shall be complete with a continuous piano hinged front door with a cylinder lock and handle. The softball field sound system equipment rack shall have a sign mounted to the front stating, “Personal Listening Devices Stored Here”. The sign shall be 1/16-inch-thick laminated plastic with 3/16-inch-high white letters on a black background. The following equipment shall be furnished and installed by this Contractor in the rack:

a) One (1) dual channel power amplifier suitable for rack mounting with a minimum rating of 300 watts continuous sine wave per channel into an eight (8) ohm output at twenty (20) Hz to twenty (20) kHz with a maximum 0.1 percent (0.1%) distortion. A power amplifier that will meet this specification is CROWN Model No. CTs 600.

b) One (1) PASO Model No. DMS260P ten (10) channel, digital mixer/preamplifier with 27/3501 Rack Mount Kit.

c) One (1) PASO Model No. PM01ML Mic/Line input module

d) One (1) PYLE Model No. PT504 rack mounted stereo AM/FM tuner.

e) One (1) TASCAM Model No. CD-200i, rack mounted CD player with MP3 dock.

f) One (1) WILLIAMS SOUND Model No. PPA T35 personal listening system base station transmitter complete with WILLIAMS SOUND Model No. RPK 005 rack mounting kit and ANT 005 coaxial antenna.

g) The Contractor shall furnish and install in the charging stations, twelve (12) WILLIAMS SOUND Model No. No. PPA R37, seventeen (17) channel personal listening system receivers each complete with WILLIAMS SOUND Model No. EAR 013 single earbud, rechargeable batteries, and belt clip.

h) This contractor shall furnish to the owners representative, four (4) WILLIAMS SOUND Model NKL 001 neckloops.

i) The Contractor shall furnish and install (1) WILLIAMS SOUND Model No. CHG 3512 twelve (12) charging station for the personal listening system receivers complete with one (1) ATLAS SOUND Model No. VTD1-16 rack sliding shelf

j) One (1) ATLAS SOUND Model No. ACRL-191 AC power supply module suitable for rack mounting.

k) One (1) ATLAS SOUND Model No. ACS-1 AC power strip.

l) One (1) SHURE “SLX” series UHF Wireless Microphone System complete with Model No. SLX4 wireless receiver complete with rack mounting hardware and detachable antennas.

B. Speaker Systems:

1. This Contractor shall furnish and install two (2), horn type loudspeakers of the compound diffraction design rated 15W to 120 watts, 70.0 volts with a frequency response of 90 Hz - 16 kHz and shall include a driver. A horn type loudspeaker that will meet this Specification is COMMUNITY Model No. R.5-66T or equal as manufactured by JBL.

C. Microphones:

1. This Contractor shall furnish to the Owner’s representative, one (1) SHURE Model No. SM58S dynamic cardioid microphones complete with an ON/OFF switch. The microphone shall be furnished by this Contractor complete with a twenty-five (25) foot connector cord with CANNON XLR connectors

2. This Contractor shall furnish to the Owner’s representative, one (1) SHURE Model No. SLX2/SM58 dynamic cardioid wireless handheld microphone, and one (1) SHURE Model No WL183 lapel microphone with SLX1 transmitter. Each complete with an ON/OFF switch and batteries

D. Microphone Stand:

1. This Contractor shall furnish to the Owner’s representative, one (1) ATLAS SOUND Model No. DS-2 microphone desk stand.

E. Microphone Outlets:

1. This Contractor shall furnish and install where shown on the Drawings, flush or surface wall and/or ceiling mounted microphone outlets (Type “A”) consisting of CANNON "XLR" complete with 3 pin XLR (female) series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, and a stainless-steel cover plate. A microphone outlet, which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

2. This Contractor shall furnish and install where shown on the Drawings, flush or

surface wall mounted Microphone outlets (Type “B”) consisting of one (1) CANNON "XLR", complete with 3 pin XLR (female), series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, one (1) 3.5mmstereo audio jack (MP3), and a stainless-steel cover plate. A Microphone/MP3 outlet, which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

F. Softball Field System Cable:

1. This Contractor shall furnish and install speaker cable consisting of one (1) twisted pair, No. 12 AWG unshielded with a temperature range for dry locations of minus twenty-five (25) degrees C to one hundred five (105) degrees C and seventy-five (75) degrees C for wet locations. A cable that meets this Specification is WEST PENN Cat. No. AQ227 or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

2. This Contractor shall furnish and install field wiring for microphone outlets as shown on the Drawings. Wiring shall be two (2) conductor, No. 20 AWG stranded and shielded cable. A cable that meets this Specification is WEST PENN Cat. No. 25292B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

3. This Contractor shall furnish and install field wiring for MP3 outlets as shown on the Drawings. Wiring shall be two (2) conductor, No. 20 AWG stranded and shielded cable. A cable that meets this Specification is WEST PENN Cat. No. 25292B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

IV. TRACK AND FIELD AREA SOUND REINFORCEMENT SYSTEM

A. EQUIPMENT RACK

1. This Contractor shall furnish and install a sectional wall mounted Track and Field Area sound reinforcement system equipment rack as shown on the Drawings and as specified herein. The rack shall be ATLAS SOUND Cat. No. WMA24-23 sectional, wall mounting type with a textured black finish providing a minimum of forty-two (42) inches of vertical rack mounting space. The rack shall be complete with a continuous piano hinged front door with a cylinder lock and handle. The track and field sound system equipment rack shall have a sign mounted to the front stating, “Personal Listening Devices Stored Here”. The sign shall be 1/16-inch-thick laminated plastic with 3/16-inch-high white letters on a black background. The following equipment shall be furnished and installed by this Contractor in the rack:

    a) Two (2) dual channel power amplifier suitable for rack mounting with a minimum rating of 600 watts’ continuous sine wave per channel into a four (4) ohm output at twenty (20) Hz to twenty (20) kHz with a maximum 0.1 percent (0.1%) distortion. A power amplifier that will meet this specification is CROWN Model No. CTs-1200 complete with the required number of ATLAS SOUND Model No. AF140 matching

transformers.

b) One (1) PASO Model No. DMS260P ten (10) channel, digital mixer/preamplifier with 27/3501 Rack Mount Kit.

c) One (1) PASO Model No. PM01ML Mic/Line input module

d) One (1) PYLE Model No. PT504 rack mounted stereo AM/FM tuner.

e) One (1) TASCAM Model No. CD-200i, rack mounted CD player with MP3 dock.

f) One (1) WILLIAMS SOUND Model No. PPA T35 personal listening system base station transmitter complete with WILLIAMS SOUND Model No. RPK 005 rack mounting kit and ANT 005 coaxial antennae.

g) The Contractor shall furnish and install in the charging stations, twelve (12) WILLIAMS SOUND Model No. No. PPA R37, seventeen (17) channel personal listening system receivers each complete with WILLIAMS SOUND Model No. EAR 013 single earbud, rechargeable batteries, and belt clip.

h) This contractor shall furnish to the owner's representative, four (4) WILLIAMS SOUND Model NKL 001 neckloops.

i) the Contractor shall furnish and install, one (1) WILLIAMS SOUND Model No. CHG 3512 twelve (12) unit charging station for the personal listening system receivers complete with one (1) ATLAS SOUND Model No. VTD1-16 rack sliding shelf

j) One (1) ATLAS SOUND Model No. ACRL-191 AC power supply module suitable for rack mounting.

k) One (1) ATLAS SOUND Model No. ACS-1 AC power strip.

l) One (1) SHURE "SLX" series UHF Wireless Microphone System complete with Model No. SLX4 wireless receiver complete with rack mounting hardware and detachable antennas

B. Speaker Systems:

1. This Contractor shall furnish and install four (4), horn type loudspeakers of the compound diffraction design rated 15W to 120 watts, 70.0 volts with a frequency response of 90 Hz - 16 kHz and shall include a driver. A horn type loudspeaker that will meet this Specification is COMMUNITY Model No. R.5-66T or equal as manufactured by JBL.

C. Microphones:

1. This Contractor shall furnish to the Owner's representative, one (1) SHURE

Model No. SM58S dynamic cardioid microphones complete with an ON/OFF switch. The microphone shall be furnished by this Contractor complete with a twenty-five (25) foot connector cord with CANNON XLR connectors.

2. This Contractor shall furnish to the Owner's representative, one (1) SHURE Model No. SLX2/SM58 dynamic cardioid wireless handheld microphone, and one (1) SHURE Model No WL183 lapel microphone with SLX1 transmitter. Each complete with an ON/OFF switch and batteries

D. Microphone Stand:

1. This Contractor shall furnish to the Owner's representative, one (1) ATLAS SOUND Model No. DS-2 microphone desk stand.

E. Microphone Outlets:

1. This Contractor shall furnish and install where shown on the Drawings, flush or surface wall and/or ceiling mounted microphone outlets (Type "A") consisting of CANNON "XLR" complete with 3 pin XLR (female) series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, and a stainless-steel cover plate. A microphone outlet, which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

2. This Contractor shall furnish and install where shown on the Drawings, flush or surface wall mounted Microphone outlets (Type "B") consisting of one (1) CANNON "XLR", complete with 3 pin XLR (female), series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, one (1) 3.5mmstereo audio jack (MP3), and a stainless-steel cover plate. A Microphone/MP3 outlet, which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

F. Track and Field System Cable:

1. This Contractor shall furnish and install speaker cable consisting of one (1) twisted pair, No. 12 AWG unshielded with a temperature range for dry locations of minus twenty-five (25) degrees C to one hundred five (105) degrees C and seventy-five (75) degrees C for wet locations. A cable that meets this Specification is WEST PENN Cat. No. AQ227 or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

2. This Contractor shall furnish and install field wiring for microphone outlets as shown on the Drawings. Wiring shall be two (2) conductor, No. 20 AWG stranded and shielded cable. A cable that meets this Specification is WEST PENN Cat. No. 25292B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

3. This Contractor shall furnish and install field wiring for MP3 outlets as shown on the Drawings. Wiring shall be two (2) conductor, No. 20 AWG stranded and

shielded cable. A cable that meets this Specification is WEST PENN Cat. No. 25292B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

Part 3 - Execution

I. INSTALLATION

A. All wiring for the Athletic Fields sound reinforcement systems shall be installed by this Contractor in ½-inch conduit. All junction box covers shall be stenciled for distinct identification. All conduit, device mounting boxes, junction boxes, and enclosures shall be securely fastened with appropriate fittings to insure a positive ground throughout each entire system.

B. All wiring connections shall be made by this Contractor as directed by the equipment manufacturer. Splices for circuits shall be made only in junction boxes and shall be crimp connected.

C. All wiring shall be checked and tested by this Contractor to insure each system is free from grounds, opens, and shorts.

D. All work shall be under the supervision of a factory accredited sound engineer. It shall be the responsibility of the sound engineer and this Contractor to check and inspect this installation to the Architect/Engineer's approval.

II. RACK MOUNTED EQUIPMENT

A. Each Athletic Field sound reinforcement systems' rack mounted equipment shall be installed by this Contractor with the proper adapters, rack mounting kits, brackets, and closure panels for unused spaces. All interconnecting wiring shall be labeled, bundled, secured, and terminated by this Contractor in a neat and professional manner.

B. All rack mounted equipment AC power cords shall be plugged into the rack mounted power strip by this Contractor.

III. SPEAKER MOUNTING

A. This Contractor shall assemble and install all speakers as detailed on the Drawings.

IV. MICROPHONES

A. This Contractor shall unpack and assemble microphones complete with all cables, connectors, and stands and connect ready for operation.

V. MICROPHONE OUTLETS

A. This Contractor shall assemble microphone outlets and install, connect, and label as shown on the Drawings.

VI. CABLES

A. All wiring and cable for the Athletic Fields sound reinforcement systems shall be pulled continuously through conduits without splices or abrasions and shall be terminated at their appropriate devices as shown on the Drawings, specified herein, and as directed by the system supplier. All cables shall be labeled. Input and output cabling shall not be installed in the same raceway.

B. Unless otherwise indicated on the Drawings, all Athletic Fields sound reinforcement systems cable shall be installed in heavy wall schedule 40 PVC conduits, minimum size 3/4, as hereinbefore specified.

END OF SECTION

Part 1 - General

I. REQUIREMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

II. SCOPE

A. The work covered under this Section shall include furnishing and installing a locally controlled complete and satisfactorily operating sound system in each of the Dance and Gymnastics Rooms for the pickup, amplification, reproduction, and distribution of voice and/or music to associated loudspeakers within each room.

B. Existing Dance and Gymnastics Rooms sound reinforcement systems equipment may be reused as noted on the Drawings. This Contractor shall exercise extreme care not to damage the equipment while following the instructions on the Drawings. The equipment to be reused shall be protected from construction before, during, and after work has been completed.

III. QUALITY ASSURANCE

A. All equipment described shall be the product of a manufacturer of established reputation and experience produced similar apparatus for a period of at least ten (10) years and shall be able to refer to similar installations now rendering satisfactory service.

B. The Dance and Gymnastics Rooms sound reinforcement systems shall be furnished by a factory authorized distributor certified to design, program, and service the system. The distributor must show evidence of successfully furnishing systems specified for at least five (5) years.

C. All equipment for the Dance and Gymnastics Rooms sound reinforcement systems shall be listed Underwriters Laboratories, Inc. (UL) bear the UL label and shall be installed in accordance with all requirements of the National Electrical Code (NEC), state and local codes, and these Specifications.

D. Each of the Dance and Gymnastics Rooms sound reinforcement systems installation shall be performed under the direct supervision of a factory trained service specialist.

E. Shop drawing submittals are required per SECTION 260500 and shall include the following for review. Submittals not containing all of the information listed below will be rejected.

1. A complete list of equipment for each Dance and Gymnastics Rooms sound reinforcement system shall be furnished indicating the specific quantities to be furnished by this Contractor. The catalog or model number for each module of each system shall be listed next to the quantities. This information shall be furnished in the front of the submittal.

2. A specific description of each of the Dance and Gymnastics Rooms sound reinforcement systems shall be furnished describing each module and how it shall function within each system.

3. A specific drawing shall be furnished of each Dance and Gymnastics Rooms sound reinforcement system equipment rack. Each module shall be shown in its proper location with its terminal designation shown.

4. A data sheet shall be furnished for each module and device. The information shall be highlighted that applies to the particular module or device to be furnished.

5. A detailed diagram showing how to connect each device shall be furnished indicating exact final connection information.

6. A detailed floor plan for each Dance and Gymnastics Room shall be furnished. The plans shall show the locations of all equipment, loudspeakers, and devices and their required interconnections. The interconnections shown shall indicate the number, size, and type of wires as described in this Specification. Loudspeakers shall be zoned as shown on the Drawings. The layout of all Dance and Gymnastics Rooms sound reinforcement system equipment, devices, and conduit routings shall closely follow that shown on the Drawings.

IV. DOCUMENTATION

A. This Contractor shall furnish to the Contractor, one (1) set of "As Built" drawings for each Dance and Gymnastics Room sound reinforcement system depicting the complete field wiring system and component interconnections in each system equipment rack.

B. This Contractor shall furnish to the Contractor, four (4) sets of factory operation and maintenance manuals. These manuals shall include factory service manuals with complete parts lists, wiring and component schematics including circuit diagrams, and all other information necessary for the proper operation, service, and maintenance of each Dance and Gymnastics Room sound reinforcement system.

V. TRAINING

A. This Contractor shall furnish eight (8) hours (total for all rooms) of technical service training to the Owner's technical staff using the factory service manuals previously specified.

B. This Contractor shall furnish eight (8) hours (total for all rooms) of operating and programming training to the Owner's operating staff which shall be delivered in two (2) separate four (4) hours sessions to be scheduled at the Owner's convenience over the warranty period.

C. All training specified herein shall be performed by a factory certified technician.

VI. DESCRIPTION OF OPERATION

A. This Contractor shall furnish and install Dance and Gymnastics Rooms sound reinforcement systems with all conduit, cable, outlets, devices, and equipment as shown on the Drawings and as herein specified to furnish complete systems.

B. Each Dance and Gymnastics Rooms sound reinforcement system shall provide for reception of AM or FM radio broadcasts, the amplification of music and voice, and the reproduction of recorded music or other program materials, and their distribution to all associated speakers within each Dance and Gymnastics Room.

C. Each Dance and Gymnastics Room sound reinforcement system shall accept both the input and output of an external tape recorder.

D. Each Dance and Gymnastics sound reinforcement system shall accept a priority override signal to mute the system when the main building Sound and Intercommunications System activates the priority override function.

VII. SYSTEM TEST AND ACCEPTANCE

A. Prior to the final site visitation this Contractor shall conduct an operating test of each complete Dance and Gymnastics Rooms sound reinforcement system. Each system shall test free from grounds, shorts, and other faults. All connections shall be thoroughly checked for mechanical and electrical connections. All equipment shall be demonstrated to operate in accordance with the requirements set forth in these Specifications and as shown on the Drawings.

B. This Contractor shall perform all tests in the presence of the Architect/Engineer. This Contractor shall furnish all personnel and test instruments for use in the test.

C. When the work on each Dance and Gymnastics Room sound reinforcement system has been completed and is ready for final review, this Contractor shall demonstrate that the requirements of the Contract as it applies to this work have been carried out and that the system has been adjusted and operated in accordance therewith.

VIII. WARRANTY

A. This Contractor shall deliver the work described herein in a first-class operating condition in every respect. This Contractor shall also warrant that the material, equipment, and workmanship furnished shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractors own expense. Refer to SECTION 01740 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the Drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

Part 2 - Products

I. EQUIPMENT RACKS

A. This Contractor shall furnish and install in each Dance and Gymnastics Room where shown on the Drawings, a wall mounted equipment rack for the room's sound reinforcement system as specified herein. Each rack shall be ATLAS SOUND Cat. No. WMA24-23 sectional, wall mounting type with a textured black finish providing a minimum of sixty-one (61) inches of vertical rack mounting space. Each rack shall be complete with a continuous piano hinged front door with a cylinder lock and handle. The following equipment shall be furnished and installed by this Contractor in each rack:

1. One (1) TOA Model No. D-901 twelve (12) input, eight (8) output, digital mixer. Mixer shall come complete with:

   a) One (1) D936R four (4) stereo input module (tuner, CD, MP3 outlets).

   b) One (1) D971E four (4) channel line output module (personal listening system, amplifier).

   c) Four (4) D921E 2-channel input modules (microphone/MP3 outlets).

2. One (1) CROWN Model No. CTs 600 dual channel amplifier with three hundred (300) watts per channel at eight (8) ohms. Amplifier shall be suitable for rack mounting.

3. One (1) PYLE Model No. PT504 rack mounted stereo AM/FM tuner.

4. One (1) TASCAM Model No. CD-200i, rack mounted CD player with MP3 dock.

5. One (1) ATLAS SOUND Model No. ACS-1 AC power strip suitable for rack mounting.

II. WALL MOUNTED STEREO SPEAKERS

A. This Contractor shall furnish and install where shown on the Drawings, two (2) JBL Model No "C29AV-1" enclosed wall mounted stereo speakers. The stereo speakers shall be 300 watts, 8 ohms. Each stereo speaker shall be complete with wall mounting bracket.

III. MICROPHONES

A. This Contractor shall furnish to the Owner's representative, two (2) SHURE Model No. SM58S dynamic cardioid microphones for each Dance and Gymnastics Room sound reinforcement system (total of **CONSULTANT SHALL EDIT**). Each microphone shall be furnished by this Contractor complete with a twenty-five (25) foot connector cord with CANNON XLR connectors

IV. MICROPHONE STANDS

A. This Contractor shall furnish to the Owner's representative, two (2) ATLAS SOUND Model No. MS-20 microphone floor stands for each Dance and Gymnastics Room sound reinforcement system (total of **CONSULTANT SHALL EDIT**).

V. MICROPHONE OUTLETS

A. This Contractor shall furnish and install where shown on the Drawings, flush or surface wall and/or ceiling mounted microphone outlets (Type “A”) consisting of CANNON "XLR" complete with 3 pin XLR (female) series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, and a stainless-steel cover plate. A microphone outlet, which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

B. This Contractor shall furnish and install where shown on the Drawings, flush or surface wall mounted Microphone outlets (Type “B”) consisting of one (1) CANNON "XLR", complete with 3 pin XLR (female), series audio jack of the type required so as to be compatible with the type of microphone cable connector furnished, one (1) 3.5mmstereo audio jack (MP3), and a stainless-steel cover plate. A Microphone/MP3 outlet, which meets this Specification shall be as manufactured by CONQUEST AUDIO or approved equal.

VI. AM/FM ANTENNA

A. This Contractor shall furnish and install a PIXEL TECHNOLOGIES Model No. AFHD-4 AM/FM and HD antenna complete with: L mounting bracket; weather boot; surge protector; 20dB attenuator; 10dB attenuator; AM/FM separator; U- bolts with washers and nuts; pole mount saddle brackets; F-female to twin-lead adaptor and push-on-F-female to DIN adaptor. This Contractor shall furnish and install a weatherhead, rigid steel conduit mast, and two (2) RG-6 plenum rated cables from the antennas to the tuner located in the sound and intercommunication system equipment rack. This Contractor shall ground the antenna in accordance with the following specification.

VII. DANCE AND GYMNASTICS ROOMS SOUND SYSTEM CABLE

A. This Contractor shall furnish and install one (1) two (2) conductor, No. 12 AWG stranded plenum rated cable with a temperature range for dry locations of minus ten (10) degrees C to sixty (60) degrees C for each stereo speaker. A cable that meets this Specification is WEST PENN Cat. No. 25227B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

B. This Contractor shall furnish and install field wiring for microphone outlets as shown on the Drawings. Wiring shall be two (2) conductor, No. 20 AWG stranded and shielded cable. A cable that meets this Specification is WEST PENN Cat. No. 25292B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

C. This Contractor shall furnish and install field wiring for MP3 outlets as shown on the Drawings. Wiring shall be two (2) conductor, No. 20 AWG stranded and shielded cable. A cable that meets this Specification is WEST PENN Cat. No. 25292B or equal as manufactured by BELDEN, CONSULIDATED WIRE, GENERAL CABLE, PAIGE, or TAPPAN.

Part 3 - Execution

I. INSTALLATION

A. All vertical, low voltage field wiring shall be installed by this Contractor in 1/2-inch conduit and/or surface metal raceway as shown on the Drawings. Conduit fill shall not exceed the conduit space capacity.

B. All horizontal, low voltage field wiring to be installed in areas without a ceiling or in areas without an accessible ceiling shall be installed by this Contractor in 1/2-inch conduit.

C. All horizontal low voltage field wiring to be installed in areas with accessible ceilings shall be installed by this Contractor bundled together and run exposed above the ceilings. Bundles shall be supported by "J" hooks mounted not more than four (4) feet on center. “J” hooks shall be dedicated to the wiring specified in this specification section.

D. All horizontal, low voltage field wiring shall be run at right angles to the building structure.

E. All horizontal low voltage field wiring shall be installed below the roof/floor structural supports (joist, beams, girders, etc.). Wiring installed between the structural supports mentioned above and the roof or floor deck will not be acceptable.

F. All horizontal low voltage field wiring penetrations through new and/or existing walls shall be sleeved. Minimum sleeve size shall be 3/4 inch. All sleeves shall be bushed both sides.

G. All low voltage field wiring for the Dance and Gymnastics Rooms sound reinforcement systems shall be furnished and installed by this Contractor. All junction box covers shall be stenciled for distinct identification.

H. All wiring connections shall be made by this Contractor as directed by the equipment manufacturer. Splices for circuits shall be made only in junction boxes and shall be crimp connected.

I. All Dance and Gymnastics Rooms sound reinforcement systems wiring shall be checked and tested by this Contractor to insure the system is free from grounds, opens, and shorts.

J. All work shall be under the supervision of a factory accredited sound engineer. It shall be the responsibility of the sound engineer and this contractor to check and inspect this installation to the Owner's and Architect/Engineer's approval.

II. RACK MOUNTED EQUIPMENT

A. Each Dance and Gymnastics Room sound reinforcement system's rack mounted equipment shall be installed by this Contractor with the proper adapters, rack mounting kits, brackets, and closure panels for unused spaces. All interconnecting wiring shall be labeled, bundled, secured, and terminated by this Contractor in a neat and professional

manner.

B. All rack mounted equipment AC power cords shall be plugged into the mounted power strip by this Contractor.

III. SPEAKERS

A. Wall mounted stereo speakers shall be securely fastened to the building structure by this Contractor with threaded rod or bolts as appropriate for the application.

IV. MICROPHONES

A. This Contractor shall unpack microphone and assemble with cables and stands and connect ready for operation. Microphones shown for permanent installation shall be mounted by this Contractor in accordance with the Drawings in a manner appropriate for the location.

V. MICROPHONES OUTLETS

A. This Contractor shall assemble microphone outlets and install, connect, and label as shown on Drawings.

VI. ANTENNA INSTALLATION

A. The antenna shall be bracket mounted by this Contractor above the roof at a location approved by the Owner. The antenna cables shall be run by this Contractor to the equipment rack and connected ready for operation.

B. The antenna shall be grounded by this Contractor to the secondary building ground system with one (1) No. 10 AWG in 1/2-inch conduit.

END OF SECTION

Part 1 - General

I. REQUIREMENTS

A. The general provisions of the Contracts, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

II. SCOPE

A. The work covered under this Section shall include furnishing and installing locally controlled complete and satisfactorily operating classroom amplification system where shown on the Drawings for the pickup, amplification, and reproduction of voice/audio at classroom locations.

III. SUBMITTALS

A. Product Data

1. Submit equipment prints, panel diagrams, full electronic wiring diagrams and specifications sheets for items included herein. Provide a tabulation of the specification clearly comparing the submitted items with the items specified. Specifications shall be submitted for all items

B. Shop Drawings

1. Shop drawings detailing integrated electronic communications network systems including the built in station arrangement and equipment cabinet arrangement.

2. Wiring diagrams detailing power, signal and control.

3. Typical connections for all types of equipment.

4. A riser diagram for the system showing all connections, interconnections and all provisions available for future expandability.

C. Samples

1. Provide a sample of all equipment and components that will be installed in a typical classroom.

IV. QUALITY ASSURANCE

A. Qualifications

1. All items of equipment including wiring and cable shall be designed by the manufacturer to function as a complete system and shall be accompanied by the manufacturer’s complete service notes and drawings detailing all interconnections.

2. The contractor shall be an established communications and electronics contractor that has had and currently maintains a locally run and operated business for a minimum of five years. The contractor shall utilize an authorized distributor of the equipment supplied for this project location with full manufacturer's warranty privileges.

3. The contractor shall show satisfactory evidence that the supplier maintains a fully equipped service organization capable of furnishing adequate inspection and service to the system. The supplier shall maintain at his facility the necessary spare parts to properly service the equipment.

B. All equipment specified herein shall be the product of a manufacturer of established reputation and experience who shall have produced similar apparatus for a period of at least ten (10) years and who shall be able to refer to similar installations now rendering satisfactory service.

C. The classroom amplification system(s) shall be a dynamic FM and digital modulation (DM) type system. Specifically, it must operate in the VHF Band, 216 to 217 MHz (23 narrow band channels) and utilize digital transmission technology in the 2.4 GHz band with automatic frequency hopping to avoid interference issues.

D. The classroom amplification system(s) shall be furnished by a factory authorized distributor certified to design, program, and service the system. The distributor must show evidence of successfully furnishing similar systems for at least five (5) years.

E. All equipment for this system shall be listed by Underwriters Laboratories, Inc. (UL), bear the UL label and shall be installed in accordance with all requirements of the National Electrical Code (NEC), state and local codes, and these Specifications.

F. The classroom amplification system(s) shall be furnished and installed by this Contractor as shown on the Drawings and as specified herein.

G. Shop drawing submittals are required per SECTION 16010 and shall include the following for review. Submittals not containing all of the information listed below will be rejected.

1. A complete list of equipment shall be furnished indicating the specific quantities to be furnished by this Contractor. The catalog or model number for each module of the system(s) shall be listed next to the quantities. This information shall be furnished in the front of the submittal.

2. A specific description of the system(s) shall be furnished describing each module and how it shall function in the system.

3. A data sheet shall be furnished for each module and device. The information shall be highlighted that applies to the particular module or device to be furnished.

4. A detailed diagram showing how to connect the audio hub device to a computer and the CATV system shall be furnished indicating the exact final connection

information.

V. QUALITY ASSURANCE

A. Conditions for Consideration of "Or Equal" Products: Where products are specified by name and accompanied by the term "or equal", the proposed "or equal" product will be considered when the following conditions are satisfied. If all the following conditions are not satisfied, Design Consultant will return requests without action, except to record noncompliance with these requirements:

1. Proposed product does not require extensive revisions to the Contract Documents.

2. With the exception of the product name or number and manufacturer's name, proposed product conforms with requirements indicated on the Drawings and in the Specifications in every respect and will produce indicated results.

3. Proposed product t is fully documented and properly submitted.

4. Proposed product has received necessary approvals of authorities having jurisdiction.

5. Proposed product is compatible with AND has been coordinated with other portions of the Work.

6. Proposed product provides specified warranty.

7. If proposed product involves more than one contractor, proposed product has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

8. Submission is accompanied with detailed comparison of significant qualities of proposed product with those named in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.

9. Submission is accompanied with a list of similar installations for completed projects with project names and addresses and names and addresses of design consultants and authorities, if requested.

10. Submission is accompanied with proposed product's Manufacturer signed written statement on Manufacturer's letterhead, certifying that manufacturer complies with requirements in the Contract Documents

VI. DOCUMENTATION

A. This Contractor shall furnish to the Contractor four (4) sets of factory operation and maintenance manuals. These manuals shall include factory service manuals with complete parts lists, wiring and component schematics including circuit diagrams, and all other information necessary for the proper operation and service maintenance of the system.

VII. TRAINING

A. This Contractor shall furnish eight (8) hours of technical service training to the Owner's technical staff using the factory operation manuals previously specified.

B. This Contractor shall furnish eight (8) hours of operating and programming training to the Owner's operating staff which shall be delivered in two (2) separate four (4) hour sessions to be scheduled at the Owner's convenience over the warranty period.

C. All training specified herein shall be performed by a factory certified technician.

VIII. DESCRIPTION OF OPERATION

A. Each system shall provide for the distribution of voice/audio to associated loudspeaker.

B. Each system shall provide auxiliary inputs for the connection to a computer and/or the building CATV system.

C. Each system shall have the capability to interact with a student’s hearing aid and/or cochlear implant device.

IX. SYSTEM TEST AND ACCEPTANCE

A. Prior to the final site visitation, and acceptance of each construction phased spaces, this Contractor shall conduct an operating test of each complete classroom amplification system. Each system shall test free from grounds, shorts, and other faults. All connections shall be checked for mechanical and electrical connection. All equipment shall be demonstrated to operate in accordance with the requirements set forth in these Specifications and as shown on the Drawings.

B. This Contractor shall perform all tests in the presence of the Architect/Engineer. This Contractor shall furnish all personnel and test instruments required for use in the test.

X. WARRANTY

A. This Contractor shall deliver the work described herein in a first class operating condition in every respect. This Contractor shall also warrant that the material, equipment, and workmanship shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractors own expense. Refer to SECTION 01740 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the Drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

Part 2 - Products

I. MANUFACTURER

A. The classroom amplification system(s) shall be as manufactured by PHONAK or approved equal.

II. WALL MOUNTED SPEAKER

A. This Contractor shall furnish and install, wall mounted classroom amplification system speaker where shown on the Drawings and herein specified.

1. One (1) PHONAK Digimaster 5000 wall mounted speaker complete with the following:

a) Wall mounted bracket.

b) 12 speaker-line array

c) Mini USB port

d) 3.5 mm audio input

e) LED status indicating light

f) Power supply with mini USB connection

III. TRANSMITTER

A. This Contractor shall furnish at each classroom amplification wall mounted speaker location shown on the Drawings one (1) PHONAK Inspiro Transmitter complete with the following:

1. Dual transmission mode FM and DM

2. Voice activity detector.

3. One (1) ILapel (lavaliere) microphone.

4. One (1) DynaMic (handheld) microphone

5. LCD display.

6. Belt clip and neck loop.

IV. AUDIO HUB

A. This Contractor shall furnish at each classroom amplification wall mounted speaker location shown on the Drawings one (1) PHONAK Inspiro Audio Hub complete with the following:

1. Two (2) audio inputs.

2. Volume control.

3. Mini-USB charging interface
4. On/off switch
5. Two (2) 3.5mm male to 3.5mm male patch cables. Minimum 10ft. in length.
6. Power supply with mini USB connection

Part 3 - Execution

I. INSTALLATION

A. All work shall be under the direct supervision of an accredited factory sound engineer. It shall be the responsibility of the sound engineer and this Contractor to check and inspect this installation to the Owner's approval.

B. All transmitters, microphones, audio hubs and patch cables shall be properly stored and protected during construction.

II. WALL MOUNTED SPEAKER

A. The classroom amplification system wall mounted speaker(s) shall be installed by this Contractor with the proper adapters, mounting kits, and brackets at 48" above finished floor to bottom of speaker. All interconnecting power wiring shall be secured, and terminated by this Contractor in a neat and professional manner.

III. TRANSMITTER/MICROPHONES

A. This Contractor shall unpack each transmitter and microphone, assemble, connect and make ready for operation.

IV. AUDIO HUB

A. This Contractor shall unpack each audio hub, connect power and 3.5mm patch cables and make ready for operation.

END OF SECTION

Part 1 - General

I. REQUIREMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

II. SCOPE

A. The work covered under this Section shall include furnishing and installing a complete and satisfactorily operating wireless master clock and program system as shown on the Drawings and herein specified for selected clock correction and distribution of program signals.

B. The existing master clock and program system shall remain in operation during the construction period until the new system has been installed and tested, ready for operation. After the new system has been placed in operation, the existing system shall be removed as shown on the Drawings.

III. QUALITY ASSURANCE

A. All equipment described herein shall be the product of a manufacturer of established reputation and experience who shall have produced similar apparatus for a period of at least ten (10) years and who shall be able to, upon request, refer to similar installations now rendering satisfactory service.

B. The wireless master clock and program system shall be furnished by a factory authorized distributor certified to design, program, and service the system. The distributor must show evidence of successfully furnishing systems specified for at least five (5) years

C. All equipment for this system shall be listed by Underwriters Laboratories, Inc. (UL), bear the UL label, and shall be installed in accordance with all requirements of the National Electrical Code (NEC), all state and local codes, and these Specifications.

D. The entire wireless master clock and program system installation shall be performed under the direct supervision of a factory trained service specialist.

E. Shop drawing submittals are required per SECTION 260500 and shall include the following for review. Submittals not containing all of the information listed below will be rejected.

1. A complete list of equipment shall be furnished indicating the specific quantities to be furnished by the manufacturer. The catalog or model number for each module of the system shall be listed next to the quantities. This shall be provided in the front of the submittal.

2. A specific description of the system shall be furnished describing each module and how it shall function in the system.

3. A detailed set of floor plans for the complete building shall be furnished showing the locations of all equipment and devices and their required interconnections. The interconnections shown shall indicate the number, size, and type of wires as described in this Specification. The layout of all wireless master clock and program system equipment, devices, and conduit routings shall closely follow that shown on the Drawings.

4. A data sheet shall be furnished for each component and device. The information shall be highlighted that applies to the module or device.

5. A detailed diagram on how to connect each device shall be furnished showing exact hook-up information.

IV. DOCUMENTATION

A. This Contractor shall furnish to the Contractor one (1) set of "As Built" drawings depicting the complete field wiring system and component interconnections.

B. This Contractor shall furnish to the Contractor four (4) sets of factory service manuals. These manuals shall include factory service manuals with complete parts lists, wiring and component schematics including circuit diagrams, and other information necessary for the proper operation and service maintenance of the system.

V. TRAINING

A. This Contractor shall furnish eight (8) hours of technical service training to the Owner's technical staff using the factory service manuals previously specified.

B. This Contractor shall furnish twenty-four (24) hours of operating and programming training to the Owner's operating staff that shall be delivered in six (6) four (4) hour sessions to be scheduled at the Owner's convenience over the warranty period.

C. All training specified herein shall be performed by a factory certified technician.

VI. DESCRIPTION OF OPERATION

A. Transmitter Operation: When power is first applied to the master transmitter, the master transmitter checks for and displays the software version. The master transmitter then checks the position of the switches and stores their position in memory. The master transmitter looks for the GPS time signal. Once the master transmitter has received the GPS time, it sets its internal clock to that time. The master transmitter then starts to transmit its internal time once every second. The master transmitter updates its internal clock every time it receives valid time data from the GPS. The wireless master clock and program system shall be connected to the master clock and program system in the sound and intercommunications system for time and tone synchronization.

B. Analog Clock Operation:

1. Apply power then follow set up procedures detailed in manufacturer’s

instructions.

2. After initial setup, the clock will shut off the receiver. Six times each day, the microprocessor will activate the receiver and starting with the stored channel, it will again look for a valid time signal. If necessary, the clocks will resynchronize to the correct time.

3. If the clock has not decoded a valid time signal a pre-determined number of days, it will go to a step mode.

C. This contractor shall furnish and install, where required, wireless repeater/transmitter(s). The number of repeater/transmitters shall be as needed for a complete, functioning wireless master clock and program system.

VII. SYSTEM TEST AND ACCEPTANCE

A. Prior to the final site visitation, this Contractor shall conduct an operating test of the complete wireless master clock and program system. The system shall test free from grounds, shorts, and other faults. All connections shall be thoroughly checked for mechanical and electrical connections. All equipment shall be demonstrated to operate in accordance with the requirements set forth in these Specifications and as shown on the Drawings.

B. This Contractor shall perform all tests in the presence of the Architect/Engineer and Owner. This Contractor shall furnish all personnel and test instruments for use in the test.

C. When the work on the entire wireless master clock and program system has been completed and is ready for final review, this Contractor shall demonstrate that the requirements of the Contract as it applies to this work have been carried out and that the system has been adjusted and operated in accordance therewith.

VIII. WARRANTY

A. This Contractor shall deliver the work described herein in a first class operating condition in every respect. This Contractor shall also warrant that the material, equipment, and workmanship shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractors own expense. Refer to SECTION 01740 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the Drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

Part 2 - Products

I. MANUFACTURER

A. The wireless clock and program system shall be manufactured by PRIMEX WIRELESS,

INC., or approved equal from SAPLING INC.

II. EQUIPMENT

A. General: The wireless master clock and program system shall include a master transmitter, a roof mounted GPS receiver, indicating clocks, and all accessories for complete operation.

B. GPS roof mounted Receiver:

1. The GPS Receiver shall be complete with the antenna in a waterproof case, designed for roof or outdoor mounting. Provide mounting bracket for attachment to roof structure and transmitter connection cable.

C. Master Transmitter: Primex Wireless Model 14400, consisting of wireless transmitter with GPS receiver, a surge suppressor/battery backup, and a mounting shelf. Unit shall obtain current atomic time from satellite. The clock system shall transmit time continuously to all clocks in the system.

1. Transmission:

a) Frequency Range: 72.100 to 72.400 MHz.

b) Transmission Range: one mile, open field.

c) Radio technology: narrowband FM

d) Number of channels: 16

e) Channel bandwidth: 20 kHz maximum

f) Transition mode: one-way communication

g) Data rate: 2 KBps

h) Operating range: 0 degrees C. to 70 degrees C.

2. Transmitter:

a) Transmitter output power: +26 to +30 dBm

b) Frequency deviation: +/- 4 kHz

c) Transmitter power requirements: 120 VAC 60 Hz

d) Internal power requirements: 5 VDC

e) Carrier frequency stability: +/- 20 ppm

3. Transmitter shall have 16 selectable channels to assure interference-free

reception.

4. Transmitter shall have the following switches:

    a) Time zone adjustment switches for all time zones in the world. Includes all Canadian time zones: Eastern, Central, Mountain, Pacific, Alaska, and Hawaii.

    b) Daylight Saving Time bypass switch.

    c) 12-hour or 24-hour display.

5. Antenna shall be 46 inches high, commercial type, Antenna gain shall be < 2.2 dB. Antenna polarization shall be vertical.

6. Transmitter housing shall incorporate a display which shall include the following:

    a) Time readout

    b) AM and PM indicator if 12-hour time display is set

    c) Day and date readout

    d) Indicator for daylight savings or standard time

    e) LED which shall flash red in event of reception problem

    f) GPS reception indicator

7. Transmitter shall contain an internal clock such that failure of reception from the GPS will not disable the operation of the clocks.

D. Power supply (included), Input: 120-volt AC 50/60 Hz, 0.4 amp. Output: 9-volt DC, 1.5 amp.

E. Surge Protector/Battery Backup (included), Input: 120-volt AC 60 Hz +/- 1 Hz., Output: 120-volt AC, 500VA, 300 watts, Surge Energy Rating: 365 joules

F. Additional Equipment

1. Wireless Receiver Switches: Switches shall receive time packets from the Master Transmitter and relay the synchronized time to the Satellite Transmitter connected to it. The unit shall include the following:

    a) Antenna mounted on top of the switch housing, 11-1/2 inches long.

    b) Power Supply: Input 120 VAC 50/60 Hz, 0.4 amps; Output: 9-volt DC, 1.5 amps

    c) RS 232 data cable, 5 feet long

d) Daylight Savings Time bypass switch

e) Dimensions: 4-1/4 inches long, 5/-3/4 inches wide, 1-1/4 inches deep.

f) Weight: 12 ounces

g) Operating Range: 32 degrees F to 158 degrees F (0-70 degrees C)

2. Where wireless analog clocks that are out of range from the master transmitter, this contractor shall furnish and install one (1) Wireless Repeater/Transmitters Primex Wireless Model 14401:

3. Repeater/Transmitters shall receive the signal from the Wireless Receiver Switches and transmit the signal to the devices in its vicinity. The repeater/transmitter shall be installed in a location as agreed upon by the Owner. The unit shall include the following:

a) Antenna shall be 46 inches high, commercial type, Antenna gain shall be <2.2dB. Antenna polarization shall be vertical.

b) Wireless Receiver Switch.

c) Power Supply

d) Input: 120 VAC, 50/60 Hz, 0.4-amp Output: 9-volt DC, 1.5 amps

e) 6-foot cord

f) Surge Suppressor/Battery Backup

g) Mounting Shelf.

h) Approximately one Watt transmission.

i) 72 MHz frequency.

G. This Contractor shall furnish and install where shown on the Drawings analog, wireless clocks. Clocks shall have polycarbonate frame, lexan lens, and two (2) clock locks. Face shall be white. Hour and minute hands shall be black. Analog clocks shall be provided with red sweep hand, 12.5 or 16” inch, 120 VAC with proper cord and cap, and 18-inch pigtail to plug into a single pole, 120-volt clock receptacle. Primex Model 14306 (12 inch), 14339 (16 inch).

1. Analog clocks shall be capable of adjusting for Daylight Savings Time.

2. Time shall be automatically updated from the transmitter 6 times per day.

3. If power is interrupted, the clock will stop until power resumes. Upon resumption of power, the clock will self-correct to the current time.

4. If transmitter stops transmitting valid time signals due to power failure, the clocks will continue to function as accurate quartz clocks until a valid time signal is decoded.

5. Clocks shall have wire guards where indicated on drawings. Primex Model 14131 (12.5 “), 14123 (16”)

III. WIRELESS TONE GENERATOR:

A. This Contractor shall furnish and install Primex Wireless tone generator Model 14002, WT generator, complete with cables and antenna required for complete installation. The tone generator shall be used to connect the wireless clock system to the master clock in the sound and intercommunications system for time and tone synchronization.

B. 9 volt switching power supply (fed from 120-volt line)

C. Switching contacts "Form D", two sets: one normally open, one normally close.

D. Audio Output:

1. Isolation transformer with center tap, 600/150 ohms output impedance

2. Variable output and line level

E. Relay output

F. Test and reset buttons

G. Signal indicator

H. One hundred switch identification codes. Any number of switches for each identification code.

I. Selectable channels: 16

J. 24 programmable events with 7 day selectable operations.

K. Selectable daylight saving time bypass.

L. Selectable automatic channel scanning.

M. Computer programmable through transmitter, with automatic backup, and schedule changes which easy to make.

N. Switching information stored in non-volatile memory in the transmitter and broadcast at regular intervals. Each switch retains its instructions in non-volatile memory.

IV. CLOCK RECEPTACLE

A. Refer to specification section 16130.

Part 3 - Execution

I. INSTALLATION

A. GPS Unit: Install on roof in location indicated, in clear view of the sky. Install unit in location free from standing water, and above accumulations of snow, leaves or debris. Seal cable connection to GPS with cable connection sealant. Any added cable lengths must be protected from outside elements. The GPS unit shall be mounted on the roof. In each case, the GPS unit must have a clear view of the sky. The GPS unit mounted on the roof must be located on a suitable bracket, well above the level of standing or incidental water and drifting snow.

B. Master Transmitter and Wireless Repeater/Transmitter(s):

1. Locate master transmitter where indicated, a minimum of 2 to 3 feet above the floor, away from large metal objects such as filing cabinets, lockers or metal framed walls.

2. Attach GPS receiver to master transmitter using cable.

3. Connect antenna to transmitter(s), using care not to strip threads.

4. Connect power supply to the transmitter(s).

5. Set the channel number on the display to correspond to the FCC license.

6. Plug power supply into electrical outlet.

C. One (1) wireless tone generator shall be located at the Sound and Intercommunications main distribution location (SS-MDEL) to provide activation of schedule tones via relay contacts to the main sound and intercommunications system.

D. Analog clocks (AC): Perform the following operations with each clock:

1. Apply power (120 VAC).

2. Observe clock until valid time signals are received and analog clock adjusts itself to correct time.

3. Install the analog on the wall in the indicated location, plumb, level, and tight against the wall. All wireless system clocks shall be mounted over a flush mounted clock outlet where indicated on floor plans. Analog clocks shall be mounted with two (2) Primex Wireless, Inc. clock locks.

II. FIELD WIRING

A. Local 120 VAC power shall be provided to the system clocks.

B. All clock system connections and wiring shall be made by this Contractor as directed by the equipment manufacturer.

C. All clock system wiring shall be checked and tested by this Contractor to insure the system is free from grounds, opens, and shorts.

III. ON-SITE AS-BUILT DRAWINGS

A. The Contractor shall provide one (1) set of the wireless master clock and program system supplier's as-built drawings for permanent use on-site. The Contractor shall: laminate each page of these drawings; provide a rigid means for mounting such as 1/4-inch thick x two (2) inch wide x width of the drawings through-bolted wood along the left edge of the drawings; furnish and install hanging hooks on the back of the Communications Room door; and hang the bound set of drawings.

END OF SECTION

NOTE: SECTION IS STILL UNDER REVIEW. FINAL COORDINATION SHALL OCCUR WITH PGCPS SECURITY DEPARTMENT.

Part 1 - General

I. Description:

A. Work of this section consists of providing the following. Refer to the drawings for additional information.

1. A complete and fully operational Intrusion Security System including but not limited to: control panel, expander panels, keypads, motion detectors, door contacts.

2. A complete and fully operational IP Camera System (PoE) monitoring interior and exterior of building including but not limited to: Full HD IP color cameras, Servers, PoE switches, patch panels, racks, controllers, software, licenses and dedicated work station for video monitoring.

3. Contractor shall comply with 280511 - LAN Wiring Specifications for installation of PoE switches.

4. A complete and fully operational Card Reader Door Access System (PoE) including but not limited to: PoE IP card readers, controllers, processors, locks.

5. A complete and fully operational Aiphone Video Intercom system including but not limited to: Door station, Master Stations, Software and system integration.

B. Furnish all labor, materials, tools, equipment and services necessary to complete the hardware work, as indicated on the drawings, specified, and as necessary or required to satisfactorily complete the project.

1. Contractor will provide a “Digital Monitoring Products” certified Dealer/Installer to install Intrusion Security System.

2. Contractor will provide a “Genetec” certified Dealer/Installer to install IP Camera System (Poe).

3. Contractor will provide a “Genetec” certified Dealer/Installer to install Door Card Access System (PoE).

C. Related Documents:

1. Drawings and general provisions of contract, including General and Supplementary Conditions and Division 1 specification section, apply to work of this section.

2. General Electrical Provisions and Basic Materials and methods sections apply to work specified in this section.

II. Submittals:

A. Submit three copies of a complete product data showing all devices to be furnished and the installation location for which it is intended to the Architect for review. A cover sheet shall be made part of the line item device schedule and shall list manufacturer and model number of each device with mounting heights, explanation of abbreviations, symbols, codes, etc. The schedule shall include all items required for all four phases under Security Systems, Intrusion, Cameras, Card Access and Video Intercom. The contractor shall assume sole responsibility for the provisions, proper coordination, installation and operation of completed Security Systems. The Architect's and Owner's review of the submittals and component installation schedule shall not be construed as a complete check, nor shall it relieve the Contractor from responsibility for any errors, deviations or omissions from the requirements needed to satisfactorily complete all four phases of Security System, Intrusion, IP Camera, Card Access and Video Intercom.

B. Manufacture's brochures, technical directives, instructions, and installation manuals.

C. The submittals shall include an itemized equipment list and wiring diagrams

III. Quality Assurance:

A. The Intrusion Security System dealer/installer shall, in the opinion of the Owner, have sufficient comparable experience (not less than five years) and an organization consisting of experienced certified "Digital Monitoring Products" technician status to properly install and program Intrusion Security System in a satisfactory manner. The certified "DMP" dealer/installer shall have in stock at all times sufficient material to take care of shortages and minor extras without delay. The certified "DMP" dealer/installer shall maintain an office/warehouse in the Washington Metropolitan area (75 mile radius) and be readily available to attend job meetings that may be required by the architect, Owner or general contractor. The definition of the Washington Metropolitan area is at the discretion of the Owner, and he reserves the right to exclude.

B. The IP Camera System (PoE) and Card Access System (PoE) dealer/installer shall, in the opinion of the Owner, have sufficient comparable experience (not less than five years) and be a certified "Genectec" partner with certified "Genetec" technicians in order to properly install and program IP Camera and Card Access Systems in a satisfactory manner. The certified "Genetec" partner shall have in stock at all times sufficient material to take care of shortages and minor extras without delay. The certified "Genetec" partner shall maintain an office/warehouse in the Washington Metropolitan area (75 mile radius) and be readily available to attend job meetings that may be required by the architect, Owner or general contractor. The definition of the Washington Metropolitan area is at the discretion of the Owner, and he reserves the right to exclude.

C. The dealer/installer shall examine all drawings, schedules, details and relevant shop drawings, and furnish all hardware for complete and operational Intrusion, Camera, Card Access and Video Intercom Systems. Where practical applications cannot be made with the exact types of hardware requested , obtain the Owner's and Architect's permission to furnish suitable types having the same or equal specifications.

D. All items to be new & in good condition, free of defects. At time of installation all items must be most recent manufacture's model numbers and software are to be used.

E. The dealer/installation company shall show proof of having regular experience with design, installation, service, and maintenance of manufactured systems for a minimum of the last twelve (12) calendar months from the project start date. Each system installer and service person must provide manufacturer certification of technical training for installation, service, and system maintenance. Certification shall be proven with an official document issued by the manufacturer.

F. The dealer/installation company shall provide a minimum of 5 (five) verifiable references from its clients where the manufacturer's system has been installed and or maintained within the last twelve (12) calendar months from the project start date.

G. The dealer/installation company shall become familiar with all details of the work, verify all dimensions in the field, and shall advise the Owner, Architect of any discrepancy before performing the work. Materials shall be installed in strict compliance with state and local building and electrical codes. All work shall be performed in accordance with manufacture instructions. Components must be installed by a dealer/installer in good standing that has been is factory-trained by Digital Monitoring Products for Intrusion Security System and Genetec for Camera/Card Access Systems.

H. Prior to the installation, the dealer/installation company and contractor must meet with the Prince George's County Public Schools, Department of Security's Supervisor of Technical Services to review systems installation procedures, zoning device location, and to resolve any concerns regarding equipment installation.

IV. Warranty – See section 16010.

Part 2 - Products

I. General:

A. Furnish and install a complete Intrusion Detection Control system Control Panel With the performance criteria detailed in this specification. The system shall be inclusive of all necessary functions, monitoring, and control capability as detailed herein and on accompanying Shop drawings.

B. All wiring is to be marked with number wire markers at each end and throughout the project. The wire marking information shall match drawing with information being turned over to Prince George's County Public Schools, Department of Security supervisor of Technical Services.

C. Complete Raceway systems of conduit and outlets shall be used between interface junction boxes and area junction boxes and any area where wire would not be accessible upon completion of building.

II. Fire Alarms:

A. The security system shall have relays install in the fire alarm control panel to trip Fire Alarm, Fire Trouble and Fire Supervision signals to the security alarm system control panel.

B. The relays shall be approved for use by the fire alarm manufacture or the owner.

C. One 12 conductor jacketed stranded copper wire in shall be run from Fire Alarm Panel to Security Alarm Panel and wire shall be in conduit.

III. Security Control Panel 574-ZONE PANEL SYSTEM

A. Manufacturer

1. The manufacturer shall have at least thirty-five (35) years of experience in the role of fire and security control manufacturing, and a proven track record of forward and backward compatibility for a minimum of twenty (25) years for its product's auxiliary devices, including system keypads, annunciation devices, zone expansion modules, and addressable detection devices.

2. The manufacturer must also manufacture receiving equipment that is compatible with standard dial-up telephone lines, network, and cellular network monitoring equipment that is compatible with a LAN, WAN, and the Internet. The receiving equipment shall be capable of receiving all status and alarm messages generated by the system. The receiving equipment shall be capable of updating the panel operating program and the system date and time.

3. Commercial/Residential Intrusion detection/Access control /Household Fire Alarm Control Panel equipment manufacturer shall be: Digital Monitoring Products

4. The installing company shall furnish and install a complete electrically supervised DMP panel, as detailed in this specification. The system shall be inclusive of all necessary function, monitoring, and control capability as detailed herein and on accompanying shop drawings.

B. Features

1. 1 Select Area, All/Perimeter, or Home/Sleep/Away operation

2. 32 individual reporting areas, with common areas

3. Up to 16 supervised door access-points and/or keypads

4. 32 character names available for user, zone, area, profiles and group names

5. Up to 4 profiles per user

6. Fully supervised 10/100 network and CDMA/HSPA+ cellular communication

7. Communications Diagnostics check network and cellular communication status from the keypad.

8. Eight communication paths between the panel and Central Station

9. Guest operation allows up to three separate protected systems

10. Flexible system arming features, with Instant Arming option
11. Lock Down operation from keypad or remotely
12. Up to 562 two-wire smoke detector or fire-initiating zones
13. 10,000 user codes with 99 profiles
14. 506 Outputs
15. 12,000 event buffer
16. Built-in phone line monitor
17. Mulch-lingual menus available by user
18. 1.5 Amps 12 VDC smoke and auxiliary output with OVC protection
19. User inactivity audit
20. Easy NetTM connection for the DMP App when used with a network
21. Connection
22. Allow for DMP App, and Central Station connection
23. Cellular backup
24. Up to 500 DMP 1100 Series Wireless or Wired LX Bus
25. Up to 99 schedules for areas, doors, outputs, Z-Wave Favorites, and profiles
26. DMP wireless communication employs 900MHz frequency-hopping spread-spectrum to ensure clear and accurate signal transmissions without interference in practically any environment. Receivers are alerted of transmitters that go missing with Two-Way communication. Each wireless transmitter communicates with the receiver using supervision messages. The on-board LED on all 1100 Series Transmitters provides built-in survey capability to allow for single-person installations, eliminating the Requirement for an external survey kit.
27. Exclusive DMP Wireless features include:

    a) Sensitivity, Pulse Count, Walk Test, & Disarm Disable. Motion sensors can be configured from the panel, allowing for simple, fast, one-person installation. Adjustable sensitivity via panel programming, battery-saving Disarm Disable, Pulse count programming that allows multiple triggers before an alarm is initiated, and Walk Test Mode for sensor setup. WirelessReceivers and repeaters are authorized for wireless Commercial Burglary and Commercial Fire applications. Wireless ONE Button key-fob with PROX Patch

b) The 1145-1-BP is a wearable and portable panic button fob, programmable to function in multiple locations, with alerts for lost fobs, late to test, and lower battery power.

IV. Security Motion Detectors

A. Professional Series TriTech Detectors ISC-PDL1-W18GB Professional Series TriTech Detector Provide PIR and microwave, 18 m x 25 m (60 ft x 80 ft) coverage (10.525 GHz frequency) field selectable to 8 m x 10 m (25 ft x 33 ft) shall be wall mounted on a recessed back box mounted at 102" with a B328 swivel bracket.

1. Description:

a) Professional Series TriTech Detectors are exceptionally suited for commercial indoor applications. Sensor data fusion technology ensures that the detectors send alarm conditions based on precise information. Tri-focus optics eliminate coverage gaps and respond efficiently to intruders. The powerful combination of unique features in the Professional Series delivers superior catch performance and virtually eliminates false alarms. The self-locking two-piece enclosure, built-in bubble level, flexible mounting height, and three optional mounting brackets simplify installation and reduce service time.

2. Sensor Data Fusion Technology

a) Sensor data fusion technology is a unique feature that uses a sophisticated software algorithm to gather signals from five sensors: two pyroelectric sensors, range adaptive radar, a room temperature sensor, and a white light level sensor. The microcontroller analyzes and compares the sensor data to make the most intelligent alarm decisions in the security industry.

3. Tri-focus Optics Technology

a) Tri-focus optics technology uses optics with three specific focal lengths: long- range coverage, middlerange coverage, and short-range coverage. The detector applies the three focal lengths to 86 detection zones, which combine to make 11 solid curtains of detection. Tri-focus optics technology also includes two pyroelectric sensors, which deliver twice the standard optical gain. The sensors process multiple signals to deliver precise performance virtually free of false alarms.

4. Range Adaptive Radar

a) The microwave transceiver automatically adjusts its detection thresholds based on input from the PIR sensors. Integrating the target audience distance information from the PIR significantly reduces false alarms from the microwave Doppler radar.

5. Microwave Anti-mask

a) The detector sends a supervision-trouble signal if microwave reflective material is placed within 30.5 cm (1 ft) of the detector.

6. Supervised Microwave and PIR

    a) The detector provides single technology coverage if the microwave subsystem fails.

7. Active White Light Suppression

    a) An internal light sensor measures the level of light intensity directed at the face of the detector. Sensor data fusion technology uses this information to eliminate false alarms from bright light sources.

8. Field Selectable Coverage (18 m x 25 m or 8 m x 10 m)

    a) Installers can use a DIP switch to select 18 m x 25 m or 8 m x 10 m (60 ft x 80 ft or 25 ft x 33 ft) coverage.

9. Dynamic Temperature Compensation

    a) The detector automatically adjusts PIR sensitivity to identify human intruders at critical temperatures. Dynamic temperature compensation detects human body heat accurately, avoids false alarms, and delivers consistent catch performance at all operating temperatures.

10. Cover and Wall Tamper Switch

    a) When an intruder removes the cover or attempts to separate the detector from the wall, a normally-closed contact opens to alert the control panel.

11. Self-adjusting LED

    a) The LED brightness adjusts automatically to the surrounding light level. A blue light-emitting diode (LED) indicates dual alarms and activates during a walk test. A yellow LED indicates microwave detection, and a red LED indicates PIR detection.

12. Remote Walk Test LED

    a) Users can type a command through a keypad, a control center, or programming software to remotely enable or disable the walk test LED. Users can locally enable or disable the walk test LED through the DIP switch.

13. Alarm Memory

    a) Alarm memory flashes the alarm LED to indicate stored alarms for use in multiple unit applications. A switched voltage from the control panel controls the alarm memory.

14. Solid State Relays

    a) Normally Open Form C Solid State Relay when motion is powered and closes in an alarm condition. Solid state relays send silent alarm output signals to provide a higher level of security and reliability. An external magnet does not activate the relay. The solid state relay uses less current than a mechanical relay, providing longer standby capacity during a power loss.

15. Draft, Insect, and Small Animal Immunity

    a) The sealed optic chamber provides immunity to drafts and insects, reducing false alarms. Small animal immunity reduces false alarms caused by animals less than 4.5 kg (10 lb), such as rodents.

16. Remote Self-Test

    a) Remote self-test initiates when the walk test input switches to its true state. The alarm relay and alarm LED activate for four seconds following a successful test. The trouble relay activates, and the alarm LED flashes following a failed test.

17. Input Power Supervision

    a) When the power is lower than 8 V, a low input power trouble condition activates the trouble relay and causes the LED to flash. The trouble condition clears automatically when power reaches or exceeds 8 V.

18. Trouble Memory

    a) When the walk test input switches to its true state for less than two seconds, LED flashes to indicate the most recent trouble condition. If there is no trouble in memory, the LED does not flash. After twelve hours, or after the detector receives a second walk test pulse for two seconds or less, the LED stops flashing and the trouble memory clears

19. Region Certification

    a) USA UL ANSR: Intrusion Detection Units (UL639)

    b) ANSR7: Intrusion Detection Units Certified for Canada (cULus) [-W18G]

    c) FCC (T3XISC-PDL1-W18G)

20. Mounting Considerations

    a) The recommended mounting height is 102” to the top of recessed back box.

    b) Use B328 Gimbal-mount Bracket Low-profile Swivel-mount Bracket to surface- mount the detector on a flat wall or in a corner.

21. Wiring Considerations

    a) Recommended wire size is 0.2 mm2 to 1 mm2 (26 AWG to 16 AWG).

22. Electrical

    a) Power Requirements

    b) Voltage (Operating): 9 VDC to 15 VDC

    c) Current (Maximum): < 25 mA

    d) Current (Standby): 13 mA

    e) Outputs

    f) Relay: Solid state relay, normally-closed (NC) contacts power supervised.

    g) W, 125 mA, 25 VDC, resistance < 10 Ω.

    h) Tamper: Normally-closed (NC) contacts (with cover on) rated at 25 VDC, 125 Ma maximum.

    i) Connect tamper circuit to 24-hour protection circuit.

    j) Trouble: Solid-state relay normally-closed (NC) contacts.

23. Mechanical

    a) Enclosure Design

    b) Color: White

    c) Dimensions: 136 mm x 69 mm x 58 mm

    d) (5.25 in. x 2.75 in. x 2.25 in.)

    e) Material: High-impact ABS plastic

    f) Indicators

    g) Alarm Indicator: • Blue LED for TriTech alarms

    h) Yellow LED for microwave detection

    i) Red LED for PIR detection Zones

    j) Zones: 86

k) Frequency Information

l) Radio Frequency

m) Interference (RFI) immunity:

n) No alarm or setup on critical frequencies in the range from 26 MHz to 1 GHz at 50 V/m.

24. Environmental

a) Relative Humidity: 0 to 95%, non-condensing

b) Temperature (Operating and Storage): -29°C to +55°C (-20°F to +130°F)

c) For UL certificated installations, 0°C to +49°C (+32°F to +120°F)

d) Environmental Class II EN 50130-5

e) Protection Rating: IP41, IK04 (EN 60529, EN 50102)

B. DUAL TEC MOTION SENSORS X-BAND TECHNOLOGY DT900 Series (with anti-mask)

1. Microcontroller-Based Dual Technology

a) Microwave and passive infrared (PIR) technologies, combined with microcontroller-based advanced signal processing, provide excellent detection while virtually eliminating false alarms and costly service calls.

2. Sensor Sabotage Prevention

a) The DT900 Series uses Active Infrared for anti-masking to detect attempts to mask the sensor. The patented look-down lens catches saboteurs who try to disable the unit from below, while three different tamper switches deter would-be criminals from physically damaging the sensor. The patented INFORMER® function, designed primarily as a diagnostic tool, monitors for sensor blockage and can help identify a sabotage situation.

3. Queue Logic Event Processing

a) The microcontroller in the DT900 converts all incoming microwave and PIR signals from analog-to-digital format. If the signal is determined to be valid it enters the Queue Logic Event Process. This process stores the valid signals within a moving window of time, keeping up to eight events for each signal type. Based on the First In First Out (FIFO) concept, Queue Logic requires a sophisticated on- board microcontroller to make advanced calculations for qualifying a sequence of events as an actual alarm.

4. Self-Test and Continuous Supervision for High Reliability

a) This industrial-grade sensor performs multiple levels of supervision. The INFORMER function checks each technology continuously. The microcontroller conducts a self-test of the sensor's functions at regular intervals, and reports any trouble using the on-board trouble relay.

5. Designed for Harsh Environments

    a) Vandal resistant housing combined with a zero clearance bug guard make the DT- 900 series ideal for commercial and industrial applications such as warehouses, large retail facilities, manufacturing sites and schools.

6. Self-Adjusting Thresholds

    a) The on-board microcontroller automatically adjusts the microwave and PIR thresholds to compensate for environmental disturbances not related to actual intrusion events. True temperature compensation continually optimizes the performance of the PIR to account for changes in room temperature. Environmental noise compensation keeps common environmental disturbances such as fluorescent lights from causing the microwave to false alarm.

7. Technology

    a) PIR for intrusion detection

    b) Microwave for intrusion detection

    c) Active infrared for anti-masking

8. Digital Fluorescent Light Filter

    a) Digital filter virtually eliminates interference caused by fluorescent lighting.

9. Three Microcontroller-based Sensitivity Modes

    a) Sensor sensitivity can be set to high for fastest capture, to normal, or to low for maximum false alarm immunity in harsh environments

10. Sensitivity

    a) Two to four steps within field-of-view, depending on sensitivity setting selected.

11. Zero Clearance Bug Guard

    a) The bug guard provides zero clearance, protecting the pyro chamber from insects that can cause false alarms.

12. Small Animal Immunity

    a) Immune to small animals commonly found in commercial conditions (birds, rodents, snakes).

13. Installer-Friendly Design

    a) Designed with the installer in mind, the DT900 contains a large wiring space, protective clear plastic covers over the circuit boards to prevent damage, two end- of-line terminals, flashed over LEDs visible at great distance, a fast-install wall mounting plate for the included swivel mounting bracket and easy vertical and horizontal adjustment.

14. Mirror Optics For Long Range

    a) The DT900 series utilizes custom designed mirror optics to provide effective capture at long range. Each model is easily selectable between two ranges.

15. LED Diagnostics

    a) The LEDs will display codes to indicate an anti-masking condition, INFORMER condition, trouble condition, and recallable codes to indicate INFORMER results and whether or not there was a self-test failure.

16. Advanced Commercial/Industrial Features

    a) In addition to anti-masking (DT900/DT906), the DT900 Series has command input for initiating a self-test remotely, has CENELEC two wire input options and has a remote LED enable input.

17. DT900 27m (90') Range PIR Fields of View (Edges)

    a) Long: 18

    b) Intermediate long: 18

    c) Intermediate: 16

    d) Intermediate lower: 12

    e) Lower: 8

    f) Look-down: 2

    g) 15m (50') Range

    h) Long: 18

    i) Intermediate long: 16

j) Intermediate: 12

k) Lower: 8

l) Look-down: 2

m) DT900 (anti-mask)

n) 15m x 12m (50' x 40')

o) 27m x 21m (90' x 70')

18. DT906 61m (200') Range PIR Fields of View (Edges)

a) Long: 2

b) Intermediate long: 6

c) Intermediate: 4

d) Intermediate lower: 4

e) Lower: 8

f) Look-down: 2

g) 37m (120') Range

h) Long: 6

i) Intermediate long: 4

j) Intermediate: 4

k) Lower: 8

l) Look-down: 2

m) DT906 (anti-mask)

n) 37m x 3m (120' x 10')

o) 61m x 5m (200' x 15')

C. IP Cameras PoE:

1. Standard Interior Fixed Recess Mount Camera Shall Be Super Dynamic Full HD Dome Network Camera Model WV-SFN631L

a) 1080p Full HD images up to 60 fps*1

b) Approximate 1/3 inches, high sensitivity MOS Sensor

c) Super high resolution at Full HD/1,920 x 1,080 created by high sensitivity MOS Sensor. (WV-SFN631L only)

d) Multiple H.264 (High profile) streams (max. 4 streams) and JPEG streams ensure simultaneous real time monitoring and high resolution recording by new enhanced “UniPhier®”.

e) Maximum Screen Size is 2,048 x 1,536* @30fps, H.264 with use of super resolution techniques.

f) Enhanced Super Dynamic*1 and ABS (Adaptive Black Stretch) technologies deliver 133 dB wide dynamic range.

g) Multi process NR & 3D-DNR to ensure noise reduction.

h) High sensitivity with Day & Night (IR) function: 0.04 lx (Color), 0.01 lx (B/W) at F1.3

i) IR LED equipped: The equipped infrared LED makes it possible to take pictures at zero lx.

j) IR LED is controlled to match the environment; thereby the camera provides clear images of human faces without white blur.

k) Camera attachment bracket that allows easy camera installation toward all four directions.

l) High Speed ABF (Auto Back Focus) and Motorized Zoom.

m) Lens with aperture control function realizes the best focus in any environment.

n) VIQS (Variable Image Quality on Specified area) technology allows the designated eight areas to retain higher image quality while the excluded area will have a decreased image quality, which enables to use lower image file size and bit rate.

o) Cropping function to provide whole image and the part image simultaneously.

p) Up to 4 image capture areas can be specified, and it is also possible to control the sequence.

q) Face Super Dynamic technology to ensure clear face image.

r) Lens distortion compensation for the distorted images can be adjusted 256 steps.

s) Electronic sensitivity enhancement: Auto (Up to 16/30s) / OFF

t) Selectable light control modes:

(1) Outdoor scene, Indoor scene (50 Hz) / Indoor scene (60 Hz), Fix shutter Indoor scene

(2) (50 Hz/60Hz): Flicker caused by fluorescent lightning will be automatically compensated.

u) 3x extra optical zoom at 640 x 360 resolution

v) 2x, 4x digital zoom controlled by browser

w) VMD (Video Motion Detection) with 4 programmable detection areas, 15 steps sensitivity level and 10 steps detection size

x) Privacy Zone can mask up to 8 private areas, such as house windows and entrances/exits.

y) Camera title display: Up to 20 alphanumeric characters on the browser

z) Alarm sources including 3 terminal input, VMD and Camera alarm command can trigger actions such as SDXC/SDHC/SD memory recording, FTP image transfer, E-mail notification, Indication on browser, Alarm terminal output, and Panasonic alarm protocol output.

aa) Full duplex bi-directional audio allows interactive communication between camera site and monitoring site.

bb) JPEG Image compression ratio can be changed by alarm so that higher quality image can be provided.

cc) Prioritized stream control: One of the video streams can be prioritized when multiple recorders or client PCs are accessing the camera so that the recorder or the client PC can maintain the frame rate.

dd) Double SDXC/SDHC/SD Memory card slots for manual recording (H.264 / JPEG), alarm recording (H.264 / JPEG) and backup upon network failure (H.264 / JPEG). Realize long-term recording and auto backup function.

ee) Dome cover provides clearer images above the horizontal. Thereby, it expands the tilting range of the lens.

ff) Face detection function detects the position of human face and the information is sent by XML or video stream.

gg) Intelligent extension software in addition to built-in VMD (Video Motion Detection), alarm function.

hh) Fog compensation function equipped as standard.

ii) HLC (High Light Compensation) technology reduces strong light sources such as vehicle headlights to prevent camera being blinded.

jj) Super Chroma Compensation function realizes a better color reproducibility even in low illumination.

kk) H.264 max. bit rate/client and Total bit rate control allows flexible network traffic management. Frame rate priority mode controls bit rate and compression ratio to provide the specified frame rate.

ll) Internet mode: H.264 images can be transmitted over HTTP protocol.

mm) Multi-language: English / Italian / French / German / Spanish /

nn) Portuguese / Russian / Chinese / Japanese

oo) IPv4/IPv6 protocol supported

pp) Supports SSL, DDNS (viewnetcam, RFC2136)

qq) Still images (JPEG) can be viewed on mobile phones via Internet.

rr) Onvif compliant

ss) Ceiling Mount Bracket: Q105A

tt) Ceiling Mount Bracket: Q174B

uu) Smoke Dome Cover: CF5SA

2. Standard Interior Fixed Wall Mount Camera Shall Be Super Dynamic Full HD Vandal Resistant Dome Network Camera Model WV-SFR631L

a) 1080p Full HD images up to 60 fps*1

b) Approximate 1/3 inches, high sensitivity MOS Sensor

c) Super high resolution at Full HD/1,920 x 1,080 created by high sensitivity MOS Sensor.

d) Multiple H.264 (High profile) streams (max. 4 streams) and JPEG streams ensure simultaneous real time monitoring and high resolution recording by enhanced “UniPhier®”.

e) Maximum Screen Size is 2,048 x 1,536* @30fps, H.264 with use of super resolution techniques.

f) Enhanced Super Dynamic*1 and ABS (Adaptive Black Stretch) technologies deliver 133 dB wider dynamic range.

g) Multi process NR & 3D-DNR to ensure noise reduction.

h) High sensitivity with Day & Night (IR) function: 0.04 lx (Color), 0.01 lx (B/W) at F1.3

i) IR LED equipped: The equipped infrared LED makes it possible to take pictures at zero lx.

j) IR LED is controlled to match the environment; thereby the camera provides clear images of human faces without white blur.

k) Camera attachment bracket allows an easy camera installation toward all four directions.

l) High Speed ABF (Auto Back Focus) and Motorized Zoom.

m) Lens with aperture control function realizes the best focus in any environment.

n) VIQS (Variable Image Quality on Specified area) technology allows the designated eight areas to retain higher image quality while the excluded area will have a decreased image quality, which enables to use lower image file size and bit rate.

o) Cropping function enables to provide whole image and the part image simultaneously.

p) Up to 4 image capture areas can be specified, and it is also possible to control the sequence.

q) Face Super Dynamic technology to ensure clear face image.

r) Lens distortion compensation for the distorted images can be adjusted 256 steps.

s) Electronic sensitivity enhancement: Auto (Up to 16/30s) / OFF

t) Selectable light control modes:

    (1) Outdoor scene, Indoor scene (50 Hz) / Indoor scene (60 Hz), Fix shutter

    (2) Indoor scene (50 Hz/60Hz): Flicker caused by fluorescent lightning will be automatically compensated.

u) 3x extra optical zoom at 640 x 360 resolution

v) 2x, 4x digital zoom controlled by browser

w) VMD (Video Motion Detection) with 4 programmable detection areas, 15 steps sensitivity level and 10 steps detection size

x) Privacy Zone can mask up to 8 private areas, such as house windows and entrances/exits.

y) Camera title display: Up to 20 alphanumeric characters on the browser

z) Alarm sources including 3 terminal input, VMD and Camera alarm command can trigger actions such as SDXC/SDHC/SD memory recording, FTP image transfer, E-mail notification, Indication on browser, Alarm terminal output, and Panasonic alarm protocol output.

kk) Multi-language: English / Italian / French / German / Spanish / mm. Portuguese / Russian / Chinese / Japanese

ll) IPv4/IPv6 protocol supported

mm) Supports SSL, DDNS (viewnetcam, RFC2136)

nn) Still images (JPEG) can be viewed on mobile phones via Internet.

oo) Onvif compliant model

pp) Vandal resistant mechanism for high reliability

qq) Ceiling Mount Bracket: Q105A

rr) Ceiling Mount Bracket: Q174B

ss) Smoke Dome Cover: CR1Sional Accessories

3. Standard Exterior Fixed IP Camera Shall Be Super Dynamic Full HD Vandal Resistant & Waterproof Dome Network Camera Model WV-SFV631L a. 1080p Full HD images up to 60 fps

a) Approximate 1/3 inches, high sensitivity MOS image sensor

b) Super high resolution at Full HD/1,920 x 1,080 created by high sensitivity MOS Sensor.

c) Multiple H.264 (High profile) streams (max. 4 streams) and JPEG streams ensure simultaneous real time monitoring and high resolution recording by enhanced “UniPhier®”.

d) Maximum Screen Size is 2,048 x 1,536* @30fps, H.264 with use of super resolution techniques

e) Enhanced Super Dynamic*1 and ABS (Adaptive Black Stretch) technologies deliver 133 dB wider dynamic range.

f) Multi process NR & 3D-DNR to ensure noise reduction.

g) High sensitivity with Day & Night (IR) function: 0.04 lx (Color), 0.01 lx (B/W) at F1.3

h) IR LED equipped: The equipped infrared LED makes it possible to take pictures at zero lx.

i) IR LED is controlled to match the environment, thereby the camera provides clear images of human faces without white blur.

j) Camera attachment bracket allows an easy camera installation toward all four directions.

k) High Speed ABF (Auto Back Focus) and Motorized Zoom ensures easy installation.

l) Lens with aperture control function realizes the best focus in any environment.

m) VIQS (Variable Image Quality on Specified area) technology allows the designated eight areas to retain higher image quality while the excluded area will have a decreased image quality, which enables to use lower image file size and bit rate.

n) Cropping function enables to provide whole image and the part image simultaneously.

o) Up to 4 image capture areas can be specified, and it is also possible to control the equence.

p) Face Super Dynamic technology to ensure clear face image.

q) Lens distortion compensation for the distorted images can be adjusted 256 steps.

r) Electronic sensitivity enhancement: Auto (Up to 16/30s) / OFF

s) Selectable light control modes:

t) Outdoor scene, Indoor scene (50 Hz) / Indoor scene (60 Hz),Fix shutter

u) Indoor scene (50 Hz/60Hz): Flicker caused by fluorescent lightning will be automatically compensated.

v) 3x extra optical zoom at 640 x 360 resolution

w) 2x, 4x digital zoom controlled by browser

x) VMD (Video Motion Detection) with 4 programmable detection areas, 15 steps sensitivity level and 10 steps detection size

y) Privacy Zone can mask up to 8 private areas, such as house windows and entrances/exits.

z) Camera title display: Up to 20 alphanumeric characters on the browser

aa) Alarm sources including 3 terminal input, VMD and Camera alarm command can trigger actions such as SDXC/SDHC/SD memory recording, FTP image transfer, E-mail notification, Indication on browser, Alarm terminal output, and Camera alarm protocol output.

bb) Full duplex bi-directional audio allows interactive communication between camera site and monitoring site.

cc) JPEG Image compression ratio can be changed by alarm so that higher quality image can be provided.

dd) Prioritized stream control: One of the video streams can be prioritized when multiple recorders or client PCs are accessing the camera so that

the recorder or the client PC can maintain the frame rate.

ee) Double SDXC/SDHC/SD Memory card slots for manual recording (H.264 / JPEG), alarm recording (H.264 / JPEG) and backup upon network failure (H.264 / JPEG). Realize long-term recording and auto backup function.

ff) Dome cover provides clearer images above the horizontal. Thereby, it expands the tilting range of the lens.

gg) Face detection function detects the position of human face and the information is sent by XML or video stream.

hh) Intelligent extension software in addition to built-in VMD (Video Motion Detection), alarm function.

ii) Fog compensation function equipped as standard.

jj) Super Chroma Compensation function realizes a better color reproducibility even in low illumination.

kk) H.264 max. bit rate/client and Total bit rate control allows flexible network traffic management. Frame rate priority mode controls bit rate and compression ratio to provide the specified frame rate.

ll) Internet mode: H.264 images can be transmitted over HTTP protocol.

mm) Multi-language: English / Italian / French / German / Spanish / Portuguese / Russian / Chinese / Japanese

nn) IPv4/IPv6 protocol supported

oo) Supports SSL, DDNS (viewnetcam, RFC2136)

pp) Still images (JPEG) can be viewed on mobile phones via Internet.

qq) Onvif compliant model

rr) IP66 rated water and dust resistant. Compatible with IEC60529 measurement standard, Type 4X(UL50), NEMA 4X compliant.

ss) Dehumidification device for use with various weather conditions

tt) Vandal resistant mechanism for high reliability

uu) Ceiling Mount Bracket: Q169A

vv) Smoke Dome Cover: CW7S

ww) Sun Shade: Q7118

4. Standard Exterior PTZ Shall Be Super Dynamic Weather Resistant Full HD / 1,920 x1,080 H.264 Weather Proof Camera featuring Optical 30x zoom and Super Dynamic PTZ Dome Network Camera WV-SW598

    a) 1080p HD images up to 30 fps

    b) 2.4 Megapixel high sensitivity MOS Sensor

    c) Super high resolution at Full HD / 1,920 x 1,080 created by 2.4 Megapixel high sensitivity MOS Sensor

    d) Multiple H.264 (High profile) streams and JPEG streams ensure simultaneous real time monitoring and high resolution recording by “UniPhier®”.

    e) Full frame (Up to 30 fps) transmission at 1,920 x 1080 image size

    f) 30x optical zoom 90x extra optical zoom at 640x360 resolution with 12x digital zoom enabling 1080x zoom.

    g) Super Dynamic and ABS (Adaptive Black Stretch) technologies deliver 128x wider dynamic range.

    h) Face Super Dynamic Range technology to ensure clear face image.

    i) High sensitivity with Day & Night (IR) function: 0.5 lx (Color), 0.06 lx (B/W) at F1.6

    j) VIQS (Variable Image Quality on Specified area) technology allows the designated 2 areas to retain higher image quality while the excluded area will have a decreased image quality, which enables to use lower image file size and bit rate. VIQS can be set on preset position (1 to 8) and except preset.

    k) Digital Noise Reduction: 3D-DNR ensures noise reduction in various conditions.

    l) Progressive scan ensures clear images with less motion blur and no tearing even when the subject is moving.

    m) Electronic sensitivity enhancement: Auto (Up to 16x) / OFF

    n) Selectable light control modes:

        (1) Outdoor scene / Indoor scene (50 Hz) / Indoor scene (60 Hz) / Fix shutter Indoor scene (50 Hz / 60 Hz): Flicker caused by fluorescent lightning will be automatically compensated.

    o) 360 degrees endless Panning

    p) Advanced auto tracking: The camera automatically pans and tilts to

follow a moving subject and keep it in the center of the image.

q) PTZ control can be taken very smoothly on the user friendly GUI with 16 speeds pan/tilt and new “Drag and Zoom” operation enabling finer control.

r) Up to 256 preset positions

s) 360 map shot: 8 thumbnail images at 45 deg. intervals make it simple to direct the camera easily by clicking on a thumbnail.

t) Industrial grade Pan / Tilt / Zoom mechanism for high reliability

u) VMD (Video Motion Detection) with 4 programmable detection areas, 15 steps sensitivity level and 10 steps detection size

v) Privacy Zone can mask up to 32 private areas, such as house windows and entrances/exits.

w) Camera title display: Up to 20 alphanumeric characters on the browser

x) Alarm sources including 3 terminal input, VMD and Camera alarm command can trigger actions such as SDXC/SDHC/SD memory recording, FTP image transfer, E-mail notification, Indication on browser, Alarm terminal output, and Panasonic alarm protocol output.

y) Full duplex bi-directional audio allows interactive communication between camera site and monitoring site.

z) JPEG Image compression ratio can be changed by alarm so that higher quality image can be provided.

aa) Prioritized stream control: One of the video streams can be prioritized when multiple recorders or client PCs are accessing the camera so that the recorder or the client PC can maintain the frame rate.

bb) SDXC/SDHC/SD Memory card slot for manual recording (H.264 / JPEG), alarm recording (H.264 / JPEG) and backup upon network failure (JPEG)

cc) H.264 max. bit rate / client and Total bit rate control allows flexible network traffic management. Frame rate priority mode controls bit rate and compression ratio to provide the specified frame rate.

dd) Internet mode: H.264 images can be transmitted over HTTP protocol.

ee) Multi-language: English / Italian / French / German / Spanish / Russian / Chinese / Japanese

ff) IPv4/IPv6 protocol supported

gg) Supports SSL, DDNS (viewnetcam, RFC2136)

hh) Still images (JPEG) can be viewed on mobile phones via Internet.

ii) Onvif compliant model

jj) IP66 rated water and dust resistant. Compatible with IEC60529 measurement standard.

kk) Dehumidification device for use in various weather conditions

ll) Rain wash coat dome cover

mm) Ambient Operating Temperature: -50 °C ~ +55 °C (- 58 °F ~ 131 °F)

nn) Fog and Sandstorm compensation

oo) AEM (Auto Eyelid Mechanism) offers images that are more natural and easy to watch reducing doubled images when direction of the lens moved above the horizontal.

D. Network Security Appliance (NSA)

1. Network Security Appliance (NSA) Genreal

a) The NSA shall be a stand-alone enterprise class IP-enabled security appliance.

b) The NSA shall come pre-loaded with the following security software:

c) Genetec Omnicast 4.x

d) Genetec Security Center 5.x

e) The NSA shall support seamless unification of IP access control systems (ACS) and IP video management systems (VMS).

f) Functionalities available with the NSA shall include:

g) Configuration of embedded systems such as ACS and VMS systems

h) User management including Microsoft Active Directory integration for synchronizing user accounts and cardholder accounts

i) System status and health monitoring

j) Activity and audit trails

k) Live event monitoring

l) Live video monitoring and playback of archived video

m) PTZ control and digital zoom

n) Camera sequences

o) Video bookmarks

p) Alarm management

q) Incident management

r) Reporting, including creating custom report templates and incident reports

s) Intrusion device and panel integration (live monitoring, reporting, and arming/disarming)

t) Dynamic graphical map viewing

u) The NSA shall be deployed in one of the following types of installations:

v) Stand-alone video management appliance

w) Remote Archiver as part of an Omnicast or Security Center Enterprise installation

x) Stand-alone access control appliance

y) Unified access control and video management appliance

z) The NSA shall support connectivity through federation from the following security systems:

aa) Genetec Security Center

bb) Genetec Omnicast Video Management System

cc) In a stand-alone video management appliance, the NSA shall support simultaneous recording of up to 100 cameras running at 2Mbps per camera.

dd) In a stand-alone access control appliance, the NSA shall support up to 256 access control readers.

ee) In a unified access control and video management appliance, the NSA shall support simultaneous recording of up 50 cameras running at 2Mbps and support up to 128 access control readers.

ff) The NSA is available in 4 hardware flavors distinguishable by their storage and power supply options:

(1) 4 TB of internal storage and non-redundant power supply

(2) 8 TB of internal storage and redundant power supply

(3) 12 TB of internal storage and redundant power supply

(4) 12 TB with RAID5 configuration for an effective storage of 9 TB and redundant power supply

gg) The NSA shall be an open architecture platform allowing connecting to edge devices from various manufacturers.

hh) The NSA shall support video streams supplied from analog cameras via IP encoders or IP cameras digitally encoded in MPEG-4, MPEG-2, MJPEG, H.264, Wavelet or JPEG2000 compression formats.

ii) The NSA shall support industry standard for the interface of IP-based physical security products, such as:

(1) ONVIF

(2) The NSA shall support up to 10 simultaneous client connections for monitoring over any IP network.

(3) All communication between the NSA and the client applications shall be based on standard TCP/IP protocol and shall use encryption when enabled by the administrator.

(4) The NSA shall include a Server Monitoring Service (Watchdog) that continuously monitors the state of the NSA services.The NSA shall support multiple languages, including but not limited to the following: English, French, Arabic, Dutch, German, Italian, Japanese, Korean, Persian, Simplified Chinese, and Spanish.

2. HARDWARE SPECIFICATIONS Network Security Appliance (NSA) Genreal

a) Power Specifications

(1) Power Input: Auto Ranging 100V-240V

(2) Power Consumption: 350W for non-redundant power supply and 400W for redundant power supplies

b) Mechanical Specifications

(1) 1U 19'' rack mount chassis

(2) Dimensions (HxWxD): 1.68” x 19.00” x 26.00” (42.8 x 482.4 x 660.2 mm) (with bezel and rack flange)

(3) Weight: 42.55lbs (19.3 kg)

c) Environmental Specifications

(1) Operating Temperature: 50°F to 95°F (10°C to 35°C)

(2) Storage Temperature: -40°F to 149°F (-40°C to 65°C)

(3) Operating Humidity: 10% to 80% (non-condensing)

(4) Storage Humidity: 5% to 95% (non-condensing)

d) System Component Specifications

(1) Operating System: Windows Embedded Standard 7

(2) CPU: Intel Xeon E5-2403 1.80GHz, 10M Cache, 6.4GT/s QPI, No Turbo

(3) Memory: 4GB Memory (1X4GB), 1333MHz Dual Ranked RDIMM

(4) Peripheral Interfaces:

(5) 1x RS-232

(6) 4x USB 2.0

(7) 1x VGA

(8) 2x GbE ports

(9) Up to 4, 3.5" or 2.5" Hot Plug Hard Drives SAS or SATA drives

(10) Certifications

(11) CE, Class B

(12) FCC, Class B

(13) Warranty

(14) 3-years hardware

E. IP Camera Viewing Work Station:

1. PC Viewing Work Station with Genetec software to be installed in Main Office.

F. Door Access Master Controller

1. Controller (SMC) Synergis Master

a) The SMC is an intelligent IP controller that provides native support of popular security modules from HID Global and Mercury Security, as well

as Assa Abloy IP locks.

2. PoE Device Support

    a) Synergis supports a variety of PoE-enabled devices such as the HID EDGE EVO and Assa Abloy PoE locks, leading to a simplified and cost effective installation.

3. Respond to potential threats by quickly restricting access to specific areas in no time.

4. Active Directory Integration

    a) Centralize the management and synchronization of Windows user accounts with Synergis' user and cardholder accounts and automate cardholder account creation and deactivation.

5. Global Cardholder Management

    a) Efficiently manage cardholders and credentials across multiple sites, create them centrally or at a remote site, and then have them automatically synchronized across one or more locations.

    b) Federation Unify multiple independent Synergis systems under a single virtual system for ease of global access control monitoring, alarm management, and reporting across sites and time zones.

6. Integrated Badge Designer

    a) Create multiple badge templates for cardholders and print either single-sided or dual-sided badges. Custom card sizes, import/ export of badge templates and batch printing are also supported.

7. Built-In Visitor Management

    a) Check-in visitors by entering their information, assigning a new or existing credential, assigning them to a visitor group, and printing a badge. This is all done from an easy enrolment tool. Fully integrated check-in and check-out of visitors.

8. Software Development Kit (SDK)

    a) Develop custom business applications with a mature software development kit. Integrate badging, payroll, enterprise resource planning, human resources management systems (HRMS), or building management systems.

9. Alarm Management

    a) Configure or trigger alarms based on different events and associate each event to specific users and required actions such as acknowledge,

forward, snooze or show the procedure. Capable of handling thousands of alarms per second. Support for hundreds of alarm priority levels with user defined procedures.

10. Mobile Apps and Web Client

    a) Access your Synergis IP access controller system through a range of mobile apps for your smartphone and a Web Client.

11. People Counting and Area Presence Tracking

    a) Get a real-time count of people within one or more specific areas and generate area-presence reports on demand.

G. Door Access PoE Locking Hardware:

1. Assa Abloy Ethernet (PoE) locks

    a) Must be Full compatibility to Security Center Master Controller access control behavior.

    b) Access rules for card holders and card holder groups on door and areas

    c) Unlock schedules (up to 32 schedules per door)

    d) Standard time and Extended grant time for doors

    e) Door relock mode (after door opens or when door closes)

    f) Monitoring of locks running state (Online, Offline)

    g) Unlock schedule overrides and maintenance mode

    h) Magstripes (full track 2)

    i) Contactless cards (up to 37 bits)

    j) 128 IP locks per SMC unit

    k) 2400 credentials per IP lock

    l) Instant awareness of newly enrolled credentials (cardholders).

    m) Instant awareness of inactive/expired cardholders

    n) Instant awareness of inactive/expired/lost/stolen credentials

    o) Live monitoring of lock status, access grant/deny events from Security Desk, including the following events:

        (1) Offline

(2) Battery fail

(3) Deadbolt set/free

(4) Door forced open

(5) Door held open too long

p) Full reporting capability on granted and denied accesses

(1) Cardholder activities

(2) Credential activities

(3) Door activities

(4) Area activities

(5) Data are only available after the next radio contact

q) Offline mode (when SMC is disconnected from the Access Manager)

r) Autonomous mode (when the IP lock is disconnected from SMC)

s) Offline unit logs and Autonomous interface logs

t) Power fail lock settings (Fail Safe/Fail Secure)

u) WiFi radio scheduler (Always on, Daily, or Every x minutes)c N/A

v) Battery checks (Off, Report only, or Daily at a specific time)d N/A

2. Assa Abloy Wi-Fi locks

a) Must be Full compatibility to Security Center Synergis access control behavior.

b) Access rules for cardholders and cardholder groups on doors and areas

c) Unlock schedules (up to 32 schedules per door)

d) Standard time and Extended grant time for doors

e) Door relock mode (after door opens or when door closes)

f) Monitoring of locks running state (Online, Offline)

g) Unlock schedule overrides and maintenance mode

h) Magstripes (full track 2)

i) Contactless cards (up to 37 bits)

j) 128 IP locks per SMC unit

k) 2400 credentials per IP lock

l) Instant awareness of newly enrolled credentials (cardholders).

m) Instant awareness of inactive/expired cardholders

(1) After the next radio contact

n) Instant awareness of inactive/expired/lost/stolen credentials

(1) After the next radio contact

o) Live monitoring of lock status, access grant/deny events from Security Desk, including the following events: Available in reports after the next radio contact

(1) Offline

(2) Battery fail

(3) Deadbolt set/free

(4) Door forced open

(5) Door held open too long

p) Full reporting capability on granted and denied accesses: Data are only available after the next radio contact

(1) Cardholder activities

(2) Credential activities

(3) Door activities

(4) Area activities

q) Offline mode (when SMC is disconnected from the Access Manager)

r) Autonomous mode (when the IP lock is disconnected from SMC)

s) Offline unit logs and Autonomous interface logs

t) Power fail lock settings (Fail Safe/Fail Secure)

u) WiFi radio scheduler (Always on, Daily, or Every x minutes)c

v) Battery checks (Off, Report only, or Daily at a specific time)d

(1) WiFi locks are considered offline only after the periodic radio contact + 5 min. is missed.

(2) The default Power fail lock setting is Fail Secure, meaning the door is locked when power if off. For the configuration of this feature in SMC 2.1 Refer to Genetec specifications.

(3) The default WiFi radio wake up schedule is every day at 0:00 UTC time. For the configuration of this feature in SMC 2.1, refer to Genetec specifications.

(4) The default Battery check schedule is every day at 23:00 UTC time. For the configuration of this feature in SMC 2.1, refer to Genetec specifications. For information on monitoring the battery status, refer to Assa Abloy specifications for "Monitoring the battery status of WiFi locks"

3. Following are acceptable Assa Abloy PoE and WiFi Locks

a) Corbin Russwin Access 700 PIP1 PoE Supported by design

b) Corbin Russwin Access 800 IP1 PoE Supported by design

c) SARGENT Passport 1000 P1 PoE 3_0n08_px_pfm

d) SARGENT Profile Series v.S1 PoE 3_0n08_px_pfm

e) Corbin Russwin Access 700 PWI1 WiFi 3_0n08_px_pfm

f) Corbin Russwin Access 800 WI1 WiFi Supported by design

g) SARGENT Passport 1000 P2 WiFi 3_0n08_px_pfm

h) SARGENT Profile Series v.S2 WiFi Supported by design

H. Video Intercom

1. IS-IPMV IP Master Station at Main Office Secretarial and Administration desks.

2. IS-IPDV IP Video Door Station at Main Entrance Door

I. Visitor Management System

1. Raptor Video Management Software and Hardware installed at Main Office secretarial Desks.

Part 3 - Execution

I. INSTALLATION:

A. The alarm system contractor shall coordinate the installation of all equipment and systems to prevent interference from other building equipment or systems.

B. Alternate locations must be approved by the Security Office representative and the Project Engineer.

C. All detectors shall be securely fastened to the building walls.

D. All wiring shall be installed in conduit where required.

E. When wiring is located above accessible ceilings, conduit may be omitted, but cable must then be run in a neat and orderly fashion. Cable shall be plenum rated, bundled and supported with ties so that there is no sagging. Cable shall also be run under structural or other mechanical and electrical elements such that it is fully accessible over its entire length.

F. All conduit and cable must be concealed above ceilings or within walls.

G. Exposed conduit will be permitted only in unfinished spaces and at the main interface junction cabinet.

II. AS-BUILT DRAWINGS:

A. The alarm installation contractor must provide, directly to the project engineer, a 1/8” scale “as-built” schematic drawing of the complete security system installation indicating:

1. Building layout – interior, exterior floor plan.

2. Room location, names, and numbers.

3. Device equipment connection points, color-coded.

4. Device locations.

5. Interface junction cabinet.

6. Area junction and splice boxes.

III. DEMONSTRATION AND WALK TEST:

A. Upon completion of the security system installation, the alarm system installation contractor will demonstrate the functions and operations to school security system representatives. All devices are to be activated during the test. The Capital Improvement Office will coordinate the demonstration schedule.

B. Upon completion of the security system installation, the alarm system installation contractor will provide a 1/8” scale as-built drawing of the completed security system installation.

C. It is incumbent upon the contractor to have tested all security alarm devices and walk tested the total system prior to the demonstration.

D. Failure of any part of the alarm system will result in a non-acceptance of the installation.

E. Future demonstration walk tests will be done at a time and date convenient to the Security Office.

END OF SECTION

SECTION 28 1000 - ACCESS CONTROL

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Access control system requirements.

B. Access control units and software.

C. Access control point peripherals, including readers.

D. Accessories.

1.02 RELATED REQUIREMENTS

A. Section 07 8400 - Firestopping.

B. Section 08 7100 - Door Hardware: Electrically operated door hardware, for interface with access control system.

C. Section 26 0526 - Grounding and Bonding for Electrical Systems.

D. Section 26 0533.13 - Conduit for Electrical Systems.

E. Section 27 1000 - Structured Cabling: Data cables for access control system IP network connections.

F. Section 28 2000 - Video Surveillance: For interface with access control system.

G. Section 28 3111 - Building Intrusion Detection: For interface with access control system.

H. Section 28 4600 - Fire Detection and Alarm: For interface with access control system.

1.03 REFERENCE STANDARDS

A. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

B. NFPA 101 - Life Safety Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

C. UL 294 - Access Control System Units Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the work with other installers to provide suitable door hardware as required for both access control functionality and code compliance.

2. Coordinate the placement of readers with millwork, furniture, equipment, etc. installed under other sections or by others.

3. Coordinate the work with other installers to provide power for equipment at required locations.

4. Notify Architect of any conflicts with or deviations from the contract documents. Obtain direction before proceeding with work.

B. Preinstallation Meetings:

1. Conduct meeting with facility representative and other related equipment manufacturers to discuss access control system interface requirements.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Include plan views indicating locations of system components and proposed size, type, and routing of conduits and/or cables. Include elevations and details of proposed equipment arrangements. Include system interconnection schematic diagrams. Include requirements for interface with other systems.

C. Product Data: Provide manufacturer's standard catalog pages and data sheets for each system component. Include ratings, configurations, standard wiring diagrams, dimensions, finishes, service condition requirements, and installed features.

D. Design Data: Standby battery/UPS calculations.

E. Evidence of qualifications for installer.

F. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation, and operation of product.

G. Manufacturer’s detailed field testing procedures.

H. Field quality control test reports.

I. Maintenance contracts.

J. Project Record Documents: Record actual locations of system components and installed wiring arrangements and routing.

K. Operation and Maintenance Data: Include detailed information on system operation, equipment programming and setup, replacement parts, and recommended maintenance procedures and intervals.

1. Include contact information for entity that will be providing contract maintenance and trouble call-back service.

L. Warranty: Submit sample of manufacturer's warranty and documentation of final executed warranty completed in Owner's name and registered with manufacturer.

M. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

2. Deliver blank credentials to Owner as directed.

1.06 **QUALITY ASSURANCE**

A. Comply with the following:

1. NFPA 70.

2. NFPA 101 (Life Safety Code).

3. The requirements of the local authorities having jurisdiction.

4. Applicable TIA/EIA standards.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

C. Installer Qualifications: Company specializing in performing the work of this section with minimum three years documented experience with access control systems of similar size, type, and complexity and providing contract maintenance service as a regular part of their business; authorized manufacturer's representative.

1.07 **DELIVERY, STORAGE, AND HANDLING**

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

B. Store products in manufacturer's unopened packaging, keep dry and protect from damage until ready for installation.

1.08 **FIELD CONDITIONS**

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.09 **WARRANTY**

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

PART 2 PRODUCTS

2.01 **ACCESS CONTROL SYSTEM REQUIREMENTS**

A. Provide new access control system consisting of all required equipment, conduit, boxes, wiring, connectors, hardware, supports, accessories, software, system programming, etc. as necessary for a complete operating system that provides the functional intent indicated.

B. Surge Protection:

1. Provide surge protection for readers and door strikes/locks.

2. Provide equipment power surge protection where electrical distribution system surge protection is not provided.

C. Access Control Points:

1. See article "ACCESS CONTROL POINT PERIPHERALS" below for device descriptions.

D. Computers Required:

1. See article "ACCESS CONTROL UNITS AND SOFTWARE" below for product descriptions.

2. Server(s):

3. Workstation Computer(s):

4. Badging Station Computer(s):

E. Interface with Other Systems:

1. Provide products compatible with other systems requiring interface with access control system.

F. Provide products listed, classified, and labeled as suitable for the purpose intended.

1. Access Control Units and Readers: Listed and labeled as complying with UL 294.

2.02 **ACCESS CONTROL UNITS AND SOFTWARE**

A. Provide access control units and associated software compatible with readers to be connected.

B. Computers:

1. Workstation Computers: Unless otherwise indicated, workstation computer hardware and associated peripherals not furnished by access control system manufacturer to be provided by Contractor as part of work of this section, meeting access control system equipment manufacturer's recommended requirements.

2. Servers: Unless otherwise indicated, server hardware and associated peripherals not furnished by access control system manufacturer to be provided by Contractor as part of work of this section, meeting access control system equipment manufacturer's recommended requirements.

3. Badging Peripherals: ~~Unless otherwise indicated, badging peripherals not furnished by access control system manufacturer to be provided by Contractor as part of work of this section.~~ Delineation

of Responsibilities to provide the following have been addressed in the *RFP* and *supporting exhibits* with regards to Badging Peripherals.

a. Basis of Design Product(s):

1) Badging Printer:

2) Badging Camera:

3) Badging Signature Tablet:

C. Software:

1. Unless otherwise indicated, provide all software and licenses required for fully operational system.
2. Access Control System:
3. Visitor Management System:

2.03 ACCESS CONTROL POINT PERIPHERALS

A. Provide devices compatible with control units.

B. Provide devices suitable for operation under the service conditions at the installed location.

C. Provide readers compatible with credentials to be used.

D. Reader Color: To be selected by Architect from manufacturer's available standard colors.

E. Contactless Smart Card Readers:

1. Utilizes 13.56 Mhz RF communication with compatible credentials.
2. Utilizes 64 bit authentication keys.
3. Supports ISO compliant credentials.
4. Supports data encryption.

F. Biometric Readers:

G. Proximity Readers:

1. Utilizes 125 kHz RF communication with compatible credentials.

H. Wiegand Readers:

I. Keypads:

J. Bar Code Readers:

K. Door Position Switches:

1. Magnetic Contacts: Encapsulated reed switch(es) and separate magnet; designed to monitor opened/closed position of doors.

L. Request to Exit Devices:

1. Motion Sensors: Passive infrared.

M. Door Locking Devices (Electric Strikes and Magnetic Locks): Comply with Section 08 7100.

2.04 ACCESSORIES

A. Provide components as indicated or as required for connection of access control system to devices and other systems indicated.

B. Unless otherwise indicated, credentials to be provided by Contractor.

1. Provide credentials compatible with readers and control units/software to be used.

C. Unless otherwise indicated, network switches required for network connections to system components to be provided by Contractor.

D. Provide cables as indicated or as required for connections between system components.

1. Data Cables for IP Network Connections: Unshielded twisted pair (UTP), minimum Category 5e, complying with Section 27 1000.

E. Provide accessory racks/cabinets as indicated or as required for equipment mounting.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that ratings and configurations of system components are consistent with the indicated requirements.

C. Verify that mounting surfaces are ready to receive system components.

D. Verify that branch circuit wiring installation is completed, tested, and ready for connection to system.

E. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Install access control system in accordance with NECA 1 (general workmanship).

B. Install products in accordance with manufacturer's instructions.

C. Wiring Method: Unless otherwise indicated, use cables (not in conduit).

1. Use suitable listed cables in wet locations, including underground raceways.
2. Use suitable listed cables for vertical riser applications.
3. Use listed plenum rated cables in spaces used for environmental air.
4. Install wiring in conduit for the following:
    a. Where required for rough-in.
    b. Where required by authorities having jurisdiction.
    c. Where exposed to damage.
    d. Where installed outside the building.
    e. For exposed connections from outlet boxes to devices.
5. Conduit: Comply with Section 26 0533.13.
6. Conceal all cables unless specifically indicated to be exposed.
7. Use power transfer hinges complying with Section 08 7100 for concealed connections to door hardware.
8. Cables in the following areas may be exposed, unless otherwise indicated:
    a. Equipment closets.
    b. Within joists in areas with no ceiling.
9. Route exposed cables parallel or perpendicular to building structural members and surfaces.
10. Do not exceed manufacturer's recommended maximum cable length between components.

D. Provide grounding and bonding in accordance with Section 26 0526.

E. Install firestopping to preserve fire resistance rating of partitions and other elements, using materials and methods specified in Section 07 8400.

F. Identify system wiring and components in accordance with Section 26 0553.

3.03 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Provide services of a manufacturer's authorized representative to observe installation and assist in inspection and testing. Include manufacturer's detailed testing procedures and field reports with submittals.

C. Prepare and start system in accordance with manufacturer's instructions.

D. Program system parameters according to requirements of Owner.

E. Test for proper interface with other systems.

F. Correct defective work, adjust for proper operation, and retest until entire system complies with contract documents.

G. Submit detailed reports indicating inspection and testing results and corrective actions taken.

3.04 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.05 CLOSEOUT ACTIVITIES

A. See Section 01 7800 - Closeout Submittals, for closeout submittals.

B. See Section 01 7900 - Demonstration and Training, for additional requirements.

C. Demonstration: Demonstrate proper operation of system to Owner, and correct deficiencies or make adjustments as directed.

D. Training: Train Owner's personnel on operation, adjustment, and maintenance of system.

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
2. Provide minimum of four hours of training.
3. Instructor: Manufacturer's authorized representative.
4. Location: At project site.

3.06 PROTECTION

A. Protect installed system components from subsequent construction operations.

3.07 MAINTENANCE

A. See Section 01 7000 - Execution and Closeout Requirements, for additional requirements relating to maintenance service.

B. Provide to Owner, a proposal as an alternate to the base bid, a separate maintenance contract for the service and maintenance of access control system for two years from date of Substantial Completion; Include a complete description of preventive maintenance, systematic examination, adjustment, cleaning, inspection, and testing, with a detailed schedule.

C. Conduct site visit at least once every three months to perform inspection, testing, and preventive maintenance. Submit report to Owner indicating maintenance performed along with evaluations and recommendations.

D. Provide trouble call-back service upon notification by Owner:

   1. Include allowance for call-back service during normal working hours at no extra cost to Owner.

   2. Owner will pay for call-back service outside of normal working hours on an hourly basis, based on actual time spent at site and not including travel time; include hourly rate and definition of normal working hours in maintenance contract.

END OF SECTION

SECTION 28 4600
FIRE DETECTION AND ALARM SYSTEM

PART 1 GENERAL

1.01 REQUIREMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

1.02 SCOPE

A. The work covered under this Section shall include engineering, designing, testing, furnishing and installing a complete and operable addressable type analog fire detection and alarm system with voice activation shown on the Drawings and herein specified. The system shall include, but not be limited to: control panel including backbox; remote graphic annunciator panel including backbox; alarm initiating and indicating peripheral devices; outlet boxes; conduit; line and low voltage wiring; and all accessories required.

B. The existing fire detection and alarm system shall remain in operation during the construction period until the new system has been installed, tested, and approved by the Prince George's County Fire Marshal and the Owner. The existing system shall then be removed as shown on the Drawings.

1.03 QUALITY ASSURANCE

A. All devices and equipment for this system shall be listed by the Underwriter's Laboratories, Inc. (UL), bear the UL label and shall conform to the applicable sections of National Fire Protection Association (NFPA) 72 and 90A, and the Americans with Disabilities Act (ADA) Code of Federal Regulation.

B. The installation shall be in accordance with all requirements of NFPA, the National Electrical Code (NEC), all state and local codes and requirements, and these Specifications.

C. Source Limitations for Fire-Alarm System and Components: Obtain fire-alarm system from single source from single manufacturer. Components shall be compatible with, and operate as, an extension of existing system.

D. Installer Qualifications: Personnel shall be trained and certified by manufacturer for installation of units required for this Project.

E. Installer Qualifications: Installation shall be by personnel certified by NICET as fire-alarm Level III technician.

F. This Contractor shall furnish shop drawings submittals for all components of this system in accordance with SECTION 16010 of these specifications. Submittals shall include the following for review. Submittals not containing all of the information listed below will be rejected.

1. A complete list by model number of each component of the system with a statement of how many pieces of each model are to be furnished and a listing of the specific data sheet.
2. A description of the system as it functions by component in the system using model numbers where applicable.
3. A complete battery calculation listing by module for the system.
4. A data sheet shall be furnished for each component of the system. The specific information shall be highlighted.
5. A detailed drawing of the control panel shall be furnished showing all modules in their specific location with the specific terminal terminations shown.
6. A detailed set of floor plans for the complete building shall be furnished showing the locations of all equipment and devices, their addresses, and their required interconnections. The interconnections shown shall indicate the system manufacturer's recommended number, size, and type of wires as described in this Specification. The plans shall show the locations of all required control and monitor modules and their addresses. The layout of all fire detection and alarm system equipment, devices, and conduit routings shall closely follow that shown on the Drawings.
7. A detailed drawing shall be furnished of each type of device showing the exact terminal designations.
8. A detailed list shall be furnished of each type of device in the system stating its program function in the system.

9. A detailed list shall be furnished of the relays in the system and their program function.
10. A detailed manufacturer's drawing shall be furnished of the graphic annunciator panel, as it shall appear on the wall in the location of its installation.
11. Certification by the equipment distributor of the required service response time.

G. Following review of the submittals by the Architect/Engineer and Owner, and prior to release of the fire alarm equipment, this Contractor shall submit to the Prince George's County Fire Marshal's office all copies of the corrected submittals for review, comment, and approval. This contractor shall not release any equipment prior to receiving the Prince George's County Fire Marshall approved shop drawing. This contractor shall be responsible for paying all fees associated with the Fire Marshall's review.

H. The installation of all equipment and the final connection of all components and wiring shall be performed under the direct supervision of the system manufacturer's technical staff.

I. Upon completion, the system shall be thoroughly tested by this Contractor to assure proper interfacing of all components.

J. Prior to final inspection, this Contractor shall furnish to the prime Contractor, five (5) copies of the manufacturer's submittal drawings up-dated to reflect: any and all revisions to the system made during construction; and the final addresses of all devices. A printed list of system devices, which will include the following: device type, address, and custom message.

K. The equipment to be furnished by this Contractor under these Specifications shall be the standard product of one manufacturer. Acceptable manufacturers shall be engaged in the manufacture of multiplexed fire alarm equipment for at least seven (7) years and have a fully equipped, factory trained and authorized service organization that will have a response time of four (4) hours or less to the job site The acceptable manufacturers shall be non-proprietary systems as follows Fire Lite,Silent Knight.

L. The fire detection and alarm system shall be furnished by a factory authorized distributor certified to design, program, and service the system. This distributor must show evidence of successfully furnishing systems as specified for at least five (5) years. This distributor shall provide twenty four (24) hour, seven (7) day a week (including holidays) service capability with a maximum four (4) hour response time. This distributor shall provide certification of this capability as part of the submittals.

M. This contractor shall furnish to the Owner the following keys in the quantities indicated.
1. Fire Alarm Annunciator Panel Access – Two (2)
2. Fire Alarm Annunciator Control Switches – Five (5).
3. Fire Alarm Control Panel – Five (5)
4. Manual Station - One per device.

1.04 DESCRIPTION OF SYSTEM

A. The fire detection and alarm system shall be individual point addressable, general alarm, electrically supervised, continuously sounding temporal tone signal with audible and visual alarm and trouble indications.
1. Each individual alarm initiating device shall report to the control panel as a separate "address".
2. The remote graphic annunciator panel's fire zone, and sprinkler zone boundaries shall be in accordance with the Prince George's County's regulations and the Architect/Engineer's detail on the Drawings.

B. Activation of a manual fire alarm pull station; automatic smoke, heat detector; kitchen hood extinguishing system; or waterflow switch shall cause the following:
1. All audible/visual-signaling devices shall sound continuously having a temporal tone signal until manually silenced. A subsequent alarm received after silencing shall again cause the alarm indicating circuits to be activated. The fire alarm signals shall be distinctive from all other alarm signals and shall be clearly audible throughout the entire building.
2. The appropriate alarm source indicating lamps shall energize on the remote graphic annunciator panel and indicate type of device and geographic fire zone. Graphic annunciator panel lamps, when lighted, shall be constantly illuminated. Flashing lamps will not be acceptable.
3. Auxiliary contacts shall activate the security intrusion system to PGCPS Remote Station.
4. Operation of any intelligent thermal detector in the elevator machine room and/or elevator shaft shall automatically shut down the associated elevator.

5. Close all normally held-open smoke doors.
6. Visually indicate via the integral control panel LCD display, the addressable device in alarm. When the control panel goes into the alarm condition: the ALARM (red) LED shall light; the internal control panel alarm shall sound; and the first line of the minimum eighty (80) character LCD shall indicate the REAL TIME, the number of MESSAGES WAITING, and the TIME THAT THE ALARM OCCURRED. The second line shall display the TYPE OF ALARM and the ALARM ZONE NUMBER. The third and fourth lines shall display the user specified message. In order to reduce false alarms, all inputs shall be capable of alarm verification. The system shall be capable of setting the sensitivity of all analog detectors by point and shall be capable of displaying the analog value of the detector by device and/or traditional input and vectoring the value to a remote printer. The system shall automatically identify any analog detector which becomes dirty (maintenance alert) prior to false alarming.

C. Activation of a sprinkler valve tamper switch; dry pipe HI/LO air; air duct type detector; fire pump fault; or generator fault shall cause the following:
   1. The appropriate amber alarm source indicating lamp shall energize on the remote graphic annunciator panel and the integral audible trouble signal shall sound.
   2. Auxiliary contacts shall activate the security intrusion system to PGCPS Remote Station.
   3. Visually indicate via the integral control panel LCD display, the addressable sprinkler valve tamper switch, dry pipe HI/LO air, air duct type detector, fire pump fault, or generator fault in alarm. When the control panel goes into the alarm condition: the NORMAL (green) LED shall extinguish; the SUPERVISORY (amber) LED shall light; and the internal control panel alarm shall sound which shall be distinct from all other alarm sounds. The first line of the minimum eighty (80) character LCD shall indicate the REAL TIME, the number of MESSAGES WAITING, and TIME THAT THE ALARM OCCURRED. The second line shall display the TYPE OF ALARM and the ALARM ZONE NUMBER. The third and fourth lines shall display the user specified message. In order to reduce false alarms, all inputs shall be capable of alarm verification.
   4. Operation of any air duct type smoke detector shall automatically shut down the associated air-handling unit and units which serve the same area, such as gymnasiums, cafeteria, auditoriums, etc.

D. The system, including the remote graphic annunciator panel, shall remain in alarm condition until the initiating device is reset to normal and the control panel is reset. System reset shall be accomplished on a single key-operated switch on the remote graphic annunciator panel.

E. The system shall use 120-volt commercial power as its normal source of power. Upon failure of the normal source, the system shall automatically transfer to the standby power supply which shall be capable of supporting all system supervisory functions for all initiation circuits for a period of twenty four (24) hours and five (5) minutes in as required by NFPA 72A.

F. In the event of failure of operating power, an open, or ground condition on the system wiring, the trouble signals (both audible and visual) shall actuate at the remote graphic annunciator panel. It shall be possible to silence audible trouble signals by means of silencing switches; however, it shall not be possible to extinguish the visual signals until the disarrangement has been corrected. Upon correction of the trouble condition, the system automatically resets the trouble indication. Alarm or trouble indication shall cause an auxiliary contact operation connected to the security system Field Interface Device.

1.05 **TESTING**

A. Upon final completion of the installation, and acceptance of each construction phased space, and after satisfactory testing of the system by this Contractor in the presence of the equipment supplier, this Contractor shall test the system in the presence of the Architect/Engineer, Fire Marshall, Owner, and other authorities having jurisdiction. The manufacturer shall furnish to the Owner a two (2) year contract effective from the date of acceptance, for maintenance and inspection service of the manufacturers' equipment. The manufacturer shall maintain an adequate supply of spare parts for ten (10) years, and shall provide supervision of the installation. The manufacturer and/or their distributor shall provide twenty-four (24) hour/seven (7) day (including holidays) service to the system as hereinbefore described.

1.06 **WARRANTY**

A. This Contractor shall deliver the work described herein in a first-class operating condition in every respect. This Contractor shall also warrant that the material, equipment, and workmanship furnished shall be entirely free from defects. Any materials, equipment, or workmanship in which defects may develop before or during the warranty period shall be repaired or replaced at the Contractor's own expense. Refer to SECTION 01740 for the start of the warranty period. The contractor shall further warrant that all material, equipment, and workmanship used in the installation, but not specifically mentioned in the Drawings and Specifications, is the best of their respective kinds and that the construction and installation was performed in accordance with the best accepted standard practices in all details.

B. It is the intention of this Specification that a complete life-safety system be furnished from a single manufacturer. Equipment shall be UL listed for fire alarm use.

1.07 **INSTRUCTION AND MANUALS**

A. The equipment manufacturer shall provide eight (8) hours of instruction to the Owner's maintenance personnel and shall furnish three (3) complete field service manuals.

1.08 **SPARE PARTS**

A. This Contractor shall furnish to the Owner spare parts as follows. Spare parts shall be furnished prior to the installation of the system.
   1. Two (2) intelligent smoke detectors including bases.
   2. Two (2) intelligent thermal type detectors including bases.
   3. Four (4) intelligent control modules.
   4. Four (4) intelligent monitor modules.
   5. Two (2) manual pull stations and intelligent monitor modules for each.
   6. Six (6) audio/visual alarm signals.
   7. Two (2) exterior alarm signals including surface mounted weatherproof back boxes.
   8. Four (4) visual only alarm signals

PART 2 - PRODUCTS

2.01 **NEW MAIN CONTROL PANEL**

A. The control panel shall be modular for ease of installation, maintenance, and configuration. The control panel controller shall have an eighty (80) character alphanumeric display that offers four (4) twenty (20) character lines.

B. The control panel shall differentiate between long term drift above the pre-alarm threshold (maintenance alert, indicative of the need for cleaning) and a fast rise above the pre-alarm threshold (indicative of a smoldering fire). The maintenance alert shall be annunciated as an alert on the LCD only and shall not be confused as a trouble or an alarm. The unit shall contain a display module of the membrane style construction with a four (4) line by twenty (20) character liquid crystal display (LCD). The LCD shall use super-twist technology and backlighting for high contrast visual clarity. In the normal mode, the LCD shall display the TIME, the TOTAL NUMBER OF ACTIVE EVENTS, and the TOTAL NUMBER OF DISABLE POINTS. In the alarm mode, the LCD shall display the TOTAL NUMBER OF EVENTS, and the TYPE OF EVENT ON DISPLAY. Forty (40) characters of display space shall be reserved for the user's custom messages. The module shall have visual indicators for the following common control functions: AC POWER; ALARM; SUPERVISORY, TROUBLE, DISABLE, GROUND FAULT, CPU FAILURE, and TEST. There shall be common control keys and visual indicators for: RESET; ALARM SILENCE; TROUBLE SILENCE; DRILL; and one (1) custom programmable key/indicator. The module shall include four (4) pairs of display control keys for selection of event display by type (alarm, supervisory, monitor, and trouble) and forward- backward scrolling through event listings. The operation of these keys shall be integrated with the related common control indicators to flash the indicators when undisplayed events are available for display and turn-on steady when all events have been displayed. The module shall allow the first event of the highest priority to capture the LCD for display so that arriving fire fighters can view the first alarm event "hands free". The module shall provide the following system function keys: STATUS; REPORTS; ENABLE; DISABLE; ACTIVATE; RESTORE; PROGRAM; and TEST. The module shall have a numeric keypad, zero (0) through nine (9), with delete and enter keys.

C. During the normal state, the NORMAL (green) LED shall flash, the first line of the LCD shall display the time in (HH:MM:SS) as well as the number of active points and the number of disabled points in the system. When the control panel goes into the alarm condition, the first line of the minimum eighty (80) character LCD shall indicate the REAL TIME; the NUMBER OF MESSAGES WAITING; and TIME THAT THE ALARM OCCURED. The second line shall display the TYPE OF ALARM and the ALARM ZONE NUMBER. The third and fourth lines shall be dedicated to user specified messages. To silence audible devices the operator shall press the ALARM SILENCE button. A new alarm shall cause the audible devices to resound. To reset the network the operator shall press the RESET button.

D. The control panel controller shall contain a RS232 printer/programming port for programming locally via a personal computer or down loading through modems from a remote personal computer.

E. The main controller shall be supervised, site programmable, and of modular design supporting up to ninety six (96) detectors and ninety four (94) remote modules, and two (2) notification appliance circuits (NAC). Additional support for expansion modules shall be provided to add an additional ninety six (96) detectors and ninety four (94) modules including two (2) additional NAC circuits. The NAC shall be convertible to power risers to serve remote multiple NAC modules for zoned signal applications. The system shall have built-in automatic system programming to automatically address and map all system devices attached to the main controller. A minimum default single stage alarm system operation shall be supported with alarm silence, event silence, drill, lamp test, and reset common controls. The system shall support distributed processor intelligent detectors with the following operational attributes: integral multiple differential sensors; automatic device mapping; electronic addressing; environmental compensation; pre-alarm; dirty detector identification; automatic day/night sensitivity adjustment; normal/alarm LED's; relay bases; sounder bases; and isolator bases. Systems, which only monitor the presence of a conventional detector in an addressable base, shall not be acceptable.

F. Each intelligent loop card shall contain its own dedicated resident central processor unit (CPU) and shall provide power, process, store, control, and communicate with detectors and in/out modules via a minimum No. 18 AWG twisted pair cable up to a maximum of 5,000 feet. The cable shall be computer grade.

G. The system shall use full digital communications to supervise all addressable loop devices and power supplies for placement, correct location, and operation. It shall allow swapping of "same type" devices without the need of addressing and impose the "location" parameters on replacement devices. It shall initiate and maintain a trouble if a device is added to a loop and clear the trouble when the new device is mapped and defined into the system. System circuits shall be configured as follows: addressable analog loops Class **; initiating device circuits Class ; notification appliance circuits Class ; network communications ; and annunciator communications . The system shall have an U.L. listed detector sensitivity test feature, which shall be a function of the smoke detectors and performed automatically every four (4) hours. The system shall support one hundred percent (100%) of all remote devices in alarm. All panel modules shall be supervised for placement and return trouble if damaged or removed. The system shall have a CPU "watchdog" circuit to initiate trouble should the CPU fail. The system evacuation signal rate shall be continuous. The system shall include a signal silence inhibit and an automatic signal silence timer. Audible notification and visual signal appliances shall be affected by signal silence features. For NFPA Style 4 operation, branch circuits (T-Taps) may be made off the loop. The number of T-Taps shall not exceed the manufacturer's recommendations.**

H. The average time to detect an alarm shall be three (3) seconds or less. The polling time for the system shall remain the same regardless of the number of intelligent loops in the system up to its maximum.

I. The control panel network master shall have the following features without any changes in hardware or firmware:

1. Five hundred seventy six (576) event history log stored in RAM including, but not limited to, facility name, licensee, project compile date, compiler version, project revision, and time and date of history request.
2. Logics statements.
3. Time controls.
4. Sequences.
5. Actions.
6. Weekday/holiday schedules.
7. Analog value reporting of all analog detectors.
8. Maintenance reporting by intelligent detector.
9. Sensitivity setting changed by detector (within UL limits).
10. Sensitivity setting changed by time (Day/Night Mode).
11. Alarm verification by point or zone (0 to 60 seconds in intervals of 5 seconds).
12. Up to ninety nine (99) priorities for any event driven relay/output.
13. Enabling and disabling of any system device.
14. Ground fault detection on all system devices and inputs.
15. Opens detected on all system devices and inputs.

2.02 **INTELLIGENT PERIPHERAL REQUIREMENTS**

A. This Contractor shall furnish and install intelligent devices as shown on the Drawings and herein specified. All remote intelligent devices shall have a microprocessor with non-volatile memory to support their functionality and serviceability. Each device shall store as required for its functionality the following data: device serial number; device address; device type; personality code; date of manufacture; hours in use; time and date of last alarm; amount of environmental compensation left/used; last maintenance date; job/project number; current detector sensitivity values; diagnostic information (trouble codes); and algorithms required to process sensor data and perform communications with the loop controller. Each device shall be capable of electronic addressing either automatically or application programmed assigned, to support physical/electrical mapping and supervision by location. Setting a device's address by physical means shall not be necessary.

B. The intelligent detectors shall be capable of full digital communications using both broadcast and polling protocol. Each detector shall be capable of performing independent fire detection algorithms. The fire detection algorithm shall measure sensor signal dimensions, time patterns, and combine different fire parameters to increase reliability and distinguish real fire conditions from unwanted deceptive nuisance alarms. The devices shall eliminate by digital filters, signal patterns that are not typical of fires. Devices not capable of combining different fire parameters or employing digital filters shall not be acceptable. Each detector shall have an integral microprocessor capable of making alarm decisions based on fire parameter information stored in the detector head. Distributed intelligence shall improve response time by decreasing the data flow between detector and analog loop controller. Detectors not capable of making independent alarm decisions shall not be acceptable. Maximum total analog loop response time for detectors changing state shall be 0.5 seconds. Each detector shall have a separate means of displaying communication and alarm status. A green LED shall flash to confirm communication with the analog loop controller. A red LED shall flash to display alarm status. The detector shall be capable of identifying up to thirty-two (32) diagnostic codes. This information shall be available for system maintenance. The diagnostic code shall be stored at the detector. Each smoke detector shall be capable of transmitting pre-alarm and alarm signals in addition to the normal, trouble, and need cleaning information. It shall be possible to program control panel activity to each level. It shall be possible to individually program each smoke detector to operate at any one of five (5) sensitivity settings. Each detector microprocessor shall contain an environmental compensation algorithm, which shall identify and set ambient "environmental thresholds" approximately six (6) times an hour. The microprocessor shall continually monitor the environmental impact of temperature, humidity, other types of contaminates, as well as detector aging. The process shall employ digital compensation to adapt the detector to both twenty-four (24) hour long term and four (4) hour short term environmental changes. The microprocessor shall monitor the environmental compensation value and alert the system operator when the detector approaches eighty percent (80%) and one hundred percent (100%) of the allowable environmental compensation value. Differential sensing algorithms shall maintain a constant differential between

selected detector sensitivity and the “learned” base line sensitivity. The base line sensitivity information shall be updated and permanently stored at the detector approximately once every hour.

2.03 INTELLIGENT PHOTOELECTRIC TYPE SMOKE DETECTOR

A. This Contractor shall furnish and install intelligent photoelectric type smoke detectors as shown on the Drawings and herein specified. The analog photoelectric type smoke detector shall utilize a light scattering type photoelectric smoke sensor to sense changes in air samples from its surroundings, and shall operate between 0 degrees to 49 degrees celsius. The integral microprocessor shall dynamically examine values from the sensor and initiate an alarm based on the analysis of data. Systems using central intelligence for alarm decisions shall not be acceptable. The detector shall continually monitor any changes in sensitivity due to the environmental effects of dirt, smoke, temperature, aging, and humidity. The information shall be stored in the integral processor and transferred to the analog loop controller for retrieval using a laptop PC or similar program/service tool. The detector shall be rated for ceiling installation at a minimum of thirty (30) feet centers and shall be suitable for wall mount applications. The percent smoke obscuration per foot alarm set point shall be field selectable to any of five (5) sensitivity settings ranging from one percent (1%) to three and a half percent (3-1/2%). The photoelectric smoke detector shall be suitable for direct insertion into air ducts up to 3 ft (0.91m) high and 3 ft (0.91m) wide with air velocities up to 5,000 ft/min. (0-25.39 m/sec) without requiring specific duct detector housings or supply tubes. The detector shall be suitable for operation in the following environment:
   1. Temperature: thirty-two (32)˚F to one hundred twenty (120)˚F.
   2. Humidity: zero (0) to ninety-three percent (93%) relative humidity, non- condensing.
   3. Elevation: no limit.

B. Self-Restoring: Detectors do not require resetting or readjustment after actuation to restore them to normal operation.

C. Where noted on the Drawings, intelligent photoelectric type smoke detectors shall be furnished and installed by this Contractor complete with wire guards.

D. Integral Visual-Indicating Light: LED type indicating detector has operated and power on status.

2.04 INTELLIGENT THERMAL DETECTOR

A. This Contractor shall furnish and install intelligent combination fixed temperature/rate-of-rise thermal detectors as shown on the Drawings and herein specified. The thermal detector shall have a low mass thermistor heat sensor and operate at a fixed temperature and at a temperature rate-of-rise. The detector shall continually monitor the temperature of the air in its’ surroundings to minimize thermal lag to the time required to process an alarm. The integral microprocessor shall determine if an alarm condition exists and initiate an alarm based on the analysis of the data. Systems using central intelligence for alarm decisions shall not be acceptable. The intelligent thermal detector shall have a nominal fixed temperature alarm point rating of one hundred thirty-five (135)˚F and a rate-of-rise alarm point of fifteen (15)˚F per minute. The intelligent thermal detector shall be rated for ceiling installation at a minimum of seventy (70) foot centers and be suitable for wall mount applications.

2.05 INTELLIGENT CARBON MONOXIDE (CO) DETECTOR

A. This Contractor shall furnish and install intelligent carbon monoxide detectors with remote indicator as shown on the Drawings and herein specified. The carbon monoxide detectors detector shall have advanced electromechanical carbon monoxide sensing technology, ground fault detection, field replaceable carbon monoxide sensor/daughterboard module and automatic device mapping with electronic addressing. The intelligent carbon monoxide detectors shall have a operating temperature range of 32˚F To 120˚F. The intelligent carbon monoxide detectors shall be rated for both ceiling and wall mounted installation. Wall mounted detectors shall be mounted at a height recommended by the system manufacturer.

2.06 INTELLIGENT MONITOR MODULE

A. This Contractor shall furnish and install intelligent single input monitor modules as shown on the Drawings and herein specified. The intelligent single input monitor module shall provide one (1) supervised Class B input circuit capable of a minimum of four (4) personalities, each with a distinct operation. The module shall be suitable for mounting on a 1-1/2” deep four (4) inch square outlet box. The single input module shall support the following circuit types:

1. Normally-open alarm latching for manual pull stations, thermal detectors, etc.
2. Normally-open alarm delayed latching for sprinkler flow alarm switches.
3. Normally-open active non-latching for monitor, fans, dampers, door hold- open, etc.
4. Normally-open active latching for supervisory and sprinkler valve tamper switches.

B. It shall be possible to address each intelligent monitor module with the use of DIP or rotary switches. Modules using DIP switches for addressing shall be acceptable. The personality of multifunction modules shall be programmable at the site to suit conditions and shall be changeable at any time using a personality code downloaded from the analog loop controller. Modules requiring EPROM, PROM, or ROM changes shall not be acceptable. DIP switch and/or jumper changes shall be acceptable The module shall have a minimum of two (2) diagnostic LEDs mounted behind a finished cover plate. A green LED shall flash to confirm communication with the loop controller. A red LED shall flash to display alarm status. The module shall be capable of storing up to twenty-four (24) diagnostic codes that may be retrieved for troubleshooting assistance. Input and output circuit wiring shall be supervised for open and ground faults. The module shall be suitable for operation in the following environment:
   1. Temperature: thirty-two (32)˚F to one hundred twenty (120)˚F.
   2. Humidity: Zero (0) to ninety-three percent (93%) relative humidity, non- condensing.

C. An intelligent monitor modulecomplete with a cover plate designed to conceal the address setting means but allow the polling LED to show.

2.07 INTELLIGENT CONTROL MODULE

A. This Contractor shall furnish and install intelligent control relay modules as shown on the Drawings and herein specified. The intelligent control relay module shall provide one (1) form C dry relay contact rated at two (2) amps at 24 VDC to control external appliances or equipment shutdown. The control relay shall be rated for pilot duty and releasing systems. The position of the relay contact shall be confirmed by the system firmware. The module shall be suitable for mounting on a 1-1/2” deep four (4) inch square outlet box.

B. It shall be possible to address each intelligent monitor module with the use of DIP or rotary switches. Modules using DIP switches for addressing shall be acceptable. The personality of multifunction modules shall be programmable at the site to suit conditions and shall be changeable at any time using a personality code downloaded from the analog loop controller. Modules requiring EPROM, PROM, or ROM changes shall not be acceptable. Modules using DIP switch and/or jumper changes shall be acceptable. The module shall have a minimum of two (2) diagnostic LEDs mounted behind a finished cover plate. A green LED shall flash to confirm communication with the loop controller. A red LED shall flash to display alarm status. The module shall be capable of storing up to twenty-four (24) diagnostic codes that may be retrieved for troubleshooting assistance. Input and output circuit wiring shall be supervised for open and ground faults. The module shall be suitable for operation in the following environment:
   1. Temperature: thirty-two (32)˚F to one hundred twenty (120)˚F.
   2. Humidity: Zero (0) to ninety-three percent (93%) relative humidity, non- condensing.

C. An intelligent control module, which will meet this Specification, is EST Module No. SIGA-CR complete with a cover plate designed to conceal the address setting means but allow the polling LED to show.

2.08 INTERIOR MANUAL PULL STATIONS

A. This Contractor shall furnish and install double action, two stage, manual pull stations as shown on the Drawings and herein specified. The double action manual pull stations shall be addressable. Pull stations using DIP or rotary switches shall be acceptable. A green LED shall flash to confirm communication with the loop controller. A red LED shall flash to display alarm status. The pull station shall include a locked test feature and an internal toggle switch. The red manual station shall be constructed of rugged aluminum or high impact Lexan. Stations shall be keyed alike with the control panel. The module shall be suitable for mounting on a 2-1/2” deep single gang outlet box or a 1-1/2” deep four (4) inch square outlet box with a single gang cover. The manual station shall be suitable for operation in the following environment:
   1. Temperature: thirty-two (32)˚F to one hundred twenty (120)˚F.
   2. Humidity: Zero (0) to ninety-three percent (93%) relative humidity, non- condensing.

B. Furnish and install Safety Technology International, Inc. (STI) clear lexan alarm covers Model No. 1100 (flush mounted) and/or 1130 (surface mounted) Stopper II.

2.09 AIR DUCT TYPE SMOKE DETECTORS

A. This Contractor shall furnish photoelectric duct smoke detectors as shown on the Drawings and herein specified. The duct smoke detector shall include a housing assembly to facilitate mounting an intelligent analog photoelectric detector along with a relay detector base. The detector housing shall be UL listed per UL 268A specifically for use in air handling systems. The detector shall operate at air velocities of 300 feet per minute to 4,000 feet per minute. An integral filter system shall be included to reduce dust and residual effects on the detector and housing. The duct detector shall include an air exhaust tube and an air sampling inlet tube that shall extend into the duct air stream up to ten (10) feet, a drilling template, and gaskets.

B. The detectors shall be furnished complete with auxiliary relay contacts to shut down the associated air handling unit upon activation of the duct detector.

C. The detectors shall be furnished complete with an intelligent monitor module.

D. Air duct type smoke detectors shall be furnished by this Contractor and installed in the air duct under DIVISION 15. Motor control wiring shall be furnished and installed under DIVISION 15. The detector shall be made part of the fire detection and alarm system by this Contractor.

E. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.

F. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
   1. Primary status.
   2. Device type.
   3. Present average value.
   4. Present sensitivity selected.
   5. Sensor range (normal, dirty, etc.).

G. Weatherproof Duct Housing Enclosure: NEMA 250, Type 4X; NRTL listed for use with the supplied detector.

H. Where duct detectors are installed in area with a suspended ceiling, this contractor shall furnish and install a label on the ceiling grid below where the duct detector is installed.

I. This Contractor shall furnish and install a remote alarm indicator for each air duct type smoke detector. Each alarm indicator shall be complete with an engraved nameplate mounted adjacent to the indicator by this Contractor and lettered with the air handling unit number.

J. An air duct type smoke detector, which will meet this Specification, shall consist of the following.
   1. One (1) analog photoelectric type detector.
   2. One (1) sampling tube of the length required to suit the duct dimension.
   3. One (1) intelligent control module for shutdown of the air handling equipment.
   4. One (1) remote indicator.

2.10 SPRINKLER WATERFLOW SWITCHES

A. This Contractor shall furnish and install an intelligent monitor module for each waterflow switch installed.

2.11 VALVE TAMPER SWITCHES

A. This Contractor shall furnish and install an intelligent monitor module for each tamper switch installed.

2.12 WALL MOUNTED AUDIO/VISUAL ALARM SIGNALS

A. This Contractor shall furnish and install wall mounted electronic alarm signals as shown on the Drawings and herein specified. The alarm signals shall be of solid- state construction and shall produce a temporal horn sound output of 94.5 dBA avg. and 97.6 dBA peak at ten (10) feet. The strobes shall be selectable to produce a minimum of 15, 30, 75, 95, 110, 115, 150 and 177 candela effective intensity as shown on the drawings. The flash rate shall not exceed three (3) flashes per second nor be less than one (1) flash every three (3) seconds. This Contractor shall furnish and install wall mounting styles for surface, semi-

flush, or flush installation as shown on the Drawings. Alarm signals shall be complete with screw terminals for in-out field wiring of up to No. 12 AWG conductors and a red finish.

B. Audio/visual alarm signals shall be listed to: UL 1971; UL 1638; UL 464; ULC S525 and S526; ADA Chapter 28, Part 36 Final Rule; and NFPA 72, Chapter 7.

C. All audio/visual alarm signals shall be UL listed for fire protective service.

D. Audio/visual alarm signals shall be capable of operating from standard signaling circuits or from addressable intelligent signal modules.

E. Audio/visual alarm signals in areas noted on the Drawings shall be installed complete with wire guards furnished and installed by this Contractor.

F. The wall mounted audio/visual alarm signals, which meet this Specification, are Multi-candela Strobe field selectable at 15, 30, 75 or 110 Candela and Multi-candela Strobe field selectable at 95, 115, 150 or 177 Candela complete with red finish, mounting plate.

2.13 CEILING MOUNTED AUDIO/VISUAL ALARM SIGNALS

A. This Contractor shall furnish and install ceiling mounted electronic alarm signals as shown on the Drawings and herein specified. The alarm signals shall be of solid state construction and shall produce temporal horn sound output of 94.5 dBA avg. and 97.6 dBA peak at ten (10) feet. The strobes shall be selectable to produce a minimum of 15, 30, 75, 95, 115, 150 and 177 Candela. The flash rate shall not exceed three (3) flashes per second nor be less than one (1) flash every three (3) seconds. This Contractor shall furnish and install a mounting style for installation flush in the ceiling as shown on the Drawings. Alarm signals shall be complete with screw terminals for in-out field wiring of up to No. 12 AWG conductors and a white finish.

B. Audio/visual alarm signals shall be listed to: UL 1971; UL 1638; UL 464; ULC S525 and S526; ULC S525; ADA Chapter 28, Part 36 Final Rule; and NFPA 72, Chapter 7.

C. Audio/visual alarm signals shall be capable of operating from standard signaling circuits or from addressable intelligent signal modules.

D. The ceiling mounted audio/visual alarm signals, which will meet this Specification, are Multi-candela Strobe field selectable at 15, 30, 75 or 95 Candela, and Multi-candela Strobe field selectable at 95, 115, 150 or 177 Candela. Complete with white finish, mounting plate and ceiling orientated lettering.

2.14 WALL MOUNTED VISUAL ONLY ALARM SIGNALS

A. This Contractor shall furnish and install wall mounted electronic visual only alarm signals as shown on the Drawings and herein specified. The visual only alarm signal strobes shall be selectable to produce a minimum of 15, 30, 75, 95, 110, 115, 150 and 177 candela effective intensity as shown on the drawings. The flash rate shall not exceed three (3) flashes per second nor be less than one (1) flash every three (3) seconds. This Contractor shall furnish and install wall mounting styles for surface or semi-flush installation as shown on the Drawings. Visual only alarm signals shall be complete with screw terminals for in-out field wiring of up to No. 12 AWG conductors and a red finish.

B. Visual only alarm signals shall be listed to: UL 1971; UL 1638; ULC S525 and S526; ADA Chapter 28, Part 36 Final Rule; and NFPA 72, Chapter 7.

C. Visual only alarm signals shall be capable of operating from standard signaling circuits or from addressable intelligent control modules.

D. Visual only alarm signal noted on the Drawings shall be complete with wire guards furnished and installed by this Contractor.

E. The wall mounted visual alarm signals, which will meet this Specification, are Multi-candela Strobe field selectable at 15, 30, 75 or 110 and Multi-candela Strobe field selectable at 95, 115, 150 or 177 candela complete with red finish, mounting plate.

2.15 CEILING MOUNTED VISUAL ONLY ALARM SIGNALS

A. This Contractor shall furnish and install ceiling mounted electronic visual only alarm signals as shown on the Drawings and herein specified. The visual only alarm signals strobes shall be selectable to produce a minimum of 15, 30, 75, 95, 115, 150 and 177 Candela effective intensity as shown on the drawings. The flash rate shall not exceed three (3) flashes per second nor be less than one (1) flash every three (3)

seconds. This Contractor shall furnish and install a ceiling mounting style for flush installation as shown on the Drawings. Visual only alarm signals shall be complete with screw terminals for in-out field wiring of up to No. 12 AWG conductors and a white finish.

B. Visual only alarm signals shall be listed to: UL 1971; UL 1638; ULC S525 and S526; ADA Chapter 28, Part 36 Final Rule; and NFPA 72, Chapter 7.

C. Visual only alarm signals shall be capable of operating from standard signaling circuits or from addressable intelligent control modules.

D. The ceiling mounted visual only alarm signals, which will meet this Specification, is Multi-candela ceiling strobe field selectable at 15, 30, 75 or 95 Candela and Multi-candela Strobe field selectable at 95, 115, 150 or 177 Candela complete with white finish, mounting plate, and ceiling orientated lettering.

2.16 EXTERIOR ALARM SIGNALS

A. This Contractor shall furnish and install exterior alarm signals as shown on the Drawings and herein specified. The exterior alarm signals shall be of solid state construction and shall produce a temporal horn sound output of 92 dBA peak at ten (10) feet. Maximum current shall be 0.023 Amps at 24 VDC. Exterior alarm signals shall be complete with screw terminals for in-out field wiring of up to No. 12 AWG conductors and a red finish.

B. Exterior alarm signals shall be listed to: UL 1971; UL 1638; UL 464; ULC S525 and S526; ADA Chapter 28, Part 36 Final Rule; and NFPA 72, Chapter 7.

C. All exterior alarm signals shall be UL listed for fire protective service.

D. Exterior alarm signals shall be capable of operating from standard signaling circuits or from addressable intelligent signal modules.

E. Exterior alarm signals shall be suitable for installation of the exterior of the building, bear the appropriate UL label, and shall be furnished complete with a surface mounted weatherproof outlet box.

F. An exterior alarm signal that will meet this Specification is complete with red finish, mounting plate, and red finished surface mounted weatherproof outlet box.

2.17 EXTERIOR AUDIO/VISUAL ALARM SIGNALS

A. This Contractor shall furnish and install exterior audio/visual alarm signals as shown on the Drawings and herein specified. The exterior alarm signals shall be of solid state construction and shall produce a temporal horn sound output of 92 dBA peak at ten (10) feet. The strobes shall be minimum of 75 and 110 Candela. The flash rate shall not exceed three (3) flashes per second nor be less than one (1) flash every three (3) seconds. This Contractor shall furnish and install wall mounting styles for surface or semi-flush installation as shown on the Drawings. Audio/Visual alarm signals shall be complete with screw terminals for in-out field wiring of up to No. 12 AWG conductors and a red finish.

B. Exterior audio/visual alarm signals shall be listed to: UL 1971; UL 1638; UL 464; ULC S525 and S526; ADA Chapter 28, Part 36 Final Rule; and NFPA 72, Chapter 7.

C. All exterior audio/visual alarm signals shall be UL listed for fire protective service.

D. Exterior audio/visual alarm signals shall be capable of operating from standard signaling circuits or from addressable intelligent signal modules.

E. Exterior audio/visual alarm signals shall be suitable for installation of the exterior of the building, bear the appropriate UL label, and shall be furnished complete with a surface mounted weatherproof outlet box.

F. An exterior audio/visual alarm signals that will meet this Specification is (75cd) and/or (110cd) complete with white finish, mounting plate, and red finished surface mounted weatherproof outlet box.

2.18 REMOTE GRAPHIC ANNUNCIATOR PANEL

A. This Contractor shall furnish and install where shown on the Drawings, a remote graphic annunciator panel. The annunciator panel shall have white photo- emulsion graphics as detailed on the Drawings. The graphics shall be applied to a smoked Plexiglas panel to assure legibility and ease of future on-site updating. The graphics panel shall be protected by a outer layer of non-glare Plexiglas. All electrical connections shall be made to screw terminals mounted on a back plate that shall connect to the faceplate with ribbon cables. The LED system, positioned behind the graphic panel shall be visible only in the ON

mode. The panel shall be framed in architectural gray aluminum and mounted by this Contractor in a flush steel backbox. A key lock and hidden-screw construction shall be provided for tamper resistance. The annunciator panel shall be keyed alike for all the control switches but different from the annunciator panel door access key.

B. Display Type and Functional Performance: Graphic. Alphanumeric display and LED indicating lights shall match those of fire-alarm control unit. Provide controls to acknowledge, silence, reset.

C. The annunciator shall operate via a data line connected to the main control panel. Annunciators that require a separate conductor for each indicator shall not be acceptable.

2.19 **MAGNETIC DOOR HOLDERS**

A. Magnetic door holders shall be furnished and installed by this Contractor as required for the mounting conditions and controlled by the fire alarm and detection system. This Contractor shall coordinate with the hardware supplier and the door installer to assure proper alignment, preparation, and operation with the associated doors. The door mounted magnets shall be mounted with bolts through the door with finish grade back plates. Magnets shall be 24VDC and shall be mounted as indicated on the Drawings.

B. This Contractor shall furnish and install an intelligent control module for each set, or adjacent sets, of magnetic door holders as shown on the Drawings.

2.20 **FIELD WIRING**

A. Field wiring for each intelligent loop shall consist of cables furnished and installed by this Contractor. The type, size, and number of conductors in the cable shall be in strict compliance with the manufacturer's requirements.

B. Field wiring for all alarm signals shall consist of cables furnished and installed by this Contractor. The type, size, and number of conductors in the cable shall be in strict compliance with the manufacturer's requirements.

C. Magnetic door holder power wiring from the main control panel shall consist of two (2) conductor, No. 12 AWG, furnished and installed by this Contractor.

D. All field wiring below ceilings or in rooms without ceilings shall be in minimum 1/2" conduit.

PART 3 - EXECUTION

3.01 **EQUIPMENT INSTALLATION**

A. Comply with NFPA 70, NFPA 72 and IBC for installation of fire-alarm equipment.

B. Equipment Mounting: Install fire-alarm control unit on finished floor with tops of cabinets not more than 72 inches above the finished floor.

C. Install wall-mounted equipment, with tops of cabinets not more than 72 inches above the finished floor

3.02 **FIRE ALARM CONTROL EQUIPMENT**

A. All fire alarm control equipment, including the main control panel and any signal extender panels shall be supplied from the building's 120 volt EMERGENCY power source. Contractor shall be responsible for providing any additional devices required by code or these specifications for any control equipment located other than in the Communications Room, including 120 volt EMERGENCY power. These other locations must be specifically approved by the Owner.

3.03 **MAIN CONTROL PANEL**

A. The main control panel backbox(s) shall be mounted on the wall, and all interior components furnished and installed by this Contractor, at the location shown on the Drawings in accordance with manufacturer's recommendations. Mounting height shall be approximately sixty (60) inches above the finished floor to the center of cabinet, with tops of cabinets not more than 72 inches above the finished floor.

3.04 **MANUAL STATIONS**

A. Manual stations shown on the Drawings to be installed on existing walls or partitions shall be furnished and installed in surface device boxes of the appropriate size and shall be suitable for use with surface metal raceway. Existing conduits concealed in masonry walls may be reused only with the written approval of the Owner.

B. Manual stations shown on the Drawings to be installed in new construction shall be furnished and installed by this Contractor to flush device boxes of the appropriate size as recommended by the equipment manufacturer.

C. Wire guards to be installed over manual stations shall be furnished and installed by this Contractor. Wire guards shall not be anchored into acoustical wall panels. This Contractor shall insure that wood blocking is installed behind the wall panels. The wire guards shall be anchored through the wall panels and into the wood blocking.

3.05 **SMOKE DETECTORS**

A. Smoke detectors shown on the Drawings to be installed in areas with suspended ceilings shall be surface mounted as high as possible on ceiling with concealed outlet boxes supported from structure.

B. Smoke detectors shown on the Drawings to be installed in areas without suspended ceilings shall be mounted to a surface mounted outlet box rigidly attached to the building structure independently of the associated conduits.

C. Smoke detectors required for smoke damper control shall be furnished and installed by this contractor. Coordinate locations with Mechanical drawings.

D. All smoke detectors shall be thoroughly cleaned at the end of the project prior to the system being turned over to the Owner.

E. Smoke- or Heat-Detector Spacing:
   1. Comply with NFPA 72, "Smoke-Sensing Fire Detectors" Section in the "Initiating Devices" Chapter, for smoke-detector spacing.
   2. Comply with NFPA 72, "Heat-Sensing Fire Detectors" Section in the "Initiating Devices" Chapter, for heat-detector spacing.
   3. HVAC: Locate detectors not closer than 5 feet from air-supply diffuser or return-air opening.
   4. Lighting Fixtures: Locate detectors not closer than 12 inches from any part of a lighting fixture.

3.06 **THERMAL DETECTORS**

A. Thermal detectors shown on the Drawings to be installed in areas with suspended ceilings shall be surface mounted on the ceiling with concealed outlet boxes.

B. Thermal detectors shown on the Drawings to be installed in areas without suspended ceilings shall be mounted as high as possible to surface mounted outlet boxes rigidly attached to the building structure independently of the associated conduits.

3.07 **INTELLIGENT CARBON MONOXIDE (CO) DETECTOR**

A. Intelligent carbon monoxide detectors shown on the Drawings to be installed in areas with suspended ceilings shall be surface mounted as high as possible on ceiling with concealed outlet boxes supported from structure.

B. Intelligent carbon monoxide detectors shown on the Drawings to be installed in areas without suspended ceilings shall be mounted to a surface mounted outlet box rigidly attached to the building structure independently of the associated conduits.

C. All intelligent carbon monoxide detectors shall be thoroughly cleaned at the end of the project prior to the system being turned over to the Owner.

3.08 **INTELLIGENT CONTROL, MONITOR, AND SIGNAL MODULES**

A. Intelligent control, monitor, and signal modules shall be flush mounted in the ceiling as close as possible to the associated device. In areas without ceilings, the modules may be mounted to the underside of the structure, or wall mounted. Wherever possible, the modules shall be ganged together.

B. Intelligent control and monitor modules for sprinkler flow and tamper switches and the fire pump shall be flush mounted in the front face of a wiring trough as detailed on the Drawings.

3.09 **REMOTE GRAPHIC ANNUNCIATOR PANEL**

A. The remote graphic annunciator panel backbox shall be mounted and all interior components furnished and installed by this Contractor, at the location shown on the Drawings in accordance with manufacturer's

recommendations. Mounting height shall be approximately fifty two (52) inches above finished floor to the center of cabinet, and top of panel not more than 72”.

3.10 **SPRINKLER FLOW ALARM SWITCHES**

A. This Contractor shall make all electrical connections necessary to properly integrate these devices into the fire detection and alarm system.

3.11 **SPRINKLER VALVE TAMPER SWITCHES**

A. This Contractor shall make all electrical connections necessary to properly integrate these devices into the fire detection and alarm system.

3.12 **ALARM SIGNALS**

A. Audio/visual and visual only alarm signals shown on the Drawings to be installed on existing walls or partitions shall be furnished and installed by this Contractor over surface device boxes of appropriate size and suitable for use with surface metal raceways.

B. Audio/visual and visual only alarm signals shown on the Drawings to be installed in new construction shall be furnished and installed by this Contractor over concealed device boxes of appropriate size with the appropriate trim rings.

C. Audio/visual and visual only alarm signals shown on the Drawings to be installed flush and/or semi-flush mounted in ceilings shall be installed by this Contractor over concealed flush mounted device boxes of appropriate size with the appropriate trim rings. The box shall be supported by ceiling support bridges and steel wire directly to building structure.

D. Audio/Visual and Visual only alarm signals shown on the Drawings to be ceiling mounted in areas with open structure (no suspended ceiling) shall be furnished by this contractor over surface device boxes of the appropriate size and suitable for use with surface conduit. The boxes shall be mounted directly to the underside of the structural members or metal framing channels bridging the structural members.

3.13 **AIR DUCT TYPE SMOKE DETECTORS**

A. Air duct type smoke detectors shall be furnished under this DIVISION and mounted into ducts and connected to the air handler control circuit. This Contractor shall perform all wiring connections to the fire detection and alarm system and complete system test.

B. Air duct type smoke detectors shall be thoroughly cleaned at the end of the project prior to the system being turned over to the Owner.

C. Duct Smoke Detectors: Comply with NFPA 72 and NFPA 90A. Install sampling tubes so they extend the full width of duct.

3.14 **FIELD WIRING**

A. All line and low voltage wiring, conduit, backboxes, device mounting boxes, and junction boxes required for the fire detection and alarm system shall be furnished and installed by this Contractor.

B. All low voltage field wiring shall be installed, by this Contractor.

C. This Contractor shall make all connections to panels, devices, and detectors with crimp type spade terminal connectors. Splices in station circuits shall be made only in junction boxes.

D. All wiring shall be checked and tested by this Contractor to insure the system is free from grounds, opens, and shorts.

E. The installation and final connections of all components and devices shall be performed under the direct supervision of the system manufacturer's technical staff.

3.15 **GROUNDING**

A. Ground fire-alarm control unit and associated circuits; comply with IEEE 1100. Install a ground wire from main service ground to fire-alarm control unit.

3.16 **FIELD PROGRAMMING**

A. The manufacturer's technical representative shall field program the fire detection and alarm system after all related equipment has been installed and prior to any final testing. The technical representative shall

be factory certified for programming. The initial program shall be developed by the equipment supplier in conjunction with the Owner and Fire Marshal.

B. In addition to the initial field programming described above, the contractor shall furnish an additional two (2) sessions of field programming changes to be performed at any time during the warranty period at no additional expense to the Owner.

3.17 **ON-SITE AS-BUILT DRAWINGS**

A. The Contractor shall provide one (1) set of the fire alarm system supplier's as- built drawings for permanent use on-site. The contractor shall supply and mount a document box to be located near the fire alarm control panel.

END OF SECTION

SECTION 31 0916.21
PILE LOAD TESTS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Pile load testing and documenting results.

1.02 RELATED REQUIREMENTS

A. Section 01 4000 - Quality Requirements: Testing laboratory services.

B. Section 31 6213.19 - Precast Concrete Piles.

C. Section 31 6216.16 - Steel H Piles.

D. Section 31 6219 - Timber Piles.

E. Section 31 6223.13 - Concrete-Filled Steel Piles.

F. Section 31 6329 - Drilled Concrete Piers and Shafts.

1.03 REFERENCE STANDARDS

A. ASTM D1143/D1143M - Standard Test Method for Deep Foundations Under Static Axial Compressive Load 2007 (Reapproved 2013).

B. ASTM D3689/D3689M - Standard Test Method for Deep Foundations Under Static Axial Tensile Load 2007, with Editorial Revision (2013).

C. ASTM D3966/D3966M - Standard Test Method for Deep Foundations Under Lateral Loads 2007 (Reapproved 2013).

D. ASTM D4945 - Standard Test Method for High-Strain Dynamic Testing of Deep Foundations 2012.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate test method and equipment, load type, calibration equipment.

C. Designer Qualification Statement.

1.05 QUALITY ASSURANCE

A. Monitor test pile placement and elevations under direct supervision of a Professional Engineer experienced in design of this work and licensed in Maryland.

B. Maintain one copy of each test method document on site.

PART 2 PRODUCTS

2.01 EQUIPMENT

A. Provide equipment, load carrying devices, loads, and instrumentation as required by test methods specified in PART 3.

B. Test Crib: Provide one test crib for pile load testing.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify site conditions will support cribbing and load for testing purposes.

3.02 PREPARATION

A. Establish stable working elevation for test equipment.

3.03 TESTING

A. Perform load tests for piles specified in the following Sections:
   1. Section 31 6213.19 - Precast Concrete Piles.
   2. Section 31 6216.16 - Steel H Piles.
   3. Section 31 6219 - Timber Piles.
   4. Section 31 6223.13 - Concrete-Filled Steel Piles.
   5. Section 31 6329 - Drilled Concrete Piers and Shafts.

B. Load test the following:
   1. 6 indicator piles at locations as directed.
   2. One pile in first 100 piles.
   3. One pile in next 250 piles.
   4. One pile in each 500 piles thereafter.

C. Perform the following tests on each test pile:
   1. High-strain impact test as specified in ASTM D4945.
   2. Static axial compression load test as specified in ASTM D1143/D1143M.
   3. Static axial tensile load test as specified in ASTM D3689/D3689M.
   4. Lateral load test as specified in ASTM D3966/D3966M.
   5. Subject piles to 1-3/4 times design load.

D. Acceptable Permanent Set of Piles After Load Testing: 1/8 inch (3 mm).

E. If tested piles do not conform to requirements, perform additional testing of other piles.

3.04 FIELD QUALITY CONTROL

A. Field inspection and monitoring of testing will be performed under provisions of Section 01 4000.

B. An independent inspection firm will be engaged to observe and document test method and results.

C. Document test equipment used, method of calibration and recording, test results, recommendations or modification of piling method used.

D. Accurately record actual dimensions and locations of tested piles and movement or distortion caused by testing.

3.05 EQUIPMENT REMOVAL

A. Remove test and temporary load equipment from site.

END OF SECTION

SECTION 31 1000
SITE CLEARING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Clearing and protection of vegetation.

B. Removal of existing debris.

1.02 RELATED REQUIREMENTS

A. Section 01 1000 - Summary: Limitations on Contractor 's use of site and premises.

B. Section 01 1000 - Summary: Sequencing and staging requirements.

C. Section 01 5000 - Temporary Facilities and Controls: Site fences, security, protective barriers, and waste removal.

D. Section 01 5713 - Temporary Erosion and Sediment Control.

E. Section 01 7000 - Execution and Closeout Requirements: Project conditions; protection of bench marks, survey control points, and existing construction to remain; reinstallation of removed products.

F. Section 01 7419 - Construction Waste Management and Disposal: Limitations on disposal of removed materials; requirements for recycling.

G. Section 02 4100 - Demolition: Removal of built elements and utilities.

H. Section 31 2200 - Grading: Topsoil removal.

I. Section 31 2200 - Grading: Fill material for filling holes, pits, and excavations generated as a result of removal operations.

J. Section 31 2323 - Fill: Fill material for filling holes, pits, and excavations generated as a result of removal operations.

K. Section 32 9300 - Plants: Relocation of existing trees, shrubs, and other plants.

L. Section 32 9300 - Plants: Pruning of existing trees to remain.

1.03 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Site Plan: Showing:

1. Vegetation removal limits.
2. Areas for temporary construction and field offices.

1.04 QUALITY ASSURANCE

A. Clearing Firm: Company specializing in the type of work required.

B. Conform to applicable codes and local, state and federal regulations for disposal of debris and use of herbicides. Burning of debris, lumber or scrap will not be permitted.

C. Coordinate clearing work with the Project Manager.

D. Obtain the owner's approval prior to removal of tree branches. Removal of tree branches shall be under the supervision of the owner.

1.05 PROJECT CONDITIONS

A. Traffic: Conduct site-clearing operations to ensure minimum interference with roads, streets, walks, and other adjacent occupied or used facilities. Do not close or obstruct streets, walks, or other occupied or

used facilities without permission from authorities having jurisdiction.

B. Protection of Existing Improvements: Provide protections necessary to prevent damage to existing improvements indicated to remain in place.

PART 2 PRODUCTS -- NOT USED

1. Protect improvements on adjoining properties and on Owner’s property.
2. Restore damaged improvements to their original condition, as acceptable to property owners, in a timely manner and at no additional cost to the Owner.

B. Soil Erosion and Sediment Control: Soil erosion and sediment control measures are required for this site in accordance with the approved plans. Soil erosion and sediment control measures disturbed or damaged by clearing operations shall be restored to operating condition in accordance with the requirements of the approved plan before the end of the work day.

C. Protection of Existing Trees and Vegetation: Protect existing trees and other vegetation indicated to remain in place against unnecessary cutting, breaking or skinning of roots, skinning or bruising of bark, smothering of trees by stockpiling construction materials or excavated materials within drip line, excess foot or vehicular traffic, or parking of vehicles within drip line. Provide temporary guards to protect trees and vegetation to be left standing.

1. Water trees and other vegetation to remain within limits of contract work as required to maintain their health during course of construction operations.
2. Provide protection for roots over 1-1/2 inch in diameter that are cut during construction operations. Coat cut faces with an emulsified asphalt or other acceptable coating formulated to use on damaged plant tissues. Temporarily cover exposed roots with wet burlap to prevent roots from drying out, cover with earth as soon as possible.
3. Repair or replace trees and vegetation indicated to remain that are damaged by construction operations in manner acceptable to Architect. Employ a licensed arborist to repair damage to trees and shrubs.
4. Replace trees that cannot be replaced and restored to full-growth status, as determined by arborist. E. Salvable Improvements: Carefully remove items indicated to be salvaged and store on Owner’s premises where indicated or directed.

PART 3 EXECUTION

3.01 SITE CLEARING

A. Comply with other requirements specified in Section 01 7000.

B. Minimize production of dust due to clearing operations; do not use water if that will result in ice, flooding, sedimentation of public waterways or storm sewers, or other pollution.

3.02 EXISTING UTILITIES AND BUILT ELEMENTS

A. Coordinate work with utility companies; notify before starting work and comply with their requirements; obtain required permits.

B. Protect existing utilities to remain from damage.

C. Do not disrupt public utilities without permit from authority having jurisdiction.

D. Protect existing structures and other elements that are not to be removed.

3.03 VEGETATION

A. Scope: Remove trees, shrubs, brush, and stumps in areas to be covered by building structure, paving, playing fields, lawns, and planting beds.

B. Do not begin clearing until vegetation to be relocated has been removed.

C. Do not remove or damage vegetation beyond the limits indicated on drawings.

1. 40 feet (12 m) outside the building perimeter.
2. 10 feet (3.1 m) each side of surface walkways, patios, surface parking, and utility lines less than 12 inches (305 mm) in diameter.
3. 15 feet (4.6 m) each side of roadway curbs and main utility trenches.
4. 25 feet (7.5 m) outside perimeter of pervious paving areas that must not be compacted by construction traffic.
5. Exception: Specific trees and vegetation indicated on drawings to be removed.
6. Exception: Selective thinning of undergrowth specified elsewhere.

D. Install substantial, highly visible fences at least 3 feet high (at least 1 m high) to prevent inadvertent damage to vegetation to remain:

1. At vegetation removal limits.
2. Around trees to remain within vegetation removal limits; locate no closer to tree than at the drip line.
3. Around other vegetation to remain within vegetation removal limits.
4. See Section 01 5000 for fence construction requirements.

E. In areas where vegetation must be removed but no construction will occur other than pervious paving, remove vegetation with minimum disturbance of the subsoil.

F. Vegetation Removed: Do not burn, bury, landfill, or leave on site, except as indicated.

1. Chip, grind, crush, or shred vegetation for mulching, composting, or other purposes; preference should be given to on-site uses.
2. Trees: Sell if marketable; if not, treat as specified for other vegetation removed; remove stumps and roots to depth of 18 inches (450 mm).
3. Existing Stumps: Treat as specified for other vegetation removed; remove stumps and roots to depth of 18 inches (450 mm).
4. Sod: Re-use on site if possible; otherwise sell if marketable, and if not, treat as specified for other vegetation removed.
5. Fill holes left by removal of stumps and roots, using suitable fill material, with top surface neat in appearance and smooth enough not to constitute a hazard to pedestrians.

G. Dead Wood: Remove all dead trees (standing or down), limbs, and dry brush on entire site; treat as specified for vegetation removed.

H. Restoration: If vegetation outside removal limits or within specified protective fences is damaged or destroyed due to subsequent construction operations, replace at no cost to Owner.

3.04 DEBRIS

A. Remove debris, junk, and trash from site.

B. Leave site in clean condition, ready for subsequent work.

C. Clean up spillage and wind-blown debris from public and private lands.

3.05 DISPOSAL OF WASTE MATERIALS

A. Burning on Owner’s Property: Burning is not permitted on Owner’s property.

END OF SECTION

A. Removal from Owner’s Property: Remove waste materials and unsuitable topsoil from Owner’s property and dispose of off-site in accordance with local regulations.

4.02 RECORD DRAWINGS

A. Survey and include on record drawings location and depth of all utilities encountered which have not been removed.

SECTION 31 1005
SITE DEMOLITION

PART 1 - GENERAL:

1.01 RELATED DOCUMENTS:

A. The General Conditions, Supplementary Conditions and Division 1, General Requirements, are a part of this section.

1.02 RELATED WORK:

A. Refer to Section 31 20 00 "Earthmoving", and Division 26 "Electrical".

1.03 DESCRIPTION OF WORK:

A. This section specifies demolition of existing site improvements and underground utilities.

1.04 CODES:

A. For existing utilities refer to Section 31 20 00 "Earthmoving".

1.05 PROJECT CONDITIONS:

A. Refer to Section 31 20 00 "Earthmoving" and as noted.

B. Existing Utilities: The locations of all existing utilities are approximate. These locations have been determined from field survey, public utility records and Owner records.

1. The Contractor shall be responsible for contacting "Miss Utility" and all Owner's or controlling agencies of existing utilities within the construction area for verification of locations, prior to beginning of work.

2. The Contractor shall be responsible for coordination of utility relocation or removal by others with all phases of construction activities.

C. Existing Subsurface Conditions: Verify existing pavement materials and respective thicknesses during prebid inspection. Obtain written authorization from the owner before conducting test hole explorations of existing pavements within the project site.

D. Traffic: Obtain written authorization from the local jurisdiction or adjacent property owners prior to obstructing vehicular traffic and parking areas. Obtain written authorization from local jurisdiction prior to obstructing public rights-of-way and easements.

E. Pre-bid Inspection Conditions: Conditions, existing during prebid inspections, will not be altered or modified.

F. All work must be contained within the prescribed limits of disturbance shown on the contract documents.

1.06 SUBMITTALS:

A. Submit written notifications to public utility companies for disconnection of active utilities.

1.07 DEFINITIONS:

A. Demolition: Complete removal and disposal of existing facilities specified or indicated, "Remove".

B. Salvage: Complete removal, by methods, which prevent damage or destruction of any items indicated to be relocated (or salvaged) and subsequent relocation and reinstallation in an area designated by Owner.

PART 2 - PRODUCTS: (NOT USED) PART 3 - EXECUTION:

2.01 PROTECTION AND RESTORATION:

A. Refer to Section 31 10 00 "Clearing" and Section 31 20 00 "Earthmoving”.

B. Existing Facilities: Protect existing facilities and structures designated to remain, temporarily or permanently, from damage during demolition or construction activities. Repair items damaged during demolition or construction activities to their original condition, or replace with new. Do not overload structural elements or pavements to remain. Provide new supports and reinforcement for existing construction weakened by demolition and/or removal work. Repairs, reinforcement or structural replacement shall be approved by the Architect or the Owner's Representative.

C. Weather Protection: For portions of the existing building to remain, protect building interior and materials and equipment from the weather at all times. Where removal of roofing or walls is necessary to accomplish work, immediately provide adequate temporary covering of exposed areas to assure protection of remaining facilities.

D. Existing Utility Services: The locations of underground utility services are approximate, and are taken from Owner's record information and record information provided by utility companies. Protect existing utility services designated to remain temporarily or perma- nently, or to be relocated or removed by others. Contractor shall sequence demolition and construction activities to minimize utility service interruptions to existing facilities to re- main. Where removal of existing utility services is required for other site construction, provide temporary covering of exposed areas, and temporary service or connections for utilities until permanent utility service replacements are completed.

1. Contractor shall coordinate with affected utility companies to determine extent of relocation work to be done by others.

2. Contractor shall coordinate utility relocation or removal by others with all phases of construction activity.

2.02 EXISTING SITE IMPROVEMENTS DEMOLITION:

A. Existing Pavements: Demolish existing pavements, regardless of pavement thickness, to limits indicated at no increase to contract sum. Neatly saw cut existing bituminous concrete pavement to straight, smooth and sharp edges perpendicular to pavement surface.

B. Existing Curbing: Demolish existing curbing to limits indicated, unless nearest expansion joint is less than six (6) feet from the indicated limits of removal. In that case, remove existing concrete curbing to the nearest expansion joint beyond the indicated demolition limits at no increase to the Contract Sum. Neatly saw cut existing portland cement concrete curbing, to limits indicated, to smooth, clean and sharp edges perpendicular to top and face of curbing.

1. Contractor's Option: Remove existing concrete curbing to nearest expansion joint beyond demolition limits indicated at no increase to contract sum.

C. Existing Entrances and Aprons: Demolish existing entrances and aprons indicated.

D. Miscellaneous: Demolish existing fencing indicated, including posts, footings and related appurtenances. Demolish additional miscellaneous existing site improvements indicated, specified and required to construct project.

2.03 EXISTING OVERHEAD UTILITY DEMOLITION:

A. Existing electrical facilities will be removed by Potomac Electric and Power Company. Contractor shall contact PEPCO to schedule and arrange for payment for removals.

B. Existing telephone facilities will be removed by Telephone Company. Contractor shall contact Telephone Company to schedule and arrange for payment for removals.

C. Existing cable television facilities will be removed by Comcast Cable Company. Contractor shall contact Comcast to schedule and arrange for payment for removals.

2.04 EXISTING UNDERGROUND UTILITY DEMOLITION:

A. Excavate and expose existing underground utilities and related structures designated for, or as required to implement, removals. For excavation operations refer to Section 33 10 00 "Utility Standards". Remove existing utility structure castings. Backfill excavations, upon completion of utility demolition operations. For backfill operations refer to Section 33 10 00 "Utility Standards".

2.05 MAINTENANCE:

A. Refer to Section 31 20 00 "Earthmoving".

2.06 SALVAGE MATERIALS:

A. Carefully remove items designated for Salvage, or "Remove and Relocate", to avoid damage. Store site items indicated for salvage, or "Remove and Relocate", to prevent damage during construction. Relocate items as indicated on site plan or as directed in the field by the Owner's Representative. Contractor shall replace salvage items damaged during removal, storage or relocation operations at no increase to the Contract sum.

2.07 WASTE MANAGEMENT:

A. Transport demolition waste materials from the project site to legal offsite waste disposal areas. Document legal offsite waste disposal areas.

B. Recycle waste demolition materials in accordance with Division 1 “Construction Waste Management” requirements.

END OF SECTION

SECTION 31 2000
EARTHMOVING

PART 1 - GENERAL:

1.01 RELATED DRAWINGS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 1, Specification Sections, apply to work in this section.

1.02 DESCRIPTION OF WORK:

A. This section specifies materials, equipment and work required to perform earthwork and grading operations for site development.

1.03 TESTING AND INSPECTIONS:

A. The Owner shall be responsible for providing a Maryland Registered Professional Soils Engineer for required testing and inspections.

B. Services of the Soils Engineer will not necessarily be on a full time basis, but will include the number of visits and tests required to observe the performance of all earthwork under this Section. If in the opinion of the Soils Engineer, any work performed under this Section does not meet the technical or design requirements stipulated for the work, the Contractor shall make all necessary readjustments to his approval.

C. All earthwork procedures shall be performed in the presence of the Soils Engineer. Give adequate (24 hours) notice when Soils Engineer’s services are required.

1.04 RELATED WORK:

A. Refer to Section 31 10 00 "Clearing", Section 31 10 05 "Demolition"

1.05 CODES:

A. Contractor shall comply with the applicable requirements of the governing agencies having jurisdiction.

B. In performance of the Work the Contractor will, at a minimum, satisfy all federal, state and local statutes, regulations and ordinances, regarding training as well as health and safety, including medical record retention as required. The Contractor is responsible for any required OSHA compliance monitoring for workers potentially exposed to concentrations of contaminants above the OSHA permissible exposure limits.

C. The Contractor has the responsibility to develop and provide its employees and Subcontractors with a Health and Safety Plan (HASP) prior to commencement of their work on the site. This HASP shall include measures for working with contaminated soil. Precautions shall be exercised by the Contractor and its Subcontractors at all times for the protection of persons (including employees) and property. The safety provisions of applicable laws and of building and construction codes shall be observed. The safety of the Contractor's employees and Subcontractors shall be the Contractor's responsibility.

1.06 DEFINITIONS:

A. Excavation: Removal of earth materials to subgrade elevations indicated or specified.

B. Over-Excavation: Removal of earth materials, beyond subgrade elevations indicated or specified, without written authorization from the Architect.

C. Unsuitable Earth: Soft or unstable earth materials beyond limits of excavation indicated (e.g. muck, soft clays, organic soils, peat, etc.).

D. Fill: Placement of earth materials over existing ground surfaces to subgrade elevations indicated or specified.

E. Backfill: Placement of earth materials in excavations to subgrade elevations indicated or specified.

F. Soils Engineer: Shall be a Professional Engineer, currently registered in the State of Mary- land, or shall be an authorized representative of such an engineer.

G. Rock Excavation: Rock excavation includes removal and disposal of rock materials and obstructions encountered that cannot be removed by the following heavy-duty excavation equipment without systematic drilling, blasting, or ripping:

1. Bulk Excavation: Caterpillar Model No. D-8 (or equivalent machinery), heavy duty, track-mounted loader/dozer; rated at not less than 285-hp flywheel power with a single- shank hydraulic ripper, capable of exerting a minimum of 45,000-lbf breakout force; measured according to SAE J-1179.

a. Excavations more than 10 feet wide and 30 feet in length or width are defined as open excavations.

2. Excavation of Footings, Trenches, and Pits: Caterpillar Model no. 215D LC (or equiva- lent machinery), track-mounted hydraulic excavator; equipped with a 42-inch wide, short-tip-radius rock bucket; rated at not less than 120-hp flywheel power with bucket- curling force of not less than 25,000 lbf and stick-crowd force of not less than 18,000 lbf with extra-long reach boom; measured according to SAE J-1179.

3. Rock removal includes boulders 3/4 cubic yard or more in volume and rock in beds, ledges, unstratified masses, and conglomerate deposits.

1.07 SUBMITTALS:

A. Density Test Results: The Contractor shall submit copies of the results of the specified density testing to the Owner's Representative for review and approval.

B. Submit location of product manufacture and of extraction/recovery of primary raw materials.

C. Submit recycled-content data, designating percentages of post-consumer and post-industrial recycled material.

1.08 PROJECT CONDITIONS:

A. Existing Subsurface Conditions: A subsurface investigation has been conducted at the project site to determine general subsurface conditions. Additional subsurface investigations may be made by the Contractor at no increase to the contract sum. Obtain written authorization from the Owner before proceeding with subsurface investigations.

B. Existing Utilities: The locations of all existing utilities are approximate. These locations have been determined from field survey, public utility records and Owner records.

1. The Contractor shall be responsible for contacting "Miss Utility" and all Owner's or controlling agencies of existing utilities within the construction area for verification of locations, prior to beginning of work.

2. The Contractor shall be responsible for coordination of utility relocation or removal by others with all phases of construction activities.

C. The Contractor should assume a portion of the contaminated soil will require offsite disposal and a portion of the contaminated soil can be reused onsite as subsurface fill material. The Contractor should assume that the areas of contaminated soil excavation will not exceed 4 feet in depth and the excavations will not encroach upon roadways or structures or encounter subsurface structures or utilities. The Contractor should assume that multiple areas of con- taminated soil excavation are located onsite. Additionally, the contractor should assume that the contaminated soil intended for reuse onsite will be placed in multiple areas onsite.

1.09 CONSTRUCTION SURVEYS:

A. Provide survey equipment and qualified personnel for construction surveys. Provide combined vertical and horizontal stakes required to perform earthwork operations to subgrade elevations indicated or specified.

1.10 EARTHWORK BALANCE:

A. Perform all earthwork operations regardless of actual quantities encountered.

1. Excess materials shall be legally disposed of off project property.
2. Off-site borrow shall be provided at no increase to the Contract sum.

1.11 QUALITY ASSURANCE

A. An independent testing laboratory, selected and paid for by the Contractor, will be retained to perform construction testing on site.

PART 2 - PRODUCTS:

1. The independent testing laboratory shall prepare test reports that indicate test location, elevation data, and test results. Owner, Civil Engineering Consultant, and Contractor shall be provided with copies of reports within 96 hours of time that test was performed. In event that test performed fails to meet Specifications, the independent testing laboratory shall notify Owner and Contractor immediately.
2. Cost related to retesting due to failures shall be paid for by the Contractor at no additional expense to Owner. Contractor shall provide free access to site for testing activities.
3. Quality assurance testing will be conducted in accordance with Paragraph “Field Testing” in Part 3 hereinafter.

2.02 MATERIALS:

A. Provide products manufactured and of primary raw materials extracted/recovered within a 500-mile radius of the project site.

B. Fill Materials: Soils used as fill materials shall have Unified Soils Classification (ASTM D 2487) of SM, SC or more granular. Soil material for fill shall be free of organic matter or debris, waste materials, frozen materials, vegetable matter and rock or stones exceed- ing three inches in any dimension. No more than 15 percent of rocks or lumps shall be larger than 2½ inches in any dimension. Materials shall be non-frost susceptible soils, and shall have a liquid limit of less than 40 and a plasticity index of less than 20. RC-6 recycled concrete shall be used as fill and subbase material, except under building slab, as performance requirements permit.

1. Fill material used within the top 12 inches of fill shall be free of rocks or stones exceeding two inches in any dimension.

C. Backfill Material: As indicated for fill material.

D. Borrow Material: Off-site borrow, if required, shall be as specified for Fill Materials. Obtain and transport borrow material at no increase to the Contract sum.

PART 3 - EXECUTION:

3.01 PROTECTION AND RESTORATION:

A. General: Provide protection to prevent settlement, movement, undermining of or erosion to existing site improvements, existing utilities, existing buildings, new site improvements, new buildings and new utilities.

B. Do not permit heavy equipment to pass over any utility until a minimum of two feet of compacted fill or backfill is placed over the top of utility.

C. Restore damage, at no increase to Contract sum, resulting from the lack of protection or improper installation of protective measures or careless execution of construction activities. Restoration work to be approved by the Soils Engineer and Owner's Representative.

3.02 EXISTING UTILITIES:

A. Notify all public utility companies, 48 hours prior to the start of earthwork operations. Verify and mark horizontal utility locations prior to the start of earthwork operation. Manually excavate and expose utilities as earthwork operations approach marked locations.

B. Immediately notify the Owner’s Representative or the Architect in the event horizontal or vertical utility locations differ from locations indicated. Provide horizontal and vertical details of utility locations as directed by the Owner’s Representative or the Architect. Conflicts with construction to be determined by the Owner’s Representative or the Architect. Payment for correction of unforeseen conflicts with construction shall be by change order.

C. Coordinate public utility relocation work required for public utilities conflicting with construction. The Owner’s Representative or the Architect will provide directions and details required to relocate utilities conflicting with construction.

D. Do not disconnect or interrupt existing utilities serving existing facilities to remain without notification and authorization of the Architect or the Owner's representatives.

3.03 DEWATERING:

A. Perform earthwork and grading operations to prevent surface or subsurface water from flowing into excavations, surface or subsurface water from flooding project site or adjacent property and water accumulations detrimental to stability of subgrades. Provide, install, operate and maintain all required pumps, sumps, discharge lines and related equipment.

3.04 DUST CONTROL AND DUST CONTROL PLAN:

A. Work under this section includes control of dust in accordance with OSHA regulations. Contractor must implement dust control techniques at all times during the work with contaminated soil to prevent the formation and migration of dust during excavation and removal of debris and soil.

B. The Contractor must implement a dust control plan. Contractor shall execute work by methods to minimize generation of dust from construction activates within the areas of contamination. Fugitive dust control strategies shall be composed of a balance of available dust mitigation techniques applied on an as needed basis by construction site supervision to: prevent dust from exiting the contaminated area work zone; prevent visible emissions from exceeding air quality regulations; and prevent public nuisance.

3.05 DECONTAMINATION:

A. Any equipment that contacts contaminated materials must be properly cleaned to mini- mize track out of contaminated materials. Contractor must deposit all disposable clothing in containers onsite and provide offsite disposal. Contractor must provide washtubs with soap and water and rinse tubs must be provided for decontamination of boots and gloves to be reused. Contaminated PPE and other contaminated disposable equipment must be collected for appropriate disposal.

B. Prior to beginning work, Contractor shall establish one or more areas on-Site for the decontamination of personnel, vehicles, and equipment leaving exclusion zones and/or exiting the Site. Decontamination areas shall allow the Engineer to conveniently observe the decontamination of equipment and vehicles leaving the Site. The location of the decontamination area will be determined by the Contractor based on staging of the Work. Contractor shall be responsible for re-locating decontamination area, as necessary,

based on Contractor's staging of Work.

C. If decontamination wastes are to be stored on-Site, Contractor shall temporarily store wastes in a contained area on-Site satisfactory to Client Representative. Contractor shall dispose of al liquid and solid decontamination wastes in accordance with applicable federal state and local regulations.

3.06 CONTAMINATED SOIL REMOVAL:

A. Contaminants of concern are expected to include non-hazardous levels of pesticides, herbicides and metals including but not limited to arsenic, lead, mercury and chromium.

B. For the purpose of this project, two types of soil may be encountered during excavation, as defined below:

1. Non-contaminated: Soil that does not contain levels of chemicals above background levels and do not exhibit an odor or visual discrepancy (such as discoloration or de- bris, etc.) to indicate otherwise.

2. Contaminated: Soil that contains laboratory quantified non- hazardous concentrations of compounds of concern above background levels as defined by the MDE, but below hazardous waste levels. If determine to be located onsite, areas of contaminated soil excavation will be provided or directed by the Engineer. Excavation of contaminated soil shall require special management practices. Area of contaminated soil excavations that cannot be immediately backfilled will be fenced.

C. Employees who will be involved in the excavation, stockpiling and loading of potentially contaminated soils and/or groundwater must receive appropriate OSHA training. The Contractor must provide 24- or 40-hour OSHA HAZWOPER-certified site workers, and provide a field Site Safety Officer that is also an 8-hour OSHA HAZWOPER supervisor trained to directly oversee potentially contaminated soil and groundwater operations. All workers in this circumstance must have their annual refresher training, medical clearance and personal protection equipment in accordance with applicable regulations.

D. The Contractor is responsible for the segregation, excavation, waste characterization, loading, transportation and offsite disposal of non-hazardous soil at the subject site in accordance with applicable regulations. The soil will require staging onsite prior to offsite disposal. The staged contaminated soil must be placed on and covered with plastic. The plastic must be a minimum of 6-mil thick. Hay bales (or similar) must be used as necessary to secure the edges of the stockpile areas. The stockpiled contaminated soil must be covered at the end of each work shift and must remained covered when not in use. Liquid including groundwater or precipitation which has contacted the stockpiled contaminated soil must not be allowed to migrate from the staging area plastic. Contaminated soil being transported offsite must have no free liquid is present, either leaving the Site or at the disposal facility. Waste characterization parameters will be contingent upon the disposal facility. The disposal facility must be permitted to accept the contaminated soil and provide evidence of such. Contractor shall submit samples under chain-of custody for laboratory analysis by an accredited laboratory. Results of the waste characterization as well as fully executed soil disposal manifests complete with weight tickets must be provided.

E. Notices of Non-Compliance and Notices of Violation: Immediately provide copies of any notices of non-compliance or notices of violation by any federal, state, or local regulatory agency issued to Contractor in relation to any work performed under this contract to Engineer. Furnish all relevant documents regarding the incident and any information requested, and coordinate the response to the notice with the Engineer prior to submission to the regulatory agencies, including the final reply to the notice, and all other responses, until the matter is resolved.

F. Final Summary Report on Contaminated Soil: Submit a Final Summary Report documenting the quantities, and the disposal activates completed on the project no later than 45 days after the completion of the project.

3.07 CONTAMINATED SOIL REUSE:

A. Contaminated soil excavated during construction may be used as backfill if deemed acceptable by MDE and the Geotechnical Engineer. Contractor is responsible for the handling and placement of the contaminated soil scheduled for reuse as backfill onsite in accordance with applicable federal state and local regulations. Contractor is responsible for placing an MDE approved geotextile atop the area of reused contaminated soil. Contractor must also follow the guidelines established above for health and safety, dust control and decontamination during the handling and placement of the contaminated soil. Contractor is responsible for providing surveyed locations and depths of the contaminated soil reused onsite.

3.08 EXCAVATION:

A. Excavate materials encountered to subgrade elevations indicated or specified by the Soils Engineer. All excavation is unclassified. Excavate materials regardless of the character of the materials encountered, at no increase to contract sum.

B. Subgrade Preparation: Upon completion of excavation activities, exposed subgrade shall be proofrolled utilizing a heavily loaded dump truck or other pneumatic-tired vehicle of similar size and weight, in the presence of the Soils Engineer. Proofrolling shall not be performed during or following wet weather conditions. Any unsuitable materials discovered during proofrolling operations shall be removed and replaced as specified below. Upon completion of proofrolling activities and approval of the subgrade by the Soils En- gineer, exposed subgrade shall be further prepared as follows:

1. Unpaved Areas: Scarify subgrade to six-inch depth prior to topsoil placement.
2. Paved Areas: Scarify subgrade to twelve-inch depth and compact to 90 percent max- imum dry density. Density test methods: ASTM D 1557. Remove unsuitable earth, exhibiting excessive weaving during compaction operations, as specified.

3.09 OVER-EXCAVATION:

A. Correct over-excavated areas as directed by the Soils Engineer. Remove unsuitable earth encountered as a direct result of over-excavation. Excavate and dispose of all unsuitable earth. Correct excavated area as directed.

3.10 UNSUITABLE EARTH:

A. Immediately notify the Soils Engineer in the event unsuitable earth is encountered during earthwork or subsequent construction operations. Stop all work within immediate area of unsuitable earth. Do not remove unsuitable earth until direction is received from the Soils Engineer. Excavate and dispose of all unsuitable earth. Backfill excavated area as specified and directed by the Soils Engineer. Removal of and backfill for unsuitable soils shall be at the Contractors expense.

3.11 EXCAVATED MATERIAL STORAGE:

A. Stockpile select excavated materials required for fill and/or backfill operations. Stockpile locations to be approved by the Owner’s Representative or the Architect. Shape and grade stockpiles to prevent ponding of surface water. Temporarily stabilize stockpiles as specified on the Soil Erosion and Sediment Control drawings. Dispose of excess excavation materials as specified.

1. Excess excavated material shall be legally disposed of by removal from the project site.

3.12 EARTH FILL:

A. Existing Ground Surface Preparation: Remove vegetation and topsoil as specified in Section 31 10 00 "Clearing". Proofroll exposed subgrade utilizing a heavily loaded dump truck or other pneumatic-tired vehicle of similar size and weight, in the presence of the Soils Engineer. Proofrolling shall not be performed during or following wet weather conditions.

B. Existing Subgrade Preparation: Remove unsuitable earth, upon completion of clearing and proofrolling operations, as specified. Continuously bench existing slopes exceeding four feet horizontal to one foot vertical. Bench sufficiently to accommodate earthmoving and compaction equipment. Select material, removed as a result of benching operations, may be used for fill and/or backfill as specified.

1. Unpaved Areas: Scarify existing subgrade to six-inch depth and compact to 85 percent maximum dry density. Density test method: ASTM D 1557.

2. Paved Areas: Scarify existing subgrade to twelve-inch depth and compact to 90 percent maximum dry density. Density test method: ASTM D 1557. Remove unsuitable earth, exhibiting excessive weaving during compaction operations, as specified.

C. Fill Placement: Do not place fill material on frozen or muddy subgrades.

1. Unpaved Areas: Place fill material in loose lifts not exceeding eight-inches.

2. Paved Areas: Place fill material in loose lifts not exceeding eight-inches.

D. Fill Compaction and Moisture Control: Obtain compaction with approved compaction equipment. Provide compaction equipment of proper size and in proper mechanical operating condition. All fill material shall be moisture conditioned to within two percent of optimum moisture content.

1. Unpaved Areas: Compact each lift to 85 percent maximum dry density. Density test method: ASTM D 1557.

2. Paved Areas: Compact each lift to 90 percent maximum dry density. Density test method: ASTM D 1557.

E. Control moisture during placement and compaction operations. Remove and replace or scarify and aerate excessively moist material until required moisture content is obtained. Moisten excessively dry material by applying measured amounts of water uniformly to fill material until required moisture content is obtained.

3.13 EARTH BACKFILL:

A. General: Backfill excavations as promptly as work permits, but not until completion of inspection, testing and approval by the Soils Engineer.

B. Placement and Compaction: Do not place backfill on frozen or muddy subgrades.

1. Unpaved Areas: Place backfill material in loose lifts not exceeding eight inches. Compact each lift to 85 percent maximum dry density. Density test method: ASTM D 1557.

2. Paved Areas: Place backfill material in loose lifts not exceeding eight inches. Compact each lift to 90 percent maximum dry density. Density test method: ASTM D 1557.

3. All material to be moisture conditioned to within two percent of optimum moisture content.

3.14 GRADING:

A. General: Grade unpaved and paved areas to smooth and uniform surfaces and to prevent ponding of surface water.

1. Unpaved Areas: Areas to receive topsoil shall be graded to allow for installation of a minimum of 6 inches of topsoil. Grade slopes exceeding four feet horizontal to one foot vertical, to smooth and uniformly rounded surfaces.

2. Paved Areas: Grade paved area subgrades to the lines, elevations and sections indicated or specified.

3.15 MAINTENANCE:

A. Maintain all paved access roads in a clean and dust free condition during earthwork or subsequent construction operations. Clean trucks and equipment, removing mud and debris, prior to entering project site access roads and public right-of-way.

B. Maintain completed areas of project site free of trash and debris. Scarify, regrade and recompact subgrades damaged or disturbed by adverse weather, soil erosion, settlement and subsequent construction operations.

3.16 TESTING:

A. The following tests will be conducted.

1. Laboratory Density Tests:

a. Test method: As specified.

b. Test interval: One test per each 15,000 s.f., or fraction thereof, of each lift of fill or backfill compacted by other than hand-operated machines, and 1 per each 5,000 s.f., etc, for areas done by hand-operated machines.

2. In-place Field Density Tests:

a. Test method: ASTM D 1556-82 or D 2167.

b. Density required: As specified.

c. Test Interval: One test per 2,000 s.f., or fraction thereof, of compacted subgrade, or of each lift of fill or backfill compacted by other than handoperated machines, and 1 per 1000 s.f., etc, for each lift of fill or backfill compacted by hand-operated machines..

B. Correct work not conforming to specified densities as directed by the Soils Engineer, at no increase to the Contract Sum.

3.17 WASTE MANAGEMENT:

A. Recycle or salvage waste earthwork materials in accordance with Division 1 “Construction Waste Management” requirements.

END OF SECTION

SECTION 31 2200
GRADING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Removal of topsoil.

B. Rough grading the site for site structures.

C. Finish grading.

1.02 RELATED REQUIREMENTS

A. Section 31 1000 - Site Clearing.

B. Section 31 2316 - Excavation.

C. Section 31 2316.13 - Trenching: Trenching and backfilling for utilities.

D. Section 31 2316.26 - Rock Removal.

E. Section 31 2323 - Fill: Filling and compaction.

F. Section 32 9219 - Seeding: Finish ground cover.

G. Section 32 9223 - Sodding: Finish ground cover.

H. Section 32 9300 - Plants: Topsoil in beds and pits.

1.03 SUBMITTALS

A. Project Record Documents: Accurately record actual locations of utilities remaining by horizontal dimensions, elevations or inverts, and slope gradients.

1.04 QUALITY ASSURANCE

A. Perform Work in accordance with State of Maryland, Highway Department standards.

1. Maintain one copy on site.

PART 2 PRODUCTS

2.01 MATERIALS

A. Topsoil: See Section 31 2323.

B. Other Fill Materials: See Section 31 2323.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that survey bench mark and intended elevations for the Work are as indicated.

B. Verify the absence of standing or ponding water.

3.02 PREPARATION

A. Identify required lines, levels, contours, and datum.

B. Stake and flag locations of known utilities.

C. Locate, identify, and protect from damage above- and below-grade utilities to remain.

D. Notify utility company to remove and relocate utilities.

E. Provide temporary means and methods to remove all standing or ponding water from areas prior to grading.

F. Protect site features to remain, including but not limited to bench marks, survey control points, existing structures, fences, sidewalks, paving and curbs, from damage by grading equipment and vehicular traffic.

G. Protect trees to remain by providing substantial fencing around entire tree at the outer tips of its branches; no grading is to be performed inside this line.

H. Protect plants, lawns, rock outcroppings and other features to remain as a portion of final landscaping.

3.03 ROUGH GRADING

A. Remove topsoil from areas to be further excavated, re-landscaped, or re-graded, without mixing with foreign materials.

B. Do not remove topsoil when wet.

C. Remove subsoil from areas to be further excavated, re-landscaped, or re-graded.

D. Do not remove wet subsoil , unless it is subsequently processed to obtain optimum moisture content.

E. When excavating through roots, perform work by hand and cut roots with sharp axe.

F. See Section 31 2323 for filling procedures.

G. Benching Slopes: Horizontally bench existing slopes greater than 1:4 to key fill material to slope for firm bearing.

H. Stability: Replace damaged or displaced subsoil to same requirements as for specified fill.

I. Remove and replace soils deemed unsuitable by classification and which are excessively moist due to lack surface water control.

3.04 SOIL REMOVAL

A. Stockpile excavated topsoil on site.

B. Stockpile excavated subsoil on site.

C. Stockpiles: Use areas designated on site; pile depth not to exceed 8 feet (2.5 m); protect from erosion.

3.05 FINISH GRADING

A. Before Finish Grading:

1. Verify building and trench backfilling have been inspected.
2. Verify subgrade has been contoured and compacted.

B. Remove debris, roots, branches, stones, in excess of 1/2 inch (13 mm) in size. Remove soil contaminated with petroleum products.

C. Where topsoil is to be placed, scarify surface to depth of 3 inches (75 mm).

D. In areas where vehicles or equipment have compacted soil, scarify surface to depth of 3 inches (75 mm).

E. Place topsoil in areas indicated.

F. Place topsoil where required to level finish grade.

G. Place topsoil to the following compacted thicknesses:

1. Areas to be Seeded with Grass: 6 inches (150 mm).
2. Areas to be Sodded: 4 inches (100 mm).
3. Shrub Beds: 18 inches (450 mm).
4. Flower Beds: 12 inches (300 mm).
5. Planter Boxes: To within 3 inches (75 mm) of box rim.

H. Place topsoil during dry weather.

I. Remove roots, weeds, rocks, and foreign material while spreading.

J. Near plants spread topsoil manually to prevent damage.

K. Fine grade topsoil to eliminate uneven areas and low spots. Maintain profiles and contour of subgrade.

L. Lightly compact placed topsoil.

M. Maintain stability of topsoil during inclement weather. Replace topsoil in areas where surface water has eroded thickness below specifications.

3.06 TOLERANCES

A. Top Surface of Subgrade: Plus or minus 0.10 foot (1-3/16 inches) (30 mm) from required elevation.

B. Top Surface of Finish Grade: Plus or minus 0.04 foot (1/2 inch) (13 mm).

3.07 REPAIR AND RESTORATION

A. Existing Facilities, Utilities, and Site Features to Remain: If damaged due to this work, repair or replace to original condition.

B. Trees to Remain: If damaged due to this work, trim broken branches and repair bark wounds; if root damage has occurred, obtain instructions from Architect as to remedy.

C. Other Existing Vegetation to Remain: If damaged due to this work, replace with vegetation of equivalent species and size.

3.08 FIELD QUALITY CONTROL

A. See Section 31 2323 for compaction density testing.

3.09 CLEANING

A. Remove unused stockpiled topsoil and subsoil. Grade stockpile area to prevent standing water.

B. Leave site clean and raked, ready to receive landscaping.

END OF SECTION

SECTION 31 2316.13
TRENCHING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Backfilling and compacting for utilities outside the building to utility main connections.

1.02 RELATED REQUIREMENTS

A. Document : Geotechnical report; bore hole locations and findings of subsurface materials.

B. Section 03 3000 - Cast-in-Place Concrete.

C. Section 31 2200 - Grading: Site grading.

D. Section 31 2316 - Excavation: Building and foundation excavating.

E. Section 31 2316.26 - Rock Removal: Removal of rock during excavating.

F. Section 31 2323 - Fill: Backfilling at building and foundations.

G. Section 33 4100 - Subdrainage: Filter aggregate and filter fabric for foundation drainage systems.

1.03 DEFINITIONS

A. Finish Grade Elevations: Indicated on drawings.

B. Subgrade Elevations: Indicated on drawings.

1.04 REFERENCE STANDARDS

A. AASHTO M 147 - Standard Specification for Materials for Aggregate and Soil-Aggregate Subbase, Base and Surface Courses 2017.

B. AASHTO T 180 - Standard Specification for Moisture-Density Relations of Soils Using a 4.54-kg (10-lb) Rammer and a 457-mm (18 in.) Drop 2017.

C. ASTM C136/C136M - Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates 2014.

D. ASTM D698 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft3 (600 kN-m/m3)) 2012, with Editorial Revision (2015).

E. ASTM D1556 - Standard Test Method for Density and Unit Weight of Soil in Place by the Sand-Cone Method 2007.

F. ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3 (2,700 kN m/m3)) 2012, with Editorial Revision (2015).

G. ASTM D2167 - Standard Test Method for Density and Unit Weight of Soil in Place by the Rubber Balloon Method 2015.

H. ASTM D2487 - Standard Practice for Classification of Soils for Engineering Purposes (Unified Soil Classification System) 2011.

I. ASTM D4318 - Standard Test Methods for Liquid Limit, Plastic Limit, and Plasticity Index of Soils 2017.

J. ASTM D6938 - Standard Test Methods for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth) 2017.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Materials Sources: Submit name of imported materials source.

C. Fill Composition Test Reports: Results of laboratory tests on proposed and actual materials used.

D. Compaction Density Test Reports.

1.06 DELIVERY, STORAGE, AND HANDLING

A. When necessary, store materials on site in advance of need.

B. When fill materials need to be stored on site, locate stockpiles where indicated.

1. Separate differing materials with dividers or stockpile separately to prevent intermixing.
2. Prevent contamination.
3. Protect stockpiles from erosion and deterioration of materials.

1.07 QUALITY ASSURANCE

A. All work must be done in accordance with standards and codes applicable to Prince George's County.

PART 2 PRODUCTS

2.01 FILL MATERIALS

A. General Fill: Subsoil excavated on-site.

1. Graded.
2. Free of lumps larger than 3 inches (75 mm), rocks larger than 2 inches (50 mm), and debris.
3. Conforming to ASTM D2487 Group Symbol CL.

B. Structural Fill: Subsoil excavated on-site.

1. Graded.
2. Free of lumps larger than 3 inches (75 mm), rocks larger than 2 inches (50 mm), and debris.
3. Conforming to ASTM D2487 Group Symbol CL.

C. Granular Fill: Coarse aggregate, conforming to State of Maryland Highway Department standard.

D. Granular Fill - Pea Gravel: Natural stone; washed, free of clay, shale, organic matter.

1. Grade in accordance with ASTM D2487 Group Symbol GM.
2. Graded in accordance with ASTM C136/C136M, within the following limits:
    a. Minimum Size: 1/4 inch (6 mm).
    b. Maximum Size: 5/8 inch (16 mm).

E. Sand: Natural river or bank sand; washed; free of silt, clay, loam, friable or soluble materials, and organic matter.

1. Graded in accordance with ASTM C136/C136M; within the following limits:
    a. No. 4 (4.75 mm) sieve: 100 percent passing.
    b. No. 14 (1.40 mm) sieve: 10 to 100 percent passing.
    c. No. 50 (300 micro m) sieve: 5 to 90 percent passing.
    d. No. 100 (150 micro m) sieve: 4 to 30 percent passing.
    e. No. 200 (75 micro m) sieve: 0 percent passing.

2.02 ACCESSORIES

A. Geotextile Fabric: Non-biodegradable, woven

2.03 SOURCE QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for general requirements for testing and analysis of soil material.

B. Where fill materials are specified by reference to a specific standard, test and analyze samples for compliance before delivery to site.

C. If tests indicate materials do not meet specified requirements, change material and retest.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that survey bench marks and intended elevations for the work are as indicated.

3.02 PREPARATION

A. Identify required lines, levels, contours, and datum locations.

B. See Section 31 2200 for additional requirements.

C. Grade top perimeter of trenching area to prevent surface water from draining into trench. Provide temporary means and methods, as required, to maintain surface water diversion until no longer needed, or as directed by the Architect.

3.03 TRENCHING

A. Notify Architect of unexpected subsurface conditions and discontinue affected Work in area until notified to resume work.

B. Slope banks of excavations deeper than 4 feet (1.2 meters) to angle of repose or less until shored.

C. Do not interfere with 45 degree bearing splay of foundations.

D. Cut trenches wide enough to allow inspection of installed utilities.

E. Hand trim excavations. Remove loose matter.

F. Remove large stones and other hard matter that could damage piping or impede consistent backfilling or compaction.

G. Remove lumped subsoil, boulders, and rock up to 1/3 cubic yard (0.25 cu m) measured by volume. See Section 31 2316.26 for removal of larger material.

H. Remove excavated material that is unsuitable for re-use from site.

I. Stockpile excavated material to be re-used in area designated in Section 31 2200.

J. Remove excess excavated material from site.

K. Provide temporary means and methods, as required, to remove all water from trenching until directed by the Architect. Remove and replace soils deemed unsuitable by classification and which are excessively moist due to lack of dewatering or surface water control.

L. Determine the prevailing groundwater level prior to trenching. If the proposed trench extends less than 1 foot (305 mm) into the prevailing groundwater, control groundwater intrusion with perimeter drains routed to sump pumps, or as directed by the Architect.

3.04 PREPARATION FOR UTILITY PLACEMENT

A. Cut out soft areas of subgrade not capable of compaction in place. Backfill with general fill.

B. Compact subgrade to density equal to or greater than requirements for subsequent fill material.

C. Until ready to backfill, maintain excavations and prevent loose soil from falling into excavation.

3.05 BACKFILLING

A. Backfill to contours and elevations indicated using unfrozen materials.

B. Fill up to subgrade elevations unless otherwise indicated.

C. Employ a placement method that does not disturb or damage other work.

D. Systematically fill to allow maximum time for natural settlement. Do not fill over porous, wet, frozen or spongy subgrade surfaces.

E. Maintain optimum moisture content of fill materials to attain required compaction density.

F. Granular Fill: Place and compact materials in equal continuous layers not exceeding 6 inches (150 mm) compacted depth.

G. Soil Fill: Place and compact material in equal continuous layers not exceeding 8 inches (200 mm) compacted depth.

H. Slope grade away from building minimum 2 inches in 10 feet (50 mm in 3 m), unless noted otherwise. Make gradual grade changes. Blend slope into level areas.

I. Correct areas that are over-excavated.

1. Other areas: Use general fill, flush to required elevation, compacted to minimum 97 percent of maximum dry density.

J. Compaction Density Unless Otherwise Specified or Indicated:

1. Under paving, slabs-on-grade and similar construction: 97 percent of maximum dry density.

2. At other locations: 95 percent of maximum dry density.

K. Reshape and re-compact fills subjected to vehicular traffic.

3.06 BEDDING AND FILL AT SPECIFIC LOCATIONS

A. Use general fill unless otherwise specified or indicated.

B. Utility Piping, Conduits, Duct Bank and other item identified by architect:

1. Bedding: Use general fill.

2. Cover with general fill.

3. Fill up to subgrade elevation.

4. Compact in maximum 8 inch (200 mm) lifts to 95 percent of maximum dry density.

C. At Pipe Culverts:

1. Bedding: Use general fill.

2. Place filter fabric specified in Section 33 0513 over compacted bedding.

3. Cover with general fill.

4. Fill up to subgrade elevation.

5. Compact in maximum 8 inch (200 mm) lifts to 95 percent of maximum dry density.

D. Over Subdrainage Piping at Foundation Perimeter and Under Slabs:

1. Drainage fill and geotextile fabric: Section 33 4100.

2. Cover drainage fill with general fill.

3. Compact to 95 percent of maximum dry density.

E. At French Drains:

1. Use granular fill.
2. Fill up to 8 inches (200 mm) below finish grade.
3. Compact to 95 percent of maximum dry density.

3.07 TOLERANCES

A. Top Surface of General Backfilling: Plus or minus 1 inch (25 mm) from required elevations.

B. Top Surface of Backfilling Under Paved Areas: Plus or minus 1 inch (25 mm) from required elevations.

3.08 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for general requirements for field inspection and testing.

B. Perform compaction density testing on compacted fill in accordance with ASTM D1556, ASTM D2167 or ASTM D6938.

C. Evaluate results in relation to compaction curve determined by testing uncompacted material in accordance with ASTM D1557 ("modified Proctor"), AASHTO T 180 or ASTM D698 ("standard Proctor").

D. If tests indicate work does not meet specified requirements, remove work, replace and retest.

E. Frequency of Tests: at beginning of each shift.

3.09 CLEANING

A. Leave unused materials in a neat, compact stockpile.

B. Remove unused stockpiled materials, leave area in a clean and neat condition. Grade stockpile area to prevent standing surface water.

C. Leave borrow areas in a clean and neat condition. Grade to prevent standing surface water.

END OF SECTION

SECTION 31 2316.26
ROCK REMOVAL

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Removal of identified rock during excavation.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete.

B. Section 31 2323 - Fill: Fill materials.

1.03 DEFINITIONS

A. Site Rock: Solid mineral material with a volume in excess of 1/3 cubic yard (0.25 cubic meter) or solid material that cannot be removed with a 3/4 cubic yard (0.57 cubic meter) capacity power shovel without drilling.

B. Trench Rock: Solid mineral material with a volume in excess of 1/6 cubic yard (0.13 cubic meter) or solid material that cannot be removed with a capacity power shovel without drilling.

C. Rock: Solid mineral material of a size that cannot be removed with a capacity power shovel.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate the proposed method of blasting, delay pattern, explosive types, type of blasting mat or cover, and intended rock removal method.

1.05 QUALITY ASSURANCE

A. Seismic Survey Firm: Company specializing in seismic surveys with five years documented experience.

PART 2 PRODUCTS -- NOT USED

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify site conditions and note subsurface irregularities affecting work of this section.

3.02 PREPARATION

A. Identify required lines, levels, contours, and datum.

3.03 ROCK REMOVAL

A. Excavate and remove rock by mechanical methods only; use of explosives is prohibited.

B. Mechanical Methods: Drill holes and utilize expansive tools to fracture rock.

C. Form level bearing at bottom of excavations.

D. Remove shaled layers to provide sound and unshattered base for footings.

E. In utility trenches, excavate to 6 inches (150 mm) below invert elevation of pipe and 24 inches (600 mm) wider than pipe diameter.

F. Remove excavated materials from site.

G. Correct unauthorized rock removal in accordance with backfilling and compacting requirements of Section 31 2323.

3.04 ROCK DISPOSAL

A. Dispose of surplus removed rock off site. Dispose in locations acceptable to authorities having jurisdiction and Owner's Representative.

3.05 FIELD QUALITY CONTROL

A. Do not dispose removed rock into landfill. Material must be sent to appropriate location as approved by the Owner's Representative.

B. Independent agency field inspection will be provided under provisions of Section 01 4000 - Quality Requirements.

END OF SECTION

SECTION 31 2316
EXCAVATION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Excavating for building volume below grade, footings, pile caps, slabs-on-grade, paving, site structures and utilities within the building.

B. Trenching for utilities outside the building to utility main connections.

C. Temporary excavation support and protection systems.

1.02 RELATED REQUIREMENTS

A. Section 01 5713 - Temporary Erosion and Sediment Control: Slope protection and erosion control.

B. Section 01 7000 - Execution and Closeout Requirements: Project conditions; protection of bench marks, survey control points, and existing construction to remain; reinstallation of removed products; temporary bracing and shoring. General requirements for dewatering of excavations and water control.

C. Section 02 4100 - Demolition: Shoring and underpinning existing structures.

D. Section 21 0553 - Identification for Fire Suppression Piping and Equipment: Underground warning tapes at underground fire suppression lines.

E. Section 22 0553 - Identification for Plumbing Piping and Equipment: Underground warning tapes at underground plumbing lines.

F. Section 23 0553 - Identification for HVAC Piping and Equipment: Underground warning tapes at underground HVAC lines.

G. Section 26 0553 - Identification for Electrical Systems: Underground warning tapes at underground electrical lines.

H. Section 31 1000 - Site Clearing: Vegetation and existing debris removal.

I. Section 31 2200 - Grading: Soil removal from surface of site.

J. Section 31 2200 - Grading: Grading.

K. Section 31 2316.13 - Trenching: Excavating for utility trenches outside the building to utility main connections.

L. Section 31 2316.26 - Rock Removal: Removal of rock during excavating.

M. Section 31 2323 - Fill: Fill materials, backfilling, and compacting.

N. Section 31 3700 - Riprap.

O. Section 33 4100 - Subdrainage: Filter aggregate and filter fabric for foundation drainage systems.

1.03 REFERENCE STANDARDS

A. 29 CFR 1926 - U.S. Occupational Safety and Health Standards current edition.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Temporary Support and Excavation Protection Plan.

C. Project Record Documents: Record drawings at project closeout according to 01 7000 - Execution and Closeout Requirements. Show locations of installed support materials left in place, including referenced locations and depths, on drawings.

D. Shoring Installer's Qualification Statement.

E. Field Quality Control Submittals: Document visual inspection of load-bearing excavated surfaces.

1.05 QUALITY ASSURANCE

A. Temporary Support and Excavation Protection Plan:

1. Indicate sheeting, shoring, and bracing materials and installation required to protect excavations and adjacent structures and property.

2. Include drawings and calculations for bracing and shoring.

3. Bracing and shoring design to meet requirements of OSHA’s Excavation Standard, 29 CFR 1926, Subpart P.

B. Designer Qualifications: For design of temporary shoring and bracing, employ a Professional Engineer experienced in design of this type of work and licensed in Maryland.

C. Shoring Installer Qualifications: Company specializing in performing the shoring and bracing work of this section with minimum five years of documented experience.

PART 2 PRODUCTS

2.01 MATERIALS

A. Bedding and Fill to Correct Over-Excavation:

1. See Section 31 2323 for bedding and corrective fill materials at general excavations.

2. See Section 31 2316.13 for bedding and corrective fill materials at utility trenches.

B. Underground Warning Tapes:

1. See Section for 21 0553 underground warning tapes at underground fire suppression lines.

2. See Section for 22 0553 underground warning tapes at underground plumbing lines.

3. See Section for 23 0553 underground warning tapes at underground HVAC lines.

4. See Section for 26 0553 underground warning tapes at underground electrical lines.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that survey bench mark and intended elevations for the work are as indicated.

B. Survey existing adjacent structures and improvements and establish exact elevations at fixed points to act as benchmarks.

1. Resurvey benchmarks during installation of excavation support and protection systems and notify Owner if any changes in elevations or positions occur or if cracks, sags, or other damage is evident in adjacent construction.

C. Determine the prevailing groundwater level prior to excavation. If the proposed excavation extends less than 1 foot (305 mm) into the prevailing groundwater, control groundwater intrusion with perimeter drains routed to sump pumps, or as directed by Architect. If the proposed excavation extends more than 1 foot (305 mm) into the prevailing groundwater, control groundwater intrusion with a comprehensive dewatering procedures, or as directed by Geotechnical Engineer.

3.02 PREPARATION

A. Identify required lines, levels, contours, and datum locations.

B. See Section 31 1000 for clearing, grubbing, and removal of existing debris.

C. See Section 31 2200 for topsoil removal.

D. Locate, identify, and protect utilities that remain and protect from damage.

E. Notify utility company to remove and relocate utilities.

F. Protect bench marks, survey control points, existing structures, fences, sidewalks, paving and curbs from excavating equipment and vehicular traffic.

G. Protect plants, lawns, rock outcroppings and other features to remain.

H. Grade top perimeter of excavation to prevent surface water from draining into excavation. Provide temporary means and methods, as required, to maintain surface water diversion until no longer needed, or as directed by Architect.

I. See Sections 01 7000 and 02 4100 for underpinning and shoring of adjacent structures that could be damaged by excavating work.

3.03 TEMPORARY EXCAVATION SUPPORT AND PROTECTION

A. Excavation Safety: Comply with OSHA's Excavation Standard, 29 CFR 1926, Subpart P.

1. Excavations in stable rock or in less than 5 feet (1.5 m) in depth in ground judged as having no cave-in potential do not require excavation support and protection systems.

2. Depending upon excavation depth, time that excavation is open, soil classification, configuration and slope of excavation sidewalls, design and provide an excavation support and protection system that meets the requirements of 29 CFR 1926, Subpart P:

a. Sloping and benching systems.

b. Support systems, shield systems, and other protective systems.

B. Leave excavation support and protection systems, used as formwork or within 10 feet (3.03 m) of existing foundations, permanently in place, unless otherwise noted.

C. Excavation support and protection systems not required to remain in place may be removed subject to approval of Owner or Owner's Representative.

1. Remove temporary shoring and bracing in a manner to avoid harmful disturbance to underlying soils and damage to buildings, structures, pavements, facilities and utilities.

3.04 EXCAVATING

A. Excavate to accommodate new structures and construction operations.

1. Excavate to the specified elevations.

2. Excavate to the length and width required to safely install, adjust, and remove any forms, bracing, or supports necessary for the installation of the work.

3. Cut utility trenches wide enough to allow inspection of installed utilities.

4. See Section 31 2316.26 for required excavation clearances for pipes in utility trenches.

5. Hand trim excavations. Remove loose matter.

B. Notify Architect of unexpected subsurface conditions and discontinue affected Work in area until notified to resume work.

C. Preparation for Piling Work: Excavate to working elevations. Coordinate special requirements for piling.

D. Do not interfere with 45 degree bearing splay of foundations.

E. Remove lumped subsoil, boulders, and rock up to 1/3 cubic yard (0.25 cu m) measured by volume. See Section 31 2316.26 for removal of larger material.

F. Provide temporary means and methods, as required, to remove all water from excavations until directed by Architect. Remove and replace soils deemed suitable by classification and which are excessively moist due to lack of dewatering or surface water control.

3.05 SUBGRADE PREPARATION

A. See Section 31 2323 for subgrade preparation at general excavations.

B. See Section 31 2316.13 for subgrade preparation at utility trenches.

3.06 FILLING AND BACKFILLING

A. Do not fill or backfill until all debris, water, unsatisfactory soil materials, obstructions, and deleterious materials have been removed from excavation.

B. Install underground warning tape at buried utilities according to Sections 21 0553, 22 0553, 23 0553 and 26 0553.

C. See Section 31 2323 for fill, backfill, and compaction requirements at general excavations.

D. See Section 31 2316.13 for fill, backfill, and compaction requirements at utility trenches.

E. See Section 31 2200 for rough and final grading and topsoil replacement requirements.

3.07 REPAIR

A. Correct areas that are over-excavated and load-bearing surfaces that are disturbed; see Section 31 2323.

3.08 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for general requirements for field inspection and testing.

B. Provide for visual inspection of load-bearing excavated surfaces by Architect before placement of foundations.

3.09 CLEANING

A. Stockpile excavated material to be re-used in area designated on site in accordance with Section 31 2200.

B. Remove excavated material that is unsuitable for re-use from site.

C. Remove excess excavated material from site.

3.10 PROTECTION

A. Divert surface flow from rains or water discharges from the excavation.

B. Prevent displacement of banks and keep loose soil from falling into excavation; maintain soil stability.

C. Protect open excavations from rainfall, runoff, freezing groundwater, or excessive drying so as to maintain foundation subgrade in satisfactory, undisturbed condition.

D. Protect bottom of excavations and soil adjacent to and beneath foundation from freezing.

E. Keep excavations free of standing water and completely free of water during concrete placement.

END OF SECTION

SECTION 31 2323
FILL

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Filling, backfilling, and compacting for building volume below grade.

B. Filling holes, pits, and excavations generated as a result of removal (demolition) operations.

C. Lightweight concrete fill.

1.02 RELATED REQUIREMENTS

A. Section 01 5713 - Temporary Erosion and Sediment Control: Slope protection and erosion control.

B. Section 03 3000 - Cast-in-Place Concrete.

C. Section 13 4713 - Cathodic Protection.

D. Section 31 2200 - Grading: Removal and handling of soil to be re-used.

E. Section 31 2200 - Grading: Site grading.

F. Section 31 2316 - Excavation: Removal and handling of soil to be re-used.

G. Section 31 2316.13 - Trenching: Excavating for utility trenches outside the building to utility main connections.

H. Section 31 3700 - Riprap.

I. Section 32 1413 - Precast Concrete Unit Paving: Leveling bed placement under pavers.

J. Section 32 1416 - Brick Unit Paving: Leveling bed placement under pavers.

K. Section 32 1440 - Stone Paving: Leveling bed placement under pavers.

L. Section 33 4100 - Subdrainage: Filter aggregate and filter fabric for foundation drainage systems.

1.03 DEFINITIONS

A. Finish Grade Elevations: Indicated on drawings.

B. Subgrade Elevations: 4 inches (100 mm) below finish grade elevations indicated on drawings, unless otherwise indicated.

1.04 REFERENCE STANDARDS

A. AASHTO M 147 - Standard Specification for Materials for Aggregate and Soil-Aggregate Subbase, Base and Surface Courses 2017.

B. AASHTO T 180 - Standard Specification for Moisture-Density Relations of Soils Using a 4.54-kg (10-lb) Rammer and a 457-mm (18 in.) Drop 2017.

C. ASTM C136/C136M - Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates 2014.

D. ASTM C150/C150M - Standard Specification for Portland Cement 2018.

E. ASTM C1602/C1602M - Standard Specification for Mixing Water Used in the Production of Hydraulic Cement Concrete 2012.

F. ASTM C796/C796M - Standard Test Method for Foaming Agents for Use in Producing Cellular Concrete Using Preformed Foam 2012.

G. ASTM D698 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft3 (600 kN-m/m3)) 2012, with Editorial Revision (2015).

H. ASTM D1556 - Standard Test Method for Density and Unit Weight of Soil in Place by the Sand-Cone Method 2007.

I. ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3 (2,700 kN m/m3)) 2012, with Editorial Revision (2015).

J. ASTM D2167 - Standard Test Method for Density and Unit Weight of Soil in Place by the Rubber Balloon Method 2015.

K. ASTM D2487 - Standard Practice for Classification of Soils for Engineering Purposes (Unified Soil Classification System) 2011.

L. ASTM D4318 - Standard Test Methods for Liquid Limit, Plastic Limit, and Plasticity Index of Soils 2017.

M. ASTM D6817/D6817M - Standard Specification for Rigid Cellular Polystyrene Geofoam 2017.

N. ASTM D6938 - Standard Test Methods for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth) 2017.

O. ASTM D7557/D7557M - Standard Practice for Sampling of Expanded Geofoam Specimens 2009, with Editorial Revision (2013).

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data for Manufactured Fill.

C. Shop Drawings for Manufactured Fill.

1. Submit plan, section, and profile drawings. Indicate size, type, location, and orientation of each geofoam block.

2. Submit location and type of connectors.

3. Indicate proposed weighting or guying.

D. Soil Samples: 10 pounds (4.5 kg) sample of each type of fill; submit in air-tight containers to testing laboratory.

E. Materials Sources: Submit name of imported materials source.

F. Fill Composition Test Reports: Results of laboratory tests on proposed and actual materials used, including manufactured fill.

G. Compaction Density Test Reports.

H. Lightweight Concrete Test Reports.

I. Manufacturer's Instructions.

J. Designer's Qualification Statement.

K. Manufacturer's Qualification Statement.

L. Lightweight Concrete Fill Installer's Qualification Statement.

M. Testing Agency Qualification Statement.

N. Specimen Warranty.

1.06 QUALITY ASSURANCE

A. Designer Qualifications: Perform design of structural fill under direct supervision of a Professional Engineer experienced in design of this type of work and licensed in Maryland.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than ten years of documented experience.

C. Lightweight Concrete Fill Applicator Qualifications: Company specializing in performing work of the type specified and with at least 13,000 cubic yards (10,000 cu m) in five years of documented experience and approved by manufacturer.

D. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.

E. Copies of Documents at Project Site: Maintain at the project site a copy of each referenced document that prescribes execution requirements.

1.07 DELIVERY, STORAGE, AND HANDLING

A. When necessary, store materials on site in advance of need.

B. When fill materials need to be stored on site, locate stockpiles where indicated.

1. Separate differing materials with dividers or stockpile separately to prevent intermixing.
2. Prevent contamination.
3. Protect stockpiles from erosion and deterioration of materials.

1.08 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a five year period after Date of Substantial Completion.

C. Provide ten year manufacturer warranty for manufactured fill material.

PART 2 PRODUCTS

2.01 FILL MATERIALS

A. General Fill: Subsoil excavated on-site.

1. Graded.
2. Free of lumps larger than 3 inches (75 mm), rocks larger than 2 inches (50 mm), and debris.
3. Conforming to ASTM D2487 Group Symbol CL.

B. Structural Fill: Subsoil excavated on-site.

1. Graded.
2. Free of lumps larger than 3 inches (75 mm), rocks larger than 2 inches (50 mm), and debris.
3. Conforming to ASTM D2487 Group Symbol CL.

C. Concrete for Fill: As specified in Section 03 3000; compressive strength of 2500 psi (17.235 MPa).

D. Granular Fill - Gravel : Pit run washed stone; free of shale, clay, friable material and debris.

1. Graded in accordance with ASTM D2487 Group Symbol GW.

E. Granular Fill - Pea Gravel: Natural stone; washed, free of clay, shale, organic matter.

1. Graded in accordance with ASTM C136/C136M, within the following limits:
   a. Minimum Size: 1/4 inch (6 mm).
   b. Maximum Size: 5/8 inch (16 mm).

F. Sand: Natural river or bank sand; free of silt, clay, loam, friable or soluble materials, and organic matter.

1. Graded in accordance with ASTM C136/C136M; within the following limits:
    a. No. 4 (4.75 mm) sieve: 100 percent passing.
    b. No. 14 (1.40 mm) sieve: 10 to 100 percent passing.
    c. No. 50 (300 micro m) sieve: 5 to 90 percent passing.
    d. No. 100 (150 micro m) sieve: 4 to 30 percent passing.
    e. No. 200 (75 micro m) sieve: 0 percent passing.

G. Topsoil: See Section 31 2200.

H. Engineered Fill - Lightweight Concrete:
1. Finished Properties, Class II Engineered Fill:
    a. Cast Density, Maximum: 30 pounds per cubic foot (480 kg/cu m).
    b. Compressive Strength, Minimum: 41 pounds per square inch (280 kPa).
2. Materials:
    a. Cement: ASTM C150/C150M.
    b. Water: ASTM C1602/C1602M; clean, potable, and not detrimental to concrete.
    c. Admixtures: As recommended by lightweight concrete fill manufacturer.
    d. Expansion Material: Manufacturer's recommended expansion material.
    e. Mix Design: By manufacturer.

2.02 ACCESSORIES

A. Geotextile Fabric: Non-biodegradable, woven .

B. Vapor Retarder: 10 mil (0.25 mm) thick, polyethylene.

2.03 SOURCE QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for general requirements for testing and analysis of soil material.

B. Where fill materials are specified by reference to a specific standard, test and analyze samples for compliance before delivery to site.

C. If tests indicate materials do not meet specified requirements, change material and retest.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that survey bench marks and intended elevations for the Work are as indicated.

B. Identify required lines, levels, contours, and datum locations.

C. See Section 31 2200 for additional requirements.

D. Verify subdrainage, dampproofing, or waterproofing installation has been inspected.

E. Verify structural ability of unsupported walls to support imposed loads by the fill.

F. Verify areas to be filled are not compromised with surface or ground water.

3.02 PREPARATION

A. Scarify and proof roll subgrade surface to a depth of 6 inches (150 mm) to identify soft spots.

B. Cut out soft areas of subgrade not capable of compaction in place. Backfill with general fill.

C. Compact subgrade to density equal to or greater than requirements for subsequent fill material.

D. Until ready to fill, maintain excavations and prevent loose soil from falling into excavation.

3.03 FILLING

A. Fill to contours and elevations indicated using unfrozen materials.

B. Fill up to subgrade elevations unless otherwise indicated.

C. Employ a placement method that does not disturb or damage other work.

D. Systematically fill to allow maximum time for natural settlement. Do not fill over porous, wet, frozen or spongy subgrade surfaces.

E. Maintain optimum moisture content of fill materials to attain required compaction density.

F. Granular Fill: Place and compact materials in equal continuous layers not exceeding 6 inches (150 mm) compacted depth.

G. Soil Fill: Place and compact material in equal continuous layers not exceeding 8 inches (200 mm) compacted depth.

H. Slope grade away from building minimum 2 inches in 10 feet (50 mm in 3 m), unless noted otherwise. Make gradual grade changes. Blend slope into level areas.

I. Correct areas that are over-excavated.

1. Load-bearing foundation surfaces: Use structural fill, flush to required elevation, compacted to 100 percent of maximum dry density.

2. Other areas: Use general fill, flush to required elevation, compacted to minimum 97 percent of maximum dry density.

J. Compaction Density Unless Otherwise Specified or Indicated:

1. Under paving, slabs-on-grade and similar construction: 97 percent of maximum dry density.

2. At other locations: 95 percent of maximum dry density.

K. Reshape and re-compact fills subjected to vehicular traffic.

L. Maintain temporary means and methods, as required, to remove all water while fill is being placed as required, or until directed by the Architect. Remove and replace soils deemed unsuitable by classification and which are excessively moist due to lack of dewatering or surface water control.

3.04 ENGINEERED FILL - LIGHTWEIGHT CONCRETE

A. Install lightweight concrete fill according to manufacturer's written instructions.

B. Use batching, mixing, and placing equipment approved by the manufacturer.

C. Prevent segregation of material.

D. Tolerance: Finished surface within 2 inches (50 mm) of elevation indicated on drawings.

3.05 FILL AT SPECIFIC LOCATIONS

A. Use general fill unless otherwise specified or indicated.

B. Under Interior Slabs-On-Grade:

1. Use granular fill.

2. Depth: 4 inches (100 mm) deep.

3. Compact to 95 percent of maximum dry density.

4. Cover with sand.
    a. Depth: 2 inches (50 mm).
    b. Compact to 95 percent of maximum dry density.

C. At Foundation Walls and Footings:
1. Use general fill.
2. Fill up to subgrade elevation.
3. Compact each lift to 90 percent of maximum dry density.
4. Do not backfill against unsupported foundation walls.
5. Backfill simultaneously on each side of unsupported foundation walls until supports are in place.

D. Over Subdrainage Piping at Foundation Perimeter and Under Slabs:
1. Drainage fill and geotextile fabric: Section 33 4100.
2. Cover drainage fill with general fill.
3. Fill up to subgrade elevation.
4. Compact to 95 percent of maximum dry density.

E. Over Buried Utility Piping, Conduits and Duct Bank in Trenches:
1. Bedding: Use general fill.
2. Cover with general fill.
3. Fill up to subgrade elevation.
4. Compact in maximum 8 inch (200 mm) lifts to 95 percent of maximum dry density.

F. At Interior Crawl Spaces:
1. Use general fill.
2. Compact to 90 percent of maximum dry density.
3. Install vapor retarder over entire exposed surface.
4. Cover with granular fill, 2 inches (50 mm) deep.

G. Inside Planter Boxes:
1. Use granular fill, 4 inches (100 mm) deep.
2. Cover with geotextile fabric.
3. Cover with sand, 2 inches (50 mm) deep.
4. Finish with topsoil, to within 2 inches (50 mm) of planter rim, lightly tamped.

H. At Lawn Areas:
1. Use general fill.
2. Fill up to 6 inches (150 mm) below finish grade elevations.
3. Fill up to subgrade elevations.
4. Compact to 95 percent of maximum dry density.
5. See Section 31 2200 for topsoil placement.

I. At Planting Areas Other Than Lawns :

1. Use general fill.
2. Fill up to 12 inches (300 mm) below finish grade elevations.
3. Fill up to subgrade elevations.
4. Compact to 95 percent of maximum dry density.
5. See Section 31 2200 for topsoil placement.

J. At French Drains:

1. Use granular fill.
2. Fill up to 8 inches (200 mm) below finish grade.
3. Compact to 95 percent of maximum dry density.

K. Under Pavers Set on Sand Leveling Bed:

1. Use granular fill.
2. Fill up to bottom of sand leveling bed.
3. Compact to 95 percent of maximum dry density.
4. See unit pavers section for leveling bed placement.

3.06 TOLERANCES

A. Top Surface of General Filling: Plus or minus 1 inch (25 mm) from required elevations.

B. Top Surface of Filling Under Paved Areas: Plus or minus 1 inch (25 mm) from required elevations.

3.07 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for general requirements for field inspection and testing.

B. Soil Fill Materials:

C. Perform compaction density testing on compacted fill in accordance with ASTM D1556, ASTM D2167 or ASTM D6938.

D. Evaluate results in relation to compaction curve determined by testing uncompacted material in accordance with ASTM D698 ("standard Proctor"), ASTM D1557 ("modified Proctor") or AASHTO T 180.

E. If tests indicate work does not meet specified requirements, remove work, replace and retest.

F. Frequency of Tests: daily.

G. Proof roll compacted fill at surfaces that will be under slabs-on-grade.

H. Engineered Fill - Lightweight Concrete:

1. Sampling: During initial placement, take four 3 inch by 6 inch (76 mm by 152 mm)3 inch by 6 inch (76 mm by 152 mm) test specimens per 303 cubic yards (230 cu m) of material placed or for each four hours of placement work.
2. Testing: Provide third-party testing of samples in accordance with ASTM C796/C796M except do not oven-dry load-test specimens.

3.08 CLEANING

A. See Section 01 7419 - Construction Waste Management and Disposal, for additional requirements.

B. Remove unused stockpiled materials, leave area in a clean and neat condition. Grade stockpile area to prevent standing surface water.

C. Leave borrow areas in a clean and neat condition. Grade to prevent standing surface water.

END OF SECTION

SECTION 31 3116
TERMITE CONTROL

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Chemical soil treatment.

B. Termite-resistant vapor barrier sheet.

C. Termite exclusion materials.

D. Site-applied termiticide for wood, steel, and concrete.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Vapor barrier placement under concrete slab-on-grade.

B. Section 06 0573 - Wood Treatment: Field-applied termiticide for wood.

1.03 REFERENCE STANDARDS

A. ASTM E1643 - Standard Practice for Selection, Design, Installation and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs 2011 (Reapproved 2017).

B. ASTM E1745 - Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs 2017.

C. Title 7, United States Code, 136 through 136y - Federal Insecticide, Fungicide and Rodenticide Act 2006.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Indicate toxicants to be used, composition by percentage, dilution schedule, intended application rate.

C. Product Data: Submit manufacturers' data on manufactured products showing compliance with specified requirements.

D. Test Reports: Indicate regulatory agency approval reports when required.

E. Manufacturer's Certificate: Certify that toxicants meet or exceed specified requirements.

F. Certificate of compliance from authority having jurisdiction indicating approval of toxicants.

G. Manufacturer's Instructions: Indicate caution requirement.

H. Record and document moisture content of soil before application.

I. Installer Qualifications: Company specializing in performing work of the type specified and with minimum three (3) years of documented experience.

J. Maintenance Data: Indicate re-treatment schedule .

K. Warranty: Submit warranty and ensure that forms have been completed in Owner 's name.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing this type of work and:

1. Having minimum of three (3) years documented experience.
2. Approved by manufacturer of treatment materials.
3. Licensed in Maryland .

1.06 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Provide five year installer's warranty against damage to building caused by termites.

1. Include coverage for repairs to building and to contents damaged due to building damage. Repair damage and, if required, re-treat.

2. Inspect annually and report in writing to Owner . Provide inspection service for five years from Date of Substantial Completion.

C. Termite-Resistant Vapor Barrier Sheet: Provide five year manufacturer's limited warranty.

PART 2 PRODUCTS

2.01 CHEMICAL SOIL TREATMENT

A. Toxicant Chemical: Local authority approved; synthetically color dyed to permit visual identification of treated soil. Per PGCPS stanards, Termite control chemicals should not contain properlene glycol. Should the choice be limiting, other means such as barrier sheets should be exploted.

B. Diluent: Recommended by toxicant manufacturer.

C. Manufacturers:

1. Bayer Environmental Science Corp: www.backedbybayer.com/pest-management/#sle.Bayer Environmental Science Corp: www.backedbybayer.com/pest-management/#sle.Bayer Environmental Science Corp: www.backedbybayer.com/pest-management/#sle.

2. FMC Professional Solutions: www.fmcprosolutions.com/#sle.

3. Syngenta Professional Products: www.syngentaprofessionalproducts.com/#sle.

4. Substitutions: See Section 01 6000 - Product Requirements.

D. Mixes: Mix toxicant to manufacturer's instructions.

2.02 SITE-APPLIED TERMITICIDE

A. Site Applied Termiticide for Wood, Steel and Concrete: Borate mineral salt based, spray applied termiticide formulated for use on wood, steel, concrete and other building materials.

1. Active Ingredient: 40% minimum disodium octaborate tetrahydrate (DOT). Per PGCPS stanards, Termite control chemicals should not contain properlene glycol. Should the choice be limiting, other means such as barrier sheets should be exploted.

2.03 TERMITE BARRIER SHEET

A. Termite-Resistant Vapor Barrier Sheet: Plastic sheet, complying with ASTM E1745, Class C; stated by manufacturer as suitable for installation in contact with soil or granular fill under concrete slabs, and for exclusion of subterranean termites.

B. Accessory Products: Vapor retarder manufacturer's recommended tape, adhesive, prefabricated boots, etc., for sealing seams and penetrations in vapor retarder.

C. NOTE: This specification consists of furnishing and installing a complete stainless steel mesh barrier system or graded basaltic barrier sand at allpenetrations, joints and perimeter foundations as a physical barrier below the concrete slabs and foundations of a structure to prevent the entry of Formosan and other ground termites into wood components of the structure, similar to laying down a chemical barrier of soil termiticide treatments. The use of these materials does not preclude the use of other preventive measures such as chemical treatment and pressure treated lumber for construction to provide maximum protection to the structure. In fact, it is recommended that these materials be used in conjunction with chemical treatment at all vulnerable areas such as penetration areas around electrical conduits and plumbing pipes that penetrate the slab as well as the foundation perimeter and shoulder portions of he

barrier. These termite barriers must comply with all codes. It is also recommended that pressure treated lumber be used to provide maximum protection to the structure.

D. Manufacturers:

1. Stego Technology LLC; Pango Wrap with Pango Tape: www.stegoindustries.com/#sle.
2. Substitutions: See Section 01 6000 - Product Requirements.

2.04 TERMITE EXCLUSION PARTICLE BARRIER

A. Particle Barrier: Selected granular fill material; weight, granularity, hardness, and installed compaction prevent termite intrusion into foundations or structure without poisons or other chemicals.

1. Products:

a. Polyguard Barrier Systems, Inc, a division of Polyguard Products, Inc; TERM Particle Barrier: www.polyguardbarriers.com/#sle.

2.05 TERMITE EXCLUSION BARRIER SYSTEM

A. Multiple Component Barrier System: Selected granular fill material, mesh, barrier sheet, and sealant; mechanical properties prevent termite intrusion into foundations or structure without poisons or other chemicals.

1. Products:

a. Polyguard Barrier Systems, Inc, a division of Polyguard Products, Inc; TERM All Pest Bath Trap Barrier: www.polyguardbarriers.com/#sle.

b. Substitutions: See Section 01 6000 - Product Requirements.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that soil surfaces are unfrozen, sufficiently dry to absorb toxicant, and ready to receive treatment.

B. Verify final grading is complete.

3.02 APPLICATION - CHEMICAL TREATMENT

A. Comply with requirements of U.S. EPA and applicable state and local codes.

B. Spray apply toxicant in accordance with manufacturer's instructions.

C. Apply toxicant at following locations:

1. Under Slabs-on-Grade.
2. In Crawl Spaces.
3. At Both Sides of Foundation Surface.
4. Soil Within 10 feet (3 m) of Building Perimeter For a Depth of [4 feet] feet ([1.21] m).

D. Under slabs, apply toxicant immediately prior to installation of vapor barrier.

E. At foundation walls, apply toxicant immediately prior to finish grading work outside foundations.

F. Apply extra treatment to structure penetration surfaces such as pipe or ducts, and soil penetrations such as grounding rods or posts.

G. Re-treat disturbed treated soil with same toxicant as original treatment.

H. If inspection or testing identifies the presence of termites, re-treat soil and re-test.

3.03 INSTALLATION - SITE-APPLIED TERMITICIDE

A. Comply with manufacturer's written instructions.

3.04 INSTALLATION - BARRIER SHEET

A. Comply with ASTM E1643.

B. Lap joints minimum 6 inches (150 mm). Seal joints, seams and penetrations watertight with manufacturer's recommended products and follow manufacturer's written instructions.

3.05 INSTALLATION - EXCLUSION SYSTEM

A. Particle Barrier: Comply with manufacturer's written instructions.

B. Barrier System: Comply with manufacturer's written instructions.

3.06 PROTECTION

A. Do not permit soil grading over treated work.

B. Protect sheet materials from damage after completed installation. Repair damage with manufacturer's recommended products and according to the manufacturer's written instructions.

END OF SECTION

SECTION 31 3700
RIPRAP

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Riprap in sacks.

1.02 RELATED REQUIREMENTS

A. Section 31 2323 - Fill: Aggregate requirements.

1.03 QUALITY ASSURANCE

A. Perform Work in accordance with State of Maryland Highways standard.

B. Maintain one copy of each document on site.

C. Furnish each aggregate material from single source throughout the Work.

PART 2 PRODUCTS

2.01 MATERIALS

A. Riprap: Provide in accordance with State of Maryland Highways standards.

B. Aggregate: Granular fill as specified in Section 31 2323.

C. Bags: Woven jute.

D. Binder: Portland cement.

E. Geotextile Fabric: Non-biodegradable, woven .

2.02 BAGGED RIPRAP

A. Mix riprap, cement , sand and aggregate dry. Limit quantity of cement to 10 percent of dry mixed materials by volume.

B. Fill bags with dry ingredients to 70 percent capacity and close by sewing or stapling to a straight seam.

2.03 SUSTAINABILITY CHARACTERISTICS

A. Section 018113 - Sustainable Design Requirements: Requirements for sustainable design compliance.

PART 3 EXECUTION

A. Materials and Resources Characteristics:

1. Recycled Content Materials: Furnish materials with maximum available recycled content.

2. Regional Materials: Furnish materials extracted, processed, and manufactured within 500 miles of Project site.

3.02 EXAMINATION

A. Do not place riprap bags over frozen or spongy subgrade surfaces.

3.03 PLACEMENT

A. Place geotextile fabric over substrate, lap edges and ends.

B. Place riprap at culvert pipe ends, embankments slopes and as indicated.

C. Installed Thickness: as directed on drawings.

D. Place rock evenly and carefully over bagged riprap to minimize voids, do not tear bag fabric, place bags and rock in one consistent operation to preclude disturbance or displacement of substrate.

E. After placement, spray with water to moisten the bagged mix. Maintain moist for 24 hours.

3.04 SCHEDULES

A. Culvert Pipe Ends: Bagged, placed one layer thick, 6 inch (150 mm) average thickness, concealed with topsoil fill.

B. Sloped Grade At Retaining Wall: Individual riprap units, 6 inch (150 mm) thickness; placed prior to finish topsoil.

END OF SECTION

SECTION 31 4000
TEMPORARY SHORING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General Conditions and Division One through Division Five Specification Sections, apply to work of this Section.

1.02 REFERENCE STANDARDS

A. Latest Editions of Prince George's County Design Manuals, Maryland State Highway Standards and Specifications and 2011 MDE Soil Erosion and Sediment Control Manual.

B. Pertinent requirements of the "Occupational and Health Standards for the Construction Industry," as promulgated by OSHA.

1.03 WORK DESCRIPTION

A. Design and construct temporary shoring at excavations to prevent collapse of adjacent materials, and to protect workmen, the general public, structural and site components associated with the Work, and adjacent properties and structure.

B. The Contractor shall be solely responsible for materials, means and methods for construction of temporary shoring.

C. The Contractor shall secure all required approvals, including PG County DPIE, and adjacent property owners if required.

1.04 SUBMITTALS

A. Comply with provisions of PG County Design Manual for preparation, review, and approval of construction documents for temporary shoring.

1. Construction documents shall be prepared, signed, and sealed by a Registered Design Professional, licensed by the State of Maryland, and experienced in the design of temporary shoring.
2. Construction documents shall be reviewed and approved by PG County DPIE prior to beginning work requiring temporary shoring.
3. Submit three (3) copies of approved construction documents to architect for record and distribution to Owner.

1.05 QUALITY ASSURANCE

A. Use adequate numbers of workmen, who are trained and experienced in the installation of temporary shoring, and who are familiar with the requirements and methods required by this Section, for proper, safe performance of shoring.

B. Coordinate shoring design and construction with the following:

1. The Geotechnical Report
2. Structural Systems included in the Work
3. Site Structures included in the Work
4. Existing adjacent structures affected by work requiring temporary shoring

PART 2 - PRODUCTS

2.01 MATERIALS

A. Provide all materials necessary to construct the temporary shoring, in accordance with the approved construction documents.

PART 3 - EXECUTION

3.01 CONDITIONS

A. Examine the areas and conditions under which the work of this Section shall be performed. Correct conditions detrimental to proper installation and safe performance of the temporary shoring. Do not proceed until unsatisfactory conditions are corrected.

3.02 INSTALLATION

A. Install the temporary shoring in strict conformance with the approved construction documents.

3.03 CLEANUP

A. After work requiring temporary shoring is completed, remove all materials and components associated with the shoring, and remove from site. Dispose of excess materials and debris in a legal manner.

END OF SECTION

SECTION 31 5000
EXCAVATION SUPPORT AND PROTECTION

PART 1 – GENERAL:

1.01 SUMMARY

A. Work of this section includes sheeting and shoring and bracing.

1.02 RELATED SECTIONS

A. Section 31 10 00: Clearing

B. Section 31 20 00: Earthmoving

1.03 SYSTEM DESCRIPTION DESIGN REQUIREMENTS

A. Shoring systems shall be designed to safely and adequately prevent collapse of adjacent materials and permit construction of Work to arrangement shown on Contract Documents.

B. Secure approvals, including those of local governmental agencies having jurisdiction.

C. Analyze site conditions. Make supplemental investigations as needed for proper design of shoring.

1.04 QUALITY ASSURANCE SUBMITTALS FOR DESIGN DATA

A. Prepare and submit design drawings and calculations showing analysis of work to be performed, including horizontal support for shoring.

B. Drawings shall include methods, equipment and work procedures.

1.05 QUALITY ASSURANCE

A. Qualifications

1. Bracing and shoring drawings shall be prepared by a registered professional engineer, licensed to practice in the State of Maryland. Drawings and calculations shall bear seal of Professional Engineer registered in the State of Maryland.

2. Personnel performing installation shall be trained or qualified in techniques and procedures of shoring installation with a minimum of three (3) years successful experience in such installation.

3. Installation shall be performed under supervision of a Professional Engineer registered in the State of Maryland, experienced in this type of work.

B. Regulatory Requirements: Conform to requirements of Occupational Safety and Health Administration (OSHA) as well as measures accepted as standards of industry.

C. Certifications: Upon completion of shoring, submit a letter signed and sealed by design engineer stating that, to best of his or her knowledge, systems were constructed in compliance with design drawings and calculations.

1.06 LEED SUBMITTALS

A. Product data for Credit MR 4.: For products having recycled content, documentation indicating percentages by weight of pre-consumer and post-consumer recycled content. Include statement indicating cost of each product with recycled content.

B. Product data for Credit MR 5: For products having regional material content, documentation indicating location of manufacture and location of extraction, recovery or harvest of primary raw materials. Include statement indicating cost of each product with regional material content.

C. Certificates for Credit MR 7: Chain-of-custody certificates certifying that products specified to be made from certified wood comply with forest certification requirements. Include vendor invoice indicating Chain

of Custody number and wood products listed per requirements Section 01 60 00 Product Requirements.

PART 2 – PRODUCTS:

2.01 MATERIALS

A. Materials shall be selected and furnished to perform in compliance with design criteria.

B. Structural Steel Shapes and Plates: ASTM A 36 or ASTM A 572. Steel shall be of American manufacturer, new and free from defects in strength, durability, appearance and function.

1. Recycled Content: Provide steel with minimum 90 percent total recycled content, including at least 60 percent post-consumer recycled content.

2. Regional Materials: Provide steel manufactured and of primary raw materials extracted or recovered within 500 mile radius of Project Site.

C. Forest Certification: To the extent necessary to meet required LEED threshold, provide wood products made from forests certified by an FSC-accredited certification body. All non-FSC wood in assemblies with FSC-certified wood shall meet the FSC Controlled Wood (CW) criteria.

PART 3 – EXECUTION:

3.01 EXAMINATION

A. Site Verification of Conditions: Prior to commencing work of this Section, check and verify governing dimensions and elevations, including field measurements of existing or adjoining work on which this work is dependent to assure proper fit and clearances between new and existing structures.

3.02 PREPARATION

A. Protection

1. Protect and support water, sewer, gas, and other pipes and electrical conduits encountered and immediately notify persons, companies or governmental agencies, granting them ample opportunity to take such additional precautions as they may deem necessary.

2. Cut and cap street connections encountered in excavating along curb lines in compliance with local jurisdiction requirements. Mark locations of capped utilities so they may be subsequently located and reconnected as needed.

3. Damage to adjacent properties, streets, sidewalks and utilities caused by work under this Section shall be repaired, restored to original condition, or replaced at no additional expense to Owner.

B. Coordination

1. Prepare a photographic or video survey of existing crack conditions in adjacent facilities and other conditions of structures prior to commencing work.

2. Maintain free flow of pedestrian and vehicular traffic to and from adjacent properties at levels existing prior to start of work and as described in Section 02000 “Clearing”.

3. Interior bracing shall be arranged to offer no interference with formwork for new construction.

4. Provide sufficient quantity of materials on hand at all times for protection of Work and for use in event of emergency.

5. Setting of formwork, reinforcing and placement of concrete shall be in compliance with requirements described in other related Sections of this Project Manual.

6. Provide pumps and other equipment as necessary to dewater excavations for shoring operations.

C. Sheeting

1. Provide sheeting of proper lengths and section needed, and anchor or brace to resist earth and hydrostatic pressures and superimposed loads from adjacent structures and/or construction equipment.
2. Install sheeting plumb and true, to lines and locations as indicated on design submittal drawings. Sheeting shall be used to form concrete walls and shall be located and driven to ensure that no part of sheeting is within outline of permanent construction.
3. Sheeting retaining earth on which support and stability of existing structures is dependent shall be left in place at completion of Work.

D. Shoring

1. Locate shoring at distances away from new construction sufficient to allow working room and observation of construction.
2. Shoring shall be set clear of permanent footings, walls and other structural features.
3. Shoring shall be installed to retain earth under surcharges, including such loads as weight of construction materials and equipment, vibration, snow, rainwater, water absorption by soils, and temporary construction.
4. Extend shoring as high as necessary to allow for construction of foundation walls and for berming to divert water run-off. Depth of shoring shall be as deep as necessary to brace excavation to ultimate depth.
5. Shoring supporting formwork may not be left in place upon written approval by the Owner's Representative.

3.03 RESTORATION

A. Remove temporary protective installations upon completion of shoring operations.

B. Repair damage to structures caused by shoring operations and restore surfaces to original or better condition.

3.04 CLEANING

A. Remove debris and excess earth resulting from shoring operations as it accumulates. Do not store debris on site or permit debris to be scattered over site.

END OF SECTION

SECTION 31 6213.19
PRECAST CONCRETE PILES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Prestressed precast concrete piles with steel points.

1.02 RELATED REQUIREMENTS

A. Section 31 0916.21 - Pile Load Tests: Requirements for pile load tests.

1.03 REFERENCE STANDARDS

A. ASTM A416/A416M - Standard Specification for Steel Strand, Uncoated Seven-Wire for Prestressed Concrete 2017.

B. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement 2018, with Editorial Revision (2018).

C. PCI MNL-116 - Manual for Quality Control for Plants and Production of Structural Precast Concrete Products 1999.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to the start of the work of this section; require attendance by all affected installers.

B. Scheduling: Schedule pile driving to occur between the hours of 8:00 and 4:30 pm.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide details of points.

C. Shop Drawings: Indicate details and schedule of pile installation sequence. Identify recommended pile length and size to suit design requirements.

D. Certificate of compliance from authority having jurisdiction indicating approval.

E. Designer's Qualification Statement.

F. Installer's Qualification Statement.

G. Project Record Documents: Accurately record the following:

1. Sizes, lengths, and locations of piles.
2. Sequence of driving.
3. Number of blows per foot (meter) for entire length of piles and measured set for last 10 blows.
4. Piles requiring drilling and the hole diameters.
5. Final base and top elevations.
6. Driving force of each hammer blow.

1.06 QUALITY ASSURANCE

A. Fabricate in accordance with requirements of PCI MNL-116.

B. Design and select pile components under direct supervision of a Professional Structural Engineer experienced in design of this Work and licensed in Maryland.

C. Installer Qualifications: Company specializing in performing the work of this section with minimum [five] years of documented experience.

PART 2 PRODUCTS

2.01 MATERIALS

A. Concrete: Minimum 5,000 psi (34 MPa) 28 day strength, normal portland cement; aggregates and sand as recommended by pile manufacturer.

B. Tensioning Steel Tendons: ASTM A416/A416M; Grade 250 - 250K psi (1725 MPa) tensile strength, seven-wire stranded steel cable; low-relaxation type; full length without splices.

C. Reinforcing Steel: ASTM A615/A615M, Grade 40 (40,000 psi) (280 MPa) yield strength, deformed steel bars.

2.02 FABRICATION

A. Pile Points: Hardened steel, hollowed tip to minimize bounce or deflection.

B. Pile Section Joint Ends: Male and female, with positive lock, formed steel.

C. Pile Connectors: Fabricated of steel angles, fitted to outside dimensions of square pile ends.

D. Shop fabricate pile in maximum practical lengths to meet design requirements.

2.03 SOURCE QUALITY CONTROL

A. Provide shop testing and inspection of piles under provisions of Section 01 4000.

B. Test concrete for compressive strength in accordance with quality control requirements of PCI MNL-116.

PART 3 EXECUTION

3.01 PREPARATION

A. Obtain prior approval of hammer type to be used.

B. Use driving method that will not cause damage to nearby structures.

C. Notify adjacent and affected land owners and building occupants with 90 days notice before proceeding with the Work.

D. Protect structures near the Work from damage.

3.02 DRILLING

A. Drill holes to facilitate driving only if piling cannot be completed in specified manner. Drill only through strata that obstructs driving.

B. Hole Diameter: Maximum 1 inch (25 mm) larger than tip dimension.

3.03 INSTALLATION

A. Drive piles to defined load supporting capacity.

B. Protect pile head during driving, using cushion cap with full bearing on pile butt for even distribution of hammer blow.

C. Deliver hammer blows to central axis of pile.

D. Do not damage piles during driving operations.

E. If driving is interrupted before refusal, drive an additional 12 inches (300 mm) before resuming recording of performance data.

F. Re-drive piles that have lifted due to driving adjacent piles, or by soil uplift.

G. Prepare pile top to receive pile caps.

3.04 TOLERANCES

A. Maximum Variation From Vertical For Plumb Piles: 1 in 48.

B. Maximum Variation From Required Angle For Batter Piles: 1 in 24.

C. Maximum Variation From Pile Cut-off Elevation: 4 inches (100 mm).

D. Maximum Out-of-Position: 2 inches (50 mm).

3.05 FIELD QUALITY CONTROL

A. Field inspection will be performed under provisions of Section 01 4000.

B. Perform load tests to requirements of Section 31 0916.21.

C. Test Piles: Same diameter and type as specified for other piling, placed in same manner.

D. Accepted test piles may not be used in the Work.

3.06 UNACCEPTABLE PILES

A. Unacceptable Piles: Piles that fail tests, are placed out of position, are below cut-off elevations, or are damaged.

B. Provide additional piles or replace piles to conform to specified requirements.

END OF SECTION

SECTION 31 6216.16
STEEL H PILES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Rolled steel section piles.

1.02 RELATED REQUIREMENTS

A. Section 31 0916.21 - Pile Load Tests: Requirements for pile load tests.

1.03 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel 2014.

B. ASTM A690/A690M - Standard Specification for High-Strength Low-Alloy Nickel, Copper, Phosphorus Steel H-Piles and Sheet Piling with Atmospheric Corrosion Resistance for Use in Marine Environments 2013a (Reapproved 2018).

1.04 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to the start of the work of this section; require attendance by all affected installers.

B. Scheduling: Schedule pile driving to occur between the hours of 8:00 am and 4:30 pm.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide details of collars.

C. Shop Drawings: Indicate details and schedule of pile installation sequence. Identify recommended pile length and shapes to suit design loads.

D. Manufacturer's Mill Certificate: Certify that steel casings meets or exceeds specified requirements.

E. Certificate of compliance from authority having jurisdiction indicating approval.

F. Designer's Qualification Statement.

G. Installer's Qualification Statement.

H. Project Record Documents: Accurately record the following:

1. Sizes, lengths, and locations of piles.
2. Sequence of driving.
3. Number of blows per foot (meter) for entire length of piles and measured set for last 10 blows.
4. Identify piles requiring drilling, and hole diameters.
5. Final base and top elevations.
6. Driving force of each hammer blow.

1.06 QUALITY ASSURANCE

A. Design and select pile components under direct supervision of a Professional Structural Engineer experienced in design of this Work and licensed in Maryland.

B. Installer Qualifications: Company specializing in performing the work of this section with minimum five years of documented experience.

C. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification within the previous 12 months.

PART 2 PRODUCTS

2.01 MATERIALS

A. Piles: ASTM A690/A690M; structural steel, rolled H sections, minimum 50 ksi (345 MPa) yield strength; sizes and lengths indicated.

B. Piles: ASTM A36/A36M; structural steel, rolled HP sections, minimum 36 ksi (250 MPa) yield strength; sizes and lengths indicated.

C. Accessories: Points, driving cap; to suit pile shape.

D. Protective Coating:

2.02 SOURCE QUALITY CONTROL

A. Provide shop testing and inspection of piles under provisions of Section 01 4000.

2.03 FABRICATION

A. Coat pile with specified protective cover in accordance with manufacturer's instructions.

B. Allow to cure before driving piles.

PART 3 EXECUTION

3.01 PREPARATION

A. Obtain prior approval of hammer type to be used.

B. Use driving method that will not cause damage to nearby structures.

C. Notify adjacent and affected land owners and building occupants with 90 days notice before proceeding with the Work.

D. Protect structures near the Work, from damage.

E. Prepare to place piles from existing site elevations.

3.02 INSTALLATION

A. Drive piles to defined load supporting capacity.

B. Protect pile head during driving, using cushion cap with full bearing on pile butt for even distribution of hammer blow.

C. Deliver hammer blows to central axis of pile.

D. If driving is interrupted before refusal, drive an additional 12 inches (300 mm) before resuming recording of performance data.

E. Re-drive piles that have lifted due to driving adjacent piles, or by soil uplift.

F. Do not damage piles during driving operations.

G. Cut off tops of piles to elevations indicated and prepare pile top to receive pile caps.

3.03 TOLERANCES

A. Maximum Variation From Vertical For Plumb Piles: 1 in 48.

B. Maximum Variation From Required Angle For Batter Piles: 1 in 24.

C. Maximum Variation From Pile Cut-off Elevation: 4 inches (100 mm).

D. Maximum Out-of-Position: 2 inches (50 mm).

3.04 FIELD QUALITY CONTROL

A. Field inspection will be performed under provisions of Section 01 4000.

B. Perform load tests to requirements of Section 31 0916.21.

C. Test Piles: Same diameter and type as specified for other piling, placed in same manner.

D. Accepted test piles may not be used in the Work.

3.05 UNACCEPTABLE PILES

A. Unacceptable Piles: Piles that fail tests, are placed out of position, are below cut-off elevations, or are damaged.

B. Provide additional piles or replace piles to conform to specified requirements.

END OF SECTION

SECTION 32 0190
OPERATION AND MAINTENANCE OF PLANTING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Maintain plants in manner that promotes health, growth, color and appearance, to quality levels specified; replace dead, dying, and damaged plants at no extra cost to Owner .

1. It is Contractor 's responsibility to determine type and quantity of soil amendments and fertilizer required.
2. Perform soil analysis to determine type and quantity of soil amendments; test enough soil samples to obtain a comprehensive analysis; submit reports.

B. Maintain newly planted landscape plants, including turf (lawns), turf (playfields), trees, shrubs, hedges, vines, ground cover, perennials, flowering bulbs and annuals.

C. Maintain established landscape plants, including turf (lawns), turf (playfields), trees, shrubs, hedges, vines, ground cover, perennials, flowering bulbs and naturalized wildflowers.

D. Renovate the following established landscape plants within the project boundaries: turf (lawns), turf (playfields), trees, regardless of size, shrubs, hedges, vines, ground cover, perennials and naturalized wildflowers.

E. Clean up landscaped areas.

F. Maintenance Period: The time frame covered by these requirements is 90 days:

1. Start Date: Project Date of Substantial Completion.

1.02 RELATED REQUIREMENTS

A. Section 01 5713 - Temporary Erosion and Sediment Control.

B. Section 31 2200 - Grading.

C. Section 32 9219 - Seeding.

D. Section 32 9223 - Sodding.

E. Section 32 9300 - Plants.

1.03 REFERENCE STANDARDS

A. ANSI A300 Part 1 - American National Standard for Tree Care Operations -- Tree, Shrub and Other Woody Plant Maintenance -- Standard Practices 2017.

B. ANSI Z133.1 - American National Standard For Arboricultural Operations - Pruning, Repairing, Maintaining, And Removing Trees, And Cutting Brush - Safety Requirements 2012.

C. ASTM C602 - Standard Specification for Agricultural Liming Materials 2013a.

D. ASTM D4972 - Standard Test Method for pH of Soils 2018.

1.04 PROPOSAL SUBMITTALS

A. Submit complete maintenance plan, showing:

1. Irrigation volume and frequency.
2. Fertilizer type, quantity, and schedule of application.
3. Soil amendment type, quantity, and schedule of application.
4. Personnel assigned, including supervisor.

5. Inspection procedures, diagnostics, and remedies.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Soil Tests and Analysis: Submit report showing number of samples, test results, and recommendations for soil amendments and fertilizer.

C. Product Data: Manufacturer's data sheets on each fertilizer, herbicide, pesticide, and other chemical material to be used, showing trade name, chemical composition, mixing instructions, recommended application rate, storage and handling instructions, and application instructions.

1. Pesticides and Herbicides: Also include U.S. EPA registration number and Material Safety Data Sheets.

D. Shop Drawings:

1. Maintenance plan.

2. Recommendations of the local Cooperative Extension Service office for maintenance and care of turf.

3. Pesticide application plan; obtain approval of Owner for each individual pesticide application.

E. Certificates: Certification of composition of the following as delivered:

1. Fertilizer.

2. Mulch.

3. Pesticides.

4. Herbicides.

5. Other chemical materials.

F. Installer Qualifications: As specified.

G. Site Reports: Include date, time, personnel, condition of plants, activities, temperature, precipitation, irrigation applied; record:

1. Each visit for maintenance purposes.

2. Volume of water applied and area applied to.

3. Diagnosis for treatment of unhealthy plants.

4. Pesticide application; provide all additional reports and recordkeeping required by law.

5. Herbicide application; provide all additional reports and recordkeeping required by law.

6. Removal of dead plants, with quantity and diagnosis.

7. Replanting.

8. Volume of bio-degradable debris composted.

9. Volume of wood chips produced.

10. Volume of debris removed from site.

1.06 QUALITY ASSURANCE

A. Installer Qualifications:

1. Maintenance Contractor: The contractual entity that performed the planting installation.

2. Pruners: Certified member, or supervised by certified member, of International Society of Arboriculture.
3. Pesticide Applicators: Certified by authorities having jurisdiction.
4. Herbicide Applicators: Certified by authorities having jurisdiction.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver U.S. EPA-controlled materials to site in original containers with legible labels indicating registration number and registered uses.

B. Deliver fertilizer and manufactured soil amendments to site in original containers bearing manufacturer's chemical analysis, name, trade name or trademark, and indication of compliance with applicable state and federal laws and regulations ; alternatively, bulk delivery with equivalent certificate is acceptable.

C. Store fertilizer, soil amendments, and mulch in dry locations away from contaminants.

D. Do not store pesticides, herbicides, or other chemical treatment materials in locations where they could damage seeds or plants.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Fertilizers:

B. Antidessicants:

C. Plant Growth Regulators:

D. Pesticides:

E. Herbicides:

F. Substitutions: See Section 01 6000 - Product Requirements.

2.02 FERTILIZERS AND SOIL AMENDMENTS

A. Fertilizers: Free flowing granular organic type containing nitrogen, phosphorus, and potassium, plus trace minerals and micro-nutrients; controlled release type is preferred.

1. Determine type and quantity based on soil analysis.
2. Turf Fertilizer: As specified in Section 32 9219.
3. Non-Turf Plant Fertilizer: As specified in Section 32 9300.

B. Soil Amendments: Type and quantity as required to achieve specified results, based on soil analysis.

C. pH Adjuster: ASTM C602 Class O limestone.

D. Gypsum: Commercially packaged, free flowing, minimum 95 percent calcium sulfate by volume.

E. Sand: Clean and free of materials harmful to plants; 95 percent by weight, minimum, passing No.10 ((2 mm) sieve and 10 percent by weight, minimum, passing No.16 ((1.18 mm) sieve.

F. Calcined Clay: Granular particles produced from montmorillonite clay calcined to minimum temperature of 1200 degrees F (650 degrees C).

1. Gradation:
   a. 90 percent, minimum, passing No.8 ((2.36 mm) sieve.
   b. 99 percent, minimum, retained on No.60 ((0.25 mm) sieve.
   c. 2 percent, maximum, passing No.100 ((0.15 mm) sieve.

2. Density: 40 pounds per cubic foot (640 kg per cubic meter).

G. Decomposed Wood Derivatives: Ground bark, sawdust, humus or other green wood waste material; free of stones, sticks, and fully composted or stabilized with nitrogen.

H. Recycled Compost: Well decomposed, stable, weed free; derived from food, agricultural or industrial residuals, biosolids, yard trimmings, or source-separated or mixed solid waste; with no objectionable odors and not resembling the raw material from which it was made; no substances toxic to plants.

1. Gradation: 100 percent passing 3/8 inch (10 mm) screen.
2. Moisture Content: 35 to 55 percent by weight.
3. pH: 5.5 to 8.9.
4. Not more than 1 percent man-made matter and without plastic items more than 2 inches (50 mm) in length.

I. Bonemeal: Finely ground, steamed, with 2 to 4 percent nitrogen and 16 to 40 percent phosphoric acid.

2.03 APPLIED MATERIALS

A. Antidessicants: Sprayable, water insoluble film-forming material that produces a moisture retarding barrier not removable by rain or snow.

1. Film-Forming Temperature: Temperature commonly encountered out of doors during planting season.
2. Moisture Vapor Transmission: 0.2 pounds (10 grams) per 24 hours at 70 percent humidity, maximum.

B. Plant Growth Regulators: Sprayable, foliar absorbed non-translocatable liquid; not for application via permanent irrigation system.

C. Organic Mulch: Maintain general appearance of existing mulched areas; use one of the following types:

1. Wood chips ranging in size from 1/2 inch (12 mm) to one inch (25 mm).
2. Ground or shredded bark.
3. Shredded hardwood ranging in size from 1/2 inch (12 mm) to one inch (25 mm).
4. Bark peelings ranging in size from 1/2 inch (12 mm) to one inch (25 mm).
5. Pine straw.
6. Marsh hay.
7. Recovered 100 percent wood-based materials ranging in size from 1/2 inch (12 mm) to one inch (25 mm).

D. Inorganic Mulch: Match existing mulched areas.

E. Pesticides: U.S. EPA registered.

F. Herbicides for Use on Turf: U.S. EPA registered.

G. Water: Suitable for irrigation; Owner 's water supply may be used.

PART 3 EXECUTION

3.01 EXAMINATION

A. If soil analysis has not already been performed, take sufficient samples to obtain a comprehensive analysis; perform analysis in accordance with ASTM D4972.

3.02 LANDSCAPE MAINTENANCE - GENERAL

A. Obtain and follow the maintenance instructions provided by the installer of new plant materials.

B. Protect existing vegetation, pavements, and facilities from damage due to maintenance activities; restore damaged items to original condition or replace, at no extra cost to Owner .

C. General Cleanup: Remove debris from all landscape areas at least once a week and from turf areas before each mowing.

   1. Debris consists of trash, rubbish, dropped leaves, downed branches and limbs of all sizes, dead vegetation, rocks, and other material not belonging in landscaped areas.

   2. Remove debris from site and dispose of properly.

D. Watering, Soil Erosion, and Sedimentation Control: Comply with federal, state, local, and other regulations in force; prevent over-watering, run-off, erosion, puddling, and ponding.

   1. Site grading and planting have been designed to resist erosion once fully grown, with temporary measures in place during establishment period.

   2. Repair temporary erosion control mechanisms provided by others.

   3. Repair eroded areas and replant, when caused by inadequate maintenance.

   4. Prevent sediment from entering storm drains.

E. Trees: Exercise care to avoid girdling trees; provide protective collars if necessary; remove protective collars at end of maintenance period.

F. Fertilizing: Apply fertilizer only when necessary.

G. Drainage Channels: Remove obstructions in gutters, catch basins, storm drain inlets, yard drains, swales, ditches, and overflows.

   1. Remove grates from catch basins to clean.

   2. Prevent encroachment of other vegetation on turfed surface drainage channels.

H. Health Maintenance: Inspect all plants regularly for health:

   1. Eradicate diseases and damaging pests, regardless of severity or speed of effect.

   2. Treat accidental injuries and abrasions.

   3. If a plant is unhealthy but not yet dead, according to specified definitions, determine reason(s) and take remedial action immediately.

   4. Remove dead plants immediately upon determining that they are dead.

I. Pesticide and Herbicide Application: Comply with manufacturer's instructions and recommendations and applicable regulations.

   1. Obtain Owner 's approval prior to each application.

   2. Apply in manner to prevent injury to personnel and damage to property due to either direct spray or drifting, both on and off Owner 's property.

   3. Use backflow preventers on hose bibbs used for mixing water; prevent spills.

   4. Inspect equipment daily before application; repair leaks, clogs, wear, and damage.

   5. Do not dispose of excess mixed material, unmixed material, containers, residue, rinse water, or contaminated articles on site; dispose of off site in legal manner.

   6. Rinse water may be used as mix water for next batch of same formulation.

7. Contractor is responsible for all recordkeeping, submissions, and reports required by laws and regulations.

J. Winterizing: Prepare designated plants for winter as described:

K. Replanting: Perform replacement and replanting immediately upon removal of dead plant.

3.03 IRRIGATION

A. Irrigation: Do not allow plants to wilt; apply water as required to supplement rainfall; do not waste water; do not water plants or areas not needing water; do not water during rainfall; shut off water flow when finished; repair leaks.

1. No automatic irrigation system is available; provide hoses and other equipment as required.
2. Do not drive water trucks over turf, seeded areas, or planting beds.
3. Provide backflow preventers on hose bibbs used for irrigation hoses.

3.04 RENOVATION OF ESTABLISHED TURF

A. Remove turf from around trees to radius of 18 inches (450 mm) from base of tree trunk. Cut turf out and remove; do not simply mow. Trim turf edge as specified.

B. Trim perimeter of turf area and around intervening objects as specified under Turf Maintenance.

C. Eliminate undesirable grasses and weeds. Remove as much thatch as possible.

D. Aerate established turf at least once every two years by coring and pulling out soil plugs 2 to 3 inches (50 to 75 mm) deep and not more than 2 inches (50 mm) apart.

1. Leave the plugs on the turf until the soil has been washed from them, then remove.
2. Clean plugs from pavements immediately.

E. Apply fertilizer over entire aerated area.

F. After aeration, seed entire aerated area as specified in Section 32 9219; rake or brush seed into contact with soil.

G. When soil amendments are necessary, apply as top dressing to entire aerated area after overseeding to depth of 1/4 inch (6 mm); blend top dressing mixture thoroughly before applying.

H. Water as soon as possible after planting. Do not allow newly planted material to become dry.

I. Fertilize again 3 to 4 weeks after seeding.

J. Begin normal mowing once grass reaches 1-1/2 times specified mowing height.

3.05 TURF MAINTENANCE

A. Maintain turf in manner required to produce turf that is healthy, uniform in color and leaf texture, and free from weeds and other undesirable growth.

1. Grass Density - Lawns: 20 plants per square foot (200 plants per square meter), minimum.
2. Bare Spots - Lawns: 2 percent of total area, maximum; 6 inches (150 mm) square, maximum.
3. Keep turf relatively free of thatch, woody plant roots, diseases, nematodes, soil-borne insects, stones larger than 1 inch (25 mm) in diameter, and other materials detrimental to grass growth.
4. Limit broadleaf weeds and patches of foreign grass to a maximum of 2 percent of the total area.
5. When new grass is planted in existing turf areas, quality will be evaluated when grass is 1 inch (25 mm) high.

B. Mowing: During growing season(s) mow turf to uniform height, in manner that prevents scalping, rutting, bruising, and uneven or rough cutting.
   1. Prior to mowing clean all debris and leaves from turf surface.
   2. Schedule frequency of mowing so that no more than one-quarter to one-third of grass leaf length is removed during a cutting.
      a. Maximum grass height before mowing: 4 inches (100 mm).
      b. Height of turf is measured from the soil surface.
   3. Make each successive mowing at approximately 45 degrees to the previous mowing, if practical.
   4. Cool Season Grasses:
      a. Reduce mowing height in fall and spring.
      b. Use rotary type mowers; mulcher type mowers may be used.
   5. Warm Season Grasses:
      a. Increase mowing height slightly as fall approaches.
      b. Use reel type mowers; do not use mulcher mowers.

C. Summer Mowing Height for Lawns:
   1. Bahiagrass: 3 inches (75 mm).
   2. Bermuda, Common: 2 inches (50 mm).
   3. Bluegrass: 3 inches (75 mm).
   4. Fescue, Creeping Red: 3 inches (75 mm).
   5. Fescue, Fine: 2 inches (50 mm).
   6. Fescue, Tall: 4 inches (100 mm).
   7. Rye, Annual: 3 inches (75 mm).
   8. Rye, Perennial: 3 inches (75 mm).
   9. St. Augustine, Common: 4 inches (100 mm).
   10. St. Augustine, Improved: 3 inches (75 mm).

D. Mowing Playfields:
   1. Mowing Frequency: Once a week.

E. Mowing Naturalized Grass Areas:
   1. Mowing Frequency: One a season.

F. Trimming: Immediately after each mowing, neatly trim perimeter of each turf area and around obstructions within turf area; match height and appearance of adjacent turf.
   1. Adjacent to Pavements: Cut edges of turf to form a distinct, uniform turf edge.
   2. Adjacent to Planting Beds and Permanently Mulched Areas: Cut edges of turf to form a distinct, uniform turf edge.
   3. Around Other Trees and Poles: Where no planting bed or mulched area exists, trimming with string trimmer is acceptable.
   4. At Fences: Trim on both sides of fence.

5. Irrigation Heads and Valve Boxes: Trim neatly so grass doesn't interfere with operation.

G. Fertilizer: Apply as recommended by manufacturer and at rate indicated by soil analysis.

1. Cool Season Grasses: Apply at least once, in Fall before first frost; do not apply high nitrogen fertilizer during Summer; Spring application is optional but must be reduced in quantity.

H. Reseeding: Comply with requirements of Section 32 9219.

I. Resodding: Comply with requirements of Section 32 9223.

3.06 PLANTING BED MAINTENANCE

A. Planting beds include all planted areas except turf.

B. Begin maintenance immediately after plants have been installed; inspect at least once a week and perform needed maintenance promptly.

C. Keep planting beds free of pests; remove weeds and grass by hand before reaching 1 inch (25 mm) height.

D. Do not allow climbing, twining, or creeping plants to encroach into other species.

E. Ground Cover and Vines:

1. Trim to encourage dense, well-developed growth covering intended areas.

2. Do not allow plants to grow up trees, shrubs, or vines or encroach into turf or drainage channels, unless the drainage channel is intended to be planted with ground cover.

3. Remove existing plants grown up trees, shrubs, and vines.

F. Flowering Plants: Remove dead flower heads; do not trim off leaves of flowering bulbs until they are brown.

G. Replace mulch as required and remove debris.

3.07 TREE AND SHRUB MAINTENANCE

A. Trees will be considered dead when main leader has died back or when 25 percent or more of crown has died ; except as otherwise indicated for palm trees.

B. Shrubs will be considered dead when 25 percent or more of plant has died.

C. Inspect woody plants for health by scraping up to 1/16 inch (2 mm) square area of bark; no green cambium layer below bark shall be evidence of death.

D. Adjust stakes, guys and turnbuckles, ties, and trunk wrap as required to promote growth and avoid girdling.

E. Fertilizing: Fertilize all trees at least once during maintenance period, preferably in the Fall; use accepted standards for determining type and method of fertilization.

F. Pruning: Unless otherwise indicated, prune only to maintain balanced natural shape; follow recommendations of ANSI A300 and ANSI Z133.1 and best local practices for species involved.

G. Shrubs: Prune at least once during maintenance period at best time to influence ultimate shape and size for the particular species.

1. Prune to balance the plant's form and according to its natural growth characteristics.

2. Remove water shoots, suckers, and branches not conforming to desired shape and size.

H. Hedges: Trim to encourage growth into voids and gaps.

1. Formal Hedges: Trim to two feet high by three feet wide with base slightly wider than top and sides uniformly sloped; trim as often as necessary to maintain dimensions within 3 inches (75 mm) of specified dimensions.
2. Informal Hedges: Trim to six feet high, shaped naturally; trim as often as necessary to maintain dimensions within 6 inches (150 mm) of specified dimensions.

I. Young Trees: Prune at least once during maintenance period at best time to influence ultimate shape and size for the particular species; do not remove or cut off leader.

J. Renovation of Established Shrubs: Prune and trim as required to improve shape and balance as appropriate to the particular species; remove dead, damaged, and diseased branches and limbs; do not remove excess growth except as follows:

1. Remove growth in front of windows, above or obstructing entranceways and walkways, leaning against structures, and obstructing vision at street intersections.

K. Renovation of Established Trees (Except Palm Trees):

1. Remove dead, damaged, and diseased branches and limbs and structurally weak limbs that may be a safety hazard.
2. Remove growth in front of windows, above or obstructing entranceways and walkways, and leaning against structures.
3. Remove growth obstructing traffic signs or vision at street intersections.
4. Remove branches that extend over buildings or otherwise endanger roofs.
5. Remove low-hanging branches over vehicular traffic routes to height necessary to clear expected traffic including buses and moving vans.
6. Where indicated, remove excess growth by pruning technique best suited to future growth for the particular species.

3.08 CLEANING

A. Remove fallen deciduous leaves in Fall; removal may wait until all leaves have fallen.

B. Clean adjacent pavements of plant debris and other debris generated by maintenance activities.

C. Remove and dispose of general cleanup debris and biodegradable debris in a proper manner; Owner 's trash collection facilities may be used.

D. Remove and dispose of general cleanup debris and biodegradable debris in a proper manner.

1. Biodegradable Debris: Owner will designate a compost pile on site where biodegradable debris may be deposited; branches and bark are not considered biodegradable.
2. Branches and Bark: Owner will designate a wood chip storage area; machine-chip all branch and bark debris.
3. Non-Biodegradable Debris: Owner 's trash collection facilities may be used.

3.09 CLOSEOUT ACTIVITIES

A. 10 days prior to end of maintenance period, submit request for final inspection.

B. Final inspection will be conducted by Architect .

END OF SECTION

SECTION 32 1123
AGGREGATE BASE COURSES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Aggregate base course.

B. Paving aggregates.

1.02 RELATED REQUIREMENTS

A. Section 31 2200 - Grading: Preparation of site for base course.

B. Section 31 2316.13 - Trenching: Compacted fill over utility trenches under base course.

C. Section 31 2323 - Fill: Topsoil fill at areas adjacent to aggregate base course.

D. Section 31 2323 - Fill: Compacted fill under base course.

E. Section 32 1125 - Turf Surfaced Roadways: Additional aggregate base course requirements.

F. Section 32 1216 - Asphalt Paving: Finish and binder asphalt courses.

G. Section 32 1313 - Concrete Paving: Finish concrete surface course.

H. Section 32 1413 - Precast Concrete Unit Paving.

I. Section 32 1416 - Brick Unit Paving.

J. Section 32 1440 - Stone Paving.

K. Section 33 0513 - Manholes and Structures: Manholes including frames.

L. Section 33 4100 - Subdrainage: Filter aggregate and filter fabric for foundation drainage systems.

1.03 REFERENCE STANDARDS

A. AASHTO M 147 - Standard Specification for Materials for Aggregate and Soil-Aggregate Subbase, Base and Surface Courses 2017.

B. AASHTO T 180 - Standard Specification for Moisture-Density Relations of Soils Using a 4.54-kg (10-lb) Rammer and a 457-mm (18 in.) Drop 2017.

C. ASTM C136/C136M - Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates 2014.

D. ASTM D698 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft3 (600 kN-m/m3)) 2012, with Editorial Revision (2015).

E. ASTM D1556 - Standard Test Method for Density and Unit Weight of Soil in Place by the Sand-Cone Method 2007.

F. ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3 (2,700 kN m/m3)) 2012, with Editorial Revision (2015).

G. ASTM D2167 - Standard Test Method for Density and Unit Weight of Soil in Place by the Rubber Balloon Method 2015.

H. ASTM D2487 - Standard Practice for Classification of Soils for Engineering Purposes (Unified Soil Classification System) 2011.

I. ASTM D6938 - Standard Test Methods for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth) 2017.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Samples: 10 lb (4.5 kg) sample of each type of aggregate; submit in air-tight containers to testing laboratory.

C. Materials Sources: Submit name of imported materials source.

D. Aggregate Composition Test Reports: Results of laboratory tests on proposed and actual materials used.

E. Compaction Density Test Reports.

1.05 DELIVERY, STORAGE, AND HANDLING

A. When necessary, store materials on site in advance of need.

B. When aggregate materials need to be stored on site, locate where directed by Owner.

C. Aggregate Storage, General:

1. Separate differing materials with dividers or stockpile separately to prevent intermixing.
2. Prevent contamination.
3. Protect stockpiles from erosion and deterioration of materials.

1.06 QUALITY ASSURANCE

A. Single Source: Furnished from single source throughout Work.

B. Certification: Certify that source of materials for this Work meets these Specifications and provide tests required to prove that Work-in-progress meets requirements of these Specifications.

C. Installation by a contractor specializing in the work, and a minimum of ten (10) years of documented experience for successful, high quality installations of aggregate base specified herein.

PART 2 PRODUCTS

2.01 MATERIALS

A. Coarse Aggregate: Coarse aggregate, conforming to State of Maryland Highway Department standard.

B. Coarse Aggregate: Natural washed stone; free of shale, clay, friable material and debris.

1. Graded in accordance with ASTM D2487 Group Symbol GW.

C. Blended Aggregate: Pit run stone; free of shale, clay, friable material and debris.

1. Graded in accordance with ASTM D2487 Group Symbol GW.

D. Medium Aggregate: Natural stone; pea gravel, washed, free of clay, shale, organic matter.

1. Grade in accordance with ASTM D2487 Group Symbol GM.

E. Fine Aggregate: Natural river or bank sand; washed; free of silt, clay, loam, friable or soluble materials, and organic matter.

1. Grade in accordance with ASTM D2487 Group Symbol SW.

F. Herbicide: .

2.02 SOURCE QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for general requirements for testing and analysis of aggregate materials.

B. Where aggregate materials are specified using ASTM D2487 classification, test and analyze samples for compliance before delivery to site.

C. Where aggregate materials are specified using ASTM D2487 classification, testing of samples for compliance will be provided before delivery to site.

D. If tests indicate materials do not meet specified requirements, change material and retest.

E. Provide materials of each type from same source throughout the Work.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that survey bench marks and intended elevations for the work are as indicated.

B. Verify substrate has been inspected, gradients and elevations are correct, and is dry.

3.02 PREPARATION

A. Correct irregularities in substrate gradient and elevation by scarifying, reshaping, and re-compacting.

B. Do not place aggregate on soft, muddy, or frozen surfaces.

3.03 INSTALLATION

A. Under Bituminous Concrete Paving:

1. Place {CH#14505} to a total compacted thickness of {CH#14506}.
2. Compact to 95 percent of maximum dry density.

B. Under Portland Cement Concrete Paving:

1. Place coarse aggregate to a total compacted thickness of [6 inches] inches ([____] mm).
2. Compact to 95 percent of maximum dry density.

C. Place aggregate in maximum 4 inch (100 mm) layers and roller compact to specified density.

D. Level and contour surfaces to elevations and gradients indicated.

E. Add small quantities of fine aggregate to coarse aggregate as appropriate to assist compaction.

F. Add water to assist compaction. If excess water is apparent, remove aggregate and aerate to reduce moisture content.

G. Use mechanical tamping equipment in areas inaccessible to compaction equipment.

H. Apply herbicide to finished surface.

3.04 TOLERANCES

A. Flatness: Maximum variation of 1/4 inch (6.4 mm) measured with 10 foot (3 m) straight edge.

B. Scheduled Compacted Thickness: Within 1/4 inch (6.4 mm).

C. Variation From Design Elevation: Within 1/2 inch (12.8 mm).

3.05 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for general requirements for field inspection and testing.

B. Compaction density testing will be performed on compacted aggregate base course in accordance with ASTM D1556, ASTM D2167 or ASTM D6938.

C. If tests indicate work does not meet specified requirements, remove work, replace and retest.

3.06 CLEANING

A. Remove unused stockpiled materials, leave area in a clean and neat condition. Grade stockpile area to prevent standing surface water.

B. Leave borrow areas in a clean and neat condition. Grade to prevent standing surface water.

END OF SECTION

SECTION 32 1125
TURF SURFACED ROADWAYS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Water-permeable, turf surfaced aggregate base for infrequent vehicular traffic.

1.02 RELATED REQUIREMENTS

A. Section 31 2200 - Grading: Preparation of subbase.

B. Section 32 0190 - Operation and Maintenance of Planting: Turf maintenance.

C. Section 32 1123 - Aggregate Base Courses: Product and execution requirements for aggregate base course.

D. Section 32 1413 - Precast Concrete Unit Paving: Permeable paving accomplished using open grid concrete pavers.

E. Section 32 9223 - Sodding: Product and execution requirements for sodding.

1.03 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's printed product literature on all products specified in this section; include installation instructions.

C. Samples: Two full sized pieces of individual turf reinforcement units, or minimum 1 foot (300 mm) square piece of roll reinforcement, whichever is applicable.

D. Certificates: Certify that products of this section meet or exceed specified requirements.

E. Maintenance Data: Manufacturer's precautions for maintenance of turf and turf reinforcement.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

B. Installer Qualifications: Company specializing in performing the work of this section with minimum five years of experience.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Turf Reinforcement Manufacturers:

1. Invisible Structures, Inc: www.invisiblestructures.com/#sle.
2. NDS, Inc: www.ndspro.com/#sle.
3. Presto-Geosystems, Co: www.prestogeo.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

2.02 MATERIALS

A. Aggregate Base Course: Comply with requirements of Section 32 1123 with the following exceptions:

1. Sieve Analysis: For long term porosity provide:
   a. 100 percent passing 3/4 inch (19 mm) sieve.
   b. 85 percent passing 3/8 inch (9.5 mm) sieve.

c. 60 percent passing #4 sieve.

d. 30 percent passing #40 sieve.

e. Less than 3 percent passing #200 sieve.

2. pH: Between 6.5 and 7.2.

B. Moisture Absorbent Crystals: Dry synthetic crystal made of polyacrylamide (less than 0.1 percent) polymer; non-toxic and neutral in Ph; capable of absorbing 150 to 350 times its weight in water from most tap sources and capable of absorbing fertilizers and other minerals without degradation.

C. Turf Reinforcement: Plastic rings or grids for sand and grass fill, interlocking to form continuous reinforcement over roadway area, with geotextile on bottom.

1. Load Bearing Capacity: 365 psi (256,620 kg/sq m), minimum.

2. Material: Polyolefin or Polyethylene , up to 100 percent recyclable.

3. Recycled Content: 100 percent.

4. Thickness: 1 inch (25 mm), minimum.

5. Size: 20 by 20 inches (508 by 508 mm), nominal.

6. Size: Minimum 3.3 feet (1 meters) wide rolls.

7. Top Surface: Textured, with rhomboidal indentations.

D. Sod, Fertilizer, and Related Materials: As specified in Section 32 9223 with the following exceptions:

1. Sod Thickness: "Thick" sod, minimum 1 inch (25 mm) and maximum 1-3/8 inch (35 mm) topsoil base.

E. Signs: Provide durable materials suitable for outdoor exposure:

1. Firelane Markings: Identify entrance and physical location of firelanes using signs if gates, curbs, bollards, and other built elements do not adequately indicate firelanes; comply with requirements of local fire authorities.

2. Maintenance Warning Sign: Provide a sign indicating the presence of turf reinforcement, stating that special maintenance is required, with manufacturer's phone number.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that subgrade has been prepared correctly, is smooth, and is at the proper grade and level.

B. Do not begin work until subgrade is correct.

3.02 INSTALLATION

A. Install aggregate base course as specified in Section 32 1123.

B. Immediately before installing turf reinforcement, spread moisture absorbent crystals evenly over surface of base course, at rate of 5 pounds per 1000 square feet (2.25 kg per 100 square meters); do not allow crystals to be wetted prior to placement of reinforcement.

C. Install turf reinforcement and fill in accordance with manufacturer’s instructions.

1. Cut units to shape with pruning shears.

2. Place with top of grid/rings flush or slightly below the surface of adjacent hard-surfaced pavements.

3. Anchor units to base course, using anchors recommended by manufacturer, wherever anchorage is necessary to prevent movement by traffic.

D. Sodding: Install sod as specified in Section 32 9223 and as follows:

1. Install sod directly over turf reinforcement units with very tight joints between sod strips.
2. Vibrate sod into reinforcement with roller or plate, with sod in a moist condition, until the bottom of sod touches base of unit.
3. Keep sodded areas fertilized and moist for minimum of 3 weeks.

3.03 CLEANING

A. Clean adjacent paved surfaces of excess sand, gravel, soil, and debris. Sweep broom clean.

3.04 PROTECTION

A. Protect turf from all traffic other than emergency vehicles for minimum of 4 weeks, or until the root system has penetrated and established grass well below the turf reinforcement units.

END OF SECTION

SECTION 32 1216
ASPHALT PAVING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Aggregate base course.

B. Single course bituminous concrete paving.

C. Double course bituminous concrete paving.

D. Surface sealer.

1.02 RELATED REQUIREMENTS

A. Section 09 9113 - Exterior Painting: Pavement markings.

B. Section 31 2200 - Grading: Preparation of site for paving and base.

C. Section 31 2323 - Fill: Compacted subgrade for paving.

D. Section 32 1313 - Concrete Paving: Concrete substrate.

E. Section 32 1313 - Concrete Paving: Concrete curbs.

F. Section 32 1413 - Precast Concrete Unit Paving.

G. Section 32 1416 - Brick Unit Paving.

H. Section 32 1440 - Stone Paving.

I. Section 32 1723.13 - Painted Pavement Markings: Concrete bumpers.

J. Section 33 0513 - Manholes and Structures: Manholes, including frames; gutter drainage grilles, covers, and frames for placement by this section.

1.03 REFERENCE STANDARDS

A. AASHTO M 147 - Standard Specification for Materials for Aggregate and Soil-Aggregate Subbase, Base and Surface Courses 2017.

B. AI MS-2 - Mix Design Methods for Asphalt Concrete and Other Hot-Mix Types 2015.

C. AI MS-19 - A Basic Asphalt Emulsion Manual Fourth Edition.

D. ASTM C136/C136M - Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates 2014.

E. ASTM D946 - Standard Specification for Penetration-Graded Asphalt Cement for Use in Pavement Construction 2009a.

F. ASTM D2487 - Standard Practice for Classification of Soils for Engineering Purposes (Unified Soil Classification System) 2011.

G. ASTM D4318 - Standard Test Methods for Liquid Limit, Plastic Limit, and Plasticity Index of Soils 2017.

1.04 PERFORMANCE REQUIREMENTS

1.05 QUALITY ASSURANCE

A. Perform Work in accordance with State of Maryland Highways standard.

B. Mixing Plant: Conform to State of Maryland Highways standard.

C. Obtain materials from same source throughout.

1.06 FIELD CONDITIONS

A. Do not place asphalt when ambient air or base surface temperature is less than 40 degrees F (4 degrees C), or surface is wet or frozen.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

A. Conform to applicable code for paving work on public property.

2.02 MATERIALS

A. Aggregate for Base Course: In accordance with State of Maryland Highways standards.

B. Aggregate for Binder Course: In accordance with State of Maryland Highways standards.

C. Aggregate for Wearing Course: In accordance with State of Maryland Highways standards.

D. Fine Aggregate: In accordance with State of Maryland Highways standards.

E. Mineral Filler: Finely ground particles of limestone, hydrated lime or other mineral dust, free of foreign matter.

F. Fiber Reinforcement: Synthetic fibers shown to have long-term resistance to deterioration when in contact with alkalis and moisture; 1/2 inch (12 mm) length.

G. Primer: In accordance with State of Maryland Highways standards.

H. Tack Coat: Homogeneous, medium curing, liquid asphalt.

I. Seal Coat: AI MS-19, sand type.

2.03 ASPHALT PAVING MIXES AND MIX DESIGN

A. Base Course: 3.0 to 6 percent of asphalt cement by weight in mixture in accordance with AI MS-2.

B. Binder Course: 4.5 to 6 percent of asphalt cement by weight in mixture in accordance with AI MS-2.

C. Wearing Course: 5 to 7 percent of asphalt cement by weight in mixture in accordance with AI MS-2.

D. Submit proposed mix design of each class of mix for review prior to beginning of work.

2.04 SOURCE QUALITY CONTROL

A. Test mix design and samples in accordance with AI MS-2.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that compacted subgrade is dry and ready to support paving and imposed loads.

B. Verify gradients and elevations of base are correct.

3.02 BASE COURSE

A. Place and compact base course.

3.03 PREPARATION - PRIMER

A. Apply primer in accordance with manufacturer's instructions.

B. Apply primer on aggregate base or subbase at uniform rate of 1/3 gal/sq yd (1.5 L/sq m).

C. Use clean sand to blot excess primer.

3.04 PREPARATION - TACK COAT

A. Apply tack coat in accordance with manufacturer's instructions.

B. Apply tack coat on asphalt or concrete surfaces over subgrade surface at uniform rate of 1/3 gal/sq yd (1.5 L/sq m).

3.05 PLACING ASPHALT PAVEMENT - SINGLE COURSE

A. Install Work in accordance with State of Maryland Highways standards.

B. Place asphalt within 24 hours of applying primer or tack coat.

C. Compact pavement by rolling to specified density. Do not displace or extrude pavement from position. Hand compact in areas inaccessible to rolling equipment.

D. Perform rolling with consecutive passes to achieve even and smooth finish without roller marks.

3.06 PLACING ASPHALT PAVEMENT - DOUBLE COURSE

A. Place asphalt binder course within 24 hours of applying primer or tack coat.

B. Place wearing course within two hours of placing and compacting binder course.

C. Compact pavement by rolling to specified density. Do not displace or extrude pavement from position. Hand compact in areas inaccessible to rolling equipment.

D. Perform rolling with consecutive passes to achieve even and smooth finish, without roller marks.

3.07 SEAL COAT

A. Apply seal coat to surface course and asphalt curbs in accordance with AI MS-19.

3.08 TOLERANCES

A. Flatness: Maximum variation of 1/4 inch (6 mm) measured with 10 foot (3 m) straight edge.

B. Variation from True Elevation: Within 1/2 inch (12 mm).

3.09 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for general requirements for quality control.

B. Provide field inspection and testing. Take samples and perform tests in accordance with AI MS-2.

3.10 PROTECTION

A. Immediately after placement, protect pavement from mechanical injury for three days or until surface temperature is less than 140 degrees F (60 degrees C).

3.11 SCHEDULE

A. Pavement at Truck Ramp and Garbage Area: Single course of 3-1/2 inch (89 mm) compacted thickness, sand seal coat.

B. Pavement at Parking Areas: Two courses; binder course of 2-1/2 inch (63 mm) compacted thickness and wearing course of 1 inch compacted thickness, fog seal coat.

C. Pavement at Rear Bus Loading Area: Thickness and compaction of subbase to support vehicles up to 30,000 lb (13 600 kg).

D. Pavement Front Sidewalks: Thickness and compaction of subbase to support moderate pedestrian traffic.

END OF SECTION

SECTION 32 1218
PERVIOUS PAVEMENTS

PART 1 - GENERAL:

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1, Specification Sections apply to work in this section.

1.02 DESCRIPTION OF WORK:

A. This work shall consist of constructing pervious pavements consisting of pervious Portland cement concrete mix (rigid pavement) for sidewalk as specified in the Contract Drawings or as directed by the Engineer.

1.03 RELATED WORK:

A. Refer to Section 31 20 00 "Earthmoving".

1.04 STANDARDS:

A. Maryland Department of Transportation State Highway Administration's current "Standard Specifications for Construction and Materials".

B. American Concrete Institute Standard – 522.1 (latest edition)

1.05 SUBMITTALS:

A. Submit location of product manufacture and of extraction/recovery of primary raw materials.

B. Contractor Qualifications related to construction of pervious concrete pavement. The contractor shall furnish the architect with a statement attesting to qualification and experience in placing pervious concrete. The forwarded information shall include the names and addresses of at lest two (2) completed projects.

C. Proposed concrete mixture proportions and density.

D. Submit certificates stating that in-place surface concrete materials achieve a minimum Solar Reflectance Index value of at least 29 when freshly installed, and will achieve a minimum Solar Reflectance Index of at least 29 when weathered, as tested by ASTM C1549.

1.06 QUALITY ASSURANCE:

A. Contractor Qualifications: The Contractor shall employ no less than one National Ready Mixed Concrete Association (NRMCA) certified pervious concrete craftsman who must be on-site, overseeing each placement crew during all concrete placement, or the Contractor shall employ no less than three NRMCA certified Pervious Concrete Installers, who shall be on-site working as members of each placement crew during all concrete placement, or the Contractor shall employ no less than five NRMCA certified Pervious Concrete Technicians, who shall be on site working as members of each placement crew during all concrete placement unless otherwise specified. Alternative documentation of qualifications shall be permitted when approved by the Architect/Engineer.

B. Test Panels: The Contractor is to place, joint, and cure one test panels, each to be a minimum of 225 sq. ft. at the required project thickness. Test panels, if acceptable, may be incorporated into the project. Following a minimum of seven days, two cores shall be extracted from each test panel. The extracted cores shall be tested for thickness in accordance with ASTM C 42; core unit weight in accordance with ASTM C 140, Paragraph 6.3.l, and void structure. Satisfactory performance of the test panels will be determined by:

1. Compacted thickness to be no less than ½” of the specified thickness,

2. Unit weight to be ± five (5) pcf of the design unit weight as approved by the Engineer, and consistency and uniformity of the void structure.
3. Failure to comply with any of the above criteria will result in the Contractor removing and disposing of the test panel at its own expense.
4. The test panel must provide a minimum SRI value of 29 as tested by ASTM C1549. If the test panel fails to meet this requirement provide additional color to the concrete to meet this requirement.

1.07 PROJECT CONDITIONS:

A. Traffic: Maintain pedestrian traffic during walk construction operations.

B. Limitations:

1. Underground Utilities: Do not proceed with concrete construction until underground utility construction is complete.
2. Curbing: Do not proceed with concrete walk construction until adjacent or adjoining curb construction is complete.
3. Handicapped ramps shall be regular concrete, constructed in accordance with Section 32 13 13.

PART 2 - PRODUCTS:

2.01 MATERIALS:

A. Gravel Base: Washed AASHTO No. 3 Coarse Aggregate shall be used as a pavement aggregate base. Washed AASHTO No. 57 stone (same as MSHA Agg. No. 57 Stone, table 901A) shall be used as a Chocker Aggregate Coarse to be placed on top of the pavement aggregate base. Other aggregate sizes may be used if approved by the Engineers. Fine Aggregate shall not be used in either the aggregate base or the chocker aggregate coarse.

AASH												
TO							3/8				#10	#20
No.	2½”	2”	1½”	1”	¾”	½”	”	#4	#8	#16	0	0
3	100	90-100	35-70	0-15		0-5						
57			100	95-100		25-60		0-10	0-5			

a. Regional Materials: Provide aggregate manufactured and of primary raw materials extracted or recovered within 500 mile radius of Project Site.

B. Pervious Portland Cement Concrete: The permeable pavement section shall consist of portland-cement based pervious concrete. Pervious concrete shall be designed and constructed in accordance with ACI 522.1-08 “Specification for Pervious Concrete Pavement”. It is also recommended that the guidelines for Ready-Mixed Concrete, ASTM C94, be used as a general guideline for the manufacturing and delivery of the pervious concrete. Each locality will generally create a unique mix design that will contain locally available materials. It is the responsibility of the Contractor to work with the local Ready-Mix suppliers to finalize a mixdesign that will be acceptable for each project. If the mix-design is new to the local supplier, then at least three trial-batches shall be made before the decision is made to use that particular mix design. Both the Contractor, and the Supplier, must agree on any particular mix design before it is submitted to the Owner's Representative.

Mix Properties	Targeted Criteria	Tolerance of Mix Design
Cementitious Materials* (MDOT-SHA 902-03)	650 lb/yd3	± 50 lb

Water Cement Ratio*	0.30	± 0.03
Design Unit Weight* (ASTM) C 29 Paragraph 11, Jigging Procedure	135 lb/ft3	± 5 lb.
Coarse Aggregate*	AASHTO No 89	-
Fine Aggregate	None	-
Permeability	8”/hr min.	-
Thickness	Per Plan	-
All Voids	22% min.	± 3%

a. * Or as approved by the Engineer

C. Joint Materials: Expansion and Isolation Joints: ASTM D 994, bituminous preformed joint filler, 1/2 inch thick.

D. Forms: Steel or wood for straight or tangent walks. Non-rented wood materials shall be FSC-certified sustainably harvested.

E. Curing Materials: Burlap Mats: AASHTO M182, Class 1.

F. Joint Sealant: Shall conform to MDOT-SHA Standards Section 911.01.

G. Miscellaneous Products:

1. Form Release Compound: Non-staining, zero-VOC, 100% biodegradable made from plant-based oils and approved by the Architect.

2. Cement Mortar: Section 33 10 00 "Utility Standards".

PART 3 - EXECUTION:

3.01 PROTECTION AND RESTORATION:

A. Concrete: Protect completed concrete from damage. Restore damaged concrete as directed by the Owner’s Representative or the Architect.

3.02 SUBGRADE PREPARATION:

A. Paved Areas: Section 31 20 00 "Earthmoving" and as noted. Verify subgrade elevations and compaction and correct discrepancies before proceeding with construction. After reaching the required elevation the exposed subgrade shall not be compacted. Slope of the exposed subgrade shall not exceed 5 percent. Elevation of existing groundwater shall be at least (3) feet below the level of the exposed subgrade. Bedrock, if any, shall be located at least two (2) feet below the level of the exposed subgrade.

B. Geotextile: The exposed subgrade shall be overlaid by an SD TYPE II nonwoven geotextile fabric installed in accordance with manufacturer’s recommendations. The fabric shall be se- cured around the aggregate base for protection against runoffs and flow of sediments.

C. Determine subgrade permeability in accordance with ASTM D3385 before concrete placement. Confirm that subgrade permeability meets requirements of Contract Documents.

3.03 GRAVEL BASE PLACEMENT:

A. Aggregate Base: Thickness of the aggregate base shall not be less than 36 inches or as directed by the Engineer. Do not place gravel base material on frozen or muddy subgrade.

B. Chocker Aggregate Coarse: the choker aggregate coarse, placed on top of the aggregate base, shall provide a level paving plane prior to placing the pervious concrete. Thickness of the choker aggregate coarse shall be a minimum of 2 inches. Remove debris from surface of gravel prior to placement of concrete.

3.04 FORMS:

A. Fixed forms shall be of steel or wood and shall extend to the full depth of the concrete. All forms shall be straight, free from warp and of sufficient strength to resist the pressure of the concrete without displacement. Bracing and staking of forms shall be so that the forms remain in both horizontal and vertical alignment until their removal. The forms shall be thoroughly cleaned and coated with form release compound each time they are used. The concrete shall be set for a minimum of 12 hours before the forms are removed and every precaution shall be taken to avoid damaging the concrete.

3.05 EXPANSION JOINTS:

A. Install expansion joints at maximum 40-foot intervals or as indicated. Install expansion joints, adjacent to curbing, opposite curbing joints, around structures and as indicated. Place expansion joints perpendicular to concrete surface and with top edge 1/2 inch below concrete surface. Provide sealant on all expansion joints.

3.06 ISOLATION JOINTS:

A. Install isolation joints where concrete abuts buildings, existing walk sections, utility structures and concrete curb. Place isolation joints with top edge 1/4 inch below concrete surface.

3.07 CONTRACTION JOINTS (SCORE LINES):

A. Provide contraction joints at 20-foot intervals or as indicated. Form contraction joints with 3/4 inch jointing tool.

3.08 CONCRETE PLACEMENT:

A. Sample Approval: No pervious concrete may be constructed until the sample section has been inspected and approved by the Owner’s Representative.

B. General: Before placing concrete the choker aggregate coarse shall be moistened with water. The concrete shall be mixed in conformance with approved mix design. Concrete shall be deposited on the prepared choker aggregate coarse in successive batches to the full width of the formed section. It shall be struck off, screeded to the elevation of the top of the forms, and rolled to consolidate.

3.09 FINISHING:

A. Plastering of the surface is prohibited. Pervious concrete shall not be floated or troweled. A steel roller shall be used for compaction and finishing. All outside edges and all joints shall be edged with a ¼ in. edging tool.

3.10 CURING:

A. Begin curing within 20 minutes of concrete discharge unless longer working time is accepted by the Architect/Engineer.

B. Completely cover the pavement surface with a minimum 6 mil (0.15 mm) thick polyethylene sheet. Cut sheeting to a minimum of a full placement width.

C. Cover all exposed edges of pavement with polyethylene sheet.

D. Secure curing cover material without using dirt.

E. Cure pavement for a minimum of 7 uninterrupted days, unless otherwise specified.

3.11 JOINT SEALING:

A. Expansion joints shall be cleaned of dirt or other foreign material prior to placement of the joint sealing compound. Joint surfaces to which the sealing material is to adhere shall be surface dry for at least three hours prior to sealing. No sealing material shall be used until the joints are acceptable to the Engineer. The surface of the sealing compound shall be a maximum of 1/8 in. below the level of the sidewalk

surface.

3.12 TESTING:

A. General: Correct work not conforming to tolerances as directed by the Owner's Representative or the Architect, at no increase to the contract sum.

B. Density shall be determined for each 100 cubic yards or fraction thereof delivered, with a minimum of one test for each day's placement. Plastic concrete shall be collected in accordance with ASTM C172. Density shall be determined in accordance with ASTM C138, following the consolidation procedures described in ASTM C1688. The density of the delivered concrete shall be within plus-or-minus 5 pounds per cubic foot of the specified design density.

C. Failure to comply with any of the thickness, unit weight, or voids criteria shall result in the Contractor removing and disposing of the non-complying porous concrete at the Contractor's own expense.

D. Smoothness Tests: Conduct surface smoothness tests. Tolerance not to exceed 1/4 inch between any two surface contacts on a 10-foot straightedge. Test locations are random and to be determined by the Owner's Representative or the Architect. Regardless of paved area size, at least one test shall be performed for each newly paved area.

3.13 BACKFILL

A. After the forms have been stripped and any necessary repairs are satisfactorily completed, the spaces in front and back of the sidewalk shall be backfilled to the required elevations using material approved by the Engineer.

END OF SECTION

SECTION 32 1313
CONCRETE PAVING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Concrete sidewalks, stair steps, integral curbs, gutters, median barriers, parking areas and roads.

1.02 RELATED REQUIREMENTS

A. Section 03 1000 - Concrete Forming and Accessories.

B. Section 03 2000 - Concrete Reinforcing.

C. Section 03 3000 - Cast-in-Place Concrete.

D. Section 07 9200 - Joint Sealants: Sealing joints.

E. Section 09 9113 - Exterior Painting: Pavement markings.

F. Section 31 2200 - Grading: Preparation of site for paving and base and preparation of subsoil at pavement perimeter for planting.

G. Section 31 2323 - Fill: Compacted subbase for paving.

H. Section 32 1123 - Aggregate Base Courses:

I. Section 32 1216 - Asphalt Paving: Asphalt wearing course.

J. Section 32 1413 - Precast Concrete Unit Paving.

K. Section 32 1416 - Brick Unit Paving.

L. Section 32 1440 - Stone Paving.

M. Section 32 1726 - Tactile Warning Surfacing: Plastic tactile and detectable warning tiles for pedestrian walking surfaces.

N. Section 33 0513 - Manholes and Structures: Manholes, including frames; gutter drainage grilles, covers, and frames for placement by this section.

1.03 REFERENCE STANDARDS

A. ACI 211.1 - Standard Practice for Selecting Proportions for Normal, Heavyweight, and Mass Concrete 1991 (Reapproved 2009).

B. ACI 301 - Specifications for Structural Concrete 2016.

C. ACI 304R - Guide for Measuring, Mixing, Transporting, and Placing Concrete 2000 (Reapproved 2009).

D. ACI 305R - Guide to Hot Weather Concreting 2010.

E. ACI 306R - Guide to Cold Weather Concreting 2016.

F. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement 2018, with Editorial Revision (2018).

G. ASTM A1064/A1064M - Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete 2018.

H. ASTM C33/C33M - Standard Specification for Concrete Aggregates 2016, with Editorial Revision (2016).

I. ASTM C39/C39M - Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens 2018.

J. ASTM C94/C94M - Standard Specification for Ready-Mixed Concrete 2017a.

K. ASTM C150/C150M - Standard Specification for Portland Cement 2018.

L. ASTM C173/C173M - Standard Test Method for Air Content of Freshly Mixed Concrete by the Volumetric Method 2016.

M. ASTM C260/C260M - Standard Specification for Air-Entraining Admixtures for Concrete 2010a (Reapproved 2016).

N. ASTM C309 - Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete 2011.

O. ASTM C494/C494M - Standard Specification for Chemical Admixtures for Concrete 2017.

P. ASTM C685/C685M - Standard Specification for Concrete Made by Volumetric Batching and Continuous Mixing 2014.

Q. ASTM D1751 - Standard Specification for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Nonextruding and Resilient Bituminous Types) 2018.

R. ASTM D1752 - Standard Specification for Preformed Sponge Rubber Cork and Recycled PVC Expansion Joint Fillers for Concrete Paving and Structural Construction 2004a (Reapproved 2013).

S. ASTM D8139 - Standard Specification for Semi-Rigid, Closed-Cell Polypropylene Foam, Preformed Expansion Joint Fillers for Concrete Paving and Structural Construction 2017.

1.04 **SUBMITTALS**

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on joint filler, admixtures and curing compound.

C. Design Data: Indicate pavement thickness, designed concrete strength, reinforcement, and typical details.

1.05 **QUALITY ASSURANCE**

A. Manufacturer Qualifications: Manufacturer of ready-mixed concrete products who complies with ASTM C 94/C 94M requirements for production facilities and equipment.

PART 2 PRODUCTS

1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities."

B. Concrete Testing Service: Engage a qualified independent testing agency to perform material evaluation tests and to design concrete mixtures.

C. Work, materials, and color of any handicap ramp paving shall conform to applicable sections of Americans with Disabilities Act (ADA) Accessibility Guidelines for Buildings and Facilities.

D. Paving work, base course etc., shall be done only after excavation and construction work which might damage them have been completed. Damage caused during construction shall be repaired before acceptance.

E. Existing paved areas shall, if damaged or removed during course of this project, be repaired or replaced under this section of the specification. Workmanship and materials for such repair and replacement, except as otherwise noted, shall match as closely as possible those employed in existing work.

F. Pavement, base, or sub-base shall not be placed on a muddy or frozen subgrade.

2.02 **PAVING ASSEMBLIES**

A. Comply with applicable requirements of ACI 301.

B. Design paving for parking and residential streets.

C. Concrete Sidewalks and Median Barrier: 3,000 psi (20.7 MPa) 28 day concrete, 4 inches (100 mm) thick, buff color Portland cement, exposed aggregate finish.

D. Parking Area Pavement: 4,000 psi (27.6 MPa) 28 day concrete, 5 inches (125 mm) thick, 6 by 6 - W2.9 by W2.9 mesh reinforcement, wood float finish.

2.03 FORM MATERIALS

A. Form Materials: As specified in Section 03 1000, conform to ACI 301.

B. Joint Filler: Preformed; non-extruding bituminous type (ASTM D1751) or sponge rubber or cork (ASTM D1752).

1. Thickness: 1/2 inch (12 mm).

2.04 REINFORCEMENT

A. Reinforcing Steel and Welded Wire Reinforcement: Types specified in Section 03 2000.

B. Dowels: ASTM A615/A615M, Grade 40 - 40,000 psi (280 MPa) yield strength; deformed billet steel bars; unfinished finish.

2.05 CONCRETE MATERIALS

A. Concrete Materials: As specified in Section 03 3000.

B. Fiber Reinforcement: Synthetic fibers shown to have long-term resistance to deterioration when in contact with alkalis and moisture; 1/2 inch (12 mm) length.

2.06 ACCESSORIES

A. Acid Etch Solution: Muriatic type mixed to a 10 percent solution.

B. Curing Compound: ASTM C309, Type 1, Class A.

C. Liquid Surface Sealer:

D. Surface Retarder:

1. Color: As indicated.

E. Slab Isolation Joint Filler: 1/2 inch (13 mm) thick, height equal to slab thickness, with removable top section that will form 1/2 inch (13 mm) deep sealant pocket after removal.

1. Material: ASTM D1751, cellulose fiber.

F. Tactile Warning Surfaces: See Section 32 1726.

2.07 CONCRETE MIX DESIGN

A. Proportioning Normal Weight Concrete: Comply with ACI 211.1 recommendations.

B. Concrete Strength: Establish required average strength for each type of concrete on the basis of field experience or trial mixtures, as specified in ACI 301.

1. For trial mixtures method, employ independent testing agency acceptable to Architect for preparing and reporting proposed mix designs.

C. Admixtures: Add acceptable admixtures as recommended in ACI 211.1 and at rates recommended by manufacturer.

D. Fiber Reinforcement: Add to mix at rate of 1.5 pounds per cubic yard (0.89 kg per cubic meter), or as recommended by manufacturer for specific project conditions.

E. Concrete Properties:

1. Compressive strength, when tested in accordance with ASTM C39/C39M at 28 days; .

2. Fly Ash Content: Maximum 15 percent of cementitious materials by weight.
3. Calcined Pozzolan Content: Maximum 10 percent of cementitious materials by weight.
4. Silica Fume Content: Maximum 5 percent of cementitious materials by weight.
5. Water-Cement Ratio: Maximum 40 percent by weight.
6. Total Air Content: 4 percent, determined in accordance with ASTM C173/C173M.
7. Maximum Slump: 3 inches (75 mm).

2.08 **MIXING**

A. On Project Site: Mix in drum type batch mixer, complying with ASTM C685/C685M. Mix each batch not less than 1-1/2 minutes and not more than 5 minutes.

B. Transit Mixers: Comply with ASTM C94/C94M.

PART 3 EXECUTION

3.01 **EXAMINATION**

A. Verify compacted subgrade is acceptable and ready to support paving and imposed loads.

B. Verify gradients and elevations of base are correct.

3.02 **SUBBASE**

A. See Section 32 1123 for construction of base course for work of this Section.

3.03 **PREPARATION**

A. Moisten base to minimize absorption of water from fresh concrete.

B. Coat surfaces of manhole frames with oil to prevent bond with concrete pavement.

C. Notify Architect minimum 24 hours prior to commencement of concreting operations.

3.04 **FORMING**

A. Place and secure forms to correct location, dimension, profile, and gradient.

B. Assemble formwork to permit easy stripping and dismantling without damaging concrete.

C. Place joint filler vertical in position, in straight lines. Secure to formwork during concrete placement.

3.05 **REINFORCEMENT**

A. Place reinforcement at top of slabs-on-grade.

B. Interrupt reinforcement at contraction joints.

C. Place dowels to achieve pavement and curb alignment as detailed.

3.06 **COLD AND HOT WEATHER CONCRETING**

A. Follow recommendations of ACI 305R when concreting during hot weather.

B. Follow recommendations of ACI 306R when concreting during cold weather.

C. Do not place concrete when base surface temperature is less than 40 degrees F (4 degrees C), or surface is wet or frozen.

3.07 **PLACING CONCRETE**

A. Place concrete in accordance with ACI 304R.

B. Do not place concrete when base surface is wet.

C. Ensure reinforcement, inserts, embedded parts, formed joints and [____] are not disturbed during concrete placement.

D. Place concrete continuously over the full width of the panel and between predetermined construction joints. Do not break or interrupt successive pours such that cold joints occur.

E. Apply surface retarder to all exposed surfaces in accordance with manufacturer's instructions.

3.08 **JOINTS**

A. Align curb, gutter, and sidewalk joints.

B. Place 3/8 inch (10 mm) wide expansion joints at 20 foot (6 m) intervals and to separate paving from vertical surfaces and other components and in pattern indicated.

1. Form joints with joint filler extending from bottom of pavement to within 1/2 inch (13 mm) of finished surface.

2. Secure to resist movement by wet concrete.

C. Provide scored joints.

1. At 3 feet (1 m) intervals.

2. Between sidewalks and curbs.

3. Between curbs and pavement.

D. Provide keyed joints as indicated.

E. Saw cut contraction joints 3/16 inch (5 mm) wide at an optimum time after finishing. Cut 1/3 into depth of slab.

3.09 **FINISHING**

A. Sidewalk Paving: Light broom, texture perpendicular to direction of travel with troweled and radiused edge 1/4 inch radius (6 mm radius).

B. Curbs and Gutters: Light broom, texture parallel to pavement direction.

C. Place sealer on exposed concrete surfaces immediately after finishing. Apply in accordance with manufacturer's instructions.

3.10 **TOLERANCES**

A. Maximum Variation of Surface Flatness: 1/4 inch (6 mm) in 10 ft (3 m).

B. Maximum Variation From True Position: 1/4 inch (6 mm).

3.11 **FIELD QUALITY CONTROL**

A. An independent testing agency will perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

1. Provide free access to concrete operations at project site and cooperate with appointed firm.

2. Submit proposed mix design of each class of concrete to inspection and testing firm for review prior to commencement of concrete operations.

3. Tests of concrete and concrete materials may be performed at any time to ensure conformance with specified requirements.

B. Compressive Strength Tests: ASTM C39/C39M; for each test, mold and cure three concrete test cylinders. Obtain test samples for every 100 cu yd (76 cu m) or less of each class of concrete placed.

1. Take one additional test cylinder during cold weather concreting, cured on job site under same conditions as concrete it represents.
2. Perform one slump test for each set of test cylinders taken.

C. Maintain records of placed concrete items. Record date, location of pour, quantity, air temperature, and test samples taken.

3.12 **PROTECTION**

A. Immediately after placement, protect pavement from premature drying, excessive hot or cold temperatures, and mechanical injury.

B. Do not permit pedestrian traffic over pavement until 75 percent design strength of concrete has been achieved.

END OF SECTION

SECTION 32 1413
PRECAST CONCRETE UNIT PAVING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Interlocking concrete paver units.

B. Non-interlocking concrete paver units.

C. Open grid concrete paver units.

D. Detectable warning pavers.

E. Sand setting bed.

F. Sand joint filler.

G. Polymeric sand joint filler.

H. Aggregate fill.

I. Topsoil filler.

J. Edge restraints.

1.02 RELATED REQUIREMENTS

A. Section 31 2200 - Grading: Preparation of subsoil for pavers.

B. Section 31 2323 - Fill: Compacted fill for pavers.

C. Section 32 1123 - Aggregate Base Courses: Aggregate subbase for pavers.

D. Section 32 1216 - Asphalt Paving: Pavement subbase for pavers.

E. Section 32 1313 - Concrete Paving: Concrete subbase for pavers.

F. Section 33 0513 - Manholes and Structures: Manholes including frames.

1.03 REFERENCE STANDARDS

A. ASTM C33/C33M - Standard Specification for Concrete Aggregates 2016, with Editorial Revision (2016).

B. ASTM C144 - Standard Specification for Aggregate for Masonry Mortar 2017.

C. ASTM C936/C936M - Standard Specification for Solid Concrete Interlocking Paving Units 2018.

D. ASTM C1319 - Standard Specification for Concrete Grid Paving Units 2017.

E. ASTM D5268 - Standard Specification for Topsoil Used for Landscaping Purposes 2013.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide characteristics of paver unit, detectable warning pavers, dimensions, and special shapes.

C. Product Data: Provide characteristics of polymeric sand, including base material, additive(s), compressive strength, and color.

D. Samples: Submit two samples of each paver type, illustrating style, size, color range and surface texture of units being provided.

E. Manufacturer's Installation Instructions: Indicate substrate requirements and installation methods.

F. Maintenance Materials: Provide the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Pavers: 10 of each type and size.

1.05 QUALITY ASSURANCE

A. Paving Subcontractor Qualifications:

1. Utilize an installer having successfully completed concrete paver installation similar in design, material, and extent indicated on this project.
2. Utilize an installer holding a current certificate from the Interlocking Concrete Pavement Institute Concrete Paver Installer Certification program.

B. Regulatory Requirements and Approvals: All applicable licensing, bonding or other requirements of Prince George's County.

C. Mock-ups:

1. Install a 4 ft x 4 ft paver area.
2. Use this area to determine surcharge of the bedding sand layer, joint sizes, lines, laying pattern(s), color(s) and texture of the job.
3. This area will be used as the standard by which the work will be judged.
4. Subject to acceptance by owner, mock-up may be retained as part of finished work.
5. If mock-up is not retained, remove and properly dispose of mock-up.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Interlocking Permeable Concrete Pavers:

1. Capitol Ornamental Concrete Specialties, Inc: www.capitolconcreteproducts.com/#sle.
2. Hanover Architectural Products, Inc: www.hanoverpavers.com/#sle.
3. Oldcastle: www.oldcastle.com/#sle.
4. Tectura Designs, a division of Wausau Tile Inc; Granitex: www.tecturadesigns.com/#sle.
5. The Concrete Products Group; Spec-Pave: www.concreteproductsgroup.com/#sle.
6. Unilock; Promenade Plank Pavers: www.unilock.com/#sle.
7. Substitutions: See Section 01 6000 - Product Requirements.

B. Open Grid Concrete Pavers:

1. Belgard Turfstone: www.belgard.biz/dealer.htm.
2. Interlock Paving Systems, Inc www.interlockonline.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

2.02 MATERIALS

A. Interlocking Concrete Pavers: Hydraulically pressed concrete, configured for interlocking with adjacent units and complying with ASTM C936/C936M.

1. Compressive Strength: 8000 pounds per square inch (55 MPa) average, with minimum of 7200 pounds per square inch (50 MPa).
2. Thickness: 2-3/8 inches (60 mm).
3. Type: Rectangular.

4. Color: Natural.

B. Open Grid Pavers: Precast concrete units complying with ASTM C1319.

1. Compressive Strength: 5000 pounds per square inch (35 MPa) average, with minimum of 4500 pounds per square inch (31 MPa).
2. Absorption: Maximum of 10 pounds per cubic foot (160 kg per cubic m) averaged over three units.
3. Net Open Area: Minimum 50 percent.
4. Thickness: 3-1/8 inches (80 mm).
5. Color: Natural.

C. Detectable Warning Pavers: Cast concrete with truncated domes, color provided by architect.

D. Sand for Setting Bed: Clean washed natural sand or crushed stone complying with gradation requirements of ASTM C33/C33M for fine aggregates.

E. Sand for Joints: Fine washed sand with 100 percent passing No. 16 (1.18 mm) sieve and not more than 10 percent passing No. 200 (0.075 mm) sieve.

F. Polymeric Sand: Fine sand conforming to ASTM C144 combined with polymer binders for creating semi-solid joints between pavers.

1. Material: Granite.
2. Additive(s): Portland Cement.
3. Compressive Strength: 750 pounds per square inch (5 MPa).
4. Adhesion by Tensile Load: 100 pounds per square inch (0.7 MPa).
5. Color: Beige.

G. Aggregate Fill: Open-graded aggregate for filling voids and joints in open grid paver units, conforming to requirements of ASTM C33/C33M for No. 8 crushed stone.

H. Topsoil Fill: For filling voids and joints, provide topsoil conforming to ASTM D5268.

I. Edging: Concrete curb, as detailed.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that substrate is level or to correct gradient, smooth, capable of supporting pavers and imposed loads, and ready to receive work of this Section.

B. Verify gradients and elevations of substrate are correct.

C. Verify dry weather forecast without rain for a minimum of 24 hours with temperatures above 55 degrees Fahrenheit (13 degrees Celsius).

D. Verify that pavers are completely dry prior to polymeric sand installation.

3.02 PREPARATION

A. Treat soil with herbicide to retard plant growth.

B. Wear clothing and equipment to protect from excessive exposure to polymeric sand.

C. See Section 31 2200 for subsoil preparation.

D. See Section 31 2323 for fill compaction requirements.

E. See Section 32 1123 for aggregate subbase.

F. See Section 32 1216 for pavement subbase.

G. See Section 32 1313 for concrete subbase.

3.03 INSTALLATION OF SOLID PAVER UNITS

A. Spread sand bedding evenly over prepared substrate surface to a maximum thickness of 1-1/2 inch (38 mm).

B. Dampen and roller compact sand to level and even surface.

C. Screed and scarify top 1 inch to 1 1/2 inch (12 mm) of sand.

D. Cut paver units at edges with masonry saw.

E. Place half units at edge and interruptions. Maintain tight joints.

F. Sprinkle sand over surface and sweep into joints. Moisten joints and recover with additional sand until firm joints are achieved. Remove excess sand.

G. Spread polymeric sand uniformly over surface. Use a push broom to fill joints and remove excess while not sweeping long distances. Sweep all excess with a fine bristle brush and remove residues with a leaf blower.

H. Tamp and level paver units with mechanical vibrator until units are firmly bedded, level, and to correct elevation and gradients. Do not tamp unrestrained edges.

3.04 INSTALLATION OF OPEN GRID PAVER UNITS

A. Spread sand evenly over prepared substrate course and screed to a uniform thickness of 1-1/2 inch (38 mm).

B. Place paver units in pattern indicated on drawings.

C. Maintain uniform joints between paver units not more than 1/8 inch (4 mm) wide.

D. Cut paver units at edges with masonry saw.

E. Compact and seat paver units into screeded setting bed using low amplitude plate compactor capable of at least 5,000 lb (22 kN) centrifugal compaction force.

F. Vibrate and compact pavers again while sweeping aggregate fill or topsoil into joints and openings in pavers, stopping when fill material is within 1/2 inch (13 mm) from top surface of units. Do not compact within 3 ft (1 m) of unrestrained paver edges.

G. Completely fill voids in pavers with aggregate fill. Remove excess material.

3.05 CLEANING

A. Do not clean pavers until pavers and mortar are dry.

B. Clean soiled surfaces using cleaning solution. Do not harm pavers, joint materials, or adjacent surfaces.

C. Use non-metallic tools in cleaning operations.

D. Rinse surfaces with clean water.

E. Broom clean paving surfaces. Dispose of excess sand.

F. See Section 01 7419 for construction waste management and disposal.

3.06 PROTECTION

A. Do not permit traffic over unprotected paver surface.

B. Protect paver surface with sheets of plywood.

C. Do not permit traffic for 48 hours after pavement placement.

3.07 MAINTENANCE

A. See Section 01 7000 - Execution and Closeout Requirements, for additional requirements relating to maintenance service.

B. Provide a separate maintenance contract for specified maintenance service.

END OF SECTION

SECTION 32 1416
BRICK UNIT PAVING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Brick Pavers.

B. Sand Materials.

C. Cementitious Materials.

D. Bituminous Materials.

E. Reinforcement.

F. Accessories.

G. Mixes.

1.02 RELATED REQUIREMENTS

A. Section 31 2323 - Fill: Compacted subbase preparation.

B. Section 32 1216 - Asphalt Paving: Bituminous paving for brick paver base; extruded asphalt curbs.

C. Section 32 1313 - Concrete Paving: Concrete paving for brick paver base; concrete curbs.

D. Section 33 0513 - Manholes and Structures: Frames to be built into paving.

1.03 REFERENCE STANDARDS

A. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design 2010.

B. ASTM A1064/A1064M - Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete 2018.

C. ASTM C33/C33M - Standard Specification for Concrete Aggregates 2016, with Editorial Revision (2016).

D. ASTM C144 - Standard Specification for Aggregate for Masonry Mortar 2017.

E. ASTM C150/C150M - Standard Specification for Portland Cement 2018.

F. ASTM C270 - Standard Specification for Mortar for Unit Masonry 2014a.

G. ASTM C902 - Standard Specification for Pedestrian and Light Traffic Paving Brick 2015.

H. ASTM C920 - Standard Specification for Elastomeric Joint Sealants 2018.

I. ASTM C1272 - Standard Specification for Heavy Vehicular Paving Brick 2017.

J. ASTM C1330 - Standard Specification for Cylindrical Sealant Backing for Use with Cold Liquid-Applied Sealants 2018.

K. ASTM D946/D946M - Standard Specification for Penetration-Graded Asphalt Binder for Use in Pavement Construction 2015.

L. ASTM D1073 - Standard Specification for Fine Aggregate for Asphalt Paving Mixtures 2016.

M. ASTM D1751 - Standard Specification for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Nonextruding and Resilient Bituminous Types) 2018.

N. ASTM D1752 - Standard Specification for Preformed Sponge Rubber Cork and Recycled PVC Expansion Joint Fillers for Concrete Paving and Structural Construction 2004a (Reapproved 2013).

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittals procedures.

B. Product Data: Provide data on characteristics of paver unit, curbs and border, special shapes, dimensions, setting and grouting materials.

C. Product Data: Provide characteristics of polymeric sand, including base material, additive(s), compressive strength, and color.

D. Shop Drawings: Indicate on shop drawings, layout of pavers, special design layout, layout of curbs and borders, dimensions of paved areas, control jointing, elevations, and affected adjacent construction.

E. Samples: Submit two sample paver, curb, and border units illustrating color, surface finish, and texture.

F. Maintenance Materials: Provide the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

2. Extra Pavers: 10 of each type and size.

1.05 QUALITY ASSURANCE

A. Paver Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum three years documented experience.

B. Installer Qualifications: Company specializing in performing the work of this section with Five years experience.

1.06 MOCK-UP

A. See Section 01 4000 - Quality Requirements, for general requirements for mock-up.

B. Size: 100 sq ft (10 sq m).

C. Install setting bed, brick pavers, curbs and border, and accessories to pattern indicated.

1. Show range of shades, color, and texture of pavers.

D. Mock-up may remain as part of the Work.

1.07 FIELD CONDITIONS

A. Do not install mortar when surrounding air or substrate surface temperature is below 50 degrees F (10 degrees C) prior to, during, and 48 hours after completion of work.

B. Do not install mortar when surrounding air or substrate surface temperature is above 90 degrees F (32 degrees C) during and 48 hours after completion of the work.

C. Do not install mortar when wind velocity exceeds 15 mph (24 kph) or relative humidity exceeds 50 percent.

D. At end of working day, or during rainy weather, cover work exposed to weather with waterproof coverings, securely anchored.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Brick Pavers:

1. Belden Brick; City Line Extruded Pavers: www.beldenbrick.com/#sle.

2. Endicott Clay Products Co; Pedestrian/Light Duty Vehicular Pavers: www.endicott.com/#sle.

3. General Shale Brick: www.generalshale.com/#sle.

4. Glen-Gery Corp: www.glengerybrick.com/#sle.

5. Substitutions: See Section 01 6000 - Product Requirements.

2.02 APPLICATIONS

A. Sidewalks and Residential Driveways: Pavers for pedestrian traffic.
   1. Setting Bed: Sand, with open joints.
   2. Subbase: See drawings.
B. Roads, Streets, Service Drives, and Parking Lots: Pavers for vehicular traffic.
   1. Setting Bed: Mortar setting bed, mortar joints.
   2. Subbase: See drawings.

2.03 BRICK PAVERS

A. Pavers for Pedestrian Traffic: Extruded fire clay.
   1. Grade: ASTM C902 Weather Class SX Traffic Type I, with dimensional tolerances complying with Application PS.
   2. Face Size: 4 by 8 inches (102 by 204 mm).
   3. Thickness: 1-1/4 inches (32 mm).
   4. Exposed Surface Texture: Wirecut.
   5. Edges: Square.
   6. Lugged Pavers: 1/8 inch (3 mm) lugs within nominal face size.
   7. Handicapped Detectable Warning Pavers: Molded with ADA Standards compliant bumps; matching other pavers.
   8. Stair Tread/Nosing: Bullnose leading edge.
   9. Color: As selected by Architect from manufacturer's standard colors.
   10. Manufacturers:
      a. Endicott Clay Products Co; Pedestrian/Light Duty Vehicular Pavers: www.endicott.com/#sle.
      b. Substitutions: See Section 01 6000 - Product Requirements.
B. Pavers For Vehicular Traffic: Extruded fire clay.
   1. Grade: ASTM C1272, Type R, dimensional tolerances conforming to Application PS.
   2. Face Size: 4 by 8 inches (102 by 204 mm).
   3. Thickness: 2-5/8 inches (67 mm).
   4. Exposed Surface Texture: Wirecut.
   5. Edges: Square.
   6. Lugged Pavers: 1/8 inch (3 mm) lugs within nominal face size.
   7. Color: As selected by Architect from manufacturer's standard colors.

2.04 SAND MATERIALS

A. Sand for Base and Joint Filler: ASTM C33/C33M, clean, washed river or bank sand containing maximum of 50 percent particle size of No. 50 (300 micro m) sieve.
B. Polymeric Sand: Fine sand conforming to ASTM C144 combined with polymer binders for creating semi-solid joints between pavers.
   1. Material: Granite.
   2. Additive(s): Portland Cement.

3. Compressive Strength: 750 pounds per square inch (5 MPa).
4. Adhesion by Tensile Load: 100 pounds per square inch (0.7 MPa).
5. Color: Beige.

2.05 CEMENTITIOUS MATERIALS

A. Portland Cement: ASTM C150/C150M, Type I; white color.

B. Sand: ASTM C33/C33M, sharp, clean, screened sand free from deleterious material.

C. Premixed Grout Mortar:

D. Water: Potable and not detrimental to mortar.

E. Admixtures: Air entrainment to achieve 5 to 7 percent.

2.06 BITUMINOUS MATERIALS

A. Asphalt Cement: Conform to ASTM D946.

B. Fine Aggregate: Sand conforming to ASTM D1073, sharp, clean, free from deleterious material.

2.07 REINFORCEMENT

A. Welded Wire Reinforcement: ASTM A1064/A1064M; 2 x 2, 16/16 wire (50 x 50, 1.5/1.5 wire); galvanized steel.

2.08 ACCESSORIES

A. Separation Sheet: No. 15 asphalt roofing felt.

B. Cleaning Solution: Type recommended by paver manufacturer.

C. Mortar Bed Joint Filler: Preformed compressible strip complying with ASTM D1751 or ASTM D1752, or closed-cell non-absorbent compressible polyethylene or polymer foam in sheet form; thickness as required to form joint of indicated width; intended to remain in joint to allow moderate movement.

D. Sealant: ASTM C920, self-leveling or nonsag polyurethane or silyl-terminated polyether/polyurethane (STPE/STPU) sealant approved by manufacturer for traffic exposure without being recessed below the top of substrate surface.

1. Color: Concrete gray.

E. Backer Rod: ASTM C1330, closed-cell polyethylene, 25 to 33 percent larger in diameter than joint width.

F. Neoprene Modified Asphalt Adhesive: 2 percent neoprene in oxidized asphalt, 10 percent long fibered inert reinforcement material.

G. Sealer: Acrylic topcoat.

H. Sealer: Penetrating.

2.09 MIXES

A. Cementitious Bed: Portland cement mix conforming to the following:

1. Compressive Strength (28 day): 2000 psi (15 MPa).
2. Slump: 3 to 4 inches (75 to 100 mm).
3. Air Entrained: 5 to 7 percent.

B. Joint Mortar: ASTM C270, Type M, using the Proportion Specification.

C. Add admixtures in accordance with manufacturer's instructions.

D. Thoroughly mix ingredients in quantities required for immediate use.

E. Use within two hours after mixing. Do not re-temper thereafter.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify substrate is ready to support pavers and imposed loads.

B. Verify gradients and elevations of substrate are correct.

C. Verify dry weather forecast without rain for a minimum of 24 hours with temperatures above 55 degrees Fahrenheit (13 degrees Celsius).

D. Verify that pavers are completely dry prior to polymeric sand installation.

3.02 PREPARATION

A. See Section 31 2323 for subbase preparation.

B. See Section 32 1216 for pavement subbase.

C. See Section 32 1313 for concrete subbase.

D. See Section 33 0513 for manholdes and structures.

3.03 INSTALLATION - MORTAR SETTING BED

A. Locate control and expansion joints directly above joints in structural base and where indicated on drawings; use joint filler to form full depth joint before laying mortar bed.

1. Control Joints: 1/2 inch (13 mm) wide.

2. Expansion Joints: 1/2 inch (13 mm) wide.

B. Place a full cementitious mortar bed of minimum 1 inch (25 mm) thickness over entire paver area.

C. Place reinforcement at mid-height of bed thickness.

D. Place paver units in herringbone pattern to match existing, from straight reference line.

E. Place half units or special shaped units at edges and interruptions. Machine saw partial units.

F. Maintain uniform joint width of 3/8 inch (9 mm) between pavers, and at abutting vertical surfaces and protrusions.

G. Keep control and expansion joints free of mortar, for sealant installation.

H. Fill joints with mortar; pack and work into voids; neatly tool surface to concave joint.

I. Seal control and expansion joints with sealant, in accordance with sealant manufacturer's instructions; use joint filler, backer rod, and or bond breaker tape to achieve width-to-depth ratio recommended by sealant manufacturer.

3.04 INSTALLATION - OVER CONCRETE PAVING

A. Sweep substrate surface clean of loose matter.

B. Place separation sheet over paved surfaces in one layer. Butt edges and ends; do not lap.

C. Place paver units in herringbone pattern to match existing, from straight reference line.

D. Sprinkle sand over surface and sweep into joints. Moisten joints and recover with additional sand until firm joints are achieved. Remove excess sand.

3.05 CLEANING

A. Do not clean pavers until pavers and mortar are dry.

B. Clean soiled surfaces using cleaning solution. Do not harm pavers, joint materials, or adjacent surfaces.

C. Use non-metallic tools in cleaning operations.

D. Rinse surfaces with clean water.

E. Broom clean paving surfaces. Dispose of excess sand.

F. See Section 01 7419 for construction waste management and disposal.

3.06 PROTECTION

A. Do not permit traffic over unprotected paver surface.

B. Protect paver surface with sheets of plywood.

C. Do not permit traffic for 48 hours after pavement placement.

3.07 MAINTENANCE

A. See Section 01 7000 - Execution and Closeout Requirements, for additional requirements relating to maintenance service.

B. Provide a separate maintenance contract for specified maintenance service.

END OF SECTION

SECTION 32 1440
STONE PAVING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Paver materials.

B. Sand bed materials.

C. Mortar and grout materials.

D. Accessories.

E. Mixes.

1.02 RELATED REQUIREMENTS

A. Section 31 2200 - Grading: Preparation of subsoil for pavers.

B. Section 31 2323 - Fill: Compacted fill for pavers.

C. Section 32 1216 - Asphalt Paving: Subbase for pavers.

D. Section 32 1313 - Concrete Paving: Subbase for pavers.

E. Section 33 0513 - Manholes and Structures: Frames to be built into paving.

1.03 REFERENCE STANDARDS

A. ASTM A1064/A1064M - Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete 2018.

B. ASTM C33/C33M - Standard Specification for Concrete Aggregates 2016, with Editorial Revision (2016).

C. ASTM C144 - Standard Specification for Aggregate for Masonry Mortar 2017.

D. ASTM C150/C150M - Standard Specification for Portland Cement 2018.

E. ASTM C270 - Standard Specification for Mortar for Unit Masonry 2014a.

F. ASTM C920 - Standard Specification for Elastomeric Joint Sealants 2018.

G. ASTM C1330 - Standard Specification for Cylindrical Sealant Backing for Use with Cold Liquid-Applied Sealants 2018.

H. ASTM D1751 - Standard Specification for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Nonextruding and Resilient Bituminous Types) 2018.

I. ASTM D1752 - Standard Specification for Preformed Sponge Rubber Cork and Recycled PVC Expansion Joint Fillers for Concrete Paving and Structural Construction 2004a (Reapproved 2013).

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide characteristics of paver unit, dimensions, special shapes, and setting materials.

C. Product Data: Provide characteristics of polymeric sand, including base material, additive(s), compressive strength, and color.

D. Shop Drawings: Indicate layout of pavers and curbs, dimensions of paved areas, elevations, and affected adjacent construction.

E. Samples: Submit two samples of each paver and curb size, illustrating style, size, color range and surface texture of units being provided.

F. Manufacturer's Installation Instructions: Indicate substrate requirements , and installation methods.

G. Maintenance Materials: Provide the following for Owner's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

2. Extra Pavers: 10 of each type and size.

1.05 QUALITY ASSURANCE

A. Installer Qualifications:

1. Engage experienced installer that has completed stone installation similar in material, design, and extent to that indicated for the project.

2. Installer shall have a minimum 5 years experience with similar materials and shall have a record of successful projects of comparable size.

B. Fabricator Qualifications: Engage experienced fabricator that has completed stone fabrication similar in material, design, and extent to that indicated for the project.

C. Source Limitations for Stone: Obtain each stone variety from a single quarry.

1. Make quarried blocks available for examination by Architect.

1.06 MOCK-UP

A. Provide paver mock-up, 4 feet (1.2 m) long by 4 feet (1.2 m) wide; include setting bed, pavers, curbs, joints, and edging.

B. Locate where directed.

C. Mock-up may not remain as part of the Work.

1.07 FIELD CONDITIONS

A. Maintain cementitious materials and substrate surface to a minimum of 50 degrees F (10 degrees C) prior to, during, and 48 hours after completion of work.

B. At end of working day or during rainy weather, cover work exposed to weather with waterproof coverings, securely anchored.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Granite Pavers:

1. Cold Spring Granite Inc: www.coldspringgranite.com/#sle.

2. Fletcher Granite Company, Inc: www.fletchergranite.com/#sle.

3. North Carolina Granite Corporation: www.ncgranite.com/#sle.

4. Substitutions: See Section 01 6000 - Product Requirements.

B. Slate Pavers:

1. Echeguren Slate, Inc: www.echeguren.com/#sle.

2. Hilltop Slate, Inc: www.hilltopslate.com/#sle.

3. Structural Slate Company: www.structuralslate.com/#sle.

4. Substitutions: See Section 01 6000 - Product Requirements.

2.02 PAVER MATERIALS

A. Granite Pavers: Dimension stone units; size, thick; shape, surface finish; color selected from quarried range and to be determined by Owner.

B. Slate Pavers: Split units with sawn backs; size, thick; shape, surface finish; color selected from quarried range available and to be determined by Owner..

2.03 SAND BED MATERIALS

A. Sand for Base: Clean washed bank sand containing maximum of 30 percent particle size of No. 10 (2 mm) sieve.

B. Sand for Joints: Clean washed fine sand.

C. Polymeric Sand: Fine sand conforming to ASTM C144 combined with polymer binders for creating semi-solid joints between pavers.

1. Material: Granite.
2. Additive(s): Portland Cement.
3. Compressive Strength: 750 pounds per square inch (5 MPa).
4. Adhesion by Tensile Load: 100 pounds per square inch (0.7 MPa).
5. Color: Beige.

2.04 MORTAR AND GROUT MATERIALS

A. Portland Cement: ASTM C150/C150M Type I, white color.

B. Sand: ASTM C144; sharp, clean, screened sand free of injurious amounts of organic material.

C. Premixed Grout Mortar:

D. Water: Potable, not detrimental to mix.

2.05 ACCESSORIES

A. Welded Wire Reinforcement: ASTM A1064/A1064M; 2 x 2, 16/16 wire (50 x 50, 1.5/1.5 wire); galvanized steel.

B. Mortar Bed Joint Filler: Preformed compressible strip complying with ASTM D1751 or ASTM D1752, or closed-cell non-absorbent compressible polyethylene or polymer foam in sheet form; thickness as required to form joint of indicated width; intended to remain in joint to allow moderate movement.

C. Sealant: ASTM C920, self-leveling or nonsag polyurethane or silyl-terminated polyether/polyurethane (STPE/STPU) sealant explicitly approved by manufacturer for traffic exposure without being recessed below the top of substrate surface.

1. Color: As selected by Architect from manufacturer's full color range.

D. Backer Rod: ASTM C1330, closed-cell polyethylene, 25 to 33 percent larger in diameter than joint width.

E. Cleaning Solution:

2.06 MIXES

A. Mortar Bed: Portland cement mix conforming to the following:

1. Compressive Strength (28 day): 2000 psi (15 MPa).
2. Slump: 3 to 4 inches (75 to 100 mm).
3. Air Entrainment: 5 to 7 percent.

B. Joint Grout: Portland cement mix conforming to the following:

1. Compressive Strength (28 day): 3000 psi (20 MPa).

2. Slump: 1 to 2 inches (25 to 50 mm).
3. Air Entrainment: 5 to 7 percent.
4. Color Admixture: In accordance with manufacturer's instructions.

C. Add admixtures in accordance with manufacturer's instructions.

D. Thoroughly mix ingredients in quantities needed for immediate use.

E. Use within two hours after mixing. Do not re-temper.

2.07 FABRICATION

A. Fabrication Tolerances For Stone Units: Within 1/8 inch (3 mm) of actual dimensions.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that substrate is level, smooth, capable of supporting pavers and imposed loads, and ready to receive work of this section.

B. Verify that concrete substrate has cured at least 28 days.

C. Verify gradients and elevations of substrate are correct.

D. Verify dry weather forecast without rain for a minimum of 24 hours with temperatures above 55 degrees Fahrenheit (13 degrees Celsius).

E. Verify that pavers are completely dry prior to polymeric sand installation.

3.02 PREPARATION

A. See Section 31 2200 for subsoil preparation.

B. See Section 31 2323 for fill compaction requirements.

C. See Section 32 1216 for pavement subbase.

D. See Section 32 1313 for concrete subbase.

3.03 INSTALLATION - SAND SETTING BED

A. Spread sand evenly over prepared substrate to a maximum thickness of 1-1/2 inch (38 mm).

B. Dampen and roller compact sand to level and even surface.

C. Screed and scarify top 1/2 inch (13 mm) of sand.

D. Place paver units in herringbone pattern, from straight reference edge.

E. Place half units, special shaped units, and curbs at edge and interruptions. Maintain tight joints.

F. Sprinkle sand over surface, sweep into joints and moisten. Recover with additional sand until firm joints are achieved. Remove excess sand.

G. Tamp and level paver units with mechanical vibrator until units are firmly bedded, level, and to correct elevation and gradients.

3.04 INSTALLATION - MORTAR SETTING BED

A. Wear clothing and equipment to protect from excessive exposure to polymeric sand.

B. Locate control and expansion joints directly above joints in structural base and where indicated on drawings; use joint filler to form full depth joint before laying mortar bed.

1. Control Joints: 1/2 inch (13 mm) wide.

2. Expansion Joints: 1/2 inch (13 mm) wide.

C. Set paver units in full mortar bed of minimum 1 inch (25 mm) thickness, to support pavers over full bearing surface.

D. Place reinforcement at mid-height of bed thickness.

E. Place paver units in herringbone pattern, from straight reference edge.

F. Place half units, special shaped units, and curbs at edges and interruptions. Machine saw partial units.

G. Maintain uniform joint width of 3/8 inch (9 mm) between pavers, and at abutting vertical surfaces and protrusions. To accommodate grout, rake out joints 1/4 to 3/8 inch (6 to 9 mm) deep.

H. Keep control and expansion joints free of grout, for sealant installation.

I. Fill joints with grout; pack and work into voids; neatly tool surface to concave joint. Wet cure.

J. Spread polymeric sand uniformly over surface. Use a push broom to fill joints and remove excess while not sweeping long distances. Sweep all excess with a fine bristle brush and remove residues with a leaf blower.

K. Seal control and expansion joints with sealant, in accordance with sealant manufacturer's instructions; use joint filler, backer rod, and or bond breaker tape to achieve width-to-depth ratio recommended by sealant manufacturer.

3.05 CLEANING

A. Do not clean pavers until pavers and mortar are dry.

B. Clean soiled surfaces using cleaning solution. Do not harm pavers, joint materials, or adjacent surfaces.

C. Use non-metallic tools in cleaning operations.

D. Rinse surfaces with clean water.

E. Broom clean paving surfaces. Dispose of excess sand.

F. See Section 01 7419 for construction waste management and disposal.

3.06 PROTECTION

A. Do not permit traffic over sealant joints until sealant is fully cured.

B. Do not permit traffic over unprotected paver surface.

C. Protect paver surface with sheets of plywood.

3.07 MAINTENANCE

A. See Section 01 7000 - Execution and Closeout Requirements, for additional requirements relating to maintenance service.

B. Provide a separate maintenance contract for specified maintenance service. Term of contract shall be determined in writing by PGCPS.

END OF SECTION

SECTION 32 1723.13
PAINTED PAVEMENT MARKINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Parking lot markings, including parking bays, crosswalks, arrows, handicapped symbols and curb markings.

B. Roadway lane markings and crosswalk markings.

1.02 RELATED REQUIREMENTS

A. Section 32 1216 - Asphalt Paving.

B. Section 32 1313 - Concrete Paving.

C. Section 32 1726 - Tactile Warning Surfacing: Plastic tactile and detectable warning tiles for pedestrian walking surfaces.

1.03 REFERENCE STANDARDS

A. FS TT-B-1325 - Beads (Glass Spheres); Retro-Reflective 2007d (Validated 2017).

B. FS TT-P-1952 - Paint, Traffic Black, and Airfield Marking, Waterborne 2015f.

C. MPI (APL) - Master Painters Institute Approved Products List; Master Painters and Decorators Association Current Edition.

D. FHWA MUTCD - Manual on Uniform Traffic Control Devices for Streets and Highways; U.S. Department of Transportation, Federal Highway Administration Current Edition.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

C. Certificates: Submit for each batch of paint and glass beads stating compliance with specified requirements.

D. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Paint: 2 containers, 1 gallon (4 liter) size, of each type and color.

1.05 QUALITY ASSURANCE

A. Regulatory Requirements: Comply with materials, workmanship, and other applicable requirements of Prince George’s County and Maryland Department of Transportation for pavement-marking work.

1. Measurement and payment provisions and safety program submittals included in standard specifications do not apply to this Section.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver paint in containers of at least 5 gallons (18 L) accompanied by batch certificate.

B. Deliver glass beads in containers suitable for handling and strong enough to prevent loss during shipment accompanied by batch certificate.

C. Store products in manufacturer's unopened packaging until ready for installation.

D. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

PART 2 PRODUCTS

2.01 MATERIALS

A. Line and Zone Marking Paint: MPI (APL) No. 97 Latex Traffic Marking Paint; color(s) as indicated.

1. Roadway Markings: As required by authorities having jurisdiction.

2. Parking Lots: Yellow.

3. Handicapped Symbols: Blue.

B. Line and Zone Marking Paint: Refer to Section 09 9000.

C. Paint For Obliterating Existing Markings: FS TT-P-1952; black for bituminous pavements, gray for portland cement pavements.

D. Reflective Glass Beads: FS TT-B-1325, Type I (low index of refraction), Gradation A (coarse, drop-on) ; with silicone or other suitable waterproofing coating to ensure free flow.

E. Temporary Marking Tape: Preformed, reflective, pressure sensitive adhesive tape in color(s) required; Contractor is responsible for selection of material of sufficient durability as to perform satisfactorily during period for which its use is required.

F. Tactile Warning Surfaces: See Section 32 1726.

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

B. Obliteration of existing markings using paint is acceptable in lieu of removal; apply the black paint in as many coats as necessary to completely obliterate the existing markings.

C. Clean surfaces thoroughly prior to installation.

1. Remove dust, dirt, and other granular surface deposits by sweeping, blowing with compressed air, rinsing with water, or a combination of these methods.

2. Completely remove rubber deposits, existing paint markings, and other coatings adhering to the pavement, by scraping, wire brushing, sandblasting, mechanical abrasion, or approved chemicals.

D. Where oil or grease are present, scrub affected areas with several applications of trisodium phosphate solution or other approved detergent or degreaser, and rinse thoroughly after each application; after cleaning, seal oil-soaked areas with cut shellac to prevent bleeding through the new paint.

E. Establish survey control points to determine locations and dimensions of markings; provide templates to control paint application by type and color at necessary intervals.

F. Temporary Pavement Markings: When required or directed by Architect , apply temporary markings of the color(s), width(s) and length(s) as indicated or directed.

1. After temporary marking has served its purpose, remove temporary marking by carefully controlled sandblasting, approved grinding equipment, or other approved method so that surface to which the marking was applied will not be damaged.

2. At Contractor 's option, temporary marking tape may used in lieu of temporary painted marking; remove unsatisfactory tape and replace with painted markings at no additional cost to Owner .

3.03 INSTALLATION

A. Begin pavement marking as soon as practicable after surface has been cleaned and dried.

B. Do not apply paint if temperature of surface to be painted or the atmosphere is less than 50 degrees F (10 degrees C) or more than 95 degrees F (35 degrees C).

C. Apply in accordance with manufacturer's instructions using an experienced technician that is thoroughly familiar with equipment, materials, and marking layouts.

D. Comply with FHWA MUTCD manual (http://mutcd.fhwa.dot.gov) for details not shown.

E. Apply markings in locations determined by measurement from survey control points; preserve control points until after markings have been accepted.

F. Apply uniformly painted markings of color(s), lengths, and widths as indicated on drawings true, sharp edges and ends.

1. Apply paint in one coat only.

2. Wet Film Thickness: 0.015 inch (0.4 mm), minimum.

3. Width Tolerance: Plus or minus 1/8 inch (3 mm).

G. Roadway Traffic Lanes: Use suitable mobile mechanical equipment that provides constant agitation of paint and travels at controlled speeds.

1. Conduct operations in such a manner that necessary traffic can move without hindrance.

2. Place warning signs at the beginning of the wet line, and at points well in advance of the marking equipment for alerting approaching traffic from both directions. Place small flags or other similarly effective small objects near freshly applied markings at frequent intervals to reduce crossing by traffic.

3. If paint does not dry within expected time, discontinue paint operations until cause of slow drying is determined and corrected.

4. Skip Markings: Synchronize one or more paint "guns" to automatically begin and cut off paint flow; make length of intervals as indicated.

5. Use hand application by pneumatic spray for application of paint in areas where a mobile paint applicator cannot be used.

6. Distribute glass beads uniformly on the paint lines within ten seconds without any waste, applied at rate of 6 pounds per gallon (720 g per L) of paint; if the marking equipment does not have a glass bead dispenser, use a separate piece of equipment adjusted and synchronized with the paint applicator; remove and replace markings having faulty distribution of beads.

H. Parking Lots: Apply parking space lines, entrance and exit arrows, painted curbs, and other markings indicated on drawings.

1. Mark the International Handicapped Symbol at indicated parking spaces.

2. Hand application by pneumatic spray is acceptable.

I. Symbols: Use a suitable template that will provide a pavement marking with true, sharp edges and ends, of the design and size indicated.

3.04 DRYING, PROTECTION, AND REPLACEMENT

A. Protect newly painted markings so that paint is not picked up by tires, smeared, or tracked.

B. Provide barricades, warning signs, and flags as necessary to prevent traffic crossing newly painted markings.

C. Allow paint to dry at least the minimum time specified by the applicable paint standard and not less than that recommended by the manufacturer.

D. Remove and replace markings that are applied at less than minimum material rates; deviate from true alignment; exceed length and width tolerances; or show light spots, smears, or other deficiencies or irregularities.

E. Remove markings in manner to avoid damage to the surface to which the marking was applied, using carefully controlled sand blasting, approved grinding equipment, or other approved method.

F. Replace removed markings at no additional cost to Owner .

END OF SECTION

SECTION 32 1726
TACTILE WARNING SURFACING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Plastic tactile and detectable warning tiles for pedestrian walking surfaces.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Concrete for sidewalks and platforms.

B. Section 32 1313 - Concrete Paving: Concrete sidewalks.

C. Section 32 1723.13 - Painted Pavement Markings: Crosswalk and curb markings.

1.03 REFERENCE STANDARDS

A. 49 CFR 37 - Transportation Services for Individuals with Disabilities (ADA) current edition.

B. AASHTO LRFD - Bridge Design Specifications 2017.

C. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design 2010.

D. ASTM A48/A48M - Standard Specification for Gray Iron Castings 2003 (Reapproved 2016).

E. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar 2015.

F. ASTM B117 - Standard Practice for Operating Salt Spray (Fog) Apparatus 2018.

I. ASTM D2047 - Standard Test Method for Static Coefficient of Friction of Polish-Coated Flooring Surfaces as Measured by the James Machine 2011.

J. ASTM D543 - Standard Practices for Evaluating the Resistance of Plastics to Chemical Reagents 2014.

K. ASTM D570 - Standard Test Method for Water Absorption of Plastics 1998 (Reapproved 2010).

L. ASTM D638 - Standard Test Method for Tensile Properties of Plastics 2014.

M. ASTM D695 - Standard Test Method for Compressive Properties of Rigid Plastics 2015.

N. ASTM D790 - Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials 2016.

O. ASTM D1308 - Standard Test Method for Effect of Household Chemicals on Clear and Pigmented Organic Finishes 2002 (Reapproved 2013).

P. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

Q. ASTM G155 - Standard Practice for Operating Xenon Arc Light Apparatus for Exposure of Nonmetallic Materials 2013.

R. ATBCB PROWAG - Proposed Accessibility Guidelines for Pedestrian Facilities in the Public Right-of-Way 2011.

S. SAE AMS-STD-595 - Colors Used in Government Procurement 2017a.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Submit manufacturer's product data, standard details, details specific to this project; written installation and maintenance instructions.

C. Samples: For each product specified provide two samples, 8 inches (203 mm) square, minimum; show actual product, color, and patterns.

D. Shop Drawings: Submit plan and detail drawings. Indicate:

1. Locations on project site. Demonstrate compliance with referenced accessibility standards.
2. Sizes and layout.
3. Pattern spacing and orientation.
4. Attachment and fastener details, if applicable

E. Warranty: Submit manufacturer warranty; complete forms in Owner's name and register with manufacturer.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than five years documented experience.

B. Installer Qualifications: Company certified in writing by product manufacturer as having successfully completed work substantially similar to the work of this section.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver to project site in manufacturer's protective wrapping and in manufacturer's unopened packaging.

B. Store covered and elevated above grade and in manufacturer's unopened packaging until ready for installation. Maintain at ambient temperature between 40 and 90 degrees F (4 and 32 degrees C).

1.07 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Plastic Tiles: Provide manufacturer's standard five year warranty against manufacturing defects, breakage or deformation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Plastic Tactile and Detectable Warning Surface Tiles:

1. Access Tile, a brand of Access Products, Inc: www.accesstile.com/#sle.
2. ADA Solutions, Inc: www.adatile.com/#sle.
3. Armor-Tile, a brand of Engineered Plastics, Inc: www.armortiletransit.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

2.02 TACTILE AND DETECTABLE WARNING DEVICES

A. Plastic Tactile and Detectable Warning Tiles: ADA Standards compliant, glass fiber and carbon fiber reinforced, exterior grade, matte finish polyester sheet with truncated dome pattern, solid color throughout, internal reinforcing of sheet and of truncated domes, integral radius cut lines on back face of tile; with factory applied removable protective sheeting.

1. Material Properties:

a. Water Absorption: 0.20 percent, maximum, when tested in accordance with ASTM D570.

b. Slip Resistance: 0.50 minimum dry static coefficient of friction, when tested in accordance with ASTM D2047.

c. Compressive Strength: 25,000 pounds per square inch (172 MPa), minimum, when tested in accordance with ASTM D695.

d. Tensile Strength: 10,000 pounds per square inch (69 MPa), minimum, when tested in accordance with ASTM D638.

e. Flexural Strength: 25,000 pounds per square inch (172 MPa) minimum, when tested in accordance with ASTM D790.

f. Chemical Stain Resistance: No reaction to 1 percent hydrochloric acid, motor oil, calcium chloride, gum, soap solution, bleach, or antifreeze, when tested in accordance with ASTM D543.

g. Abrasion Resistance: 300, minimum, when tested in accordance with ASTM C501.

h. Flame Spread Index: 25, maximum, when tested in accordance with ASTM E84.

i. Accelerated Weathering: Delta-E of less than 5.0 at 2,000 hours exposure, when tested in accordance with ASTM G155.

j. Adhesion: No delamination of tile prior to board failure in a temperature range of 20 to 180 degrees F (minus 7 to 82 degrees C), when tested in accordance with ASTM C903.

k. Loading: No damage when tested according to AASHTO LRFD test method HS20.

l. Salt and Spray Performance: No deterioration or other defect after 200 hours of exposure, when tested in accordance with ASTM B117.

2. Installation Method: Cast in place.

3. Shape: Rectangular.

4. Dimensions: 24 inches by 48 inches (610 mm by 1220 mm).

5. Pattern: In-line pattern of truncated domes complying with ADA Standards.

6. Edge: Square.

7. Joint: Butt.

8. Color: SAE AMS-STD-595, Table IV, Federal Yellow No. 33538.

9. Products:

a. ADA Solutions, Inc; Transit Use - In-Line Dome Surface Applied System: www.adatile.com/#sle.

2.03 ACCESSORIES

A. Fasteners: ASTM A666, Type 304 stainless steel

1. Type: Countersunk, color matched composite sleeve anchors

2. Size: 1/4 inch (6.35 mm) diameter and 1-1/2 inches (38 mm) long.

B. Adhesive: Type recommended and approved by surfacing tile manufacturer.

C. Sealant: Elastomeric sealant of color to match adjacent surfaces; approved by surfacing tile manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

A. When installation location is near site boundary or property line, verify required location using property survey.

B. Verify that work area is ready to receive work:

1. Examine work area with installer present.

2. If existing conditions are not as required to properly complete the work of this section, notify Architect.

3. Do not proceed with installation until deficiencies in existing conditions have been corrected.

C. Verify that dimensions, tolerances, and attachment methods for work in this section are properly coordinated with other work on site.

3.02 INSTALLATION, GENERAL

A. Install in accordance with manufacturer's written instructions.

1. Do not install damaged, warped, bowed, dented, abraded, or otherwise defective units.

2. Do not install when ambient or substrate temperature has been below 40 degrees F (4 degrees C) during the preceding 8 daylight hours.

B. Field Adjustment:

1. Cut units to size and configuration shown on drawings.

2. Locate relative to curb line in compliance with ATBCB PROWAG, Sections 304 and 305.

3. Orient so dome pattern is aligned with the direction of ramp.

4. Align truncated dome pattern between adjacent units.

C. Install units fully seated to substrate, square to straight edges and flat to required slope.

D. Align units so that tops of adjacent units are flush and joints between units are uniform in width.

3.03 INSTALLATION, CAST IN PLACE PLASTIC TILES

A. Concrete:

1. See Section 03 3000.

2. Slump: 4 to 7 percent.

B. When installing multiple adjacent units, leave a 3/16 inch (5 mm) gap between units to allow for expansion.

C. Tamp and vibrate units as recommended by manufacturer.

D. Place and position weights on units while concrete cures as recommended by manufacturer. Ensure no voids or air pockets exist between top surface of concrete and underside of units.

3.04 INSTALLATION, SURFACE APPLIED PLASTIC TILES

A. Cure concrete surfaces for a minimum of 4 days before installing units.

B. Verify substrate is clean and dry; free of voids, projections and loose material. Remove dust, oil, grease, curing compounds, sealers and other substances that may interfere with adhesive bond or sealant adhesion.

C. Mechanically roughen surface as required to remove contaminants and prepare surface for adhesive and sealant application.

D. Drill fastener holes straight, true and to depth recommended by manufacturer.

E. Apply adhesive to back of unit as recommended by manufacturer.

F. Mechanically fasten to substrate. Avoid striking or damaging the unit itself during installation.

G. Apply sealant to edges in cove profile.

3.05 CLEANING PLASTIC UNITS

A. Remove protective plastic sheeting within 24 hours of installation.

B. Remove excess sealant or adhesive from joints and edges.

C. Clean four days prior to date of scheduled inspection.

3.06 PROTECTION

A. Protect installed units from traffic, subsequent construction operations or other imposed loads until concrete is fully cured.

B. Touch-up, repair or replace damaged products prior to Date of Substantial Completion.

END OF SECTION

SECTION 32 1813
SYNTHETIC GRASS SURFACING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Synthetic grass surfacing and infill.

B. Edge anchoring and borders.

C. Shock absorbing course.

D. Correction of grades and subgrade.

E. Drainage layer.

F. Field graphics.

1.02 RELATED REQUIREMENTS

A. Section 01 2100 - Allowances: Cash, testing, and contingency allowances.

B. Section 01 2200 - Unit Prices: Descriptions of unit price items, administrative requirements.

C. Section 03 3000 - Cast-in-Place Concrete.

D. Section 31 2316 - Excavation.

E. Section 31 2316.13 - Trenching.

F. Section 31 2323 - Fill.

G. Section 32 3113 - Chain Link Fences and Gates.

H. Section 33 4211 - Stormwater Gravity Piping.

1.03 REFERENCE STANDARDS

A. ASTM C920 - Standard Specification for Elastomeric Joint Sealants 2018.

B. ASTM C94/C94M - Standard Specification for Ready-Mixed Concrete 2017a.

C. ASTM C136/C136M - Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates 2014.

D. ASTM C476 - Standard Specification for Grout for Masonry 2018.

E. ASTM D698 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft3 (600 kN-m/m3)) 2012, with Editorial Revision (2015).

F. ASTM D1335 - Standard Test Method for Tuft Bind of Pile Yarn Floor Coverings 2017, with Editorial Revision (2018).

G. ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3 (2,700 kN m/m3)) 2012, with Editorial Revision (2015).

H. ASTM D2859 - Standard Test Method for Ignition Characteristics of Finished Textile Floor Covering Materials 2016.

I. ASTM D5823 - Standard Test Method for Tuft Height of Pile Floor Coverings 2013.

J. ASTM D6662 - Standard Specification for Polyolefin-Based Plastic Lumber Decking Boards 2017.

K. ASTM F1292 - Standard Specification for Impact Attenuation of Surfacing Materials Within the Use Zone of Playground Equipment 2017.

L. ASTM F1487 - Standard Consumer Safety Performance Specification for Playground Equipment for Public Use 2017.

M. ASTM F1632 - Standard Test Method for Particle Size Analysis and Sand Shape Grading of Golf Course Putting Green and Sports Field Rootzone Mixes 2003 (Reapproved 2010).

N. ASTM F1667 - Standard Specification for Driven Fasteners: Nails, Spikes, and Staples 2018.

O. ASTM F1936 - Standard Specification for Impact Attenuation of Turf Playing Systems as Measured in the Field 2010 (Reapproved 2015).

P. ASTM F2765 - Standard Specification for Total Lead Content in Synthetic Turf Fibers 2014.

Q. ASTM F2898 - Standard Test Method for Permeability of Synthetic Turf Sports Field Base Stone and Surface System by Non-confined Area Flood Test Method 2011.

R. ASTM STP322-1 - Field Testing of Soils, Chapter 1: Field Percolation Tests for Sanitary Engineering Application 1962.

S. CPSC Pub. No. 325 - Public Playground Safety Handbook 2010.

1.04 ADMINISTRATIVE REQUIREMENTS

A. See Section 01 3000 - Administrative Requirements - Administrative Requirements, for project meetings.

B. Preinstallation Meeting: Conduct a preinstallation meeting 1 week prior to the start of the work of this section; require attendance by all affected installers.

C. Sequencing: Ensure that utility connections are achieved in an orderly and expeditious manner.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: For all manufactured surfacing products, provide manufacturer's product data showing materials of construction, compliance with specified standards, installation procedures, and safety limitations.

1. Include STC certifications where required.
2. Treated Wood Products: Provide information on wood treatment chemical content, toxicity level, and life-cycle durability.

C. Shop Drawings: Carpet Roll: Show locations of seams and methods of seaming.

1. Field Graphics: Include methods of seaming.

D. Samples: For each product for which color must be selected provide color chart showing full range of colors.

E. Samples: Provide the following prior to ordering material:

1. Synthetic Grass carpet: Two 12 inch by 12 inch (305 mm by 305 mm) pieces.
2. Infill material: Two 1 gallon bags for each type.
3. Seamed synthetic grass carpet: Two 12 inch by 24 inch (305 mm by 610 mm) pieces seemed together for each seaming method indicated on drawings.
4. Shock absorbing material: two 1 gallon bags for each type.
5. Field graphics synthetic grass carpet: Two 12 inch by 12 inch (305 mm by 305 mm) pieces for each color indicated on drawings.

F. Percolation Test Report: Describing test method used and results.

G. Manufacturer's Qualification Statement.

H. Installer's Qualification Statement.

I. Maintenance Data:

1. For manufactured surfacing products, provide manufacturer's recommended maintenance instructions and list of repair products, with address and phone number of source of supply.
2. For loose fill surfacing products, provide detailed re-ordering information to enable Owner to match installed material exactly.

J. Manufacturer's Field Report.

K. Topographical survey of loose fill layer prior to installation of synthetic grass carpet.

L. Certification: Provide IPEMA certification of ASTM F1292 Critical Fall Height at thickness specified.

1.06 QUALITY ASSURANCE

A. See section 01 4000 - Quality Requirements, for procedures for testing, inspection, mock-ups, reports, certificates, use of reference standards.

B. Maintain one copy of the latest edition of ASTM F1487 and CPSC Pub. No. 325 at project site.

C. Manufacturer Qualifications: Company regularly engaged in manufacturing products specified in this section, with not less than three years of documented experience.

1. Surfacing installed in minimum 10 sites and been in successful service minimum 5 years.
2. Manufacturer's Representative: Provide name, company name and address, and qualifications.

D. Installer Qualifications: Company certified by manufacturer for training and experience installing the protective surfacing; provide installer's company name and address, and training and experience certificate.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver, handle, and store synthetic grass surfacing to project site in accordance with manufacturer's recommendations.

B. Store materials in a dry, covered area, elevated above grade.

1.08 FIELD CONDITIONS

A. Ambient Conditions: Work under this section will cease when:

1. Temperatures are below 55 degrees F.
2. Humidity levels are above the adhesive manufacturer's requirements.
3. Rain is imminent or falling.
4. Surfaces are wet or damp.

1.09 WARRANTY

A. See Section 01 7800 - Closeout Submittals - Closeout Submittals, for additional warranty requirements.

B. Provide 10 year minimum warranty from the date of substantial completion for materials and installation covering:

1. Excessive wear.
2. Fiber tensile strength.
3. Deterioration or fading from UV light.
4. Seam integrity.
5. Shock absorption.

6. Drainage rate.

PART 2 PRODUCTS

2.01 SYNTHETIC GRASS SURFACING

A. Synthetic Grass Carpet: Yarn fibers tufted through and adhered to a porous fiber backing.
   1. Primary Blades:
      a. Fibers: Monofilament.
      b. Material: Polyethylene.
      c. Weight: 40 ounces per square yard (1.4 l/sm).
      d. Height: 1-1/4 inch (32 mm), in compliance with ASTM D5823.
      e. Tuft Bind: 8 pounds-force, minimum, in compliance with ASTM D1335.
   2. Secondary Blades:
      a. Fibers: Monofilament.
      b. Material: Polyethylene.
      c. Weight: 40 ounces per square yard (1.4 l/sm).
      d. Height: 1 inch (25 mm), in compliance with ASTM D5823.
      e. Tuft Bind: 8 pounds-force, minimum, in compliance with ASTM D1335.
   3. Backing:
      a. First: Single layer of woven polyester treated with UV inhibitors.
      b. Second: Coating of polyurethane.
      c. Third: Geotextile fleece.
      d. Backing Weight: 20 ounces per square meter (3 l/sm).
   4. Face Weight: Minimum 40 ounces per square yard (1.4 l/sm).
   5. Permeability: 10 inches (254 mm) of water per hour, minimum.
   6. Lead Content: 100 ppm, maximum, in compliance with ASTM F2765.
   7. Roll: 10 feet (3 m) feet wide, minimum.
   8. Noncombustible: Pass ASTM D2859 for flammability.
   9. Field Graphics:
      a. Applied Marking: Permanent paint, per manufacturer's approval.

B. Synthetic Grass Infill: 2 pounds per square foot (10 ksm), minimum at 50-50 percent rubber granule to synthetic sand:
   1. Rubber granule: SBR, 10-20 mesh, free of metals, nonmetal fibers, and contaminants.
   2. Sand: Silica, 10-20 mesh, free of silts, clays, and contaminants, roundness of subangular, minimum, per ASTM F1632.

C. Shock Absorbing Course:
   1. Recycled Rubber Fill: Loose fill; 100 percent recycled rubber chips, shreds, granules, or nuggets; installed over subgrade.
      a. Chip Size: 3/8 inch (9 mm).

b. Depth: As indicated on drawings.

2. Impact Mats:

a. In Situ Cushion: Shredded rubber bonded with polyurethane adhesive, allowing water penetration, over aggregate subbase.

1) Rubber: 100 percent recycled shredded styrene butadiene rubber (SBR) shreds or granules.

2) Depth: As indicated on drawings.

2.02 MATERIALS

A. Edge Anchoring: Wood-polymer composite lumber complying with ASTM D6662; factory finished, free of sharp vertical edges, protruding elements, and trip hazards, capable of being secured to the border.

1. Size(s): 2 inch by 3 inch (51 mm by 76mm).

2. Minimum Edge Radius: 1/2 inch (13 mm).

B. Border: Permanent element surrounding edge anchoring, consisting of exterior walls:

1. Exterior Walls: As indicated on drawings.

2. Sidewalks: As indicated on drawings.

3. Precast Concrete Curb: 12 inch wide by 6 inch deep (305 mm by 152 mm), smooth top.

4. Chain Link Fence: As indicated on drawings.

C. Drainage (Loose Surfacing) Course: Fractured, non-rounded gravel; washed; free of dust, clay, dirt, organic material, hazardous substances, or foreign objects; rounded particles, either naturally or mechanically; sieved in compliance with ASTM C136/C136M in the specified gradation range.

1. Percent Passing Sieve Size 1/2 inch (13 mm): 100 percent.

2. Percent Passing Sieve Size 3/8 inch (10 mm): 75 to 85 percent.

3. Percent Passing Sieve Size No. 4 (5 mm): 0 percent.

4. Depth: As indicated on drawings.

D. Drainage (Base Stone) Course: Fractured, non-rounded gravel; washed; free of dust, clay, dirt, organic material, hazardous substances, or foreign objects; rounded particles, either naturally or mechanically; sieved in compliance with ASTM C136/C136M in the specified gradation range.

1. Percent Passing Sieve Size 1-1/2 inch (38 mm): 100 percent.

2. Percent Passing Sieve Size 3/4 inch (19 mm): 75 to 85 percent.

3. Percent Passing Sieve Size 1/2 inch (13 mm): 40 to 70 percent.

4. Percent Passing Sieve Size 3/8 inch (10 mm): 75 to 85 percent.

5. Percent Passing Sieve Size No. 4 (5 mm): 0 percent.

6. Depth: As indicated on drawings.

E. Drainage Pipes: Uniform material, free of defects:

1. Material: Polyvinyl Chloride.

2. Shape: Round.

3. Perforations: As indicated on drawings.

4. Size: As indicated on drawings.

F. Geotextile Fabric: Nonwoven Polypropylene Sheet.

2.03 ACCESSORIES

A. Fasteners, Synthetic Grass to Edging: 1/2 inch (13 mm) stainless steel staples, in compliance with ASTM F1667.

B. Fasteners, Edging to Border: Self drilling, stainless steel screws, in compliance with ASTM F1667.

C. Fasteners, Seams:

1. Nails: Galvanized steel, 4 inch (102 mm) long, in compliance with ASTM F1667.

D. Rebar: Number 4 rod.

E. Cementitious Grout: Fine, in compliance with ASTM C476.

2.04 SOURCE QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

PART 3 EXECUTION

3.01 PREPARATION

A. Lay out entire project perimeter as indicated on drawings prior to starting work.

B. Measure the location of all synthetic grass elements, including perimeter of existing synthetic grass surfacing, access and egress points, hard surfaces, walls, fences, and structures.

C. Verify location of underground utilities and facilities in the project area. Damage to underground utilities and facilities will be repaired at Contractor's expense.

3.02 SUBGRADE

A. Excavate unsuitable soils as specified in Section 31 2316. Backfill with suitable material as specified in Section 31 2323.

B. Correct irregularities to ensure that required depth of drainage layer can be installed, and elevation is in accordance with manufacturer's requirements.

C. Remove all obstructions that extend into the drainage layer within the composite nailer boards.

D. Perform rough and finish grading as specified in Section 31 2200.

E. Shape to profile indicated on drawings and compact by proof rolling to a minimum 95 percent, in compliance with ASTM D698.

F. Flatness Tolerance: 1/2 inch in 10 feet (12 mm in 3 m), maximum.

G. Perform percolation test at the lowest elevation of the subgrade, in compliance with ASTM STP322-1.

1. Report results to Architect .

2. If percolation is less than 1 inch (25 mm) in a 3 hour period, do not proceed.

H. Verify that subgrades are at proper elevations and that smooth grading is complete.

3.03 TRENCHING AND BACKFILLING

A. Lay out trenching for entire drainage network prior to excavation, as indicated on drawings.

B. Excavate trenches in accordance with drawings.

C. Mirror base of trenches to finish grade.

D. Open trenches require the presence of daily site activity.

E. Repair any deviations from plans after drainage pipe installation and prior to installing geotextile fabric.

F. Perform trenching as specified in Section 31 2316.13.

3.04 DRAINAGE PIPE

A. Install all piping and fittings as indicated on drawings.

B. Install collector lines prior to laterals with deepest excavations first.

C. Connect collector lines to discharge outlet prior to field use.

D. Completion of installation in accordance to design requires approval by Architect.

E. Install drainage pipe as specified in Section 33 4211.

3.05 GEOTEXTILE FABRIC

A. Verify that subgrade is free of ruts or protruding objects.

B. Install geotextile fabric over subgrade in in drainage trenches first, prior to field installation.

C. Lap minimum 36 inches (915 mm) width at seams. Adhere seams in accordance with manufacturer's recommendations.

D. Install fabric smooth, and free of tensile stresses, folds, or wrinkles.

E. Protect fabric from clogging, tears, or other damage during surfacing installation.

F. Repair or replace damaged fabric in accordance with manufacturer's recommendations.

3.06 DRAINAGE AGGREGATE

A. Loose Fill Surfacing:

1. Install in compliance with CPSC Pub. No. 325, ASTM F1487, and requirements of authorities having jurisdiction (AHJ).
2. Install aggregate subbase as indicated on drawings and in Section 32 1123. Compact aggregate to maximum 95 percent, in compliance with ASTM D1557.
3. Compact to minimum 95 percent density, in compliance with ASTM D698.
4. Flatness Tolerance: 1/4 inch in 10 feet (6 mm in 3 m), maximum.
5. Correct high and low areas in accordance with design drawings.
6. Match top of layer with top of edge anchoring.
7. Prevent base stone from entering into loose fill surfacing layer. Prevent loose fill from entering into base stone layer.

B. Base Stone:

1. Install aggregate subbase as indicated on drawings and in Section 32 1123. Compact aggregate to maximum 95 percent, in compliance with ASTM D1557.
2. Install in compliance with CPSC Pub. No. 325, ASTM F1487, and requirements of authorities having jurisdiction (AHJ).
3. Compact to minimum 95 percent density, in compliance with ASTM D698.
4. Flatness Tolerance: 1/2 inch in 10 feet (12 mm in 3 m), maximum.
5. Correct high and low areas in accordance with design drawings.
6. Mirror base stone elevations to final elevations.
7. Prevent disturbance to geotextile fabric during installation.

8. Approval of drainage piping by Architect required prior to commencement of installation. Prevent disturbance of drainage piping during installation.

3.07 SHOCK ABSORBING COURSE

A. Recycled Rubber Fill:

1. Install to thickness meeting critical fall heights, as determined by ASTM F1292, or according to drawings.
2. Install in a smooth level manner without depressions or rises.
3. Compact until adult foot depressions do not occur.

B. Impact Mats:

1. In Situ Cushion:
   a. Mix SBR and adhesive mechanically on-site in accordance with manufacturer's directions; do not mix by hand.
   b. Install in a continuous bond; ensure complete bond to subbase.
   c. Maintain full thickness of resilient layers within Use Zone; cover or abut containment curbs as indicated on drawings; completely cover tapered transition edges.
   d. Hand trowel exposed surface to smooth, even finish.
   e. Impact Attenuation Layer: Install entire layer in one continuous pour on the same day.

3.08 EDGE ANCHORING

A. Layout composite nailer boards. Approval of locations by Architect required prior to installing.

B. Install along full perimeter of synthetic grass.

C. Fasten to border with case hardened screws at 24 inch (610 mm) on center, minimum.

D. Set top of edging flush or recessed 1/2 inch (13 mm) below top of border, maximum.

3.09 BORDER

A. Verify that site furnishings and composite nailer boards located within project area are complete.

B. Install border walls according to design drawings.

C. Sidewalks: Match to top elevation or increase by 1/2 inch (13 mm) above edge anchoring, maximum. Install cast-in-place sidewalks as specified in Section 03 3000.

D. Chain Link Fence: Align centerlines of fence and curb. Apply grout to each curb hole installed with fence post, securing post in place. Install chain link fences and gates as specified in Section 32 3113.

3.10 SYNETHETIC GRASS

A. Carpet Rolls:

1. Unroll all carpet in the same direction.
2. Prevent seams from being located over impact mats.
3. Allow carpet to rest for at least 4 hours after unrolling and prior to seaming.
4. Smooth seams and edges, eliminate overlaps and gaps.

B. Seaming:

1. Cut: Straight, with a clean and smooth edge.
2. Method:

a. Nailing / Stapling: Spaced 3 inch (76 mm) along seam.

b. Sewing: 2 thread, bound seam stitch.

c. Bonding: adhesive-backed, applied uniformly with complete coverage.

d. Micromechanical: Utilizing hook-and-loop fasteners.

C. Securing: Staple carpet to edging 1 inch (25 mm) on center.

D. Field Graphics:

1. Applied Marking: Per manufacturer recommendations, in dimensions and color patterns indicated on drawings.

2. Inlaid Marking:

a. Shearing: Cut the synthetic grass through the backing, in dimensions and pattern indicated on drawings.

b. Inlay: Bond synthetic grass in colors indicated on drawings within sheared patterns.

3.11 INFILL

A. Apply during dry weather without signs of moisture on synthetic grass.

B. Thoroughly brush synthetic grass prior to infill installation.

C. Apply infill uniformly in multiple lifts, brush fibers between each application.

D. Measure depth to confirm accordance with plans.

3.12 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Drainage aggregate completion requires approval by Architect.

C. Owner or Owner's representative will inspect synthetic grass after installation to verify that surfacing is of proper type and meets specified design safety and accessibility requirements.

D. Repair or replace rejected work until compliant with specified requirements and design criteria.

E. Confirm rainfall permeability meets design, per ASTM F2898.

F. Confirm impact attenuation meets design, per ASTM F1936.

G. Replace damaged products before Date of Substantial Completion.

3.13 CLEANING

A. Clean surrounding areas of excess construction materials, debris, and waste.

B. Remove excess and waste material and dispose of off-site in accordance with requirements of authorities having jurisdiction.

C. See Section 01 7419 - Construction Waste Management and Disposal, for additional requirements.

3.14 PROTECTION

A. Protect installed products until Date of Substantial Completion.

B. Restore adjacent existing areas that have been damaged by work of this section.

END OF SECTION

SECTION 32 1816.13
PLAYGROUND PROTECTIVE SURFACING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Removal of existing protective surfacing and correction of grades as necessary.

B. Protective surfacing for playground area.

C. Subbase under resilient surfacing.

D. Containment curbs.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete.

B. Section 11 6813 - Playground Equipment: Playground layout (staking).

C. Section 32 1123 - Aggregate Base Courses: Subbase for resilient surfacing.

D. Section 32 1216 - Asphalt Paving: Subbase for resilient surfacing.

E. Section 32 1313 - Concrete Paving: Subbase for resilient surfacing.

1.03 REFERENCE STANDARDS

A. ASTM C94/C94M - Standard Specification for Ready-Mixed Concrete 2017a.

B. ASTM C136/C136M - Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates 2014.

C. ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3 (2,700 kN m/m3)) 2012, with Editorial Revision (2015).

D. ASTM D2047 - Standard Test Method for Static Coefficient of Friction of Polish-Coated Flooring Surfaces as Measured by the James Machine 2011.

E. ASTM D6662 - Standard Specification for Polyolefin-Based Plastic Lumber Decking Boards 2017.

F. ASTM F1292 - Standard Specification for Impact Attenuation of Surfacing Materials Within the Use Zone of Playground Equipment 2017.

G. ASTM F1487 - Standard Consumer Safety Performance Specification for Playground Equipment for Public Use 2017.

H. ASTM F2075 - Standard Specification for Engineered Wood Fiber for Use as a Playground Safety Surface Under and Around Playground Equipment 2015.

I. AWPA U1 - Use Category System: User Specification for Treated Wood 2017.

J. CPSC Pub. No. 325 - Public Playground Safety Handbook 2010.

1.04 DEFINITIONS

A. Use Zone: The area beneath and immediately adjacent to a play structure or equipment (play event) that is designated for unrestricted circulation around equipment, and on whose surface it is predicted that a user would land when falling from or exiting the equipment.

B. Critical Fall Height: The maximum fall height at which the protective surfacing meets the requirements of ASTM F1292.

C. High Play Activity Area: Areas where the fall height is especially great, such as at swings. A high play activity area is defined only where the protective surfacing of the entire playground area is not designed for the greatest fall height. High play activity areas are defined on the drawings.

D. Fall Height: The vertical distance between the finished elevation of the designated play surface and the finished elevation of the protective surfacing beneath it as defined by ASTM F1487.

E. Protective Surfacing: Resilient ground surfacing. The characteristics of the protective surfacing are based on the fall height of the playground equipment. Changes in either the surfacing or the fall height, particularly reducing the resilience of the protective surfacing or increasing the fall height, will reduce safety-related performance.

F. Subbase: A layer under the resilient layer of the protective surfacing but over the subgrade; may be rigid, as in concrete or bituminous, or aggregate.

G. Subgrade: The surface of the ground on which the protective surfacing is installed.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements - Administrative Requirements, for submittal procedures.

B. Product Data: For all manufactured surfacing products, provide manufacturer's product data showing materials of construction, compliance with specified standards, installation procedures, and safety limitations.

1. Include IPEMA certifications where required.

2. Treated Wood Products: Provide information on wood treatment chemical content, toxicity level, and life-cycle durability.

C. Product Data: For natural surfacing materials, provide supplier's certification or mill certificate showing compliance with specified requirements.

D. Shop Drawings: Detailed scale drawings showing locations of existing playground equipment and exposed footings, bases, and anchorage points.

1. Clearly identify footing and base elevations in relation to a fixed survey point on site and to subgrade elevation and depth of protective surfacing, surveyed by land surveyor licensed in Maryland .

2. Show locations of underground utilities, storm-drainage system and irrigation system.

3. Show locations of related construction such as walkways and roadways, fences, site furnishings, and plantings.

4. Show measured fall height for each playground equipment item, determined in accordance with ASTM F1487.

5. Show Use Zone perimeters, determined in accordance with ASTM F1487.

E. Samples: For each product for which color must be selected provide color chart showing full range of colors.

F. Samples: Provide actual material samples for approval by Owner..

G. Percolation Test Report: Describing test method used and results.

H. Maintenance Data:

1. For manufactured surfacing products, provide manufacturer's recommended maintenance instructions and list of repair products, with address and phone number of source of supply.

2. For loose fill surfacing products, provide detailed re-ordering information to enable Owner to match installed material exactly.

I. Manufacturer's Field Report.

1.06 QUALITY ASSURANCE

A. Maintain one copy of the latest edition of ASTM F1487 and CPSC Pub. No. 325 at project site.

B. Manufacturer Qualifications: Company regularly engaged in manufacturing products specified in this section, with not less than three years of documented experience.

1. Surfacing installed in minimum 10 sites and been in successful service minimum 5 years.

2. Provide certificate of Insurance AA rated for minimum 1,000,000 dollars covering both product and general liability.

3. Manufacturer's Representative: Provide name, company name and address, and qualifications.

C. Installer Qualifications: Company certified by manufacturer for training and experience installing the protective surfacing; provide installer's company name and address, and training and experience certificate.

1.07 PRE-INSTALLATION MEETING

A. Coordinate with Section 11 6813.

B. Convene a meeting one week before starting earthwork for playground to discuss coordination between various installers.

1. Require attendance by personnel responsible for grading and installers of playground equipment, protective surfacing, footings, and adjacent work.

2. Include representatives of Contractor .

3. Notify Architect at least 2 weeks prior to meeting.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver, handle, and store protective surfacing to project site in accordance with manufacturer's recommendations.

B. Store materials in a dry, covered area, elevated above grade.

1.09 WARRANTY

A. See Section 01 7800 - Closeout Submittals - Closeout Submittals, for additional warranty requirements.

B. Provide minimum [Two] year warranty for playground surfacing.

PART 2 PRODUCTS

2.01 DESIGN CRITERIA

A. Because the safety of the playground depends on strict conformance to the design criteria, this information is provided for Contractor 's information.

1. The protective surfacing constitutes a resilient layer installed over a non-resilient layer, which is installed over the subgrade, with the top of playground equipment footings and anchorage devices covered by full depth of the resilient portion of the protective surfacing.

2. The total depth available for protective surfacing, from surface of subgrade, is indicated on drawings.

3. The top elevation of the protective surfacing is intended to be flush with adjacent grades.

4. Use Zone: The protective surfacing has been designed to provide acceptable impact attenuation as defined in ASTM F1292 for Critical Height of [six feet] feet ([1.8] m).
5. High Play Activity Area: The protective surfacing has been designed to provide impact acceptable attenuation as defined in ASTM F1292 for Critical Fall Height of [six feet] feet ([1.8] m).

B. If deviation from specified depth is required, it is the Contractor 's responsibility to make all changes required to maintain specified top elevation and required impact attenuation at no extra cost to Owner ; obtain approval prior to proceeding; follow approval request procedure as specified for substitutions.

2.02 MATERIALS

A. Poured-In-Place Membrane Surfacing: Weather-resistant wear layer over impact attenuating substrate over rigid subbase.

1. Wear Layer: Ethylene propylene diene monomer (EPDM) particles adhered with a ultraviolet-stabilized polyurethane binder to produce an even, uniformly colored surface.
2. Wear Layer Thickness: 3/8 inch (10 mm), minimum.
3. Coefficient of Friction, when wet: 0.8, minimum, when tested in accordance with ASTM D2047.
4. Wear Layer Color(s): As indicated on drawings.
5. Impact Attenuating Substrate: 100 percent recycled shredded styrene butadiene rubber (SBR) shreds or granules with 100 percent solids polyurethane binder to form a resilient material; do not use foam rubber.
6. Resilient Depth: As required to achieve specified Critical Fall Height as defined in ASTM F1292 but not more than depth indicated; maintain top elevation flush with adjacent grades.
7. Certification: Provide IPEMA certification of ASTM F1292 Critical Fall Height at thickness specified.
8. Manufacturers:
    a. GameTime, Inc: www.gametime.com/#sle.
    b. No Fault Sport Group; No Fault Safety Surface for Playgrounds: www.nofault.com/#sle.
    c. Play Safe Surfacing, Inc: www.playsafesurfacing.com/#sle.
    d. Hanover Specialties Inc: www.vitriturf.com/#sle.
    e. Substitutions: See Section 01 6000 - Product Requirements.
9. Accessories: Provide manufacturer's standard containment curbs and tapered transition elements to support surfacing between changes of surface grade.

B. Poured-In-Place Membrane Surfacing: Weather-resistant wear layer over rigid subbase.

1. Wear Layer: Ethylene propylene diene monomer (EPDM) particles adhered with a ultraviolet-stabilized polyurethane binder to produce an even, uniformly colored surface.
2. Wear Layer Thickness: 3/8 inch (10 mm), minimum.
3. Coefficient of Friction, when wet: 0.8, minimum, when tested in accordance with ASTM D2047.
4. Wear Layer Color(s): As indicated on drawings.
5. Manufacturers:
    a. No Fault Sport Group; No Fault Safety Surface for Waterplay: www.nofault.com/#sle.
    b. Substitutions: See Section 01 6000 - Product Requirements.

6. Accessories: Provide manufacturer's standard containment curbs and tapered transition elements to support surfacing between changes of surface grade.

C. Poured-In-Place Permeable Surfacing: Shredded rubber bonded with polyurethane adhesive, allowing water penetration, over aggregate subbase.

1. Rubber: 100 percent recycled shredded styrene butadiene rubber (SBR) shreds or granules.
2. Color: As indicated on drawings.
3. Resilient Depth: As required to achieve specified Critical Fall Height as defined in ASTM F1292 but not more than depth indicated; maintain top elevation flush with adjacent grades.
4. Certification: Provide IPEMA certification of ASTM F1292 Critical Fall Height at thickness specified.
5. Manufacturers:
    a. GameTime, Inc: www.gametime.com/#sle.
    b. No Fault Sport Group; No Fault Bonded Rubber Mulch Surfacing for Playgrounds: www.nofault.com/#sle.
    c. Play Safe Surfacing, Inc: www.playsafesurfacing.com/#sle.
    d. Substitutions: See Section 01 6000 - Product Requirements.
6. Accessories: Provide manufacturer's standard containment curbs and tapered transition elements to support surfacing between changes of surface grade.

D. Tile Surfacing: Factory-molded rubber tile with impact attenuating design and solid, uniform top surface, flat bottom and solid sides (dual durometer); adhered to a rigid subbase.

1. Tile Size: As indicated on drawings.
2. Coefficient of Friction, when wet: 0.8, minimum, when tested in accordance with ASTM D2047.
3. Resilient Depth: As required to achieve specified Critical Fall Height as defined in ASTM F1292 but not more than depth indicated; maintain top elevation flush with adjacent grades.
4. Color: As indicated on drawings.
5. Certification: Provide IPEMA certification of ASTM F1292 Critical Fall Height at thickness specified.
6. Manufacturers:
    a. Dinoflex; : www.dinoflex.com/#sle.
    b. GameTime, Inc: www.gametime.com/#sle.
    c. No Fault Sport Group; No Fault Safety Tile for Playgrounds: www.nofault.com/#sle.
    d. Surface America Inc: www.surfam.com/#sle.
    e. Ultimate RB: www.ultimaterb.com/#sle.
    f. Substitutions: See Section 01 6000 - Product Requirements.
7. Accessories: Provide manufacturer's standard containment curbs and tapered transition elements to support surfacing between changes of surface grade.

E. Recycled Rubber Fill: Loose fill; 100 percent recycled rubber chips, shreds, granules, or nuggets; installed over subgrade.

1. Chip Size: 3/8 inch, nominal (9 mm, nominal).

2. Depth: As required to achieve specified Critical Fall Height as defined in ASTM F1292 but not more than depth indicated; maintain top elevation flush with adjacent grades.
3. Color: Manufacturer's standard mixed colors.
    a. Selected color combination will average maximum 10 percent dark colors.
4. Certification: Provide IPEMA certification of ASTM F1292 Critical Fall Height at thickness specified.
5. Manufacturers:
    a. No Fault Sport Group; No Fault Loose Fill Rubber Mulch: www.nofault.com/#sle.
    b. Substitutions: See Section 01 6000 - Product Requirements.

F. Engineered Wood Fiber Fill: Manufactured for the purpose of protective surfacing; complying with ASTM F2075; do not use mulch manufactured from recycled pallets, or lumber containing nails or metal fasteners.
1. Depth: As required to achieve specified Critical Fall Height as defined in ASTM F1292 but not more than depth indicated; maintain top elevation flush with adjacent grades.
2. Certification: Provide IPEMA certification of ASTM F1292 Critical Fall Height at thickness specified.
3. Manufacturers:
    a. Fibar Systems: www.fibar.com/#sle.
    b. GameTime, Inc: www.gametime.com/#sle.
    c. Sof' Fall: www.sof-fall.com/#sle.
    d. Substitutions: See Section 01 6000 - Product Requirements.

G. Sand Fill: Uniformly graded (not "well graded"); washed; free of dust, clay, dirt, organic material, hazardous substances, and foreign objects; naturally or mechanically rounded particles; sieved in accordance with ASTM C136/C136M in the specified gradation range.
1. Percent Passing Sieve Size No. 8 (2.36 mm): 100 percent.
2. Percent Passing Sieve Size No. 16 (1.18 mm): 80 to 100 percent.
3. Percent Passing Sieve Size No. 30 (0.6 mm): 40 to 75 percent.
4. Percent Passing Sieve Size No. 50 (0.3 mm): 0 to 25 percent.
5. Percent Passing Sieve Size No. 100 (0.15 mm): Less than 2 percent.
6. Depth: As indicated on drawings.

H. Gravel Fill: Pea gravel or other rounded gravel; washed; free of dust, clay, dirt, organic material, hazardous substances, or foreign objects; rounded particles, either naturally or mechanically; sieved in accordance with ASTM C136/C136M in the specified gradation range.
1. Percent Passing Sieve Size 1/2 inch (12.5 mm): 100 percent.
2. Percent Passing Sieve Size 3/8 inch (9.5 mm): 75 to 85 percent.
3. Percent Passing Sieve Size No. 4 (4.75 mm): 0 percent.
4. Depth: As indicated on drawings.

I. Wood Mulch Fill: Untreated chipped bark or untreated chipped tree prunings; free of sharp or foreign objects or toxic chemicals; free of twigs, leaves, branches, thorns, dirt, grass, yard clippings, soil, or

poisonous plants; do not use mulch manufactured from recycled pallets, or lumber containing nails or metal fasteners.

1. Chip Length: 1-1/2 inches (40 mm), maximum.
2. Depth: As indicated on drawings.

J. Geotextile Fabric: Nonwoven polypropylene sheet.

K. Containment Curbs: Cast-in-place concrete; free of sharp vertical edges, protruding elements, and trip hazards.

1. Size(s): As indicated on drawings.
2. Minimum Edge Radius: 1/2 inch (13 mm).

L. Rigid Subbase: Concrete; ready mix concrete in accordance with ASTM C94/C94M; strength of 3,000 psi (20.7 MPa) at 28 days.

M. Rigid Subbase: Bituminous, as specified in Section 32 1216.

N. Aggregate Subbase: As specified in Section 32 1123.

PART 3 EXECUTION

3.01 PREPARATION FOR REPLACEMENT OF EXISTING LOOSE FILL SURFACING

A. Remove existing loose fill.

B. Measure the location of all playground elements, including perimeter of existing protective surfacing, access and egress points, hard surfaces, walls, fences, and structures, and planting locations.

C. Stake the layout of the entire Use Zone perimeter before starting any work, based on contract documents.

1. Verify that Use Zone perimeters do not overlap hard surfaces, whether currently installed or not.
2. If overlaps exist, notify Architect .
3. Do not proceed until revised drawings have been provided, showing corrected layout.

D. Inside Use Zones remove all obstructions that would extend into the resilient protective surfacing.

E. Make surface of subgrade smooth and evenly sloped.

1. Fill holes and depressions with borrow from same area or soil of similar type.
2. Make changes to grades as indicated on drawings.

F. After subgrade is correct, mark intended depth of surfacing on the base supports of each item of playground equipment using paint or tape in a manner that will be easily verifiable during installation of surfacing.

G. Perform percolation test at the lowest elevation of the subgrade in the areas to be covered by protective surfacing.

1. Report results to Architect .
2. If percolation is less than 1 inch (25 mm) in a 3 hour period, do not proceed.

3.02 EXAMINATION

A. Playground equipment installer will perform playground layout prior to installation of footings; verify correctness of layout before starting this work.

B. Verify that playground equipment and site furnishings and irrigation system located within playground area are complete.

C. Verify location of underground utilities and facilities in the playground area. Damage to underground utilities and facilities will be repaired at Contractor 's expense.

D. Verify that subgrades are at proper elevations and that smooth grading is complete.

E. Verify that proper depth of surfacing is marked on base supports of playground equipment.

3.03 PREPARATION

A. Correct subgrade irregularities to ensure that required depth of protective surfacing can be installed, and subgrade elevation is in accordance with manufacturer's requirements.

B. Inside Use Zones remove all obstructions that would extend into the resilient protective surfacing.

C. Remove rocks, debris, and other similar items.

D. Install containment curbs with top surface flush with intended elevation of top surface of protective surfacing.

3.04 SUBBASE

A. Install aggregate subbase as indicated on drawings and in Section 32 1123. Compact aggregate to maximum 95 percent, in accordance with ASTM D1557.

B. Install concrete subbase as indicated on drawings and in Section 03 3000.

1. Thickness: 4 inches (100 mm).
2. Remove curing compounds and other substances that will adversely affect adhesion.

C. Install bituminous subbase as indicated on drawings and in Section 32 1216.

D. Install with top surface of subbase no higher than grades and levels indicated and not more than 1/4 inch (6 mm) lower than grades and levels indicated.

E. Install in true, even plane, sloped to provide positive drainage.

F. Flatness Tolerance: 1/4 inch in 10 feet (6 mm in 3 m), maximum.

G. Cure subbase at least 7 days but not less than required by manufacturer of resilient surfacing.

3.05 RESILIENT SURFACING LAYER

A. Install in accordance with CPSC Pub. No. 325, ASTM F1487, manufacturer's instructions, and requirements of authorities having jurisdiction (AHJ).

B. Install proper thickness throughout Use Zone(s).

C. Clean and dry surface of subbase.

D. Cover aggregate subbase with geotextile fabric:

1. Verify that aggregate is free of ruts or protruding objects.
2. Lap minimum 4 inches (100 mm) width at seams. Adhere seams in accordance with manufacturer's recommendations.
3. Install fabric smooth, and free of tensile stresses, folds, or wrinkles.
4. Protect fabric from clogging, tears, or other damage during surfacing installation.
5. Repair or replace damaged fabric in accordance with manufacturer's recommendations.

E. Poured In Place Surfacing:

1. Mix components mechanically on-site in accordance with manufacturer's directions; do not mix by hand.
2. Install seamlessly; ensure complete bond to subbase.
3. Cover footings and foundations and adhere tightly around penetrating elements.
4. Maintain full thickness of resilient layers within Use Zone; cover or abut containment curbs as indicated on drawings; completely cover tapered transition edges.
5. Hand trowel exposed surface to smooth, even finish.
6. Impact Attenuation Layer: Install entire layer in one continuous pour on the same day.
7. Wear Surface: Bond wear surface to substrate with adhesive. Apply adhesive in small quantities so that wear surface can be applied before adhesive dries.
    a. Install surfacing seamlessly. When wear surface is composed of different color patterns, pour surface continuously and seamlessly.
    b. When seams are required due to color change or field conditions, place adjacent wear surface as soon as possible, before initial pour has cured. Coat edge of initial pour with adhesive and apply wear surface mixture immediately.
    c. Add a minimum of 1/16 inch (2 mm) depth to specified surfacing depth to ensure required impact attenuation performance is met.
    d. Install wear surface to cover foundations and adhere tightly around elements penetrating the surface.

F. Tiles: Lay tile with cut end tiles of equal width.
1. Bond tile to substrate with adhesive recommended by manufacturer.
2. Make cutouts around equipment not more than 3/8 inch (10 mm) in width; remove and refit tile as required to reduce gaps.
3. Fill and seal gaps around equipment with sealant.

3.06 LOOSE FILL SURFACING

A. Install in accordance with CPSC Pub. No. 325, ASTM F1487, and requirements of authorities having jurisdiction (AHJ).

B. Cover Subgrade with Geotextile Fabric:
1. Lap minimum 4 inches (100 mm) width at seams. Adhere seams in accordance with manufacturer's recommendations.
2. Install fabric smooth, and free of tensile stresses, folds, or wrinkles.
3. Protect fabric from clogging, tears, or other damage during surfacing installation.
4. Repair or replace damaged fabric in accordance with manufacturer's recommendations.

C. Install loose fill to depths indicated, with smooth even surface flush with tops of containment curbs.

D. Sand: Determine finished elevation after sand has been settled with water and percolating.

3.07 FIELD QUALITY CONTROL

A. Obtain the services of the equipment manufacturer's field representative to review the finished installation for compliance with specified requirements and with design criteria to the extent known to the Contractor ; submit report of field review.

B. Owner or Owner 's representative will inspect playground surfacing after installation to verify that surfacing is of proper type and depth and that playground meets specified design safety and accessibility requirements.

C. Repair or replace rejected work until compliance is achieved.

3.08 CLEANING AND PROTECTION

A. Restore adjacent existing areas that have been damaged from the construction.

B. Clean playground equipment of construction materials, dirt, stains, filings, and blemishes due to shipment or installation. Clean in accordance with manufacturer's instructions, using cleaning agents as recommended by manufacturer.

C. Clean playground area of excess construction materials, debris, and waste.

D. Remove excess and waste material and dispose of off-site in accordance with requirements of authorities having jurisdiction.

E. Protect installed products until Date of Substantial Completion.

F. Replace damaged products before Date of Substantial Completion.

END OF SECTION

SECTION 32 1822
TENNIS COURT SURFACING AND NETS

PART 1 – GENERAL:

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General Conditions and Supplementary Conditions and Division 1 through Division 16 Specification Sections, apply to work of this Section.

1.02 RELATED WORK

A. Section 32 12 16– Hot-Mixed Asphalt Paving

B. Section 32 31 13 - Chain Link Fences and Gates

1.03 REFERENCE STANDARDS

A. Applicable standards and details of the Maryland Department of Transportation "Standards and Specifications."

1.04 WORK DESCRIPTION

A. Construct tennis courts as indicated on Drawings, in number, size, and locations as shown. Work of this Section shall include the following:

1. Preparation of the base pavement section for tennis courts shall be as indicated on the Plans and as specified in Section 32 12 16.
2. Construction of court surface including game lines, net posts and footings and nets.
3. Existing perimeter court fencing shall be treated as indicated, and is covered under Section 32 31 13. Coordinate court surface installation with treatment of existing fencing posts and installation of new fencing mesh.1.

B. Court surfaces shall be uniform in texture and color, in accordance with grades, cross sections and pitch required by drawings, and free of all depressions and ridges.

1.05 SUBMITTALS

A. Submit court surface manufacturer's product data, catalog cuts, application specifications, maintenance information, and office samples.

1.06 QUALITY ASSURANCE

A. The installer of the court surfacing shall be certified by the approved manufacturer, and shall use only workmen who are trained and experienced in the installation of the court surface.

B. Do not store resurfaces or color system materials in direct sunlight. During cold weather, store materials in a manner to prevent freezing. All materials shall be kept sealed in original containers until ready for use.

1.07 WARRANTY

A. Provide minimum one (1) year warranty, commencing from date of owner acceptance, covering materials and installation. Contractor shall repair or replace defective surface, at no cost to owner, during the warranty period.

PART 2 – PRODUCTS:

2.01 GENERAL

A. Court Surfacing:

1. Approved Manufacturer: "Latex-ite" asphalt resurfacer,“ Latex-ite” crack and leveling compound and "Latex-ite" acrylic color sealer, as manufactured by American Tennis Courts, Inc., Baltimore, Maryland, 1.410.477.4400, or pre-bid approved substitution.

B. Tennis net posts: 2 7/8" O. D. galvanized steel posts with "dark green" epoxy finish and heavy duty external take-up winding device, equipped with quick release, detachable winding handle.

1. Approved manufacturer: "Super Pro Deluxe" by American Tennis Courts, Inc., or pre-bid approved substitution.

C. Tennis net tie down: As manufactured by American Tennis Courts, Inc., or pre-bid approved substitution.

D. Tennis nets: Double synthetic spun polyester headband, quadruple sewn to a braided polyethylene body, with black vinyl side pockets, double sewn bottom band, and incorporating spur grommets and fiberglass dowels. Net shall not crack, yellow, pink, face, or show effects from acid rain. Net shall remain pliable in cold weather. Net dimensions: 41'-9" long x 3'-3" high.

1. Netting: Single twine mesh, made from heavy-duty 3mm black braided polyethylene, with minimum B/S of 285 pounds. Mesh shall be 1-3/4" square.

2. Cables: 6mm diameter PVC coated wire, with mechanically spliced double loops.

3. Dowels: 10mm diameter polished fiberglass.

4. Grommets: Nickel-plated brass, spur type.

E. Windscreens: Open mesh polypropylene, minimum 75 percent blockage, with reinforcing center tape and vinyl-coated steel wire rope. Reinforced hems and brass grommets spaced at 12 inches on center, top and bottom. Height shall be 9 feet, color shall be dark green.

F. Game Lines: Two (2) inch wide white lines, 100% acrylic game line paint. Oil base paint or lacquer is not acceptable.

G. Court surface base: Refer to Section 32 12 16, Hot-Mixed Asphalt Paving, and as indicated on the Contract Drawings.

H. Concrete for footings and anchors: MDOT-SHA Class "3", 3500 PSI.

I. Tennis Backboard: Provide tennis backboard, 10 feet high by 16 feet wide (four 4 foot wide panels). Backboard shall be constructed of solid U.V. stabilized, plastic sheet, with corrosion resistant mounting hardware. Provide mounting hardware to suit project conditions. Color of each panel shall be green with a horizontal with “net” stripe.

PART 3 – EXECUTION:

3.01 INSPECTION

A. Examine the areas and conditions under which the Work of this Section shall be installed. Correct conditions detrimental to the proper condition of the Work. Do not proceed until unsatisfactory conditions have been corrected.

B. Do not install court surfacing when the ambient temperature is below 50□F or above 140□F. Do not apply when rain is imminent.

3.02 PREPARATION

A. Prepare base pavement section for tennis courts as indicated on the Plans and as specified in Section 32 12 16. Base shall be allowed to cure for a minimum of fourteen (14) days prior to the application of court surfacing.

B. Net posts, footings, and tie-downs shall be installed prior to placing the Superpave base course. Footings shall be held 2" below finish grade, with top of sleeves extending to finish grade.

C. Prior to applying court surfacing, flood court area with water. Allow water to stand for one (1) hour at a minimum temperature of 75□ with sun. Any areas exhibiting standing water or "birdbaths" over 1/16" in depth shall be marked for patching. Patch areas as follows:

1. Using a straightedge of sufficient length to bridge the low area, screed an application of "Latex-ite" Resurfacer or Crack and Leveling Compound, or comparable compound recommended by a pre-bid approved manufacturer.
2. After patching has cured, check patched area with a stringline to insure that the area has been brought flush with surrounding surface.
3. Roller marks: Apply asphalt patching and leveling compound along roller marks and feather with a squeegee.

D. After patching, completely clean court base surface by means of high powered blowers, removing all dust, dirt and debris, and leaving areas completely dry.

3.03 COURT SURFACING

A. Apply one (1) application of asphalt resurfacer at the rate of 0.12 gallons per square yard (undiluted form). Mix resurfacer with potable water at the rate recommended/specified by the manufacturer. Allow material to cure at least twenty-four (24) hours prior to application of color coats.

B. Color coats: Apply acrylic color sealer in three (3) applications for a total of 0.15 gallons per square yard (undiluted form). Mix color sealer with 80-100 mesh silica sand and potable water at rates specified by the manufacturer. Courts shall be thoroughly scraped between color sealer applications to remove ridges. Apply succeeding coat only after preceding coat has thoroughly dried (2-3 hours).

1. Colors shall be selected by the Architect.

C. Game Lines: Apply marking paint only after the color sealer has completely cured (two (2) to four (4) days depending on conditions). Accurately locate and mark game lines by snapping chalk lines. Use soft-soled shoes and kneepads to prevent surface indentation during marking and painting operations. Uneven line width and undulating or ragged line work shall be rejected.

3.04 FOOTINGS, NET POSTS, AND FIXTURES

A. Footings: Footings shall be two (2) feet by two (2) feet by three (3) feet in depth, except they shall be belled at the bottom a minimum of 30".

B. Ground sleeves shall be schedule 40 PVC pipe, 24" long, six (6) inches above the top of the 2" base course.

C. Tie downs: Install center tie-down anchors, compatible with nets. Anchors shall be set in twelve (12) inch by twelve (12) inch by twelve (12) inch deep footings. Top of footings shall protrude four (4) inches above the top of the 2" base course.

3.05 NETS AND ACCESSORIES

A. Install nets and winding devices in accordance with manufacturer's written instructions.

3.06 WINDSCREENS

A. Install windscreens in accordance with manufacturer’s written instructions. Assure that windscreens are installed tight and secure.

3.07 TENNIS BACKBOARD

A. Install backboard in accordance with manufacturer’s written instructions. Assure that backboards are installed tight and secure.

3.08 PROTECTION

A. Protect tennis court surfaces, posts, tie downs, nets and winding devices from damage by work of other trades until accepted by owner.

3.09 CLEAN-UP

A. Remove all excess materials and debris associated with the Work of this Section from the project area and legally dispose of offsite.

END OF SECTION

SECTION 32 1823.39
SYNTHETIC RUNNING TRACK SURFACING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Synthetic running track surfaces.

B. Line markings.

1.02 RELATED REQUIREMENTS

A. Section 31 1000 - Site Clearing.

B. Section 31 2000 - Earthmoving.

C. Section 32 1216 - Asphalt Paving.

D. Section 32 1313 - Concrete Paving.

E. Section 32 1813 - Synthetic Grass Surfacing.

F. Section 31 2200 - Grading: Excavation, backfill and compaction required for installation of synthetic running track surfacing.

G. Section 33 4100 - Subdrainage.

1.03 REFERENCE STANDARDS

A. ASTM D2240 - Standard Test Method for Rubber Property--Durometer Hardness 2015e1.

B. IAAF/NCAA - Performance Specification for Synthetic-Surfaced Athletics Tracks (Outdoor) 1999.

C. DIN 4102-1 - Fire Behaviour of Building Materials and Building Components - Part 1: Building materials; concepts, requirements and tests 1998.

D. DIN 18035 6 - Sporting Grounds Part 6-Synthetic Surfaces 2008.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to start of work of this section; require attendance by all affected installers.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's product data including standard specifications, installation guidelines and maintenance instructions.

1. Submit documentation that synthetic running track surfacing material is free of toxic or hazardous substances that exceed the limits set forth by the U.S. Environmental Protection Agency.

C. Shop Drawings: Show location and color of lane lines, start lines, finish lines, and related markings for Owner to review a minimum of 4 weeks prior to application.

D. Samples: Three, 12 inch by 12 inch (305 mm by 305 mm) samples of the full-depth system in the color(s) indicated on the contract documents.

E. Certifications:

1. Submit installer's certification that the installer has reviewed the asphalt or concrete base drawings and specifications and accepts the asphalt or concrete base will be suitable if constructed as indicated and specified.

2. Submit installer's certification that in-place concrete or asphalt substrate is acceptable as installed.
3. Submit certification from registered engineer or land surveyor that synthetic running track surface layout and dimensions are as shown on drawings.

F. Test Reports: Reports of field quality control testing.

G. Manufacturer's Instructions: Submit copies of manufacturer's written installation instructions and other recommendations

H. Manufacturer's Qualification Statement.

I. Installer's Qualification Statement.

J. Maintenance Data.

K. Warranty: Submit manufacturer warranty and ensure that forms have been completed in Owner 's name and registered with manufacturer.

L. Project Record Documents: Record actual locations of installed synthetic running track surfaces.

1.06 QUALITY ASSURANCE

A. The synthetic surfacing contractor shall furnish all labor, materials, equipment, supervision and services necessary for the proper completion of the synthetic track surfacing and related work indicated on the drawings and specified herein. The synthetic surfacing contractor shall refer to the drawings for the required locations of synthetic track surfacing to be installed. All quantities and dimensions shall be field verified by the synthetic surfacing contractor.

1. Install an IAAF approved, full depth poured-in-place two components, UV stabilized elastomeric polyurethane Dual Durometer synthetic surfacing system with embedded textured finish

B. Manufacturer Qualifications: Company that has produced surfacing materials for not less than ten years with not less than five similar projects that have been in successful use for more than five years.

1. The manufacturer must have a minimum of 10 years of experience with compound two part polyurethane for athletic surfaces.
2. The Manufacturer must offer a minimum of four (4) IAAF Certified Track Systems.
3. Layout and paint all track lines and event markings as required.
4. Coordination - The synthetic surfacing contractor shall coordinate the work specified with an authorized and appointed representative of the owner so as to perform the work during a period and in a manner acceptable to the owner.

C. Installer Qualifications: Minimum five years experience in successful installation of surfacing systems of type specified herein.

1. Submit manufacturer's certification that installer is qualified to install the products specified.
2. Submit installer's certification that installer is a member of American Sports Builders Association (ASBA).
3. Submit installer's certification that installer employs at least one ASBA “Certified Track Builder” (CTB) on installation team for project.
4. The Contractor must have a minimum of 7 years’ experience in the installation of poured-in- place, two-component elastomeric polyurethane synthetic track surfacing.

5. The contractor must have installed a minimum of 6 outdoor track facilities in the last 2 years using the exact, IAAF certified, poured-in-place, two-component elastomeric polyurethane synthetic track surfacing, as specified herein with the contractor bidding this project.
    a. Provide list of a minimum of 10 total IAAF/NCAA certified installations utilizing the same product specified.

D. Applicable Publications - Codes and standards follow the current guidelines set forth by the International Amateur Athletic Federation (IAAF) and the National Collegiate Athletic Association (NCAA), along with the current material testing guidelines as published by the American Society of Testing and Materials (ASTM).

E. Performance Standards

1. The new synthetic track surfacing system shall exhibit the following minimum performance standards as required by IAAF:

1.07 DELIVERY STORAGE AND HANDLING

a. Thickness Average: ≥ 13mm Minimum - 10mm

b. Force Reduction: 35 to 50

c. Modified Vertical Deformation: 0.6 to 1.8

d. Friction: TRRL Skid Resistance ≥ 47

e. Tensile Strength: ≥ 0.5

f. Elongation at break: ≥ 40

B. Track Surface System Packaged Materials: Deliver packaged materials in original, unopened containers showing name and address of manufacturer, and indication of conformance with state and federal laws, as applicable.

C. Store in weathertight location and protect from damage during delivery, storage and handling.

1.08 PROJECT CONDITIONS

A. Weather Limitations: Proceed with track surface installation only when existing and forecasted weather conditions permit installation to be performed to ensure beneficial and optimum results are obtained. Apply products during favorable weather conditions according to manufacturer's written instructions.

1.09 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective work within a five year period after date of Substantial Completion.

C. Provide five year manufacturer warranty for synthetic running track surface system.

PART 2 PRODUCTS

2.01 SYNTHETIC RUNNING TRACK SURFACING

A. A.Basis of design product: BSS 1000, 13mm manufactured by Tarkett Beynon. Substitutions shall be approved in writing by PGCPS.

B. Synthetic Running Track Surfacing System: Permeable; paved-in-place.

1. System Thickness: 1/2-inch thick (13 mm).

2. Base Layer: Paved-in-place base layer of Type 2 base layer recycled SBS rubber granule and polyurethane binder.

3. Finish Layer: Structural spray coating of colored polyurethane and Type 2 top layer EPDM rubber granule mixture, sprayed onto base system.
4. Comply with the following as described in IAAF/NCAA Performance Specification for Synthetic-Surfaced Athletics Tracks (Outdoor):
    a. Force Reduction: 35 to 50 percent.
    b. Modified Vertical Deformation: 0.23 inch to 0.07 inch (0.6 mm to 1.8 mm).
    c. Friction (TRRL Skid Resistance): 47.
    d. Tensile Strength:
        1) Porous surface: 72.5 pound per square inch (0.5 MPa).
        2) Non-porous surface: 58 pounds per square inch (0.4 MPa).
    e. Elongation at Break: 40 percent.
    f. Maximum Rubber Content in Force Reduction Layer: 20 percent.
5. Comply with the following as described in DIN 18035 6:
    a. Spike Resistance: Class 1.
    b. Ball Rebound: 99 percent.
    c. Abrasion Resistance: 1.30.
    d. Maximum Indentation: 7/32 inch (5.7 mm).
    e. Sliding Coefficient:
        1) Dry: 0.68.
        2) Wet: 0.50.
6. Flammability Behavior: Class 1 in accordance with DIN 4102-1.

2.02 MATERIALS

A. Elastomeric Polyurethane: A.Beypur, the two-component U.V. stabilized elastomeric polyurethane compounded from polyol and isocyanate components, based on one hundred percent Methylene Diphenyl Isocyanate (MDI). No Toluene Disocyanate Isocyanate (TDI) will be allowed.

B. Polyurethane Primer: Single-component, designed specifically for use in priming concrete, asphalt or existing, cured polyurethane prior to installation of new polyurethane coating.

C. Polyurethane Coating: 2-component, self-leveling, colored, polyurethane coating (polyol and isocyanate) containing no solvents, toluene diisocyanate (TDI), or mercury.

D. Polyurethane Binder: Single component, 100 percent polyurethane, moisture curing, middle viscosity binding agent based on diphenylmethane diisocyanate (MDI)/TDI, containing less than 0.5 percent of TDI monomer, with no solvents or extenders (plasticizers).

E. Polyurethane Pore Filler: 2-component thixotropic colored polyurethane containing no solvents, TDI, or mercury.

F. Structural Spray Coat: 2-component polyurethane spray coating.

G. Aliphatic Top Coating: 2-component, high elongation, UV resistant sealer.

H. Base Layer Granules, Type 1: Low-density, colored EPDM rubber granules, processed and graded to 3/64 inch (1 mm) to 3/32 inch (3 mm) in size, containing less than 4 percent dust.

1. Granulates shall be peroxide cured.
2. The EPDM granulates and the U.V. stabilized elastomeric polyurethane shall be color matched.

I. Top Layer Granules, Type 2: Colored, virgin EPDM rubber granules, processed and graded 1/64 inch (0.5 mm) to 1/16 inch (1.5 mm) in size unless otherwise specified. Provide rubber containing minimum of 20 percent EPDM and approved by resin manufacturer.

1. Specific Density: 1.60 plus or minus 0.08.
2. Hardness of 60 when tested in accordance with ASTM D2240, Shore A.

J. Rubber Dust: Residual product made from excess top layer granules in size of 0.0 inch (0.0 mm) to 1/64 inch (0.5 mm).

K. Rubber Granulate

1. Fine mesh Styrene Butadiene Rubber (SBR) processed ground to a graded size not to exceed 20 mesh in size.
2. A maximum of twenty percent, by weight of the SBR will be allowed in the force reduction layer.

2.03 ACCESSORIES

A. Track and Event Line Marking Paint: Polyurethane paint formulated for exterior service environments in striping applications in color as specified for line markings.

1. Thickness: 12 mils (0.3 mm) dry film thickness (DFT).
2. Multiple coats to achieve thickness as required by paint manufacturer.
3. Prime surface to achieve adhesion characteristics of paint.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of Conditions: Examine areas and conditions under which work is to be performed and identify conditions detrimental to proper or timely completion.

1. Do not proceed until unsatisfactory conditions have been corrected.
2. Installation shall not take place if adjacent or concurrent construction generates excessive dust,
3. abrasives or any other byproduct that, in the opinion of the installer, would be harmful to the track material, until completion of such works.
4. Substrate tolerances:
5. If, in the opinion of the installer of the synthetic material, the weather and/or climatic conditions are detrimental to the proper installation of the surfacing materials, work shall be delayed until conditions are acceptable.
6. Preferred installed temperature is 50 degrees Fahrenheit and rising. Installation shall be executed only in dry conditions.
    a. Planarity: Not to exceed 1/4 inch (6 mm) in 10 feet (3.048 m), non-cumulative.
    b. Levelness: Not to exceed 0.1 percent in running direction.
    c. Concrete Curbs: Ensure top elevations of continuous concrete curbs are at constant elevation.

B. Flood Test: Flood substrate immediately after substrate is capable of supporting foot traffic. Allow to dry for 20 minutes.

1. If any areas of ponded water (“birdbaths”) are visible at the end of the 20 minute drying time, correct areas of substrate that allow water to pond.
2. Obtain Architect 's written approval of method of correction prior to proceeding with corrective work.
3. Cold tar patching, skim-coat patching and sand-mix patching are not acceptable methods of correction.

3.02 PREPARATION

A. Protection: Protect surfaces adjacent to track surfacing operations from polyurethane liquids.

B. Surface Preparation: Verify substrate is fully cured and free from excess surface oils and chemicals that would impair track surface installation.

1. Concrete: Cure concrete for not less than 45 days. Test cured concrete substrate and provide documentation that moisture content is within limits defined by manufacturer.
2. Asphalt: Cure asphalt for no less than 28 days. Test cured asphalt and provide documentation that volatiles and latent asphalt content are within limits defined by manufacturer.

C. Ensure that asphalt compaction tests indicate compaction of 95 percent or greater. Check asphalt with 10 foot (3.048 m) straightedge in all directions. Repair areas not in conformance or replace with new materials, recompact, and recheck surfaces.

D. Subbase:

1. The synthetic track surfacing system shall be laid on an approved subbase. The General Contractor shall provide compaction test results of 95% or greater for the installed subbase and asphalt surface.
2. The track surface, i.e. asphalt substrate, shall not vary from planned cross slope by more than + .2%, with a maximum lateral slope outside to inside of 1%, and a maximum slope of 0.1% in any running direction. The finished asphalt shall not vary under a 10' straight edge more than 1/8”.

3.03 INSTALLATION

1. It should be the responsibility of the asphalt paving contractor to flood the surface immediately after the asphalt is capable of handling traffic, but within 24 hours. If, after 20 minutes of drying time, there are birdbaths evident, it shall be the responsibility of the architect, in conjunction with the surfacing contractor, to determine the method of correction. No cold tar patching, skin patching or sand mix patching will be acceptable.
2. Any oil spills (hydraulic, diesel, motor oil, etc.) must be completely removed and replaced with either polyurethane or new, keyed in asphalt. The minimum curing time for the asphalt base is 28 days. It shall be the responsibility of the surfacing contractor to determine if the asphalt substrate has cured sufficiently prior to the application of the polyurethane surfacing system.
3. It shall be the responsibility of the general contractor to determine if the asphalt substrate meets all design specifications, i.e. cross slopes, planarity and specific project criteria. After all the above conditions are met, the synthetic surfacing contractor must, in writing, accept the planarity of the asphalt receiving base, before work

B. General:

1. Comply with manufacturer's recommendations.
2. Prime areas to be surfaced.
3. Make substrate surface repairs and minor planarity corrections with repair compound.

4. Install track surface as specified to achieve track surface performance and physical dimensions within tolerances.
5. Total thickness of the BSS 1000 Dual Durometer synthetic track surfacing system shall average 13mm.
6. Equipment:
    a. The BSS 1000 Dual Durometer synthetic track surfacing system components shall be processed and installed by specially designed machinery with automatic electronic portioning, which provides continuous mixing, feeding and finishing for accurate quality controlled installation.
    b. No hand mixing will be allowed.
7. Materials
    a. Force Reduction Layer – The fine mesh SBR granules and UV stabilized elastomeric polyurethane shall be metered and mixed together on site to regulate the ratio/quantity of SBR, not to exceed fourteen percent in the system and to insure an even distribution of the granules throughout the 8mm force reduction layer. No multi-layered system allowed.
    b. Resilient Wearing Layer - The 1 to 3 millimeter EPDM granules shall be mechanically integrated with an UV stabilized elastomeric polyurethane to the full depth of the 5mm wearing layer. The resilient textured finish shall be a dense matrix of embedded EPDM granules.

3.04 INSTALLATION OF PAVED-IN-PLACE SYNTHETIC TRACK SURFACE

A. Priming: Prime only area to be covered within working day to ensure good bond to base. Apply primer at manufacturer's recommended rate.
    1. Asphalt: Prime asphalt substrates with mixture of one part polyurethane binder and on part butyl acetate.
    2. Concrete: Prime concrete substrates with mixture of one polyurethane binder and one part polyurethane primer.

B. Base Layer: Mix base layer granules with polyurethane binder at manufacturer's recommended rate until homogeneous. Pave mixture in place using heated mechanical screed paver specially designed for this work. Apply to recommended depth at recommended application rate.

C. Spray Coat: Apply spray coat with air and volume controlled spray equipment in even surfaces without streaking. Apply second coat in opposite direction to first application. Achieve uniform finish. Apply at manufacturer's recommended rate.

D. Seal Coat: Seal base layer by scraping thixotropic mixture of pore filler and rubber dust onto surface. Inspect sealed surfaces for pinholes prior to further application. Apply at rates recommended by material manufacturer.

E. Top Layer: Apply multiple-spray application of mixed polyurethane coating and top layer granules, mixed and applied at rates recommended by product manufacturer, to achieve resilient texture finish comprising of dense matrix of encapsulated granules.

F. Seal Coat: Seal base layer by scraping thixotropic mixture of pore filler and rubber dust onto surface to render it impermeable. Inspect sealed surfaces for pinholes prior to further application. Apply at rates recommended by material manufacturer.

G. Spray Coat: Apply spray coat with air and volume controlled spray equipment. Apply spray coats resulting in even surfaces without streaking. Apply second application in opposite direction to first application. Achieve uniform finish. Apply at manufacturer's recommended rate.

3.05 INSTALLATION OF FULL-POUR SYNTHETIC TRACK SURFACE

A. Base Layers: Apply two coats of double-mixed polyurethane coating at approximately manufacturer's recommended rate with notched squeegee. After material has self-leveled and is still liquid, broadcast Type 2 base layer granules into surface to excess. After curing (hardening), remove excess granules for reuse. Then apply third layer of polyurethane coating with flat squeegee to fill open areas between embedded granules.

B. Top Layer: Apply multiple-spray application of mixed polyurethane coating and Type 2 top layer granules, mixed and applied at rates recommended by product manufacturer, to achieve resilient texture finish comprising of dense matrix of encapsulated granules.

C. Seal Coat: Spray-apply aliphatic top coating in two coats applications onto exposed top layer. Apply second application in opposite direction to first application to achieve uniform finish.

3.06 TRACK AND EVENT LINE MARKING

A. Track and Event Line Markings, General: Comply with the requirements of the referenced IAAF / NCAA standards.

B. Provide IAAF / NCAA standard markings for the following track and field events:

1. 100 m.
2. 200 m.
3. 400 m.
4. 800 m.
5. 1000 m.
6. 1500 m.
7. 1 mile.
8. 2000 m.
9. 3000 m steeplechase.
10. 100 m hurdles.
11. 110 m hurdles.
12. 400 m hurdles (men and women).
13. 4 by 100 m relay.
14. 4 by 200 m relay (completed in lanes).
15. 4 by 400 m relay.
16. 4 by 800 m relay.
17. 4 by 1500 m relay.
18. Other events defined by Owner.
19. NCAA events.

3.07 TOLERANCES

A. Percent Granules: Variation of plus or minus 2 percent.

B. Surface Thickness, variation: Variation of minus 0.0 inch (0.0 mm) to plus 1/8 inch (3.0 mm).

C. Color Deviation: 5 Delta E (Hunter) units maximum allowed.

D. Slopes:

1. Track Oval:

a. Running Direction: 1.0 percent, maximum.

b. Lateral Slope: 1.0 percent maximum.

2. High Jump (“D” area): 1.0 percent maximum, downwards to the cross bar.

3. Run Ups: Same as track oval unless located in the High Jump (“D”) area.

3.08 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements for additional information.

B. Tests: Perform thickness, hardness and deformation tests. Employ an Independent Testing Laboratory for the purpose. Submit reports.

1. Conduct 60 thickness test spaced throughout the track surface.

2. Conduct 5 hardness and deformation tests.

C. Layout:

1. Employ registered surveyor to document compliance of in-place work with the contract documents and the referenced standards.

2. Submit reports.

3.09 CLEANING

A. Leave surfacing in clean condition and free of surface defects.

B. Reapply and touch up paint striping once during the warranty period.

C. Promptly remove debris created by track work from paved areas. Clean wheels of vehicles before leaving site to avoid tracking debris onto roads, walks, or other paved areas.

D. Dispose of all materials off site in proper manner.

3.10 PROTECTION

A. Protect installed surfacing from damage during the balance of construction activity.

END OF SECTION

SECTION 32 1823
SAND-RUBBER SYNTHETIC TURF SYSTEM

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The provisions of the Contract Documents apply to the work of this Section.

B. National Federation Football Rules and Interpretations; FIFA Rules.

C. National Federation of State High School Associations

D. State of Maryland High School League

1.02 SUMMARY

A. Approved manufactures that may be considered with comparable systems as approved by the owner and shall meet the speciedd requirements outline herein: Fieldturf, Shaw Sports Turf, Astroturf.

B. Furnish all labor, materials, tools and equipment necessary to completely install all new synthetic turf as indicated on the plans and as specified herein. The installation of all new materials shall be performed in strict accordance with the manufacturer's installation instructions and in accordance with all approved shop drawings.

C. Regardless of the turf system proposed, each system shall meet or exceed the requirements of this specification related to performance and qualifications, and particularly with regard to fiber length and infill composition.

D. Furnish and install a multi-purpose Infilled Synthetic Turf System.

E. Provide tufted and inlaid lines and markings or other such graphics as described herein and as shown on the Drawings and approved Shop Drawings.

F. Provide all attachments and penetrations as required to complete the work as shown on the Drawings and approved Shop Drawings.

G. Provide an eight (8) year standard, non-prorated warranty for all Infilled Synthetic Turf components and installation. Provide a Third Party Insured Warranty as described herein for Synthetic Turf System.

H. Provide Owner with video taped on site field maintenance training, manuals, schedules and equipment.

1.03 SUBMITTALS

A. All submittals shall be directed to the Owner for distribution. The contractor may send electronic submittals where applicable.

B. Submit the following with the Bid/Proposal:

1. Submit two samples, 12x12 inch in size, illustrating details of finished product.
2. A letter and specification sheet certifying that the products of this section meet or exceed specified requirements.
3. Certified copies of independent (third-party) laboratory reports on ASTM tests as follows:
    a. Pile Height, Face Width & Total Fabric Weight, ASTM D418 or D5848
    b. Primary & Secondary (and Tertiary if applicable) Backing Weights, ASTM D418 or D5848
    c. ASTM F2765-09 – Standard Test Method for Measuring Total Lead content in Turf Fibers
    d. EN-71 - Toxicology test results for infill materials
4. List of at least 20 existing completed turf installations over the past five years comprised of 65,000 sq. ft. or more, including Owner representative and telephone number. List must include 5 projects

at least 4 years old.

5. Lists providing specific contacts and telephone numbers of the following:
    a. A football field of 65,000 sq. ft or more of the exact specified material, including the infill material and fiber.
    b. A list of 10 fields that have been in play utilizing the same: exact fiber (length, denure, cross section, stich gage, stich rate, fibers per bundle, etc) that is being proposed for this field.
    c. A sand/SBR rubber infill field in play for at least 5 years.
6. The Turf Contractor and the turf Manufacturer (if different from the company) shall provide a sample copy of insured, non-prorated warranty and pre-paid, non-cancelable warranty insurance policy to be issued by an A- rated carrier and issued in the name of Prince Georges County Public Schools.

C. Submittals prior to ordering of materials:
1. The Contractor shall submit Shop Drawings indicating:
    a. Field Layout with tufted/inlaid lines
    b. Field Marking Plan and details for the specified sports; i.e., VHSL and NFHS.
    c. Roll/Seaming Layout indicating all turf panels by number and how they are to be seamed, by type seam and location, in the field.
    d. Sewing/Adhesives technical specification Sieve Analysis of Sand and Rubber In-Fill
    e. Sample of Cryogenic Rubber and Sand from actual source supplier
    f. Methods of attachment, field openings and perimeter conditions.
    g. Methods of attaching removable/replaceable batters boxes.
    h. Provide a 12” x 12” sample of Resilient Underlayment (if needed).
2. The Turf Manufacturer must submit the fiber manufacturer's name, type of fiber and composition of fiber and all ASTM testing data for each material.
3. Product Data including the following
    a. Submit manufacturer's catalog cuts, material safety data sheets (MSDS), brochures, specifications; preparation and installation instructions and recommendations; storage, handling requirements and recommendations.
    b. Submit data in sufficient detail to indicate compliance with the contract documents.
    c. Submit manufacturer's instructions for installation.
    d. Submit manufacturer's instructions for maintenance for the proper care and preventative maintenance of the synthetic turf system, including painting and markings.

D. Prior to Final Project Acceptance, the Contractor shall submit to the Owner:
1. Three (3) copies of Maintenance Manuals, which will include all necessary instructions for the proper care and preventative maintenance of the synthetic turf system, including painting and markings.
2. Project Record Documents: Record actual locations of seams, drains or other pertinent information.
3. Warranty: Submit Manufacturer Warranty and ensure that forms have been completed in Owner's name and registered with Manufacturer.
4. Provide attic stock requirements, maintenance equipment with training and manuals.

5. Submit written statement signed jointly by General Contractor and synthetic field surfacing supplier/installer stating that the Drawings and Specifications have been reviewed by qualified representatives of the material manufacturer, and that they are in agreement that the materials and system, including drainage, to be used for synthetic field surfacing are proper and adequate for the applications shown.
6. The synthetic turf supplier/installer shall submit at the pre-construction conference a certificate stating that it is not aware of any aspects of the proposed turf system to be installed which knowingly violate any patented materials or methods and that the manufacturer fully indemnifies the Owner and Engineer from any liability arising out of any issue related to patent infringement.
7. Submit a certified statement issued by the synthetic field surfacing materials supplier/installer, attesting that all areas and surfaces designated to receive synthetic field surfacing have been inspected and found satisfactory for the reception of the Work covered under this Section; and are not in conflict with the “Guarantee” requirements. Installation of synthetic field surfacing materials may not commence until final acceptance of finished crushed stone/aggregate base has been received by the Engineer.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section. The Turf Contractor and/or the turf Manufacturer:
   1. Must be experienced in the manufacture and installation of this specific type of synthetic infill grass system for at least 5 years.
   2. Must have 10 fields in play utilizing the same fiber and fiber manufacturer that is being proposed for this field.
   3. Must have installed a minimum of 10 fields of 65,000 sq. ft or more in the past two years with the same manufacturer, product and company, including the exact same infill system, fiber and fiber manufacturer that is being proposed for this field.

B. Installer Qualifications: Company specializing in performing the work of this section.
   1. The Turf Contractor must provide competent workmen skilled in this specific type of synthetic turf installation.
   2. The designated Supervisory Personnel on the project must be certified, in writing by the Turf Manufacturer, as competent in the installation of this material, including sewing seams and proper installation of the infill mixture.
   3. The Synthetic Turf System shall be installed by an experienced Contractor who shall provide a list of at least five completed field installations within the last three years, providing specific information about the name of the product, contact names, addresses, telephone numbers, year of the installation and type of infill material for type of fields.
   4. The installer shall have a manufacturer’s representative on site to certify the installation and Warranty compliance.

C. Prior to the beginning of installation, the Installer of the synthetic turf shall inspect the existing aggregate base condition and palanarity. The installer will accept the surface in writing when the contractor verifies test results for planarity and permeability that are in compliance with the synthetic turf manufacturer’s specifications. The Installer shall have the dimensions of the field and locations for markings measured by a registered surveyor (in the State of Maryland) to verify conformity to the specifications and applicable standards.

D. The Turf Contractor shall provide the necessary testing data to the owner that the finished field meets the required shock attenuation, as per ASTM F1936. The synthetic field surfacing materials supplier/installer shall provide (arrange and pay for) G-Max testing on the installed surface prior to acceptance and it shall be repeated at one year intervals throughout the turf manufacturer's guarantee period at no additional cost. Testing shall be preformed in accordance with ASTM F-355-Method A, by an independent materials testing laboratory cerified to preform this test and subject to the approval of the Engineer. "In-house" laboratories with a busines affiliation to the turf manufacturer and/or installer are unacceptable. Over the life of the warranty, changes in the average G-Max that exceed +20% of the original installed system shall be remedied by the synthetic field surfacing supplier/installer within 30 days of the deficient test results.

1.05 TESTING AND INSPECTION

A. ASTM Standard Test Methods shall apply to turf products submitted. All test methods shall be accurately referenced and verified by a third party agency:

1. D1577 - Standard Test Method for Linear Density of Textile Fiber
2. D5848- Standard Test Method for Testing Pile Yarn Floor Covering Construction D1338 - Standard Test Method for Tuft Bind of Pile Yarn Floor Coverings
3. D1682 - Standard Method of Test for Breaking Load and Elongation of Textile Fabrics
4. D5034 - Standard Test Method of Breaking Strength and Elongation of Textile Fabrics (Grab Test)
5. F1015- Standard Test Method for Relative Abrasiveness of Synthetic Turf Playing Surfaces F2765-09 – Standard Test Method for Measuring Total Lead content in Turf Fibers
6. D4491 - Standard Test Methods for Water Permeability of Geotextiles by Permittivity
7. D2859 - Standard Test Method for Ignition Characteristics of Finished Textile Floor Covering Materials
8. F355- Standard Test Method for Shock-Absorbing Properties of Playing Surfaces. F1936
9. F1936- Standard Test Method for Shock-Absorbing Properties of North American Football Field Playing Systems as Measured in the Field

PART 2 – PRODUCTS

2.01 MANUFACTURERS

A. The Synthetic Turf products indentified for the purpose of this project are:

1. Astroturf – Stadium Field - 2.5" XPE (Slit Film min 45oz/SY)
2. Shaw Sports Turf – Stadium Field - 2.5" Momentum (Slit Film min 45oz/SY)
3. Field Turf – Stadium Field - 2.5" Classic HD (Slit Film min 45oz/SY)

B. Selection of these products represents the required minimum performance criteria as outlined herein. The manufacturer's performance criteria and product properties and declarations both physical and chemical are as represented by the manufacturers at the time of this solicitation. Requests for pre-approval of products must be submitted to the owner and approved prior to pre-bid meeting and bid receipt.

2.02 MATERIALS

A. The component materials of the synthetic turf system consist of:

1. A Carpet made of slit film polyethylene fibers tufted into a fibrous, perforated or porous backing.

2. An Infill that is a controlled mixture of graded silica sand and rubber crumb that partially covers the carpet to the specified depth of 47mm +/- 1mm.
3. Crumb Rubber infill color is preferred to be black.
4. Glue, thread, paint, seaming fabric and other materials used to install and mark the synthetic turf.

B. The installed synthetic turf shall have the following properties:

Standard	Property	Specification
---- Fiber type	Slit Film	Slit Film Polyethylene
		Min 130 micron thickness
ASTM D1577	Fiber Denier	9500 nominal
ASTM D418/D5848	Pile Height	2 1/2” nominal
	Infill Depth	1 7/8" - 47mm (+/-1mm)
ASTM D418/D5848	Pile Weight	Minimum 45 oz./sq. yd.
ASTM D1335	Tuft Bind	min 8 lbs. (with infill)
ASTM D1682/D5034	Grab Tear (width)	200 lbs/force
ASTM D1682/D5034	Grab Tear (length)	200 lbs/force
ASTM F1015	Relative Abrasiveness Index	<25
ASTM D4491	Carpet Permeability	>14 inches/hour
ASTM F355/F1936	Impact Attenuation, Gmax	(<120) at installation
		=<165 over field warranty life

C. The Carpet shall consist of fibers tufted into a primary backing with a secondary backing, consisting of a minimum of two layers

1. The Carpet shall be furnished in 15’ wide rolls. Rolls shall be long enough to go from sideline to sideline without splicing. The perimeter white line shall be tufted into the individual sideline rolls. Head seams, other than at sidelines, will not be acceptable
2. The Carpet’s primary backing shall be a minimum double-layered polypropylene fabric treated with UV inhibitors. The secondary coating shall consist of an application of porous, heat-activated urethane to permanently lock the fiber tufts in place. Perforated (i.e. with punched or burned holes) backed carpet shall be acceptable however will need to be reviewed and approved by the owner/engineer on a case by case basis.
3. The fiber shall be 9,500 denier, low friction, UV-resistant fiber measuring not less than 2 ½ inches high. The same fiber from the above listed projects (Section 1.04, art. C. 5) must be used on this project. Systems with less than a 2 ½ - inch fiber will not be accepted as equivalent.

D. The Infill materials shall be approved by the Manufacturer. The Infill shall consist of a resilient granular system, comprising selected and graded, rounded, washed/dust-free silica sand and SBR cryogenic rubber crumb. The silica sand component of the infill must be represented by a minimum of 40% of the total infill, by weight. Silica sand within the infill mix, min 35% by weight, will meet the following size distribution and Gmax requirements:

U.S. (Mesh)	Metric (mm)	% Retained per sieve
16	1.190	0
20	08.840	0-3
25	0.710	10-30
30	0.590	30-50
35	0.500	15-35
40	0.420	5-15

50	0.297	<5
70	0.210	Trace

a. Silica Sand will consist of uniform, sub-angular to rounded, single grains.It will be dust-free, and unground. Crusher fines are unacceptable.

E. Rubber crumb within the infill mix will meet the following size distribution and have a specific gravity of no less than 1.1%:

U.S. (Mesh)	Metric (mm)	% Passing	% Retained
12	1.680	100	0
14	1.410	96-100	0-5
16	1.190	82-100	0-15
20	0.840	30-66	30-80
30	0.590	0-24	20-50
40	0.420	0-4	5-20
50	0.297	0	0-5
60	0.250		0

F. Non-tufted or inlaid lines and markings shall be painted with paint approved by the synthetic turf Manufacturer.

G. Thread for sewing seams of turf shall be as recommended by the synthetic turf Manufacturer.

H. Glue and seaming fabric for inlaying lines and markings shall be as recommended by the synthetic turf Manufacturer. All turf roll seams must be sewn.

I. Restoration of Damage: The Infilled Synthetic Turf Installation contractor shall exercise care in the execution of his work and avoid damage or defacement of the aggregate base system or surrounding areas by using suitable equipment or protective means. Damage or defacement that occurs shall be remedied at either the Base Contractor’s and/or the Infilled Synthetic Turf Vendor’s cost to the satisfaction of the Owner.

2.03 WARRANTIES

A. The synthetic turf must maintain an ASTM 355 G-max below 165 for the life of the Warranty. The initial installation must have a Gmax of (<120) upon completion, per ASTM F1936.

B. Sample Warranty: Must be provided with bid submittal. Provide a sample pre paid third party insured warranty with the bid. Policy must be valid and in force at time of bid.

C. Warranties: The Contractor shall provide a warranty to the Owner that covers defects in materials and workmanship of the turf for a period of eight (8) years from the date of substantial completion. The turf manufacturer must verify that their representative has inspected the installation and that the work conforms to the manufacturer's requirements. The manufacturer's warranty shall also include general wear and damage caused from UV degradation.

D. The warranty shall be fully third party insured, pre paid for the entire 8 year term and be non-prorated. The Contractor shall provide a warranty to the Owner that covers defects in the installation workmanship, and further warrant that the installation was done in accordance with both the manufacturer's recommendations and any written directives of the manufacturer's representative. Prior to final payment for the synthetic turf, the Contractor shall submit to owner an insurance policy, guaranteeing the warranty to the Owner.

E. The synthetic turf suppliers/installers shall provide a written guarantee stating that all work executed under this section will be free from defects of material and workmanship for a period of eight (8) years from date of Substantial Completion, and that any defects will be remedied on written notice at no

additional cost to the Owner. The warranty shall be in writing and shall be signed by the Installer and synthetic field surfacing materials manufacturer. Guarantee shall include removal and replacement of materials as required, to repair synthetic field surfacing at no cost to the Owner. This warranty shall not be pro-rated, rather it shall provide for the full replacement value of defective aspects of the installation throughout the life of the warranty.

F. In addition to the manufacturer's/installer's warranty described above, the synthetic turf manufacturer will provide the Owner with a third party insurance policy acceptable to the Owner, pre-paid for a full eight (8) years and not cancelable, issued in the name of the Owner, by a US insurance company rated AM Best A- or better, which provides the same warranty coverage established above, in the event that the turf manufacturer is unable or unwilling to provide the specified coverage. A copy of the policy will be required prior to award of the contract and an executed policy in the Owner's name will be required prior to final payment.

G. Shock Absorbency (to ASTM F 355): Immediately upon substantial completion, the Contractor shall arrange for shock absorbency testing by a certified laboratory subject to approval by the Engineer in accordance with ASTM F 335 Method A. Testing will be performed at a minimum of ten locations selected by the Engineer. The average G-Max value at installation shall be under 120. The Contractor, prior to acceptance, shall remedy an average G-Max value outside this range, or individual reading more than 15% outside this range. Satisfactory G-Max testing shall be a fixed requirement for final payment of the synthetic turf installation and release of retainage.

H. Over the life of the guarantee, the turf supplier/installer shall arrange and pay for annual re-testing of the field using the same procedure, within 30 days (±) of the anniversary of the original test date upon request by the Owner. The turf supplier/installer shall take whatever action is required to remedy any average G- Max value greater than 20% of the average value at installation, and to remedy any areas with individual readings over 165. These costs will be included in the turf price proposal.

I. The insurance policy must reflect the following values:

1. No maximum per claim coverage amount.
2. Minimum of five - million dollar annual aggregate
3. Must cover full 100% replacement value of total square footage installed, minimum of $5.50 per sqft.
4. Pre Paid 8 year third party policy must be issued by a carrier with an A.M. Best rated "A-" or better rating.
5. Policies that include self insurance or self retention clauses shall not be considered.
6. Policy can not include any form of deductible amount. Policy must be valid and in force at time of bid.

PART 3 – EXECUTION

3.01 GENERAL

A. The installation shall be performed in full compliance with Manufacturers recommendations and contract drawings.

B. Only trained technicians, skilled in the installation of athletic caliber synthetic turf systems working under the direct supervision of the approved installer supervisors, shall undertake any cutting, sewing, gluing, shearing, and topdressing or brushing operations.

C. The designated Supervisory personnel on the project must be certified, in writing by the turf Manufacturer, as competent in the installation of this material, including sewing seams and proper installation of the Infill mixture.

D. All designs, markings, layouts, and materials shall conform to all currently applicable National Federation of State High School Association rules and other standards that may apply to this type of synthetic grass installation.

3.02 PRE-INSTALLATION MEETING

A. Convene one week before starting work of this section with contractors involved, turf manufacturer representative, Installation Superintendent, Owner and Engineer.

B. Pre-installation meeting is required between general contractor, turf installation company, and base contractor prior to installing the synthetic turf system. The subsurface conditions must be accepted in writing by General Contractor, Turf Manufacturer and/or Turf Installation Company.

3.03 DELIVERY, STORAGE, AND PROTECTION

A. Deliver products to project site in wrapped condition.

B. Provide a copy of delivery receipt to owner indicating quantity of materials delivered. Provide all turf roll Identification decals to the owner to verify origin and material details.

C. Store weather sensitive products under cover and elevated above grade.

3.04 MAINTENANCE EQUIPMENT AND TRAINING

A. The turf manufacturer shall furnish and train the owner on a approved 7ft mechanical sweeper unit manufactured by Sportsfield Specialties Inc. or Greens Groomer to be used for debris removal and surface contaminants.

B. The turf manufacturer shall furnish and train the owner with field grooming equipment supplied by Sports Field Specialties 15’ folding Fieldspec Drag Brush and shall be approved for use on the selected manufacturers turf.

C. Turf manufacturer shall establish maintenance schedule and method of documenting owner maintenance as part of the O&M documents.

3.05 EXAMINATION

A. The surface to receive the synthetic turf shall be inspected by the Installer, and prior to the beginning of installation, the Installer must accept the sub-surface in writing. The acceptance will depend on the General Contractor providing the owner with test results indicating that compaction, planarity and permeability are in compliance with the synthetic turf manufacturer’s specifications. The surface must be perfectly clean as installation commences and shall be maintained in that condition throughout the process.

B. The compaction of the aggregate base shall be 90% in any newly constructed areas or excavated areas, according to the standard proctor procedure (ASTM D 698), and the surface tolerance shall not exceed 0- 3/16 inch over 10 feet and 0-½" from design grade. Contractor shall furnish evidence of same for the field prior to commencement of the turf installation via as-built topography in a 25ft grid (from a licensed land surveyor) and also via documented planarity tests performed on entire field witnessed by the engineer.

C. Notify the General Contractor and Owner in writing of any unsatisfactory conditions. Do not begin turf installation until these conditions have been satisfactorily corrected.

3.06 INSTALLATION

A. Install in accordance with Manufacturer's instructions. The Turf Contractor shall strictly adhere to the installation procedures outlined under this section. Any variance from these requirements must be accepted in writing, by the Manufacturer’s onsite representative, and submitted to the Engineer/Owner, verifying that the changes do not in any way affect the warranty. Infill materials shall be approved by the

Manufacturer and installed in accordance with the Manufacturer's standard procedures.

B. The carpet rolls are to be installed directly over the accepted aggregate base surface. Extreme care should be taken to avoid disturbing the underlayment material and aggregate base, both in regard to compaction and planarity.

C. The full width rolls shall be laid out across the field. Turf shall be of sufficient length to permit full cross-field installation from sideline to sideline. No head or cross seams will be allowed in the main playing area between the sidelines. Utilizing standard state of the art sewing procedures, each roll shall be sewn properly to the next. When all of the rolls of the playing surface have been installed, the sideline areas shall be installed at right angles to the playing field turf. These rolls shall be sewn as well.

D. This is a 99% sewn installation. Gluing of rolls shall not be acceptable. Minimum gluing will only be permitted to repair problem areas, corner completions, and to install in any logos or inlaid lines as required by the specifications. All seams shall be sewn using double bagger stitches and polyester thread or adhered using seaming tape and high grade adhesive (per the manufacturer's standard procedures). Seams shall be flat, tight, and permanent with no separation or fraying.

E. Infill materials shall be applied in numerous thin lifts. The turf shall be brushed as the mixture is applied.

F. The Infill materials shall be installed to fill the voids between the fibers and allow the fibers to remain vertical and non-directional. The Infill shall be installed to the depth of 1 7/8". The Infill shall be placed so that there is a void of 5/8" to the top of the fibers when initially installed to account for 1/8" settlement.

G. Prior to the application of any line painting the turf shall be fibrillated by means of a nylon rotary brush to provide the look, feel, and safety of optimally maintained natural grass, including subtle undulations normally associated with natural grass athletic fields.

H. Non-tufted or inlaid lines and markings shall be painted according to the recommendations of the turf Manufacturer and of the paint manufacturer. Several applications may be required.

I. Provide extra turf and infill for replacement of the complete cirlular LAX goal creases (2) once during the warranty period. Include turf replacement cost for the 2 circular goals in bid cost. Owner is not responsible for replacement labor costs or material costs for the one set of replacement LAX goals.

J. Synthetic turf shall be attached to the perimeter edge detail in accordance with the Manufacturer's standard procedures.

K. Installation shall not proceed when:

1. Ambient air temperature is below forty (40) degrees Fahrenheit (F).
2. Material temperature is below forty (40) degrees Fahrenheit (F).
3. Rain is falling or pending, unless acceptable to qualified installers.
4. Conditions exist, or are pending, that will be unsuitable for the installation of the system.

L. Follow-up Visits

1. The turf manufacturer/installer shall include in their price, two (2) follow-up visits at six month intervals after the final turf inspection date. The visits shall be scheduled by the Owner or Engineer to inspect the condition of the synthetic turf, infill material, seams, painted lines, anchorage, and peripheral attachments. Items found to require repair, amendment, or replacement shall be the responsibility of the turf manufacturer/installer. Repairs, except those required due to vandalism, shall take place immediately upon notification by the Engineer.
2. The manufacturer shall include the cost to perform independant Gmax testing once per year for 8 years after turf is installed. Manufacturer shall arrange Gmax testing yearly and supply owner with test results identifiing any deficiencies or issues observed during the test and field inspection. Any

maintenance issues shall be identified and proper instructions to the owner for corrective action. Any Gmax value outside of the allowed tolerances shall be identifed and corrected by the turf manufacturer.

3. Scope to include replacing turf system at 2 LAX goal circular areas once during warranty period.
    a. one set of replacement circular LAX goals to be provided to owner as part of attic stock for replacement at owners descression. Infill shall also be included as part of attic stock for replacement of LAX goals.

3.07 FIELD MARKINGS

A. The stadium field will have the following lines tufted or inlaid according to NFSHSA standards:
    1. Football: tufted markings (WHITE). Color shall be white, except where noted.
        a. Side lines and End lines
        b. 5-yd lines
        c. Goal lines
        d. Player's box
        e. Coach's box
    2. Soccer (Yellow): Inlayed and Tufted markings.
        a. Side lines
        b. End lines
    3. Boys LAX (Blue): Inlayed and Tufted markings
        a. All boys LAX lines
    4. Womens LAX (Orange): Inlayed and Tufted markings
        a. All womens LAX lines
    5. Womens Field Hockey (Red): 4 inch Tick marks only
B. The stadium field will have the following markings inlaid and as shown on the drawings:
    1. Football: Color shall be white, except where noted.
        a. 10 yard numbers and arrows in white with black shadows outline
        b. 1-yd hash markings (two sets)
        c. Inbound hash markings
        d. Extra point lines
        e. Kick off markings
        f. Limit lines
        g. Coaches Boxes
    2. Soccer:
        a. Full lines: Center Circle, corner kicks, penalty kicks and all arcs
    3. Mens and Womens LAX: Color shall be blue for mens, orange for womens
        a. Full Lines
    4. Womens Field Hockey: Tick marks Color shall be red

a. Tick Marks – 4” inch square

C. The center field logo will be inlaid according to the school mascot artwork submitted by the Owner or Engineer to the turf Manufacturer or Turf Contractor, subject to the availability of colors. The logo shall fit within a 50 foot diameter circle at the center of the field.

D. The end-zones will be color (not green, to be chosen by owner) with 4” color outlined end zone letters (stadium field only) and will be inlaid to include the school mascot name in one endzone and the school name in the opposite endzone (placement to be chosen by owner) according to artwork and fonts submitted by the Owner or Engineer to the turf Manufacturer or Turf Contractor, subject to the availability of colors.

E. Standards

1. Standards; all lines and markings shall be to National Federation of State High School Association Standards.

2. Refer to drawing details for linework and striping details. Center field logo image file to be provided by Engineer /Owner during submittal process.

3.08 SURPLUS MATERIALS

A. The Contractor shall provide the Owner, at each installation as a part of the Contract, the following surplus materials transported to storage location selected by the Owner:

1. Synthetic Turf Fabric (green) – 500 square feet

2. Synthetic Turf Fabric (White, Yellow, Blue, Orange and Red) – 50 linear feet each

3. Infill Material – minimum 2 supersacs as required to infill 500 square feet. This material shall not be used by the Synthetic Turf Subcontractor to maintain depth and Gmax values during the warranty period. The Contractor must provide material, matching the existing infill material if needed for maintenance , during the warranty period at no cost to the Owner.

3.09 CLEANING AND PROTECTION

A. Do not permit traffic over unprotected Synthetic Turf surface or Track surface.

B. Contractor shall provide the labor, supplies, and equipment as necessary for final cleaning of surfaces and installed items.

C. All usable remnants of new material shall be come the property of the Owner. These shall become the contractors responsibility to dispose if not wanted by owner.

D. The Contractor shall keep the area clean throughout the project and clear of debris.

E. Surfaces, recesses, enclosures, etc., shall be cleaned as necessary to leave the work area in a clean, immaculate condition ready for immediate occupancy and use by the Owner.

END OF SECTION

SECTION 32 3300
SITE FURNISHINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Benches.

B. Bollards.

C. Planters.

D. Tables.

E. Waste receptacles.

F. Skate deterrents.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Bollard infill and underground encasement.

B. Section 04 7200 - Cast Stone Masonry: Architectural cast stone benches and bollards.

C. Section 05 5000 - Metal Fabrications: Anchors to attach site furnishings to mounting surfaces.

1.03 REFERENCE STANDARDS

A. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design 2010.

B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel 2014.

C. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes 2013.

D. ASTM A536 - Standard Specification for Ductile Iron Castings 1984 (Reapproved 2014).

E. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar 2015.

F. ASTM B26/B26M - Standard Specification for Aluminum-Alloy Sand Castings 2018.

G. ASTM B211 - Standard Specification for Aluminum and Aluminum-Alloy Rolled or Cold Finished Bar, Rod, and Wire 2012.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's specifications and descriptive literature, installation instructions, and maintenance information.

C. Shop Drawings: Indicate plans for each unit or groups of units, elevations with model number, overall dimensions; construction, and anchorage details.

D. Samples: Submit two sets of manufacturer's available colors for metal furnishings.

1.05 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Provide manufacturer’s warranty against defects in materials or workmanship for ductile iron castings for a period of 10 years from Date of Substantial Completion.

C. Provide manufacturer’s Lifetime Warranty against defects in materials or workmanship for wood benches manufactured from solid teak.

1.06 QUALITY ASSURANCE

A. Layout Review: Contractor shall stake layout of all site furnishings and signage, and request a review by Owner's Representative with notice of 5 working days prior to installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Metal Furnishings:
   1. BRP by Bison, Inc: www.brpbybison.com/#sle.
   2. Neenah Foundry, a division of Neenah Enterprises, Inc: www.nfco.com/#sle.
   3. Tectura Designs, a division of Wausau Tile Inc: www.tecturadesigns.com/#sle.
   4. Substitutions: See Section 01 6000 - Product Requirements.

B. Precast Furnishings:

C. Steel Pipe Bollards:
   1. FairWeather Site Furnishings: www.fairweathersf.com/#sle.
   2. Huntco Supply, LLC: www.huntco.com/#sle.
   3. Substitutions: See Section 01 6000 - Product Requirements.

D. Wood Benches:
   1. Anderson Teak, LLC: www.andersonteak.com/#sle.
   2. Bench Smith, LLC: www.benchsmith.com/#sle.
   3. Westminster Teak, Inc: www.westminsterteak.com/#sle.
   4. Substitutions: See Section 01 6000 - Product Requirements.

E. Skate Deterrents:
   1. The Park Catalog: www.theparkcatalog.com/#sle.
   2. Skate Stoppers: www.skatestoppers.com/#sle.
   3. StopAGrind: www.stopagrind.com/#sle.
   4. Substitutions: See Section 01 6000 - Product Requirements.

2.02 METAL FURNISHINGS

A. Metal Furnishings, General:
   1. Cast iron components: Ductile iron castings complying with ASTM A536; cleaned, treated, and powder-coated.
      a. Color: As selected by Architect from manufacturer's standard range.
   2. Steel components: Plates, bars, and shapes complying with ASTM A36/A36M and tubing complying with ASTM A500/A500M; cleaned, treated, and powder-coated.
      a. Color: As selected by Architect from manufacturer's standard range.
   3. Wood components: Western red cedar with eased edges, and clear wood preservative coating.
   4. Hardware: Stainless steel.

B. Benches: Metal frame and seat section with back.
   1. Frame: Steel.

2. Seat: Wood slat.
3. Intermediate support: Locate at midpoint.
4. Intermediate arm rest. Locate at midpoint.
5. Mounting: Surface.

C. Planters: Steel frame with steel slats.
1. Shape: Square.
2. Wall liners: Galvanized steel panels welded inside planter frame as integral part of planter unit.
3. Inserts: Plastic containers for potting soil.
4. Mounting: Surface.

D. Waste Receptacles: Steel frame with steel slats and removable lid.
1. Capacity: 20 gallons (76 liters).
2. Shape: Round.
3. Diameter: TBD.
4. Wall liners: Galvanized steel panels welded inside waste receptacle frame as integral part of waste receptacle unit.
5. Inserts: Removable plastic containers for waste material.

2.03 PRECAST CONCRETE FURNISHINGS

A. Precast Concrete Furnishings, General:
1. Precast Concrete Components: Mixture of cement, aggregates, water, and mineral colors; molded to shape, and reinforced with steel bars.
a. Finish:
1) Horizontal Surfaces: Smooth for seats and table tops.
2) Vertical Surfaces: Smooth for supports and sides.
b. Color: As selected by Architect from manufacturer's standard range.
c. Color: As indicated on drawings.
d. Clear Sealers: Anti-graffiti.
2. Hardware: Stainless steel.

B. Benches: Frame and seat section with back.
1. Frame: Precast concrete.
2. Seat: Precast concrete.

C. Planters: Precast concrete with drain holes.
1. Shape: Round.
2. Diameter: TBD By Owner.

2.04 WOOD BENCHES

A. Materials:
1. Wood: Solid, A -Grade Teak.
2. Factory Finish: Natural.

B. Benches: Solid wood supports and seat section with back.
   1. Shape: Rectangle.

2.05 BOLLARDS

A. Steel Pipe Bollards: Hollow steel pipe with plain shaft.
   1. Materials:
      a. Steel Pipe: ASTM A53/A53M, standard weight.
      b. Factory Finish: Primed.
      c. Color: As selected by Architect from manufacturer's standard range.
   2. Mounting: In-ground.

B. Precast Concrete Bollards:
   1. Shape: Round.

2.06 SKATE DETERRENTS

A. Skate Deterrents:
   1. Material: Aluminum; ASTM B26/B26M, 319 alloy; clear anodized finish.
   2. Attachment: Surface mounted to benches, planters, tables and table seating.
   3. Anchoring: Tamper-resistant screws, pins or bolts as recommended by manufacturer.
   4. Shape: Fixed radius curve.
   5. Spacing: As indicated on drawings.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that mounting surfaces, preinstalled anchor bolts, or other mounting devices are properly installed; and ready to receive site furnishing items.

B. See Section 05 5000 for anchors to attach site furnishings to mounting surfaces.

C. Do not begin installation until unacceptable conditions are corrected.

3.02 INSTALLATION

A. Install site furnishings in accordance with approved shop drawings, and manufacturer's installation instructions.

B. See Section 03 3000 for bollard infill and underground encasement.

C. Provide level mounting surfaces for site furnishing items.

END OF SECTION

SECTION 32 3313
SITE BICYCLE RACKS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Exterior bicycle racks.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Mounting surface for bicycle racks.

B. Section 05 5000 - Metal Fabrications: Custom metal outdoor furnishings.

C. Section 32 1313 - Concrete Paving: Mounting surface for bicycle racks.

1.03 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel 2014.

B. ASTM A269/A269M - Standard Specification for Seamless and Welded Austenitic Stainless Steel Tubing for General Service 2015a.

C. ASTM A312/A312M - Standard Specification for Seamless, Welded, and Heavily Cold Worked Austenitic Stainless Steel Pipes 2018a.

D. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes 2013.

E. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement 2018, with Editorial Revision (2018).

F. ASTM C33/C33M - Standard Specification for Concrete Aggregates 2016, with Editorial Revision (2016).

G. ASTM C150/C150M - Standard Specification for Portland Cement 2018.

H. ASTM C260/C260M - Standard Specification for Air-Entraining Admixtures for Concrete 2010a (Reapproved 2016).

I. ASTM C330/C330M - Standard Specification for Lightweight Aggregates for Structural Concrete 2017a.

J. ICC-ES AC308 - Acceptance Criteria for Post-Installed Adhesive Anchors in Concrete Elements 2016.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

C. Shop Drawings: Indicate size, shape, and dimensions, including clearances from adjacent walls, doors, and obstructions.

D. Selection Samples: For each finish product specified, color chips representing manufacturer's full range of available colors and patterns.

1.05 QUALIITY ASSURANCE

A. Manufacturer Qualifications:

1. A company experienced in manufacturing bicycle racks similar to those required for this project and with a record of successful in-service performance.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Installer Qualifications:

1. An experienced installer who has completed installation of bicycle racks similar in material, design, and extent to that indicated for this project and whose work has resulted in construction with a record of successful in-service performance.

B. Source Limitations: Obtain each color, finish, shape and type of bicycle rack from a single source with resources to provide components of consistent quality in appearance and physical properties.

C. Mock-Up: Provide a mock-up for evaluation of surface preparation techniques and application workmanship.

1. Install in areas designated by Architect.
2. Do not proceed with remaining work until workmanship and installation are approved by Architect.
3. Refinish mock-up area as required to produce acceptable work.

D. Store products in manufacturer's unopened packaging until ready for installation.

E. Handle racks with sufficient care to prevent scratches and other damage to the finish.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Exterior Bicycle Racks:

1. American Bicycle Security Company: www.ameribike.com/#sle.
2. Columbia Cascade Company: www.timberform.com/#sle.
3. Huntco Supply, LLC: www.huntco.com/#sle.
4. Neenah Foundry, a division of Neenah Enterprises, Inc: www.nfco.com/#sle.
5. Substitutions: See Section 01 6000 - Product Requirements.

2.02 BICYCLE RACKS

A. Exterior Bicycle Racks: Device allows user-provided lock to simultaneously secure one wheel and part of the frame on each bicycle parked or racked.

1. Capacity: Seven bicycles.
2. Mounting, Ground: In-ground anchor.
3. Mounting, Wall: Post-installed anchor.
4. Finish: Powder coat, maintenance-free and weather-resistant.
5. Color: As indicated on drawings..
6. Accessories: Surface flange cover.

B. Materials:

1. Pipe: Carbon steel, ASTM A53/A53M, Schedule 40.
2. Tube: Carbon steel, ASTM A500/A500M.
3. Bar, Round and Flat, Carbon Steel: ASTM A36/A36M.
4. Precast Concrete:
    a. Cement: ASTM C150/C150M, Portland Type I - Normal; white color.

b. Concrete Materials: ASTM C33/C33M aggregate, water, and sand.

c. Reinforcing Steel: ASTM A615/A615M, deformed steel bars; unfinished, strength and size required by precast unit design.

d. Concrete Mix: Minimum 5000 psi (34 MPa), 28 day strength, air entrained to 5 to 7 percent.

e. Air Entrainment Admixture: ASTM C260/C260M.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine surfaces to receive bicycle racks.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory conditions before proceeding.

C. Do not begin installation until unsatisfactory conditions are corrected.

3.02 PREPARATION

A. Ensure surfaces to receive bicycle racks are clean, flat, and level.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install level, plumb, square, and correctly located as indicated on drawings.

C. In-Ground Anchor Installation:

1. Prepare holes in size according to manufacturer’s instructions.
2. Place anchoring bolts through the holes in pipe.
3. Lower rack into holes, ensuring the bottom of lower bends are at least 1-1/2 inch (38 mm) from the ground.
4. Place concrete.
5. Level rack before concrete sets.
6. Support until dry.

D. Post-Installed Anchors: Comply with ICC-ES AC308.

3.04 CLEANING

A. Clean installed work to like-new condition. Do not use cleaning materials or methods that could damage finish.

3.05 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

END OF SECTION

SECTION 32 3314
SITE BICYCLE LOCKERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Exterior bicycle lockers.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Mounting surface for bicycle lockers.

B. Section 05 5000 - Metal Fabrications: Custom metal outdoor furnishings.

C. Section 32 1313 - Concrete Paving: Mounting surface for bicycle lockers.

1.03 PRICE AND PAYMENT PROCEDURES

A. See Section 01 2300 - Alternates, for product alternatives affecting this section.

1.04 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel 2014.

B. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2017.

C. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar 2015.

D. ICC-ES AC308 - Acceptance Criteria for Post-Installed Adhesive Anchors in Concrete Elements 2016.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

C. Shop Drawings: Indicate size, shape, and dimensions, including clearances from adjacent walls, doors, and obstructions.

D. Selection Samples: For each finish product specified, color chips representing manufacturer's full range of available colors and patterns.

1.06 QUALITY ASSURANCE

A. Products: Manufactured to ISO 9000 or ISO 14000 requirements.

B. Manufacturer Qualifications A company specialized in the manufacture of fiberglass reinforced plastic/SMC composite.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Conformance: Conform to Class I Bicycle Parking Facilities requirements.

B. Store products in manufacturer's unopened packaging until ready for installation.

C. Handle lockers with sufficient care to prevent scratches and other damage to the finish.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Exterior Bicycle Lockers:

1. American Bicycle Security Company: www.ameribike.com/#sle.
2. Columbia Cascade Company: www.timberform.com/#sle.
3. CycleSafe, Inc: www.cyclesafe.com/#sle.
4. Huntco Supply, LLC: www.huntco.com/#sle.
5. Substitutions: See Section 01 6000 - Product Requirements.

2.02 BICYCLE LOCKERS

A. Exterior Steel Bicycle Lockers: Secure storage enclosure fabricated of steel panels with factory applied finish and factory installed hardware.

1. Capacity: One bicycle per unit.
2. Layout: Horizontal.
3. Panels: Steel sheet, 12 gage, 0.1046 inch (2.66 mm) minimum thickness, with manufacturer's standard perforations.
4. Door and Frame: Steel sheet; 12 gage, 0.1046 inch (2.66 mm) minimum thickness, door factory hung and adjusted.
5. Hardware:
    a. Door Hinges: Full length, piano type hinges of 14 gage, 0.0781 inch (1.98 mm) minimum thickness, stainless steel.
    b. Locking Mechanism: Steel vertical locking bar running full length of door.
    c. Lock Hardware: Manufacturer's standard stainless steel pistol grip style handle with "U" style lock and padlock adapter.
6. Mounting, Ground: Leveling and anchoring system consisting of feet adjustable up to 5 inches (127 mm) vertically and flanges suitable for bolts or post-installed anchors..
7. Mounting, Wall: Post-installed anchor.
8. Finish: Powder coat, factory applied over primer.
9. Color: As indicated on drawings.

B. Materials:

1. Bar, Round and Flat, Carbon Steel: ASTM A36/A36M.
2. Galvanized Steel: ASTM A653/A653M, with G90/Z275 zinc coating.
3. Bar Round and Flat, Stainless Steel: ASTM A666, Type 304.
4. Stainless Steel Sheet: ASTM A666 Type 304, soft temper.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine surfaces to receive bicycle lockers.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

C. Do not begin installation until unsatisfactory substrates have been properly repaired.

3.02 PREPARATION

A. Ensure surfaces to receive bicycle lockers are clean, flat, and level.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install bicycle lockers level, plumb, square, and correctly located as indicated on drawings.

C. Post-Installed Anchors: Comply with ICC-ES AC308.

D. Surface Flange Installation: Anchor bicycle lockers securely in place with 1/2 inch (13 mm) by 4 inch (101 mm) anchor bolts through flange holes.

3.04 CLEANING

A. Clean installed work to like-new condition. Do not use cleaning materials or methods that could damage finish.

3.05 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

END OF SECTION

SECTION 32 9000
TREE CONSERVATION

PART 1 - GENERAL:

1.01 DESCRIPTION:

A. This section specifies labor, materials, and equipment and services necessary for and reasonably incidental to preservation, protection and care of trees as shown on the Drawings, specified or directed.

1.02 QUALITY ASSURANCE:

A. Methods for tree preservation and protection shall conform to details shown on the Drawings and any pertinent nationally recognized standards.

B. The Contractor shall during pre-construction activities, construction activities and post- construction activities employ an ISA (International Society of Arboriculture) certified arborist with a minimum of two years experience in tree preservation. The Contractor shall submit documentation that arborist has the above qualifications.

C. The arborist shall be on-site at any time work is being performed in the vicinity of trees to supervise implementation of procedures for tree protection, to monitor tree health during construction operations and the installation of pipes, curbs, sidewalks, etc and to supervise any repair of damages after construction.

D. All work must be contained within the prescribed limits of disturbance shown on the contract documents.

1.03 SUBMITTALS:

A. Provide written report by a certified arborist identifying root evaluations of the trees, which are in potential conflict with construction to determine the critical root zones.

B. Provide written report by a certified arborist indicating the best methods of construction, which will minimize the impact on the critical root zone. Obtain specifications from the arborist for individual tree protection and maintenance as required for the identified to be saved on the Drawings.

PART 2 - PRODUCTS:

2.01 TREE PROTECTION DEVICE:

A. Fencing shall be tenax alpi or approved equal. It shall be blaze orange plastic mesh at least forty-eight (48) inches in height, with grid openings not greater than three (3) inches in width.

2.02 SOIL AMENDMENTS:

A. Suitable organic matter shall be peat moss, composted manure, deactivated sewage sludge or similar material as approved by the arborist or engineer.

B. Special soil mixture is composed of one part suitable organic matter and 6 parts backfill. Backfill material shall be loose, fine, friable, even textured loam. The mixture shall not contain any rock fragments larger than four (4) inches in any direction, nor construction debris of any sort.

PART 3 - EXECUTION:

3.01 PRECONSTRUCTION ACTIVITIES:

A. The limits of disturbance shall be located and flagged by the Contractor in the field prior to any stress reduction or construction activities. Limits of Disturbance shall be placed outside of critical root zones of trees to be preserved wherever possible.

B. As shown on the plans, trees which are to be preserved shall have their roots pruned. Root pruning trenches shall be located within one foot of limits of disturbance. Roots shall be cleanly cut to a depth of at least 24 inches using a vibratory plow (cable laying machine), tooth- chain trencher or other acceptable

equipment. Fill trench as soon as possible with soil mixture herein described and pack to eliminate air pockets.

C. Fertilize trees in construction area at the rate of 3 pounds of nitrogen per 1,000 square feet of root zone disturbed. Apply fertilizer to entire critical root zone out to root pruning trench. Fertilizer should be at least 50 percent (50%) slow release nitrogen and contain other essential elements and micronutrients.

D. Water critical root zone immediately after applying fertilizer to saturate the top 6 inches of soil.

E. Mulch 2-4 inches deep comprised of weed-free straw, woodchips, shredded bark or leaves shall be applied in the critical root zone adjacent to the pruning trench. Mulching shall not extend farther than 20 feet from the pruning trench.

F. Trees which are dead or dying or are in poor condition prior to the start of construction shall be flagged and recorded on the plan.

G. Blaze Orange Plastic Mesh Fence

1. All tree Preservation Areas shall be surrounded by blaze orange plastic mesh fences.
2. Boundaries of fencing shall be staked, flagged and approved prior to installation.
3. All fencing shall be installed prior to construction activities.
4. Fences shall be firmly anchored at a spacing no greater than eight (8) feet and constructed in a manner which precludes sagging.
5. All fencing shall be maintained in a good condition and promptly repaired or restored as the situation warrants.

3.02 CONSTRUCTION PHASE

A. Any on-site decisions regarding conditions or activities which may be injurious to the health of certain specimen trees in the vicinity of the construction area shall be made in consultation with the specified arborist.

B. Excavated and backfill material shall not be placed or side cast within the critical root zones of trees to be preserved.

C. Construction equipment shall not be driven into or through protected trees, nor shall swinging cranes or backhoes be allowed in their canopies.

D. There shall be no stacking or storing supplies within the critical root zones of trees to be preserved.

E. Trees to be removed shall be taken out without damaging protected trees.

F. There shall be no burning in or close to protected trees.

G. Changing site grades which will cause drainage to flow into, or to collect near protected trees shall be prohibited. All grading shall take place outside the critical root zone of the trees to be protected.

H. All equipment shall be kept outside the blaze orange fencing.

I. In the event of drought, the protected trees shall be monitored for signs of stress and watered as needed or as directed by the arborist.

J. The certified arborist shall also monitor trees to be preserved for any other conditions or activities not mentioned above which may be injurious to their health.

3.03 POST-CONSTRUCTION ACTIVITIES

A. Repair & Care of Tree Damages

1. The ends of any additional roots damaged or cut during the construction phase of the project which have not already been pruned and dressed at the outset of the project shall be cut off smoothly.

Then peat moss or other suitable organic matter shall be added to the backfill material at a ratio of 1 part organic matter to 6 parts backfill. Fill and pack around roots to avoid air spaces. Restore grades to preconstruction elevations.

2. Damaged limbs and dead limbs shall be removed if a safety hazard or if injurious to the health of the tree. Tree crown reduction procedures may be employed to promote the health of a tree and shall be performed by a certified arborist.
3. If a tree is wounded during construction, under direction of the arborist, wounds should be cleaned, torn bark cut, and if possible the wounds dressed in a shape like a vertical ellipse, to facilitate rapid healing. Pruning knife shall be sharp and clean.
4. Unless directed otherwise by the arborist, any compacted soil within the critical root zone of the trees to be preserved shall be mechanically aerated to a depth of eight (8) inches. Aeration holes should be spaced one foot on center and should be positioned to avoid severing major roots.
5. The arborist shall inspect and review the trees within one-year after completion of construction and determine if the trees can be safely fertilized. The arborist shall make the initial fertilizer application and provide written instructions and information to the owner on successive fertilizer applications. After completion of construction the arborist shall perform Class II pruning on all trees to remove any damaged, dead, interfering and objectionable limbs ½ inch in diameter and larger. The arborist shall selectively thin the trees to properly shape the canopy, reduce wind resistance and the possibility of storm damage.

3.04 REMOVAL OF TEMPORARY STRUCTURES

A. Remove blaze orange fencing.

B. Re-seed or sod disturbed areas in accordance with the Contract Documents.

END OF SECTION

SECTION 32 9219
SEEDING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Preparation of subsoil.

B. Placing topsoil.

C. Hydroseeding, mulching and fertilizer.

D. Maintenance.

1.02 RELATED REQUIREMENTS

A. Section 31 2200 - Grading: Topsoil material.

B. Section 31 2200 - Grading: Preparation of subsoil and placement of topsoil in preparation for the work of this section.

C. Section 31 2323 - Fill: Topsoil material.

D. Section 32 0190 - Operation and Maintenance of Planting: Post-occupancy maintenance.

E. Section 32 1125 - Turf Surfaced Aggregate Base Course: Additional seeding requirements.

1.03 PRICE AND PAYMENT PROCEDURES

A. See Section 01 2200 - Unit Prices, for additional unit price requirements.

B. Topsoil:

1. Basis of Measurement: By the cubic yard (meter).

2. Basis of Payment: Includes topsoil, placing topsoil.

C. Grassed Areas:

1. Basis of Measurement: By the square yard (meter).

2. Basis of Payment: Includes preparation of subsoil, placing topsoil, seeding, watering and maintenance to specified time limit.

1.04 DEFINITIONS

A. Weeds: Include Dandelion, Jimsonweed, Quackgrass, Horsetail, Morning Glory, Rush Grass, Mustard, Lambsquarter, Chickweed, Cress, Crabgrass, Canadian Thistle, Nutgrass, Poison Oak, Blackberry, Tansy Ragwort, Bermuda Grass, Johnson Grass, Poison Ivy, Nut Sedge, Nimble Will, Bindweed, Bent Grass, Wild Garlic, Perennial Sorrel, and Brome Grass.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Topsoil samples.

C. Certificate: Certify seed mixture approval by authority having jurisdiction.

D. Maintenance Data: Include maintenance instructions, cutting method and maximum grass height; types, application frequency, and recommended coverage of fertilizer .

E. Maintenance Contract.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver grass seed mixture in sealed containers. Seed in damaged packaging is not acceptable. Deliver seed mixture in containers showing percentage of seed mix, year of production, net weight, date of packaging, and location of packaging.

B. Deliver fertilizer in waterproof bags showing weight, chemical analysis, and name of manufacturer.

1.07 QUALITY ASSURANCE

A. Applicable Standards:

1. Federal Seed Act: Rules and Regulations.

B. Seed and Labeling Certification:

1. Ship all seed and other materials with certificates of inspection required by governing authorities. Make sure seed and certification complies with regulations applicable to such materials.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

A. Comply with regulatory agencies for fertilizer and herbicide composition.

B. Provide certificate of compliance from authority having jurisdiction indicating approval of seed mixture.

2.02 SEED MIXTURE

A. Seed Mixture:

2.03 SOIL MATERIALS

A. Topsoil: Fertile, agricultural soil, typical for locality, capable of sustaining vigorous plant growth, taken from drained site; free of subsoil, clay or impurities, plants, weeds and roots; pH value of minimum 5.4 and maximum 7.0.

2.04 ACCESSORIES

A. Mulching Material: Oat or wheat straw, free from weeds, foreign matter detrimental to plant life, and dry. Hay or chopped cornstalks are not acceptable.

B. Fertilizer: ; recommended for grass, with fifty percent of the elements derived from organic sources; of proportion necessary to eliminate any deficiencies of topsoil, as indicated by analysis.

C. Water: Clean, fresh and free of substances or matter that could inhibit vigorous growth of grass.

D. Erosion Fabric: Jute matting, open weave.

E. Herbicide:

F. Stakes: Softwood lumber, chisel pointed.

G. String: Inorganic fiber.

H. Edging: Galvanized steel.

2.05 TESTS

A. Provide analysis of topsoil fill under provisions of Section 01 4000.

B. Analyze to ascertain percentage of nitrogen, phosphorus, potash, soluble salt content, organic matter content, and pH value.

C. Submit minimum 10 oz (280 g) sample of topsoil proposed. Forward sample to approved testing laboratory in sealed containers to prevent contamination.

D. Testing is not required if recent tests are available for imported topsoil. Submit these test results to the testing laboratory for approval. Indicate, by test results, information necessary to determine suitability.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that prepared soil base is ready to receive the work of this Section. Proceeding with work assumes acceptance for existing conditions.

B. When conditions are such by reason of drought, excessive moisture, frozen soil or when in the opinion of the owner's representative less than satisfactory results are likely to be obtained, seeding work shall be halted as directed by the owner's representative and resumed only when conditions are favorable or when approved alternative or corrective measures and procedures have been enacted.

C. The contractor is to proceed with complete seeding work as rapidly as portions of the site become available, working within seasonal limitations. In any event, seeding shall be accomplished before the prepared seedbed becomes eroded, crusted over, or dried out and shall not be conducted when the ground is frozen or snow covered.

3.02 PREPARATION

A. Prepare subgrade in accordance with Section 31 2200.

B. Place topsoil in accordance with Section 31 2200.

C. Install edging at periphery of seeded areas in straight lines to consistent depth.

3.03 FERTILIZING

A. Apply fertilizer in accordance with manufacturer's instructions.

B. Apply after smooth raking of topsoil and prior to roller compaction.

C. Do not apply fertilizer at same time or with same machine as will be used to apply seed.

D. Mix thoroughly into upper 2 inches (50 mm) of topsoil.

E. Lightly water to aid the dissipation of fertilizer.

3.04 SEEDING

A. Apply seed at a rate determined by Architect evenly in two intersecting directions. Rake in lightly.

B. Do not seed areas in excess of that which can be mulched on same day.

C. Planting Season:

D. Do not sow immediately following rain, when ground is too dry, or during windy periods.

E. Roll seeded area with roller not exceeding 112 lbs (50 Kg).

F. Immediately following seeding and compacting, apply mulch to a thickness of 1/8 inches (3 mm). Maintain clear of shrubs and trees.

G. Apply water with a fine spray immediately after each area has been mulched. Saturate to 4 inches (100 mm) of soil.

H. Following germination, immediately re-seed areas without germinated seeds that are larger than 4 by 4 inches (100 by 100 mm).

3.05 HYDROSEEDING

A. Apply seeded slurry with a hydraulic seeder at a rate identified by Architect evenly in two intersecting directions.

B. Do not hydroseed area in excess of that which can be mulched on same day.

C. Immediately following seeding, apply mulch to a thickness of 1/8 inches (3 mm). Maintain clear of shrubs and trees.

D. Apply water with a fine spray immediately after each area has been mulched. Saturate to 4 inches (100 mm) of soil.

E. Following germination, immediately re-seed areas without germinated seeds that are larger than 4 by 4 inches (100 by 100 mm).

3.06 PROTECTION

A. Identify seeded areas with stakes and string around area periphery.

B. Cover seeded slopes where grade is 4 inches per foot ([____] mm per m) or greater with erosion fabric. Roll fabric onto slopes without stretching or pulling.

C. Lay fabric smoothly on surface, bury top end of each section in 6 inch (150 mm) deep excavated topsoil trench. Provide 12 inch (300 mm) overlap of adjacent rolls. Backfill trench and rake smooth, level with adjacent soil.

D. Secure outside edges and overlaps at 36 inch (900 mm) intervals with stakes.

E. Lightly dress slopes with topsoil to ensure close contact between fabric and soil.

F. At sides of ditches, lay fabric laps in direction of water flow. Lap ends and edges minimum 6 inches (150 mm).

3.07 RECONDITIONING EXISTING AREAS

A. Exisitng areas damaged by the contractor's operations (e.g., contractor's storage or staging areas) including storage of materials and equipment, and movement of vehicles, are to be reconditioned. The contractor is also to recondition existing grass areas where minior regrading is required.

B. Contractor is to provide fertilizer, seed, lime and mulch as required for reconditioned areas as well as new soil as may be required to fill low spots to finished grade, at no additional cost to the owner.

C. The contractor shall rip or chisel all disturbed areas to a depth of twelve (12) inches, unless otherwise directed by the owner's representative.

D. Contractor is to remove diseaded and unsatisfactory grass areas. These grasses shall be buried in the soil at a depth of at least one (1) foot. Contractor shall remove topsoil containing foreign materials resulting from the contractor's operation including oil drippings, stone, gravel, and other materials as directed by the owner's representative.

E. Where substantial grass remains (but is thin) the contractor shall mow, rake, aerate (if compacted), fill low spots, remove humps, cultivate, fertilize, seed and mulch in accordance with these specifications.

3.08 FIELD QUALITY CONTROL

A. The owner's representative shall ensure that the contractor follows all seeding specifications and that seed mixes are planted in appropriate areas. The owner's representative shall:

1. Inspect and remove all company seed tickets from seed bags to ensure the quantity and quality of seed is adequate and that the proper mixture and species are planted. Seed without bag tags or company certification shall not be planted and will be replaced at no cost to the owner.

2. Ensure all soil ammendments meet specification for quantity and quality. No payment shall be made for ammendments or products that do not meet specifications.

3. Ensure all specificed seed methods are followed. No payment shall be made for seed that does not meet specifications.

4. Ensure all areas are planted and seeded with the appropriate seed mixtures. No payment shall be made for seeding work that does not meet specifications.
5. Ensure all rutted or damaged areas are smothered, repaired and seeded. No payment shall be made until all such areas are repaired.

B. If the contractor does not meet specified methods or use specified materials, the owner's representative shall take appropriate action. Any seeding methods that do not meet specifications will not be paid for by the owner or time extension to the contract.

C. If the work or materials do not meet specification, the contractor shall be responsible to replace material, work or make repairs at no cost to the owner or time extension to the contract.

3.09 MAINTENANCE

A. See Section 32 0190 - Operation and Maintenance of Planting for post-occupancy maintenance.

B. Maintain seeded areas immediately after placement until grass is well established and exhibits a vigorous growing condition.

END OF SECTION

SECTION 32 9223
SODDING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Preparation of subsoil.

B. Placing topsoil.

C. Fertilizing.

D. Sod installation.

E. Maintenance.

1.02 RELATED REQUIREMENTS

A. Section 31 2200 - Grading: Topsoil material.

B. Section 31 2200 - Grading: Preparation of subsoil and placement of topsoil in preparation for the work of this section.

C. Section 31 2323 - Fill: Topsoil material.

D. Section 32 0190 - Operation and Maintenance of Planting: Post-occupancy maintenance.

E. Section 32 1125 - Turf Surfaced Roadways: Additional sodding requirements.

1.03 DEFINITIONS

A. Weeds: Includes Dandelion, Jimsonweed, Quackgrass, Horsetail, Morning Glory, Rush Grass, Mustard, Lambsquarter, Chickweed, Cress, Crabgrass, Canadian Thistle, Nutgrass, Poison Oak, Blackberry, Tansy Ragwort, Bermuda Grass, Johnson Grass, Poison Ivy, Nut Sedge, Nimble Will, Bindweed, Bent Grass, Wild Garlic, Perennial Sorrel, and Brome Grass.

1.04 REFERENCE STANDARDS

A. TPI (SPEC) - Guideline Specifications to Turfgrass Sodding 2006.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Certificate: Certify grass species and location of sod source.

C. Certificate: Certify fertilizer and herbicide mixture approval by authority having jurisdiction.

D. Maintenance Data: Include maintenance instructions, cutting method and maximum grass height; types, application frequency, and recommended coverage of fertilizer .

E. Maintenance Contract.

1.06 QUALITY ASSURANCE

A. Sod Producer: Company specializing in sod production and harvesting with minimum five years experience, and certified by the State of Maryland.

B. Installer Qualifications: Company approved by the sod producer.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver sod on pallets. Protect exposed roots from dehydration.

B. Do not deliver more sod than can be laid within 24 hours.

1.08 MAINTENANCE

A. See Section 01 7000 - Execution and Closeout Requirements, for additional requirements relating to maintenance service.

B. Provide a separate maintenance contract for specified maintenance service.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

A. Comply with regulatory agencies for fertilizer and herbicide composition.

B. Provide certificate of compliance from authority having jurisdiction indicating approval of fertilizer and herbicide mixture.

2.02 MATERIALS

A. Sod: TPI (SPEC), Certified Turfgrass Sod quality; cultivated grass sod; type indicated in plant schedule on Drawings; with strong fibrous root system, free of stones, burned or bare spots; containing no more than 5 weeds per 1000 sq ft (100 sq m). Minimum age of 18 months, with root development that will support its own weight without tearing, when suspended vertically by holding the upper two corners.

1. Machine cut sod and load on pallets in accordance with TPI (SPEC) Guidelines.

B. Topsoil: Fertile, agricultural soil, typical for locality, capable of sustaining vigorous plant growth, taken from drained site; free of subsoil, clay, or impurities, plants, weeds and roots; pH value of minimum 5.4 and maximum 7.0.

C. Fertilizer: recommended for grass, with fifty percent of the elements derived from organic sources; of proportion necessary to eliminate any deficiencies of topsoil, as indicated by analysis.

D. Water: Clean, fresh and free of substances or matter that could inhibit vigorous growth of grass.

2.03 ACCESSORIES

A. Wood Pegs: Softwood, sufficient size and length to ensure anchorage of sod on slope.

B. Wire Mesh: Interwoven hexagonal metal wire mesh of 2 inch (50 mm) size.

C. Edging: Galvanized steel.

2.04 SOURCE QUALITY CONTROL

A. Provide analysis of topsoil fill under provisions of Section 01 4000.

B. Submit minimum 10 oz (280 g) sample of topsoil proposed. Forward sample to approved testing laboratory in sealed containers to prevent contamination.

C. Testing is not required if recent tests are available for imported topsoil. Submit these test results to the testing laboratory for approval. Indicate, by test results, information necessary to determine suitability.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that prepared soil base is ready to receive the work of this section.

3.02 PREPARATION

A. Prepare subgrade in accordance with Section 31 2200.

B. Place topsoil in accordance with Section 31 2200.

C. Install edging at periphery of seeded areas in straight lines to consistent depth.

3.03 FERTILIZING

A. Apply fertilizer in accordance with manufacturer's instructions.

B. Apply after smooth raking of topsoil and prior to installation of sod.

C. Apply fertilizer no more than 48 hours before laying sod.

D. Mix thoroughly into upper 2 inches (50 mm) of topsoil.

E. Lightly water to aid the dissipation of fertilizer.

3.04 LAYING SOD

A. Moisten prepared surface immediately prior to laying sod.

B. Lay sod immediately after delivery to site to prevent deterioration.

C. Lay sod smooth and tight with no open joints visible, and no overlapping; stagger end joints 12 inches (300 mm) minimum. Do not stretch or overlap sod pieces.

D. Where new sod adjoins existing grass areas, align top surfaces.

E. Where sod is placed adjacent to hard surfaces, such as curbs, pavements, etc., place top elevation of sod 1/2 inch (13 mm) below top of hard surface.

F. On slopes 6 inches per foot (500 mm per m) and steeper, lay sod perpendicular to slope and secure every row with wooden pegs at maximum 2 feet (600 mm) on center. Drive pegs flush with soil portion of sod.

G. Prior to placing sod, on slopes exceeding 8 inches per foot (666 mm per m) or where indicated, place wire mesh over topsoil. Securely anchor in place with wood pegs sunk firmly into the ground.

H. Water sodded areas immediately after installation. Saturate sod to 4 inches (100 mm) of soil.

I. After sod and soil have dried, roll sodded areas to ensure good bond between sod and soil and to remove minor depressions and irregularities.

3.05 MAINTENANCE

A. Provide maintenance at no extra cost to Owner ; Owner will pay for water.

B. See Section 01 7000 - Execution and Closeout Requirements, for additional requirements relating to maintenance service.

C. Provide maintenance of sodded areas for three months from Date of Substantial Completion.

D. Maintain sodded areas immediately after placement until grass is well established and exhibits a vigorous growing condition.

E. Mow grass at regular intervals to maintain at a maximum height of 2-1/2 inches (65 mm). Do not cut more than 1/3 of grass blade at any one mowing.

F. Neatly trim edges and hand clip where necessary.

G. Immediately remove clippings after mowing and trimming.

H. Water to prevent grass and soil from drying out.

I. Roll surface to remove irregularities.

J. Control growth of weeds. Apply herbicides in accordance with manufacturer's instructions. Remedy damage resulting from improper use of herbicides.

K. Immediately replace sod to areas that show deterioration or bare spots.

L. Protect sodded areas with warning signs during maintenance period.

END OF SECTION

SECTION 32 9300
PLANTS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Preparation of subsoil.

B. Topsoil bedding.

C. New trees, plants and ground cover.

D. Relocated trees, plants and ground cover.

E. Mulch and Fertilizer.

F. Maintenance.

G. Tree Pruning.

1.02 RELATED REQUIREMENTS

A. Section 31 2200 - Grading: Topsoil material.

B. Section 31 2323 - Fill: Topsoil material.

C. Section 32 0190 - Operation and Maintenance of Planting: Post-occupancy maintenance.

1.03 DEFINITIONS

A. Weeds: Any plant life not specified or scheduled.

B. Plants: Living trees, plants, and ground cover specified in this Section , and described in ANSI Z60.1.

1.04 REFERENCE STANDARDS

A. ANSI/ANLA Z60.1 - American National Standard for Nursery Stock 2004.

B. ANSI A300 Part 1 - American National Standard for Tree Care Operations -- Tree, Shrub and Other Woody Plant Maintenance -- Standard Practices 2017.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Certificate: Certify fertilizer and herbicide mixture approval by authority having jurisdiction.

C. Certificate: Submit certificate for plants free of disease or hazardous insects; certified by federal department of agriculture; free of disease or hazardous insects.

D. Maintenance Data: Include cutting and trimming method ; types, application frequency, and recommended coverage of fertilizer .

E. Submit list of plant life sources.

F. Maintenance Contract.

1.06 QUALITY ASSURANCE

A. Nursery Qualifications: Company specializing in growing and cultivating the plants with three years documented experience.

B. Installer Qualifications: Company specializing in installing and planting the plants with five years experience.

C. Tree Pruner Qualifications: Company specializing in pruning trees with proof of Arborist Certification.

D. Tree Pruning: Conform to ANSI A300 Part 1.

E. Maintenance Services: Performed by installer.

F. Non-native, Invasive Plant Species: Do not introduce, grow, or cultivate plant species that are non-native to the ecosystem of the project site, and whose introduction causes or is likely to cause economic or environmental harm or harm to human health.

1. Conform to laws regulating non-native and invasive plant species in Maryland.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver fertilizer in waterproof bags showing weight, chemical analysis, and name of manufacturer.

B. Protect and maintain plant life until planted.

C. Deliver plant life materials immediately prior to placement. Keep plants moist.

1.08 FIELD CONDITIONS

A. Do not install plant life when ambient temperatures may drop below 35 degrees F (2 degrees C) or rise above 90 degrees F (32 degrees C).

B. Do not install plant life when wind velocity exceeds 30 mph (48 k/hr).

C. Coordination with Lawns: Plant trees and shrubs after finish grades are established and before planting lawns, unless otherwise acceptable to Architect.

1. When planting trees and shrubs after lawns, protect lawn areas and promptly repair damage caused by planting operations.

1.09 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Provide one year warranty that shall commence at substantial completion.

C. Warranty: Include coverage for one continuous growing season; replace dead or unhealthy plants.

D. Replacements: Replace exterior plants that are more than 25 percent dead with plants of same size and species as specified, planted in the next growing season, with a new warranty commencing on date of replacement.

1.10 MAINTENANCE (SEE END OF SECTION)

A. See Section 01 7000 - Execution and Closeout Requirements, for additional requirements relating to maintenance service.

B. Provide a separate maintenance contract for specified maintenance service. Term to be defined by owner.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

A. Comply with regulatory agencies for fertilizer and herbicide composition.

B. Provide certificate of compliance from authority having jurisdiction indicating approval of plants, fertilizer and herbicide mixture.

C. Plant Materials: Certified by federal department of agriculture; free of disease or hazardous insects.

2.02 PLANTS

A. Plants: Species and size identified in plant schedule, grown in climatic conditions similar to those in locality of the work.

2.03 SOIL MATERIALS

A. Topsoil: Type as specified in Section 31 2200.

2.04 SOIL AMENDMENT MATERIALS

A. Fertilizer: Containing fifty percent of the elements derived from organic sources; of proportion necessary to eliminate any deficiencies of topsoil, as indicated in analysis..

B. Peat Moss: Shredded, loose, sphagnum moss; free of lumps, roots, inorganic material or acidic materials; minimum of 85 percent organic material measured by oven dry weight, pH range of 4 to 5; moisture content of 30 percent.

C. Bone Meal: Raw, finely ground, commercial grade, minimum of 3 percent nitrogen and 20 percent phosphorous.

D. Lime: Ground limestone, dolomite type, minimum 95 percent carbonates.

E. Water: Clean, fresh, and free of substances or matter that could inhibit vigorous growth of plants.

2.05 MULCH MATERIALS

A. Mulching Material: Oat or wheat straw, free from weeds, foreign matter detrimental to plant life, and dry. Hay or chopped cornstalks are not acceptable.

2.06 ACCESSORIES

A. Wrapping Materials: Burlap.

B. Stakes: Softwood lumber, pointed end.

C. Cable, Wire, Eye Bolts and Turnbuckles: Non-corrosive, of sufficient strength to withstand wind pressure and resulting movement of plant life.

D. Guy Stakes: Rough-sawn, sound, new hardwood, redwood, or pressure-preservativetreated softwood, free of knots, holes, cross grain, and other defects, 2 by 2 inches (50 by 50 mm) by length indicated, pointed at one end. Revise first paragraph below to 0.080-inch- (2-mm-) diameter wire for small trees. Select guy cable for tall and large caliper trees.

E. Plant Protectors: Rubber sleeves over cable to protect plant stems, trunks, and branches.

F. Guy and Tie Wire: ASTM A 641/A 641M, Class 1, galvanized-steel wire, 2-strand, twisted, 0.106 inch (2.7 mm) in diameter.

G. Grates: Cast iron, galvanized finish, with grillage design, diameter, sized to resist pedestrian loads.

H. Membrane: 20 mil (0.5 mm) thick, clear polyethylene.

I. Wrapping: Waterproof fabric.

J. Tree Protectors: Metal with galvanized rings.

2.07 TOP SOIL MIX

A. A uniform mixture of 1 part peat and 3 parts topsoil by volume.

2.08 SOURCE QUALITY CONTROL

A. Provide analysis of topsoil; comply with requirements of Section 01 4000.

B. Provide testing of imported topsoil.

C. Submit minimum 10 oz (280 g) sample of topsoil proposed. Forward sample to testing laboratory in sealed containers to prevent contamination.

D. Testing is not required if recent tests are available for imported topsoil. Submit these test results to the testing laboratory for approval. Indicate, by test results, information necessary to determine suitability.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that prepared subsoil and planters are ready to receive work.

B. Saturate soil with water to test drainage.

C. Examine areas to receive exterior plants for compliance with requirements and conditions affecting installation and performance. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION OF SUBSOIL

A. Protect structures, utilities, sidewalks, pavements, and other facilities, and lawns and existing exterior plants from damage caused by planting operations.

B. Prepare subsoil to eliminate uneven areas. Maintain profiles and contours. Make changes in grade gradual. Blend slopes into level areas.

C. Remove foreign materials, weeds and undesirable plants and their roots. Remove contaminated subsoil.

D. Scarify subsoil to a depth of 3 inches (75 mm) where plants are to be placed. Repeat cultivation in areas where equipment, used for hauling and spreading topsoil, has compacted subsoil.

E. Dig pits and beds 6 inches (150 mm) larger than plant root system.

3.03 PLACING TOPSOIL

A. Spread topsoil to a minimum depth of 4 inches (100 mm) over area to be planted. Rake smooth.

B. Place topsoil during dry weather and on dry unfrozen subgrade.

C. Remove vegetable matter and foreign non-organic material from topsoil while spreading.

D. Grade topsoil to eliminate rough, low or soft areas, and to ensure positive drainage.

E. Install topsoil into pits and beds intended for plant root balls, to a minimum thickness of 6 inches (150 mm).

3.04 FERTILIZING

A. Apply fertilizer in accordance with manufacturer's instructions.

B. Apply after initial raking of topsoil.

C. Mix thoroughly into upper 2 inches (50 mm) of topsoil.

D. Lightly water to aid the dissipation of fertilizer.

3.05 PLANTING

A. Place plants for best appearance for review and final orientation by Architect .

B. Set plants vertical.

C. Remove non-biodegradable root containers.

D. Set plants in pits or beds, partly filled with prepared plant mix, at a minimum depth of 6 inches (of 150 mm) under each plant. Remove burlap, ropes, and wires, from the root ball.

E. Place bare root plant materials so roots lie in a natural position. Backfill soil mixture in 6 inch (150 mm) layers. Maintain plant life in vertical position.

F. Saturate soil with water when the pit or bed is half full of topsoil and again when full.

3.06 PLANT RELOCATION AND RE-PLANTING

A. Relocate plants as indicated by Architect .

B. Replant plants in pits or beds, partly filled with prepared topsoil mixture, at a minimum depth of 6 inches (of 150 mm) under each plant. Remove burlap, ropes, and wires, from the root ball.

C. Place bare root plant materials so roots lie in a natural position. Backfill soil mixture in 6 inch (150 mm) layers. Maintain plant materials in vertical position.

D. Saturate soil with water when the pit or bed is half full of topsoil and again when full.

3.07 INSTALLATION OF ACCESSORIES

A. Place decorative cover and membrane, where indicated on drawings.

B. Place grates at base of trees where indicated on drawings.

C. Wrap deciduous shade and flowering tree trunks and place tree protectors.

3.08 PLANT SUPPORT

A. Brace plants vertically with plant protector wrapped guy wires and stakes to the following:

1. Tree Caliper: 1 to 2 inches (25 to 50 mm); Tree Support Method: 2 stakes with two ties
2. Tree Caliper: 2 to 4 inches (50 to 100 mm); Tree Support Method: 3 guy wires with eye bolts and turn buckles
3. Tree Caliper: Over 4 inches (100 mm); Tree Support Method: 4 guy wires with eye bolts and turn buckles

3.09 TREE PRUNING

A. Prune trees as recommended in ANSI A300 Part 1.

B. Prune newly planted trees as required to remove dead, broken, and split branches.

3.10 FIELD QUALITY CONTROL

A. Perform field inspection and testing in accordance with Section 01 4000.

B. Plants will be rejected if a ball of earth surrounding roots has been disturbed or damaged prior to or during planting.

3.11 MAINTENANCE

A. Provide maintenance at no extra cost to Owner ; Owner will pay for water.

B. Provide a separate maintenance contract for specified maintenance service.

C. Irrigate sufficiently to saturate root system and prevent soil from drying out.

D. Cultivate and weed plant beds and tree pits.

E. Remove dead or broken branches and treat pruned areas or other wounds.

F. Neatly trim plants where necessary.

G. Immediately remove clippings after trimming.

H. Control growth of weeds. Apply herbicides in accordance with manufacturer's instructions.

I. Control insect damage and disease. Apply pesticides in accordance with manufacturers instructions.

J. Remedy damage from use of herbicides and pesticides.

K. Replace mulch when deteriorated.

L. Maintain wrappings, guys, turnbuckles, and stakes. Adjust turnbuckles to keep guy wires tight. Repair or replace accessories when required.

END OF SECTION

SECTION 32 9600
REFORESTATION PLANTING TREES AND SHRUBS

PART 1 – GENERAL:

1.01 DESCRIPTION OF WORK:

A. Description of work: Work of this section includes, but is not limited to, the following:

1. Trees and shrubs
2. Backfill mixtures.
3. Mulching and planting accessories.
4. Warranty and maintenance.
5. Implementing measures to prevent wildlife injury and depredation.

1.02 RELATED WORK:

A. Coordinate with the earthwork and appropriate site specifications for proper scheduling for the performance of the work specified herein.

1. Section 31 20 00: Earthmoving
2. Section 32 90 00: Tree Conservation
3. Section 32 93 05: Lawns and Grasses

1.03 QUALITY ASSURANCE:

A. Installer shall have not less than 5 years documented successful experience in installation of work similar to work of this Project and be a member of one of the following organizations:

1. Landscape Contractors Association.
2. American Nursery and Landscape Association.
3. Maryland Nurserymen’s Association.

1.04 SUBMITTALS:

A. Product Data:

1. Submit manufacturer’s data and source data for materials including soils.
2. Submit manufacturer’s data and source data for materials for weed control and wildlife control.
3. Submit location of product manufacture and harvest of primary raw materials.

B. Schedules:

1. Submit schedule listing plants to be provided.
2. Submit maintenance schedule for watering and wildlife control measures.

C. Samples:

1. Submit to the Landscape Architect for review, one-pound (1lb.) samples packaged in plastic bags of mulch, topsoil, and soil mixes for all planting pits.
2. Provide samples typical of material used in Project with same color texture, and organic composition.

D. Test Reports:

1. Submit soil analysis of both soil mixes and topsoil, stating pH, nutrient levels (N.P.K), % organic matter, and mechanical analysis prepared by qualified soil testing lab along with samples. Test and

Reports shall be paid for by the Contractor.

E. Qualification Data:

1. Submit installer qualifications verifying years of experience; include list of completed projects having similar scope of work identified by name, location, date, reference names and phone numbers.

F. Warranty and Maintenance:

1. Submit written warranty and maintenance agreement for materials as specified.

1.05 WARRANTY AND MAINTENANCE AGREEMENT:

A. All plants shall be guaranteed to remain alive and healthy for five full years after initial acceptance.

B. Inspection and Initial Acceptance:

1. Initial acceptance shall be defined as approval, by the M-NCPPC or Landscape Architect, of the complete landscape installation immediately after planting.

2. Contractor shall notify M-NCPPC and Landscape Architect, in writing, of project completion and request an inspection within two weeks.

3. If the plant material and workmanship are satisfactory, the Landscape Architect will give written notice to that effect. This will constitute the Certificate of Acceptance, and the warranty period will begin from that date.

4. Care of the plant material shall begin immediately after each plant item is satisfactorily installed and shall continue through the entire life of the contract. During this time, the Contractor shall do all work which is necessary to establish and keep the plants alive and healthy.

1.06 FINAL INSPECTION:

A. The Contractor will conduct a final Inspection with the Landscape Architect at the end of the five-year period. It will be the Contractors responsibility to notify the M-NCPPC and Landscape Architect within two weeks of the anticipated meeting.

B. Any material that is 25% dead or more shall be considered dead and must be replaced at no charge. A tree shall be considered dead when the main leader has died back or there is 25% of the crown dead.

C. Deciduous material will be guaranteed to break dormancy if planted in dormant season.

1.07 REPLACEMENTS AND CONDITIONS

A. Replacements will be made during the next appropriate planting period.

B. The Contractor shall be responsible for replacements as required to provide 200 live trees 1" or greater in diameter per acre, in satisfactory condition at the end of the five year warranty period.

C. Replacements will be of the same size and species as the original with no additional soil amendments to be used. Native plant material substitutions may be permitted if requested in writing and approved by the M-NCPPC.

D. The Contractor will not be responsible for plant material that has been damaged due to vandalism, fire, relocation or other activities beyond the contractor’s control.

E. Plant losses due to abnormal weather conditions such as floods, excessive wind, or severe freezing will not be the responsibility of the contractor.

F. Plant losses or damage due to wildlife depredation or foraging shall be the responsibility of the contractor during the five year warranty period.

PART 2 - PRODUCTS

2.01 GENERAL

A. Provide products manufactured and of raw materials extracted/recovered within a 500-mile radius of the Project Site.

2.02 TREES, SHRUBS AND GROUNDCOVERS

A. Topsoil: New topsoil shall be good friable, natural loam topsoil, containing no subsoil material, free of sticks, stones, roots, weeds, debris or other extraneous matter, and shall be obtained from an area that has never been stripped and shall have an acidity range of pH 5.0 to pH 7.0.

B. Soil Mix: Soil mix shall be 50% topsoil, 25% sand and 25% leaf mulch organic matter.

C. Fertilizer: Fertilizer for planting areas and tree pits shall be approximately 5-10-5, and organically derived.

D. Mulch: Mulch for groundcover areas shall be dark brown, shredded hardwood bark, or approved equal.

E. Stakes: Stakes shall be 2” x 2” x 8’ wood timbers.

F. Guy Wires and Turnbuckles (if needed); Guy wire shall be No. 14 gage galvanized steel wire: turnbuckles shall be galvanized, 1/2’ diameter. bolt size with closed eyes to receive guy wires. The use of ArborTie by Deep Root Partner, LLP is an acceptable alternative for the wire guy and hose collar.

G. Rubber Hose: Rubber hose shall be ¾” black corded hose. The use of ArborTie by Deep Root Partner, LLP is an acceptable alternative for the wire guy and hose collar.

H. Tree Trunk Protector: The tree trunk protector shall consist of 4" diameter ADS flexible drainage pipe or approved equal. The tree trunk protector shall extend from the top of the root ball to the lowest branch of the tree or 5 feet which ever is greater. ADS flex pipe or approved equal shall be split to wrap around tree trunk to prevent damage.

I. Plant Material

1. Plant List: The Contractor shall be responsible for furnishing and installing all plant material shown on the drawings. Contractor shall verify all quantities to his own satisfaction prior to bidding. Any discrepancies shall be reported to the Landscape Architect immediately.

2. Nomenclature: The names of plants required under this contract conform to those given in Hortus III, 1979 Edition.

3. The Contractor shall have investigated the sources of supply and satisfied himself that he can supply all of the plants specified on the plant list in the size, variety and quality noted prior to submitting his bid. Failure to take this precaution will not relieve the successful bidder from his responsibility for furnishing and installing all the plant material in strict accordance with the contract requirements and without additional expense to the owner. Substitutions will not be permitted unless approved by the MNCP&PC and Landscape Architect. If proof is submitted that any plant specified is not obtainable, a proposal will be considered for use of nearest equivalent size or variety with an equitable adjustment of contract price. Such proof shall be substantiated and submitted in writing to the Landscape Architect.

4. All plants shall comply with the recommendations and requirements of ANSI Z60.1-1996 “American Standard for Nursery Stock”.

5. Rejection: Any materials and/or work may be rejected if in the opinion of the Landscape Architect such does not meet the requirements of the specifications. All rejected materials shall be removed from the site by the Contractor within 45 hours.

6. Size: All trees and shrubs shall be measured when their branches are in their normal position. Height and spread dimensions specified refer to the main body of the plant and not from branch or root tip to tip. The determining measurement for trees shall be caliper, which shall be taken six (6”) inches above the ground for trees up to four (4”) inches in caliper. All plants shall conform to the measurements specified in the plant lists except that plants larger than specified may be used if

approved by the Landscape Architect. Use of such plants shall not increase the contract price. If larger plants are approved, the size of the root ball shall be increased in proportion to the size of the plant.

7. All “matched” species shall be from the same nursery source and nursery lot location.

PART 3 – EXECUTION:

3.01 EXAMINAT1ON OF SITES:

A. The Contractor shall examine the site and all conditions thereon, and take into consideration all such conditions that may affect his work. Start of work indicates acceptance of conditions and full responsibility for work of this section.

B. The Contractor shall be responsible to coordinate his work and access with the other site contractors for the construction projects on the property.

3.02 PERSONNEL:

A. The work shall be performed by personnel familiar with the planting procedures under the supervision of qualified foremen.

3.03 PLANT INSPECTION:

A. All plants shall be subject to inspection by the Landscape Architect for species, size, color, and quality. If so desired, a sample for each plant variety (tree, shrub, groundcover) shall be planted as specified. Once approved, these samples shall be tagged by the Contractor and used as standards of comparison for the remainder of the Work. Plant inspection shall be arranged by the Contractor at least one week prior to planting.

B. Photographs of any material that is coming from suppliers outside the immediate project area may be submitted as typical samples for pre-approval.

3.04 PROTECTION AND REPAIR:

A. All portions of the property, which have been disturbed or damaged due to, or incidental to, work performed under this contract shall be repaired and restored to its original condition to the satisfaction of the Landscape Architect.

B. The Contractor shall fully and satisfactorily maintain and protect all work until completion and acceptance of all work or portions thereof and shall repair or replace, at his expense, any work damaged during that period, to the satisfaction of the Landscape Architect.

C. All work must be contained within the prescribed limits of disturbance shown on the contract documents.

3.05 CLEANUP:

A. At all times during the progress of the work, the contractor shall maintain the site in an orderly condition. Streets and pavements shall be kept clean. Materials and equipment for planting work shall be limited to the quantity required for the work. All rejected materials shall be immediately removed from the site.

3.06 TIMING:

A. Planting work shall not be started until final grades have been established and approved by the Landscape Architect.

B. Under no conditions shall any work be done if weather or soil conditions are not satisfactory.

C. The season for planting trees, shrubs and groundcover shall be March 15 to June 1 and September 15 to November 15, unless otherwise approved by the Landscape Architect. Any out of season planting will be fully guaranteed by the Contractor.

3.07 DIGGING AND HANDLING PLANT MATERIAL:

A. No plants shall be dug or delivered to the site until the required inspections have been made and the plants approved.

B. Balled and burlapped (B&B) plants shell be dug with firm, natural balls of earth, of diameter and sufficient depth to include the fibrous and feeding roots. No plants will be accepted if the ball is cracked or broken before or during planting operations.

C. Roots or balls of all plants shall be adequately protected at all times from sun and/or drying winds. Balled and burlapped plants that cannot be planted immediately upon delivery or collection from the site shall be set on the ground and protected with soil, wet peat or other acceptable material.

D. No plant shall be bound with wire or rope at any time so as to damage the bark or break branches.

E. Plants shall be pruned only as directed by the Landscape Architect.

3.08 PLANTING PITS:

A. Tree locations shall be staked by the Contractor and approved by the Landscape Architect before planting; all planting areas shall be excavated to depths and dimensions indicated; all unsuitable subsoil shall be removed from the site.

B. The sides and bottom of all planting beds shall be scarified.

C. Planting beds shall be backfilled with specified soil mix and hand compacted.

D. Fertilizer shall be mixed thoroughly into the full depth of all planting areas.

3.09 PLANTING:

A. Setting Plants:

1. Unless otherwise specified, all plants shall be planted in pits, centered and set on prepared soil to such depth that 1/8 of the root ball is above grade. Plants shall be planted upright and faced to give the best appearance or relationship to adjacent structures.

2. No burlap shall be pulled out from under balls. Platforms, wire and surplus binding from top and sides of the ball shall be removed. All broken or frayed roots shall be cut off cleanly.

3. When trees are delivered in wire baskets, the wire baskets shall be cut down the side of each mesh and peeled away from the rootball and removed in entirety.

4. Topsoil shall be placed and compacted carefully to avoid injury to roots and to fill all voids. When the hole is nearly filled, water shall be added as necessary and allowed to soak in. The hole shall be filled to finished grade and a shallow saucer shall be formed around each plant by placing a ridge of soil around the edge of each pit. After the ground settles, additional soil shall be filled into the pit to reach the level of the finished grade.

5. After all backfill has been placed, water thoroughly on the interior of the tree saucer until it is filled, even if it is raining.

B. Plant Locations: Plants shall be located as indicated on the contract drawings. All locations are to be approved by the Landscape Architect before any excavation is started.

C. Obstructions: All utilities shall be located in the field before any digging is begun. Any disruption or damage to utility lines shall be the responsibility of the Contractor.

D. Pruning: Only dead and broken branches shall be removed from trees unless otherwise directed by the Landscape Architect. Plant material shall be pruned in accordance with standard horticultural practice to preserve the natural character of the plant. Only clean sharp tools shall be used.

E. Mulching and Staking: All trees shall be staked and mulched with a 2-inch layer of shredded hardwood bark within the entire area of the planting pit. Mulch shall be placed within 48 hours of planting. All shrubs

shall be mulched with a 2-inch layer of shredded hardwood bark within the entire area of the planting pit. Mulch shall be placed within 48 hours of planting.

F. Clean-Up: No debris shall be left on-site. Excavated materials shall be removed or disposed of per Landscape Architect's instructions.

3.10 MAINTENANCE OF PLANT MATERIALS

A. DESCRIPTION:

1. Maintenance shall begin immediately after each plant is installed. The landscape contractor shall provide all materials, labor and equipment to complete all landscape maintenance work for the two-year warranty period.

B. STANDARDS:

1. All landscape maintenance services shall be performed by trained personnel using current, acceptable horticultural practices.
2. All work shall be performed in a manner, which maintains the original intent of the landscape design.
3. All chemical applications shall be performed in accordance with current county, state and federal laws, utilizing EPA-approved materials and methods of application. These applications shall be performed under the supervision of a Licensed Certified applicator.

C. WORKMANSHIP:

1. During landscape maintenance operations, all areas shall be kept neat and clean. Precautions shall be taken to avoid damage to existing structures. All work shall be performed in a safe manner to the operators, the occupants and pedestrians.
2. Upon completion of maintenance operations, all debris and waste materials shall be cleaned up and removed from the site, unless provisions have been granted by the owner to utilize on-site trash receptacles.
3. Any damage to the site caused by the Landscape Contractor shall be repaired by the Landscape Contractor without charge to the Owner.

D. TREES, SHRUBS & GROUNDCOVERS:

1. Pruning: All ornamental trees, shrubs shall be pruned when appropriate to remove dead or damaged branches, develop the natural form of the plant.
2. Weeding: All beds shall be weeded on a continuous basis throughout the growing season to maintain a neat appearance at all times.
3. Insect and Disease Control: The Landscape Contractor shall be responsible for monitoring the site conditions on each visit to determine if any insect or disease problems exist. Immediate measures shall be taken to eliminate any disease or infestation problems.
4. Trash Removal: The Landscape Contractor shall remove trash from all groundcover beds with each visit.
5. Winter Clean Up: Project shall receive a general clean up once during each of the winter months (January, February, March) to include: Removing all trash and unwanted debris, turning mulch where necessary, and inspection of grounds.
6. Watering: The Landscape Contractor shall be responsible for watering all plant material as necessary throughout the growing season for the two year warranty period. A water supply shall be made available on the site for the Contractor to use. The Contractor shall have the option to install a temporary drip irrigation system, install water bags ("TREEGATOR" units) or perform watering by dragging hose to water plants individually. If a temporary drip irrigation system is used the

contractor shall be responsible for all temporary plumbing connections, back-flow preventers and devices required by the plumbing code.

7. Fertilizing: A slow release fertilizer of 5-10-5 shall be applied to all plant material at the end of the 5 yr. maintenance period.
8. Miscellaneous:
    a. Mulch areas of all planting beds and tree pits shall be maintained at a 2” level.
    b. Plants shall be reset to proper grade or upright position as necessary. Stakes and guys shall also be adjusted as necessary.
    c. The Contractor shall prepare maintenance guidelines for use by the Owner.
    d. All stakes and guys shall be removed by the Contractor at the end of five- years unless instructed in writing to leave the stakes and guys in place.
    e. Cut back tops of perennials. Dead tops of all perennials shall be cut back in February and the tops removed. Care shall be taken not to damage plants.

3.11 ACCEPTANCE:

A. Final acceptance of the work by the Owner will be contingent on Contractor’s compliance, with warranty and replacement requirements and Landscape Architect’s approval. The Landscape Architect will notify the Owner within one week of final inspection.

END OF SECTION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Disinfection of site domestic water lines and site fire water lines specified in Section 33 1416.

B. Disinfection of building domestic water piping specified in Section 22 1005.

C. Disinfection of water storage tanks.

D. Testing and reporting results.

1.02 RELATED REQUIREMENTS

A. Section 22 1005 - Plumbing Piping: Disinfection of building domestic water piping system.

B. Section 33 1416 - Site Water Utility Distribution Piping.

C. Section 33 1113 - Potable Water Supply Wells.

D. WSSC General Conditions, Standard Specifications, Details, and Templates for Construction

1.03 REFERENCE STANDARDS

A. AWWA B300 - Hypochlorites 2010, Addendum 2011.

B. AWWA B301 - Liquid Chlorine 2010.

C. AWWA B302 - Ammonium Sulfate 2016.

D. AWWA B303 - Sodium Chlorite 2010.

E. AWWA C651 - Disinfecting Water Mains 2014.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Test Reports: Indicate results comparative to specified requirements.

C. Certificate: From authority having jurisdiction indicating approval of water system.

D. Certificate: Certify that cleanliness of water distribution system meets or exceeds specified requirements.

E. Disinfection report:

1. Type and form of disinfectant used.
2. Date and time of disinfectant injection start and time of completion.
3. Test locations.
4. Initial and 24 hour disinfectant residuals (quantity in treated water) in ppm for each outlet tested.
5. Date and time of flushing start and completion.
6. Disinfectant residual after flushing in ppm for each outlet tested.

F. Bacteriological report:

1. Date issued, project name, and testing laboratory name, address, and telephone number.
2. Time and date of water sample collection.
3. Name of person collecting samples.
4. Test locations.

5. Initial and 24 hour disinfectant residuals in ppm for each outlet tested.
6. Coliform bacteria test results for each outlet tested.
7. Certification that water conforms, or fails to conform, to bacterial standards of Clean Water Act for MD.

1.05 QUALITY ASSURANCE

A. Water Treatment Firm: Company specializing in disinfecting potable water systems specified in this Section with minimum three years documented experience.

B. Testing Firm: Company specializing in testing potable water systems, certified by WSSC.

C. Submit bacteriologist's signature and authority associated with testing.

D. Source Quality Assurance:

1. Perform work in connection with disinfection under direction of experienced supervisor.
2. Use equipment in proper working condition and adequate for specified work.

PART 2 PRODUCTS

2.01 DISINFECTION CHEMICALS

A. Chemicals: AWWA B300 Hypochlorite, AWWA B301 Liquid Chlorine, AWWA B302 Ammonium Sulfate and AWWA B303 Sodium Chlorite, or other material as approved by WSSC.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that piping system and water well has been cleaned, inspected , and pressure tested.

B. Schedule disinfecting activity to coordinate with start-up, testing, adjusting and balancing, demonstration procedures, including related systems.

3.02 DISINFECTION

A. Use method prescribed by the applicable state or local codes, or health authority or water purveyor having jurisdiction, or in the absence of any of these follow AWWA C651.

B. Provide and attach equipment required to perform the work.

C. Inject treatment disinfectant into piping system.

D. Maintain disinfectant in system for 24 hours.

E. Flush, circulate, and clean until required cleanliness is achieved; use municipal domestic water.

F. Replace permanent system devices removed for disinfection.

G. Pressure test system to standards identified by WSSC. Repair leaks and re-test.

3.03 FIELD QUALITY CONTROL

A. Perform field inspection and testing in accordance with Section 01 4000.

B. Test samples in accordance with AWWA C651.

END OF SECTION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Monolithic concrete manholes with masonry transition to lid frame, covers, anchorage, and accessories.

B. Modular precast concrete manhole sections with tongue-and-groove joints with masonry transition to lid frame, covers, anchorage, and accessories.

C. Masonry manhole sections with masonry transition to lid frame, covers, anchorage, and accessories.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete.

B. Section 04 0511 - Mortar and Masonry Grout.

C. Section 04 2000 - Unit Masonry: Masonry units.

1.03 REFERENCE STANDARDS

A. ACI 530/530.1/ERTA - Building Code Requirements and Specification for Masonry Structures and Related Commentaries 2013.

B. ASTM A48/A48M - Standard Specification for Gray Iron Castings 2003 (Reapproved 2016).

C. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products 2017.

D. ASTM C494/C494M - Standard Specification for Chemical Admixtures for Concrete 2017.

E. ASTM C260/C260M - Standard Specification for Air-Entraining Admixtures for Concrete 2010a (Reapproved 2016).

F. ASTM C478 - Standard Specification for Circular Precast Reinforced Concrete Manhole Sections 2015a.

G. ASTM C478M - Standard Specification for Circular Precast Reinforced Concrete Manhole Sections (Metric) 2015a.

H. ASTM C923M - Standard Specification for Resilient Connectors Between Reinforced Concrete Manhole Structures, Pipes, and Laterals (Metric) 2018.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manhole covers, component construction, features, configuration, and dimensions.

C. Shop Drawings: Indicate manhole locations, elevations, piping sizes and elevations of penetrations.

D. Manufacturer's Qualification Statement.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

1.06 FIELD CONDITIONS

A. Cold and Hot Weather Requirements: Comply with requirements of ACI 530/530.1/ERTA or applicable building code, whichever is more stringent.

PART 2 PRODUCTS

2.01 MATERIALS

A. Manhole Sections: Reinforced precast concrete in accordance with ASTM C478 (ASTM C478M), with resilient connectors complying with ASTM C923 (ASTM C923M).

B. Concrete: As specified in Section 03 3000.

C. Clay Brick Units: ASTM C62, Grade SW solid units; nominal modular size of 2-1/4 x 3-5/8 x 7-5/8 in (28 x 92 x 194 mm).

D. Mortar and Grout: As specified in Section 04 2000, Type S.

E. Reinforcement: Formed steel wire, galvanized finish, wire diameter as indicated on drawings.

F. Concrete Reinforcement: As specified in Section 03 3000.

G. Admixtures, General: Chemical type conforming to ASTM C494/C494M (wet mix only).

H. Air-Entraining Admixture: Conforming to ASTM C260/C260M (wet mix only).

I. Microbiologically-Induced Corrosion-Inhibiting Admixture: Resists growth of bacteria and fungi on or inside concrete.

2.02 COMPONENTS

A. Lid and Frame: ASTM A48/A48M Class 30B Cast iron construction, machined flat bearing surface, removable lockable lid, closed lid design; sealing gasket; lid molded with identifying name.

B. Manhole Steps: Formed galvanized steel rungs; 3/4 inch (19 mm) diameter. Formed integral with manhole sections.

C. Strap Anchors: Bent steel shape, galvanized to ASTM A123/A123M Grade specified for applicable material category.

2.03 CONFIGURATION

A. Shaft Construction: Concentric with concentric cone top section; lipped male/female dry joints; sleeved to receive pipe sections.

B. Shape: Cylindrical.

C. Pipe Entry: Provide openings as indicated.

D. Steps: 12 inches (300 mm) wide, 16 inches (400 mm) on center vertically, set into manhole wall.

E. Steps: As required by code.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify items provided by other sections of Work are properly sized and located.

B. Verify that built-in items are in proper location, and ready for roughing into Work.

C. Verify excavation for manholes is correct.

3.02 PREPARATION

A. Coordinate placement of inlet and outlet pipe or duct sleeves required by other sections.

B. Protect structures, utilities, sidewalks, pavements, benchmarks, survey control points, and other facilities from damage caused by excavation equipment and any settlement, lateral movement, undermining, washout, and other hazards created by earth moving operations.

C. Protect and maintain erosion and sedimentation controls during earth moving operations.

D. Protect subgrades and foundation soils from freezing temperatures and frost. Remove temporary protection and all frost damaged soils before placing subsequent materials.

E. Perform all excavations in accordance with current OSHA safety requirements. Excavation side slope support shall be provided using soldier piles and lagging, where necessary.

F. Notify all utility companies prior to excavation, in accordance with Prince George's County regulations.

G. Coordinate placement of inlet and outlet pipe or duct sleeves required by other sections.

H. Do not install structures where site conditions induce loads exceeding structural capacity of structures.

I. Inspect precast concrete structures immediately prior to placement in excavation to verify structures are internally clean and free from damage. Remove and replace damaged units.

3.03 MANHOLES

A. Place concrete base pad, trowel top surface level.

B. Place manhole sections plumb and level, trim to correct elevations, anchor to base pad.

C. Form and place manhole cylinder plumb and level, to correct dimensions and elevations. As work progresses, build in fabricated metal items.

D. Cut and fit for pipe.

E. Grout base of shaft sections to achieve slope to exit piping. Trowel smooth. Contour as required.

F. Set cover frames and covers level without tipping, to correct elevations.

G. Coordinate with other sections of work to provide correct size, shape, and location.

3.04 MASONRY WORK

A. Maintain masonry courses to uniform dimension. Form vertical and horizontal joints of uniform thickness.

B. Lay masonry units in running bond. Course one unit and one mortar joint to equal 8 inches (200 mm).

C. Form concave mortar joints.

D. Lay masonry units in full bed of mortar, with full head joints, uniformly jointed with other work.

E. Install joint reinforcement 16 inches (400 mm) on center.

F. Place joint reinforcement in first and second horizontal joints above base pad and below lid frame opening.

3.05 SCHEDULES

A. Storm Sewer Manholes: Precast concrete sections, galvanized steel steps, 48 inch (1200 mm) inside dimension, to depth indicated, with bolted lid.

B. Electric Service Manholes: Prefabricated FRP sections, integral molded steps, 60 inch (1500 mm) inside dimension, to depth indicated.

END OF SECTION

PART 1 - GENERAL:

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 1, Specification Sections apply to work in this section.

1.02 DESCRIPTION OF WORK:

A. This section specifies materials, work and standards for site and utility construction materials and work.

1.03 RELATED WORK:

A. Refer to Section 31 20 00 "Earthmoving"; Section 33 41 00 "Storm Drainage", Division 22 "Plumbing" and Division 26 "Electrical".

1.04 STANDARDS:

A. Washington Suburban Sanitary Commission's (WSSC) current "General Conditions and Standard Specifications".

B. Maryland Department of Transportation State Highway Administration current “Standard Specifications for Construction and Materials”, Measurement and Payment Clauses do not apply.

C. American Concrete Institute (ACI).

1.05 SUBMITTALS:

A. Products:

1. Submit typewritten list of selected products, when options are specified, within ten (10) calendar days after contract execution. Submit detailed shop drawings of utility modifications required by selection of options.
2. Submit manufacturer's descriptive literature of structure castings.
3. Submit Portland cement concrete mix design formula for each class specified.
4. Submit certificates, signed by manufacturer or producer and contractor, stating the following comply with this specification:
    a. Portland cement.
    b. Fine aggregates.
    c. Coarse aggregates.
    d. Portland cement concrete.
    e. Concrete masonry units.
    f. Brick.
    g. Foundation materials.
    h. Bedding materials.
5. Submit shop drawings, of the following, indicating concrete reinforcement locations, size and placement:
    a. Cast in place reinforced concrete structures.
    b. Pre-cast reinforced concrete structures.
6. Submit location of product manufacture and of extraction/recovery of primary raw materials.

7. Submit recycled-content data, designating percentages of post-consumer and post- industrial recycled material.
8. Submit certification of FSC-certified sustainably harvested wood formwork materials, if applicable.

B. Compaction Equipment: Submit compaction equipment data prior to start of controlled fill earthwork operations.

C. Testing: Submit test reports of testing specified.

D. “As-Built” Plans: Submit “as-built” plans for water, sanitary sewer and storm drainage systems. Submit to the Owner’s Representative and to controlling utility agencies as required.

1.06 PRODUCT DELIVERY, STORAGE AND HANDLING:

A. Delivery: Schedule delivery operations to avoid unnecessary re-handling.

B. Storage:

1. General: Store in accordance with manufacturer's recommendations and as noted.
2. Store on platforms above ground and protect from adverse environmental conditions.
3. Aggregates: Store to prevent foreign material contamination.
4. Utility Joint Materials and Lubricants: Store in cool and dry location free of oil, grease, excessive heat and direct sunrays.

C. Handling:

1. General: Comply with manufacturer's recommendations and as noted.
2. Aggregates: Handle to prevent segregation.
3. Pre-cast Concrete Structures: Handle to prevent damage. Utilize lifting holes provided by structure manufacturer.

1.07 DEFINITIONS:

A. Refer to Section 31 20 00 "Earthmoving".

1.08 PROJECT CONDITIONS:

A. Refer to Section 31 20 00 "Earthmoving" and as noted.

B. Traffic: Maintain pedestrian and vehicular traffic during utility construction operations.

C. Limitations:

1. Environmental: Do not place Portland cement products or erect masonry when ambient air temperature is below 40 degrees Fahrenheit or air temperature has been below 35 degrees Fahrenheit for twelve or more consecutive hours or between 15 November and 01 March without written authorization from the Owner’s Representative or the Architect.

D. Certifications, Inspections and As-Built Documents:

1. The Contractor shall provide inspection, certification and "as-built" plans of the on- site water, sanitary sewer service and storm sewer work by a registered professional Engineer. Contractor shall notify the Architect within 15 calendar days of signing the contract who the Maryland Registered P.E. will be and who will certify the as- built water and sewer plan. Show any changes and include ties for the location of valves, bends, manholes, fire hydrants, and laterals accompanied by the qualifying air test date and certification of compliance. See Division One “Project Record Documents” for format of “as-built” drawings.

2. All storm drain system work must be inspected by Prince George's County in accordance with agency permit requirements. Record of as-built conditions will be required.

1.09 QUALITY ASSURANCE

A. Comply with standards of Prince George's County and WSSC for potable water service piping, including materials, installation, testing, etc.

B. Piping materials shall bear label, stamp or other markings of specified testing agency as required.

C. Electrical Components, Devices and Accessories: Listed and labeled as deifined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

PART 2 - PRODUCTS:

2.01 MATERIALS:

A. Provide products manufactured and of primary raw materials extracted/recovered within a 500-mile radius of the project site.

B. Portland Cement Concrete: SHA Section 902, Portland Cement Concrete and Related Products.

1. Water: Clean and free of oil, acid and injurious amounts of vegetable matter, alkalis and salts. River, stream or lake water is prohibited.

2. Forms: Wood, steel or as specified. Form materials to produce smooth surfaces, free of irregularities. Nonrented wood formwork shall be made of FSC-certified sustainably harvested wood materials.

C. Mixes:

1. Class "A" Concrete: SHA Mix No. 4, Table 902 A. 28-Day compressive strength 3500 P.S.I. Maximum 50% GGBF slag replacement for Portland cement, per MDOT-SHA Specification 902.06.05.

2. Class "B" Concrete: SHA Mix No. 2, Table 902 A. 28-Day compressive strength 3000 P.S.I. Maximum 50% GGBF slag replacement for Portland cement, per MDOT-SHA Specification 902.06.05.

D. Concrete Reinforcements:

1. Steel bars: ASTM A 615, Grade 60, deformed, designation as indicated or specified. Minimum 99% recycled-content, of which minimum 60% shall be post-consumer and the remainder may be post-industrial material.

2. Steel Wire Mesh: ASTM A 185 welded wire mesh, roll type, size as indicated or specified.

E. Brick:

1. ASTM C 55 Concrete Building Brick, type I, grade N, standard manufacture size.

2. Type B: ASTM C 32 Clay or Shale Brick, grade SS or as specified, solid, 2-1/4 by 3-3/4 by 8 inches.

F. Cement Mortar: SHA Section 902.05, Masonry Cement.

1. Water: As specified for Portland cement concrete.

G. Cast-in-Place Reinforced Concrete Structures:

1. Structure Bases: Class "B" Portland Cement Concrete.

2. Structure Walls and Top Slabs: Class "A" Portland Cement Concrete.

3. Concrete Reinforcement, Structural Steel, Structure Castings and Appurtenances: As indicated and specified.

H. Pre-Cast Reinforced Concrete Structures:

1. Square and Rectangular Structures: ASTM C 858.
2. Structural Design Loading: ASTM C 858, live load designation A-16.
3. Circular Structures: ASTM C 478.
4. Structure Joints: ASTM C 443.

I. Foundation Materials:

1. Type I: ASTM C 33 Coarse Aggregate, size No. 8 (3/8 inch to No. 8).
2. Type II: SHA Coarse Aggregate Size No. 57 stone (1 1/2 inch to No. 8).
3. Type III: Earth material free of debris, waste materials, frozen materials, vegetable matter, clay, rocks or stones exceeding 1 inch in any dimension. Obtain Type III material from on-site excavations or off-site borrow areas approved by the Soils Engineer.

J. Bedding Materials:

1. Type A: ASTM C 33 Fine Aggregate.
2. Type B: ASTM C 33 Coarse Aggregate, size No. 6 (1 inch to No. 4).
   a. Contractor’s Option: SHA Coarse Aggregate Size No. 57 stone (1 1/2 to # 8.)
   b. Recycled concrete RC-6 may, at Contractor’s discretion, be used for bedding in approved locations.
3. Type C: Earth material free of debris, waste materials, frozen materials, vegetable matter, clay and rocks or stones exceeding one inch in any direction.

K. Bedding Material Schedule:

1. Storm drainage system: Type B, or as per manufacturers recommendations.
2. Water Distribution System: W.S.S.C. Standards, or Type A.
3. Sanitary Sewer System: W.S.S.C. Standards, or Type B.
4. All other utilities: Type C.

L. Backfill Materials: As specified for Fill or Backfill, Section 31 20 00 "Earthmoving", and as noted.

1. Utility Trenches:
   a. Phase I: Earth material free of debris, waste materials, frozen materials, vegetable matter and rock or stones exceeding one inch in any dimension.
   b. Phase II: Earth material free of debris, waste material, frozen material, vegetable matter and rock or stones exceeding two inches in any dimension.
2. Utility Structures: Earth material free of debris, waste material, frozen material, vegetable matter and rock or stones exceeding two inches in any dimension. Obtain backfill material from the following: Excavated material approved by the Soils Engineer or the Owner's Representative.

PART 3 - EXECUTION:

3.01 PROTECTION AND RESTORATION:

A. Refer to Section 31 20 00 "Earthmoving" and as noted.

B. General: Provide support systems (e.g. sheeting, shoring, sheet piling, cribbing, etc.) at no increase to contract sum. Cut off timber when using timber support systems above top of utility to prevent utility displacement. Exercise care when using trench shields or boxes during shield movement to prevent utility

displacement.

3.02 EXISTING UTILITIES:

A. Refer to Section 31 20 00 "Earthmoving", and as noted. Contractor shall notify "Miss Utility" at least 48 hours prior to start of construction.

B. Provide test pits at all existing utility crossings prior to any system construction. Verify utility inverts for review by Architect or the Owner's Representative to determine potential conflicts prior to start of system construction.

3.03 DEWATERING:

A. Refer to Section 31 20 00 "Earthmoving".

3.04 EXCAVATION:

A. Refer to Section 31 20 00 "Earthmoving" and as noted.

B. Trench Excavation: Open cut method or as specified. Excavate materials encountered to subgrade elevations indicated or specified.

1. Trench width below top of utility not to exceed the following clearances on each side of utility:

Utility Exterior Width, Diameter or Span	Clearance
1 thru 30 in.	16 in.
31 and higher	24 in.

2. Excavate utility trenches to the following depths:

a. Circular storm drainage pipe: Six inches below bottom of pipe.

b. Water distribution pipe: W.S.S.C. Standards or four inches below bottom of pipe.

c. Sanitary sewer pipe: W.S.S.C. Standards or six inches below bottom of pipe.

d. All other utilities: Bottom of utility.

C. Structure Excavation:

1. Utility structure excavation to produce 12-inch clearance between exterior structure walls and excavation walls or support systems.

2. Extend excavation to the following:

a. Cast in place reinforced concrete structures: Six inches beyond structure base.

b. Pre-cast reinforced concrete structures: Six inches below bottom of pre-cast structure base.

c. Pre-cast reinforced concrete structure with cast in place concrete base: Bottom of structure base.

d. Masonry structures: Bottom of structure base.

3.05 OVER-EXCAVATION:

A. Refer to Section 31 20 00 "Earthmoving", except as noted.

B. Utility Trenches:

1. Correct over-excavation of water distribution, storm drainage and gravity flow sanitary sewer systems by backfilling over-excavated trenches with Type II foundation (Type B bedding) material and compacting.

2. Correct over-excavation of all other utilities by backfilling over-excavated trenches with Type III foundation (Type C bedding) material and compacting.

3. Place material in loose lifts not exceeding eight inches. Compact each lift to 98 percent maximum dry density. Density test method: ASTM D 698.

C. Structures: Correct utility structure over-excavation by backfilling over-excavation with Type II foundation (Type B bedding) material and compacting.

1. Place material in loose lifts not exceeding eight inches. Compact each lift to 98 percent maximum dry density. Density test method: ASTM D 698.

3.06 UNSUITABLE EARTH:

A. Refer to Section 31 20 00 "Earthmoving", except as noted.

B. Restore unsuitable earth excavation as specified for over-excavation.

3.07 EXCAVATED MATERIAL STORAGE:

A. Refer to Section 31 20 00 "Earthmoving" and as noted.

B. Stockpile select excavated materials required for backfill operations.

3.08 PORTLAND CEMENT CONCRETE CONSTRUCTION:

A. Mixing:

1. Ready-Mixed Concrete: ASTM C 94.

2. Project Site Batch Mixing: ACI 301, Chapter 7.

B. Formwork: ACI 301, Chapter 4.

C. Reinforcement: ACI 301, Chapter 5.

D. Joints and Embedded Items: ACI 301, Chapter 6.

E. Placement: ACI 301, Chapter 8.

F. Surface Defects: ACI 301, Chapter 9.

G. Finishes: ACI 301. Non-Exposed: Section 10.2.1. Exposed: Section 10.2.2.

H. Curing and Protection: ACI 301, Chapter 12.

I. Cold Weather Concreting: ACI 306R.

J. Hot Weather Concreting: ACI 305R.

3.09 STRUCTURES:

A. Cast in Place Reinforced Concrete Structures: Construct cast in place concrete structures as indicated and specified.

B. Pre-cast Reinforced Concrete Structures:

1. Pre-cast structure base: Place Type I foundation material, on excavation subgrade, to bottom of structure base and compact to 98 percent of maximum dry density by ASTM D 698. Install pre-cast structure base, on compacted foundation material, level to 1/8 inch in 5 feet. Clean and lubricate structure joints, immediately prior to installation, in accordance with manufacturer's recommendation. Install pre-cast reinforced structure sections, on structure base, plumb to 1/4 inch in 10 feet. Position structure sections on previously installed section and push joints tightly together. Position concrete top slabs on structure as indicated. Plug lifting holes with cement mortar. Install frames and covers to finished grade with bricks and cement mortar.

C. Masonry Structures:

1. Erect structure walls with masonry materials specified. Wet each masonry unit thoroughly before placement. Shove each unit into place in full bed of cement mortar. Horizontal and vertical joints not to exceed 1/2 inch.

2. Bond and Coursing: Brick Masonry - Common Bond.

3. Fill joints completely with cement mortar. Fit masonry units tightly around utilities projecting through structure walls. Space, set and bond structure appurtenances as indicated or specified during masonry erection. Point up interior structure joints and clean removing excess cement mortar. Parge exterior structure walls with 1/2 inch thick cement mortar and finish with smooth trowel. Masonry construction tolerances not to exceed 1/4 inch in 10 feet vertical from plumb.

3.10 BEDDING:

A. Storm drainage pipe: Place bedding material, on excavated trench subgrade to bottom of pipe and compact. Upon completion of pipe installation, place and compact bedding material to springline of pipe.

B. All Other Utilities: Bedding not required. Install utilities on excavated trench subgrade as indicated or specified.

3.11 BACKFILL:

A. Backfill utility trenches in two consecutive phases as follows:

1. Phase I - Backfill to 12-inch depth above top of utility. Place backfill material in loose lifts not exceeding eight inches. Compact each lift to 90 percent maximum dry density. Density test method: ASTM D 1557.

2. Phase II - Unpaved Areas: Place backfill material to grade in loose lifts not exceeding 8 inches. Compact each lift to 85 percent maximum dry density. Density test method: ASTM D 1557

3. Phase III - Paved Areas: Place backfill material to grade in loose lifts not exceeding eight inches. Compact each lift to 90 percent maximum dry density. Density test method: ASTM D 1557.

B. Backfill utility structures as follows: Place backfill material carefully and in loose lifts not exceeding 12 inches (paved areas - 8 inches) in depth. Compact each lift to 95 percent maximum dry density. Density test method: ASTM D 698. Do not backfill masonry structures until cement mortar parge attains initial set.

3.12 EXCAVATED MATERIAL DISPOSAL:

A. Refer to Section 31 20 00 "Earthmoving".

3.13 WASTE MANAGEMENT:

A. Recycle waste materials in accordance with Division 1 “Construction Waste Management” requirements.

END OF SECTION

PART 1 – GENERAL:

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 1, Specification Sections apply to work in this section.

1.02 DESCRIPTION OF WORK:

A. This section specifies materials and work required to construct water distribution system.

1.03 RELATED WORK:

A. Refer to Section 33 10 00 "Utility Standards".

1.04 STANDARDS:

A. Washington Suburban Sanitary Commission's (WSSC) current "General Conditions and Standard Specifications" and "Standard Details".

B. Washington Suburban Sanitary Commission's current "Regulations Governing the Installation of Plumbing and Sewer Cleaning in the Washington Suburban Sanitary District".

C. American Water Works Association (AWWA).

1.05 SUBMITTALS:

A. Refer to Section 33 10 00 "Utility Standards" and as noted.

B. Products: Submit product manufacturer's specifications and installation instructions and certificates of compliance signed by manufacturer and contractor stating that products comply with this specification to the Architect. Certificates of compliance must be notarized, signed by an officer of the Manufacturer, and shall include W.S.S.C. Contract Number or On-site number, job location, Contractor’s name, types, classes and strengths of pipe and fittings, and the Manufacturer’s name.

C. Submit As-built drawings to the Architect.

D. Service Connection Permit: Contractor shall submit to Architect all items required by WSSC to obtain a Service Connection Permit, including but not limited to: All required WSSC Bonds, Letter indicating Utility Contractor, and Certificate of Insurance. The Architect will obtain the Service Connection Permit once all these items are received.

1.06 PRODUCT DELIVERY, STORAGE AND HANDLING:

A. Refer to Section 33 10 00 "Utility Standards", and as noted.

1.07 PROJECT CONDITIONS:

A. Refer to Section 33 10 00 "Utility Standards", and as noted.

B. Jurisdiction Standards: Site is located within WSSC jurisdiction. On-site fire hydrants shall be "Supervised Fire Hydrants".

C. All on-site construction and materials shall be in accordance with the latest edition of the W.S.S.C. General Conditions and Standard Specifications, Design Manual, Standard Details and Plumbing and Gasfitters Regulations.

1.08 CONSTRUCTION SURVEYS:

A. Provide survey equipment and qualified personnel for construction surveys. Provide combined horizontal and vertical alignment stakes for system construction. Horizontal stake interval to be 50 feet and at all appurtenances (e.g. fittings, valves, etc.). Provide construction cut sheet preparation as required.

1.09 QUALITY ASSURANCE

A. Perform Work in accordance with Prince Georges County and WSSC standards, codes and requirements.

B. Manufacturers shall be experienced in the design and manufacturing of materials specified herein for a minimum period of 5 years

C. All pipe, regardless of diameter, shall be supplied by a single manufacturer.

D. Contractor shall conduct visual inspection prior installation. Proceeding with work constitutes acceptance of existing conditions.

E. Provide manufacturer's name and pressure rating marked on piping and valves

F. Provide piping complete with all fittings, jointing materials, supports, joint restraint system, and necessary appurtenances for watertight, fully operational sewer lines.

PART 2 - PRODUCTS

2.01 MATERIALS:

A. All materials shall be W.S.S.C. Standards and shall meet all W.S.S.C. requirements indicated.

B. Valve Boxes: Cast iron two-piece valve boxes, screw type box, bell base section, 5-1/4 inch shaft, round drop cover with "W" marking.

2.02 FIRE HYDRANTS:

A. WSSC Standard.

2.03 CONCRETE PADS:

A. Class 'A' Portland cement.

2.04 CONCRETE ANCHORS:

A. W.S.S.C. Standards indicated and specified. Class 'A' Portland cement concrete, Section 33 10 00 "Utility Standards".

2.05 STRAPS AND RODS:

A. Clamps, Straps and Washers: Steel, ASTM A 506.

B. Rods: Steel, ASTM A 575.

C. Rod Couplings: Malleable-Iron, ASTM A 197

D. Bolts: Steel, ASTM A 307

E. Cast-Iron Washers: Gray-iron, ASTM A 126

2.06 MISCELLANEOUS PRODUCTS:

A. Underground Identification Tape: Manufactured by Allen Systems, Houston, Texas.

1. Type: “Markline”.
2. Color: Precaution Blue.
3. Legend: Caution water line buried below.
4. Tape Width: Three inches.

B. Disinfection Products: W.S.S.C. standards indicated and specified. For continuous feed disinfection method, use Calcium Hypochlorite: AWWA B 300, granular form.

1. Contractor's Option: AWWA B 301 Liquid Chlorine.

2. Contractor's Option: AWWA B 303 Sodium Chloride.
3. Water: Potable.

PART 3 - EXECUTION:

3.01 PROTECTION AND RESTORATION:

A. Refer to Section 33 10 00 "Utility Standards".

3.02 DEWATERING, EXCAVATION, OVER-EXCAVATION AND UNSUITABLE EARTH:

A. Refer to Section 33 10 00 "Utility Standards".

3.03 PIPE:

A. General:

1. Install in accordance with pipe manufacturer's installation instructions, W.S.S.C. standards and requirements and as noted.
2. Inspect each pipe laying length, pipe joint materials and fittings for defects. Remove defective products from project site. Install pipe to horizontal and vertical alignment indicated. Place fittings at changes in horizontal and vertical alignment as indicated. Construct concrete anchors at each fitting as indicated. Place concrete to permit access to joints for inspection and maintenance. Apply liberal coat of coal tar pitch to exposed steel and hardware. Field cut pipe only where required to complete closures or to install fittings, valves or fire protection equipment. Cut pipe to smooth square end with equipment designed for cutting pipe.

B. Ductile Iron Pipe:

1. Install pipe in accordance with AWWA C 600 and as noted.
2. Install with bell ends facing in direction of laying operations. Begin installation of pipe, with vertical gradient exceeding 10 percent, at lowest elevation and proceed upgrade. Place identifying mark on pipe not provided with spigot depth mark. Clean interior and exterior surfaces of bell and spigot removing oil, grit, excess coating and foreign matter. Lubricate pipe ends and gasket in accordance with pipe manufacturer's instruction.

C. Ductile Iron Push-On Pipe: Position each laying length in previously installed pipe and push or pull joint tightly together with mechanical device designed for pipe jointing. Grind or file spigot end of field cut pipe to resemble manufactured spigot end. Place spigot identifying depth mark as specified. Pipe joint deflection not to exceed the limits specified in Table 2, AWWA C 655.

3.04 BURIED VALVES:

A. Install valves in accordance with valve manufacturer's installation instructions, and W.S.S.C. requirements.

3.05 FIRE HYDRANTS:

A. General: Install fire hydrants at locations indicated, in accordance with AWWA M17 "Installation, Operation and Maintenance of Fire Hydrants", manufacturer's installation instructions, and W.S.S.C. standards and requirements.

3.06 BACKFILL:

A. Refer to Section 33 10 00 "Utility Standards" and as noted.

B. Watermain’s 4-inches and larger must be inspected by the Architect prior to completion of backfill operations. Contractor shall provide a minimum of 48 hours notice to the Architect before completion of backfill operations.

C. Valve Box Installation: Install valve box for each buried gate valve during backfill operations. Install boxes to prevent shock or stress transmission to valves or pipe and center over valve operating nut plumb to 1/4 inch in five feet. Adjust box cover flush to finished grade.

D. Underground Identification Tape: Install tape during backfill operations. Tape shall be centered over pipe, located 24 inches below finished grade.

3.07 SYSTEM TESTING:

A. General: Provide materials, equipment (e.g. pumps, gauges, etc.) and labor required to test system. Do not conduct tests until concrete anchors cure and set seven calendar days. Provide a minimum of 48 hours notification of planned testing. Test observation by local governing water authority personnel. Test system in accordance with AWWA C 600 and as noted.

B. Hydrostatic Pressure Tests: Conduct hydrostatic pressure tests, upon completion of Phase I backfill operations. Fill systems or valved section of system with water. Expel air from pipe. Slowly apply test pressure. Test pressure to be per approved plan. Test duration to be two hours. Test pressure shall not vary more than +5 psi for the duration of the test. Examine all system joints. Correct defective products or improper system installation as directed by the local governing water authority personnel.

C. Hydrostatic Leakage Tests: Conduct hydrostatic leakage tests upon completion of Phase II backfill operations. Test procedure as specified for hydrostatic pressure tests, except as noted. Test duration 24 hours. Allowable leakage for ductile iron pipe is not to exceed the limits specified in Table 3, AWWA C 600. Correct system installation exceeding allowable leakage specified as directed by the local governing water authority personnel.

3.08 INSPECTION AND CERTIFICATION:

A. Retain the services of a Maryland-Registered Professional Engineer for inspection of system construction and certification that system complies with standards specified. In accordance with the requirements on the approved WSSC drawings, the inspecting engineer must be the engineer of record for the approved WSSC drawings.

3.09 SYSTEM DISINFECTION:

A. Disinfect system in accordance with AWWA C 651, W.S.S.C. standards specified, and as noted. Provide materials, equipment (e.g. pumps, etc.) and labor required to disinfect system.

B. Disinfection Method: Continuous feed.

1. Preliminary and final flushing velocity to be 2.5 fps. Solution concentration as specified. Maintain 50 MG/L available chlorine during 24-hour disinfection period. Bacteriologic test interval every six hours. Flushing and drainage locations where directed by the Owner's Representative.

3.10 DISINFECTION TESTING:

A. Conduct chlorine residual tests upon completion of final flushing operations. Repeat disinfection operation until satisfactory chlorine residual quality tests are obtained.

3.11 WATER BACTERIOLOGIC QUALITY TESTING:

A. Retain the services of an independent testing laboratory to conduct water bacteriologic quality testing.

END OF SECTION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Pipe and fittings for site water lines including domestic water lines and fire water lines.

B. Valves, Fire hydrants and Domestic water hydrants.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Concrete for thrust restraints.

B. Section 09 9113 - Exterior Painting.

C. Section 21 1100 - Facility Fire-Suppression Water-Service Piping.

D. Section 31 2316 - Excavation: Excavating of trenches.

E. Section 31 2316.13 - Trenching: Excavating, bedding, and backfilling.

F. Section 31 2323 - Fill: Bedding and backfilling.

G. Section 33 0110.58 - Disinfection of Water Utility Piping Systems: Disinfection of site service utility water piping.

H. Section 33 0513 - Manholes and Structures.

1.03 REFERENCE STANDARDS

A. AASHTO HB - Standard Specifications for Highway Bridges 2002, with Errata (2005).

B. ASME B16.3 - Malleable Iron Threaded Fittings: Classes 150 and 300 2016.

C. ASME B16.4 - Gray Iron Threaded Fittings: Classes 125 and 250 2016.

D. ASME B16.18 - Cast Copper Alloy Solder Joint Pressure Fittings 2012.

E. ASME B16.22 - Wrought Copper and Copper Alloy Solder-Joint Pressure Fittings 2018.

F. ASME B18.2.2 - Nuts for General Applications: Machine Screw Nuts, Hex, Square, Hex Flange, and Coupling Nuts (Inch Series) 2015.

G. ASME B18.5.2.1M - Metric Round Head Short Square Neck Bolts 2006 (Reaffirmed 2011).

H. ASME B18.5.2.2M - Metric Round Head Square Neck Bolts 1982 (Reaffirmed 2010).

I. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless 2018.

J. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength 2014 (Editorial 2017).

K. ASTM A563 - Standard Specification for Carbon and Alloy Steel Nuts 2015.

L. ASTM A563M - Standard Specification for Carbon and Alloy Steel Nuts (Metric) 2007 (Reapproved 2013).

M. ASTM B88 - Standard Specification for Seamless Copper Water Tube 2016.

N. ASTM D1785 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe, Schedules 40, 80, and 120 2015, with Editorial Revision (2018).

O. ASTM D2241 - Standard Specification for Poly (Vinyl Chloride) (PVC) Pressure-Rated Pipe (SDR Series) 2015.

P. ASTM D2466 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 40 2017.

Q. ASTM D2467 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 80 2015.

R. ASTM D2855 - Standard Practice for the Two-Step (Primer & Solvent Cement) Method of Joining Poly (Vinyl Chloride) (PVC) or Chlorinated Poly (Vinyl Chloride) (CPVC) Pipe and Piping Components with Tapered Sockets 2015.

S. ASTM D3035 - Standard Specification for Polyethylene (PE) Plastic Pipe (DR-PR) Based on Controlled Outside Diameter 2015.

T. ASTM D3139 - Standard Specification for Joints for Plastic Pressure Pipes using Flexible Elastomeric Seals 1998 (Reapproved 2011).

U. AWS A5.8M/A5.8 - Specification for Filler Metals for Brazing and Braze Welding 2011 (Amended 2012).

V. AWWA C104/A21.4 - Cement-Mortar Lining for Ductile-Iron Pipe and Fittings 2016.

W. AWWA C105/A21.5 - Polyethylene Encasement for Ductile-Iron Pipe Systems 2010.

X. AWWA C111/A21.11 - Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings 2017.

Y. AWWA C115/A21.15 - Flanged Ductile-Iron Pipe with Ductile-Iron or Gray-Iron Threaded Flanges 2011.

Z. AWWA C151/A21.51 - Ductile-Iron Pipe, Centrifugally Cast 2017.

AA. AWWA C200 - Steel Water Pipe, 6 In. (150 mm) and Larger 2017.

BB. AWWA C203 - Coal-Tar Protective Coatings and Linings for Steel Water Pipe 2015.

CC. AWWA C205 - Cement-Mortar Protective Lining and Coating for Steel Water Pipe, 4 in. (100 mm) and Larger - Shop Applied 2012.

DD. AWWA C206 - Field Welding of Steel Water Pipe 2017.

EE. AWWA C207 - Steel Pipe Flanges for Waterworks Service, Size 4 In. Through 144 In. (100 mm Through 3,600 mm) 2013.

FF. AWWA C208 - Dimensions for Fabricated Steel Water Pipe Fittings 2012.

GG. AWWA C209 - Cold-Applied Tape Coatings for Steel Water Pipe, Special Sections, Connections, and Fittings 2013.

HH. AWWA C210 - Liquid-Epoxy Coating Systems for the Interior and Exterior of Steel Water Pipelines 2015.

II. AWWA C500 - Metal-Seated Gate Valves for Water Supply Service 2009.

JJ. AWWA C502 - Dry-Barrel Fire Hydrants 2014.

KK. AWWA C504 - Rubber-Seated Butterfly Valves 3 In. (75 mm) Through 72 In. (1,800 mm) 2010.

LL. AWWA C508 - Swing-Check Valves for Waterworks Service, 2 In. (50 mm) Through 24 In. (600 mm) NPS 2017.

MM. AWWA C509 - Resilient-Seated Gate Valves for Water Supply Service 2015.

NN. AWWA C600 - Installation of Ductile-Iron Water Mains and Their Appurtenances 2017.

OO. AWWA C602 - Cement-Mortar Lining of Water Pipelines in Place, 4 In. (100 mm) and Larger 2017.

PP. AWWA C606 - Grooved and Shouldered Joints 2015.

QQ. AWWA C900 - Polyvinyl Chloride (PVC) Pressure Pipe, 4 In. Through 12 In. (100 mm Through 300 mm), for Water Transmission and Distribution 2016.

RR. AWWA C901 - Polyethylene (PE) Pressure Pipe and Tubing, 1/2 In. (13 mm) Through 3 In. (76 mm), for Water Service 2017.

SS. AWWA M11 - Steel Water Pipe - A Guide For Design and Installation 2016.

TT. UL 246 - Hydrants for Fire-Protection Service Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to the start of the work of this section; require attendance by all affected installers.

B. Sequencing: Ensure that utility connections are achieved in an orderly and expeditious manner.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on pipe materials, pipe fittings, valves and accessories.

C. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

D. Project Record Documents: Record actual locations of piping mains, valves, connections, thrust restraints, and invert elevations. Identify and describe unexpected variations to subsoil conditions or discovery of uncharted utilities.

1.06 QUALITY ASSURANCE

A. Perform Work in accordance with Prince Georges County and WSSC standards, codes and requirements.

B. Manufacturers shall be experienced in the design and manufacturing of materials specified herein for a minimum period of 5 years

C. All pipe, regardless of diameter, shall be supplied by a single manufacturer.

D. Contractor shall conduct visual inspection prior installation. Proceeding with work constitutes acceptance of existing conditions.

E. Provide manufacturer's name and pressure rating marked on piping and valves

F. Provide piping complete with all fittings, jointing materials, supports, joint restraint system, and necessary appurtenances for watertight, fully operational sewer lines.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store valves in shipping containers with labeling in place.

PART 2 PRODUCTS

2.01 WATER PIPE

A. Steel Pipe: Welded or Seamless complying with AWWA C200.

1. Underground Pipe and Fittings: Cement-mortar lining and cement-mortar coating.
2. Aboveground Pipe and Fittings: Cement-mortar lining.
3. Fittings: AWWA C208.
    a. Construct of same material as pipe with standard tube turns or segmentally welded sections to accommodate the type of couplings or joints provided.
    b. Thickness Rating: Comply with not less than specified pipe thickness and calculated pipe pressure rating.

c. Mechanically or manually wrap, line, and coat all fittings with same protective materials and applications used for pipe.

4. Pipe manufacturer to calculate and determine wall thickness and fittings in the following manner:
   a. Calculate pipe wall thickness on the basis of an allowable fiber stress in the steel equal to 50 percent of the minimum yield strength of the steel used in the manufacture of the pipe.
5. Joints:
   a. Rubber Gasketed Bell and Spigot: Provide pipe manufacturer's standard design, meeting the requirements of AWWA C200.
   b. Welded: Provide electrodes complying with AWWA C206.
   c. Sleeve Type Mechanical Coupled:
      1) Designed to couple plain-end piping by compression of a ring gasket at each end of the adjoining pipe sections and provide for confinement and compression of gaskets.
      2) Coupling Assembly:
         (a) One steel middle ring, flared or beveled at each end, providing a gasket seat and two steel or malleable iron follower rings, providing for confinement and compression of the gaskets.
         (b) Provide middle ring and follower rings consisting of true, circular sections, free from irregularities, flat spots, and surface defects.
         (c) Two resilient and tapered rubber gaskets, designed for resistance to set after installation.
         (d) Bolts and nuts to draw the follower rings toward each other to compress the gaskets.
      3) Bolts: Track head conforming to ASTM A307 Grade A, with nuts conforming to ASTM A563 and ASTM A563M Grade A.
      4) Coupling Strength: Not less than adjoining pipeline.
   d. Grooved and Shouldered:
      1) Groove pipe ends by roll grooving or provide weld-on adapters with cut grooves.
      2) Groove dimensions by roll grooving as recommended by the coupling manufacturer.
      3) Dimensions of grooves cut in adapters to conform with AWWA C606.
      4) Comply with AWWA C606 for pipe ends.
      5) Joint dimensions to comply with AWWA C606 for rigid joints and as indicated for flexible joints.
   e. Flanged:
      1) Steel Flanges: AWWA C207, Class D.
      2) Bolts, Nuts, and Rubber Gaskets: AWWA C207.
      3) Asbestos gaskets not allowed.
   f. Insulating Joints:
      1) Provide flanged type with insulating gasket, bolt sleeves, and washers to prevent metal-to-metal contact with adjacent piping.
      2) Gaskets: Dielectric type, full face, as recommended in Appendix to AWWA C115/A21.15.

3) Bolts and Nuts: As recommended in Appendix to AWWA C115/A21.15.

6. Lining and Coating:
   a. Cement-Mortar Lining: AWWA C602 applied in-place.
   b. Cement-Mortar Coating: AWWA C205, factory applied.
   c. Coal-Tar Epoxy Coating, Shop Applied: Clean, prime, and topcoat piping with coal-tar epoxy coating system in accordance with AWWA C210.

B. Ductile Iron Pipe: AWWA C151:
   1. Fittings: Ductile iron, standard thickness.
   2. Joints: AWWA C111/A21.11, Styrene butadiene rubber (SBR) or vulcanized SBR gasket with rods.
   3. Jackets: AWWA C105/A21.5 polyethylene jacket.

C. Copper Tubing: ASTM B88, Type K, annealed:
   1. Fittings: ASME B16.18, cast copper, or ASME B16.22, wrought copper.
   2. Joints: Compression connection or AWS A5.8M/A5.8, BCuP silver braze.

D. PVC Pipe: ASTM D1785 Schedule 40.
   1. Fittings: ASTM D2466, PVC.
   2. Joints: ASTM D2855, solvent weld.

E. Polyethylene Pipe: ASTM D3035, for 45 psig pressure rating (ASTM D3035, for 315 kPa pressure rating):
   1. Fittings: AWWA C901, molded or fabricated.
   2. Joints: Compression.

F. Trace Wire: Magnetic detectable conductor, clear plastic covering, imprinted with "Water Service" in large letters.

2.02 VALVES

A. Valves: Manufacturer's name and pressure rating marked on valve body.

B. Gate Valves Up To 3 Inches (75 mm):
   1. Brass or Bronze body, non-rising stem, inside screw, single wedge or disc, compression ends, with control rod, post indicator, valve key, and extension box.

C. Gate Valves 3 Inches (75 mm) and Over:
   1. AWWA C509, iron body, bronze trim, non-rising stem with square nut, single wedge, resilient seat, flanged ends, control rod, post indicator, valve key, and extension box.

D. Ball Valves Up To 2 Inches (50 mm):
   1. Brass body, Teflon coated brass ball, rubber seats and stem seals, Tee stem pre-drilled for control rod, AWWA inlet end, compression outlet with electrical ground connector, with control rod, valve key, and extension box.

E. Swing Check Valves From 2 Inches to 24 Inches (50 mm to 600 mm):
   1. AWWA C508, iron body, bronze trim, 45 degree swing disc, renewable disc and seat, flanged ends.

F. Butterfly Valves From 2 Inches to 24 Inches (50 mm to 600 mm):
   1. AWWA C504, iron body, bronze disc, resilient replaceable seat, water or lug ends, ten position lever handle.

2.03 BEDDING AND COVER MATERIALS

A. Bedding: As specified in Section 31 2316.13.

B. Cover: As specified in Section 31 2316.13.

2.04 ACCESSORIES

A. Concrete for Thrust Restraints: Concrete type specified in Section 03 3000.

B. Backflow Preventer:

C. Meter:

D. Manhole and Cover: Refer to Section 33 0513.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that building service connection and municipal utility water main size, location, and invert are as indicated.

3.02 PREPARATION

A. Cut pipe ends square, ream pipe and tube ends to full pipe diameter, remove burrs.

B. Remove scale and dirt on inside and outside before assembly.

C. Prepare pipe connections to equipment with flanges or unions.

3.03 TRENCHING

A. See the sections on excavation and fill for additional requirements.

B. Hand trim excavation for accurate placement of pipe to elevations indicated.

C. Form and place concrete for pipe thrust restraints at each change of pipe direction. Place concrete to permit full access to pipe and pipe accessories. Provide thrust restraint bearing on subsoil.

D. Backfill around sides and to top of pipe with cover fill, tamp in place and compact, then complete backfilling.

3.04 INSTALLATION - PIPE

A. Maintain separation of water main from sewer piping in accordance with National Standard Plumbing code.

B. Group piping with other site piping work whenever practical.

C. Install pipe to indicated elevation to within tolerance of 5/8 inches (20 mm).

D. Install ductile iron piping and fittings to AWWA C600.

E. Install grooved and shouldered pipe joints to AWWA C606.

F. Route pipe in straight line.

G. Install pipe to allow for expansion and contraction without stressing pipe or joints.

H. Install access fittings to permit disinfection of water system performed under Section 33 0110.58.

I. Slope water pipe and position drains at low points.

J. Install trace wire 6 inches (150 mm) above top of pipe; coordinate with Section 31 2316.13.

3.05 INSTALLATION - STEEL PIPE

A. Make and assemble rubber-gasketed, bell-and-spigot joints in accordance with manufacturer's recommendations.

B. Make welded joints in accordance with AWWA C206 and install in accordance with AWWA M11, Chapter 12, Transportation, Installation, and Testing.

C. Assemble sleeve-type mechanical coupling joints in accordance with manufacturer's recommendations.

D. Make flanged joints water-tight without undue strain on other material and equipment, using right-sized bolts, and parallel to adjoining flanges.

E. Make grooved joints with equipment designed and produced by the manufacturer of grooved joint couplings and assemble in accordance with the coupling manufacturer's recommendations.

F. Make shouldered type joints with the specified coupling, connect with shouldered ends, and assemble in accordance with the couplings manufacturer's recommendations.

G. Make insulating joints with specified materials and assemble for flanged joints with bolts, with full size insulating sleeves for bolt holes, and no metal-to-metal contact with dissimilar metals after assembly.

H. After installation, line piping in-place with cement mortar in accordance with AWWA C602.

I. Finish joints on piping with cement-mortar lining in accordance with AWWA C205.

J. Finish joints on piping with coating by cleaning, priming, coating, and wrapping with cold-applied tape coating in accordance with AWWA C209.

K. Maximum, allowable offsets for bell-and-spigot rubber-gasket joints, from a straight line or grade, as required by vertical curves, horizontal curves, or offsets, shall be five degrees or less in accordance with manufacturer's recommendations.

L. Form short-radius curves and closures with short pipe lengths or specified, fabricated specials.

3.06 INSTALLATION - VALVES AND HYDRANTS

A. Set valves on solid bearing.

B. Center and plumb valve box over valve. Set box cover flush with finished grade.

C. Set hydrants plumb; locate pumper nozzle perpendicular to and facing roadway.

D. Set hydrants to grade, with nozzles at least 20 inches (500 mm) above ground.

E. Locate control valve 4 inches (100 mm) away from hydrant.

F. Provide a drainage pit 36 inches (900 mm) square by 24 inches (600 mm) deep filled with 2 inches (50 mm) washed gravel. Encase elbow of hydrant in gravel to 6 inches (150 mm) above drain opening. Do not connect drain opening to sewer.

G. Paint hydrants in accordance with Section 33 1419.

3.07 SERVICE CONNECTIONS

A. Provide water service to utility company requirements with reduced pressure backflow preventer and water meter with bypass valves and sand strainer.

B. Provide sleeve in retaining wall for service main. Support with reinforced concrete bridge. Calk enlarged sleeve watertight.

C. Anchor service main to interior surface of foundation wall.

D. Provide 18 gage, 0.0478 inch (1.21 mm) galvanized sheet metal sleeve surrounding service main to 6 inches (150 mm) above floor and 6 feet (1,800 mm) minimum below grade. Size for 2 inches (50 mm) minimum of glass fiber insulation stuffing.

3.08 FIELD QUALITY CONTROL

A. Perform field inspection and testing in accordance with Section 01 4000.

B. Pressure test water piping as required by WSSC .

C. If tests indicate Work does not meet specified requirements, remove Work, replace and retest at no cost to Owner .

END OF SECTION

PART 1 - GENERAL

1.01 GENERAL

A. Drawings and General Provisions of Contract, including General and Supplementary Conditions and Division 1 through Division 16 Specification Sections, apply to the Work of this Section.

1.02 SCOPE

A. The work covered under this section shall include fire hydrant installation. Section includes, but not necessarily be limited to, furnishing and installing fire hydrants or relocating fire hydrants in accordance with the Contract Documents.

1.03 QUALITY ASSURANCE

A. Materials: The Engineer will inspect all materials before and after installation to ensure compliance with the Contract Documents.

B. Field Tests

1. Fire hydrants installed at the same time as a new water main shall be tested, after installation, by the Contractor along with the water main.

2. Fire hydrants installed on an existing water main will be visually inspected for leakage by the Engineer at the existing water main line pressure before the excavation is backfilled. The hydrant, valve, and connecting pipe shall be leak free under line pressure.

1.04 SUBMITTALS

A. Shop drawings shall be submitted as specified in the "General Provisions" for the fire hydrants furnished and shall include the following information: product description, parts list, valve and hose connection sizes, operating nut style, and direction of opening.

PART 2 - PRODUCTS

2.01 MATERIALS FURNISHED BY THE COUNTY

A. The County will not furnish any materials for fire hydrant installation or relocation.

B. Acceptable manufacturers include:

1. Kennedy Valve, Model K-81-A;

2. Mueller

3. Centurian

4. Waterous

5. U.S. Pipe.

2.02 FIRE HYDRANTS

A. Hydrant valve opening shall be a minimum of a 5-1/4-inch diameter main valve opening. Inlet connection shall be 6-inch mechanical joint with accessories (glands, plain rubber gaskets, bolts and nuts).

B. Hose connections shall consist of two 2 1/2-inch diameter hose connections and one 4 1/2-inch diameter steamer or pumper connection threaded as follows: the 2 1/2-inch nose nozzles and 4-1/2 inch steamer nozzle shall have National Standard Threads.

C. Operating nut shall be 5 sided, 1 5/16 inches from point to flat, and shall turn left (counterclockwise) to open.

D. Outer casing shall be one-piece cast iron, designed to permit its extension without Excavating.

E. Hydrant design shall be such that when the barrel is broken, it may be replaced without excavating or breaking adjacent pavement; that the entire barrel, including all working parts along with the main and waste valve seats, may be removed for inspection or repair without excavating or disturbing the ground; and that underground flanges with bolts and nuts are eliminated.

F. The main valve seal shall be compression type sealing against a bronze seat and the valve shall open against pressure.

G. Between elbow and top cap, the barrel shall be made in two parts connected by a swivel segment to permit facing the nozzles in any direction.

H. Bonnet shall be bolted to the standpipe and shall have cast on the top an arrow and the word "Open" indicating the direction for opening.

I. Bonnet construction shall utilize a one piece construction that isolates the stem's operating threads from the wet portion of the barrel. The internal portion of the bonnet shall be factory filled with grease to lubricate the operating threads. O-rings shall be provided where the stem penetrates the bonnet to prevent water from entering the grease cavity and to prevent exfiltration of the lubricant.

J. A self opening drain valve shall be provided.

2.03 OTHER REQUIREMENTS

A. Gravel or crushed stone for hydrant foundation shall meet the gradation requirements of ASTM-C33/#67.

B. Retainer glands or tie rods and appurtenances for fire hydrant restraint, and pipe caps and plugs for existing fire hydrant lead abandonment shall be specified by contractor with approval by PGCPS building services..

C. Portland cement concrete for hydrant and cap blocking shall be coordinated with PGCPS building services.

PART 3 - EXECUTION

3.01 GENERAL

A. Excavation, foundation preparation, backfill, and compaction shall be as specified in Division 2.

B. Construction methods shall be in accordance with Division 2.

3.02 FIRE HYDRANT INSTALLATION

A. Fire hydrants shall be installed and restrained in accordance with the Standard Details, at the locations shown, and to elevations directed by the Engineer. Hydrants shall be set within a gravel or crushed stone drainage well extending the full width of the trench.

B. Hydrant leads shall be laid level on a firm foundation to insure that the hydrant is set plumb. Backfill around the hydrant shall be compacted so as to obtain a density of a least 95% of maximum when measured in accordance with AASHTO T180, Method D.

C. Where hydrants are to be relocated, the Contractor shall ascertain whether or not the hydrant valve has been restrained before removing the hydrant to be relocated. The lead shall be capped and blocked so that service can be restored to the parent main pending the removal or plugging of the mainline tee.

D. The outside of all fire hydrants above finished grade on PGCPS property shall be painted red or approved color to match the logo of the school. Coordinate with PGCPS Building Services.

END OF SECTION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 1, Specification Sections apply to work in this section.

1.02 DESCRIPTION OF WORK:

A. This section specifies materials and work required to construct gravity flow sanitary sewer system.

1.03 RELATED WORK:

A. Refer to Section 31 20 00 "Earthmoving", Section 33 10 00 "Utility Standards", Section 33 41 00 "Storm Drainage", and Division 26 "Plumbing".

1.04 STANDARDS:

A. Refer to Section 33 10 00 "Utility Standards", and as noted.

B. Washington Suburban Sanitary Commission's (WSSC) current "General Conditions and

C. Standard Specifications" and "Standard Details".

D. Washington Suburban Sanitary Commission's current "Regulations Governing the Installation of Plumbing and Sewer Cleaning in the Washington Suburban Sanitary District".

1.05 SUBMITTALS:

A. Refer to Section 33 10 00 "Utility Standards" and as noted.

B. Products: Submit product manufacturer's specifications and installation instructions and certificates of compliance signed by manufacturer and contractor stating that products comply with this specification to the Architect. Certificates of compliance must be notarized, signed by an officer of the Manufacturer, and shall include W.S.S.C. Contract Number or On-site number, job location, Contractor’s name, types, classes and strengths of pipe and fittings, and the Manufacturer’s name.

C. Options: Submit typewritten list of selected products when options are specified within 10 calendar days after contract execution. Submit detailed shop drawings of system modifications required by selection of options.

D. Submit shop drawings of precast structures indicating concrete reinforcement location, size and placement.

E. Submit As-built drawings to the Architect.

F. Service Connection Permit: Contractor shall submit to Architect all items required by WSSC to obtain a Service Connection Permit including but not limited to: All required WSSC Bonds, Letter indicating Utility Contractor, and Certificate of Insurance. The Architect will obtain the Service Connection Permit once all these items are received.

1.06 PRODUCT, DELIVERY, STORAGE AND HANDLING:

A. Refer to Section 33 10 00 "Utility Standards".

1.07 PROJECT CONDITIONS:

A. Refer to Section 33 10 00 "Utility Standards" and as noted.

B. All on-site construction and materials shall be in accordance with the latest edition of the W.S.S.C. General Conditions and Standard Specifications, Design Manual, Standard Details and Plumbing and Gasfitters Regulations.

C. Existing Sanitary Sewer System: Provide, install, operate and maintain pumps and related equipment required to divert sewage (bypass pumping) during system construction. Extend pump discharge lines to existing sanitary sewer structures. Surface flow is prohibited.

D. Traffic: Maintain vehicular and pedestrian traffic during system construction.

1.08 CONSTRUCTION SURVEYS:

A. Provide survey equipment and qualified personnel for construction surveys. Provide combined horizontal and vertical alignment stakes for system construction. Horizontal stake interval to be 25 feet maximum and at all structures. Provide construction cut sheet preparation as required.

1.09 QUALITY ASSURANCE

A. Perform Work in accordance with Prince Georges County and WSSC standards, codes and requirements.

B. Manufacturers shall be experienced in the design and manufacturing of materials specified herein for a minimum period of 5 years

C. All pipe, regardless of diameter, shall be supplied by a single manufacturer.

D. Contractor shall conduct visual inspection prior installation. Proceeding with work constitutes acceptance of existing conditions.

E. Provide manufacturer's name and pressure rating marked on piping and valves

F. Provide piping complete with all fittings, jointing materials, supports, joint restraint system, and necessary appurtenances for watertight, fully operational sewer lines.

PART 2 - PRODUCTS

2.01 MATERIALS:

A. All materials shall be W.S.S.C. Standards and shall meet all W.S.S.C. requirements indicated.

B. Polyvinyl Chloride (PVC) Pipe: W.S.S.C. Standards indicated. ASTM D 3034, SDR 35 PVC gravity sewer pipe, size as indicated, standard manufacture laying length.

1. Pipe Joints: ASTM D 3212 bell and spigot type, with flexible elastomeric gasket seals. Gaskets shall meet the requirements of ASTM F 477.

2. Fittings shall be as indicated and required.

C. Cleanouts: W.S.S.C. standards indicated.

1. Cleanouts For Use in Paved Walk Areas: Refer to Section 33 41 00 "Storm Drainage", and as noted.

   a. Expansion Joint: ASTM D 994, bituminous preformed joint filler, 1/2 inch thick.

2. Furnish the Owner with one cleanout wrench.

D. Structures: W.S.S.C. standards specified and indicated.

E. Foundation and Bedding Materials: Refer to Section 33 10 00 "Utility Standards". F. Concrete: Refer to Section 33 10 00 "Utility Standards".

F. Miscellaneous Products:

G. Underground identification type manufactured by Allen Systems, Houston, Texas. "Detectatape" type, three inches wide, marked "Caution Sewer Line Buried Below", "Safety Green" color.

PART 3 - EXECUTION

3.01 DEWATERING, EXCAVATION, OVER-EXCAVATION AND UNSUITABLE EARTH:

A. Refer to Section 33 10 00 "Utility Standards".

3.02 EXISTING SYSTEM CONNECTION:

A. Notify WSSC no less than 48 hours prior to the start of system construction.

B. Excavate and expose existing pipe at connection location indicated. Adjust connection location, as required, in the event of conflicts with existing pipe joints. Neatly cut existing pipe and prepare cut end as required for connection with new pipe. Make connections with existing pipe using fittings designed for the purpose, in accordance with manufacturer's installation instructions.

3.03 PIPE:

A. General: Install in accordance with manufacturer's installation instructions and as noted. Inspect each pipe laying length and pipe joint materials for defects. Remove defective products from project site. Install pipe to horizontal and vertical alignment indicated. Begin with installation at lowest system elevation and proceed up-grade. Field cut pipe only where required to complete structure-to-structure closures, install fittings or as specified. Cut pipe to smooth square end with equipment designed for cutting pipe.

B. Polyvinyl Chloride (PVC) Pipe: Install pipe in accordance with ASTM D 2321, manufacturer's installation instructions, and as noted.

1. Install with pipe spigot end pointing in flow direction. Begin installation of pipe, with vertical gradient exceeding 10 percent, at lowest elevation and proceed up- grade. Clean bell and spigot interior and exterior surfaces, removing oil, grit and foreign matter. Lubricate pipe ends and gasket in accordance with manufacturer's instructions. Position each laying length of previously installed pipe and manually push joint tightly together.

2. Field Pipe Cutting: Shape spigot end of cut pipe to resemble manufactured spigot end, with a pipe-beveling tool designed for PVC pipe. Copy the full insertion mark provided on the manufactured spigot end onto the prepared field cut end.

3.04 EXISTING PIPE/STRUCTURE CONSTRUCTION:

A. Excavate and expose existing pipe at structure location indicated. Adjust structure location as directed by the Architect or Owner's Representative in the event existing pipe joint interferes with structure walls, or as required to obtain required invert, at no increase to contract sum. Manually excavate below existing pipe prior to structure base placement. Place concrete structure base and construct structure as specified. Neatly cut and remove upper half of existing pipe and construct invert flow channel.

3.05 STRUCTURES:

A. Refer to Section 33 10 00 "Utility Standards" and as noted.

B. Pipe Connections: Install pipe opening sleeves in accordance with manufacturer's installation instructions. Neatly cut pipes flush with interior structure walls except as otherwise indicated or specified.

C. Structure Joints: Apply liberal coat of joint coating material to each structure section joint in accordance with manufacturer's application instructions.

D. Invert Flow Channels: Construct invert flow channels smooth and semicircular in shape. Shape channels with horizontal circular curve radii as large as structure will permit. Neatly form channels in structure base with bricks and cement mortar.

3.06 CLEANOUTS:

A. Refer to Section 33 41 00 "Storm Drainage", and as noted.

B. Install cleanouts in accordance with manufacturer's installation instructions and as indicated.

C. Construct concrete pads of Class "A" concrete as indicated.

D. Cleanouts in paved walk shall be installed without a concrete pad. Top shall be cast into and set flush with finished walk surface.

3.07 BACKFILL:

A. Refer to Section 33 10 00 "Utility Standards", and as noted.

B. Sanitary Sewer mains must be inspected by the Architect prior to completion of backfill operations. Contractor shall provide a minimum of 48 hours notice to the Architect before completion of backfill operations.

C. Underground Identification Tape: Install tape during backfill operations. Tape shall be centered over pipe, located 12 inches above top of pipe.

3.08 SYSTEM TESTING:

A. Provide equipment, materials and labor required to test system. Conduct low pressure air tests in accordance with local jurisdiction approving agency standards. Provide a minimum of 48 hours notification of planned testing. Test observation by W.S.S.C. personnel.

B. Repair or replace defective products and system construction, which fails tests as directed by local jurisdiction approving agency. Provide additional corrective work and retesting until system is approved and accepted. Provide corrective work and retesting at no increase to contract sum.

END OF SECTION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Building Perimeter, Retaining Wall and Under-Slab Drainage Systems.

B. Filter aggregate and fabric and bedding.

1.02 RELATED REQUIREMENTS

A. Section 31 2316 - Excavation: Excavating for subdrainage system piping and surrounding filter aggregate.

B. Section 31 2316.13 - Trenching: Excavating and backfilling for site subdrainage systems.

C. Section 31 2323 - Fill: Backfilling over filter aggregate, up to subgrade elevation.

1.03 REFERENCE STANDARDS

A. ASTM C4 - Standard Specification for Clay Drain Tile and Perforated Clay Drain Tile 2004 (Reapproved 2018).

B. ASTM C412 - Standard Specification for Concrete Drain Tile 2015.

C. ASTM C412M - Standard Specification for Concrete Drain Tile (Metric) 2015.

D. ASTM D2729 - Standard Specification for Poly(Vinyl Chloride) (PVC) Sewer Pipe and Fittings 2011.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on pipe drainage products, pipe accessories.

C. Shop Drawings: Indicate dimensions, layout of piping, high and low points of pipe inverts, gradient of slope between corners and intersections.

D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

E. Project Record Documents: Record location of pipe runs, connections, cleanouts and principal invert elevations.

1.05 QUALITY ASSURANCE

A. Perform Work in accordance with Prince Georges County and WSSC standards, codes and requirements.

B. Manufacturers shall be experienced in the design and manufacturing of materials specified herein for a minimum period of 5 years

PART 2 PRODUCTS

A. Contractor shall conduct visual inspection prior installation. Proceeding with work constitutes acceptance of existing conditions.

2.02 REGULATORY REQUIREMENTS

A. Conform to applicable code for materials and installation of the work of this section.

2.03 PIPE MATERIALS

A. Polyvinyl Chloride Pipe: ASTM D2729; plain end, 4 inch (100 mm) inside diameter; with required fittings.

B. Bituminous Fiber Pipe: With Type split collar or internal coupling joints; 4 inch (100 mm) inside diameter; with necessary fittings.

C. Clay Pipe: ASTM C4 Standard Class, 4 inch (100 mm) inside diameter, with required fittings.

D. Concrete Pipe: ASTM C412 (ASTM C412M) Standard-Quality, 4 inch (100 mm) inside diameter, with required fittings.

E. Corrugated Plastic Tubing: Flexible type; 4 inch (100 mm) diameter, with required fittings.

F. Use perforated pipe at subdrainage system; unperforated through sleeved walls.

2.04 AGGREGATE AND BEDDING

A. Filter Aggregate and Bedding Material: Granular fill as specified in Section 31 2323.

B. Filter Sand and Bedding Material: Sand as specified in Section 31 2323.

C. Impervious Fill Material: as specified in Section 31 2323.

2.05 ACCESSORIES

A. Pipe Couplings: Solid plastic.

B. Joint Covers: No. 15 asphalt saturated roofing felt.

C. Filter Fabric: Water pervious type, black polyolefin.

D. Sleeve: wall sleeve type for foundation wall.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that trench cut is ready to receive work and excavations, dimensions, and elevations are as indicated on layout drawings.

3.02 PREPARATION

A. Hand trim excavations to required elevations. Correct over-excavation with fine grained fill.

B. Remove large stones or other hard matter that could damage drainage piping or impede consistent backfilling or compaction.

3.03 INSTALLATION

A. Install and join pipe and pipe fittings in accordance with pipe manufacturer's instructions.

B. Place drainage pipe on clean cut subsoil.

C. Lay pipe to slope gradients noted on drawings; with maximum variation from true slope of 1/8 inch (3 mm) in 10 feet (3 m).

D. Loosely butt pipe ends. Place joint cover strip 12 inches (300 mm) wide, around pipe diameter centered over joint.

E. Place pipe with perforations facing down. Mechanically join pipe ends.

F. Install pipe couplings.

G. Install filter aggregate at sides, over joint covers and top of pipe. Provide top cover compacted thickness of 12 inches (300 mm).

H. Place filter fabric over levelled top surface of aggregate cover prior to subsequent backfilling operations.

I. Place aggregate in maximum 4 inch (100 mm) lifts, consolidating each lift.

J. Refer to Section 31 2323 for compaction requirements. Do not displace or damage pipe when compacting.

K. Place impervious fill over drainage pipe aggregate cover and compact.

L. Connect to storm sewer system with unperforated pipe , through installed sleeves.

M. Coordinate the Work with connection to municipal sewer utility service, and trenching.

3.04 FIELD QUALITY CONTROL

A. Section 01 4000 - Quality Requirements: Field inspection and testing.

B. Request inspection prior to and immediately after placing aggregate cover over pipe.

C. Inspect interior of piping to determine whether line displacement or other damage has occured. Inspect after approximately 24 inches (610 mm) of backfill is in place, and again at completion of Project.

1. Submit separate reports for each system inspection.
2. Defects requiring correction include the following:
    a. Alignment: Less than full diameter of inside of pipe is visible between structures.
    b. Deflection: Flexible piping with deflection that prevents passage of ball or cylinder of size not less than 92.5 percent of piping diameter.
    c. Damage: Crushed, broken, cracked, or otherwise damaged piping.
    d. Infiltration: Water leakage into piping.
    e. Exfiltration: Water leakage from or around piping.
3. Replace defective piping using new materials, and repeat inspections until defects are within allowances specified by Engineer/WSSC.
4. Re-inspect and repeat procedure until results are satisfactory.

D. Test new piping systems, and parts of existing systems that have been altered, extended, or repaired, for leaks and defects.

1. Do not enclose, cover, or put into service before inspection and approval.
2. Test completed piping systems according to WSSC requirements.
3. Schedule tests and inspections by authorities having jurisdiction with at least 24 hours advance notice.
4. Submit separate report for each test.
5. Gravity-Flow Storm Drainage Piping: Test according to WSSC requirements.

E. Leaks and loss in pressure constitutes defects that must be repaired.

F. Replace leaking piping using new materials, and repeat testing until leakage is within allowances specified.

3.05 PROTECTION

A. Protect pipe and aggregate cover from damage or displacement until backfilling operation begins.

END OF SECTION

SECTION 33 7119
ELECTRICAL UNDERGROUND DUCTS, DUCTBANKS, AND MANHOLES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Conduit and duct:
   1. Galvanized steel rigid metal conduit (RMC).
   2. Rigid polyvinyl chloride (PVC) conduit.
B. Precast concrete manholes.
C. Cast-in-place manhole accessories.
D. Accessories:
   1. Underground warning tape.

1.02 RELATED REQUIREMENTS

A. Section 03 1000 - Concrete Forming and Accessories.
B. Section 03 2000 - Concrete Reinforcing.
C. Section 03 3000 - Cast-in-Place Concrete.
D. Section 07 1113 - Bituminous Dampproofing.
E. Division 22 - Plumbing Specialties.
F. Section 22 1006 - Plumbing Piping Specialties.
G. Section 31 2316 - Excavation.
H. Section 31 2316.13 - Trenching: Excavating, bedding, and backfilling.
I. Section 31 2323 - Fill: Bedding and backfilling.

1.03 REFERENCE STANDARDS

A. ANSI C80.1 - American National Standard for Electrical Rigid Steel Conduit (ERSC) 2015.
B. ASTM A48/A48M - Standard Specification for Gray Iron Castings 2003 (Reapproved 2016).
C. ASTM C857 - Standard Practice for Minimum Structural Design Loading for Underground Precast Concrete Utility Structures 2016.
D. ASTM C858 - Standard Specification for Underground Precast Concrete Utility Structures 2010.
E. ASTM C891 - Standard Practice for Installation of Underground Precast Concrete Utility Structures 2011.
F. ASTM C1037 - Standard Practice for Inspection of Underground Precast Concrete Utility Structures 2016.
G. NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit, Electrical Metallic Tubing, and Cable 2014.
H. NEMA TC 2 - Electrical Polyvinyl Chloride (PVC) Conduit 2013.
I. NEMA TC 3 - Polyvinyl Chloride (PVC) Fittings for Use with Rigid PVC Conduit and Tubing 2016.
J. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
K. UL 6 - Electrical Rigid Metal Conduit-Steel Current Edition, Including All Revisions.

L. UL 514B - Conduit, Tubing, and Cable Fittings Current Edition, Including All Revisions.

M. UL 651 - Schedule 40, 80, Type EB and A Rigid PVC Conduit and Fittings Current Edition, Including All Revisions.

1.04 QUALITY ASSURANCE

A. Conform to requirements of NFPA 70.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience and with service facilities within 100 miles (160 km) of Project.

C. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

PART 2 PRODUCTS

2.01 CONDUIT AND DUCT

A. Galvanized Steel Rigid Metal Conduit (RMC): NFPA 70, Type RMC; comply with ANSI C80.1 and list and label as complying with UL 6.

1. Fittings: Comply with NEMA FB 1 and list and label as complying with UL 514B; steel or malleable iron, threaded type.

B. Rigid Polyvinyl Chloride (PVC) Conduit: NFPA 70, Type PVC; comply with NEMA TC 2 and list and label as complying with UL 651; Schedule 40 unless otherwise indicated; rated for use with conductors rated 90 degrees C.

1. Fittings: Comply with NEMA TC 3 and list and label as complying with UL 651.

a. Manufacturer: Same as manufacturer of conduit to be connected.

2.02 PRECAST CONCRETE MANHOLES

A. Description: Precast manhole designed in accordance with ASTM C858, comprising modular, interlocking sections complete with accessories.

B. Loading: ASTM C857, Class A-16.

C. Shape: Square.

D. Base Section: Include 3 inch (75 mm) deep x 14 inch (350 mm) round sump with cast sleeve, and two 1 inch (25 mm) ground rod openings.

E. Top Section: Include 39 inch (1000 mm) diameter grooved opening for frame and cover.

F. Riser Casting: 6 inch (150 mm), with manhole step cast into frame.

G. Frames and Covers: ASTM A48/A48M; Class 30B gray cast iron, 27 inch (686 mm) size, machine finished with flat bearing surfaces. Provide cover marked ELECTRIC to indicate utility.

H. Duct Entry Provisions: Single duct knockouts.

I. Duct Entry Size: 4 inch (100 mm).

J. Cable Pulling Irons: Use galvanized rod and hardware. Locate opposite each duct entry. Provide watertight seal.

K. Cable Rack Inserts: Minimum load rating of 800 pounds (365 kg).

L. Cable Rack Mounting Channel: 1-1/2 x 3/4 inch (38 x 19 mm) steel channel, 48 inch (1.2 mm) length. Provide cable rack arm mounting slots on 1-1/2 inch (38 mm) centers.

M. Cable Racks: Steel channel, 1-1/2 x 3/4 x 14 inches (38 x 19 x 350 mm), with fastener to match mounting channel.

N. Cable Supports: Porcelain clamps and saddles.

O. Manhole Steps: Polypropylene plastic manhole step with 1/2-inch steel reinforcement (Polypropylene plastic manhole step with 13 mm steel reinforcement).

P. Sump Covers: ASTM A48/A48M; Class 30B gray cast iron.

2.03 CAST-IN-PLACE MANHOLE ACCESSORIES

A. Frames and Covers: ASTM A48/A48M; Class 30B gray cast iron, 27 inch (686 mm) size, machine finished with flat bearing surfaces. Provide cover marked ELECTRIC to indicate utility.

B. Cable Pulling Irons: Use galvanized rod and hardware.

C. Cable Rack Inserts: Minimum load rating of 800 pounds (365 kg).

D. Cable Rack Mounting Channel: 1-1/2 x 3/4 inch (38 x 19 mm) steel channel, 48 inch (1.2 mm) length. Provide cable rack arm mounting slots on 1-1/2 inch (38 mm) centers.

E. Cable Racks: Steel channel, 1-1/2 x 3/4 x 14 inches (38 x 19 x 350 mm), with fastener to match mounting channel.

F. Cable Supports: Porcelain clamps and saddles.

G. Manhole Steps: Polypropylene plastic manhole step with 1/2-inch (13 mm) steel reinforcement.

H. Sump Covers: ASTM A48/A48M; Class 30B gray cast iron.

2.04 ACCESSORIES

A. Duct Bank Spacers: Nonmetallic; designed for maintaining conduit/duct spacing for concrete encasement in open trench installation; suitable for the conduit/duct arrangement to be installed.

B. Bore Spacers: Nonmetallic; designed for maintaining conduit/duct spacing for installation within casing; furnished with roller wheels to facilitate installation, openings to facilitate grout flow, and holes for stabilization cable; suitable for the casing and conduit/duct arrangement to be installed.

C. Underground Warning Tape: Polyethylene tape suitable for direct burial.

1. Non-detectable Type Tape: 6 inches (152 mm) wide, with minimum thickness of 4 mil (0.1 mm).
2. Foil-backed Detectable Type Tape: 3 inches (76 mm) wide, with minimum thickness of 5 mil (0.1 mm), unless otherwise required for proper detection.
3. Legend: Type of service, continuously repeated over full length of tape.
4. Color:
    a. Tape for Buried Power Lines: Black text on red background.
    b. Tape for Buried Communication, Alarm, and Signal Lines: Black text on orange background.

2.05 SOURCE QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Precast Manholes: Inspect in accordance with ASTM C1037.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify routing and termination locations of duct bank prior to excavation for rough-in.

C. Verify locations of manholes prior to excavating for installation.

D. Duct bank routing is shown in approximate locations unless dimensions are indicated. Route as required to complete duct system.

E. Manhole locations are shown in approximate locations unless dimensions are indicated. Locate as required to complete ductbank system.

3.02 DUCT BANK INSTALLATION

A. Install duct to locate top of ductbank at depths as indicated on drawings.

B. Install duct with minimum slope of 4 inches per 100 feet (100 mm per 25.4 m) (0.33 percent). Slope duct away from building entrances.

C. Cut duct square using saw or pipe cutter; de-burr cut ends.

D. Insert duct to shoulder of fittings; fasten securely.

E. Join nonmetallic duct using adhesive as recommended by manufacturer.

F. Wipe nonmetallic duct dry and clean before joining. Apply full even coat of adhesive to entire area inserted in fitting. Allow joint to cure for 20 minutes, minimum.

G. Install no more than equivalent of three 90-degree bends between pull points.

H. Provide suitable fittings to accommodate expansion and deflection where required.

I. Stagger duct joints vertically in concrete encasement 6 inches (150 mm) minimum.

J. Use suitable separators and chairs installed not greater than 4 feet (1200 mm) on centers.

K. Band ducts together before backfilling.

L. Securely anchor duct to prevent movement during concrete placement.

M. Place concrete under provisions of Section 03 3000. Use mineral pigment to color concrete red.

N. Provide minimum 3 inch (75 mm) concrete cover at bottom, top, and sides of ductbank.

O. Provide two No. 4 steel reinforcing bars in top of bank under paved areas.

P. Provide suitable pull string in each empty duct except sleeves and nipples.

Q. Swab duct. Use suitable caps to protect installed duct against entrance of dirt and moisture.

R. Interface installation of underground warning tape with backfilling. Install tape 6 inches (150 mm) below finished surface.

3.03 PRE-CAST MANHOLE INSTALLATION

A. Install and seal precast sections in accordance with ASTM C891.

B. Install manholes plumb.

C. Use precast neck and shaft sections to bring manhole cover to finished elevation.

D. Attach cable racks to inserts after manhole installation is complete.

E. Install drains in manholes and connect to site drainage system under provisions of Division 22.

F. Dampproof exterior surfaces, joints, and interruptions of manholes after concrete has cured 28 days, under provisions of Section 07 1113.

G. Backfill manhole excavation under the provisions of Section 31 2323.

3.04 CAST-IN-PLACE MANHOLE INSTALLATION

A. Excavate for manhole installation under the provisions of Section 31 2316.

B. Formwork: Form inside and outside manhole surfaces in accordance with provisions of Section 03 1000.

C. Reinforcing: Install reinforcing under the provisions of Section 03 2000.

D. Concrete: Provide air-entrained, 2000 psi (20 MPa) compressive strength at 28 days under the provisions of Section 03 3000.

E. Shape: Square.

F. Base: Include 14 inch (350 mm) drain opening and two 1 inch (25 mm) ground rod openings. Slope to drain at 0.25 inch per foot (6.35 mm per m) (2 percent).

G. Top: Include 39 inch (1000 mm) diameter opening; cast 1/2 inch (13 mm) rod in opening to accept ladder hook.

H. Duct Entry: Cast duct openings in walls as indicated.

I. Cable Pulling Irons: Locate opposite each duct entry.

J. Construct brick collar with 30 inch (760 mm) clear opening to bring cover to proper elevation.

K. Manhole Steps: Cast steps at 12 inches (300 mm) on center vertically.

L. Install ladder in each manhole.

M. Attach cable racks to inserts after manhole construction is complete.

N. Install drains in manholes and connect to site drainage system under provisions of Division 22.

O. Install drains in manholes and connect to 4 inch pipe terminating in 0.33 cu yd (0.25 cu m) crushed gravel bed under provisions of Section 22 1006.

P. Dampproof exterior surfaces, joints, and interruptions of manholes after concrete has cured 28 days, under provisions of Section 07 1113.

Q. Backfill manhole excavation under the provisions of Section 31 2323.

END OF SECTION

Part 1 - General

I. REQUIREMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Requirements, apply to the work specified in this Section.

II. SCOPE

A. The work covered under this Section shall include furnishing and installing an overhead electrical service complete as shown on the Drawings and herein specified.

III. QUALITY ASSURANCE

A. All equipment, materials and their installation shall conform to the requirements of the National Electrical Code (NEC), local code requirements, and these Specifications.

B. All equipment and material shall be listed by Underwriter's Laboratories, Inc. (UL) for their intended use and shall bear the UL label.

C. Equipment shall be constructed in accordance with National Electrical Manufacturer's Association (NEMA) standards.

D. All electrical work specified under this Section of these Specifications shall conform to the requirements of the electrical utility company.

E. The grounding systems shall comply with the NEC and as hereinafter specified.

Part 2 - Products

I. ELECTRICAL SERVICE

A. Primary service shall be three-phase with pole mounted transformer and shall be furnished by Potomac Electric Power Company in most instances and Baltimore Gas and Electric or Southern Maryland Electric Cooperative in selected instances.

B. This Contractor shall furnish and install secondary overhead service into the building and extend to metering equipment as shown on the Drawings. Secondary voltage, phase, and number of wires shall be as shown on the Drawings.

C. All necessary devices, such as meter sockets, meter connection boxes, meter enclosures, current and/or potential transformers, instrument transformer hangers, and cabinets shall be furnished to this Contractor by the electric utility company.

II. MATERIALS AND COMPONENTS

A. Materials shall be furnished and installed by this Contractor as shown on the Drawings and as herein specified.

B. All components exposed to the weather shall be UL listed for the application and conditions.

Part 3 - Execution

I. SERVICE INSTALLATION

A. This Contractor shall furnish and install a metering system as shown on the Drawings and as required by the electric utility company serving the project.

B. This Contractor shall make all necessary final agreements with the electric utility company for the installation of the permanent overhead electrical service.

END OF SECTION

SECTION 00 0110
TABLE OF CONTENTS

END OF SECTION

SECTION 01100 - SUMMARY

PART 1 GENERAL

1.1 PROJECT

A. Project Name:

B. Owner's Name: Prince Georges County Public School.

C. Architect's Name:

1.2 CONTRACT DESCRIPTION

A. Contract Type:

1.3 DESCRIPTION OF ALTERATIONS WORK

A. Scope of demolition and removal work is shown on drawings and specified in Section 02 4100.

B. Scope of alterations work is shown on drawings.

C. Owner will remove the following items before start of work:
   1. Non-fixed furnishings.
   2. Computers, document cameras, projectors.

1.4 WORK BY OWNER

A. Items noted NIC (Not in Contract) will be supplied and installed by Owner before Substantial Completion. Some items include:
   1. Movable cabinets.
   2. Furnishings.
   3. Small equipment.

1.5 OWNER OCCUPANCY

A. Owner intends to occupy the Project upon Substantial Completion.

B. Cooperate with Owner to minimize conflict and to facilitate Owner's operations.

C. Schedule the Work to accommodate Owner occupancy.

1.6 CONTRACTOR USE OF SITE AND PREMISES

A. Construction Operations: Limited to areas noted on Drawings.

B. Arrange use of site and premises to allow:
   1. Work by Others.
   2. Work by Owner.

C. Provide access to and from site as required by law and by Owner:

1. Emergency Building Exits During Construction: Keep all exits required by code open during construction period; provide temporary exit signs if exit routes are temporarily altered.
2. Do not obstruct roadways, sidewalks, or other public ways without permit.

D. Time Restrictions:
   1. Limit conduct of especially noisy exterior work to the hours of 7:00 AM - 7:00PM.

END OF SECTION

SECTION 01310 - PROJECT MANAGEMENT AND COORDINATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative provisions for coordinating construction operations on Project including, but not limited to, the following:

1. General coordination procedures.
2. Coordination drawings.
3. Requests for Information (RFIs).
4. Project meetings.

B. Related Requirements:

1. Section 01320 “Construction Progress Documentation” for preparing and submitting Contractor's construction schedule.
2. Section 01400 “Quality Requirements” for procedures for coordinating general installation and field-engineering services, including establishment of benchmarks and control points.
3. Section 01700 “Execution and Closeout Requirements” for coordinating closeout of the Contract.

1.3 DEFINITIONS

A. RFI: Request from Owner, Architect, or Contractor seeking information required by or clarifications of the Contract Documents.

1.4 INFORMATIONAL SUBMITTALS

A. Subcontract List: Prepare a written summary identifying individuals or firms proposed for each portion of the Work, including those who are to furnish products or equipment fabricated to a special design. Include the following information in tabular form:

1. Name, address, and telephone number of entity performing subcontract or supplying products.
2. Number and title of related Specification Section(s) covered by subcontract.
3. Drawing number and detail references, as appropriate, covered by subcontract.

B. Key Personnel Names: Within 15 days of starting construction operations, submit a list of key personnel assignments, including superintendent and other personnel in attendance at Project site. Identify individuals and their duties and responsibilities; list addresses and telephone numbers, including home, office, and cellular telephone numbers and e-mail addresses. Provide names, addresses, and telephone numbers of individuals assigned as alternates in the absence of individuals assigned to Project.

1. Post copies of list in project meeting room, in temporary field office, and by each temporary telephone. Keep list current at all times.

1.5 ABOVE-CEILING PRE-CONSTRUCTION CONFERENCE AND COORDINATION DRAWINGS

A. Coordination Drawings (Optional): Prior to the Above-Ceiling Pre-Construction Conference, prepare drawings where limited space availability necessitates maximum utilization of space for the proper and efficient installation of the components, materials, and systems (including, but may not be limited to: above finish ceilings; within chases and shafts; and within mechanical and electrical spaces).

1. Content: Project-specific information, drawn accurately to scale. Do not base Coordination Drawings on reproductions of the Contract Documents or standard printed data. Include the following information, as applicable:
   a. Ensure components, materials, and systems are indicated where each are fully functional, operational, accessible, and complete.
   b. Indicate relationships of components, materials, and systems with surrounding construction.
   c. Indicate installation sequences to avoid conflicts
   d. Indicate dimensions shown on the Contract Drawings and make specific note of dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternate sketches to Architect for resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.
2. Sheet Size: At least 8-1/2 by 11 inches but no larger than 30 by 42 inches.
3. Number of Copies: Submit two opaque copies. Architect will return one copy.
   a. Coordination Drawings will not be approved by the Architect and will be considered as "information only" and will be furnished to the Owner for filing.
   b. Submit five copies where Coordination Drawings are required for operation and maintenance manuals. Architect will retain two copies; remainder will be returned. Mark up and retain one returned copy as a Project Record Drawing.
4. Refer to individual Sections for Coordination Drawing requirements for Work in those Sections.

B. Above-Ceiling Pre-Construction Conference: Schedule and conduct with all affected parties present to review procedures for addressing potential conflicts, review of Coordination Drawings (if furnished) and obtain approval of each affected trade to ensure components, materials, and systems can be installed as intended prior to the Work being performed.

1. Identify Above-Ceiling Pre-Construction Conference on the Construction Schedule as a "milestone" date.
2. Advise the Architect of potential conflicts identified in the Coordination Drawings (if furnished) and Above-Ceiling Pre-Construction Conference.
3. Do not proceed with construction or installation of the components, materials, and systems until potential conflicts identified have been resolved and affected parties have agreed to a remedy.

C. Remedies to address conflicts not identified in the Coordination Drawings (if furnished), Above-Ceiling Pre-Construction Conference, or otherwise addressed prior to construction or installation of the affected components, materials, and systems; or discovery of a non-workable situation without Coordination Drawings on file with the Owner will not be considered as a basis of delay, time extension, or additional cost to the Contract.

1.6 REQUESTS FOR INFORMATION (RFIs) General: Immediately on discovery of the need for additional information or interpretation of Contract Documents, Contractor shall prepare and

submit an RFI in the form specified.

1. Architect will return RFIs submitted to Architect by other entities controlled by Contractor with no response.
2. Coordinate and submit RFIs in a prompt manner so as to avoid delays in Contractor's work or work of subcontractors.

B. Content of the RFI: Include a detailed, legible description of item needing information or interpretation and the following:

1. Project name.
2. Project number.
3. Date.
4. Name of Contractor.
5. Name of Architect.
6. RFI number, numbered sequentially.
7. RFI subject.
8. Specification Section number and title and related paragraphs, as appropriate.
9. Drawing number and detail references, as appropriate.
10. Field dimensions and conditions, as appropriate.
11. Contractor's suggested resolution. If Contractor's suggested resolution impacts the Contract Time or the Contract Sum, Contractor shall state impact in the RFI.
12. Contractor's signature.
13. Attachments: Include sketches, descriptions, measurements, photos, Product Data, Shop Drawings, coordination drawings, and other information necessary to fully describe items needing interpretation.
    a. Include dimensions, thicknesses, structural grid references, and details of affected materials, assemblies, and attachments on attached sketches.

C. Architect's Action: Architect will review each RFI, determine action required, and respond. Allow seven working days for Architect's response for each RFI. RFIs received by Architect after 1:00 p.m. will be considered as received the following working day.

1. The following Contractor-generated RFIs will be returned without action:
    a. Requests for approval of submittals.
    b. Requests for approval of substitutions.
    c. Requests for approval of Contractor's means and methods.
    d. Requests for coordination information already indicated in the Contract Documents.
    e. Requests for adjustments in the Contract Time or the Contract Sum.
    f. Requests for interpretation of Architect's actions on submittals.
    g. Incomplete RFIs or inaccurately prepared RFIs.
2. Architect's action may include a request for additional information, in which case Architect's time for response will date from time of receipt of additional information.
3. Architect's action on RFIs that may result in a change to the Contract Time or the Contract Sum may be eligible for Contractor to submit Change Proposal according to conditions of the Contract.
    a. If Contractor believes the RFI response warrants change in the Contract Time or the Contract Sum, notify Architect in writing within 10 days of receipt of the RFI response.

D. RFI Log: Prepare, maintain, and submit a tabular log of RFIs organized by the RFI number. Submit log at intervals as established Software log with not less than the following:

1. Project name.
2. Name and address of Contractor.

3. Name and address of Architect.
4. RFI number including RFIs that were returned without action or withdrawn.
5. RFI description.
6. Date the RFI was submitted.
7. Date Architect's response was received.

E. On receipt of Architect's action, update the RFI log and immediately distribute the RFI response to affected parties. Review response and notify Architect within seven days if Contractor disagrees with response.

1. Identification of related Minor Change in the Work, Construction Change Directive, and Proposal Request, as appropriate.

1.7 PROJECT MEETINGS

A. General: Schedule and conduct meetings and conferences at Project site unless otherwise indicated.

1. Attendees: Inform participants and others involved, and individuals whose presence is required, of date and time of each meeting. Notify Owner and Architect of scheduled meeting dates and times.
2. Agenda: The Contractor will prepare the meeting agenda and distribute it to all invited attendees.
3. Minutes: The Contractor will record significant discussions and agreements achieved. Within 7 days of the meeting the Contractor will distribute the meeting minutes to the Owner, the Architect's consultants, and to the Architect.
4. Additional comments and/or discrepancies must be recorded within 7 days of distribution. After 7 days, the meeting minutes will become the final record of each meeting.

B. Preconstruction Conference: Schedule a preconstruction conference before starting construction, at a time convenient to Owner and Architect, but no later than 15 days after execution of the Agreement. Hold the conference at Project site or another convenient location. The Contractor shall conduct the meeting to review responsibilities and personnel assignments.

1. Conduct the conference to review responsibilities and personnel assignments.
2. Attendees: Authorized representatives of Owner, Architect, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
3. Agenda: Discuss items of significance that could affect progress, including the following:
    a. Tentative construction schedule.
    b. Phasing.
    c. Critical work sequencing and long-lead items.
    d. Designation of key personnel and their duties.
    e. Lines of communications.
    f. Procedures for processing field decisions and Change Orders.
    g. Procedures for RFIs.
    h. Procedures for testing and inspecting.
    i. Procedures for processing Applications for Payment.
    j. Distribution of the Contract Documents.
    k. Submittal procedures.
    l. Coordination and submittal of color & finish related selections.
    m. Preparation of record documents.
    n. Use of the premises [and existing building].
    o. Work restrictions.
    p. Working hours.
    q. Owner's occupancy requirements.
    r. Responsibility for temporary facilities and controls.

s. Procedures for moisture and mold control.
t. Procedures for disruptions and shutdowns.
u. Construction waste management and recycling.
v. Parking availability.
w. Office, work, and storage areas.
x. Equipment deliveries and priorities.
y. First aid.
z. Security.
aa. Progress cleaning.

C. LEED Orientation and Q&A Sessions:

1. Schedule: Schedule a LEED Orientation session at the Project site or other convenient location no later than fifteen (15) days after execution of the Agreement and prior to commencement of construction activities. Conduct the meeting to review responsibilities and personnel assignments. This session may be included in the pre-construction conference if time permits.
2. Attendees: The Owner, Architect, Architect's LEED Coordinator, Civil Engineer, Mechanical/Electrical/Plumbing Engineer, the Contractor and its superintendent, major subcontractors, manufacturers, suppliers and other concerned parties shall each be represented at the conference by persons familiar with and authorized to conclude matters relating to the Work.
3. Agenda to include:
   a. Overview of the LEED Green Building Rating System
   b. Contractor's LEED responsibilities
   c. Construction Waste Management
   d. Construction Indoor Air Quality Management
   e. LEED progress and final reporting
   f. Question and answer session

D. Pre-installation Conferences: Conduct a pre-installation conference at Project site before each construction activity that requires coordination with other construction. Contractor conducts conferences, records and distributes meeting minutes.

1. Attendees: Installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise Architect of scheduled meeting dates.
2. Agenda: Review progress of other construction activities and preparations for the particular activity under consideration, including requirements for the following:
   a. Contract Documents.
   b. Options.
   c. Related RFIs.
   d. Related Change Orders.
   e. Purchases.
   f. Deliveries.
   g. Submittals.
   h. Review of mockups.
   i. Possible conflicts.
   j. Compatibility requirements.
   k. Time schedules.
   l. Weather limitations.
   m. Manufacturer's written instructions.
   n. Warranty requirements.
   o. Compatibility of materials.
   p. Acceptability of substrates.
   q. Temporary facilities and controls.
   r. Space and access limitations.

s. Regulations of authorities having jurisdiction.
t. Testing and inspecting requirements.
u. Installation procedures.
v. Coordination with other work.
w. Required performance results.
x. Protection of adjacent work.
y. Protection of construction and personnel.

3. Record significant conference discussions, agreements, and disagreements, including required corrective measures and actions.
4. Reporting: Distribute minutes of the meeting to each party present and to other parties requiring information.
5. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.

E. Project Closeout Conference: Schedule and conduct a project closeout conference, at a time convenient to Owner and Architect, but no later than 90 days prior to the scheduled date of Substantial Completion.

1. Conduct the conference to review requirements and responsibilities related to Project closeout.
2. Attendees: Authorized representatives of Owner, Architect, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the meeting. Participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
3. Agenda: Discuss items of significance that could affect or delay Project closeout, including the following:
   a. Preparation of record documents.
   b. Procedures required prior to inspection for Substantial Completion and for final inspection for acceptance.
   c. Submittal of written warranties.
   d. Requirements for preparing operations and maintenance data.
   e. Requirements for delivery of material samples, attic stock, and spare parts.
   f. Requirements for demonstration and training.
   g. Preparation of Contractor's punch list.
   h. Procedures for processing Applications for Payment at Substantial Completion and for final payment.
   i. Submittal procedures.
   j. Coordination of separate contracts.
   k. Owner's partial occupancy requirements.
   l. Installation of Owner's furniture, fixtures, and equipment.
   m. Responsibility for removing temporary facilities and controls.
4. Minutes: Entity conducting meeting will record and distribute meeting minutes.

F. Progress Meetings: The Contractor shall conduct progress meetings at biweekly intervals. Coordinate dates of meetings with preparation of payment requests.

1. Attendees: Representatives of the Owner, the Architect and the Contractor shall be represented at each of these meetings. Design consultants, Subcontractors, suppliers, and other entities concerned with current progress or involved in planning, coordination, or performance of future activities may be invited to attend these meetings on an as needed basis to resolve specific issues. All participants at these meetings shall be familiar with Project and authorized to conclude matters relating to the Work.
2. Agenda: Review and correct or approve minutes of previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.

a. Contractor's Construction Schedule: Review progress since the last meeting. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to Contractor's construction schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.

1) Review schedule for next period.

b. Review present and future needs of each entity present, including the following:

1) Interface requirements.
2) Sequence of operations.
3) Status of submittals.
4) Deliveries.
5) Off-site fabrication.
6) Access.
7) Site utilization.
8) Temporary facilities and controls.
9) Progress cleaning.
   a) Progress of Construction Waste Management
   b) Progress of Indoor Air Quality Management
10) Quality and work standards.
11) Status of correction of deficient items.
12) Field observations.
13) Status of RFIs.
14) Status of proposal requests.
15) Pending changes. (Potential Change Order – PCO)
16) Status of Change Orders. (CO)
17) Pending claims and disputes.
18) Documentation of information for payment requests.

3. Minutes: Contractor will record and distribute meeting minutes, as noted. Additional comments and/or discrepancies must be recorded within 7 days of distribution. After 7 days, the meeting minutes will become the final record of each meeting.

4. Reporting: Distribute minutes of the meeting to each party present and to parties who should have been present.

a. Schedule Updating: Revise Contractor's construction schedule after each progress meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with the report of each meeting.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01310

SECTION 01351 - LEED CERTIFICATION PROCEDURES

PART 1 GENERAL

1.1 PROJECT GOALS

A. Projects are to be designed to achieve as a minimum the LEED Silver rating as defined in the LEED(r) Green Building Rating System(tm) for Schools, 2009 Edition. Review specific project LEED rating goal with PGCPS before design proceeds.

B. Contractor is not responsible for the application neither for LEED certification, nor for determination of methods of achieving LEED credits unless specifically so indicated.

C. Many of the LEED credits can be achieved only through intelligent design of the project and are beyond the control of the Contractor. However, certain credits relate to the products and procedures used for construction. Therefore, the full cooperation of the Contractor and subcontractors is essential to achieving final certification.

D. Contractor shall familiarize himself with the relevant requirements and provide the necessary information and instruction to all subcontractors and installers.

E. Since Contractor and subcontractors may not be familiar with LEED requirements, this section includes a summary of the products and procedures intended to achieve LEED credits.
   1. Some credits are marked PREREQUISITE; these must be achieved regardless of the level of certification; many are dependent on proper performance by Contractor and subcontractors.
   2. Other credits involve quantifying percentages by weight and cost; these require careful recordkeeping and reporting by the Contractor.
   3. See www.usgbc.org for more information.

1.2 SUBMITTALS

A. See Section 01300 - Administrative Requirements, for additional submittal procedures.

B. LEED Submittal/Report: For each product with the notation "show quantity on LEED submittal or report," submit a report with the following information:
   1. Submit with each Application for Payment; update the Report each period with latest period shown separately:
   2. Identify each product with:
      a. Name and manufacturer.
      b. Specification section number.
      c. Applicable Credit(s).
      d. Net weight per unit.
      e. Quantity installed.
      f. Material cost per unit.
      g. Total material cost.
   3. Attach evidence of compliance from either the manufacturer or an independent agency.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

END OF SECTION

SECTION 01351.6 - LEED SUBMITTAL FORMS

.1 PURPOSE

A. These forms are for the Contractor's use in submitting documentation to be used to determine whether particular credits have been achieved. The cooperation of subcontractors, suppliers, and manufacturers is required.

B. These forms apply to the following LEED Credits:
   1. MR Credits 3.1 and 3.2 - Materials Reuse.
   2. MR Credits 4.1 and 4.2 - Recycled Content.
   3. MR Credits 5.1 and 5.2 - Regional Materials.
   4. MR Credit 6 - Rapidly Renewable Materials.
   5. MR Credit 7 - Certified Wood.

.2 FORMS

A. 01351.601 - LEED Material Cost Summary Form: Certification by Contractor.

B. 01351.602- LEED Wood-Containing Product List: Certification by Contractor.

C. 01351.603 - LEED Metal-Containing Product List: Certification by Contractor.

D. 01351.604 - LEED New Product Content Form: Including separate reporting of wood, steel, rapidly renewable, and recycled content; data certification by manufacturer of product; cost and quantity certification by Contractor.

E. 01351.605 - LEED New Product Source Form: Data certification by manufacturer of product; cost and quantity certification by Contractor.

F. 01351.606 - LEED Reused Product Form: Data certification by manufacturer of product; cost and quantity certification by Contractor.

.3 PROCEDURES

A. All LEED submittal forms are to be submitted by Contractor; certifications are to be made by indicated party.

B. Where a LEED Submittal is called for, fill out and submit the appropriate form.
   1. Fill out one form for each different brand name product and each different manufacturer of a lot of commodity products.
   2. Where required attachments are specified, attach the documentation to the back of the form.

C. Each form must be signed by the entity capable of certifying the information.
   1. Certification signatures must be made by an officer of the company.
   2. For products, certification must be made by the manufacturer not the supplier.
   3. For custom fabricated products, certification by the fabricator is acceptable.

D. Submit the completed forms in accordance with the requirements of Section 01300 - Administrative Requirements, as information submittals.
   1. Give each form a unique submittal number.
   2. Do not combine LEED forms with product data or shop drawing submittals.

END OF SECTION

SECTION 01351.601 - LEED MATERIAL COST SUMMARY FORM

LEED SUBMITTAL FORM

1.1 IDENTIFICATION:

A. Project Name: _____

B. Project No.: _____

C. Architect: _____

1.2 THIS FORM APPLIES TO THE FOLLOWING LEED CREDITS:

A. MR Credits 3 - Materials Reuse.

B. MR Credits 4.1 and 4.2 - Recycled Content.

C. MR Credits 5.1 and 5.2 - Regional Materials.

D. MR Credit 6 - Rapidly Renewable Materials.

E. MR Credit 6 - Certified Wood.

1.3 PROCEDURE:

A. Because the above listed credits require computations based on the material costs for the project, the Contractor is required to submit the following cost breakdown, in addition to any cost breakdown specified elsewhere.

B. Costs are to be material costs excluding labor, overhead, and profit, but including delivery, storage, and handling charges. Revise cost summary whenever materials actually installed change due to contract modifications or Contractor preference.

1.4 CERTIFICATION

A. $_____Total Cost of All Materials

B. $_____Total Cost of Plumbing, HVAC, Electrical, and Communications

C. $_____Total Cost of Architectural Equipment in Divisions 11 Through 14

D. $_____Total Cost of Wood and Wood-Based Materials, including temporary construction items that will neither be incorporated into the work nor returned to their supplier for re-use.

1.5 CERTIFIED BY: (CONTRACTOR)

A. Print Name: _____

B. Signature: _____

C. Title: _____(officer of company), Date: _____

END OF SECTION

SECTION 01351.602 - LEED WOOD-CONTAINING PRODUCT LIST

LEED SUBMITTAL FORM

1.1 IDENTIFICATION:

A. Project Name: _____

B. Project No.: _____

C. Architect: _____

1.2 THIS FORM APPLIES TO LEED MR CREDIT 6 (CERTIFIED WOOD).

1.3 WOOD-CONTAINING PRODUCTS

A. Wood-containing products are those made of solid wood, wood chip, or wood fiber, or containing components made of solid wood, wood chip, or wood fiber.

B. Rationale: Because the computation for this credit is based on the total material costs for all wood and wood-based products on the project, the Contractor is required to submit the following itemization of wood and wood-based products, including materials used during construction but not incorporated into the finished work.

C. Procedure: For each wood-containing product provided for this project, submit "LEED New Product Content Form". At minimum, submit for the following products. Initial those for which the material content form is attached.

D. Permanent Wood-Containing Product List:
1. ____Wood framing, furring, and supports
2. ____Blocking, curbing, and nailers
3. ____Paneling
4. ____Architectural woodwork
5. ____Cabinets and casework
6. ____Doors and frames, including composite construction
7. ____Wood wall covering

E. Temporary Wood-Containing Product List:
1. ____Excavation supports
2. ____Concrete formwork and formwork supports
3. ____Bracing and shoring
4. ____Barricades and enclosures

1.4 CERTIFICATION

A. ____All other wood-containing products used on this project are shown on the attached list.

B. ____I certify that there are no other wood-containing products used on this project that exceed 1 percent of total material cost.

C. ____I certify that there are no other temporary facilities or construction using wood-containing products that exceed 1 percent of the total material cost.

D. CERTIFIED BY: (Contractor)

1. Print Name: _____
2. Signature: _____
3. Title: _____(officer of company), Date: _____

END OF SECTION

SECTION 01200 - PRICE AND PAYMENT PROCEDURES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Procedures for preparation and submittal of applications for progress payments.

B. Documentation of changes in Contract Sum and Contract Time.

C. Change procedures.

D. Procedures for preparation and submittal of application for final payment.

1.2 SCHEDULE OF VALUES

A. Coordination: Coordinate preparation of the schedule of values with preparation of Contractor's construction schedule.

B. Correlate line items in the schedule of values with other required administrative forms and schedules, including the following:
   1. Application for Payment forms with continuation sheets.
   2. Submittal schedule.
   3. Items required to be indicated as separate activities in Contractor's construction schedule.

C. Format and Content: Use the Project Manual table of contents as a guide to establish line items for the schedule of values. Provide at least one line item for each Specification Section.
   1. Identification: Include the following Project identification on the schedule of values:
      a. Project name and location.
      b. Name of Architect.
      c. Architect's project number.
      d. Contractor's name and address.
      e. Date of submittal.
   2. Arrange the schedule of values in tabular form with separate columns to indicate the following for each item listed:
      a. Related Specification Section or Division.
      b. Description of the Work.
      c. Name of subcontractor.
      d. Name of manufacturer or fabricator.
      e. Name of supplier.
      f. Change Orders (numbers) that affect value.
      g. Dollar value of the following, as a percentage of the Contract Sum to nearest one- hundredth percent, adjusted to total 100 percent.
         1) Labor.
         2) Materials.
         3) Equipment.
   3. Provide a breakdown of the Contract Sum in enough detail to facilitate continued evaluation of Applications for Payment and progress reports. Coordinate with the Project Manual table of contents. Provide multiple line items for principal subcontract amounts in excess of five percent of Contract Sum or as appropriate.
   4. Round amounts to nearest whole dollar; total shall equal the Contract Sum.
   5. Provide a separate line item in the schedule of values for each part of the Work where Applications for Payment may include materials or equipment purchased or fabricated and stored, but not yet installed.

a. Differentiate between items stored on-site and items stored off-site. If required, include evidence of insurance.

6. Provide separate line items in the schedule of values for initial cost of materials, for each subsequent stage of completion, and for total installed value of that part of the Work.
7. Allowances: Provide a separate line item in the schedule of values for each allowance. Show line-item value of unit-cost allowances, as a product of the unit cost, multiplied by measured quantity. Use information indicated in the Contract Documents to determine quantities.
8. Each item in the schedule of values and applications for Payment shall be complete. Include total cost and proportionate share of general overhead and profit for each item.
   a. Temporary facilities and other major cost items that are not direct cost of actual work-in-place may be shown either as separate line items in the schedule of values or distributed as general overhead expense, at Contractor's option.
9. Schedule Updating: Update and resubmit the schedule of values before the next Applications for Payment when Change Orders or Construction Change Directives result in a change in the Contract Sum.

D. Forms filled out by hand will not be accepted.

E. Submit Schedule of Values in duplicate within 15 days after date of Owner-Contractor Agreement.

F. Include in each line item, the amount of Allowances specified in this section. For unit cost Allowances, identify quantities taken from Contract Documents multiplied by the unit cost to achieve the total for the item.

G. Include separately from each line item, a direct proportional amount of Contractor's overhead and profit.

H. Revise schedule to list approved Change Orders, with each Application For Payment.

I. Correlate line items in the schedule of values with other required administrative forms and schedules, including the following:
   1. Application for Payment forms with continuation sheets.
   2. Submittal schedule.
   3. Items required to be indicated as separate activities in Contractor's construction schedule.

1.3 APPLICATIONS FOR PROGRESS PAYMENTS

A. Initial Application for Payment: Administrative actions and submittals that must precede or coincide with submittal of first Application for Payment include the following:
   1. List of subcontractors.
   2. Schedule of values.
   3. Contractor's construction schedule (preliminary if not final).
   4. Products list (preliminary if not final).
   5. Schedule of lump sum and unit price allowances.
   6. Submittal schedule (preliminary if not final).
   7. List of Contractor's staff assignments.
   8. List of Contractor's principal consultants.
   9. Copies of building permits.
   10. Copies of authorizations and licenses from authorities having jurisdiction for performance of the Work.
   11. Initial progress report.
   12. Report of preconstruction conference.
   13. Certificates of insurance and insurance policies.

14. Performance and payment bonds.
15. Data needed to acquire Owner's insurance.

B. All applications for payment are required to be submitted on the IAC/PSCP Form 306.4. The IAC/PSCP Form 306.4 can be downloaded at: http://www.pscp.state.md.us/forms/apgindex.cfm

C. Payment Period: Pencil copies of the payment applications are due by the 20th of the payment period. Final drafts of the payment application are due by the 1st of the payment period.

D. Payment Terms: As outlined per the Contract Agreement.

E. Payment Submission Requirements: Submit 6 original executed and notarized copies per payment application for processing. Scanned copies will be rejected for processing.

F. Electronic media printout including equivalent information will be considered in lieu of standard form specified; submit sample to Architect for approval.

G. Forms filled out by hand will not be accepted.

H. For each item, provide a column for listing each of the following:
1. Item Number.
2. Description of work.
3. Scheduled Values.
4. Previous Applications.
5. Work in Place and Stored Materials under this Application.
6. Authorized Change Orders.
7. Total Completed and Stored to Date of Application.
8. Percentage of Completion.
9. Balance to Finish.
10. Retainage.

I. Application Preparation: Complete every entry on form. Notarize and execute by a person authorized to sign legal documents on behalf of Contractor. Architect will return incomplete applications without action.
1. Entries shall match data on the schedule of values and Contractor's construction schedule. Use updated schedules if revisions were made.
2. Include amounts for work completed following previous Application for Payment, whether or not payment has been received. Include only amounts for work completed at time of Application for Payment.
3. Include amounts of Change Orders and Construction Change Directives issued before last day of construction period covered by application.
4. Indicate separate amounts for work being carried out under Owner-requested project acceleration.

J. Stored Materials: Include in Application for Payment amounts applied for materials or equipment purchased or fabricated and stored, but not yet installed. Differentiate between items stored on-site and items stored off-site.
1. Provide certificate of insurance, evidence of transfer of title to Owner, and consent of surety to payment, for stored materials.
2. Provide supporting documentation that verifies amount requested, such as paid invoices.
    a. Match amount requested with amounts indicated on documentation; do not include overhead and profit on stored materials.
3. Provide summary documentation for stored materials indicating the following:
    a. Materials previously stored and included in previous Applications for Payment.

b. Work completed for this Application utilizing previously stored materials.
c. Additional materials stored with this Application.
d. Total materials remaining stored, including materials with this Application.

K. Use data from approved Schedule of Values. Provide dollar value in each column for each line item for portion of work performed and for stored products.

L. List each authorized Change Order as a separate line item, listing Change Order number and dollar amount as for an original item of Work.

M. Include in Application for Payment LEED Material and Resource and Indoor Air Quality Progress Reports: Prepare the following LEED Credit template forms made available at preconstruction conference of LEED issues. Submit updated forms with each Application for Payment.
1. MR Credit 2: Construction Waste Management
2. MR Credit 4: Recycled Content
3. MR Credit 5: Regional Materials
4. MR Credit 7: Certified Wood
5. EQ Credit 4: Low-Emitting Materials

N. Transmittal: Submit six (6) signed and notarized original copies of each Application for Payment to Architect by a method ensuring receipt within 24 hours. Each copy shall include waivers of lien and similar attachments as required.
1. Transmit each copy with a transmittal form listing attachments and recording appropriate information about application.
2. Include the following with the application:
a. Transmittal letter as specified for Submittals in Section 01 3000.
b. Construction progress schedule, revised and current as specified in 01 3000.
c. Current construction photographs specified in Section 01 3000

O. When Architect requires substantiating information, submit data justifying dollar amounts in question. Provide one copy of data with cover letter for each copy of submittal. Show application number and date, and line item by number and description.

1.4 MODIFICATION PROCEDURES

A. For minor changes not involving an adjustment to the Contract Sum or Contract Time, Architect will issue instructions directly to Contractor.

B. For other required changes, Architect will issue a document signed by Owner instructing Contractor to proceed with the change, for subsequent inclusion in a Change Order.
1. The document will describe the required changes and will designate method of determining any change in Contract Sum or Contract Time.
2. Promptly execute the change.

C. For changes for which advance pricing is desired, Architect will issue a document that includes a detailed description of a proposed change with supplementary or revised drawings and specifications, a change in Contract Time for executing the change. Contractor shall prepare and submit a fixed price quotation within 14 days.

D. Contractor may propose a change by submitting a request for change to Architect, describing the proposed change and its full effect on the Work, with a statement describing the reason for the change, and the effect on the Contract Sum and Contract Time with full documentation. Document any requested substitutions in accordance with Section 01 6000.

E. Computation of Change in Contract Amount: As specified in the Agreement and Conditions of the Contract.
   1. For change requested by Architect for work falling under a fixed price contract, the amount will be based on Contractor's price quotation.
   2. For change requested by Contractor, the amount will be based on the Contractor's request for a Change Order as approved by Architect.
   3. For pre-determined unit prices and quantities, the amount will based on the fixed unit prices.

F. Substantiation of Costs: Provide full information required for evaluation of each submitted Change Order
   1. Support each claim with the following required data:
      a. Quantities of products, labor, and equipment.
      b. Taxes, insurance, and bonds.
      c. Overhead and profit.
      d. Justification for any change in Contract Time.
      e. Credit for deletions from Contract, similarly documented.
      f. Supplier quotes to support the requested change.
      g. Subcontractor proposals with manufacturer/supplier documentation to support the requested change.
   2. Support each claim for additional costs with additional information:
      a. Origin and date of claim.
      b. Dates and times work was performed, and by whom.
      c. Time records and wage rates paid.
      d. Invoices and receipts for products, equipment, and subcontracts, similarly documented.

G. Execution of Change Orders: Architect will issue Change Orders for signatures of parties as provided in the Conditions of the Contract.

H. After execution of Change Order, promptly revise Schedule of Values and Application for Payment forms to record each authorized Change Order as a separate line item and adjust the Contract Sum.

I. Promptly revise progress schedules to reflect any change in Contract Time, revise sub-schedules to adjust times for other items of work affected by the change, and resubmit.

J. Promptly enter changes in Project Record Documents.

1.5 APPLICATION FOR PAYMENT AT SUBSTANTIAL COMPLETION

A. After issuing the Certificate of Substantial Completion, submit an Application for Payment showing 100 percent completion for portion of the Work claimed as substantially complete.

B. Include documentation supporting claim that the Work is substantially complete and a statement showing an accounting of changes to the Contract Sum.

C. This application shall reflect Certificates of Partial Substantial Completion issued previously for Owner occupancy of designated portions of the Work.

D. Completed and signed LEED Credit Templates for all points falling under Contractor responsibility.

1.6 APPLICATION FOR FINAL PAYMENT

A. Submit final Application for Payment with releases and supporting documentation not previously submitted and accepted, including, but not limited, to the following:
   1. Evidence of completion of Project closeout requirements.
   2. Insurance certificates for products and completed operations where required and proof that taxes, fees, and similar obligations were paid.
   3. Updated final statement, accounting for final changes to the Contract Sum.
   4. AIA Document G706, “Contractor's Affidavit of Payment of Debts and Claims.”
   5. AIA Document G707, “Consent of Surety to Final Payment.”
   6. Evidence that claims have been settled.
   7. Final meter readings for utilities, a measured record of stored fuel, and similar data as of date of Substantial Completion or when Owner took possession of and assumed responsibility for corresponding elements of the Work.
   8. Final liquidated damages settlement statement.

B. Prepare Application for Final Payment as specified for progress payments, identifying total adjusted Contract Sum, previous payments, and sum remaining due.

C. Final Payment - Requires Prince George’s County Board of Education approval prior to final release of payment.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION

Section 01 2100
Allowances

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Cash allowances.

B. Contingency allowance.

C. Inspecting and testing allowances.

D. Payment and modification procedures relating to allowances.

E. Summary - A "Schedule of Allowances," showing amounts included in Contract Sum, is included in this section. Coordinate allowance to ensure that each section is completely integrated and interfaced. Requirements for allowances are shown and specified to extent established by date of Contract Documents; additional requirements will be established by Change Order. At earliest possible date, advise Architect/Engineer of date each final allowance selection must be completed. Submit proposals for allowance Work as directed and in manner specified for Change Orders. Indicate quantities, unit costs, total purchase amounts, taxes, delivery charges and trade discounts. Where requested, furnish a detailed breakdown of quantity survey. Contractor mark-up of overrun of allowance purchases will be permitted where purchase amount exceeds established allowance by more than 15%; otherwise, and except as otherwise indicated, amount of Change Order on each allowance will be the difference between purchase amount and allowance. Deliver excess materials of allowance Work to Owner's storage space, or dispose of by other means as directed. Designate in project construction schedule delivery dates for products and services specified under each allowance. Contingency allowances may be drawn upon in accordance with guidelines put forth in Article 7, Changes in the Work, of General Conditions.

1.02 RELATED REQUIREMENTS

A. Section 01 2000 - Price and Payment Procedures: Additional payment and modification procedures.

B. Document Summary "E" located above.

1.03 CASH ALLOWANCES

A. Costs Included in Cash Allowances: Cost of product to Contractor or subcontractor, less applicable trade discounts, less cost of delivery to site , less applicable taxes .

B. Architect Responsibilities:

1. Consult with Contractor for consideration and selection of products, suppliers, and installers.

C. Contractor Responsibilities:

1. Assist Architect in selection of products, suppliers , and installers.
2. Obtain proposals from suppliers and installers and offer recommendations.
3. On notification of which products have been selected, execute purchase agreement with designated supplier and installer.
4. Arrange for and process shop drawings, product data, and samples. Arrange for delivery.
5. Promptly inspect products upon delivery for completeness, damage, and defects. Submit claims for transportation damage.
6. Differences in costs will be adjusted by Change Order.

1.04 CONTINGENCY ALLOWANCE

A. Funds will be drawn from the Contingency Allowance only by the issuance of an Allowance Deduction Authorization (ADA).

B. At closeout of Contract, funds remaining in Contingency Allowance will be credited to Owner by Change Order.

C. Payment for allowance items shall be made regularly by Contractor to suppliers of allowance items as work progresses. Contractor shall invoice for allowance items through periodic applications for payment as Work progresses.

1.05 INSPECTING AND TESTING ALLOWANCES

1.06 ALLOWANCES SCHEDULE

A. Contingency Allowance: Include the stipulated sum/price of $[100,000] for use upon Owner's instructions. This is the allowance amount to be included in the base bid. The stiplulations are as follows.

1. This amount will be utilized for unforeseen conditions to cover extra labor and material costs, if any, and shall be tracked separately from other contract costs. All mark-up, including general conditions, overhead, profit, etc., for this allowance shall be included in the base bid. No additional or credited markup will be allowed for extra work paid for by this allowance.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION

SECTION 01 2500
SUBSTITUTION PROCEDURES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Procedural requirements for proposed substitutions.

1.02 DEFINITIONS

A. Substitutions: Changes from Contract Documents requirements proposed by Contractor to materials, products, assemblies and equipment.

1. Substitutions for Cause: Proposed due to changed Project circumstances beyond Contractor's control.

a. Unavailability.

b. Regulatory changes.

2. Substitutions for Convenience: Proposed due to possibility of offering substantial advantage to the Project.

a. Substitution requests offering advantages solely to the Contractor will not be considered.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.01 GENERAL REQUIREMENTS

A. A Substitution Request for products, assemblies, materials and equipment constitutes a representation that the submitter:

1. Has investigated proposed product and determined that it meets or exceeds the quality level of the specified product, equipment, assembly, or system.

2. Agrees to provide the same warranty for the substitution as for the specified product.

3. Agrees to provide same or equivalent maintenance service and source of replacement parts, as applicable.

4. Agrees to coordinate installation and make changes to other work that may be required for the work to be complete, with no additional cost to Owner.

5. Waives claims for additional costs or time extension that may subsequently become apparent.

B. Document each request with complete data substantiating compliance of proposed substitution with Contract Documents. Burden of proof is on proposer.

C. Content: Include information necessary for tracking the status of each Substitution Request, and information necessary to provide an actionable response.

1. No specific form is required. Contractor's Substitution Request documentation must include the following:

a. Project Information:

b. Substitution Request Information:

c. Attached Comparative Data: Provide point-by-point, side-by-side comparison addressing essential attributes specified, as appropriate and relevant for the item:

d. Impact of Substitution:

D. Limit each request to a single proposed substitution item.

3.02 **SUBSTITUTION PROCEDURES DURING CONSTRUCTION**

A. Architect will consider requests for substitutions only within 60 days after date established in Notice to Proceed.

B. Submit request for Substitution for Cause within 14 days of discovery of need for substitution, but not later than 14 days prior to time required for review and approval by Architect, in order to stay on approved project schedule.

C. Use the product specified if the Architect cannot make a decision on the use of a proposed substitute within the time allocated. Following acceptance of the substitution, the Contractor shall submit related information and the product data in accordance with Section 01300- Submittals.

D. Substitutions will not be considered under one or more of the following circumstances:

1. When they are indicated or implied on shop drawing or product data submittals, without having received prior approval.
2. Without a separate written request.
3. When acceptance will require revisions to the Contract Documents.
4. The Architect will consider requests for substitutions if received within 60 days AFTER
5. Notice to Proceed.
6. The Architect will only consider requests for substitution submitted by the Prime
7. Contractor whose work is involved.
8. No substitution requests will be considered from manufacturer’s representatives or
9. product vendors unless submitted through a prime contractor.

3.03 **RESOLUTION**

10. No substitution requests will be considered during the bid period.
11. Bids shall be based on products from one of the manufacturers specified or an
12. “or equal” product.
13. Transmit three (3) copies of each request for substitution for consideration.
14. Requests shall be on the Substitution Request Form found at the end of this Section.
15. Requests not meeting this procedural requirement will be returned with no action
16. taken.
17. Identify the product to be substituted in each request. Include related Specification
18. Section and Drawing numbers.

E. Conditions for Consideration: The Architect will receive and consider the Contractor's request for substitution when one or more of the following conditions are satisfied, as

A. Architect may request additional information and documentation prior to rendering a decision. Provide this data in an expeditious manner.

determined by the Architect. Requests will be returned with no action taken if none of the following conditions are satisfied.

1. Extensive revisions to the Contract Documents are not required.
2. Proposed changes are in keeping with the general intent of the Contract Documents.

3. The specified product cannot be provided within the Contract Time. The Architect will not consider the request if the product cannot be provided as a result of the Contractor's failure to pursue the Work promptly.
4. The requested substitution offers the Owner a substantial advantage, in cost, time, or energy conservation.
5. The specified product cannot receive necessary approval by a governing authority.
6. The specified product cannot be provided in a manner that is compatible with other materials and where the Contractor certifies that the substitution will overcome the incompatibility.
7. The specified product cannot be coordinated with other materials and where the Contractor certifies that the proposed substitution can be coordinated.
8. The specified product cannot provide a warranty required by the Contract Documents and where the Contractor certifies that the proposed substitution provides the required warranty.

B. Architect will notify Contractor in writing of decision to accept or reject request.
1. Architect's decision following review of proposed substitution will be noted on the submitted form.
2. Conditions for Acceptance: Following evaluation by the Architect and in accordance with a Change Order, the Contractor may make a substitution only with the consent of the Owner.

3.04 **ACCEPTANCE**

A. Accepted substitutions change the work of the Project. They will be documented and incorporated into work of the project by Change Order, Construction Change Directive, Architectural Supplementary Instructions, or similar instruments provided for in the Conditions of the Contract.

3.05 **CLOSEOUT ACTIVITIES**

A. See Section 01 7800 - Closeout Submittals, for closeout submittals.

END OF SECTION

Section 01 2600
Contract Modification Procedures

PART 1 GENERAL

1.01 SUMMARY

A. Section includes administrative and procedural requirements for handling and processing Contract modifications.

1. MINOR CHANGES IN THE WORK

2. Architect will issue through Construction Manager supplemental instructions authorizing minor changes in the Work, not involving adjustment to the Contract Sum or the Contract Time, on AIA Document G710, "Architect's Supplemental Instructions."

1.02 PROPOSAL REQUESTS

A. Owner-Initiated Proposal Requests: Architect will issue through Construction Manager a detailed description of proposed changes in the Work that may require adjustment to the Contract Sum or the Contract Time. If necessary, the description will include supplemental or revised Drawings and Specifications.

B. Work Change Proposal Requests issued by Architect through Construction Manager are not instructions either to stop work in progress or to execute the proposed change.

C. Within time specified in Proposal Request after receipt of Proposal Request, submit a quotation estimating cost adjustments to the Contract Sum and the Contract Time necessary to execute the change.

D. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.

E. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.

F. Include costs of labor and supervision directly attributable to the change.

G. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.

H. Quotation Form: Use CSI Form 13.6D, "Proposal Worksheet Summary," and Form 13.6C, "Proposal Worksheet Detail."

I. Maximum Contractors markup (OH & Profit) shall be limited to as follows:

1. General Contractor – In the case when the contractor self performs the work with their OWN forces, fifteen percent (15%) of the total cost of the work associated with the change order for overhead, profit, supervision, and miscellaneous expenses will be allowed.

2. General Contractor – In the case when the contractor does not self-perform the work and the work is performed by a 1st – 3rd tier subcontractor, the contractor may add five percent (5%) of the total cost of the work associated with the change order for overhead, profit, supervision, and miscellaneous expenses.

3. 1st Tier Subcontractor – In the case when the contractor self performs the work with their OWN forces, fifteen percent (15%) of the total cost of the work associated with the change order for overhead, profit, supervision, and miscellaneous expenses will be allowed.

4. 1st Tier Subcontractor – In the case when the contractor does not self-perform the work and the work is performed by a 2nd – 3rd tier subcontractor, the contractor may add five percent (5%) of the total cost of the work associated with the change order for overhead, profit, supervision, and miscellaneous expenses. 2nd Tier Subcontractors will be allowed to add fifteen percent (15%) for work performed by their own forces.

J. Provide all supplier, subcontractor, manufacturer, etc backup to substantiate the proposed cost.

1. Substantiation of Costs: Provide full information required for evaluation of each submitted Change Order.

a. Support each claim with the following required data:

i. Quantities of products, labor, and equipment.

ii. Taxes, insurance, and bonds.

iii. Overhead and profit.

iv. Justification for any change in Contract Time.

v. Credit for deletions from Contract, similarly documented.

vi. Supplier quotes to support the requested change.

vii. Subcontractor proposals with manufacturer/supplier documentation to support the requested change.

b. Support each claim for additional costs with additional information:

i. Origin and date of claim.

ii. Dates and times work was performed, and by whom. c. Time records and wage rates paid.

iii. Invoices and receipts for products, equipment, and subcontracts, similarly documented.

c. Support each claim for additional requests for time with the required data:

i. CPM schedule illustrating the claimed delay impact to the Critical Path.

K. Contractor-Initiated Proposals: If latent or changed conditions require modifications to the Contract, Contractor may initiate a claim by submitting a request for a change to Construction Manager.

L. Include a statement outlining reasons for the change and the effect of the change on the Work. Provide a complete description of the proposed change. Indicate the effect of the proposed change on the Contract Sum and the Contract Time.

M. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.

N. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.

O. Comply with requirements in Division 01 Section "Substitution Procedures" if the proposed change requires substitution of one product or system for product or system specified.

P. Proposal Request Form: Use CSI Form 13.6A, "Change Order Request (Proposal)," with attachments CSI Form 13.6D, "Proposal Worksheet Summary," and Form 13.6C, "Proposal Worksheet Detail."

Q. Maximum Contractors markup (OH & Profit) shall be limited to 8% of the cost of the work associated with the change order.

R. Provide all supplier, subcontractor, manufacturer, etc backup to substantiate the proposed cost.

1.03 CHANGE ORDER PROCEDURES

A. On Owner's approval of a Work Changes Proposal Request, Construction Manager will issue a Change Order for signatures of Owner and Contractor on form included in Project Manual.

1.04 CONSTRUCTION CHANGE DIRECTIVE

A. Construction Change Directive: Architect may issue through Construction Manager a Construction Change Directive on AIA Document G714. Construction Change Directive instructs Contractor to proceed with a change in the Work, for subsequent inclusion in a Change Order.

B. Construction Change Directive contains a complete description of change in the Work. It also designates method to be followed to determine change in the Contract Sum or the Contract Time.

C. Documentation: Maintain detailed records on a time and material basis of work required by the Construction Change Directive.

D. After completion of change, submit an itemized account and supporting data necessary to substantiate cost and time adjustments to the Contract.

1.05 PART 2 - PRODUCTS (NOT USED)

1.06 PART 3 - EXECUTION (NOT USED)

END OF SECTION

SECTION 01270 - UNIT PRICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Provisions of the Contract and of the Contract Documents apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for unit prices.

B. Related Sections:

1. Division 01 Section “Contract Modification Procedures” for procedures for submitting and handling Change Orders.
2. Division 01 Section “Quality Requirements” for general testing and inspecting requirements.

1.3 DEFINITIONS

A. Unit price is an amount incorporated in the Agreement, applicable during the duration of the Work as a price per unit of measurement for materials, equipment, or services, or a portion of the Work, added to or deducted from the Contract Sum by appropriate modification, if the scope of Work or estimated quantities of Work required by the Contract Documents are increased or decreased.

1.4 PROCEDURES

A. Unit prices include all necessary material, plus cost for delivery, installation, insurance, applicable taxes, overhead, and profit.

B. Measurement and Payment: Refer to individual Specification Sections for work that requires establishment of unit prices. Methods of measurement and payment for unit prices are specified in those Sections.

C. Owner reserves the right to reject Contractor's measurement of work-in-place that involves use of established unit prices and to have this work measured, at Owner's expense, by an independent surveyor acceptable to Contractor.

D. List of Unit Prices: A schedule of unit prices is included in Part 3. Specification Sections referenced in the schedule contain requirements for materials described under each unit price.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 SCHEDULE OF UNIT PRICES

A. Unit Price No. 1:

END OF SECTION 01270

SECTION 01300 - ADMINISTRATIVE REQUIREMENTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Preconstruction meeting.

B. Progress meetings.

C. Construction progress schedule.

D. Submittal Schedule.

E. Coordination drawings.

F. Submittals for review, information, and project closeout.

G. Submittal procedures.

1.2 PROJECT COORDINATION

A. Project Coordinator: Contractor.

B. Cooperate with the Project Coordinator in allocation of mobilization areas of site; for field offices and sheds, for site access, traffic, and parking facilities.

C. During construction, coordinate use of site and facilities through the Project Coordinator.

D. Comply with Project Coordinator's procedures for intra-project communications; submittals, reports and records, schedules, coordination drawings, and recommendations; and resolution of ambiguities and conflicts.

E. Comply with instructions of the Project Coordinator for use of temporary utilities and construction facilities.

F. Coordinate field engineering and layout work under instructions of the Project Coordinator.

G. Make the following types of submittals to Architect through the Project Coordinator:
   1. Requests for interpretation.
   2. Requests for substitution.
   3. Shop drawings, product data, and samples.
   4. Test and inspection reports.
   5. Design data.
   6. Manufacturer's instructions and field reports.
   7. Applications for payment and change order requests.
   8. Progress schedules.
   9. Coordination drawings.
   10. Closeout submittals.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 PRECONSTRUCTION MEETING

A. Attendance Required:
   1. Owner.
   2. Architect.
   3. Contractor.

B. Agenda:
   1. Execution of Owner-Contractor Agreement.
   2. Submission of executed bonds and insurance certificates.
   3. Distribution of Contract Documents.
   4. Submission of list of Subcontractors, schedule of values, and progress schedule.
   5. Designation of personnel representing the parties to Contractor, Owner and Architect.
   6. Procedures and processing of field decisions, submittals, and substitutions, applications for payments, proposal request, Change Orders, and Contract closeout procedures.
   7. Scheduling.

C. Record minutes and distribute copies within two days after meeting to participants, with two copies to Architect, Owner, participants, and those affected by decisions made.

3.2 PROGRESS MEETINGS

A. Schedule and administer meetings throughout progress of the Work at maximum bi-monthly intervals.

B. Make arrangements for meetings, prepare agenda with copies for participants, preside at meetings.

C. Attendance Required: Job superintendent, major Subcontractors and suppliers, Owner, Architect, as appropriate to agenda topics for each meeting.

D. Agenda:
   1. Review minutes of previous meetings.
   2. Review of Work progress.
   3. Field observations, problems, and decisions.
   4. Identification of problems that impede, or will impede, planned progress.
   5. Review of submittals schedule and status of submittals.
   6. Review of off-site fabrication and delivery schedules.
   7. Maintenance of progress schedule.
   8. Corrective measures to regain projected schedules.
   9. Planned progress during succeeding work period.
   10. Coordination of projected progress.
   11. Maintenance of quality and work standards.
   12. Effect of proposed changes on progress schedule and coordination.
   13. Other business relating to Work.

E. Record minutes and distribute copies within two days after meeting to participants, with two

copies to Architect, Owner, participants, and those affected by decisions made.

3.3 CONSTRUCTION PROGRESS SCHEDULE

A. Within 10 days after date of the Agreement, submit preliminary schedule defining planned operations for the first 60 days of Work, with a general outline for remainder of Work.

B. If preliminary schedule requires revision after review, submit revised schedule within 10 days.

C. Within 20 days after review of preliminary schedule, submit draft of proposed complete schedule for review.
   1. Include written certification that major contractors have reviewed and accepted proposed schedule.

D. Within 10 days after joint review, submit complete schedule.

E. Submit updated schedule with each Application for Payment.

3.4 SUBMITTAL SCHEDULE

A. Submit a schedule of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, ordering, manufacturing, fabrication, and delivery when establishing dates. Include additional time required for making corrections or revisions to submittals noted by Architect and Construction Manager and additional time for handling and reviewing submittals required by those corrections. Architect reserves the rights to suspend review of submittals until a Submittal Schedule is received and accepted.
   1. Coordinate Submittal Schedule with list of subcontracts, the schedule of values, and Contractor's construction schedule.
   2. Submit initial Submittal Schedule concurrently with initial Construction Progress Schedule. Include submittals required during the first 60 days of Work. Indicate the submittals required to maintain orderly progress of the Work and those required early due to long lead times for manufacture and/or fabrication.
   3. Submit revised Submittal Schedules to reflect changes to the status of the Work.
   4. Format: Arrange the following information in a tabular format:
      a. Scheduled date for first submittal.
      b. Specification Section number and title.
      c. Submittal Category: Action or Informational.
      d. Name of Subcontractor.
      e. Description of Work covered.
      f. Scheduled date for Architect's final release and/or approval.
      g. Scheduled date of fabrication.
      h. Scheduled dates for purchasing.
      i. Scheduled dates for installation.
      j. Activity or event number.

3.5 COORDINATION DRAWINGS

A. Provide information required by Project Coordinator for preparation of coordination drawings.

B. Review drawings prior to submission to Architect.

3.6 SUBMITTALS FOR REVIEW

A. When the following are specified in individual sections, submit them for review:
   1. Product data.
   2. Shop drawings.

3. Samples for selection.
4. Samples for verification.

B. Submit to Architect for review for the limited purpose of checking for conformance with information given and the design concept expressed in the contract documents.

C. Samples will be reviewed only for aesthetic, color, or finish selection.

D. After review, provide copies and distribute in accordance with SUBMITTAL PROCEDURES article below.

E. The following submittals will require additional time for review which should be factored into the schedule:
1. Structural Steel
2. Interior Architectural Woodwork
3. Doors and Hardware
4. Aluminum Framed Entrances, Storefronts, and Curtainwall
5. Food Service Equipment
6. Library Furniture
7. Automatic Temperature Control System
8. Lighting

3.7 SUBMITTALS FOR INFORMATION

A. When the following are specified in individual sections, submit them for information:
1. Design data.
2. LEED submittals and reports.
3. Certificates.
4. Test reports.
5. Inspection reports.
6. Manufacturer's instructions.
7. Manufacturer's field reports.
8. Other types indicated.

B. Submit for Architect's knowledge as contract administrator or for Owner.

3.8 SUBMITTALS FOR PROJECT CLOSEOUT

A. When the following are specified in individual sections, submit them at project closeout:
1. Project record documents.
2. Operation and maintenance data.
3. Warranties.
4. Bonds.
5. Other types as indicated.

B. Submit for Owner's benefit during and after project completion.

3.9 NUMBER OF COPIES OF SUBMITTALS

A. Documents: Submit one electronic copy in PDF format; an electronically-marked up file will be returned. Create PDFs at native size and right-side up; illegible files will be rejected.

B. Samples: Submit the number specified in individual specification sections; one of which will be retained by Architect.
1. After review, produce duplicates.

2. Retained samples will not be returned to Contractor unless specifically so stated.

3.10 SUBMITTAL PROCEDURES

A. Transmit each submittal with form included in the project manual.

B. Sequentially number the transmittal form. Revise submittals with original number and a sequential alphabetic suffix.

C. Identify Project, Contractor, Subcontractor or supplier; pertinent drawing and detail number, and specification section number, as appropriate on each copy.

D. Apply Contractor's stamp, signed or initialed certifying that review, approval, verification of Products required, field dimensions, adjacent construction Work, and coordination of information is in accordance with the requirements of the Work and Contract Documents.

E. Schedule submittals to expedite the Project, and coordinate submission of related items.

F. For each submittal for review, allow 21 days excluding delivery time to and from the Contractor.

G. Identify variations from Contract Documents and Product or system limitations that may be detrimental to successful performance of the completed Work.

H. Provide space for Contractor and Architect review stamps.

I. When revised for resubmission, identify all changes made since previous submission.

J. Distribute reviewed submittals as appropriate. Instruct parties to promptly report any inability to comply with requirements.

K. Submittals not requested will not be recognized or processed.

END OF SECTION

SECTION 01 3050
DESIGN PROCEDURES AND SUBSTANTIATION REQUIREMENTS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Procedures for design of the facility, based on the design criteria specified.
B. Substantiation requirements.

1.02 RELATED REQUIREMENTS

A. Section 00 7100 - Contracting Definitions: Definitions of time periods and phase names.

1.03 DEFINITIONS

A. Substantiation: All forms of evidence that are used to predict whether the design will comply with the requirements or to verify that the construction based on the design actually does comply. During Preliminary Design, Design Development, and Construction Documents, requirements to submit substantiation are primarily intended to forestall use of designs or constructions that will not comply. At any time before completion of construction, substantiation is presumed to be only a prediction and may subsequently be invalidated by actual results. The term substantiation is used to distinguish these forms of evidence from traditional submittals commonly required during the construction phase.
B. Proven-In-Use: Proven to comply by having actually been built to the same or very similar design with the same materials as proposed (specified) and functioning as specified.
C. Proven-by-Mock-Up: Compliance reasonably predictable by having been tested in full-scale mock-up using the same materials and design as proposed (specified) and functioning as specified. Testing need not have been accomplished specifically for this project; when published listings of independent agencies include details of testing and results, citation of test by listing number is sufficient (submittal of all test details is not required).

1.04 REFERENCE STANDARDS

A. ASTM E329 - Standard Specification for Agencies Engaged in Construction Inspection, Testing, or Special Inspection 2018.

1.05 SUBMITTALS

A. Substantiation Submittal Procedures:
   1. Time Frames: As specified. If there is a conflict between the degree of detail or completion specified and the progress of the design or construction, obtain a clarification before submitting (a clarification will be obtained before submitting).
   2. Recipient: Owner's project manager, at [_____].
   3. Number of Copies: 2 copies for Owner's use and records; Owner will return not more than one additional copy.
   4. For time periods that constitute Milestones, all substantiation submittals required during that period must be complete and accepted before the Milestone can be considered achieved.
   5. Resubmissions: Clearly identified as such, with all changes made since the original submittal clearly marked.
B. Owner's Review of Substantiation: Unless otherwise indicated, Owner will make formal acceptance of substantiation submittals.
   1. If a submittal is not acceptable Owner will notify Design-Builder promptly.
   2. Allow minimum of 15 working days for review of major "end of period" submittals.
C. Substantiation Schedule: Prepare and maintain (Contract will include preparation and maintenance of) a complete schedule of substantiation items, showing:
   1. Contents, for each item:
      a. Anticipated and actual item, with Section and paragraph number and drawing identification, if any.
      b. Anticipated submittal date, or time period(s) during which submittal is required.
      c. Actual submittal date.

d. Action taken or other status.
e. Identification of future re-submission requirement, if any.

2. If desired, schedule may be incorporated into overall progress schedule, provided substantiation data can be reported separately from other progress information.
3. Submission: To Owner, within 30 days after notice to proceed.
4. Form: Computer database format for Owner's use in tracking submittals; database structured so Owner's added information will not be overwritten or deleted by incorporation of updated data from Design-Builder.
5. Updates: To Owner, monthly in hard copy.

1.06 **QUALITY ASSURANCE**

A. Qualifications of Testing/Inspection Agencies Performing Substantiation:
1. Qualified and equipped to perform applicable tests/inspection.
2. Regularly engaged in testing and inspection activities on a commercial basis.
3. Independent of Design-Builder and Design-Builder's contractors' organizations.
4. Authorized to operate in the State in which the project is located.
5. Acceptable to Owner.
6. Substantiation: Submittal of qualifications, based on ASTM E329.

PART 2 PRODUCTS

2.01 **OWNER-FURNISHED PRODUCTS**

A. Owner-furnished products for this project are:
B. Developer team will arrange for and deliver shop drawings and other submittals, arrange and pay for delivery to site, perform joint inspection after delivery, submit claims for transportation damage, replace items damaged prior to delivery, replace defective items and arrange for manufacturer inspections, service, and warranties.

2.02 **DESIGN-BUILDER FURNISHED PRODUCTS**

A. In addition to requirements specified in other sections, provide products and elements that comply with the following.
B. Where "no substitutions" is indicated, use only the product (or one of the products) specified.
C. Elements Made Up of More Than One Product:
1. Where an element is specified by performance criteria, use (the project will use) construction either proven-in-use or proven-by-mock-up, unless otherwise indicated.
a. The Design-Builder may choose whether to use elements proven-in-use or proven-by-mock-up, unless either option is indicated as specifically required.
b. Where test methods accompany performance requirements, use those test methods (those test methods will be used) to test the mock-up.
2. Where a type of product is specified, without performance criteria specifically applicable to the element, use (the project will use) the type of product specified.
3. Where more than one type of product is specified, without performance criteria specifically applicable to the element, use (the construction will use) one of the types of products specified.
4. Where a type of product is specified, with applicable performance criteria, use (the construction will use) either the type of product specified or another type of product that meets the performance criteria as proven-in-use or proven-by-mock-up.
5. Where more than one type of product is specified, with applicable performance criteria, use (the construction will use) either one of the types of products specified or another type of product that meets the performance criteria as proven-in-use or proven-by-mock-up.
6. Where neither types of products nor performance criteria are specified, use (the construction will use) products that will perform well within the specified life span of the building.

D. Products:

1. Where a product is specified only by a manufacturer name and model number/brand name, use (the construction will use) only that model/brand product.
2. Where the properties of a product are specified by description and/or with performance criteria, use (the construction will use) products that comply with the description and/or performance criteria.
3. Where manufacturers are listed for a particular product, use (the construction will use) a product made by one of those manufacturers that also complies with other requirements.

E. Reference Standards: Where products or workmanship is specified by reference to a document not included in Contract Documents, comply (the construction will comply) with the requirements of the document, except where more stringent requirements are specified.
1. Date of Issue: As indicated in each instance except where a specific date is established by code.
2. Copies on Site: Keep (Contract will include obtaining and maintaining) copies of referenced standards that prescribe installation or workmanship standards on site until completion.

PART 3 EXECUTION

3.01 **DESIGN**

A. During Preliminary Design, the design criteria and the design itself must be (will be) refined, finalized, and documented.
B. Owner will appoint representatives of the following departments to provide details of functional needs:
1. User groups.
2. Food service staff.
3. Operations staff.
4. Maintenance staff.
5. Owner's commissioning agent.

C. Design Documentation: Record (Documentation will include) all design and performance criteria that will be of use during occupancy and operation of the project, including all items specified for maintenance manuals, below.
1. Design Criteria Documentation Included in Construction Documents: Organized logically (from the point of view of operations staff) and placed in a prominent location in drawing sets.
2. If desired, documentation may consist of annotated modifications to and amplification of the Conceptual Documents, with changes that affect Contract Times or Contract Price documented as required for modifications.
3. If required, shop drawings may be used to accomplish design documentation.
4. Owner will maintain the project program document, modified to reflect changes made during refinement of the design.
5. Drawings: Prepared using AutoCAD R14, using Owner's specified drawing and layering conventions.
6. Shop Drawings: Prepared using same CAD software.
7. Mock-Ups: Where necessary to clarify design intent and obtain approvals, construct full-scale mock-ups (full-scale mock-ups will be constructed).

3.02 **PROGRESS DOCUMENTATION**

A. Progress Schedule: As specified in the Conditions of the Contract.
1. Submit updated schedule (Updated schedule will be submitted) whenever adjustments that change the Contract Times or Milestones are approved.

B. Progress Documentation for Owner Information:
1. During Preliminary Design, Design Development, and Construction Documents Periods: Graphic displays sufficiently detailed to allow individual departments to identify the status of the design of their new spaces.
2. During Construction and Closeout: Photographs and graphic displays sufficiently detailed to allow individual departments to identify the status of the construction of their new spaces.

C. Progress Documentation for Owner's Project Record:

1. During Construction: Daily digital photographic record of each portion of the work, taken from consistent locations, distances, and angles.
2. During Construction: Time-lapse video record of site activity from a single vantage point located so as to view most of the site; views taken at one hour intervals from just before ground breaking until completion of enclosure and again during site finishing activities until Substantial Completion.
3. During Closeout: Detailed digital photographic record of each interior room and space, each exterior elevation, the roof, all site areas and [_____].
4. Photographs and Videos: Include the date taken, a short title of the view, and the compass orientation in each view; data must be in the actual photograph or frame, rather than added after printing.

3.03 **PERFORMANCE OF SUBSTANTIATION**

A. In addition to the requirements stated in other sections, provide (we will provide) the following substantiation of compliance at each stage of the project:
   1. If a substantiation requirement is specified without an indication of when it is to be submitted, submit or execute (we will submit or execute) it before the end of Construction Documents.
   2. See also the Agreement and Conditions of the Contract for submittal requirements.

B. Submit (Contract will include submission of) complete sets of documents containing all substantiation at end of the following periods:
   1. Proposal period.
   2. Preliminary Design period.
   3. Design Development period.
   4. Construction Documents period.

C. Proven-In-Use: Where elements proven-in-use are used to comply with performance requirements:
   1. In the Proposal, identify (we will identify) which elements will be accomplished using proven-in-use elements.
   2. During Design Development, identify (we will identify) proven-in-use elements proposed for use, including building name, location, date of construction, owner contact, and description of design and materials in sufficient detail to enable reproduction in this project.

D. Proven-By-Mock-Up: Where elements proven-by-mock-up are used to comply with performance requirements:
   1. In the Proposal, identify (we will identify) which elements will be accomplished using proven-by-mock-up elements.
   2. During Design Development, identify (we will identify) proven-by-mock-up elements proposed for use, with test report including date and location of test, name of testing agency, and description of test and mock-up.
   3. Mock-up testing need (may) not have been performed specifically for this project, provided the mock-up is substantially (but the mock-up will be very) similar in design and construction to the element proposed.

E. Design Analyses (including Engineering Calculations):
   1. Where a design analysis or calculation is specified without identifying a particular method, perform analysis (analysis will be performed) in accordance with accepted engineering or scientific principles to show compliance with specified requirements, and submit (with) report that includes analysis methods used and the name and qualifications of the designer.
   2. Where engineering design is allowed to be completed after commencement of construction, substantiation may be in the form of shop drawings or other data.
   3. Submit design analyses (Design analyses will be submitted) at the end of Design Development unless otherwise indicated.
   4. Where design analysis is specified to be performed by licensed design professional, use (we will use) a design professional licensed in Maryland.

F. Substantiation for Products:
   1. Where actual brand name products are not identified by either the Owner or the Design-Builder, identify (we will identify) the products to be used.
   2. In the Proposal:
      a. Identify (We will identify) one or more product types for each system, assembly, or element.
      b. For each product type, provide (we will provide) brief descriptive or performance specifications.
      c. For major manufactured products that are commonly purchased by brand name, and any other products so indicated, identify (we will identify) at least one manufacturer that will be used.
   3. During Preliminary Design or Design Development:
      a. Where more than one product type is identified for a particular system, assembly, or element, identify (we will identify) exactly which type will be used.
      b. For each product type, provide (we will provide) descriptive or performance specifications; early submittals may (will) be brief specifications, but complete specifications are required (will be provided) prior to completion of construction documents.
      c. For each product type, identify (we will identify) at least one manufacturer that will be used.
      d. For major manufactured products that are commonly purchased by brand name, and any other products so indicated, provide (we will provide) manufacturer's product literature on at least one actual brand name product that meets the specifications, including performance data and sample warranty.
   4. During Construction:
      a. Identify (We will identify) actual brand name products used for every product, except commodity products specified by performance or description.
      b. Where a product is specified by performance requirements with test methods, and if so specified, provide (we will provide) test reports showing compliance.
      c. Provide (We will provide) manufacturer's product literature for each brand name product.
      d. Provide (We will provide) the manufacturer's certification that the product used on the project complies with Contract Documents.
   5. Before End of Closeout:
      a. Provide (We will provide) copies of all manufacturer warranties that extend for more than one year after completion.

G. Regardless of whether substantiation is specified or not, the actual construction must (will) comply with the specified requirements and may, at the Owner's discretion, be examined, inspected, or tested to determine compliance.
   1. Substantiation submittals will not be approved or accepted, except to the extent that they are part of documents required to be approved or accepted in order to proceed to the next stage of design or construction. However, approval or acceptance of substantiation will not constitute approval or acceptance of deviations from the specified requirements unless those deviations are specifically identified as such on the submittal.
   2. The Owner accepts the responsibility to review substantiation submittals in a timely manner and to respond if they are unacceptable.

3.04 FIELD TESTING AND INSPECTION AS SUBSTANTIATION

A. Perform (Construction operations will include) all testing , observation, and inspection required by code and as specified.
   1. Exception: Tests and inspections indicated to be performed by Owner's commissioning agent or other independent agency.

B. Reports: Written report of each test/inspection; including complete details of conditions, methods, and results, signed by responsible individual.

3.05 **POST-OCCUPANCY SURVEY AS SUBSTANTIATION**

A. Post-Occupancy Survey: Conducted by Owner, of actual occupants after minimum of two weeks of full occupancy and operation and again after 90 days.

B. See Agreement and Conditions of the Contract for terms of provisions relating to results of post-occupancy survey.

C. Purpose of Survey: Subjective evaluation of function and quality of occupants' spaces and project as a whole. Survey questions will include:

1. Were the final design and features communicated to you before construction began?
2. Have the functional needs you identified as important been provided?
3. Was the progress of construction of the new building communicated to you on a regular basis?
4. Is the room temperature in your work area comfortable? Is the performance of the heating/air conditioning system acceptable?
5. Does the amount of direct lighting in your work area meet your needs and expectations?
6. Does the amount of outside natural light into your work area meet your expectations based on the design and location of your work area?
7. Is noise from other work areas or outside sources not objectionable in your work area?
8. Does the performance of the equipment you use in your work area meet your expectations? (Excluding owner-provided equipment.)
9. Does the appearance of the building both inside and outside project the appropriate image to the community and our customers?
10. Is the building user-friendly? Have features been placed where they are convenient and readily accessible?
11. Does the quality of construction meet your expectations? Do finishes, trim, and painting demonstrate the expected level of quality?
12. Were you provided with an appropriate level of orientation regarding the features of the new building before move-in?
13. Is the number of corrective repairs or warranty claims during the first 90 days of occupancy less or more than you would expect with a major new facility?
14. How would you rate the new building, overall, on a scale of 1 to 10 (lowest to highest), realizing that it would be impossible to completely please everyone?

END OF SECTION

SECTION 01320 - CONSTRUCTION PROGRESS DOCUMENTATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Provisions of the Contract apply to this Section.

1.2 SUBMITTALS (for information only; no action will be taken by the Architect)

A. Submittal Schedule: Submit three copies of schedule. Arrange the following information in a tabular format:
   1. Scheduled date for each submittal.
   2. Specification Section number and title.
   3. Submittal category (action or informational).
   4. Name of subcontractor.
   5. Description of the Work covered.
   6. Scheduled date for Architect's final release or approval.

B. Contractor's Construction Schedule: Submit two opaque copies of initial schedule, large enough to show entire schedule for entire construction period.
   1. Submit an electronic copy of schedule, using Primavera P6 software, on CD-R, and labeled to comply with requirements for submittals. Include type of schedule (Initial or Updated) and date on label.

C. Daily Construction Reports: Submit two copies at monthly intervals.

D. Field Condition Reports: Submit two copies at time of discovery of differing conditions.

E. Special Reports: Submit two copies at time of unusual event.

1.3 COORDINATION

A. Coordinate preparation and processing of schedules and reports with performance of construction activities and with scheduling and reporting of separate contractors.

B. Coordinate Contractor's Construction Schedule with the Submittals Schedule, and other required schedules and reports.
   1. Secure time commitments for performing critical elements of the Work from parties involved.
   2. Coordinate each construction activity with other activities and schedule them in proper sequence.

PART 2 - PRODUCTS

2.1 SUBMITTAL SCHEDULE

A. Preparation: Submit a schedule of submittals, arranged in chronological order by dates required by Contractor’s Construction Schedule. Include time required for review, resubmittal, ordering, manufacturing, fabrication, and delivery when establishing dates.

1. Coordinate Submittals Schedule with Contractor's Construction Schedule.
    a. At Contractor's option, show submittals on the Construction Schedule, instead of tabulating them separately.

2.2 CONTRACTOR'S CONSTRUCTION SCHEDULE (CPM SCHEDULE)

A. Procedures: Prepare precedence diagram network using AON (activity-on-node) format. Comply with procedures contained in AGC's "Construction Planning & Scheduling."

B. Time Frame: Extend schedule from date established for Commencement of the Work to date of Final Completion.
    1. Contract completion date shall not be changed by submission of a schedule that shows an early completion date, unless specifically authorized by Change Order.

C. Preliminary Network Diagram: Submit diagram within 14 days of date established for Commencement of the Work. Outline significant construction activities for the first 60 days of construction. Include skeleton diagram for the remainder of the Work based on indicated activities.

D. CPM Schedule: Prepare Contractor's Construction Schedule using a computerized, time-scaled CPM network analysis diagram for the Work.
    1. Develop network diagram for Owner review no later than 30 days after date established for Commencement of the Work.
        a. Failure to include any work item required for performance of this Contract shall not excuse Contractor from completing all Work within applicable completion dates.
    2. Use "one workday" as the unit of time. Include list of nonworking days and holidays incorporated into the schedule.

E. Activities: Treat each story or separate area as a separate activity for each principal element of the Work. Comply with the following:
    1. Activity Duration: Define activities so no activity is longer than 20 days, unless specifically allowed by Architect.
    2. Procurement Activities: Include procurement process activities for long lead items and major items, requiring a cycle of more than 60 days, as separate activities in schedule. Procurement cycle activities include, but are not limited to, submittals, approvals, purchasing, fabrication, and delivery.
    3. Submittal Review Time: Include reasonable review periods and adequate time for resubmittals in the schedule. Coordinate submittal review times in Contractor's Construction Schedule with Submittals Schedule.
        a. Identify the minimum 30-day time period allowed for color selection activity conducted by Owner and Architect to result in project color schedule.
    4. Startup and Testing Time: As a predecessor to Substantial Completion include activities of reasonable duration for startup and testing of equipment. Schedule should include activities for individual / specific areas, not just one activity for entire project.
    5. Building Commissioning and Testing: As a predecessor to Substantial Completion include a reasonable duration period for building commissioning and testing.
    6. Substantial Completion: Indicate completion of work activities in advance of the date established for Substantial Completion, and include separate activities for Architect's administrative procedures necessary for certification of Substantial Completion.

F. CPM Schedule Preparation and Constraints: Prepare a list of all activities required to complete the Work. Include constraints and work restrictions indicated in the Contract Documents and as follows in schedule, and show how the sequence of the Work is affected.
    1. Phasing: Arrange list of activities on schedule by phase.

2. Work by Others: Include a separate activity for each portion of the Work performed by Owner or other contractors necessary for the completion of the Work.
3. Owner-Furnished Products: Include a separate activity for each product. Coordinate delivery dates established by Owner with the project schedule.
4. Owner-Furnished Permanent Utilities: Include separate activities indicating when permanent utilities are required.
5. Activities and Work Restrictions: Indicate estimated time duration, sequence requirements, and relationship of each activity in relation to other activities. Include estimated time frames and show the effect of the following items on the schedule as applicable:
    a. Coordination with existing construction.
    b. Limitations of continued occupancies.
    c. Utility interruptions.
    d. Uninterruptible services.
    e. Partial occupancy before Substantial Completion.
    f. Use of premises restrictions.
    g. Provisions for future construction.
    h. Seasonal variations.
    i. Environmental control.
    j. Preparation and processing of submittals.
    k. Mobilization and demobilization.
    l. Work by Owner that may affect or be affected by Contractor's activities.
6. Work Stages: Indicate estimated time duration, sequence requirements, and relationship of each activity in relation to other activities. Indicate important stages of construction for each major portion of the Work, including, but not limited to, the following:
    a. Fabrication.
    b. Installation.
    c. Tests and inspections, including commissioning.
    d. Adjusting.
    e. Startup and placement into final use and operation.
7. Area Separations: Identify each major area of construction for each major portion of the Work. Indicate where each construction activity within a major area must be sequenced or integrated with other construction activities to provide for the following:
    a. Structural frame completion.
    b. Permanent building enclosure.
    c. Substantial Completion of mechanical installation.
    d. Substantial Completion of electrical installation.
    e. Substantial Completion.
    f. Final Completion.
8. Critical Path Activities: Identify critical path activities, including those for interim completion dates. Scheduled start and completion dates shall be consistent with Contract milestone dates.
9. Processing: Process data to produce output data on a computer-drawn, time-scaled network. Revise data, reorganize activity sequences, and reproduce as often as necessary to produce the CPM schedule within the limitations of the Contract Time.

G. Milestones: Include milestones indicated in the Contract Documents in schedule, including, but not limited to, the Notice to Proceed (Commencement of the Work), Substantial Completion, and Final Completion.

H. Initial Issue of Schedule: Prepare initial network diagram from a list of straight "late finish-total float" sort. Identify critical activities. Prepare tabulated reports showing the following:
1. Description of activity.
2. Early and late start dates.
3. Early and late finish dates.

4. Activity duration in workdays.
5. Total float or slack time.

I. Submittal of the Final Construction Schedule by the Contractor certifies that the work will be prosecuted in accordance with the Schedule, subject to any change therein which is implemented in accordance with the Contract Documents

J. Schedule Updating: Concurrent with making revisions to schedule, prepare tabulated reports showing the following:

1. Identification of all activities and relationships that have changed.
2. Changes in early and late start dates.
3. Changes in early and late finish dates.
4. Changes in activity durations in workdays.
5. Changes in the critical path.
6. Changes in total float or slack time.
7. Changes in the Contract Time.

K. Contract Modifications: For each proposed contract modification and concurrent with its submission, prepare a time-impact analysis using fragments to demonstrate the effect of the proposed change on the overall project schedule.

L. Computer Software: Prepare schedules using Primavera P6 or alternate software acceptable to Owner and Architect.

2.3 RECOVERY SCHEDULE

A. Should the updated Construction Schedule show at any time during Contractor's performance, in the sole opinion of the Owner, that the Contractor is fourteen (14) or more days behind schedule for any Specific Date, or should Contractor be required to undertake actions under the General Conditions hereof, the Contractor shall prepare a Recovery Schedule at no additional cost to the Owner explaining and displaying how Contractor intends to reschedule the Work in order to regain compliance with the Construction Schedule during the immediate subsequent pay period.

B. Recovery Schedule Requirements:

1. The Contractor shall prepare and submit to the Owner a one-month maximum duration Recovery Schedule, which demonstrates how the progress of the Work will return to the approved Construction Schedule at the earliest possible time. Prepare the Recovery Schedule to same level of detail as the Construction Schedule. This Recovery Schedule shall be prepared in coordination with other separate contractors on the Project.
2. Contractor shall advise the Owner of the effectiveness of the Recovery Schedule during the schedule recovery time period. At the conclusion of the one month schedule recovery period, the Owner will direct the Contractor as follows:
   a. If Owner determines the Contractor is still behind schedule, Owner will direct the Contractor to prepare a Schedule Revision and comply with all of the requirements of a Schedule Revision as stated herein and the other requirements of the Contract Documents; provided, however, that nothing herein shall limit in any way the rights and remedies of the Owner as provided elsewhere in the Contract Documents.
   b. If the Owner determines the Contractor has successfully complied with provisions of the Recovery Schedule, the Owner will direct the Contractor to return to the use of the approved Construction Schedule.

2.4 SCHEDULE REVISIONS

A. Should Contractor desire to or be required under the Contract Documents to make modifications or changes in his method of operation, his sequence of Work or the durations of activities in the Construction Schedule, the Contractor shall do so in accordance with requirements of Contract

Documents. Revisions to the approved Construction Schedule shall be identified by Contractor in writing and approved in writing by Owner prior to incorporation into the approved schedule.

B. Logic modifications associated with change orders shall affect only those activities and performance dates directly concerned. Adjustments in scheduled intermediate Completion Dates or for the Contract as a whole will be considered only to the extent that there is insufficient remaining float to absorb these changes.

C. Revisions to Contractor's Construction Schedule required under terms of this Section shall not modify the Contract Time or any Milestone Date and shall not modify or limit the Contractor's obligations under this Contract.

D. If there are separate contractors on the Project, prior to the submission by the Contractor of proposed schedule revision, the Contractor shall meet with and gain written approval of the separate contractors to make the revisions which shall be evidenced by the signatures of said separate contractors on the proposed schedule revisions. If accepted by the Owner the revisions shall be binding upon Contractor and all separate contractors on the Project.

1. Separate contractors include hazardous material remediation contractor. Schedule shall address testing and monitoring associated with remediation.

E. Submittal of any proposed schedule revisions by the Contractor certifies that he will prosecute the Work in accordance with the schedule revision, subject to any change therein which is implemented in accordance with the Contract Documents.

2.5 REPORTS

A. Daily Construction Reports: Prepare a daily construction report recording, at a minimum, the following information concerning events at Project site:

1. List of subcontractors at Project site.
2. List of separate contractors at Project site.
3. Approximate count of personnel at Project site.
4. Equipment at Project site.
5. Material deliveries.
6. High and low temperatures and general weather conditions.
7. Meetings and significant decisions.
8. Unusual events (refer to special reports).
9. Stoppages, delays, shortages, and losses.
10. Meter readings and similar recordings.
11. Orders and requests of authorities having jurisdiction.
12. Change Orders received and implemented.
13. Construction Change Directives received and implemented.
14. Services connected and disconnected.
15. Equipment or system tests and startups.
16. Partial Completions and occupancies.
17. Substantial Completions authorized.

B. Field Condition Reports: Immediately on discovery of a difference between field conditions and the Contract Documents, prepare and submit a detailed report with a request for interpretation on CSI Form 13.2A or alternate form acceptable to Architect. Include a detailed description of the differing conditions, together with recommendations for changing the Contract Documents.

2.6 SPECIAL REPORTS

A. General: Submit special reports directly to Owner within one day of an occurrence. Distribute copies of report to parties affected by the occurrence.

B. Reporting Unusual Events: When an event of an unusual and significant nature occurs at Project site, whether or not related directly to the Work, prepare and submit a special report. List chain of events, persons participating, response by Contractor's personnel, evaluation of

results or effects, and similar pertinent information. Advise Owner in advance when these events are known or predictable.

PART 3 - EXECUTION

3.1 CONTRACTOR'S CONSTRUCTION SCHEDULE

A. Contractor's Construction Schedule Updating: At monthly intervals, update schedule to reflect actual construction progress and activities. Issue schedule one week in advance of the regularly scheduled monthly meeting designated for the review of the project schedule by the Architect.

1. Revise schedule after each meeting or other activity where revisions have been recognized or made. Issue updated schedule concurrently with the report of each such meeting.
2. Include a report with updated schedule that indicates every change, including, but not limited to, changes in logic, durations, actual starts and finishes, and activity durations.
3. As the Work progresses, indicate Actual Start Dates, Actual Finish Dates and an accurate Completion Percentage for each activity.

B. Distribution: Distribute copies of approved schedule to Architect, Owner, and additional parties determined by the Contractor.

1. Post copies in Project meeting rooms and temporary field offices.
2. When revisions are made, distribute updated schedules to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in performance of construction activities.

END OF SECTION 01320

SECTION 01321 - CONSTRUCTION PROGRESS SCHEDULE

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Preliminary schedule.

B. Construction progress schedule, bar chart type.

1.2 RELATED SECTION

A. Section 01100 - Summary:

1.3 REFERENCES

A. AGC (CPSM) - Construction Planning and Scheduling Manual; Associated General Contractors of America.

B. M-H (CPM) - CPM in Construction Management - Project Management with CPM, O'Brien, McGraw-Hill Book Company.

1.4 SUBMITTALS

A. Within 10 days after date of Agreement, submit preliminary schedule defining planned operations for the first 60 days of Work, with a general outline for remainder of Work.

B. If preliminary schedule requires revision after review, submit revised schedule within 10 days.

C. Within 20 days after review of preliminary schedule, submit draft of proposed complete schedule for review.

D. Within 10 days after joint review, submit complete schedule.

E. Submit updated schedule with each Application for Payment.

F. Submit under transmittal letter form specified in Section 01300.

1.5 SCHEDULE FORMAT

A. Listings: In chronological order according to the start date for each activity. Identify each activity with the applicable specification section number.

B. Sheet Size: Multiples of 8-1/2 x 11 inches.

C. Scale and Spacing: To allow for notations and revisions.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 PRELIMINARY SCHEDULE

A. Prepare preliminary schedule in the form of a horizontal bar chart.

3.2 BAR CHARTS

A. Include a separate bar for each major portion of Work or operation.

B. Identify the first work day of each week.

3.3 NETWORK ANALYSIS

A. Prepare network analysis diagrams and supporting mathematical analyses using the Critical Path Method.

B. Illustrate order and interdependence of activities and sequence of work; how start of a given activity depends on completion of preceding activities, and how completion of the activity may restrain start of subsequent activities.

C. Mathematical Analysis: Tabulate each activity of detailed network diagrams, using calendar dates, and identify for each activity:
   1. Preceding and following event numbers.
   2. Activity description.
   3. Estimated duration of activity, in maximum 15 day intervals.
   4. Earliest start date.
   5. Earliest finish date.
   6. Actual start date.
   7. Actual finish date.
   8. Latest start date.
   9. Latest finish date.
   10. Total and free float; float time shall accrue to Owner and to Owner's benefit.
   11. Monetary value of activity, keyed to Schedule of Values.
   12. Percentage of activity completed.
   13. Responsibility.

D. Analysis Program: Capable of compiling monetary value of completed and partially completed activities, accepting revised completion dates, and recomputation of all dates and float.

E. Required Reports: List activities in sorts or groups:
   1. By preceding work item or event number from lowest to highest.
   2. By amount of float, then in order of early start.

3.4 REVIEW AND EVALUATION OF SCHEDULE

A. Participate in joint review and evaluation of schedule with Architect at each submittal.

B. Evaluate project status to determine work behind schedule and work ahead of schedule.

C. After review, revise as necessary as result of review, and resubmit within 10 days.

3.5 UPDATING SCHEDULE

A. Maintain schedules to record actual start and finish dates of completed activities.

B. Indicate progress of each activity to date of revision, with projected completion date of each activity.

C. Annotate diagrams to graphically depict current status of Work.

D. Identify activities modified since previous submittal, major changes in Work, and other identifiable changes.

E. Indicate changes required to maintain Date of Substantial Completion.

F. Submit reports required to support recommended changes.

3.6 DISTRIBUTION OF SCHEDULE

A. Distribute copies of updated schedules to Contractor's project site file, to Subcontractors, suppliers, Architect, Owner, and other concerned parties.

B. Instruct recipients to promptly report, in writing, problems anticipated by projections shown in schedules.

END OF SECTION

SECTION 01330 SUBMITTAL PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes requirements for the submittal schedule and administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals.

1.2 DEFINITIONS

A. Action Submittals: Written and graphic information and physical samples that require Architect's and Construction Manager's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."

B. Informational Submittals: Written and graphic information and physical samples that do not require Architect's and Construction Manager's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

C. Info Exchange (Electronic File Transfer): The Info Exchange is a Web-enabled server that allows project team members to easily and securely exchange project files on a website.

D. Portable Document Format (PDF): An open standard file format licensed by Adobe Systems used for representing documents in a device-independent and display resolution-independent fixed-layout document format.

1.3 ACTION SUBMITTALS

A. Submittal Schedule: Submit a schedule of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, ordering, manufacturing, fabrication, and delivery when establishing dates. Include additional time required for making corrections or revisions to submittals noted by Architect and Construction Manager and additional time for handling and reviewing submittals required by those corrections. Architect reserves the right to suspend review of submittals until a Submittal Schedule is received and accepted.
   1. Coordinate submittal schedule with list of subcontracts, the schedule of values, and Contractor's construction schedule.
   2. Initial Submittal: Submit concurrently with startup construction schedule. Include submittals required during the first 60 days of construction. List those submittals required to maintain orderly progress of the Work and those required early because of long lead time for manufacture or fabrication.
   3. Final Submittal: Submit concurrently with the first complete submittal of Contractor's construction schedule.
      a. Submit revised submittal schedule to reflect changes in current status and timing for submittals.
   4. Format: Arrange the following information in a tabular format:
      a. Scheduled date for first submittal.
      b. Specification Section number and title.
      c. Submittal category: Action; informational.
      d. Name of subcontractor.
      e. Description of the Work covered.
      f. Scheduled date for Architect's and Construction Manager's final release or approval.
      g. Scheduled date of fabrication.

h. Scheduled dates for purchasing.
i. Scheduled dates for installation.
j. Activity or event number.

1.4 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

A. Architect's Digital Data Files: Electronic digital data files of the Contract Drawings will be provided by Architect for Contractor's use in preparing submittals.
1. Architect will furnish Contractor electronic copies of requested drawings In AutoCAD 2011 "DWG" Format for use in preparing Shop Drawings.
a. Architect makes no representations as to the accuracy or completeness of digital data files as they relate to the Contract Drawings.
b. Contractor shall execute a data licensing agreement in the form of Agreement included at the end of this section.
c. Files will be provided through the Architect's Info Exchange
d. Electronic Structural Drawings will not be provided for use in producing structural steel shop drawing submittals.
e. The contractor shall pay the Architect a preparation and transfer fee of $250.00 per single AutoCAD "DWG" File.

B. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.
1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
4. Submit LEED submittals concurrently with product data with which they are related.
5. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.
a. Architect and Construction Manager reserve the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

C. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.
1. Initial Review: Allow 15 business days for initial review of each submittal. Allow additional time if coordination with subsequent submittals is required. Construction Manager will advise Contractor when a submittal being processed must be delayed for coordination.
2. Intermediate Review: If intermediate submittal is necessary, process it in same manner as initial submittal.
3. Resubmittal Review: Allow 15 business days for review of each resubmittal.
4. Sequential Review: Where sequential review of submittals by Architect's consultants, Owner, or other parties is indicated, allow 21 business days for initial review of each submittal.
5. The following submittals will, by their nature, require additional time for review which should be factored into the schedule.
a. Structural Steel
b. Interior Architectural Woodwork
c. Doors & Hardware
d. Aluminum-Framed Entrances and Storefronts / Fire-Rated Entrances and Storefronts / Glazed Aluminum Curtain Walls / Aluminum Windows

e. Food Service Equipment
f. Laboratory Casework
g. Library Furniture
h. Hydraulic Elevators
i. Automatic Temperature Control System
j. Interior and Exterior Lighting

D. Electronic Submittals: All submittals excepting those listed under 01330.1.5.E shall be submitted electronically in PDF format.

E. Paper Submittals: The following submittals shall be submitted in hard copy.
1. Division 05-Metals
2. Interior Architectural Woodwork
3. Metal Roof Panels
4. Metal Wall Panels
5. Built-up Asphalt Roofing
6. Aluminum-Framed Entrances and Storefronts / Fire-Rated Entrances and Storefronts / Glazed Aluminum Curtain Walls / Aluminum Windows
7. Laboratory Casework
8. Submittals larger than 11" x 17".

F. Submittal Preparation:
1. Use the Submittal Cover Sheet provided at the end of this section to supply submittal identification. Paper copies shall have this Submittal Cover Sheet attached to each copy.
2. Drawing numbers, detail references, locations where product is to be installed and other necessary identification shall be provided in addition to the information required by the Submittal Cover Sheet.
3. Transmittal for Submittals: Assemble each submittal individually and appropriately for transmittal and handling. Transmit each submittal using a transmittal form. Architect will return without review submittals received from sources other than Construction Manager.

G. Options: Identify options requiring selection by Architect.

H. Deviations and Additional Information: On an attached separate sheet, prepared on Contractor's letterhead, record relevant information, requests for data, revisions other than those requested by Architect and Construction Manager on previous submittals, and deviations from requirements in the Contract Documents, including minor variations and limitations. Include same identification information as related submittal.

I. Resubmittals: Make resubmittals in same form and number of copies as initial submittal.
1. Note date and content of previous submittal.
2. Note date and content of revision in label or title block and clearly indicate extent of revision.
3. Resubmit submittals until they are marked with approval notation from Architect's and Construction Manager's action stamp.

J. Distribution: Furnish copies of final submittals to manufacturers, subcontractors, suppliers, fabricators, installers, authorities having jurisdiction, and others as necessary for performance of construction activities. Show distribution on transmittal forms.

K. Use for Construction: Retain complete copies of submittals on Project site. Use only final action submittals that are marked with approval notation from Architect's and Construction Manager's action stamp.

PART 2 - PRODUCTS

2.1 SUBMITTAL PROCEDURES

A. General Submittal Procedure Requirements: Prepare and submit submittals required by individual Specification Sections. Types of submittals are indicated in individual Specification Sections.
   1. Action Submittals: Submit six paper copies of each submittal unless otherwise indicated. Architect, through Construction Manager, will return two copies.
   2. Informational Submittals: Submit four paper copies of each submittal unless otherwise indicated. Architect and Construction Manager will not return copies.
   3. Certificates and Certifications Submittals: Provide a statement that includes signature of entity responsible for preparing certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity.
      a. Provide a notarized statement on original paper copy certificates and certifications where indicated.

B. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.
   1. If information must be specially prepared for submittal because standard published data are not suitable for use, submit as Shop Drawings, not as Product Data.
   2. Mark each copy of each submittal to show which products and options are applicable.
   3. Include the following information, as applicable:
      a. Manufacturer's catalog cuts.
      b. Manufacturer's product specifications.
      c. Standard color charts.
      d. Statement of compliance with specified referenced standards.
      e. Testing by recognized testing agency.
      f. Application of testing agency labels and seals.
      g. Notation of coordination requirements.
      h. Availability and delivery time information.
   4. For equipment, include the following in addition to the above, as applicable:
      a. Wiring diagrams showing factory-installed wiring.
      b. Printed performance curves.
      c. Operational range diagrams.
      d. Clearances required to other construction, if not indicated on accompanying Shop Drawings.
   5. Submit Product Data before or concurrent with Samples.

C. Shop Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data.
   1. Preparation: Fully illustrate requirements in the Contract Documents. Include the following information, as applicable:
      a. Identification of products.
      b. Schedules.
      c. Compliance with specified standards.
      d. Notation of coordination requirements.
      e. Notation of dimensions established by field measurement.
      f. Relationship and attachment to adjoining construction clearly indicated.
      g. Seal and signature of professional engineer if specified.
   2. Sheet Size: Except for templates, patterns, and similar full-size drawings, submit Shop Drawings on sheets at least 8-1/2 by 11 inches, but no larger than 24 by 36 inches.
   3. Submit Shop Drawings in the following format:

a. Six opaque copies of each submittal. Architect and Construction Manager will retain four copies; remainder will be returned.

D. Samples: Submit Samples for review of kind, color, pattern, and texture for a check of these characteristics with other elements and for a comparison of these characteristics between submittal and actual component as delivered and installed.
   1. Transmit Samples that contain multiple, related components such as accessories together in one submittal package.
   2. Identification: Attach label on unexposed side of Samples that includes the following:
      a. Generic description of Sample.
      b. Product name and name of manufacturer.
      c. Sample source.
      d. Number and title of applicable Specification Section.
      e. Specification paragraph number and generic name of each item.
   3. Disposition: Maintain sets of approved Samples at Project site, available for quality-control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.
   4. Samples for Initial Selection: Submit manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available.
      a. Number of Samples: Submit two full set(s) of available choices where color, pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. Architect, through Construction Manager, will return one submittal with options selected.
   5. Samples for Verification: Submit full-size units or Samples of size indicated, prepared from same material to be used for the Work, cured and finished in manner specified, and physically identical with material or product proposed for use, and that show full range of color and texture variations expected. Samples include, but are not limited to, the following: partial sections of manufactured or fabricated components; small cuts or containers of materials; complete units of repetitively used materials; swatches showing color, texture, and pattern; color range sets; and components used for independent testing and inspection.
      a. Number of Samples: Submit four sets of Samples. Architect and Construction Manager will retain two Sample sets; remainder will be returned.
         1) Submit a single Sample where assembly details, workmanship, fabrication techniques, connections, operation, and other similar characteristics are to be demonstrated.
         2) If variation in color, pattern, texture, or other characteristic is inherent in material or product represented by a Sample, submit at least three sets of paired units that show approximate limits of variations.

E. Product Schedule: As required in individual Specification Sections, prepare a written summary indicating types of products required for the Work and their intended location. Include the following information in tabular form:
   1. Type of product. Include unique identifier for each product indicated in the Contract Documents or assigned by Contractor if none is indicated.
   2. Manufacturer and product name, and model number if applicable.
   3. Number and name of room or space.
   4. Location within room or space.

F. Coordination Drawing Submittals: Comply with requirements specified in Division 01 Section "Project Management and Coordination."

G. Contractor's Construction Schedule: Comply with requirements specified in Division 01 Section "Construction Progress Documentation."

H. Application for Payment and Schedule of Values: Comply with requirements specified in Division 01 Section "Price and Payment Procedures."

I. Test and Inspection Reports and Schedule of Tests and Inspections Submittals: Comply with requirements specified in Division 01 Section "Quality Requirements."

J. Closeout Submittals and Maintenance Material Submittals: Comply with requirements specified in Division 01 Section "Closeout Submittals."

K. Maintenance Data: Comply with requirements specified in Division 01 Section "Closeout Submittals."

L. LEED Submittals: Comply with requirements specified in Division 01 sustainable design requirements Section. LEED submittals shall be submitted concurrently with the product with which they are related. Architect may return without action product data or shop drawing submittals when LEED information has not been received at the same time.

M. Qualification Data: Prepare written information that demonstrates capabilities and experience of firm or person. Include lists of completed projects with project names and addresses, contact information of architects and owners, and other information specified.

N. Welding Certificates: Prepare written certification that welding procedures and personnel comply with requirements in the Contract Documents. Submit record of Welding Procedure Specification and Procedure Qualification Record on AWS forms. Include names of firms and personnel certified.

O. Installer Certificates: Submit written statements on manufacturer's letterhead certifying that Installer complies with requirements in the Contract Documents and, where required, is authorized by manufacturer for this specific Project.

P. Manufacturer Certificates: Submit written statements on manufacturer's letterhead certifying that manufacturer complies with requirements in the Contract Documents. Include evidence of manufacturing experience where required.

Q. Product Certificates: Submit written statements on manufacturer's letterhead certifying that product complies with requirements in the Contract Documents.

R. Material Certificates: Submit written statements on manufacturer's letterhead certifying that material complies with requirements in the Contract Documents.

S. Material Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.

T. Product Test Reports: Submit written reports indicating that current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.

U. Research Reports: Submit written evidence, from a model code organization acceptable to authorities having jurisdiction, that product complies with building code in effect for Project. Include the following information:
   1. Name of evaluation organization.
   2. Date of evaluation.
   3. Time period when report is in effect.

4. Product and manufacturers' names.
5. Description of product.
6. Test procedures and results.
7. Limitations of use.

V. Preconstruction Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of tests performed before installation of product, for compliance with performance requirements in the Contract Documents.

W. Compatibility Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for primers and substrate preparation needed for adhesion.

X. Field Test Reports: Submit written reports indicating and interpreting results of field tests performed either during installation of product or after product is installed in its final location, for compliance with requirements in the Contract Documents.

Y. Design Data: Prepare and submit written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers.

2.2 DELEGATED-DESIGN SERVICES

A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.
   1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect.

B. Delegated-Design Services Certification: In addition to Shop Drawings, Product Data, and other required submittals, submit certification signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional.
   1. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.

PART 3 - EXECUTION

3.1 CONTRACTOR'S REVIEW

A. Action and Informational Submittals: Review each submittal and check for coordination with other Work of the Contract and for compliance with the Contract Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to Architect and Construction Manager.

B. Project Closeout and Maintenance Material Submittals: See requirements in Division 01 Section "Closeout Procedures."

C. Approval Stamp: Stamp each submittal with a uniform, approval stamp in space provided on the Submittal Cover Sheet provided at the end of this section. Include Project name and location, submittal number, Specification Section title and number, name of reviewer, date of

Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents. Architect will not review submittals that do not bear Contractor's approval stamp and will return them without action.

3.2 ARCHITECT'S AND CONSTRUCTION MANAGER'S ACTION

A. Action Submittals: Architect and Construction Manager will review each submittal, make marks to indicate corrections or revisions required, and return it. Architect and Construction Manager will stamp each submittal with an action stamp and will mark stamp appropriately to indicate action, as follows:
   1. NO EXCEPTIONS TAKEN
   2. EXCEPTIONS AS NOTED
   3. REVISE & RESUBMIT
   4. REJECTED
   5. RESUBMIT FOR RECORD
   6. REVIEWED FOR INFO ONLY

B. Informational Submittals: Architect and Construction Manager will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect and Construction Manager will forward each submittal to appropriate party.

C. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect and Construction Manager.

D. Incomplete submittals are unacceptable, will be considered nonresponsive, and will be returned for resubmittal without review.

E. Submittals not required by the Contract Documents may be returned by the Architect without action.

END OF SECTION

SECTION 01 3329
SUSTAINABLE DESIGN REPORTING

PART 1 GENERAL

1.01 PROJECT GOALS

A. This project has been designed to achieve the LEED Certified (minimum 40 points) rating as defined in USGBC LEED v4-BD+C for New Construction and is pursuing MR Building Product Disclosure and Optimization and EQ Low-Emitting Materials Credits.

B. A Sustainable Design Consultant has been employed by Owner to review sustainable design documentation.

C. Contractor is not responsible for the application for certification, nor for determination of methods of achieving sustainable design credits unless specifically so indicated.

D. Many of the sustainable design credits can be achieved only through intelligent design of the project and are beyond the control of the Contractor. However, certain credits relate to the products and procedures used for construction. Therefore, the full cooperation of the Contractor and subcontractors is essential to achieving final certification.

E. Contractor shall familiarize himself with the relevant requirements and provide the necessary information and instruction to all subcontractors and installers.

F. Since Contractor and subcontractors may not be familiar with sustainable design requirements, this section includes a summary of the products and procedures intended to achieve sustainable design credits.

1. Some credits are dependent on proper performance by Contractor and subcontractors.
2. Other credits involve quantifying percentages by weight or volume and cost; these require careful recordkeeping and reporting by the Contractor.
3. See www.usgbc.org for more information.

1.02 RELATED REQUIREMENTS

A. Section 01 3000 - Administrative Requirements: Additional submittal requirements.

B. Section 01 3329.04 - Material Content Form: Form with checklist for documenting product content, emissions, health effects, sources, and costs.

C. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

1.03 DEFINITIONS

A. Product Reporting Scope: All products in the following product categories, whether specified or not:

1. Interior paints and coatings.
2. Interior adhesives and sealants, including flooring adhesives.
3. Flooring.
4. Composite wood.
5. Products making up wall and ceiling assemblies.
6. Thermal and acoustical insulation.
7. Wet-applied roofing and waterproofing.
8. Free-standing furniture.

1.04 REFERENCE STANDARDS

A. USGBC LEED v4-BD+C - LEED v4 for Building Design and Construction 2018.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for additional submittal procedures.

B. Sustainable Design Documentation: The scope of required documentation is specified in some individual specification sections; other scope is specified in this section and its related forms only.

C. New Product Documentation: For each new product in the Product Reporting Scope, submit the Material Content Form, with evidence of compliance attached.

D. Product Cost Statement: Submit the total cost of all products defined as in the Product Reporting Scope, above, including purchase price, taxes, and delivery to site, but not labor, tools, or equipment for installation; submit prior to or along with initial application for payment; update and re-submit whenever the total cost changes due to contract modifications.

1.06 ELECTRONIC DOCUMENT SUBMITTAL SERVICE

A. Sustainable design documentation is to be in electronic (PDF) format and transmitted via an Internet-based submittal service that receives, logs and stores documents, notifies participants, and provides electronic submission to the certifying agency.

1. The types of submittals for which this service must be used include those for credits that relate to materials, and any others designated by Architect.
2. For credits for which achievement requires substantiation of material type, quantity, and cost, submit receipts showing purchase of materials for this project.
3. Contractor and Architect are required to use this service.
4. It is Contractor's responsibility to submit documents in PDF format.
5. Subcontractors, suppliers, and Architect's consultants are to be permitted to use the service at no extra charge.
6. Users of the service need an email address, Internet access, and PDF review software that includes ability to mark up and apply electronic stamps (such as Adobe Acrobat, www.adobe.com, or Bluebeam PDF Revu, www.bluebeam.com), unless such software capability is provided by the service provider.
7. Paper document transmittals will not be reviewed; emailed PDF documents will not be reviewed.
8. All other specified submittal and document transmission procedures apply, except that electronic document requirements to not apply to samples or color selection charts.

B. Cost: The cost of the service is to be paid by Contractor; include the cost of the service in the contract sum.

C. Submittal Service: The selected service is:

D. Training: One, one-hour, web-based training session will be arranged for all participants, with representatives of Architect and Contractor participating; further training is the responsibility of the user of the service.

E. Architect will also be using this service to identify materials and prepare sustainable design documentation and submissions. Contractor is encouraged to use any other features of the service that are useful.

F. Project Closeout: Architect will determine when to terminate the service for the project and is responsible for obtaining archive copies of files for Owner.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 PROCEDURES

A. Submit sustainable design documentation by Contractor, using procedures defined under Submittals for Information in Section 01 3000.

B. Use of electronic submittal service specified in this section is required.

C. Submit sustainable design documentation to Consultant, not to Architect, unless otherwise indicated.

D. Where an item of sustainable design documentation is specified, fill out and submit the appropriate form.

1. Fill out one form for each different brand name product and each different manufacturer of a lot of commodity products.
2. Where required attachments are specified, attach the documentation to the back of the form.
3. Mark each blank with the appropriate information; use "ATT" for items attached; if any item is not relevant use the code "NR"; if any item is not available use the code "NA".

E. Each form must be signed by the entity capable of certifying the information.

1. Certification signatures must be made by an officer of the company.
2. For products, certification must be made by the manufacturer not the supplier.
3. For custom fabricated products, certification by the fabricator is acceptable.

F. Submit the completed forms in accordance with the requirements of Section 01 3000, as information submittals.

1. Give each form a unique submittal number.
2. Do not combine sustainable design documentation with product data or shop drawing submittals.

G. Submit forms applicable to work for which application for payment is being made, either prior to or concurrent with application for payment; payment will not be made until relevant forms have been submitted.

H. For work covered by multiple applications for payment, the initial submittal of a form is sufficient for subsequent applications unless the nature of the product has changed.

3.02 DIVISION 1 - GENERAL REQUIREMENTS

A. Sections that include requirements intended to achieve sustainable design goals are, but are not limited to, the following:

B. Section 01 1000 - Summary:

1. List of materials and equipment to be salvaged from existing building for re-use or relocation on project.

C. Section 01 3329 - Sustainable Design Reporting: Requirements and procedures for sustainable design documentation.

D. Section 01 3329.04 - Material Content Form: Form with checklist for documenting product content, emissions, health effects, sources, and costs.

E. Section 01 3329.07 - Prohibited Content Installer Certification: Certification by each installer working on project regardless of product type.

F. Section 01 5713 - Temporary Erosion and Sediment Control: Preventive measures and remediation.

G. Section 01 5719 - Temporary Environmental Controls:

1. Basic construction procedures.
2. Testing of ventilation.
3. Full building flush out before occupancy is required.

H. Section 01 6000 - Product Requirements:
1. Definitions of:
a. Reused Products.
b. Recycled Content.
c. Bio-Based content.
d. Sustainably Harvested Wood, which is defined as certified by FSC only.
e. Source Location.
f. Environmental Product Declarations.
g. Health Product Declarations.
h. Cradle-to-Cradle.
i. GreenScreen Chemical Hazard Analysis.
j. Manufacturer's Inventory of Product Content.

I. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions: List of indoor-emissions-restricted products and VOC-content-restricted products, requirements, evidence required, and reporting.

J. Section 01 7000 - Execution and Closeout Requirements:
1. Dust control and basic surface drainage.

K. Section 01 7419 - Construction Waste Management and Disposal: Requirements for landfill diversion and reporting.

L. Section 01 7800 - Closeout Submittals: Maintenance and operation manuals for commissioned systems.

M. Section 01 7900 - Demonstration and Training:
1. Demonstration of commissioned systems and equipment.
2. Training of Owner's personnel.

N. Section 01 9113 - General Commissioning Requirements.

O. Section 01 9114 - Commissioning Authority Responsibilities.

3.03 DIVISION 2 - EXISTING CONDITIONS

A. Section 02 4100 - Demolition:
1. Demolition of existing pavements and other impervious surfacing.
2. Partial demolition for preserving existing construction.

B. Section 02 8400 - Polychlorinate Biphenyl (PCB) Remediation: Abatement of PCBs, mercury, and other substances regulated under the U.S. Federal Toxic Substances Control Act (TSCA).

3.04 DIVISION 3 - CONCRETE

A. Section 03 3000 - Cast-in-Place Concrete: Replacement of Portland cement, to some extent, with recycled content.

B. Section 03 4100 - Precast Structural Concrete: Replacement of Portland cement, to some extent, with recycled content.

3.05 DIVISION 5 - METALS

A. Section 05 5000 - Metal Fabrications: Custom-fabricated recessed mat frames at regularly used exterior entrances.

B. Section 05 5305 - Metal Gratings and Floor Plates: Custom-fabricated metal gratings at regularly used exterior entrances.

3.06 DIVISION 6 - WOOD, PLASTICS, AND COMPOSITES

A. Note: Definition of sustainably harvested wood is in Section 01 6000.

B. Section 06 1000 - Rough Carpentry: Requirement to use sustainably harvested wood.

C. Section 06 1323 - Heavy Timber Framing: Requirement to use sustainably harvested wood.

D. Section 06 1326 - Heavy Timber Trusses: Requirement to use sustainably harvested wood.

E. Section 06 1500 - Wood Decking: Requirement to use sustainably harvested wood.

F. Section 06 1736 - Metal-Web Wood Joists: Requirement to use sustainably harvested wood.

G. Section 06 1753 - Shop-Fabricated Wood Trusses: Requirement to use sustainably harvested wood.

H. Section 06 1800 - Glued-Laminated Construction: Requirement to use sustainably harvested wood.

I. Section 06 2000 - Finish Carpentry: Requirement to use sustainably harvested wood.

J. Section 06 4100 - Architectural Wood Casework: Requirement to use sustainably harvested wood.

3.07 DIVISION 7 - THERMAL AND MOISTURE PROTECTION

A. Section 07 1300 - Sheet Waterproofing: For vegetated roof.

B. Section 07 1400 - Fluid-Applied Waterproofing: For vegetated roof.

C. Section 07 4113 - Metal Roof Panels: Rain water collection surface.

D. Section 07 5200 - Modified Bituminous Membrane Roofing: For vegetated roof.

E. Section 07 5300 - Elastomeric Membrane Roofing: Unballasted white or light-colored roofing with minimum SRI specified

F. Section 07 5400 - Thermoplastic Membrane Roofing: Unballasted white or light colored roofing with minimum SRI specified.

G. Section 07 5050 - Vegetated Roof Components: Plants, planting modules, fill, and insulation.

H. Section 07 6100 - Sheet Metal Roofing: Rain water collection surface.

I. Section 07 8400 - Firestopping: Emissions-compliant firestopping sealants.

J. Section 07 8400 - Firestopping: Sealing penetrations in walls, floors, and ceilings between residential units.

K. Section 07 9200 - Joint Sealants: Sealing penetrations in walls, floors, and ceilings between residential units.

L. Section 07 9200 - Joint Sealants: Emissions-compliant sealants.

3.08 DIVISION 8 - OPENINGS

A. Section 08 4313 - Aluminum-Framed Storefronts: For daylighting and views.

B. Section 08 4413 - Glazed Aluminum Curtain Walls: For daylighting and views.

C. Section 08 4418 - Glazed Steel Curtain Walls: For daylighting and views.

D. Section 08 4500 - Translucent Wall and Roof Assemblies: For daylighting and views.

E. Section 08 5113 - Aluminum Windows: For daylighting and views.

F. Section 08 5313 - Vinyl Windows: For daylighting and views.

G. Section 08 5413 - Fiberglass Windows: For daylighting and views.

H. Section 08 6200 - Unit Skylights: For daylighting.

I. Section 08 6223 - Tubular Skylights: For daylighting.

J. Section 08 6300 - Metal-Framed Skylights: For daylighting.

K. Section 08 7100 - Door Hardware: Door closers at rooms where hazardous gases or chemicals are present or used.

L. Section 08 8000 - Glazing: For daylighting and views.

3.09 DIVISION 9 - FINISHES

A. Section 09 2116 - Gypsum Board Assemblies: Deck-to-deck sealed partitions around rooms where hazardous gases or chemicals are present or used.

B. Section 09 6813 - Tile Carpeting: Carpet tile complying with CRI Green Label Plus requirements.

C. Section 09 6816 - Sheet Carpeting: Carpet complying with CRI Green Label Plus requirements.

D. Section 09 9123 - Interior Painting: Emissions-compliant interior opaque paints and coatings.

E. Section 09 9600 - High-Performance Coatings: Emissions-compliant interior opaque high performance coatings.

3.10 DIVISION 10 - SPECIALTIES

A. Section 10 1400 - Signage:

1. Signs identifying preferred parking spaces for green vehicles.

2. Signage at parking entrances stating discounted rate for green vehicles.

B. Section 10 5100 - Lockers: Lockers near bicycle entrance; metal.

C. Section 10 7113.43 - Fixed Sun Screens.

3.11 DIVISION 11 - EQUIPMENT

A. Section 11 4000 - Foodservice Equipment: Energy Star rated appliances.

B. Section [_____] - Solid Waste Bins: Recycling storage containers.

C. Section [_____] - Electric Vehicle Charging Stations.

3.12 DIVISION 12 - FURNISHINGS

A. Section 12 2400 - Window Shades: Motorized window shades.

B. Section 12 3600 - Countertops: Requirement to use sustainably harvested wood.

C. Section 12 4813 - Entrance Floor Mats and Frames: Manufactured recessed floor grilles at high volume entryways.

D. Section 12 9313 - Bicycle Racks.

E. Section 12 9314 - Bicycle Lockers.

3.13 DIVISION 21 - FIRE SUPPRESSION

A. Section 21 2200 - Clean-Agent Fire-Extinguishing System: Non-water based fire suppression equipment using extinguishing agent other than Halon.

3.14 DIVISION 22 - PLUMBING

A. Building-level water meter is provided by the local utility.

B. Section 22 0519 - Meters and Gauges for Plumbing Piping: Plumbing metering devices for water subsystems.

C. Section 22 1005 - Plumbing Piping: Potable and non-potable water distribution.

1. Documentation of products meeting regulatory lead-content restrictions.
2. Certification of proper soldering of copper piping joints.
3. Above-grade copper piping is to have mechanically crimped joints.

D. Section 22 1006 - Plumbing Piping Specialties: Specialties for potable and non-potable water distribution.

1. Documentation of products meeting regulatory lead-content restrictions.

E. Section 22 3000 - Plumbing Equipment: Plumbing pumps for non-potable water distribution.

F. Section 22 4000 - Plumbing Fixtures:

1. WaterSense-labeled water closets, urinals, lavatory faucets, and showerheads.
2. Documentation of products meeting regulatory lead-content restrictions.
3. Toilets supplied by non-potable water distribution.
4. Replacement plumbing fixtures.

G. Section 22 4300 - Healthcare Plumbing Fixtures:

1. WaterSense-labeled water closets, urinals, lavatory faucets, and showerheads.
2. Documentation of products meeting regulatory lead-content restrictions.

3.15 DIVISION 23 - HVAC

A. Section 23 0800 - Commissioning of HVAC.

B. Section 23 0130.51 - HVAC Air-Distribution System Cleaning: Remedial cleaning in the event Contractor's efforts under Section 01 5719 - Temporary Environmental Controls are insufficient.

C. Section 23 0519 - Meters and Gauges for HVAC Piping.

D. Section 23 0913 - Instrumentation and Control Devices for HVAC:

1. HVAC monitoring and metering devices.
2. For minimum ventilation performance.
3. Outdoor airflow measurement devices in HVAC system.
4. General ventilation control devices.
5. Carbon dioxide monitoring devices for ventilation control.
6. Humidity control devices.

E. Section 23 0923 - Direct-Digital Control System for HVAC:

F. Section 23 0993 - Sequence of Operations for HVAC Controls.

G. Section 23 2300 - Refrigerant Piping: Refrigerant options are limited those with ODP of zero and GWP of less than 50.

H. Section 23 2500 - HVAC Water Treatment: Water treatment to reduce cooling tower water usage.

I. Section 23 3100 - HVAC Ducts and Casings: For mechanical ventilation.

J. Section 23 3100 - HVAC Ducts and Casings: Emissions-compliant duct sealers.

K. Section 23 3423 - HVAC Power Ventilators: Exhaust fans.

L. Section 23 3600 - Air Terminal Units: Locally controlled HVAC terminal units.

M. Section 23 4000 - HVAC Air Cleaning Devices: Air filters.

N. Section 23 5216 - Condensing Boilers: High efficiency boilers.

O. Section 23 6100 - Refrigerant Compressors: Refrigerant options are limited those with ODP of zero and GWP of less than 50.

P. Section 23 6213 - Packaged Air-Cooled Refrigerant Compressor and Condenser Units: Refrigerant options are limited those with ODP of zero and GWP of less than 50.

Q. Section 23 6416 - Centrifugal Water Chillers: Refrigerant options are limited those with ODP of zero and GWP of less than 50.

R. Section 23 7313 - Modular Indoor Central-Station Air-Handling Units: Refrigerant options are limited those with ODP of zero and GWP of less than 50.

S. Section 23 7413 - Packaged Outdoor Central-Station Air-Handling Units: Refrigerant options are limited those with ODP of zero and GWP of less than 50.

T. Section 23 7433 - Dedicated Outdoor Air Units: Refrigerant options are limited those with ODP of zero and GWP of less than 50.

U. Section 23 8113 - Packaged Terminal Air-Conditioners: Refrigerant options are limited those with ODP of zero and GWP of less than 50.

V. Section 23 8119 - Self-Contained Air-Conditioners: Refrigerant options are limited those with ODP of zero and GWP of less than 50.

W. Section 23 8124 - Computer Room Air Conditioners - Floor Mounted: Refrigerant options are limited those with ODP of zero and GWP of less than 50.

X. Section 23 8125 - Computer Room Air Conditioners - Ceiling Mounted: Refrigerant options are limited those with ODP of zero and GWP of less than 50.

Y. Section 23 8126.13 - Small-Capacity Split-System Air Conditioners: Refrigerant options are limited those with ODP of zero and GWP of less than 50.

Z. Section 23 8129 - Variable Refrigerant Flow HVAC Systems: Refrigerant options are limited those with ODP of zero and GWP of less than 50.

AA. Section 23 8149 - Ground-Source Unitary Heat Pumps: For use with ground-loop piping and hydronic distribution system; refrigerant options are limited to those having ODP of zero and GWP of less than 50.

3.16 DIVISION 25 - INTEGRATED AUTOMATION

3.17 DIVISION 26 - ELECTRICAL

A. Section 26 0505 - Selective Demolition for Electrical:

1. Certification of removal and appropriate disposal of abandoned cables containing lead stabilizers.

2. Minor removal and disposal of mercury-containing lamps and PCB- and DEHP-containing ballasts.

B. Section 26 0513 - Medium-Voltage Cables: Wiring meeting lead-content restrictions.

C. Section 26 0519 - Low-Voltage Electrical Power Conductors and Cables: Conductors and cables meeting lead-content restrictions.

D. Section 26 0923 - Lighting Control Devices: Automatic lighting controls.

E. Section 26 1200 - Medium-Voltage Transformers: Replacement transformers.

F. Section 26 2200 - Low-Voltage Transformers: Replacement transformers.

G. Section 26 2713 - Electricity Metering.

H. Section 26 2726 - Wiring Devices: Manual lighting control devices.

I. Section 26 3100 - Photovoltaic Collectors: And related equipment and roof supports.

J. Section 26 5100 - Interior Lighting:

1. Limitations on mercury content of lamps.
2. Minimum rated lamp life.
3. Interior lighting fixtures selected and laid out to minimize light spillover through windows.

K. Section 26 5600 - Exterior Lighting:

1. Limitations on mercury content of lamps.
2. Minimum rated lamp life.
3. Site lighting fixtures that reduce light pollution.

3.18 DIVISION 27 - COMMUNICATIONS

A. Section 27 1000 - Structured Cabling: Limitations on lead content of cable insulation.

3.19 DIVISION 31 - EARTHWORK

A. Note: Temporary erosion and sediment control is located in Division 1.

B. Section 31 1000 - Site Clearing: Fences to protect vegetation not being removed; vegetation removal limits are indicated on drawings; site clearing waste management.

C. Section 31 2200 - Grading.

3.20 DIVISION 32 - EXTERIOR IMPROVEMENTS

A. Section 32 0190 - Operation and Maintenance of Planting: Maintenance contract for first year.

B. Section 32 1125 - Turf Surfaced Roadways.

C. Section 32 1313 - Concrete Paving.

D. Section 32 1413 - Precast Concrete Unit Paving: Open grid concrete unit pavers with gravel fill.

E. Section 32 3300 - Site Furnishings: Benches for places of respite; metal, precast concrete and wood.

F. Section 32 9219 - Seeding.

G. Section 32 9223 - Sodding.

H. Section 32 9300 - Plants: See drawings for specific plant materials.

3.21 DIVISION 33 - UTILITIES

A. Section 33 0513 - Manholes and Structures.

B. Section 33 4211 - Stormwater Gravity Piping.

END OF SECTION

SECTION 01355 - SECURITY PROCEDURES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Security measures including formal security program, entry control, personnel identification, guard service, and miscellaneous restrictions.

1.2 SECURITY PROGRAM

A. Protect Work, existing premises and Owner's operations from theft, vandalism, and unauthorized entry.

B. Initiate program at project mobilization.

C. Maintain program throughout construction period until Owner occupancy.

1.3 ENTRY CONTROL

A. Restrict entrance of persons and vehicles into Project site and existing facilities.

B. Allow entrance only to authorized persons with proper identification.

C. Maintain log of workers and visitors, make available to Owner on request.

D. Coordinate access of Owner's personnel to site in coordination with Owner's security forces.

1.4 PERSONNEL IDENTIFICATION

A. Provide identification badge to each person authorized to enter premises.

B. Badge To Include: Personal photograph, name, assigned number, expiration date and employer.

C. Maintain a list of accredited persons, submit copy to Owner on request.

D. Require return of badges at expiration of their employment on the Work.

1.5 GUARD SERVICE

1.6 RESTRICTIONS

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION

SECTION 01 3566.05
PROJECT SUSTAINABILITY GOAL CREDIT SUMMARY - LEED V4

PART 1 GENERAL

1.01 PROJECT GOALS

A. This project has been designed to achieve the LEED Certified (minimum 40 points) rating as defined in USGBC LEED v4-BD+C for New Construction.

1. This project is pursuing MR: Building Product Disclosure and Optimization (BPDO) category credit(s) for Environmental Product Declarations, Sourcing of Raw Materials and Materials Ingredients.

a. To achieve Environmental Product Declarations category points, project has targeted successful completion of requirements of Option 1, Environmental Product Declaration path and Option 2, Multi-Attribute Optimization path.

b. To achieve Sourcing of Raw Materials category points, project has targeted successful completion of requirements of Option 1, Raw Material Source and Extraction Reporting path and Option 2, Leadership Extraction Practices path.

c. To achieve Material Ingredients category points, project has targeted successful completion of requirements of Option 1, Material Ingredient Reporting path, Option 2, Material Ingredient Optimization path and Option 3, Product Manufacturer Supply Chain Optimization path.

2. This project is also pursuing EQ: Low-Emitting Materials credit(s) using the Product Category Calculations Method and Budget Calculation Method.

1.02 RELATED REQUIREMENTS

A. Section 013329.02 - Sustainable Design Reporting - LEED v4 for Contractor's reporting responsibilities.

B. Section 01 3566.12 - Sustainability Certification Project Procedures - LEED v4 for Contractor's procedural responsibilities.

1.03 DEFINITIONS

A. Sustainability Rating System: United States Green Building Council's LEED v4 for New Construction.

B. Required: Achievement of this credit is essential for certification of this project.

C. Preferred: Achievement of this credit would be desirable but is not mandatory.

D. Not Required: Achievement of this credit is not expected or not possible for this project.

E. To Be Provided: Provided via one or more construction contracts.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - CREDIT SUMMARY

3.01 SPECIAL PREREQUISITE (FOR HEALTHCARE PROJECTS ONLY)

A. Prerequisite - Required - No points - Integrative project Planning and Design.

1. Design of the project maximizes opportunities for integrated, cost-effective adoption of green design and construction strategies, emphasizing human health as a fundamental evaluative criterion for building design, construction and operational strategies. It utilizes innovative approaches and techniques for green design and construction.

3.02 GENERAL

A. Credit - Undecided - 1 point - Integrative Process.

1. The project has engaged in this process to support high-performance, cost-effective project outcomes through an early analysis of the interrelationships among systems.

3.03 LOCATION AND TRANSPORTATION (LT)

A. LT Credit - Required- New Construction (8 to 16) Points - LEED for Neighborhood Development Location. Projects attempting this credit are not eligible to earn points under other Location and Transportation credits.

1. Project is located within the boundary of a development certified under LEED for Neighborhood Development.

3.04 SUSTAINABLE SITES (SS)

A. SS Prerequisite - Required - No points - Construction Activity Pollution Prevention.

1. During Construction:

a. Preventive measures and remediation are specified in Section 01 5713.

b. Dust control and basic surface drainage are specified in Section 01 7000.

c. Preventive measures prescribed by state law will be followed.

2. Permanent erosion and sedimentation prevention features will be provided:

a. Grading for sediment traps and retention ponds is specified in Section 31 2200.

b. Riprap is specified in Section 31 3700.

c. Turf (for lawns) is specified in Section 32 9219 (seeding).

d. Plants are specified in Section 32 9300.

e. Open grid concrete pavers are specified in Section 32 1413.

B. SS Prerequisite - Required - No points - Environmental Site Assessment - Schools and Healthcare:

1. Site has been assessed for environmental contamination. Environmental contamination remediation is part of this project.

C. SS Credit - Undecided - 1 point - Site Assessment - Building Design and Construction projects.

D. SS Credit - Undecided - 1 to 3 points - Rainwater Management - Building Design and Construction projects.

1. The project reduces runoff volume and improves water quality in a manner that meets the criteria for this Credit.

a. Grading is specified in Section 31 2200.

b. Riprap is specified in Section 31 3700.

c. Plants are specified in Section 32 9300.

E. SS Credit - Undecided - 1 to 2 points - Site Development - Protect or Restore Habitat - Building Design and Construction projects.

F. SS Credit - Undecided - 1 point - Open Space - Building Design and Construction projects.

G. SS Credit - Undecided - 1 to 2 points - Heat Island Reduction - Building Design and Construction projects.

1. The project minimizes effects on microclimates and human and wildlife habitats by reducing heat islands.

a. Option 1 - Combination of measures meeting criteria of the Credit is used to achieve claimed number of points.

1) High-Reflectance Roof - Using roof materials with required minimum solar reflectance index values.

(a) Modified bituminous membrane roofing with cap sheet meeting the requirements is specified in Section 07 5200.

H. SS Credit - Undecided - 1 point - Light Pollution Reduction - Building Design and Construction projects.

1. The project's design increases night sky access, improves nighttime visibility, and reduces the consequences of development for wildlife and people.

a. Light Trespass - Option 1 (BUG Rating Method) - The project meets the criteria for this Credit.

2. Appropriate exterior lighting fixtures are specified in Section 26 5600.

3. Appropriate interior lighting fixtures are specified in Section 26 5100.

4. Lighting control devices for automatic control of lighting are specified in Section 26 0923.

I. SS Credit - Undecided - 1 point - Site Master Plan (for Schools project only).

1. A site master plan for the school has been developed in collaboration with school authorities.

J. SS Credit - Undecided - 1 point - Joint Use of Facilities (for Schools project only).

1. The project integrates the school with the community by sharing the building and its playing fields for nonschool events and functions using one of the options below.

a. Option 1 - Makes building space open to the general public.

3.05 WATER EFFICIENCY (WE)

A. WE Prerequisite - Required - No points - Outdoor Water Use Reduction - Building Design and Construction projects.

B. WE Prerequisite - Required - No points - Indoor Water Use Reduction.

C. WE Prerequisite - Required - No points - Building-Level Water Metering - Building Design and Construction projects.

1. Permanent water meters for potable water are specified in Section 22 0519.

D. WE Prerequisite - Required - No points - Water Metering - Homes Design and Construction projects.

E. WE Credit - Required - 1 to 2 points - Outdoor Water Use Reduction - Building Design and Construction projects.

1. Option 1 - The landscaping does not require irrigation, and no permanent irrigation system is provided beyond a maximum two-year establishment period.

a. The climate provides adequate rainfall for the landscaping intended without need for irrigation.

b. Plants that do not require irrigation are specified in Section 32 9300.

F. WE Credit - Undecided - 1 to 7 Points - Indoor Water Use Reduction.

1. Further reductions in water use have been achieved meeting the criteria for the number of points claimed for this Credit.

2. Appropriate high efficiency and/or waterless fixtures are specified in Section 22 4000.

G. WE Credit - Undecided - 1 point - Water Metering - Building Design and Construction projects.

1. The project includes permanent water metering specified in Section 22 0519 for the following two or more water subsystems:
    a. Indoor plumbing fittings and fixtures are specified in Section 22 4000.
    b. Domestic hot water piping is specified in Section 22 1005.

3.06 ENERGY & ATMOSPHERE (EA)

A. EA Prerequisite - Required - No points - Fundamental Commissioning and Verification.
    1. Requirement for commissioning performed by and under the supervision of an independent commissioning authority is included in the Contract Documents.
    2. Detailed demonstration and training for commissioning is specified in Section 01 7900.
    3. General commissioning criteria are specified in Section 01 9113.
    4. The commissioning authority's responsibilities are specified in Section 01 9114 for Contractor's information only.
    5. Commissioning of HVAC is specified in Section 23 0800.

B. EA Prerequisite - Required - No points - Minimum Energy Performance - Building Design and Construction projects.
    1. Option 2 - Prescriptive Compliance, ASHRAE 50% Advanced Energy Design Guide: Design complies with the mandatory and prescriptive provisions of ANSI/ASHRAE/IESNA Standard 90.1–2010, with errata (or a USGBC-approved equivalent standard for projects outside the U.S.).
    2. The building envelope, HVAC, lighting, etc., have been designed to meet the criteria for this prerequisite.
    3. The overall design solution is implemented in the drawings and many sections of the specifications.

C. EA Prerequisite - Required - No points - Building-Level Energy Metering - Building Design and Construction projects.
    1. Continuous metering systems that meet the credit criteria are to be provided.
        a. Plumbing metering devices are specified in Section 22 0519.
        b. General HVAC monitoring and metering devices are specified in Section 23 0913.

D. EA Prerequisite - Required - No points - Fundamental Refrigerant Management.
    1. New equipment: No CFC-based refrigerants are used in any equipment. Non-CFC refrigerants are specified in the following sections:

E. EA Credit - Undecided - Optimize Energy Performance - Building Design and Construction projects.
    1. Option 2 - 1 to 6 Points - Prescriptive Compliance, ASHRAE Advanced Energy Design Guide: Design meets the criteria for the number of points claimed for this Credit.
    2. The building envelope, HVAC, lighting, etc., have been designed to meet the criteria for the number of points claimed for this Credit.
    3. The overall design solution is implemented in the drawings and many sections of the specifications.

F. EA Credit - Undecided - 1 to 3 points - Renewable Energy Production - Building Design and Construction projects.
    1. Renewable energy systems provide the percentage of the project's total energy cost required for the number of points indicated.

2. The following on-site systems, along with utility net metering, are provided:
    a. Geothermal power generation; specified in Section [_____].

G. EA Credit - Undecided - 2 to 6 points - Enhanced Commissioning - Building Design and Construction projects.
1. Option 1 - Enhanced Systems Commissioning applies to the project.
    a. Path 1 - Enhanced Commissioning compliance path is used.
2. The commissioning authority's responsibilities with regard to design phase review, review of Contractor's submittals, and post-occupancy review are specified in Section 01 9114, which is included for Contractor's information only.

H. EA Credit - Undecided - 1 point - Enhanced Refrigerant Management.
1. Option 2 - Calculation of Refrigerant Impact: The project meets the criteria for this Credit.
2. No Halon is used in any equipment or extinguishing system.

I. EA Credit - Undecided - 1 point - Advanced Energy Metering - Building Design and Construction projects.
1. Continuous advanced energy metering systems that meet the Credit criteria will be provided.
    a. Plumbing metering devices are specified in Section 22 0519.
    b. General HVAC monitoring and metering devices are specified in Section 23 0913.
    c. Lighting, motor, and other electrical load metering devices are specified in Division 26.

3.07 MATERIALS & RESOURCES

A. MR Prerequisite - Required - No points - Storage & Collection of Recyclables.
1. The area designated for collection and storage of recyclables is indicated on the drawings.
2. Bins, waste cans, can crushers, etc., are considered furnishings and are therefore not part of the construction contract.

B. MR Prerequisite - Required - No points - Construction and Demolition Waste Management Planning.
1. Waste diversion goals have been established for the project.

C. MR Credit - Undecided - 2 to 6 points - Building Life-Cycle Impact Reduction.

D. MR Credit - Undecided - 1 to 2 points - Building Product Disclosure and Optimization - Environmental Product Declarations.
1. Option 1 - Environmental Product Declaration (EPD): To achieve Environmental Product Declarations category points, project has targeted successful completion of requirements of this Option.

E. MR Credit - Undecided - 1-2 points - Building Product Disclosure and Optimization - Sourcing of Raw Materials.
1. Option 1 - Raw Material Source and Extraction Reporting: To achieve Sourcing of Raw Materials category points, project has targeted successful completion of requirements of this Option.

F. MR Credit - Undecided - 1 to 2 points - Building Product Disclosure and Optimization - Material Ingredients - Building Design and Construction projects.
1. Option 1 - Material Ingredient Reporting: To achieve Material Ingredients category points, project has targeted successful completion of requirements of this Option.

G. MR Credit - Undecided - Construction and Demolition Waste Management.

1. Option 1 - Diversion.

a. Path 1 - Divert 50 percent of waste, and Three Material Streams - 1 point. The project has targeted achievement of this Credit. It requires the Contractor to meet its criteria, including record-keeping and reporting.

b. Construction procedures and measurement of diverted waste are specified in Section 01 7419. This section requires the Contractor to perform the measurement and computation.

c. Waste prevention and disposal procedures specific to certain types of work are specified in many sections.

3.08 INDOOR ENVIRONMENTAL QUALITY

A. EQ Prerequisite - Required - No points - Minimum Indoor Air Quality (IAQ) Performance - Building Design and Construction projects.

1. Requirements for monitoring of mechanically-ventilated spaces that meet the criteria for this prerequisite are specified in Section 23 0913.

2. The overall design solution is implemented in the drawings and many sections of the specifications.

B. EQ Prerequisite - Required - No points - Environmental Tobacco Smoke (ETS) Control.

1. Owner intends to prohibit smoking in the building.

a. Owner will provide signage indicating no-smoking policy.

C. EQ Prerequisite - Required - No points - Minimum Acoustic Performance (for Schools projects only).

1. Design meets the criteria for this prerequisite.

D. EQ Credit - Undecided - 1 to 2 points - Enhanced Indoor Air Quality (IAQ) Strategies - Building Design and Construction projects.

1. Option 1 - Enhanced IAQ Strategies.

a. Design of the project meets the criteria for these Credits.

b. Entryway Systems:

1) Floor mats and recessed frames are specified in Section 12 4813.

E. EQ Credit - Undecided - 1 point - Construction IAQ Management Plan.

1. Good construction procedures intended to prevent future problems are specified in Section 01 5719.

F. EQ Credit - Undecided - 1 to 3 points - Low-Emitting Materials.

1. Product criteria and reporting criteria for VOC-restricted products are specified in Section 01 6116.

2. Prohibited Content Installer Certification form is included as Section 01 3329.07.

3. Option 1 - Product Category Calculations. The project uses this option to meet the criteria for the claimed number of points for these Credits.

a. Interior paints and coatings applied on site. Calculated by volume.

b. Interior adhesives and sealants applied on site (including flooring adhesive). Calculated by volume

c. Flooring. 100 percent.

d. Composite Wood. 100 percent not covered by other product categories.

e. Healthcare and Schools Projects only: Exterior applied products. Calculated by volume.

4. The following products are used in this project and meet the specified VOC restrictions criteria for this Credit:

a. All adhesives used on the project, whether explicitly specified or not, are considered VOC-restricted products.

b. Composite Wood: Particleboard, plywood, medium density fiberboard (MDF), wheatboard, strawboard, panel substrates, door cores, and laminating adhesives used on-site or in the shop.

1) A project-wide prohibition on use of these products if they contain added urea-formaldehyde is specified.

c. Exterior Applied Products (for Healthcare and Schools projects only); specified in various sections.

1) Hot-mopped asphalt for roofing and coal-tar sealants for parking lots and other paved surfaces are prohibited, and are not specified for the project.

d. Firestopping sealants; specified in Section 07 8400.

e. Architectural joint sealants; specified in Section 07 9200.

f. Carpet; specified in Section 09 6816.

g. Carpet tile; specified in Section 09 6813.

h. Adhesives used in connection with carpet systems.

i. Interior paints and stains are specified in Section 09 9123.

1) Water-based paints or solvent-based paints with VOC content meeting the credit criteria are used for all interior opaque applications.

2) Other coatings, such as stains and clear finishes, are specified to meet the most stringent of federal EPA, state, or local criteria.

j. Duct sealers and sealants; specified in Section 23 3100.

G. EQ Credit - Undecided - 1 point - Thermal Comfort.

1. Thermal Comfort Design.

a. Option 1 - ASHRAE Std 55-2010. The project has been designed to meet criteria for this Credit.

2. HVAC Controls: Controls will be provided for at least 50 percent of individual occupant spaces.

H. EQ Credit - Undecided - 1 to 3 points - Daylight.

1. The project design facilitates daylighting necessary to meet the Credit criteria.

2. Option 3 - Measurement: The project will verify that illuminance levels that meet the criteria for these Credits have been achieved.

I. EQ Credit - Undecided - 1 to 2 points - Quality Views.

1. The project design provides views meeting the Credit criteria.

J. EQ Credit - Undecided - 1 to 2 points - Acoustic Performance.

1. The project design achieves HVAC maximum background noise levels restrictions meeting criteria for these Credits.

2. The project design includes STC class ratings meeting criteria for this Credit as applicable to walls, partitions and floor-ceiling assemblies.

3.09 INNOVATION (IN)

A. IN Credit - Undecided - 1 to 5 points - Innovation.

1. Option 1 - Design of the project achieves significant, measurable environmental performance using a strategy not addressed in the LEED green building rating system.

3.10 REGIONAL PRIORITY (RP)

A. RP Credit - Undecided - 4 points - Region Specific Environmental Priority.

END OF SECTION

SECTION 01 3566.12
SUSTAINABILITY CERTIFICATION PROJECT PROCEDURES - LEED V4

PART 1 GENERAL

1.01 PROJECT APPROACH

A. This project intends to achieve recognition for sustainable design using LEED v4 Certification program.

B. Contractor is not responsible for the application for Sustainability certification, nor for determination of methods of achieving Sustainability credits unless specifically so indicated.

C. Many of the Sustainability credits can be achieved only through intelligent design of the project and are beyond the control of the Contractor. However, certain credits relate to the products and procedures used for construction. Therefore, full cooperation of the Contractor and subcontractors is essential to achieving final certification goal, and they must familiarize themselves with the relevant requirements, and provide the necessary information and instructions to product suppliers and installers.

D. Since Contractor and subcontractors may not be familiar with detailed LEED Sustainability procedures, this section includes a list of other specifications sections that contain related requirements for products and procedures necessary for achievement of targeted Sustainability certification level.

1. Achievement of many prerequisites and credits is dependent on proper performance by Contractor and subcontractors, using specific required project management and work execution means and methods.

2. Achievement of other credits involves quantifying percentages of installed products by weight and cost; these require careful recordkeeping and reporting by the Contractor.

3. See www.usgbc.org for more information.

1.02 RELATED REQUIREMENTS

A. General and Technical Sections: Sections that include requirements intended to achieve Sustainability Credits include, but are not limited to, the following:

B. DIVISION 1 - GENERAL REQUIREMENTS

1. Section 01 1000 - Summary.

2. Section 013329.02 - Sustainable Design Reporting - LEED v4: Requirements and procedures for sustainable design documentation.

3. Section 01 3329.07 - Prohibited Content Installer Certification: Certification by each installer working on project regardless of product type.

4. Section 01 5713 - Temporary Erosion and Sediment Control: Preventive measures and remediation.

5. Section 01 5719 - Temporary Environmental Controls.

a. Basic construction procedures.

b. Contractor's IAQ management plan and construction procedures.

c. Testing of ventilation.

d. Full building flush out before occupancy is required.

e. Air contaminant testing must be performed by Contractor.

f. Air contaminant testing may be substituted for building flush out, at Contractor's option.

6. Section 01 6000 - Product Requirements.

a. Definitions of:
    1) Reused Products.
    2) Recycled Content.
    3) Bio-Based content.
    4) Sustainable forestry certified Wood.
    5) Source Location.
    6) Environmental Product Declarations.
    7) Health Product Declarations.
    8) Cradle-to-Cradle.
    9) GreenScreen Chemical Hazard Analysis.
    10) Manufacturer's Inventory of Product Content.
b. Regionally-sourced products.
    1) Contractor is not required to provide any particular minimum percentage of regionally-sourced products; however, Contractor is required to collect and submit information necessary to determine whether the material is eligible for application of cost multiplier for products sourced within 100 miles (160 Km) of the project site.

7. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions: List of indoor-emissions-restricted products and VOC-content-restricted products, requirements, evidence required, and reporting.
8. Section 01 7000 - Execution and Closeout Requirements.
    a. Dust control and basic surface drainage.
    b. Alterations procedures and selective demolition for preserving existing construction.
9. Section 01 7610 - Temporary Protective Coverings: Temporary protection materials to be reused or recycled.
10. Section 01 7419 - Construction Waste Management and Disposal: Requirements for landfill diversion and reporting.
11. Section 01 7800 - Closeout Submittals: Maintenance and operation manuals for commissioned systems.
12. Section 01 7900 - Demonstration and Training.
    a. Demonstration of commissioned systems and equipment.
    b. Training of Owner's personnel.
13. Section 01 9113 - General Commissioning Requirements.
14. Section 01 9114 - Commissioning Authority Responsibilities.
    a. LEED Fundamental Commissioning.
    b. LEED Additional Commissioning.

C. DIVISION 2 - EXISTING CONDITIONS
1. Section 02 4100 - Demolition.
    a. Demolition of existing pavements and other impervious surfacing.

b. Partial demolition for preserving existing construction.

2. Section 02 6500 - Underground Storage Tank Removal
3. Section 02 8213 - Asbestos Abatement
4. Section 02 8400 - Polychlorinate Biphenyl (PCB) Remediation: Abatement of PCBs, mercury, and other substances regulated under the U.S. Federal Toxic Substances Control Act (TSCA).

D. DIVISION 3 - CONCRETE

1. Section 03 3000 - Cast-in-Place Concrete: Replacement of Portland cement, to some extent, with recycled content.
2. Section 03 4100 - Precast Structural Concrete: Replacement of Portland cement, to some extent, with recycled content.
3. Section 03 4500 - Precast Architectural Concrete: Replacement of Portland cement, to some extent, with recycled content.
4. Section 03 4713 - Tilt-Up Concrete: Replacement of Portland cement, to some extent, with recycled content.

E. DIVISION 5 - METALS

1. Section 05 5000 - Metal Fabrications: Custom-fabricated recessed mat frames at regularly used exterior entrances.
2. Section 05 5305: Manufactured foot grilles at regularly used exterior entrances.
3. Section 05 5305 - Metal Gratings and Floor Plates: Custom-fabricated metal gratings at regularly used exterior entrances.

F. DIVISION 6 - WOOD, PLASTICS, AND COMPOSITES

1. Section 06 1000 - Rough Carpentry: Requirement to use sustainable forestry certified wood.
2. Section 06 1323 - Heavy Timber Framing: Requirement to use sustainable forestry certified wood.
3. Section 06 1326 - Heavy Timber Trusses: Requirement to use sustainable forestry certified wood.
4. Section 06 1500 - Wood Decking: Requirement to use sustainable forestry certified wood.
5. Section 06 1733 - Wood I-Joists: Requirement to use sustainable forestry certified wood.
6. Section 06 1736 - Metal-Web Wood Joists: Requirement to use sustainable forestry certified wood.
7. Section 06 1753 - Shop-Fabricated Wood Trusses: Requirement to use sustainable forestry certified wood.
8. Section 06 1800 - Glued-Laminated Construction: Requirement to use sustainable forestry certified wood.
9. Section 06 2000 - Finish Carpentry: Requirement to use sustainable forestry certified wood.
10. Section 06 4100 - Architectural Wood Casework: Requirement to use sustainable forestry certified wood.
11. Section 06 4200 - Wood Paneling: Requirement to use sustainable forestry certified wood.

G. DIVISION 7 - THERMAL AND MOISTURE PROTECTION

1. Section 07 1300 - Sheet Waterproofing: For vegetated roof.
2. Section 07 1400 - Fluid-Applied Waterproofing: For vegetated roof.

3. Section 07 2100 - Thermal Insulation.
    a. Insulation in exterior walls.
    b. Acoustical insulation.
4. Section 07 2400 - Exterior Insulation and Finish Systems: Water-managed systems.
5. Section 07 2500 - Weather Barriers.
    a. Continuous air barriers.
    b. Vapor retarders installed as per energy code requirements.
6. Section 07 4113 - Metal Roof Panels: Rain water collection surface.
7. Section 07 5100 - Built-Up Bituminous Roofing: Unballasted white or light-colored roofing with minimum SRI specified.
8. Section 07 5200 - Modified Bituminous Membrane Roofing.
    a. Unballasted white or light-colored roofing with minimum SRI specified:
    b. For vegetated roof.
9. Section 07 5300 - Elastomeric Membrane Roofing.
    a. Unballasted white or light-colored roofing with minimum SRI specified:
    b. For vegetated roof.
10. Section 07 5400 - Thermoplastic Membrane Roofing.
    a. Unballasted white or light-colored roofing with minimum SRI specified.
    b. For vegetated roof.
11. Section 07 5050 - Vegetated Roof Components: Plants, planting modules, fill, and insulation.
12. Section 07 6100 - Sheet Metal Roofing.
    a. Rain water collection surface.
    b. Lead-free metals.
13. Section 07 6200 - Sheet Metal Flashing and Trim: Lead-free flashing.
14. Section 07 7100 - Roof Specialties.
    a. Lead-free metals.
    b. Downspouts directed into planted area or other landscape features.
    c. Downspouts directed to rainwater harvesting tanks or cisterns.
15. Section 07 7123 - Manufactured Gutters and Downspouts.
    a. Lead-free metals.
    b. Downspouts directed into planted area or other landscape features.
    c. Downspouts directed to rainwater harvesting tanks or cisterns.
16. Section 07 8400 - Firestopping.
    a. Emissions-compliant firestopping sealants.
    b. Sealing penetrations in walls, floors, and ceilings between residential units.
17. Section 07 9200 - Joint Sealants.

a. Emissions-compliant sealants.

b. Sealing penetrations in walls, floors, and ceilings between residential units.

H. DIVISION 8 - OPENINGS

1. Section 08 1416 - Flush Wood Doors: For sustainable forestry certified wood.
2. Section 08 1423 - Clad Wood Doors: For sustainable forestry certified wood.
3. Section 08 3613 - Sectional Doors: For sustainable forestry certified wood.
4. Section 08 4313 - Aluminum-Framed Storefronts: For daylighting and views.
5. Section 08 4413 - Glazed Aluminum Curtain Walls: For daylighting and views.
6. Section 08 4500 - Translucent Wall and Roof Assemblies: For daylighting.
7. Section 08 5113 - Aluminum Windows.
   a. For maximized home energy performance.
   b. For daylighting and views.
8. Section 08 5123 - Steel Windows: For daylighting and views.
9. Section 08 5200 - Wood Windows.
   a. For maximized home energy performance.
   b. For daylighting, views and sustainable forestry certified wood.
10. Section 08 5313 - Vinyl Windows.
    a. For maximized home energy performance.
    b. For daylighting and views.
11. Section 08 5400 - Composite Windows.
    a. For maximized home energy performance.
    b. For daylighting, views and sustainable forestry certified wood.
12. Section 08 7100 - Door Hardware.
13. Section 08 8000 - Glazing: For daylighting and views.

I. DIVISION 9 - FINISHES

1. Section 09 2116 - Gypsum Board Assemblies: Deck-to-deck sealed partitions around rooms where hazardous gases or chemicals are present or used.
2. Section 09 5100 - Acoustical Ceilings: Low-Emitting Materials.
3. Section 09 6229 - Cork Flooring: Flooring made of bio-based or sustainable forestry certified material.
   a. VOC-restrictions for adhesives.
4. Section 09 6500 - Resilient Flooring: VOC restrictions.
5. Section 09 6566 - Resilient Athletic Flooring: VOC restrictions.
6. Section 09 6700 - Fluid-Applied Flooring: VOC restrictions.
7. Section 09 6813 - Tile Carpeting: Carpet tile complying with CRI Green Label Plus requirements.
8. Section 09 6816 - Sheet Carpeting: Carpet complying with CRI Green Label Plus requirements.

9. Section 09 6900 - Access Flooring.
    a. Systems facilitating future project space flexibility, ease of adaptive use,
10. Section 09 7200 - Wall Coverings: Emissions-compliant Wall Coverings;.
11. Section 09 9113 - Exterior Painting.
    a. Lead-free exterior paint.
    b. Exterior paint with no intentionally added cadmium.
12. Section 09 9123 - Interior Painting: Emissions-compliant interior opaque paints and coatings.
    a. Lead-free interior paint.
    b. Interior paint with no intentionally added cadmium.
13. Section 09 9600 - High-Performance Coatings: Emissions-compliant interior opaque high performance coatings.

J. DIVISION 10 - SPECIALTIES
1. Section 10 1400 - Signage.
    a. "No Smoking" signs, and signs identifying designated outdoor smoking areas.
    b. Signs identifying preferred parking spaces for green vehicles.
    c. Signs identifying preferred parking spaces for car-van pooling vehicles.
    d. Signage at parking entrances stating discounted rate for green vehicles.
    e. Signage for areas of respite.
2. Section 10 2219 - Demountable Partitions.
    a. Systems facilitating future project space flexibility, ease of adaptive use,
3. Section 10 5100 - Lockers: Lockers near bicycle entrance; metal.
4. Section 10 7113.43 - Fixed Sun Screens.

K. DIVISION 11 - EQUIPMENT
1. Section 11 4000 - Foodservice Equipment: Energy Star rated appliances.
2. Section 11 5300 - Laboratory Equipment.
    a. Indoor water-use-reducing equipment.
3. Section 12 2400 - Interior Automatic Shading Devices:
    a. For glare control.
4. Section 11 8226 - Facility Waste Compactors: For recycling.
5. DIVISION 12 - FURNISHINGS
6. Section 12 2400 - Window Shades: Motorized window shades.
7. Section 12 3100 - Manufactured Metal Casework.
    a. Systems facilitating future project space flexibility, ease of adaptive use.
8. Section 12 3200 - Manufactured Wood Casework.
    a. Sustainable forestry certified wood.
    b. Systems facilitating future project space flexibility, ease of adaptive use.

9. Section 12 3553.13 - Metal Laboratory Casework.
10. Section 12 3600 - Countertops: Requirement to use sustainable forestry certified wood.
11. Section 12 4813 - Entrance Floor Mats and Frames: Manufactured recessed floor grilles at high volume entryways.

L. DIVISION 13 - SPECIAL CONSTRUCTION

1. Section 13 3100 - Fabric Structures: Shade structures for heat island reduction.

M. DIVISION 21 - FIRE SUPPRESSION

1. Section 21 2200 - Clean-Agent Fire-Extinguishing System: Non-water based fire suppression equipment using extinguishing agent other than Halon.

N. DIVISION 22 - PLUMBING

1. Building-level water meter is provided by the local utility.
2. Section 22 0519 - Meters and Gauges for Plumbing Piping: Plumbing metering devices for water subsystems.
3. Section 22 0719 - Plumbing Piping Insulation: Domestic hot water piping insulation.
4. Section 22 1005 - Plumbing Piping: Potable and non-potable water distribution.
    a. Documentation of products meeting regulatory lead-content restrictions.
    b. Certification of proper soldering of copper piping joints.
    c. Above-grade copper piping is to have mechanically crimped joints.
5. Section 22 1006 - Plumbing Piping Specialties: Specialties for potable and non-potable water distribution.
    a. Documentation of products meeting regulatory lead-content restrictions.
6. Section 22 3000 - Plumbing Equipment:
    a. Plumbing pumps for non-potable water distribution.
    b. Efficient domestic hot water equipment.
7. Section 22 4000 - Plumbing Fixtures.
    a. WaterSense-labeled water closets, urinals, lavatory faucets, and showerheads.
    b. Documentation of products meeting regulatory lead-content restrictions.
    c. Toilets supplied by non-potable water distribution.
    d. Showers near bicycle entrance.
    e. Replacement plumbing fixtures.
    f. High efficiency and dry toilet fixtures; occupant sensors.

O. DIVISION 23 - HVAC

1. Section 23 0130: Refrigerant recycling and recovery; replacement of CFC and HCFC refrigerants in existing equipment.
2. Section 23 0130.51 - HVAC Air-Distribution System Cleaning: Remedial cleaning in the event Contractor's efforts under Section 01 5719 - Temporary Environmental Controls are insufficient.
3. Section 23 0519 - Meters and Gauges for HVAC Piping.

4. Section 23 0593 - Testing, Adjusting, and Balancing for HVAC.
5. Section 23 0800 - Commissioning of HVAC.
6. Section 23 0913 - Instrumentation and Control Devices for HVAC.
    a. HVAC monitoring and metering devices.
    b. For minimum ventilation performance.
    c. Outdoor airflow measurement devices in HVAC system.
    d. General ventilation control devices.
    e. Carbon dioxide monitoring/sensor devices.
    f. Humidity control devices.
7. Section 23 0923 - Direct-Digital Control System for HVAC.
8. Section 23 0943 - Pneumatic Control System for HVAC.
9. Section 23 0993 - Sequence of Operations for HVAC Controls.
10. Section 23 2113 - Hydronic Piping: Connection to non-potable water distribution.
11. Section 23 2113.33 - Ground-Loop Heat-Pump Piping: Connection to non-potable water distribution.
12. Section 23 2114 - Hydronic Specialties: Radiator valves
13. Section 23 2300 - Refrigerant Piping: Refrigerant options are limited those with ODP of zero and GWP of less than 50.
14. Section 23 2500 - HVAC Water Treatment: Water treatment to reduce cooling tower water usage.
15. Section 23 3100 - HVAC Ducts and Casings: For mechanical ventilation.
16. Section 23 3100 - HVAC Ducts and Casings: Emissions-compliant duct sealers.
17. Section 23 3423 - HVAC Power Ventilators: Exhaust fans.
18. Section 23 3600 - Air Terminal Units: Locally controlled HVAC terminal units.
19. Section 23 4000 - HVAC Air Cleaning Devices: Air filters.
20. Section 23 5216: Boilers incorporating required water conservation features.
21. Section 23 5400 - Furnaces: Furnaces for residential construction.
22. Section 23 5613.13 - Heating Solar Flat-Plate Collectors.
23. Section 23 6100 - Refrigerant Compressors: Refrigerant options are limited those with ODP of zero and GWP of less than 50.
    a. Non-CFC refrigerant.
24. Section 23 6213 - Packaged Air-Cooled Refrigerant Compressor and Condenser Units: Refrigerant options are limited those with ODP of zero and GWP of less than 50.
    a. Non-CFC refrigerant.
25. Section 23 6313 - Air Cooled Refrigerant Condensers: Refrigerant options are limited those with ODP of zero and GWP of less than 50.
    a. Non-CFC refrigerant.
26. Section 23 7333: Central air conditioning systems.
27. 23 6423 - Water Cooled Chillers

28. 23 6513 - Closed Circuit Cooling Towers
29. 23 6514 - Induced Draft Cooling Towers
30. Section 23 7313 - Modular Indoor Central-Station Air-Handling Units: Refrigerant options are limited those with ODP of zero and GWP of less than 50.
31. Section 23 7413 - Packaged Outdoor Central-Station Air-Handling Units: Refrigerant options are limited those with ODP of zero and GWP of less than 50.
32. Section 23 7433 - Dedicated Outdoor Air Units: Refrigerant options are limited those with ODP of zero and GWP of less than 50.
33. Section 23 8126.13 - Small-Capacity Split-System Air Conditioners: Refrigerant options are limited those with ODP of zero and GWP of less than 50.
34. Section 23 8129 - Variable Refrigerant Flow HVAC Systems: Refrigerant options are limited those with ODP of zero and GWP of less than 50.
35. Section 23 8149 - Ground-Source Unitary Heat Pumps: For use with ground-loop piping and hydronic distribution system; refrigerant options are limited to those having ODP of zero and GWP of less than 50.
36. Section 23 8200 - Convection Heating and Cooling Units. Radiators.

P. DIVISION 26 - ELECTRICAL

1. Section 26 0505 - Selective Demolition for Electrical.
    a. Certification of removal and appropriate disposal of abandoned cables containing lead stabilizers.
2. Section 26 0513 - Medium-Voltage Cables: Wiring meeting lead-content restrictions.
3. Section 26 0519 - Low-Voltage Electrical Power Conductors and Cables: Conductors and cables meeting lead-content restrictions.
4. Section 26 0918 - Remote Control Switching Devices.
5. Section 26 0923 - Lighting Control Devices: Automatic lighting controls.
6. Section 26 1200 - Medium-Voltage Transformers: Replacement transformers.
7. Section 26 2200 - Low-Voltage Transformers: Replacement transformers.
8. Section 26 2713 - Electricity Metering.
9. Section 26 2726 - Wiring Devices: Manual lighting control devices.
10. Section 26 5100 - Interior Lighting.
    a. Limitations on mercury content of lamps.
    b. Minimum rated lamp life.
    c. Replacement ballasts for existing fixtures.
    d. Interior lighting fixtures selected and laid out to minimize light spillover through windows.
11. Section 26 5600 - Exterior Lighting.
    a. Limitations on mercury content of lamps.
    b. Minimum rated lamp life.
    c. Site lighting fixtures that reduce light pollution.

Q. DIVISION 27 - COMMUNICATIONS

1. Section 27 1000 - Structured Cabling: Limitations on lead content of cable insulation.
2. Section 27 5119 - Sound Masking Systems: Systems for acoustic comfort design in open office areas.

R. DIVISION 31 - EARTHWORK

1. Note: Temporary erosion and sediment control is located in Division 1.
2. Section 31 1000 - Site Clearing: Fences to protect vegetation not being removed; vegetation removal limits are indicated on drawings; site clearing waste management.
3. Section 31 2200 - Grading.
4. Section 31 3700 - Riprap.

S. DIVISION 32 - EXTERIOR IMPROVEMENTS

1. Section 32 0190 - Operation and Maintenance of Planting: Maintenance contract for 90 days.
2. Section 32 1125 - Turf Surfaced Roadways.
3. Section 32 1313 - Concrete Paving.
4. Section 32 1413 - Precast Concrete Unit Paving: Open grid concrete unit pavers with gravel fill.
5. Section 32 1723.13 - Painted Pavement Markings: Marking of dedicated bicycle lanes.
6. Section 32 3300 - Site Furnishings: Benches for places of respite; metal, precast concrete and wood.
7. Section 32 8423 - Underground Sprinklers: Sprinkler system supplied by non-potable water system.
8. Section 32 9219 - Seeding.
9. Section 32 9223 - Sodding.
10. Section 32 9300 - Plants: See drawings for specific plant materials.

T. DIVISION 33 - UTILITIES

1. Section 33 0513 - Manholes and Structures.
2. Section 33 4211 - Stormwater Gravity Piping.

1.03 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for additional submittal procedures requirements.

1.04 INFORMATION SOURCES

A. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. (ASHRAE); 1791 Tullie Circle, NE, Atlanta, GA 30329. Tel: (404) 636-8400. Fax: (404) 321-5478. www.ashrae.org.

B. Green Seal; 1001 Connecticut Avenue, NW, Suite 827, Washington, DC 20036-5525. Tel: (202) 872-6400. Fax: (202) 872-4324. www.greenseal.org.

C. U.S. Green Building Council (USGBC); 1015 18th Street, NW, Suite 805, Washington, DC 20036. Tel: (202) 82-USGBC or (202) 828-7422. Fax: (202) 828-5110. www.usgbc.org.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 PROCEDURES

A. General: Conduct project management and construction operations in a manner consistent with, and in support of successful achievement of Owner's targeted certification level.

B. Construction Waste Management and Disposal: Implement approved waste management plan during the entire duration of the Contract.

C. Commissioning Authority Activities: Cooperate with Commissioning Authority to coordinate construction and closeout activities scheduling.

D. Sustainable Design Reporting: Comply with requirements of Section 013329.02.

3.02 SMOKING POLICY

A. General: Smoking policy on the project site is implemented for the following reasons:

B. Smoking is not permitted anywhere on project site.

3.03 CONSTRUCTION WASTE MANAGEMENT

A. Comply with applicable requirements of Section 01 7419 - Construction Waste Management and Disposal.

3.04 TEMPORARY ENVIRONMENTAL CONTROLS

A. Comply with applicable requirements of Section 01 5719 - Temporary Environmental Controls.

END OF SECTION

SECTION 01 4000
QUALITY REQUIREMENTS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Submittals.

B. Quality assurance.

C. References and standards.

D. Inspection agencies and services.

E. Contractor's construction-related professional design services.

F. Contractor's design-related professional design services.

G. Control of installation.

H. Mock-ups.

I. Tolerances.

J. Manufacturers' field services.

K. Defect Assessment.

1.02 RELATED REQUIREMENTS

A. Document 00 3100 - Available Project Information: Soil investigation data.

B. Document 00 7200 - General Conditions: Inspections and approvals required by public authorities.

C. Section 01 2100 - Allowances: Allowance for payment of testing services.

D. Section 01 3000 - Administrative Requirements: Submittal procedures.

E. Section 01 4216 - Definitions.

F. Section 01 4219 - Reference Standards.

G. Section 01 6000 - Product Requirements: Requirements for material and product quality.

1.03 REFERENCE STANDARDS

A. ASTM C1021 - Standard Practice for Laboratories Engaged in Testing of Building Sealants 2008 (Reapproved 2014).

B. ASTM C1077 - Standard Practice for Agencies Testing Concrete and Concrete Aggregates for Use in Construction and Criteria for Testing Agency Evaluation 2017.

C. ASTM C1093 - Standard Practice for Accreditation of Testing Agencies for Masonry 2015a, with Editorial Revision (2016).

D. ASTM D3740 - Standard Practice for Minimum Requirements for Agencies Engaged in the Testing and/or Inspection of Soil and Rock as Used in Engineering Design and Construction 2012a.

E. ASTM E329 - Standard Specification for Agencies Engaged in Construction Inspection, Testing, or Special Inspection 2018.

F. ASTM E543 - Standard Specification for Agencies Performing Nondestructive Testing 2015.

G. ASTM E699 - Standard Specification for Agencies Involved in Testing, Quality Assurance, and Evaluating of Manufactured Building Components 2016.

H. IAS AC89 - Accreditation Criteria for Testing Laboratories 2017.

1.04 DEFINITIONS

A. Contractor's Quality Control Plan: Contractor's management plan for executing the Contract for Construction.

B. Contractor's Professional Design Services: Design of some aspect or portion of the project by party other than the design professional of record. Provide these services as part of the Contract for Construction.

1. Design Services Types Required:

a. Construction-Related: Services Contractor needs to provide in order to carry out the Contractor’s sole responsibilities for construction means, methods, techniques, sequences, and procedures.

b. Design-Related: Design services explicitly required to be performed by another design professional due to highly-technical and/or specialized nature of a portion of the project. Services primarily involve engineering analysis, calculations, and design, and are not intended to alter the aesthetic aspects of the design.

C. Design Data: Design-related, signed and sealed drawings, calculations, specifications, certifications, shop drawings and other submittals provided by Contractor, and prepared directly by, or under direct supervision of, appropriately licensed design professional.

1.05 CONTRACTOR'S CONSTRUCTION-RELATED PROFESSIONAL DESIGN SERVICES

A. Coordination: Contractor's professional design services are subject to requirements of project's Conditions for Construction Contract.

B. Provide such engineering design services as may be necessary to plan and safely conduct certain construction operations, pertaining to, but not limited to the following:

1. Temporary sheeting, shoring, or supports.

2. Temporary scaffolding.

3. Temporary bracing.

4. Temporary stairs or steps required for construction access only.

5. Temporary hoist(s) and rigging.

6. Investigation of soil conditions to support construction equipment.

1.06 CONTRACTOR'S DESIGN-RELATED PROFESSIONAL DESIGN SERVICES

A. Coordination: Contractor's professional design services are subject to requirements of project's Conditions for Construction Contract.

B. Base design on performance and/or design criteria indicated in individual specification sections.

1. Submit a Request for Interpretation to Architect if the criteria indicated are not sufficient to perform required design services.

C. Scope of Contractor's Professional Design Services: Provide for the following items of work:

1. Structural Design of Reinforcement Splices: As described in Section 03 0100 - Maintenance of Concrete.

2. Structural Design of Formwork: As described in Section 03 1000 - Concrete Forming and Accessories.

3. Structural Design of Formwork: As described in Section 03 1119 - Insulating Concrete Forming.

4. Concrete Mix Design: As described in Section 03 3000 - Cast-in-Place Concrete. No specific designer qualifications are required.

5. Structural Calculations and Design: As described in Section 03 3800 - Post-Tensioned Concrete.
6. Structural Calculations and Design: As described in Section 03 4100 - Precast Structural Concrete.
7. Concrete Mix and Structural Design: As described in Section 03 4113 - Precast Concrete Hollow Core Planks.
8. Concrete Mix and Structural Design: As described in Section 03 4500 - Precast Architectural Concrete.
9. Structural Design of Steel Connections: As described in Section 05 1200 - Structural Steel Framing.
10. Structural Design of Steel Connections: As described in Section 05 2100 - Steel Joist Framing.
11. Structural Design of Steel Decking: As described in Section 05 3100 - Steel Decking.
12. Structural Design of Steel Trusses: As described in Section 05 4400 - Cold-Formed Steel Trusses.
13. Structural Design of Formwork: As described in Section 05 4500 - Metal Support Assemblies.
14. Structural Design of Metal Fabrications: As described in Section 05 5000 - Metal Fabrications.
15. Structural Design of Stairs: As described in Section 05 5100 - Metal Stairs.
16. Structural Design of Gratings and Plates: As described in Section 05 5305 - Metal Gratings and Floor Plates.
17. Structural Design of Spiral Stairs: As described in Section 05 7113 - Fabricated Metal Spiral Stairs.
18. Structural Design of Insulated Panels: As described in Section 06 1219 - Structural Insulated Panels.
19. Structural Design of Heavy Timber Framing: As described in Section 06 1323 - Heavy Timber Framing.
20. Structural Design of Wood Decking: As described in Section 06 1500 - Wood Decking.
21. Structural Design of Metal-Web Wood Joists: As described in Section 06 1736 - Metal-Web Wood Joists.
22. Structural Design of Wood Trusses: As described in Section 06 1753 - Shop-Fabricated Wood Trusses
23. Structural Design of Glued-Laminated Construction: As described in Section 06 1800 - Glued-Laminated Construction.
24. Structural Design of Fabrications: As described in Section 06 8200 - Composite Trim.
25. Structural Calculations: As described in Section 07 4213.23 - Metal Composite Material Wall Panels.
26. Fire Protection Design: As described in Section 07 8700 - Smoke Containment Barriers.
27. Structural Design: Include physical characteristics, engineering calculations, and resulting dimensional limitations as described in Section 08 4435 - Protective Framed Glazing Assemblies.
28. Structural Design Calculations for Exterior Assemblies: As described in Section 08 4126 - All-Glass Entrances and Storefronts.
29. Structural Design: Include physical characteristics, engineering calculations, and resulting dimensional limitations as described in Section 08 4313 - Aluminum-Framed Storefronts.
30. Structural design: Include calculations for resisting wind loads, anchor locations, and loads at points of attachment as described in Section 08 4327 - Channel Glass Storefronts.

31. Structural Design: Include calculations for resisting wind loads, anchor locations, loads at points of attachment to building structure, physical characteristics, resulting dimensional limitations as described in Section 08 4413 - Glazed Aluminum Curtain Walls.
32. Structural Design: Include calculations for resisting wind loads, anchor locations, loads at points of attachment to building structure, physical characteristics, resulting dimensional limitations as described in Section 08 4418 - Glazed Steel Curtain Walls.
33. Structural Design: Include calculations for resisting wind loads, physical characteristics, resulting dimensional limitations as described in Section 08 4500 - Translucent Wall and Roof Assemblies.
34. Structural Design of Floor System: As described in Section 09 6900 - Access Flooring.
35. Structural Design and Calculations: As described in Section 10 7113.43 - Fixed Sun Screens.
36. Structural Design of Canopy: As described in Section 10 7316.13 - Metal Canopies.
37. Structural Design of Foundation: As described in Section 10 7500 - Flagpoles.
38. Structural Design and Calculations: As described in Section 10 8200 - Grilles and Screens.
39. Control System Design. As described in Section 11 1400 - Pedestrian Control Equipment.
40. Structural Design of Pool Tank Supports: As described in Section 13 1100 - Swimming Pools.
41. Structural Design of Cold Storage Room Roof: As described in Section 13 2126 - Cold Storage Rooms
42. Design of Structural Components: Include development of shop drawings, and performing shop and site work, as described in Section 13 3419 - Metal Building Systems.
43. Corrosion Protection Design: As described in Section 13 4713 - Cathodic Protection.
44. Design of Structural Components: As described in Section 14 2020 - Freight Elevators.
45. Design of Structural Components: As described in Section 14 2100 - Electric Traction Elevators.
46. Design of Structural Components: As described in Section 14 2400 - Hydraulic Elevators.
47. Sprinkler Layout: Coordinate with ceiling installation, detailed pipe layout, and hydraulic calculations as described in Section 21 1300 - Fire-Suppression Sprinkler Systems.
48. System Design: Include calculations, detailed layout, component locations, control diagrams, wiring diagrams, and sequences of operation as described in Section 21 2400 - Dry-Chemical Fire-Extinguishing System.
49. System Design and Detailed Layout: As described in Section 21 3000 - Fire Pumps.
50. Structural Design of Seismic Controls: As described in Section 22 0548 - Vibration and Seismic Controls for Plumbing Piping and Equipment.
51. System Design: As described in Section 23 0923 - Direct-Digital Control System for HVAC.
52. Written Sequence of Operation: Include entire HVAC system and each piece of equipment, as described in Section 23 0993 - Sequence of Operations for HVAC Controls.
53. Piping System Design: As described in Section 23 2300 - Refrigerant Piping.
54. Engineering Calculations Indicating Maximum Room Sound Levels Are Not Exceeded: As described in Section 23 3319 - Duct Silencers.
55. Structural Calculations and Design of Equipment Mounting: As described in Section 26 3100 - Photovoltaic Collectors.
56. Sound Masking Systems Design: As described in Section 27 5119 - Sound Masking Systems.

57. Monitoring of Pile Placement, Elevation, and Load Testing: As described in Section 31 0916.21 - Pile Load Tests.
58. Design of Structural Fill: As described in Section 31 2323 - Fill.
59. Selection and Design of Pile Components: As described in Section 31 6213.19 - Precast Concrete Piles
60. Selection and Design of Pile Components: As described in Section 31 6216.16 - Steel H Piles.
61. Selection and Design of Pile Components: As described in Section 31 6219 - Timber Piles.
62. Design of Piles: As described in Section 31 6316 - Auger Cast Grout Piles.
63. Design of Piers: As described in Section 31 6329 - Drilled Concrete Piers and Shafts
64. Design or Piers: As described in Section 31 6614 - Hydraulically Driven Pier Foundations.
65. Structural Calculations and Design: As described in Section 32 3223 - Segmental Retaining Walls
66. Design of Seismic Component of Structural Supports and Anchors: As described in Section 46 0509 - Piping and Equipment Supports and Anchors.

1.07 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Designer's Qualification Statement: Submit for Architect's knowledge as contract administrator, or for Owner's information.

1. Include information for each individual professional responsible for producing, or supervising production of, design-related professional services provided by Contractor.
    a. Full name.
    b. Professional licensure information.
    c. Statement addressing extent and depth of experience specifically relevant to design of items assigned to Contractor.

C. Design Data: Submit for Architect's knowledge as contract administrator for the limited purpose of assessing compliance with information given and the design concept expressed in the contract documents, or for Owner's information.

1. Include calculations that have been used to demonstrate compliance to performance and regulatory criteria provided, and to determine design solutions.
2. Include required product data and shop drawings.
3. Include a statement or certification attesting that design data complies with criteria indicated, such as building codes, loads, functional, and similar engineering requirements.
4. Include signature and seal of design professional responsible for allocated design services on calculations and drawings.

D. Test Reports: After each test/inspection, promptly submit two copies of report to Architect and to Contractor.

1. Include:
    a. Date issued.
    b. Project title and number.
    c. Name of inspector.

d. Date and time of sampling or inspection.

e. Identification of product and specifications section.

f. Location in the Project.

g. Type of test/inspection.

h. Date of test/inspection.

i. Results of test/inspection.

j. Compliance with Contract Documents.

k. When requested by Architect , provide interpretation of results.

2. Test report submittals are for Architect's knowledge as contract administrator for the limited purpose of assessing compliance with information given and the design concept expressed in the contract documents, or for Owner's information.

E. Certificates: When specified in individual specification sections, submit certification by the manufacturer and Contractor or installation/application subcontractor to Architect, in quantities specified for Product Data.

1. Indicate material or product complies with or exceeds specified requirements. Submit supporting reference data, affidavits, and certifications as appropriate.

2. Certificates may be recent or previous test results on material or product, but must be acceptable to Architect .

F. Manufacturer's Instructions: When specified in individual specification sections, submit printed instructions for delivery, storage, assembly, installation, start-up, adjusting, and finishing, for the Owner's information. Indicate special procedures, perimeter conditions requiring special attention, and special environmental criteria required for application or installation.

G. Manufacturer's Field Reports: Submit reports for Architect 's benefit as contract administrator or for Owner .

1. Submit report in duplicate within 30 days of observation to Architect for information.

2. Submit for information for the limited purpose of assessing compliance with information given and the design concept expressed in the contract documents.

1.08 QUALITY ASSURANCE

A. Testing Agency Qualifications:

1. Prior to start of work, submit agency name, address, and telephone number, and names of full time registered Engineer and responsible officer.

2. Qualification Statement: Provide documentation showing testing laboratory is accredited under IAS AC89.

B. Designer Qualifications: Where professional engineering design services and design data submittals are specifically required of Contractor by Contract Documents, provide services of a Professional Engineer experienced in design of this type of work and licensed in Maryland.

C. Contractor's Quality Control (CQC) Plan:

1. Prior to start of work, submit a comprehensive plan describing how contract deliverables will be produced. Tailor CQC plan to specific requirements of the project. Include the following information:

a. Management Structure: Identify personnel responsible for quality. Include a chart showing lines of authority.

1) Include qualifications (in resume form), duties, responsibilities of each person assigned to CQC function.

b. Management Approach: Define, describe, and include in the plan specific methodologies used in executing the work.

1) Management and control of documents and records relating to quality.

2) Communications.

3) Coordination procedures.

4) Resource management.

5) Process control.

6) Inspection and testing procedures and scheduling.

7) Control of noncomplying work.

8) Tracking deficiencies from identification, through acceptable corrective action, and verification.

9) Control of testing and measuring equipment.

10) Project materials certification.

11) Managerial continuity and flexibility.

c. Owner will not make a separate payment for providing and maintaining a Quality Control Plan. Include associated costs in Bid price.

d. Acceptance of the plan is required prior to start of construction activities not including mobilization work. Owner's acceptance of the plan will be conditional and predicated on continuing satisfactory adherence to the plan. Owner reserves the right to require Contractor to make changes to the plan and operations, including removal of personnel, as necessary, to obtain specified quality of work results.

D. Quality-Control Personnel Qualifications. Engage a person with requisite training and experience to implement and manage quality assurance (QA) and quality control (QC) for the project.

1.09 REFERENCES AND STANDARDS

1.10 TESTING AND INSPECTION AGENCIES AND SERVICES

A. Owner will employ services of an independent testing agency to perform certain specified testing; payment for cost of services will be derived from allowance specified in Section 01 2100; see Section 01 2100 and applicable sections for description of services included in allowance.

B. Owner will employ and pay for services of an independent testing agency to perform other specified testing.

C. Contractor shall employ and pay for services of an independent testing agency to perform other specified testing.

D. Employment of agency in no way relieves Contractor of obligation to perform Work in accordance with requirements of Contract Documents.

E. Contractor Employed Agency:

1. Testing agency: Comply with requirements of ASTM E329, ASTM E543, ASTM E699, ASTM C1021, ASTM C1077, ASTM C1093, ASTM D3740 and [_____].

2. Laboratory: Authorized to operate in Maryland.

3. Laboratory Staff: Maintain a full time registered Engineer on staff to review services.
4. Testing Equipment: Calibrated at reasonable intervals either by NIST or using an NIST established Measurement Assurance Program, under a laboratory measurement quality assurance program.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.01 CONTROL OF INSTALLATION

A. Monitor quality control over suppliers, manufacturers, products, services, site conditions, and workmanship, to produce work of specified quality.

B. Comply with manufacturers' instructions, including each step in sequence.

C. Should manufacturers' instructions conflict with Contract Documents, request clarification from Architect before proceeding.

D. Comply with specified standards as minimum quality for the work except where more stringent tolerances, codes, or specified requirements indicate higher standards or more precise workmanship.

E. Have work performed by persons qualified to produce required and specified quality.

F. Verify that field measurements are as indicated on shop drawings or as instructed by the manufacturer.

G. Secure products in place with positive anchorage devices designed and sized to withstand stresses, vibration, physical distortion, and disfigurement.

3.02 MOCK-UPS

A. Before installing portions of the Work where mock-ups are required, construct mock-ups in location and size indicated for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work. The purpose of mock-up is to demonstrate the proposed range of aesthetic effects and workmanship.

B. Accepted mock-ups establish the standard of quality the Architect will use to judge the Work.

C. Integrated Exterior Mock-ups: Construct integrated exterior mock-up as indicated on drawings. Coordinate installation of exterior envelope materials and products as required in individual Specification Sections. Provide adequate supporting structure for mock-up materials as necessary.

D. Room Mock-ups: Construct room mock-ups as indicated on drawings. Coordinate installation of materials, products, and assemblies as required in specification sections; finish according to requirements. Provide required lighting and any supplemental lighting where required to enable Architect to evaluate quality of the mock-up.

E. Notify Architect fifteen (15) working days in advance of dates and times when mock-ups will be constructed.

F. Provide supervisory personnel who will oversee mock-up construction. Provide workers that will be employed during the construction at Project.

G. Tests shall be performed under provisions identified in this section and identified in the respective product specification sections.

H. Assemble and erect specified items with specified attachment and anchorage devices, flashings, seals, and finishes.

I. Obtain Architect's approval of mock-ups before starting work, fabrication, or construction.

1. Architect will issue written comments within seven (7) working days of initial review and each subsequent follow up review of each mock-up.

2. Make corrections as necessary until Architect's approval is issued.

J. Accepted mock-ups shall be a comparison standard for the remaining Work.

K. Where mock-up has been accepted by Architect and is specified in product specification sections to be removed, protect mock-up throughout construction, remove mock-up and clear area when directed to do so by Architect.

3.03 TOLERANCES

A. Monitor fabrication and installation tolerance control of products to produce acceptable Work. Do not permit tolerances to accumulate.

B. Comply with manufacturers' tolerances. Should manufacturers' tolerances conflict with Contract Documents, request clarification from Architect before proceeding.

C. Adjust products to appropriate dimensions; position before securing products in place.

3.04 TESTING AND INSPECTION

A. See individual specification sections for testing and inspection required.

B. Testing Agency Duties:

1. Provide qualified personnel at site. Cooperate with Architect and Contractor in performance of services.

2. Perform specified sampling and testing of products in accordance with specified standards.

3. Ascertain compliance of materials and mixes with requirements of Contract Documents.

4. Promptly notify Architect and Contractor of observed irregularities or non-compliance of Work or products.

5. Perform additional tests and inspections required by Architect .

6. Attend preconstruction meetings and progress meetings.

7. Submit reports of all tests/inspections specified.

C. Limits on Testing/Inspection Agency Authority:

1. Agency may not release, revoke, alter, or enlarge on requirements of Contract Documents.

2. Agency may not approve or accept any portion of the Work.

3. Agency may not assume any duties of Contractor .

4. Agency has no authority to stop the Work.

D. Contractor Responsibilities:

1. Deliver to agency at designated location, adequate samples of materials proposed to be used that require testing, along with proposed mix designs.

2. Cooperate with laboratory personnel, and provide access to the Work and to manufacturers' facilities.

3. Provide incidental labor and facilities:

a. To provide access to Work to be tested/inspected.

b. To obtain and handle samples at the site or at source of Products to be tested/inspected.

c. To facilitate tests/inspections.

d. To provide storage and curing of test samples.

4. Notify Architect and laboratory 24 hours prior to expected time for operations requiring testing/inspection services.
5. Employ services of an independent qualified testing laboratory and pay for additional samples, tests, and inspections required by Contractor beyond specified requirements.
6. Arrange with Owner 's agency and pay for additional samples, tests, and inspections required by Contractor beyond specified requirements.

E. Re-testing required because of non-compliance with specified requirements shall be performed by the same agency on instructions by Architect.

F. Re-testing required because of non-compliance with specified requirements shall be paid for by Contractor.

3.05 MANUFACTURERS' FIELD SERVICES

A. When specified in individual specification sections, require material or product suppliers or manufacturers to provide qualified staff personnel to observe site conditions, conditions of surfaces and installation, quality of workmanship, start-up of equipment, test, adjust, and balance equipment as applicable, and to initiate instructions when necessary.

B. Report observations and site decisions or instructions given to applicators or installers that are supplemental or contrary to manufacturers' written instructions.

3.06 DEFECT ASSESSMENT

A. Replace Work or portions of the Work not complying with specified requirements.

B. If, in the opinion of Owner, it is not practical to remove and replace the work, Owner will direct an appropriate remedy or adjust payment.

END OF SECTION

SECTION 01 4100
REGULATORY REQUIREMENTS

PART 1 GENERAL

1.01 SUMMARY OF REFERENCE STANDARDS

A. Regulatory requirements applicable to this project are the following:

B. 28 CFR 35 - Nondiscrimination on the Basis of Disability in State and Local Government Services; Final Rule; Department of Justice current edition.

C. 28 CFR 36 - Nondiscrimination by Public Accommodations and in Commercial Facilities; Final Rule; Department of Justice current edition.

D. 36 CFR 1191 - Americans with Disabilities Act (ADA) Accessibility Guidelines for Buildings and Facilities; Architectural Barriers Act (ABA) Accessibility Guidelines current edition.

E. 49 CFR 27, 37, and 38 - Transportation for Individuals with Disabilities; Final Rule; Department of Transportation current edition.

F. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design 2010.

G. FED-STD-795 - Uniform Federal Accessibility Standards (UFAS) 1988.

H. 29 CFR 1910 - Occupational Safety and Health Standards current edition.

I. State of Maryland amendments to some or all of the following.

J. City of Upper Marlboro amendments to some or all of the following.

K. Zoning Code: 20772.

L. ICC A117.1 - Accessible and Usable Buildings and Facilities 2017.

M. ICC (IFC) - International Fire Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

N. NFPA 1 - Fire Code 2018.

O. NFPA 101 - Life Safety Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

P. ICC (IBC) - International Building Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

Q. ICC (IPC) - International Plumbing Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

R. IAPMO (UPC) - Uniform Plumbing Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

S. ICC (IMC) - International Mechanical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

T. IAPMO (UPC) - Uniform Plumbing Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

U. ICC (IFGC) - International Fuel Gas Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

V. ICC (IPSDC) - International Private Sewage Disposal Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

W. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

X. ICC (IECC) - International Energy Conservation Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

Y. ICC (IPMC) - International Property Maintenance Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

Z. Erosion and Sedimentation Control Regulations: [_____].

1.02 RELATED REQUIREMENTS

A. Section 01 4000 - Quality Requirements.

B. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this section.

1.03 SECTION INCLUDES

A. General: Comply with the applicable Articles and Sections of the Annotated Code of Maryland.

1.04 QUALITY ASSURANCE

A. General Safety and Health Regulations.

B. Discrimination

C. Environmental Statutes and Regulations

D. Miscellaneous Regulations.

1. 1. Buy American Steel Act
2. 2. Financial Disclosure
3. 3. Political Contribution Disclosure
4. 4. Retention of Records

1.05 GENERAL SAFETY AND HEALTH REGULATIONS.

A. The use of products containing asbestos will not be permitted.

B. Nothing contained in the Contract shall be construed as relieving Contractor in any way of Contractor's responsibility for strict compliance with all governmentalrequirements, pertaining to health and safety.

C. The Contract is to be governed at all times by applicable provisions of federal law, including but not limited to the following:

1. Williams-Steiger Occupational Safety and Health Act of 1970, Public Law 91-596.
2. 2. Part 1910 - Occupational Safety and Health Standards, Chapter XIII of Title 29, Code of Federal Regulations
3. Maryland State Safety Health Act (MOSHA)

D. MARYLAND BUY AMERICAN STEEL ACT: The Contractor shall comply with Section 17-301 through Section 17-306 of Annotated Code of Maryland, State Finance and Procurement Article. The "Buy American Steel" Act of Maryland defines "steel products" as any product: "rolled, formed, shaped, drawn, extruded, forged, cast, fabricated, or otherwise similarly processed, or processed by a combination of two or more of such operations, from steel made in the United States by the open hearth, basic oxygen, electric furnace, bessemer, or other steel making process."

E. Project safety procedures/policies for construction activities shall be adhered to at all times. Refer to PART 3 - EXECUTION for further safety information and requirements.

1.06 DISCRIMINATION

A. FINANCIAL DISCLOSURE: The Contractor shall comply with the provisions of Section 13-221 of the State Finance and Procurement Article, Annotated Code of Maryland. Every business that enters into contracts, leases, or other agreements, with that State of Maryland or its agencies, during a calendar year under which the business is to receive in the aggregate $100,000 or more, shall within 30 days of the time when aggregate value of these contracts, leases to other agreements reached $100,000, file with the Secretary of State of Maryland certain specified information to include disclosure of beneficial ownership of the business.

B. POLITICAL CONTRIBUTION DISCLOSURE: The Contractor shall comply with the provisions of Article 33, Section 30-1 through 30-4 the Annotated Code of Maryland, which requires that every person that enters into contracts , leases, or other agreements with the State of Maryland during a calendar year under which the business is to receive in the aggregate $10,000 or more, shall on or before February 1, of the following year file with the Secretary of State of Maryland certain specified information to include disclosure of political contributions in excess of $100 to a candidate for elective office in any primary or general election.

C. RETENTION OF RECORDS: The Contractor shall retain and maintain all records and documents relating to this contract for three years after final payment by the Owner or any applicable statute of limitations, whichever is longer, and shall make them available for inspection and audit by the Owners authorized representatives at all times.

D. DRUGS, TOBACCO AND ALCOHOL: All of the School properties are "drug, tobacco, and alcohol free zones" as designated by state and local laws. Neither the Contractor nor any of his employees or subcontractors are permitted to have any drugs, tobacco, or alcohol products on school property. Use or possession of such items on school properties will result in immediate termination of the Contract. Upon termination of the contract, the contractor will be paid for all services performed to date but will not be paid for any lost or anticipated profits due to termination of the Contract. The Contractor will be removed from all bids with the Prince George's County Public Schools for a period not to exceed two years. Prince George's County Public Schools will provide an unsatisfactory reference when inquiries are made.

E. The Contractor shall not discriminate against any employee or applicant because of race, creed, color or national origin. The Contractor shall take affirmative action to ensure that applicants are employed and that employees are treated during employment without regard to their race, creed, color or national origin. Such action shall include but not be limited to the following: employment, upgrading, demotion, or transfer; rates of pay or other forms of compensation; and selection for training including apprenticeship. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment notices to be provide by the Owner concerning discrimination.

F. The Contractor shall send to each labor union or representative of workers with which he has collective bargaining agreements or contract or understanding a notice to be provided by the Owner advising the said union or worker's representative of the Contractor's commitments under this section, and the Contractor shall post copies of the notice in conspicuous places available to employees and applicants for employment.

G. The Contractor shall furnish, if requested by the Owner a compliance report concerning their employment practices and policies in order for the Owner to ascertain compliance with the special provisions of this contract concerning discrimination in employment.

H. In the event of the Contractor's noncompliance with the nondiscrimination clause of this contract, this contract maybe canceled, terminated or suspended in whole or in part and the Contractor may be declared in eligible for further Prince George's County Public School work.

I. The Contractor shall include the special provisions outlined herein, pertaining to nondiscrimination in employment in every subcontract or purchase order utilized by him in order to carry out the terms and conditions of this contract. So that such nondiscrimination in employment provisions shall be binding on each subcontract.

1.07 ENVIRONMENTAL PROTECTION

A. A. Contractor shall comply with all applicable provisions of federal and state laws dealing with the prevention of environmental pollution and the preservation of natural resources, including but not limited to the Federal Air Quality Act of 1967; the Clean Air Act; the Clean Water Restoration act; the Water Pollution Control Act Amendments of 1956; the Water Quality Act of 1965; the Water Quality Improvement Act of 1970; the Water Pollution Control Act Amendments of 1972; the Water Facilities Act (see Consolidated Farmer's Home Administration Act of 1961); the Watershed Protection and Flood Prevention Act; the Clean Streams Law; the Solid Waste Management Act; the Municipal Waste Planning, Recycling and Waste Reduction Act; A.H.E.R.A; and all rules and regulations thereunder, including but not limited to, those formulated by the United States Environmental Protection Agency, the Maryland Department of the Environment. Nothing contained in the Contract shall be construed as relieving Contractor in any way of Contractor's responsibility for strict compliance with all governmental requirements pertaining to environmental protection.

B. Nothing contained in the Contract Documents for construction shall be construed by the Contractor as relieving him in any way of his responsibility for strict compliance with the statues, rules and regulations contained in the above mentioned Environmental Protection Act.

1.08 MISCELLANEOUS REGULATIONS

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.01 SAFETY REQUIREMENTS

A. All work shall be performed in accordance with rules, regulations, procedures and safe practices and/or OSHA and all other Government agencies having jurisdiction over the project.

B. MARYLAND OCCUPATIONAL SAFETY & HEALTH (MOSH) REQUIREMENTS All contracts with the BOARD OF EDUCATION OF PRINCE GEORGE’S COUNTY shall be governed by the STATE OF MARYLAND OCCUPATIONAL SAFETY AND HEALTH (MOSH) LAWS. Where any difference(s) may exist between any particular MOSH standard(s) and the corresponding, related United States Occupational Safety and Health Administration (OSHA) standard(s), MOSH LAW SHALL TAKE PRECEDENCE.

1. Information pertaining to any particular MOSH Law(s) may be obtained from: STATE OF MARYLAND DEPARTMENT OF LICENSING AND REGULATION Division of Labor and Industry/Maryland Occupational Safety and Health 1100 North Eutaw Street Baltimore, Maryland 21202 Telephone No.: 410-767-2215

3.02 SAFETY PRECAUTIONS AND PROGRAMS:

A. Each Contractor shall be responsible for initiating, maintaining and supervising safety precautions and programs in connection with the work.

B. All Contractors shall comply with the provisions of the "Occupational Safety and Health Act" and Federal, State and local requirements.

C. If a Contractor fails to maintain the safety precautions required by law or directed by authorities having jurisdiction, the Owner may take such action as necessary and charge the Contractor therefore. The failure of the Owner to take any such action shall not relieve the Contractor of his obligations.

D. The Contractor individually shall be responsible for the safety, efficiency, and adequacy of his plant, appliances, and methods and for any damage which may result from their failure or their improper construction, maintenance or operation.

E. Prior to mobilizing to the job, the Contractor shall submit, in writing, a description of his safety program. During the conduct of the work, the Contractor shall immediately notify the Owner and Architect in writing of all accidents and shall submit a written report describing in detail the circumstances of each accident within 24'hours of its occurrence. All Contractors shall notify the Architect of any flammable, combustible and/or toxic materials intended for use on the project and shall furnish literature pertinent to the use and control of all materials, including, but not limited to M.S.D.S. sheets.

F. Each Contractor shall delegate one representative who shall be responsible to maintain all safety requirements of the Contractor.

3.03 SAFETY OF PERSONS AND PROPERTY:

A. The Contractor shall take all reasonable precautions for the safety of, and shall provide all reasonable protection to prevent damage or loss to:

1. All school personnel, employees on the work site and all other persons who may be affected thereby.

2. All the work and all materials and equipment to be incorporated therein, whether in storage on or off the site, under the care, custody or control of the Contractor or any of his Subcontractors or Sub-Subcontractors.

3. Other property at the site or adjacent thereto, including but not limited to trees, shrubs, lawns, walks, pavements, roadways, structures and utilities not designated for removal, relocation or replacement in the course of construction and underground property.

B. The Contractor shall give all notices and 'comply with all applicable laws, ordinances, rules, regulations and lawful orders of any public authority, including the Owner's requirements bearing on the Safety of persons or property or their protection from damage, injury or loss.

C. The Contractor shall erect and maintain, as required by existing conditions and progress of the work, all reasonable safeguards for safety and protection, including danger signs and other warnings against hazards.

D. The Contractor shall promptly remedy all damage or loss to any property caused in whole or in part by the Contractor, his Subcontractors, his Sub-Subcontractors, or anyone directly employed by any of them, or by anyone for whose acts any of them be liable.

E. The Contractor shall not load or permit any part of the work to be loaded so as to endanger its integrity and safety.

END OF SECTION

A. Contractors using a method of blasting to perform work on the project shall use all proper methods, including adequate safety matting and/or overburden, progressive time sequences and scaled distances, in accordance with all governmental regulations.

B. The use of audio equipment and headsets will not be permitted on the construction site.

4.02 PERSONAL PROTECTION REQUIREMENTS

A. All persons entering the project shall wear hard hats in good condition and meet ANSI 289.11997. Hard hats shall be worn in the proper manner.

B. All persons entering the project 'shall wear proper work boots, clothing and attire including long trousers and shirts. No obscene or inappropriate messages may be displayed on clothing. What constitutes

obscene or inappropriate will be at the sole discretion of the Owner.

C. All job site personnel are expected to strictly adhere to the following rules and regulations:

1. Use of approved eye protection by all Contractor personnel shall be required during all types of percussion and reciprocating work or when other requirements govern.
2. Approved respiratory equipment shall be worn by all personnel exposed to hazardous volumes of toxic or noxious dusts, fumes, mists, or gases
3. Personal protective equipment is to be used under unusual conditions, such as high temperature work, handling caustic or corrosive liquids, or molten metals.
4. The Contractor is responsible for providing safety training to all of his employees.
5. All shipments to the site shall have the required documentation and labels attached and the documentation and labels shall be maintained while the material is on site.
6. As defined in the occupational Safety & Health Act, safety belts, complete with lanyards, or parachute-style harness, complete with lanyard, are to be used where there is a danger of falling.

4.03 HOUSEKEEPING

A. Materials and equipment must be piled up or stored in a safe manner. Aisles must be kept clear

B. All drop cables/extension cords shall be elevated above the ground or protected in such a way to allow traffic to pass.

C. Consumption of food and beverages shall be in designated areas and at specified times.

D. Glass-bottled refreshments will not be allowed in the workplace.

E. Welding stubs and shells from explosive activated tools shall be collected and properly disposed of by Contractor.

F. The cords and connections at temporary panels must be maintained in an orderly fashion at all times to prevent tripping.

G. Nails are to be bent over and/or removed from wood.

H. Aisles, stairwells and base areas of ladders are to be kept clear at all times.

4.04 M.S.D.S.-CONTROLLED PRODUCTS

A. The Contractor is responsible for notifying the Owner, of any controlled products that they bring or cause to have brought onto the site. The Contractor shall submit copies of the Material Safety Data Sheet (M.S.D.S.) for the controlled product, and the Contractor shall retain a copy of the M.S.D.S. on site for their own reference. The legal storage, use, and disposal of any controlled product is the responsibility of the Contractor.

B. The Contractor shall comply with OSHA Communications' Standards 29 CFR 1910-1200 for hazardous materials. The Contractor shall maintain a Material Safety Data Sheet on file at the jobsite for each chemical brought to the site.

C. In any emergency affecting the safety or persons or property, the Contractor shall act, at his discretion, to prevent threatened damage, injury or loss and shall immediately notify the Owner and Architect of such emergency conditions. Any claims made by the Contractor for additional compensation or extension of time on account of emergency work shall be processed in accordance with the Conditions of the Contract.

D. Temporary storage of hazardous materials shall be the responsibility of the Contractor. Final cleanup and removal shall be by the Contractor.

4.05 EMERGENCIES

SECTION 01410 REGULATORY REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

A. General: Comply with the applicable Articles and Sections of the Annotated Code of Maryland.

B. General Safety and Health Regulations.

C. Discrimination

D. Environmental Statutes and Regulations

E. Miscellaneous Regulations.

1. Buy American Steel Act
2. Financial Disclosure
3. Political Contribution Disclosure
4. Retention of Records

1.3 GENERAL SAFETY AND HEALTH REGULATIONS.

A. The use of products containing asbestos will not be permitted.

B. Nothing contained in the Contract shall be construed as relieving Contractor in any way of Contractor's responsibility for strict compliance with all governmental requirements, pertaining to health and safety.

C. The Contract is to be governed at all times by applicable provisions of federal law, including but not limited to the following:

1. Williams-Steiger Occupational Safety and Health Act of 1970, Public Law 91-596.
2. Part 1910 - Occupational Safety and Health Standards, Chapter XIII of Title 29, Code of Federal Regulations
3. Maryland State Safety Health Act (MOSHA)

D. Project safety procedures/policies for construction activities shall be adhered to at all times. Refer to PART 3 - EXECUTION for further safety information and requirements.

1.4 DISCRIMINATION

A. The Contractor shall not discriminate against any employee or applicant because of race, creed, color or national origin. The Contractor shall take affirmative action to ensure that applicants are employed and that employees are treated during employment without regard to their race, creed, color or national origin. Such action shall include but not be limited to the following: employment, upgrading, demotion, or transfer; rates of pay or other forms of compensation; and selection for training including apprenticeship. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment notices to be provide by the Owner concerning discrimination.

B. The Contractor shall send to each labor union or representative of workers with which he has collective bargaining agreements or contract or understanding a notice to be provided by the Owner advising the said union or worker's representative of the Contractor's commitments under this section, and the Contractor shall post copies of the notice in conspicuous places available to employees and applicants for employment.

C. The Contractor shall furnish, if requested by the Owner a compliance report concerning their employment practices and policies in order for the Owner to ascertain compliance with the special provisions of this contract concerning discrimination in employment.

D. In the event of the Contractor's noncompliance with the nondiscrimination clause of this contract, this contract maybe canceled, terminated or suspended in whole or in part and the Contractor may be declared in eligible for further Prince George's County Public School work.

E. The Contractor shall include the special provisions outlined herein, pertaining to nondiscrimination in employment in every subcontract or purchase order utilized by him in order to carry out the terms and conditions of this contract. So that such nondiscrimination in employment provisions shall be binding on each subcontract.

1.5 ENVIRONMENTAL PROTECTION

A. Contractor shall comply with all applicable provisions of federal and state laws dealing with the prevention of environmental pollution and the preservation of natural resources, including but not limited to the Federal Air Quality Act of 1967; the Clean Air Act; the Clean Water Restoration act; the Water Pollution Control Act Amendments of 1956; the Water Quality Act of 1965; the Water Quality Improvement Act of 1970; the Water Pollution Control Act Amendments of 1972; the Water Facilities Act (see Consolidated Farmer's Home Administration Act of 1961); the Watershed Protection and Flood Prevention Act; the Clean Streams Law; the Solid Waste Management Act; the Municipal Waste Planning, Recycling and Waste Reduction Act; A.H.E.R.A; and all rules and regulations thereunder, including but not limited to, those formulated by the United States Environmental Protection Agency, the Maryland Department of the Environment. Nothing contained in the Contract shall be construed as relieving Contractor in any way of Contractor's responsibility for strict compliance with all governmental requirements pertaining to environmental protection.

B. Nothing contained in the Contract Documents for construction shall be construed by the Contractor as relieving him in any way of his responsibility for strict compliance with the

statues, rules and regulations contained in the above mentioned Environmental Protection Act.

1.6 MISCELLANEOUS REGULATIONS

A. MARYLAND BUY AMERICAN STEEL ACT: The Contractor shall comply with Section 17-301 through Section 17-306 of Annotated Code of Maryland, State Finance and Procurement Article. The "Buy American Steel" Act of Maryland defines "steel products" as any product: "rolled, formed, shaped, drawn, extruded, forged, cast, fabricated, or otherwise similarly processed, or processed by a combination of two or more of such operations, from steel made in the United States by the open hearth, basic oxygen, electric furnace, bessemer, or other steel making process**."**

B. FINANCIAL DISCLOSURE: The Contractor shall comply with the provisions of Section 13-221 of the State Finance and Procurement Article, Annotated Code of Maryland. Every business that enters into contracts, leases, or other agreements, with that State of Maryland or its agencies, during a calendar year under which the business is to receive in the aggregate $100,000 or more, shall within 30 days of the time when aggregate value of these contracts, leases to other agreements reached $100,000, file with the Secretary of State of Maryland certain specified information to include disclosure of beneficial ownership of the business.

C. POLITICAL CONTRIBUTION DISCLOSURE: The Contractor shall comply with the provisions of Article 33, Section 30-1 through 30-4 the Annotated Code of Maryland, which requires that every person that enters into contracts , leases, or other agreements with the State of Maryland during a calendar year under which the business is to receive in the aggregate $10,000 or more, shall on or before February 1, of the following year file with the Secretary of State of Maryland certain specified information to include disclosure of political contributions in excess of $100 to a candidate for elective office in any primary or general election.

D. RETENTION OF RECORDS: The Contractor shall retain and maintain all records and documents relating to this contract for three years after final payment by the Owner or any applicable statute of limitations, whichever is longer, and shall make them available for inspection and audit by the Owners authorized representatives at all times.

E. DRUGS, TOBACCO AND ALCOHOL: All of the School properties are "drug, tobacco, and alcohol free zones" as designated by state and local laws. Neither the Contractor nor any of his employees or subcontractors are permitted to have any drugs, tobacco, or alcohol products on school property. Use or possession of such items on school properties will result in immediate termination of the Contract.

Upon termination of the contract, the contractor will be paid for all services performed to date but will not be paid for any lost or anticipated profits due to termination of the Contract. The Contractor will be removed from all bids with the Prince George's County Public Schools for a period not to exceed two years. Prince George's County Public Schools will provide an unsatisfactory reference when inquiries are made.

PART 2 - PRODUCTS Not Used.

PART 3 - EXECUTION

3.1 SAFETY REQUIREMENTS

A. All work shall be performed in accordance with rules, regulations, procedures and safe practices and/or OSHA and all other Government agencies having jurisdiction over the project.

B. MARYLAND OCCUPATIONAL SAFETY & HEALTH (MOSH) REQUIREMENTS

All contracts with the BOARD OF EDUCATION OF PRINCE GEORGE'S COUNTY shall be governed by the STATE OF MARYLAND OCCUPATIONAL SAFETY AND HEALTH (MOSH) LAWS. Where any difference(s) may exist between any particular MOSH standard(s) and the corresponding, related United States Occupational Safety and Health Administration (OSHA) standard(s), MOSH LAW SHALL TAKE PRECEDENCE.

1. Information pertaining to any particular MOSH Law(s) may be obtained from:

STATE OF MARYLAND DEPARTMENT OF LICENSING AND REGULATION
Division of Labor and Industry/Maryland Occupational Safety and Health
1100 North Eutaw Street
Baltimore, Maryland 21202
Telephone No.: 410-767-2215

3.2 SAFETY PRECAUTIONS AND PROGRAMS:

A. Each Contractor shall be responsible for initiating, maintaining and supervising safety precautions and programs in connection with the work.

B. All Contractors shall comply with the provisions of the "Occupational Safety and Health Act" and Federal, State and local requirements.

C. If a Contractor fails to maintain the safety precautions required by law or directed by authorities having jurisdiction, the Owner may take such action as necessary and charge the Contractor therefore. The failure of the Owner to take any such action shall not relieve the Contractor of his obligations.

D. The Contractor individually shall be responsible for the safety, efficiency, and adequacy of his plant, appliances, and methods and for any damage which may result from their failure or their improper construction, maintenance or operation.

E. Prior to mobilizing to the job, the Contractor shall submit, in writing, a description of his safety program. During the conduct of the work, the Contractor shall immediately notify the Owner and Architect in writing of all accidents and shall submit a written report describing in detail the circumstances of each accident within 24'hours of its occurrence. All Contractors shall notify the Architect of any flammable, combustible and/or toxic

materials intended for use on the project and shall furnish literature pertinent to the use and control of all materials, including, but not limited to M.S.D.S. sheets.

F. Each Contractor shall delegate one representative who shall be responsible to maintain all safety requirements of the Contractor.

3.3 SAFETY OF PERSONS AND PROPERTY:

A. The Contractor shall take all reasonable precautions for the safety of, and shall provide all reasonable protection to prevent damage or loss to:

1. All school personnel, employees on the work site and all other persons who may be affected thereby.

2. All the work and all materials and equipment to be incorporated therein, whether in storage on or off the site, under the care, custody or control of the Contractor or any of his Subcontractors or Sub-Subcontractors.

3. Other property at the site or adjacent thereto, including but not limited to trees, shrubs, lawns, walks, pavements, roadways, structures and utilities not designated for removal, relocation or replacement in the course of construction and underground property.

B. The Contractor shall give all notices and 'comply with all applicable laws, ordinances, rules, regulations and lawful orders of any public authority, including the Owner's requirements bearing on the Safety of persons or property or their protection from damage, injury or loss.

C. The Contractor shall erect and maintain, as required by existing conditions and progress of the work, all reasonable safeguards for safety and protection, including danger signs and other warnings against hazards.

D. The Contractor shall promptly remedy all damage or loss to any property caused in whole or in part by the Contractor, his Subcontractors, his Sub-Subcontractors, or anyone directly employed by any of them, or by anyone for whose acts any of them be liable.

E. The Contractor shall not load or permit any part of the work to be loaded so as to endanger its integrity and safety.

F. Contractors using a method of blasting to perform work on the project shall use all proper methods, including adequate safety matting and/or overburden, progressive time sequences and scaled distances, in accordance with all governmental regulations.

G. The use of audio equipment and headsets will not be permitted on the construction site.

3.4 PERSONAL PROTECTION REQUIREMENTS

A. All persons entering the project shall wear hard hats in good condition and meet ANSI 289.11997. Hard hats shall be worn in the proper manner.

B. All persons entering the project 'shall wear proper work boots, clothing and attire including long trousers and shirts. No obscene or inappropriate messages may be displayed on clothing. What constitutes obscene or inappropriate will be at the sole discretion of the Owner.

C. All job site personnel are expected to strictly adhere to the following rules and regulations:

1. Use of approved eye protection by all Contractor personnel shall be required during all types of percussion and reciprocating work or when other requirements govern.

2. Approved respiratory equipment shall be worn by all personnel exposed to hazardous volumes of toxic or noxious dusts, fumes, mists, or gases.

3. Personal protective equipment is to be used under unusual conditions, such as high temperature work, handling caustic or corrosive liquids, or molten metals.

4. The Contractor is responsible for providing safety training to all of his employees.
5. All shipments to the site shall have the required documentation and labels attached and the documentation and labels shall be maintained while the material is on site.

6. As defined in the occupational Safety & Health Act, safety belts, complete with lanyards, or parachute-style harness, complete with lanyard, are to be used where there is a danger of falling.

3.5 HOUSEKEEPING

A. Materials and equipment must be piled up or stored in a safe manner. Aisles must be kept clear.

B. All drop cables/extension cords shall be elevated above the ground or protected in such a way to allow traffic to pass.

C. Consumption of food and beverages shall be in designated areas and at specified times.

D. Glass-bottled refreshments will not be allowed in the workplace.

E. Welding stubs and shells from explosive activated tools shall be collected and properly disposed of by Contractor.

F. The cords and connections at temporary panels must be maintained in an orderly fashion at all times to prevent tripping.

G. Nails are to be bent over and/or removed from wood.

H. Aisles, stairwells and base areas of ladders are to be kept clear at all times.

3.6 M.S.D.S.-CONTROLLED PRODUCTS

A. The Contractor is responsible for notifying the Owner, of any controlled products that they bring or cause to have brought onto the site. The Contractor shall submit copies of the Material Safety Data Sheet (M.S.D.S.) for the controlled product, and the Contractor shall retain a copy of the M.S.D.S. on site for their own reference. The legal storage, use, and disposal of any controlled product is the responsibility of the Contractor.

B. The Contractor shall comply with OSHA Communications' Standards 29 CFR 1910-1200 for hazardous materials. The Contractor shall maintain a Material Safety Data Sheet on file at the jobsite for each chemical brought to the site.

C. Temporary storage of hazardous materials shall be the responsibility of the Contractor. Final cleanup and removal shall be by the Contractor.

3.7 EMERGENCIES

A. In any emergency affecting the safety or persons or property, the Contractor shall act, at his discretion, to prevent threatened damage, injury or loss and shall immediately notify the Owner and Architect of such emergency conditions. Any claims made by the Contractor for additional compensation or extension of time on account of emergency work shall be processed in accordance with the Conditions of the Contract.

END OF SECTION

SECTION 01 5000
TEMPORARY FACILITIES AND CONTROLS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Dewatering

B. Temporary utilities.

C. Temporary telecommunications services.

D. Temporary sanitary facilities.

E. Temporary Controls: Barriers, enclosures and fencing.

F. Security requirements.

G. Vehicular access and parking.

H. Waste removal facilities and services.

I. Project identification sign.

J. Field offices.

1.02 RELATED REQUIREMENTS

A. Section 01 3553 - Security Procedures

B. Section 01 5100 - Temporary Utilities.

C. Section 01 5213 - Field Offices and Sheds.

D. Section 01 5500 - Vehicular Access and Parking.

E. Section 01 5813 - Temporary Project Signage.

1.03 REFERENCE STANDARDS

A. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

B. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements 2009 (Reapproved 2016).

1.04 DEWATERING

A. Provide temporary means and methods for dewatering all temporary facilities and controls.

B. Maintain temporary facilities in operable condition.

1.05 TEMPORARY UTILITIES - SEE SECTION 01 5100

A. Provide and pay for all electrical power, lighting, water, heating and cooling and ventilation required for construction purposes.

1.06 TELECOMMUNICATIONS SERVICES

A. Provide, maintain, and pay for telecommunications services to field office at time of project mobilization.

B. Telecommunications services shall include:

1. Windows-based personal computer dedicated to project telecommunications, with necessary software and laser printer.

2. Telephone Land Lines: One line, minimum; one handset per line.

3. Internet Connections: Minimum of one; DSL modem or faster.

4. Email: Account/address reserved for project use.

1.07 TEMPORARY SANITARY FACILITIES

A. Provide and maintain required facilities and enclosures. Provide at time of project mobilization.

B. Maintain daily in clean and sanitary condition.

C. At end of construction, return facilities to same or better condition as originally found.

1.08 BARRIERS

A. Provide barriers to prevent unauthorized entry to construction areas, to prevent access to areas that could be hazardous to workers or the public, to allow for owner's use of site and to protect existing facilities and adjacent properties from damage from construction operations and demolition.

B. Provide barricades and covered walkways required by governing authorities for public rights-of-way and for public access to existing building.

C. Provide protection for plants designated to remain. Replace damaged plants.

D. Protect non-owned vehicular traffic, stored materials, site, and structures from damage.

1.09 FENCING

A. Construction: Commercial grade chain link fence.

B. Provide 6 foot (1.8 m) high fence around construction site; equip with vehicular and pedestrian gates with locks.

1.10 EXTERIOR ENCLOSURES

A. Provide temporary insulated weather tight closure of exterior openings to accommodate acceptable working conditions and protection for Products, to allow for temporary heating and maintenance of required ambient temperatures identified in individual specification sections, and to prevent entry of unauthorized persons. Provide access doors with self-closing hardware and locks.

1.11 INTERIOR ENCLOSURES

A. Provide temporary partitions and ceilings as indicated to separate work areas from Owner-occupied areas, to prevent penetration of dust and moisture into Owner-occupied areas, and to prevent damage to existing materials and equipment.

B. Construction: Framing and reinforced polyethylene sheet materials with closed joints and sealed edges at intersections with existing surfaces:

1. STC rating of 35 in accordance with ASTM E90.

2. Maximum flame spread rating of 75 in accordance with ASTM E84.

1.12 SECURITY - SEE SECTION 01 3553

A. Provide security and facilities to protect Work, existing facilities, and Owner's operations from unauthorized entry, vandalism, or theft.

B. Coordinate with Owner 's security program.

1.13 VEHICULAR ACCESS AND PARKING - SEE SECTION 01 5500

A. Comply with regulations relating to use of streets and sidewalks, access to emergency facilities, and access for emergency vehicles.

B. Coordinate access and haul routes with governing authorities and Owner .

C. Provide and maintain access to fire hydrants, free of obstructions.

D. Provide means of removing mud from vehicle wheels before entering streets.

E. Designated existing on-site roads may be used for construction traffic.

F. Provide temporary parking areas to accommodate construction personnel. When site space is not adequate, provide additional off-site parking.

G. Provide one parking space for Owner use.

H. Provide one parking space for Architect use.

1.14 WASTE REMOVAL

A. See Section 01 7419 - Construction Waste Management and Disposal, for additional requirements.

B. Provide waste removal facilities and services as required to maintain the site in clean and orderly condition.

C. Provide containers with lids. Remove trash from site periodically.

D. If materials to be recycled or re-used on the project must be stored on-site, provide suitable non-combustible containers; locate containers holding flammable material outside the structure unless otherwise approved by the authorities having jurisdiction.

E. Open free-fall chutes are not permitted. Terminate closed chutes into appropriate containers with lids.

1.15 PROJECT IDENTIFICATION

A. Provide project identification sign of design, construction, and location approved by Owner .

B. No other signs are allowed without Owner permission except those required by law.

1.16 FIELD OFFICES - SEE SECTION 01 5213

A. Office: Weathertight, with lighting, electrical outlets, heating, cooling equipment, and equipped with sturdy furniture, drawing rack and drawing display table.

B. Provide space for Project meetings, with table and chairs to accommodate 6 persons.

C. Locate offices a minimum distance of 30 feet (10 m) from existing and new structures.

1.17 REMOVAL OF UTILITIES, FACILITIES, AND CONTROLS

A. Remove temporary utilities, equipment, facilities, materials, prior to Date of Substantial Completion inspection.

B. Remove underground installations to a minimum depth of 2 feet (600 mm). Grade site as indicated.

C. Clean and repair damage caused by installation or use of temporary work.

D. Restore existing facilities used during construction to original condition.

E. Restore new permanent facilities used during construction to specified condition.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION

SECTION 01510 - TEMPORARY UTILITIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Temporary Utilities: Electricity, lighting, heat, ventilation, and water.

1.2 TEMPORARY ELECTRICITY

A. Cost: By Contractor.

B. Provide power service required from utility source.

C. Complement existing power service capacity and characteristics as required.

D. Provide power outlets for construction operations, with branch wiring and distribution boxes located at each floor. Provide flexible power cords as required.

E. Provide main service disconnect and over-current protection at convenient location and meter.

F. Permanent convenience receptacles may be utilized during construction.

G. Provide adequate distribution equipment, wiring, and outlets to provide single phase branch circuits for power and lighting.

1.3 TEMPORARY LIGHTING FOR CONSTRUCTION PURPOSES

A. Provide and maintain incandescent lighting for construction operations to achieve a minimum lighting level of 2 watt/sq ft.

B. Provide and maintain 1 watt/sq ft lighting to exterior staging and storage areas after dark for security purposes.

C. Provide branch wiring from power source to distribution boxes with lighting conductors, pigtails, and lamps as required.

D. Maintain lighting and provide routine repairs.

E. Permanent building lighting may be utilized during construction.

1.4 TEMPORARY HEATING

A. Cost of Energy: By Contractor.

B. Provide heating devices and heat as needed to maintain specified conditions for construction operations.

C. Maintain minimum ambient temperature of 50 degrees F in areas where construction is in progress, unless indicated otherwise in specifications.

D. Prior to operation of permanent equipment for temporary heating purposes, verify that installation is approved for operation, equipment is lubricated and filters are in place. Provide and pay for operation, maintenance, and regular replacement of filters and worn or consumed parts.

1.5 TEMPORARY COOLING

A. Cost of Energy: By Contractor.

B. Provide cooling devices and cooling as needed to maintain specified conditions for construction operations.

C. Maintain maximum ambient temperature of 80 degrees F in areas where construction is in progress, unless indicated otherwise in specifications.

D. Prior to operation of permanent equipment for temporary cooling purposes, verify that installation is approved for operation, equipment is lubricated and filters are in place. Provide and pay for operation, maintenance, and regular replacement of filters and worn or consumed parts.

1.6 TEMPORARY VENTILATION

A. Utilize existing ventilation equipment. Extend and supplement equipment with temporary fan units as required to maintain clean air for construction operations.

1.7 TEMPORARY WATER SERVICE

A. Cost of Water Used: By Owner/Contractor.

B. Provide and maintain suitable quality water service for construction operations at time of project mobilization.

C. Connect to existing water source.
   1. Exercise measures to conserve water.

D. Extend branch piping with outlets located so water is available by hoses with threaded connections. Provide temporary pipe insulation to prevent freezing.

VEHICULAR ACCESS AND PARKING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Access roads.

B. Parking.

C. Existing pavements and parking areas.

D. Permanent pavements and parking facilities.

E. Construction parking controls.

F. Flag persons.

G. Flares and lights.

H. Haul routes.

I. Traffic signs and signals.

J. Maintenance.

K. Removal, repair.

L. Mud from site vehicles.

1.02 RELATED REQUIREMENTS

A. Section 01 1000 - Summary: For access to site, work sequence and occupancy.

B. Section 01 5813 - Temporary Project Signage: Post Mounted and Wall Mounted Traffic Control and Informational Signs.

C. Section 31 2200 - Grading: Specifications for earthwork and paving bases.

PART 2 PRODUCTS

2.01 MATERIALS

A. Materials for Permanent Construction: As specified in product specification sections, including earthwork, paving base and topping.

2.02 SIGNS, SIGNALS, AND DEVICES

A. Post Mounted and Wall Mounted Traffic Control and Informational Signs: Specified in Section 01 5813 - Temporary Project Signage.

B. Automatic Traffic Control Signals: As approved by local jurisdictions.

C. Traffic Cones and Drums, Flares and Lights: As approved by local jurisdictions.

D. Flag Person Equipment: As required by local jurisdictions.

PART 3 EXECUTION

3.01 PREPARATION

A. Clear areas, provide surface and storm drainage of road, parking, area premises, and adjacent areas.

3.02 ACCESS ROADS

A. Use of existing on-site streets and driveways for construction traffic is permitted.

B. Construct new temporary all-weather access roads from public thoroughfares to serve construction area, of a width and load bearing capacity to provide unimpeded traffic for construction purposes.

C. Construct temporary bridges and culverts to span low areas and allow unimpeded drainage.

D. Extend and relocate as work progress requires, provide detours as necessary for unimpeded traffic flow.

E. Location as approved by Architect .

F. Provide unimpeded access for emergency vehicles. Maintain 20 foot (6 m) width driveways with turning space between and around combustible materials.

G. Provide and maintain access to fire hydrants free of obstructions.

3.03 PARKING

A. Use of designated areas of existing parking facilities by construction personnel is permitted.

B. Use of designated areas of new parking facilities by construction personnel is permitted.

C. When site space is not adequate, provide additional off-site parking.

D. Locate as approved by Architect .

3.04 PERMANENT PAVEMENTS AND PARKING FACILITIES

A. Prior to Substantial Completion the base for permanent roads and parking areas may be used for construction traffic.

3.05 CONSTRUCTION PARKING CONTROL

A. Control vehicular parking to prevent interference with public traffic and parking, access by emergency vehicles, and Owner's operations.

B. Monitor parking of construction personnel's vehicles in existing facilities. Maintain vehicular access to and through parking areas.

C. Prevent parking on or adjacent to access roads or in non-designated areas.

3.06 FLAG PERSONS

A. Provide trained and equipped flag persons to regulate traffic when construction operations or traffic encroach on public traffic lanes.

3.07 HAUL ROUTES

A. Drawings indicate haul routes designated by authorities for use of construction traffic.

B. Confine construction traffic to designated haul routes.

C. Provide traffic control at critical areas of haul routes to regulate traffic, to minimize interference with public traffic.

3.08 TRAFFIC SIGNS AND SIGNALS

A. At approaches to site and on site, install at crossroads, detours, parking areas, and elsewhere as needed to direct construction and affected public traffic.

B. Relocate as work progresses, to maintain effective traffic control.

3.09 MAINTENANCE

A. Maintain traffic and parking areas in a sound condition free of excavated material, construction equipment, products, mud, snow, and ice.

B. Maintain existing paved areas used for construction; promptly repair breaks, potholes, low areas, standing water, and other deficiencies, to maintain paving and drainage in original, or specified,

condition.

3.10 REMOVAL, REPAIR

A. Remove temporary roads when permanent paving is usable.

B. Remove underground work and compacted materials to a depth of 2 feet (600 mm); fill and grade site as specified.

C. Repair existing facilities damaged by use, to original condition.

D. Remove equipment and devices when no longer required.

E. Repair damage caused by installation.

F. Remove post settings to a depth of 2 feet (600 mm).

3.11 MUD FROM SITE VEHICLES

A. Provide means of removing mud from vehicle wheels before entering streets.

END OF SECTION

SECTION 01 5713
TEMPORARY EROSION AND SEDIMENT CONTROL

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Prevention of erosion due to construction activities.

B. Prevention of sedimentation of waterways, open drainage ways, and storm and sanitary sewers due to construction activities.

C. Restoration of areas eroded due to insufficient preventive measures.

D. Performance bond.

E. Compensation of Owner for fines levied by authorities having jurisdiction due to non-compliance by Contractor .

1.02 RELATED REQUIREMENTS

A. Section 01 3329 - Sustainable Design Reporting: Submittal procedures for sustainable design documentation.

B. Section 03 3000 - Cast-in-Place Concrete: Concrete for temporary and permanent erosion control structures indicated on drawings.

C. Section 31 1000 - Site Clearing: Limits on clearing; disposition of vegetative clearing debris.

D. Section 31 2200 - Grading: Temporary and permanent grade changes for erosion control.

E. Section 31 3700 - Riprap: Temporary and permanent stabilization using riprap.

F. Section 32 1123 - Aggregate Base Courses: Temporary and permanent roadways.

G. Section 32 9219 - Seeding: Permanent turf for erosion control.

H. Section 32 9223 - Sodding: Permanent turf for erosion control.

I. Section 32 9300 - Plants: Permanent plantings for erosion control.

1.03 REFERENCE STANDARDS

A. ASTM D4355/D4355M - Standard Test Method for Deterioration of Geotextiles by Exposure to Light, Moisture and Heat in a Xenon Arc Type Apparatus 2014.

B. ASTM D4491 - Standard Test Methods for Water Permeability of Geotextiles by Permittivity. 1999a (Reapproved 2014).

C. ASTM D4533 - Standard Test Method for Trapezoid Tearing Strength of Geotextiles 2011.

D. ASTM D4632/D4632M - Standard Test Method for Grab Breaking Load and Elongation of Geotextiles 2015a.

E. ASTM D4751 - Standard Test Method for Determining Apparent Opening Size of a Geotextile 2016.

F. ASTM D4873 - Standard Guide for Identification, Storage, and Handling of Geosynthetic Rolls and Samples 2002 (Reapproved 2009).

G. EPA (NPDES) - National Pollutant Discharge Elimination System (NPDES), Construction General Permit Current Edition.

H. FHWA FLP-94-005 - Best Management Practices for Erosion and Sediment Control 1995.

I. USDA TR-55 - Urban Hydrology for Small Watersheds; USDA Natural Resources Conservation Service 2013.

1.04 PERFORMANCE REQUIREMENTS

A. Comply with requirements of EPA (NPDES) for erosion and sedimentation control, as specified by the NPDES, for Phases I and II, and in compliance with requirements of Construction General Permit (CGP), whether the project is required by law to comply or not.

B. Also comply with all more stringent requirements of State of Maryland Erosion and Sedimentation Control Manual.

C. Runoff Calculation Standard for Urban Areas: USDA TR-55.

D. Develop and follow an Erosion and Sedimentation Prevention Plan and submit periodic inspection reports.

E. Do not begin clearing, grading, or other work involving disturbance of ground surface cover until applicable permits have been obtained; furnish all documentation required to obtain applicable permits.

1. Obtain and pay for permits and provide security required by authority having jurisdiction.

F. Provide to Owner a Performance Bond covering erosion and sedimentation preventive measures only, in an amount equal to 100 percent of the cost of erosion and sedimentation control work.

G. Timing: Put preventive measures in place as soon as possible after disturbance of surface cover and before precipitation occurs.

H. Storm Water Runoff: Control increased storm water runoff due to disturbance of surface cover due to construction activities for this project.

1. Prevent runoff into storm and sanitary sewer systems, including open drainage channels, in excess of actual capacity or amount allowed by authorities having jurisdiction, whichever is less.

2. Anticipate runoff volume due to the most extreme short term and 24-hour rainfall events that might occur in 25 years.

I. Erosion On Site: Minimize wind, water, and vehicular erosion of soil on project site due to construction activities for this project.

1. Control movement of sediment and soil from temporary stockpiles of soil.

2. Prevent development of ruts due to equipment and vehicular traffic.

3. If erosion occurs due to non-compliance with these requirements, restore eroded areas at no cost to Owner .

J. Erosion Off Site: Prevent erosion of soil and deposition of sediment on other properties caused by water leaving the project site due to construction activities for this project.

1. Prevent windblown soil from leaving the project site.

2. Prevent tracking of mud onto public roads outside site.

3. Prevent mud and sediment from flowing onto sidewalks and pavements.

4. If erosion occurs due to non-compliance with these requirements, restore eroded areas at no cost to Owner .

K. Sedimentation of Waterways On Site: Prevent sedimentation of waterways on the project site, including rivers, streams, lakes, ponds, open drainage ways, storm sewers, and sanitary sewers.

1. If sedimentation occurs, install or correct preventive measures immediately at no cost to Owner ; remove deposited sediments; comply with requirements of authorities having jurisdiction.

2. If sediment basins are used as temporary preventive measures, pump dry and remove deposited sediment after each storm.

L. Sedimentation of Waterways Off Site: Prevent sedimentation of waterways off the project site, including rivers, streams, lakes, ponds, open drainage ways, storm sewers, and sanitary sewers.

1. If sedimentation occurs, install or correct preventive measures immediately at no cost to Owner ; remove deposited sediments; comply with requirements of authorities having jurisdiction.

M. Open Water: Prevent standing water that could become stagnant.

N. Maintenance: Maintain temporary preventive measures until permanent measures have been established.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Sustainable Design Documentation: Submit all submittals required in this section in accordance with procedures specified in Section 01 3329.

C. Erosion and Sedimentation Control Plan:

1. Submit within 2 weeks after Notice to Proceed.

2. Include:

a. Site plan identifying soils and vegetation, existing erosion problems, and areas vulnerable to erosion due to topography, soils, vegetation, or drainage.

b. Site plan showing grading; new improvements; temporary roads, traffic accesses, and other temporary construction; and proposed preventive measures.

c. Where extensive areas of soil will be disturbed, include storm water flow and volume calculations, soil loss predictions, and proposed preventive measures.

d. Schedule of temporary preventive measures, in relation to ground disturbing activities.

e. Other information required by law.

f. Format required by law is acceptable, provided any additional information specified is also included.

3. Obtain the approval of the Plan by authorities having jurisdiction.

4. Obtain the approval of the Plan by Owner .

D. Certificate: Mill certificate for silt fence fabric attesting that fabric and factory seams comply with specified requirements, signed by legally authorized official of manufacturer; indicate actual minimum average roll values; identify fabric by roll identification numbers.

E. Inspection Reports: Submit report of each inspection; identify each preventive measure, indicate condition, and specify maintenance or repair required and accomplished.

F. Maintenance Instructions: Provide instructions covering inspection and maintenance for temporary measures that must remain after Substantial Completion.

PART 2 PRODUCTS

2.01 MATERIALS

A. Mulch: Use one of the following:

1. Straw or hay.

2. Wood waste, chips, or bark.

3. Erosion control matting or netting.

B. Grass Seed For Temporary Cover: Select a species appropriate to climate, planting season, and intended purpose. If same area will later be planted with permanent vegetation, do not use species known to be excessively competitive or prone to volunteer in subsequent seasons.

C. Bales: Air dry, rectangular straw bales.

1. Cross Section: 14 by 18 inches (350 by 450 mm), minimum.

2. Bindings: Wire or string, around long dimension.

D. Bale Stakes: One of the following, minimum 3 feet (1 m) long:

1. Steel U- or T-section, with minimum mass of 1.33 pound per linear foot (1.98 kg per linear m).

2. Wood, 2 by 2 inches (50 by 50 mm) in cross section.

E. Silt Fence Fabric: Polypropylene geotextile resistant to common soil chemicals, mildew, and insects; non-biodegradable; in longest lengths possible; fabric including seams with the following minimum average roll lengths:

1. Average Opening Size: 30 U.S. Std. Sieve (0.600 mm), maximum, when tested in accordance with ASTM D4751.

2. Permittivity: 0.05 sec^-1, minimum, when tested in accordance with ASTM D4491.

3. Ultraviolet Resistance: Retaining at least 70 percent of tensile strength, when tested in accordance with ASTM D4355/D4355M after 500 hours exposure.

4. Tensile Strength: 100 pounds-force (450 N), minimum, in cross-machine direction; 124 pounds-force (550 N), minimum, in machine direction; when tested in accordance with ASTM D4632/D4632M.

5. Elongation: 15 to 30 percent, when tested in accordance with ASTM D4632/D4632M.

6. Tear Strength: 55 pounds-force (245 N), minimum, when tested in accordance with ASTM D4533.

7. Color: Manufacturer's standard, with embedment and fastener lines preprinted.

F. Silt Fence Posts: One of the following, minimum 5 feet (1500 mm) long:

1. Steel U- or T-section, with minimum mass of 1.33 pound per linear foot (1.98 kg per linear m).

2. Hardwood, 2 by 2 inches (50 by 50 mm) in cross section.

G. Gravel: See Section 32 1123 for aggregate.

H. Riprap: See Section 31 3700.

I. Concrete: See Section 03 3000.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine site and identify existing features that contribute to erosion resistance; maintain such existing features to greatest extent possible.

3.02 PREPARATION

A. Schedule work so that soil surfaces are left exposed for the minimum amount of time.

3.03 SCOPE OF PREVENTIVE MEASURES

A. In all cases, if permanent erosion resistant measures have been installed temporary preventive measures are not required.

B. Construction Entrances: Traffic-bearing aggregate surface.

1. Width: As required; 20 feet (7 m), minimum.
2. Length: 50 feet (16 m), minimum.
3. Provide at each construction entrance from public right-of-way.
4. Where necessary to prevent tracking of mud onto right-of-way, provide wheel washing area out of direct traffic lane, with drain into sediment trap or basin.

C. Linear Sediment Barriers: Made of silt fences.
1. Provide linear sediment barriers:
a. Along downhill perimeter edge of disturbed areas, including soil stockpiles.
b. Along the top of the slope or top bank of drainage channels and swales that traverse disturbed areas.
c. Along the toe of cut slopes and fill slopes.
d. Perpendicular to flow across the bottom of existing and new drainage channels and swales that traverse disturbed areas or carry runoff from disturbed areas; space at maximum of 200 feet apart (at maximum of 60 m apart).
e. Across the entrances to culverts that receive runoff from disturbed areas.
2. Space sediment barriers with the following maximum slope length upslope from barrier:
a. Slope of Less Than 2 Percent: 100 feet (30 m)..
b. Slope Between 2 and 5 Percent: 75 feet (23 m).
c. Slope Between 5 and 10 Percent: 50 feet (15 m).
d. Slope Between 10 and 20 Percent: 25 feet (7.5 m).
e. Slope Over 20 Percent: 15 feet (4.5 m).

D. Storm Drain Curb Inlet Sediment Trap: Protect each curb inlet using one of the following measures:
1. Filter fabric wrapped around hollow concrete blocks blocking entire inlet face area; use one piece of fabric wrapped at least 1-1/2 times around concrete blocks and secured to prevent dislodging; orient cores of blocks so runoff passes into inlet.
2. Straw bale row blocking entire inlet face area; anchor into pavement.

E. Storm Drain Drop Inlet Sediment Traps: As detailed on drawings.

F. Temporary Splash Pads: Stone aggregate over filter fabric; size to suit application; provide at downspout outlets and storm water outlets.

G. Soil Stockpiles: Protect using one of the following measures:
1. Cover with polyethylene film, secured by placing soil on outer edges.
2. Cover with mulch at least 4 inches (100 mm) thickness of pine needles, sawdust, bark, wood chips, or shredded leaves, or 6 inches (150 mm) of straw or hay.

H. Mulching: Use only for areas that may be subjected to erosion for less than 6 months.
1. Wood Waste: Use only on slopes 3:1 or flatter; no anchoring required.

I. Temporary Seeding: Use where temporary vegetated cover is required.

3.04 INSTALLATION

A. Traffic-Bearing Aggregate Surface:

1. Excavate minimum of 6 inches (150 mm).
2. Place geotextile fabric full width and length, with minimum 12 inch (300 mm) overlap at joints.
3. Place and compact at least 6 inches (150 mm) of 1 1/2 to 3 1/2 inch (40 to 90 mm) diameter stone.

B. Silt Fences:

1. Store and handle fabric in accordance with ASTM D4873.
2. Where slope gradient is less than 3:1 or barriers will be in place less than 6 months, use nominal 16 inch (405 mm) high barriers with minimum 36 inch (905 mm) long posts spaced at 6 feet (1830 mm) maximum, with fabric embedded at least 4 inches (100 mm) in ground.
3. Where slope gradient is steeper than 3:1 or barriers will be in place over 6 months, use nominal 28 inch (710 mm) high barriers, minimum 48 inch (1220 mm) long posts spaced at 6 feet (1830 mm) maximum, with fabric embedded at least 6 inches (150 mm) in ground.
4. Where slope gradient is steeper than 3:1 and vertical height of slope between barriers is more than 20 feet (6 m), use nominal 32 inch (810 mm) high barriers with woven wire reinforcement and steel posts spaced at 4 feet (1220 mm) maximum, with fabric embedded at least 6 inches (150 mm) in ground.
5. Install with top of fabric at nominal height and embedment as specified.
6. Embed bottom of fabric in a trench on the upslope side of fence, with 2 inches (50 mm) of fabric laid flat on bottom of trench facing upslope; backfill trench and compact.
7. Do not splice fabric width; minimize splices in fabric length; splice at post only, overlapping at least 18 inches (460 mm), with extra post.
8. Fasten fabric to wood posts using one of the following:
    a. Four nails per post with 3/4 inch (19 mm) diameter flat or button head, 1 inch (25 mm) long, and 14 gage, 0.083 inch (2.11 mm) shank diameter.
    b. Five staples per post with at least 17 gage, 0.0453 inch (1.150 mm) wire, 3/4 inch (19 mm) crown width and 1/2 inch (12 mm) long legs.
9. Fasten fabric to steel posts using wire, nylon cord, or integral pockets.
10. Wherever runoff will flow around end of barrier or over the top, provide temporary splash pad or other outlet protection; at such outlets in the run of the barrier, make barrier not more than 12 inches (300 mm) high with post spacing not more than 4 feet (1220 mm).

C. Straw Bale Rows:

1. Install bales in continuous rows with ends butting tightly, with one bale at each end of row turned uphill.
2. Install bales so that bindings are not in contact with the ground.
3. Embed bales at least 4 inches (100 mm) in the ground.
4. Anchor bales with at least two stakes per bale, driven at least 18 inches (450 mm) into the ground; drive first stake in each bale toward the previously placed bale to force bales together.
5. Fill gaps between ends of bales with loose straw wedged tightly.
6. Place soil excavated for trench against bales on the upslope side of the row, compacted.

D. Mulching Over Large Areas:

1. Dry Straw and Hay: Apply 2-1/2 tons per acre (6350 kg per hectare); anchor using dull disc harrow or emulsified asphalt applied using same spraying machine at 100 gallons of water per ton of mulch.

2. Wood Waste: Apply 6 to 9 tons per acre (15,200 to 20,800 kg per hectare).
3. Erosion Control Matting: Comply with manufacturer's instructions.

E. Mulching Over Small and Medium Areas:

1. Dry Straw and Hay: Apply 4 to 6 inches (100 to 150 mm) depth.
2. Wood Waste: Apply 2 to 3inches (50 to 75 mm) depth.
3. Erosion Control Matting: Comply with manufacturer's instructions.

F. Temporary Seeding:

1. When hydraulic seeder is used, seedbed preparation is not required.
2. When surface soil has been sealed by rainfall or consists of smooth undisturbed cut slopes, and conventional or manual seeding is to be used, prepare seedbed by scarifying sufficiently to allow seed to lodge and germinate.
3. If temporary mulching was used on planting area but not removed, apply nitrogen fertilizer at 1 pound per 1000 sq ft (0.5 kg per 100 sq m).
4. On soils of very low fertility, apply 10-10-10 fertilizer at rate of 12 to 16 pounds per 1000 sq ft (6 to 8 kg per 100 sq m).
5. Incorporate fertilizer into soil before seeding.
6. Apply seed uniformly; if using drill or cultipacker seeders place seed 1/2 to 1 inch (12 to 25 mm) deep.
7. Irrigate as required to thoroughly wet soil to depth that will ensure germination, without causing runoff or erosion.
8. Repeat irrigation as required until grass is established.

3.05 MAINTENANCE

A. Inspect preventive measures weekly, within 24 hours after the end of any storm that produces 0.5 inches (13 mm) or more rainfall at the project site, and daily during prolonged rainfall.

B. Repair deficiencies immediately.

C. Silt Fences:

1. Promptly replace fabric that deteriorates unless need for fence has passed.
2. Remove silt deposits that exceed one-third of the height of the fence.
3. Repair fences that are undercut by runoff or otherwise damaged, whether by runoff or other causes.

D. Straw Bale Rows:

1. Promptly replace bales that fall apart or otherwise deteriorate unless need has passed.
2. Remove silt deposits that exceed one-half of the height of the bales.
3. Repair bale rows that are undercut by runoff or otherwise damaged, whether by runoff or other causes.

E. Clean out temporary sediment control structures weekly and relocate soil on site.

F. Place sediment in appropriate locations on site; do not remove from site.

3.06 CLEAN UP

A. Remove temporary measures after permanent measures have been installed, unless permitted to remain by Architect .

B. Clean out temporary sediment control structures that are to remain as permanent measures.

C. Where removal of temporary measures would leave exposed soil, shape surface to an acceptable grade and finish to match adjacent ground surfaces.

END OF SECTION

SECTION 01 5719
TEMPORARY ENVIRONMENTAL CONTROLS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Construction procedures to promote adequate indoor air quality after construction.

B. Building flush-out after construction and before occupancy.

C. Testing indoor air quality before commencement of construction; existing building areas only.

D. Testing indoor air quality after completion of construction.

E. Testing air change effectiveness after completion of construction.

1.02 PROJECT GOALS

A. See Section 01 3329 - Sustainable Design Reporting, for overall project goals relating to environment and energy.

B. Dust and Airborne Particulates: Prevent deposition of dust and other particulates in HVAC ducts and equipment.

1. Cleaning of ductwork is not contemplated under this Contract.

2. Contractor shall bear the cost of cleaning required due to failure to protect ducts and equipment from construction dust.

C. Airborne Contaminants: Procedures and products have been specified to minimize indoor air pollutants.

1. Furnish products meeting the specifications.

2. Avoid construction practices that could result in contamination of installed products leading to indoor air pollution.

1.03 RELATED REQUIREMENTS

A. Section 01 4000 - Quality Requirements: Testing and inspection services.

B. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

C. Section 23 4000 - HVAC Air Cleaning Devices: HVAC filters.

D. Section 23 0593 - Testing, Adjusting, and Balancing for HVAC: Testing HVAC systems for proper air flow rates, adjustment of dampers and registers, and settings for equipment.

E. Section 23 0130.51 - HVAC Air-Distribution System Cleaning: Cleaning air ducts, equipment, and terminal units.

1.04 REFERENCE STANDARDS

A. ASHRAE Std 52.2 - Method of Testing General Ventilation Air-Cleaning Devices for Removal Efficiency by Particle Size 2017.

B. ASHRAE Std 129 - Measuring Air-Change Effectiveness. 1997 (Reaffirmed 2002).

C. ASTM D5197 - Standard Test Method for Determination of Formaldehyde and Other Carbonyl Compounds in Air (Active Sampler Methodology) 2016.

D. ASTM E779 - Standard Test Method for Determining Air Leakage Rate by Fan Pressurization 2010 (Reapproved 2018).

E. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions From Indoor Sources Using Environmental Chambers 2017, v1.2.

F. EPA 600/4-90/010 - Compendium of Methods for the Determination of Air Pollutants in Indoor Air 1990.

G. SMACNA (OCC) - IAQ Guidelines for Occupied Buildings Under Construction 2007.

1.05 DEFINITIONS

A. Adsorptive Materials: Gypsum board, acoustical ceiling tile and panels, carpet and carpet tile, fabrics, fibrous insulation, and other similar products.

B. Contaminants: Gases, vapors, regulated pollutants, airborne mold and mildew, and the like, as specified.

C. Particulates: Dust, dirt, and other airborne solid matter.

D. Wet Work: Concrete, plaster, coatings, and other products that emit water vapor or volatile organic compounds during installation, drying, or curing.

1.06 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Sustainability Documentation: Submit all submittals required in this section.

1. For LEED v4 certification system projects, submit in accordance with procedures specified in Section 01 3329.02 - Sustainable Design Reporting - LEED v4.

C. Indoor Air Quality Management Plan: Describe in detail measures to be taken to promote adequate indoor air quality upon completion; use SMACNA (OCC) as a guide.

1. Submit not less than 60 days before enclosure of building.
2. Identify potential sources of odor and dust.
3. Identify construction activities likely to produce odor or dust.
4. Identify areas of project potentially affected, especially occupied areas.
5. Evaluate potential problems by severity and describe methods of control.
6. Describe construction ventilation to be provided, including type and duration of ventilation, use of permanent HVAC systems, types of filters and schedule for replacement of filters.
7. Describe cleaning and dust control procedures.
8. Describe coordination with commissioning procedures.

D. Interior Finishes Installation Schedule: Identify each interior finish that either generates odors, moisture, or vapors or is susceptible to adsorption of odors and vapors, and indicate air handling zone, sequence of application, and curing times.

E. Duct and Terminal Unit Inspection Report.

F. Air Contaminant Test Plan: Identify:

1. Testing agency qualifications.
2. Locations and scheduling of air sampling.
3. Test procedures, in detail.
4. Test instruments and apparatus.
5. Sampling methods.

G. Air Contaminant Test Reports: Show:

1. Location where each sample was taken, and time.
2. Test values for each air sample; average the values of each set of 3.

3. HVAC operating conditions.
4. Certification of test equipment calibration.
5. Other conditions or discrepancies that might have influenced results.

H. Ventilation Effectiveness Test Plan: Identify:

1. Testing agency qualifications.
2. Description of test spaces, including locations of air sampling.
3. Test procedures, in detail; state whether tracer gas decay or step-up will be used.
4. Test instruments and apparatus; identify tracer gas to be used.
5. Sampling methods.

I. Ventilation Effectiveness Test Reports: Show:

1. Include preliminary tests of instruments and apparatus and of test spaces.
2. Calculation of ventilation effectiveness, E.
3. Location where each sample was taken, and time.
4. Test values for each air sample.
5. HVAC operating conditions.
6. Other information specified in ASHRAE Std 129.
7. Other conditions or discrepancies that might have influenced results.

1.07 QUALITY ASSURANCE

A. Testing and Inspection Agency Qualifications: Independent testing agency having minimum of 5 years experience in performing the types of testing specified.

PART 2 PRODUCTS

2.01 MATERIALS

A. Low VOC Materials: See Section 01 6116.

B. Low VOC Materials: See other sections for specific requirements for materials with low VOC content.

C. Auxiliary Air Filters: MERV of 8, minimum, when tested in accordance with ASHRAE Std 52.2.

PART 3 EXECUTION

3.01 CONSTRUCTION PROCEDURES

A. Prevent the absorption of moisture and humidity by adsorptive materials by:

1. Sequencing the delivery of such materials so that they are not present in the building until wet work is completed and dry.
2. Delivery and storage of such materials in fully sealed moisture-impermeable packaging.
3. Provide sufficient ventilation for drying within reasonable time frame.

B. Begin construction ventilation when building is substantially enclosed.

C. If extremely dusty or dirty work must be conducted inside the building, shut down HVAC systems for the duration; remove dust and dirt completely before restarting systems.

D. When working in a portion of an occupied building, prevent movement of air from construction area to occupied area.

E. HVAC equipment and supply air ductwork may be used for ventilation during construction:
   1. Operate HVAC system on 100 percent outside air, with 1.5 air changes per hour, minimum.
   2. Ensure that air filters are correctly installed prior to starting use; replace filters when they lose efficiency.
   3. Seal return air inlets or otherwise positively isolate return air system to prevent recirculation of air; provide alternate return air pathways.
   4. Where return air ducts must be used for ventilation, install auxiliary filters at return inlets, sealed to ducts; use filters with at least the equivalent efficiency as those required at supply air side; inspect and replace filters when they lose efficiency.

F. Do not store construction materials or waste in mechanical or electrical rooms.

G. Prior to use of return air ductwork without intake filters clean up and remove dust and debris generated by construction activities.
   1. Inspect duct intakes, return air grilles, and terminal units for dust.
   2. Clean plenum spaces, including top sides of lay-in ceilings, outsides of ducts, tops of pipes and conduit.
   3. Clean tops of doors and frames.
   4. Clean mechanical and electrical rooms, including tops of pipes, ducts, and conduit, equipment, and supports.
   5. Clean return plenums of air handling units.
   6. Remove intake filters last, after cleaning is complete.

H. Do not perform dusty or dirty work after starting use of return air ducts without intake filters.

I. Use other relevant recommendations of SMACNA (OCC) for avoiding unnecessary contamination due to construction procedures.

3.02 BUILDING FLUSH-OUT

A. Contractor 's Option: Either full continuous flush-out OR satisfactory air contaminant testing is required, not both.

B. Perform building flush-out before occupancy.

C. Do not start flush-out until:
   1. All construction is complete.
   2. HVAC systems have been tested, adjusted, and balanced for proper operation.
   3. Cleaning of inside of HVAC ductwork, specified elsewhere, has been completed.
   4. Inspection of inside of return air ducts and terminal units confirms that cleaning is not necessary.
   5. New HVAC filtration media have been installed.

D. Building Flush-Out: Operate all ventilation systems at normal flow rates with 100 percent outside air until a total air volume of 14,000 cubic feet per square foot (4500 cubic meters per square meter) of floor area has been supplied.
   1. Obtain Owner 's concurrence that construction is complete enough before beginning flush-out.
   2. Maintain interior temperature of at least 60 degrees F (15 degrees C) and interior relative humidity no higher than 60 percent.

3. If additional construction involving materials that produce particulates or any of the specified contaminants is conducted during flush-out, start flush-out over.

E. Install new HVAC filtration media after completion of flush-out and before occupancy or further testing.

3.03 AIR CONTAMINANT TESTING

A. Contractor's Option: Either full continuous flush-out, or satisfactory air contaminant testing is required, not both.

B. Perform air contaminant testing before starting construction, as base line for evaluation of post-construction testing.

C. Perform air contaminant testing before occupancy.

D. Do not start air contaminant testing until:

1. All construction is complete, including interior finishes.
2. HVAC systems have been tested, adjusted, and balanced for proper operation.
3. Cleaning of inside of HVAC ductwork, specified elsewhere, has been completed.
4. New HVAC filtration media have been installed.

E. Indoor Air Samples: Collect from spaces representative of occupied areas:

1. Collect samples while operable windows and exterior doors are closed, HVAC system is running normally as if occupied, with design minimum outdoor air, but with the building unoccupied.
2. Collect samples from spaces in each contiguous floor area in each air handler zone, but not less than one sample per 25,000 square feet (2300 square meters); take samples from areas having the least ventilation and those having the greatest presumed source strength.
3. Collect samples from height from 36 inches (915 mm) to 72 inches (1830 mm) above floor.
4. Collect samples from same locations on 3 consecutive days during normal business hours; average the results of each set of 3 samples.
5. Exception: Areas with normal very high outside air ventilation rates, such as laboratories, do not need to be tested.
6. When retesting the same building areas, take samples from at least the same locations as in first test.

F. Outdoor Air Samples: Collect samples at outside air intake of each air handler at the same time as indoor samples are taken.

G. Analyze air samples and submit report.

H. Air Contaminant Concentration Limits:

1. Formaldehyde: Not more than 27 parts per billion.
2. PM10 Particulates: Not more than 50 micrograms per cubic meter.
3. Total Volatile Organic Compounds (TVOCs): Not more than 500 micrograms per cubic meter.
4. Chemicals Listed in CAL (CDPH SM) Table 4-1, except Formaldehyde: Allowable concentrations listed in Table 4-1.
5. Carbon Monoxide: Not more than 9 parts per million and not more than 2 parts per million higher than outdoor air.

I. Air Contaminant Concentration Test Methods:

1. Formaldehyde: ASTM D5197, EPA 625/R-96/010b Method TO-11A, or EPA 600/4-90/010 Method IP-6.
2. Particulates: EPA 600/4-90/010 Method IP-10.
3. Total Volatile Organic Compounds (TVOC): EPA 625/R-96/010b Method TO-1, TO-15, or TO-17; or EPA 600/4-90/010 Method IP-1.
4. Chemicals Listed in CAL (CDPH SM) Table 4-1, except Formaldehyde: ASTM D5197, or EPA 625/R-96/010b Method TO-1, TO-15, or TO-17.
5. Carbon Monoxide: EPA 600/4-90/010 Method IP-3, plus measure outdoor air; measure in ppm; report both indoor and outdoor measurements.

J. If air samples show concentrations higher than those specified, ventilate with 100 percent outside air and retest at no cost to Owner , or conduct full building flush-out specified above.

3.04 VENTILATION EFFECTIVENESS TESTING

A. Perform ventilation effectiveness testing before occupancy.

B. Do not begin ventilation effectiveness testing until:

1. HVAC testing, adjusting, and balancing has been satisfactorily completed.
2. Building flush-out or air contaminant testing has been completed satisfactorily.
3. New HVAC filtration media have been installed.

C. Test each air handler zone in accordance with ASHRAE Std 129.

D. If calculated air change effectiveness for a particular zone is less than 0.9 due to inadequate balancing of the system, adjust, and retest at no cost to Owner .

END OF SECTION

SECTION 01 5813
TEMPORARY PROJECT SIGNAGE

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Project identification sign.

B. Project informational signs.

1.02 RELATED REQUIREMENTS

A. Section 01 1000 - Summary: Responsibility to provide signs.

1.03 QUALITY ASSURANCE

A. Design sign and structure to withstand 50 miles/hr (80 km/hr) wind velocity.

B. Sign Painter: Experienced as a professional sign painter for minimum three years.

C. Finishes, Painting: Adequate to withstand weathering, fading, and chipping for duration of construction.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Shop Drawing: Show content, layout, lettering, color, foundation, structure, sizes and grades of members.

PART 2 PRODUCTS

2.01 SIGN MATERIALS

A. Sign Surfaces: Exterior grade plywood with medium density overlay, minimum 3/4 inch (19 mm) thick, standard large sizes to minimize joints.

B. Paint and Primers: Exterior quality, two coats; sign background of white color.

C. Lettering: Exterior quality paint, contrasting colors.

2.02 PROJECT IDENTIFICATION SIGN

A. One painted sign of construction, design, and content indicated on drawings, location designated.

B. Content:

1. Project number, title, logo and name of Owner as indicated on Contract Documents.
2. Names and titles of authorities.
3. Names and titles of Architect and Consultants.
4. Name of Prime Contractor and major Subcontractors.

C. PGCPS has directive on how to execute the signage for all types of project. This documentation will be incorproated in the drawings and specifications.

2.03 PROJECT INFORMATIONAL SIGNS

A. Painted informational signs of same colors and lettering as Project Identification sign, or standard products; size lettering to provide legibility at 100 foot (30 m) distance.

B. Provide at each field office, storage shed , and directional signs to direct traffic into and within site. Relocate as Work progress requires.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install project identification sign within 30 days after date fixed by Notice to Proceed.

B. Erect at designated location.

C. Erect supports and framing on secure foundation, rigidly braced and framed to resist wind loadings.

D. Install sign surface plumb and level, with butt joints. Anchor securely.

E. Paint exposed surfaces of sign, supports, and framing.

3.02 MAINTENANCE

A. Maintain signs and supports clean, repair deterioration and damage.

3.03 REMOVAL

A. Remove signs, framing, supports, and foundations at completion of Project and restore the area.

MEMORANDUM

TO: **All Directors of Facility Planning**
All Directors of Maintenance

FROM: **Robert A. Gorrell, Executive Director**

DATE: **June 5, 2019** RAG

RE: **Revision for Construction Sign**

Each State funded school construction project shall have a construction sign on the site and a plaque for installation in the school as identified in Appendix E of the IAC/PSCP Administrative Procedures Guide (APG).

On May 1, 2019, Speaker Adrienne A. Jones was sworn in as Speaker of the House, resulting in revisions to the construction sign for State funded school construction projects. This revised sign is available through Maryland Correctional Enterprises (MCE) and should be used for State funded school construction projects. Replacement labels are available as well and may be adhered to existing signs in lieu of replacement signs.

The construction sign should be erected for all State funded school construction projects including all systemic renovation projects, with the exception of Aging School Program (ASP) and Qualified Zone Academy Bond (QZAB) projects less than $100,000 and State-owned and locally-owned relocatable classroom building projects. This policy is consistent with the requirements of the IAC Administrative Procedures Guide (APG).

Please ensure that the new layout is followed exactly as sent to you, including the same slogan, names, colors, justification, size of lettering, etc. It is strongly recommended that construction signs be purchased through MCE.
MCE can be reached at:

SECTION 01600 - PRODUCT REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes administrative and procedural requirements for selection of products for use in Project; product delivery, storage, and handling; manufacturers' standard warranties on products; special warranties; product substitutions; and comparable products.

1.2 DEFINITIONS

A. Products: Items purchased for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.
   1. Named Products: Items identified by manufacturer's product name, including make or model number or other designation shown or listed in manufacturer's published product literature, that is current as of date of the Contract Documents.
   2. New Products: Items that have not previously been incorporated into another project or facility, except that products consisting of recycled-content materials are allowed, unless explicitly stated otherwise. Products salvaged or recycled from other projects are not considered new products.
   3. Comparable Product: Product that is demonstrated and approved through submittal process, or where indicated as a product substitution, to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.

B. Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor.

C. Basis-of-Design Product Specification: Where a specific manufacturer's product is named and accompanied by the words "basis of design," including make or model number or other designation, to establish the significant qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics for purposes of evaluating comparable products of other named manufacturers.

D. Manufacturer's Warranty: Preprinted written warranty published by individual manufacturer for a particular product and specifically endorsed by manufacturer to Owner.

E. Special Warranty: Written warranty required by or incorporated into the Contract Documents, either to extend time limit provided by manufacturer’s warranty or to provide more rights for Owner.

1.3 SUBMITTALS

A. Product List: Submit a list, in tabular from, showing specified products. Include generic names of products required. Include manufacturer's name and proprietary product names for each product.
   1. Coordinate product list with Contractor's Construction Schedule and the Submittals Schedule.
   2. Form: Tabulate information for each product under the following column headings:
      a. Specification Section number and title.
      b. Generic name used in the Contract Documents.
      c. Proprietary name, model number, and similar designations.
      d. Manufacturer's name and address.

e. Supplier's name and address.
f. Installer's name and address.
g. Projected delivery date or time span of delivery period.
h. Identification of items that require early submittal approval for scheduled delivery date.

3. Initial Submittal: Within 14 calendar days after the Notice to Proceed (NTP), submit 3 copies of initial product list. Include a written explanation for omissions of data and for variations from Contract requirements.
   a. At Contractor's option, initial submittal may be limited to product selections and designations that must be established early in Contract period.
4. Completed List: Within 28 calendar days after the Notice to Proceed (NTP), submit 3 copies of completed product list. Include a written explanation for omissions of data and for variations from Contract requirements.
5. Design Consultant Action: The Design Consultant will respond in writing to Contractor 14 calendar days of receipt of completed product list. The Design Consultant's response will include a list of unacceptable product selections and a brief explanation of reasons for this action. The Design Consultant's response, or lack of response, does not constitute a waiver of requirement to comply with the Contract Documents.

B. Substitution Requests: Submit three copies of each request for consideration. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.
   1. Substitution Request Form: Use CSI Form 13.1A.
   2. Documentation: Show compliance with requirements for substitutions and the following, as applicable:
      a. Statement indicating why specified material or product cannot be provided.
      b. Coordination information, including a list of changes or modifications needed to other parts of the Work and to construction performed by Owner and separate contractors, that will be necessary to accommodate proposed substitution.
      c. Detailed comparison of significant qualities of proposed substitution with those of the Work specified. Significant qualities may include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.
      d. Product Data, including drawings and descriptions of products and fabrication and installation procedures.
      e. Samples, where applicable or requested.
      f. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners.
      g. Material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.
      h. Research/evaluation reports evidencing compliance with building code in effect for Project, from a model code organization acceptable to authorities having jurisdiction.
      i. Detailed comparison of Contractor's Construction Schedule using proposed substitution with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating lack of availability or delays in delivery.
      j. Cost information, including a proposal of change, if any, in the Contract Sum.
      k. Contractor's certification that proposed substitution complies with requirements in the Contract Documents and is appropriate for applications indicated.
      l. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.
   3. Design Consultant Action: If necessary, the Design Consultant will request additional information or documentation for evaluation within 7 calendar days of receipt of a request for substitution. The Design Consultant will notify Contractor through Construction Manager of acceptance or rejection of proposed substitution within 15 calendar days of

receipt of request, or 7 calendar days of receipt of additional information or documentation, whichever is later.
    a. Form of Acceptance: Change Order.
    b. Use product specified if Architect cannot make a decision on use of a proposed substitution within time allocated.

C. Comparable Product Requests: Submit three copies of each request for consideration. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.
    1. Design Consultant Action: If necessary, the Design Consultant will request additional information or documentation for evaluation within 7 calendar days of receipt of a comparable product request. The Design Consultant will notify Contractor through Construction Manager of approval or rejection of proposed comparable product request within 15 calendar days of receipt of request, or 7 calendar days of receipt of additional information or documentation, whichever is later.
        a. Form of Approval: As specified in Division 1 Section "Submittal Procedures."
        b. Use product specified if Architect cannot make a decision on use of a comparable product request within time allocated.

D. Basis-of-Design Product Specification Submittal: Comply with requirements in Division 1 Section "Submittal Procedures." Show compliance with requirements.

1.4 QUALITY ASSURANCE

A. Compatibility of Options: If Contractor is given option of selecting between two or more products for use on Project, product selected shall be compatible with products previously selected, even if previously selected products were also options.
    1. Each contractor is responsible for providing products and construction methods compatible with products and construction methods of other contractors.
    2. If a dispute arises between contractors over concurrently selectable but incompatible products, Architect will determine which products shall be used.

1.5 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle products using means and methods that will prevent damage, deterioration, and loss, including theft. Comply with manufacturer's written instructions.

B. Delivery and Handling:
    1. Schedule delivery to minimize long-term storage at Project site and to prevent overcrowding of construction spaces.
    2. Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.
    3. Deliver products to Project site in an undamaged condition in manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.
    4. Inspect products on delivery to ensure compliance with the Contract Documents and to ensure that products are undamaged and properly protected.

C. Storage:
    1. Store products to allow for inspection and measurement of quantity or counting of units.
    2. Store materials in a manner that will not endanger Project structure.
    3. Store products that are subject to damage by the elements, under cover in a weathertight enclosure above ground, with ventilation adequate to prevent condensation.
    4. Store cementitious products and materials on elevated platforms.

5. Store foam plastic from exposure to sunlight, except to extent necessary for period of installation and concealment.
6. Comply with product manufacturer's written instructions for temperature, humidity, ventilation, and weather-protection requirements for storage.
7. Protect stored products from damage and liquids from freezing.
8. Provide a secure location and enclosure at Project site for storage of materials and equipment by Owner's construction forces. Coordinate location with Owner.
9. Materials paid by Owner and stored off-site, the items must be stored in a bonded storage facility and insured with the Owner named as the insured. If the material is to be located beyond 25 miles of the construction site the contractor must provide transportation for the Owners representative to visit the storage site for material verification. Materials must be clearly marked as property of the Owner, including project name.

1.6 PRODUCT WARRANTIES

A. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Contractor of obligations under requirements of the Contract Documents.
   1. Manufacturer's Warranty: Preprinted written warranty published by individual manufacturer for a particular product and specifically endorsed by manufacturer to Owner. Provide Manufacturer's Warranty for all items specified in the Contract Documents including items not identified specifically to receive Warranties. Warranty period shall be consistent with industry standards and shall be for manufactures maximum duration offered.
   2. Special Warranty: Written warranty required by or incorporated into the Contract Documents, either to extend time limit provided by manufacturer's warranty or to provide more rights for Owner.

B. Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution. Submit a draft for approval before final execution.
   1. Manufacturer's Standard Form: Modified to include Project-specific information and properly executed.
   2. Specified Form: When specified forms are included with the Specifications, prepare a written document using appropriate form properly executed.
   3. Refer to Divisions 2 through 16 Sections for specific content requirements and particular requirements for submitting special warranties.

C. Submittal Time: Comply with requirements in Division 1 Section "Closeout Procedures."

PART 2 - PRODUCTS

2.1 PRODUCT SELECTION PROCEDURES

A. General Product Requirements: Provide products that comply with the Contract Documents, that are undamaged and, unless otherwise indicated, that are new at time of installation.
   1. Provide products complete with accessories, trim, finish, fasteners, and other items needed for a complete installation and indicated use and effect.
   2. Standard Products: If available, and unless custom products or nonstandard options are specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.
   3. Owner reserves the right to limit selection to products with warranties not in conflict with requirements of the Contract Documents.
   4. Where products are accompanied by the term "as selected," the Design Consultant will make selection.

5. Where products are accompanied by the term "match sample," sample to be matched is the Design Consultant's.
6. Descriptive, performance, and reference standard requirements in the Specifications establish "salient characteristics" of products.
7. Or Equal: Where products are specified by name and accompanied by the term "or equal" or "or approved equal" or "or approved," comply with provisions in Part 2 "Comparable Products" Article to obtain approval for use of an unnamed product.

B. Product Selection Procedures:
1. Product: Where Specifications name a single product and manufacturer, provide the named product that complies with requirements.
2. Manufacturer/Source: Where Specifications name a single manufacturer or source, provide a product by the named manufacturer or source that complies with requirements.
3. Products: Where Specifications include a list of names of both products and manufacturers, provide one of the products listed that complies with requirements.
4. Manufacturers: Where Specifications include a list of manufacturers' names, provide a product by one of the manufacturers listed that complies with requirements.
5. Available Products: Where Specifications include a list of names of both products and manufacturers, provide one of the products listed, or an unnamed product, that complies with requirements. Comply with provisions in Part 2 "Comparable Products" Article for consideration of an unnamed product.
6. Available Manufacturers: Where Specifications include a list of manufacturers, provide a product by one of the manufacturers listed, or an unnamed manufacturer, that complies with requirements. Comply with provisions in Part 2 "Comparable Products" Article for consideration of an unnamed product.
7. Product Options: Where Specifications indicate that sizes, profiles, and dimensional requirements on Drawings are based on a specific product or system, provide the specified product or system. Comply with provisions in Part 2 "Product Substitutions" Article for consideration of an unnamed product or system.
8. Basis-of-Design Product: Where Specifications name a product and include a list of manufacturers, provide the specified product or a comparable product by one of the other named manufacturers. Drawings and Specifications indicate sizes, profiles, dimensions, and other characteristics that are based on the product named. Comply with provisions in Part 2 "Comparable Products" Article for consideration of an unnamed product by the other named manufacturers.
9. Visual Matching Specification: Where Specifications require matching an established Sample, select a product that complies with requirements and matches Architect's sample. Architect's decision will be final on whether a proposed product matches.
    a. If no product available within specified category matches and complies with other specified requirements, comply with provisions in Part 2 "Product Substitutions" Article for proposal of product.
10. Visual Selection Specification: Where Specifications include the phrase "as selected from manufacturer's colors, patterns, textures" or a similar phrase, select a product that complies with other specified requirements.
    a. Standard Range: Where Specifications include the phrase "standard range of colors, patterns, textures" or similar phrase, Architect will select color, pattern, density, or texture from manufacturer's product line that does not include premium items.
    b. Full Range: Where Specifications include the phrase "full range of colors, patterns, textures" or similar phrase, Architect will select color, pattern, density, or texture from manufacturer's product line that includes both standard and premium items.

2.2 PRODUCT SUBSTITUTIONS

A. Timing: The Contractor may submit substitutions anytime within a 45 calendar day period after Notice to Proceed. Substitutions will be considered and reviewed by the Design Consultant who will make an acceptance or rejection recommendation to BCPS. The burden of proof of

equivalency rests with the Contractor and evidence of such equivalency shall be submitted to the Design Consultant.

B. Conditions: The Design Consultant will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, the Design Consultant will return requests without action, except to record noncompliance with these requirements:
   1. Requested substitution offers Owner a substantial advantage in cost, time, energy conservation, or other considerations, after deducting additional responsibilities Owner must assume. Owner's additional responsibilities may include compensation to Architect for redesign and evaluation services, increased cost of other construction by Owner, and similar considerations.
   2. Requested substitution does not require extensive revisions to the Contract Documents.
   3. Requested substitution is consistent with the Contract Documents and will produce indicated results.
   4. Substitution request is fully documented and properly submitted.
   5. Requested substitution will not adversely affect Contractor's Construction Schedule.
   6. Requested substitution has received necessary approvals of authorities having jurisdiction.
   7. Requested substitution is compatible with other portions of the Work.
   8. Requested substitution has been coordinated with other portions of the Work.
   9. Requested substitution provides specified warranty.
   10. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

2.3 COMPARABLE PRODUCTS

A. Conditions: The Design Consultant will consider Contractor's request for comparable product when the following conditions are satisfied. If the following conditions are not satisfied, the Design Consultant will return requests without action, except to record noncompliance with these requirements:
   1. Evidence that the proposed product does not require extensive revisions to the Contract Documents, that it is consistent with the Contract Documents and will produce the indicated results, and that it is compatible with other portions of the Work.
   2. Detailed comparison of significant qualities of proposed product with those named in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.
   3. Evidence that proposed product provides specified warranty.
   4. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners, if requested.
   5. Samples, if requested.

PART 3 - EXECUTION (NOT USED)

END OF SECTION

SECTION 01 6116
VOLATILE ORGANIC COMPOUND (VOC) CONTENT RESTRICTIONS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Requirements for Indoor-Emissions-Restricted products.

B. Requirements for VOC-Content-Restricted products.

C. Requirement for installer certification that they did not use any non-compliant products.

1.02 RELATED REQUIREMENTS

A. Section 01 3000 - Administrative Requirements: Submittal procedures.

B. Section 01 3329.02 - Sustainable Design Reporting - LEED v4: Procedures for reporting emissions and VOC content data.

C. Section 01 3329.04 - Material Content Form: Form for reporting emissions and VOC content.

D. Section 01 3329.07 - Prohibited Content Installer Certification: Form for certifying that no non-compliant products were used.

E. Section 01 4000 - Quality Requirements: Procedures for testing and certifications.

F. Section 01 5719 - Temporary Environmental Controls: Procedures and testing.

G. Section 01 6000 - Product Requirements: Fundamental product requirements, substitutions and product options, delivery, storage, and handling.

H. Section 07 9200 - Joint Sealants: Emissions-compliant sealants.

1.03 DEFINITIONS

A. Indoor-Emissions-Restricted Products: All products in the following product categories, whether specified or not:

1. Interior paints and coatings applied on site.
2. Interior adhesives and sealants applied on site, including flooring adhesives.
3. Flooring.
4. Composite wood.
5. Products making up wall and ceiling assemblies.
6. Thermal and acoustical insulation.
7. Free-standing furniture.
8. Exterior applied products (for Healthcare and Schools projects only).
9. Other products when specifically stated in the specifications.

B. VOC-Content-Restricted Products: All products in the following product categories, whether specified or not:

1. Interior paints and coatings applied on site.
2. Interior adhesives and sealants applied on site, including flooring adhesives.
3. Wet-applied roofing and waterproofing.
4. Other products when specifically stated in the specifications.

C. Interior of Building: Anywhere inside the exterior weather barrier.

D. Adhesives: All gunnable, trowelable, liquid-applied, and aerosol adhesives, whether specified or not; including flooring adhesives, resilient base adhesives, and pipe jointing adhesives.

E. Sealants: All gunnable, trowelable, and liquid-applied joint sealants and sealant primers, whether specified or not; including firestopping sealants and duct joint sealers.

F. Inherently Non-Emitting Materials: Products composed wholly of minerals or metals, unless they include organic-based surface coatings, binders, or sealants; and specifically the following:

1. Concrete.
2. Clay brick.
3. Metals that are plated, anodized, or powder-coated.
4. Glass.
5. Ceramics.
6. Solid wood flooring that is unfinished and untreated.

1.04 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency current edition.

B. ASTM D3960 - Standard Practice for Determining Volatile Organic Compound (VOC) Content of Paints and Related Coatings 2005 (Reapproved 2013).

C. BIFMA e3 - Furniture Sustainability Standard; Business and Institutional Furniture Manufacturers Association 2014.

D. BIFMA M7.1 - Standard Test Method for Determining VOC Emissions from Office Furniture Systems, Components, and Seating 2011 (Reapproved 2016).

E. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions From Indoor Sources Using Environmental Chambers 2017, v1.2.

F. CARB (ATCM) - Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products; California Air Resources Board current edition.

G. CARB (SCM) - Suggested Control Measure for Architectural Coatings; California Air Resources Board 2007.

H. CHPS (HPPD) - High Performance Products Database Current Edition at www.chps.net/.

I. CRI (GLP) - Green Label Plus Testing Program - Certified Products Current Edition.

J. GreenSeal GS-36 - Adhesives for Commercial Use 2013.

K. SCAQMD 1113 - Architectural Coatings 1977 (Amended 2016).

L. SCAQMD 1168 - Adhesive and Sealant Applications 1989 (Amended 2017).

M. SCS (CPD) - SCS Certified Products Current Edition.

N. UL (GGG) - GREENGUARD Gold Certified Products Current Edition.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: For each VOC-restricted product used in the project, submit evidence of compliance.

C. Sustainable Design Reporting: Submit evidence of compliance.

1. Refer to Section 01 3329.02 - Sustainable Design Reporting - LEED v4.

D. Installer Certifications Regarding Prohibited Content: Require each installer of any type of product (not just the products for which VOC restrictions are specified) to certify that either 1) no adhesives, joint sealants, paints, coatings, or composite wood or agrifiber products have been used in the installation of installer's products, or 2) that such products used comply with these requirements.

1.06 QUALITY ASSURANCE

A. Indoor Emissions Standard and Test Method: CAL (CDPH SM), using Standard Private Office exposure scenario and the allowable concentrations specified in the method, and range of total VOC's after 14 days.

1. Wet-Applied Products: State amount applied in mass per surface area.
2. Paints and Coatings: Test tinted products, not just tinting bases.
3. Evidence of Compliance: Acceptable types of evidence are the following;
    a. Current UL (GGG) certification.
    b. Current SCS (CPD) Floorscore certification.
    c. Current SCS (CPD) Indoor Advantage Gold certification.
    d. Current listing in CHPS (HPPD) as a low-emitting product.
    e. Current CRI (GLP) certification.
    f. Test report showing compliance and stating exposure scenario used.
4. Product data submittal showing VOC content is NOT acceptable evidence.
5. Manufacturer's certification without test report by independent agency is NOT acceptable evidence.

B. VOC Content Test Method: 40 CFR 59, Subpart D (EPA Method 24), or ASTM D3960, unless otherwise indicated.

1. Evidence of Compliance: Acceptable types of evidence are:
    a. Report of laboratory testing performed in accordance with requirements.
    b. Published product data showing compliance with requirements.
    c. Certification by manufacturer that product complies with requirements.

C. Composite Wood Emissions Standard: CARB (ATCM) for ultra-low emitting formaldehyde (ULEF) resins.

1. Evidence of Compliance: Acceptable types of evidence are:
    a. Current SCS "No Added Formaldehyde (NAF)" certification; www.scscertified.com.
    b. Report of laboratory testing performed in accordance with requirements.
    c. Published product data showing compliance with requirements.
    d. Certification by manufacturer that product complies with requirements.

D. Furnishings Emissions Standard and Test Method: BIFMA e3 Sections 7.6.1 and 7.6.2, tested in accordance with BIFMA M7.1.

1. Evidence of Compliance:
    a. Test report showing compliance and stating exposure scenario used.

E. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.

PART 2 PRODUCTS

2.01 MATERIALS

A. All Products: Comply with the most stringent of federal, State, and local requirements, or these specifications.

B. Indoor-Emissions-Restricted Products: Comply with Indoor Emissions Standard and Test Method, except for:

1. Composite Wood, Wood Fiber, and Wood Chip Products: Comply with Composite Wood Emissions Standard or contain no added formaldehyde resins.
2. Furnishings: Comply with Furnishings Emissions Standard and Test Method.
3. Inherently Non-Emitting Materials.

C. VOC-Content-Restricted Products: VOC content not greater than required by the following:

1. Adhesives, Including Flooring Adhesives: SCAQMD 1168 Rule.
2. Aerosol Adhesives: GreenSeal GS-36.
3. Joint Sealants: SCAQMD 1168 Rule.
4. Paints and Coatings: Each color; most stringent of the following:
    a. 40 CFR 59, Subpart D.
    b. SCAQMD 1113 Rule.
    c. CARB (SCM).
5. Wet-Applied Roofing and Waterproofing: Comply with requirements for paints and coatings.

PART 3 EXECUTION

3.01 FIELD QUALITY CONTROL

A. Owner reserves the right to reject non-compliant products, whether installed or not, and require their removal and replacement with compliant products at no extra cost to Owner .

B. Additional costs to restore indoor air quality due to installation of non-compliant products will be borne by Contractor.

END OF SECTION

SECTION 01 7000
EXECUTION AND CLOSEOUT REQUIREMENTS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Examination, preparation, and general installation procedures.

B. Requirements for alterations work, including selective demolition.

C. Pre-installation meetings.

D. Cutting and patching.

E. Surveying for laying out the work.

F. Cleaning and protection.

G. Starting of systems and equipment.

H. Demonstration and instruction of Owner personnel.

I. Closeout procedures, including Contractor's Correction Punch List, except payment procedures.

J. General requirements for maintenance service.

1.02 RELATED REQUIREMENTS

A. Section 01 1000 - Summary: Limitations on working in existing building; continued occupancy; work sequence; identification of salvaged and relocated materials.

B. Section 01 3000 - Administrative Requirements: Submittals procedures, Electronic document submittal service.

C. Section 01 4000 - Quality Requirements: Testing and inspection procedures.

D. Section 01 5000 - Temporary Facilities and Controls: Temporary exterior enclosures.

E. Section 01 5000 - Temporary Facilities and Controls: Temporary interior partitions.

F. Section 01 5100 - Temporary Utilities: Temporary heating, cooling, and ventilating facilities.

G. Section 01 5713 - Temporary Erosion and Sediment Control: Additional erosion and sedimentation control requirements.

H. Section 01 7419 - Construction Waste Management and Disposal: Additional procedures for trash/waste removal, recycling, salvage, and reuse.

I. Section 4600 - 4600: Materials for protection of installed work.

J. Section 01 7800 - Closeout Submittals: Project record documents, operation and maintenance data, warranties, and bonds.

K. Section 01 7900 - Demonstration and Training: Demonstration of products and systems to be commissioned and where indicated in specific specification sections

L. Section 01 9113 - General Commissioning Requirements: Contractor's responsibilities in regard to commissioning.

M. Section 02 4100 - Demolition: Demolition of whole structures and parts thereof; site utility demolition.

N. Section 02 8400 - Polychlorinate Biphenyl (PCB) Remediation: Removal of equipment containing substances regulated under the Federal Toxic Substances Control Act (TSCA), including but not limited to PCB- and mercury-containing equipment.

O. Section 07 8400 - Firestopping.

P. Individual Product Specification Sections:

1. Limitations on cutting structural members.

1.03 REFERENCE STANDARDS

A. NFPA 241 - Standard for Safeguarding Construction, Alteration, and Demolition Operations 2013.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Survey work: Submit name, address, and telephone number of Surveyor before starting survey work.

1. On request, submit documentation verifying accuracy of survey work.
2. Submit a copy of site drawing signed by the Land Surveyor, that the elevations and locations of the work are in compliance with Contract Documents.
3. Submit surveys and survey logs for the project record.

C. Demolition Plan: Submit demolition plan as specified by OSHA and local authorities.

1. Indicate extent of demolition, removal sequence, bracing and shoring, and location and construction of barricades and fences. Include design drawings and calculations for bracing and shoring.
2. Identify demolition firm and submit qualifications.
3. Include a summary of safety procedures.

D. Cutting and Patching: Submit written request in advance of cutting or alteration that affects:

1. Structural integrity of any element of Project.
2. Integrity of weather exposed or moisture resistant element.
3. Efficiency, maintenance, or safety of any operational element.
4. Visual qualities of sight exposed elements.
5. Work of Owner or separate Contractor.
6. Include in request:
    a. Identification of Project.
    b. Location and description of affected work.
    c. Necessity for cutting or alteration.
    d. Description of proposed work and products to be used.
    e. Effect on work of Owner or separate Contractor.
    f. Written permission of affected separate Contractor.
    g. Date and time work will be executed.

1.05 QUALIFICATIONS

A. For demolition work, employ a firm specializing in the type of work required.

1. Minimum of five years of documented experience.

B. For surveying work, employ a land surveyor registered in Maryland and acceptable to Architect. Submit evidence of surveyor's Errors and Omissions insurance coverage in the form of an Insurance Certificate. Employ only individual(s) trained and experienced in collecting and recording accurate data relevant to ongoing construction activities,

C. For design of temporary shoring and bracing, employ a Professional Engineer experienced in design of this type of work and licensed in Maryland.

1.06 PROJECT CONDITIONS

A. Grade site to drain. Maintain excavations free of water. Provide, operate, and maintain pumping equipment.

B. Protect site from puddling or running water. Provide water barriers as required to protect site from soil erosion.

C. Perform dewatering activities, as required, for the duration of the project.

D. Ventilate enclosed areas to assist cure of materials, to dissipate humidity, and to prevent accumulation of dust, fumes, vapors, or gases.

E. Dust Control: Execute work by methods to minimize raising dust from construction operations. Provide positive means to prevent air-borne dust from dispersing into atmosphere and over adjacent property.

1. Provide dust-proof enclosures to prevent entry of dust generated outdoors.
2. Provide dust-proof barriers between construction areas and areas continuing to be occupied by Owner .

F. Erosion and Sediment Control: Plan and execute work by methods to control surface drainage from cuts and fills, from borrow and waste disposal areas. Prevent erosion and sedimentation.

1. Minimize amount of bare soil exposed at one time.
2. Provide temporary measures such as berms, dikes, and drains, to prevent water flow.
3. Construct fill and waste areas by selective placement to avoid erosive surface silts or clays.
4. Periodically inspect earthwork to detect evidence of erosion and sedimentation; promptly apply corrective measures.

G. Noise Control: Provide methods, means, and facilities to minimize noise produced by construction operations.

1. At All Times: Excessively noisy tools and operations will not be tolerated inside the building at any time of day; excessively noisy includes jackhammers.
2. Outdoors: Limit conduct of especially noisy exterior work to the hours of 8 am to 5 pm.
3. Indoors: Limit conduct of especially noisy interior work to the hours of 6 pm to 7 am.

H. Pest and Rodent Control: Provide methods, means, and facilities to prevent pests and insects from damaging the work.

I. Rodent Control: Provide methods, means, and facilities to prevent rodents from accessing or invading premises.

J. Pollution Control: Provide methods, means, and facilities to prevent contamination of soil, water, and atmosphere from discharge of noxious, toxic substances, and pollutants produced by construction operations. Comply with federal, state, and local regulations.

1.07 COORDINATION

A. See Section 01 1000 for occupancy-related requirements.

B. Coordinate scheduling, submittals, and work of the various sections of the Project Manual to ensure efficient and orderly sequence of installation of interdependent construction elements, with provisions for accommodating items installed later.

C. Notify affected utility companies and comply with their requirements.

D. Verify that utility requirements and characteristics of new operating equipment are compatible with building utilities. Coordinate work of various sections having interdependent responsibilities for installing, connecting to, and placing in service, such equipment.

E. Coordinate space requirements, supports, and installation of mechanical and electrical work that are indicated diagrammatically on drawings. Follow routing indicated for pipes, ducts, and conduit, as closely as practicable; place runs parallel with lines of building. Utilize spaces efficiently to maximize accessibility for other installations, for maintenance, and for repairs.

F. In finished areas except as otherwise indicated, conceal pipes, ducts, and wiring within the construction. Coordinate locations of fixtures and outlets with finish elements.

G. Coordinate completion and clean-up of work of separate sections.

H. After Owner occupancy of premises, coordinate access to site for correction of defective work and work not in accordance with Contract Documents, to minimize disruption of Owner 's activities.

PART 2 PRODUCTS

2.01 PATCHING MATERIALS

A. New Materials: As specified in product sections; match existing products and work for patching and extending work.

B. Type and Quality of Existing Products: Determine by inspecting and testing products where necessary, referring to existing work as a standard.

C. Product Substitution: For any proposed change in materials, submit request for substitution described in Section 01 6000 - Product Requirements.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that existing site conditions and substrate surfaces are acceptable for subsequent work. Start of work means acceptance of existing conditions.

B. Verify that existing substrate is capable of structural support or attachment of new work being applied or attached.

C. Examine and verify specific conditions described in individual specification sections.

D. Take field measurements before confirming product orders or beginning fabrication, to minimize waste due to over-ordering or misfabrication.

E. Verify that utility services are available, of the correct characteristics, and in the correct locations.

F. Prior to Cutting: Examine existing conditions prior to commencing work, including elements subject to damage or movement during cutting and patching. After uncovering existing work, assess conditions affecting performance of work. Beginning of cutting or patching means acceptance of existing conditions.

3.02 PREPARATION

A. Clean substrate surfaces prior to applying next material or substance.

B. Seal cracks or openings of substrate prior to applying next material or substance.

C. Apply manufacturer required or recommended substrate primer, sealer, or conditioner prior to applying any new material or substance in contact or bond.

3.03 PREINSTALLATION MEETINGS

A. When required in individual specification sections, convene a preinstallation meeting at the site prior to commencing work of the section.

B. Require attendance of parties directly affecting, or affected by, work of the specific section.

C. Notify Architect four days in advance of meeting date.

D. Prepare agenda and preside at meeting:

1. Review conditions of examination, preparation and installation procedures.

2. Review coordination with related work.

E. Record minutes and distribute copies within two days after meeting to participants, with two copies to Architect , Owner , participants, and those affected by decisions made.

3.04 LAYING OUT THE WORK

A. Verify locations of survey control points prior to starting work.

B. Promptly notify Architect of any discrepancies discovered.

C. Contractor shall locate and protect survey control and reference points.

D. Control datum for survey is that established by Owner provided survey.

E. Protect survey control points prior to starting site work; preserve permanent reference points during construction.

F. Promptly report to Architect the loss or destruction of any reference point or relocation required because of changes in grades or other reasons.

G. Replace dislocated survey control points based on original survey control. Make no changes without prior written notice to Architect .

H. Utilize recognized engineering survey practices.

I. Establish a minimum of two permanent bench marks on site, referenced to established control points. Record locations, with horizontal and vertical data, on project record documents.

J. Establish elevations, lines and levels. Locate and lay out by instrumentation and similar appropriate means:

1. Site improvements including pavements; stakes for grading, fill and topsoil placement; utility locations, slopes, and invert elevations.

2. Grid or axis for structures.

3. Building foundation, column locations, ground floor elevations.

4. Controlling lines and levels required for mechanical and electrical trades.

K. Periodically verify layouts by same means.

L. Maintain a complete and accurate log of control and survey work as it progresses.

M. On completion of foundation walls and major site improvements, prepare a certified survey illustrating dimensions, locations, angles, and elevations of construction and site work.

3.05 GENERAL INSTALLATION REQUIREMENTS

A. In addition to compliance with regulatory requirements, conduct construction operations in compliance with NFPA 241, including applicable recommendations in Appendix A.

B. Install products as specified in individual sections, in accordance with manufacturer's instructions and recommendations, and so as to avoid waste due to necessity for replacement.

C. Make vertical elements plumb and horizontal elements level, unless otherwise indicated.

D. Install equipment and fittings plumb and level, neatly aligned with adjacent vertical and horizontal lines, unless otherwise indicated.

E. Make consistent texture on surfaces, with seamless transitions, unless otherwise indicated.

F. Make neat transitions between different surfaces, maintaining texture and appearance.

3.06 ALTERATIONS

A. Drawings showing existing construction and utilities are based on casual field observation and existing record documents only.

1. Verify that construction and utility arrangements are as indicated.
2. Report discrepancies to Architect before disturbing existing installation.
3. Beginning of alterations work constitutes acceptance of existing conditions.

B. Keep areas in which alterations are being conducted separated from other areas that are still occupied.

1. Provide, erect, and maintain temporary dustproof partitions of construction specified in Section 01 5000 in locations indicated on drawings.
2. Provide sound retardant partitions of construction indicated on drawings in locations indicated on drawings.

C. Maintain weatherproof exterior building enclosure except for interruptions required for replacement or modifications; take care to prevent water and humidity damage.

1. Where openings in exterior enclosure exist, provide construction to make exterior enclosure weatherproof.
2. Insulate existing ducts or pipes that are exposed to outdoor ambient temperatures by alterations work.

D. Remove existing work as indicated and as required to accomplish new work.

1. Remove rotted wood, corroded metals, and deteriorated masonry and concrete; replace with new construction specified.
2. Remove items indicated on drawings.
3. Relocate items indicated on drawings.
4. Where new surface finishes are to be applied to existing work, perform removals, patch, and prepare existing surfaces as required to receive new finish; remove existing finish if necessary for successful application of new finish.
5. Where new surface finishes are not specified or indicated, patch holes and damaged surfaces to match adjacent finished surfaces as closely as possible.

E. Services (Including but not limited to HVAC, Plumbing, Fire Protection, Electrical, Telecommunications and Building Automation Systems): Remove, relocate, and extend existing systems to accommodate new construction.

1. Maintain existing active systems that are to remain in operation; maintain access to equipment and operational components; if necessary, modify installation to allow access or provide access panel.
2. Where existing systems or equipment are not active and Contract Documents require reactivation, put back into operational condition; repair supply, distribution, and equipment as required.
3. Where existing active systems serve occupied facilities but are to be replaced with new services, maintain existing systems in service until new systems are complete and ready for service.

a. Disable existing systems only to make switchovers and connections; minimize duration of outages.

b. See Section 01 1000 for other limitations on outages and required notifications.

c. Provide temporary connections as required to maintain existing systems in service.

4. Verify that abandoned services serve only abandoned facilities.

5. Remove abandoned pipe, ducts, conduits, and equipment , including those above accessible ceilings; remove back to source of supply where possible, otherwise cap stub and tag with identification; patch holes left by removal using materials specified for new construction.

F. Protect existing work to remain.

1. Prevent movement of structure; provide shoring and bracing if necessary.

2. Perform cutting to accomplish removals neatly and as specified for cutting new work.

3. Repair adjacent construction and finishes damaged during removal work.

G. Adapt existing work to fit new work: Make as neat and smooth transition as possible.

1. When existing finished surfaces are cut so that a smooth transition with new work is not possible, terminate existing surface along a straight line at a natural line of division and make recommendation to Architect .

2. Where removal of partitions or walls results in adjacent spaces becoming one, rework floors, walls, and ceilings to a smooth plane without breaks, steps, or bulkheads.

3. Where a change of plane of 1/4 inch (6 mm) or more occurs in existing work, submit recommendation for providing a smooth transition for Architect review and request instructions.

4. Trim existing wood doors as necessary to clear new floor finish. Refinish trim as required.

H. Patching: Where the existing surface is not indicated to be refinished, patch to match the surface finish that existed prior to cutting. Where the surface is indicated to be refinished, patch so that the substrate is ready for the new finish.

I. Refinish existing surfaces as indicated:

1. Where rooms or spaces are indicated to be refinished, refinish all visible existing surfaces to remain to the specified condition for each material, with a neat transition to adjacent finishes.

2. If mechanical or electrical work is exposed accidentally during the work, re-cover and refinish to match.

J. Clean existing systems and equipment.

K. Remove demolition debris and abandoned items from alterations areas and dispose of off-site; do not burn or bury.

L. Do not begin new construction in alterations areas before demolition is complete.

M. Comply with all other applicable requirements of this section.

3.07 CUTTING AND PATCHING

A. Whenever possible, execute the work by methods that avoid cutting or patching.

B. See Alterations article above for additional requirements.

C. Perform whatever cutting and patching is necessary to:

1. Complete the work.

2. Fit products together to integrate with other work.
3. Provide openings for penetration of mechanical, electrical, and other services.
4. Match work that has been cut to adjacent work.
5. Repair areas adjacent to cuts to required condition.
6. Repair new work damaged by subsequent work.
7. Remove samples of installed work for testing when requested.
8. Remove and replace defective and non-complying work.

D. Execute work by methods that avoid damage to other work and that will provide appropriate surfaces to receive patching and finishing. In existing work, minimize damage and restore to original condition.

E. Employ original installer to perform cutting for weather exposed and moisture resistant elements, and sight exposed surfaces.

F. Cut rigid materials using masonry saw or core drill. Pneumatic tools not allowed without prior approval.

G. Restore work with new products in accordance with requirements of Contract Documents.

H. Fit work air tight to pipes, sleeves, ducts, conduit, and other penetrations through surfaces.

I. At penetrations of fire rated walls, partitions, ceiling, or floor construction, completely seal voids with fire rated material in accordance with Section 07 8400, to full thickness of the penetrated element.

J. Patching:

1. Finish patched surfaces to match finish that existed prior to patching. On continuous surfaces, refinish to nearest intersection or natural break. For an assembly, refinish entire unit.
2. Match color, texture, and appearance.
3. Repair patched surfaces that are damaged, lifted, discolored, or showing other imperfections due to patching work. If defects are due to condition of substrate, repair substrate prior to repairing finish.

3.08 PROGRESS CLEANING

A. Maintain areas free of waste materials, debris, and rubbish. Maintain site in a clean and orderly condition.

B. Remove debris and rubbish from pipe chases, plenums, attics, crawl spaces, and other closed or remote spaces, prior to enclosing the space.

C. Broom and vacuum clean interior areas prior to start of surface finishing, and continue cleaning to eliminate dust.

D. Collect and remove waste materials, debris, and trash/rubbish from site periodically and dispose off-site; do not burn or bury.

3.09 PROTECTION OF INSTALLED WORK

A. See Section 01 7610 for temporary protective covering materials.

B. Protect installed work from damage by construction operations.

C. Provide special protection where specified in individual specification sections.

D. Provide temporary and removable protection for installed products. Control activity in immediate work area to prevent damage.

E. Provide protective coverings at walls, projections, jambs, sills, and soffits of openings.

F. Protect finished floors, stairs, and other surfaces from traffic, dirt, wear, damage, or movement of heavy objects, by protecting with durable sheet materials.

G. Protect work from spilled liquids. If work is exposed to spilled liquids, immediately remove protective coverings, dry out work, and replace protective coverings.

H. Prohibit traffic or storage upon waterproofed or roofed surfaces. If traffic or activity is necessary, obtain recommendations for protection from waterproofing or roofing material manufacturer.

I. Prohibit traffic from landscaped areas.

J. Remove protective coverings when no longer needed; reuse or recycle coverings if possible.

3.10 SYSTEM STARTUP

A. Coordinate with requirements of Section 01 9113 - General Commissioning Requirements.

B. Coordinate schedule for start-up of various equipment and systems.

C. Notify Architect and Owner seven days prior to start-up of each item.

D. Verify that each piece of equipment or system has been checked for proper lubrication, drive rotation, belt tension, control sequence, and for conditions that may cause damage.

E. Verify tests, meter readings, and specified electrical characteristics agree with those required by the equipment or system manufacturer.

F. Verify that wiring and support components for equipment are complete and tested.

G. Execute start-up under supervision of applicable Contractor personnel and manufacturer's representative in accordance with manufacturers' instructions.

H. When specified in individual specification Sections, require manufacturer to provide authorized representative to be present at site to inspect, check, and approve equipment or system installation prior to start-up, and to supervise placing equipment or system in operation.

I. Submit a written report that equipment or system has been properly installed and is functioning correctly.

3.11 DEMONSTRATION AND INSTRUCTION

A. See Section 01 7900 - Demonstration and Training.

3.12 ADJUSTING

A. Adjust operating products and equipment to ensure smooth and unhindered operation.

B. Testing, adjusting, and balancing HVAC systems: See Section 23 0593 - Testing, Adjusting, and Balancing for HVAC.

3.13 FINAL CLEANING

A. Execute final cleaning prior to final project assessment.

1. Clean areas to be occupied by Owner prior to final completion before Owner occupancy.

B. Use cleaning materials that are nonhazardous.

C. Clean interior and exterior glass, surfaces exposed to view; remove temporary labels, stains and foreign substances, polish transparent and glossy surfaces, vacuum carpeted and soft surfaces.

D. Remove all labels that are not permanent. Do not paint or otherwise cover fire test labels or nameplates on mechanical and electrical equipment.

E. Clean equipment and fixtures to a sanitary condition with cleaning materials appropriate to the surface and material being cleaned.

F. Clean filters of operating equipment.

G. Clean debris from roofs, gutters, downspouts, scuppers, overflow drains, area drains, drainage systems and [_____].

H. Clean site; sweep paved areas, rake clean landscaped surfaces.

I. Remove waste, surplus materials, trash/rubbish, and construction facilities from the site; dispose of in legal manner; do not burn or bury.

3.14 CLOSEOUT PROCEDURES

A. Make submittals that are required by governing or other authorities.

1. Provide copies to Architect and Owner .

B. Accompany Project Coordinator on preliminary inspection to determine items to be listed for completion or correction in the Contractor's Correction Punch List for Contractor's Notice of Substantial Completion.

C. Notify Architect when work is considered ready for Architect's Substantial Completion inspection.

D. Submit written certification containing Contractor's Correction Punch List, that Contract Documents have been reviewed, work has been inspected, and that work is complete in accordance with Contract Documents and ready for Architect's Substantial Completion inspection.

E. Owner will occupy all of the building as specified in Section 01 1000.

F. Conduct Substantial Completion inspection and create Final Correction Punch List containing Architect's and Contractor's comprehensive list of items identified to be completed or corrected and submit to Architect.

G. Correct items of work listed in Final Correction Punch List and comply with requirements for access to Owner-occupied areas.

H. Accompany Project Coordinator on Contractor's preliminary final inspection.

I. Notify Architect when work is considered finally complete and ready for Architect's Substantial Completion final inspection.

J. Complete items of work determined by Architect listed in executed Certificate of Substantial Completion.

3.15 MAINTENANCE

A. Provide service and maintenance of components indicated in specification sections.

B. Maintenance Period: As indicated in specification sections or, if not indicated, not less than one year from the Date of Substantial Completion or the length of the specified warranty, whichever is longer.

C. Examine system components at a frequency consistent with reliable operation. Clean, adjust, and lubricate as required.

D. Include systematic examination, adjustment, and lubrication of components. Repair or replace parts whenever required. Use parts produced by the manufacturer of the original component.

E. Maintenance service shall not be assigned or transferred to any agent or subcontractor without prior written consent of the Owner .

END OF SECTION

SECTION 01 7419
CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

PART 1 GENERAL

1.01 WASTE MANAGEMENT REQUIREMENTS

A. Owner requires that this project generate the least amount of trash and waste possible.

B. Employ processes that ensure the generation of as little waste as possible due to error, poor planning, breakage, mishandling, contamination, or other factors.

C. Minimize trash/waste disposal in landfills; reuse, salvage, or recycle as much waste as economically feasible.

D. Owner may decide to pay for additional recycling, salvage, and/or reuse based on Landfill Alternatives Proposal specified below.

E. Required Recycling, Salvage, and Reuse: The following may not be disposed of in landfills or by incineration:

1. Aluminum and plastic beverage containers.
2. Corrugated cardboard.
3. Wood pallets.
4. Clean dimensional wood.
5. Land clearing debris, including brush, branches, logs, and stumps; see Section 31 1000 - Site Clearing for use options.
6. Concrete: May be crushed and used as riprap, aggregate, sub-base material, or fill.
7. Bricks: May be used on project if whole, or crushed and used as landscape cover, sub-base material, or fill.
8. Concrete masonry units: May be used on project if whole, or crushed and used as sub-base material or fill.
9. Precast concrete panels: May be used for erosion control or landscape features.
10. Asphalt paving: May be recycled into paving for project.
11. Metals, including packaging banding, metal studs, sheet metal, structural steel, piping, reinforcing bars, door frames, and other items made of steel, iron, galvanized steel, stainless steel, aluminum, copper, zinc, lead, brass, and bronze.
12. Glass.
13. Gypsum drywall and plaster.
14. Plastic buckets.
15. Carpet, carpet cushion, carpet tile, and carpet remnants, both new and removed: DuPont (http://flooring.dupont.com) and Interface (www.interfaceinc.com) conduct reclamation programs.
16. Asphalt roofing shingles.
17. Paint.
18. Plastic sheeting.
19. Rigid foam insulation.
20. Vinyl siding.

21. Windows, doors, and door hardware.
22. Plumbing fixtures.
23. Mechanical and electrical equipment.
24. Fluorescent lamps (light bulbs).
25. Acoustical ceiling tile and panels.

F. The following recycling incentive programs are mandatory for this project; Contractor is responsible for implementation:

1. Rebates and credits must be applied for by Owner and shall accrue to Owner .

G. Owner has made arrangements for salvage of the following materials by others:

H. Contractor shall submit periodic Waste Disposal Reports; all landfill disposal, incineration, recycling, salvage, and reuse must be reported regardless of to whom the cost or savings accrues; use the same units of measure on all reports.

I. Contractor shall develop and follow a Waste Management Plan designed to implement these requirements.

J. The following sources may be useful in developing the Waste Management Plan:

1. Recycling Haulers and Markets: The attached list contains local haulers and markets for recyclable materials. This list is provided for information only and is not necessarily comprehensive; other haulers and markets are acceptable.

K. Methods of trash/waste disposal that are not acceptable are:

1. Burning on the project site.
2. Burying on the project site.
3. Dumping or burying on other property, public or private.
4. Other illegal dumping or burying.

L. Regulatory Requirements: Contractor is responsible for knowing and complying with regulatory requirements, including but not limited to Federal, state and local requirements, pertaining to legal disposal of all construction and demolition waste materials.

1.02 RELATED REQUIREMENTS

A. Section 01 1000 - Summary: List of items to be salvaged from the existing building for relocation in project or for Owner.

B. Section 01 3000 - Administrative Requirements: Additional requirements for project meetings, reports, submittal procedures, and project documentation.

C. Section 01 5000 - Temporary Facilities and Controls: Additional requirements related to trash/waste collection and removal facilities and services.

D. Section 01 6000 - Product Requirements: Waste prevention requirements related to delivery, storage, and handling.

E. Section 01 7000 - Execution and Closeout Requirements: Trash/waste prevention procedures related to demolition, cutting and patching, installation, protection, and cleaning.

F. Section 31 1000 - Site Clearing: Handling and disposal of land clearing debris.

1.03 DEFINITIONS

A. Clean: Untreated and unpainted; not contaminated with oils, solvents, caulk, or the like.

B. Construction and Demolition Waste: Solid wastes typically including building materials, packaging, trash, debris, and rubble resulting from construction, remodeling, repair and demolition operations.

C. Hazardous: Exhibiting the characteristics of hazardous substances, i.e., ignitibility, corrosivity, toxicity or reactivity.

D. Nonhazardous: Exhibiting none of the characteristics of hazardous substances, i.e., ignitibility, corrosivity, toxicity, or reactivity.

E. Nontoxic: Neither immediately poisonous to humans nor poisonous after a long period of exposure.

F. Recyclable: The ability of a product or material to be recovered at the end of its life cycle and remanufactured into a new product for reuse by others.

G. Recycle: To remove a waste material from the project site to another site for remanufacture into a new product for reuse by others.

H. Recycling: The process of sorting, cleansing, treating and reconstituting solid waste and other discarded materials for the purpose of using the altered form. Recycling does not include burning, incinerating, or thermally destroying waste.

I. Return: To give back reusable items or unused products to vendors for credit.

J. Reuse: To reuse a construction waste material in some manner on the project site.

K. Salvage: To remove a waste material from the project site to another site for resale or reuse by others.

L. Sediment: Soil and other debris that has been eroded and transported by storm or well production run-off water.

M. Source Separation: The act of keeping different types of waste materials separate beginning from the first time they become waste.

N. Toxic: Poisonous to humans either immediately or after a long period of exposure.

O. Trash: Any product or material unable to be reused, returned, recycled, or salvaged.

P. Waste: Extra material or material that has reached the end of its useful life in its intended use. Waste includes salvageable, returnable, recyclable, and reusable material.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Sustainable Design Submittals: Submit Waste Management Plan and Waste Disposal Reports in accordance with procedures specified in Section 01 3566.13 - Sustainability Certification Project Procedures - Green Globes.

C. Landfill Alternatives Proposal: Within 10 calendar days after receipt of Notice of Award of Bid, or prior to any trash or waste removal, whichever occurs sooner, submit a projection of trash/waste that will require disposal and alternatives to landfilling, with net costs.

1. Submit to Architect for Owner 's review and approval.

2. If Owner wishes to implement any cost alternatives, the Contract Sum will be adjusted as specified elsewhere.

3. Include an analysis of trash/waste to be generated and landfill options as specified for Waste Management Plan described below.

4. Describe as many alternatives to landfilling as possible:

a. List each material proposed to be salvaged, reused, or recycled.

b. List the proposed local market for each material.

c. State the estimated net cost resulting from each alternative, after subtracting revenue from sale of recycled or salvaged materials and landfill tipping fees saved due to diversion of materials from the landfill.

5. Provide alternatives to landfilling for at least the following materials:

a. Aluminum and plastic beverage containers.

b. Corrugated cardboard.

c. Wood pallets.

d. Clean dimensional wood.

e. Land clearing debris, including brush, branches, logs, and stumps.

f. Concrete.

g. Bricks.

h. Concrete masonry units.

i. Asphalt paving.

j. Metals, including packaging banding, metal studs, sheet metal, structural steel, piping, reinforcing bars, door frames, and other items made of steel, iron, galvanized steel, stainless steel, aluminum, copper, zinc, lead, brass, and bronze.

D. Once Owner has determined which of the landfill alternatives addressed in the Proposal above are acceptable, prepare and submit Waste Management Plan; submit within 10 calendar days after notification by Architect .

E. Waste Management Plan: Include the following information:

1. Analysis of the trash and waste projected to be generated during the entire project construction cycle, including types and quantities.

2. Landfill Options: The name, address, and telephone number of the landfill(s) where trash/waste will be disposed of, the applicable landfill tipping fee(s), and the projected cost of disposing of all project trash/waste in the landfill(s).

3. Landfill Alternatives: List all waste materials that will be diverted from landfills by reuse, salvage, or recycling.

a. List each material proposed to be salvaged, reused, or recycled.

b. List the local market for each material.

c. State the estimated net cost, versus landfill disposal.

4. Meetings: Describe regular meetings to be held to address waste prevention, reduction, recycling, salvage, reuse, and disposal.

5. Materials Handling Procedures: Describe the means by which materials to be diverted from landfills will be protected from contamination and prepared for acceptance by designated facilities; include separation procedures for recyclables, storage, and packaging.

6. Transportation: Identify the destination and means of transportation of materials to be recycled; i.e. whether materials will be site-separated and self-hauled to designated centers, or whether mixed materials will be collected by a waste hauler.

7. Recycling Incentives: Describe procedures required to obtain credits, rebates, or similar incentives.

F. Waste Disposal Reports: Submit at specified intervals, with details of quantities of trash and waste, means of disposal or reuse, and costs; show both totals to date and since last report.

1. Submit updated Report with each Application for Progress Payment; failure to submit Report will delay payment.
2. Submit Report on a form acceptable to Owner .
3. Landfill Disposal: Include the following information:
    a. Identification of material.
    b. Amount, in tons or cubic yards (cubic meters), of trash/waste material from the project disposed of in landfills.
    c. State the identity of landfills, total amount of tipping fees paid to landfill, and total disposal cost.
    d. Include manifests, weight tickets, receipts, and invoices as evidence of quantity and cost.
4. Incinerator Disposal: Include the following information:
    a. Identification of material.
    b. Amount, in tons or cubic yards (cubic meters), of trash/waste material from the project delivered to incinerators.
    c. State the identity of incinerators, total amount of fees paid to incinerator, and total disposal cost.
    d. Include manifests, weight tickets, receipts, and invoices as evidence of quantity and cost.
5. Recycled and Salvaged Materials: Include the following information for each:
    a. Identification of material, including those retrieved by installer for use on other projects.
    b. Amount, in tons or cubic yards (cubic meters), date removed from the project site, and receiving party.
    c. Transportation cost, amount paid or received for the material, and the net total cost or savings of salvage or recycling each material.
    d. Include manifests, weight tickets, receipts, and invoices as evidence of quantity and cost.
    e. Certification by receiving party that materials will not be disposed of in landfills or by incineration.
6. Material Reused on Project: Include the following information for each:
    a. Identification of material and how it was used in the project.
    b. Amount, in tons or cubic yards (cubic meters).
    c. Include weight tickets as evidence of quantity.
7. Other Disposal Methods: Include information similar to that described above, as appropriate to disposal method.

G. Recycling Incentive Programs:
1. Where revenue accrues to Contractor, submit copies of documentation required to qualify for incentive.
2. Where revenue accrues to Owner, submit any additional documentation required by Owner in addition to information provided in periodic Waste Disposal Report.

PART 2 PRODUCTS

2.01 PRODUCT SUBSTITUTIONS

A. See Section 01 6000 - Product Requirements for substitution submission procedures.

B. For each proposed product substitution, submit the following information in addition to requirements specified in Section 01 6000:

1. Relative amount of waste produced, compared to specified product.
2. Cost savings on waste disposal, compared to specified product, to be deducted from the Contract Sum.
3. Proposed disposal method for waste product.
4. Markets for recycled waste product.

PART 3 EXECUTION

3.01 WASTE MANAGEMENT PROCEDURES

A. See Section 01 3000 for additional requirements for project meetings, reports, submittal procedures, and project documentation.

B. See Section 01 5000 for additional requirements related to trash/waste collection and removal facilities and services.

C. See Section 01 6000 for waste prevention requirements related to delivery, storage, and handling.

D. See Section 01 7000 for trash/waste prevention procedures related to demolition, cutting and patching, installation, protection, and cleaning.

3.02 WASTE MANAGEMENT PLAN IMPLEMENTATION

A. Manager: Designate an on-site person or persons responsible for instructing workers and overseeing and documenting results of the Waste Management Plan.

B. Communication: Distribute copies of the Waste Management Plan to job site foreman, each subcontractor, Owner , and Architect .

C. Instruction: Provide on-site instruction of appropriate separation, handling, and recycling, salvage, reuse, and return methods to be used by all parties at the appropriate stages of the project.

D. Meetings: Discuss trash/waste management goals and issues at project meetings.

1. Prebid meeting.
2. Preconstruction meeting.
3. Regular job-site meetings.

E. Facilities: Provide specific facilities for separation and storage of materials for recycling, salvage, reuse, return, and trash disposal, for use by all contractors and installers.

1. As a minimum, provide:
   a. Separate area for storage of materials to be reused on-site, such as wood cut-offs for blocking.
   b. Separate dumpsters for each category of recyclable.
   c. Recycling bins at worker lunch area.
2. Provide containers as required.
3. Provide temporary enclosures around piles of separated materials to be recycled or salvaged.
4. Provide materials for barriers and enclosures that are nonhazardous, recyclable, or reusable to the maximum extent possible; reuse project construction waste materials if possible.
5. Locate enclosures out of the way of construction traffic.
6. Provide adequate space for pick-up and delivery and convenience to subcontractors.

7. Keep recycling and trash/waste bin areas neat and clean and clearly marked in order to avoid contamination of materials.

F. Hazardous Wastes: Separate, store, and dispose of hazardous wastes according to applicable regulations.

G. Recycling: Separate, store, protect, and handle at the site identified recyclable waste products in order to prevent contamination of materials and to maximize recyclability of identified materials. Arrange for timely pickups from the site or deliveries to recycling facility in order to prevent contamination of recyclable materials.

H. Reuse of Materials On-Site: Set aside, sort, and protect separated products in preparation for reuse.

I. Salvage: Set aside, sort, and protect products to be salvaged for reuse off-site.

END OF SECTION

SECTION 01 7610
TEMPORARY PROTECTIVE COVERINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Temporary protective coverings for installed floors, walls, other surfaces and specialty items as determined by architect.

1.02 RELATED REQUIREMENTS

A. Section 01 7000 - Execution and Closeout Requirements: Coordination of requirements for materials specified in this section.

1.03 REFERENCE STANDARDS

A. ANSI A135.4 - American National Standard for Basic Hardboard 2012.

B. ASTM C208 - Standard Specification for Cellulosic Fiber Insulating Board 2012.

C. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

D. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials 2016.

E. NFPA 701 - Standard Methods of Fire Tests for Flame Propagation of Textiles and Films 2015.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data on specified products, describing physical and performance characteristics; including sizes available; and installation instructions.

C. Shop Drawings: Indicate existing finished surfaces to be protected.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Temporary Protective Coverings:

B. Substitutions: See Section 01 6000 - Product Requirements.

2.02 GENERAL

A. Provide materials that are easily removed without damage to the surfaces covered and with the following characteristics:

1. Water resistant.
2. Vapor permeable.
3. Impact resistant.
4. Slip resistant.
5. Flame retardant.

2.03 MATERIALS

A. Sheet Materials:

1. Corrugated polypropylene sheet.
2. Recycled paperboard/plastic composite sheet.
3. Recycled paperboard sheet.

4. Wood Hardboard: ANSI A135.4, tempered, 1/4 inch (6 mm) thick nominal.
5. Plywood, 1/2 inch (13 mm) thick nominal.
6. Fiberboard: ASTM C208, 1/2 inch (13 mm) thick nominal.
7. Water Vapor Permeability: Tested in accordance with ASTM E96/E96M.
8. Flame Retardance: Meet requirements of NFPA 701.
9. Surface Burning Characteristics: Maximum flame spread index of 25 and smoke developed index of 450; when system tested in accordance with ASTM E84.

B. Rolled Materials:

1. Self-adhering polyethylene film.
2. Recycled cellulose fiberboard paper.
3. Laminated glass fiber reinforced kraft paper.
4. Water Vapor Permeability: Tested in accordance with ASTM E96/E96M.
5. Flame Retardance: Meet requirements of NFPA 701.
6. Surface Burning Characteristics: Maximum flame spread index of 25 and smoke developed index of 450; when system tested in accordance with ASTM E84.

C. Corner and Door Jamb Protection Materials:

1. Cardboard, shaped specifically for application.
2. PVC plastic.

D. Tape: Type recommended by protective covering material manufacturer.

PART 3 EXECUTION

3.01 PREPARATION

A. Remove dirt and debris from surfaces to be protected.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Trim or overlap sheet materials to fit area to be covered.

C. Roll out and cut rolled materials to fit area to be covered.

D. Tape seams. Avoid taping directly to finished surfaces.

E. Stretch self-adhering film materials to completely cover surface.

F. Install door jamb protection to full height of opening.

3.03 REMOVAL

A. Remove protective coverings prior to Date of Substantial Completion. Reuse or recycle materials if possible.

3.04 PROTECTION ASSEMBLY SCHEDULE

END OF SECTION

SECTION 01 7800
CLOSEOUT SUBMITTALS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Project Record Documents.

B. Operation and Maintenance Data.

C. Warranties and bonds.

1.02 RELATED REQUIREMENTS

A. Section 00 7200 - General Conditions and 00 7300 - Supplementary Conditions: Performance bond and labor and material payment bonds, warranty, and correction of work.

B. Section 01 3000 - Administrative Requirements: Submittals procedures, shop drawings, product data, and samples.

C. Section 01 7000 - Execution and Closeout Requirements: Contract closeout procedures.

D. Individual Product Sections: Specific requirements for operation and maintenance data.

E. Individual Product Sections: Warranties required for specific products or Work.

1.03 SUBMITTALS

A. Project Record Documents: Submit documents to Architect with claim for final Application for Payment.

B. Operation and Maintenance Data:

1. Submit two copies of preliminary draft or proposed formats and outlines of contents before start of Work. Architect will review draft and return one copy with comments.

2. For equipment, or component parts of equipment put into service during construction and operated by Owner , submit completed documents within ten days after acceptance.

3. Submit one copy of completed documents 15 days prior to final inspection. This copy will be reviewed and returned after final inspection, with Architect comments. Revise content of all document sets as required prior to final submission.

4. Submit two sets of revised final documents in final form within 10 days after final inspection.

C. Warranties and Bonds:

1. For equipment or component parts of equipment put into service during construction with Owner 's permission, submit documents within 10 days after acceptance.

2. Make other submittals within 10 days after Date of Substantial Completion, prior to final Application for Payment.

3. For items of Work for which acceptance is delayed beyond Date of Substantial Completion, submit within 10 days after acceptance, listing the date of acceptance as the beginning of the warranty period.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.01 PROJECT RECORD DOCUMENTS

A. Maintain on site one set of the following record documents; record actual revisions to the Work:

1. Drawings.

2. Specifications.
3. Addenda.
4. Change Orders and other modifications to the Contract.
5. Reviewed shop drawings, product data, and samples.
6. Manufacturer's instruction for assembly, installation, and adjusting.

B. Ensure entries are complete and accurate, enabling future reference by Owner .

C. Store record documents separate from documents used for construction.

D. Record information concurrent with construction progress.

E. Specifications: Legibly mark and record at each product section description of actual products installed, including the following:

1. Manufacturer's name and product model and number.
2. Product substitutions or alternates utilized.
3. Changes made by Addenda and modifications.

F. Record Drawings and Shop Drawings: Legibly mark each item to record actual construction including:

1. Measured depths of foundations in relation to finish first floor datum.
2. Measured horizontal and vertical locations of underground utilities and appurtenances, referenced to permanent surface improvements.
3. Measured locations of internal utilities and appurtenances concealed in construction, referenced to visible and accessible features of the Work.
4. Field changes of dimension and detail.
5. Details not on original Contract drawings.

G. Owner shall be provided AutoDesk or BIM electronic files for records at conclusion of project.

3.02 OPERATION AND MAINTENANCE DATA

A. Source Data: For each product or system, list names, addresses and telephone numbers of Subcontractors and suppliers, including local source of supplies and replacement parts.

B. Product Data: Mark each sheet to clearly identify specific products and component parts, and data applicable to installation. Delete inapplicable information.

C. Drawings: Supplement product data to illustrate relations of component parts of equipment and systems, to show control and flow diagrams. Do not use Project Record Documents as maintenance drawings.

D. Typed Text: As required to supplement product data. Provide logical sequence of instructions for each procedure, incorporating manufacturer's instructions.

3.03 OPERATION AND MAINTENANCE DATA FOR MATERIALS AND FINISHES

A. For Each Product, Applied Material, and Finish:

1. Product data, with catalog number, size, composition, and color and texture designations.
2. Information for re-ordering custom manufactured products.

B. Instructions for Care and Maintenance: Manufacturer's recommendations for cleaning agents and methods, precautions against detrimental cleaning agents and methods, and recommended schedule for cleaning and maintenance.

C. Moisture protection and weather-exposed products: Include product data listing applicable reference standards, chemical composition, and details of installation. Provide recommendations for inspections, maintenance, and repair.

D. Additional information as specified in individual product specification sections.

E. Where additional instructions are required, beyond the manufacturer's standard printed instructions, have instructions prepared by personnel experienced in the operation and maintenance of the specific products.

3.04 OPERATION AND MAINTENANCE DATA FOR EQUIPMENT AND SYSTEMS

A. For Each Item of Equipment and Each System:

1. Description of unit or system, and component parts.
2. Identify function, normal operating characteristics, and limiting conditions.
3. Include performance curves, with engineering data and tests.
4. Complete nomenclature and model number of replaceable parts.

B. Where additional instructions are required, beyond the manufacturer's standard printed instructions, have instructions prepared by personnel experienced in the operation and maintenance of the specific products.

C. Panelboard Circuit Directories: Provide electrical service characteristics, controls, and communications; typed.

D. Include color coded wiring diagrams as installed.

E. Operating Procedures: Include start-up, break-in, and routine normal operating instructions and sequences. Include regulation, control, stopping, shut-down, and emergency instructions. Include summer, winter, and any special operating instructions.

F. Maintenance Requirements: Include routine procedures and guide for preventative maintenance and trouble shooting; disassembly, repair, and reassembly instructions; and alignment, adjusting, balancing, and checking instructions.

1. Include HVAC outdoor and exhaust air damper calibration strategy.
    a. Include provisions which ensure that full closure of dampers can be achieved.
2. Include Carbon Dioxide Monitoring Protocol.
3. Include Carbon Monoxide Monitoring Protocol.
4. Include Frost Mitigation Strategy for ventilation heat-recovery system.

G. Provide servicing and lubrication schedule, and list of lubricants required.

H. Include manufacturer's printed operation and maintenance instructions.

I. Include sequence of operation by controls manufacturer.

J. Provide original manufacturer's parts list, illustrations, assembly drawings, and diagrams required for maintenance.

K. Provide control diagrams by controls manufacturer as installed.

L. Provide Contractor 's coordination drawings, with color coded piping diagrams as installed.

M. Provide charts of valve tag numbers, with location and function of each valve, keyed to flow and control diagrams.

N. Provide list of original manufacturer's spare parts, current prices, and recommended quantities to be maintained in storage.

O. Include test and balancing reports.

P. Additional Requirements: As specified in individual product specification sections.

3.05 ASSEMBLY OF OPERATION AND MAINTENANCE MANUALS

A. Assemble operation and maintenance data into durable manuals for Owner's personnel use, with data arranged in the same sequence as, and identified by, the specification sections.

B. Where systems involve more than one specification section, provide separate tabbed divider for each system.

C. Binders: Commercial quality, 8-1/2 by 11 inch (216 by 280 mm) three D side ring binders with durable plastic covers; 2 inch (50 mm) maximum ring size. When multiple binders are used, correlate data into related consistent groupings.

D. Cover: Identify each binder with typed or printed title OPERATION AND MAINTENANCE INSTRUCTIONS; identify title of Project; identify subject matter of contents.

E. Project Directory: Title and address of Project; names, addresses, and telephone numbers of Architect, Consultants, Contractor and subcontractors, with names of responsible parties.

F. Tables of Contents: List every item separated by a divider, using the same identification as on the divider tab; where multiple volumes are required, include all volumes Tables of Contents in each volume, with the current volume clearly identified.

G. Dividers: Provide tabbed dividers for each separate product and system; identify the contents on the divider tab; immediately following the divider tab include a description of product and major component parts of equipment.

H. Text: Manufacturer's printed data, or typewritten data on 20 pound paper.

I. Drawings: Provide with reinforced punched binder tab. Bind in with text; fold larger drawings to size of text pages.

J. Arrangement of Contents: Organize each volume in parts as follows:

1. Project Directory.
2. Table of Contents, of all volumes, and of this volume.
3. Operation and Maintenance Data: Arranged by system, then by product category.
    a. Source data.
    b. Product data, shop drawings, and other submittals.
    c. Operation and maintenance data.
    d. Field quality control data.
    e. Photocopies of warranties and bonds.
4. Design Data: To allow for addition of design data furnished by Architect or others, provide a tab labeled "Design Data" and provide a binder large enough to allow for insertion of at least 20 pages of typed text.

3.06 WARRANTIES AND BONDS

A. Obtain warranties and bonds, executed in duplicate by responsible Subcontractors, suppliers, and manufacturers, within 10 days after completion of the applicable item of work. Except for items put into use with Owner's permission, leave date of beginning of time of warranty until Date of Substantial

completion is determined.

B. Verify that documents are in proper form, contain full information, and are notarized.

C. Co-execute submittals when required.

D. Retain warranties and bonds until time specified for submittal.

E. Manual: Bind in commercial quality 8-1/2 by 11 inch (216 by 279 mm) three D side ring binders with durable plastic covers.

F. Cover: Identify each binder with typed or printed title WARRANTIES AND BONDS, with title of Project; name, address and telephone number of Contractor and equipment supplier; and name of responsible company principal.

G. Table of Contents: Neatly typed, in the sequence of the Table of Contents of the Project Manual, with each item identified with the number and title of the specification section in which specified, and the name of product or work item.

H. Separate each warranty or bond with index tab sheets keyed to the Table of Contents listing. Provide full information, using separate typed sheets as necessary. List Subcontractor, supplier, and manufacturer, with name, address, and telephone number of responsible principal.

END OF SECTION

SECTION 01 7900
DEMONSTRATION AND TRAINING

PART 1 GENERAL

1.01 SUMMARY

A. Demonstration of products and systems to be commissioned and where indicated in specific specification sections.

B. Training of Owner personnel in operation and maintenance is required for:

1. All software-operated systems.
2. HVAC systems and equipment.
3. Plumbing equipment.
4. Electrical systems and equipment.
5. Items specified in individual product Sections.

C. Training of Owner personnel in care, cleaning, maintenance, and repair is required for:

1. Roofing, waterproofing, and other weather-exposed or moisture protection products.
2. Finishes, including flooring, wall finishes, ceiling finishes.
3. Fixtures and fittings.
4. Items specified in individual product Sections.

1.02 RELATED REQUIREMENTS

A. Section 01 7800 - Closeout Submittals: Operation and maintenance manuals.

B. Section 01 9113 - General Commissioning Requirements: Additional requirements applicable to demonstration and training.

C. Other Specification Sections: Additional requirements for demonstration and training.

1.03 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures; except:

1. Make all submittals specified in this section, and elsewhere where indicated for commissioning purposes, directly to the Commissioning Authority.
2. Submit one copy to the Commissioning Authority, not to be returned.
3. Make commissioning submittals on time schedule specified by Commissioning Authority.
4. Submittals indicated as "Draft" are intended for the use of the Commissioning Authority in preparation of overall Training Plan; submit in editable electronic format, Microsoft Word 2003 preferred.

B. Draft Training Plans: Owner will designate personnel to be trained; tailor training to needs and skill-level of attendees.

1. Submit to Commissioning Authority for review and inclusion in overall training plan.
2. Submit not less than four weeks prior to start of training.
3. Revise and resubmit until acceptable.
4. Provide an overall schedule showing all training sessions.
5. Include at least the following for each training session:

a. Identification, date, time, and duration.

b. Description of products and/or systems to be covered.

c. Name of firm and person conducting training; include qualifications.

d. Intended audience, such as job description.

e. Objectives of training and suggested methods of ensuring adequate training.

f. Methods to be used, such as classroom lecture, live demonstrations, hands-on, etc.

g. Media to be used, such a slides, hand-outs, etc.

h. Training equipment required, such as projector, projection screen, etc., to be provided by Contractor .

C. Training Manuals: Provide training manual for each attendee; allow for minimum of two attendees per training session.

1. Include applicable portion of O&M manuals.

2. Include copies of all hand-outs, slides, overheads, video presentations, etc., that are not included in O&M manuals.

3. Provide one extra copy of each training manual to be included with operation and maintenance data.

D. Training Reports:

1. Identification of each training session, date, time, and duration.

2. Sign-in sheet showing names and job titles of attendees.

3. List of attendee questions and written answers given, including copies of and references to supporting documentation required for clarification; include answers to questions that could not be answered in original training session.

4. Include Commissioning Authority's formal acceptance of training session.

E. Video Recordings: Submit digital video recording of each demonstration and training session for Owner 's subsequent use.

1. Format: DVD Disc.

2. Label each disc and container with session identification and date.

1.04 QUALITY ASSURANCE

A. Instructor Qualifications: Familiar with design, operation, maintenance and troubleshooting of the relevant products and systems.

1. Provide as instructors the most qualified trainer of those contractors and/or installers who actually supplied and installed the systems and equipment.

2. Where a single person is not familiar with all aspects, provide specialists with necessary qualifications.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.01 DEMONSTRATION - GENERAL

A. Demonstrations conducted during system start-up do not qualify as demonstrations for the purposes of this section, unless approved in advance by Owner .

B. Demonstrations conducted during Functional Testing need not be repeated unless Owner personnel training is specified.

C. Demonstration may be combined with Owner personnel training if applicable.

D. Operating Equipment and Systems: Demonstrate operation in all modes, including start-up, shut-down, seasonal changeover, emergency conditions, and troubleshooting, and maintenance procedures, including scheduled and preventive maintenance.

1. Perform demonstrations not less than two weeks prior to Substantial Completion.
2. For equipment or systems requiring seasonal operation, perform demonstration for other season within six months.

E. Non-Operating Products: Demonstrate cleaning, scheduled and preventive maintenance, and repair procedures.

1. Perform demonstrations not less than two weeks prior to Substantial Completion.

3.02 TRAINING - GENERAL

A. Commissioning Authority will prepare the Training Plan based on draft plans submitted.

B. Conduct training on-site unless otherwise indicated.

C. Owner will provide classroom and seating at no cost to Contractor .

D. Do not start training until Functional Testing is complete, unless otherwise specified or approved by the Commissioning Authority.

E. Provide training in minimum two hour segments.

F. The Commissioning Authority is responsible for determining that the training was satisfactorily completed and will provide approval forms.

G. Training schedule will be subject to availability of Owner 's personnel to be trained; re-schedule training sessions as required by Owner ; once schedule has been approved by Owner failure to conduct sessions according to schedule will be cause for Owner to charge Contractor for personnel "show-up" time.

H. Review of Facility Policy on Operation and Maintenance Data: During training discuss:

1. The location of the O&M manuals and procedures for use and preservation; backup copies.
2. Typical contents and organization of all manuals, including explanatory information, system narratives, and product specific information.
3. Typical uses of the O&M manuals.

I. Product- and System-Specific Training:

1. Review the applicable O&M manuals.
2. For systems, provide an overview of system operation, design parameters and constraints, and operational strategies.
3. Review instructions for proper operation in all modes, including start-up, shut-down, seasonal changeover and emergency procedures, and for maintenance, including preventative maintenance.
4. Provide hands-on training on all operational modes possible and preventive maintenance.
5. Emphasize safe and proper operating requirements; discuss relevant health and safety issues and emergency procedures.
6. Discuss common troubleshooting problems and solutions.
7. Discuss any peculiarities of equipment installation or operation.

8. Discuss warranties and guarantees, including procedures necessary to avoid voiding coverage.
9. Review recommended tools and spare parts inventory suggestions of manufacturers.
10. Review spare parts and tools required to be furnished by Contractor .
11. Review spare parts suppliers and sources and procurement procedures.

J. Be prepared to answer questions raised by training attendees; if unable to answer during training session, provide written response within three days.

END OF SECTION

SECTION 01 9113
GENERAL COMMISSIONING REQUIREMENTS

PART 1 GENERAL

1.01 SUMMARY

A. Commissioning is intended to achieve the following specific objectives; this section specifies the Contractor 's responsibilities for commissioning:

1. Verify that the work is installed in accordance with the Contract Documents and the manufacturer’s recommendations and instructions, and that it receives adequate operational checkout prior to startup: Startup reports and Prefunctional Checklists executed by Contractor are utilized to achieve this.
2. Verify and document that functional performance is in accordance with the Contract Documents: Functional Tests executed by Contractor and witnessed by the Commissioning Authority are utilized to achieve this.
3. Verify that operation and maintenance manuals submitted to Owner are complete: Detailed operation and maintenance (O&M) data submittals by Contractor are utilized to achieve this.
4. Verify that the Owner ’s operating personnel are adequately trained: Formal training conducted by Contractor is utilized to achieve this.

B. Commissioning, including Functional Tests, O&M documentation review, and training, is to occur after startup and initial checkout and be completed before Functional Completion.

C. The Commissioning Authority directs and coordinates all commissioning activities; this section describes some but not all of the Commissioning Authority's responsibilities.

D. The Commissioning Authority is employed by Owner .

1.02 SCOPE OF COMMISSIONING

A. The following are to be commissioned:

B. Plumbing Systems:

C. HVAC System, including:

1. Major and minor equipment items.
2. Piping systems and equipment.
3. Ductwork and accessories.
4. Terminal units.
5. Control system.
6. Variable frequency drives.

D. Electrical Systems:

E. Other equipment and systems explicitly identified elsewhere in Contract Documents as requiring commissioning.

F. Indoor Air Quality Procedures: The Commissioning Authority will coordinate; Contractor will execute; see Section 01 5719 - Temporary Environmental Controls.

1.03 RELATED REQUIREMENTS

A. Section 01 3329 - Sustainable Design Reporting: Reporting requirements relating to commissioning.

B. Section 01 5719 - Temporary Environmental Controls: Precautions and procedures; smoking room testing; building flush-out.

C. Section 01 7000 - Execution and Closeout Requirements: General startup requirements.

D. Section 01 7800 - Closeout Submittals: Scope and procedures for operation and maintenance manuals and project record documents.

E. Section 01 7900 - Demonstration and Training: Scope and procedures for Owner personnel training.

F. Section 01 9114 - Commissioning Authority Responsibilities.

G. Section 23 0800 - Commissioning of HVAC: HVAC control system testing; other requirements.

1.04 REFERENCE STANDARDS

A. ANSI/RESNET/ICC 301 - Standard for the Calculation and Labeling of the Energy Performance of Low-Rise Residential Buildings using an Energy Rating Index 2014.

B. ANSI/RESNET/ICC 380 - Standard for Testing Airtightness of Building Enclosures, Airtightness of Heating and Cooling Air Distribution Systems, and Airflow of Mechanical Ventilation Systems 2016.

C. ASHRAE Std 202 - Commissioning Process for Buildings and Systems 2018.

D. ASTM E779 - Standard Test Method for Determining Air Leakage Rate by Fan Pressurization 2010 (Reapproved 2018).

E. CSI/CSC MF - Masterformat 2016.

F. NEBB S110 - Whole Building Technical Commissioning Of New Construction 2018.

G. PECI (Samples) - Sample Forms for Prefunctional Checklists and Functional Performance Tests Current Edition.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures; except:

1. Make all submittals specified in this section, and elsewhere where indicated for commissioning purposes, directly to the Commissioning Authority, unless they require review by Architect ; in that case, submit to Architect first.

2. Submit one copy to the Commissioning Authority, not to be returned.

3. Make commissioning submittals on time schedule specified by Commissioning Authority.

4. Submittals indicated as "Draft" are intended for the use of the Commissioning Authority in preparation of Prefunctional Checklists or Functional Test requirements; submit in editable electronic format, Microsoft Word 2010 preferred.

5. As soon as possible after submittals made to Architect are approved, submit copy of approved submittal to the Commissioning Authority.

B. Product Data: If submittals to Architect do not include the following, submit copies as soon as possible:

1. Manufacturer's product data, cut sheets, and shop drawings.

2. Manufacturer's installation instructions.

3. Startup, operating, and troubleshooting procedures.

4. Fan and pump curves.

5. Factory test reports.

6. Warranty information, including details of Owner 's responsibilities in regard to keeping warranties in force.

C. Manufacturers' Instructions: Submit copies of all manufacturer-provided instructions that are shipped with the equipment as soon as the equipment is delivered.

D. Startup Plans and Reports.

E. Completed Prefunctional Checklists.

F. Commissioning Issues Log:

1. Construction observations.

2. Supporting photographs.

1.06 QUALITY ASSURANCE

A. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.

PART 2 PRODUCTS

2.01 TEST EQUIPMENT

A. Provide all standard testing equipment required to perform startup and initial checkout and required Functional Testing; unless otherwise noted such testing equipment will NOT become the property of Owner .

B. Calibration Tolerances: Provide testing equipment of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified. If not otherwise noted, the following minimum requirements apply:

1. Temperature Sensors and Digital Thermometers: Certified calibration within past year to accuracy of 0.5 degree F (0.3 degree C) and resolution of plus/minus 0.1 degree F (0.05 degree C).

2. Pressure Sensors: Accuracy of plus/minus 2.0 percent of the value range being measured (not full range of meter), calibrated within the last year.

3. Calibration: According to the manufacturer’s recommended intervals and when dropped or damaged; affix calibration tags or keep certificates readily available for inspection.

C. Equipment-Specific Tools: Where special testing equipment, tools and instruments are specific to a piece of equipment, are only available from the vendor, and are required in order to accomplish startup or Functional Testing, provide such equipment, tools, and instruments as part of the work at no extra cost to Owner ; such equipment, tools, and instruments are to become the property of Owner .

D. Dataloggers: Independent equipment and software for monitoring flows, currents, status, pressures, etc. of equipment.

1. Dataloggers required to for Functional Tests will be provided by the Commissioning Authority and will not become the property of Owner .

PART 3 EXECUTION

3.01 COMMISSIONING PLAN

A. Commissioning Authority has prepared the Commissioning Plan.

1. Attend meetings called by the Commissioning Authority for purposes of completing the commissioning plan.

2. Require attendance and participation of relevant subcontractors, installers, suppliers, and manufacturer representatives.

B. Contractor is responsible for compliance with the Commissioning Plan.

C. Commissioning Plan: The commissioning schedule, procedures, and coordination requirements for all parties in the commissioning process.

1. Commissioning will be phased (by floors, for example) to minimize the total construction time.

D. Basis of Design Documentation (BOD): Detailed documentation of the functional requirements of the project; descriptions of the systems, components, and methods chosen to meet the design intent; assumptions underlying the design intent.

1. Basis of Design Documentation is to be prepared by Architect .

E. Commissioning Schedule:

1. Submit anticipated dates of startup of each item of equipment and system to Commissioning Authority within 60 days after award of Contract.
2. Re-submit anticipated startup dates monthly, but not less than 4 weeks prior to startup.
3. Prefunctional Checklists and Functional Tests are to be performed in sequence from components, to subsystems, to systems.
4. Provide sufficient notice to Commissioning Authority for delivery of relevant Checklists and Functional Test procedures, to avoid delay.

3.02 DOCUMENTATION IDENTIFICATION SYSTEM

A. Give each submitted form or report a unique identification; use the following scheme.

B. Type of Document: Use the following prefixes:

1. Startup Plan: SP-.
2. Startup Report: SR-.
3. Prefunctional Checklist: PC-.
4. Functional Test Procedure: FTP-.
5. Functional Test Report: FTR-.

C. System Type: Use the first 4 digits from CSI/CSC MF (Master Format), that are applicable to the system; for example:

1. 2300: HVAC system as a whole.
2. 2320: HVAC Piping and Pumps.
3. 2330: HVAC Air Distribution.

D. Component Number: Assign numbers sequentially, using 1, 2, or 3 digits as required to accommodate the number of units in the system.

E. Test, Revision, or Submittal Number: Number each successive iteration sequentially, starting with 1.

F. Example: PC-2320-001.2 would be the Prefunctional Checklist for equipment item 1 in the HVAC piping system, probably a pump; this is the second, revised submittal of this checklist.

3.03 STARTUP PLANS AND REPORTS

A. Startup Plans: For each item of equipment and system for which the manufacturer provides a startup plan, submit the plan not less than 8 weeks prior to startup.

B. Startup Reports: For each item of equipment and system for which the manufacturer provides a startup checklist (or startup plan or field checkout sheet), document compliance by submitting the completed

startup checklist prior to startup, signed and dated by responsible entity.

C. Submit directly to the Commissioning Authority.

3.04 PREFUNCTIONAL CHECKLISTS

A. A Prefunctional Checklist is required to be filled out for each item of equipment or other assembly specified to be commissioned.

1. No sampling of identical or near-identical items is allowed.
2. These checklists do not replace manufacturers' recommended startup checklists, regardless of apparent redundancy.
3. Prefunctional Checklist forms will not be complete until after award of the contract; the following types of information will be gathered via the completed Checklist forms:
    a. Certification by installing contractor that the unit is properly installed, started up, and operating and ready for Functional Testing.
    b. Confirmation of receipt of each shop drawing and commissioning submittal specified, itemized by unit.
    c. Manufacturer, model number, and relevant capacity information; list information "as specified," "as submitted," and "as installed."
    d. Serial number of installed unit.
    e. List of inspections to be conducted to document proper installation prior to startup and Functional Testing; these will be primarily static inspections and procedures; for equipment and systems may include normal manufacturer’s start-up checklist items and minor testing.
    f. Sensor and actuator calibration information.
4. All preliminary Prefunctional Checklists are included in the contract documents; the Commissioning Authority has the authority to modify these and will furnish final versions as applicable.
5. A preliminary list of Prefunctional Checklists is attached, to indicate anticipated scope.

B. Contractor is responsible for filling out Prefunctional Checklists, after completion of installation and before startup; witnessing by the Commissioning Authority is not required unless otherwise specified.

1. Each line item without deficiency is to be witnessed, initialed, and dated by the actual witness; checklists are not complete until all line items are initialed and dated complete without deficiencies.
2. Checklists with incomplete items may be submitted for approval provided the Contractor attests that incomplete items do not preclude the performance of safe and reliable Functional Testing; re-submission of the Checklist is required upon completion of remaining items.
3. Individual Checklists may contain line items that are the responsibility of more than one installer; Contractor shall assign responsibility to appropriate installers or subcontractors, with identification recorded on the form.
4. If any Checklist line item is not relevant, record reasons on the form.
5. Contractor may independently perform startup inspections and/or tests, at Contractor's option.
6. Regardless of these reporting requirements, Contractor is responsible for correct startup and operation.
7. Submit completed Checklists to Commissioning Authority within two days of completion.
8. See Section 01 7000 - Execution and Closeout Requirements for additional general startup requirements.

C. Commissioning Authority is responsible for furnishing the Prefunctional Checklists to Contractor .

1. Initial Drafts: Contractor is responsible for initial draft of Prefunctional Checklist where so indicated in the Contract Documents.
2. Provide all additional information requested by Commissioning Authority to aid in preparation of checklists, such as shop drawing submittals, manufacturers' startup checklists, and O&M data.
3. Commissioning Authority may add any relevant items deemed necessary regardless of whether they are explicitly mentioned in the Contract Documents or not.
4. When asked to review the proposed Checklists, do so in a timely manner.

D. Commissioning Authority Witnessing: Required for:

1. Each piece of primary equipment, unless sampling of multiple similar units is allowed by the commissioning plan.
2. A sampling of non-primary equipment, as allowed by the commissioning plan.

E. Deficiencies: Correct deficiencies and re-inspect or re-test, as applicable, at no extra cost to Owner .

1. If difficulty in correction would delay progress, report deficiency to the Commissioning Authority immediately.

3.05 FUNCTIONAL TESTS

A. A Functional Test is required for each item of equipment, system, or other assembly specified to be commissioned, unless sampling of multiple identical or near-identical units is allowed by the final test procedures.

B. Contractor is responsible for execution of required Functional Tests, after completion of Prefunctional Checklist and before closeout.

C. Commissioning Authority is responsible for witnessing and reporting results of Functional Tests, including preparation and completion of forms for that purpose.

D. Contractor is responsible for correction of deficiencies and re-testing at no extra cost to Owner ; if a deficiency is not corrected and re-tested immediately, the Commissioning Authority will document the deficiency and the Contractor 's stated intentions regarding correction.

1. Deficiencies are any condition in the installation or function of a component, piece of equipment or system that is not in compliance with the Contract Documents or does not perform properly.
2. Use the standard form provided with copies submitted to Owner and Contractor .
3. When the deficiency has been corrected, the Contractor completes the form certifying that the item is ready to be re-tested and returns the form to the Commissioning Authority; the Commissioning Authority will reschedule the test and the Contractor shall re-test.
4. Identical or Near-Identical Items: If 10 percent, or three, whichever is greater, of identical or near-identical items fail to perform due to material or manufacturing defect, all items will be considered defective; provide a proposal for correction within 2 weeks after notification of defect, including provision for testing sample installations prior to replacement of all items.
5. Contractor shall bear the cost of Owner and Commissioning Authority personnel time witnessing re-testing.
6. Contractor shall bear the cost of Owner and Commissioning Authority personnel time witnessing re-testing if the test failed due to failure to execute the relevant Prefunctional Checklist correctly; if the test failed for reasons that would not have been identified in the Prefunctional Checklist process, Contractor shall bear the cost of the second and subsequent re-tests.

E. Functional Test Procedures:

1. Some test procedures are included in the Contract Documents; where Functional Test procedures are not included in the Contract Documents, test procedures will be determined by the Commissioning Authority with input by and coordination with Contractor .
2. Examples of Functional Testing:
    a. Test the dynamic function and operation of equipment and systems (rather than just components) using manual (direct observation) or monitoring methods under full operation (e.g., the chiller pump is tested interactively with the chiller functions to see if the pump ramps up and down to maintain the differential pressure setpoint).
    b. Systems are tested under various modes, such as during low cooling or heating loads, high loads, component failures, unoccupied, varying outside air temperatures, fire alarm, power failure, etc.
    c. Systems are run through all the HVAC control system’s sequences of operation and components are verified to be responding as the sequence's state.
    d. Traditional air or water test and balancing (TAB) is not Functional Testing; spot checking of TAB by demonstration to the Commissioning Authority is Functional Testing.
3. Some preliminary Functional Test procedures are included in the contract documents; the Commissioning Authority has the authority to modify these and will furnish final versions as applicable.
4. A preliminary list of Functional Tests is attached, to indicate anticipated scope.

F. Deferred Functional Tests: Some tests may need to be performed later, after substantial completion, due to partial occupancy, equipment, seasonal requirements, design or other site conditions; performance of these tests remains the Contractor 's responsibility regardless of timing.

G. Factory Tests: Commissioning Authority and Contractor are responsible for coordinating testing of equipment at the factory by factory personnel, to ensure compliance with commissioning requirements.

H. Field Tests By Others: Where Functional Tests are indicated as to be performed by others not subject to the Contract Documents, those tests are not subject to these commissioning requirements.

3.06 SENSOR AND ACTUATOR CALIBRATION

A. Calibrate all field-installed temperature, relative humidity, carbon monoxide, carbon dioxide, and pressure sensors and gauges, and all actuators (dampers and valves) on this piece of equipment shall be calibrated. Sensors installed in the unit at the factory with calibration certification provided need not be field calibrated.

B. Calibrate using the methods described below; alternate methods may be used, if approved by Commissioning Authority and Owner beforehand. See PART 2 for test instrument requirements. Record methods used on the relevant Prefunctional Checklist or other suitable forms, documenting initial, intermediate and final results.

C. All Sensors:

1. Verify that sensor location is appropriate and away from potential causes of erratic operation.
2. Verify that sensors with shielded cable are grounded only at one end.
3. For sensor pairs that are used to determine a temperature or pressure difference, for temperature make sure they are reading within 0.2 degree F (0.1 degree C) of each other, and for pressure, within tolerance equal to 2 percent of the reading, of each other.
4. Tolerances for critical applications may be tighter.

D. Sensors Without Transmitters - Standard Application:

1. Make a reading with a calibrated test instrument within 6 inches (150 mm) of the site sensor.
2. Verify that the sensor reading, via the permanent thermostat, gauge or building automation system, is within the tolerances in the table below of the instrument-measured value.
3. If not, install offset, calibrate or replace sensor.

E. Sensors With Transmitters - Standard Application.

1. Disconnect sensor.
2. Connect a signal generator in place of sensor.
3. Connect ammeter in series between transmitter and building automation system control panel.
4. Using manufacturer’s resistance-temperature data, simulate minimum desired temperature.
5. Adjust transmitter potentiometer zero until 4 mA is read by the ammeter.
6. Repeat for the maximum temperature matching 20 mA to the potentiometer span or maximum and verify at the building automation system.
7. Record all values and recalibrate controller as necessary to comply with specified control ramps, reset schedules, proportional relationship, reset relationship and P/I reaction.
8. Reconnect sensor.
9. Make a reading with a calibrated test instrument within 6 inches (150 mm) of the site sensor.
10. Verify that the sensor reading, via the permanent thermostat, gauge or building automation system, is within the tolerances in the table below of the instrument-measured value.
11. If not, replace sensor and repeat.
12. For pressure sensors, perform a similar process with a suitable signal generator.

F. Sensor Tolerances for Standard Applications: Plus/minus the following maximums:

1. Watthour, Voltage, Amperage: 1 percent of design.
2. Pressure, Air, Water, Gas: 3 percent of design.
3. Air Temperatures (Outside Air, Space Air, Duct Air): 0.4 degrees F (0.2 degree C).
4. Relative Humidity: 4 percent of design.
5. Barometric Pressure: 0.1 inch of Hg (340 Pa).
6. Flow Rate, Air: 10 percent of design.
7. Flow Rate, Water: 4 percent of design.
8. AHU Wet Bulb and Dew Point: 2.0 degrees F (1.1 degrees C).
9. Hot Water Coil and Boiler Water Temperature: 1.5 degrees F (0.8 degrees C).
10. Cooling Coil, Chilled and Condenser Water Temperatures: 0.4 degrees F (0.2 degree C).
11. Combustion Flue Temperature: 5.0 degrees F (2.8 degrees C).
12. Oxygen and CO2 Monitors: 0.1 percentage points.
13. CO Monitor: 0.01 percentage points.
14. Natural Gas and Oil Flow Rate: 1 percent of design.

G. Critical Applications: For some applications more rigorous calibration techniques may be required for selected sensors. Describe any such methods used on an attached sheet.

H. Valve/Damper Stroke Setup and Check:

1. For all valve/damper actuator positions checked, verify the actual position against the control system readout.
2. Set pump/fan to normal operating mode.
3. Command valve/damper closed; visually verify that valve/damper is closed and adjust output zero signal as required.
4. Command valve/damper to open; verify position is full open and adjust output signal as required.
5. Command valve/damper to a few intermediate positions.
6. If actual valve/damper position does not reasonably correspond, replace actuator or add pilot positioner (for pneumatics).

I. Isolation Valve or System Valve Leak Check: For valves not associated with coils.

1. With full pressure in the system, command valve closed.
2. Use an ultra-sonic flow meter to detect flow or leakage.

3.07 TEST PROCEDURES - GENERAL

A. Provide skilled technicians to execute starting of equipment and to execute the Functional Tests. Ensure that they are available and present during the agreed upon schedules and for sufficient duration to complete the necessary tests, adjustments and problem-solving.

B. Provide all necessary materials and system modifications required to produce the flows, pressures, temperatures, and conditions necessary to execute the test according to the specified conditions. At completion of the test, return all affected equipment and systems to their pre-test condition.

C. Sampling: Where Functional Testing of fewer than the total number of multiple identical or near-identical items is explicitly permitted, perform sampling as follows:

1. Identical Units: Defined as units with same application and sequence of operation; only minor size or capacity difference.
2. Sampling is not allowed for:
    a. Major equipment.
    b. Life-safety-critical equipment.
    c. Prefunctional Checklist execution.
3. XX = the percent of the group of identical equipment to be included in each sample; defined for specific type of equipment.
4. YY = the percent of the sample that if failed will require another sample to be tested; defined for specific type of equipment.
5. Randomly test at least XX percent of each group of identical equipment, but not less than three units. This constitutes the "first sample."
6. If YY percent of the units in the first sample fail, test another XX percent of the remaining identical units.
7. If YY percent of the units in the second sample fail, test all remaining identical units.

8. If frequent failures occur, resulting in more troubleshooting than testing, the Commissioning Authority may stop the testing and require Contractor to perform and document a checkout of the remaining units prior to continuing testing.

D. Manual Testing: Use hand-held instruments, immediate control system readouts, or direct observation to verify performance (contrasted to analyzing monitored data taken over time to make the “observation”).

E. Simulating Conditions: Artificially create the necessary condition for the purpose of testing the response of a system; for example apply hot air to a space sensor using a hair dryer to see the response in a VAV box.

F. Simulating Signals: Disconnect the sensor and use a signal generator to send an amperage, resistance or pressure to the transducer and control system to simulate the sensor value.

G. Over-Writing Values: Change the sensor value known to the control system in the control system to see the response of the system; for example, change the outside air temperature value from 50 degrees F to 75 degrees F to verify economizer operation.

H. Indirect Indicators: Remote indicators of a response or condition, such as a reading from a control system screen reporting a damper to be 100 percent closed, are considered indirect indicators.

I. Monitoring: Record parameters (flow, current, status, pressure, etc.) of equipment operation using dataloggers or the trending capabilities of the relevant control systems; where monitoring of specific points is called for in Functional Test Procedures:

1. All points that are monitored by the relevant control system shall be trended by Contractor ; at the Commissioning Authority’s request, Contractor shall trend up to 20 percent more points than specified at no extra charge.
2. Other points will be monitored by the Commissioning Authority using dataloggers.
3. At the option of the Commissioning Authority, some control system monitoring may be replaced with datalogger monitoring.
4. Provide hard copies of monitored data in columnar format with time down left column and at least 5 columns of point values on same page.
5. Graphical output is desirable and is required for all output if the system can produce it.
6. Monitoring may be used to augment manual testing.

3.08 OPERATION AND MAINTENANCE MANUALS

A. See Section 01 7800 - Closeout Submittals for additional requirements.

B. Add design intent documentation furnished by Architect to manuals prior to submission to Owner .

C. Submit manuals related to items that were commissioned to Commissioning Authority for review; make changes recommended by Commissioning Authority.

D. Commissioning Authority will add commissioning records to manuals after submission to Owner .

END OF SECTION

SECTION 01 9114
COMMISSIONING AUTHORITY RESPONSIBILITIES

PART 1 GENERAL

1.01 SUMMARY

A. Commissioning is intended to achieve the following specific objectives; this section covers the Commissioning Authority's responsibilities for commissioning:

1. Verify that the work is installed in accordance with the Contract Documents and the manufacturer’s recommendations and instructions, and that it receives adequate operational checkout prior to startup: Startup reports and Prefunctional Checklists are utilized to achieve this.
2. Verify and document that functional performance is in accordance with the Contract Documents: Functional Tests performed by Contractor and witnessed by the Commissioning Authority are utilized to achieve this.
3. Verify that operation and maintenance manuals submitted to Owner are complete: Detailed O&M data submittals are specified.
4. Verify that the Owner ’s operating personnel are adequately trained: Formal training conducted by Contractor is specified.

B. Commissioning, including Functional Tests, O&M documentation review, and training, is to occur after startup and initial checkout and be completed before Substantial Completion.

C. Coordinate and direct all the commissioning activities in a logical, sequential and efficient manner using consistent protocols and forms, centralized documentation, clear and regular communications and consultations with all necessary parties, frequently updated timelines and schedules and technical expertise.

1.02 SCOPE OF COMMISSIONING

A. The following are to be commissioned:

B. Other equipment and systems explicitly identified elsewhere in Contract Documents as requiring commissioning.

1.03 SUBMITTALS

A. Commissioning Plan:

1. Submit preliminary draft for review by Owner and Architect within 30 days after commencement of Commissioning Authority contract.
2. Submit revised draft to be included in the construction contract documents, not less than 4 weeks prior to bid date.
3. Submit final plan not more than 90 days after commencement of construction, for issuance to all parties.

B. Prefunctional Checklists:

1. Submit preliminary draft at start of construction documents phase or within 30 days after commencement of contract, whichever is later.
2. Submit revised draft for review by Owner and Architect not less than 6 weeks prior to bid date, for inclusion in the construction contract documents.
3. Submit final draft to Contractor not less than 4 weeks prior to startup of particular items to be commissioned.

C. Functional Test Procedures:

1. Submit preliminary draft at start of construction documents phase or within 30 days after commencement of contract, whichever is later.
2. Submit revised draft for review by Owner and Architect not less than 6 weeks prior to bid date, for inclusion in the construction contract documents.
3. Submit final draft to Contractor not less than 4 weeks prior to startup of particular items to be commissioned.

D. Training Plan.

E. Recommissioning Manual: Submit within 60 days after receipt of Owner's instructions to proceed with preparation.

F. Commissioning Record: Submit to Contractor for inclusion with O&M manuals.

G. Final Commissioning Report: Submit to Owner .

H. Sustainable Design Documentation: Submit Final Commissioning Report and Recommissioning Manual in accordance with requirements specified in Section 01 3329.02 - Sustainable Design Reporting - LEED v4.

PART 3 EXECUTION

2.01 COMMISSIONING PLAN

A. Prepare and maintain the Commissioning Plan, covering commissioning schedule, Prefunctional Checklist and Functional Test procedures, coordination requirements, and forms to be used, for all parties in the commissioning process.

1. Call and chair meetings of the Commissioning Team when appropriate.
2. Give Contractor sufficient notice for scheduling commissioning activities.
3. Develop a comprehensive start-up and initial systems checkout plan with cooperation of Contractor and subcontractors.
4. PECI (MCP) may be used as a guide for the Commissioning Plan.
5. ASHRAE Guideline 1.1 may be used as a guide for the Commissioning Plan.
6. Avoid replication of information included in the construction contract documents to the greatest extent possible.

B. Review the construction contract documents for Contractor submittals of draft checklists, draft test procedures, manufacturer startup procedures, and other information intended for the use of the Commissioning Authority in preparing the Commissioning Plan.

C. Commissioning Schedule:

1. Coordinate with Contractor anticipated dates of startup of each item of equipment and system.
2. Contractor 's scheduling responsibilities are specified in the construction contract documents.
3. Revise and re-issue schedule monthly.
4. Prefunctional Checklists and Functional Tests are to be performed in sequence from components, to subsystems, to systems.
5. Deliver relevant Prefunctional Checklists and Functional Test Procedures to Contractor in time to avoid delay.

2.02 CONSTRUCTION CONTRACT DOCUMENTS

A. General Commissioning Specifications: Architect has prepared general commissioning specifications for inclusion in the construction contract documents; review and submit comments to Owner .

1. These specifications include:

a. Procedures applicable to all types of items to be commissioned.

2. Prepare specifications for any of the following that would be recommended, for incorporation into the construction contract documents by Architect :

a. Additional Contractor submittals needed for purposes of commissioning, such as startup procedures, draft test procedures, draft training plans, etc.

b. Additional Owner personnel training.

c. Additional operation or maintenance data that should be submitted.

B. Prefunctional Checklists: Develop detailed Checklists for each item to be commissioned.

1. List of Checklists to be Developed: Prepare and maintain a detailed list of titles, not full text.

2. The Checklist forms are intended to be part of the Contractor 's Contract Documents.

C. Functional Testing: Develop detailed procedures for each item to be commissioned; submit for review by Owner and Architect .

1. List of Test Procedures to be Developed: Prepare and maintain a detailed list of titles, not full text.

2. The forms the Commissioning Authority will use to report Functional Test results are not intended to be part of Contractor 's Contract Documents, but the Functional Test Procedures that must be executed by the Contractor must be made part of the Contract Documents, by modification if necessary.

D. Develop any other reporting forms Contractor will be required to use; if they are likely to require a substantially different amount of work than the Contractor can reasonably anticipate, they must be included in the construction contract documents.

E. If any part of the documents described above have not been developed by the bid date, coordinate with Architect the issuance of modifications to the construction contract documents

2.03 PREFUNCTIONAL CHECKLISTS

A. Prefunctional Checklists - Content: Prepare forms for Contractor 's use, in sufficient detail to document that the work has been installed in accordance with the Contract Documents and the manufacturer’s recommendations and instructions, and that it receives adequate operational checkout prior to startup.

1. Prepare separate Checklists for each type of equipment, system, or other assembly, customized to the item.

2. Identify each Checklist by using the contract documents identification number or name, if any; if none, create unique identifiers for each Checklist; do not rely on Contractor to number checklists.

3. Multiple identical or near-identical items may appear on a single Checklist provided there is space to record all required data for each separately; label each set of data uniquely.

4. Include space to record manufacturer name, model number, serial number, capacity and other relevant characteristics, and accessories and other features as applicable; include space to record "as specified", "as submitted", and "as installed" data.

5. Include space to record whether or not the required submittals have been received; list each separate type of submittal.

6. Include line items for each physical inspection to be performed.

7. Include line items for each operational inspection to be performed, such as checking switch operation, fan rotation, valve and damper stroke, and measuring actual electrical loads.
8. Include separate section for sensors and actuators, with space for documenting actual physical location and calibration measurements; provide a separate generic calibration checklist identified wherever referenced.
9. Include spaces to record that related Checklists for related work upon which this work depends have been completed.

B. Prefunctional Checklists - Format:

1. Provide a cover sheet showing name of equipment item or system, documentation identification number (see Documentation Identification Scheme), names of accessory components involved, and identification of related checklists.
2. Include on cover sheet space for Contractor 's use in attesting to completeness; provide spaces for the signatures of the general contractor and each subcontractor or other entity responsible, customized to the project and the type of item.
3. Include on the cover sheet, above the signature block, the following statement: "The work referenced in this Checklist and other work integral to or dependent on this work is complete and ready for functional testing. The checklist items are complete and have been checked off only by parties having direct knowledge of the event." Include two checkboxes:
    a. "This Checklist is submitted for approval with no exceptions."
    b. "This Checklist is submitted for approval, subject to the attached list of outstanding items, none of which preclude the performance of safe and reliable functional tests. A statement of completion will be submitted upon completion of the outstanding items."
4. Use a consistent, tabular format for all Checklists, with one line per checklist activity.
5. For each line item, provide space for initials and date, and identification of the subcontractor or other entity responsible.

2.04 FUNCTIONAL TEST PROCEDURES

A. Develop test procedures in sufficient detail to show that functional performance is in accordance with the Contract Documents and shows proper operation through all modes of operation where there is a different system response, including seasonal, unoccupied, warm-up, cool-down, part- and full-load.

1. Obtain assistance and review by installing subcontractors.
2. Itemize each test sequence in step-by-step order, with acceptance criteria for each step and for the test as a whole.
3. Include test setup instructions, description of tools and apparatus, special cautions, and.
4. Avoid procedures that would void or otherwise limit warranties; review with Contractor prior to execution.
5. For HVAC systems, procedures may include energy management control system trending, stand-alone datalogger monitoring or manual functional testing.
6. Obtain explicit approval of Contractor in regard to feasibility and safety prior to execution.

B. Functional Test Report Forms: Prepare forms in advance of testing, using a consistent format; include all test procedure information given to Contractor and:

1. Report Identifier (see Documentation Identification Scheme).
2. Test prerequisites.

3. Formulas to be used in calculations.
4. Yes/No check boxes for each step of test.
5. Space to record results, document deficiencies, and make recommendations.
6. Signature and date block for Commissioning Authority.

C. Functional Test Prerequisites: Include space to verify all of the following items on each Functional Test Report Form, unless truly inapplicable:

1. All related equipment has been started up and start-up reports and Prefunctional Checklists submitted and approved ready for Functional Testing.
    a. For hydronic systems, check that:
        1) Piping system flushing is complete and required report approved.
        2) Water treatment system is complete and operational.
        3) Test and balance (TAB) is complete and approved.
2. All control system functions for this and all interlocking systems are programmed and operable in accordance with the Contract Documents, including final set points and schedules with debugging, loop tuning and sensor calibrations completed, with space for signature of controls installer.
3. Incomplete items identified by Architect during closeout inspections have been corrected or completed.
4. Safeties and operating ranges have been reviewed.
5. A copy of the specified sequence of operation is attached.
6. A copy of applicable schedules and setpoints is attached.
7. A copy of the specified Functional Test Procedures is attached.
8. The Functional Test Procedures have been reviewed and approved by the applicable installer.
9. Vibration control report approved (if required).
10. False loading equipment, system and procedures ready.
11. Sufficient clearance around equipment for servicing.
12. Original values of pre-test setpoints that need to be changed to accommodate testing have been recorded, with a check box provided to verify return to original values (include control parameters, limits, delays, lockouts, schedules, etc.).
13. Any other items on the Prefunctional Checklist or Start-up Reports that need to be re-verified.

2.05 CONSTRUCTION PHASE

A. Coordinate the commissioning work with Contractor and Construction Manager; ensure that commissioning activities are being incorporated into the master schedule.

B. Perform site visits, as necessary, to observe component and system installations. Attend planning and job-site meetings to obtain information on construction progress. Review Contractor 's meeting minutes for issues relating to the commissioning process. Assist in resolving discrepancies.

C. Commissioning Kick-Off Meeting: Plan and conduct a meeting early in the construction phase to review commissioning activities and responsibilities with all parties involved. Require attendance by all members of the Commissioning Team.

D. Conduct periodic meetings as necessary to coordinate, resolve planning issues, and aid in resolution of deficiencies, minimizing the time spent by Contractor and Owner personnel; hold meetings at least

monthly.

E. Submit periodic progress reports to Owner and Contractor .

F. Review Contractor shop drawing submittals applicable to systems being commissioned for compliance with commissioning needs; verify that Owner 's responsibilities are clearly defined in warranties.

G. Review and approve submittals directly related to commissioning.

H. Deliver Prefunctional Checklists and Functional Test procedures to Contractor .

I. Verify satisfactory completion of Prefunctional Checklists by Contractor by reviewing checklists and by site observation and spot checking; provide formal approval when satisfactory.

J. Verify startup of all systems by reviewing start-up reports and by site observation; provide formal approval when satisfactory.

K. Coordinate, witness and approve Functional Tests performed by Contractor . Coordinate retesting until satisfactory performance is achieved.

L. HVAC Commissioning:

1. Gather and review the control sequences and interlocks and work with Contractor and design engineers until sufficient clarity has been obtained, in writing, to be able to prepare detailed Functional Test procedures.
2. Witness all or part of HVAC piping test and flushing procedures, sufficient to be confident that proper procedures were followed; document testing and include documentation in O&M manuals.
3. Witness all or part of duct testing and cleaning procedures, sufficient to be confident that proper procedures were followed; document testing and include documentation in O&M manuals.
4. Review TAB Plan prepared by Contractor .
5. Before TAB is executed, witness sufficient Functional Testing of the control system to approve it to be used for TAB.
6. Verify air and water systems balancing by spot testing, by reviewing completed reports, and by site observation; provide formal approval when satisfactory.
7. Analyze trend logs and monitoring data to verify performance.

M. Witness and document testing of systems and components over which the Commissioning Authority does not have direct control, such as smoke control systems, tests contracted directly by Owner , and tests by manufacturer’s personnel; include documentation in O&M manuals.

N. When Functional Testing for specific systems or equipment is specified to be performed by the Commissioning Authority rather than the Contractor, perform such testing without assistance of Contractor.

O. Maintain a master deficiency and resolution log and a separate testing record. Provide written progress and test reports with recommended actions.

P. O&M Data: Review submitted operation and maintenance data for completeness; provide formal approval if satisfactory.

Q. Notify Contractor and Owner of deficiencies in procedures or results; suggest solutions.

2.06 TRAINING

A. Training Plan: Prepare a comprehensive Training Plan, incorporating draft training plans submitted by Contractor .

1. Include a 8 hour session by the HVAC design engineer covering the overall HVAC system and equipment design concepts, with one-line schematic drawings.
2. Include a 8 hour session by the Commissioning Authority on the use of the blank Prefunctional Checklists and Functional Test report forms for re-commissioning purposes.
3. Establish criteria for determining satisfactory completion of training.

B. Verify that training was satisfactorily completed; provide formal approval if satisfactory.

2.07 CLOSEOUT

A. Commissioning Record: Use the same format and organization as specified for the O&M manuals.
1. Include the Final Commissioning Plan and Final Report.
2. For each product or system and equipment item, include the following organized as indicated, with separator tabs:
a. Design intent documentation, furnished by Architect or others.
b. Detailed operational sequences.
c. Startup plan and approved startup reports.
d. Filled out Prefunctional Checklists.
e. Filled out Functional Test reports; trend logs and monitoring reports and analysis; other verification documentation.
f. Training plan and training records.
g. Recommissioning recommendations, including time schedule and procedures; include blank copies of all Prefunctional Checklists and Functional Test report forms.

B. Final Commissioning Report: Include:
1. Executive summary.
2. List of participants and roles.
3. Brief facility description.
4. Overview of commissioning scope and general description of testing and verification methods.
5. For each item commissioned, an evaluation of adequacy of:
a. The product itself; i.e. compliance with the contract documents.
b. Installation.
c. Functional performance; include a brief description of the verification method used and observations and conclusions from the testing.
d. O&M documentation, including design intent.
e. Operator training.
6. List of all outstanding non-compliance items, referenced to the specific functional test, inspection, trend log, etc., where the deficiency is documented.
7. List of unresolved issues, seasonal or deferred testing, and other concerns that could affect facility operation.
8. Recommendations for improvement to equipment or operations, future actions, commissioning process changes, etc. (about four to six pages).

9. Attach appendices containing all commissioning documentation, including logs, minutes, reports, deficiency lists, communications, findings, etc., except that specified to be part of the Commissioning Record.

C. Recommissioning Manual: Revise the Commissioning Plan documents, checklists, and Functional Test forms as necessary based on accepted recommendations of the final Commissioning Report. Provide step-by-step instructions for recommissioning, blank forms, and cross-references to O&M data needed during recommissioning.

2.08 POST-OCCUPANCY PHASE

A. Coordinate deferred and seasonal Functional Tests; verify correction of deficiencies.

B. On-Site Review: 10 months after Substantial Completion conduct on-site review with Owner 's staff.

1. Review the current facility operation and condition of outstanding issues related to the original and seasonal commissioning.
2. Interview staff to identify problems or concerns they have operating the facility as originally intended.
3. Make suggestions for improvements and for recording these changes in the O&M manuals.
4. Identify areas of concern that are still under warranty or are the responsibility of the original construction contractor.
5. Assist facility staff in developing reports, documents and requests for services to remedy outstanding problems.

END OF SECTION

SECTION 02080 – ASBESTOS REMOVAL

I SCOPE OF WORK: Asbestos Abatement

Base Bid: The Base Bid shall include the total cost of all asbestos abatement work described. This work shall be performed in accordance with this Section, the plans, all other bid documents, and all federal and state regulations.

A. PGCPS requires all Asbestos Abatement to be performed by a PGCPS Approved Vendor. Please see the attached list for all PGCPS Approved vendors.
B. The contractor will provide all labor, materials, equipment, supervision, testing, permits and all other incidentals required to remove the asbestos containing materials (ACM) listed within these specifications from the areas indicated on the drawings and as described as follows:

1. The contractor shall, completely remove all asbestos containing mastic/caulking associated with wallboards, cement sinks, pipe insulation, duct insulation, floor tile, windows, and mastic in the areas indicted in the drawings.
2. Completely remove all asbestos containing acoustical ceiling tile. Contractor will replace all abated acoustical ceiling tile.
3. Remove all other ACM material encountered and or exposed during project work or involving connection to existing concealed building utilities.
4. The contractor shall, completely remove all asbest

C. The Abatement Contractor shall provide the complete isolation of the work area(s) as needed, and for the total cleaning and decontamination of the area(s) such that no airborne or residual asbestos remains in accordance with the applicable regulatory provisions. The contractor shall be responsible for the proper removal, storage, transportation and disposal of asbestos waste. No waste or debris will be placed in any BOARD owned dumpster or refuse container.

D. The Abatement Contractor can use existing electrical receptacles to operate their equipment. Any electrical work required by the contractor (moving light fixtures, installing "pigtails" for equipment, etc.) must be completed by a contractor, licensed to perform electrical work in Prince Geo**r**ges County, Maryland. Prices for performing such work shall be incorporated in the total job cost submitted.

E. The BOARD will contract a BOARD approved independent air monitoring company to conduct daily air sampling, final visual inspection and subsequent clearance air and bulk sampling as described in Article X of this document.

F. The contractor will retain primary responsibility for all means, methods, sequencing and coordination during the asbestos abatement phase. Responsibility for the preparation, accuracy, and execution of any drawings or work plans remains with the Contractor. The contractor shall communicate with the general contractor in order to secure access to power, water, telephone and other utilities as part of his bid.

G. This document addresses only the ACM that is associated with the actual work areas. This serves as notice that some materials in other areas within the facility, also has been identified as ACM. It is the General Contractor's responsibility to review the Asbestos Management Plan for each School and familiarize his employees, inclusive of all Subcontractors, that ACM is present and the possible locations that it may be encountered. Any and all work that involves handling of ACM must be conducted by the asbestos contractor, approved by the BOARD.

H. The cost of any planned or un-planned clean-up activity, inclusive of all school system personnel salaries, required relative to ACM being disturbed by abatement, demolition or construction activities, shall be borne by the Asbestos Contractor.

II REGULATIONS:

A. All work must comply with all applicable Federal, State and County regulations. Work performed in this building falls within the regulatory authority of the Asbestos Hazard Emergency Response Act (AHERA). All workers and supervisors are required to be AHERA certified.

B. All employees performing work on this project must be accredited as required by the Federal AHERA regulations and certified to remove asbestos under the Maryland COMAR Regulations. Appropriate AHERA accreditation must be held by all workers, supervisors and project designers.

C. The successful bidder shall ensure that an Abatement Supervisor (as described in the AHERA Regulations) is on-site at all times during any asbestos removal activity that is conducted during this project. The Supervisor shall be able to present accreditation documents for all workers.

D. All work must comply with the following Federal and State regulations which govern asbestos abatement work or hauling and disposal of asbestos waste materials including but not limited to the following:

1. U. S. Environmental Protection Agency (EPA) including but not limited to:
   - Asbestos Abatement Projects Rule
     CFR Part 762
     TS 62044, FRL 2843-9
     Federal Register, Vol 50 No 134, July 12,1985
     8530-28540
   - Regulation for Asbestos
     Title 40, Part 61, Subpart A of the
     Code of Federal Regulations
   - National Emission Standard for Asbestos
     Title 40, Part 61, Subpart M (Revised Subpart B)
     of the Code of Federal Regulations

2. U.S. Department of Labor, Occupational Safety and Health Administration, (OSHA), including but not limited to:
   - Occupational Exposure to Asbestos, Tremolite,
     Anthophyllite, and Actinolite; Final Rules
     Title 29, Part 1910, Section 1001 and
     Part 1926, Section 1101 of the Code of Federal Regulations
   - Respiratory Protection
     Title 29, Part 1910, Section 134 of the Code of Federal Regulations
   - Construction Industry Asbestos Standard
     Title 29, Part 1926, of the Code of Federal Regulations
     Construction Industry Lead Standard
     Title 29, Part 1926, Section 62, of the Code of Federal Regulations
   - Access to Employee Exposure and Medical Records
     Title 29, Part 1910, Section 2 of the Code of Federal Regulations
   - Hazard Communication
     Title 29, Part 1910, Section 1200 of the Code of Federal Regulations
   - Specifications for Accident Prevention Signs and Tags
     Title 29, Part 1910, Section 145 of the Code of Federal Regulations
3. State of Maryland
   - Control of Asbestos Act, Maryland Code, COMAR Title 26
     Subtitle 11, Chapter 21

- Asbestos Accreditation of Individuals, and Approval of Training Courses, Maryland Code, COMAR Title 26, Subtitle 11, Chapter 23

III SITE VISIT:

A. Bidders should visit the site to verify existing conditions and establish the amount of ACM to be removed. Arrangements for a site visit must be made through the BOARD'S Environmental Office at (301) 952-6539**. NO UNAUTHORIZED VISITS WILL BE PERMITTED**.

B. A schematic representation, which indicates the actual work areas, is included for informational purposes, only. The materials listed in the "Scope of Work" portion of this document, are to be removed completely, unless otherwise documented in writing by the BOARD. The BOARD will not accept sample analysis that the contractor submits relevant to a specific material that is not ACM.

IV SUBCONTRACTORS:

A. Full documentation of the firm that will conduct the asbestos work, including certifications and a signed statement affirming they visited the building, must be approved within two(2) business days after the apparent low bidder is notified. This shall include copies of their Maryland License accreditation(s), and references from at least five previous jobs. No contractor substitutions will be permitted, without the BOARD'S consent, after the BOARD reviews and verifies the provided information.

B. The BOARD can reject an Asbestos contractor, if they have demonstrated poor or unsafe performance or poor quality of work from past projects. Any additional costs incurred by the subcontractor or a general contractor, as a result of this action being taken, will not be the responsibility of the BOARD. Asbestos contractors must be pre-approve, with the BOARD's Environmental Office, at least one week prior to the bid due date for this project.

C. In a case where an asbestos contractor has violated any terms or condition of his contract, the BOARD reserves the right to obtain another reputable abatement contractor to complete the remaining work. All associated costs relative to that work shall be borne by the original abatement contractor.

V ASBESTOS REMOVAL PLANS:

A. As soon as possible but not later than 14 calendar days after receipt of a contract award, the successful bidder shall submit a detailed removal plan, for each facility, including shop drawings, prepared and signed by an accredited AHERA Project Designer, for the Board's approval. The drawings shall detail the following items for each work section, as required:

1. Work areas
2. Work entrance and exit points
3. Shower and clean room locations
4. Locations and quantities of negative pressure ventilation equipment
5. Storage locations for supplies and equipment
6. Storage locations for removed materials prior to such materials being transported off site
7. Cleanup and waste disposal plans
8. The locations of any demolition activity the contractor may undertake in order to gain access to remove any ACM
9. Work schedule
10. Number of workers and copies of their qualifications

VI NOTIFICATION TO REGULATORY AUTHORITIES:

The contractor is responsible for making required notification to the Maryland Air Management Administration, the Environmental Protection Agency and any other regulatory authorities with jurisdiction. Copies of such notification must be provided to the BOARD before work can begin.

A. NOTICES: ENVIRONMENTAL PROTECTION AGENCY

Send Written Notification as required by USEPA National Emission Standards for Hazardous Air Pollutants (NESHAPS) Asbestos Regulations (40CFR 61, Subpart M) to the regional Asbestos NESHAPS Contact at least 10 days prior to beginning any work on asbestos-containing materials. Send notification to the following address:

REGION 3:
USEPA, Region III
1650 Arch Street
Philadelphia, Pennsylvania 19103-2029

1. Notification must be sent to EPA for all demolitions and for renovations involving 160 square feet or 260 linear feet or more.

2. Notification: Include the following information in the notification sent to the NESHAPS Contact:
   - Name and address of owner or operator.
   - Description of the facility being demolished or renovated, including the size, age, and prior use of the facility.
   - Estimate of the approximate amount of friable asbestos material present in the facility in terms of linear feet of pipe, and surface area on other facility components. For facilities in which the amount of friable asbestos materials less than 80 linear meters (260 linear feet) on pipes and less than 15 square meters (160 square feet) on other facility components, explain techniques of estimation.
   - Location of the facility being demolished or renovated.
   - Scheduled starting and completion dates of demolition or renovation.
   - Nature of planned demolition or renovation and method(s) to be used.
   - Procedures to be used to comply with the requirements of USEPA National Emission Standards for Hazardous Air Pollutants (NESHAPS) Asbestos Regulations (40 CFR 61 Subpart M). Final Rule.
   - Name and location of the waste disposal site where the friable asbestos waste material will be deposited.
   - For facilities being demolished under an order of a State or local governmental agency, issued because the facility is structurally unsound and in danger of imminent collapse, the name, title, and authority of the State or local governmental representative who has ordered the demolition.

B. STATE AGENCIES:

Send written Notification as required by local regulations prior to beginning any work on asbestos-containing materials to:

Asbestos Licensing/Enforcement Division
MD Department of Environment (MDE)
1800 Washington Boulevard
Baltimore, Maryland 21230

1. Notification must be postmarked 10 working days prior to commencement of work.)

C. LICENSES:

1. Licenses: Maintain current licenses as required by applicable state or local jurisdictions for the removal, transporting, disposal or other regulated activity relative to the work of this contract.
2. Posting and Filing of Regulations: Maintain two (2) copies of applicable federal, state and local regulations above. Post one copy of each at the job site. Keep on file in contractor's office one copy of each.

Copies of all notification will be provided to the BOARD before work can begin.

VII ALTERNATIVE PROCEDURES:

A. Procedures described in the specifications will be used at all times. If the specified procedures cannot be utilized, the contractor shall provide a written statement to the BOARD'S Environmental Office describing the problems encountered and recommended alternatives. Any alternative procedures must be approved by the BOARD and regulatory authorities before implementation. The BOARD reserves the right to reject any variances or alternative methods not found to be acceptable to the BOARD.

B.

VIII MONITORING WORK PROGRESS:

A. The BOARD's Environmental Office, Safety Office and/or contracted industrial hygienist will monitor the progress of work. This person(s) shall have the authority to make work-in progress inspections at any time and to stop work if, in their opinion, an immediate health threat exists to the public or the contractor's employees due to improper work methods or noncompliance with the specifications or regulations.

B. In situations where job site performance is unsatisfactory but does not present an immediate health threat to the public or workers, a written warning will be given to the contractor. A deadline will be given to correct the referenced situation. Failure to comply with said written orders could be considered grounds for shutting down a job until said condition has been remedied to the satisfaction of the BOARD.

C. The BOARD'S Environmental Office and/or the contracted industrial hygiene consultant will have final authority over questions of interpretation of regulations and specifications. Whenever a conflict occurs, the most stringent requirement shall be followed.

IX PERMISSION TO BEGIN WORK:

A. Prior to asbestos abatement activities (including preparatory work such as containment system fabrication), a pre-job meeting shall be scheduled at which time the contractor shall submit proof satisfactory to the BOARD that all required permits and arrangements for transportation and disposal of waste materials have been made. The Contractor shall also provide a list of all employees who will be working on the project along with submitting AHERA. and Maryland training accreditation for these workers. At the pre-job meeting, the Contractor and the BOARD'S Environmental Office representative will review the specifications and asbestos removal plans. The BOARD'S Environmental Office will respond verbally to any questions by the Contractor. The BOARD will document all verbal authorization via written memoranda.

B. The contractor shall not begin any site work, either actual abatement or preparatory work until he has received verbal permission from the Environmental Office. The BOARD will document all verbal authorizations via written memoranda.

C. After completing preparatory activities for each work area, the contractor must arrange for a site inspection by the BOARD's Environmental Office before authorization to begin actual asbestos removal. During this inspection the contractor shall demonstrate (where applicable) that the containment system, mini enclosures, work entrance way, etc. are properly sealed and all meet the specifications. Additionally, he will be required to prove proper operation of any required negative pressure ventilation equipment. This inspection process shall be repeated as each new work area is established. No asbestos removal can begin until the satisfactory completion of such an inspection.

X. AIR SAMPLING BY THE CONTRACTOR AND/OR CONTRACTED INDUSTRIAL HYGIENE CONSULTANT:

A. **PERSONAL SAMPLING -** The contractor will be responsible for conducting and paying for "personal" air samples during the course of work. Personal air monitoring will be conducted for the maintenance of Time Weighted Average (TWA) fiber counts for types of respiratory protection required. This includes

Short Term Excursion (STEL) Level samples of 30 minutes. These samples can be collected by the contracted industrial hygiene consultant.

B. **BACKGROUND SAMPLING** - The BOARD's hygiene consultant will conduct background air samples for each containment area to establish background fiber levels prior to work commencing along with all daily air tests and personal air sampling. These samples can be collected by the contracted industrial hygiene consultant. The hygiene consultant shall coordinate with the BOARD'S Environmental Office the exact location where these samples will be taken and the time of day when daily samples will be taken. The analysis laboratory shall use methods approved by the Environmental Protection Agency. The samples will be archived in case the BOARD has a need to retrieve them.

C. Results of the air test taken within the work area prior to commencement of work will determine the need for respirator use during construction of containment systems. If these air tests show fiber levels higher than the permissible exposure limit, respirators will be worn during containment fabrication; otherwise respirator use during this phase is optional. "Personal" samples will be taken during containment construction since airborne fiber levels may increase during this work. If the results of the samples taken during this activity show levels higher than the permissible exposure limit, respirators and other protective equipment shall immediately be utilized for the remainder of all containment work.

D. **OUTSIDE AMBIENT AIR SAMPLES**

1. Air Samples will be collected daily outside but nearby the work area to detect faults in the work area isolation such as:
   - Contamination of the building outside of the work area with airborne asbestos fibers,
   - Failure of filtration or rupture in the negative pressure system,
   - Contamination of the building exterior with airborne asbestos fibers
2. These samples will be collected by the contracted industrial hygiene consultant. If airborne fiber levels in such samples exceed air fiber levels revealed in the "before work" (background) ambient samples or 0.1 fibers per cubic centimeter (fiber/cc), the contractor shall immediately stop work and notify the BOARD's Environmental Office. If this air sample was taken inside the building and outside of critical barriers around the work area, the contractor shall immediately inspect the critical barriers to ensure their integrity. The affected area shall be isolated from the balance of the building and evacuated if the area is occupied. Critical barriers shall be erected at the next existing structural isolation of the involved space (e.g.

wall, pipe, and floor). The project will be reviewed jointly by the contractor and the BOARD's Environmental Office to determine and correct the cause of the high air sample results. The contractor will clean the outside area and retest before work can be restarted.

E. **INSIDE AIR SAMPLES**

The contractor shall maintain an average airborne count in the work area of less than 0.2 fibers/cc. If the fiber counts rise above this figure for any sample taken, the contractor shall revise work procedures (i.e., additional use of amended water or increased negative pressure to lower fiber counts). If these methods do not effectively reduce the average airborne level then the contractor is to stop all work, leave engineering controls/negative air system in operation and notify the BOARD'S Environmental Office. Do not recommence work until authorized by the BOARD'S Environmental Office.

F. **ANALYTICAL METHODS:**

The NIOSH 7400 method of phase contrast microscopy will be used by the laboratory in analyzing filters used to collect air samples before and during abatement. Transmission Electron Microscopy shall be performed on final air sampling.

G. **SAMPLE VOLUMES:**

General: The number and volume of air samples taken by the Industrial Hygiene Consultant will be in accordance with the following schedule. Sample volumes given may vary depending upon the analytical method used.

H. **SCHEDULE OF AIR SAMPLES**: Before Start of Work: **Base Line**: Pre-Tests are taken to establish background levels of airborne fibers to determine respiratory protection required during preparation of the work area. If any of the Pre-Tests or the air samples taken during preparation are $\geq$0.01 fibers per cubic centimeter (f/cc) the workers shall wear respiratory protection. The type of respirator worn shall be determined by the standards set in OSHA Regulations 29CFR 1910.1001. The Industrial Hygiene Consultant will secure the following Air Samples:

SCHEDULE BASE LINE : Before Start of Work (Pre-Test).

Project Size	IWA	OWA	Blank	Analysis
≥5,000 SF	**5**	**5**	**2**	**PCM**
≥500 LF	**5**	**5**	**2**	**PCM**
≤5,000 SF	**5**	**5**	**2**	**PCM**
≤ 500 LF	**5**	**5**	**2**	**PCM**

ACM - Asbestos Containing Material **TEM** - Transmission Electron Microscopy
IWA - Inside Work Area
OWA - Outside Work Area
PCM - Phase Contrast Microscopy, NIOSH 7400 Method

SCHEDULE OF DAILY AIR SAMPLES : During Work

Project Size	IWA	OWA	Blank	Analysis
≥5,000 SF	**4**	**4**	**2**	**PCM**
≥500 LF	**4**	**4**	**2**	**PCM**
≤5,000 SF	**2**	**2**	**2**	**PCM**
≤ 500 LF	**2**	**2**	**2**	**PCM**

ACM - Asbestos Containing Material
IWA - Inside Work Area
OWA - Outside Work Area
PCM - Phase Contrast Microscopy, NIOSH 7400 Method
TEM - Transmission Electron Microscopy

XI **LABORATORY TESTING:**

A. The services of a testing laboratory will be employed by the Industrial Hygiene Consultant to perform laboratory analysis of the air samples. A microscope and technician will be setup at the job site (where project conditions permit), so that verbal reports on air samples can be obtained immediately.

B. The services of a testing laboratory will be employed by the Contractor to perform laboratory analysis of the OSHA air samples.

C. A complete record, certified by the testing laboratory, of all air monitoring tests and results will be furnished to the BOARD'S Environmental Office.

D. Verbal Reports: of all air monitoring tests will be communicated at the job site by the Industrial Hygiene Consultant, to the Contractor on a daily basis. Air sample results shall be posted in a central location on a daily basis.

E. Exposure monitoring of the work place for employees safety will be performed in accordance with Occupational Safety and Health Administration (OSHA) Asbestos Regulations for the Construction Industry (20 CFR 1926.1101).

F. Verbal results for all air samples shall be supplied to the BOARD within 24 hours, with written results maintained at the work site.

XII. DAMAGE TO THE BUILDING:

A. Care shall be taken by the contractor not to damage finishes, wiring, piping or other building systems or equipment. Any such damage shall be corrected per all relative codes and regulations at the contractor's expense.

XIII. ASBESTOS WORKER ACCESS:

A. All work entry is to be made through the nearest exterior door. This location will be given to the Contractor at the pre-construction meeting.

B. Limited parking is available in the school's parking lot. Vehicles must be parked in parking spaces. No parking will be permitted in fire lanes, loading zones, reserved parking spaces, grass, etc. A clear lane must be kept at all times for emergency vehicles, deliveries, and other school traffic.

C. The Contractor shall supply protective equipment, including a respirator and disposable suit to the school Custodian in the event he needs to enter the work area during asbestos removal.
D. Smoking is not permitted in this facility or on the property.

XIV. ASBESTOS WORK SCHEDULE:

A. Preliminary asbestos removal work cannot begin until the BOARD issues a written notice to the General Contractor. All asbestos abatement activities, relevant to the ACM found in the actual work area, must be completed within Fourteen (14) calendar days.

B. The Contractor is responsible for paying the wages of the school system personnel if the work is conducted during times when the facility is not staffed.

C. The general Contractor shall limit any other work activities that may inhibit the progress of the asbestos removal work.

D. The BOARD reserves the right to require that all activities involving asbestos work, be conducted during the hours when the school is normally occupied. The BOARD will pay no additional cost, if this stipulation is invoked.

XV. DISPOSAL OF ASBESTOS:

A. The contractor is free to utilize any landfill approved to accept friable asbestos waste. The contractor shall submit with their bid response, the name and address of the facility he proposes to use.
B. Transportation of asbestos waste must comply with all Federal, State and County Regulations.

C. Copies of all dump receipts; transportation manifests and other documentation of legal disposal shall be supplied to the BOARD'S Environmental Office as disposal occurs. No payment will be made without such documentation of proper disposal.

D. All bagged asbestos debris must be removed from the work area on a daily basis.

E. Bagged debris may be stored on the premises while awaiting transport to the dumpsite. Storage shall be within a locked, closed container, such as a dumpster

equipped with a lid or top. This container shall be located as directed by the BOARD'S Environmental Office.

XVI. EQUIPMENT:

A. The contractor will have, as needed, a sufficient quantity of scaffolds, ladders, lifts and hand tools. Under no circumstances will the contractor be allowed to use equipment owned by the BOARD.

XVII ASBESTOS CONTAINING MATERIAL (ACM) REMOVAL PROCEDURES

A. Asbestos Containing material removal shall be conducted in a regulated enclosure, including hygiene facilities, with negative pressure ventilation units equipped to provide a minimum one work place air change every fifteen (15) minutes and a negative pressure differential inside the work area equal to, or greater than .02 inches of water column.

B. The product name and Material Safety Data Sheet (MSDS) for all materials must be supplied at the pre-job meeting for the BOARD'S Environmental Office approval. No material change will be permitted without the BOARD'S Environmental Office approval.

C. Removal is not complete until all surfaces are smooth to the extent that a sample cannot be obtained. Patched areas will have to be cleaned such that a sample cannot be obtained by scratching away the material.

D. All surfaces (walls, pipes, floors, etc.) shall be free of any residue. The contractor shall take all precautions to limit the spread of odors outside the area of work.

E. The BOARD reserves the right to review and reject unsuitable work practices at its sole discretion.

F. Materials, not identified for removal in these specifications that are damaged by the contractor, will be repaired and/or replaced and the associated cost deducted from the contractor's retention.

G. Other portions of this facility may be occupied and/or used while the asbestos work is being done. The contractor shall take measures to keep the construction related dust to a minimum. The contractor shall also take measures to prevent his activities from creating a disruption to building and instructional activities. The

BOARD can require the contractor to work evenings if their operation causes disruptions to the daytime building and instructional activities.

XVIII. CLEARANCE TESTING

A. Initial final clearance air testing will be conducted by the company engaged by the BOARD. In the event the initial test shows the average concentration of asbestos of five (5) air samples collected within the containment area are greater than 70 structures per square millimeter 70s/mm^2, the contractor is responsible for all costs associated with the second and subsequent final air clearance tests in the affected "work area" from the contractor's final retention. See item XIX.G below for additional information.

B. Each work area will be treated separately for final clearance air testing. The testing will take place as soon as feasible once abatement work is finished.

C. The contractor shall notify the BOARD's representative at least 48 hours in advance of requesting a final air sampling, in each area. Following the satisfactory completion of a visual inspection by BOARD Personnel, the BOARD will arrange for an air-monitoring professional to aggressively sample the air for airborne asbestos fiber concentrations.

D. Final Clearance Sampling-Transmission Electron Analysis (TEM) shall be used to analyze all final clearance air samples per 40 CFR Part, Appendix A to Subpart E.

1. All clearance Air Samples will be taken using aggressive sampling techniques as follows:
    - Sampling shall not begin until 1 hour after the area is dry with no visible water or condensation remaining (a minimum of 4 hours following encapsulation).
    - Samplers shall be placed at random around the work area. If the work area contains the number of rooms equivalent to the number of required samples based on floor area, a sampler shall be placed in each room. When the number of rooms is greater than the required number of samples a representative sample of rooms shall be selected.
    - The representative samplers placed outside the work area but within the building shall be located to avoid any air that might escape through the isolation barriers and shall be approximately 50 feet from the entrance to the work area, and 25 feet from the isolation barriers.

- In each homogeneous work area after completion of all cleaning work, a minimum of 13 samples will be taken and analyzed as follows:

FINAL CLEARANCE SAMPLING SCHEDULE :

Location Sampled	Number of Samples	Filter Media	Detection Limits Structures/mm^2	Minimum Volume	Rate (LPM)
Work Area	**5**	**MCE**	**70**	**1200**	**6-9.9**
Outside Work Area	**5**	**MCE**	**70**	**1200**	**6-9.9**
Field Blank	**2**	**MCE**	**70**	**1200**	**6-9.9**
Sealed Blank	**1**	**MCE**	**70**	**1200**	**6-9.9**

Release Criteria: Decontamination of the work site is complete if the concentration of all samples is (less than) <70 s/mm^2.

E. Final Clearance Sampling for the soil in each work area shall be conducted by Polarized Light Microscopy (PLM) bulk sampling. Nine (9) bulk sampling shall be conducted in a statically random manner of each work area. Each bulk sample shall be less than one percentage (< 1%).

E. The BOARD reserves the right to require that the work area be re-cleaned, at no additional cost, even if the average concentration of asbestos of five air samples collected in the containment area is less than 70s/mm^2, and the result of any one (1) sample collected within the work area yields a result of 80s/mm^2 or above.

F. The enclosure shall remain intact until final clearance has been obtained and no additional cleaning as specified in Item XIX.G is required. Verbal results will be given to the contractor as soon as the BOARD is given the results; this will be followed up in writing when the results become available.

XIX. ASBESTOS SUBMITTALS:

A. The Contractor shall, submit within two (2) working days, after the apparent low bidder is notified, a qualification statement. This statement will include:

1. Owners of the asbestos removal firm, addresses and telephone numbers.
2. A list of five (5) comparable previous asbestos jobs. The list will include names, addresses, telephone numbers and dates of the jobs
3. Asbestos removal firm's Maryland license to remove or encapsulate asbestos.
4. A statement that the contractor has ample equipment and personnel to perform the work within the time specified
5. Copies of valid Maryland certificates of all asbestos workers and supervisors who will be performing abatement activities
6. The name, addressed phone number of the disposal facility.
7. The name, addresses and phone number of the independent laboratory that the contractor will employ to analyze air samples

SECTION 02 4100
DEMOLITION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Building demolition Removal of Hazardous material or toxic substances section is adopted by PGCPS and has been added as a separate specification section .

B. Selective demolition of built site elements.

C. Selective demolition of building elements for alteration purposes.

D. Abandonment and removal of existing utilities and utility structures.

1.02 RELATED REQUIREMENTS

A. Section 00 3100 - Available Project Information: Existing building survey conducted by Owner; information about known hazardous materials.

B. Section 01 1000 - Summary: Limitations on Contractor's use of site and premises.

C. Section 01 1000 - Summary: Sequencing and staging requirements.

D. Section 01 1000 - Summary: Description of items to be removed by Owner.

E. Section 01 1000 - Summary: Description of items to be salvaged or removed for re-use by Contractor.

F. Section 01 5000 - Temporary Facilities and Controls: Site fences, security, protective barriers, and waste removal.

G. Section 01 5713 - Temporary Erosion and Sediment Control.

H. Section 01 6000 - Product Requirements: Handling and storage of items removed for salvage and relocation.

I. Section 01 7000 - Execution and Closeout Requirements: Project conditions; protection of bench marks, survey control points, and existing construction to remain; reinstallation of removed products; temporary bracing and shoring.

J. Section 01 7419 - Construction Waste Management and Disposal: Limitations on disposal of removed materials; requirements for recycling.

K. Section 02 6500 - Underground Storage Tank Removal.

L. Section 02 8400 - Polychlorinate Biphenyl (PCB) Remediation: Removal of equipment containing substances regulated under the Federal Toxic Substances Control Act (TSCA), including but not limited to PCB- and mercury-containing equipment.

M. Section 07 0150.19 - Preparation for Re-Roofing: Removal of existing roofing, roof insulation, flashing, trim, and accessories.

N. Section 31 1000 - Site Clearing: Vegetation and existing debris removal.

O. Section 31 2200 - Grading: Topsoil removal.

P. Section 31 2200 - Grading: Fill material for filling holes, pits, and excavations generated as a result of removal operations.

Q. Section 31 2323 - Fill: Filling holes, pits, and excavations generated as a result of removal operations.

R. Section 32 9300 - Plants: Relocation of existing trees, shrubs, and other plants.

S. Section 32 9300 - Plants: Pruning of existing trees to remain.

1.03 REFERENCE STANDARDS

A. 29 CFR 1926 - U.S. Occupational Safety and Health Standards current edition.

B. NFPA 241 - Standard for Safeguarding Construction, Alteration, and Demolition Operations 2013.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Site Plan: Showing:

1. Vegetation to be protected.
2. Areas for temporary construction and field offices.
3. Areas for temporary and permanent placement of removed materials.

C. Demolition Plan: Submit demolition plan as specified by OSHA and local authorities.

1. Indicate extent of demolition, removal sequence, bracing and shoring, and location and construction of barricades and fences.
2. Identify demolition firm and submit qualifications.
3. Include a summary of safety procedures.

D. Project Record Documents: Accurately record actual locations of capped and active utilities and subsurface construction.

1.05 QUALITY ASSURANCE

A. Demolition Firm Qualifications: Company specializing in the type of work required.

1. Minimum of five years of documented experience.

PART 2 PRODUCTS

2.01 MATERIALS

A. Fill Material: As specified in Section 31 2200 - Grading.

PART 3 EXECUTION

3.01 SCOPE

A. Remove portions of existing buildings in the following sequence:

1. utilities, underground tanks and crawlspaces.
2. foundation walls and footings.
3. slab & structure.

B. Remove paving and curbs as required to accomplish new work.

C. Remove all other paving and curbs within site boundaries.

D. Within area of new construction, remove foundation walls and footings to a minimum of 2 feet (600 mm) below finished grade.

E. Outside area of new construction, remove foundation walls and footings to a minimum of 2 feet (600 mm) below finished grade.

F. Remove concrete slabs on grade as indicated on drawings.

G. Remove underground tanks that contain or once contained petroleum products; fill and bury other types of tanks as indicated on drawings.

H. Remove manholes and manhole covers, curb inlets and catch basins as indicated on drawings.

I. Remove fences and gates as indicated on drawings.

J. Removing items that require special care and coordination is the responsibility of the contractor. Coordinate with A/E team and Owner as required. Scheduling removal is paramount to PGCPS Capital Programs.

K. Remove other items indicated, for salvage, relocation, recycling and fill.

3.02 GENERAL PROCEDURES AND PROJECT CONDITIONS

A. Comply with other requirements specified in Section 01 7000.

B. Comply with applicable codes and regulations for demolition operations and safety of adjacent structures and the public.

1. Obtain required permits.
2. Comply with applicable requirements of NFPA 241.
3. Use of explosives is not permitted.
4. Take precautions to prevent catastrophic or uncontrolled collapse of structures to be removed; do not allow worker or public access within range of potential collapse of unstable structures.
5. Provide, erect, and maintain temporary barriers and security devices.
6. Use physical barriers to prevent access to areas that could be hazardous to workers or the public.
7. Conduct operations to minimize effects on and interference with adjacent structures and occupants.
8. Do not close or obstruct roadways or sidewalks without permit.
9. Conduct operations to minimize obstruction of public and private entrances and exits; do not obstruct required exits at any time; protect persons using entrances and exits from removal operations.
10. Obtain written permission from owners of adjacent properties when demolition equipment will traverse, infringe upon or limit access to their property.

C. Do not begin removal until receipt of notification to proceed from Owner .

D. Do not begin removal until built elements to be salvaged or relocated have been removed.

E. Do not begin removal until vegetation to be relocated has been removed and specified measures have been taken to protect vegetation to remain.

F. Protect existing structures and other elements that are not to be removed.

1. Provide bracing and shoring.
2. Prevent movement or settlement of adjacent structures.
3. Stop work immediately if adjacent structures appear to be in danger.

G. Minimize production of dust due to demolition operations; do not use water if that will result in ice, flooding, sedimentation of public waterways or storm sewers, or other pollution.

H. If hazardous materials are discovered during removal operations, stop work and notify Architect and Owner ; hazardous materials include regulated asbestos containing materials, lead, PCB's, and mercury.

I. Perform demolition in a manner that maximizes salvage and recycling of materials.

1. Comply with requirements of Section 01 7419 - Waste Management.
2. Dismantle existing construction and separate materials.

3. Set aside reusable, recyclable, and salvageable materials; store and deliver to collection point or point of reuse.

J. Partial Removal of Paving and Curbs: Neatly saw cut at right angle to surface.

K. Underground Storage Tanks: Remove and dispose of as specified in Section 02 6500.

3.03 EXISTING UTILITIES

A. Coordinate work with utility companies; notify before starting work and comply with their requirements; obtain required permits.

B. Protect existing utilities to remain from damage.

C. Do not disrupt public utilities without permit from authority having jurisdiction.

D. Do not close, shut off, or disrupt existing life safety systems that are in use without at least 7 days prior written notification to Owner .

E. Do not close, shut off, or disrupt existing utility branches or take-offs that are in use without at least 3 days prior written notification to Owner .

F. Locate and mark utilities to remain; mark using highly visible tags or flags, with identification of utility type; protect from damage due to subsequent construction, using substantial barricades if necessary.

G. Remove exposed piping, valves, meters, equipment, supports, and foundations of disconnected and abandoned utilities.

H. Prepare building demolition areas by disconnecting and capping utilities outside the demolition zone; identify and mark utilities to be subsequently reconnected, in same manner as other utilities to remain.

3.04 SELECTIVE DEMOLITION FOR ALTERATIONS

A. Drawings showing existing construction and utilities are based on casual field observation and existing record documents only.

1. Verify that construction and utility arrangements are as indicated.

2. Report discrepancies to Architect before disturbing existing installation.

3. Beginning of demolition work constitutes acceptance of existing conditions that would be apparent upon examination prior to starting demolition.

B. Separate areas in which demolition is being conducted from other areas that are still occupied.

1. Provide, erect, and maintain temporary dustproof partitions of construction specified in Section 01 5000 in locations indicated on drawings.

2. Provide sound retardant partitions of construction indicated on drawings in locations indicated on drawings.

C. Maintain weatherproof exterior building enclosure except for interruptions required for replacement or modifications; take care to prevent water and humidity damage.

D. Remove existing work as indicated and as required to accomplish new work.

1. Remove rotted wood, corroded metals, and deteriorated masonry and concrete; replace with new construction specified.

2. Remove items indicated on drawings.

E. Services (Including but not limited to HVAC, Plumbing, Fire Protection, Electrical and Telecommunications): Remove existing systems and equipment as indicated.

1. Maintain existing active systems that are to remain in operation; maintain access to equipment and operational components.
2. Where existing active systems serve occupied facilities but are to be replaced with new services, maintain existing systems in service until new systems are complete and ready for service.
3. Verify that abandoned services serve only abandoned facilities before removal.
4. Remove abandoned pipe, ducts, conduits, and equipment, including those above accessible ceilings; remove back to source of supply where possible, otherwise cap stub and tag with identification.

F. Protect existing work to remain.

1. Prevent movement of structure; provide shoring and bracing if necessary.
2. Perform cutting to accomplish removals neatly and as specified for cutting new work.
3. Repair adjacent construction and finishes damaged during removal work.
4. Patch as specified for patching new work.

3.05 DEBRIS AND WASTE REMOVAL

A. Remove debris, junk, and trash from site.

B. Remove from site all materials not to be reused on site; comply with requirements of Section 01 7419 - Waste Management.

C. Leave site in clean condition, ready for subsequent work.

D. Clean up spillage and wind-blown debris from public and private lands.

3.06 SALVAGE

A. Owner assumes no responsibility for loss or damage to materials or structures on site, salvage value of which Contractor may have reflected in his bid.

END OF SECTION

A. Right of first refusal: All existing items of construction, building materials and furnishings (doors, frames, hardware, windows, chalkboards, tackboards, kitchen, heating ventilation, air conditioning, plumbing and electrical equipment, etc.) located in renovated or altered areas of the project shall be carefully removed without damage and remain the property of the Owner unless indicated for re-use in the new work. Any equipment not desired to be retained by the Owner shall be removed from the site and legally disposed of by the Contractor.

SECTION 02 4113
SELECTIVE DEMOLITION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including General Conditions and Division 1 Specifications Sections, apply to the Work of this Section, with special attention to the following:

1. Section 01 1000 - Summary
2. Section 01 5000 - Temporary Facilities and Controls
3. Section 01 5100 - Temporary Utilities
4. Section 01 7610 - Temporary Protective Coverings
5. Section 01 7419 - Condruction Waste Management

1.02 RELATED WORK

A. Section 31 1000 - Site Clearing

1.03 REFERENCE STANDARDS

A. Occupational Safety and Health Standards for the Construction Industry (29 CFR Part 1926) as promulgated by OSHA.

1. Subpart D – Occupational Health and Environmental Controls, 1926.62- Lead.
2. Subpart T – Demolition.

B. 2011 Maryland Standards and Specifications for Soil Erosion and Sediment Control

C. Prince Georges County Design Manuals

1.04 WORK EXCLUDED

A. Information related to asbestos abatement/removal and materials and finishes containing asbestos is indicated on the Drawings, and in the school's Asbestos Containing Materials (ACM) Management Plan, available on site. Removal of asbestos containing materials shall be performed by a licensed asbestos abatement/removal contractor retained by the Owner, except as noted in 1.06 below

B. It shall be the responsibility of the Contractor to notify the Owner prior to initiating selective demolition in existing building areas where the presence of asbestos has been identified. Selective demolition shall not commence until asbestos- containing material has been removed.

C. The Contractor shall include a time allowance for notification and abatement/removal operations for identified ACM in his work schedule.

1. A minimum 20-day notification to the MDE and is required where removal and disturbance of more than 10 LF per 10 SF of ACM is required.

1.05 CONTRACTOR QUALIFICATIONS

A. The Contractor shall have personnel on site during performance of selective demolition who are trained to identify ACM and other hazardous material, and who are familiar with removal procedures for non asbestos containing hazardous materials (See 1.06 below). The Contractor shall provide evidence of certification for these personnel.

1.06 DESCRIPTION OF WORK

A. General:

1. Remove and legally dispose of all equipment and materials indicated on the drawings, including those items that contain regulated hazardous materials, including asbestos containing materials (ACM) as noted below. Regulated hazardous materials shall require specialized disposal in accordance with applicable regulations. The Contractor will coordinate the scheduling of the removal of all hazardous materials with the Owner and provide the Owner with documentation that the hazardous waste is disposed at an authorized waste disposal facility.
    a. Regulated hazardous materials include the following:
        1) Fluorescent lamps and PCB containing ballasts.
        2) Lead paint, putty and sealants in windows/frames.
        3) Metal primer on structural steel and steel windows.
        4) CFC type refrigerants such as R-12 (“Freon”).
        5) The Contractor must coordinate removal activities to allow the Owner to schedule the presence of a project monitor. Provide the Owner with documentation that the ACM waste generated is disposed at an authorized waste disposal facility.
        6) Wood utility poles treated with creosote.

B. Performance of Work
1. Construction of the proposed work will be performed while school is in use. The Contractor shall give full cooperation to the school administration and staff in scheduling and performing the work.
2. The Contractor shall provide, install and maintain safety and dust barriers as required by applicable health and safety regulations and as specified in Section 01520.
3. The Contractor shall schedule his work and deliveries so as not to interfere with the normal operation of the school, including morning arrivals and afternoon departures.
4. The Contractor shall give seventy-two hours advance written notice to Owner when work is to be performed that might endanger and inconvenience occupants.
5. The Contractor shall provide all erosion and sediment control devices as required by site inspector, owner, owner’s agent, architect or engineer.
6. The Contractor shall keep open, protect and maintain all existing fire exits and fire lanes during the entire course of construction.

C. Protection
1. Erect barriers, fences, guard rails, enclosures, chutes, and shoring to protect personnel, structures, and utilities remaining intact.

D. Maintaining Traffic
1. Minimize interference with normal use of roads, streets, driveways, sidewalks, and adjacent facilities.
2. Do not close or obstruct streets, sidewalks, alleys, or passageways without written permission from authorities having jurisdiction.
3. If required by governing authorities, provide alternate routes around closed or obstructed traffic ways.

1.07 DEFINITIONS

A. Chain of Custody: a system that tracks a product, its materials and components through two or more life cycle stages

PART 2 – PRODUCTS – NOT USED

A. Closed-loop Life Cycle: a product and/or constituent material(s) life-cycle where the product or constituent material(s) are reused, repurposed (reused for a different purpose), recycled, composted, or otherwise treated as a useful resource that minimizes waste and negative environmental impacts.

B. Custodian: a single person with primary responsibility for the care and custody of the product until primary possession of the product is transferred.

C. Deconstruction: Disassembly of buildings for the purpose of recovering materials.

D. Extended Producer Responsibility: a strategy designed to promote the integration of environmental costs associated with products throughout their life cycles into the market price of the products. Extended producer responsibility imposes accountability over the entire life cycle of products and packaging introduced on the market.

2.02 SUBMITTALS

A. A. Schedule of items and materials to be salvaged. Identify procedures for disassembly.

1. Coordinate with Solid Waste Management Plan. Identify materials to be recycled. Identify materials to be salvaged for reuse on site and off site.

B. Documentation of manufacturers' take-back and buy-back programs in support of a closed-loop life cycle:

1. Take-Back Agreements: Submit copy of each manufacturer's written commitment to reclaim product at product's end-of-life or when purchaser requests to return the product, whichever is earlier.

   a. Commitment shall specify that producer's reclamation shall be conducted in an environmentally responsible manner.

   b. Indicate whether manufacturer reclaims only their products or similar competitor products.

   c. Identify any parameters, limitations, and conditions that may apply.

2. Buy-Back Agreement: Submit copy of each manufacturer's written commitment to repurchase product at product's end-of-life or when purchaser requests to return the product, whichever is earlier.

   a. Commitment shall specify that producer's reclamation shall be conducted in an environmentally responsible manner.

   b. Commitment shall specify a financial value for repurchase of product. Value may be extended in one or more of the following: monetary exchange, credit towards future purchase, or other tangible consideration.

   c. Indicate whether manufacturer repurchases only their products or similar competitor products.

   d. Identify any parameters, limitations, and conditions that may apply

3. Chain-of-Custody: Submit chain-of-custody documentation to verify that products have been salvaged from project and satisfactorily transferred and accepted for reclamation by manufacturer. Indicate:

PART 3 - EXECUTION

   a. Description of product: Manufacturer name, product name and description.

   b. Quantity of product.

   c. Custodian Information - Sender:

      1) Contact information for sending custodian including name, title, organization, address, phone, and email.

2) Date and time product was sent.

3) Condition of product.

d. Custodian Information - Receiver:

1) Contact information for sending custodian including name, title, organization, address, phone, and email.

2) Date and time product was sent.

3) Condition of product.

3.02 QUALITY ASSURANCE

A. Handle waste materials as specified in Section 01 74 19 – Construction Waste Management.

3.03 INSPECTION

A. Verify that areas to be demolished are unoccupied and discontinued in use.

B. Verify that all utilities within the area to be demolished have been cut off and capped.

C. Do not commence work until conditions are acceptable to Architect and Owner.

3.04 PREPARATION

A. Remove items scheduled to be salvaged for Owner, and place in designated storage area. (See 3.05, Salvage).

3.05 DEMOLITION

A. Demolition shall be carried out with care so that portions of building that are to remain will be undamaged. Work on exterior of building shall be done with extreme care to prevent risk or harm to persons or property. Install temporary floors consisting of sisal kraft paper over existing floors that are to remain in areas of work. Do not allow debris to accumulate.

B. Coordinate demolition with work of other trades. Supervise and assist in removal and replacement of existing materials for installation of new mechanical and electrical items. Remove and replace or re-route mechanical, electrical installation as indicated on the drawings and specified or required for installation of new work or remodeling.

C. Walls

1. At areas where windows are removed, protect adjacent work which shall remain.

2. Where openings are cut in walls, such openings shall be cut with care to avoid damage to work that shall remain.

3. Infill masonry shall be toothed, with the exception of face brick which shall be flush vertically with adjoining existing work.

4. New work shall be carefully installed with materials that match existing, and shall conform to existing planes unless indicated otherwise.

D. Finishes

1. Existing ceiling, wall and floor finish or trim that is disturbed or destroyed by these operations shall be replaced to abut adjoining walls, floors, ceiling and new construction with material to match existing.

2. At locations where existing tile floors are disturbed by new construction, existing tile shall be removed to nearest tile joint that parallels new construction and shall be replaced.

E. Connecting work and new work in extension of existing work shall correspond in all respects with that to which it connects, or similar existing work, unless otherwise indicated or specified. Existing work shall be cut, drilled, altered or temporarily removed and replaced as necessary for performance of Contract.

F. No structural member shall be cut or altered without written authorization of Architect.

G. Work remaining in place that is damaged or defaced by work under this contract shall be restored to the original condition at the time of award of contract.

H. If removal of existing work exposes discolored, unfinished surfaces or work out of alignment, such surfaces shall be refinished or material replaced as necessary to make contiguous work uniform and harmonious.

3.06 DISPOSAL

A. Remove demolition debris daily.

B. Do not store or burn materials on site.

C. Transport demolition debris to off-site legal disposal facilities.

1. Hazardous materials such as fluorescent lamps and PCB-containing ballasts shall be disposed of at special collection centers offering specialized recycling and treatment procedures.

3.07 SALVAGE

A. Owner assumes no responsibility for loss or damage to materials or structures on site, salvage value of which Contractor may have reflected in his bid.

B. Right of first refusal: All existing items of construction, building materials and furnishings (doors, frames, hardware, windows, chalkboards, tackboards, kitchen, heating ventilation, air conditioning, plumbing and electrical equipment, etc.) located in renovated or altered areas of the project shall be carefully removed without damage and remain the property of the Owner unless indicated for re-use in the new work. Any equipment not desired to be retained by the Owner shall be removed from the site and legally disposed of by the Contractor.

3.08 DECONSTRUCTION

A. Inspect and evaluate for reuse existing structures on site.

B. Disassemble existing construction scheduled to be removed for recycling or reuse, including reclamation by manufacturers' take-back and buy-back programs.

C. Demolition will not be permitted [unless approved in writing by Owner].

D. Salvage materials for recycling and reuse as indicated on drawings.

1. Materials scheduled for reuse on site include: [xxxx].

2. Materials scheduled for reuse off site: As specified in Section 01 74 19 (01351) – Construction Waste Management.

3. Materials scheduled for recycling off site: As specified in Section 01 74 19 (01351) – Construction Waste Management.

4. Materials scheduled for manufacturers' take-back and buy-back programs: [xxxx]

END OF SECTION

SECTION 02 4300
STRUCTURE MOVING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Preparing structure for move.

B. Moving structure to new location.

C. Setting structure on new foundation.

D. Disconnecting and capping utilities at original location.

E. Connecting utilities at new location.

1.02 RELATED REQUIREMENTS

A. Section 02 4100 - Demolition: Removal of existing foundation after structure removal.

B. Section 31 2200 - Grading: Rough and finish grading.

C. Section 31 2316 - Excavation: Excavating at perimeter of existing foundations in preparation for move.

D. Section 31 2316 - Excavation: Excavating at new site.

E. Section 31 2323 - Fill: Fill materials.

F. Section 31 2323 - Fill: Backfilling against foundation walls at new site.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Arrange for route of move with authorities having jurisdiction and comply with its requirements for the move including, but not limited to, traffic control, police escorts, and relocation of overhead utility services in the route.

B. Coordination: Ensure utilities at new location are ready for connection.

C. Pre-Move Meeting: Convene one week before starting work of this section. Discuss the following:

1. Method of determining damage to existing structure and finishes before and after the move.
2. Identify existing damage to sidewalks, roads, and curbs.
3. Method and responsibility for repairs after moving.
4. Review the intended route for moving and dimensional clearances of obstructions.
5. Coordination with affected utility companies.
6. Coordination with authorities for permits, municipalities affected, and traffic control.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Project Record Documents: Record actual locations of new utilities and services, foundations .

1.05 QUALITY ASSURANCE

A. Mover Qualifications: Company specializing in relocating building structures with minimum of three years of documented experience.

B. Retain services of a Professional Structural Engineer experienced in this Work and licensed in Maryland for the following:

1. To investigate and provide documented report confirming load bearing capacity of roads over which structure will be moved.

2. To design structural supports for existing structure and associated Work. Design framing, reinforcement, and brace connections to transfer loads of structure to transport carrying timbers.

PART 2 PRODUCTS

2.01 EQUIPMENT AND MATERIALS

A. Transport, Equipment, and Supports: As required to achieve a successful structure move.

B. Fill Materials: As specified in Section 31 2323.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify availability and accessibility of transport routes. Verify route load limits to ensure conditions are adequate to support moving loads of structure.

B. Identify utility services and obstructions to be removed, relocated, or abandoned during progress of the Work.

C. Damage Determination:

1. Before the move, inspect existing structure thoroughly and notify Architect in writing of visible defects and factors that could affect safe movement of structure to final location.

2. Compile list of existing visible defects to building structure, finishes, accessories . This list will form the basis for determining required repair work after the move.

3. Photograph interior surfaces for record purposes.

3.02 PREPARATION

A. Prepare site, route of transport, and destination site.

B. Reinforce road as necessary to safely move the structure and to prevent damage.

C. Coordinate the work of municipal utility disconnection and reconnection with the work of this section.

D. Disconnect and cap existing site utility services. Remove overhead or exposed utility services to provide clear working and moving space around and below structure.

E. Remove building protrusions prior to move.

F. Secure supplementary framing and bracing to structure.

G. Secure operating, moving, or suspended items such as doors, windows, and light fixtures in a manner to prevent damage to items or to the structure during move.

H. Protect elements surrounding the structure from damage.

3.03 RAISE STRUCTURE

A. Cut structure free of foundation and portions of structure not being moved.

B. Reinforce, brace, and raise structure clear of foundation in manner to prevent damage.

C. Provide necessary framing, bracing, closures, supports, and blocking.

D. Secure structure to temporary supporting structural members to prevent shifting of structure during move.

3.04 MOVE STRUCTURE

A. Provide transport vehicles for moving structure to new site.

B. Move structure, control speed, and provide anchor and restraining devices to maintain the integrity of the structure.

C. During move, protect adjacent structures, and private and public property from damage.

3.05 REINSTALL STRUCTURE

A. Position and anchor structure over prepared foundation and lower onto new foundation.

B. Remove moving equipment.

C. Leave reinforcing, framing, and bracing intact until structure is fully attached and structure loads are supported by new foundation.

D. Reinstall building protrusions removed prior to move.

3.06 TOLERANCES

A. Maximum Variation from Level and Plumb After Reinstallation: 1/4 inch (6 mm).

B. Maximum Offset from True Position After Reinstallation: 1/4 inch (6 mm).

C. Adjust structure on foundation:

1. To permit doors to swing freely.
2. So that floor surfaces are level, walls are plumb.

3.07 DAMAGE REPAIR

A. Repair damage to structure not identified in writing prior to move.

B. Refinish repaired surfaces to match adjacent work.

C. Pay all third party claims for incidental or other damage.

3.08 CLEANING

A. Remove moving equipment and materials from original site, final site, and route of travel.

B. Remove road base constructed by this section, fill and return grades and contours to original condition and dimension.

END OF SECTION

SECTION 02 6500
UNDERGROUND STORAGE TANK REMOVAL

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Removal and disposal of underground storage tanks and connected piping.

B. Cleaning and vapor freeing of tanks.

C. Fuel removal.

D. Temporary containment of excavated soil.

E. Testing soils for contamination.

F. Disposal of contaminated soil.

G. Water disposal.

H. Providing reports required by regulatory agencies.

I. Backfilling.

1.02 RELATED REQUIREMENTS

A. Section 01 7000 - Execution and Closeout Requirements: Dewatering of excavations and water control.

B. Section 02 4100 - Demolition.

C. Section 31 2200 - Grading: Soil removal from surface of site.

D. Section 31 2323 - Fill: Fill materials, filling, and compacting.

1.03 PRICE AND PAYMENT PROCEDURES

A. See Section 01 2200 - Unit Prices, for general requirements applicable to unit prices related to removal and disposal of underground storage tanks.

B. Unit Prices: Assume for bidding purposes that concrete slabs, bituminous pavement, soil and water encountered during the removal of the underground tanks are contaminated with JP-5 fuel oil and shall be handled as specified herein.

1. Payment for removal from temporary stockpile and disposal of contaminated soil and furnishing clean soil shall be paid for at the contract unit price per cubic yard (cubic meter).

2. Bituminous pavement and concrete slabs shall be washed and disposed of as demolition debris. Wash water shall be collected and stored.

3. Disposal of contaminated water shall be paid for at the contract unit price per liter (gallon).

1.04 REFERENCE STANDARDS

A. API RP 1604 - Closure of Underground Petroleum Storage Tanks 1996 (R2010).

B. 29 CFR 1910 - Occupational Safety and Health Standards current edition.

C. 29 CFR 1910.38 - Emergency action plans current edition.

D. 29 CFR 1910.134 - Respiratory protection current edition.

E. 40 CFR 280 - Technical Standards and Corrective Action Requirements for Owners and Operators of Underground Storage Tanks current edition.

F. COE EM-385-1-1 - Safety and Health Requirements Manual 2008.

G. EPA SW-846 - Test Methods for Evaluating Solid Waste, Physical/Chemical Methods Current Edition.

H. EPA 600-4-790-20 - Methods for Chemical Analysis of Water and Wastes 1983.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Site Safety and Health Plan: Describe safety and health plan and procedures as related to underground tank removal and pipe removal, and as related to operations associated with petroleum contaminated soils and water.

C. Excavation and Material Handling Plan: Describe methods, means, equipment, sequence of operations and schedule to be employed in excavation, transport, handling, and stockpiling of soil during underground tank removal.

1. Submit to Architect fifteen days before beginning tank removal work.
2. Include a material handling plan that describes phases of dealing with the contaminated soil and water as it relates to the proposed tank and piping removal.
3. Include methods of excavating, a material handling plan for the contaminated material, soil testing requirements, safety precautions and requirements and water pumping and collection requirements.

D. Field Sampling and Laboratory Testing Plan: Describe field sampling methods and quality control procedures.

1. Identify laboratory and laboratory methods to be used for contamination testing.
2. Sample reports shall show sample identification for location, date, time, sample method, contamination level, name of individual sampler, identification of laboratory, and quality control procedures.

E. Tank and Piping Removal and Disposal Plan: Describe methods, means, sequence of operations, and schedule to be employed in the testing, pumping, cleaning, de-vaporizing, inspecting, removal, and disposal of underground storage tanks and piping.

F. Spill and Discharge Control Plan: Describe procedures and plan related to potential spills and discharge of contaminated soils and water.

G. Reports:

1. Identification of tanks removed and disposed of, including site map showing location of tank and piping.
2. Starting and ending dates of reporting period.
3. Closure report. Incorporate reports, records, and data into a single binder with the title "SITE ASSESSMENT REPORT" on the cover of the binder.
4. Laboratory testing reports, including location of soil excavated and associated OVA/FID (organic vapor analyzer/flame ionization device) readings, and sampling and test results for:
    a. TPH (total petroleum hydrocarbons).
    b. BTEX (benzene, toluene, ethylbenzene, and xylene).
    c. TCLP (toxicity characteristic leaching procedure); if BTEX indicates gasoline, then provide TCLP.
5. Cumulative quantities of soil excavated, beginning with start date for each tank and associated piping.

H. Record Documents:

1. Building permit, inspection permits, and other permits required for underground tank removal.

2. Results of excavation, including sketch showing location of underground storage tank, sampling locations, and extent of excavation.
3. Tank disposal paperwork, such as copy of UST Notification Form and method of conditioning tank for disposal.
4. Contaminated soil disposal paperwork, such as laboratory testing reports.
5. Contaminated water disposal paperwork, such as laboratory testing results.

1.06 QUALITY ASSURANCE

A. Perform work in accordance with local, state, and federal regulations and 40 CFR 280.

B. Qualifications: Prior to start of work, submit documentation of recent experience and resumes of personnel working on the project.

1. Data shall indicate that tank removal contractor, subcontractors, and personnel employed on the project have been engaged in removal, transportation, and disposal of underground tanks and associated piping, are familiar with and shall abide with the following:
   a. API RP 1604.
   b. 40 CFR 280 and State and local regulations and procedures.
   c. Applicable safety rules and regulations.
   d. Use of equipment and procedures for testing and vapor-freeing tanks.
   e. Handling and disposal of types of wastes encountered in underground tank and pipe removal including disposal of underground tanks and associated piping.
   f. Excavation, testing, and disposal of petroleum contaminated soils, liquids, and sludge.
   g. Provide documentation that tank removers are certified if locality of project has this requirement.
2. Furnish the name and qualifications of the proposed Site Safety and Health Officer, based on education, training, and work experience.

C. References: Furnish data proving experience on at least three prior projects that included types of activities similar to those in this project. Provide project titles, dates of projects, owners of projects, point of contact for each project, and phone numbers of each point of contact.

PART 2 PRODUCTS

2.01 MATERIALS

A. Plastic Sheeting: ASTM D4397.

PART 3 EXECUTION

3.01 PREPARATION FOR TANK REMOVAL AND DISPOSAL

A. Site Safety And Health Plan (SSHP): Furnish safety, health, and accident prevention provisions and develop a Site Safety and Health Plan (SSHP).

1. The SSHP shall incorporate the requirements of 29 CFR 1910 and COE EM-385-1-1.
2. Site work shall not start until the SSHP is approved by the Architect .

B. Site Safety And Health Officer: Identify an individual to serve as the Site Safety and Health Officer (SSHO) who is a Certified Industrial Hygienist (CIH).

1. The SSHO CIH shall report problems and concerns regarding health and safety to the Architect .

2. The SSHO CIH shall have a working knowledge of local and Federal occupational safety and health regulations, and shall provide training to Contractor employees in air monitoring practices and techniques.
3. The SSHO CIH shall also provide day to day industrial hygiene support, including air monitoring, training, and daily site safety inspections.
4. The SSHO CIH shall be trained in the use of the monitoring and sampling equipment, interpretation of data required to implement the SSHP, and to administer the elements of the SSHP.
5. The SSHO CIH shall remain on site during project operations and may be assigned other duties, such as project foreman or quality control manager.

C. Spill And Discharge Control Plan: Develop, implement, and maintain a comprehensive spill and discharge control plan.
1. The plan shall provide contingency measures for potential spills and discharges from handling and transportation of contaminated soils and water.
2. A possible source of guidance for assessment and remediation is API PUBL 1628.

D. Exclusion Zone (EZ) And Contamination Reduction Zone (CRZ): Do not permit personnel not directly involved with the project to enter work zones, called the EZ and CRZ.
1. The EZ shall be an area around the tank a minimum of 10 feet (3 m) from the limits of the tank excavation.
2. At the perimeter of the EZ, establish a CRZ.
3. The Contractor 's site office, parking area, and other support facilities shall be located outside the EZ and CRZ.
4. Clearly mark and post the boundaries of the EZ and CRZ.
5. Include a site map, outlining the extent of work zones and location of support facilities, in the SSHP.

E. Training: Provide health and safety training in accordance with 29 CFR 1910 prior to starting work.
1. Furnish copies of current training certification statements for personnel prior to initial entry into the work site.
2. On-Site Training: Prior to starting on-site work, a health and safety training class shall be held by the SSHO CIH to discuss the implementation of the SSHP.
3. Notify the Architect 24 hours prior to beginning the training class.
4. Training Outline: Provide the following:
    a. Health and safety organization, including discussion of distribution of functions and responsibilities
    b. Organization and components of the SSHP
    c. Physical and chemical site hazard identification
    d. Basic toxicology and toxicity information
    e. Discussion of the EZ and CRZ
    f. Protective clothing
    g. Respiratory protection
    h. Air quality monitoring
    i. Personnel exposure guidelines

j. Decontamination procedures

k. Basic first aid review

l. Emergency procedures and contingency plan

m. Site entry and exit procedures

n. Sampling procedures

F. Personnel Protection: Furnish appropriate personal safety equipment and protective clothing to personnel.

1. Ensure that safety equipment and protective clothing is kept clean and well maintained.

2. Furnish three clean sets of personal protective equipment and clothing for use by the Architect or official visitors as required for entry into the EZ.

G. Respiratory Protection Program: Develop a respiratory protection program, addressing respirator usage and training, in accordance with 29 CFR 1910.134 and COE EM-385-1-1.

H. Decontamination: Decontaminate or properly dispose of personal protective equipment and clothing worn in contaminated areas at the end of the work day.

1. The SSHO CIH shall be responsible for ensuring that personal protective clothing and equipment are decontaminated before being reissued.

I. First Aid And Emergency Response Equipment And Procedures: Provide appropriate emergency first aid equipment for treatment of exposure to site physical and chemical hazards.

1. Provide and post a list of emergency phone numbers and points of contact for fire, hospital, police, ambulance, and other necessary contacts.

2. Provide and post a route map detailing the directions to the nearest medical facility.

J. Ignition Sources: Do not permit ignition sources in the EZ and CRZ.

K. Personnel And Equipment Decontamination: Decontaminate personnel and equipment before exiting the work zones.

L. Waste Disposal: The SSHP shall detail the practices and procedures to be utilized to dispose of wastes. Upon completion of the project, certify that equipment and materials were properly decontaminated prior to being removed from the site.

M. Emergency Response Requirements: Furnish emergency response and contingency plan in accordance with 29 CFR 1910.38.

1. In an emergency, take action to remove or minimize the cause of the emergency, alert the Architect , and institute necessary measures to prevent repetition of the emergency.

2. Equip site-support vehicles with route maps providing directions to the medical treatment facility.

N. Unforeseen Hazards: Notify the Architect of any unforeseen hazard or condition that becomes evident during work.

3.02 TANK CLEANING

A. Provide clean and vapor free tank in accordance with API RP 1604 and the following Table of Tank History:

B. Fuel Removal:

1. All possible fuel will be pumped or otherwise removed from the tank by Owner .

2. Consider remaining fuel contaminated or waste fuel; pump into 55 gallon (208 liters) drums or other suitable containers for disposal in accordance with approved procedures meeting local, state, and federal regulations.
    a. Drums or tanks used for containerizing waste fuel shall be furnished by Contractor .
3. Dispose of remaining fuel emulsions in accordance with applicable local, state, and federal regulations.

3.03 TEMPORARY CONTAINMENT OF EXCAVATED SOIL

A. Provide temporary containment area near the excavated area.

B. Cover containment area with 30 mil (0.75 mm) polyethylene sheeting.
1. Place excavated soil on the impervious barrier and cover with 6 mil (0.15 mm) polyethylene sheeting.
2. Provide straw bale berm around the outer limits of the containment area and cover with polyethylene sheets.
3. Secure edges of sheets to keep the polyethylene sheeting in place.

3.04 EXCAVATION

A. Provide Architect with written documentation, no later than 30 days before work begins, that proper state or local authorities have been notified.

B. Notify Architect at least 48 hours prior to start of tank removal work.
1. Stage operations to minimize the time that tank excavation is open and the time that contaminated soil is exposed to the weather.
2. Provide protection measures around the excavation area to prevent water runoff and to contain the soil within the excavation area.

C. Excavation: Excavate as required to remove tanks and piping.
1. Place soil removed from the excavation in a temporary containment area.
2. Collect and temporarily store water runoff from stockpiled soils.
3. Contaminated soil materials may be used as backfill for tank and pipe excavations as follows:
    a. To determine soil contamination levels, continuously monitor soil materials excavated to remove tanks with an OVA/FID capable of detecting volatile organic vapors to a minimum of one ppm.
    b. Contaminated soils with OVA/FID readings of 10 ppm or greater shall be further tested for TPH and BTEX as specified herein.
    c. Soils with OVA/FID readings less than 10 ppm may be used as clean backfill.
    d. Dispose of unacceptably contaminated soils in accordance with federal, state, and local regulations.

D. Excavation Methods: Select methods and equipment to remove soil to minimize disturbance to areas beyond the limits of the excavation area.
1. Material that becomes contaminated as a result of Contractor 's operations shall be removed and disposed of at no additional cost to Owner .
2. Where excavation extends into groundwater levels, dewatering methods shall be employed on a localized basis to facilitate excavation operations, as specified in Section 01 7000.

3. Water generated by dewatering during excavation required for removal of tanks or piping, surface water collected in open excavation, or water used for washing equipment or existing concrete or bituminous surfaces, shall be collected and tested.
    a. Test in accordance with EPA SW-846 and EPA 600-4-790-20 and state or locally required analyses.
    b. Water that contains contaminants above locally acceptable levels shall be disposed of in accordance with federal, state, and local regulations.
    c. Non-contaminated water may be disposed of on-site.

E. Structures: During excavation activities, if asphalt pavement, concrete slabs, or other structures are encountered, remove and wash with high pressure water cleaning equipment.
1. Remove and dispose of pavement, concrete, and other structures as specified in Section 02 4100.

3.05 TESTING

A. Stockpiled Soils: Soils with OVA/FID readings of 10 ppm or greater shall be further sampled and tested.
1. Test for TPH and for BTEX in accordance with EPA SW-846 and EPA 600-4-790-20.
2. Test for toxicity characteristic leaching procedure (TCLP) for lead if leaded gasoline was stored in or near the underground tank being removed.
3. For TPH, provide a minimum of one test for every 100 cubic yards (77 cubic meters).
4. For BTEX and TCLP, provide one test for every 100 cubic yards (77 cubic meters).
5. Soils that contain 50 ppm or more TPH, 10 ppm or more BTEX or have TCLP reading of 10 ppm lead or virgin petroleum products are considered contaminated materials.
6. Soils that test at levels less than the above may be used as clean fill.
7. Furnish results to Architect within 24 hours after the results are obtained.

B. Testing Under Tank After Removal of Tank:
1. If tank is 20 feet (6 m) or less in length, take two samples. Each sample shall be 2 feet (0.60m) from each end of the tank and 2 feet (0.60 m) below the bottom of the excavation.
2. If the tank is greater than 20 feet (6 m), take three samples. Two samples shall be 2 feet (0.60 m) from each end of the tank and 2 feet (0.60 m) below the bottom of the excavation. A third sample shall be taken from the middle of the tank area and 2 feet (0.60 m) below the bottom of the excavation.
3. Analyze samples for TPH, BTEX, and TCLP.
4. Comply with standards for sampling and analysis as specified above for stockpiled soils.
5. Test for TPH and for BTEX in accordance with EPA SW-846 and EPA 600-4-790-20.
6. Soils that contain 50 ppm or more TPH, 10 ppm or more BTEX, or have TCLP reading of 10 ppm of lead or virgin petroleum products are considered contaminated materials.
7. Soils that test at levels less than the above may be used as clean fill.
8. Furnish results to Architect within 24 hours after the results are obtained.
9. Along with the results furnish a sketch showing underground tank, sampling location, and extent of excavations.

C. Testing Along Piping:

1. For every 25 linear feet (7.5 m) of product delivery piping, for every change in direction, and at every mechanical joint take one soil sample and analyze for TPH, BTEX, and TCLP.
2. Comply with requirements for sampling and analysis of soil materials as specified above in the paragraph entitled "Testing Under Tank After Removal of Tank."

3.06 WATER DISPOSAL

A. Dewatering will be permitted only with approval of Architect .

B. Store and test water generated during removal of tanks and piping.

1. If contaminated, transport and dispose of water in an EPA approved disposal site in accordance with federal, state, and local requirements.
2. Non-contaminated water may be disposed of on-site.

3.07 DISPOSAL OF UNDERGROUND TANKS, ANCHORS , SLABS, AND ASSOCIATED PIPING

A. Preparation: API RP 1604. Remove the fill pipe, gage pipe, vapor recovery truck connection, submersible pumps, and drop tube.

1. Cap or remove non-product piping, except vent piping.
2. Plug tank openings so that vapors will exit through vent piping during the vapor-freeing process.

B. Purging: Remove flammable vapors in accordance with API RP 1604. Tanks shall be certified as "vapor free" prior to further work.

C. Cleaning and Testing: Clean tank and perform atmosphere testing in accordance with API RP 1604.

1. Distribution (product delivery) piping shall be cleaned and removed or the piping shall be cleaned, filled with concrete, and abandoned in place.
2. Test the tank atmosphere and the excavation area for flammable or combustible vapor concentrations, with a combustible gas indicator until the tank is removed from the excavation and from the site.

D. Tank Removal and Disposal:

1. Plug or cap accessible holes. One plug shall have a minimum 1/8 inch (3 mm) vent hole.
2. Remove tank from the excavation, place it on a level surface and render it useless in accordance with API RP 1604.
3. Provide warning labels on tank if tank contained leaded fuels, as follows:
    a. "TANK HAS CONTAINED LEADED GASOLINE -- NOT VAPOR FREE -- NOT SUITABLE FOR STORAGE OF FOOD OR LIQUIDS INTENDED FOR HUMAN OR ANIMAL CONSUMPTION -- DATE OF REMOVAL: MONTH/DAY/YEAR"
4. Transport and dispose of tank at an EPA approved disposal site in accordance with federal, state, and local regulations.

3.08 INSPECTIONS

A. Arrange for and perform required inspections. Provide copies of inspections to the Architect .

3.09 CLOSURE REPORT (SITE ASSESSMENT REPORT)

A. Provide Architect a Site Assessment Report in a single binder notebook that contains the full collection of reports relating to this work, including but not limited to, records, starting and ending dates of reporting period, inspections, documentation, and data as follows:

1. Complete UST Notification Form (within 30 days of closure).

2. Description of work, including removal procedures, number of tanks removed, identification of tanks removed and disposed of, cubic yards of excavated soil, location of disposal sites, and dates of excavation.
3. Site plan, including location of tanks and piping, limits of excavation, sampling points, results of excavation, and depths.
4. Laboratory testing reports, copies of data and test results from testing laboratory.
5. Tank disposal paperwork, contaminated soil disposal paperwork, and contaminated water disposal paperwork.
6. Certifications required by implementing agency.
7. Building permit, inspection permits, and other permits required for underground tank removal, notifications, and inspection reports.
8. Cumulative quantities of soil excavated, beginning with start date for each tank and associated piping.

3.10 SPILLS OF CONTAMINATED SOILS

A. Use appropriate vehicles and operating practices to prevent spillage or leakage of contaminated materials from occurring during operations. Inspect vehicles leaving the area of contamination to ensure that no contaminated materials adhere to the wheels or undercarriage.

3.11 BACKFILLING

A. Provide backfill, compaction, grading, and seeding in accordance with 31 2323.

B. Line the excavation with two plastic sheets before backfilling.

END OF SECTION

SECTION 02 8213
ASBESTOS ABATEMENT

PART 1 GENERAL

1.01 SCOPE OF WORK: ASBESTOS ABATEMENT

A. Base Bid: The Base Bid shall include the total cost of all asbestos abatement work described. This work shall be performed in accordance with this Section, the plans, all other bid documents, and all federal and state regulations.

B. PGCPS requires all Asbestos Abatement to be performed by a PGCPS Approved Vendor. Coordinate with PGCPS Environmental Department for a list of pre-approved vendors.

C. The contractor will provide all labor, materials, equipment, supervision, testing, permits and all other incidentals required to remove the asbestos containing materials (ACM) listed within these specifications from the areas indicated on the drawings and as described as follows:

1. The contractor shall, completely remove all asbestos containing mastic/caulking associated with wallboards, cement sinks, pipe insulation, duct insulation, floor tile, windows, and mastic in the areas indicted in the drawings.

2. Completely remove all asbestos containing acoustical ceiling tile. Contractor will replace all abated acoustical ceiling tile.

3. Remove all other ACM material encountered and or exposed during project work or involving connection to existing concealed building utilities.

D. The Abatement Contractor shall provide the complete isolation of the work area(s) as needed, and for the total cleaning and decontamination of the area(s) such that no airborne or residual asbestos remains in accordance with the applicable regulatory provisions. The contractor shall be responsible for the proper removal, storage, transportation and disposal of asbestos waste. No waste or debris will be placed in any BOARD owned dumpster or refuse container.

E. The Abatement Contractor can use existing electrical receptacles to operate their equipment. Any electrical work required by the contractor (moving light fixtures, installing “pigtails” for equipment, etc.) must be completed by a contractor, licensed to perform electrical work in Prince Georges County, Maryland. Prices for performing such work shall be incorporated in the total job cost submitted.

F. The BOARD will contract a BOARD approved independent air monitoring company to conduct daily air sampling, final visual inspection and subsequent clearance air and bulk sampling as described in Article X of this document.

G. The contractor will retain primary responsibility for all means, methods, sequencing and coordination during the asbestos abatement phase. Responsibility for the preparation, accuracy, and execution of any drawings or work plans remains with the Contractor. The contractor shall communicate with the general contractor in order to secure access to power, water, telephone and other utilities as part of his bid.

H. This document addresses only the ACM that is associated with the actual work areas. This serves as notice that some materials in other areas within the facility, also has been identified as ACM. It is the General Contractor’s responsibility to review the Asbestos Management Plan for each School and familiarize his employees, inclusive of all Subcontractors, that ACM is present and the possible locations that it may be encountered. Any and all work that involves handling of ACM must be conducted by the asbestos contractor, approved by the BOARD.

I. The cost of any planned or un-planned clean-up activity, inclusive of all school system personnel salaries, required relative to ACM being disturbed by abatement, demolition or construction activities, shall be borne by the Asbestos Contractor.

1.02 REGULATIONS:

A. All work must comply with all applicable Federal, State and County regulations. Work performed in this building falls within the regulatory authority of the Asbestos Hazard Emergency Response Act (AHERA). All workers and supervisors are required to be AHERA certified.

B. All employees performing work on this project must be accredited as required by the Federal AHERA regulations and certified to remove asbestos under the Maryland COMAR Regulations. Appropriate AHERA accreditation must be held by all workers, supervisors and project designers.

C. The successful bidder shall ensure that an Abatement Supervisor (as described in the AHERA Regulations) is on-site at all times during any asbestos removal activity that is conducted during this project. The Supervisor shall be able to present accreditation documents for all workers.

D. All work must comply with the following Federal and State regulations which govern asbestos abatement work or hauling and disposal of asbestos waste materials including but not limited to the following:

1. Environmental Protection Agency (EPA) including but not limited to:
    a. Asbestos Abatement Projects Rule CFR Part 762 TS 62044, FRL 2843-9 Federal Register, Vol 50 No 134, July 12,1985 8530-28540
    b. Regulation for Asbestos Title 40, Part 61, Subpart A of the Code of Federal Regulations
    c. National Emission Standard for Asbestos Title 40, Part 61, Subpart M (Revised Subpart B) of the Code of Federal Regulations
2. Department of Labor, Occupational Safety and Health Administration, (OSHA), including but not limited to:
    a. Occupational Exposure to Asbestos, Tremolite, Anthophyllite, and Actinolite; Final Rules Title 29, Part 1910, Section 1001 and Part 1926, Section 1101 of the Code of Federal Regulations
    b. Respiratory Protection Title 29, Part 1910, Section 134 of the Code of Federal Regulations
    c. Construction Industry Asbestos Standard Title 29, Part 1926, of the Code of Federal Regulations Construction Industry Lead Standard Title 29, Part 1926, Section 62, of the Code of Federal Regulations
    d. Access to Employee Exposure and Medical Records Title 29, Part 1910, Section 2 of the Code of Federal Regulations
    e. Hazard Communication Title 29, Part 1910, Section 1200 of the Code of Federal Regulations
    f. Specifications for Accident Prevention Signs and Tags Title 29, Part 1910, Section 145 of the Code of Federal Regulations
3. State of Maryland
    a. Control of Asbestos Act, Maryland Code, COMAR Title 26 Subtitle 11, Chapter 21
    b. Asbestos Accreditation of Individuals, and Approval of Training Courses, Maryland Code, COMAR Title 26, Subtitle 11, Chapter 23

1.03 SITE VISIT:

A. Bidders should visit the site to verify existing conditions and establish the amount of ACM to be removed. Arrangements for a site visit must be made through the BOARD'S Environmental Office at (301) 952-6539. NO UNAUTHORIZED VISITS WILL BE PERMITTED.

B. A schematic representation, which indicates the actual work areas, is included for informational purposes, only. The materials listed in the "Scope of Work" portion of this document, are to be removed completely, unless otherwise documented in writing by the BOARD. The BOARD will not accept sample

analysis that the contractor submits relevant to a specific material that is not ACM.

1.04 SUBCONTRACTORS:

A. Full documentation of the firm that will conduct the asbestos work, including certifications and a signed statement affirming they visited the building, must be approved within two(2) business days after the apparent low bidder is notified. This shall include copies of their Maryland License accreditation(s), and references from at least five previous jobs. No contractor substitutions will be permitted, without the BOARD'S consent, after the BOARD reviews and verifies the provided information.

B. The BOARD can reject an Asbestos contractor, if they have demonstrated poor or unsafe performance or poor quality of work from past projects. Any additional costs incurred by the subcontractor or a general contractor, as a result of this action being taken, will not be the responsibility of the BOARD. Asbestos contractors must be pre-approve, with the BOARD's Environmental Office, at least one week prior to the bid due date for this project.

C. In a case where an asbestos contractor has violated any terms or condition of his contract, the BOARD reserves the right to obtain another reputable abatement contractor to complete the remaining work. All associated costs relative to that work shall be borne by the original abatement contractor.

1.05 ASBESTOS REMOVAL PLANS:

A. As soon as possible but not later than 14 calendar days after receipt of a contract award, the successful bidder shall submit a detailed removal plan, for each facility, including shop drawings, prepared and signed by an accredited AHERA Project Designer, for the Board's approval. The drawings shall detail the following items for each work section, as required:

1. Work areas
2. Work entrance and exit points
3. Shower and clean room locations
4. Locations and quantities of negative pressure ventilation equipment
5. Storage locations for supplies and equipment
6. Storage locations for removed materials prior to such materials being transported off site
7. Cleanup and waste disposal plans
8. The locations of any demolition activity the contractor may undertake in order to gain access to remove any ACM
9. Work schedule
10. Number of workers and copies of their qualifications

1.06 NOTIFICATION TO REGULATORY AUTHORITIES:

A. The contractor is responsible for making required notification to the Maryland Air Management Administration, the Environmental Protection Agency and any other regulatory authorities with jurisdiction. Copies of such notification must be provided to the BOARD before work can begin.

B. NOTICES: ENVIRONMENTAL PROTECTION AGENCY

1. Send Written Notification as required by USEPA National Emission Standards for Hazardous Air Pollutants (NESHAPS) Asbestos Regulations (40CFR 61, Subpart M) to the regional Asbestos NESHAPS Contact at least 10 days prior to beginning any work on asbestos-containing materials. Send notification to the following address:

   a. REGION 3: USEPA, Region III 1650 Arch Street Philadelphia, Pennsylvania 19103-2029

2. Notification must be sent to EPA for all demolitions and for renovations involving 160 square feet or 260 linear feet or more.
3. Notification: Include the following information in the notification sent to the NESHAPS Contact:
    a. Name and address of owner or operator.
    b. Description of the facility being demolished or renovated, including the size, age, and prior use of the facility.
    c. Estimate of the approximate amount of friable asbestos material present in the facility in terms of linear feet of pipe, and surface area on other facility components. For facilities in which the amount of friable asbestos materials less than 80 linear meters (260 linear feet) on pipes and less than 15 square meters (160 square feet) on other facility components, explain techniques of estimation.
    d. Location of the facility being demolished or renovated.
    e. Scheduled starting and completion dates of demolition or renovation.
    f. Nature of planned demolition or renovation and method(s) to be used.
    g. Procedures to be used to comply with the requirements of USEPA National Emission Standards for Hazardous Air Pollutants (NESHAPS) Asbestos Regulations (40 CFR 61 Subpart M). Final Rule.
    h. Name and location of the waste disposal site where the friable asbestos waste material will be deposited.
    i. For facilities being demolished under an order of a State or local governmental agency, issued because the facility is structurally unsound and in danger of imminent collapse, the name, title, and authority of the State or local governmental representative who has ordered the demolition.

1.07 STATE AGENCIES:

A. Send written Notification as required by local regulations prior to beginning any work on asbestos-containing materials to:

B. Asbestos Licensing/Enforcement Division MD Department of Environment (MDE) 1800 Washington Boulevard Baltimore, Maryland 21230 1. Notification must be postmarked 10 working days prior to commencement of work.

1.08 LICENSES:

A. Licenses: Maintain current licenses as required by applicable state or local jurisdictions for the removal, transporting, disposal or other regulated activity relative to the work of this contract.

B. Posting and Filing of Regulations: Maintain two (2) copies of applicable federal, state and local regulations above. Post one copy of each at the job site. Keep on file in contractor's office one copy of each.

C. Copies of all notification will be provided to the BOARD before work can begin.

1.09 ALTERNATIVE PROCEDURES:

A. Procedures described in the specifications will be used at all times. If the specified procedures cannot be utilized, the contractor shall provide a written statement to the BOARD’S Environmental Office describing the problems encountered and recommended alternatives. Any alternative procedures must be approved by the BOARD and regulatory authorities before implementation. The BOARD reserves the right to reject any variances or alternative methods not found to be acceptable to the BOARD.

1.10 MONITORING WORK PROGRESS:

A. The BOARD's Environmental Office, Safety Office and/or contracted industrial hygienist will monitor the progress of work. This person(s) shall have the authority to make work-in progress inspections at any time and to stop work if, in their opinion, an immediate health threat exists to the public or the contractor's employees due to improper work methods or noncompliance with the specifications or regulations.

B. In situations where job site performance is unsatisfactory but does not present an immediate health threat to the public or workers, a written warning will be given to the contractor. A deadline will be given to correct the referenced situation. Failure to comply with said written orders could be considered grounds for shutting down a job until said condition has been remedied to the satisfaction of the BOARD.

C. The BOARD'S Environmental Office and/or the contracted industrial hygiene consultant will have final authority over questions of interpretation of regulations and specifications. Whenever a conflict occurs, the most stringent requirement shall be followed.

1.11 PERMISSION TO BEGIN WORK:

A. Prior to asbestos abatement activities (including preparatory work such as containment system fabrication), a pre-job meeting shall be scheduled at which time the contractor shall submit proof satisfactory to the BOARD that all required permits and arrangements for transportation and disposal of waste materials have been made. The Contractor shall also provide a list of all employees who will be working on the project along with submitting AHERA. and Maryland training accreditation for these workers. At the pre-job meeting, the Contractor and the BOARD'S Environmental Office representative will review the specifications and asbestos removal plans. The BOARD'S Environmental Office will respond verbally to any questions by the Contractor. The BOARD will document all verbal authorization via written memoranda.

B. The contractor shall not begin any site work, either actual abatement or preparatory work until he has received verbal permission from the Environmental Office. The BOARD will document all verbal authorizations via written memoranda.

C. After completing preparatory activities for each work area, the contractor must arrange for a site inspection by the BOARD's Environmental Office before authorization to begin actual asbestos removal. During this inspection the contractor shall demonstrate (where applicable) that the containment system, mini enclosures, work entrance way, etc. are properly sealed and all meet the specifications. Additionally, he will be required to prove proper operation of any required negative pressure ventilation equipment. This inspection process shall be repeated as each new work area is established. No asbestos removal can begin until the satisfactory completion of such an inspection.

1.12 AIR SAMPLING BY THE CONTRACTOR AND/OR CONTRACTED INDUSTRIAL HYGIENE CONSULTANT:

A. PERSONAL SAMPLING - The contractor will be responsible for conducting and paying for "personal" air samples during the course of work. Personal air monitoring will be conducted for the maintenance of Time Weighted Average (TWA) fiber counts for types of respiratory protection required. This includes Short Term Excursion (STEL) Level samples of 30 minutes. These samples can be collected by the contracted industrial hygiene consultant.

B. BACKGROUND SAMPLING - The BOARD's hygiene consultant will conduct background air samples for each containment area to establish background fiber levels prior to work commencing along with all daily air tests and personal air sampling. These samples can be collected by the contracted industrial hygiene consultant. The hygiene consultant shall coordinate with the BOARD'S Environmental Office the exact location where these samples will be taken and the time of day when daily samples will be taken. The analysis laboratory shall use methods approved by the Environmental Protection Agency. The samples will be archived in case the BOARD has a need to retrieve them.

C. Results of the air test taken within the work area prior to commencement of work will determine the need for respirator use during construction of containment systems. If these air tests show fiber levels higher than the permissible exposure limit, respirators will be worn during containment fabrication; otherwise respirator use during this phase is optional. “Personal” samples will be taken during containment construction since airborne fiber levels may increase during this work. If the results of the samples taken during this activity show levels higher than the permissible exposure limit, respirators and other protective equipment shall immediately be utilized for the remainder of all containment work.

D. OUTSIDE AMBIENT AIR SAMPLES

1. Air Samples will be collected daily outside but nearby the work area to detect faults in the work area isolation such as:

   a. Contamination of the building outside of the work area with airborne asbestos fibers,

   b. Failure of filtration or rupture in the negative pressure system,

   c. Contamination of the building exterior with airborne asbestos fibers

2. These samples will be collected by the contracted industrial hygiene consultant. If airborne fiber levels in such samples exceed air fiber levels revealed in the “before work” (background) ambient samples or 0.1 fibers per cubic centimeter (fiber/cc), the contractor shall immediately stop work and notify the BOARD’s Environmental Office. If this air sample was taken inside the building and outside of critical barriers around the work area, the contractor shall immediately inspect the critical barriers to ensure their integrity. The affected area shall be isolated from the balance of the building and evacuated if the area is occupied. Critical barriers shall be erected at the next existing structural isolation of the involved space (e.g. wall, pipe, and floor). The project will be reviewed jointly by the contractor and the BOARD’s Environmental Office to determine and correct the cause of the high air sample results. The contractor will clean the outside area and retest before work can be restarted.

1.13 INSIDE AIR SAMPLES

A. The contractor shall maintain an average airborne count in the work area of less than 0.2 fibers/cc. If the fiber counts rise above this figure for any sample taken, the contractor shall revise work procedures (i.e., additional use of amended water or increased negative pressure to lower fiber counts). If these methods do not effectively reduce the average airborne level then the contractor is to stop all work, leave engineering controls/negative air system in operation and notify the BOARD’S Environmental Office. Do not recommence work until authorized by the BOARD’S Environmental Office.

1.14 ANALYTICAL METHODS:

A. The NIOSH 7400 method of phase contrast microscopy will be used by the laboratory in analyzing filters used to collect air samples before and during abatement. Transmission Electron Microscopy shall be performed on final air sampling.

1.15 SAMPLE VOLUMES:

A. General: The number and volume of air samples taken by the Industrial Hygiene Consultant will be in accordance with the following schedule. Sample volumes given may vary depending upon the analytical method used.

1.16 SCHEDULE OF AIR SAMPLES:

A. Before Start of Work: Base Line: Pre-Tests are taken to establish background levels of airborne fibers to determine respiratory protection required during preparation of the work area. If any of the Pre-Tests or the air samples taken during preparation are >0.01 fibers per cubic centimeter (f/cc) the workers shall wear respiratory protection. The type of respirator worn shall be determined by the standards set in OSHA Regulations 29CFR 1910.1001. The Industrial Hygiene Consultant will secure the following Air

Samples:

1. SCHEDULE BASE LINE : Before Start of Work Pre-Test).

Project Size	IWA	OWA	Blank	Analysis
>5,000 SF	5	5	2	PCM
>500 LF	5	5	2	PCM
<5,000 SF	5	5	2	PCM
<500 LF	5	5	2	PCM

1) **ACM -** Asbestos Containing Material
2) **TEM** - Transmission Electron Microscopy
3) **IWA** - Inside Work Area
4) **OWA** - Outside Work Area
5) **PCM** - Phase Contrast Microscopy, NIOSH 7400 Method

2. SCHEDULE OF DAILY AIR SAMPLES : During Work

Project Size	IWA	OWA	Blank	Analysis
>5,000 SF	4	4	2	PCM
>500 LF	4	4	2	PCM
<5,000 SF	2	2	2	PCM
<500 LF	2	2	2	PCM

1) **ACM -** Asbestos Containing Material
2) **TEM** - Transmission Electron Microscopy
3) **IWA** - Inside Work Area
4) **OWA** - Outside Work Area
5) **PCM** - Phase Contrast Microscopy, NIOSH 7400 Method

1.17 LABORATORY TESTING:

A. The services of a testing laboratory will be employed by the Industrial Hygiene Consultant to perform laboratory analysis of the air samples. A microscope and technician will be setup at the job site (where project conditions permit), so that verbal reports on air samples can be obtained immediately.

B. The services of a testing laboratory will be employed by the Contractor to perform laboratory analysis of the OSHA air samples.

C. A complete record, certified by the testing laboratory, of all air monitoring tests and results will be furnished to the BOARD'S Environmental Office.

D. Verbal Reports: of all air monitoring tests will be communicated at the job site by the Industrial Hygiene Consultant, to the Contractor on a daily basis. Air sample results shall be posted in a central location on a daily basis.

E. Exposure monitoring of the work place for employees safety will be performed in accordance with Occupational Safety and Health Administration (OSHA) Asbestos Regulations for the Construction Industry (20 CFR 1926.1101).

F. Verbal results for all air samples shall be supplied to the BOARD within 24 hours, with written results maintained at the work site.

1.18 DAMAGE TO THE BUILDING:

A. Care shall be taken by the contractor not to damage finishes, wiring, piping or other building systems or equipment. Any such damage shall be corrected per all relative codes and regulations at the contractor's expense.

1.19 ASBESTOS WORKER ACCESS:

A. All work entry is to be made through the nearest exterior door. This location will be given to the Contractor at the pre-construction meeting.

B. Limited parking is available in the school's parking lot. Vehicles must be parked in parking spaces. No parking will be permitted in fire lanes, loading zones, reserved parking spaces, grass, etc. A clear lane must be kept at all times for emergency vehicles, deliveries, and other school traffic.

C. The Contractor shall supply protective equipment, including a respirator and disposable suit to the school Custodian in the event he needs to enter the work area during asbestos removal. D. Smoking is not permitted in this facility or on the property.

1.20 ASBESTOS WORK SCHEDULE:

A. Preliminary asbestos removal work cannot begin until the BOARD issues a written notice to the General Contractor. All asbestos abatement activities, relevant to the ACM found in the actual work area, must be completed within Fourteen (14) calendar days.

B. The Contractor is responsible for paying the wages of the school system personnel if the work is conducted during times when the facility is not staffed.

C. The general Contractor shall limit any other work activities that may inhibit the progress of the asbestos removal work.

D. The BOARD reserves the right to require that all activities involving asbestos work, be conducted during the hours when the school is normally occupied. The BOARD will pay no additional cost, if this stipulation is invoked.

1.21 DISPOSAL OF ASBESTOS:

A. The contractor is free to utilize any landfill approved to accept friable asbestos waste. The contractor shall submit with their bid response, the name and address of the facility he proposes to use.

B. Transportation of asbestos waste must comply with all Federal, State and County Regulations.

C. Copies of all dump receipts; transportation manifests and other documentation of legal disposal shall be supplied to the BOARD'S Environmental Office as disposal occurs. No payment will be made without such documentation of proper disposal.

D. All bagged asbestos debris must be removed from the work area on a daily basis.

E. Bagged debris may be stored on the premises while awaiting transport to the dumpsite. Storage shall be within a locked, closed container, such as a dumpster equipped with a lid or top. This container shall be located as directed by the BOARD'S Environmental Office.

1.22 EQUIPMENT:

A. The contractor will have, as needed, a sufficient quantity of scaffolds, ladders, lifts and hand tools. Under no circumstances will the contractor be allowed to use equipment owned by the BOARD.

1.23 ASBESTOS CONTAINING MATERIAL (ACM) REMOVAL PROCEDURES

A. Asbestos Containing material removal shall be conducted in a regulated enclosure, including hygiene facilities, with negative pressure ventilation units equipped to provide a minimum one work place air change every fifteen (15) minutes and a negative pressure differential inside the work area equal to, or greater than .02 inches of water column.

B. The product name and Material Safety Data Sheet (MSDS) for all materials must be supplied at the pre-job meeting for the BOARD'S Environmental Office approval. No material change will be permitted without the BOARD'S Environmental Office approval.

C. Removal is not complete until all surfaces are smooth to the extent that a sample cannot be obtained. Patched areas will have to be cleaned such that a sample cannot be obtained by scratching away the material.

D. All surfaces (walls, pipes, floors, etc.) shall be free of any residue. The contractor shall take all precautions to limit the spread of odors outside the area of work.

E. The BOARD reserves the right to review and reject unsuitable work practices at its sole discretion.

F. Materials, not identified for removal in these specifications that are damaged by the contractor, will be repaired and/or replaced and the associated cost deducted from the contractor's retention.

G. Other portions of this facility may be occupied and/or used while the asbestos work is being done. The contractor shall take measures to keep the construction related dust to a minimum. The contractor shall also take measures to prevent his activities from creating a disruption to building and instructional activities. The BOARD can require the contractor to work evenings if their operation causes disruptions to the daytime building and instructional activities.

1.24 CLEARANCE TESTING

A. Initial final clearance air testing will be conducted by the company engaged by the BOARD. In the event the initial test shows the average concentration of asbestos of five (5) air samples collected within the containment area are greater than 70 structures per square millimeter 70s/mm2, the contractor is responsible for all costs associated with the second and subsequent final air clearance tests in the affected "work area" from the contractor's final retention. See item XIX.G below for additional information.

B. Each work area will be treated separately for final clearance air testing. The testing will take place as soon as feasible once abatement work is finished.

C. The contractor shall notify the BOARD's representative at least 48 hours in advance of requesting a final air sampling, in each area. Following the satisfactory completion of a visual inspection by BOARD Personnel, the BOARD will arrange for an air-monitoring professional to aggressively sample the air for airborne asbestos fiber concentrations.

D. Final Clearance Sampling-Transmission Electron Analysis (TEM) shall be used to analyze all final clearance air samples per 40 CFR Part, Appendix A to Subpart E.

1. All clearance Air Samples will be taken using aggressive sampling techniques as follows:

a. Sampling shall not begin until 1 hour after the area is dry with no visible water or condensation remaining (a minimum of 4 hours following encapsulation).

b. Samplers shall be placed at random around the work area. If the work area contains the number of rooms equivalent to the number of required samples based on floor area, a sampler shall be placed in each room. When the number of rooms is greater than the required number of samples a representative sample of rooms shall be selected.

c. The representative samplers placed outside the work area but within the building shall be located to avoid any air that might escape through the isolation barriers and shall be approximately 50 feet from the entrance to the work area, and 25 feet from the isolation barriers.

d. In each homogeneous work area after completion of all cleaning work, a minimum of 13 samples will be taken and analyzed as follows:

Location Sampled	Number of	Filter Media	Detection	Minimum	Rate (LPM)

	Samples		Limits Structures/MM2	Volume	
Work Area	5	MCE	70	1200	6-9.9
Outside Work Area	5	MCE	70	1200	6-9.9
Field Blank	2	MCE	70	1200	6-9.9
Sealed Blank	1	MCE	70	1200	6-9.9

1) **Release Criteria:** Decontamination of the work site is complete if the concentration of all samples is (less than) <70 s/mm^2.

E. Final Clearance Sampling for the soil in each work area shall be conducted by Polarized Light Microscopy (PLM) bulk sampling. Nine (9) bulk sampling shall be conducted in a statically random manner of each work area. Each bulk sample shall be less than one percentage (< 1%).

F. The BOARD reserves the right to require that the work area be re-cleaned, at no additional cost, even if the average concentration of asbestos of five air samples collected in the containment area is less than 70s/mm2, and the result of any one (1) sample collected within the work area yields a result of 80s/mm2 or above.

G. The enclosure shall remain intact until final clearance has been obtained and no additional cleaning as specified in Item XIX.G is required. Verbal results will be given to the contractor as soon as the BOARD is given the results; this will be followed up in writing when the results become available.

1.25 ASBESTOS SUBMITTALS:

A. The Contractor shall, submit within two (2) working days, after the apparent low bidder is notified, a qualification statement. This statement will include:

1. Owners of the asbestos removal firm, addresses and telephone numbers.
2. A list of five (5) comparable previous asbestos jobs. The list will include 3 names, addresses, telephone numbers and dates of the jobs
3. Asbestos removal firm’s Maryland license to remove or encapsulate asbestos.
4. A statement that the contractor has ample equipment and personnel to perform the work within the time specified
5. Copies of valid Maryland certificates of all asbestos workers and supervisors who will be performing abatement activities
6. The name, addressed phone number of the disposal facility.
7. The name, addresses and phone number of the independent laboratory that the contractor will employ to analyze air samples

END OF SECTION

SECTION 02 8400
POLYCHLORINATE BIPHENYL (PCB) REMEDIATION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Furnish labor, materials, services, and equipment necessary for complete removal and disposal of the following demolition debris in accordance with federal, state, and local regulations:

1. PCB-containing electrical equipment, including transformers, capacitors, and switches.
2. PCB- and DEHP-containing lighting ballasts.
3. Mercury-containing lamps and tubes, including fluorescent lamps, high intensity discharge (HID), arc lamps, ultra-violet, high pressure sodium, mercury vapor, ignitron tubes, neon, and incandescent.

B. Perform PCB removal and disposal work in accordance with 40 CFR 761 and the requirements specified herein.

1.02 RELATED REQUIREMENTS

A. Section 01 7000 - Execution and Closeout Requirements: Other selective demolition procedures.

B. Section 01 7419 - Construction Waste Management and Disposal: Disposal of normal demolition debris.

C. Section 02 4100 - Demolition: Demolition of entire buildings.

D. Section 26 0505 - Selective Demolition for Electrical.

1.03 DEFINITIONS

A. Toxic Substances: PCBs, mercury, and other substances regulated under the U.S. Federal Toxic Substances Control Act (TSCA); substances covered by this specification are identified under SECTION INCLUDES.

B. Leak: Leak or leaking means any instance of a toxic substance present on any portion of the external surface of an item of equipment or container.

C. PCBs: PCBs as used in this specification shall mean the same as PCBs, PCB Article, PCB Article Container, PCB Container, PCB Equipment, PCB Item, PCB Transformer, PCB-Contaminated Electrical Equipment, as defined in 40 CFR 761, Section 3, Definitions.

D. Universal Waste: Any of the following hazardous wastes that are managed under the universal waste requirements of 40 CFR 273:

1. Batteries as described in Sec. 273.2 of that chapter.
2. Thermostats as described in Sec. 273.4 of that chapter.
3. Lamps as described in Sec. 273.5 of that chapter.

1.04 REFERENCE STANDARDS

A. 29 CFR 1910.132-138 - Personal Protective Equipment current edition.

B. 29 CFR 1910.145 - Accident Prevention Signs and Tags current edition.

C. 29 CFR 1910.1000 - Air Contaminants current edition.

D. 40 CFR 273 - Standards For Universal Waste Management current edition.

E. 40 CFR 761 - Polychlorinated Biphenyls (PCBs) Manufacturing, Processing, Distribution In Commerce, And Use Prohibitions current edition.

F. 49 CFR 178 - Specifications for Packaging current edition.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures, except that all submittals are to be made to Owner, not to Architect.

B. Qualifications of Certified Industrial Hygienist: Submit name, address, and telephone number and documentation of certification, including certification number and date of certification or recertification.

C. Toxic Substances Removal Work Plan.

D. Disposal Plan.

E. Worker Training Certification: Submit certificates, prior to the start of work but after the main abatement submittals, signed and dated by the Certified Industrial Hygienist and by each employee stating that the employee has received training; organize by individual worker not by type of certificates.

F. Spill notification and documentation:

1. Certification of Decontamination for PCB Spill.

2. Post-cleanup sampling data, if required.

G. Transporter and disposal documentation.

1.06 QUALITY ASSURANCE

A. Notification: Notify Owner 20 days prior to the start of toxic substance removal work.

B. Reference Documents: At all times maintain one copy each of 29 CFR 1910.1000, 40 CFR 761, and Contractor work practices for removal, storage and disposal of toxic substances, at field office and one copy each in view at project site.

C. Certified Industrial Hygienist (CIH): Obtain services of an industrial hygienist certified by American Board of Industrial Hygiene to review and approve Toxic Substances Removal Plan, including determination of the need for personnel protective equipment (PPE) in performing toxic substance removal work, and to certify training.

D. Training: Instruct employees on dangers of exposure to toxic substances present and on respirator use, decontamination, and applicable regulations.

E. Surveillance Personnel: Surveillance personnel may enter Control Areas for brief periods of time provided they wear disposable polyethylene gloves and disposal polyethylene foot covers, as a minimum. Additional protective equipment may be required if respiratory hazard is involved or if skin contact with PCB is involved.

F. Toxic Substances Removal Work Plan: Submit a detailed job-specific plan of the work procedures to be used in the removal and containment of toxic substance-containing materials, not to be combined with other hazardous abatement plans.

1. Select removal procedures to minimize contamination of work areas with toxic substances or contaminated debris or waste.

2. Include a sketch showing the location, size, and details of Control Areas.

3. Include location and details of decontamination rooms, change rooms, shower facilities and mechanical ventilation system.

4. Include eating, drinking, smoking and restroom procedures, interface of trades, sequencing of related work, Disposal Plan, respirators, protective equipment, and a detailed description of the method of containment of the operation to ensure that toxic substances are not spread or carried outside of the control area unless properly containerized or controlled.

5. Obtain approval of plan prior to the start of removal work.

G. Disposal Plan: Within 45 calendar days after award of contract submit a Disposal Plan that complies with applicable requirements of federal, state, and local waste regulations.

1. Do not proceed without Owner 's approval of plan.
2. Do not proceed without Architect 's approval of plan.
3. Include in Plan:
    a. Identification of wastes associated with the work.
    b. Estimated quantities of wastes to be generated and disposed of.
    c. Names and qualifications of each contractor that will be transporting, storing, treating, and disposing of the wastes.
    d. Disposal facility location and 24-hour point of contact; furnish two copies of facility's EPA waste permit applications and EPA Identification numbers.
    e. Names and qualifications (experience and training) of personnel who will be working on-site with toxic substances.
    f. List of waste handling equipment to be used in performing the work, to include cleaning, volume reduction, and transport equipment.
    g. Spill prevention, containment, and cleanup contingency measures to be implemented.

PART 2 PRODUCTS

2.01 EQUIPMENT

A. Special Clothing (PPE): Work clothes shall consist of personal protective equipment (PPE) as required by 29 CFR 1910.132-138; including, but not limited to, the following:

1. Disposable coveralls.
2. Gloves (Disposable rubber gloves may be worn under these).
3. Disposable foot covers (polyethylene).
4. Chemical safety goggles.
5. Half mask cartridge respirator.

B. Special Clothing for Owner 's Personnel Required to Enter Control Areas: Provide PPE same as specified for workers.

C. PCB Spill Kit: Include the following items, in at least the quantity indicated:

1. Disposable Gloves (Polyethylene): 6 Pairs.
2. Gloves With A High Degree Of Impermeability To PCB: 6 Pairs
3. Disposable Coveralls With Permeation Resistance To PCB: 4 Each.
4. Chemical Safety Goggles: 2 Each.
5. Disposable Foot Covers (Polyethylene): 6 Pairs.
6. PCB Caution Sign: "PCB Spill--Authorized Personnel Only": 2 Each.
7. Banner Guard Or Equivalent Banner Material: 100 feet (30 m).
8. Absorbent Material.
9. Blue Polyethylene Waste Bags: 5 Bags.

10. Cloth Backed Tape: 5 Each.
11. Area Access Logs, Blank: 1 Roll.
12. Brattice Cloth 6 by 6 feet (2 by 2 m): 10 Each.
13. Rags: 1 Piece.
14. Ball Point Pens: 20 Each.
15. Herculite, 4 by 4 feet (1.5 by 1.5 m): 2 Each.
16. Herculite, 8 by 8 feet (3 by 3 m): 1 Each.
17. Blank Metal Signs And Grease Pencils.
18. Waste Containers: 55 gallon (208 Liters): 2 Each.
19. Drum (May Be Used As Container For Kit): 1 Each.

D. PCB Caution Labels: Comply with 40 CFR 761, Subpart C.
   1. Affix labels to PCB waste containers and PCB-contaminated items not stored in containers.
   2. Provide label with sufficient print size to be clearly legible, with bold print on contrasting background, displaying the following: "CAUTION: Contains PCBs (Polychlorinated Biphenyls)."

E. Caution Signs: Comply with 29 CFR 1910.145.
   1. Provide signs at approaches to Control Areas.
   2. Locate signs at such a distance that personnel may read the sign and take the necessary precautions before entering the control area.

F. Storage Containers for PCBs: Comply with 49 CFR 178.
   1. Liquid PCBs: Department of Transportation (DOT) Specification 17E containers.
   2. Non-Liquid PCB Mixtures, Articles, and Equipment: DOT Specification 5, 5B, or 17C containers with removable heads.

G. Storage Containers for Mercury-Containing Lamps: Appropriate DOT containers (original transport boxes or equivalent).

PART 3 EXECUTION

3.01 PREPARATION

A. Control Area: Isolate Control Area by physical boundaries to prevent unauthorized entry of personnel; do not permit food, drink, or smoking materials in areas where toxic substances are handled or stored.

3.02 WORK PROCEDURE - PCBS

A. Permissible Exposure Limits (PEL): PEL for PCBs is 3.1 E-08 pounds per cubic foot (0.5 mg/cu m) on an 8-hour time weighted average basis.

B. Work Operations: Ensure that work operations and processes involving PCB or PCB-contaminated materials are conducted in accordance with 40 CFR 761 and the applicable requirements of this section, including but not limited to:
   1. Obtaining advance approval of PCB storage sites.
   2. Notifying Owner prior to commencing the operation.
   3. Reporting leaks and spills to Owner .
   4. Cleaning up spills.

5. Maintaining access log of employees working in Control Area and providing copy to Owner upon completion of the operation.
6. Inspecting PCB and PCB-contaminated items and waste containers for leaks and forwarding copies of inspection reports to Owner .
7. Maintaining the specified spill kit.
8. Maintaining inspection, inventory and spill records.

C. Perform PCB removal as described in PCB Removal Work Plan; handle PCBs so that no skin contact occurs.

D. Personnel Protection: Require workers to wear and use PPE, as recommended by the Industrial Hygienist, upon entering PCB control area. If PPE is not required by the CIH, so state in PCB Removal Work Plan.

E. Footwear: Keep work footwear inside work area until completion of removal operations.

F. Hazards:

1. Do not expose PCBs to open flames or other high temperature sources since toxic decomposition by-products may be produced.
2. Do not heat or handle PCBs to temperatures of 135 degrees F (55 degrees C) or higher without Owner 's concurrence.

G. Package, mark, transport, and dispose of PCBs as required by regulations.

H. Control Area: Allow only personnel certified as having received specified training into the control area.

I. No Smoking: Smoking is not permitted within 50 feet (15 m) of control area; provide "No Smoking" signs as directed by Owner .

J. Confined Spaces: Wherever feasible, do not carry out PCB handling operations in confined spaces having limited means of egress and inadequate cross ventilation.

K. Exhaust Ventilation: If used, discharge exhaust ventilation for PCB operations to outside and away from personnel.

L. Solvent Cleaning: Clean contaminated tools, containers, etc., after use by rinsing three times with appropriate solvent or by wiping down three times with solvent wetted rag; suggested solvents are Stoddard solvent and hexane.

M. Drip Pans: Place drip pans under portable PCB transformers and rectifiers in use or stored for use; provide pans with containment volume of at least one and one-half times internal volume of PCBs that would drain into pan.

N. Evacuation Procedures: Establish written procedures for evacuation of injured workers; do not delay aid for a seriously injured worker for reasons of decontamination.

3.03 PCB-CONTAINING EQUIPMENT EXCEPT BALLASTS

A. Draining of Liquid PCB: Drain equipment items of free flowing liquid prior to transportation.

1. Place the drained liquids in specified containers, filled with not more than 50 gallons (190 liters) of oil.
2. Do not mix different concentrations in the same container.
3. Containers must have a 2 inch (50 mm) ullage space from the top of the container.
4. After draining add absorbent material to absorb oil residue remaining.

B. If equipment cannot be drained, place it in storage container of the type specified.

C. Markings: Apply specified PCB Caution Labels to containers and drained PCB-contaminated electrical equipment.

1. Apply date drained to transformer using stencil or grease pencil.
2. Containers: Stencil on the following:
    a. PCB content in parts per million (ppm).
    b. Date container filled.
    c. Serial number of transformer liquid came from.

3.04 BALLASTS

A. As ballasts are removed from lighting fixtures, inspect label on ballast.

1. Ballasts Without "No PCB" Label: Assume to contain PCBs; containerize and dispose of as specified.
2. Ballasts With "No PCB" Label: If there are less than 1600 total to be removed from project, dispose of them as normal demolition debris.

B. More Than 1600 "No PCB" Labeled Ballasts: Determine whether the "No PCB" labeled ballasts contain diethylhexyl phthalate (DEHP) either by testing or by checking with ballast manufacturer indicated on the label.

1. Submit testing results and/or written confirmation from manufacturer to Owner .
2. If the ballasts do not contain DEHP, dispose of them as normal demolition debris.
3. If they do contain DEHP, dispose of them as as specified for PCBs.
4. As basis of contract assume ballasts with "No PCB" labels do not contain DEHP.
5. If 1600 or more DEHP ballasts are disposed of in a 24 hour period, notify the National Response Team at 800-424-8802.

3.05 MERCURY-CONTAINING LIGHTING LAMPS

A. Lighting Lamps: Remove lighting tubes/lamps from lighting fixtures and carefully place, unbroken, into containers.

1. In the event a lighting tube/lamp breaks, sweep up pieces and contents and place waste in double plastic taped bags and dispose of as Universal Waste as specified in 40 CFR 273.

B. Deliver unbroken, boxed, lamps to Owner at location directed.

3.06 PCB SPILL CLEANUP REQUIREMENTS

A. Immediately report to Owner all PCB spills on the ground or in the water, PCB spills in drip pans, and PCB leaks.

B. Control Area: Rope off area around edges of PCB leaks and spills and post "PCB Spill Authorized Personnel Only" caution sign. Immediately transfer leaking items to drip pan or other container.

C. Cleanup: Comply with 40 CFR 761, Subpart G.

1. Initiate cleanup of spills as soon as possible, but no later than 48 hours of its discovery.
2. Require personnel to wear specified PPE, unless determined not required by CIH.
3. If misting, elevated temperatures, or open flames are present, or if spill is situated in a confined space, notify Owner .
4. Mop up liquid with rags or other conventional absorbent.

5. Treat spent absorbent as solid PCB waste.

D. Records and Certification: Document cleanup with records of decontamination in accordance with 40 CFR 761, Section 125, Requirements for PCB Spill Cleanup; provide certification of decontamination.

E. Sampling: Perform post cleanup sampling as required by 40 CFR 761, Section 130, Sampling Requirements.

F. Do not remove boundaries of PCB control area until site is determined satisfactorily clean by Owner .

3.07 TEMPORARY STORAGE PRIOR TO DISPOSAL

A. Storage Site: Obtain Owner 's approval in advance of areas, spaces, rooms, and buildings used to store toxic substances prior to disposal off-site; storage sites must comply with the following criteria without exception:

1. Adequate roof and walls to prevent rainwater from reaching stored toxic substances.
2. Adequate floor that has continuous curbing with minimum 6 inch (50 mm) high curb, with containment volume equal to at least two times internal volume of largest toxic substance article or container stored therein or 25 percent of total internal volume of all toxic substance containing equipment or containers stored therein, whichever is greater.
3. No drain valves, floor drains, expansion joints, sewer lines, or other openings that would permit liquids to flow from curbed area.
4. Floors and curbing constructed of continuous smooth and impervious materials, such as Portland cement, concrete, or steel, to prevent or minimize penetrations of toxic substances.
5. Not located at a site that is below the 100-year flood water elevation.
6. Posted with specified Caution Sign.

B. Store PCBs, PCB articles, and PCB-contaminated items in specified containers.

1. Label waste containers with the following:
   a. "Solid (or Liquid) Waste Polychlorinated Biphenyls."
   b. Specified PCB Caution Label.
   c. Date item was placed in storage and name of generator.
2. Label PCB articles and PCB-contaminated items with the following:
   a. Specified PCB Caution Label.
   b. Date item was placed in storage and name of generator.

C. Label mercury-containing lamp waste in accordance with 40 CFR 273. Affix labels to all lighting waste containers.

3.08 CLEANING

A. Clean up and containerize wastes daily.

B. Maintain surfaces of Control Areas free of accumulations of toxic substances. Restrict spread of dust and debris; keep waste from being distributed over work area.

C. Do not remove Control Area boundaries or warning signs prior to Owner 's approval.

D. Reclean areas showing residual toxic substances.

3.09 DISPOSAL BY CONTRACTOR

A. Comply with disposal requirements and procedures specified in 40 CFR 761 and [_____]; deliver toxic substance waste to a disposal facility having required permits.
   1. Do not accept toxic substance waste unless it is accompanied by a manifest signed by Owner .
   2. Before transporting toxic substance waste, sign and date manifest acknowledging acceptance of the waste from Owner .
   3. Return a signed copy to Owner before leaving project site.
   4. Ensure that manifest accompanies waste at all times.
   5. Submit transporter certification of notification to EPA of their toxic substance waste activities.

B. Certificate of Disposal: Submit to Owner within 30 days of date that disposal of waste identified on manifest was completed; include on the certificate:
   1. The identity of disposal facility, by name, address, and EPA identification number.
   2. The identity of waste affected by Certificate of Disposal including reference to manifest number for the shipment.
   3. Statement certifying the fact of disposal of the identified waste, including date(s) of disposal, and identifying disposal process used.
   4. Certification as defined in 40 CFR 761, Section 3.

END OF SECTION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Horizontal slat louver blinds.

B. Operating hardware.

1.02 RELATED REQUIREMENTS

A. Section 06 1000 - Rough Carpentry: Concealed wood blocking for attachment of headrail brackets.

B. Section 10 7113 - Exterior Sun Control Devices: Exterior horizontal louver blinds.

C. Section 12 2116 - Vertical Louver Blinds.

1.03 PRICE AND PAYMENT PROCEDURES

A. Allowances: See Section 01 2100 - Allowances, for cash allowances affecting this section.

1.04 REFERENCE STANDARDS

A. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

B. WCMA A100.1 - Safety of Window Covering Products 2018.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordinate the placement of concealed blocking to support blinds. See Section 06 1000.

1.06 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data indicating physical and dimensional characteristics.

C. Shop Drawings: Indicate opening sizes, tolerances required, method of attachment, clearances, and operation.

D. Samples: Submit two samples illustrating slat materials and finish, cord type and color.

E. Manufacturer's Installation Instructions: Indicate special procedures.

F. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Blind Assemblies: One of each size.
3. Extra Slats: 20 of each type and size.
4. Extra Lift Cords, Control Cords, and Wands: One of each type.

1.07 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Horizontal Louver Blinds:

1. Substitutions: See Section 01 6000 - Product Requirements.

B. Horizontal Louver Blinds With Side Guides:

1. Basis of Design: Draper, Inc; Venetian Blinds by Warema; www.draperinc.com/#sle.
2. Other Acceptable Manufacturers:
3. Substitutions: See Section 01 6000 - Product Requirements.

C. Source Limitations: Furnish blinds and associated controls produced by a single manufacturer and obtained from a single supplier.

2.02 BLINDS

A. Description: Horizontal slat louvers hung from full-width headrail with full-width bottom rail.

B. Manual Operation: Control of raising and lowering by cord with full range locking; blade angle adjustable by control wand.

C. Metal Slats: Spring tempered pre-finished aluminum; square slat corners, with manufacturing burrs removed.

1. Width: 2 inch (50 mm).
2. Color: As selected by Architect.

D. Wood Slats: square slat corners.

1. Width: 2 inch (50 mm).
2. Pre-finished, color as selected by Architect.

E. Slat Support: Woven polypropylene cord, ladder configuration.

F. Head Rail: Pre-finished, formed aluminum box, with end caps; internally fitted with hardware, pulleys, and bearings for operation; same depth as width of slats.

1. Color: Same as slats.

G. Bottom Rail: Pre-finished, formed steel; with end caps.

1. Color: Same as headrail.

H. Lift Cord: Braided nylon; continuous loop; complying with WCMA A100.1.

1. Free end weighted.
2. Color: As selected by Architect.

I. Control Wand: Extruded hollow plastic; hexagonal shape.

1. Non-removable type.
2. Length of window opening height less 3 inch (76 mm).
3. Color: Clear.

J. Headrail Attachment: Wall brackets.

K. Accessory Hardware: Type recommended by blind manufacturer.

2.03 BLINDS WITH SIDE GUIDES

A. Description: Horizontal slat louvers hung from full-width headrail with full-width bottom rail and side guides for slat stability.

B. Manual Operation: Control of raising, lowering, and tilting blades by crank operator. Gear box concealed in headrail; fixed handle.

C. Headrail: Extruded aluminum, size according to length of drop of blinds.

D. Headrail Box: Custom fabricated sheet aluminum box to protect blinds in raised position. Size as required to cover stack of retracted blinds.

E. Bottom Rail: Extruded aluminum with plastic end caps, size according to width of slat.

F. Metal Slats: Pre-finished aluminum; square slat corners, with manufacturing burrs removed.

1. Width: 2 inch (50 mm).

G. Slat Support: Heavy-duty, tear-resistant terylene yarn, ladder configuration.

H. Side Guides:

1. Extruded aluminum side channels with plastic inserts.

I. Headrail Attachment: Direct-mounted.

J. Finish/Color:

1. Other exposed aluminum components: Color to match slats.

2.04 FABRICATION

A. Determine sizes by field measurement.

B. At openings requiring multiple blind units, provide separate blind assemblies with space as specified by architect between blinds, located at window mullion centers.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that openings are ready to receive the work.

B. Ensure structural blocking and supports are correctly placed. See Section 06 1000.

3.02 INSTALLATION

A. Install blinds in accordance with manufacturer's instructions.

B. Secure in place with flush countersunk fasteners.

3.03 TOLERANCES

A. Maximum Variation of Gap at Window Opening Perimeter: 1/4 inch (6 mm).

B. Maximum Offset From Level: 1/8 inch (3 mm).

3.04 ADJUSTING

A. Adjust blinds for smooth operation.

3.05 CLEANING

A. Clean blind surfaces just prior to occupancy.

B. See Section 01 7419 - Construction Waste Management and Disposal, for additional requirements.

END OF SECTION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Roll-up mats.

B. Recessed mat frames.

1.02 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data indicating properties of walk-off surface, component dimensions, recessed frame characteristics and profiles, and finishes.

C. Shop Drawings: Indicate dimensions, details for recessed frame, and divisions between mat sections.

1. For recessed frames located within a dimensionally restricted area, show dimensions of space within which the frame will be installed.

D. Samples for Initial Selection: For each type of product indicated.

E. LEED Submittals:

1. Credit MR 4: Product Data and certification letter indicating percentages by weight of post-consumer and pre-consumer recycled content for products having recycled content. Include statement indicating costs for each product having recycled content.

a. Contributions to this Credit include recycled content of aluminum.

F. Maintenance Data: Include cleaning instructions and stain removal procedures.

1.03 QUALITY ASSURANCE

A. Source Limitations: Obtain floor mats and frames through one source from a single manufacturer.

B. Accessibility Requirements: Provide installed floor mats that comply with most stringent requirements of Section 4.5 in the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA), Accessibility Guidelines for Buildings and Facilities (ADAAG)" and Sections 302 and 303 in ICC A117.1.

1.04 PROJECT CONDITIONS

A. Field Measurements: Indicate measurements on Shop Drawings.

1.05 COORDINATION

A. Coordinate size and location of recesses in concrete with installation of finish floors to receive floor mats and frames.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Floor Mats:

1. American Floor Products Company, Inc: www.afco-usa.com.

2. C. Musson Rubber Co: www.mussonrubber.com.

3. Pawling Corporation: www.pawling.com.

4. C/S Group .

2.02 MATS

A. Roll-Up, Aluminum-Rail Hinged Mats: Extruded-aluminum tread rails 1-1/2 inches wide by 3/8 inches thick, sitting on continuous vinyl cushions.

1. Tread Inserts: 32-oz./sq. yd. weight, fusion-bonded solution-dyed polypropylene carpet.
2. Rail Color: Clear.
3. Hinges: Aluminum.
4. Mat Size: As indicated.
5. Products:
    a. American Floor Products Company, Inc.; Stratoflex III Foot Grid System.
    b. C/S Group; Product Pedimat.
    c. Musson, R. C. Rubber Co.; Product EM-800.
    d. Pawling Corporation; Architectural Products Division; Product EM-800 Rol-Dek.

B. Recessed Frame:

1. Extruded Aluminum: ASTM B 221, Alloy 6061-T6 or Alloy 6063-T5, T6, or T52.
2. Color: Clear anodized.

2.03 CONCRETE FILL AND GROUT MATERIALS

A. Provide concrete grout and fill equivalent in strength to cast-in-place concrete slabs for recessed mats and frames. Use aggregate no larger than one-third fill thickness.

2.04 FABRICATION

A. Construct recessed mat frames square, tight joints at corners, rigid. Coat surfaces with protective coating where in contact with cementitious materials.

B. Fabricate mats in single unit sizes; fabricate multiple mats where indicated. Do not exceed manufacturer's recommended maximum sizes for units that are removed for maintenance and cleaning. Where joints in mats are necessary, space symmetrically and away from normal traffic lanes. Miter corner joints in framing elements with hairline joints or provide prefabricated corner units without joints.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates and floor conditions for compliance with requirements for location, sizes, minimum recess depth, and other conditions affecting installation of floor mats and frames.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Mats: Verify size of floor recess before fabricating mats.

B. Vacuum clean floor.

3.03 INSTALLATION

A. Install frames to achieve flush plane with finished floor surface and comply with manufacturer's written instructions.

B. Coordinate top of mat surfaces with bottom of doors that swing across mats to provide clearance between door and mat.

C. Install walk-off surface in floor recess flush with finish floor after cleaning of finish flooring.

1. Install necessary shims, spacers, and anchorages for proper location and secure attachment of frames.
2. Install grout and fill around frames and, if required to set mat tops at proper elevations, in recesses under mats. Finish grout and fill smooth and level.

3.04 PROTECTION

A. After completing frame installation and concrete work, provide temporary filler of plywood or fiberboard in recesses and cover frames with plywood protective flooring. Maintain protection until construction traffic has ended and Project is near Substantial Completion.

END OF SECTION

SECTION 03 0100
MAINTENANCE OF CONCRETE

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Cleaning of existing concrete surfaces.

B. Repair of exposed structural, shrinkage, and settlement cracks.

C. Resurfacing of concrete surfaces having spalled areas and other damage.

D. Repair of deteriorated concrete.

E. Repair of internal concrete reinforcement.

F. Scope of Work: As indicated on drawings.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Finishing of concrete surface to tolerance; floating, troweling, and similar operations; curing.

1.03 PRICE AND PAYMENT PROCEDURES

A. See Section 01 2200 - Unit Prices, for additional unit price requirements.

B. Repair Surface: By the square foot (meter). Includes surface preparation, repair, finishing.

C. Preparation for Resurfacing: By the square yard (meter). Includes surface preparation, cleaning.

1.04 REFERENCE STANDARDS

A. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement 2018, with Editorial Revision (2018).

B. ASTM A767/A767M - Standard Specification for Zinc-Coated (Galvanized) Steel Bars for Concrete Reinforcement 2016.

C. ASTM A996/A996M - Standard Specification for Rail-Steel and Axle-Steel Deformed Bars for Concrete Reinforcement 2016.

D. ASTM A1064/A1064M - Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete 2018.

E. ASTM C33/C33M - Standard Specification for Concrete Aggregates 2016, with Editorial Revision (2016).

F. ASTM C39/C39M - Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens 2018.

G. ASTM C109/C109M - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 2-in. or (50-mm) Cube Specimens) 2016a.

H. ASTM C150/C150M - Standard Specification for Portland Cement 2018.

I. ASTM C348 - Standard Test Method for Flexural Strength of Hydraulic-Cement Mortars 2014.

J. ASTM C404 - Standard Specification for Aggregates for Masonry Grout 2011.

K. ASTM C881/C881M - Standard Specification for Epoxy-Resin-Base Bonding Systems for Concrete 2015.

L. ASTM C928/C928M - Standard Specification for Packaged, Dry, Rapid-Hardening Cementitious Material for Concrete Repairs 2013.

M. ASTM C1059/C1059M - Standard Specification for Latex Agents for Bonding Fresh to Hardened Concrete 2013.

N. AWS D1.4/D1.4M - Structural Welding Code - Reinforcing Steel 2011.

O. ICRI 310.2R - Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings, Polymer Overlays, and Concrete Repair 2013.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Scheduling: Perform blast cleaning only between the hours of 7 am to 10 pm.

1.06 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Indicate product standards, physical and chemical characteristics, technical specifications, limitations, maintenance instructions, and general recommendations regarding each material.

C. Designer's Qualification Statement.

D. Manufacturer's Qualification Statement.

E. Installer's Qualification Statement.

F. Project Record Documents: Accurately record actual locations of structural reinforcement repairs and type of repair.

1.07 QUALITY ASSURANCE

A. Designer Qualifications: Design reinforcement splices under direct supervision of a Professional Structural Engineer experienced in design of this type of work and licensed in Maryland.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

C. Installer Qualifications: Company specializing in performing work of the type specified and with minimum of 3 years of documented experience.

1.08 MOCK-UP(S)

A. Test each type of maintenance procedure required on each type of existing construction, to determine the most appropriate procedures to use and as a record of expected results.

B. Crack Injection: Prepare one sample of each type of injection.

C. Horizontal Surface Repair: Total of 10 foot (3 m) square area, demonstrating each type of repair.

D. Vertical Surface Repair: Total of 10 foot (3 m) square area, demonstrating each type of repair.

E. Where color or texture matching is required, first prepare a small size sample on cementitious board.

F. Locate mock-up(s) where directed.

G. Re-work mock-up(s) until satisfactory to Architect.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Comply with manufacturers' instructions for storage, shelf life limitations, and handling of products.

PART 2 PRODUCTS

2.01 CLEANING MATERIALS

A. Degreaser:

1. Manufacturers:

a. Euclid Chemical Company; Euco Clean and Strip: www.euclidchemical.com/#sle.

b. L&M Construction Chemicals, Inc, a subsidiary of Laticrete International, Inc; CITREX: www.lmcc.com/#sle.

c. SpecChem, LLC; Orange Peel-Citrus Cleaner: www.specchemllc.com/#sle.

d. Substitutions: See Section 01 6000 - Product Requirements.

B. Detergent: Non-ionic detergent.

C. Alkaline Cleaning Agent:.

D. Acidic Cleaning Agent:.

E. Blasting Medium: .

2.02 CEMENTITIOUS PATCHING AND REPAIR MATERIALS

A. Manufacturers:

1. Adhesives Technology Corporation: www.atcepoxy.com/#sle.
2. ARDEX Engineered Cements: www.ardexamericas.com/#sle.
3. Dayton Superior Corporation: www.daytonsuperior.com/#sle.
4. Euclid Chemical Company: www.euclidchemical.com/#sle.
5. Kaufman Products Inc: www.kaufmanproducts.net/#sle.
6. Master Builders Solutions by BASF: www.master-builders-solutions.basf.us/en-us/#sle.
7. The QUIKRETE Companies: www.quikrete.com/#sle.
8. SpecChem, LLC: www.specchemllc.com/#sle.
9. Stauf USA LLC: www.staufusa.com/#sle.
10. Substitutions: See Section 01 6000 - Product Requirements.

B. Bonding Slurry: Water-based latex admixture complying with ASTM C1059/C1059M, combined with Portland cement and sand in accordance with admixture manufacturer's instructions.

1. Admixture Manufacturers:

a. Dayton Superior Corporation; Acrylic Bonding Agent J40: www.daytonsuperior.com/#sle.

b. Euclid Chemical Company; AKKRO-7T: www.euclidchemical.com/#sle.

c. The QUIKRETE Companies; QUIKRETE® Concrete Bonding Adhesive: www.quikrete.com/#sle.

d. SpecChem, LLC; Strong Bond - Acrylic Bonder: www.specchemllc.com/#sle.

e. W. R. Meadows, Inc; Acry-lok: www.wrmeadows.com/#sle.

f. Substitutions: See Section 01 6000 - Product Requirements.

C. Cementitious Resurfacing Mortar: One- or two-component, factory-mixed, polymer-modified cementitious mortar designed for continuous thin-coat application.

1. In-place material resistant to freeze/thaw conditions.
2. Mixed with water or latex type bonding agent in proportions as recommended by manufacturer.
3. Integral corrosion inhibitor.
4. Recommended Thickness: Feather edge to 1/8 inch (Feather edge to 3 mm).
5. Color: Gray.

6. Manufacturers:
    a. Euclid Chemical Company; THIN TOP SUPREME: www.euclidchemical.com/#sle.
    b. Kaufman Products Inc; Patchwell Deep Light: www.kaufmanproducts.net/#sle.
    c. SpecChem, LLC: Duo Patch: www.specchemllc.com/#sle.
    d. Xypex Chemical Corporation; XYPEX Megamix II: www.xypex.com/#sle.
    e. Substitutions: See Section 01 6000 - Product Requirements.

D. Cementitious Repair Mortar, Trowel Grade: One- or two-component, factory-mixed, polymer-modified cementitious mortar.
    1. In-place material resistant to freeze/thaw conditions.
    2. Mixed with water or latex type bonding agent in proportions as recommended by manufacturer.
    3. Products:
        a. ARDEX Engineered Cements; ARDEX Feather Finish: www.ardexamericas.com/#sle.
        b. Adhesives Technology Corporation; HARD-ROK JET PATCH: www.atcepoxy.com/#sle.
        c. Dayton Superior Corporation; Civil/Structural VO: www.daytonsuperior.com/#sle.
        d. Euclid Chemical Company; EXPRESS REPAIR: www.euclidchemical.com/#sle.
        e. Euclid Chemical Company; EucoRepair V100: www.euclidchemical.com/#sle.
        f. Five Star Products, Inc; Five Star Structural Concrete V/O: www.fivestarproducts.com/#sle.
        g. Kaufman Products Inc; Patchwell Deep Light: www.kaufmanproducts.net/#sle.
        h. The QUIKRETE Companies; QUIKRETE® FastSet Repair Mortar: www.quikrete.com/#sle.
        i. SpecChem, LLC; SpecPatch: www.specchemllc.com/#sle.
        j. W. R. Meadows, Inc; Meadow-Patch T1, Meadow-Patch T2, Meadow-Patch 5, or Meadow-Patch 20: www.wrmeadows.com/#sle.
        k. Substitutions: See Section 01 6000 - Product Requirements.

E. Cementitious Repair Mortar, Form and Pour/Pump Grade: Flowable, one- or two-component, factory-mixed, polymer-modified cementitious mortar; in-place material resistant to freeze/thaw conditions.
    1. Mixed with water in proportions as recommended by manufacturer.
    2. Integral corrosion inhibitor.
    3. Manufacturers:
        a. ARDEX Engineered Cements; ARDEX FDM: www.ardexamericas.com/#sle.
        b. Dayton Superior Corporation; Civil/Structural FPX : www.daytonsuperior.com/#sle.
        c. Euclid Chemical Company; EUCOCRETE: www.euclidchemical.com/#sle.
        d. Euclid Chemical Company; EUCOCRETE SUPREME: www.euclidchemical.com/#sle.
        e. Five Star Products, Inc; Five Star Structural Concrete: www.fivestarproducts.com/#sle.
        f. Kaufman Products Inc; Patchwell Deep: www.kaufmanproducts.net/#sle.
        g. SpecChem, LLC; RepCon H-350; www.specchemllc.com/#sle.
        h. W. R. Meadows, Inc; Meadow-Crete FNP: www.wrmeadows.com/#sle.
        i. Substitutions: See Section 01 6000 - Product Requirements.

F. Cementitious Pavement Repair Mortar: Fast hardening, flowable; composed of cement, sand, and additives; capable of setting in cold weather conditions without the aid of chloride- or gypsum-based accelerators; in-place material resistant to freeze/thaw conditions.
   1. Dry Material: Complies with ASTM C928/C928M.
   2. Integral corrosion inhibitor.
   3. Time To Open To Traffic: 6 hours, maximum.
   4. Time to Top-Coating: 4 hours, maximum.
   5. Manufacturers:
      a. ARDEX Engineered Cements; ARDEX ERM: www.ardexamericas.com/#sle.
      b. ARDEX Engineered Cements; ARDEX CD: www.ardexamericas.com/#sle.
      c. ARDEX Engineered Cements; ARDEX Fine CD: www.ardexamericas.com/#sle.
      d. Dayton Superior Corporation; HD 50 : www.daytonsuperior.com/#sle.
      e. Kaufman Products Inc; Duracrete II: www.kaufmanproducts.net/#sle.
      f. Kaufman Products Inc; Duracrete II FT: www.kaufmanproducts.net/#sle.
      g. Kaufman Products Inc; Duracrete II VOFT: www.kaufmanproducts.net/#sle.
      h. SpecChem, LLC; RepCon 928: www.specchemllc.com/#sle.
      i. SpecChem, LLC; RepCon 928 FS: www.specchemllc.com/#sle.
      j. Substitutions: See Section 01 6000 - Product Requirements.

G. Cementitious Hydraulic Waterstop: Very fast setting, low slump, hand formable, and capable of stopping active water leaks; in-place material resistant to freeze/thaw conditions.
   1. Manufacturers:
      a. Dayton Superior Corporation; Waterstop : www.daytonsuperior.com/#sle.
      b. Euclid Chemical Company; SPEED PLUG: www.euclidchemical.com/#sle.
      c. Kaufman Products Inc; SurePlug - regular set: www.kaufmanproducts.net/#sle.
      d. Kaufman Products Inc; HiCap: www.kaufmanproducts.net/#sle.
      e. SpecChem, LLC; SpecPlug or Super SpecPlug; www.specchemllc.com/#sle.
      f. W. R. Meadows, Inc; Meadow-Plug or Meadow-Patch 5: www.wrmeadows.com/#sle.

H. Exterior Self-Leveling Concrete Topping: Portland cement-based; suitable as wear surface topping in exterior and wet locations as well as underlayment for applied materials.
   1. Compressive Strength: 4300 pounds per square inch (30 MPa), minimum, at 28 days, when tested in accordance with ASTM C109/C109M, air cured.
   2. Flexural Strength: 1000 pounds per square inch (7 MPa), minimum, at 28 days, when tested in accordance with ASTM C348.
   3. Manufacturers:
      a. ARDEX Engineered Cements; ARDEX K301: www.ardexamericas.com/#sle.
      b. Kaufman Products Inc; SureFlow 042: www.kaufmanproducts.net/#sle.
      c. Substitutions: See Section 01 6000 - Product Requirements.

I. Pre-Blended Concrete Mix for Small Projects: Construction-grade Portland cement uniformly blended with aggregates and other approved concrete ingredients, requiring only the addition of water.

1. Compressive Strength: 4000 pounds per square inch (27.6 MPa), minimum, at 28 days, when tested in accordance with ASTM C39/C39M.
2. Manufacturers:
    a. The QUIKRETE Companies; QUIKRETE® Concrete Mix: www.quikrete.com/#sle.
    b. The QUIKRETE Companies; QUIKRETE® Crack Resistant Concrete Mix: www.quikrete.com/#sle.
    c. Substitutions: See Section 01 6000 - Product Requirements.

2.03 EPOXY PATCHING AND REPAIR MATERIALS

A. Manufacturers:

1. Adhesives Technology Corporation: www.atcepoxy.com/#sle.
2. Chase Construction Products: www.chasecorp.com/#sle.
3. Euclid Chemical Company: www.euclidchemical.com/#sle.
4. Kaufman Products Inc.: www.kaufmanproducts.net/#sle.
5. SpecChem, LLC: www.specchemllc.com/#sle.
6. W. R. Meadows, Inc: www.wrmeadows.com/#sle.
7. Substitutions: See Section 01 6000 - Product Requirements.

B. Epoxy Repair Mortar: Epoxy resin mixed with aggregate and other materials in accordance with manufacturer's instructions for purpose intended; comply with pot life and workability limits.

1. Manufacturers:
    a. Adhesives Technology Corporation; Crackbond LR-321: www.atcepoxy.com/#sle.
    b. ARDEX Engineered Cements; ARDEX BACA: www.ardexamericas.com/#sle.
    c. Dayton Superior Corporation; Sure Patch: www.daytonsuperior.com/#sle.
    d. Dayton Superior Corporation; Sure Fil J52: www.daytonsuperior.com/#sle.
    e. Dayton Superior Corporation; Sure Seal LV/LM: www.daytonsuperior.com/#sle.
    f. Dayton Superior Corporation; Pro-Flex: www.daytonsuperior.com/#sle.
    g. Euclid Chemical Company; DURALFLEX FASTPATCH: www.euclidchemical.com/#sle.
    h. Kaufman Products Inc; SurePoxy Mortar, SurePoxy HMLV, or SurePoxy HMLV Class B: www.kaufmanproducts.net/#sle.
    i. LATICRETE International; SPARTACOTE™ Epoxy Fill Coat: www.laticrete.com/#sle.
    j. The QUIKRETE Companies; QUIKRETE® FastSet Anchoring Epoxy: www.quikrete.com/#sle.
    k. SpecChem, LLC; SpecPoxy 1000, SpecPoxy 2000, SpecPoxy 3000 or SpecPoxy 3000 FS: www.specchemllc.com/#sle.
    l. W. R. Meadows, Inc; Rezi-Weld Gel Paste, Rezi-Weld Gel Paste State, Rezi-Weld 1000, Rezi-Weld LV, or Rezi-Weld LV State: www.wrmeadows.com/#sle.
    m. Substitutions: See Section 01 6000 - Product Requirements.

C. Epoxy Injection Adhesive:

1. Manufacturers:
    a. Adhesives Technology Corporation; Crackbond LR-321: www.atcepoxy.com/#sle.
    b. Dayton Superior Corporation; Sure Inject J56 SLV: www.daytonsuperior.com/#sle.
    c. Dayton Superior Corporation; Pro-Poxy 100 : www.daytonsuperior.com/#sle.
    d. Kaufman Products Inc; SurePoxy HMLV, SurePoxy HMLV Class B, or SurePoxy HMSLV: www.kaufmanproducts.net/#sle.
    e. SpecChem, LLC; SpecPoxy 1000; www.specchemllc.com/#sle.
    f. W. R. Meadows, Inc; Rezi-Weld LV, Rezi-Weld LV State, Rezi-Weld (IP), or Rezi-Weld Gel Paste: www.wrmeadows.com/#sle.
    g. Substitutions: See Section 01 6000 - Product Requirements.

D. Epoxy Bonding Adhesive: Non-sag, two-part, 100 percent solids; recommended by manufacturer for purpose and conditions under which used.
    1. Non-Load-Bearing Applications: ASTM C881/C881M Type I, II, III, IV, or V, whichever is appropriate to application.
    2. Load-Bearing Applications: ASTM C881/C881M Type IV or V, whichever is appropriate to application.
    3. Other Applications: ASTM C881/C881M Type as appropriate to application.
    4. Manufacturers:
        a. ARDEX Engineered Cements; ARDEX BACA: www.ardexamericas.com/#sle.
        b. Adhesives Technology Corporation; Crackbond LR-321: www.atcepoxy.com/#sle.
        c. Adhesives Technology Corporation; Crackbond SLV-302: www.atcepoxy.com/#sle.
        d. Adhesives Technology Corporation; Ultrabond 2100: www.atcepoxy.com/#sle.
        e. Dayton Superior Corporation; Sure Bond J58 : www.daytonsuperior.com/#sle.
        f. Euclid Chemical Company; DURALFLEX GEL: www.euclidchemical.com/#sle.
        g. Euclid Chemical Company; DURALFLEX LV: www.euclidchemical.com/#sle.
        h. Euclid Chemical Company; DURAL 452 GEL, DURAL 452 LV, or DURAL 452 MV: www.euclidchemical.com/#sle.
        i. Kaufman Products Inc; SurePoxy HM Gel: www.kaufmanproducts.net/#sle.
        j. SpecChem, LLC; SpecPoxy 3000 FS: www.specchemllc.com/#sle.
        k. W. R. Meadows, Inc; Rezi-Weld 1000: www.wrmeadows.com/#sle.
        l. Substitutions: See Section 01 6000 - Product Requirements.

2.04 POLYURETHANE PATCHING AND REPAIR MATERIALS

A. Manufacturers:
    1. Adhesives Technology Corporation: www.atcepoxy.com/#sle.
    2. ARDEX Engineered Cements: www.ardexamericas.com/#sle.
    3. Substitutions: See Section 01 6000 - Product Requirements.

B. Polyurethane Repair Gel:
    1. Manufacturers:

a. Adhesives Technology Corporation; Crackbond CSR: www.atcepoxy.com/#sle.

b. ARDEX Engineered Cements; ARDEX ArdiFix: www.ardexamericas.com/#sle.

c. Substitutions: See Section 01 6000 - Product Requirements.

2.05 ACCESSORIES

A. Anchoring Adhesive: Self-leveling or non-sag as applicable.

1. Self-Leveling Polyester-Based Products:

a. W. R. Meadows, Inc; Poly-Grip: www.wrmeadows.com/#sle.

b. Substitutions: See Section 01 6000 - Product Requirements.

2. Self-Leveling Epoxy Products:

a. Euclid Chemical Company; DURAL FAST SET LV: www.euclidchemical.com/#sle.

b. SpecChem, LLC; SpecPoxy 2000; www.specchemllc.com/#sle.

c. W. R. Meadows, Inc; Rezi-Weld 1000, Rezi-Weld (IP), or Rezi-Weld 3/2: www.wrmeadows.com/#sle.

d. Substitutions: See Section 01 6000 - Product Requirements.

3. Non-Sag Epoxy Products:

a. Dayton Superior Corporation; Sure Anchor J50, Sure Anchor I J51, All Weather J51 AW, Pro-Poxy 300, Pro-Poxy 300 FAST, Pro-Poxy 400, or Pro-Poxy 500 : www.daytonsuperior.com/#sle.

b. Euclid Chemical Company; DURAL FAST SET GEL: www.euclidchemical.com/#sle.

c. SpecChem, LLC; SpecPoxy 3000 or SpecPoxy 3000 FS: www.specchemllc.com/#sle.

d. W. R. Meadows, Inc; Rezi-Weld Gel Paste or Rezi-Weld Gel Paste State: www.wrmeadows.com/#sle.

e. Substitutions: See Section 01 6000 - Product Requirements.

B. Portland Cement: ASTM C150/C150M, Type I, grey.

C. Sand: ASTM C33/C33M or ASTM C404; uniformly graded, clean.

D. Water: Clean and potable.

E. Reinforcing Steel: ASTM A615/A615M Grade 40 (40,000 psi) (280 MPa) billet-steel deformed bars, unfinished.

F. Reinforcing Steel: Deformed bars, ASTM A996/A996M Grade 40 (280), Type A.

1. Galvanized in accordance with ASTM A767/A767M, Class I.

G. Stirrup Steel: ASTM A1064/A1064M.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that surfaces are ready to receive work.

B. Beginning of installation means acceptance of substrate.

3.02 PREPARATION

A. Prepare concrete surfaces to be repaired according to ICRI 310.2R.

3.03 CLEANING EXISTING CONCRETE

A. Provide enclosures, barricades, and other temporary construction as required to protect adjacent work from damage.

B. Clean concrete surfaces of dirt or other contamination using the gentlest method that is effective.

1. Try the gentlest method first, then, if not clean enough, use a less gentle method taking care to watch for impending damage.
2. Clean out cracks and voids using same methods.

C. The following are acceptable cleaning methods, in order from gentlest to less gentle:

1. Water washing using low-pressure, maximum of 100 psi, and, if necessary, brushes with natural or synthetic bristles.
2. Increasing the water washing pressure to maximum of 400 psi.
3. Adding detergent to washing water; with final water rinse to remove residual detergent.
4. Steam-generated low-pressure hot-water washing.
5. Alkaline cleaning agent applied for the least amount of time that is effective, followed by slight acid rinse and water rinse.
6. Acidic cleaning agent applied for the least amount of time that is effective, followed by water rinse. Test acidic cleaning agents on mock-up surfaces prior to use.
7. Abrasive blasting: Use only abrasive media that have been proven not to damage concrete by testing on mock-up.

D. Do not use any of the following cleaning methods, unless otherwise indicated:

1. Brushes with wire bristles, grinding with abrasives, solvents, hydrochloric or muriatic acid, sodium hydroxide, caustic soda, or lye.
2. Soap or detergent that is not non-ionic.

3.04 PAINT AND GRAFFITI REMOVAL

3.05 CONCRETE STRUCTURAL MEMBER REPAIR

A. See drawings for specific areas to be repaired.

B. Remove broken and soft concrete at least 1/4 inch (6 mm) deep.

C. Mechanically cut away damaged portions of reinforcement.

D. Remove corrosion from steel and clean mechanically.

E. Blast clean remaining exposed reinforcement surfaces.

F. Repair by welding new bar reinforcement to existing reinforcement using sleeve splices.

1. Perform welding work in accordance with AWS D1.4/D1.4M.
2. Make welded sleeve splices to achieve strength to exceed strength of new reinforcement.

G. Follow repair product manufacturer's written installation instructions.

H. Cover exposed steel reinforcement with epoxy mortar.

I. Work epoxy mortar into broken surface and build up patch to match original.

J. Feather edges of repairs flush to sound surface and trowel surface to match surrounding area.

3.06 CRACK REPAIR USING EPOXY ADHESIVE INJECTION

A. Repair exposed cracks.

B. Provide temporary entry ports spaced to accomplish movement of fluids between ports; no deeper than the depth of the crack to be filled or port size diameter no greater than the thickness of the crack. Provide temporary seal at concrete surface to prevent leakage of adhesive.

C. Inject adhesive into ports under pressure using equipment appropriate for particular application.

D. Begin injection at lower entry port and continue until adhesive appears in adjacent entry port. Continue from port to port until entire crack is filled.

E. Remove temporary seal and excess adhesive.

F. Clean surfaces adjacent to repair and blend finish.

3.07 CONCRETE SURFACE REPAIR USING CEMENTITIOUS MATERIALS

A. Clean concrete surfaces, cracks, and joints of dirt, laitance, corrosion, and other contamination using method(s) specified above and allow to dry.

B. Apply coating of bonding agent to entire concrete surface to be repaired.

C. Fill voids with cementitious mortar flush with surface.

D. Apply repair mortar by steel trowel to a minimum thickness of 1/4 inch (6 mm) over entire surface, terminating at a vertical change in plane on all sides.

E. Trowel finish to match adjacent concrete surfaces.

3.08 FIELD QUALITY CONTROL

A. An independent testing agency, as specified in Section 01 4000, will perform field inspection and testing.

1. Test concrete for calcium chloride content during the execution of the Work.

END OF SECTION

SECTION 03 0516
UNDERSLAB VAPOR BARRIER

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Sheet vapor barrier under concrete slabs on grade.

1.02 RELATED REQUIREMENTS

A. Section 03 1000 - Concrete Forming and Accessories: Forms and accessories for formwork.

B. Section 03 2000 - Concrete Reinforcing.

C. Section 03 3000 - Cast-in-Place Concrete: Preparation of subgrade, granular fill, placement of concrete.

1.03 REFERENCE STANDARDS

A. ASTM E1643 - Standard Practice for Selection, Design, Installation and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs 2011 (Reapproved 2017).

B. ASTM E1745 - Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs 2017.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Submit manufacturers' data on manufactured products.

C. Test Data: Submit report of tests showing compliance with specified requirements.

D. Samples: Submit samples of underslab vapor barrier to be used.

E. Manufacturer's Installation Instructions: Indicate installation procedures and interface required with adjacent construction.

PART 2 PRODUCTS

2.01 MATERIALS

A. Underslab Vapor Barrier:

1. Water Vapor Permeance: Not more than 0.010 perms (0.6 ng/(s m2 Pa)), maximum.
2. Thickness: 15 mils (0.4 mm).
3. Basis of Design:
    a. Stego Industries LLC; Stego Wrap Vapor Barrier (15-mil): www.stegoindustries.com/#sle.

B. Accessory Products: Vapor barrier manufacturer's recommended tape, adhesive, mastic, etc., for sealing seams and penetrations in vapor barrier.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that surface over which vapor barrier is to be installed is complete and ready before proceeding with installation of vapor barrier.

3.02 INSTALLATION

A. Install vapor barrier in accordance with manufacturer's instructions and ASTM E1643.

B. Install vapor barrier under interior slabs on grade; lap sheet over footings and seal to foundation walls.

C. Lap joints minimum 6 inches (150 mm).

D. Seal joints, seams and penetrations watertight with manufacturer's recommended products and follow manufacturer's written instructions.

E. No penetration of vapor barrier is allowed except for reinforcing steel and permanent utilities.

F. Repair damaged vapor retarder before covering with other materials.

END OF SECTION

SECTION 03 1000
CONCRETE FORMING AND ACCESSORIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Formwork for cast-in place concrete, with shoring, bracing and anchorage.

B. Openings for other work.

C. Form accessories.

D. Form stripping.

1.02 RELATED REQUIREMENTS

A. Section 03 2000 - Concrete Reinforcing.

B. Section 03 3000 - Cast-in-Place Concrete.

C. Section 03 3523 - Exposed Aggregate Concrete Finishing.

D. Section 03 3800 - Post-Tensioned Concrete.

E. Section 04 2000 - Unit Masonry: Reinforcement for masonry.

F. Section 04 2001 - Masonry Veneer: Spacing for veneer anchor reglets recessed in concrete.

G. Section 04 2500 - Unit Masonry Panels: Reinforcement for prefabricated masonry.

H. Section 04 2900 - Engineered Unit Masonry: Reinforcement for engineered masonry.

I. Section 05 1200 - Structural Steel Framing: Placement of embedded steel anchors and plates in cast-in-place concrete.

J. Section 05 2100 - Steel Joist Framing: Placement of embedded steel anchors, plates and joist seats in cast-in-place concrete.

K. Section 05 3100 - Steel Decking: Placement of steel anchors in composite decking.

L. Section 31 2316 - Excavation: Shoring and underpinning for excavation.

M. Section 31 6216.13 - Sheet Steel Piles: Shoring and underpinning related to sheet piles.

N. Section 31 6614 - Hydraulically Driven Pier Foundations: Shoring and underpinning related to hydraulically driven piles.

1.03 REFERENCE STANDARDS

A. ACI 117 - Standard Specifications for Tolerances for Concrete Construction and Materials 2010 (Reapproved 2015).

B. ACI 301 - Specifications for Structural Concrete 2016.

C. ACI 318 - Building Code Requirements for Structural Concrete and Commentary 2014 (Errata 2018).

D. ACI 347R - Guide to Formwork for Concrete 2014.

E. ASME A17.1 - Safety Code for Elevators and Escalators 2016.

F. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2017.

G. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes 2014.

H. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric) 2013.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on void form materials and installation requirements.

C. Shop Drawings: Indicate pertinent dimensions, materials, bracing, and arrangement of joints and ties.

1.05 QUALITY ASSURANCE

A. Designer Qualifications: Design formwork under direct supervision of a Professional Structural Engineer experienced in design of concrete formwork and licensed in Maryland .

B. Maintain one copy of each installation standard on site throughout the duration of concrete work.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver prefabricated forms and installation instructions in manufacturer's packaging.

B. Store prefabricated forms off ground in ventilated and protected manner to prevent deterioration from moisture.

1.07 DESIGN OF FORMWORK

A. Design, erect, support, brace and maintain formwork so that it will safely support all vertical and lateral loads that might be applied until such loads can be supported by the concrete structure. Carry vertical and lateral loads to the ground by the formwork system and by the in-place construction that has attained adequate strength for that purpose. Concrete work has been designed to safely support construction loads, including reshoring loads. If the contractor is uncertain about the design live loads, it shall be his responsibility to obtain these from the Architect.

B. Design forms and falsework to include assumed values of live load, dead load, weight of moving equipment operated of formwork, concrete mix, height of concrete drop, vibrator frequency, ambient temperature, foundation pressures, stresses, lateral stability, and other factors pertinent to safety of the structure during construction.

C. Provide shores and struts with positive means of adjustment capable of taking up all formwork settlement during concrete placing operations, using wedges or jacks or combination thereof. Provide trussed supports when adequate foundations for shores and struts cannot be secured.

D. Support form facing materials by structural members spaced sufficiently close to prevent deflection of the form facing material. Fit forms placed in successive unit for continuous surfaces to accurate alignment to assure a smooth completed surface, free from irregularities and within the allowable tolerances. Provide camber in formwork as required for anticipated deflections in formwork due to weight and pressure of fresh concrete and construction loads for long-span members without intermediate supports. Final position of all structural members to be at elevations shown on drawings.

E. Design formwork to be readily removable without impact, shock or damage to the cast-in-place concrete surfaces and adjacent materials.

F. Provide formwork sufficiently tight to prevent leakage of cement past during concrete placement. Solidly butt all joints and provide backup material at joints as may be required to prevent leakage and fins.

PART 2 PRODUCTS

2.01 FORMWORK - GENERAL

A. Provide concrete forms, accessories, shoring, and bracing as required to accomplish cast-in-place concrete work.

B. Design and construct concrete that complies with design with respect to shape, lines, and dimensions.

C. Chamfer outside corners of beams, joists, columns, and walls.

D. Chamfer exposed external corners and edges where shown, using chamfer strips accurately fabricated to produce uniform smooth lines and tight edge joints. Provide chamfers of wood, metal, PVC, or rubber, to form the required corner or edge shapes as shown on contract documents.

E. Carefully form intersecting planes to provide true, clean-cut corners, with edge grain of plywood not exposed as form for concrete. Back joints with extra studs or girts as required to maintain true and square intersections.

F. Comply with applicable state and local codes with respect to design, fabrication, erection, and removal of formwork.

G. Comply with relevant portions of ACI 347R, ACI 301 and ACI 318.

2.02 EXPOSED FINISHED CONCRETE

A. Forms for Exposed Finish Concrete:

1. Unless otherwise shown or specified, construct all formwork for exposed concrete surfaces with plywood, metalframed plywood-faced, or other panel type materials acceptable to the Architect, to provide continuous, straight smooth exposed surfaces. Furnish in the largest practical sizes to minimize number of joints and to conform to the joint system shown on the drawings.

2. Provide form material with sufficient thickness to withstand the pressure of newly placed concrete without bow or deflections.

3. Drill forms to suit ties used and to prevent leakage of concrete mortar around tie holes. Do not splinter forms by driving ties through improperly prepared holes. Do not use cover plates for patching holes or defects in forms.

B. Exposed finished concrete shall be defined to mean any vertical surface or soffit concrete exposed to sight; i.e., exterior grade beams, retaining walls, etc. Hand rubbing of concrete surfaces is only required at locations indicated on the drawings.

2.03 REMOVABLE PREFABRICATED FORMS

A. Preformed Steel Forms: Minimum 16 gage, 0.0598 inch (1.52 mm) thick, matched, tight fitting, stiffened to support weight of concrete without deflection detrimental to tolerances and appearance of finished surfaces.

B. Preformed Aluminum Forms: ASTM B221 (ASTM B221M), 6061-T6 alloy, matched, tight fitting, stiffened to support weight of concrete without deflection detrimental to tolerances and appearance of finished surfaces.

C. Preformed Plastic Forms: Thermoplastic polystyrene form liner, tight fitting, stiffened to support weight of concrete without deflection detrimental to tolerances and appearance of finished surfaces.

D. Void Forms: Moisture resistant treated paper faces, biodegradable, structurally sufficient to support weight of wet concrete mix until initial set; 2 inches (50 mm) thick.

2.04 FORMWORK ACCESSORIES

A. Form Ties: Removable type, galvanized metal, fixed length, cone type, with waterproofing washer, free of defects that could leave holes larger than 1 inch (25 mm) in concrete surface.

B. Form Release Agent: Capable of releasing forms from hardened concrete without staining or discoloring concrete or forming bugholes and other surface defects, compatible with concrete and form materials, and not requiring removal for satisfactory bonding of coatings to be applied.

1. Composition: Colorless reactive, mineral oil-based, soy-based or vegetable-oil based compound.
2. Do not use materials containing diesel oil or petroleum-based compounds.
3. VOC Content: In compliance with applicable local, State, and federal regulations.

C. Filler Strips for Chamfered Corners: type; size; maximum possible lengths.

D. Dovetail Anchor Slot: Galvanized steel, at least 22 gage, 0.0299 inch (0.76 mm) thick, foam filled, release tape sealed slots, anchors for securing to concrete formwork.

E. Flashing Reglets: Galvanized steel, at least 22 gage, 0.0299 inch (0.76 mm) thick, longest possible lengths, with alignment splines for joints, foam filled, release tape sealed slots, anchors for securing to concrete formwork.

F. Nails, Spikes, Lag Bolts, Through Bolts, Anchorages: Sized as required, of sufficient strength and character to maintain formwork in place while placing concrete.

G. Embedded Anchor Shapes, Plates, Angles and Bars: As specified in Section 05 1200.

H. Waterstops: Preformed mineral colloid strips, 3/8 inch (9 mm) thick, moisture expanding.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify lines, levels and centers before proceeding with formwork. Ensure that dimensions agree with drawings.

3.02 ERECTION - FORMWORK

A. Erect formwork, shoring and bracing to achieve design requirements, in accordance with requirements of ACI 301.

B. Provide bracing to ensure stability of formwork. Shore or strengthen formwork subject to overstressing by construction loads.

C. Align joints and make watertight. Keep form joints to a minimum.

D. Construct forms to the exact sizes, shapes, lines and dimensions on contract documents, and as required to obtain accurate alignment, locations, grades, level and plumb work in the finished structures.

E. Coordinate this section with other sections of work that require attachment of components to formwork.

F. Obtain approval before framing openings in structural members that are not indicated on drawings.

G. Install void forms in accordance with manufacturer's recommendations. Protect forms from moisture or crushing.

H. Coordinate this section with other sections of work that require attachment of components to formwork.

3.03 APPLICATION - FORM RELEASE AGENT

A. Apply form release agent on formwork in accordance with manufacturer's recommendations.

3.04 INSERTS, EMBEDDED PARTS, AND OPENINGS

A. Coordinate with work of other sections in forming and placing openings, slots, reglets, recesses, sleeves, bolts, anchors, other inserts, and components of other work.

B. Position recessed anchor slots for brick veneer masonry anchors to spacing and intervals specified in Section 04 2001.

C. Install accessories in accordance with manufacturer's instructions, so they are straight, level, and plumb. Ensure items are not disturbed during concrete placement.

D. Install waterstops in accordance with manufacturer's instructions, so they are continuous without displacing reinforcement. Heat seal joints so they are watertight.

E. Provide temporary ports or openings in formwork where required to facilitate cleaning and inspection. Locate openings at bottom of forms to allow flushing water to drain.

F. Close temporary openings with tight fitting panels, flush with inside face of forms, and neatly fitted so joints will not be apparent in exposed concrete surfaces.

G. Obtain approval before framing openings in structural members that are not indicated on drawings.

H. Provide for openings, offsets, sinkage, keyways, recesses, moldings, rustications, reglets, chamfers, blocking, screeds, bulkheads, anchorages and inserts, and other features required on the work, and shown in the architectural, structural, and any other pertinent parts of the contract drawings. Use selected materials to obtain the required finishes.

I. Provide openings in concrete framework to accommodate work of other trades, including those under separate prime contracts. Size and location of openings, recesses and chases are the responsibility of the trade requiring such items. No hole, blockout, or recess shall be allowed in any structural member without the written approval of the Architect. Accurately place and securely support items to be built into forms.

J. Provide temporary openings where interior area of formwork is inaccessible for cleanout, for inspection before concrete placement, and for placement of concrete. Securely brace temporary openings and set tightly to forms to prevent the loss of concrete mortar. Locate consistent with the requirements of the work, and not in any exposed surface.

K. Install void forms in accordance with manufacturer's recommendations. Protect forms from moisture or crushing.

3.05 FORM CLEANING

A. Clean forms as erection proceeds, to remove foreign matter within forms.

B. Thoroughly clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, or other debris just before concrete is to be placed. Retighten forms immediately after concrete placement as required to eliminate mortar leaks.

C. Clean formed cavities of debris prior to placing concrete.

1. Flush with water or use compressed air to remove remaining foreign matter. Ensure that water and debris drain to exterior through clean-out ports.

2. During cold weather, remove ice and snow from within forms. Do not use de-icing salts. Do not use water to clean out forms, unless formwork and concrete construction proceed within heated enclosure. Use compressed air or other means to remove foreign matter.

3.06 FORMWORK TOLERANCES

A. Construct formwork to maintain tolerances required by ACI 117, unless otherwise indicated.

B. Camber slabs and beams in accordance with ACI 301.

3.07 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

B. Inspect erected formwork, shoring, and bracing to ensure that work is in accordance with formwork design, and to verify that supports, fastenings, wedges, ties, and items are secure.

3.08 FORM REMOVAL

A. Do not remove forms or bracing until concrete has gained sufficient strength to carry its own weight and imposed loads.

B. Formwork not supporting the weight of concrete, such as sides of beams, walls, columns, and similar parts of the work, may be removed 24 hours after placing the concrete, providing the concrete is sufficiently hard to not be damaged by the form removal operations, and provided that curing and protection operations are maintained.

C. Form removal timeframes:

1. Formwork supporting the weight of concrete, such as beam soffits, joists, slabs and other structural elements of work, shall not be removed in less than fourteen (14) days or until the concrete has attained 70% of the design minimum compressive strength for the applicable type of concrete. Determine potential compressive strength of in-place concrete by testing of field-cured specimens representative of the concrete location or members.

2. Form facing material may be removed four (4) days after placement, only if the shores and other vertical supports have been arranged to permit removal of the form facing material without loosening or disturbing the shores and supports.

3. These periods indicated above represent the cumulative number of days or fractions thereof, not necessarily consecutive, during which the temperature of the concrete is above 50 degrees F.

D. Re-use of forms:

1. Clean and repair the surfaces of forms that are to be re-used in the work, except that split, frayed, delaminated or otherwise damaged form facing material will not be acceptable. Apply new form coating compound material to all concrete contact form surfaces as specified for new formwork.

2. When forms are extended for successive concrete placement, thoroughly clean surfaces, remove fins and laitance, and tighten forms to close all joints. Align and secure all joints to avoid offsets. Do not use "patched" forms for exposed concrete surfaces, except as acceptable to the Architect.

E. Loosen forms carefully. Do not wedge pry bars, hammers, or tools against finish concrete surfaces scheduled for exposure to view.

F. Store removed forms to prevent damage to form materials or to fresh concrete. Discard damaged forms.

END OF SECTION

SECTION 03 1521
TERMITE BARRIER

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Termite-resistant vapor barrier sheet.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Vapor barrier placement under concrete slab-on-grade.

1.03 PRICE AND PAYMENT PROCEDURES

A. See Section 01 2200 - Unit Prices, for additional unit price requirements.

B. Termite Barrier: By the square foot (square meter) of installed termite barrier.

1.04 REFERENCE STANDARDS

A. ASTM E1643 - Standard Practice for Selection, Design, Installation and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs 2011 (Reapproved 2017).

B. ASTM E1745 - Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs 2017.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Submit manufacturers' data on manufactured products showing compliance with specified requirements.

C. Test Reports: Submit manufacturer's summary of independent laboratory and field testing for effectiveness in subterranean termite exclusion.

D. Manufacturer's Installation Instructions.

E. Installer Qualifications: Company specializing in performing work of the type specified and with minimum three years of documented experience.

F. Warranty: Submit warranty and ensure that forms have been completed in Owner's name.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing this type of work and:

1. Having minimum of 2 years documented experience.
2. Approved by manufacturer of treatment materials.
3. Licensed in Maryland.

1.07 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Provide five year manufacturer's limited warranty.

PART 2 PRODUCTS

2.01 TERMITE BARRIER SHEET

A. Termite-Resistant Vapor Barrier Sheet: Plastic sheet complying with ASTM E1745, Class C; stated by manufacturer as suitable for installation in contact with soil or granular fill under concrete slabs, and for exclusion of subterranean termites.

B. Accessory Products: Barrier sheet manufacturer's recommended tape, adhesive, etc., for sealing seams and penetrations in termite barrier.

C. Manufacturer: Stego Technology LLC; Pango Wrap with Pango Tape: www.stegoindustries.com/#sle.

D. Substitutions: See Section 01 6000 - Product Requirements.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that soil surfaces are unfrozen.

B. Verify final grading is complete.

3.02 INSTALLATION - BARRIER SHEET

A. Comply with ASTM E1643.

B. Lap joints 6 inches (150 mm), minimum. Seal joints, seams, penetrations, and edges at adjacent materials with manufacturer's recommended products and follow manufacturer's written instructions.

3.03 PROTECTION

A. Protect sheet materials from damage after completed installation.

B. Repair damage to installed sheet materials with manufacturer's recommended products and according to the manufacturer's written instructions.

END OF SECTION

SECTION 03 2000
CONCRETE REINFORCING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Reinforcing steel for cast-in-place concrete.

B. Supports and accessories for steel reinforcement.

1.02 RELATED REQUIREMENTS

A. Section 03 1000 - Concrete Forming and Accessories.

B. Section 03 3000 - Cast-in-Place Concrete.

C. Section 03 3713 - Shotcrete: Reinforcement for shotcrete.

D. Section 03 4500 - Precast Architectural Concrete: Reinforcement for precast concrete panels.

E. Section 04 2000 - Unit Masonry: Reinforcement for masonry.

F. Section 04 2001 - Masonry Veneer: Spacing for veneer anchor reglets recessed in concrete.

G. Section 04 2500 - Unit Masonry Panels: Reinforcement for prefabricated masonry.

H. Section 04 2900 - Engineered Unit Masonry: Reinforcement for engineered masonry.

I. Section 26 0526 - Grounding and Bonding for Electrical Systems: Grounding connection to concrete reinforcement.

J. Section 31 6223.13 - Concrete-Filled Steel Piles: Reinforcement for pile foundations.

K. Section 31 6329 - Drilled Concrete Piers and Shafts: Reinforcement for drilled pier foundations.

1.03 REFERENCE STANDARDS

A. ACI 301 - Specifications for Structural Concrete 2016.

B. ACI 318 - Building Code Requirements for Structural Concrete and Commentary 2014 (Errata 2018).

C. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement 2018, with Editorial Revision (2018).

D. ASTM A704/A704M - Standard Specification for Welded Steel Plain Bar or Rod Mats for Concrete Reinforcement 2018.

E. ASTM A706/A706M - Standard Specification for Deformed and Plain Low-Alloy Steel Bars for Concrete Reinforcement 2016.

F. ASTM A767/A767M - Standard Specification for Zinc-Coated (Galvanized) Steel Bars for Concrete Reinforcement 2016.

G. ASTM A775/A775M - Standard Specification for Epoxy-Coated Steel Reinforcing Bars 2017.

H. ASTM A884/A884M - Standard Specification for Epoxy-Coated Steel Wire and Welded Wire Reinforcement 2014.

I. ASTM A996/A996M - Standard Specification for Rail-Steel and Axle-Steel Deformed Bars for Concrete Reinforcement 2016.

J. ASTM A1064/A1064M - Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete 2018.

K. ASTM D3963/D3963M - Standard Specification for Fabrication and Jobsite Handling of Epoxy-Coated Steel Reinforcing Bars 2015.

L. AWS D1.4/D1.4M - Structural Welding Code - Reinforcing Steel 2011.

M. CRSI (DA4) - Manual of Standard Practice 2009.

N. CRSI (P1) - Placing Reinforcing Bars 2011.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Comply with requirements of ACI SP-66. Include bar schedules, shapes of bent bars, spacing of bars, and location of splices.

1. Prepare shop drawings under seal of a Professional Structural Engineer experienced in design of work of this type and licensed in Maryland .

C. Provide bar schedules, stirrup spacing, and diagrams of bent bars.

D. Do not place any reinforcing until Shop Drawings are approved.

1.05 QUALITY ASSURANCE

A. Perform work of this section in accordance with ACI 301.

B. Welders' Certificates: Submit certifications for welders employed on the project, verifying AWS qualification within the previous 12 months.

C. Comply with the most current accepted code of Prince George's County, Maryland.

D. Installer Qualifications: A company specializing in placement of concrete reinforcement steel, with a minimum of 3 years experience on projects of similar size and scope.

1.06 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Deliver reinforcement to project site in bundles marked with metal tags indicating bar size and length.

B. Protect concrete reinforcement before, during and after installation and the installed work and materials of other sections.

C. Store in a manner to prevent excessive rusting and fouling with dirt, grease, and other bond-breaking coatings.

D. Maintain identification after bundles are broken.

E. In event of damage, immediately make repairs and replacements necessary.

PART 2 PRODUCTS

2.01 REINFORCEMENT

A. All materials shall be new, free from rust and comply with the following:

1. Reinforcing Steel: ASTM A615/A615M, Grade 60 (60,000 psi) (420 MPa).
2. Plain billet-steel bars.
3. Galvanized in accordance with ASTM A767/A767M, Class I.
4. Wire fabric: ASTM A185.
5. Bar supports: "Bar Support Specifications," CRSI Manual of Standard Practice, Type: plastic tipped accessories.
6. Reinforcing Steel: ASTM A706/A706M, deformed low-alloy steel bars.
7. Reinforcing Steel: Deformed bars, ASTM A996/A996M Grade 40 (280), Type A.
8. Epoxy coated in accordance with ASTM A775/A775M.

9. Stirrup Steel: ASTM A1064/A1064M steel wire, unfinished.
10. Steel Welded Wire Reinforcement (WWR): Galvanized, deformed type; ASTM A1064/A1064M.
11. Reinforcement Accessories:
    a. Tie Wire: Annealed, minimum 16 gage, 0.0508 inch (1.29 mm).
        1) Supports for reinforcement: Provide supports including bolsters, chairs, spacers and other devices for supporting and fastening reinforcing bars and welded wire fabric in place. Use wire bar type supports complying with CRSI recommendations.
        2) For exposed-to-view concrete surfaces and where support legs are in contact with forms, provide supports with plastic protection (CRSI, Class1) or stainless steel protection (CRSI, Class 2).
12. Chairs, Bolsters, Bar Supports, Spacers: Sized and shaped for adequate support of reinforcement during concrete placement.

2.02 RE-BAR SPLICING:

A. Coupler Systems: Mechanical devices for splicing reinforcing bars; capable of developing full steel reinforcing design strength in tension and compression.

B. Dowel Bar Splicer with Dowel-Ins: Mechanical devices for connecting dowels; capable of developing full steel reinforcing design strength in tension and compression.

C. Grout: Cementitious, non-metallic, non-shrink grout for use with manufacturer's grout sleeve reinforcing bar coupler system.

2.03 FABRICATION

A. Fabricate concrete reinforcing in accordance with CRSI (DA4) - Manual of Standard Practice.

B. Fabricate bars with kinks or bends only as indicated on the drawings.

C. Do not field-bend or straighten steel. Do not re-bend or straighten reinforcement to correct fabrication errors.

D. Design:
    1. Bend bars cold.
    2. Make bend for stirrups and ties in accordance with ACI 315.

E. Fabricate and handle epoxy-coated reinforcing in accordance with ASTM D3963/D3963M.

F. Locate reinforcing splices not indicated on drawings at point of minimum stress.
    1. Review locations of splices with Architect .

PART 3 EXECUTION

3.01 PLACEMENT

A. Before start of concrete placement, accurately place concrete reinforcement, positively securing and supporting by concrete blocks, metal chairs or spacers, or metal hangers.

B. Place, support and secure reinforcement against displacement. Do not deviate from required position.

C. Clearance: Clear space between bars and cover for bars shall conform to the Requirements of ACI 318.

D. Splicing:
    1. Horizontal bars:

a. Place bars in horizontal members with laps at splices in accordance with the Contract Documents and the Requirements of ACI-318 (Latest Edition).

b. Bars may be wired together at laps.

c. Wherever possible, stagger the splices of adjacent bars.

2. Wire fabric:

a. Make splices in wire fabric at least 1-1/2 meshes wide.

3. Other splices:

a. Make only those other splices indicated on accepted Shop Drawings or specifically accepted by Architect.

b. Place required steel dowels and securely anchor into position before concrete is placed.

c. In the event conduits, piping, inserts, sleeves or other items interfere with placing reinforcement as indicated or as otherwise required, immediately consult Architect and Owner's Representative and obtain approval of new procedure before placing concrete.

E. Do not displace or damage vapor barrier.

F. Accommodate placement of formed openings.

G. Comply with applicable code for concrete cover over reinforcement.

3.02 CLEANING REINFORCEMENT

A. Steel reinforcement, at the time concrete is placed around it, shall be free from rust scale, loose mill scale, oil, paint, and other coatings which will destroy bond between steel and concrete.

3.03 PROTECTION DURING INSTALLATION

A. Keep reinforcing steel in proper position during concrete placement.

3.04 INSPECTION BEFORE CONCRETE PLACEMENT

A. Do not place any concrete until reinforcing steel has been inspected and approved.

END OF SECTION

SECTION 03 2400
FIBROUS REINFORCING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Steel fiber reinforcing for cast-in-place concrete.

1.02 RELATED REQUIREMENTS

A. Section 03 1000 - Concrete Forming and Accessories.

B. Section 03 2000 - Concrete Reinforcing.

C. Section 03 3000 - Cast-in-Place Concrete.

D. Section 03 3713 - Shotcrete.

1.03 REFERENCE STANDARDS

A. ACI 302.1R - Guide to Concrete Floor and Slab Construction 2015.

B. ACI 318 - Building Code Requirements for Structural Concrete and Commentary 2014 (Errata 2018).

C. ASTM A370 - Standard Test Methods and Definitions for Mechanical Testing of Steel Products 2017a.

D. ASTM A820/A820M - Standard Specification for Steel Fibers for Fiber-Reinforced Concrete 2016.

E. ASTM C1116/C1116M - Standard Specification for Fiber-Reinforced Concrete 2010a (Reapproved 2015).

F. ASTM C1609/C1609M - Standard Test Method for Flexural Performance of Fiber-Reinforced Concrete (Using Beam With Third-Point Loading) 2012.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Submit manufacturer's product data sheets for specified products..

C. Shop Drawings: Show concrete design with indicated load cases.

1. Wheel loads at center of slab and at dowel joints in kips (kN).
2. Point loads at center of slab and at dowel joints in kips (kN).
3. Linear loads in pounds per linear foot (N/m).
4. Uniform distributed loads in pounds per square foot (Pa, kPa, or MPa).

D. Test Reports: Submit certified copies of manufacturer's test reports for equivalent flexural strength ratio (Re3) and residual strengths (fD,600 and fD,150).

E. Manufacturer's Instructions: Submit manufacturer's handling, dosing, and mixing instructions.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's original, unopened, and undamaged containers with intact identification labels.

B. Store materials in manufacturer's original containers at temperature and humidity recommended by manufacturer. Protect materials from exposure to harmful conditions.

C. Protect materials from dirt, corrosion, oil, grease, and other contaminants.

PART 2 PRODUCTS

2.01 STEEL FIBER REINFORCING

A. System Requirements for Steel Fiber-Reinforced Concrete:
   1. Design Requirements:
      a. Equivalent Flexural Strength Ratio (Re3) = 0.35, minimum.
      b. Residual Strengths:
         1) fD,600 equals , minimum.
         2) fD,150 equals , minimum.
      c. Verification: Submit manufacturer's reports documenting results of ASTM C1609/C1609M testing on concrete containing similar materials.
   2. Performance Requirements: Ultimate tensile strength of 168,000 pounds per square inch (1158 kPa), minimum, when tested according to ASTM A370.

B. Structural Fiber Reinforcement: ASTM C1116/C1116M.
   1. Length: 2.4 inches (65 mm).
   2. Diameter: 0.04 inch (0.9 mm)
   3. Aspect Ratio (L/D): 65, minimum.
   4. Anchorage: End-deformed.
   5. Surface Condition: Clean; free of rust, oil, and other deleterious materials.
   6. Configuration: Loose, round, drawn wire; end-deformed.

C. Material: Uncoated, low-carbon steel; ASTM A820/A820M, Type 1 cold-drawn wire.

D. Manufacturer:
   1. Bekaert Corporation; Dramix 3D: www.bekaert.com/#sle.
   2. Substitutions: See Section 01 6000 - Product Requirements.

2.02 MIXING

A. Steel Fibers: Mix steel fibers into concrete per manufacturer's written instructions.
   1. Steel fibers may be added during or after batching of concrete materials.
   2. Do not place steel fibers as first component in concrete mixer.
   3. Add fibers at maximum rate of 132 pounds per minute (60 kg/min).
   4. Mix concrete for five minutes, minimum, at 12 to 18 revolutions per minute.

B. Slump Adjustment: Adjust concrete mixture to minimum slump of 5 inches (127 mm).

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify improvements to existing subgrade comply with manufacturer's recommendations.

3.02 INSTALLATION

A. Comply with manufacturer's written instructions and requirements stated in the manufacturer's product data, technical bulletins, and product packaging.

B. Provide additional reinforcing as recommended by manufacturer.

C. Use well-graded combined aggregate mix. See Section 03 3000 for material requirements and mix design.

1. Cement plus pozzolan content: 575 pounds per cubic yard (341 kg/cu m), maximum.
2. Water-Cement Ratio: Less than 0.50.
3. No water added at site.
4. Adjust slump with plasticizer or superplasticizer only.

D. Form concrete joints to allow unrestrained shrinkage of concrete in two directions.

E. Saw cuts: Make saw cuts one-third concrete depth with wet-cut saw or one-fourth concrete depth with early-entry dry-cut saw.

3.03 PROTECTION

A. Do not disturb concrete paste covering steel fibers during concrete finishing.

B. Protect exposed slab from excessive drying due to wind and temperature.

END OF SECTION

SECTION 03 3000
CAST-IN-PLACE CONCRETE

PART 1 GENERAL

1.01 RELATED REQUIREMENTS

A. Section 03 1000 - Concrete Forming and Accessories: Forms and accessories for formwork.

B. Section 03 2000 - Concrete Reinforcing.

1.02 REFERENCE STANDARDS

A. ACI 117 - Standard Specifications for Tolerances for Concrete Construction and Materials 2010 (Reapproved 2015).

B. ACI 211.1 - Standard Practice for Selecting Proportions for Normal, Heavyweight, and Mass Concrete 1991 (Reapproved 2009).

C. ACI 301 - Specifications for Structural Concrete 2016.

D. ACI 302.1R - Guide to Concrete Floor and Slab Construction 2015.

E. ACI 304R - Guide for Measuring, Mixing, Transporting, and Placing Concrete 2000 (Reapproved 2009).

F. ACI 305R - Guide to Hot Weather Concreting 2010.

G. ACI 306R - Guide to Cold Weather Concreting 2016.

H. ACI 308R - Guide to External Curing of Concrete 2016.

I. ACI 318 - Building Code Requirements for Structural Concrete and Commentary 2014 (Errata 2018).

J. ACI 347R - Guide to Formwork for Concrete 2014.

K. ASTM C1602/C1602M - Standard Specification for Mixing Water Used in the Production of Hydraulic Cement Concrete 2012.

L. ASTM C33/C33M - Standard Specification for Concrete Aggregates 2016, with Editorial Revision (2016).

M. ASTM C94/C94M - Standard Specification for Ready-Mixed Concrete 2017a.

N. ASTM C150/C150M - Standard Specification for Portland Cement 2018.

O. ASTM C260/C260M - Standard Specification for Air-Entraining Admixtures for Concrete 2010a (Reapproved 2016).

P. ASTM C309 - Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete 2011.

Q. ASTM C330/C330M - Standard Specification for Lightweight Aggregates for Structural Concrete 2017a.

R. ASTM C494/C494M - Standard Specification for Chemical Admixtures for Concrete 2017.

S. ASTM C618 - Standard Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use in Concrete 2015.

T. ASTM C1240 - Standard Specification for Silica Fume Used in Cementitious Mixtures 2015.

U. ASTM C1315 - Standard Specification for Liquid Membrane-Forming Compounds Having Special Properties for Curing and Sealing Concrete 2011.

1.03 QUALITY ASSURANCE

A. No payments will be made for extra concrete needed as a result of unauthorized material removed below the required depth found in the field.

B. Perform work of this section in accordance with ACI 301 and ACI 318.

C. Follow recommendations of ACI 305R when concreting during hot weather.

D. Follow recommendations of ACI 306R when concreting during cold weather.

PART 2 PRODUCTS

2.01 FORMWORK

A. Comply with requirements of Section 03 1000.

B. Formwork Design and Construction: Comply with guidelines of ACI 347R to provide formwork that will produce concrete complying with tolerances of ACI 117.

C. Form Materials: Contractor 's choice of standard products with sufficient strength to withstand hydrostatic head without distortion in excess of permitted tolerances.

1. Form Facing for Exposed Finish Concrete: Contractor 's choice of materials that will provide smooth, stain-free final appearance.

2. Form Coating: Release agent that will not adversely affect concrete or interfere with application of coatings.

D. Formwork Fabrication

1. Fabricate formwork mortartight, braced to prevent displacement under vibration and sagging between supports. For surfaces exposed to view in finished work, use new, clean, smooth plywood free from blemishes, square-cut and in sizes as large as practical.

2. Fabricate forms for removal without hammering or prying against concrete.

3. Provide temporary clean-out openings at base of forms and other locations in formwork to facilitate cleaning and inspection for placing concrete.

2.02 CONCRETE MATERIALS

A. Mixing Water: Drinkable in accordance with ACI 318

B. Cement: ASTM C150/C150M, Type I - Normal.

C. Fine and Coarse Aggregates: ASTM C33/C33M.

D. Lightweight Aggregate: ASTM C330/C330M.

E. Fly Ash: ASTM C618, Class C or F.

F. Calcined Pozzolan: ASTM C618, Class N.

G. Silica Fume: ASTM C1240, proportioned in accordance with ACI 211.1.

H. Water: ASTM C1602/C1602M; clean, potable, and not detrimental to concrete.

2.03 ADMIXTURES

A. Do not use chemicals that will result in soluble chloride ions in excess of 0.1 percent by weight of cement.

B. Air Entrainment Admixture: ASTM C260/C260M.

C. Water Reducing and Accelerating Admixture: ASTM C494/C494M Type E.

D. Water Reducing and Retarding Admixture: ASTM C494/C494M Type D.

E. Retarding Admixture: ASTM C494/C494M Type B.

F. Water Reducing Admixture: ASTM C494/C494M Type A.

G. Moisture Vapor Reduction Admixture (MVRA): Liquid, inorganic admixture free of volatile organic compounds (VOCs) and formulated to close capillary systems formed during curing to reduce moisture vapor emission and transmission with no adverse effect on concrete properties or finish flooring.

2.04 ACCESSORY MATERIALS

A. Underslab Vapor Retarder: Sheet material complying with ASTM E1745, Class A; stated by manufacturer as suitable for installation in contact with soil or granular fill under concrete slabs. The use of single ply polyethylene is prohibited.

1. Installation: Comply with ASTM E1643.
2. Accessory Products: Vapor retarder manufacturer's recommended tape, adhesive, mastic, prefabricated boots, etc., for sealing seams and penetrations.
3. Manufacturers:
    a. Fortifiber Building Systems Group; Moistop Ultra 10: www.fortifiber.com/#sle.
    b. Stego Industries, LLC: www.stegoindustries.com/#sle.

B. Cement feathering compound: Ardex “SD-F Feather Finish”, Portland cement-based, latex-modified; or comparable.

C. Perimeter "Zip Strip": Provide a removable bond break "zip strip" capable of producing a clean 1/2" x 1/2" joint to be used for sealing all joints where walls penetrate and abut floor slab. "Sealtight Snap-Cap," W. R. Meadows, 1/2" (12.7mm), or comparable.

D. Porous Fill: Clean, water-worn tailings free from clay, dirt, wood and debris, graded from 2 in. to 3/4 in.

E. Expansion Joint Material: 1/2 inch (12.7mm) asphalt expansion joint filler complying with the following:

1. ASTM D994
2. FS HH-F-341F, Type III
3. AASHTO M33 03300-6
4. FAA Specification P-610-2.7

2.05 CURING MATERIALS

A. Curing and Sealing Compound, Moisture Emission Reducing, Membrane-Forming: Liquid, membrane-forming, clear sealer, for application to newly-placed concrete; capable of providing adequate bond for flooring adhesives, initially and over the long term; with sufficient moisture vapor impermeability to prevent deterioration of flooring adhesives due to moisture emission.

B. Curing Compound, Non-dissipating: Liquid, membrane-forming, clear, non-yellowing acrylic; complying with ASTM C309.

1. Application: Use at exposed concrete floors.
2. VOC Content: OTC compliant.

2.06 CONCRETE MIX DESIGN

A. Controlled concrete proportioned as outlined in Section 5.3 ACI 318, unless specified otherwise. Allowable design stresses are based on minimum 28-day compressive strength indicated. Submit design mix for each class of concrete for Architect's approval.

B. Proportions of aggregate to cement shall produce non-segregating plastic mixture of consistency required to give specified finish and be worked readily into corners and angles of forms and around reinforcement with method of placement employed. Accomplish variations in consistency by changes in proportioning of mix with changing W/C (water/cement) ratios established.

C. Admixtures: Add acceptable admixtures as recommended in ACI 211.1 and at rates recommended or required by manufacturer.

1. Admixtures used in concrete: of one manufacturer.

2. Use air-entraining admixture in concrete exposed to elements to obtain air content of 5 percent, plus or minus 1.5 percent for 1-inch maximum aggregate and 6 percent plus or minus 2 percent for 3/4 inch maximum aggregate. Do not premix air-entraining admixture with other admixtures.
3. Retarding densifier: in concrete, except concrete for footings and isolated piers.
4. For low temperature conditions, an accelerating densifier may be used in lieu of a retarding densifier in walls.
5. A water-reducing admixture may be used in lieu of a retarding densifier in slabs.
6. Proportion admixtures in accordance with manufacturer's recommendations.

D. Slump Limits: 3" ± 1"; 4 inch maximum.

2.07 MIXING

A. Ready-mixed ASTM C94, except addition of water for material with insufficient slump shall not be permitted.

B. Provide a certificate signed by authorized official of supplier, with each load of concrete stating the following:

1. Time truck left plant.
2. Mix of concrete.
3. Amount of water and cement in mix.
4. Time truck is unloaded at project site.

C. Retain certificates at project site for inspection by testing laboratory.

D. Not more than one hour shall elapse from time water is introduced into mixer drum until drum is discharged. Do not use concrete that has stood outside the mixer drum for more than 30 minutes. Do not add water to a mix that has stiffened to increase workability. Retempering of partly set concrete is not permitted.

PART 3 EXECUTION

3.01 PREPARATION

A. Prior to placing concrete, clean equipment for transporting concrete. Remove debris and ice from spaces to receive concrete. Oil or wet form, as specified, and clean reinforcement of ice or other coatings. Remove water from areas to receive concrete.

B. Reinforcement, forms and earth in contact with concrete shall be free from frost. Do not place concrete during rainfall without adequate protection. Make preparation to protect newly placed concrete from rainfall until concrete has hardened sufficiently to preclude rainfall damage.

C. Place expansion joint material as indicated for slab isolation at perimeter walls and columns. Depress joint material 1/2 in. below finish slab for installation of “Zip Strip” specified in this section and sealant specified in Section 07900.

D. Formwork:

1. Comply with requirements of ACI 301. Design and fabricate forms to support all applied loads until concrete is cured, and for easy removal without damage to concrete.
2. Construct formwork to lines, dimensions, and shapes of concrete indicated, to a tolerance of 1/8 inch in 10 feet. Provide watertight joints in forms. Provide support to maintain tolerance specified during placing of concrete.
3. Coat forms with form release agent prior to each use of form.

4. Secure keys in position by continuous wood blocking rigidly secured to forms or reinforcing.
5. Do not use pinch bars or other metal tools in exposed work to pry forms loose.
6. Use form ties to prevent form deflection, and to prevent spalling of concrete surfaces upon removal of forms.
7. Verify that forms are clean and free of rust before applying release agent.
8. Coordinate placement of embedded items with erection of concrete formwork and placement of form accessories.

3.02 COORDINATION WITH OTHER WORK

A. Provide in locations indicated slots, chases, recesses or openings not formed by sleeves, frames, boxes or equipment specified in other Sections.

B. Examine Contract Documents for work specified in other Sections requiring either building in or provisions for later setting. Set items specified in other Sections and provide protection required to prevent damage or displacement during placing of concrete.

C. Grout and fill with concrete as required throughout the project, except as otherwise specified, and including column base plates, door saddles, frames in concrete walls, and openings after pipes are in place.

D. Minimum 1-inch concrete cover is required over conduits and pipes embedded in concrete. Do not place pipes or conduits having an outside diameter larger than 1/3 slab thickness in slabs.

E. Place conduits and pipes as indicated. Place conduits and pipes to avoid changing location of reinforcing steel.

F. Provide inserts required to bond adjacent construction to concrete.

3.03 PLACING CONCRETE

A. Place concrete in accordance with ACI 304R.

B. Convey concrete to point of final placement by methods preventing segregation or loss of materials. Place concrete as near as practical in final position to avoid segregation due to handling and flowing. Do not use concrete that has partially hardened, been contaminated by foreign materials or been retempered.

C. Place concrete in layers not exceeding 18 inches in depth avoiding inclined planes and piling and concrete in forms permitting escape of water or free flow of concrete.

D. Place concrete for columns and walls through canvas, wood, rubber or metal elephant trunks, 6 inches in diameter minimum, to avoid segregation of concrete in free fall. Do not allow concrete to ricochet against forms for exposed surfaces. Deposit concrete directly to center of forms. Space drop chutes on 10-foot centers, maximum. Do not use drop chutes longer than 12 feet. Provide illumination to permit inspection of the interior of forms.

E. Vibration:

1. Exposed surfaces shall be finished with a smooth, dense, concrete without honeycombing. Tamp, space, and vibrate concrete thoroughly during placing.
2. Quantity, capacity and type of vibrators used is left to discretion of the Contractor. Maintain a reserve of vibrators in event of breakdown.
3. Exercise care in use of vibrators to prevent scarring or roughening of forms. Vibrators shall not cause separation of free water from mix. Do not vibrate in one spot to extent pools of grout are formed.

4. Do not vibrate to the extent of causing segregation of aggregate. Insert and withdraw vibrators slowly. Vibrators shall run continuously while being withdrawn. Insert unit in a depth to vibrate lower layer of concrete. Do not insert into concrete that is partly hardened or that will not become plastic under vibrator action. Do not apply vibration to steel reinforcing extending into partially hardened concrete.
5. Exercise care to prevent formation of water pockets and bubbles against form faces.

F. Place concrete in continuous operation until panel or section is completed. Locate construction joints at point of minimum shear.

3.04 SLAB JOINTING

A. Locate joints as indicated on drawings.

B. Anchor joint fillers and devices to prevent movement during concrete placement.

C. Isolation Joints: Use preformed joint filler with removable top section for joint sealant, total height equal to thickness of slab, set flush with top of slab.

D. Contraction Joints at Grade Slabs

1. Contraction joints shall be located as indicated on Drawings or, if not indicated, so as not to impair the strength and appearance of the structure. Joints shall be spaced at a maximum of 20 feet on center, in either direction and shall coincide with column grids, where present. Install contraction joints in accordance with approved joint location shop drawings.
2. Sawcut joints in grade slabs immediately after finishing, and after curing compound has been applied so that the slab surface is not damaged by equipment and sawcutting does not dislodge aggregate. In general, sawcutting of joints shall take place within a period of 7 to 14 hours after concrete is placed, depending on actual project conditions. Sawcutting shall be scheduled to occur within this timeframe to minimize the risk of shrinkage cracking. Work shall not be postponed until the following work day.
3. Contraction joints shall be 1/8 inch wide by a depth equal to 25% of slab thickness.

3.05 CONCRETE FINISHING

A. Finishes other than floors:

1. After removal of forms, remove fins and forms marks by grinding on exposed interior and exterior surfaces scheduled to receive paint or membrane waterproofing. Patch voids and honeycombs.
2. Interior and exterior exposed concrete surfaces: "Rubbed Finish." Apply grout, clean-down after the patching, grinding, and cleaning operations are complete. The grout wash shall follow the patching operation as soon as possible and the procedure shall be as follows:
    a. Mix one part portland cement and 1-1/2 parts fine sand with sufficient water to produce a grout having the consistency of thick paint. Use white portland cement for cement in grout. Wet the surface of the concrete sufficiently to prevent absorption of water from grout and apply grout with a brush or burlap completely filling air bubbles and holes. Immediately after applying grout, float surface with a cork or other suitable float, scouring vigorously. While the grout is still plastic, finish surface with a sponge rubber float, removing excess grout.
    b. Finishing shall be done at time when grout will not pull from holes of depressions. Next, allow surface to dry until surface takes on a powdery appearance, then rub vigorously with dry burlap to remove completely dried grout. No visible film or grout shall remain after rubbing. Complete entire cleaning operation for an area the day it is started. Do not leave grout on overnight.

c. After the concrete has been grout-cleaned, if slightly dark spots or streaks remain, wipe off lightly with a fine abrasive hone without using water. Rubbing with the hone shall not be sufficient to change the texture of the concrete. Include final operation as part of grout cleaning where necessary.

3. In foundation walls below grade and both sides of pit walls, cut back ties and spreaders to a depth of approximately 1-1/2 in. Cut back honeycombed concrete and voids to sound concrete. Cuts shall be to depth of at least 1-1/2 in. with edges perpendicular to surface.

4. Concrete surfaces not exposed to view may be left "as is." Fill holes resulting from cutting back of scale pockets, honeycomb, surface voids and the removal of form wires or spreaders with cement mortar.

B. Floor and slab finishes:

1. Measure floor finish tolerances in accordance with ASTM E1155. Individual floor sections shall be bounded by construction joints, contraction (control) joints, or column lines that form the smallest sections.

2. Floor Slab Tolerance: After final troweling operation slab shall have a surface place tolerance not exceeding 1/4 inch in 10 feet when tested with a loft straightedge, but 1/4 inch shall not be cumulative.

3. Where specified tolerances in surface elevation of slabs are exceeded, grind or patch the surface to obtain specified tolerance. Grind as soon as possible but not before 3 days of cure. Install patching material in accordance with manufacturer's instructions.

4. Finishes:

a. Scratched finish for surfaces to receive bonded applied cementitious finishes: After the surface has been struck off, consolidated and leveled, roughen surface with stiff brushes or rakes before final set.

b. Troweled finish for surface to receive finish flooring or be exposed: Float finish surfaces first and then apply power-driven trowel and then hand trowel. First troweling after power floating shall be with a power trowel producing a smooth surface relatively free of defects. Additional troweling by hand after surface has hardened sufficiently to produce a ringing sound as the trowel is moved over the surface. Thoroughly consolidate surface by hand trowel operation. Finished surface shall be free of trowel markings and be uniform in texture and appearance. On surfaces receiving floor coverings, remove defects of sufficient magnitude to show through floor covering by grinding.

c. Broom finish: Light/medium broom on ramps and sidewalks, to be approved in field by Architect, finish to be consistent.

5. Floor Slab Recesses and Slopes:

a. Where floor drains are indicated on Drawings, slope floor slabs to drain.

3.06 FORMS REMOVAL

A. Forms not supporting weight of concrete, such as sides of beams, walls, columns, and similar work, may be removed after cumulatively curing at not less than 50o F. for at least 24 hours after placing concrete, provided that concrete is sufficiently hard so as not to be damaged by form removal, and provided that curing and protection measures are maintained.

B. Forms supporting the weight of concrete shall not be removed in less than 14 days or until the concrete has attained at least 70% of the design strength.

3.07 CURING AND PROTECTION

A. Curing:

1. Spray top surface of slabs with liquid membrane-forming compound in accordance with manufacturer's directions as soon as the newly placed surface has been finished and will not be marred by application.
2. Respray surfaces subjected to heavy rainfall within three hours of compound application.
3. Where practicable, keep forms in place for a seven-day curing period. Keep top exposed concrete surface wet and forms moist. Loosen forms to allow curing water to run down between concrete and forms.
4. If forms cannot remain in place for seven days, cover concrete with fabrics that have moisture-retaining properties. Examine fabrics to detect elements that might discolor concrete finish. Keep fabric moist continuously to ensure a film of water on concrete surface.

B. Comply with requirements of ACI 308R. Immediately after placement, protect concrete from premature drying, excessively hot or cold temperatures, and mechanical injury.

C. Maintain concrete with minimal moisture loss at relatively constant temperature for period necessary for hydration of cement and hardening of concrete.

D. Cold Weather Protection

1. Protection of concrete during cold weather shall comply with ACI 306; heating of concrete shall be in accordance with ASTM C94-78. Cold weather techniques shall be used where the mean daily temperature falls below 40 degrees F for at least two (2) consecutive days.
2. Temperature of the concrete at time of placement shall not be less than 50 degrees F. Temperature of the soil against which concrete to be placed shall not be less than 40 degrees F.
3. Concrete temperature shall be maintained at a minimum of 50 degrees F for at least seventy-two (72) hours after placement.
4. Contractor shall provide to the architect a description of cold weather protection procedures to be used, including the methods for determining the need for the procedures.

E. Hot Weather Protection

1. Protection of concrete during hot weather shall comply with ACI 301 and ACI 305. Hot weather protection procedures shall be used when the temperature of the concrete mix exceeds 85 degrees F.
2. Temperature of the concrete mix may exceed 85 degrees F only if water reducing and retarding compound complying with ASTM C494 is used.
3. Hot weather precautions shall be instituted by the contractor when the anticipated rate of evaporation, as determined by guidelines in ACI 305, is expected to reach 0.2 pounds per square foot per hour (lb/sq. ft./hr.).
4. The contractor shall provide to the architect a description of hot weather protection procedures to be used, including the methods for determining when the procedures will need to be implemented. Provide written recommendations from the manufacturer for use of water reducing and retarding compounds.

3.08 FIELD QUALITY CONTROL

A. Concrete shall be sampled and tested for quality control during the placement of concrete as follows:

1. Sampling Fresh Concrete: ASTM C172, except modified for slump to comply with ASTM C94.

2. Slump: ASTM C143; one test for each concrete load at point of discharge, and one for each set of compressive strength test specimens. The testing laboratory or Owner's Representative shall have the authority to reject any concrete that does not have the specified slump.
3. Air Content: ASTM C231, pressure method; one for each set of compressive strength test specimens.

B. Compression Test Specimens

1. ASTM C31: One set of 5 standard cylinders for each compressive strength test, unless otherwise directed. Mold and store cylinders for laboratory cured test specimens except when field-cure test specimens are required.
2. Tests shall be made by an independent testing laboratory. Not less than one test for each 150 cubic yards of concrete, or fraction thereof, or each 5,000 sq. ft. of slab, for each class of concrete placed will be required, and in any event not less than one test for each day's pour of each class of concrete. Four specimens will be made for each test: ASTM C39 and C31.
3. Standard age of test shall be 28 days. Seven-day test results shall be reported to Architect for two cylinders of each class of concrete. Test 2 cylinders at 28 days and 2 at 7 days.
4. If strength of laboratory control cylinders for any portion of structure falls below the compressive strength required for the design, Architect shall have the right to order change in proportions of water content of concrete for remaining portions of structure. In addition, where there is question as to quality of concrete in structure, Architect may require tests in accordance with ASTM C42. Should such tests fail to develop minimum strengths specified, faulty concrete shall be replaced.
5. Report test results in writing to the Architect and the Contractor on the same day that tests are made. Reports of compressive strength tests shall contain the project identification name and number, date of concrete placement, name of Contractor, name of concrete supplier and truck number, name of concrete testing service, concrete type and class, location of concrete batch in the structure, design compressive strength at 28 days, concrete mix proportions and materials, compressive breaking strength and type of break for both 7-day and 28-day tests. Furnish copy of each test to local building inspections office at same time other submittals are made.
6. Contractor must provide a concrete cylinder storage box acceptable to the testing and inspection laboratory.

C. An independent testing agency will perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

3.09 DEFECTIVE CONCRETE

A. Test Results: The testing agency shall report test results in writing to Architect and Contractor within 24 hours of test.

B. Repair or replacement of defective concrete will be determined by the Architect . The cost of additional testing shall be borne by Contractor when defective concrete is identified.

3.10 PROTECTION

A. Do not permit traffic over unprotected concrete floor surface until fully cured.

END OF SECTION

SECTION 03 3511
CONCRETE FLOOR FINISHES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Surface treatments for concrete floors and slabs.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Finishing of concrete surface to tolerance; floating, troweling, and similar operations; curing.

B. Section 03 3000 - Cast-in-Place Concrete: Curing compounds that also function as sealers.

C. Section 03 3523 - Exposed Aggregate Concrete Finishing.

D. Section 09 6623 - Resinous Matrix Terrazzo Flooring.

E. Section 09 9600 - High-Performance Coatings.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordinate the work with concrete floor placement and concrete floor curing.

1.04 SUBMITTALS

A. Quality Assurance:

1. Test Reports: Certified test reports showing compliance with specified performance characteristics and physical properties as cited in 1.03 Performance Requirements.

2. Certificates:

a. Product certificates signed by manufacturer certifying materials comply with specified performance characteristics and criteria and physical requirements.

b. Letter of certification from the National Floor Safety Institute confirming the system has been tested and passed phase Two Level of certification when tested by Method 101-A.

c. Current contractor’s certificate signed by manufacturer declaring contractor as an approved installer of polishing system.

3. Manufacturer’s Instructions: Manufacturer’s installation instructions.

B. CLOSEOUT SUBMITTALS

1. Warranty: Submit warranty documents specified.

2. Operation and Maintenance Data: Submit operation and maintenance data for installed products to include:

a. Manufacturer’s instructions on maintenance renewal of applied treatments.

b. Protocols and product specifications for joint filing, crack repair and/or surface repair.

C. See Section 01 3000 - Administrative Requirements, for submittal procedures.

D. Product Data: Manufacturer's published data on each finishing product, including information on compatibility of different products and limitations.

E. Maintenance Data: Provide data on maintenance and renewal of applied finishes.

1.05 QUALITY ASSURANCE

A. Qualifications:

1. Installer experienced in performing work of this section who has specialized in installation of work similar to that required for this project.
2. Installer trained and holding current certification for FGS PermaShine installation.
3. Manufacturer Qualifications: Manufacturer capable of providing field service representation during construction and approving application method.

B. Regulatory Requirements.

1. NFSI Test Method 101-A Phase Two Level High Traction Material.

C. Mock-Ups:

1. Mock-Up Size: 100 ft2 sample panel at jobsite at location as directed under conditions similar to those which will exist during actual placement.
2. Mock-up will be used to judge workmanship, concrete substrate preparation, operation of equipment, material application, color selection and shine.
3. Allow 24 hours for inspection of mock-up before proceeding with work.
4. When accepted, mock-up will demonstrate minimum standard of quality required for this work.
5. Approved mock-up may remain as part of finished work.

D. Preinstallation Meetings: Conduct a preinstallation meeting to verify project requirements, manufacturer’s installation instructions and manufacturer’s warranty requirements. Review the following:

1. Environmental requirements.
2. Scheduling and phasing of work.

1.06 MOCK-UP

1. Coordinating with other work and personnel.
2. Protection of adjacent surfaces.
3. Surface preparation.
4. Repair of defects and defective work prior to installation.
5. Cleaning.
6. Installation of polished floor finishes.
7. Application of liquid hardener, densifier.
8. Protection of finished surfaces after installation.

B. Mock-Up Size: 100 ft2 sample panel at jobsite at location as directed under conditions similar to those which will exist during actual placement.

C. Mock-up will be used to judge workmanship, concrete substrate preparation, operation of equipment, material application, color selection and shine.

D. Allow 24 hours for inspection of mock-up before proceeding with work.

E. When accepted, mock-up will demonstrate minimum standard of quality required for this work.

F. Approved mock-up may remain as part of finished work.

G. For coatings, construct mock-up area under conditions similar to those that will exist during application, with coatings applied.

H. Mock-Up Size: 10 feet (3 m) square.

I. Locate where directed.

J. Mock-up may remain as part of the work.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's sealed packaging, including application instructions.

B. Ordering: Comply with manufacturer’s ordering instructions and lead time requirements to avoid construction delays.

C. Delivery:

1. Deliver materials in manufacturer’s original packaging with identification labels and seals intact.

D. Storage and Protection:

1. Store materials protected from exposure to harmful weather conditions and at temperature conditions recommended by manufacturer.

2. Protect concrete slab.

a. Protect from petroleum stains during construction.

b. Diaper hydraulic power equipment.

c. Restrict vehicular parking.

d. Restrict use of pipe cutting machinery.

e. Restrict placement of reinforcing steel on slab.

f. Restrict use of acids or acidic detergents on slab.

3. Waste Management and Disposal:

a. Remove from site and legally dispose of packaging materials.

1.08 FIELD CONDITIONS

A. Installation Location: Comply with manufacturer’s written recommendations.

B. Maintain light level equivalent to a minimum 200 W light source at 8 feet (2.5 m) above the floor surface over each 20 foot (6 m) square area of floor being finished.

C. Do not finish floors until interior heating system is operational.

D. Maintain ambient temperature of 50 degrees F (10 degrees C) minimum.

1.09 SEQUENCING

A. Sequence With Other Work: Comply with manufacturer’s written recommendations for sequencing construction operations.

1.10 WARRANTY

A. Manufacturer’s Warranty: Submit, for Owner’s acceptance, manufacturer’s standard warranty document executed by authorized company official. Manufacturer’s warranty is in addition to, and does not limit, other rights Owner may have under Contract Documents.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Ensure manufacturer has minimum 5 years experience in manufacturing components similar to or exceeding requirements of project.

B. Polished Concrete Finishing Products

1. Manufacturer: L & M Construction Chemicals, Inc. is the design basis of this specification. Other manufacturers may be proposed no later than ten days prior to bid date in accordance with Section 01630.

C. Products/Systems:

1. Hardener, Sealer, Densifier: Proprietary, water based, odorless liquid, VOC compliant, environmentally safe chemical hardening solution leaving no surface film.
    a. Acceptable Material: L & M Construction Chemicals, Inc., FGS Hardener Plus.
2. Joint Filler: Semi-rigid, 2-component, self-leveling, 100% solids, rapid curing, polyurea control joint and crack filler with Shore A 80 or higher hardness.
    a. Acceptable Material: L & M Construction Chemicals, Inc., Joint Tite 750.
3. Oil Repellent Sealer: Ready to use, silane, siloxane and fluoropolymers blended water based solution sealer, quick drying, low-odor, oil and water repellent, VOC compliant and compatible with chemically hardened floors.
    a. Acceptable Material: L & M Construction Chemicals, Inc., Petrotex.
4. Concrete Dyes: Fast-drying dye, packaged in premeasured units ready for mixing with VOC exempt solvent; formulated for application to polished cementitious surfaces.
    a. Acceptable Material: L & M Construction Chemicals, Inc., Vivid Concrete Dyes.
5. Cleaning Solution: Proprietary, mild, highly concentrated liquid concrete cleaner and conditioner containing wetting and emulsifying agents; biodegradable, environmentally safe and certified High Traction by National Floor Safety Institute (NFSI).
    a. Acceptable Material: L & M Construction Chemicals, Inc., FGS Concrete Conditioner.
6. Finish: Standard High gloss (HG-1), 1500 grit
7. Color: As selected by Owner/Architect from standard palette of 24 colors.

D. SOURCE QUALITY CONTROL

1. Ensure concrete finishing components and materials are from single manufacturer.

2.02 CONCRETE FLOOR FINISH APPLICATIONS

A. Unless otherwise indicated, all concrete floors are to be finished using liquid densifier/hardener.

B. Liquid Densifier/Hardener:

C. Penetrating Clear Sealer:

D. High Gloss Clear Sealer:

E. Slip Resistant Coating: High gloss clear sealer with plastic aggregate.

F. Polished Finish:

2.03 SURFACE TREATMENTS

A. Troweling Aid, Densifier and Curing Agent: Liquid reactive colloidal silica-based topical treatment, spray-applied to wet concrete and floated or troweled into the surface.

2.04 DENSIFIERS AND HARDENERS

A. Liquid Densifier/Hardener: Penetrating chemical compound that reacts with concrete, filling the pores and dustproofing; for application to concrete after set.

1. Composition: Lithium silicate.

2.05 COATINGS

A. High Gloss Clear Coating: Transparent, non-yellowing, water- or solvent-based coating.

1. Composition: Acrylic polymer-based.

2. Nonvolatile Content: 15 percent, minimum, when measured by volume.

B. Low Gloss Clear Coating: Transparent, non-yellowing, water- or solvent-based coating.

1. Composition: Acrylic polymer-based.

2. Nonvolatile Content: 25 percent, minimum, when measured by volume.

C. Penetrating Sealer: Transparent, non-yellowing, water- or solvent-based coating.

1. Composition: Siliconate.

D. Plastic Aggregate: Finely ground polymer for addition to coatings for slip resistance.

2.06 POLISHED CONCRETE SYSTEM

A. Polished Concrete System: Materials, equipment, and procedures designed and furnished by a single manufacturer to produce dense polished concrete of the specified sheen.

1. Acceptable Systems:

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that floor surfaces are acceptable to receive the work of this section.

B. Verify that flaws in concrete have been patched and joints filled with methods and materials suitable for further finishes.

3.02 GENERAL

A. Apply materials in accordance with manufacturer's instructions.

3.03 MANUFACTURERS INSTRUCTIONS

A. Compliance: Comply with manufacturer’s written data, including product technical bulletins, product catalog installation instructions, product carton installation instructions and L & M Construction Chemicals, Inc., SPEC-DATA sheets.

B. Use only L & M certified FGS/PermaShine installers.

3.04 EXAMINATION

A. Site Verification of Conditions:

1. Verify that concrete substrate conditions, which have been previously installed under other sections or contracts, are acceptable for product installation in accordance with manufacturer’s instructions prior to installation of concrete finishing materials.

3.05 PREPARATION

A. Ensure surfaces are clean and free of dirt and other foreign matter harmful to performance of concrete finishing materials.

B. Examine surface to determine soundness of concrete for polishing.

C. General Contractor to remove surface contamination.

3.06 INSTALLATION

A. Floor Surface Polishing and Treatment:

1. Provide polished concrete floor treatment in entirety of slab indicated by drawings. Provide consistent finish in all contiguous areas.
2. Apply floor finish prior to installation of fixtures and accessories.
3. Diamond polish concrete floor surfaces with power disc machine recommended by floor finish manufacturer. Sequence with coarse to fine grit using dry method.
    a. Comply with manufacturer's recommended polishing grits for each sequence to achieve desired finish level. Level of sheen shall match that of approved mock-up.
    b. Expose aggregate in concrete surface only as determined by approved mock-up.
    c. All concrete surfaces shall be as uniform in appearance as possible.
4. Dyed and Polished Concrete:
    a. Locate demarcation line between dyed surfaces and other finishes.
    b. Polish concrete to final finish level.
    c. Apply diluted dyes to polished concrete surface.
    d. Allow dye to dry.
    e. Remove residue with dry buffer; reapply as necessary for desired result.
5. Apply FGS Hardener Plus, Hardener, Densifier As Follows:
    a. First coat at 250 ft2 /gal (6.25 m2 /L).
    b. Second coat at 350 ft2 /gal (8.75 m2 /L).
    c. Follow manufacturer's recommendations for drying time between successive coats.
6. Remove defects and repolish defective areas.
7. Finish edges of floor finish adjoining other materials in a clean and sharp manner.

3.07 ADJUSTMENTS

A. Polish to higher gloss those areas not meeting specified gloss levels per mockup.

B. Fill joints flush to surface.

3.08 FINAL CLEANING

A. Mechanically scrub treated floors for seven days with soft to medium pads with approved cleaning solution.

B. Upon completion, General Contractor must remove surplus and excess materials, rubbish, tools and equipment.

3.09 COATING APPLICATION

A. Verify that surface is free of previous coatings, sealers, curing compounds, water repellents, laitance, efflorescence, fats, oils, grease, wax, soluble salts, residues from cleaning agents, and other impediments to adhesion.

B. Verify that water vapor emission from concrete and relative humidity in concrete are within limits established by coating manufacturer.

C. Protect adjacent non-coated areas from drips, overflow, and overspray; immediately remove excess material.

3.10 CONCRETE POLISHING

A. Execute using materials, equipment, and procedures specified by manufacturer, using manufacturer approved installer.
   1. Final Polished Sheen: Satin finish; other sheens are included as comparison to illustrate required sheen; final sheen is before addition of any sealer or coating, regardless of whether that is also specified or not.
   2. Satin Finish: Reflecting images from side lighting.

B. Protect finished surface as required and as recommended by manufacturer of polishing system.

END OF SECTION

SECTION 03 3533
STAMPED CONCRETE FINISHING

PART 1 – GENERAL

1.01 GENERAL

A. SECTION INCLUDES:

1. Colored and color-hardened concrete paving with imprinted pattern Portland and cement stain/sealer treatments.

1.02 RELATED DOCUMENTS

A. Section 07 9000 - Joint Sealants: Sealant for joints.

1.03 REFERENCES

A. American Concrete Institute (ACI)

B. ACI 305R - Hot Weather Concreting.

C. ACI 306R - Cold Weather Concreting.

D. ACI 308 - Standard Practice for Curing Concrete.

E. ACI 309 - Standard Practice for Consolidation of Concrete.

F. ACI 347 - Guide to Formwork for Concrete.

G. ACI 503 - Standard Specification for Bonding Plastic Concrete to Hardened Concrete with a Multi-Component Epoxy Adhesive.

H. American Society for Testing and Materials (ASTM)

I. ASTM C33 - Standard Specifications for Concrete Aggregates.

J. ASTM C150 - Standard Specifications for Portland Cement.

K. ASTM C260 - Standard Specifications for Air-Entraining Admixtures for Concrete.

L. ASTM C309 - Standard Specifications for Liquid Membrane Forming Compounds for Curing Concrete.

M. ASTM C494 - Standard Specifications for Chemical Admixtures for Concrete.

1.04 SUBMITTALS

A. Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

B. Testing:

1. Submit proposed mix design for each class of concrete for review prior to commencement of work.
2. Testing firm will take cylinders and perform slump and air entrainment tests in accordance with ACI 301.
3. Four concrete test cylinders will be taken for each class of concrete placed each day.
4. One slump test will be taken for each set of test cylinders taken.

1.05 QUALITY ASSURANCE

A. Installer Qualifications:

1. The Installer shall provide a qualified foreman or supervisor who has a minimum of three years experience with imprinted and textured concrete, and who has successfully completed at least five imprinted concrete installations of high quality and similar in scope to that required.
2. The concrete is cast in place, on the job site, by trained and experienced workmen who shall be employed by a firm that is a licensed and certified Imprint Licensed Contractor by a reputable national colored concrete company.
3. Perform work in accordance with ACI 301, 302, 303.
4. Obtain materials from same source throughout.
5. Conform to applicable codes and regulations for paving work performed within the public right of way.

B. Ready-Mixed Supplier Qualifications:

1. Supplier of ready-mixed concrete products shall comply with ASTM C 94 requirements for production facilities and equipment. Supplier shall be certified according to NCRMA's "Certification of Ready Mixed Concrete Production Facilities Quality Control Manuals."

C. Testing Agency Qualifications:

1. An independent testing agency, acceptable to authorities having jurisdiction, qualified according to ASTM C 1077 and ASTM E 329 to conduct the testing indicated, as documented according to ASTM E 548.

D. Mock-Up:

1. Provide field samples of surface colors textures and patterns specified for architect approval prior to beginning work, 48 inches by 48 inches in size illustrating paving finishes.
   a. Finish areas designated by Architect.
   b. Do not proceed with remaining work until workmanship, color, and sheen are approved by Architect
   c. Finish mock-up area as required to produce acceptable work.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.07 PROJECT CONDITIONS

A. Do not place pavement when base surface or ambient temperature is less than 40 degrees F (4 degrees C) or if base surface is wet or frozen.

B. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.08 WARRANTY

A. All materials equal to that manufactured by The Bomanite Company and warranted to be of uniform quality within manufacturing tolerances.

PART 2 - PRODUCTS

2.01 SYSTEM

A. Supporting Structure:

1. Mix Design:
    a. Mix and deliver concrete in accordance with ASTM C94, Alternate 2. Refer to Drawings for concrete strength requirements.
    b. Use accelerating admixtures containing no calcium chloride in cold weather only when approved by testing laboratory. Use of admixtures will not relax cold weather placement requirements.
    c. Use set retarding admixtures during hot weather only when approved by testing laboratory.
    d. Add air entraining agent to concrete mix for concrete work exposed to exterior, in amounts of 4 to 7 percent of total concrete volume or as otherwise recommended by testing laboratory.
    e. Add coloring admixture where scheduled in quantities recommended by coloring admixture manufacturer to achieve selected color.
    f. Maintain water cement ratio to produce a minimum of 3 to maximum of 5 inch slump.
    g. Use of calcium chloride is strictly prohibited.
2. Subgrade:
    a. Refer to drawings for scope of subgrade preparation.
3. Color:
    a. Integral Color: to be selected from Manufacturer’s standard color chart.
        1) Integral Coloring Admixture: Integral Color, synthetic oxide pigment, meeting ASTM C979 and C494.
            (a) Type A, cement dispersing/water reducing.
            (b) Type D, set retarding/water reducing.
            (c) Color to be confirmed by Owner/Architect.
    b. Color Hardener:
        1) Bomanite Color Hardener: The concrete shall be colored with Color Hardener. Color to be selected from Manufacturer's standard color chart.
4. Tools Selection:
    a. Imprinting Tools:
        1) Mat type imprinting tools for texturing freshly placed concrete, in pattern/texture as selected by Architect or as scheduled.
        2) Imprinting tools for specialty projects shall become property of the City of Tulsa after the project.
    b. Textures and Patterns:
        1) Designs as scheduled. Refer to Drawings.
5. Release Agent Selection:
    a. Powdered Release Agent. Up to two (2) colors to be selected.
    b. Permapro Gunsmoke Release Agent or equal.
    c. Liquid Release Agent. Clear color
    d. Bomanite Liquid Release or equal.
6. Secondary Antique or Coloration:

a. Topical Stain:

1) Colors to be selected from Manufacturer's standard color chart.

b. Chemical Stain:

1) Colors to be selected from Manufacturer's standard color chart.

7. Cure Agent:

a. Membrane Color Cure:

1) Color(s) as scheduled. Refer to Drawings.

(a) Curing Compound: Meeting ASTM C309, water based emulsion.

2) Silicate Cure & Densifier.

2.02 RELATED MATERIALS

A. Cement:

1. ASTM C150, type 1, Portland cement, gray color.

B. Fine and Coarse Aggregates:

1. ASTM C33.

C. Water:

1. Clean and not detrimental to concrete.

D. Form Material:

1. Conform to ACI 301. If using metal, material shall be free from deformities. If using wood, use construction grade lumber, sound and free of warp, minimum 2 inches (51 mm) nominal thickness, except where short radii of curves require thinner forms.

E. Contraction Joint Devices:

1. Galvanized sheet metal, keyed profile.

F. Tie Wire:

1. Annealed steel, minimum 16 gage size.

G. Dowels:

1. ASTM A615; Grade 40, plain steel, uncoated finish.

H. Form release agent:

1. As acceptable to concrete colorant manufacturer, non-staining, dissipative type.

I. Vapor Retarding Membrane:

1. 10 mil (.2540 mm) reinforced polyethylene.

J. Air-Entraining Admixture:

1. ASTM C 206. Air Entrained Concrete shall be used wherever concrete is exposed to the freezing weather. Proportions of entrained air, as determined by ASTM C233, and C260, shall be as follows:

a. Aggregate: 3/8 inch maximum size aggregate 6-8 percent entrained air.

b. Aggregate: 3/4 inch maximum size aggregate 5-7 percent entrained air

K. Joint Fillers:

1. Asphaltic Joint Filler:

a. Asphalt impregnated fiberboard, ASTM D1751, 1/2 inch (12 mm) thick.

2. Non-Asphaltic Joint Fillers:

a. ASTM D1752, Type I

L. Sealants:

1. Two part polyurethane sealants, of grade as required to suit application, meeting ASTM C920, in manufacturer's custom colors.

a. Urethane, SL grade, as specified in Section 07 9000.

b. Urethane, SL-TB grade as specified in Section 07 9000.

M. Bonding-Agent:

1. ASTM C 1059, Type II, non-redispersible, acrylic emulsion or styrene butadiene rubber.

N. Epoxy-Bonding Adhesive:

1. ASTM C 881, two component epoxy resin, capable of humid curing and bonding to damp surface, of class and grade to suit requirements if required, and as follows: Types I and II, non-load bearing, for bonding hardened of freshly mixed concrete to hardened concrete.

PART 3 - EXECUTION

3.01 INSPECTION

A. Verify compacted subgrade is ready to support paving and imposed loads, free of frost, smooth and properly compacted.

B. Verify gradients and elevations of base are correct, and proper drainage has been provided so water does not stand in the area to receive paving.

C. Beginning of installation means acceptance of existing conditions.

3.02 PREPARATION

A. If vapor retarding membrane is not used, moisten base to minimize absorption of water from fresh concrete.

B. Notify Architect and testing laboratory, minimum 24 hours prior to commencement of concreting operations.

3.03 FORMING

A. Construct and remove forms in accordance with ACI 347.

B. Place and secure forms to correct location, dimension, and profile. Adequately brace to withstand loads applied during concrete placement.

C. Assemble formwork to permit easy stripping and dismantling without damaging concrete.

D. Place joint fillers vertical in position, in straight lines. Secure to formwork during concrete placement.

3.04 INSERTS AND ACCESSORIES

A. Make provisions for installation of inserts, accessories, anchors, and sleeves

B. Place vapor retarder continuously over subgrade. Overlap joints a minimum of 12 inches (305 mm) and seal with a joint tape of same permeance as sheeting material.

3.05 JOINTS

A. Intentional stoppage of concrete placing shall be at planned location of either an expansion joint or contraction joint.

B. When stoppage occurs at an expansion joint, install joint assembly with a bulkhead of sufficient section drilled to accommodate required dowels. Provide expansion joints at maximum 50 feet (15 m) o.c.e.w. at pedestrian paving. Align joints with stamped concrete pattern.

C. When stoppage occurs at a contraction joint, install sheet metal joint assembly of sufficient section to prevent deflection, shaped to concrete section.

D. Stoppage at Unintentional Location:

1. Immediately upon unintended stoppage of concrete placing, place available concrete to a line and install bulkhead perpendicular to surface of pavement and at required elevation. Place and finish concrete to this bulkhead.
2. Remove and dispose of concrete remaining on subgrade ahead of bulkhead.
3. When placing of concrete is resumed before concrete has set to extent that concrete will stand on removal of bulkhead, new concrete shall be rodded with the first; otherwise, carefully preserve joint face.
4. Provide a joint seal space at edges created by a construction joint of this type shall have a joint seal space as detailed on Drawings.

E. Provide sawed contraction joints in pedestrian paving spaced 10 feet o.c.e.w. spacing. Align joints with stamped concrete pattern.

1. Saw joints after completion of finishing operations as soon as concrete has hardened to extent necessary to prevent revealing of joint or damage to adjacent concrete surfaces.
2. Saw joints same day that concrete is placed except that sawing of joints in concrete placed late in day may be delayed until morning of following day.
3. In any event, saw joints within 18 hours after placing concrete.
4. Use a power-driven concrete saw made especially for sawing concrete and maintain in good operating condition.
5. Saw cut shall be to a depth equal to 1/4 of slab thickness, minimum one inch (25 mm) depth.
6. Align joints in vehicular paving with joints in adjacent pedestrian paving.
7. Cut joints through curbs at right angles to back of curb.

F. Place joint filler between paving components and building or other appurtenances.

G. Provide scored joints in sidewalks and plazas to a depth of 1/4 the slab thickness, and at intervals as indicated, but in no case spaced greater than width of walk.

3.06 PLACING CONCRETE

A. Consolidate concrete by suitable means to prevent formation of voids or honeycombs. Exercise care to prevent disturbance of forms and damage to vapor retarder. Place concrete to lines and levels shown, properly sloped to drain as designed.

1. Hot Weather Placement: ACI 305.
2. Cold Weather Placement: ACI 306.
3. Ensure inserts, embedded parts, and formed joints are not disturbed during concrete placement.
4. Place concrete continuously between predetermined construction joints. Do not break or interrupt successive pours such that cold joints occur.

B. After consolidating and screeding, float concrete to gradients indicated. Use a straight edge to level and test surface in longitudinal direction to required grade. Finish edges to provide a smooth dense surface

with 1/8 inch (3 mm) radius.

C. Apply Color Hardener prior to application of pattern. Apply at rate recommended by manufacturer, evenly to the surface of the fresh concrete by the dry-shake method. Applied in two or more shakes, floated after each shake and troweled only after the final floating.

D. While concrete is still in its plastic state, apply the tool/texture pattern to the surface of the concrete. Properly tamp tools into the surface to achieve the required texture, with uniformity of pattern and depth of stamping. Utilize bond breaker to keep tools from sticking to fresh concrete.

1. Release material shall be applied to the troweled surface prior to imprinting.

E. Place curing compound on exposed concrete surfaces immediately after finishing.

F. Apply in accordance with manufacturer's instructions.

G. Apply secondary stain treatment per approved mock-up or as scheduled to achieve design.

H. Apply finish sealer per approved mock-up or as specified to achieve design required.

3.07 FIELD QUALITY CONTROL

A. Maintain records of placed concrete items. Record date, location of pour, quantity, air temperature, and test samples taken.

3.08 PROTECTION

A. Immediately after placement, protect concrete from premature drying, excessive hot or cold temperatures, and mechanical injury.

3.09 METHOD OF MEASUREMENT

A. Stamped Concrete Paving. The quantity to be measured for under this item shall be for each logo installed at the location and of the type shown on the Plans or in the Proposal, completed and accepted, measured in place.

END OF SECTION

SECTION 03 3713
SHOTCRETE

PART 1 GENERAL

1.01 SUMMARY

A. Related Documents:

1. Drawings and general provisions of the Subcontract apply to this Section.
2. Review these documents for coordination with additional requirements and information that apply to work under this Section.

B. Section Includes: Pneumatically applied concrete.

C. Related Sections:

1. Division 01 Section "General Requirements."
2. Division 01 Section "Special Procedures."
3. Division 03 Section "Concrete".
4. Division 03 Section "Concrete Reinforcing".
5. Division 03 Section "Cast-in-Place Concrete".

1.02 REFERENCES

A. General:

1. The following documents form part of the Specifications to the extent stated. Where differences exist between codes and standards, the one affording the greatest protection shall apply.
2. Unless otherwise noted, the referenced standard edition is the current one at the time of commencement of the Work.
3. Refer to Division 01 Section "General Requirements" for the list of applicable regulatory requirements.

B. ACI – American Concrete Institute:

1. Guide to Shotcrete
2. Specifications for Shotcrete

C. ASTM International:

1. Standard Specification for Concrete Aggregates
2. Standard Specification for Portland Cement
3. Standard Practice for Preparing and Testing Specimens from Shotcrete Test Panels
4. Standard Specification for Admixtures for Shotcrete

1.03 SUBMITTALS

A. Submit under provisions of Division 01 Section "General Requirements."

B. Qualifications of shotcrete applicator and personnel performing the work.

C. Mix designs including compressive test data used to establish proportions. Material certificates for shotcrete materials, including cements, aggregates and admixtures. Submit to Testing Laboratory for record purposes.

D. Submit batch tickets to Testing Laboratory for each batch of shotcrete, indicating weight of cement, aggregate, water and admixtures.

E. Samples as requested by the Testing Laboratory or University.

1.04 QUALITY ASSURANCE

A. Perform shotcrete work in accordance with the requirements of ACI 506.2, "Specifications for Materials, Proportioning, and Application of Shotcrete," and [Section 1924 of the California Building Code].

B. Shotcrete Mix Design: Testing laboratory shall, under direction of its California registered Civil Engineer, design shotcrete mixes. Each mix shall bear the signature and registration number of the responsible engineer.

C. Test Panels: Prepare preconstruction test panels at least 21 days prior to job placement, using the mix and equipment proposed for the project.

1. Each proposed nozzleman shall prepare a panel demonstrating each shooting orientation.
2. Fabricate test panels in accordance with ASTM C1140 and CBC 1924.5 and as approved by the University's Representative.
3. Notify Testing Laboratory to observe placement of panels. Maintain panels at point of fabrication for 7 days and until Testing Laboratory has taken cores.
4. Samples taken from test panel shall achieve a mean core grade of 2.0, in accordance with Section 1.7 of ACI 506.2, "Shotcrete Core Grades". In the event of failure, nozzleman shall be permitted one retest. Any nozzleman failing the second test shall not be permitted on the project.

D. Certificates of Compliance: Acceptability of the following materials will be based upon documentation furnished by the manufacturer identifying each batch of material and certifying compliance with the requirements specified.

1. Portland cement
2. Fly Ash
3. Admixtures

E. Certified laboratory test reports: Before delivery of materials, certified copies of the reports of all tests required in referenced publications or otherwise specified here shall be submitted. Certified test reports are required for the following:

1. Cement
2. Aggregates
3. Admixtures

1.05 ENVIRONMENTAL REQUIREMENTS

A. Ensure materials and surrounding air temperature are a minimum 40 deg F (4.4 deg C) prior to, during, and seven days after completion of work.

B. During freezing or near freezing weather, provide equipment and cover to maintain minimum 40 deg F (4.4 deg C) and to protect work completed or work in progress.

C. Suspend shotcrete operations during high winds, rainy weather, hot weather, or near freezing temperatures when work cannot be protected.

PART 2 PRODUCTS

2.01 MATERIALS

A. Concrete materials shall conform to the appropriate requirements of Section [Division 03 Section "Concrete Reinforcing"] Division 03 Section "Cast-in-Place Concrete"], ACI 506R and ACI 506.2 except as specified herein for adjustment of aggregate and mix for placing.

B. Addmixtures: ASTM C1141.

C. Aggregate: ASTM C33, combined Gradation No. 2 as specified in ACI 506.R.

2.02 SHOTCRETE MIX

A. Proportion shotcrete mix in accordance with ACI 506.2.to achieve 4,000 psi (27.6 MPa) compressive strength at 28 days.

B. Provide a mix that is plastic enough to give good compaction and low percentage of rebound, but stiff enough not to sag.

C. Measure and mix shotcrete in accordance with requirements of [Division 03 Section "Concrete Reinforcing"] Division 03 Section "Cast-in-Place Concrete"].

2.03 EQUIPMENT

A. Equipment: Equipment of design and size which has given good results in similar work; pneumatic feed type; capable of maintaining continuous placement.

B. Air Supply: Clean, dry air adequate for maintaining sufficient nozzle velocity, uniformly steady for work while simultaneously operating blow pipe for cleaning away rebound.

C. Delivery Equipment: Capable of discharging aggregate-cement-water mixture accurately, uniformly, and continuously through the delivery hose.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

B. Verify fabricated forms are true to line and dimension, adequately braced against deflection and vibration, and constructed to permit escape of air and rebound during gunning operations.

C. Ensure correct placement of reinforcement. Ensure sufficient clearance around reinforcement to permit complete encasement.

D. Ensure easy access to shotcrete surfaces for screening and finishing, to permit uninterrupted application.

E. Beginning of installation means the Subcontractor accepts that the existing conditions meet the above criteria.

3.02 PREPARATION

A. Prepare smooth, even surfaces. Minimize abrupt changes in thickness of repair. Remove square external corners from substrate by radiating the edge.

B. Ensure that forms are true to line and dimension, adequately braced against deflection and vibration, and constructed to permit escape of air and rebound during gunning operations.

C. Do not place shotcrete on any surface which is frozen, spongy or where there is standing water.

D. Shotcrete placed against existing concrete or masonry - Remove unsound material before applying shotcrete. Chip or scarify any area to be repaired to remove off-sets which would cause an abrupt change in thickness without suitable reinforcement. Taper edges to leave no square shoulders at the perimeter of a cavity. Remove loose material from areas receiving shotcrete. Wet the surface until it is damp, but without visible free water. [Remove paint, oil, grease and other contaminants and apply bonding agent to provide a surface for proper bonding of the shotcrete.]

3.03 ALIGNMENT CONTROL

A. Provide alignment wires to establish thickness and plane of required surfaces.

B. Install alignment wires at corners and offsets not established by forms.

C. Tighten alignment wires true to line. Position adjustment devices to permit additional tightening.

3.04 APPLICATION

A. Ensure sufficient clearance around reinforcement to permit complete encasement.

B. Allow easy access to shotcrete surfaces for screening and finishing to permit uninterrupted application.

C. Establish, and adhere to, operating procedures for placement in close quarters, at extended distances or around unusual obstructions where placement velocities and mix consistency must be adjusted.

D. When shotcreting walls, begin the application at the bottom and work upwards. Ensure that the work does not sag.

E. Direct nozzle perpendicular to surface to ensure maximum compaction with minimum rebound.

F. Build up thickness by layers, in multiple passes of the nozzle over the work area. Follow a routing that will fill and completely encase reinforcement, using maximum layer thickness.

G. Allow each layer to take initial set before applying succeeding layers.

H. After initial set, remove excess material outside of forms and alignment lines.

I. Remove laitance that has taken final set by sandblasting. Clean with air-water jet.

J. Sound work with hammer for voids. Cut out voids and replace with new shotcrete layers.

K. Remove trapped rebound at construction and expansion joints.

L. Remove rebound material which does not fall clear of the work. Discard salvaged rebound.

M. Keep rebound and other loose or porous material out of new construction.

N. Provide troweled finish of final layer. Avoid troweling of thin sections of shotcrete unless both troweling and commencement of moisture curing take place, within a relatively short period after placement of shotcrete. Do not scrape or cut to remove high spots until the shotcrete has become stiff enough to withstand pull of the cutting device.

O. Remove and replace all shotcrete which exhibits sags or sloughs, segregation, honeycombing, sand pockets or other obvious defects. Repair defective areas in accordance with the provisions of paragraph 3.02.E of this Section.

P. Keep completed surfaces wet for a minimum of seven days. Immediately after placement, protect shotcrete from premature drying, excessively hot or cold temperatures, and mechanical injury.

Q. Protect shotcrete repair work from frost action or heavy water flow.

3.05 FIELD QUALITY CONTROL

A. Inspection and Testing will be performed under provisions of Division 01.

B. Testing Laboratory will:

1. Test and inspect materials as required to ensure compliance with specifications.

2. Collect and review tickets for each batch of shotcrete delivered. Annotate water added subsequent to batching.

3. Observe placement of preconstruction test panels. Take six cores from each panel; three with reinforcement and three non-reinforced. Visually inspect and grade in accordance with "Quality

Assurance" article. Test non-reinforced cores for compressive strength at 7 days.

4. Special Inspect shotcrete placement, as required by [CBC Section 1701.5, Item 12], for conformance with the Contract Documents.
5. Take 3-inch (75 mm) core specimens from field test panels and test for compressive strength in accordance with CBC 1924.10.
6. Take 3-inch (75 mm) core specimens from in place work to examine for structural soundness in accordance with [CBC 1924.11.2].

C. The Subcontractor shall:

1. Gun field test panels for strength testing in accordance with [CBC 1924.10]. Panels shall be minimum of 18 inches square.
2. Patch areas cored for testing.
3. Pay Testing Laboratory for investigating of low-strength compressive test results in accordance with [CBC Section 1905.6.4].

END OF SECTION

SECTION 03 3800
POST-TENSIONED CONCRETE

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 Specification Sections apply to this section.

B. Related work in other Sections related to Post-tensioned Concrete include:

1. Section 01 45 29 Structural Testing Laboratory Services.
2. Section 03 10 00 Concrete Forming and Accessories.
3. Section 03 20 00 Concrete Reinforcing.
4. Section 03 30 00 Cast-In-Place Concrete.

1.02 SCOPE OF WORK

A. The post-tensioning supplier and installer shall furnish all labor, materials, services and equipment required to produce a complete post-tensioned structural system. The work shall include the following items:

1. Furnishing all post-tensioning materials including prestressing steel, anchorages, wedges, pocket formers, couplers, plates, support bars, chairs, tendon enclosures, and bursting reinforcement.
2. Placing of all items listed above.
3. Performing all post-tensioning operations including stressing, anchoring, trimming, encapsulating tendon anchors, and grouting pockets.
4. Cooperating with the Owner’s Testing Laboratory in their function of recording and reporting tendon elongation and tension applied to the prestressing steel.
5. Performing all engineering required to fully design a post-tensioning system that complies with the final force and tendon profiles as shown on the structural drawings and to prepare complete shop drawings and field placing drawings.

B. Tendons shall be unbonded as shown on the drawings.

1.03 ENVIRONMENTAL OBJECTIVES

A. The Owner has established environmental goals and strategies for achieving them for this project based upon the LEED® Green Building Rating System for New Construction & Major Renovations Version 2009, as developed by the U.S. Green Building Council. Refer to Division 01 Section "Sustainable Design Requirements.”

B. Manufacturer to supply documentation of level of compliance or non-compliance with the following requirements before consideration as an "acceptable manufacturer:"

1. The following are mandatory requirements for the overall project:
    a. The material(s) in the product(s) supplied shall have a recycled content such that the sum of the post-consumer recycled content plus one-half of the pre-consumer content constitutes at least [Percentage of required recycled materials]% of the total value of the material in the project.
    b. [Percentage of close proximity material]% of the product(s) supplied is extracted, processed, and manufactured regionally within a radius of 500 miles of this project.

1.04 REFERENCE STANDARDS AND CODES

A. American Concrete Institute (ACI):
   1. ACI 117 Specifications for Tolerances for Concrete Construction and Materials
   2. ACI 301. – Specification for Structural Concrete
   3. ACI 308.1 – Standard Specification for Curing Concrete
   4. ACI 318. – Building Code Requirements for Structural Concrete and Commentary
B. Concrete Reinforcing Steel Institute (CRSI): “Manual of Standard Practice”, CRSI MSP- 2.
C. Post-Tensioning Institute (PTI):
   1. “Specification for Unbonded Single Strand Tendons”.
   2. “Field Procedure Manual for Unbonded Single Strand Tendons”.
   3. “Post-Tensioning Manual”.
D. Local Building Code.

1.05 SYSTEM DESCRIPTION

A. Unbonded post-tensioning system described herein is intended to perform without long- term corrosion or other distress in an aggressive environment as defined in the Specification for Unbonded Single-Strand Tendons. Post-tensioning strand, couplers, intermediate, and end anchorages shall be completely protected with a watertight, encapsulated system. Tendon sheathing and grease shall be as specified herein.

1.06 SUBMITTALS

A. Due to the interdependent nature of Sections “03 10 00 – Concrete Forming and Accessories”, “03 20 00 – Concrete Reinforcing”, “03 30 00 - Cast-In-Place Concrete” and “03 38 00 - Post-Tensioned Concrete,” the Contractor shall review all supplier’s shop drawings/field-placing drawings against each other and inform Architect/Engineer of any potential interferences or conflicts.

B. Drawings, Reports, Procedures : Submittals shall be submitted for review and approval and shall include but not be limited to the following:
   1. Tendon layout, including dimensions, which locates the tendons in the horizontal plane. Detail horizontal curvature of tendons at block-outs, openings and anchorages, and show all openings in slabs and beams. Clearly designate each tendon.
   2. Size and grade of tendon profiles showing support heights and locations, and any required reinforcing support steel. Show clearly the location of each tendon and the method of support. Coordinate the location of post-tension anchorages to eliminate conflicts with other embedded items such as curtain wall anchorages, or other similar type anchorages.
   3. Value of the wobble and curvature coefficients and anchorage set used in the design to calculate the tendon elongation.
   4. Details of reinforcement around stressing pockets, closures and openings, including bursting reinforcement, and any interference with tendons. Coordinate with mild reinforcing steel drawings as required.
   5. Details of anchorages, the positive connection between the anchorage and sheathing, pocket formers, couplers, and other related hardware.
   6. Details of the method for sealing the anchorage recesses after the tendon stressing tails have been removed.

7. Clearance requirements for the hydraulic equipment and the dimensions of any stressing pockets required.
8. Sequence of construction, including installation, pouring, jacking procedure, and stressing sequences. Show all construction joints and related tendon details.
9. Samples of forms to be used for field record of stressing operations.
10. Type and thickness of post-tensioning sheathing.
11. Type and chemical analysis of P-T coating showing compliance with Table 1 of the .“Specification for Unbonded Single Strand Tendons”.
12. Shop drawings shall be signed and sealed by a qualified professional engineer, licensed in the state of Maryland who was in responsible charge of the drawing preparation.

C. Manufacturer's Data: Submit for review and approval.

1. Sample hardware, including but not limited to: Anchorage system, coated strand, wedges, pocket formers, and other sub-assemblies required for complete installation including all accessories required to complete the system. Submit valid Evaluation Service Report (ESR) from ICC Evaluation Service, Inc for each product.
2. Post-tensioning system brochures.
3. Complete post-tensioning procedure, including but not limited to: Stressing system, method of determining anchor force, method of determining tendon slack, and method of cutting off excess strand after anchorage.
4. Mill Certificates: Submit certified mill reports of post-tensioning steel immediately upon shipment indicating compliance with specified requirements for all material that is to be delivered to the project.
5. Equipment Calibration: Submit certification of the calibration of all ram and gauge sets to the Architect/Engineer as specified herein.
6. Certifications and other data as may be further required to demonstrate compliance with other items in this section.

D. Calculations:

1. Submit calculations showing all engineering required to fully design the post- tensioning system, including friction loss calculations, bursting reinforcement calculations, number of prestressing tendons, anchorage and coupling systems, tendon supports, and tendon stressing procedures, as required to fully comply with the final force and tendon profiles as shown on the structural drawings. The design shall be in accordance with the requirements of ACI 318. Submit tendon manufacturer’s data that documents the wobble and curvature friction coefficients used in the friction loss calculations. Clearly show on the shop drawings the values of wobble and curvature coefficients used in the design.
2. Post-Tensioning Supplier shall secure the services of a qualified professional engineer, licensed in the state of maryland, to provide the design as specified above. Calculations shall be signed and sealed by the professional engineer and shall be submitted to Architect/Engineer for Owner’s record only.
3. Review of shop drawings and calculations by the Architect/Engineer will not relieve the Post-Tensioning Supplier of responsibility for final design as specified herein.
4. By offering a proposal or entering into a contract for work of this Section, Post- Tensioning Supplier accepts the general design shown on the drawings as adequate for compliance with performance

requirements at no additional cost to the Owner.

E. Stressing Records: The contractor shall provide the appropriate cooperation and access to the Owner's Testing Laboratory to allow them to measure, record, and clearly report the following information. In the absence of a Testing Laboratory representative, the post-tensioning installer shall measure, record, report and submit the information described below. Submit records to the Architect/Engineer for approval within 24 hours after stressing.

1. Floor, pour and tendon identification numbers. For walls, indicate wall location.Calculated elongation and actual measured elongation for each jacking point, and totals for each tendon.
2. Stressing ram number, initial and final gauge load reading during stressing for each tendon.
3. Date of stressing operation and signature of the Contractor's stressing personnel and inspector witnessing the operation.
4. Range of allowable elongations for jacking force or a measure of the deviation of the measured elongations from the calculated elongations. Deviations that do not comply with the specified tolerances shall be noted for the Architect/Engineer to review.
5. Obvious irregularities or stress loss during anchoring procedures.
6. Required and actual concrete strength at time of jacking.

F. Record Drawings: The Contractor shall provide record drawings to the Owner, in care of the Architect/Engineer, of any approved changes from the contract documents. Form of record drawings may be legible marked-up prints of contract drawings, or separate drawings of same scale.

G. Review:

1. After review, shop drawings/field-placing drawings and data shall not be changed nor shall construction operations be deviated from, unless resubmitted under a cover letter delineating such change and reapproved.
2. Review of details and construction operations will not relieve the Contractor of his responsibility for completing the work successfully in accordance with the contract drawings and specifications.

H. LEED Submittals (Projects authorized for LEED certification only)

1. Recycled Content- Credit MR4.1/MR 4.2: Provide documentation indicating percentages of post-consumer and pre-consumer recycled content by weight per unit of product or assembly containing the product. Indicate the percentage of the dollar value of the recycled content compared to the total dollar value of the product or assembly containing the product.
2. Material Proximity- Credit MR 5.1/MR 5.2: Where the distance to the project site is 500 miles or less, indicate location and distance to project site of extraction, harvesting, recovery and manufacturing of all materials. Indicate the dollar value of the material cost of the product containing local/regional materials. Where product components are sourced or manufactured in separate locations, provide location and percentage by weight of each component per unit of product.

1.07 QUALITY ASSURANCE

A. Qualifications: The supply and installation of post-tensioning shall be executed by organizations that have successfully performed major work of a nature similar to that involved in this project for a minimum of five (5) years and have successfully completed a minimum of five (5) similar projects in own name, unless this requirement is waived by the Architect/Engineer prior to Contract award. The Contractor shall submit supporting evidence acceptable to the Architect/Engineer that this qualification has been met. Post-tensioning shall be performed using methods and related equipment that are in conformance with generally accepted systems of post-tensioning. Experienced individuals shall control and supervise all operations.

B. Fabrication Quality Assurance: The post-tensioning material shall be fabricated by a plant that is fully PTI-certified at the time of bidding, and that shall maintain this certification throughout the duration of this project as described in the Post-Tensioning Institute's "Manual for Certification of Plants Producing Unbonded Single Strand Tendons."Installer Quality Assurance: All installers of unbonded post-tensioned tendons shall be certified under the Post-Tensioning Institute's "Post-tensioning Certification Program of Field Personnel for Unbonded Post-tensioning Installers".

C. Inspection and Testing: Inspection and testing shall be provided in accordance with the Structural Testing Laboratory Services Specification.

D. Source Quality Control:

1. If requested by the Architect/Engineer, take two (2) strand samples from one end of each coil at the fabrication plant prior to greasing and sheathing. The Post- Tensioning Supplier shall notify the Architect/Engineer when the coils are ready to be sampled.
2. Submit certified mill reports indicating compliance with ASTM A416, and if requested, the test data showing evidence of compliance with the Low Relaxation Strand requirement of ASTM A416, to the Architect/Engineer immediately upon shipment for all material delivered to the project. The mill report shall be based upon a minimum of two (2) tests for each reel, heat or lot, and shall include as a minimum the breaking load, modulus of elasticity, elongation at rupture, load at 1% extension, diameter and area of strand, standard chemical analysis and drawing mill.
3. Furnish all materials and handling which testing agency requires. Submit certification by the Post-Tensioning Supplier that any submitted samples are representative of the material to be furnished.
4. Package the post-tensioning strands at the supplier's fabrication facility in a manner that prevents damage to strand and protects strand from moisture during transportation and storage.

E. Field Quality Control:

1. The Contractor shall maintain a consistent and good standard of workmanship. Check bulkheads, position of anchorages, tendon chairing and tying, location, size and placement of reinforcement, and tendon quantity.
2. Identify wedges and anchorages by individual concrete placement areas, floor sequence or both. Use materials only in their identified concrete placement areas. In the event materials intended for one concrete placement area are exchanged into another concrete placement area, notify architect/engineer and testing agency for tracking purposes.
3. Prior to pouring concrete, at a frequency as established for the project, an inspection of the tendons and mild reinforcing steel shall be made by the Architect/Engineer, or Independent Testing Agency. Placement of concrete shall not begin until acceptance of conditions is documented by the Architect/Engineer, or Independent Testing Agency.
4. Inspection of stressing operations shall also be performed as directed by the Architect/Structural Engineer.
5. The Contractor shall cooperate with the Owner's Testing Laboratory in their efforts to record tendon elongations. The Contractor shall keep a copy of the stressing records with the shop drawings.
6. Submit certificates of all ram and gauge calibrations used on the project to the Architect/Engineer. Use of non-calibrated ram and gauge sets are not allowed on this project. If requested by the Architect/Engineer, Owner, or Field Inspector, the Contractor shall have the ram and gauge sets calibrated by an Independent Testing Agency, the cost of which shall be borne by the Contractor.
7. Manufacture and deliver tendons in sequence and quantity so as to avoid lengthy job site storage. Deliver tendons as close as practicable to the designated storage area to avoid excessive handling.

Do not use chains or hooks to handle tendons.

8. Satisfactorily protect all prestressing steel from all moisture and rust or other physical damage prior to placement and keep steel free from deleterious substances, such as chlorides, fluorides, sulfites and nitrates. Provide protection for exposed prestressing steel beyond ends of members to prevent deterioration by rust or corrosion.
9. Do not store post-tensioning strand in such a manner that it is in direct contact with soil or fresh concrete or exposed to rain, snow, de-icing salts or other corrosive elements. Protect plastic materials planned to be stored for more than one month from exposure to sunlight.
10. Damage to tendon sheathing in excess of 2% of its length shall be grounds for rejection of sheathing.
11. Contractor shall inspect tendon sheathing for damage and to verify watertight seal between sheathing and anchor. Repair all damaged sheathing to the satisfaction of the Architect/Engineer.

PART 2 - PRODUCTS

2.01 POST-TENSIONING STEEL

A. Strand: Prestressing steel shall use strand conforming to ASTM A416, Low-Relaxation Type, and shall have a minimum guaranteed ultimate tensile strength of 270,000 psi based on the nominal area of the strand. The strand shall additionally conform to the “Specification for Unbonded Single Strand Tendons”. The strand shall be free of dirt, corrosion or injurious marks, scratches, seams, and sharp kinks. Surface rust shall be removed with a fine steel wool pad or by vigorous rubbing with a cloth. Pits on steel surface shall not exceed .002 in. in diameter or length. Oil-tempered strand is prohibited. Certified mill reports giving name of drawing mill shall be submitted.

B. Bar: Prestressing bars shall conform to ASTM A722, Type II-Deformed, and shall have a minimum ultimate tensile strength of 150 ksi.

C. Identification: All prestressing steel within every group or in the same member shall be of the same heat where practical. All tendons shall be assigned a proper heat and coil number and so identified on fabrication lists that are to be sent to the field with each shipment. Identify tendons in accordance with placing drawings. Unidentified steel shall not be allowed unless approved by the Architect/Engineer and tested.

D. Sheathing: All post-tensioning tendons shall be coated and sheathed with an approved slippage sheathing designed to prevent the intrusion of cement paste and the loss of the P-T coating material and be watertight and impermeable to water vapor over the entire length. Such sheathing shall enclose the prestressing steel that shall then be placed in the forms prior to placement of concrete. The sheathing shall be continuously extruded polyethylene or polypropylene with a minimum density of 0.034 lb./in., a minimum thickness of 50 mils, and an inside diameter at least .03 inches greater than the maximum diameter of the strand. The sheathing shall not rupture due to normal temperature changes, coiling and field handling. The sheathing material shall be chemically stable, without embrittlement or softening over the anticipated exposure temperature range and service life of the structure. It shall be non-reactive with concrete, prestressing steel, reinforcing steel, and corrosion preventive P-T coating. Heat-sealed or plastic-wrapped sheathing is not acceptable.

E. P-T Coating: The corrosion preventive coating shall lubricate the tendon and permanently protect the prestressing steel against corrosion. It shall resist flow caused by gravity within the anticipated temperature range of exposure and provide non-brittle coating at the lowest anticipated temperature of exposure. It shall be chemically stable and non-reactive with prestressing steel, reinforcing steel, sheathing material, and concrete. The coating shall be applied under pressure to ensure the filling of the interstices between the individual wires of the strand. There shall be no voids or pockets between the sheathing and the coated strand for water or air to collect. The minimum amount of coating on the

prestressing strand shall be 2.5 pounds of material per 100 feet of strand for a 0.5 inch diameter strand and 3.0 pounds per 100 feet for a 0.6 inch diameter strand. The P-T coating shall satisfy the requirements of table 1 of the ”Specification for Unbonded Single-Strand Tendons and Commentary”.

F. Repair tape: The tape used to repair damaged sections of sheathing or to wrap exposed strand shall be a minimum of 2 inches wide and shall be of a color that contrasts with the sheathing. The tape shall be self-adhesive and moisture-proof and shall be non-reactive with the sheathing, P-T coating, prestressing steel, or concrete.

2.02 MILD REINFORCEMENT

A. Refer to Specification Section 03 32 00 for requirements for mild reinforcement used as bursting reinforcement and tendon support.

2.03 ANCHORAGES AND COUPLERS

A. Performance and Specification:

1. Anchoring hardware shall be steel and shall meet the minimum requirements set forth in ACI 318, except as modified herein. The anchorage shall be capable of developing at least 95% of the minimum specified ultimate strength of the prestressing steel without exceeding anticipated set, and shall be capable of passing the static and dynamic tests as outlined in the PTI Post-Tensioning Manual. All anchorages, couplers, and miscellaneous hardware shall be the standard products as manufactured by the Post-Tensioning Supplier, unless shown otherwise, and shall be evaluated by the ICC Evaluation Service and be listed in a current Evaluation Service Report (ESR).
2. Anchors and couplers used shall include design features permitting a positive mechanical and watertight connection of the sheathing to the anchorage, and watertight closing of the wedge cavity, for stressing and non-stressing (fixed) anchorages. Friction connections between the anchor and the sheathing shall not be allowed. Intermediate stressing anchorages shall be designed to permit complete watertight encapsulation of the prestressing steel.
3. All anchorages shall have the demonstrated ability to remain watertight when subjected to a hydrostatic pressure of 1.25 psi over a period of 24 hours.
4. Sleeves used to connect the sheathing to the anchorages shall meet the same requirements as the sheathing for durability during fabrication, transportation, handling, storage and installation and have a minimum thickness of 50 mils. The overlap between the end of the extruded sheathing and the end of the sleeve and seal shall be a minimum of 4 inches. The sleeve shall be translucent or have another method to verify both that the P-T coating material is free of voids and the proper overlap with the sheathing.

B. Size: Anchorages and distribution (bearing) plates shall be sized according to ACI 318 unless certified test reports are submitted proving acceptable deviation. Bursting steel shall be designed by the Post-Tensioning Supplier consistent with the anchorage to be provided.

C. Anchorages at Construction Joints: At construction joints, all anchorages or tendon force distribution plates (bearing plates) shall be embedded in the first of the consecutive pours. Flat back castings, plates, etc. which are placed against previously cast concrete and then stressed shall not be allowed. Washer type grommets shall be used at construction joints if grout exclusion is necessary for the embedded item. Normal depth pockets at intermediate construction joints shall not be used unless adequate measures are taken to ensure that the pocket is completely filled with concrete during subsequent pours.

D. Seating loss: Maximum allowable anchor slip or seating loss shall be 1/4 inch.

2.04 CONCRETE

A. The concrete shall have a minimum 28-day strength as specified on the drawings. Components or admixtures with chloride, fluoride, sulphite or nitrate ions or any other substance deleterious to prestressing steel shall not be used.

B. The chloride ion content of the concrete used in post-tensioned concrete contributed from the water, aggregate, cementitious materials and admixtures used in the mix shall not be greater than 0.06 percent by weight of cement.

C. See Section 03 30 00 Cast-In-Place Concrete for additional requirements for concrete.

2.05 TENDON SUPPORT SYSTEM

A. Slab Tendons: Support points shall consist of a bar support and continuous orthogonal steel as shown on the Contract Drawings. Bar supports shall be plastic, plastic tipped, epoxy coated or stainless steel.

B. Beam Tendons: Supports shall consist of reinforcing steel tied between stirrup legs as shown on the Contract Drawings.

C. For exterior exposure conditions, any supports that come in contact with the forming surface shall be plastic tipped stainless steel or high density plastic (grey in color).

2.06 PRE-CONSTRUCTION CONFERENCE

A. At least 30 days prior to post-tensioned concrete construction, the Contractor shall hold a meeting to review the detailed requirements for preparing the concrete design mixes and to determine the procedures for producing proper post-tensioned concrete construction. Also review requirements for submittals, status of coordinating work and availability of materials. Establish work progress schedule and procedures for materials inspection, testing and certifications.

B. The Contractor shall require responsible representatives of every party who is concerned with the post-tensioned concrete work to attend the conference, including but not limited to the following:

1. Contractor's Superintendent
2. Laboratory responsible for the concrete design mix
3. Laboratory responsible for field quality control
4. Concrete Subcontractor
5. Post-Tensioning Supplier
6. Post-Tensioning and Mild-Reinforcement Installer
7. Ready-Mix Concrete Producer
8. Admixture Manufacturer(s)
9. Concrete Pumping Equipment Manufacturer
10. MEP Subcontractor
11. Owner's and Architect's/Engineer's Representative
12. Engineer-of-Record

C. Minutes of the meeting shall be recorded, typed and printed by the Contractor and distributed to all parties concerned within 5 days of the meeting. One copy of the minutes shall be transmitted to the following for information purposes:

1. Owner's Representative
2. Architect
3. Engineer-of-Record

D. The Contractor shall coordinate the scheduled date of the conference with the Architect/Engineer.

PART 3 - EXECUTION

3.01 POST-TENSIONING STEEL PLACEMENT

A. Profile: Post-tensioning tendons shall conform to the control points shown on the Contract Drawings and approved shop drawings and shall have a parabolic drape between supports unless noted otherwise. Harped tendons shall be straight between control points as shown on the drawings. Dimensions locating this profile apply to the center of gravity of the tendons. Low points of the tendons are at mid-span unless noted otherwise. Place the tendons normal to and concentric with anchorage plates. The transition curvature in tendon profile shall not start closer than 1 foot from end anchorages.

B. Interference: Slight deviation in spacing of the slab tendons is permitted where required to avoid openings and inserts that are specifically located. Horizontal sweeps to miss openings, inserts, etc. shall have minimum radius of 480 strand diameters. Where radius of curvature less than 480 diameters is necessary, contact the Architect/Engineer before moving those tendons. Coordinate the placement of mild steel reinforcement with placement of post-tensioning tendons. Proper tendon location has priority. Maintain sufficient concrete cover around tendons. Coordinate bursting steel requirements with details and post-tensioning subcontractor.

C. Tolerances: Firmly support tendons and anchorages to prevent displacement during subsequent operations. Place them with a vertical tolerance of plus or minus 1/4 inch in concrete members with depths of 8 inches or less, plus or minus 3/8 inch in concrete depths over 8 inches but less than 24 inches, and plus or minus 1/2 inch in concrete depths over 24 inches. In no case shall tendons violate the absolute minimum cover stated in ACI 117. Maintain a minimum clearance of 6 inches at all openings. Twisting or entwining of individual tendons within a bundle is not permitted.

D. Tendon Spacing: Maximum spacing of slab tendons shall be eight (8) times the thickness of the slab, but not greater than 54 inches, unless otherwise noted on the Contract Drawings. Bundle tendons in such a manner to allow proper concreting and the maintenance of the center of gravity of steel.

E. Supports: Provide a sufficient number of horizontal and vertical positioning supports to firmly support tendons to prevent displacement due to construction operations. Spacing of supports shall not exceed 4’-0” on center. Show all support devices on the shop drawings.

F. Welding: Welding of cross bars or any welding in the vicinity of the tendons is not allowed. Do not use post-tensioning tendons as an electrical ground for welding operations.

G. Sheathing

1. The sheathing shall be continuous from end to end of all stressing anchorages and all embedded dead ends including intermediate anchorages, unless shown otherwise on the Contract Drawings, or otherwise approved by the Architect/Engineer.

2. After installing the tendons and prior to concrete placement, inspect the sheathing on each tendon for its entire length to detect possible damage. Repair any detected tears or abrasions by procedures conforming to the “Field Procedures Manual for Unbonded Single Strand Tendons” by PTI. The repair of sheathing shall prevent intrusion of cement paste or loss of coating. The repair of sheathing shall also be watertight and approved by the Architect/Engineer.

H. Encapsulation: Complete the encapsulation of the post-tensioning system the same day as the tendons are installed.

I. Couplers: Do not use tendon couplers without prior approval of the Architect and Structural Engineer.

3.02 ANCHORAGES AND BLOCK-OUTS

A. Attachment

1. Attach anchorages securely to bulkhead forms using fasteners that will not corrode or are protected from corroding such that the anchor is perpendicular to the tendon axis.
2. Cover: Top, bottom, and edge concrete cover for anchorages shall be not less than the specified cover for reinforcement. Minimum concrete cover from the exterior edge of the concrete to wedge cavity area of anchor shall be 2 inches, unless otherwise noted on the drawings.

B. Bursting Reinforcement:

1. Provide and install bursting reinforcement behind anchorages as required by calculations subject to the following minimums:
   a. Slab: Provide 2-#4 bars, one above and one below the tendon, continuous along concrete edges behind slab anchorages. Provide a #3 hairpin with 9” long legs around continuous #4’s between each anchorage. Provide 2-#4 corner bars with 3’-6” legs, one each above and below the tendon center of gravity.
   b. Beam: Provide 2-#4 bars, horizontal or vertical, with appropriate development length, behind all beam anchorages.

C. Block-outs and Pockets:

1. Adequately reinforce all block-outs or pockets required for anchorages so as to not decrease the strength of the structure.
2. Pocket formers used to provide a void form at anchorages shall be designed to prevent intrusion of concrete or cement slurry into the wedge cavity.
3. Do not coat block-out forms or pocket formers with grease, form oil, or any other substance that will decrease the bonding capacity of the patching grout to the surrounding concrete.
4. Install sleeves and seals connecting sheathing to anchorage to completely seal tendon against moisture infiltration.

3.03 CONCRETE PLACEMENT

A. Formwork: Design of the formwork shall take into account the possibility of the slab or girder lifting off the formwork during tensioning, thereby transferring the entire load to the support areas. Construct the formwork to permit movement of the member without damage during application of the post-tensioning force. Supporting forms in post- tensioned areas are not to be removed until concrete is fully stressed or as required by Section 03 10 00 whichever is later. The Contractor shall submit his proposed shoring and reshoring schemes prior to commencement of forming work.

B. Construction Joints: Locate construction joints at or near where the center-of-gravity of the strands coincides with the center-of-gravity of the concrete section unless otherwise approved by the Architect/Engineer. The contractor shall submit construction joint locations in post-tensioned members to the Architect/Engineer for approval.

C. Inserts, Anchors, and Coring: All inserts and anchors for suspended mechanical and architectural work shall be cast-in-place wherever feasible. Additional fasteners will be permitted only when it can be shown that the inserts will not spall concrete and are located so as to avoid hitting tendons or anchorages. The Contractor shall identify tendon locations on the surface of the slab if drilling or coring is to be done after concrete is placed.

D. Placement: Place the concrete in conformance with the requirements of the Specifications. Do not place the concrete until the Architect/Engineer, or Independent Testing Laboratory has inspected the placement of the mild steel reinforcement and tendons at the frequency established for the project. Place the concrete in such a manner as to ensure that alignment of post-tensioning tendons remains unchanged. Make special provisions to ensure proper vibration of the concrete around the anchorage

plates. When concrete is distributed across an area being poured y way of horizontally supported slick-tube and/or rubber pump hose, the slick-tube and/or rubber hose shall be supported in such a way that does not contact the reinforcing steel or post-tensioning tendons. The slick-tube and/or rubber hose shall be braced to prevent surging of the lines that could dislodge the reinforcing and/or tendon locations. Monitor the tendon positioning during the concrete placement. All floors below the level that is to have concrete placement shall have been stressed before this concrete is placed, unless the shoring has been designed for the ensuing loads.

E. Openings: Openings shall not be cut into cast concrete without the approval of the Architect/Engineer.

3.04 STRESSING

A. Methods: Perform post-tensioning by methods and related equipment that are in conformance with generally accepted systems of post-tensioning. Variations of such generally accepted methods and equipment will be permitted with Architect/Engineer approval, provided equal results can be obtained.

B. Concrete Strength: Do not begin the post-tensioning operations until tests or readings have indicated that the concrete in the members has attained a compressive strength that is adequate for the requirements of the anchorages but not less than 3000 psi unless otherwise specified on the Contract Drawings. See Concrete Formwork section 03 10 00 for acceptable methods for determining in situ concrete strengths.

C. Equipment: Stress all tendons by means of hydraulic rams, equipped with accurate reading hydraulic pressure gauges that have been individually calibrated with a particular ram to permit the stress in the prestressing steel to be computed at any time. A certified calibration curve shall accompany each ram and gauge set. Immediately recalibrate the ram and gauge set if inconsistencies between the measured elongation and the gauge reading occur.

D. Forces: Anchor the prestressing steel at an initial or anchor force that will result in the ultimate retention of the working or effective force shown on the plans. Jacking forces shall be those indicated on the shop drawings. The length of a tendon pull more than that shown by the required friction calculations or more than 125 feet for a one-way pull or 250 feet for a two-way pull is not permitted unless it is justified by calculations and specifically approved by the Architect/Engineer. The Field Inspector shall verify the wobble and curvature friction coefficients during the stressing operation and shall report to the Post-Tensioning Engineer deviations greater than 10% from the values assumed in the design. Required adjustments to the stressing operation shall be recommended by the Post-Tensioning Engineer and approved by the Architect/Engineer.

E. Elongations: Keep records of all tendon elongations as previously described in this Section. Agreement within 7% between the gauge reading and the measured elongation and between the measured and the calculated elongation after stressing will be considered satisfactory. Deviations greater than 7% will be reported to the Architect/Engineer prior to completing stressing operation. No tensioning will be permitted until it is demonstrated that the prestressing steel is reasonably free and unbonded in the enclosure. Evidence that the steel is unbonded will be considered satisfactory if inward movement of steel is observed at one end of the tendon when a nominal pull is applied to the steel at the other end. The Architect/Engineer may order a force/elongation check at any time. Do not cut off tendons until elongation records have been reviewed and approved in writing by the Architect/Engineer.

F. Stressing Sequence: The stressing sequence shall be as shown on the approved shop drawings. Use the following general stressing sequence except as otherwise noted or approved by the Architect/Engineer.

	Beam and Slab:	Step #1.	Stress temperature tendons, if applicable.
		Step #2.	Stress continuous uniform slab tendons.
		Step #3.	Stress added uniform slab tendons.
		Step #4.	Stress continuous beam tendons.
		Step #5.	Stress added beam tendons.

		Step #6.	Stress girder tendons, if applicable.

G. Safety: Precautions shall be taken to prevent workers from standing directly behind, above or in front of the stressing rams.

H. Broken Tendons: The total loss of prestressing force in any post-tensioned concrete member due to unreplaced broken tendons shall not exceed 2% of the total prestressing force, unless otherwise accepted by the Architect/Engineer.

3.05 GROUTING ANCHORAGE RECESSES

A. Cut the tendon tails within 24 hours after the stressing records have been approved. Cut off the excess strand at least 1/2 inch inside the face of the finished concrete surface, and not more than 3/4 inch from the face of the anchorage. Cutting may be done by means of abrasive wheel, hydraulic shears, or, to prevent heating of the wedges, oxy- gasoline cutting flame is permitted. Do not allow the wedges to become heated.

B. Cover the end of tendon with approved coating-filled encapsulation cap, or other approved method no more than 24 hours after the tendon tails have been cut to ensure encapsulation of the exposed tendon.

C. Coat the anchorage recesses with an approved bonding agent and fill flush with a non- shrink, non-stain, chloride free grout compatible for use with prestressing steel or approved equal in accordance with manufacturer’s recommendations. Do not allow contamination of the anchorage recess surface that reduces the bonding capacity of the non-shrink grout.

3.06 INSTALLATION SUPERVISION

A. The duties of the post-tensioning installer's supervisor shall include:

1. Check tendon placement before and during pouring of concrete. Be present during pours and check for tendons being moved out of position.
2. Mark tendons prior to stressing and verify with the Owner’s Testing Laboratory that all initial marks are accurate.
3. Observe that tendon elongation measurements are made and recorded by Testing Laboratory or, in the absence of a Testing Laboratory representative, measure, record and report tendon elongations after stressing and submit copy of original to Architect/Engineer.
4. Compare results of actual tendon elongations with hydraulic ram gage reading and with calculated elongation.
5. Require checking of tendon force and/or elongation if requested by the Architect/Engineer.
6. Do not allow cutting off of tendons without the Architect/Engineer's written approval.

B. QUALITY ASSURANCE TESTING AND INSPECTION DURING CONSTRUCTION

1. See Testing Laboratory Services section of these Specifications for post-tensioning inspection and test requirements.

END OF SECTION

SECTION 03 4100
PRECAST STRUCTURAL CONCRETE

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:

1. Precast structural concrete.

1.02 RELATED REQUIREMENTS:

A. Section 033000 "Cast-in-Place Concrete" for concrete topping.

B. Section 051200 "Structural Steel Framing" for furnishing and installing connections attached to structural-steel framing.

1.03 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.04 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Design Mixtures: For each precast concrete mixture

C. Shop Drawings:

1. Include member locations, plans, elevations, dimensions, shapes and sections, openings, support conditions, and types of reinforcement, including special reinforcement.
2. Detail fabrication and installation of precast structural concrete units, including connections at member ends and to adjoining construction.
3. Indicate joints, reveals, drips, chamfers, and extent and location of each surface finish.
4. Indicate separate face and backup mixture locations and thicknesses.
5. Indicate type, size, and length of welded connections by AWS standard symbols.
6. Detail loose and cast-in hardware, lifting and erection inserts, connections, and joints.
7. Indicate locations, tolerances, and details of anchorage devices to be embedded in or attached to structure or other construction.
8. Include and locate openings larger than 10 inches (250 mm). Where additional structural support is required, include header design.
9. Indicate location of each precast structural concrete unit by same identification mark placed on panel.
10. Indicate relationship of precast structural concrete units to adjacent materials.
11. Indicate locations, dimensions, and details of thin-brick units, including corner units and special shapes, and joint treatment.
12. Indicate locations, dimensions, and details of stone facings, anchors, and joint widths.
13. Indicate estimated camber for precast floor slabs with concrete toppings.
14. Indicate shim sizes and grouting sequence.
15. If design modifications are proposed to meet performance requirements and field conditions, submit design calculations and Shop Drawings. Do not adversely affect the appearance, durability, or strength of units when modifying details or materials and maintain the general design concept.

D. Delegated-Design Submittal: For precast structural concrete indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer licensed in the State of Michigan responsible for their preparation.

1. Show precast structural concrete unit types, connections, types of reinforcement, including special reinforcement, and concrete cover on reinforcement. Indicate location, type, magnitude, and direction of loads imposed on the building structural frame from precast structural concrete.

1.05 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer and fabricator.

B. Welding certificates.

C. Material Certificates: For the following:

1. Cementitious materials.
2. Reinforcing materials and prestressing tendons.
3. Admixtures.
4. Bearing pads.
5. Insulation.
6. Structural-steel shapes and hollow structural sections.

D. Material Test Reports: For aggregates, by a qualified testing agency.

E. Field quality-control and special inspection reports.

1.06 QUALITY ASSURANCE

A. Fabricator Qualifications: A firm that assumes responsibility for engineering precast structural concrete units to comply with performance requirements. Responsibility includes preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.

1. Designated as a PCI-certified plant as follows:
   a. Group C, Category C2 - Prestressed Hollowcore and Repetitively Produced Products

B. Installer Qualifications: A precast concrete erector qualified and designated by PCI's Certificate of Compliance, to erect Category S1 – Simple Structural Systems.

C. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.4/D1.4M, "Structural Welding Code - Reinforcing Steel."

1.07 COORDINATION

A. Furnish loose connection hardware and anchorage items to be embedded in or attached to other construction before starting that Work. Provide locations, setting diagrams, templates, instructions, and directions, as required, for installation.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Support units during shipment on nonstaining shock-absorbing material in same position as during storage.

B. Store units with adequate bracing and protect units to prevent contact with soil, to prevent staining, and to prevent cracking, distortion, warping or other physical damage.

1. Store units with dunnage across full width of each bearing point unless otherwise indicated.

2. Place adequate dunnage of even thickness between each unit.
3. Place stored units so identification marks are clearly visible, and units can be inspected.

C. Handle and transport units in a manner that avoids excessive stresses that cause cracking or damage.

D. Lift and support units only at designated points indicated on Shop Drawings.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer licensed in the State of Michigan to design precast structural concrete.

B. Design Standards: Comply with ACI 318 (ACI 318M) and with design recommendations in PCI MNL 120, "PCI Design Handbook - Precast and Prestressed Concrete," applicable to types of precast structural concrete units indicated.

C. Fire-Resistance Calculations: Where required, provide precast structural concrete units whose fire resistance meets prescriptive requirements of authorities having jurisdiction and is acceptable to authorities having jurisdiction.

D. Structural Performance: Precast structural concrete units and connections shall withstand design loads indicated within limits and under conditions indicated.

E. Structural Performance: Provide precast structural concrete units and connections capable of withstanding the design loads described on the structural drawings:

1. Fire-Resistance Rating: Select material and minimum thicknesses to provide required fire rating.

2.02 MOLD MATERIALS

A. Molds: Rigid, dimensionally stable, non-absorptive material, warp and buckle free, that provides continuous precast concrete surfaces within fabrication tolerances indicated; nonreactive with concrete and suitable for producing required finishes.

1. Mold-Release Agent: Commercially produced form-release agent that does not bond with, stain, or adversely affect precast concrete surfaces and does not impair subsequent surface or joint treatments of precast concrete.

B. Surface Retarder: Chemical set retarder, capable of temporarily delaying setting of newly placed concrete mixture to depth of reveal specified.

2.03 REINFORCING MATERIALS

A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

B. Reinforcing Bars: ASTM A 615/A 615M, Grade 60 (Grade 420), deformed.

C. Low-Alloy-Steel Reinforcing Bars: ASTM A 706/A 706M, deformed.

D. Supports: Suspend reinforcement from back of mold or use bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place according to PCI MNL 116.

2.04 PRESTRESSING TENDONS

A. Pretensioning Strand: ASTM A 416/A 416M, Grade 250 (Grade 1720) or Grade 270 (Grade 1860), uncoated, seven-wire, or ASTM A 886/A 886M, Grade 270 (Grade 1860), indented, seven-wire, low-relaxation strand.

B. Unbonded Post-Tensioning Strand: ASTM A 416/A 416M, Grade 270 (Grade 1860), uncoated, seven-wire, low-relaxation strand.

1. Coat unbonded post-tensioning strand with post-tensioning coating complying with ACI 423.7 and sheath with polypropylene tendon sheathing complying with ACI 423.7. Include anchorage devices and coupler assemblies.

C. Post-Tensioning Bars: ASTM A 722/A 722M, uncoated high-strength steel bar.

2.05 CONCRETE MATERIALS

A. Portland Cement: ASTM C 150/C 150M, Type I or Type III, gray, unless otherwise indicated.

1. For surfaces exposed to view in finished structure, use gray or white cement, of same type, brand, and mill source.

B. Supplementary Cementitious Materials:

1. Fly Ash: ASTM C 618, Class C or F, with maximum loss on ignition of 3 percent.
2. Metakaolin: ASTM C 618, Class N.
3. Silica Fume: ASTM C 1240, with optional chemical and physical requirement.
4. Ground Granulated Blast-Furnace Slag: ASTM C 989, Grade 100 or 120.

C. Normal-Weight Aggregates: Stockpile fine and coarse aggregates for each type of exposed finish from a single source (pit or quarry) for Project.

D. Water: Potable; free from deleterious material that may affect color stability, setting, or strength of concrete and complying with chemical limits of PCI MNL 116.

E. Air-Entraining Admixture: ASTM C 260, certified by manufacturer to be compatible with other required admixtures.

F. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and to not contain calcium chloride, or more than 0.15 percent chloride ions or other salts by weight of admixture.

2.06 STEEL CONNECTION MATERIALS

A. Carbon-Steel Shapes and Plates: ASTM A 36/A 36M.

B. Carbon-Steel-Headed Studs: ASTM A 108, Grade 1010 through 1020, cold finished, AWS D1.1/D1.1M, Type A or B, with arc shields and with minimum mechanical properties of PCI MNL 116.

C. Carbon-Steel Plate: ASTM A 283/A 283M, Grade C.

D. Malleable-Iron Castings: ASTM A 47/A 47M, Grade 32510 or Grade 35028.

E. Carbon-Steel Castings: ASTM A 27/A 27M, Grade 60-30 (Grade 415-205).

F. High-Strength, Low-Alloy Structural Steel: ASTM A 572/A 572M.

G. Carbon-Steel Structural Tubing: ASTM A 500/A 500M, Grade B or Grade C.

H. Wrought Carbon-Steel Bars: ASTM A 675/A 675M, Grade 65 (Grade 450).

I. Deformed-Steel Wire or Bar Anchors: ASTM A 496/A 496M or ASTM A 706/A 706M.

J. Carbon-Steel Bolts and Studs: ASTM A 307, Grade A (ASTM F 568M, Property Class 4.6); carbon-steel, hex-head bolts and studs; carbon-steel nuts, ASTM A 563 (ASTM A 563M); and flat, unhardened steel washers, ASTM F 844.

K. High-Strength Bolts and Nuts: ASTM A 325 (ASTM A 325M) or ASTM A 490 (ASTM A 490M,) Type 1, heavy hex steel structural bolts; heavy hex carbon-steel nuts, ASTM A 563 (ASTM A 563M); and hardened carbon-steel washers, ASTM F 436 (ASTM F 436M)

1. Do not zinc coat ASTM A 490 (ASTM A 490M) bolts.

L. Zinc-Coated Finish: For exterior steel items, steel in exterior walls, and items indicated for galvanizing, apply zinc coating by hot-dip process according to ASTM A 123/A 123M or ASTM A 153/A 153M.

1. Galvanizing Repair Paint: High-zinc-dust-content paint with dry film containing not less than 94 percent zinc dust by weight, and complying with DOD-P-21035B or SSPC- Paint 20.

M. Shop-Primed Finish: Prepare surfaces of nongalvanized-steel items, except those surfaces to be embedded in concrete, according to requirements in SSPC-SP 3, and shop apply, rust-inhibitive primer, complying with performance requirements in MPI 79 according to SSPC-PA 1.

N. Welding Electrodes: Comply with AWS standards.

O. Precast Accessories: Provide clips, hangers, plastic or steel shims, and other accessories required to install precast structural concrete units.

2.07 BEARING PADS

A. Provide one of the following bearing pads for precast structural concrete units as recommended by precast fabricator for application:

1. Elastomeric Pads: AASHTO M 251, plain, vulcanized, 100 percent polychloroprene (neoprene) elastomer, molded to size or cut from a molded sheet, 50 to 70 Shore, Type A durometer hardness, ASTM D 2240; minimum tensile strength 2250 psi (15.5 MPa), ASTM D 412.

2. Random-Oriented-Fiber-Reinforced Elastomeric Pads: Preformed, randomly oriented synthetic fibers set in elastomer. 70 to 90 Shore, Type A durometer hardness, ASTM D 2240; capable of supporting a compressive stress of 3000 psi (20.7 MPa) with no cracking, splitting, or delaminating in the internal portions of pad. Test one specimen for every 200 pads used in Project.

3. Frictionless Pads: PTFE, glass-fiber reinforced, bonded to stainless- or mild-steel plate, or random-oriented-fiber-reinforced elastomeric pads; of type required for in-service stress.

4. High-Density Plastic: Multimonomer, nonleaching, plastic strip.

2.08 ACCESSORIES

A. Precast Accessories: Provide clips, hangers, high-density plastic or steel shims, and other accessories required to install structural precast concrete units.

2.09 GROUT MATERIALS

A. Sand-Cement Grout: Portland cement, ASTM C 150/C 150M, Type I, and clean, natural sand, ASTM C 144 or ASTM C 404. Mix at ratio of 1 part cement to 2-1/2 to 3 parts sand, by volume, with minimum water required for placement and hydration. Water-soluble chloride ion content less than 0.06 percent by weight of cement when tested according to ASTM C 1218/C 1218M.

B. Nonmetallic, Nonshrink Grout: Packaged, nonmetallic, noncorrosive, nonstaining grout containing selected silica sands, portland cement, shrinkage-compensating agents, plasticizing and water-reducing agents, complying with ASTM C 1107/C 1107M, Grade A for drypack and Grades B and C for flowable grout and of consistency suitable for application within a 30- minute working time. Water-soluble chloride ion content less than 0.06 percent by weight of cement when tested according to ASTM C 1218/C 1218M.

C. Epoxy-Resin Grout: Two-component, mineral-filled epoxy resin; ASTM C 881/C 881M, of type, grade, and class to suit requirements.

2.10 CONCRETE MIXTURES

A. Prepare design mixtures for each type of precast concrete required.

1. Use fly ash, pozzolan, ground granulated blast-furnace slag, and silica fume as needed to reduce the total amount of portland cement, which would otherwise be used, by not less than 40 percent.

B. Design mixtures may be prepared by a qualified independent testing agency or by qualified precast plant personnel at precast structural concrete fabricator's option.

C. Limit water-soluble chloride ions to maximum percentage by weight of cement permitted by ACI 318 (ACI 318M) or PCI MNL 116 when tested according to ASTM C 1218/C 1218M.

D. Normal-Weight Concrete Mixtures: Proportion by either laboratory trial batch or field test data methods according to ACI 211.1, with materials to be used on Project, to provide normal- weight concrete with the following properties:

1. Compressive Strength (28 Days): 5000 psi (34.5 MPa).
2. Maximum Water-Cementitious Materials Ratio: 0.45.

E. Water Absorption: For structural precast concrete with an architectural finish, limit water absorption to 6 percent by weight or 14 percent by volume, tested according to ASTM C 642, except for boiling requirement.

F. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content complying with PCI MNL 116.

G. When included in design mixtures, add other admixtures to concrete mixtures according to manufacturer's written instructions.

H. Concrete Mix Adjustments: Concrete mix design adjustments may be proposed if characteristics of materials, Project conditions, weather, test results, or other circumstances warrant.

2.11 FABRICATION

A. Cast-in Anchors, Inserts, Plates, Angles, and Other Anchorage Hardware: Fabricate anchorage hardware with sufficient anchorage and embedment to comply with design requirements. Accurately position for attachment of loose hardware, and secure in place during precasting operations. Locate anchorage hardware where it does not affect position of main reinforcement or concrete placement.

1. Weld-headed studs and deformed bar anchors used for anchorage according to AWS D1.1/D1.1M and AWS C5.4, "Recommended Practices for Stud Welding."

B. Furnish loose hardware items including steel plates, clip angles, seat angles, anchors, dowels, cramps, hangers, and other hardware shapes for securing precast structural concrete units to supporting and adjacent construction.

C. Cast-in reglets, slots, holes, and other accessories in precast structural concrete units as indicated on the Contract Drawings.

D. Cast-in openings larger than 10 inches (250 mm) in any dimension. Do not drill or cut openings or prestressing strand without Architect's approval.

E. Reinforcement: Comply with recommendations in PCI MNL 116 for fabricating, placing, and supporting reinforcement.

1. Clean reinforcement of loose rust and mill scale, earth, and other materials that reduce or destroy the bond with concrete. When damage to epoxy-coated reinforcement exceeds limits specified in ASTM A 775/A 775M, repair with patching material compatible with coating material and epoxy coat bar ends after cutting.
2. Accurately position, support, and secure reinforcement against displacement during concrete-placement and consolidation operations. Completely conceal support devices to prevent exposure on finished surfaces.

3. Place reinforcing steel and prestressing strand to maintain at least 3/4-inch (19-mm) minimum concrete cover. Increase cover requirements for reinforcing steel to 1-1/2 inches (38 mm) when units are exposed to corrosive environment or severe exposure conditions. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Direct wire tie ends away from finished, exposed concrete surfaces.
4. Install welded wire fabric in lengths as long as practicable. Lap adjoining pieces at least one full mesh spacing and wire tie laps, where required by design. Offset laps of adjoining widths to prevent continuous laps in either direction.

F. Reinforce precast structural concrete units to resist handling, transportation, and erection stresses and specified in-place loads.

G. Prestress tendons for precast structural concrete units by either pretensioning or post-tensioning methods. Comply with PCI MNL 116.

1. Delay detensioning or post-tensioning of precast, prestressed structural concrete units until concrete has reached its indicated minimum design release compressive strength as established by test cylinders cured under same conditions as concrete unit.
2. Detension pretensioned tendons either by gradually releasing tensioning jacks or by heat cutting tendons, using a sequence and pattern to prevent shock or unbalanced loading.
3. If concrete has been heat cured, detension while concrete is still warm and moist to avoid dimensional changes that may cause cracking or undesirable stresses.
4. Protect strand ends and anchorages with bituminous, zinc-rich, or epoxy paint to avoid corrosion and possible rust spots.
5. Protect strand ends and anchorages with a minimum of 1-inch- (25-mm-) thick, nonmetallic, nonshrink, grout mortar and sack rub surface. Coat or spray the inside surfaces of pocket with bonding agent before installing grout.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine supporting structural frame or foundation and conditions for compliance with requirements for installation tolerances, bearing surface tolerances, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

C. Do not install precast concrete units until supporting, cast-in-place concrete has attained minimum allowable design compressive strength and until supporting steel or other structure is structurally ready to receive loads from precast concrete units.

3.02 INSTALLATION

A. Install clips, hangers, bearing pads, and other accessories required for connecting precast structural concrete units to supporting members and backup materials.

B. Erect precast structural concrete level, plumb, and square within specified allowable tolerances. Provide temporary structural framing, shoring, and bracing as required to maintain position, stability, and alignment of units until permanent connections are complete.

1. Install temporary steel or plastic spacing shims or bearing pads as precast structural concrete units are being erected. Tack weld steel shims to each other to prevent shims from separating.
2. Maintain horizontal and vertical joint alignment and uniform joint width as erection progresses.

3. Remove projecting lifting devices and use plastic patch caps or sand-cement grout to fill voids within recessed lifting devices flush with surface of adjacent precast surfaces when recess is exposed.
4. For hollow-core slab voids used as electrical raceways or mechanical ducts, align voids between units and tape butt joint at end of slabs.

C. Connect precast structural concrete units in position by bolting, welding, grouting, or as otherwise indicated on Shop Drawings. Remove temporary shims, wedges, and spacers as soon as practical after connecting and grouting are completed.
1. Do not permit connections to disrupt continuity of roof flashing.

D. Field cutting of precast units is not permitted without approval of Architect.

E. Fasteners: Do not use drilled or powder-actuated fasteners for attaching accessory items to precast, prestressed concrete units.

F. Welding: Comply with applicable requirements in AWS D1.1/D1.1M and AWS D1.4/D1.4M for welding, welding electrodes, appearance, quality of welds, and methods used in correcting welding work.
1. Protect precast structural concrete units and bearing pads from damage by field welding or cutting operations, and provide noncombustible shields as required.
2. Clean weld-affected steel surfaces with chipping hammer followed by brushing, and apply a minimum 4.0-mil- (0.1-mm-) thick coat of galvanized repair paint to galvanized surfaces according to ASTM A 780/A 780M.
3. Clean weld-affected steel surfaces with chipping hammer followed by brushing, and reprime damaged painted surfaces.
4. Visually inspect welds and remove, reweld, or repair incomplete and defective welds.

G. At bolted connections, use lock washers, tack welding, or other approved means to prevent loosening of nuts after final adjustment.
1. Where slotted connections are used, verify bolt position and tightness. For sliding connections, properly secure bolt but allow bolt to move within connection slot.
2. For slip-critical connections, use one of the following methods to assure proper bolt pretension:
    a. Turn-of-Nut: According to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."
    b. Calibrated Wrench: According to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."
    c. Twist-off Tension Control Bolt: ASTM F 1852.
    d. Direct-Tension Control Bolt: ASTM F 1852.
3. For slip-critical connections, use method and inspection procedure approved by Architect and coordinated with inspection agency.

H. Grouting or Dry-Packing Connections and Joints: Grout connections and joints and open spaces at keyways, connections, and joints where required or indicated on Shop Drawings.

I. Retain flowable grout in place until hard enough to support itself. Alternatively, pack spaces with stiff dry-pack grout material, tamping until voids are completely filled.
1. Place grout and finish smooth, level, and plumb with adjacent concrete surfaces.
2. Fill joints completely without seepage to other surfaces.

3. Trowel top of grout joints on roofs smooth and uniform. Finish transitions between different surface levels not steeper than 1 to 12.
4. Place grout end cap or dam in voids at ends of hollow-core slabs.
5. Promptly remove grout material from exposed surfaces before it affects finishes or hardens.
6. Keep grouted joints damp for not less than 24 hours after initial set.

3.03 ERECTION TOLERANCES

A. Erect precast structural concrete units level, plumb, square, and in alignment without exceeding the noncumulative erection tolerances of PCI MNL 135.

B. Minimize variations between adjacent slab members by jacking, loading, or other method recommended by fabricator and approved by Architect.

3.04 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Erection of precast structural concrete members.

B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

C. Visually inspect field welds and test according to ASTM E 165 or to ASTM E 709 and ASTM E 1444. High-strength bolted connections are subject to inspections.

D. Testing agency will report test results promptly and in writing to Contractor and Architect.

E. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.

F. Additional testing and inspecting, at Contractor's expense, shall be performed to determine compliance of replaced or additional work with specified requirements.

G. Prepare test and inspection reports.

3.05 REPAIRS

A. Repair precast structural concrete units if permitted by Architect.

1. Repairs may be permitted if structural adequacy, serviceability, durability, and appearance of units have not been impaired.

B. Mix patching materials and repair units so cured patches blend with color, texture, and uniformity of adjacent exposed surfaces and show no apparent line of demarcation between original and repaired work, when viewed in typical daylight illumination from a distance of 20 feet (6 m).

C. Prepare and repair damaged galvanized coatings with galvanizing repair paint according to ASTM A 780/A 780M.

D. Wire brush, clean, and paint damaged prime-painted components with same type of shop primer.

E. Remove and replace damaged precast structural concrete units that cannot be repaired or when repairs do not comply with requirements as determined by Architect.

3.06 CLEANING

A. Clean mortar, plaster, fireproofing, weld slag, and other deleterious material from concrete surfaces and adjacent materials immediately.

B. Clean exposed surfaces of precast concrete units after erection and completion of joint treatment to remove weld marks, other markings, dirt, and stains.

1. Perform cleaning procedures, if necessary, according to precast concrete fabricator's written recommendations. Protect other work from staining or damage due to cleaning operations.
2. Do not use cleaning materials or processes that could change the appearance of exposed concrete finishes or damage adjacent materials.

END OF SECTION

SECTION 03 4500
PRECAST ARCHITECTURAL CONCRETE

PART I - GENERAL

1.01 DESCRIPTION

A. Work of this Section includes all materials and installation necessary to provide:

1. Precast architectural concrete units.
2. Insulated, precast architectural concrete units.
3. Thin-brick-faced, precast architectural concrete units.
4. Stone-faced, precast architectural concrete units.
5. Materials and installation of new Concrete, Concrete Formwork and Concrete Reinforcement as shown and detailed on the drawings and specified herein.

1.02 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide precast architectural concrete units and connections capable of withstanding design loads within limits and under conditions indicated.

B. Structural Performance: Provide precast architectural concrete units and connections capable of withstanding the following design loads within limits and under conditions indicated:

1. Dead Loads:
2. Live Loads:
3. Wind Loads:
4. Seismic Loads:
5. Design framing system to maintain clearances at openings, to allow for construction tolerances, and to accommodate live load deflection of primary building structure as follows:
    a. Upward and downward movement of ½".

1.03 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Design Mixes: For each concrete mix.

C. Shop Drawings: Detail fabrication and installation of precast architectural concrete units. Indicate member locations, plans, elevations, dimensions, shapes, cross sections, limits of each finish, and types of reinforcement, including special reinforcement.

1. Indicate separate face and backup mix locations and thicknesses.
2. Indicate locations and extent and treatment of dry joints if two-stage casting is proposed.
3. Indicate welded connections by AWS standard symbols. Detail loose and cast-in hardware, inserts, connections, and joints, including accessories.
4. Indicate locations and details of anchorage devices to be embedded in other construction.
5. Indicate locations and details of thin brick units and joint treatment.
6. Indicate locations and details of stone facings, anchors, and treatment of joints.
7. Comprehensive engineering analysis certified by the qualified professional engineer responsible for its preparation.

D. Samples: For each type of finish indicated on exposed surfaces of precast architectural concrete units, in sets of 3, illustrating full range of finish, color, and texture variations expected; approximately 12 x 12 x 2”.

E. Samples for each thin brick unit required, including special shapes, showing the full range of colors, textures, and dimensions expected.

1. Grout Samples for Initial Selection: Color charts consisting of actual sections of grout showing the manufacturer's full range of colors.

F. Welding Certificates: Copies of certificates for welding procedures and personnel.

G. Material Test Reports: From a qualified testing agency indicating and interpreting test results of the following for compliance with requirements indicated:

H. Material Certificates: Signed by manufacturers certifying that each of the following items complies with requirements:

1. Concrete materials.
2. Reinforcing materials and prestressing tendons.
3. Admixtures.
4. Bearing pads.
5. Water-absorption test reports.
6. Thin brick units and accessories.
7. Stone accessories.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed precast architectural concrete work similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

B. Fabricator Qualifications: A firm that complies with the following requirements and is experienced in manufacturing precast architectural concrete units similar to those indicated for this Project and with a record of successful in-service performance.

1. Assumes responsibility for engineering precast architectural concrete units to comply with performance requirements. This responsibility includes preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.
2. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of precast architectural concrete that are similar to those indicated for this Project in material, design, and extent.
3. Participates in PCI's Plant Certification program and is designated a PCI-certified plant for Group A, Category A1 - Architectural Cladding and Load Bearing Units.
4. Has sufficient production capacity to produce required units without delaying the Work.
5. Is registered with and approved by authorities having jurisdiction.

C. Testing Agency Qualifications: An independent testing agency, acceptable to authorities having jurisdiction, qualified according to ASTM C 1077 and ASTM E 329 to conduct the testing indicated, as documented according to ASTM E 548.

D. Design Standards: Comply with ACI 318 and the design recommendations of PCI MNL 120, "PCI Design Handbook - Precast and Prestressed Concrete."

E. Quality-Control Standard: For manufacturing procedures and testing requirements, quality-control recommendations, and dimensional tolerances for types of units required, comply with PCI MNL 117, "Manual for Quality Control for Plants and Production of Architectural Precast Concrete Products."

F. Product Options: Drawings indicate size, profiles, and dimensional requirements of precast concrete units and are based on the specific types of units indicated. Other fabricators' precast concrete units complying with requirements may be considered. Refer to Division 1 Product Requirements.

G. Welding: Qualify procedures and personnel according to AWS D1.1, "Structural Welding Code-Steel"; and AWS D1.4, "Structural Welding Code-Reinforcing Steel."

H. Calculated Fire-Test-Response Characteristics: Where indicated, provide precast architectural concrete units whose fire resistance has been calculated according to PCI MNL 124, "Design for Fire Resistance of Precast Prestressed Concrete," ACI 216.1/TMS 0216.1, "Standard Method for Determining Fire Resistance of Concrete and Masonry Construction Assemblies," and is acceptable to authorities having jurisdiction.

I. Sample Panels: Before fabricating precast architectural concrete units, produce sample panels to establish the approved range of selections made under sample Submittals. Produce a minimum of 3 sets of full-scale sample panels, approximately 48” (1200 mm) long x 48” (1200 mm) high, to demonstrate the expected range of finish, color, and texture variations.

1. Locate panels where indicated or, if not indicated, as directed by Owner's Representative.
2. In presence of Owner's Representative, damage part of an exposed-face surface for each finish, color, and texture, and demonstrate materials and techniques proposed for repair of surface blemishes to match adjacent undamaged surfaces.
3. Maintain sample panels during construction in an undisturbed condition as a standard for judging the completed Work.
4. Demolish and remove sample panels when directed.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver precast architectural concrete units to Project site in such quantities and at such times to ensure continuity of installation. Store units at Project site to prevent cracking, distorting, warping, staining, or other physical damage, and so markings are visible.

B. Lift and support units only at designated lifting and supporting points as shown on Shop Drawings.

1.06 SEQUENCING

A. Furnish anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, templates, instructions, and directions, as required, for installation.

PART 2 - PRODUCTS

2.01 FABRICATORS

A. Fabricators: Subject to compliance with requirements: MOLD MATERIALS

B. Molds: Provide molds and, where required, form-facing materials of metal, plastic, wood, or another material that is nonreactive with concrete and dimensionally stable to produce continuous and true precast concrete surfaces within fabrication tolerances and suitable for required finishes

C. Form Liners: Units of face design, texture, arrangement, and configuration indicated.

2.02 REINFORCING MATERIALS

A. Reinforcing Bars: ASTM A 615/A 615M, Grade 60 deformed.

B. Steel Bar Mats: ASTM A 184/A 184M, assembled with clips, as follows:

C. Steel Reinforcement: [ASTM A 615/A 615M, Grade 60, deformed bars.

D. Plain-Steel Wire: ASTM A 82, as drawn.

E. Deformed-Steel Wire: ASTM A 496.

F. Plain-Steel Welded Wire Fabric: ASTM A 185, fabricated from as-drawn steel wire into flat sheets.

G. Deformed-Steel Welded Wire Fabric: ASTM A 497, flat sheet.

H. Supports: Manufacturer's bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire fabric in place according to CRSI's "Manual of Standard Practice," PCI MNL 117, and as follows:

2.03 PRESTRESSING TENDONS

A. Prestressing Strand: ASTM A 416/A 416M, Grade 250 or 270, uncoated, 7-wire, low- relaxation strand.

2.04 CONCRETE MATERIALS

A. Portland Cement: ASTM C 150, Type I or Type III, [gray] [and] [white], of same type, brand, and source.

1. Standard gray portland cement may be used for non-exposed backup concrete.

B. Normal-Weight Aggregates: Except as modified by PCI MNL 117, ASTM C 33, with coarse aggregates complying with Class 5S.

1. Face-Mix Coarse Aggregates: Selected, hard, and durable; free of material that reacts with cement or causes staining.

a. Gradation: [Uniformly graded] [Gap graded] [To match design reference sample].

2. Face-Mix Fine Aggregates: Selected, natural or manufactured sand of the same material as coarse aggregate, unless otherwise approved by Owner's Representative.

C. Lightweight Aggregates: ASTM C 330.

D. Coloring Admixture: ASTM C 979, synthetic mineral-oxide pigments or colored water- reducing admixtures, temperature stable, nonfading, and alkali resistant.

E. Water: Potable; free from deleterious material that may affect color stability, setting, or strength of concrete and complying with chemical limits of PCI MNL 117.

F. Air-Entraining Admixture: ASTM C 260, certified by manufacturer to be compatible with other required admixtures.

2.05 STEEL CONNECTION MATERIALS

A. Carbon-Steel Shapes and Plates: ASTM A 36/A 36M.

B. Carbon-Steel Headed Studs: ASTM A 108, AISI 1018 through AISI 1020, cold finished; AWS D1.1, Type A or B, with arc shields.

C. Carbon-Steel Plate: ASTM A 283/A 283M.

D. Malleable Steel Castings: ASTM A 47.

E. Carbon-Steel Castings: ASTM A 27/A 27M, Grade 60-30.

F. High-Strength, Low-Alloy Structural Steel: ASTM A 572/A 572M.

G. Carbon-Steel Structural Tubing: ASTM A 500, Grade B.

H. Wrought Carbon-Steel Bars: ASTM A 675/A 675M, Grade 65

I. Deformed-Steel Wire or Bar Anchors: ASTM A 496 or ASTM A 706/A 706M.

J. Carbon-Steel Bolts and Studs: ASTM A 307, Grade A; carbon-steel, hex-head bolts and studs; carbon-steel nuts; and flat, unhardened steel washers.

K. High-Strength Bolts and Nuts: ASTM A 325, Type 1, heavy hex steel structural bolts, heavy hex carbon-steel nuts, and hardened carbon-steel washers.

L. Shop-Primed Finish: Prepare surfaces of nongalvanized steel items, except those surfaces to be embedded in concrete, according to requirements in SSPC-SP 3 and shop-apply lead-and chromate-free, rust-inhibitive primer, complying with performance requirements in FS TT-P-664 according to SSPC-PA 1.

M. Reglets: As specified.

N. Welding Electrodes: Comply with AWS standards.

O. Accessories: Provide clips, hangers, plastic shims, and other accessories required to install precast architectural concrete units.

2.06 STAINLESS-STEEL CONNECTION MATERIALS

A. Stainless-Steel Plate: ASTM A 666, Type 304, of grade suitable for application.

B. Stainless-Steel Bolts and Studs: ASTM F 593, alloy 304 or 316, hex-head bolts and studs; stainless-steel nuts; and flat, stainless-steel washers.

C. Stainless-Steel Headed Studs: ASTM A 276.

2.07 BEARING PADS

A. Provide bearing pads for precast architectural concrete units as follows:

1. Elastomeric Pads: AASHTO M 251, plain, vulcanized, 100% polychloroprene (neoprene) elastomer, molded to size or cut from a molded sheet, 50 to 70 Shore A durometer, minimum tensile strength 2250 psi per ASTM D 412.

2. Random-Oriented, Fiber-Reinforced Elastomeric Pads: Preformed, randomly oriented synthetic fibers set in elastomer. Surface hardness of 70 to 90 Shore A durometer.

3. Cotton-Duck-Fabric-Reinforced Elastomeric Pads: Preformed, horizontally layered cotton-duck fabric bonded to an elastomer. Surface hardness of 80 to 100 Shore A durometer.

4. Frictionless Pads: Tetrafluoroethylene, glass-fiber reinforced, bonded to mild- steel plate, of type required for in-service stress.

5. High-Density Plastic: Multimonomer, nonleaching, plastic strip.

2.08 GROUT MATERIALS

A. Sand-Cement Grout: Portland cement, ASTM C 150, Type I, and clean, natural sand, ASTM C 144. Mix at ratio of 1 part cement to 2-½ parts sand, by volume, with minimum water required for placement and hydration.

B. Nonmetallic, Nonshrink Grout: Premixed, nonmetallic, noncorrosive, nonstaining grout containing selected silica sands, portland cement, shrinkage-compensating agents, plasticizing and water-reducing agents, complying with ASTM C 1107, of consistency suitable for application.

2.09 INSULATED PANEL ACCESSORIES

A. Extruded-Polystyrene Board Insulation: Rigid, cellular polystyrene thermal insulation formed from polystyrene base resin by an extrusion process using HCFCs as blowing agents; square edged; complying with ASTM C 578, Type IV, 1.6-lb/cu. ft. (26-kg/cu. m) minimum density.

B. Polyisocyanurate Board Insulation: Rigid, cellular polyisocyanurate thermal insulation with core formed by using HCFCs as blowing agents; square edged; complying with ASTM C 1289, Type II, with nonasphaltic facers.

C. Noncomposite Wythe Connectors: Glass-fiber and vinyl-ester polymer connectors, polypropylene pin connectors, or stainless-steel pin connectors manufactured to connect wythes of precast concrete panels without shear transfer.

2.10 CONCRETE MIXES

A. Prepare design mixes for each type of concrete required.

B. Design mixes may be prepared by a qualified independent testing agency or by qualified precast plant personnel at precast architectural concrete fabricator's option.

C. Limit water-soluble chloride ions to the maximum percentage by weight of cement permitted by ACI 318.

D. Normal-Weight Concrete Face and Backup Mixes: Proportion mixes by either laboratory trial batch or field test data methods according to ACI 211.1, with materials to be used on Project, to provide normal-weight concrete with the following properties:

1. Compressive Strength (28 Days): 5000 psi (34.5 MPa).
2. Maximum Water-Cementitious Materials Ratio: 0.45.

E. Water Absorption: 12 to 14% by volume, tested according to PCI MNL 117.

F. Lightweight Concrete Backup Mixes: Proportion mixes by either laboratory trial batch or field test data methods according to ACI 211.2, with materials to be used on Project, to provide lightweight concrete with the following properties:

1. Compressive Strength (28 Days): 5000 psi.
2. Unit Weight: Calculated equilibrium unit weight of 115 lb/cu. ft., plus or minus 3 lb/cu. ft., according to ASTM C 567.

G. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content complying with PCI MNL 117.

H. When included in design mixes, add other admixtures to concrete mixes according to manufacturer's written instructions.

2.11 MOLD FABRICATION

A. Molds: Accurately construct molds, mortar tight, of sufficient strength to withstand pressures due to concrete-placement operations and temperature changes and for prestressing operations.

1. Place form liners accurately to provide finished surface texture indicated. Provide solid backing and supports to maintain stability of liners during concreting. Coat form liner with form-release agent.

B. Maintain molds to provide completed precast architectural concrete units of shapes, lines, and dimensions indicated, within fabrication tolerances specified.

1. Edge and Corner Treatment: Uniformly [chamfered] [radiused].

2.12 FABRICATION

A. Cast-in Anchors, Inserts, Plates, Angles, and Other Anchorage Hardware: Fabricate anchorage hardware with sufficient anchorage and embedment to comply with design requirements. Accurately position for attachment of loose hardware, and secure in place during precasting operations. Locate anchorage hardware where it does not affect position of main reinforcement or concrete placement.

B. Furnish loose steel plates, clip angles, seat angles, anchors, dowels, cramps, hangers, and other hardware shapes for securing precast architectural concrete units to supporting and adjacent construction.

C. Cast-in reglets, slots, holes, and other accessories in precast architectural concrete units to receive windows, cramps, dowels, reglets, waterstops, flashings, and other similar work as indicated.

D. Cast-in openings larger than 10” in any dimension.

E. Reinforcement: Comply with recommendations in CRSI's "Manual of Standard Practice" and PCI MNL 117 for fabricating, placing, and supporting reinforcement.

1. Clean reinforcement of loose rust and mill scale, earth, and other materials that reduce or destroy the bond with concrete.

2. Accurately position, support, and secure reinforcement against displacement during concrete-placement and consolidation operations. Completely conceal support devices to prevent exposure on finished surfaces.

3. Place reinforcement to maintain at least ¾” minimum coverage. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Direct wire tie ends away from finished, exposed concrete surfaces.

4. Install welded wire fabric in lengths as long as practicable. Lap adjoining pieces at least one full mesh and lace splices with wire. Offset laps of adjoining widths to prevent continuous laps in either direction.

F. Reinforce precast architectural concrete units to resist handling, transportation, and erection stresses.

G. Prestress tendons for precast architectural concrete units by either pretensioning or posttensioning methods. Comply with PCI MNL 117.

1. Delay detensioning or posttensioning of precast, prestressed architectural concrete units until concrete has reached its indicated minimum design release compressive strength as established by test cylinders cured under the same conditions as concrete.

H. Mix concrete according to PCI MNL 117 and requirements in this Section. After concrete batching, no additional water may be added.

I. Place face mix to a minimum thickness after consolidation of the greater of 1” or 1.5 times the maximum aggregate size, but not less than the minimum reinforcing cover.

J. Place concrete in a continuous operation to prevent seams or planes of weakness from forming in precast concrete units. Comply with requirements in PCI MNL 117 for measuring, mixing, transporting, and placing concrete.

1. Place backup concrete to ensure bond with face mix concrete.

K. Thoroughly consolidate placed concrete by internal and external vibration without dislocating or damaging reinforcement and built-in items. Use equipment and procedures complying with PCI MNL 117.

L. Comply with ACI 306.1 procedures for cold-weather concrete placement.

M. Comply with ACI 305R recommendations for hot-weather concrete placement.

N. Identify pickup points of precast architectural concrete units and orientation in structure with permanent markings, complying with markings indicated on Shop Drawings. Imprint or permanently mark casting date on each precast architectural concrete unit on a surface that will not show in finished structure.

O. Cure concrete, according to requirements in PCI MNL 117, by moisture retention without heat or by accelerated heat curing using low-pressure live steam or radiant heat and moisture.

P. Discard precast architectural concrete units that are warped, cracked, broken, spalled, stained, or otherwise defective unless repairs are approved by Owner's Representative.

2.13 INSULATED PANEL CASTING

A. Cast and screed supported wythe over mold.

B. Immediately place insulation boards, abutting edges and ends of adjacent boards. Stagger end joints between rows. Stagger joints of insulation layers one-half board apart. Insert wythe connectors through predrilled insulation, and consolidate concrete around connectors according to connector manufacturer's written instructions.

C. Cast and screed structural wythe and apply initial float finish.

2.14 FABRICATION TOLERANCES

A. Fabricate precast architectural concrete units straight and true to size and shape with exposed edges and corners precise and true so each finished panel complies with PCI MNL 117 product tolerances as well as position tolerances for cast-in items.

2.15 FINISHES

A. Finish exposed-face surfaces of precast architectural concrete units to match approved [design reference sample] [sample panels] [or] [mockups] and as follows:

1. Design Reference Sample:
2. PCI and APA's "Architectural Precast Concrete-Color and Texture Selection Guide," of plate numbers indicated.
3. Provide surfaces free of pockets, sand streaks, and honeycombs, with uniform color and texture.
4. Textured-Surface Finish: Impart by form liners or inserts to provide surfaces free of pockets, streaks, and honeycombs, with uniform color and texture.
5. Bushhammer Finish: Use power or hand tools to remove matrix and fracture coarse aggregates.
6. Retarded Finish: Use chemical retarding agents applied to concrete forms and washing and brushing procedures to expose aggregate and surrounding matrix surfaces after form removal.
7. Abrasive-Blast Finish: Use abrasive grit, equipment, application techniques, and cleaning procedures to expose aggregate and surrounding matrix surfaces.
8. Acid-Etched Finish: Use acid and hot-water solution, equipment, application techniques, and cleaning procedures to expose aggregate and surrounding matrix surfaces.
9. Honed Finish: Use continuous mechanical abrasion with fine grit, followed by filling and rubbing procedures.
10. Polished Finish: Use continuous mechanical abrasion with fine grit, followed by filling and rubbing procedures.
11. Sand-Embedment Finish: Use selected stones placed in a sand bed in bottom of mold, with sand removed after curing.

B. Finish exposed surfaces of precast architectural concrete units to match face-surface finish.

C. Finish exposed surfaces of precast architectural concrete units by smooth, steel-trowel finish.

D. Finish unexposed surfaces of precast architectural concrete units by float finish.

2.16 SOURCE QUALITY CONTROL

A. Owner will employ an independent testing agency to evaluate precast architectural concrete fabricator's quality-control and testing methods.

1. Allow Owner's testing agency access to material storage areas, concrete production equipment, concrete placement, and curing facilities. Cooperate with Owner's testing agency and provide samples of materials and concrete mixes as may be requested for additional testing and evaluation.

B. Quality-Control Testing: Test and inspect precast concrete according to PCI MNL 117 requirements.

C. Strength of precast concrete units will be considered deficient if units fail to comply with ACI 318 requirements.

D. Testing: If there is evidence that the strength of precast concrete units may be deficient or may not comply with ACI 318 (ACI 318M) requirements, Owner will employ an independent testing agency to obtain, prepare, and test cores drilled from hardened concrete to determine compressive strength according to ASTM C 42.

1. A minimum of three representative cores will be taken from units of suspect strength, from locations directed by Owner's Representative.
2. Cores will be tested in an air-dry condition.
3. Strength of concrete for each series of 3 cores will be considered satisfactory if the average compressive strength is equal to at least 85% of the 28-day design compressive strength and no single core is less than 75% of the 28-day design compressive strength.
4. Test results will be made in writing on the same day that tests are performed, with copies to Owner's Representative, Contractor, and precast concrete fabricator. Test reports will include the following:
    a. Project identification name and number.
    b. Date when tests were performed.
    c. Name of precast concrete fabricator.
    d. Name of concrete testing agency.
    e. Identification letter, name, and type of precast concrete unit or units represented by core tests; design compressive strength; type of break; compressive strength at breaks, corrected for length-diameter ratio; and direction of applied load to core in relation to horizontal plane of concrete as placed.

E. Patching: If core test results are satisfactory and precast concrete units comply with requirements, clean and dampen core holes and solidly fill with precast concrete mix that has no coarse aggregate, and finish to match adjacent precast concrete surfaces.

F. Defective Work: Precast architectural concrete units that do not comply with requirements, including strength, manufacturing tolerances, and finishes, are unacceptable. Replace with precast concrete units that comply with requirements.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates and conditions for compliance with requirements for installation tolerances, true and level bearing surfaces, and other conditions affecting performance. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Do not install precast concrete units until supporting concrete has attained minimum design compressive strength.

3.02 INSTALLATION

A. Install clips, hangers, and other accessories required for connecting precast architectural concrete units to supporting members and backup materials.

B. Install precast architectural concrete. Provide temporary supports and bracing as required to maintain position, stability, and alignment as units are being permanently connected.

1. Install bearing pads as precast concrete units are being erected.
2. Maintain horizontal and vertical joint alignment and uniform joint width as erection progresses.
3. Remove projecting hoisting devices and use sand-cement grout to fill voids within recessed hoisting devices flush with surface of concrete.

C. Anchor precast architectural concrete units in position by bolting, welding, grouting, or as otherwise indicated. Remove temporary shims, wedges, and spacers as soon as possible after anchoring and grouting are completed.

D. Welding: Perform welding in compliance with AWS D1.1 and AWS D1.4, with qualified welders.

1. Protect precast architectural concrete units and bearing pads from damage by field welding or cutting operations and provide noncombustible shields as required.
2. Repair damaged steel surfaces by cleaning and applying a coat of galvanizing repair paint to galvanized surfaces.
3. Repair damaged steel surfaces by cleaning and repriming damaged painted surfaces.

E. At bolted connections, use lock washers or other acceptable means to prevent loosening of nuts.

F. Grouting Connections: Grout connections where required or indicated. Retain grout in place until hard enough to support itself. Pack spaces with stiff grout material, tamping until voids are completely filled. Place grout to finish smooth, level, and plumb with adjacent concrete surfaces. Keep grouted joints damp for not less than 24 hours after initial set. Promptly remove grout material from exposed surfaces before it affects finishes or hardens.

3.03 ERECTION TOLERANCES

A. Install precast architectural concrete units level, plumb, square, true, and in alignment without exceeding the noncumulative erection tolerances of PCI MNL 117, Appendix I.

B. Install precast architectural concrete units level, plumb, square, and true, without exceeding the following noncumulative erection tolerances.

1. Plan Location from Building Grid Datum: Plus or minus ½”.
2. Plan Location from Centerline of Steel: Plus or minus ½”.
3. Top Elevation from Nominal Top Elevation: As follows:
    a. Exposed Individual Panel: Plus or minus ¼”.
    b. Nonexposed Individual Panel: Plus or minus ½”.
    c. Exposed Panel Relative to Adjacent Panel: ¼”.
    d. Nonexposed Panel Relative to Adjacent Panel: ½”.
4. Support Elevation from Nominal Support Elevation: As follows:
    a. Maximum Low: ½”.
    b. Maximum High: ¼”.
5. Maximum Plumb Variation over the Lesser of Height of Structure or 100’: 1”.
6. Plumb in Any 10’ of Element Height: ¼”.

7. Maximum Jog in Alignment of Matching Edges: ¼”.
8. Joint Width (Governs over Joint Taper): Plus or minus ¼”.
9. Maximum Joint Taper: ⅜”.
10. Joint Taper in 10’: ¼”.
11. Maximum Jog in Alignment of Matching Faces: ¼”.
12. Differential Bowing or Camber, as Erected, between Adjacent Members of Same Design: ¼”.

3.04 FIELD QUALITY CONTROL

A. Testing: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections.

B. Field welds and connections using high-strength bolts will be subject to tests and inspections.

C. Testing agency will report test results promptly and in writing to Contractor and Owner's Representative.

D. Remove and replace work that does not comply with specified requirements.

E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of corrected work with specified requirements.

3.05 REPAIRS

A. Repair exposed exterior surfaces of precast architectural concrete units to match color, texture, and uniformity of surrounding precast architectural concrete if permitted by Owner.

B. Remove and replace damaged precast architectural concrete units if repairs do not comply with requirements.

3.06 CLEANING

A. Clean exposed surfaces of precast concrete units after erection to remove weld marks, other markings, dirt, and stains.

1. Wash and rinse according to precast concrete fabricator's written recommendations. Protect other work from staining or damage due to cleaning operations.
2. Do not use cleaning materials or processes that could change the appearance of exposed concrete finishes.

END OF SECTION

SECTION 03 5216
LIGHTWEIGHT INSULATING CONCRETE

PART 1 GENERAL

1.01 SUMMARY

A. Related Sections:

1. 03 3000 - Cast-In-Place Concrete.
2. 05 3113 - Steel Floor Decking.
3. 05 3123 - Steel Roof Decking.
4. 07 5100 - Built-Up Bituminous Roofing.
5. 07 5113 - Built-Up Asphalt Roofing
6. 07 6200 - Flashing and Sheet Metal.
7. Division 22 - Drains, Floor Sinks, and Cleanouts.

1.02 REFERENCES AND CODES

A. American Society for Testing and Materials (ASTM):

1. A653/A-96: Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip process.
2. C138-92: Test Method for Unit Weight, Yield, and Air Content (Gravimetric) of Concrete.
3. C150-96: Specification for Portland Cement.
4. C177-85(93): Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot- Plate Apparatus.
5. C332-87(91): Specification for Lightweight Aggregates for Insulating Concrete.
6. C495-91a: Test Method for Compressive Strength of Lightweight Insulating Concrete.
7. C513-89(95) Test Method for Obtaining and Testing Specimens of Hardened Lightweight Insulating Concrete for Compressive Strength.
8. C518-91: Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.
9. C578-95: Specification for Rigid, Cellular Polystyrene Thermal Insulation.
10. C869-91: Specification for Foaming Agents Used in Making Preformed Foam for Cellular Concrete.

B. Underwriters Laboratories (UL) for Class A fire resistance.

1.03 SUBMITTALS

A. Product Data: Submit for each product required and application instructions.

B. Shop Drawings: Provide roof plan showing roof slopes, thickness of insulation, roof penetrations, and specific details required for project installation.

C. Submit samples of insulation board.

D. Quality control submittals:

1. Laboratory results for Thermal Resistance Values based on ASTM C177 or C518.
2. Wind Resistance Classification.
3. Current affidavit from insulating concrete manufacturer approving applicator before installation.

4. UL listing.

1.04 QUALITY ASSURANCE

A. Comply with the Prince George's County building code.

B. Insulating cellular concrete shall be applied by a manufacturer's certified applicator.

C. Any excess water on the lightweight concrete shall be removed before roof installation by vacuuming, evaporation, or other method complying with membrane manufacturer's requirements.

D. Applicator shall maintain a job log for submittal to A/E. The job log shall contain cast density recordings taken at a minimum interval of 1 hour.

1. Cast densities shall be measured with a calibrated scale measuring from 1 to 50 pounds in increments of 1/4 pound and be accurately calibrated to 1/16 pound.

2. The measuring bucket shall be 5 quarts or larger.

3. Measurements shall be taken according to ASTM C138.

E. A "Walkability Inspection" by the A/E and the Board shall determine the lightweight insulating concrete installation as a satisfactory substrate.

1. If the installation fails the inspection, additional testing shall be required by the A/E to confirm fastener spacing or provide data for the roof system manufacturer to calculate a new fastener pattern.

a. Fastener testing shall be required.

b. Any areas where fasteners will not hold a minimum of 40 pounds after 5 days of cure shall be removed and recast.

F. If continued noncompliance is observed and the roof deck and associated roof system cannot be corrected based on additional testing and attachment calculations, the nonconforming lightweight shall be removed and recast.

G. If a denser fastener pattern is required for elevated pressure zones, a Maryland registered professional engineer shall recalculate perimeter and corner spacing.

H. Field withdrawal resistance testing of lightweight concrete fasteners shall be conducted.

1. The average withdrawal resistance values obtained in field testing shall be within 10 percent of the values listed in the Roof Assemblies Limitations.

2. If the values are not achieved, a Maryland registered professional engineer can recalculate the fastener density.

I. Roofing Contractor shall consult with roofing system manufacturer for compatibility with all surface coatings or treatments.

J. Direct-adhered single ply systems shall be installed in strict compliance with manufacturer's specifications.

K. All coatings or surface preparation materials applied to the lightweight concrete shall be listed as an approved interface material with the roof membrane manufacturer.

L. Topping applied over insulation boards and any decking/substrate that allows deflection under normal traffic shall be installed within 4 hours of board installation.

1. If installation is interrupted due to inclement weather or other situations beyond the control of the contractor, the installed insulation board shall be inspected to confirm adhesion to the substrate.

2. Over solid substrates, topping installation shall not be delayed over 24 hours.

M. Roof Membrane Application: Contractor shall coordinate commencement of roofing over the lightweight insulating concrete after satisfactorily passing fastener pullout test.

N. Conduct pre-roofing conference before the installation of the roof insulation with A/E and representatives from manufacturer of insulating concrete, roofing membrane materials, and all other related trades in attendance. At the meeting date determined, by mutual agreement, between parties concerned.

O. Oven-Dry Density: Determine according to Section 7 of Test for Compressive Strength of Lightweight Insulating Concrete, ASTM C495.

P. Compressive Strength: Determine compressive strength according to requirements of ASTM C495.

1.05 DELIVERY AND STORAGE

A. Deliver material in manufacturer's original undamaged packages or acceptable bulk containers.

B. Store packaged material to protect them from the elements or physical damage.

C. Do not use cement that shows indications of moisture damage, caking, or other signs of deterioration.

1.06 WARRANTY

A. Warrant to the Board that for 10 years from the date of the completion of the lightweight insulating concrete that:

1. The roof insulation system shall remain in a reroofable condition should the roof membrane require replacement.
2. The actual resistance to heat flow through the roof insulation system shall be at least 80 percent of design thermal resistance.
3. The roof insulation will remain in place even if the roof membrane sustains wind damage.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Insulating Concrete:

1. Concrecel by Concrecel International.
2. Cellular Hybrid by Elastizell.
3. NVS (Non-Vented Substrate) by Siplast.
4. Zonocel by Siplast.
5. Insulcel by Siplast.

2.02 MATERIALS

A. Insulating Concrete Physical Properties:

1. Portland cement and pregenerated foam with water:
   a. Wet density at point of placement: 42-50 pcf.
   b. Minimum oven dry density: 32-40 pcf.
   c. Minimum compressive strength: 300 psi.
2. Portland cement and vermiculite concrete with water(1:3.5):
   a. Wet density at point of placement: 60-68 pcf.
   b. Minimum oven dry density: 35 pcf.
   c. Minimum compressive strength: 300 psi.

B. Insulation Board: One pound density expanded polystyrene board with 25 to 35 bonding and venting slots. Deliver each bundle of 2 foot by 4 foot boards to the job site with clear identification as to the manufacturer and shall carry the FM approval label on each bundle.

C. Portland Cement shall comply with ASTM C150, Type I, II, or III.

D. Water: Potable, clean, maximum chloride level of 250 ppm, and free from deleterious amount of acid, alkali, and organic material.

E. Foaming agent: Liquid concentrate shall be manufactured and be delivered to the job site with clear identification as to manufacturer and type of material according to ASTM C869.

F. Admixtures shall not be used unless specifically recommended by the manufacturer.

G. Mesh Reinforcement: Keydeck style 2160-2-1619 galvanized mesh or equal.

PART 3 EXECUTION

3.01 EXAMINATION

A. Surfaces to receive insulating concrete shall be sound, free of loose material, and free from defects affecting application.

B. Installation of other work passing through fill or concealed shall be complete and accepted before starting the work.

C. The applicator shall be responsible for inspection and approval of the substrate as suitable for roof insulation.

D. Installation of curbs, equipment supports, roof drains, framing for openings, and wood nailers shall be in place before application of material.

E. Poured Surface Finish:

1. Surface shall be bonded firmly and free from loose materials.
2. Screeded finish of surface shall be free from extreme roughness capable of interfering with proper bonding of roofing membrane and free from shrinkage and cracks.
3. Surface Dryness: Exposed surface shall look and feel substantially dry, and shall have a uniformly gray cement color.

3.02 INSTALLATION

A. Slurry: Cover substrate with a 1/8" slurry coat of the lightweight insulating fill.

B. Insulation Board:

1. Place insulation board in the 1/8" slurry coat.
2. Insulation board placement shall be made within 30 minutes of slurry coat placement.
3. Place insulation board in a manner that provides full contact of slurry to board.
4. Lay insulation board in brick paver pattern with joints staggered and side and end joints butted snugly.
5. Under no circumstances shall insulation board be laid dry on substrate.
6. Remove loose boards and immediately re-grout.

C. Lightweight Insulating Fill:

1. Within 24 hours of insulation board placement, place a minimum of 2 inches of lightweight insulating fill over the insulation board and screed to an even surface to receive the roofing membrane.

2. Increase thickness as required at 1/4" per foot slope to obtain roof drainage slopes as indicated on Drawings.
3. Roof Crickets: At roof low points between roof drains, between roof drains and parapets and at high side of fan curbs, provide insulation concrete crickets uniformly sloped not less than 1/2" per foot.

D. Installed system shall achieve a minimum average R-value of 20.

3.03 QUALITY CONTROL

A. Check the cast density according to ASTM C869 hourly at the point of placement.

B. Testing: Make set of 4 standard cylinders of each day's mix and text according to ASTM C495. When more than 75 cubic yards of concrete are poured in 1 day, make a set of specimens of each 75 yards.

C. Drainage Test: After initial set, provide hose test to assure proper drainage slopes with no ponding.

3.04 PROTECTION

A. Do not expose insulating concrete to prolonged exposure to the elements more than 7 days.

B. Do not use as a temporary working surface without adequate surface protection, nor allow it to function as a temporary dry in.

C. Prevent traffic on roof deck until applicator allows such traffic.

END OF SECTION

SECTION 03 5400
CAST UNDERLAYMENT

PART 1 GENERAL

1.01 RELATED REQUIREMENTS

A. Section 01 7000 - Execution and Closeout Requirements: Alteration project procedures; selective demolition for remodeling.

1.02 REFERENCE STANDARDS

A. ASTM C109/C109M - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 2-in. or (50-mm) Cube Specimens) 2016a.

B. ASTM C150/C150M - Standard Specification for Portland Cement 2018.

C. ASTM C1602/C1602M - Standard Specification for Mixing Water Used in the Production of Hydraulic Cement Concrete 2012.

D. ASTM C348 - Standard Test Method for Flexural Strength of Hydraulic-Cement Mortars 2014.

E. ASTM C472 - Standard Test Methods for Physical Testing of Gypsum, Gypsum Plasters and Gypsum Concrete 1999 (Reapproved 2014).

F. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

1.03 SUBMITTALS

A. Product Data: Provide manufacturer's data sheets documenting physical characteristics and product limitations of underlayment materials. Include information on surface preparation, environmental limitations and installation instructions.

B. Provide evidence of applicator's qualifications.

C. Certificate: Certify that products meet or exceed specified requirements.

D. Manufacturer's Instructions.

1.04 QUALITY ASSURANCE

A. Installation of the underlayment shall be by an applicator approved by the manufacturer, who shall have had a minimum of five years successful experience in applying the underlayment to the types of substrates indicated on the drawings.

B. Mixing equipment, tools and other accessories shall be types approved by the underlayment manufacturer.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Keep dry and protect from direct sun exposure, freezing, and ambient temperature greater than 105 degrees F (41 degrees C).

C. Deliver materials in original, unopened packaging. Protect from exposure to moisture, freezing temperatures, and direct exposure to sunlight. Store in a manner to prevent damage of disturbance of materials until ready for use.

PART 2 PRODUCTS

2.01 MATERIALS

A. Cast Underlayments, General:

1. Comply with applicable code for combustibility or flame spread requirements.

B. Gypsum-Based Underlayment: Gypsum based mix, that when mixed with water in accordance with manufacturer's directions will produce self-leveling underlayment with the following properties:

1. Compressive Strength: Minimum 2500 pounds per square inch (17.24 MPa), tested per ASTM C472.
2. Final Set Time: 1 to 2 hours, maximum.
3. Thickness: 3/4 inch (19 mm) to maximum 3-1/2 inch (89 mm).
4. Surface Burning Characteristics: Flame spread/Smoke developed index of 0/0 in accordance with ASTM E84.

C. Cementitious Underlayment:

1. Blended cement mix, that when mixed with water in accordance with manufacturer's directions will produce self-leveling underlayment with the following properties:
   a. Cement based, with a blend of Calcium Aluminate Cement and Portland cement binder.
   b. Flowing Time: Approximately 10 minutes at 70 degrees F
   c. Initial Set: Approximately 30 minutes at 70 degrees F (ASTM C191)
   d. Final Set: Approximately two (2) hours at 70 degrees F (ASTM C191)
   e. Compressive Strength: Minimum [2630] pounds per square inch ([4100] MPa) after 28 days, tested per ASTM C109/C109M.
   f. Flexural Strength: Minimum 1000 psi (6.9 MPa) after 28 days, tested per ASTM C348.
   g. Density: 125 pounds per cubic foot (2002 kg/cu m), nominal.
   h. Thickness: Capable of thicknesses from feather edge to maximum 3-1/2 inch (89 mm).
   i. Surface Burning Characteristics: Flame spread/Smoke developed index of 0/0 in accordance with ASTM E84.

D. Water: ASTM C1602/C1602M; clean, potable, and not detrimental to underlayment mix materials.

E. Primer: Manufacturer's recommended type.

F. Joint and Crack Filler: Latex based filler, as recommended by manufacturer.

G. Sound Control Mat: Sheet material, perimeter isolation strip, and tape; as recommended by the underlayment manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that substrate surfaces are clean, dry, unfrozen, do not contain petroleum byproducts, or other compounds detrimental to underlayment material bond to substrate.

3.02 PREPARATION

A. Thoroughly inspect all surfaces prior to application of the underlayment, in order to identify and correct conditions, which would affect both application and performance. Coordinate installation of underlayment with the work of other trades.

B. All surfaces shall be solid, intact, clean and properly primed.

1. All concrete subflooring shall have reached specified design strength, shall be clean and free of oil, grease, dirt, curing compounds, or any other substance which may act as a bond break between the subfloor and the underlayment. Do not use acid etching as a means of removing such substances.

2. Non-porous surfaces such as ceramic tile and quarry tile shall be clean and free of all wax and sealers.
3. Repair cracks in the subfloor to minimize "telegraphing" of crack into underlayment.

C. Install sound control mat in accordance with manufacturer's instructions.

3.03 APPLICATION

A. Priming

B. Installation

1. Install underlayment in accordance with manufacturer's instructions.
2. Mixing Ratios: Following manufacturer's recommendations for bag: water ratio. Mix thoroughly to eliminate lumps and to provide even consistency.
3. Mix aggregates in recommended proportions where thickness is to exceed 1 1/2". Do not use sand as an aggregate.
4. Pour or pump underlayment and spread in place using recommended spreader. Use recommended smoother for feather edging and touch up. Installers shall wear cleated baseball footwear to avoid leaving marks in the liquid underlayment.
5. Allow underlayment to dry (per manufacturers tech data sheets) for at least two (2) hours at 70o F before accepting foot traffic.
6. Do not apply finished floor until underlayment has been in place for at least 16 hours.
7. Extend isolation and control joints through the underlayment.
8. Once application is complete, remove all excess materials, tools, trash and other debris associated with the work of this Section from the premises and dispose of legally. Clean adjacent surfaces in order to remove excess material or splatters.

END OF SECTION

SECTION 03 6200
NON SHRINK GROUTING

PART 1 GENERAL

1.01 RELATED REQUIREMENTS

A. Section 01 4000 - Quality Requirements: Procedures for testing, inspection, mock-ups, reports, certificates; use of reference standards.

B. Drawings and General Provisions of Contract, including General Conditions and other Division 1 Specification Sections, apply to the Work of this Section.

1.02 REFERENCE STANDARDS

A. ASTM C109/C109M - Standard Test Method for Compressive Strength

B. ASTM C827/C827M - Standard Test Method for Change in Height at Early Ages of Cylindrical Specimens of Cementitious Mixtures

1.03 QUALITY ASSURANCE

PART 2 PRODUCTS

2.01 GENERAL

A. Non-shrink grout shall consist of premeasured, prepackaged materials supplied by the manufacturer requiring only the addition of water. The manufacturer's instructions must be printed on the outside of each bag.

2.02 NONSHRINK CEMENT-BASED GROUT

A. The contractor shall submit information verifying that the grout exhibits the following:

1. Nonshrink: No shrinkage (0.0%) and a maximum 4.0% expansion when tested in accordance with ASTM C-827. No shrinkage (0.0%), and a maximum of 0.2% expansion in the hardened state when tested in accordance with CRD-C-621.
2. Compressive Strength: A minimum 28-day compressive strength of 5,000 psi when tested in accordance with ASTM C-109.
3. Setting Time: A minimum set time of 60 minutes when tested in accordance with ASTM C-191.
4. Technical Service: The manufacturer shall provide technical service upon request.
5. Composition: For column base plates, grout containing metallic particles such as aluminum powders or iron fillings may be used. For any other applications, the grout shall not contain metallic particles or expansive cement.

2.03 WATER

A. Drinkable water shall be used in mixing grout. Use the minimum water necessary for proper installation in accordance with flowability requirements and manufacturers recommendations for specific applications.

2.04 SOURCE QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Coordination of Other Tests and Inspections: Owner will employ independent testing agency to test and/or inspect items as required by project; provide access as required to accommodate timely performance.

PART 3 EXECUTION

3.01 GENERAL

A. Placing: The Contractor shall perform all mixing, grouting, and curing in accordance with the manufacturer's recommendations.

B. Temperature: The temperature of the grouting surfaces and the grout shall be maintained between 50 degrees F and 90 degrees F during grouting and for a minimum of 24 hours thereafter.

C. Elimination of Voids: Grout placement shall proceed in a manner that will assure the filling of all spaces and intimate contact of the grout with contact surfaces. Grout holes shall be used; location to be approved by Architect/Engineer if not otherwise detailed.

3.02 SURFACE PREPARATION

A. Concrete Surfaces:

1. The concrete on which the grout will bear shall have attained its design strength before grouting.
2. Concrete shall be sound and all surfaces to be in contact with the grout shall be entirely free of oil, grease, laitance, curing compounds, and other deleterious substances.
3. Surfaces shall be roughened by chipping, sandblasting or other mechanical means to assure bond of the grout to the existing concrete.
4. Concrete surfaces shall be washed clean, then saturated with water for 24 hours prior to placement of cement-based grout. Excess water must be removed prior to grouting.

B. Metal Surfaces: All metal surfaces, which are to be in direct contact with the grout, shall be thoroughly cleaned to bare metal immediately before grouting.

3.03 GROUT REMOVAL

A. Treat adjacent surfaces and formwork with a bond breaking material to prevent bonding of excess grout.

END OF SECTION

SECTION 04 0511
MORTAR AND MASONRY GROUT

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Mortar for masonry.

B. Grout for masonry.

1.02 RELATED REQUIREMENTS

A. Section 04 0100 - Maintenance of Masonry: Bedding and pointing mortar for masonry restoration work.

B. Section 04 2000 - Unit Masonry: Installation of mortar and grout.

1.03 REFERENCE STANDARDS

A. ACI 530/530.1/ERTA - Building Code Requirements and Specification for Masonry Structures and Related Commentaries 2013.

B. ASTM C5 - Standard Specification for Quicklime for Structural Purposes 2018.

C. ASTM C91/C91M - Standard Specification for Masonry Cement 2012.

D. ASTM C144 - Standard Specification for Aggregate for Masonry Mortar 2017.

E. ASTM C150/C150M - Standard Specification for Portland Cement 2018.

F. ASTM C207 - Standard Specification for Hydrated Lime for Masonry Purposes 2018.

G. ASTM C270 - Standard Specification for Mortar for Unit Masonry 2014a.

H. ASTM C387/C387M - Standard Specification for Packaged, Dry, Combined Materials for Concrete and High Strength Mortar 2015.

I. ASTM C780 - Standard Test Method for Preconstruction and Construction Evaluation of Mortars for Plain and Reinforced Unit Masonry 2018a.

J. ASTM C1142 - Standard Specification for Extended Life Mortar for Unit Masonry 1995 (Reapproved 2013).

1.04 SUBMITTALS

A. Product Data: Include design mix and indicate whether the Proportion or Property specification of ASTM C270 is to be used. Also include required environmental conditions and admixture limitations.

1.05 QUALITY ASSURANCE

A. Comply with provisions of ACI 530/530.1/ERTA, except where exceeded by requirements of the contract documents.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Maintain packaged materials clean, dry, and protected against dampness, freezing, and foreign matter.

1.07 FIELD CONDITIONS

A. Cold and Hot Weather Requirements: Comply with requirements of ACI 530/530.1/ERTA or applicable building code, whichever is more stringent.

PART 2 PRODUCTS

2.01 MORTAR AND GROUT APPLICATIONS

A. At Contractor's option, mortar and grout may be field-mixed from packaged dry materials, made from factory premixed dry materials with addition of water only or ready-mixed.

2.02 MATERIALS

A. Portland Cement: ASTM C150,Type 1.

B. Masonry Cement: ASTM C91.

C. Aggregates: Standard masonry type, ASTM C144, clean, dry and protected against dampness, freezing and foreign matter.

D. Hydrated Lime: Conforming to requirements of ASTM C207, Type S.

E. Quicklime: Non-hydraulic type, ASTM C5.

F. Premix Mortar: Commercially prepared type, ASTM C387:

1. Below grade: Type M.

2. Above grade: Type S.

G. Premix Mortar with Color Additive: ASTM C387, Type S, color as selected by Architect. For additions to existing buildings, match existing mortar, as approved in writing by Architect.

1. “Flamingo-Brixment”, ESSROC Cement Corporation, Nazareth, PA 1- 610-837-6725 (www.essroc.com)

2. Lehigh Cement Co., Allentown, PA, 1-800-523-5488.

H. Water: Clean and free from injurious amounts of oil, alkali, organic matter or other deleterious material.

2.03 MORTAR MIXING

A. Ready Mixed Mortar: ASTM C1142, Type equivalent to that specified according to ASTM C270.

B. Thoroughly mix mortar ingredients using mechanical batch mixer, in accordance with ASTM C270 and in quantities needed for immediate use.

C. Maintain sand uniformly damp immediately before the mixing process.

D. Do not use anti-freeze compounds to lower the freezing point of mortar.

E. If water is lost by evaporation, re-temper only within two hours of mixing.

F. Provide minimum 1800 psi mortar.

G. Accelerators: ASTM C494, Type C; AASHTO M194, Type C. shall not contain calcium chloride; W. R. Meadows "Hydraset-Free" accelerator or comparable.

H. Mortar shall be used within two and one half hours of the initial mix-up at temperatures between 40 degrees F (10 degrees C) and 80 degrees F (26 degrees C) and within two hours of mixing at temperatures over 80 degrees F (26 degrees C). It shall not be used after it has begun to set.

PART 3 EXECUTION

3.01 PREPARATION

A. Apply bonding agent to existing concrete surfaces.

B. Plug clean-out holes for grouted masonry with brick masonry units. Brace masonry to resist wet grout pressure.

3.02 INSTALLATION

A. Install mortar and grout to requirements of section(s) in which masonry is specified.

3.03 GROUTING

A. Use either high-lift or low-lift grouting techniques, at Contractor 's option, subject to other limitations of contract documents.

B. Do not use high-lift grouting where size of cavities mandates use of fine grout.

C. Low-Lift Grouting:

1. Limit height of pours to 12 inches (300 mm).
2. Limit height of masonry to 16 inches (400 mm) above each pour.
3. Pour grout only after vertical reinforcing is in place; place horizontal reinforcing as grout is poured. Prevent displacement of bars as grout is poured.
4. Place grout for each pour continuously and consolidate immediately; do not interrupt pours for more than 1-1/2 hours.

D. High-Lift Grouting:

1. Verify that horizontal and vertical reinforcement is in proper position and adequately secured before beginning pours.
2. Place grout for spanning elements in single, continuous pour.

3.04 FIELD QUALITY CONTROL

A. An independent testing agency will perform field tests, in accordance with provisions of Section 01 4000 - Quality Requirements.

B. Test and evaluate mortar in accordance with ASTM C780 procedures.

END OF SECTION

SECTION 04 2000
UNIT MASONRY

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Concrete block.

B. Concrete building brick.

C. Concrete facing brick.

D. Clay facing brick.

E. Common brick.

F. Reinforcement and anchorage.

G. Flashings.

H. Lintels.

I. Accessories.

1.02 RELATED REQUIREMENTS

A. Section 03 1000 - Concrete Forming and Accessories: Dovetail slots for masonry anchors.

B. Section 03 2000 - Concrete Reinforcing: Reinforcing steel for grouted masonry.

C. Section 03 3000 - Cast-in-Place Concrete: Installation of dovetail slots for masonry anchors.

D. Section 04 0511 - Mortar and Masonry Grout.

E. Section 07 2100 - Thermal Insulation: Insulation for cavity spaces.

F. Section 07 2123 - Loose-Fill Insulation: Granular insulation for masonry unit cores.

G. Section 07 8400 - Firestopping: Firestopping at penetrations of fire-rated masonry and at top of fire-rated walls.

H. Section 07 9200 - Joint Sealants: Sealing control and expansion joints.

1.03 REFERENCE STANDARDS

A. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware 2016a.

B. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement 2018, with Editorial Revision (2018).

C. ASTM A951/A951M - Standard Specification for Steel Wire for Masonry Joint Reinforcement 2016.

D. ASTM C55 - Standard Specification for Concrete Building Brick 2017.

E. ASTM C90 - Standard Specification for Loadbearing Concrete Masonry Units 2016a.

F. ASTM C129 - Standard Specification for Nonloadbearing Concrete Masonry Units 2017.

G. ASTM C140/C140M - Standard Test Methods of Sampling and Testing Concrete Masonry Units and Related Units 2017a.

H. ASTM C144 - Standard Specification for Aggregate for Masonry Mortar 2017.

I. ASTM C150/C150M - Standard Specification for Portland Cement 2018.

J. ASTM C207 - Standard Specification for Hydrated Lime for Masonry Purposes 2018.

K. ASTM C216 - Standard Specification for Facing Brick (Solid Masonry Units Made From Clay or Shale) 2017a.

L. ASTM C270 - Standard Specification for Mortar for Unit Masonry 2014a.

M. ASTM C404 - Standard Specification for Aggregates for Masonry Grout 2011.

N. ASTM C476 - Standard Specification for Grout for Masonry 2018.

O. ASTM C979/C979M - Standard Specification for Pigments for Integrally Colored Concrete 2016.

P. ASTM C1634 - Standard Specification for Concrete Facing Brick 2017.

Q. ASTM D4637/D4637M - Standard Specification for EPDM Sheet Used in Single-Ply Roof Membrane 2015.

R. BIA Technical Notes No. 13 - Ceramic Glazed Brick Exterior Walls 2017.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Fire-resistance rated masonry: Comply with requirements for materials and installation established by governing authorities for the construction and fire-resistance rating indicated.

1.05 SUBMITTALS

A. Product Data: Provide data for masonry units, fabricated wire reinforcement, mortar and masonry accessories.

1. Shop drawings for masonry reinforcing as indicated on Drawings, detailing fabrication, bending and placement of reinforcing bars.

2. Grout mix design for grout used in reinforced and non-reinforced masonry.

B. Samples:

1. Submit four samples of decorative block units to illustrate color, texture, and extremes of color range.

2. All accessories that shall be embedded in masonry.

C. Manufacturer's Certificate: Certify that masonry units meet or exceed specified requirements.

D. Manufacturer's Certificate: Certify that water repellent admixture manufacturer has certified masonry unit manufacturer as an approved user of water repellent admixture in the manufacture of concrete block.

E. Test Reports: Concrete masonry manufacturer's test reports for units with integral water repellent admixture. As a condition of approval, the masonry units listed here shall require the submittal of the following certified test reports:

1. Hollow load-bearing units:

a. ASTM C90-93, for Type 1, moisture controlled units using 8" samples.

b. ASTM C-426-83 for average shrinkage not to exceed .030 using a minimum of three (3) 8" samples. The test report shall indicate shrinkage measurements for each duration period of drying. Testing shall be performed for a minimum total time of 19 days, or until equilibrium is obtained, whichever is greater.

c. ASTM C140-75 indicating absorption characteristics.

2. Hollow non-load bearing units:

a. ASTM C129-85 for Type 1, moisture controlled units using 6" samples.

b. ASTM C426-83 for average shrinkage not to exceed .030 using a minimum of three (3) 6" samples. The test report shall indicate shrinkage measurements for each duration period of

drying. Testing shall be performed for a minimum total time of 19 days, or until equilibrium is obtained whichever is greater.

c. ASTM C140-75 indicating absorption characteristics.

1.06 QUALITY ASSURANCE

A. Cold Weather Protection:

1. Conform to BIA Technical Notes 1, and 1A.
2. Conform to applicable requirements of ACI 530.1.

B. Hot Weather Protection

1. Protect masonry construction from direct exposure to wind and sun when erected in an ambient air temperature of 99 degrees F in shade, with RH less than 50 percent.
2. Conform to applicable requirements of ACI 530.1.

1.07 MOCK-UP

A. Construct a sample panel 5'-4” X 6' minimum on the job site in a location selected by the Architect, and situated such that both interior and exterior faces are clearly visible. Construct panel of selected units representing full color and texture range of both the facing units and the masonry back-up. Panel shall demonstrate cavity wall construction as indicated on the Drawings and Specifications but not limited to the following:

1. solid grouted CMU with reinforcement

B. The approved panel shall be a standard of comparison for all masonry work, and shall serve as a standard of quality for the following criteria:

1. Reasonable uniformity of color and texture for all facing units.
2. Reasonable uniformity of shade and texture for all exposed interior masonry units.
3. Reasonable accuracy for color, thickness and tooling of all mortar joints for both facing units and interior exposed masonry units.
4. Level of workmanship for installation of thru-wall flashing, air barrier and weep holes.
5. Level of workmanship for integrity of cavity air space (free of mortar droppings or other obstructions).
6. No masonry work shall begin until the Architect, in concurrence with the Owner’s Representative, has given approval of the panel in writing.

C. Failure of masonry work to comply with the standards of quality represented by the sample panel may, at the discretion of the Owner’s Representative, give cause for the rejection of that work.

D. The approved sample panel shall remain in place until completion of the project, and shall be demolished and removed from the site upon approval of the Owner’s Representative.

E. Locate where directed.

F. Mock-up may remain as part of the Work.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver, handle, and store masonry units by means that will prevent mechanical damage and contamination by other materials.

B. Handle and store ceramic glazed masonry units in protective cartons or trays. Do not remove from protective packaging until ready for installation.

C. Units shipped from the manufacturer shall comply with the parameters of Type 1 for moisture content. Units shall be delivered covered and protected from the weather in such a manner as to eliminate contact with excessive moisture.

D. Store units above ground.

E. Store on level platform, which permits air circulation under stack.

F. Cover and protect units from weather, moisture and neglect.

G. Protect anchors, ties, and reinforcement from weather exposure and construction activity.

PART 2 PRODUCTS

2.01 CONCRETE MASONRY UNITS

A. General

1. An approved manufacturer is one who has given evidence that the masonry units to be supplied have been tested in accordance with the ASTM specifications listed in this specification (see Quality Assurance). The manufacturer shall have on file with the Owner current certified test reports. Current test reports are defined as those reports performed and dated within twelve (12) months of the bid due date for this project.
2. The manufacturer shall certify, as a condition of approval, that the masonry units supplied for the project shall be a minimum of 30 days old at time of shipment from manufacturer.
3. Provide UL listed units as required for fire resistant ratings indicated, or provide units for masonry assemblies complying with ACI 216.1-97/TMS 0216.1-97 for the fire resistant rating required.
4. Provide Bullnose units as indicated and at all external corners.

B. Concrete Block: Comply with referenced standards and as follows:

1. Size: Standard units with nominal face dimensions of 16 by 8 inches (400 by 200 mm) and nominal depth of 8 inches (200 mm).
2. Load-Bearing Units: ASTM C90, normal weight.
    a. Hollow block, as indicated.
    b. Exposed Faces: Manufacturer's standard color and texture where indicated.
3. Non-Loadbearing Units: ASTM C129.
    a. Hollow block, as indicated.

C. Concrete Brick:

1. Size: As indicated on drawings.
2. Concrete Building Brick: ASTM C55; lightweight, solid, for interior or concealed use.
3. Concrete Facing Brick: ASTM C1634; solid, lightweight; for architectural, paver and below grade use.
    a. Exposed Faces: Color and texture to be selected from manufacturer's standard range.

2.02 BRICK UNITS

A. Manufacturers:

1. Belden Brick; Belcrest: www.beldenbrick.com/#sle.
2. Endicott Clay Products Co; [_____]: www.endicott.com/#sle.

B. Facing Brick: ASTM C216, Type FBS Smooth, Grade SW.

1. Nominal size: As indicated on drawings.
2. Special shapes: Molded units as required by conditions indicated, unless standard units can be sawn to produce equivalent effect.

2.03 MORTAR AND GROUT MATERIALS

A. Masonry Cement: ASTM C91/C91M, [____].
   1. Colored Mortar: Premixed cement as required to match Architect's color sample.
   2. Manufacturers:
      a. [_____].
      b. [_____].
      c. [_____].
      d. Substitutions: See Section 01 6000 - Product Requirements.

B. Portland Cement: ASTM C150/C150M, Type I; color as required to produce approved color sample.

C. Hydrated Lime: ASTM C207, Type S.

D. Mortar Aggregate: ASTM C144.

E. Grout Aggregate: ASTM C404.

F. Pigments for Colored Mortar: Pure, concentrated mineral pigments specifically intended for mixing into mortar and complying with ASTM C979/C979M.

G. Accelerating Admixture: Nonchloride type for use in cold weather.
   1. Manufacturers:
      a. [_____].

H. Moisture-Resistant Admixture: Water repellent compound designed to reduce capillarity.
   1. Manufacturers:

2.04 REINFORCEMENT AND ANCHORAGE

A. Manufacturers:
   1. Blok-Lok Limited; [_____]: www.blok-lok.com/#sle.
   2. Hohmann & Barnard, Inc; X-Seal Anchor: www.h-b.com/#sle.
   3. [_____].
   4. [_____].
   5. Substitutions: See Section 01 6000 - Product Requirements.

B. Reinforcing Steel: Type [_____] , as specified in Section 03 2000; size as indicated on drawings; galvanized finish.

C. Joint Reinforcement: Use ladder type joint reinforcement where vertical reinforcement is involved and truss type elsewhere, unless otherwise indicated.

D. Single Wythe Joint Reinforcement: ASTM A951/A951M.
   1. Type: Truss or ladder.
   2. Material: ASTM A1064/A1064M steel wire, mill galvanized to ASTM A641/A641M Class 3.

3. Size: 0.1483 inch (3.8 mm) side rods with 0.1483 inch (3.8 mm) cross rods; width as required to provide not less than 5/8 inch (16 mm) of mortar coverage on each exposure.

E. Multiple Wythe Joint Reinforcement: ASTM A951/A951M.

1. Type: Truss.

2. Material: ASTM A1064/A1064M steel wire, mill galvanized to ASTM A641/A641M Class 3.

3. Size: 0.1483 inch (3.8 mm) side rods with 0.1483 inch (3.8 mm) cross rods; width as required to provide not less than 5/8 inch (16 mm) of mortar coverage on each exposure.

F. Strap Anchors: Bent steel shapes, 1-1/2 inch (38 mm) width, 0.105 inch (2.7 mm) thick, 24 inch (610 mm) length, with 1-1/2 inch (38 mm) long, 90 degree bend at each end to form a U or Z shape or with cross pins, hot dip galvanized to ASTM A153/A153M Class B.

G. Flexible Anchors: 2-piece anchors that permit differential movement between masonry and building frame, sized to provide not less than 5/8 inch (16 mm) of mortar coverage from masonry face.

H. Masonry Veneer Anchors: 2-piece anchors that permit differential movement between masonry veneer and structural backup, hot dip galvanized to ASTM A 153/A 153M, Class B.

1. Anchor plates: Not less than 0.075 inch (1.91 mm) thick, designed for fastening to structural backup through sheathing by two fasteners; provide design with legs that penetrate sheathing and insulation to provide positive anchorage.

2. Wire ties: Manufacturer's standard shape, 0.1875 inch (4.75 mm) thick.

3. Vertical adjustment: Not less than 3-1/2 inches (89 mm).

2.05 FLASHINGS

A. Membrane Asphaltic Flashing Materials:

1. Rubberized Asphalt Flashing: Self-adhering polymer modified asphalt sheet; 40 mils (0.040 inch) (1.0 mm) minimum total thickness; 8 mil (0.20 mm) cross-laminated polyethylene bonded to adhesive rubberized asphalt, with a removable release liner.

a. Manufacturers:

1) Advanced Building Products, Inc; Strip-N-Flash: www.advancedbuildingproducts.com/#sle.

2) Heckmann Building Products, Inc; [____]: www.heckmannbuildingprods.com/#sle

3) [_____].

4) Substitutions: See Section 01 6000 - Product Requirements.

B. Membrane Non-Asphaltic Flashing Materials:

1. Composite Polymer Flashings - Self-Adhering:

a. Composite polyethylene; 40 mil (1mm) thick with pressure-sensitive adhesive and release paper.

b. Thickness: 40 mils (1.0 mm).

c. Tear Resistance: 45 lbs. MD to ASTM D1004;

d. Manufacturers:

e. Tensile Strength (film): 5000 psi ASTM D882

f. Puncture Resistance: 134 lbf to ASTM E154;

g. Low temperature flexibility: -22˚F to CGSB 37-GP-56M;

h. Aluminum termination bar, wire-bond model #4200 required for vertical membrane flashing with a vertical rise greater than 12” or higher, seal top with Henry 925 Sealant.

2. Coordinate with and confirm compatibility with air barrier system.

1) Substitutions: See Section 01 6000 - Product Requirements.

C. EPDM Flashing: ASTM D4637/D4637M, Type I, 0.040 inch (1.0 mm) thick.

1. Manufacturers:

1) Heckmann Building Products, Inc; [____]: www.heckmannbuildingprods.com/#sle

b. Hohmann & Barnard, Inc; [____]: www.h-b.com/#sle.

1) WIRE-BOND; [_____]: www.wirebond.com/#sle.

c. [_____].

d. Substitutions: See Section 01 6000 - Product Requirements.

D. Factory-Fabricated Flashing Corners and Ends: Stainless steel.

1. Manufacturers:

a. Hohmann & Barnard, Inc; [____]: www.h-b.com/#sle.

b. Mortar Net Solutions; [_____]: www.mortarnet.com/#sle.

c. [_____].

d. Substitutions: See Section 01 6000 - Product Requirements.

E. Flashing Sealant/Adhesives: Silicone, polyurethane, or silyl-terminated polyether/polyurethane or other type required or recommended by flashing manufacturer; type capable of adhering to type of flashing used.

1. Manufacturers, Synthetic Rubber Products:

a. Mortar Net Solutions; [_____]: www.mortarnet.com/#sle.

b. [_____].

c. [_____].

d. Substitutions: See Section 01 6000 - Product Requirements.

2.06 ACCESSORIES

A. PVC Control joint Material

1. “Wirebond", extruded polyvinyl chloride, conforming to ASTM D2287, type PVC 654-4; ASTM D2240, Durometer Hardness of 80. Select joint configuration to cover full depth of joint.

2. See Drawings for locations and details.

3. Apply sealant at both sides of joint.

B. Multicomponent Cavity Wall Drainage System: Combination mortar diverter, flashing and weep system.

1. Full course and joint polypropylene plastic weep vent in a range of colors for Architect’s selection and coordination with the range of brick types in the project. Weep vent installed in accordance with 3.13 of this Section. Basis of design “Cell Vent” or approved equal.

C. Cleaning Solution: As recommended by brick manufacturer. Solution shall be non-acidic, to protect adjacent surfaces, such as window frames, door frames and wall cladding from exposure to cleaning

agents.

2.07 MORTAR AND GROUT MIXING

A. Mortar for Unit Masonry: ASTM C270, using the Proportion Specification.

PART 3 EXECUTION

3.01 QUALITY CONTROL

A. Should concrete masonry units be encountered on the job that do not comply with the criteria described in 1.06 and 2.02, then this condition shall be grounds for rejection of the company producing the units as an approved manufacturer.

3.02 INSTALLATION

A. Do not lay masonry when temperature is below 40 degrees F unless suitable means as approved by Architect and Owner's Representative are provided to heat materials. Protect work from cold and frost and insure that mortar will harden without freezing.

B. Build walls and other masonry construction to full thickness indicated, except, build single-wythe walls to actual thickness of masonry units, using units of nominal thickness shown.

C. Build all interior non-bearing masonry walls to full height of story, tight to underside of floor or roof deck. Voids between decking and top of wall shall be filled with fire safing insulation.

D. Build chases and recesses as indicated and as required. Provide not less than 8 inches of masonry between chase or recess and jamb of openings, and between adjacent chases and recesses. Build in chases, do not cut in.

E. Cut masonry units with motor-driven saws designed to cut masonry with clean, sharp, unchipped edges. Cut units as required to provide pattern shown and to fit adjoining work neatly. Use full units without cutting wherever possible.

F. Set units plumb, true to line with level courses accurately spaced within tolerance specified.

G. Lay units in running bond.

H. CMU shall be dry when laid.

I. Adjust unit to final position while mortar is soft and plastic.

J. Cut and fit masonry units, including that required to accommodate work of other sections, by masonry mechanics with masonry saws.

K. Remove units disturbed after mortar has stiffened, clean joints and relay unit with fresh mortar.

L. Grout masonry cells with reinforcing bars solid. Grout lift height and grout pour height shall not exceed 5 feet. Acceptable range for grout slump shall be between 8" and 11". Do not consolidate grout by rodding. Utilize cleanouts at base of masonry walls if necessary to verify that cells have been completely filled.

3.03 JOINING OF WORK

A. Where fresh masonry joins partially or totally set masonry, clean exposed surface of set masonry and remove loose mortar and foreign material prior to laying fresh masonry.

B. If necessary to stop off a horizontal run of masonry, rack back one-half block length in each course. Toothing shall not be permitted.

C. Fill collar joints full.

3.04 PLACING AND BONDING

A. Keep joint free of mortar, debris, or other foreign matter.

B. Refer to drawings for maximum control joint spacing.

C. Wall reinforcement shall be interrupted at control and expansion joints.

D. Provide and install control joints at a maximum of 30 foot spacing and as shown on drawings. If control joints are not indicated on drawings, contractor to provide and install at a maximum of 30 foot spacing. Architect will choose locations for both interior and exterior masonry control joints to be installed by contractor.

E. Remove excess mortar with water repellent admixture promptly. Do not use acids, sandblasting or high pressure cleaning methods.

F. Perform job site cutting of masonry units with proper tools to provide straight, clean, unchipped edges. Prevent broken masonry unit corners or edges.

3.05 HOLLOW UNIT MORTAR BEDDING

A. Lay with full mortar coverage on horizontal and vertical face shells.

B. Bed webs in courses of piers, columns, and pilasters; in starting course; and where adjacent to cells or cavities to be reinforced or filled with grout.

3.06 SOLID UNIT MORTAR BEDDING

A. Lay with full horizontal and vertical joints.

3.07 WEEPS/CAVITY VENTS

A. Install weeps in veneer and cavity walls at 24 inches (600 mm) on center horizontally on top of through-wall flashing above shelf angles and lintels and at bottom of walls.

B. Keep weep holes free of mortar and other obstructions.

C. Coordinate location of weep holes with finish grade to avoid covering weep holes by planting soil, sod, or other landscaping materials.

3.08 REINFORCEMENT AND ANCHORAGE - GENERAL, SINGLE WYTHE MASONRY AND CAVITY WALL MASONRY

A. Unless otherwise indicated on drawings or specified under specific wall type, install horizontal joint reinforcement 16 inches (400 mm) on center.

B. Embed longitudinal wires of joint reinforcement in mortar joint with at least 5/8 inch (16 mm) mortar cover on each side.

C. Fasten anchors to structural framing and embed in masonry joints as masonry is laid. Unless otherwise indicated on drawings or closer spacing is indicated under specific wall type, space anchors at maximum of 36 inches (900 mm) horizontally and 24 inches (600 mm) vertically.

3.09 MASONRY FLASHINGS

A. Whether or not specifically indicated, install masonry flashing to divert water to exterior at all locations where downward flow of water will be interrupted.

B. Provide concealed flashings in masonry work at, or above, all shelf angles, lintels, ledges and other obstructions at the downward flow of water in the wall to divert water to the exterior. Prepare masonry surfaces smooth and free of projections that could puncture flashing. Place through-wall flashing on bed of mortar and cover with mortar. Seal penetrations in flashing with sealant before covering with mortar.

C. Extend flashings full width at such interruptions and at least 6 inches (152 mm), minimum, into adjacent masonry or turn up flashing ends at least [2] inches ([50.8] mm), minimum, to form watertight pan at non-masonry construction. Extend flashing from a line 1/4 inch in from exterior face of outer wythe of masonry, through the outer wythe, turned up a minimum of 4 inches. Terminations which are 12” or

higher shall be secured with a termination bar and sealant.

1. Install in accordance with manufacturer's instructions.
2. Align and position the leading edge of through-wall flashing membrane with the fully adhere membrane over surface.
3. Roll firmly into place. Ensure minimum 2 inch overlap at all end and side laps.
4. Promptly roll all laps and membrane to effect the seal.
5. Ensure all air barrier work is complete prior to applying through-wall flashing.
6. Ensure through-wall flashing membrane extends fully to the exterior face of the exterior masonry veneer. Trim of excess as directed by the Architect.
7. Apply through-wall flashing membrane along the base of masonry veneer walls, over windows, doors and all other wall openings. Flashing shall form continuous flashing and extend up a minimum of 8 inches up the back-up wall.

D. Provide weep holes in the head joints of the same course of masonry bedded in the flashing mortar. Comply with requirements of 3.13 of this Section.

E. Extend plastic, laminated, EPDM and [_____] flashings to within 1/2 inch (12 mm) of exterior face of masonry and adhere to top of stainless steel angled drip with hemmed edge.

3.10 LINTELS

A. Provide precast masonry lintels where indicated and wherever openings of more than 1 foot 0 inch are shown without structural steel or other supporting lintels. Cure precast lintels before handling and installation. Exposed surface finish texture to match lightweight masonry units. Masonry lintels shall bear minimum of 8 in. on each side of opening.

B. Submit data on precast lintels to Architect for review/approval.

3.11 CONTROL AND EXPANSION JOINTS

A. Keep joint free of mortar, debris, or other foreign matter.

B. Refer to drawings for maximum control joint spacing.

C. Wall reinforcement shall be interrupted at control and expansion joints.

D. Provide and install control joints at a maximum of 30 foot spacing and as shown on drawings. If control joints are not indicated on drawings, contractor to provide and install at a maximum of 30 foot spacing. Architect will choose locations for both interior and exterior masonry control joints to be installed by contractor.

E. Do not continue horizontal joint reinforcement through control or expansion joints.

3.12 BUILT-IN WORK

A. Install bolts, anchors, nailing blocks, inserts, doorframes, vents, flashing, conduits, insulation and other built-in items as masonry work progresses.

B. Grout solid with mortar spaces around built-in items.

C. Provide 1/4 inch to 3/8 inch outside joint around exterior doors and other wall openings to receive sealant. Rake and tool smooth to uniform depth of 1/2 inch.

D. Install built-in items plumb, level, and true to line.

E. Do not build into masonry construction organic materials that are subject to deterioration.

3.13 TOLERANCES

A. Maximum Variation from Plumb: 1/4 inch (6 mm) per story non-cumulative; 1/2 inch (13 mm) in two stories or more.

B. Maximum Variation from Level Coursing: 1/8 inch in 3 ft (3 mm/m) and 1/4 inch in 10 ft (6 mm/3 m); 1/2 inch in 30 ft (13 mm/9 m).

C. Maximum Variation from Cross Sectional Thickness of Walls: 1/4 inch (6 mm).

D. Variation of Linear Building Line: Position indicated in plan and related portion of columns, walls, and partitions, do not exceed 1/2 inch in any bay or 20 feet maximum, nor 3/4 inch in 40 feet or more.

3.14 HORIZONTAL AND VERTICAL FACE JOINTS

A. Uniform 3/8 inch thick unless otherwise required to obtain coursing indicated.

B. Shove vertical joints tight.

C. Tool joints in all exposed masonry surfaces, when thumbprint hard, with round jointer.

D. Cut mortar joints in surfaces covered with finish material flush.

E. Remove mortar protrusions extending into cells or cavities to be reinforced and filled.

F. Fill horizontal joints between top of masonry partitions and underside of concrete slabs or metal deck with compressed mineral wool firesafing insulation (unfaced).

3.15 PARGING

A. Cement Parging: One coat of mortar as specified in Section 04100 with an anti-hydro additive, 1/2" minimum total thickness or as denoted on Drawings.

3.16 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

3.17 CLEANING

A. Cut out defective joints and holes in exposed masonry and repoint with mortar.

B. Dry brush masonry surface after mortar has set at end of each day's work and after final pointing.

C. Clean exposed masonry with stiff brush and clear water.

D. Apply cleaning agent to sample area of 20 square feet in location acceptable to the Architect if cleaning by water does not produce satisfactory results.

1. Do not proceed with cleaning until sample area is acceptable to Architect.
2. Follow manufacturer's recommendations.
3. Thoroughly wet surface of masonry on which no green efflorescence appears before using cleaning agent.
4. Scrub with acceptable cleaning agent.
5. Immediately rinse with clear water.
6. Work small sections at a time.
7. Work from top to bottom.
8. Protect sash, metal lintels, and other materials that may corrode when masonry is cleaned with acid solution.
9. Remove efflorescence in accordance with brick manufacturer's recommendations.

E. Leave work area and surrounding surfaces clean and free of mortar spots, droppings and broken masonry.

3.18 PROTECTION

A. Provide temporary shoring and bracing for all exterior and interior bearing and exterior bearing walls subsequent to erection and prior to permanent connection to floor or roof systems, or abutting cross walls. Temporarily shore and brace any other walls exposed to lateral forces or other conditions, which would compromise stability prior to completion of building envelope.

B. Protect face materials against staining.

C. Remove misplaced grout or mortar immediately. As walls are constructed, use methods to avoid mortar droppings in cavities.

D. Protect sills, ledges, offsets, and similar items from mortar drippings or other damage during construction.

E. Cover top of walls, so as to prevent any penetration of water, with nonstaining waterproof coverings when work is not in progress.

F. Coverings shall overhang at least 2 feet on each side of wall and be securely anchored.

G. Without damaging completed work, provide protective boards at exposed external corners that are subject to damage by construction activities.

3.19 SCHEDULES

A. Exterior Wall: Composite masonry with an exterior wythe of "Dark Brown" brick veneer, bonded with wire ladder reinforcement to inner wythe of interior facing split faced concrete block masonry (CMU) with 2 inch (50 mm) space for insulation.

END OF SECTION

SECTION 04 2500
UNIT MASONRY PANELS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Brick facing.

B. Structural steel stud backing.

C. Reinforcement, anchorages, lifting devices, window frame anchors, and accessories.

D. Grouting under panels.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Anchors cast into building superstructure frame.

B. Section 04 0511 - Mortar and Masonry Grout: Mortar and grout for panels.

C. Section 04 2000 - Unit Masonry: Site constructed masonry elements.

D. Section 04 2001 - Masonry Veneer: Site constructed masonry veneer with masonry backup.

E. Section 04 2300 - Glass Unit Masonry.

F. Section 05 1200 - Structural Steel Framing: Building structural frame.

G. Section 07 2100 - Thermal Insulation: Thermal insulation in stud spaces.

H. Section 07 6200 - Sheet Metal Flashing and Trim: Head and sill flashings.

I. Section 07 9200 - Joint Sealants: Sealing perimeter and intermediate joints.

1.03 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel 2014.

B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware 2016a.

C. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement 2018, with Editorial Revision (2018).

D. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2017.

E. ASTM A951/A951M - Standard Specification for Steel Wire for Masonry Joint Reinforcement 2016.

F. ASTM C67/C67M - Standard Test Methods for Sampling and Testing Brick and Structural Clay Tile 2018.

G. ASTM C73 - Standard Specification for Calcium Silicate Brick (Sand-Lime Brick) 2017.

H. ASTM C126 - Standard Specification for Ceramic Glazed Structural Clay Facing Tile, Facing Brick, and Solid Masonry Units 2016.

I. ASTM C216 - Standard Specification for Facing Brick (Solid Masonry Units Made From Clay or Shale) 2017a.

J. ASTM C652 - Standard Specification for Hollow Brick (Hollow Masonry Units Made From Clay or Shale) 2017a.

K. ASTM C955 - Standard Specification for Cold-Formed Steel Structural Framing Members 2018.

L. ASTM C1405 - Standard Specification for Glazed Brick (Single Fired, Brick Units) 2016.

M. AWS D1.1/D1.1M - Structural Welding Code - Steel 2015, with Errata (2016).

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data for face brick and stud framing members. Describe materials and finish, [_____] , product criteria, and limitations.

C. Shop Drawings: Indicate component details, anchorage, loading, welds and lifting hook locations:

1. Indicate method for securing panels to building frame connections and loads imposed.

D. Samples: Submit four samples of face brick units to illustrate color, texture, and extremes of color range.

1.05 QUALITY ASSURANCE

A. Engineering Design: By or under direct supervision of a Professional Structural Engineer experienced in design of work of this type and licensed in Maryland .

B. Fabricator Qualifications: Company specializing in fabricating products of the type specified in this section, with minimum three years of documented experience.

C. Erector Qualifications: Company specializing in installing work of the type specified in this section with three years documented experience, and approved by manufacturer.

D. Mock-Up: Construct panel prototype to actual panel size. Include brick facing in specified bond pattern, steel stud backing, anchors and lifting hooks. Also include prepared window opening.

1. Locate where directed.

2. Mock-up may remain as part of the Work.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Receive panels on site and inspect for damage. Store as directed.

PART 2 PRODUCTS

2.01 PANEL SYSTEM

A. Panel System: Brick and metal frame backup fabricated as a composite panel; with lifting devices for site erection; comply with requirements of ASTM C901.

B. Size and space components to withstand design loads as follows:

C. Design panel system to provide for movement of components without damage, failure of joint seals, and undue stress on fasteners or other detrimental effects, when subject to seasonal and cyclic day/night temperature ranges and when positive and negative wind loads are imposed.

D. Size and locate joints between panels and between panels and adjacent construction as indicated on drawings.

E. Design system to accommodate construction tolerances, deflection of building structural members, and clearances of intended openings.

F. Isolate panels from vertical structural framing members with a control joint as indicated.

G. Isolate top joint of masonry panels from deflecting horizontal structural framing members, slabs, or decks with compressible joint filler.

2.02 BRICK UNITS

A. Facing Brick: ASTM C216, Type FBS, Grade SW.

1. Color and texture to match Architect 's sample.

2. Nominal Size: As indicated on drawings.

3. Special Shapes: Molded units as required by conditions indicated, unless standard units can be sawn to produce equivalent effect.
4. Compressive Strength: As indicated on drawings, measured in accordance with ASTM C67/C67M.

B. Hollow Facing and Building Brick: ASTM C652, Grade SW; Type HBS; Class H40V.

1. Color and texture to match Architect 's sample.
2. Nominal Size: As indicated on drawings.
3. Compressive Strength: As indicated on drawings, measured in accordance with ASTM C67/C67M.

C. Sand-Lime Brick: ASTM C73, Grade SW.

1. Actual Size: As indicated on drawings.

D. Glazed Brick (Single Fired, Brick Units): ASTM C1405, Grade S (standard), Type I (single-faced units), Class Exterior, Division Solid.

1. Color and texture to match Architect 's sample.
2. Nominal size: As indicated on drawings.
3. Special shapes: Molded units as required by conditions indicated, unless standard units can be sawn without chipping glaze to produce equivalent effect.

E. Glazed Brick (Double Fired, Brick Units):

1. Glazed Facing Brick: ASTM C216, Type FBS Smooth, Grade SW with ceramic glaze complying with ASTM C126.
2. Glazed Hollow Facing Brick: ASTM C652, Grade SW; Type HBS; Class H40V with ceramic glaze complying with ASTM C126.
3. Nominal size: As indicated on drawings.
4. Special shapes: Molded units as required by conditions indicated, unless standard units can be sawn without chipping glaze to produce equivalent effect.

F. Ceramic Glazed Face Brick: ASTM C126, Grade S (Select), Type I (single-faced units).

1. Color and texture to match Architect 's sample.
2. Actual Size: As indicated on drawings.
3. Special Shapes: Molded units as required by conditions indicated, unless standard units can be sawn without chipping glaze to produce equivalent effect.
4. Compressive Strength: As indicated on drawings, measured in accordance with ASTM C67/C67M.

2.03 BACKING MATERIALS

A. Structural Framing Members and Anchors: ASTM A 36/A 36M steel, uncoated finish.

B. Studs and Track: ASTM C955; studs formed to channel shape with punched web; U-shaped track in matching nominal width and compatible height.

1. Gage and Depth: As required to meet specified performance levels.
2. Galvanized in accordance with ASTM A653/A653M G90/Z275 coating.

C. Plates, Gussets, Clips: Formed sheet steel, thickness determined for conditions encountered, same finish as framing members.

D. Self-Drilling, Self-Tapping Screws: Hardened and hot dip galvanized to ASTM A153/A153M, Class D.

E. Anchorage Devices: Drilled expansion bolts.

2.04 ACCESSORIES

A. Panel Joint Filler: Closed cell polyurethane; oversized 50 percent to joint width; self-expanding [____] inch ([____] mm) wide by maximum lengths.

B. Weep/Cavity Vents: Preformed aluminum vents with sloping louvers.

C. Brick Joint Reinforcement: Use ladder type joint reinforcement where vertical reinforcement is involved and truss type elsewhere, unless otherwise indicated.

D. Brick Joint Reinforcement: ASTM A951/A951M.

1. Type: Truss.

2. Material: ASTM A1064/A1064M steel wire, mill galvanized to ASTM A641/A641M Class 3.

E. Brick Reinforcement: ASTM A615/A615M, Grade 40 (40,000 psi) (280 MPa) deformed billet steel bars, uncoated.

F. Two-Piece Wall Ties: Formed steel wire, 0.1875 inch (4.8 mm) thick, adjustable, eye and pintle type, hot dip galvanized to ASTM A 153/A 153M, Class B, sized to provide not less than 5/8 inch (16 mm) of mortar coverage from masonry face and to allow vertical adjustment of up to 1-1/4 in (32 mm).

G. Panel Spacers: Lead.

H. Touch-up Primer: Zinc rich oil alkyd.

I. Lifting Devices: ASTM A36/A36M weldable steel.

2.05 MORTAR AND GROUT

A. Mortar and Grout: Specified in Section 04 0511.

2.06 FABRICATION - PANEL BACKING

A. Fabricate panel frame in prepared jig.

B. Align top and bottom tracks and panel edge frame; secure with fasteners and weld.

C. Attach and secure corner gussets to ensure panel alignment and dimensional integrity.

D. Place studs, brace, and reinforce to develop full strength to meet design requirements.

E. Install framing between studs for attachment of mechanical and electrical items and to prevent stud rotation or distortion.

F. Perform welding in accordance with AWS D1.1/D1.1M.

2.07 FABRICATION - FACE BRICK PANELS

A. Establish lines, levels, and coursing to panel.

B. Maintain masonry courses to uniform spacing. Form joints to achieve uniform dimension.

C. Install weep/cavity vents in veneer at 24 inches (600 mm) on center horizontally at bottom course of panel.

D. Place bar reinforcement in brick cores; fill with grout.

2.08 BUILT IN WORK

A. Install built-in glazed frames, fabricated [_____] frames, window frames, anchor bolts, plates, other items furnished by other sections and [_____].

B. Install built-in items plumb and level.

2.09 PANEL REINFORCEMENT AND ANCHORAGES

A. Secure backing panel to brick panel and reinforce.

2.10 FABRICATION TOLERANCES

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated on shop drawings.

B. Verify that supporting structure is ready to receive prefabricated panels.

C. Verify items provided in other sections of work are appropriately sized and located.

D. Verify that utility rough-ins are properly located and ready for panel placement.

3.02 ERECTING PANELS

A. Erect panels without damage to shape or finish. Replace damaged panels.

B. Erect members level and plumb within allowable tolerances.

C. Align and maintain uniform horizontal and vertical panel joints as erection progresses.

D. When panels require adjustment beyond design or tolerance criteria, discontinue affected work; advise Architect .

E. Fasten and weld units in place.

1. Perform welding, including tack welding, in accordance with AWS D1.1/D1.1M.

F. Touch up field welds and scratched or damaged surfaces.

3.03 CUTTING AND FITTING

A. Obtain approval prior to cutting or fitting panels not indicated or where appearance or strength of panels may be impaired.

3.04 CLEANING

A. Remove excess mortar and grout.

B. Clean soiled surfaces with non-acidic solution that will not harm masonry or adjacent materials. Consult masonry manufacturer for acceptable cleaners.

C. Use non-metallic tools in cleaning operations.

3.05 PROTECTION

A. Maintain protective boards at exposed external corners of panels that may be damaged by construction activities.

B. Provide protection without damaging completed work.

END OF SECTION

SECTION 04 2600
SINGLE-WYTHE UNIT MASONRY

*{FONT-FAMILY:ARIAL;FONT-SIZE:10PT;}

PART 1 GENERAL

2.01 SECTION INCLUDES

A. Concrete masonry units.

B. Pre-faced unit masonry.

C. Reinforcement, anchorage, and accessories.

D. Flashings.

E. Parged masonry surfaces.

2.02 RELATED REQUIREMENTS

A. Section 03 2000 - Concrete Reinforcing: Reinforcing steel for grouted masonry.

B. Section 04 0511 - Mortar and Masonry Grout: Mortar and grout for single wythe unit masonry.

C. Section 06 1000 - Rough Carpentry: Nailing strips for installation in masonry.

D. Section 07 6200 - Sheet Metal Flashing and Trim: Cap flashings over masonry work.

E. Section 07 9200 - Joint Sealants: Sealing control and expansion joints.

2.03 REFERENCE STANDARDS

A. ASTM C34 - Standard Specification for Structural Clay Load-Bearing Wall Tile 2017.

B. ASTM C55 - Standard Specification for Concrete Building Brick 2017.

C. ASTM C56 - Standard Specification for Structural Clay Nonloadbearing Tile 2013.

D. ASTM C90 - Standard Specification for Loadbearing Concrete Masonry Units 2016a.

E. ASTM C129 - Standard Specification for Nonloadbearing Concrete Masonry Units 2017.

F. ASTM C212 - Standard Specification for Structural Clay Facing Tile 2017.

G. ASTM C216 - Standard Specification for Facing Brick (Solid Masonry Units Made From Clay or Shale) 2017a.

H. ASTM C530 - Standard Specification for Structural Clay Nonloadbearing Screen Tile 2013.

I. ASTM C652 - Standard Specification for Hollow Brick (Hollow Masonry Units Made From Clay or Shale) 2017a.

J. ASTM C744 - Standard Specification for Prefaced Concrete and Calcium Silicate Masonry Units 2016.

K. ASTM C1634 - Standard Specification for Concrete Facing Brick 2017.

L. ASTM D226/D226M - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing 2017.

M. ASTM D4637/D4637M - Standard Specification for EPDM Sheet Used in Single-Ply Roof Membrane 2015.

N. BIA Technical Notes No. 7 - Water Penetration Resistance – Design and Detailing 2017.

O. BIA Techical Notes No. 28B - Brick Veneer/Steel Stud Walls 2005.

P. BIA Technical Notes No. 46 - Maintenance of Brick Masonry 2017.

Q. TMS 402/602 - Building Code Requirements and Specification for Masonry Structures 2016.

R. UL (FRD) - Fire Resistance Directory Current Edition.

2.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data for decorative and pre-faced masonry units and fabricated wire reinforcement.

C. Samples: Submit four samples of decorative block and pre-faced units to illustrate color, texture and extremes of color range.

D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

E. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.
2. Extra Glazed Units: 50 of each type, size, and color combination.
3. Extra Pre-Faced Units: 50 of each type, size, and color combination.

2.05 QUALITY ASSURANCE

A. Comply with provisions of ACI 530/530.1/ERTA, except where exceeded by requirements of the contract documents.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years of documented experience.

C. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.

2.06 MOCK-UP

A. Construct a masonry wall as a mock-up panel sized 8 feet (2.4 m) long by 6 feet (1.8 m) high; include mortar and accessories in mock-up.

B. Locate where directed.

C. Mock-up may remain as part of the Work.

2.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver, handle, and store masonry units by means that will prevent mechanical damage and contamination by other materials.

B. Handle and store ceramic glazed masonry units in protective cartons or trays. Do not remove from protective packaging until ready for installation.

2.08 FIELD CONDITIONS

A. Cold and Hot Weather Requirements: Comply with requirements of ACI 530/530.1/ERTA or applicable building code, whichever is more stringent.

PART 2 PRODUCTS

3.01 CONCRETE MASONRY UNITS

A. Concrete Block: Comply with referenced standards and as follows:

1. Regulatory Requirements: Comply with applicable code for UL Assembly No. [____].
2. Size: Standard units with nominal face dimensions of 16 x 8 inches (400 x 200 mm) and nominal depth of 4 inches (100 mm).

3. Special Shapes: Provide non-standard blocks configured for corners.
4. Load-Bearing Units: ASTM C90, normal weight.
    a. Hollow block, as indicated.
    b. Exposed Faces: Manufacturer's standard color and texture where indicated.
    c. Pattern: [_____].
5. Non-Loadbearing Units: ASTM C129.
    a. Hollow block, as indicated.
    b. Lightweight.
6. Pre-Faced Units: ASTM C90, hollow block, with smooth resinous facing complying with ASTM C744.
    a. Colors and Styles: As indicated on drawings.
    b. Manufacturer: [_____].
    c. Substitutions: See Section 01 6000 - Product Requirements.

B. Concrete Brick:
1. Size: As indicated on drawings.
2. Concrete Building Brick: ASTM C55; lightweight, solid, for interior or concealed use.
3. Concrete Facing Brick: ASTM C1634; solid, lightweight; for architectural, paver and below grade use.
    a. Exposed Faces: Color and texture to be selected from manufacturer's standard range.
    b. Manufacturers:
        1) [_____].
        2) [_____].
        3) [_____].
        4) Substitutions: See Section 01 6000 - Product Requirements.

3.02 GIANT BRICK UNITS

A. Manufacturers:
1. Endicott Clay Products Co; [_____]: www.endicott.com/#sle.
2. General Shale Brick; [_____]: www.generalshale.com/#sle.
3. Meridian Brick LLC; [_____]: www.meridianbrick.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

B. Giant Facing Brick: ASTM C216, Type FBS, Grade SW.
1. Color and texture to match Architect 's sample.
2. Nominal size: As indicated on drawings.

C. Hollow Facing and Building Brick: ASTM C652, Grade SW; Type HBS; Class H40V.
1. Color and texture to match Architect 's sample.
2. Actual size: As indicated on drawings.

3.03 CLAY TILE UNITS

A. Manufacturers:

1. [_____]; [_____].

B. Structural Clay Load-Bearing Wall Tile: ASTM C34, Grade LBX; end-construction type; plaster-base finish.

C. Structural Clay Non-Load-Bearing Tile: ASTM C56, Grade NB; plaster-base finish.

D. Structural Clay Non-Load-Bearing Screen Tile: ASTM C530, Grade SE; Type STX; smooth finish.

E. Structural Clay Facing Tile: ASTM C212, Type FTX; Standard Class; single-face units; end-construction type.

1. Actual size: As indicated on drawings.

3.04 MORTAR AND GROUT MATERIALS

A. Mortar and Grout: As specified in Section 04 0511.

3.05 REINFORCEMENT AND ANCHORAGE

A. Manufacturers:

1. Blok-Lok Limited; [_____]: www.blok-lok.com/#sle.
2. Hohmann & Barnard, Inc; [_____]: www.h-b.com/#sle.
3. [_____].

B. Reinforcing Steel: Type specified in Section 03 2000; size as indicated on drawings; galvanized finish.

C. Joint Reinforcement: Use ladder type joint reinforcement where vertical reinforcement is involved and truss type elsewhere, unless otherwise indicated.

D. Flexible Anchors: 2-piece anchors that permit differential movement between masonry and building frame, sized to provide not more than 1 inch (25 mm) and not less than 1/2 inch (13 mm) of mortar coverage from masonry face.

3.06 FLASHINGS

A. Metal Flashing Materials:

1. Prefabricated Metal Flashing: Smooth fabricated 12 oz/sq ft (3.66 kg/sq m) copper flashing for surface mounted conditions.
    a. Manufacturers:
        1) Cheney Flashing Company; [____]: www.cheneyflashing.com/#sle.
        2) Hohmann & Barnard, Inc; [____]: www.h-b.com/#sle.

B. Membrane Asphaltic Flashing Materials:

1. Rubberized Asphalt Flashing: Self-adhering polymer modified asphalt sheet; 40 mils (0.040 inch) (1.0 mm) minimum total thickness; 8 mil (0.20 mm) cross-laminated polyethylene bonded to adhesive rubberized asphalt, with a removable release liner.
    a. Manufacturers:
        1) Advanced Building Products, Inc; [_____]: www.advancedbuildingproducts.com/#sle.
        2) Heckmann Building Products, Inc; [____]: www.heckmannbuildingprods.com/#sle
        3) WIRE-BOND; [_____]: www.wirebond.com/#sle.
        4) Substitutions: See Section 01 6000 - Product Requirements.

C. Membrane Non-Asphaltic Flashing Materials:

1. Composite Polymer Flashings - Self-Adhering: Composite polyethylene; 40 mil (1mm) thick with pressure-sensitive adhesive and release paper.

a. Manufacturers:

1) Hyload, Inc; [____]: www.hyload.com/#sle.

2) Substitutions: See Section 01 6000 - Product Requirements.

D. EPDM Flashing: ASTM D4637/D4637M, Type I, 0.040 inch (1.0 mm) thick.

1. Manufacturers:

a. Hohmann & Barnard, Inc; [____]: www.h-b.com/#sle.

1) WIRE-BOND; [_____]: www.wirebond.com/#sle.

b. [_____].

c. [_____].

d. Substitutions: See Section 01 6000 - Product Requirements.

E. Flashing Sealant/Adhesives: Silicone, polyurethane, or silyl-terminated polyether/polyurethane, or other type required or recommended by flashing manufacturer; type capable of adhering to type of flashing used.

F. Termination Bars: Stainless steel; compatible with membrane and adhesives.

G. Drip Edge: Stainless steel; angled drip with hemmed edge; compatible with membrane and adhesives.

H. Lap Sealants and Tapes: As recommended by flashing manufacturer; compatible with membrane and adhesives.

3.07 ACCESSORIES

A. Preformed Control Joints: Rubber material. Provide with corner and tee accessories, fused joints.

1. Manufacturers:

a. Substitutions: See Section 01 6000 - Product Requirements.

B. Joint Filler: Closed cell polyvinyl chloride; oversized 50 percent to joint width; self expanding; [____] inch ([____] mm) wide x by maximum lengths available.

C. Flashing - Weep - Vent System: Polypropylene pan and bridge unit with polyester mesh drainage mats and bug guards; wall system size: 12 inch (304.8 mm).

D. Building Paper: ASTM D226/D226M, Type I ("No. 15") asphalt felt.

E. Nailing Strips: Preservative treated softwood, as specified in Section 06 1000.

F. Cleaning Solution: Non-acidic, not harmful to masonry work or adjacent materials.

3.08 LINTELS

A. Precast Concrete Lintels: [_____] type, [____x____] inch ([____x____] mm) size, [____] psi ([____] MPa) strength at 28 days.

1. Manufacturers:

a. [_____].

b. [_____].

c. [_____].

d. Substitutions: See Section 01 6000 - Product Requirements.

PART 3 EXECUTION

4.01 INSTALLERS

A. Installer List:

1. [_____].
2. [_____].
3. [_____].
4. Substitution Limitations: Same as specified for products; see Section 01 6000 - Product Requirements.

4.02 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive masonry.

B. Verify that related items provided under other sections are properly sized and located.

C. Verify that built-in items are in proper location, and ready for roughing into masonry work.

4.03 PREPARATION

A. Direct and coordinate placement of metal anchors supplied for installation under other sections.

4.04 COURSING

A. Establish lines, levels, and coursing indicated. Protect from displacement.

B. Maintain masonry courses to uniform dimension. Form vertical and horizontal joints of uniform thickness.

C. Concrete Masonry Units:

D. Giant Brick Units:

E. Clay Tile Units:

4.05 PLACING AND BONDING

A. Lay solid masonry units in full bed of mortar, with full head joints, uniformly jointed with other work.

B. Lay hollow masonry units with face shell bedding on head and bed joints.

C. Remove excess mortar as work progresses.

D. Interlock intersections and external corners, except for units laid in stack bond.

E. Do not shift or tap masonry units after mortar has achieved initial set. Where adjustment must be made, remove mortar and replace.

4.06 REINFORCEMENT AND ANCHORAGE

A. Install horizontal joint reinforcement 16 inches (400 mm) on center.

B. Fasten anchors to structural framing and embed in masonry joints as masonry is laid. Space anchors at maximum of 24 inches (600 mm) horizontally and 16 inches (400 mm) vertically.

4.07 MASONRY FLASHINGS

A. Whether or not specifically indicated, install masonry flashing to divert water to exterior at all locations where downward flow of water will be interrupted.

1. Extend flashings full width at such interruptions and at least 6 inches (152 mm), minimum, into adjacent masonry or turn up at least 1 inch (25.4 mm), minimum, to form watertight pan at non-masonry construction.

2. Remove or cover protrusions or sharp edges that could puncture flashings.
3. Seal lapped ends and penetrations of flashing before covering with mortar.

B. Lap end joints of flashings at least 6 inches (152 mm), minimum, and seal watertight with flashing sealant/adhesive.

4.08 LINTELS

A. Install loose steel lintels over openings.

B. Install reinforced unit masonry lintels over openings where steel or precast concrete lintels are not scheduled.

C. Maintain minimum [____] inch ([____] mm) bearing on each side of opening.

4.09 GROUTED COMPONENTS

A. Support and secure reinforcing bars from displacement. Maintain position within 1/2 inch (13 mm) of dimensioned position.

B. Place and consolidate grout fill without displacing reinforcing.

C. At bearing locations, fill masonry cores with grout for a minimum 12 inches (300 mm) either side of opening.

4.10 CONTROL AND EXPANSION JOINTS

A. Do not continue horizontal joint reinforcement through control or expansion joints.

B. Size control joints as indicated on drawings; if not shown, 3/4 inch (19 mm) wide and deep.

4.11 BUILT-IN WORK

A. As work progresses, install built-in metal door frames and other items to be built into the work and furnished under other sections.

B. Bed anchors of metal door and glazed frames in adjacent mortar joints. Fill frame voids solid with grout.

C. Do not build into masonry construction organic materials that are subject to deterioration.

4.12 TOLERANCES

A. Install masonry within the site tolerances found in TMS 402/602.

4.13 CUTTING AND FITTING

A. Cut and fit for chases. Coordinate with other sections of work to provide correct size, shape, and location.

B. Obtain approval prior to cutting or fitting masonry work not indicated or where appearance or strength of masonry work may be impaired.

4.14 PARGING

A. Dampen masonry walls prior to parging.

B. Scarify each parging coat to ensure full bond to subsequent coat.

C. Strike top edge of parging at 45 degrees.

4.15 FIELD QUALITY CONTROL

A. An independent testing agency, as specified in Section 01 4000 - Quality Requirements, will conduct field tests.

4.16 CLEANING

A. Remove excess mortar and mortar smears as work progresses.

B. Clean soiled surfaces with cleaning solution.

C. Use non-metallic tools in cleaning operations.

4.17 PROTECTION

A. Without damaging completed work, provide protective boards at exposed external corners that are subject to damage by construction activities.

4.18 SCHEDULES

A. Exterior Wall: Single wythe of split faced decorative block unit masonry.

B. Interior Block Partitions: Clay tile units prepared for wet plaster finish.

C. Interior Fire Walls: One hour rating, grout filled concrete block units.

END OF SECTION

SECTION 04 2723
CAVITY WALL UNIT MASONRY

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Concrete block.

B. Concrete building brick.

C. Concrete facing brick.

D. Clay facing brick.

E. Common brick

F. Hollow brick.

G. Sand-lime face brick.

H. Ceramic glazed face brick.

I. Clay tile.

J. Reinforcement and anchorage.

K. Flashings.

L. Lintels.

M. Accessories.

1.02 RELATED REQUIREMENTS

A. Section 03 2000 - Concrete Reinforcing: Reinforcing steel for grouted masonry.

B. Section 04 0100 - Maintenance of Masonry.

C. Section 04 0511 - Mortar and Masonry Grout.

D. Section 04 4313 - Stone Masonry Veneer: Rough stone bonded to masonry back-up.

E. Section 06 1000 - Rough Carpentry: Nailing strips built into masonry.

F. Section 07 2100 - Thermal Insulation: Insulation for cavity spaces.

G. Section 07 2123 - Loose-Fill Insulation: Granular insulation for masonry wall cavity.

H. Section 07 6200 - Sheet Metal Flashing and Trim: Through-wall masonry flashings.

I. Section 07 9200 - Joint Sealants: Sealing control and expansion joints.

1.03 PRICE AND PAYMENT PROCEDURES

A. See Section 01 2100 - Allowances, for cash allowances affecting this section.

B. This allowance includes purchase and delivery of [_____]. Installation is not included in the allowance but is specified in this section and is part of the Contract Sum/Price.

1.04 REFERENCE STANDARDS

A. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware 2016a.

B. ASTM A641/A641M - Standard Specification for Zinc-Coated (Galvanized) Carbon Steel Wire 2009a (Reapproved 2014).

C. ASTM A951/A951M - Standard Specification for Steel Wire for Masonry Joint Reinforcement 2016.

D. ASTM A1064/A1064M - Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete 2018.

E. ASTM C34 - Standard Specification for Structural Clay Load-Bearing Wall Tile 2017.

F. ASTM C55 - Standard Specification for Concrete Building Brick 2017.

G. ASTM C56 - Standard Specification for Structural Clay Nonloadbearing Tile 2013.

H. ASTM C67/C67M - Standard Test Methods for Sampling and Testing Brick and Structural Clay Tile 2018.

I. ASTM C73 - Standard Specification for Calcium Silicate Brick (Sand-Lime Brick) 2017.

J. ASTM C90 - Standard Specification for Loadbearing Concrete Masonry Units 2016a.

K. ASTM C126 - Standard Specification for Ceramic Glazed Structural Clay Facing Tile, Facing Brick, and Solid Masonry Units 2016.

L. ASTM C129 - Standard Specification for Nonloadbearing Concrete Masonry Units 2017.

M. ASTM C140/C140M - Standard Test Methods of Sampling and Testing Concrete Masonry Units and Related Units 2017a.

N. ASTM C212 - Standard Specification for Structural Clay Facing Tile 2017.

O. ASTM C216 - Standard Specification for Facing Brick (Solid Masonry Units Made From Clay or Shale) 2017a.

P. ASTM C652 - Standard Specification for Hollow Brick (Hollow Masonry Units Made From Clay or Shale) 2017a.

Q. ASTM C744 - Standard Specification for Prefaced Concrete and Calcium Silicate Masonry Units 2016.

R. ASTM C780 - Standard Test Method for Preconstruction and Construction Evaluation of Mortars for Plain and Reinforced Unit Masonry 2018a.

S. ASTM C1405 - Standard Specification for Glazed Brick (Single Fired, Brick Units) 2016.

T. ASTM C1634 - Standard Specification for Concrete Facing Brick 2017.

U. BIA Technical Notes No. 7 - Water Penetration Resistance – Design and Detailing 2017.

V. UL (FRD) - Fire Resistance Directory Current Edition.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data for masonry units, fabricated wire reinforcement and mortar.

C. Samples: Submit four samples of decorative block units to illustrate color, texture, and extremes of color range.

D. Manufacturer's Certificate: Certify that masonry units meet or exceed specified requirements.

E. Maintenance Materials: Furnish the following for Owner 's use in maintenance of project.

1. See Section 01 6000 - Product Requirements, for additional provisions.

1.06 QUALITY ASSURANCE

A. Comply with provisions of ACI 530/530.1/ERTA, except where exceeded by requirements of the contract documents.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years of documented experience.

C. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.

1.07 MOCK-UP

A. Construct a masonry cavity wall as a mock-up panel sized 8 feet (2.4 m) long by 6 feet (1.8 m) high; include mortar and accessories, reinforcement, flashings and wall insulation in mock-up.

B. Mock-up may remain as part of the Work.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver, handle, and store masonry units by means that will prevent mechanical damage and contamination by other materials.

1.09 FIELD CONDITIONS

A. Maintain materials and surrounding air temperature to minimum 40 degrees F (5 degrees C) prior to, during, and 48 hours after completion of masonry work.

B. Maintain materials and surrounding air temperature to maximum 90 degrees F (32 degrees C) prior to, during, and 48 hours after completion of masonry work.

PART 2 PRODUCTS

2.01 UNIT MASONRY - GENERAL

A. Comply with applicable code for UL (FRD) Assembly No. [____].

2.02 CONCRETE MASONRY UNITS

A. Concrete Block: Comply with referenced standards and as follows:

1. Size: Standard units with nominal face dimensions of 16 by 8 inches (400 by 200 mm) and nominal depth of 8 inches (200 mm).
2. Special Shapes: Provide non-standard blocks configured for corners.
3. Load-Bearing Units: ASTM C90, normal weight.
    a. Exposed faces: Manufacturer's standard color and texture where indicated.
    b. Pattern: Vertical single score.
4. Non-Loadbearing Units: ASTM C129.
5. Pre-Faced Units: ASTM C90, hollow block, with smooth resinous facing complying with ASTM C744.

B. Concrete Brick:

1. Size: As indicated on drawings.
2. Concrete Building Brick: ASTM C55; lightweight, solid, for interior or concealed use.
3. Concrete Facing Brick: ASTM C1634; solid, lightweight; for architectural, paver and below grade use.
    a. Exposed Faces: Color and texture to be selected from manufacturer's standard range.
    b. Manufacturers:
        1) [_____].
        2) [_____].
        3) [_____].

4) Substitutions: See Section 01 6000 - Product Requirements.

2.03 BRICK UNITS

A. Manufacturers:

1. Endicott Clay Products Co; [_____]: www.endicott.com/#sle.
2. General Shale Brick; [_____]: www.generalshale.com/#sle.
3. Meridian Brick LLC; [_____]: www.meridianbrick.com/#sle.
4. [_____].

B. Facing Brick: ASTM C216, Type FBS, Grade SW.

1. Nominal Size: As indicated on drawings.
2. Special Shapes: Molded units as required by conditions indicated, unless standard units can be sawn to produce equivalent effect.
3. Compressive Strength: As indicated on drawings, measured in accordance with ASTM C67/C67M.

C. Building (Common) Brick: ASTM C62, Grade SW; solid units.

1. Nominal Size: As indicated on drawings.
2. Compressive Strength: As indicated on drawings, measured in accordance with ASTM C67/C67M.

D. Hollow Facing and Building Brick: ASTM C652, Grade SW; Type HBS; Class H40V.

1. Actual Size: As indicated on drawings.
2. Compressive Strength: As indicated on drawings, measured in accordance with ASTM C67/C67M.

E. Sand-Lime Brick: ASTM C73, Grade SW.

1. Color and texture to match Architect 's sample.
2. Actual Size: As indicated on drawings.

F. Glazed Brick (Single Fired, Brick Units): ASTM C1405, Grade S (standard), Type I (single-faced units), Class Exterior, Division Solid.

1. Nominal size: As indicated on drawings.
2. Special shapes: Molded units as required by conditions indicated, unless standard units can be sawn without chipping glaze to produce equivalent effect.

G. Glazed Brick (Double Fired, Brick Units):

1. Glazed Facing Brick: ASTM C216, Type FBS Smooth, Grade SW with ceramic glaze complying with ASTM C126.
2. Nominal size: As indicated on drawings.
3. Special shapes: Molded units as required by conditions indicated, unless standard units can be sawn without chipping glaze to produce equivalent effect.

H. Ceramic Glazed Face Brick: ASTM C126, Grade S (Select), Type I (single-faced units).

1. Actual Size: As indicated on drawings.
2. Special Shapes: Molded units as required by conditions indicated, unless standard units can be sawn without chipping glaze to produce equivalent effect.
3. Compressive Strength: As indicated on drawings, measured in accordance with ASTM C67/C67M.

2.04 CLAY TILE UNITS

A. Manufacturers:

1. Elgin Butler Company; [____]: www.elginbutler.com/#sle.
2. Sandkuhl Clay Works; [_____]: www.sandkuhl.com/#sle.
3. [_____].
4. Substitutions: See Section 01 6000 - Product Requirements.

B. Structural Clay Load-Bearing Wall Tile: ASTM C34, Grade LBX; end-construction type; plaster-base finish.

1. Actual Size: As indicated on drawings.

C. Structural Clay Non-Load-Bearing Tile: ASTM C56, Grade NB; plaster-base finish.

1. Actual Size: As indicated on drawings.

D. Structural Clay Facing Tile: ASTM C212, Type FTX; Standard Class; single-face units; end-construction type.

1. Actual Size: As indicated on drawings.
2. Special Shapes: Molded units as required by conditions indicated, unless standard units can be sawn to produce equivalent effect.

2.05 MORTAR AND GROUT MATERIALS

A. Mortar and Grout: As specified in Section 04 0511.

2.06 REINFORCEMENT AND ANCHORAGE

A. Manufacturers:

1. Blok-Lok Limited; [_____]: www.blok-lok.com/#sle.
2. Hohmann & Barnard, Inc; [_____]: www.h-b.com/#sle.
3. WIRE-BOND: www.wirebond.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

B. Reinforcing Steel: Type specified in Section 03 2000; size as indicated on drawings; galvanized finish.

C. Joint Reinforcement: Use ladder type joint reinforcement where vertical reinforcement is involved and truss type elsewhere, unless otherwise indicated.

D. Multiple Wythe Joint Reinforcement: ASTM A951/A951M.

1. Type: Truss.
2. Material: ASTM A1064/A1064M steel wire, mill galvanized to ASTM A641/A641M Class 3.
3. Size: 0.1483 inch (3.8 mm) side rods with 0.1483 inch (3.8 mm) cross rods; width as required to provide not less than 5/8 inch (16 mm) of mortar coverage on each exposure.

E. Adjustable Multiple Wythe Joint Reinforcement: ASTM A951/A951M.

1. Size: 0.1875 inch (4.8 mm) side rods with 0.1483 inch (3.8 mm) cross rods and adjustable components of 0.1875 inch (4.8 mm)wire, width of components as required to provide not less than 5/8 inch (16 mm) of mortar coverage from each masonry face.

F. Strap Anchors: Bent steel shapes configured as required for specific situations, 1-1/4 in (32 mm) width, 0.105 in (2.7 mm) thick, lengths as required to provide not more than 1 inch (25 mm) and not less than 1/2 inch (13 mm) of mortar coverage from masonry face, corrugated for embedment in masonry joint, hot dip galvanized to ASTM A 153/A 153M, Class B.

G. Flexible Anchors: 2-piece anchors that permit differential movement between masonry and building frame, sized to provide not more than 1 inch (25 mm) and not less than 1/2 inch (13 mm) of mortar coverage from masonry face.

2.07 FLASHINGS

A. Metal Flashing Materials: Copper, as specified in Section 07 6200.

B. Membrane Asphaltic Flashing Materials:

1. Rubberized Asphalt Flashing: Self-adhering polymer modified asphalt sheet; 40 mils (0.040 inch) (1.0 mm) minimum total thickness; 8 mil (0.20 mm) cross-laminated polyethylene bonded to adhesive rubberized asphalt, with a removable release liner.

a. Manufacturers:

1) Advanced Building Products, Inc; Strip-N-Flash: www.advancedbuildingproducts.com/#sle.

2) Heckmann Building Products, Inc; [____]: www.heckmannbuildingprods.com/#sle

C. Membrane Non-Asphaltic Flashing Materials:

1. Composite Polymer Flashings - Self-Adhering: Composite polyethylene; 40 mil (1mm) thick with pressure-sensitive adhesive and release paper.

a. Manufacturers:

1) Hohmann & Barnard, Inc; [____]: www.h-b.com/#sle.

2) Hyload, Inc; [____]: www.hyload.com/#sle.

3) [_____].

D. EPDM Flashing: ASTM D4637/D4637M, Type I, 0.040 inch (1.0 mm) thick.

1. Manufacturers:

1) Heckmann Building Products, Inc; [____]: www.heckmannbuildingprods.com/#sle

b. Hohmann & Barnard, Inc; [____]: www.h-b.com/#sle.

c. [_____].

d. Substitutions: See Section 01 6000 - Product Requirements.

E. Factory-Fabricated Flashing Corners and Ends: Stainless steel.

1. Manufacturers:

a. Hohmann & Barnard, Inc; [____]: www.h-b.com/#sle.

b. Mortar Net Solutions; [_____]: www.mortarnet.com/#sle.

c. [_____].

F. Flashing Sealant/Adhesives: Silicone, polyurethane, or silyl-terminated polyether/polyurethane, or other type required or recommended by flashing manufacturer; type capable of adhering to type of flashing used.

1. Manufacturers, Synthetic Rubber Products:

a. Mortar Net Solutions; [_____]: www.mortarnet.com/#sle.

b. [_____].

c. [_____].

d. Substitutions: See Section 01 6000 - Product Requirements.

2.08 ACCESSORIES

A. Preformed Control Joints: Rubber material. Provide with corner and tee accessories, fused joints.

1. Manufacturers:

a. Blok-Lok Limited; [_____]: www.blok-lok.com/#sle.

b. Hohmann & Barnard, Inc; [_____]: www.h-b.com/#sle.

c. WIRE-BOND; [_____]: www.wirebond.com/#sle.

d. Substitutions: See Section 01 6000 - Product Requirements.

B. Joint Filler: Closed cell polyvinyl chloride; oversized 50 percent to joint width; self expanding; in maximum lengths available.

1. Manufacturers:

a. Hohmann & Barnard, Inc; [_____]: www.h-b.com/#sle.

b. WIRE-BOND; [_____]: www.wirebond.com/#sle.

c. [_____].

d. Substitutions: See Section 01 6000 - Product Requirements.

C. Nailing Strips: Softwood lumber, preservative treated; as specified in Section 06 1000.

D. Weeps:

1. Type: Polyester mesh.

2. Color(s): As indicated on drawings.

3. Manufacturers:

a. Advanced Building Products, Inc; [_____]: www.advancedbuildingproducts.com/#sle.

b. Blok-Lok Limited; [_____]: www.blok-lok.com/#sle.

c. CavClear/Archovations, Inc; [_____]: www.cavclear.com/#sle.

d. [_____].

e. Substitutions: See Section 01 6000 - Product Requirements.

E. Cavity Vents:

1. Type: Preformed aluminum vents with sloping louvers.

2. Color(s): As indicated on drawings.

3. Manufacturers:

a. Advanced Building Products, Inc; [_____]: www.advancedbuildingproducts.com/#sle.

b. Blok-Lok Limited; [_____]: www.blok-lok.com/#sle.

c. Substitutions: See Section 01 6000 - Product Requirements.

F. Cleaning Solution: Non-acidic, not harmful to masonry work or adjacent materials.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive masonry.

B. Verify that related items provided under other sections are properly sized and located.

C. Verify that built-in items are in proper location, and ready for roughing into masonry work.

3.02 PREPARATION

A. Direct and coordinate placement of metal anchors supplied for installation under other sections.

B. Provide temporary bracing during installation of masonry work. Maintain in place until building structure provides permanent bracing.

3.03 COLD AND HOT WEATHER REQUIREMENTS

A. Comply with requirements of ACI 530/530.1/ERTA or applicable building code, whichever is more stringent.

3.04 COURSING

A. Establish lines, levels, and coursing indicated. Protect from displacement.

B. Maintain masonry courses to uniform dimension. Form vertical and horizontal joints of uniform thickness.

C. Concrete Masonry Units:

D. Brick Units:

E. Clay Tile Units:

3.05 PLACING AND BONDING

A. Lay solid masonry units in full bed of mortar, with full head joints, uniformly jointed with other work.

B. Lay hollow masonry units with face shell bedding on head and bed joints.

3.06 WEEPS/CAVITY VENTS

A. Install weeps in cavity walls at 24 inches (600 mm) on center horizontally above through-wall flashing, above shelf angles and lintels and at bottom of walls.

B. Install cavity vents in cavity walls at 32 inches (800 mm) on center horizontally below shelf angles and lintels and at top of walls.

3.07 CAVITY WALL CONSTRUCTION

A. Do not permit mortar to drop or accumulate into cavity air space or to plug weep/cavity vents.

B. Install cavity mortar diverter at base of cavity as recommended by manufacturer to prevent mortar droppings from blocking weep/cavity vents.

C. Install cavity mortar control panels continuously throughout full height of exterior masonry cavities during construction of exterior wythe, complying with manufacturer's installation instructions.

D. Build inner wythe ahead of outer wythe to receive accessories.

3.08 REINFORCEMENT AND ANCHORAGES - CAVITY WALL MASONRY

A. Place continuous joint reinforcement in first and second joint below top of walls.

B. Fasten anchors to structural framing and embed in masonry joints as masonry is laid. Space anchors at maximum of 24 inches (600 mm) horizontally and 16 inches (400 mm) vertically.

3.09 MASONRY FLASHINGS

A. Whether or not specifically indicated, install masonry flashing to divert water to exterior at all locations where downward flow of water will be interrupted.

B. Install flashing in accordance with manufacturer's instructions and BIA Technical Notes No. 7.

C. Extend metal flashings through exterior face of masonry and terminate in an angled drip with hemmed edge. Install joint sealer below drip edge to prevent moisture migration under flashing.

3.10 LINTELS

A. Install loose steel lintels over openings.

B. Install reinforced unit masonry lintels over openings where steel or precast concrete lintels are not scheduled.

3.11 CONTROL AND EXPANSION JOINTS

A. Install preformed control joint device in continuous lengths. Seal butt and corner joints in accordance with manufacturer's instructions.

3.12 CUTTING AND FITTING

A. Cut and fit for chases. Coordinate with other sections of work to provide correct size, shape, and location.

B. Obtain approval prior to cutting or fitting masonry work not indicated or where appearance or strength of masonry work may be impaired.

3.13 PARGING

A. Dampen masonry walls prior to parging.

B. Scarify each parging coat to ensure full bond to subsequent coat.

3.14 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 4000.

B. Clay Masonry Unit Tests: Test each variety of clay masonry in accordance with ASTM C67/C67M requirements, sampling 5 randomly chosen units for each 50,000 installed.

C. Concrete Masonry Unit Tests: Test each variety of concrete unit masonry in accordance with ASTM C140/C140M for compliance with requirements of this specification.

D. Mortar Tests: Test each type of mortar in accordance with recommended procedures in ASTM C780, testing with same frequency as masonry samples.

3.15 CLEANING

A. Remove excess mortar and mortar smears as work progresses.

B. Replace defective mortar. Match adjacent work.

C. Clean soiled surfaces with cleaning solution.

D. Use non-metallic tools in cleaning operations.

3.16 PROTECTION

A. Without damaging completed work, provide protective boards at exposed external corners that are subject to damage by construction activities.

END OF SECTION

SECTION 04 4200
EXTERIOR STONE CLADDING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Cut limestone, marble, travertine, granite, slate and sandstone veneer at exterior and interior walls.

B. Metal anchors and supports.

C. Sealing exterior joints.

D. Pointing interior joints.

1.02 RELATED REQUIREMENTS

A. Section 04 4313 - Stone Masonry Veneer: Thick stone set in mortar.

B. Section 05 1200 - Structural Steel Framing: Steel framing members supporting stone.

C. Section 05 4000 - Cold-Formed Metal Framing: Steel framing members supporting stone.

D. Section 05 5000 - Metal Fabrications: Steel framing members supporting stone.

E. Section 05 5000 - Metal Fabrications: Shelf angles and supports.

F. Section 05 5000 - Metal Fabrications: Metal fabricated items for building into cut stone.

G. Section 07 6200 - Sheet Metal Flashing and Trim: Flashings at copings, lintels and sills.

H. Section 07 9200 - Joint Sealants: Sealing perimeter and expansion joints in interior stone work.

1.03 REFERENCE STANDARDS

A. ASTM A240/A240M - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications 2016.

B. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar 2015.

C. ASTM C270 - Standard Specification for Mortar for Unit Masonry 2014a.

D. ASTM C503/C503M - Standard Specification for Marble Dimension Stone 2015.

E. ASTM C568/C568M - Standard Specification for Limestone Dimension Stone 2015.

F. ASTM C615/C615M - Standard Specification for Granite Dimension Stone 2018e1.

G. ASTM C616/C616M - Standard Specification for Quartz-Based Dimension Stone 2015.

H. ASTM C629/C629M - Standard Specification for Slate Dimension Stone 2015.

I. ILI (HB) - Indiana Limestone Handbook 2007.

J. MIA (DSDM) - Dimensional Stone Design Manual, Version VIII 2016.

K. NBGQA (SPEC) - Specifications for Architectural Granite, Version 18-1 2018.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on stone, mortar products, and sealant products.

C. Shop Drawings: Indicate layout, pertinent dimensions, anchorages, head, jamb, and sill opening details, and jointing methods.

D. Samples: Submit two stone samples [__ by __] inch ([__ by __] mm) in size, illustrating color range and texture, markings, surface finish, and [_____].

E. Samples: Submit mortar color samples.

F. Installation Instructions: Submit stone fabricator's installation instructions and field erection or setting drawings; indicate panel identifying marks and locations on setting drawings.

1.05 QUALITY ASSURANCE

A. Design anchors and supports under direct supervision of a Professional Structural Engineer, registered in Maryland .

1. Design anchors to resist positive and negative wind pressures and other loads as required by applicable code.

2. Design anchor attachment to stone with a factor of safety of 5:1.

3. Design each individual anchor with a factor of safety in the vertical dead-load-bearing direction of 4:1 and in the horizontal lateral-load-bearing direction of 2:1.

B. Perform work in accordance with ILI Indiana Limestone Handbook.

C. Perform work in accordance with NBGQA (SPEC).

D. Perform work in accordance with MIA Dimensional Stone Design Manual.

1.06 MOCK-UP

A. Construct stone wall mock-up, [____] feet ([____] m) long by [____] feet ([____] m) wide, including stone anchor accessories, sill and head flashings , window frame , corner condition , typical control joint , and [_____].

B. Locate where directed.

C. Mock-up may remain as part of the Work.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Store stone panels vertically on edge, resting weight on panel edge.

B. Protect stone from discoloration.

1.08 FIELD CONDITIONS

A. During temporary storage on site, at the end of working day, and during rainy weather, cover stone work exposed to weather with non-staining waterproof coverings, securely anchored.

PART 2 PRODUCTS

2.01 STONE

A. Limestone: Indiana Oolitic Limestone; complying with ASTM C568/C568M Classification II - Medium Density.

B. Marble: [_____] type; complying with ASTM C503/C503M Classification I - Calcite.

C. Travertine: [_____] type; complying with ASTM C503/C503M Classification IV - Travertine.

D. Granite: [_____]; complying with ASTM C615/C615M.

E. Slate: [_____]; complying with ASTM C629/C629M Classification I - Exterior.

F. Sandstone: [_____]; complying with ASTM C616/C616M Classification I - Sandstone.

2.02 MORTAR

A. Mortar: ASTM C270, Type N, Proportion specification, using Portland cement of white color.

2.03 ANCHORS AND ACCESSORIES

A. Anchors and Other Components in Contact with Stone: Stainless steel, ASTM A666 Type 304.

1. Sizes and configurations: As required for vertical and horizontal support of stone and applicable loads.
2. Wire ties are not permitted.

B. Support Components not in Contact with Stone: Stainless steel, ASTM A240/A240M Type 304.

C. Setting Buttons and Shims: Lead type.

D. Joint Sealant: ASTM C920 silicone sealant with movement capability of at least plus/minus 25 percent and non-staining to stone when tested in accordance with ASTM C1248.

2.04 STONE FABRICATION

A. Thickness: 3/4 inch (18 mm).

B. Fabrication Tolerances: In accordance with NBGQA (SPEC).

C. Fabricate units for uniform coloration between adjacent units and over the full area of the installation.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that support work and site conditions are ready to receive work of this section.

B. Verify that items built-in under other sections are properly located and sized.

3.02 PREPARATION

A. Clean stone prior to erection. Do not use wire brushes or implements that will mark or damage exposed surfaces.

3.03 INSTALLATION

A. Set stone with a consistent joint width of 3/8 inch (9 mm).

B. Install anchors and place setting buttons to support stone and to establish joint dimensions.

C. Joints in Exterior Work: Seal joints with joint sealant over backer rod, following sealant manufacturer's instructions; tool sealant surface to concave profile.

D. Joints in Interior Work: Leave perimeter joints and expansion joints open for sealant; fill other joints with pointing mortar; pack and work into voids; tool surface to concave joint.

3.04 TOLERANCES

A. Positioning of Elements: Maximum 1/4 inch (6 mm) from true position.

B. Maximum Variation from Plane of Wall: 1/4 inch in 10 feet (6 mm in 3 m); 1/2 inch in 50 feet (13 mm in 15 m).

C. Maximum Variation Between Face Plane of Adjacent Panels: 1/16 inch (1.5 mm).

D. Maximum Variation from Plumb: 1/4 inch (6 mm) per story non-cumulative; 1/2 inch (13 mm) in any two stories.

E. Maximum Variation from Level Coursing: 1/8 inch in 3 feet (3 mm/m); 1/4 inch in 10 feet (6 mm in 3 m); 1/2 inch (13 mm) maximum.

F. Maximum Variation of Joint Thickness: 1/8 inch in 3 feet (3 mm/m).

3.05 CUTTING AND FITTING

A. Obtain approval prior to cutting or fitting any item not so indicated on drawings.

B. Do not impair appearance or strength of stone work by cutting.

3.06 CLEANING

A. Remove excess joint material upon completion of work.

B. Clean soiled surfaces with cleaning solution.

C. Use non-metallic tools in cleaning operations.

END OF SECTION

SECTION 04 4313
STONE MASONRY VENEER

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Cut stone veneer at exterior walls.

B. Metal anchors and accessories.

C. Setting mortar.

1.02 RELATED REQUIREMENTS

A. Section 04 0511 - Mortar and Masonry Grout: Setting and pointing mortar.

B. Section 04 2000 - Unit Masonry: Joint reinforcement, Ties and Anchors.

C. Section 07 6200 - Sheet Metal Flashing and Trim: Flashings.

D. Section 07 9200 - Joint Sealants: Sealing joints indicated to be left open for sealant.

1.03 REFERENCE STANDARDS

A. ACI 530/530.1/ERTA - Building Code Requirements and Specification for Masonry Structures and Related Commentaries 2013.

B. ASTM A580/A580M - Standard Specification for Stainless Steel Wire 2016.

C. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar 2015.

D. ASTM C270 - Standard Specification for Mortar for Unit Masonry 2014a.

E. ASTM C503/C503M - Standard Specification for Marble Dimension Stone 2015.

F. ASTM C568/C568M - Standard Specification for Limestone Dimension Stone 2015.

G. ASTM C615/C615M - Standard Specification for Granite Dimension Stone 2018e1.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on stone units, [_____] , mortar, and reinforcement.

C. Samples: Submit two stone samples illustrating minimum and maximum stone sizes, [_____] , color range, texture, and markings.

D. Samples: Submit mortar color samples.

1.05 QUALITY ASSURANCE

A. Stone Fabricator Qualifications: Company specializing in fabricating cut stone with minimum ten years of experience.

B. Installer Qualifications: Company specializing in performing work of the type required by this section, with minimum [____] years of documented experience.

1.06 MOCK-UP

A. Construct stone wall mock-up, [____] feet ([____] m) long by [____] feet ([____] m) wide; include stone anchor accessories, corner condition and typical control joint in mock-up.

B. Locate where directed.

C. Mock-up may remain as part of the Work.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Protect stone from discoloration during storage on site.

1.08 FIELD CONDITIONS

A. Cold Weather Requirements: Comply with requirements of ACI 530/530.1/ERTA or applicable building code, whichever is more stringent.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Stone Quarriers:

1. Champlain Stone, Ltd; [____]: www.champlainstone.com/#sle.
2. Vetter Stone Co; [____]: www.vetterstone.com/#sle.
3. [_____].
4. Substitutions: See Section 01 6000 - Product Requirements.

B. Stone Masonry Reinforcement and Accessories

1. Blok-Lok Limited; [____]: www.blok-lok.com/#sle.
2. Hohmann & Barnard, Inc; [____]: www.h-b.com/#sle.
3. [_____].
4. Substitutions: See Section 01 6000 - Product Requirements.

2.02 STONE

A. Limestone: Indiana Oolitic Limestone; complying with ASTM C568/C568M Classification I - Low Density.

B. Marble: [_____] variety; complying with ASTM C503/C503M, Classification I - Calcite.

C. Granite: [_____] variety; complying with ASTM C615/C615M.

D. Stone: [_____] type, [_____] variety.

E. Surface Texture: Split face.

2.03 MORTAR

A. Setting Mortar: ASTM C270, Type S, using the Proportion Method as specified in Section 04 0511.

1. Products:
   a. The QUIKRETE Companies; QUIKRETE® Veneer Stone Mortar – Polymer Modified : www.quikrete.com/#sle.
   b. [_____].
   c. [_____].
   d. Substitutions: See Section 01 6000 - Product Requirements.

B. Pointing Mortar: Type N as specified in Section 04 0511, and using the Property Method in ASTM C270.

2.04 ACCESSORIES

A. Horizontal Joint Reinforcement: As specified in Section 04 2000.

B. Wall Ties: Formed steel wire, at least [___] inch ([___] mm) diameter, stainless steel conforming to ASTM A580/A580M, eye and pintle type, with provision for vertical adjustment after attachment.

C. Other Anchors in Direct Contact with Stone: ASTM A666 Type 304, stainless steel, of sizes and configurations required for support of stone and applicable superimposed loads.

D. Setting Buttons and Shims: Lead.

E. Flashings: [_____] type as specified in Section 07 6200.

F. Weep/Cavity Vents: Polyethylene tubing.

G. Back Coating:

1. Bituminous.

2. Cementitious parging of mortar to a minimum thickness of [____] inch ([____] mm).

H. Cleaning Solution: Type that will not harm stone, joint materials, or adjacent surfaces.

2.05 STONE FABRICATION

A. Fabricate for 3/8 inch (10 mm) beds and joints.

B. Bed and Joint Surfaces:

C. Form stone corners to irregular joint profile. Clean jagged corners from stone in preparation for setting.

D. Slope exposed top surfaces of stone and horizontal sill surfaces for shedding water.

E. Cut drip slot in bottom surface of work projecting more than 1/2 inch (13 mm) over window frame. Size slot not less than 3/8 inch (10 mm) wide and 1/4 inch (6 mm) deep for full width of projection.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that support work and site conditions are ready to receive work of this section.

B. Verify that items built-in under other sections are properly located and sized.

3.02 PREPARATION

A. Establish lines, levels, and coursing. Protect from disturbance.

B. Clean stone prior to erection. Do not use wire brushes or implements that mark or damage exposed surfaces.

C. Coat back surfaces not to be in contact with setting mortar with back coating material. Allow coating to cure.

3.03 INSTALLATION

A. Install flashings of longest practical length and seal watertight to back-up. Lap end joints minimum 6 inches (150 mm) and seal watertight.

B. Size stone units to fit opening dimensions and perimeter conditions.

C. Provide setting and pointing mortar in accordance with Section 04 0511.

1. If water is lost by evaporation, re-temper mortar only within two hours after mixing.

2. At ambient air temperature 80 degrees F (26 degrees C) and above, use mortar within two hours after mixing; at ambient air temperature below 50 degrees F (10 degrees C), use mortar within two-and-one-half hours after mixing.

D. Fill dowel holes in stone units with mortar.

E. Arrange stone coursing in running bond with consistent joint width.

F. Set stone in full mortar setting bed to fully support stone over bearing surface. Use setting buttons or shims to maintain correct joint width.

G. Install weep/cavity vents in vertical stone joints at [____] inches ([____] mm) on center horizontally; immediately above horizontal flashings, above shelf angles and supports and at top of each cavity space; do not permit mortar accumulation in cavity space.

3.04 REINFORCEMENT AND ANCHORAGE

A. Install horizontal joint reinforcement 16 inches (400 mm) on center.

B. Place horizontal joint reinforcement in first and second [_____] horizontal joints above and below openings. Extend minimum 16 inches (400 mm) each side of opening.

C. Place joint reinforcement continuous in first and second joint below top of walls.

D. Lap joint reinforcement ends minimum 6 inches (150 mm).

E. In addition, place wall ties at maximum 3 inches (75 mm) on center each way around perimeter of openings, within 12 inches (300 mm) of openings.

3.05 JOINTS

A. Leave the following joints open for sealant:

1. Head joints in top courses, including copings, parapets, cornices, sills, and steps.
2. Joints in projecting units.
3. Joints between rigidly anchored units, including soffits, panels, and column covers.
4. Joints below lugged sills and stair treads.
5. Joints below ledge and relieving angles.
6. Joints labeled "expansion joint".

B. Rake out mortar joints 5/8 to 3/4 inch (16 to 19 mm) and brush joints clean to accommodate pointing mortar. Fill joints with pointing mortar.

C. Pack mortar into joints and work into voids. Neatly tool surface to concave joint.

D. At joints to be sealed, clean mortar out of joint before it sets. Brush joints clean.

3.06 CLEANING

A. Remove excess mortar as work progresses, and upon completion of work.

B. Clean soiled surfaces with cleaning solution.

C. Use non-metallic tools in cleaning operations.

3.07 PROTECTION

A. During temporary storage on site, at the end of working day, and during rainy weather, cover stone work exposed to weather with non-staining waterproof coverings, securely anchored.

END OF SECTION

SECTION 04 0100
MAINTENANCE OF MASONRY

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Water cleaning of surfaces.

B. Replacement of units.

C. Repointing mortar joints.

D. Repair of damaged masonry.

1.02 RELATED REQUIREMENTS

A. Section 04 0511 - Mortar and Masonry Grout.

B. Section 04 2000 - Unit Masonry: Brick masonry units.

C. Section 04 2000 - Unit Masonry: Mortar and grout.

D. Section 04 2001 - Masonry Veneer.

E. Section 04 2600 - Single-Wythe Unit Masonry.

F. Section 04 4200 - Exterior Stone Cladding.

G. Section 04 4313 - Stone Masonry Veneer.

1.03 REFERENCE STANDARDS

A. ACI 530/530.1/ERTA - Building Code Requirements and Specification for Masonry Structures and Related Commentaries 2013.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene one week prior to commencing work of this section.

1. Require attendance of parties directly affecting work of this section.

2. Review conditions of installation, installation procedures, and coordination with related work.

B. Scheduling:

1. Perform cleaning and washing of masonry between the hours of 7 am to 11 pm only.

2. Perform blast cleaning of masonry between the hours of 7 am to 11 pm only.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate setting details of stone. Detail shoring.

C. Product Data: Provide data on cleaning compounds.

D. Samples: Submit four samples of decorative block, face brick and stone units to illustrate matching color, texture and extremes of color range.

E. Manufacturer's Instructions: For cleaning materials, indicate special procedures, conditions requiring special attention.

1.06 QUALITY ASSURANCE

A. Comply with provisions of ACI 530/530.1/ERTA, except where exceeded by requirements of the contract documents.

1. Maintain one copy of each document on project site.

B. Restorer: Company specializing in masonry restoration with minimum Five years of documented experience.

1.07 MOCK-UP

A. Restore and repoint an existing masonry wall area sized 8 feet (2.40 m) long by 6 feet (2 m) high; include in mock-up area instances of mortar, accessories, wall openings and flashings.

B. Clean a 10 ft (3 m) by 10 ft (3 m) panel of wall to determine extent of cleaning.

1. Repeat, using different cleaning methods for up to three different panels.

C. Locate where directed.

D. Acceptable panel and procedures employed will become the standard for work of this section.

E. Mock-up may remain as part of the Work.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver masonry neatly stacked and tied on pallets. Store clear of ground with adequate waterproof covering.

B. Store blast medium materials in manufacturer's packaging.

1.09 FIELD CONDITIONS

A. Cold and Hot Weather Requirements: Comply with requirements of ACI 530/530.1/ERTA or applicable building code, whichever is more stringent.

B. Do not blast clean or use process creating dust, dirt, when wind is over 10 mph (16 kph).

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Restoration and Cleaning Chemicals:

1. Diedrich Technologies, Inc: www.diedrichtechnologies.com/#sle.
2. HMK Stone Care System: www.hmkstonecare.com/#sle.
3. PROSOCO: www.prosoco.com/#sle.
4. Substitutions: See Section 01 6000 - Product Requirements.

2.02 CLEANING MATERIALS

A. Cleaning Agent: Detergent type.

B. Cleaning Agent: 0.5 lb (227 g) of mixture to one gallon (3.8 L) of water.

C. Acid Solution: Clean, stain free, commercial hydrochloric (muriatic) acid, mixed one part to 10 parts of potable water.

D. Blasting Medium: .

2.03 MORTAR MATERIALS

A. Comply with requirements of Section 04 0511.

2.04 MASONRY MATERIALS

A. Brick: Section 04 2000.

B. Stone Veneer: Section 04 4200.

C. Terra Cotta: Section .

D. Block: Section 04 2000.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that surfaces to be cleaned are ready for work of this section.

3.02 PREPARATION

A. Protect surrounding elements from damage due to restoration procedures.

B. Carefully remove and store removable items located in areas to be restored, including fixtures, fittings, finish hardware and accessories; reinstall upon completion.

C. Separate areas to be protected from restoration areas using means adequate to prevent damage.

D. Cover existing landscaping with tarpaulins or similar covers.

E. Mask immediately adjacent surfaces with material that will withstand cleaning and restoration procedures.

F. Close off adjacent occupied areas with dust proof and weatherproof partitions.

G. Protect roof membrane and flashings from damage with 1/2 inch (13 mm) plywood laid on roof surfaces over full extent of work area and traffic route.

H. When using cleaning methods that involve water or other liquids, install drainage devices to prevent runoff over adjacent surfaces unless those surfaces are impervious to damage from runoff.

I. Do not allow cleaning runoff to drain into sanitary or storm sewers.

3.03 REBUILDING

A. Cut out damaged and deteriorated masonry with care in a manner to prevent damage to any adjacent remaining materials.

B. Support structure as necessary in advance of cutting out units.

C. Cut away loose or unsound adjoining masonry as directed.

D. Build in new units following procedures for new work specified in other section(s).

E. Mortar Mix: Colored and proportioned to match existing work.

F. Ensure that anchors are correctly located and built in.

G. Install built in masonry work to match and align with existing, with joints and coursing true and level, faces plumb and in line. Build in all openings, accessories and fittings.

3.04 REPOINTING

A. Perform repointing prior to cleaning masonry surfaces.

B. Cut out loose or disintegrated mortar in joints to minimum 1/2 inch (6 mm) depth or until sound mortar is reached.

C. Use power tools only after test cuts determine no damage to masonry units will result.

D. Do not damage masonry units.

E. When cutting is complete, remove dust and loose material by brushing.

F. Premoisten joint and apply mortar. Pack tightly in maximum 1/4 inch (6 mm) layers. Form a smooth, compact concave joint to match existing.

G. Moist cure for 72 hours.

3.05 CLEANING NEW MASONRY

A. Verify mortar is fully set and cured.

B. Clean surfaces and remove large particles with wood scrapers, brass or nylon wire brushes.

C. Scrub walls with cleaning agent solution using stiff brush. Thoroughly rinse and wash off cleaning solution, dirt and mortar crumbs using clean, pressurized water.

D. Use acid solution mixed with water in accordance with manufacturer's instructions. Apply acid solution and scrub masonry with stiff fiber brushes. Do not scrub the mortar joints.

E. Protect area below cleaning operation and keep masonry soaked with water and flushed free of acid and dissolved mortar continuously for duration of cleaning.

F. Before solution dries, rinse and remove acid solution and dissolved mortar, using clean, pressurized water.

3.06 RESTORATION CLEANING

A. Clean surfaces and remove large particles with wood scrapers or non-ferrous wire brush.

B. Spray coat masonry with restoration cleaner, mixed into solution in accordance with manufacturer's instructions.

C. Provide a second application if required to match mock-up area.

D. Allow sufficient time for solution to remain on masonry and agitate with soft fiber brush or sponge.

E. Rinse from the bottom up with potable water applied at 400 psi (2 750 kPa) and at a rate of 4 gal/min (16 L/min).

3.07 AGING

A. Rub in new masonry work to match, as close as possible, adjacent original work.

1. Use carbon black in small amounts, rubbing in well with burlap rags.

B. After each application, dust off surplus and wash down with low pressure hose. Allow surface to dry before proceeding with succeeding applications.

C. Continue process until acceptance.

3.08 CLEANING

A. Immediately remove stains, efflorescence, or other excess resulting from the work of this section.

B. Remove excess mortar, smears, and droppings as work proceeds and upon completion.

C. Clean surrounding surfaces.

END OF SECTION

SECTION 05 1200
STRUCTURAL STEEL FRAMING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Structural steel framing members.

B. Structural steel support members and struts.

C. Base plates, shear stud connectors and expansion joint plates.

D. Grouting under base plates.

1.02 RELATED REQUIREMENTS

A. Section 05 1213 - Architecturally-Exposed Structural Steel Framing: Additional requirements for structural steel members designated as architecturally-exposed structural steel (AESS).

B. Section 05 2100 - Steel Joist Framing.

C. Section 05 3100 - Steel Decking: Support framing for small openings in deck.

D. Section 05 5000 - Metal Fabrications: Steel fabrications affecting structural steel work.

E. Section 07 8100 - Applied Fireproofing: Fireproof protection to framing and metal deck systems.

F. Section 31 3116 - Termite Control: Field-applied termiticide and mildewcide for structural steel.

1.03 PRICE AND PAYMENT PROCEDURES

A. See Section 01 2200 - Unit Prices, for additional unit price requirements.

B. Structural Steel Framing:

1. Basis of Measurement: By the ton (metric ton).

2. Basis of Payment: Includes structural members fabricated, placed and anchored.

1.04 REFERENCE STANDARDS

A. AISC (MAN) - Steel Construction Manual 2017.

B. AISC 303 - Code of Standard Practice for Steel Buildings and Bridges 2016.

C. ASTM A1 - Standard Specification for Carbon Steel Tee Rails 2000 (Reapproved 2018).

D. ASTM A36/A36M - Standard Specification for Carbon Structural Steel 2014.

E. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless 2018.

F. ASTM A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold Finished 2018.

G. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware 2016a.

H. ASTM A242/A242M - Standard Specification for High-Strength Low-Alloy Structural Steel 2013 (Reapproved 2018).

I. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength 2014 (Editorial 2017).

J. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes 2013.

K. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing 2014.

L. ASTM A514/A514M - Standard Specification for High-Yield-Strength, Quenched and Tempered Alloy Steel Plate, Suitable for Welding 2014.

M. ASTM A529/A529M - Standard Specification for High-Strength Carbon-Manganese Steel of Structural Quality 2014.

N. ASTM A563 - Standard Specification for Carbon and Alloy Steel Nuts 2015.

O. ASTM A563M - Standard Specification for Carbon and Alloy Steel Nuts (Metric) 2007 (Reapproved 2013).

P. ASTM A572/A572M - Standard Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel 2015.

Q. ASTM A759 - Standard Specification for Carbon Steel Crane Rails 2010 (Reapproved 2016).

R. ASTM A992/A992M - Standard Specification for Structural Steel Shapes 2011 (Reapproved 2015).

S. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable 2018.

T. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength 2018a.

U. ASTM C1107/C1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink) 2014a.

V. ASTM C827/C827M - Standard Test Method for Change in Height at Early Ages of Cylindrical Specimens of Cementitious Mixtures 2016.

W. ASTM E94/E94M - Standard Guide for Radiographic Examination Using Industrial Radiographic Film 2017.

X. ASTM E164 - Standard Practice for Contact Ultrasonic Testing of Weldments 2013.

Y. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts, Steel and Alloy Steel, Heat Treated, 120 ksi (830 MPa) and 150 ksi (1040 MPa) Minimum Tensile Strength, Inch and Metric Dimensions 2015a.

Z. ASTM F436/F436M - Standard Specification for Hardened Steel Washers Inch and Metric Dimensions 2018a.

AA. ASTM F959/F959M - Standard Specification for Compressible-Washer-Type Direct Tension Indicators for Use with Structural Fasteners, Inch and Metric Series 2017a.

BB. ASTM F1554 - Standard Specification for Anchor Bolts, Steel, 36, 55, and 105-ksi Yield Strength 2018.

CC. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination 2012.

DD. AWS D1.1/D1.1M - Structural Welding Code - Steel 2015, with Errata (2016).

EE. IAS AC172 - Accreditation Criteria for Fabricator Inspection Programs for Structural Steel 2017.

FF. RCSC (HSBOLT) - Specification for Structural Joints Using High-Strength Bolts; Research Council on Structural Connections 2014, with Errata (2015).

GG. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer 1999 (Ed. 2004).

HH. SSPC-SP 1 - Solvent Cleaning 2015, with Editorial Revision (2016).

II. SSPC-SP 3 - Power Tool Cleaning 1982, with Editorial Revision (2004).

JJ. SSPC-SP 5 - White Metal Blast Cleaning 2007.

KK. SSPC-SP 6 - Commercial Blast Cleaning 2007.

LL. SSPC-SP 7 - Brush-Off Blast Cleaning 2007.

MM. SSPC-SP 13 - Surface Preparation of Concrete 1997 (Reaffirmed 2003).

NN. UL (FRD) - Fire Resistance Directory Current Edition.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings:

1. Indicate profiles, sizes, spacing, locations of structural members, openings, attachments and fasteners.
2. Connections not detailed.
3. Indicate cambers and loads.
4. Indicate welded connections with AWS A2.4 welding symbols. Indicate net weld lengths.

C. Manufacturer's Mill Certificate: Certify that products meet or exceed specified requirements.

D. Mill Test Reports: Indicate structural strength, destructive test analysis and non-destructive test analysis.

E. Fabricator Test Reports: Comply with ASTM A1011/A1011M.

F. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification within the previous 12 months.

G. Designer's Qualification Statement.

H. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is accredited under IAS AC172.

1.06 QUALITY ASSURANCE

A. Fabricate structural steel members in accordance with AISC (MAN) "Steel Construction Manual."

B. Structural steel members designated as architecturally-exposed structural steel (AESS) to also comply with Section 05 1213.

C. Maintain one copy of each document on site.

D. Fabricator: Company specializing in performing the work of this section with minimum five years of documented experience.

E. Fabricator Qualifications: A qualified steel fabricator that is accredited by the International Accreditation Service (IAS) Fabricator Inspection Program for Structural Steel in accordance with IAS AC172.

F. Erector: Company specializing in performing the work of this section with minimum five years of documented experience.

G. Design connections not detailed on drawings under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in Maryland.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

2.02 MATERIALS

A. Steel Angles and Plates: ASTM A36/A36M.

B. Steel W Shapes and Tees: ASTM A992/A992M.

C. Rolled Steel Structural Shapes: ASTM A992/A992M.

D. Steel Shapes, Plates and Bars: ASTM A529/A529M high-strength, carbon-manganese structural steel, Grade 50.

E. Crane Rails: ASTM A1, ; cross section and length as indicated on drawings.

F. Crane Rails: ASTM A759, ; cross section and length as indicated on drawings.

G. Steel Plates and Bars: ASTM A572/A572M, Grade 50 (345) high-strength, columbium-vanadium steel.

H. Cold-Formed Structural Tubing: ASTM A500/A500M, Grade B.

I. Hot-Formed Structural Tubing: ASTM A501/A501M, seamless or welded.

J. Steel Bars: ASTM A108.

K. Steel Plate: ASTM A514/A514M.

L. Steel Sheet: ASTM A1011/A1011M, Designation SS, Grade 30 hot-rolled, or ASTM A1008/A1008M, Designation SS, Grade 30 cold-rolled.

M. Pipe: ASTM A53/A53M, Grade B, Finish black.

N. Shear Stud Connectors: Made from ASTM A108 Grade 1015 bars.

O. Sag Rods: ASTM A36/A36M.

P. Structural Bolts and Nuts: Carbon steel, ASTM A307, Grade A and galvanized in compliance with ASTM A153/A153M Class C.

Q. High-Strength Structural Bolts, Nuts, and Washers: ASTM F3125/F3125M, Type 1, with matching compatible ASTM A563 or ASTM A563M nuts and ASTM F436/F436M washers.

R. Tension Control Bolts: Twist-off type; ASTM F3125/F3125M.

S. Unheaded Anchor Rods: ASTM F1554, Grade 36, plain, with matching ASTM A563 or ASTM A563M nuts and ASTM F436/F436M Type 1 washers.

T. Headed Anchor Rods: ASTM A307 Grade C, plain.

U. Load Indicator Washers: Provide washers complying with ASTM F959/F959M at connections requiring high-strength bolts.

V. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

W. Sliding Bearing Plates: Teflon coated.

X. Grout: ASTM C1107/C1107M; Non-shrink; premixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing agents.

   1. Minimum Compressive Strength at 48 Hours: 2,000 pounds per square inch (13.7 MPa).
   2. Minimum Compressive Strength at 28 Days: 7,000 pounds per square inch (48 MPa).
   3. Height Change, Plastic State; when tested according to ASTM C827/C827M:
      a. Maximum: Plus 4 percent.
      b. Minimum: Plus 1 percent.

Y. Shop and Touch-Up Primer: Fabricator's standard, complying with VOC limitations of authorities having jurisdiction.

Z. Touch-Up Primer for Galvanized Surfaces: Fabricator's standard, complying with VOC limitations of authorities having jurisdiction.

2.03 FABRICATION

A. Shop fabricate to greatest extent possible.

B. Continuously seal joined members by continuous welds. Grind exposed welds smooth.

C. Fabricate connections for bolt, nut, and washer connectors.

D. Develop required camber for members.

2.04 FINISH

A. Prepare structural component surfaces in accordance with SSPC-SP 3.

B. Shop prime structural steel members. Do not prime surfaces that will be fireproofed, field welded, in contact with concrete or high strength bolted.

2.05 SOURCE QUALITY CONTROL

A. Provide shop testing and analysis of structural steel.

B. High-Strength Bolts: Provide testing and verification of shop-bolted connections in accordance with RCSC (HSBOLT) "Specification for Structural Joints Using High-Strength Bolts", testing at least ten percent of bolts at each connection.

C. Welded Connections: Visually inspect all shop-welded connections and test at least ten percent of welds using one of the following:

1. Radiographic testing performed in accordance with ASTM E94/E94M.
2. Ultrasonic testing performed in accordance with ASTM E164.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that conditions are appropriate for erection of structural steel and that the work may properly proceed.

3.02 ERECTION

A. Erect structural steel in compliance with AISC 303.

B. Allow for erection loads, and provide sufficient temporary bracing to maintain structure in safe condition, plumb, and in true alignment until completion of erection and installation of permanent bracing.

C. Field weld components and shear studs indicated on shop drawings.

D. Use carbon steel bolts only for temporary bracing during construction, unless otherwise specifically permitted on drawings. Install high-strength bolts in accordance with RCSC (HSBOLT) "Specification for Structural Joints Using High-Strength Bolts".

E. Do not field cut or alter structural members without approval of Architect .

F. After erection, prime welds, abrasions, and surfaces not shop primed, except surfaces to be in contact with concrete.

G. Grout solidly between column plates and bearing surfaces, complying with manufacturer's instructions for nonshrink grout. Trowel grouted surfaces smooth, splaying neatly to 45 degrees.

3.03 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch (6 mm) per story, non-cumulative.

B. Maximum Offset From True Alignment: 1/4 inch (6 mm).

3.04 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

B. High-Strength Bolts: Provide testing and verification of field-bolted connections in accordance with RCSC (HSBOLT) "Specification for Structural Joints Using High-Strength Bolts", testing at least ten percent of bolts at each connection.

C. Welded Connections: Visually inspect all field-welded connections and test at least ten percent of welds using one of the following:

1. Radiographic testing performed in accordance with ASTM E94/E94M.
2. Ultrasonic testing performed in accordance with ASTM E164.

END OF SECTION

SECTION 05 1213
ARCHITECTURALLY-EXPOSED STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Additional requirements for structural steel members designated as architecturally-exposed structural steel (AESS).

1.02 RELATED REQUIREMENTS

A. Section 05 1200 - Structural Steel Framing: General requirements for structural steel members, including AESS framing specified in this section.

B. Section 05 2100 - Steel Joist Framing: Alignment and location of bridging where joists are visible.

C. Section 05 3100 - Steel Decking: Erection requirements relating to exposed steel decking and its connections.

D. Section 05 5000 - Metal Fabrications: Loose steel bearing plates and miscellaneous steel framing.

E. Section 07 8100 - Applied Fireproofing: Fireproof protection to framing and metal deck systems.

F. Section 09 9113 - Exterior Painting: Finish coat requirements and coordination with primer and surface preparation specified in this section.

G. Section 09 9123 - Interior Painting: Finish coat requirements and coordination with primer and surface preparation specified in this section.

H. Section 09 9600 - High-Performance Coatings: Finish coat requirements and coordination with primer and surface preparation specified in this section.

1.03 DEFINITIONS

A. Architecturally-Exposed Structural Steel: Structural steel complying with designated AESS category as defined in AISC 303.

1.04 REFERENCE STANDARDS

A. AISC 303 - Code of Standard Practice for Steel Buildings and Bridges 2016.

B. AISC 360 - Specification for Structural Steel Buildings 2016.

C. ASTM A6/A6M - Standard Specification for General Requirements for Rolled Structural Steel Bars, Plates, Shapes, and Sheet Piling 2017.

D. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products 2017.

E. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes 2013.

F. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings 2009 (Reapproved 2015).

G. ASTM A1085/A1085M - Standard Specification for Cold-Formed Welded Carbon Steel Hollow Structural Sections (HSS) 2015.

H. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts, Steel and Alloy Steel, Heat Treated, 120 ksi (830 MPa) and 150 ksi (1040 MPa) Minimum Tensile Strength, Inch and Metric Dimensions 2015a.

I. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination 2012.

J. AWS D1.1/D1.1M - Structural Welding Code - Steel 2015, with Errata (2016).

K. SSPC-SP 1 - Solvent Cleaning 2015, with Editorial Revision (2016).

L. SSPC-SP 6 - Commercial Blast Cleaning 2007.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Schedule and conduct a preinstallation meeting at project site one week prior to start of work of this section; require attendance by all affected installers. Coordinate requirements for shipping, special handling, storage, attachment of safety cables and temporary erection bracing, final coating, touch-up painting, mock-up coordination, Architect's observations, and other requirements for AESS.

1.06 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product data for each type of product specified. Submit paint systems in accordance with Section 09 9113.

C. Shop Drawings: Detailing for fabrication of AESS components.

1. Provide erection documents clearly indicating which members are AESS members and the AESS category of each part.

2. Include details that clearly identify AESS requirements found in this specification. Provide connections for AESS consistent with concepts shown on drawings.

3. Indicate welds by AWS A2.4 symbols, distinguishing between shop and field welds, and show size, length and type of each weld. Identify grinding, finish and profile of welds as defined by the designated AESS category.

4. Indicate orientation of hollow structural section (HSS) seams and mill marks (where applicable).

5. Indicate type, size, finish and length of bolts, distinguishing between shop and field bolts. Identify high-strength bolted slip-critical, direct-tensioned shear/bearing connections. Indicate orientation of bolt heads.

6. Indicate which surfaces or edges are exposed and what class of surface preparation is being used.

7. Indicate special tolerances and erection requirements as noted on drawings or defined by the designated AESS category.

8. Indicate vent or drainage holes for HSS members.

D. AESS 1, AESS 2, AESS 3, AESS 4 and AESS C Samples: Provide samples of specific AESS characteristics. Samples may be small size samples or components of conventional structural steel demonstrating specific AESS characteristics, including surface preparation, sharp edges ground smooth, continuous weld appearance, weld show through and fabrication mark removal.

E. Qualification data for fabricator and erector to demonstrate their capabilities and experience. Include lists of completed projects names and address, names and addresses of architects and owners, photographs showing detail of installed AESS and other information specified.

1.07 QUALITY ASSURANCE

A. Fabricator Qualifications: In addition to those qualifications listed in Section 05 1200, engage an AISC Certified Fabricator, experienced in fabricating AESS similar to that indicated for this project with a record of successful in-service performance, as well as sufficient production capacity to fabricate AESS without delaying the work.

B. Erector Qualifications: In addition to those qualifications listed in Section 05 1200, engage an AISC Certified Erector, experienced in erecting AESS work similar in material, design, and extent to that indicated for this project and with a record of successful in-service performance.

C. Comply with applicable provisions of AISC 303, Section 10 for the designated AESS category.

D. Contractor to engage a quality assurance agency per requirements of AISC 360, Chapter N and AISC 303, Section 10.

1.08 MOCK-UP

A. Provide mock-ups for AESS 3, AESS 4 and AESS C of nature and extent indicated in contract documents.

B. See Section 01 4000 - Quality Requirements for additional requirements.

C. Locate mock-ups in fabricator's shop. Mock-ups to be full-size unless Architect approves smaller models. Alternatively, when a mock-up is not practical, the first piece of an element or connection can be used to determine acceptability.

D. Notify Architect one week in advance of dates and times when mock-ups will be available for review.

E. Demonstrate applicable AESS characteristics for specified category of AESS on elements and joints in mock-up.

F. Build mock-ups using member sizes and materials indicated for final work.

G. Mock-up to demonstrate weld quality, contouring of welds at aligned walls of members, specified surface preparation and finish coating.

H. HSS members to extend at least 6 inches (152.4 mm) from joint in mock-up.

I. Obtain Architect’s written approval of mock-ups before starting fabrication.

J. Retain and maintain mock-ups during construction in an undisturbed condition as a standard for judging completed work.

K. Approved mock-ups in an undisturbed condition at Date of Substantial Completion may become part of completed work.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Handle finished pieces in accordance with Section 10 of AISC 303, using nylon-type slings, or chains with softeners, or wire ropes with softeners such that they are not damaged.

B. Store materials to permit easy access for inspection and identification. Keep steel members off ground by using pallets, platforms, or other supports. Protect steel members and packaged materials from erosion and deterioration. Use special care in handling to prevent twisting or warping of AESS members.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Comply with Section 05 1200, except as amended in this section for aesthetic purposes.

B. Comply with AISC 303, Section 10 for specific AESS category designated on drawings.

2.02 FABRICATION

A. Fabricate and assemble AESS in shop to greatest extent possible. Locate field joints in AESS assemblies at concealed locations or as approved by Architect. Detail AESS assemblies to minimize field handling and expedite erection.

B. Permissible tolerances for member depth, width, out of square, and camber and sweep to be as specified in ASTM A6/A6M, ASTM A500/A500M, and ASTM A1085/A1085M.

C. For curved structural members, whether composed of a single standard structural shape or built-up, the as-fabricated variation from theoretical curvature to be equal to or less than standard camber and sweep tolerances permitted for straight members in applicable ASTM standard.

D. Use special care in handling and shipping of AESS both before and after shop painting to minimize damage to any shop finish. Use nylon-type slings or softeners when using chains or wire rope slings.

E. Bolted Connections:

1. Make in accordance with Section 05 1200. Provide bolt type and finish as noted herein.

F. Welded Connections:

1. Comply with AWS D1.1/D1.1M and Section 05 1200.
2. Assemble and weld built-up sections by methods that will maintain alignment of members without warp exceeding tolerances of this section.

G. Surface Preparation:

1. Remove blemishes or unsightly surfaces resulting from temporary braces or fixtures.
2. Remove backing and run out tabs.

H. Fabricate AESS in accordance with categories defined in AISC 303, as follows:

1. AESS 1: Basic elements.
2. AESS 2: Feature elements viewed at a distance greater than 20 feet (6 m) (feature elements not in close view).
3. AESS 3: Feature elements viewed at a distance less than 20 feet (6 m) (feature elements in close view).
4. AESS 4: Showcase elements with special surface and edge treatment beyond fabrication (showcase elements).

2.03 PAINT SYSTEM

A. Compatibility: All components/procedures of AESS paint system to comply with coating system specified, submitted, and approved per Sections 09 9113, 09 9123 and 09 9600. As a minimum, identify required surface preparation, primer, intermediate coat (if applicable), and finish coat. Primer, intermediate coating, and finish coating to be from a single manufacturer combined in a system documented by manufacturer with adequate guidance for fabricator to procure and execute.

B. Primer: As specified in Sections 09 9113, 09 9123 and 09 9600. Primer to comply with all federal standards for VOC, lead and chromate levels.

C. Finish Coating: Field apply intermediate and top coats per Sections 09 9113, 09 9123 and 09 9600.

2.04 SHOP PRIMING

A. Surface Preparation:

1. Provide surface preparations to meet SSPC-SP 6.
2. Coordinate required surface profile with approved paint submittal prior to beginning surface preparation.
3. Prior to blasting, remove any grease and oil using solvent cleaning to meet SSPC-SP 1.
4. Remove weld spatter, slivers and similar surface discontinuities.
5. Ease sharp corners resulting from shearing, flame cutting or grinding.

B. Shop prime structural steel members. Do not prime surfaces that will be fireproofed, field welded, in contact with concrete or high strength bolted with slip-critical connections.

1. Extend priming of members partially embedded in concrete or mortar to a depth of 2 inches (50.8 mm).

C. Priming: Immediately after surface preparation, apply primer according to manufacturer's instructions to provide a dry film thickness of not less than 1.5 mils (0.038 mm). Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

2. Apply two coats of shop primer to surfaces that are inaccessible after assembly or erection.

2.05 GALVANIZING

A. Hot-Dip Galvanized Finish: Apply zinc coating by hot-dip process to AESS indicated for galvanizing according to ASTM A123/A123M. Fabricate such that all connections of assemblies are made in the field with bolted connections where possible.

2.06 MATERIALS

A. General: Meet requirements of 05 1200 as amended below.

B. Tension Control, High-Strength Bolts, Nuts, and Washers: Per section 05 1200, Tension Control Bolts. Provide standard carbon steel finish rounded bolt heads with twist off bolts; ASTM F3125/F3125M.

2.07 SOURCE QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Structural Requirements:

1. Comply with quality control requirements per AISC 360, Chapter N and AISC 303, Section 10. Refer to Section 05 1200 for additional requirements.

2. Quality assurance agency to review work for compliance with requirements of AISC 360, Chapter N and AISC 303, Section 10.

C. AESS 1 and 2 Acceptance: Architect to observe AESS in the shop at a viewing distance consistent with final installation and determine acceptability based on qualification data and submittals. Quality assurance agency has no responsibility for enforcing requirements related to aesthetic effect.

D. AESS 3,4, and C Acceptance: Architect to observe AESS in the shop at a viewing distance consistent with final installation and determine acceptability based on approved mock-up. Quality assurance agency has no responsibility for enforcing requirements related to aesthetic effect.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Erector to check all AESS members upon delivery for twist, kinks, gouges or other imperfections which may result in rejection of appearance of member. Coordinate remedial action with fabricator prior to erecting steel.

3.02 PREPARATION

A. Provide connections for temporary shoring, bracing and supports only where noted on approved fabrication documents. Temporary connections not shown are to be made at locations not exposed to view in final structure or as approved by Architect.

B. Handle, lift and align pieces using nylon straps or chains with softeners required to maintain appearance of AESS through process of erection.

3.03 ERECTION

A. AESS 1 and 2: Basic elements; feature elements not in close view:

1. Employ special care to handle and erect AESS. Erect finished pieces using nylon straps or chains with softeners such that they are not damaged.
2. Place weld tabs for temporary bracing and safety cabling at points concealed from view in completed structure or where approved by Architect during pre-installation meeting. Obtain Architect approval of methods for removing temporary devices and finishing AESS members prior to erection.
3. AESS Erection Tolerances: Erect to standard frame tolerances for structural steel per Chapter 7 of AISC 303.
4. Set AESS accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.
5. Remove blemishes or unsightly surfaces resulting from temporary braces or fixtures.
6. Remove all backing and run out tabs.
7. When temporary braces or fixtures are required to facilitate erection, take care to avoid any blemishes, holes or unsightly surfaces resulting from use or removal of such temporary elements.
8. Bolted Connections: Align bolt heads on same side of connection as indicated on approved fabrication or erection documents.
9. Welded Connections: Comply with AWS D1.1/D1.1M and Section 05 1200. Appearance and quality of welds to be consistent. Employ methods that will maintain alignment of members without warp exceeding tolerance of this section.
10. Remove weld spatter exposed to view.
11. Grind off projections larger than 1/16 inch (1.5875 mm) at field butt and plug welds.
12. Continuous Welds: Where continuous welding is noted on drawings, provide continuous welds of a uniform size and profile.
13. Do not enlarge holes in members by burning or by using drift pins. Ream holes that must be enlarged to admit bolts. Replace connection plates that are misaligned where holes cannot be aligned with acceptable final appearance.
14. Splice members only where indicated.
15. Obtain permission for any torch cutting or field fabrication from Architect. Finish sections thermally cut during erection to a surface appearance consistent with mock-up.

B. AESS 3: Feature elements in close view:

1. Erect to requirements of AESS 1 and 2 and as follows:
2. Field Welding: Weld profile, quality, and finish to be consistent with mock-ups approved prior to fabrication.

C. AESS 4: Showcase elements:

1. Erect to requirements of AESS 3 and as follows:
2. Grind welds smooth.
3. Minimize Weld Show Through: At locations where welding on far side of an exposed connection creates distortion, grind distortion and marking of steel to a smooth profile with adjacent material.
4. Filling of Weld Access Holes: Where holes must be cut in web at intersection with flanges on W shapes and structural tees to permit field welding of flanges, fill holes with joint filler.

5. Where welds are indicated to be ground, contoured, or blended, oversize welds as required and grind to provide a smooth transition and match profile on approved mock-up.

3.04 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Structural Requirements:

1. Comply with quality control requirements per AISC 360, Chapter N and AISC 303, Section 10. Refer to Section 05 1200 for additional requirements.

2. Quality assurance agency to review work for compliance with requirements of AISC 360, Chapter N and AISC 303, Section 10.

C. AESS 1 and 2 Acceptance: Architect to observe AESS in place and determine acceptability based on qualification data and submittals. Quality assurance agency has no responsibility for enforcing requirements related to aesthetic effect.

D. AESS 3,4, and C Acceptance: Architect to observe AESS in place and determine acceptability based on qualification data and submittals as well as on approved mock- up. Quality assurance agency has no responsibility for enforcing requirements related to aesthetic effect.

3.05 CLEANING

A. Touch-up Painting: Complete cleaning and touch-up painting of field welds, bolted connections, and abraded areas of shop paint to blend with adjacent surfaces of AESS. Perform touch-up work in accordance with manufacturer's instructions and as specified in Section 09 9113, 09 9123 and 09 9600.

B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas. Repair galvanized surfaces in accordance with ASTM A780/A780M.

C. See Section 01 7419 - Construction Waste Management and Disposal, for additional requirements.

END OF SECTION

SECTION 05 2100
STEEL JOIST FRAMING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Open web steel joists, with bridging, attached seats and anchors.

B. Loose bearing members, such as plates or angles, and anchor bolts for site placement.

C. Supplementary framing for floor and roof openings greater than 18 inches (450 mm).

1.02 RELATED REQUIREMENTS

A. Section 05 1200 - Structural Steel Framing: Grouting base plates and bearing plates. Superstructure framing.

B. Section 05 1200 - Structural Steel Framing: Superstructure framing.

C. Section 05 3100 - Steel Decking: Bearing plates and angles.

D. Section 05 3100 - Steel Decking: Support framing for openings less than 18 inches (450 mm) in decking.

E. Section 05 5000 - Metal Fabrications: Non-framing steel fabrications attached to joists.

F. Section 06 1736 - Metal-Web Wood Joists: Support framing for openings less than 18 inches (450 mm) in decking.

G. Section 07 8100 - Applied Fireproofing: Fireproof protection of joist framing and metal deck systems.

1.03 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel 2014.

B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware 2016a.

C. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength 2014 (Editorial 2017).

D. ASTM A563 - Standard Specification for Carbon and Alloy Steel Nuts 2015.

E. ASTM A563M - Standard Specification for Carbon and Alloy Steel Nuts (Metric) 2007 (Reapproved 2013).

F. ASTM E164 - Standard Practice for Contact Ultrasonic Testing of Weldments 2013.

G. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts, Steel and Alloy Steel, Heat Treated, 120 ksi (830 MPa) and 150 ksi (1040 MPa) Minimum Tensile Strength, Inch and Metric Dimensions 2015a.

H. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification 2014 (Amended 2015).

Q. SSPC-SP 3 - Power Tool Cleaning 1982, with Editorial Revision (2004).

R. UL (FRD) - Fire Resistance Directory Current Edition.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate standard designations, joist coding, configurations, sizes, spacings, cambers, locations of joists, joist leg extensions, bridging, connections and attachments.

C. Welders' Certificates: Submit manufacturer's certificates, certifying welders employed on the Work, verifying AWS qualification within the previous 12 months.

D. Designer's Qualification Statement.

E. Manufacturer's Qualification Statement.

F. Erector's Qualification Statement.

1.05 QUALITY ASSURANCE

A. Design connections not detailed on drawings under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in Maryland.

B. Perform Work, including that for headers and other supplementary framing, in accordance with SJI 100 Standard Specifications Load Tables and SJI Technical Digest No. 9.

1. Maintain one copy of document on site.

C. Design and Installation Requirements: Comply with UL (FRD) Assembly Design No. .

D. Manufacturer Qualifications: Company specializing in performing the work of this section with minimum ten years documented experience.

E. Fabricator Qualifications: A qualified steel fabricator that is accredited by the International Accreditation Service (IAS) Fabricator Inspection Program for Structural Steel in accordance with IAS AC172.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Transport, handle, store, and protect products to SJI requirements.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Steel Joists:

1. Canam Group Inc: www.canam-steeljoists.ws

2. Nucor-Vulcraft Group: www.vulcraft.com/#sle.

3. Substitutions: See Section 01 6000 - Product Requirements.

2.02 MATERIALS

A. Open Web Joists: SJI Type K Joists:

1. Minimum End Bearing on Steel Supports: Comply with referenced SJI standard.

2. Minimum End Bearing on Concrete or Masonry Supports: Comply with referenced SJI standard.

3. Finish: Shop primed.

B. Open Web Joists: SJI 100 Type LH Joists:
   1. Provide bottom chord extensions as indicated.
   2. Minimum End Bearing on Steel Supports: Comply with referenced SJI standards.
   3. Minimum End Bearing on Masonry or Concrete Supports: Comply with referenced SJI standards.
   4. Finish: Shop primed.

C. Open Web Joists: SJI 100 Type DLH Joists:
   1. Provide bottom chord extensions as indicated.
   2. Minimum End Bearing on Steel Supports: Comply with referenced SJI standards.
   3. Minimum End Bearing on Masonry or Concrete Supports: Comply with referenced SJI standards.
   4. Finish: Shop primed.

D. Open Web Composite Joists: SJI 100 Type CJ Joists:
   1. Provide bottom chord extensions as indicated.
   2. Minimum End Bearing on Steel Supports: Comply with referenced SJI standards.
   3. Minimum End Bearing on Masonry or Concrete Supports: Comply with referenced SJI standards.
   4. Finish: Shop primed.

E. Open Web Joists: SJI 100 Joist Girders:
   1. Provide bottom chord extensions as indicated.
   2. Minimum End Bearing on Steel Supports: Comply with referenced SJI standards.
   3. Minimum End Bearing on Masonry or Concrete Supports: Comply with referenced SJI standards.
   4. Finish: Shop primed.

F. Anchor Bolts, Nuts and Washers: ASTM A307 hot-dip galvanized per ASTM A153/A153M Class C.

G. Tension Control Bolts: Twist-off type; ASTM F3125/F3125M.

H. Structural Steel For Supplementary Framing and Joist Leg Extensions: ASTM A36/A36M.

I. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

J. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

2.03 FABRICATION

A. Drill holes in chords for attachment of wood nailers where indicated.

B. Frame special sized openings in joist web framing as detailed.

2.04 FINISH

A. Shop prime joists as specified.
   1. Do not prime surfaces that will be fireproofed.

B. Prepare surfaces to be finished in accordance with SSPC-SP 2.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions prior to beginning work.

3.02 ERECTION

A. Erect joists with correct bearing on supports.

B. Allow for erection loads. Provide sufficient temporary bracing to maintain framing safe, plumb, and in true alignment.

C. Coordinate the placement of anchors for securing loose bearing members furnished as part of the work of this section.

D. After joist alignment and installation of framing, field weld joist seats to steel bearing surfaces.

E. Install supplementary framing for floor and roof openings greater than 18 inches (450 mm).

F. Do not permit erection of decking until joists are braced, bridged, and secured or until completion of erection and installation of permanent bridging and bracing.

G. Do not field cut or alter structural members without approval of joist manufacturer.

3.03 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch (6 mm).

B. Maximum Offset From True Alignment: 1/4 inch (6 mm).

3.04 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

END OF SECTION

SECTION 05 3113
STEEL FLOOR DECKING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including General Conditions and other Division 1 Specification Sections, apply to the Work of this Section.

1.02 RELATED GENERAL WORK

A. Structural Steel: Section 05120

B. Steel Joists: Section 05211

C. Metal Roof Deck: Section 05230

1.03 QUALITY ASSURANCE, CODES AND STANDARDS

A. Comply with the provisions of the following codes and standards, except as otherwise shown or specified:

1. Steel Deck Institute "SDI Manual of Construction with Steel Deck."
2. "SDI Design Manual for Composite Decks, Form Decks and Roof Decks - No. 30."
3. AISI "Specification for the Design of Cold-Formed Steel Structural Members" (Minimum yield point of 33 ksi).
4. AWS "Code for Welding in Building Construction."
5. AISC "Manual of Steel Construction."
6. ASTM A611 or A446 for sheet steel.
7. Job Site Safety: OSHA Regulation CFR 1926, Subparts M and R.

1.04 QUALIFICATION OF WELDING WORK

A. Qualify welding processes and welding operators in accordance with the AWS "Standard Qualification Procedure."

1.05 INSPECTION

A. Welding is subject to inspection as required by Prince George's County. The Owner will pay for all required testing by the Owner's testing and inspection agency. The Contractor shall be responsive for proper notification to the testing agency prior to performance of welding operations.

B. Expense of removing and replacing any portion of welded in place decking for testing purposes will be borne by the Owner if welds are found to be satisfactory. Remove and replace work found to be defective and not complying with requirements. Expense of replacing defective work shall be borne by the Contractor.

1.06 SUBMITTALS

A. Submit manufacturer's specifications and installation instructions for each product specified. Include manufacturer's certification to show compliance with these Specifications. Indicate by transmittal form that a copy of each instruction has been distributed to the Installer.

1.07 DELIVERY AND STORAGE

A. Deliver and store deck bundles in a location on the project site that will allow proper and safe access by the hoisting equipment to the building structure.

B. Protect bundles from weather and damage. Store above ground, covered, with one end of bundles elevated. Use ventilated, waterproof coverings to avoid condensation on deck surfaces.

C. Deck bundles shall be stacked in a manner to avoid tipping, sliding, or shifting while being stored.

D. Inspect bundle for tightness during storage. Provide additional securement if necessary.

PART 2 - PRODUCTS

2.01 STEEL FORM DECK (NON-COMPOSITE)

A. Provide corrugated steel form deck of at least 28 gauge uncoated material having a formed depth of at least 9/16", or as indicated on the Structural Drawings.

2.02 STEEL FLOOR DECK (COMPOSITE)

A. Provide composite steel floor deck of gauge and depth indicated on the structural drawings. Finish: galvanized coating complying with ASTM A 525 G60, or as indicated on the Structural Drawings.

2.03 ACCESSORIES

A. Furnish sheet metal closures for open ends of all cell raceways at columns, walls, and openings shown on Contract Drawings.

B. Provide sheet steel cover plates (or closure tape) as required to close panel and end conditions where panels change direction or abut.

C. Furnish material for column closures to close openings between panels and structural columns.

D. Provide welding hole cover, with friction fastening, to close welding access holes when required.

PART 3 - EXECUTION

3.01 INSPECTION

A. Examine the areas and conditions under which metal form decking items are to be installed. Notify the Architect and Owner’s Representative in writing of conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until satisfactory conditions have been corrected in a manner acceptable to the Installer.

3.02 ERECTION

A. Comply with recommended practices listed in the “SDI Manual of Construction with Steel Deck.”

B. The erection of the steel sub-floor shall be performed according to the manufacturer's standards and approved final shop drawings.

C. The design strength per weld shall comply with AISI specifications.

D. The steel sub-floor units shall be placed on the supporting steel framework and adjusted to final position before being permanently fastened. Each unit shall be brought to proper bearing on the supporting beams. If the supporting beams are not properly aligned or sufficiently level to permit proper bearing of the steel floor units, the steel floor contractor shall inform the Contractor. The steel floor units shall not to be placed until the necessary corrections are made. The floor units shall be placed in straight alignment for the entire length of run of flutes and with close registration of the flutes of one unit with those of abutting units, allowing a minimum of space between ends of abutting units.

3.03

A. Steel floor units shall be fastened to the steel framework at ends of units and at intermediate supports by welds no less than 3/4-inch diameter, spaced not more than 12 inches across width of floor unit. Where two units abut, each unit shall be fastened to the steel framing. Welds shall be free of sharp points or edges. Use weld washers for all metal thinner than 22 gauge.

B. The side laps of adjacent units shall be fastened between supports at intervals not exceeding 5 feet. Fasten side laps by welding at 36” o. c. maximum.

3.04 CUTTING AND DRILLING STEEL SUBFLOORS

A. Where large predetermined openings for stairs, elevators, ducts or other items occur, the steel subfloors shall be engineered by the manufacturer to fit these conditions as shown on the drawings. The reinforcing required for these openings shall be provided by the Contractor and shall comply with the Drawings.

B. Where holes or opening 6 inches in diameter and larger are required in subfloors, such holes shall be made by the respective trades requiring them and openings reinforced by these trades in compliance with the Drawings.

C. Holes smaller than 6 inches in diameter, required for passage of other work or attachment of the subfloors, shall be made by the respective trade involved. Reinforcement shall be in compliance with the Drawings.

D. Diagonal supports at columns, and any other miscellaneous supports required to carry the steel floor, shall be furnished and installed in accordance with the Drawings.

END OF SECTION

SECTION 05 3123
STEEL ROOF DECKING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including General Conditions and other Division 1 Specification Sections, apply to the Work of this Section.

1.02 RELATED WORK

A. Structural Steel: Section 05120

B. Steel Joists: Section 05211

C. Section 05500, Metal Fabrication.

1.03 QUALITY ASSURANCE, CODES AND STANDARDS

A. Comply with the provisions of the following codes and standards, except as otherwise shown or specified.

1. Steel Deck Institute “SDI Manual of Construction with Steel Deck.”
2. “SDI Design Manual for Composite Decks, Form Decks and Roof Decks - No. 30."
3. AISI "Specification for the Design of Cold-Formed Steel Structural Members."
4. AWS "Specification for Welding Sheet Steel in Structures."
5. AISC "Specifications for Design of Light Gauge Cold-Formed Steel Structures. No. 30."
6. Job Site Safety: OSHA Regulation CFR 1926, Subparts M and R.

1.04 QUALIFICATION OF WELDING WORK

A. Qualify welding processes and welding operators in accordance with the AWS "Standard Qualification Procedure".

1.05 PERFORMANCE REQUIREMENTS

A. Compute the properties of metal roof deck sections on the basis of the effective design width as limited by the provisions of the AISI Specifications. Provide not less than the depth and gauges shown.

B. Uplift Loading: Install and anchor roof deck units to resist gross uplift loading of 20 pounds per square foot for roof areas.

1.06 SUBMITTALS

A. Submit manufacturer's specifications and installation instructions for each product specified. Include manufacturer's certification as may be required to show compliance with these specifications. Indicate by transmittal form that a copy of each instruction has been distributed to the Installer.

B. Submit detailed drawings showing layout of deck panels, anchorage details and every condition requiring closure panels, supplementary framing, special jointing or other accessories.

1.07 INSPECTION

A. Welding performed in conjunction with work in this Section is subject to inspection by the Owner's testing and inspection agency and as required by Prince George's County. The Owner will pay for all required testing. The Contractor shall be responsible for proper notification to the testing agency prior to performance of welding operations.

B. Decking welded in place is subject to inspection and testing. Expense of removing and replacing any portion of decking for testing purposes will be borne by the Owner if welds are found to be satisfactory.

Remove and replace work found to be defective and not complying with requirements. Expense of replacing defective work shall be borne by the Contractor.

1.08 DELIVERY AND STORAGE

A. Deliver and store deck bundles in a location on the project site that will allow proper and safe access by the hoisting equipment to the building structure.

B. Protect bundles from weather and damage. Store above ground and covered, with one end elevated. Use ventilated, waterproof coverings to avoid condensation on deck surface.

C. Deck bundles shall be stacked in a manner to avoid tipping, sliding or shifting while being stored.

D. Inspect bundles for tightness during storage. Provide additional securement if necessary.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Refer to Structural Drawings for type and gauge of roof deck.

B. Steel: ASTM A611 Grade C (painted deck) or ASTM A653, Grade A (galvanized deck).

C. Miscellaneous Steel Shapes: ASTM A-36.

D. Sheet Metal Accessories: ASTM A526, commercial quality, galvanized.

E. Galvanized zinc coating conforming to ASTM A924, G60.

F. Prime Paint: Manufacturer's baked-on, rust inhibitive paint, for application to chemically cleaned and phosphate chemical treated metal surfaces.

2.02 FABRICATION

A. General: Form deck units in lengths to span 3 or more support spacings, with flush, telescoped or nested 2" end laps and nesting side laps, unless otherwise shown or specified. Provide deck configurations complying with SDI Design Manual Specifications, and as specified herein.

B. Intermediate-Rib Deck: Prime painted, depth approximately 1 1/2"; ribs spaced approximately 6" o. c.; width of rib opening at roof surface not more than 1 3/4"; width of bottom rib surface not less than 1". Provide closures, anchor clips, sump pans for roof drains and all other necessary pieces for a complete installation.

C. Acoustical Wide Rib Deck: Prime painted, galvanized deck, depth approximately 1-1 1/2"; ribs spaced at 6" o. c.; width of rib opening at roof surface not more than 2-3/8"; width of bottom rib surface not less than 1-3/4". Webs of the ribs shall be perforated by 5/32" diameter holes staggered 3/8" o. c. The sound absorbing elements of glass fiber shall be furnished by the manufacturer for installation by the roofing contractor.

PART 3 - EXECUTION

3.01 INSPECTION

A. Examine the areas and conditions under which metal roof decking items and corrugated steel forms are to be installed. Notify the Architect and Owner’s Representative in writing of conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Comply with recommended practices listed in the “SDI Manual of Construction with Steel Deck.”

B. Install roof deck units and accessories in accordance with manufacturer's recommendations, approved final shop drawings, and as specified.

C. Do not start placement of roof deck units before all supporting members are installed. Place roof deck units on supporting steel framework and adjust to final position with ends bearing on supporting members and accurately align end to end before being permanently fastened. Lap ends not less than 2". Do not stretch or contract the sidelap interlocks. Place deck units flat and square, secured to adjacent framing, without warp or excessive deflection.

D. Coordinate and cooperate with structural steel erector in positioning decking bundles to prevent overloading of structural members.

E. Do not use deck units for storage of working platforms until permanently secured in position.

F. Permanently fasten roof deck units to steel supporting members by not less than 1/2" diameter puddle welds, spaced 6" o. c. maximum at end laps and 12" o. c. maximum at intermediate supports. Secure deck to each supporting member where side laps occur. Side laps shall be welded at 36” o. c. maximum.

1. Use welding washers where gauge of decking is thinner than 22 gauge.

G. Comply with AWS requirements and procedures for manual shielded metal-arc welding, the appearance and quality of welds, and the methods used in correcting welding work.

H. Lock side laps between adjacent deck units at intervals as per manufacturer's instructions.

I. Cut and fit roof deck units and accessories around other work projecting through or adjacent to the roof decking. Provide neat, square, and trim cuts.

3.03 REINFORCEMENT AT OPENINGS

A. Provide additional metal reinforcement and closure pieces as required for strength and continuity of decking and support of other work. Refer to structural drawings for roof opening and equipment support. Unless noted otherwise, provide the following:

B. Openings less than 15” in any dimension: Reinforce roof decking around openings by means of a flat steel sheet placed over the opening and fusion welded to the top surface of the deck. Provide steel sheet of the same quality as the deck units, not less than nominal 0.0359" (20 gauge) thick before coating, and at least 12" wider and longer than the openings. Provide welds at each corner and spaced not more than 12" o. c. along each side.

C. For deck openings from 15" wide to 30" wide, and not supported by structural members: Weld a 1-1/2" x 1-1/2" x 3/16" steel angle to the underside of the roof deck at right angles to the roof deck ribs. Angle shall span joist to joist. Support the side parallel to the roof deck ribs with a 12" wide, 20 gauge steel sheet placed on the top surface of the decking, welded at each corner of the opening and at 12" o. c. along each side.

3.04 ROOF INSULATION SUPPORT

A. Provide metal closure strips for the support of roof insulation where the rib openings in the top surface of roof decking occur adjacent to edges and openings. Weld closure strips into position.

3.05 TOUCH-UP PAINTING

A. After roof decking installation, wire brush, clean and paint scarred areas, welds and rust spots on the top and bottom surfaces of decking units and supporting steel members. Touch-up shop galvanizing that is chipped or abraded or damaged with the same galvanized paint or as recommended by the deck manufacturer. Patch and close all holes in deck created by welding, prior to touch-up.

END OF SECTION

SECTION 05 4000
COLD FORMED METAL FRAMING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes, but is not limited to, the following.

1. Additional framing and furring as needed for standing seam installations..

B. Related Sections: The following sections contain requirements that relate to this Section:

1. Division 6 – Section 06100 Rough Carpentry
2. Division 7 – Section 07620 Sheet Metal Flashing and Trim

1.03 SUBMITTALS

A. General: Submit each item in this Article according to the Conditions of the Contract and Division 1 Specification Sections.

B. Product data for each type of cold-formed metal framing, accessory, and product specified.

C. Welder certificates signed by Contractor certifying that welders comply with requirements Specified under the “Quality Assurance” Article.

D. Qualification data for firms and persons specified in the “Quality Assurance” Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced Installer who has completed cold-formed metal framing installations similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.

B. Welding Standards: Comply with applicable provisions of AWSD1.1 “Structural Welding Code-

1. Certify that each welder has satisfactorily passed AWN qualification tests for welding processes involved and, if pertinent, has undergone recertification.

C. Fire-Test-Response Characteristics: Where fire-resistance-rated assemblies are indicated, provide cold-formed metal framing identical to that tested as part of an assembly for fire resistance per ASTM E 119 by an independent testing and inspecting agency acceptable to authorities having jurisdiction. Fire-Resistance Ratings: As indicated by design designations listed in UL “Fire Resistance Directory” or by Warnock Hersey or another testing and inspecting agency acceptable to authorities having jurisdiction.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Store cold-formed metal framing, protect with a waterproof covering, and ventilate to avoid condensation.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide cold-formed metal framing by one of the following.
   1. Consolidated Systems, Inc.
   2. Dale/Incor Industries of Florida
   3. Dale Industries, Inc.
   4. Dietrich Industries, Inc.
   5. Incor Plant Dale Industries
   6. Marino Ware; Div. of Ware Industries, Inc.
   7. Super Stud Building Products, Inc.
   8. Unimast, Inc.
   9. United States Steel

2.02 MATERIALS

A. Galvanized-Steel Sheet: ASTM A 446, zinc coated according to ASTM A 525, and as follows:
   1. Coating Designation: G60

B. Grade: As required by structural performance, but not lower than grade A, 33,000 PSI minimum yield strength, 20 percent elongation.

2.03 FRAMING

A. Steel Studs: Manufacturer’s standard C-shaped steel studs of web depths indicated, with lipped flanges and complying with the following:
   1. Design Uncoated-Steel Thickness: As indicated on drawings (20-gauge minimum at wall studs and track). No substitution of lighter gauges than that shown on drawings allowed.
   2. Flange Width: As indicated, but 1 5/8 inches minimum.
   3. Web: Punched.

B. Steel Track: Manufacturer’s standard U-shaped steel track, unpunched, of web depths indicated, with straight flanges, and complying with the following.
   1. Design Uncoated-Steel Thickness: As indicated on drawings (20 gauge minimum). Use thicker gauge as specified on drawings where track is welded to existing steel.
   2. Flange Width: Manufacturer’s standard deep flange where indicated, standard flange elsewhere.

2.04 FRAMING ACCESSORIES

A. Fabricate steel-framing accessories of the same material and finish used for framing members, with a minimum yield strength of 33,000 psi.

B. Provide accessories of manufacturer’s standard thickness and configuration, unless otherwise indicated, as follows:
   1. Supplementary framing including furring channel (hat channel) and strapping.
   2. Bracing, bridging, and solid blocking.
   3. Gusset plates.
   4. Deflection track and vertical side clips.
   5. Stud kickers and girts.

6. Reinforcement plates.
7. Bridging U-Channels.
8. 2” x 2” galvanized steel angle (20ga.)

2.05 ANCHORS, CLIPS, AND FASTENERS

A. Steel shapes and Clips: ASTM A 36, zinc coated by the hot-dip process according to ASTM A 123.

B. Cast-in-Place Anchor Bolts and Studs: ASTM A 307, Grade; carbon-steel hex-head bolts and studs; carbon-steel nuts, and flat, unhardened-steel washers. Zinc coated by the hot-dip process according to ASTM A 153.

C. Expansion Anchors: Fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 5 times the design load, as determined by testing per ASTM E 488 conducted by a qualified independent testing agency.

D. Powder-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 10 times the design load, as determined by testing per ASTME 1190 conducted by a qualified independent testing agency.

E. Mechanical Fasteners: Corrosion-resistant coated, self-drilling, self-threading steel drill screws. Head Type: Low-profile head beneath sheathing, manufacturer’s standard elsewhere.

F. Welding Electrodes: Comply with AWM standards.

2.06 MISCELLANEOUS MATERIALS

A. Galvanizing Repair Paint: SSPC-Paint 20 or DOD-P-21035, with dry film containing a minimum of 94 percent zinc dust by weight.

2.07 FABRICATION

A. Fabricate cold-formed metal framing and accessories plumb, square, true to line, and with connections securely fastened, according to manufacturer’s recommendations and the requirements of this Section.

1. Fasten cold-formed metal framing members by welding or screw fastening, as standard with fabricator. Wire typing of framing members is not permitted.

a. Comply with AWS requirements and procedures for welding, appearance and quality of weld, and methods used in correcting welding work.

b. Locate mechanical fasteners and install according to cold-framed metal framing manufacturer’s instructions with screw penetrating joined members by not less than 3 exposed screw threads.

B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies to prevent damage or distortion.

C. Fabrication Tolerances: Fabricate assemblies to a maximum allowable tolerance variation from plumb, level, and true to line of 1/8 inch in 10 feet and as follows:

1. Spacing: Space individual framing members no more than plus or minus 1/8 inch (3mm) from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

2. Squareness: Fabricate each cold-formed metal framing assembly to a maximum out-of-square tolerance of 1/8 inch.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine supporting substrates and abutting structural framing for compliance with requirements, including installation tolerances and other conditions affecting performance of cold-formed metal framing. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

A. Cold-formed metal framing may be shop or field fabricated for installation, or it may be field assembled.

B. Install cold-formed metal framing and accessories plumb, square, true to line, and with connections securely fastened, according to manufacturer's recommendations and the requirements of this Section.

1. Cut framing members by sawing or shearing; do not torch cut.

2. Fasten cold-formed metal framing members by welding or screw fastening, as standard with fabricator. Wire typing of framing members is not permitted.

a. Comply with AWS requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work

b. Locate mechanical fasteners and install according to cold-framed metal framing manufacturer's instructions with screw penetrating joined members by not less than 3 exposed screw threads.

C. Install framing members in one-piece lengths, unless splice connections are indicated for track or tension members.

D. Provide temporary bracing and leave in place until framing is permanently stabilized.

E. Do not bridge building expansion and control joints with cold-formed metal framing. Independently frame both sides of joints.

F. Install insulation in built-up exterior framing members, such as headers, sills, boxed joists, and double studs, inaccessible upon completion of framing work.

G. Fasten reinforcement plate over web penetrations that exceed size of manufacturer's standard punched openings.

H. Erection Tolerances: Install cold-formed metal framing to a maximum allowable tolerance variation from plumb, level, and true to line of 1/8 inch in 10 feet and as follows:

1. Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requires of sheathing or other finishing materials.

3.03 ENTRANCE / BUS RIDER CANOPY SOFFIT AND FASCIA SUB FRAMING

A. Install steel framing components (Studs, track, hat channels) as needed in configurations required to support the installation of new aluminum flush-seam soffit panels and perimeter standing seam fascia panels. Attach framing members to the existing canopy's steel structural components. Install ¾" FRT plywood sheathing to the steel framing as required or as needed as a sub fascia. Install a peel and stick membrane over plywood before cladding with aluminum panels.

B. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure as indicated.

C. Squarely seat studs against webs of top and bottom tracks. Fasten both flanges of studs to top and bottom track, unless otherwise indicated. Space studs as follows:

1. Stud Spacing: As indicated, but not greater than 16" inches on center.

D. Set studs plumb, except as needed for diagonal bracing or required for non plumb walls or warped surfaces and similar requirements.

E. Install miscellaneous framing and connections, including, clip angles, Attachment angles, anchors, fasteners, and stud girts, and diagonal and horizontal strapping, to provide a complete and stable framing system.

3.04 REPAIRS AND PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed metal framing with galvanizing repair paint according to ASTMA A 780 and the manufacturer's instructions.

B. Touchup Painting: Wire brush, clean, and paint scarred areas, welds, and rust spots on fabricated and installed prime-painted, cold-formed metal framing.

1. Touchup painted surfaces with same type of shop paint used on adjacent surfaces.

C. Provide final protection and maintain conditions in a manner acceptable to manufacturer and Installer to ensure that cold-formed metal framing is without damage or deterioration at the time of Substantial Completion.

END OF SECTION

SECTION 05 4400
COLD FORMED METAL TRUSSES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Cold-formed steel trusses for roofs.

1.02 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Include layout, spacings, sizes, thicknesses, and types of cold- formed steel trusses; fabrication; and fastening and anchorage details, including mechanical fasteners.

2. Indicate reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.

C. Delegated-Design Submittal: For cold-formed steel trusses.

1.04 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency.

B. Welding certificates.

C. Product test reports.

D. Field quality-control reports.

1.05 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

B. Product Tests: Mill certificates or data from a qualified testing agency, indicating steel sheet complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, and metallic-coating thickness.

C. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."

2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Aegis Metal Framing.

2. Genesis Worldwide Inc.

3. Marino/WARE.

4. Nuconsteel, A Nucor Company.

5. Steel Construction Systems.

6. TrusSteel; an ITW company.
7. USA Frametek.

2.02 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design cold- formed steel framing.

B. Structural Performance: Provide cold-formed steel trusses capable of withstanding design loads within limits and under conditions indicated.

1. Design Loads: As indicated.
2. Deflection Limits: Design trusses to withstand design loads without deflections greater than the following:
    a. Roof Trusses: Vertical deflection of 1/240 of the span.
3. Design framing systems to provide for movement of framing members located outside the insulated building envelope without damage or overstressing, sheathing failure, connection failure, undue strain on fasteners and anchors, or other detrimental effects when subject to a maximum ambient temperature change of 120 deg F (67 deg C).

C. Cold-Formed Steel Framing Design Standards:

1. Floor and Roof Systems: Design according to AISI S210.
2. Lateral Design: Design according to AISI S213.
3. Roof Trusses: Design according to AISI S214.

D. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

2.03 COLD-FORMED STEEL TRUSS MATERIALS

A. Steel Sheet: ASTM A 1003/A 1003M, structural grade, Type H, metallic coated, of grade and coating weight as follows:

1. Grade: ST33H (ST230H).
2. Coating: G60 (Z180).

2.04 ROOF TRUSSES

A. Roof Truss Members: Manufacturer's standard C-shaped steel sections.

1. Connecting Flange Width: 1-5/8 inches (41 mm), minimum at top and bottom chords connecting to sheathing or other directly fastened construction.
2. Minimum Base-Metal Thickness: 0.0329 inch (0.84 mm).

2.05 ACCESSORIES

A. Fabricate steel-framing accessories from steel sheet, ASTM A 1003/A 1003M, structural grade, Type H, metallic coated, of same grade and coating weight used for truss members.

B. Provide accessories of manufacturer's standard thickness and configuration unless otherwise indicated.

2.06 ANCHORS, CLIPS, AND FASTENERS

A. Steel Shapes and Clips: ASTM A 36/A 36M, zinc coated by hot-dip process according to ASTM A 123/A 123M.

B. Anchor Bolts: ASTM F 1554, Grade 36, threaded carbon-steel hex-headed bolts and carbon-steel nuts; and flat, hardened-steel washers; zinc coated by hot-dip process according to ASTM A 153/A 153M, Class C.

C. Expansion Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and Appendix D in ACI 318, greater than or equal to the design load, as determined by testing per ASTM E 488 conducted by a qualified testing agency.

D. Power-Actuated Fasteners: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with capability to sustain, without failure, allowable load capacities calculated according to ICC-ES AC70, greater than or equal to the design load, as determined by testing per ASTM E 1190 conducted by a qualified testing agency.

E. Mechanical Fasteners: ASTM C 1513, corrosion-resistant-coated, self- drilling, self-tapping steel drill screws.

1. Head Type: Low-profile head beneath sheathing; manufacturer's standard elsewhere.

F. Welding Electrodes: Comply with AWS standards.

2.07 MISCELLANEOUS MATERIALS

A. Galvanizing Repair Paint: SSPC-Paint 20 or MIL-P-21035B.

B. Shims: Load bearing, of high-density multimonomer plastic, nonleaching; or of cold-formed steel of same grade and coating as framing members supported by shims.

2.08 FABRICATION

A. Fabricate cold-formed steel trusses and accessories plumb, square, and true to line, and with connections securely fastened, according to referenced AISI's specifications and standards, manufacturer's written instructions, and requirements in this Section.

1. Fabricate trusses using jigs or templates.
2. Cut truss members by sawing or shearing; do not torch cut.
3. Fasten cold-formed steel truss members by welding, screw fastening, clinch fastening, pneumatic pin fastening, or riveting as standard with fabricator.
    a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
4. Fasten other materials to cold-formed steel trusses by welding, bolting, pneumatic pin fastening, or screw fastening, according to Shop Drawings.

B. Reinforce, stiffen, and brace trusses to withstand handling, delivery, and erection stresses. Lift fabricated trusses to prevent damage or permanent distortion.

C. Fabrication Tolerances: Fabricate assemblies level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet (1:960) and as follows:

1. Spacing: Space individual framing members no more than plus or minus 1/8 inch (3 mm) from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.
2. Squareness: Fabricate each cold-formed metal framing assembly to a maximum out-of-square tolerance of 1/8 inch (3 mm).

PART 3 - EXECUTION

3.01 PREPARATION

A. Before sprayed fire-resistive materials are applied, attach continuous angles, supplementary framing, or tracks to structural members indicated to receive sprayed fire-resistive materials.

B. After applying sprayed fire-resistive materials, remove only as much of these materials as needed to complete installation of cold-formed steel trusses without reducing thickness of fire-resistive materials below that is required to obtain fire-resistance rating indicated. Protect remaining fire-resistive materials from damage.

3.02 INSTALLATION

A. Install, bridge, and brace cold-formed steel trusses according to AISI S200, AISI S214, AISI's "Code of Standard Practice for Cold- Formed Steel Structural Framing," and manufacturer's written instructions unless more stringent requirements are indicated.

B. Install cold-formed steel trusses and accessories plumb, square, and true to line, and with connections securely fastened.

1. Fasten cold-formed steel trusses by welding or mechanical fasteners.

a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.

b. Locate mechanical fasteners and install according to Shop Drawings; comply with requirements for spacing, edge distances, and screw penetration.

C. Install temporary bracing and supports. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.

D. Truss Spacing: 48 inches (1220 mm).

E. Do not alter, cut, or remove framing members or connections of trusses.

F. Erect trusses with plane of truss webs plumb and parallel to each other, align, and accurately position at spacings indicated.

G. Erect trusses without damaging framing members or connections.

H. Coordinate with wall framing to align webs of bottom chords and load- bearing studs or continuously reinforce track to transfer loads to structure. Anchor trusses securely at all bearing points.

I. Install continuous bridging and permanently brace trusses.

J. Erection Tolerances: Install cold-formed steel framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet (1:960) and as follows:

1. Space individual trusses no more than plus or minus 1/8 inch (3 mm) from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

3.03 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform inspections.

B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

C. Field and shop welds will be subject to testing and inspecting.

D. Prepare test and inspection reports.

3.04 REPAIRS AND PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed metal framing with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.

B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that cold-formed metal trusses are without damage or deterioration at time of Substantial Completion.

END OF SECTION

SECTION 05 4500
METAL SUPPORT ASSEMBLIES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Metal stud interior partition framing.
2. Suspended metal channel ceiling framing

B. Related Sections:

1. Section 01010 – General Conditions
2. Section 092900 – Gypsum Board

1.02 REFERENCES

A. ASTM International (ASTM):

1. A591/A591M - Standard Specification for Steel Sheet, Electrolytic Zinc-Coated, for Light Coating Weight (Mass) Applications.
2. A641 - Standard Specification for Zinc-Coated (Galvanized) Carbon Steel Wire.
3. A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy Coated (Galvannealed) by the Hot-Dip Process.
4. A1003/A1003M - Standard Specification for Steel Sheet, Carbon, Metallic- and Nonmetallic-Coated for Cold-Formed Framing Members.
5. C635 - Standard Specification for Metal Suspension Systems for Acoustical Tile and Lay-In Panel Ceilings.
6. C636 - Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels.
7. C645 - Standard Specification for Non-Load (Axial) Bearing Steel Studs, Runners (Track), and Rigid Furring Channels for Screw Application of Gypsum Board.
8. C754 - Standard Practice for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Wall board, Backing Board, or Water-Resistant Backing Board.
9. E90 - Standard Test Method for Airborne Sound Transmission Loss of Building Partitions.
10. E413 - Standard Test Method for Classification for Rating Sound Insulation.

B. Gypsum Association (GA) GA-600 - Fire Resistance Design Manual.

C. Steel Framing Industry Association (SFIA) (www.sfia.memberclicks.net) - Member Directory.

D. Steel Stud Manufacturer’s Association (SSMA)(www.ssma.com - Member Directory.

E. Underwriters Laboratories, Inc. (UL) - Fire Resistance Directory.

1.03 QUALITY ASSURANCE

A. Manufacturer: Current member of SSMA.

B. Installer Qualifications: Minimum 3 years experience in work of this Section.

C. Acoustic Ratings: Construct assemblies to achieve acoustic ratings indicated on Drawings, tested to ASTM E90 and classified in accordance with ASTM E413.

D. Deflection Limits:

1. Limit deflection of partitions to following limits, based on 5 PSF uniform design load.
    a. Partitions: L/120.
    b. If partition height exceeds stud manufacturer's limiting height for applicable loading and deflection, install bracing above ceiling, decrease stud spacing, or increase stud gage.
2. Limit deflection of ceilings to L/360.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Acceptable Manufacturers:
    1. ClarkDietrich, www.clarkdietrich.com.
    2. Marino/WARE, www.marinoware.com.
    3. Safeco Steel Framing Products, www.safeco.com.
    4. Studco Building Systems, www.studcosystems.com.
    5. Substitutions: Under provisions of Section 01010 – General Conditions.

2.02 MATERIALS

A. Steel: ASTM A653/A653M or ASTM A1003/1003M, Class G40 hot dip galvanized.

2.03 COMPONENTS

A. Provide components in accordance with ASTM C645.
B. Studs: Non-load bearing roll-formed steel, SSMA stud profile, C-shaped, punched for utility access.
C. Top and Bottom Tracks:
    1. Same material and finish as studs, C-shaped.
    2. Standard track: SSMA stud track profile, 1-1/4 inch legs.
D. Suspended Ceiling Grid:
    1. Match existing.

2.04 ACCESSORIES

A. Fasteners: 3/8 inch long pan head screws.

PART 3 - EXECUTION

3.01 INSTALLATION OF PARTITION FRAMING

A. Install in accordance with ASTM C754 and manufacturer's instructions.
B. Attach top and bottom tracks at ends and 24 inches on center maximum.
C. Position studs vertically in tracks, spaced maximum 16 inches on center unless indicated otherwise.
D. Locate studs maximum 1/2 inch from door frames and abutting construction.
E. Use heavier gage studs or double studs on both sides of openings in partitions.
F. Install horizontal track as header above openings in partitions. Install studs from header to top track.
G. Provide wood or metal bracing in partitions to receive and support fixtures, trim, accessories and other applied items.
H. Brace ceiling height partitions to structure at 48 inches on center maximum.

3.02 INSTALLATION OF CEILING GRID

A. Install in accordance with ASTM C636 and manufacturer's instructions.

B. Patch existing grid where light fixtures are being removed but removing cross tees and replacing them with full length ones.

END OF SECTION

SECTION 05 5000
METAL FABRICATIONS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Shop fabricated steel and aluminum items.

B. Prefabricated ladders and ship ladders.

C. Ladder safety systems.

D. Downspout boots.

E. Cast iron tree gates.

F. Cast iron trench castings.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Placement of metal fabrications in concrete.

B. Section 03 3800 - Post-Tensioned Concrete: Placement of metal fabrications in post-tensioned concrete.

C. Section 03 4100 - Precast Structural Concrete: Placement of metal fabrication in precast structural concrete.

D. Section 03 4500 - Precast Architectural Concrete: Placement of metal fabrication in precast architectural concrete.

E. Section 04 2000 - Unit Masonry: Placement of metal fabrications in masonry.

F. Section 04 2001 - Masonry Veneer: Placement of metal fabrications in masonry.

G. Section 04 2600 - Single-Wythe Unit Masonry: Placement of metal fabrications in masonry.

H. Section 04 2616 - Adhered Masonry Veneer: Placement of metal fabrications in masonry.

I. Section 04 2723 - Cavity Wall Unit Masonry: Placement of metal fabrications in masonry.

J. Section 04 2900 - Engineered Unit Masonry: Placement of metal fabrications in masonry.

K. Section 05 1200 - Structural Steel Framing: Structural steel column anchor bolts.

L. Section 05 2100 - Steel Joist Framing: Structural joist bearing plates, including anchorage.

M. Section 05 3100 - Steel Decking: Bearing plates for metal deck bearing, including anchorage.

N. Section 05 5100 - Metal Stairs.

O. Section 05 5213 - Pipe and Tube Railings.

P. Section 07 7123 - Manufactured Gutters and Downspouts: Downspout boots.

Q. Section 09 9113 - Exterior Painting: Paint finish.

R. Section 09 9123 - Interior Painting: Paint finish.

S. Section 32 3300 - Site Furnishings: Steel pipe bollards to match other site furnishings.

U. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength 2014 (Editorial 2017).

V. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes 2013.

W. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing 2014.

X. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2017.

Y. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength 2018a.

Z. ASTM B85/85M - Standard Specification for Aluminum-Alloy Die Castings 2014.

AA. ASTM B177/B177M - Standard Guide for Engineering Chromium Electroplating 2011 (Reapproved 2017).

BB. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate 2014.

CC. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate (Metric) 2014.

DD. ASTM B210 - Standard Specification for Aluminum and Aluminum-Alloy Drawn Seamless Tubes 2012.

EE. ASTM B210M - Standard Specification for Aluminum and Aluminum-Alloy Drawn Seamless Tubes (Metric) 2012.

FF. ASTM B211 - Standard Specification for Aluminum and Aluminum-Alloy Rolled or Cold Finished Bar, Rod, and Wire 2012.

GG. ASTM B211M - Standard Specification for Aluminum and Aluminum-Alloy Rolled or Cold-Finished Bar, Rod, and Wire (Metric) 2012.

HH. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes 2014.

II. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric) 2013.

JJ. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel 2015.

KK. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination 2012.

LL. AWS D1.1/D1.1M - Structural Welding Code - Steel 2015, with Errata (2016).

MM. AWS D1.2/D1.2M - Structural Welding Code - Aluminum 2014, with Errata.

NN. IAS AC172 - Accreditation Criteria for Fabricator Inspection Programs for Structural Steel 2017.

OO. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer 1999 (Ed. 2004).

PP. SSPC-Paint 20 - Zinc-Rich Primers (Type I, "Inorganic," and Type II, "Organic") 2002 (Ed. 2004).

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's data sheets on each ladder safety system product to be used, including installation instructions.

C. Shop Drawings: Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories. Include erection drawings, elevations, and details where applicable.

1. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.

2. Design data: Submit drawings and supporting calculations, signed and sealed by a qualified professional structural engineer.

a. Include the following, as applicable:

1) Design criteria.

2) Engineering analysis depicting stresses and deflections.

3) Member sizes and gages.

4) Details of connections.

5) Support reactions.

6) Bracing requirements.

D. Certificate: Provide documentation that ladder safety system products of this section meet or exceed cited 29 CFR 1910.28, 29 CFR 1910.29, ANSI/ASSP Z359.16 and ANSI A14.3 requirements.

E. Welders' Certificates: Submit certification for welders employed on the project, verifying AWS qualification within the previous 12 months.

F. Designer's Qualification Statement.

G. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is accredited under IAS AC172.

1.05 QUALITY ASSURANCE

A. Design [_____] under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in Maryland.

B. Fabricator Qualifications: A qualified steel fabricator that is accredited by IAS AC172.

PART 2 PRODUCTS

2.01 MATERIALS - STEEL

A. Steel Sections: ASTM A36/A36M.

B. Steel Tubing: ASTM A501/A501M hot-formed structural tubing.

C. Plates: ASTM A283/A283M.

D. Pipe: ASTM A53/A53M, Grade B Schedule 40, black finish.

E. Slotted Channel Framing: ASTM A653/A653M, Grade 33.

F. Slotted Channel Fittings: ASTM A1011/A1011M.

G. Bolts, Nuts, and Washers: ASTM A307, Grade A, plain.

H. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

I. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

J. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20, Type I - Inorganic, complying with VOC limitations of authorities having jurisdiction.

2.02 MATERIALS - ALUMINUM

A. Extruded Aluminum: ASTM B221 (ASTM B221M), 6063 alloy, T6 temper.

B. Sheet Aluminum: ASTM B209 (ASTM B209M), 5052 alloy, H32 or H22 temper.

C. Aluminum-Alloy Drawn Seamless Tubes: ASTM B210 (ASTM B210M), 6063 alloy , T6 temper.

D. Aluminum-Alloy Bars: ASTM B211 (ASTM B211M), 6061 alloy , T6 temper.

E. Aluminum-Alloy Die Castings: ASTM B85/B85M.

F. Bolts, Nuts, and Washers: Stainless steel.

G. Welding Materials: AWS D1.2/D1.2M; type required for materials being welded.

2.03 FABRICATION

A. Fit and shop assemble items in largest practical sections, for delivery to site.

B. Fabricate items with joints tightly fitted and secured.

C. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

D. Exposed Mechanical Fastenings: Flush countersunk screws or bolts; unobtrusively located; consistent with design of component, except where specifically noted otherwise.

E. Supply components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

2.04 FABRICATED ITEMS

A. Ladders: Steel; in compliance with ANSI A14.3; with mounting brackets and attachments; prime paint finish.

1. Side Rails: 3/8 x 2 inches (9 x 50 mm) members spaced at 20 inches (500 mm).
2. Rungs: one inch (25 mm) diameter solid round bar spaced 12 inches (300 mm) on center.
3. Space rungs 7 inches (175 mm) from wall surface.

B. Telescopic Steel Columns: Steel pipe; prime paint finish.

1. Diameter: 3 inch (75 mm).
2. Height: 6 to 9 feet (1.83 to 2.75 m).

C. Bumper Posts and Guard Rails: As detailed; prime paint finish.

D. Joist Hangers: Strap anchors, fabricated with sheet steel, 18 gage, 0.0478 inch (1.21 mm) minimum base metal thickness; galvanized finish.

E. Ledge Angles, Shelf Angles, Channels and Plates Not Attached to Structural Framing: For support of metal decking; prime paint finish.

F. Lintels: As detailed; prime paint finish.

G. Sill Angles for Tempered Glass Railing Assemblies: ASTM A36/A36M steel angles with anchoring devices and sizes as indicated in shop drawings for railing assembly, drilled and tapped for fastener types, sizes, and spacing indicated, prime paint finish.

H. Door Frames for Overhead Door Openings, Wall Openings and [_____]: Channel sections; prime paint finish.

I. Recessed Mat Frames : As detailed; steel, galvanized finish.

J. Foot Scrapers, Mud and Foot Grilles and Pans: As detailed; aluminum, mill finish.

K. Elevator Hoistway Divider Beams: Beam sections; prime paint finish.

L. Toilet Partition Suspension Members: Steel channel sections; prime paint finish.

M. Slotted Channel Framing: Fabricate channels and fittings from structural steel complying with the referenced standards; factory-applied, rust-inhibiting thermoset acrylic enamel finish.

2.05 PREFABRICATED LADDERS

A. Prefabricated Ladder: Welded metal unit complying with ANSI A14.3; factory fabricated to greatest degree practical and in the largest components possible.

1. Components: Manufacturer's standard rails, rungs, treads, handrails. returns, platforms and safety devices complying with the requirements of the MATERIALS article of this section.
2. Materials: Aluminum; ASTM B221 ASTM B221M 6063 alloy, T52 temper.
3. Finish: Powder coat; color to be selected by Architect from manufacturer's standard range.
4. Manufacturers:
    a. Industrial Ladder & Scaffolding, Inc.; [_____]: www.anyladder.com/#sle.
    b. O'Keeffe's Inc; Model 500: www.okeeffes.com/#sle.
    c. Substitutions: See Section 01 6000 - Product Requirements.

B. Prefabricated Ship Ladder: Welded metal unit complying with ANSI A14.3; factory fabricated to greatest degree practical and in the largest components possible.

1. Components: Manufacturer's standard rails, rungs, treads, handrails. returns, platforms and safety devices complying with the requirements of the MATERIALS article of this section.
2. Materials: Aluminum; ASTM B221 (ASTM B221M), 6063 alloy, T52 temper.
3. Incline: 60 degrees.
4. Finish: Powder coat; color to be selected by Architect from manufacturer's standard range.
5. Manufacturers:
    a. O'Keeffe's Inc; Model 520: www.okeeffes.com/#sle.
    b. Substitutions: See Section 01 6000 - Product Requirements.

2.06 LADDER SAFETY SYSTEMS

A. Climbing Ladder Fall Arrest System (CLAFS): Comply with 29 CFR 1910.29, 29 CFR 1926.1053, Section 7 of ALI A14.3 and ANSI/ASSP Z359.16; climbing ladder fall arrest system allows worker to climb up and down using both hands; does not require employee continuously, hold, push, or pull any part of system while climbing.
    1. Install on new fixed ladders over 24 feet (7315 mm) in height.
    2. Anchorage: Fixed ladder meeting requirements of 29 CFR 1910.23.
    3. Rigid Carrier: Fixed 304 stainless steel U-shaped slotted track with top, bottom and intermediate supports; meeting requirements of ANSI/ASSP Z359.16.
    4. Fall Arrester: Stainless steel and aluminum automatic pass-through carrier sleeve fall arrester meeting requirements of ANSI/ASSP Z359.15 and ANSI/ASSP Z359.16; compatible with carrier.
    5. Manufacturers; ANSI/ASSP Z359.16 compliant:
        a. 3M Personal Safety Division; [_____]: www.3M.com/FallProtection/#sle.
        b. MSA Safety Incorporated; [_____]: www.msasafety.com/#sle.
        c. Substitutions: See Section 01 6000 - Product Requirements.

B. Ladder Safety System: Comply with 29 CFR 1910.29, 29 CFR 1926.1053 and Section 7 of ALI A14.3; ladder safety system allows the worker to climb up and down using both hands; does not require the employee continuously, hold, push, or pull any part of the system while climbing.
    1. Install on new fixed ladders over 24 feet (7315 mm) in height.
    2. Anchorage: Fixed ladder meeting requirements of 29 CFR 1910.23.
    3. Rigid Carrier: Fixed 304 stainless steel U-shaped slotted track with top, bottom and intermediate supports.
    4. Fall Arrester: Stainless steel automatic pass-through carrier sleeve fall arrester; compatible with carrier.

C. Personal Fall Arrest System Components; 29 CFR 1910.140:
    1. Body Support: Full body harness meeting requirements of ANSI/ASSP Z359.11; equipped with front or hip D-rings for attachment to climbing ladder fall arrest system.
    2. Connecting Means: Connecting hardware, such as a locking carabiner, meeting requirements of ANSI/ASSP Z359.12; compatible with fall arrester and body support harness.

2.07 DOWNSPOUT BOOTS

A. Downspout Boots: Smooth interior without boxed corners or choke points; include integral lug slots, integral cleanout, cleanout cover and tamper proof fasteners.

1. Configuration: Angular.
2. Material: Cast iron; ASTM A48/A48M; casting thickness 3/8 inch (9.5 mm), minimum.
3. Finish: Manufacturer's standard factory applied powder coat finish.
4. Color: To be selected by Architect from manufacturer's standard range.
5. Accessories: Manufacturer's standard stainless steel fasteners, stainless steel building wall anchors, integral neoprene gaskets and rubber coupling.
6. Manufacturers:
    a. Downspoutboots.com, a division of J. R. Hoe & Sons; [____]: www.downspoutboots.com/#sle.
    b. Substitutions: See Section 01 6000 - Product Requirements.

2.08 CAST IRON TREE GRATES

A. Cast Iron Tree Grates:
1. Material: Cast iron; ASTM A48/A48M.
2. Manufacturers:
    a. Neenah Foundry, a division of Neenah Enterprises, Inc: www.nfco.com/#sle.
    b. Substitutions: See Section 01 6000 - Product Requirements.

2.09 CAST IRON TRENCH CASTINGS

A. Cast Iron Trench Castings:
1. Material: Cast iron; ASTM A48/A48M, Class 35 B (heavy duty).
2. Grate Type: Manufacturer's standard Type A.
3. Manufacturers:
    a. Neenah Foundry, a division of Neenah Enterprises, Inc: www.nfco.com/#sle.
    b. Substitutions: See Section 01 6000 - Product Requirements.

2.10 FINISHES - STEEL

A. Prime paint steel items.
1. Exceptions: Galvanize .
2. Exceptions: Do not prime surfaces in direct contact with concrete, where field welding is required, and items to be covered with sprayed fireproofing.

B. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

C. Prime Painting: One coat.

D. Galvanizing of Structural Steel Members: Galvanize after fabrication to ASTM A123/A123M requirements. Provide minimum 1.7 oz/sq ft galvanized coating. (Provide minimum 530 g/sq m galvanized coating.)

E. Galvanizing of Non-structural Items: Galvanize after fabrication to ASTM A123/A123M requirements.

2.11 FINISHES - ALUMINUM

A. Exterior Aluminum Surfaces: Class I color anodized.

B. Interior Aluminum Surfaces: Class I natural anodized.

C. Class I Natural Anodized Finish: AAMA 611 AA-M12C22A41 Clear anodic coating not less than 0.7 mils (0.018 mm) thick.

D. Class II Natural Anodized Finish: AAMA 611 AA-M12C22A31 Clear anodic coating not less than 0.4 mils (0.01 mm) thick.

E. Class I Color Anodized Finish: AAMA 611 AA-M12C22A44 Electrolytically deposited colored anodic coating not less than 0.7 mils (0.018 mm) thick; light bronze.

F. Class II Color Anodized Finish: AAMA 611 AA-M12C22A34 Electrolytically deposited colored anodic coating not less than 0.4 mils (0.01 mm) thick; light bronze.

G. High Performance Organic Coating System: AAMA 2604 multiple coat, thermally cured fluoropolymer system; color as indicated.

1. Manufacturers:

a. Sherwin-Williams Company; POLANE Solar Reflective 2K Urethane Enamel: oem.sherwin-williams.com/#sle.

b. Substitutions: See Section 01 6000 - Product Requirements.

H. Superior Performance Organic Coating System: AAMA 2605 multiple coat, thermally cured polyvinylidene fluoride system; color as indicated.

1. Manufacturers:

a. Valspar; Fluropon: www.valsparcoilextrusion.com/#sle.

b. Substitutions: See Section 01 6000 - Product Requirements.

2.12 FABRICATION TOLERANCES

A. Squareness: 1/8 inch (3 mm) maximum difference in diagonal measurements.

B. Maximum Offset Between Faces: 1/16 inch (1.5 mm).

C. Maximum Misalignment of Adjacent Members: 1/16 inch (1.5 mm).

D. Maximum Bow: 1/8 inch (3 mm) in 48 inches (1.2 m).

E. Maximum Deviation From Plane: 1/16 inch (1.5 mm) in 48 inches (1.2 m).

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

B. Confirm that the ladder structure to which the ladder safety system is installed is capable of withstanding the loads applied by the system in the event of a fall.

3.02 PREPARATION

A. Clean and strip primed steel items to bare metal where site welding is required.

B. Supply setting templates to the appropriate entities for steel items required to be cast into concrete or embedded in masonry.

3.03 INSTALLATION

A. Install items plumb and level, accurately fitted, free from distortion or defects.

B. Install ladder safety system in accordance with manufacturer's instructions.

C. Provide for erection loads, and for sufficient temporary bracing to maintain true alignment until completion of erection and installation of permanent attachments.

D. Field weld components as indicated on drawings.

E. Perform field welding in accordance with AWS D1.1/D1.1M.

F. Obtain approval prior to site cutting or making adjustments not scheduled.

G. After erection, prime welds, abrasions, and surfaces not shop primed , except surfaces to be in contact with concrete.

3.04 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch (6 mm) per story, non-cumulative.

B. Maximum Offset From True Alignment: 1/4 inch (6 mm).

C. Maximum Out-of-Position: 1/4 inch (6 mm).

END OF SECTION

SECTION 05 5100
METAL STAIRS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Stairs with concrete treads.

B. Stairs with metal treads.

C. Stairs with grating treads.

D. Prefabricated stairs.

E. Structural steel stair framing and supports.

F. Handrails and guards.

G. Prefabricated stair treads and nosings.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Concrete fill in stair pans; mesh reinforcement for landings.

B. Section 03 3000 - Cast-in-Place Concrete: Placement of metal anchors in concrete.

C. Section 04 2000 - Unit Masonry: Placement of metal fabrications in masonry.

D. Section 04 2600 - Single-Wythe Unit Masonry: Placement of metal fabrications in masonry.

E. Section 04 2616 - Adhered Masonry Veneer: Placement of metal fabrications in masonry.

F. Section 04 2723 - Cavity Wall Unit Masonry: Placement of metal fabrications in masonry.

G. Section 04 2900 - Engineered Unit Masonry: Placement of metal fabrications in masonry.

H. Section 05 5000 - Metal Fabrications.

I. Section 05 5213 - Pipe and Tube Railings: Metal handrails and balusters other than specified in this section.

J. Section 06 2000 - Finish Carpentry: Wood handrails.

K. Section 09 9113 - Exterior Painting: Paint finish.

L. Section 09 9123 - Interior Painting: Paint finish.

M. Section 10 1400 - Signage: Photoluminescent markings.

1.03 REFERENCE STANDARDS

A. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design 2010.

B. AISC 201 - AISC Certification Program for Structural Steel Fabricators, Standard for Steel Building Structures 2006.

C. ASTM A6/A6M - Standard Specification for General Requirements for Rolled Structural Steel Bars, Plates, Shapes, and Sheet Piling 2017.

D. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products 2017.

E. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware 2016a.

F. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength 2014 (Editorial 2017).

G. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing 2014.

H. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2017.

I. ASTM A786/A786M - Standard Specification for Hot-Rolled Carbon, Low-Alloy, High-Strength Low-Alloy, and Alloy Steel Floor Plates 2015.

J. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable 2018.

K. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength 2018a.

L. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes 2014.

M. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric) 2013.

N. ASTM E935 - Standard Test Methods for Performance of Permanent Metal Railing Systems and Rails for Buildings 2013, with Editorial Revision.

O. ASTM E985 - Standard Specification for Permanent Metal Railing Systems and Rails for Buildings 2000 (Reapproved 2006).

P. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts, Steel and Alloy Steel, Heat Treated, 120 ksi (830 MPa) and 150 ksi (1040 MPa) Minimum Tensile Strength, Inch and Metric Dimensions 2015a.

Q. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination 2012.

R. AWS D1.1/D1.1M - Structural Welding Code - Steel 2015, with Errata (2016).

S. IAS AC172 - Accreditation Criteria for Fabricator Inspection Programs for Structural Steel 2017.

T. ICC (IBC) - International Building Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

U. NAAMM AMP 510 - Metal Stairs Manual 1992.

V. NAAMM MBG 531 - Metal Bar Grating Manual 2017.

W. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer 1999 (Ed. 2004).

X. SSPC-Paint 20 - Zinc-Rich Primers (Type I, "Inorganic," and Type II, "Organic") 2002 (Ed. 2004).

Y. SSPC-SP 2 - Hand Tool Cleaning 1982, with Editorial Revision (2004).

Z. UL 1994 - Luminous Egress Path Marking Systems Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide .

C. Shop Drawings: Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories.

1. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.

2. Include the design engineer's seal and signature on each sheet of shop drawings.

D. Design Data: As required by authorities having jurisdiction.

E. Welders' Certificates.

F. Designer's Qualification Statement.

G. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is certified under AISC 201.

H. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is accredited under IAS AC172.

1.05 QUALITY ASSURANCE

A. Welder Qualifications: Show certification of welders employed on the Work, verifying AWS qualification within the previous 12 months.

B. Fabricator Qualifications:

1. A qualified steel fabricator that is certified by the American Institute for Steel Construction (AISC) under AISC 201.

2. A qualified steel fabricator that is accredited by the International Accreditation Service (IAS) Fabricator Inspection Program for Structural Steel in accordance with IAS AC172.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Custom Metal Stair Fabricators:

1. Substitutions: See Section 01 6000 - Product Requirements.

B. Prefabricated Metal Stairs:

1. Lapeyre Stair, Inc: www.lapeyrestair.com/#sle.

2. Pacific Stair Corporation: www.pacificstair.com/#sle.

3. Substitutions: See Section 01 6000 - Product Requirements.

C. Unit Stair Towers:

1. Alfab, Inc: www.alfabinc.com/#sle.

2. American Stair, Inc: www.americanstair.com/#sle.

3. Pacific Stair Corporation: www.pacificstair.com/#sle.

4. Substitutions: See Section 01 6000 - Product Requirements.

D. Factory Fabricated Stair Treads and Nosings:

1. Nystrom, Inc: www.nystrom.com/#sle.

2. Ross Technology Corporation: www.rosstechnology.com/#sle.

3. Wooster Products, Inc; Alumogrit Type 101: www.woosterproducts.com/#sle.

4. Substitutions: See Section 01 6000 - Product Requirements.

E. Photoluminescent Stair Treads, Nosings, and Accessories:

1. Ecoglo, Inc: www.us.ecoglo.com/#sle.

2. Nystrom, Inc; Safe-T-Lume Two-Part Abrasive Nosing, Photoluminescent Grit: www.nystrom.com/#sle.

3. Safe-T-Nose, LLC: www.safetnose.com/#sle.
4. Wooster Products, Inc; Niteglow M231BF-NG: www.woosterproducts.com/#sle.
5. Substitutions: See Section 01 6000 - Product Requirements.

2.02 METAL STAIRS - GENERAL

A. Metal Stairs: Provide stairs of the design specified, complete with landing platforms, vertical and horizontal supports, railings, and guards, fabricated accurately for anchorage to each other and to building structure.

1. Regulatory Requirements: Provide stairs and railings complying with the most stringent requirements of local, state, and federal regulations; where requirements of the contract documents exceed those of regulations, comply with the contract documents.
2. Handrails: Comply with applicable accessibility requirements of ADA Standards.
3. At exit stairwells, provide unit stair towers designed for stacking to height of building as a self-supporting structure.
4. Photoluminescent Stair Accessories: Comply with applicable building code.
5. Dimensions: As indicated on drawings.
6. Shop assemble components; disassemble into largest practical sections suitable for transport and access to site.
7. No sharp or rough areas on exposed travel surfaces and surfaces accessible to touch.
8. Separate dissimilar metals using paint or permanent tape.

B. Metal Jointing and Finish Quality Levels:

1. Architectural: All joints as inconspicuous as possible, whether welded or mechanical.
    a. Welded Joints: Continuously welded and ground smooth and flush.
    b. Mechanical Joints: Butted tight, flush, and hairline; concealed fastenings only.
    c. Exposed Edges and Corners: Eased to small uniform radius.
    d. Metal Surfaces to be Painted: Sanded or ground smooth, suitable for highest quality gloss finish.
2. Commercial: Exposed joints as inconspicuous as possible, whether welded or mechanical; underside of stair not covered by soffit IS considered exposed to view.
    a. Welded Joints: Intermittently welded on back side, filled with body putty, and sanded smooth and flush.
    b. Welds Exposed to View: Ground smooth and flush.
    c. Mechanical Joints: Butted tight, flush, and hairline.
    d. Bolts Exposed to View: Countersunk flat or oval head bolts; no exposed nuts.
    e. Exposed Edges and Corners: Eased to small uniform radius.
    f. Metal Surfaces to be Painted: Sanded or ground smooth, suitable for satin or matte finish.
3. Service: Exposed joints tight with face surfaces aligned; underside of stair not covered by soffit is not considered exposed to view.
    a. Welded Joints: Welded on back side wherever possible.
    b. Welds Exposed to View: Ground smooth; not required to be flush.

c. Bolts Exposed to View: Countersunk flat or oval head bolts; no exposed nuts or screw threads.

d. Metal Surfaces to be Painted: Sanded smooth, suitable for satin or matte finish.

4. Industrial: All joints made neatly.

a. Welded Joints: Welded on back side wherever possible.

b. Welds Exposed to Touch: Ground smooth.

c. Bolts Exposed to Touch in Travel Area: No nuts or screw threads exposed to touch.

C. Fasteners: Same material or compatible with materials being fastened; type consistent with design and specified quality level.

D. Anchors and Related Components: Same material and finish as item to be anchored, except where specifically indicated otherwise; provide all anchors and fasteners required.

2.03 METAL STAIRS WITH CONCRETE TREADS

A. Jointing and Finish Quality Level: Architectural, as defined above.

B. Risers: Closed.

C. Treads: Metal pan with field-installed concrete fill.

1. Concrete Depth: 1-1/2 inches (38 mm), minimum.

2. Precast Concrete Treads:

a. Concrete Strength: 5,000 psi (35 MPa) at 28 days, minimum.

b. Air Content: 4 to 6 percent.

c. Cement Color: Natural gray.

d. Aggregate Color: As required to make finished product match Architect 's sample.

e. Abrasive Strip: Contrasting color, embedded into surface 1/2 inch (12 mm) back of point of nosing.

f. Anchorage to Tread Pan: Epoxy adhesive.

3. Tread Pan Material: Steel sheet.

4. Tread Pan Thickness: As required by design; 14 gage, 0.075 inch (1.9 mm) minimum.

5. Photoluminescent Nosing: Factory fabricated aluminum nosing with embedded photoluminescent strip; cast into front edge of tread.

6. Factory Fabricated Tread and Nosing: Manufacturer's standard, field applied aluminum walking surface with integral nosing, abrasive filler and factory applied finishes.

7. Pan Anchorage to Stringers: Welded or bolted to carrier angles welded or bolted to stringers.

8. Concrete Reinforcement: None.

9. Concrete Finish: For resilient floor covering.

D. Risers: Same material and thickness as tread pans.

1. Riser/Nosing Profile: Sloped riser with rounded nosing of minimum radius.

2. Riser/Nosing Profile: Vertical riser with underside of nosing sloped up from bottom of tread pan at not less than 60 degrees from horizontal, with rounded top of nosing of minimum radius.

3. Nosing Depth: Not more than 1-1/2 inch (38 mm) overhang.

4. Nosing Return: Flush with top of concrete fill, not more than 1/2 inch (12 mm) wide.

E. Stringers: Rolled steel channels.
   1. Stringer Depth: 10 inches (250 mm).
   2. End Closure: Sheet steel of same thickness as risers welded across ends.
F. Landings: Similar construction, using corrugated steel decking, supported and reinforced as required to achieve design load capacity.
G. Railings: Steel pipe railings.
H. Photoluminescent Handrail Strips: Factory fabricated, field applied strips.
I. Finish: Galvanized after fabrication, except sheet components to be galvanized before fabrication.
J. Under Side of Stair: Exposed to view, to be finished same as specified for other exposed to view surfaces.

2.04 METAL STAIRS WITH METAL TREADS

A. Jointing and Finish Quality Level: Service, as defined above.
B. Risers: Open.
C. Treads: Checkered steel plate.
   1. Tread Thickness: 1/4 inch (6 mm), minimum.
   2. Nosing: Plate bent to minimum radius with down return of 1 inch (25 mm).
   3. Photoluminescent Nosing: Factory fabricated aluminum nosing with embedded photoluminescent strip; field applied to front edge of tread.
   4. Factory Fabricated Tread and Nosing: Manufacturer's standard, with integral tread, nosing, abrasive filler and factory applied finishes.
   5. Anchorage to Stringers: Welded or bolted to carrier angles welded or bolted to stringers.
D. Risers: Steel sheet.
   1. Riser Thickness: As required by design; 14 gage, 0.075 inch (1.9 mm) minimum.
   2. Riser/Nosing Profile: Sloped riser with rounded nosing of minimum radius.
E. Stringers: Rolled steel channels.
   1. Stringer Depth: 10 inches (250 mm).
   2. End Closure: Sheet steel of same thickness as risers welded across ends.
F. Landings: Same construction as treads, supported and reinforced as required to achieve design load capacity.
G. Railings: Steel pipe railings.
H. Photoluminescent Handrail Strips: Factory fabricated, field applied strips.
I. Finish: Galvanized after fabrication, except sheet components are to be galvanized before fabrication.

2.05 METAL STAIRS WITH GRATING TREADS

A. Jointing and Finish Quality Level: Industrial, as defined above.
B. Risers: Closed.
C. Treads: Steel bar grating.
   1. Grating Type: Welded.

2. Bearing Bar Depth: 3/4 inch (19 mm), minimum.
3. Top Surface: Standard.
4. Nosing: Checkered plate.
5. Nosing Width: 1-1/4 inch (32 mm), minimum.
6. Photoluminescent Nosing: Factory fabricated aluminum nosing with embedded photoluminescent strip; field applied to front edge of tread.
7. Factory Fabricated Tread and Nosing: Manufacturer's standard, with integral tread, nosing, abrasive filler and factory applied finishes.
8. Anchorage to Stringers: End plates welded to grating, bolted to stringers.

D. Stringers: Rolled steel channels.
1. Stringer Depth: 10 inches (250 mm).
2. End Closure: Sheet steel of same thickness as risers welded across ends.

E. Landings: Same construction as treads, supported and reinforced as required to achieve design load capacity.

F. Railings: Steel pipe railings.

G. Photoluminescent Handrail Strips: Factory fabricated, field applied strips.

H. Finish: Galvanized after fabrication.

2.06 PREFABRICATED STAIRS

A. Prefabricated Egress Stairs: Welded steel unit, factory fabricated to greatest degree practical and in the largest components possible.
1. Design Requirements: Comply with structural design criteria stated elsewhere in this section, the applicable requirements of ASTM E985.
a. Comply with ADA Standards.
b. Comply with applicable sections of the IBC.
2. Materials: Manufacturer's standard steel tubes, plates, bars, shapes, sheets, wire and mesh complying with the requirements of the MATERIALS article of this section.
a. Rails: Manufacturer's standard rails.
1) Guardrails: 42 inches (1067 mm) high.
2) Handrails: 30 inches (762 mm) to 38 inches (965 mm) high.
3) Infill: Manufacturer's standard pickets.
b. Treads: Manufacturer's standard concrete pan.
c. Finish: Red oxide primer; manufacturer's standard.
3. Manufacturers:
a. Lapeyre Stair, Inc; 10AA: www.lapeyrestair.com/#sle.
b. Substitutions: See Section 01 6000 - Product Requirements.

B. Modular Egress and Access Stairs: Standardized, modular stair components designed with manufacturer's standard stair angle and height charts; to be field assembled with mechanical fasteners only.

1. Design Requirements: Comply with structural design criteria stated elsewhere in this section and the applicable requirements of ASTM E985.
    a. Comply with ADA Standards.
    b. Comply with applicable sections of the IBC.
2. Materials: Manufacturer's standard steel tubes, plates, bars, shapes, sheets, wire and mesh complying with the requirements of the MATERIALS article of this section.
    a. Rails: Manufacturer's standard rails.
        1) Guardrails: 48 inches (1067 mm) high.
        2) Handrails: 30 inches (762 mm) to 38 inches (965 mm) high.
        3) Infill: Manufacturer's standard pickets.
    b. Treads: Manufacturer's standard concrete pan.
    c. Finish: Manufacturer's standard hot-dipped galvanizing; comply with ASTM A153/A153M.
3. Assembly Option: Shipped unassembled.
4. Manufacturers:
    a. Lapeyre Stair, Inc; 03/04: www.lapeyrestair.com/#sle.
    b. Pacific Stair Corporation: www.pacificstair.com/#sle.
    c. Substitutions: See Section 01 6000 - Product Requirements.

C. Alternating Tread Stairs: Welded metal unit; factory fabricated to the greatest degree possible.
1. Design Requirements:
    a. Stair Load Capacity: Support the following without exceeding the allowable working stress of the material.
        1) Single Point Load: 1000 pounds (4448 N).
        2) Distributed Load: 100 pounds per square foot (4788 Pa).
    b. Guardrail and Handrail Capacity: Support the following without exceeding the allowable working stress of the material.
        1) Single Point Load: 200 pounds (890 N).
        2) Distributed Load: 50 pounds per linear foot (8760 N/m).
    c. Support the following without exceeding the allowable working stress of the material.
        1) Single Point Load: 1000 pounds (4448 N).
        2) Distributed Load: 100 pounds per square foot (4788 Pa).
2. Materials: Aluminum; ASTM B221 ASTM B221M 6063 alloy, T52 temper.
    a. Stair Angle: As determined by architect.
    b. Components: Manufacturer's standard handrails, guardrails, non-skid treads and stringers.
    c. Finish: Natural aluminum.
    d. Accessories: Manufacturer's standard foot divider with rubber bumper strip.
3. Manufacturers:
    a. Lapeyre Stair, Inc; Alternating Tread Stair: www.lapeyrestair.com/#sle.

b. Substitutions: See Section 01 6000 - Product Requirements.

2.07 HANDRAILS AND GUARDS

A. Wall-Mounted Rails: As specified in Section 05 5213.

B. Guards: Pipe railings as specified in Section 05 5213.

C. Photoluminescent Handrail Strips: Factory fabricated, field applied strips.

2.08 ACCESSORIES

A. Photoluminescent Nosing: Factory fabricated aluminum extrusion with replaceable embedded photoluminescent and slip-resistant strip, complies with UL 1994.

1. Finish: Manufacturer's standard clear anodized.
2. Color: To be selected by Architect from manufacturer's standard range.
3. Attachment: Provide manufacturer approved field applied adhesive and mechanical fasteners.
4. Manufacturers:
   a. Safe-T-Nose, LLC: www.safetnose.com/#sle.
   b. Substitutions: See Section 01 6000 - Product Requirements.

B. Factory Fabricated Stair Tread and Nosing:

1. Materials: Cast Aluminum.
   a. Tread Abrasive: Cross-hatched silicon carbide abrasive 20 grit.
   b. Finish: Natural sand cast finish.
2. Manufacturers:
   a. Nystrom, Inc: www.nystrom.com/#sle.
   b. Substitutions: See Section 01 6000 - Product Requirements.

C. Photoluminescent Handrail Strips: Manufacturer's standard clear anodized aluminum extrusion with embedded photoluminescent strip, complies with UL 1994.

1. Attachment: Provide manufacturer approved field applied adhesive, factory applied adhesive and mechanical fasteners.
2. Manufacturers:
   a. Safe-T-Nose, LLC: www.safetnose.com/#sle.
   b. Substitutions: See Section 01 6000 - Product Requirements.

D. Steel Bolts, Nuts, and Washers: ASTM A307, Grade A, plain.

E. Steel Bolts, Nuts, and Washers: ASTM F3125/F3125M, Type 1, and galvanized to ASTM A153/A153M where connecting galvanized components.

F. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

G. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

H. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20 Type I - Inorganic, complying with VOC limitations of authorities having jurisdiction.

2.09 SHOP FINISHING

A. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

B. Do not prime surfaces in direct contact with concrete or where field welding is required.

C. Prime Painting: Use specified shop- and touch-up primer.

1. Preparation of Steel: In accordance with SSPC-SP 2 Hand Tool Cleaning.

2. Number of Coats: One.

D. Galvanizing: Hot-dip galvanize to minimum requirements of ASTM A123/A123M.

1. Touch up abraded areas after fabrication using specified touch-up primer for galvanized surfaces.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

3.02 PREPARATION

3.03 INSTALLATION

A. Install components plumb and level, accurately fitted, free from distortion or defects.

B. Allow for erection loads, and for sufficient temporary bracing to maintain true alignment until completion of erection and installation of permanent attachments.

C. Provide welded field joints where specifically indicated on drawings. Perform field welding in accordance with AWS D1.1/D1.1M.

D. Other field joints may be either welded or bolted provided the result complies with the limitations specified for jointing quality levels.

E. Obtain approval prior to site cutting or creating adjustments not scheduled.

F. After erection, prime welds, abrasions, and surfaces not shop primed or galvanized, except surfaces to be in contact with concrete.

3.04 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch (6 mm) per story, non-cumulative.

B. Maximum Offset From True Alignment: 1/4 inch (6 mm).

3.05 SCHEDULES

A. Stairs A and B: Concrete-filled pan treads and landings, primed finish.

B. Stair C: Checkered plate treads and landings, galvanized finish. Pipe handrails as specified in Section 05 5213.

END OF SECTION

SECTION 05 5213
PIPE AND TUBE RAILINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Wall mounted handrails.

B. Stair railings and guardrails.

C. Free-standing railings at steps.

D. Balcony railings and guardrails.

1.02 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Placement of anchors in concrete.

B. Section 04 2000 - Unit Masonry: Placement of anchors in masonry.

C. Section 05 5100 - Metal Stairs: Handrails other than those specified in this section.

D. Section 05 5100 - Metal Stairs: Attachment plates for handrails specified in this section.

E. Section 06 2000 - Finish Carpentry: Wood handrail.

F. Section 08 8000 - Glazing: Glass baluster infill.

G. Section 09 2116 - Gypsum Board Assemblies: Placement of backing plates in stud wall construction.

H. Section 09 9113 - Exterior Painting: Paint finish.

I. Section 09 9123 - Interior Painting: Paint finish.

J. Section 10 1400 - Signage: Photoluminescent markings.

1.03 REFERENCE STANDARDS

A. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum 2014 (2015 Errata).

B. AAMA 2603 - Voluntary Specification, Performance Requirements and Test Procedures for Pigmented Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix) 2017a.

C. AAMA 2604 - Voluntary Specification, Performance Requirements and Test Procedures for High Performance Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix) 2017a.

D. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix) 2017a.

E. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design 2010.

F. AISC 201 - AISC Certification Program for Structural Steel Fabricators, Standard for Steel Building Structures 2006.

G. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless 2018.

H. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products 2017.

I. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes 2013.

J. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing 2014.

K. ASTM B177/B177M - Standard Guide for Engineering Chromium Electroplating 2011 (Reapproved 2017).

L. ASTM B211 - Standard Specification for Aluminum and Aluminum-Alloy Rolled or Cold Finished Bar, Rod, and Wire 2012.

M. ASTM B211M - Standard Specification for Aluminum and Aluminum-Alloy Rolled or Cold-Finished Bar, Rod, and Wire (Metric) 2012.

N. ASTM B241/B241M - Standard Specification for Aluminum and Aluminum-Alloy Seamless Pipe and Seamless Extruded Tube 2016.

O. ASTM B429/B429M - Standard Specification for Aluminum-Alloy Extruded Structural Pipe and Tube 2010e1.

P. ASTM B483/B483M - Standard Specification for Aluminum and Aluminum-Alloy Drawn Tubes for General Purpose Applications 2013, with Editorial Revision (2014).

Q. ASTM E935 - Standard Test Methods for Performance of Permanent Metal Railing Systems and Rails for Buildings 2013, with Editorial Revision.

R. ASTM E985 - Standard Specification for Permanent Metal Railing Systems and Rails for Buildings 2000 (Reapproved 2006).

S. ASTM E2072 - Standard Specification for Photoluminescent (Phosphorescent) Safety Markings 2014.

T. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination 2012.

U. IAS AC172 - Accreditation Criteria for Fabricator Inspection Programs for Structural Steel 2017.

V. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer 1999 (Ed. 2004).

W. SSPC-Paint 20 - Zinc-Rich Primers (Type I, "Inorganic," and Type II, "Organic") 2002 (Ed. 2004).

X. UL 1994 - Luminous Egress Path Marking Systems Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate profiles, sizes, connection attachments, anchorage, size and type of fasteners, and accessories.

1. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.

2. Include the design engineer's seal and signature on each sheet of shop drawings.

C. Samples: Submit two, long samples of handrail. Submit two samples of elbow, wall bracket and end stop.

D. Designer's Qualification Statement.

E. Fabricator's Qualification Statement.

1.05 QUALITY ASSURANCE

A. Structural Designer Qualifications: Professional Structural Engineer experienced in design of this work and licensed in Maryland, or personnel under direct supervision of such an engineer.

B. Welder Qualifications: Show certification of welders employed on the Work, verifying AWS qualification within the previous 12 months.

C. Fabricator Qualifications:

1. A qualified steel fabricator that is certified by the American Institute for Steel Construction (AISC) under AISC 201.

2. A qualified steel fabricator that is accredited by the International Accreditation Service (IAS) Fabricator Inspection Program for Structural Steel in accordance with IAS AC172.
3. A company specializing in manufacturing products specified in this section, with not less than ten years of documented experience.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Handrails and Railings:
1. Alumi-Guard: www.alumi-guard.com/#sle.
2. C.R. Laurence Company, Inc; CRL Welded Post Railing Systems (WRS): www.crl-arch.com/#sle.
3. Kee Safety, Inc; Kee Klamp (steel): www.keesafety.com/#sle.
4. Spaceguard Products; BeastWire Mezzanine Safety Railguard System: www.spaceguardproducts.com/#sle.
5. Superior Aluminum Products, Inc; Series 500: www.superioraluminum.com/#sle.
6. Substitutions: See Section 01 6000 - Product Requirements.

B. Non-Weld Pipe Fittings:
1. Kee Safety, Inc; Kee Klamp (steel): www.keesafety.com/#sle.
2. Substitutions: See Section 01 6000 - Product Requirements.

C. Metal Rail Infill:
1. The G-S Company: www.g-sco.com/#sle.
2. The Western Group; Woven Wire: www.architecturalwire.com/#sle.
3. Substitutions: See Section 01 6000 - Product Requirements.

D. Photoluminescent Handrail Strips:
1. Safe-T-Nose, LLC: www.safetnose.com/#sle.
2. Substitutions: See Section 01 6000 - Product Requirements.

2.02 RAILINGS - GENERAL REQUIREMENTS

A. Design, fabricate, and test railing assemblies in accordance with the most stringent requirements of ASTM E985 and applicable local code.

B. Distributed Loads: Design railing assembly, wall rails, and attachments to resist distributed force of 75 pounds per linear foot (1095 N/m) applied to the top of the assembly and in any direction, without damage or permanent set. Test in accordance with ASTM E935

C. Concentrated Loads: Design railing assembly, wall rails, and attachments to resist a concentrated force of 200 pounds (890 N) applied at any point on the top of the assembly and in any direction, without damage or permanent set. Test in accordance with ASTM E935

D. Allow for expansion and contraction of members and building movement without damage to connections or members.

E. Dimensions: See drawings for configurations and heights.
1. Top Rails and Wall Rails: 1-1/2 inches (38 mm) diameter, round.
2. Top Rails and Wall Rails: Wood rails, specified in Section 06 2000.
3. Intermediate Rails: 1-1/2 inches (38 mm) diameter, round.

4. Intermediate Rails: 1-1/4 by 1 inch (32 by 25 mm) rectangular.
5. Posts: 1-1/2 inches (38 mm) diameter, round.
6. Posts: 1-1/2 inches (38 mm) square.
7. Balusters: 1/2 inch (12 mm) square solid bar.

F. Provide anchors and other components as required to attach to structure, made of same materials as railing components unless otherwise indicated; where exposed fasteners are unavoidable provide flush countersunk fasteners.

1. For anchorage to concrete, provide inserts to be cast into concrete, for bolting anchors.
2. For anchorage to masonry, provide brackets to be embedded in masonry, for bolting anchors.
3. For anchorage to stud walls, provide backing plates, for bolting anchors.
4. Posts: Provide adjustable flanged brackets.

G. Provide slip-on non-weld mechanical fittings to join lengths, seal open ends, and conceal exposed mounting bolts and nuts, including but not limited to elbows, T-shapes, splice connectors, flanges, escutcheons, and wall brackets.

H. Photoluminescent Handrail Strips: Manufacturer's standard clear anodized aluminum extrusion with embedded photoluminescent strip, complies with UL 1994 and ASTM E2072.

1. Attachment: Provide manufacturer approved field applied adhesive, factory applied adhesive and mechanical fasteners.

2.03 ALUMINUM MATERIALS

A. Aluminum Pipe: Schedule 40; ASTM B429/B429M, ASTM B241/B241M, or ASTM B483/B483M.

B. Aluminum Tube: Minimum wall thickness of 0.127 inch (3.2 mm); ASTM B429/B429M, ASTM B241/B241M, or ASTM B483/B483M.

C. Solid Bars and Flats: ASTM B211 (ASTM B211M).

D. Welding Fittings: No exposed fasteners; cast aluminum.

E. Straight Splice Connectors: Concealed spigot; cast aluminum.

2.04 STEEL RAILING SYSTEM

A. Steel Tube: ASTM A500/A500M Grade B cold-formed structural tubing.

B. Steel Pipe: ASTM A53/A53M Grade B Schedule 80, black finish.

C. Welding Fittings: Factory- or shop-welded from matching pipe or tube; seams continuously welded; joints and seams ground smooth.

D. Straight Splice Connectors: Steel concealed spigots.

E. Plastic Handrail Cover: Extruded PVC.

1. Color(s): As indicated on drawings.

F. Galvanizing: In accordance with requirements of ASTM A123/A123M.

1. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20 Type I - Inorganic.

G. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

H. Chrome Plating: ASTM B177/B177M, nickel-chromium alloy, thickness [_____] , satin finish.

2.05 FABRICATION

A. Accurately form components to suit specific project conditions and for proper connection to building structure.

B. Fit and shop assemble components in largest practical sizes for delivery to site.

C. Fabricate components with joints tightly fitted and secured. Provide spigots and sleeves to accommodate site assembly and installation.

D. Welded Joints:

1. Exterior Components: Continuously seal joined pieces by intermittent welds and plastic filler. Drill condensate drainage holes at bottom of members at locations that will not encourage water intrusion.

2. Interior Components: Continuously seal joined pieces by intermittent welds and plastic filler.

3. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

E. Install continuous plastic handrail cover. Heat weld joints and trim smooth.

2.06 ALUMINUM FINISHES

A. Class I Natural Anodized Finish: AAMA 611 AA-M12C22A41 Clear anodic coating not less than 0.7 mils (0.018 mm) thick.

B. Class II Natural Anodized Finish: AAMA 611 AA-M12C22A31 Clear anodic coating not less than 0.4 mils (0.01 mm) thick.

C. Class I Color Anodized Finish: AAMA 611 AA-M12C22A44 Electrolytically deposited colored anodic coating not less than 0.7 mils (0.018 mm) thick.

D. Class II Color Anodized Finish: AAMA 611 AA-M12C22A34 Electrolytically deposited colored anodic coating not less than 0.4 mils (0.01 mm) thick.

E. Pigmented Organic Coating System: AAMA 2603 polyester or acrylic baked enamel finish.

F. High Performance Organic Coating System: AAMA 2604 multiple coat, thermally cured fluoropolymer system.

G. Superior Performance Organic Coating System: AAMA 2605 multiple coat, thermally cured polyvinylidene fluoride system.

H. Color: As indicated on drawings.

I. Touch-Up Materials: As recommended by coating manufacturer for field application.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

3.02 PREPARATION

A. Clean and strip primed steel items to bare metal where site welding is required.

B. Supply items required to be cast into concrete or embedded in masonry with setting templates, for installation as work of other sections.

C. Apply one coat of bituminous paint to concealed aluminum surfaces that will be in contact with cementitious or dissimilar materials.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install components plumb and level, accurately fitted, free from distortion or defects, with tight joints.

C. Install railings in compliance with ADA Standards for accessible design at applicable locations.

D. Anchor railings securely to structure.

E. Field weld anchors as indicated on drawings. Touch-up welds with primer. Grind welds smooth.

F. Conceal anchor bolts and screws whenever possible. Where not concealed, use flush countersunk fastenings.

3.04 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch (6 mm) per floor level, non-cumulative.

B. Maximum Offset From True Alignment: 1/4 inch (6 mm).

C. Maximum Out-of-Position: 1/4 inch (6 mm).

3.05 SCHEDULE

A. Stairs A and B: Flat steel bar railing system, plastic handrail cover, primed finish.

B. Stair C: Aluminum pipe railings, high performance organic finish.

END OF SECTION

SECTION 05 5305
METAL GRATINGS AND FLOOR PLATES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Formed metal floor, mezzanine and stair tread gratings.

B. Flat surface floor and stair tread plating.

C. Perimeter closure.

1.02 RELATED REQUIREMENTS

A. Section 05 5000 - Metal Fabrications.

B. Section 05 5100 - Metal Stairs: Framing for grating and stair treads.

C. Section 07 9513 - Expansion Joint Cover Assemblies.

D. Section 09 9113 - Exterior Painting: Field paint finish.

E. Section 09 9123 - Interior Painting: Field paint finish.

F. Section 33 0513 - Manholes and Structures.

G. Section 33 4211 - Stormwater Gravity Piping.

1.03 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel 2014.

B. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products 2017.

C. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2017.

D. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength 2018a.

E. ASTM B211 - Standard Specification for Aluminum and Aluminum-Alloy Rolled or Cold Finished Bar, Rod, and Wire 2012.

F. ASTM B211M - Standard Specification for Aluminum and Aluminum-Alloy Rolled or Cold-Finished Bar, Rod, and Wire (Metric) 2012.

G. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes 2014.

H. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric) 2013.

I. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination 2012.

J. AWS D1.1/D1.1M - Structural Welding Code - Steel 2015, with Errata (2016).

K. NAAMM MBG 531 - Metal Bar Grating Manual 2017.

L. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer 1999 (Ed. 2004).

M. SSPC-Paint 20 - Zinc-Rich Primers (Type I, "Inorganic," and Type II, "Organic") 2002 (Ed. 2004).

N. SSPC-SP 2 - Hand Tool Cleaning 1982, with Editorial Revision (2004).

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide span and deflection tables.

C. Shop Drawings: Indicate details of component supports, openings, perimeter construction details, and tolerances.

1. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.

2. Include the design engineer's seal and signature on each sheet of shop drawings.

D. Welders' Certificates: Submit certification for welders employed on the project, verifying AWS qualification within the previous 12 months.

E. Designer's Qualification Statement.

F. Manufacturer's Installation Instructions: Indicate special requirements for opening and perimeter framing.

1.05 QUALITY ASSURANCE

A. Designer Qualifications: Design gratings and plates under direct supervision of a Professional Structural Engineer experienced in design of this type of work and licensed in Maryland.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Ross Technology Corporation: www.rosstechnology.com/#sle.

B. Substitutions: See Section 01 6000 - Product Requirements.

2.02 PERFORMANCE REQUIREMENTS

A. Comply with applicable code for loading requirements.

B. Maximum Allowable Deflection Under Live Load: 1/240 of span; size components by single support design.

C. Maximum Spacing Between Bars: To restrict pedestrian shoe heels.

D. Maximum Spacing Between Bars: 4".

2.03 MATERIALS

A. Steel Floor Plate: ASTM A786/A786M; manufacturer's standard pattern.

B. Sheet Steel for Die Stamping: ASTM A1011/A1011M Designation CS hot-rolled sheet.

C. Steel For Welding or Riveting: ASTM A36/A36M unfinished, of shapes indicated.

D. Steel Sheet for Lock Forming: Hot-dipped galvanized, ASTM A653/A653M, FS Type B, with G90/Z275 coating.

E. Steel Framing: ASTM A36/A36M shapes, unfinished.

F. Aluminum For Lock Forming: ASTM B221 ASTM B221M extruded, shapes as indicated.

G. Cross Bars: ASTM B211 ASTM B211M solid bars.

H. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

I. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

J. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20 Type I - Inorganic, complying with VOC limitations of authorities having jurisdiction.

2.04 ACCESSORIES

A. Fasteners and Saddle Clips: Galvanized steel:

B. Perimeter Closure: Of same material as grating.

2.05 FABRICATION

A. Grating Type: NAAMM MBG 531, Pressure Locked Type.

B. Mechanically clinch joints of intersecting metal sections.

C. Fabricate support framing for openings.

D. Top Surface: Serrated.

2.06 FINISHES

A. Prepare surfaces to be primed in accordance with SSPC-SP 2.

B. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

C. Do not prime surfaces in direct contact with concrete or where field welding is required.

D. Prime paint items with one coat.

E. Galvanizing for Steel Shapes: ASTM A123/A123M.

F. Galvanizing for Steel Hardware: ASTM A153/A153M.

G. Aluminum: Mill finish.

H. Non-Slip Surfacing: Aluminum oxide.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated on drawings.

B. Verify that opening sizes and dimensional tolerances are acceptable.

C. Verify that supports are correctly positioned.

3.02 INSTALLATION

A. Install components in accordance with manufacturer's instructions.

B. Place frames in correct position, plumb and level.

C. Mechanically cut galvanized finish surfaces. Do not flame cut.

D. Anchor by welding.

E. Set perimeter closure flush with top of grating and surrounding construction.

F. Secure to prevent movement.

3.03 TOLERANCES

A. Comply with NAAMM MBG 531.

3.04 SCHEDULES

A. Mezzanine: Manufactured die stamped type, serrations facing upward, galvanized steel, 200 lb/sq ft (976 kg/sq m) live load.

B. Stair Treads to Main Mezzanine: Pressure locked aluminum bars, mill finish, 75 lb/sq ft (367 kg/sq m) live pedestrian load.

C. Stair Treads to Special Mezzanine: Pressure locked aluminum bars, 1/4 by 1-1/2 inch (6 by 38 mm) main bars, 1/4 by 3/4 inch (6 by 19 mm) cross bars, mill finish.

END OF SECTION

SECTION 11 5215
INTERACTIVE WHITEBOARDS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Interactive whiteboards/markerboards.

1.02 RELATED REQUIREMENTS

A. Section 06 1000: Rough Carpentry

B. Section 09 2116: Gypsum Board Assemblies

C. Section 09 2216: Non-Structural Metal Framing

D. Section 26 0530: Conduits, Raceways, Fitting and Cable Trays

E. Section 26 0537: Wire, Cable and Connectors

F. Section 27 0500: LAN Wiring Specifications

1.03 REFERENCE STANDARDS

A. ANSI A135.4 – American Standard for Basic Hard Board; 2012

B. ASTM C1396/C1396M – Standard Specification for Gypsum Board; 2017

C. ASTM E84 – Standard Test Methods for Surface Burning Characteristics of Building Materials; 2018b

D. PS 1 – Structural Plywood; 2009.

E. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

F. UL (DIR) - Online Certifications Directory Current Edition.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to the start of the work of this section; require attendance by all affected installers.

B. Sequencing: Ensure that utility connections are achieved in an orderly and expeditious manner.

C. The work covered by this section of the specifications shall include all material, labor, hardware, software, firmware and programming to install interactive whiteboards as described herein and shown on the drawings.

D. System shall utilize PGCPS shared data network, and not require the use of any proprietary switches, routers or other network components. Physical network connections shall be provided by PGCPS' specified contractor.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate wall elevations, dimensions, joint locations, special anchoring details.

C. Cut sheets: indication specific manufactures information on software, model and accessories (mobile stand, pens, remote, etc.).

D. Manufacturer’s printed installation instructions and quality statement.

E. Installer's Qualification Statement.

F. Maintenance Contracts.

G. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

H. Project Record Documents: Record actual locations of all boards locations and model numbers.

I. Software: Copy of software provided under this section.

J. Maintenance Materials: Furnish the following for Owner's use in the maintenance of project:

1. Extra Stock Materials: Provide 5% attic stock of equipment or replacement bulbs, fuses, etc. for all equipment provided under this section.

2. Tools: One each of every special tool required for maintenance of specified equipment.
3. Maintenance Data: Include data on regular upkeep cleaning, thorough cleaning, removing permanent marker ink, sensor cleaning, etc.

1.06 **QUALITY ASSURANCE**

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with at least five years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified and with at least five years of documented experience.

C. Copies of Documents at Project Site: Maintain at the project site a copy of each referenced document that prescribes execution requirements.

D. Testing and Certification: Interactive display provider must invest in accelerated life testing (ALT) to demonstrate expected failure rate, life of the product and make design changes to mitigate risk

1.07 **MOCK-UP**

A. See Section 01 4000 - Quality Requirements for additional requirements.

B. Locate where directed.

C. Mock-up may remain as part of the Work.

1.08 **DELIVERY, STORAGE, AND HANDLING**

A. Deliver products to project site in factory packaging.

1.09 **WARRANTY**

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a five year period after Date of Substantial Completion.

C. Provide five year manufacturer warranty for warranty against pixilation; backlight power issues, general electrical defects, or manufacturer’s defects, etc.

D. Warranty upgrade: Three (3) year upgrade to onsite support with remote support.

E. Provide one-year warranty for floor stands, speakers, and mobile stands from date of purchase.

PART 2 PRODUCTS

2.01 **MANUFACTURERS**

A. Boxlight (www.boxlight.com).

B. Smart (www.smarttech.com).

C. Viewsonic (www.viewsonic.com).

2.02 **EQUIPMENT REQUIREMENTS**

A. Basis of Design Manufacturer: reference BOD.

B. General:
1. At a minimum, interactive display models must be available with a 75-inch screen size (diagonal).
2. Board/Panel can function without a supplementary device (laptop, tablet) Runs an independent operating system preferably Microsoft Windows
3. Must be a Stand-alone panel
4. Board can be mobile on cart or mounted to wall/structure
5. Unit shall carry Energy Star certification
6. Display must integrate with other products from the display provider, including software, document cameras, speakers and classroom audio systems
7. Unit shall be provided with all required cables including USB, HDMI, power, audio, etc.
8. Must feature 4K UHD (ultra-high definition) resolution as well ass support 4K UHD 60Hz digital input.

C. Performance:
1. Units shall be equipped with the following:
   a. Wired ethernet and wireless internet connection
   b. Bluetooth connection

c. Auxiliary remote control
d. Ease of connection and display with PC, Apple and Android devices
e. HDMI connections
f. Interactive pens or other tools including ability to draw or activate features by finger
g. Automatic software updates for ease of function
h. Touch screen
i. Video conferencing
j. Integrated speaker system and ability to output audio through external speakers
k. Memory and Storage capabilities (including storage to Google Drive)

D. Information Technology Hardware and Software Requirements
1. Prouduct must be capable of running an independent Operating System (i.e. - Chrome OS).
2. Shall have ability to connect to a hardwired network via ethernet port.
3. Software shall have ability to support enterprise wireless - 802.11x
4. Unit shall support user installed SSL certificates.
5. Unit shall have a minimum of three (3) USB inputs.
6. Unit shall have two (2) HDMI inputs.
7. Unit shall have one (1) 3.5 mm audio input.
8. Unit shall have one (1) 3.5 mm audio output.
9. Corded power cable connection only; no hard wired equipment.

E. Mounting Carts
1. Legs on mobile stand shall not be tripping hazard.
2. Owner preferred option: shelving below board.
3. Mounting carts shall be adjustable such that unit height should be easily adjustable for variable student heights.

2.03 **SOURCE QUALITY CONTROL**

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Non-Complying Work: See Section 01 4000 - Quality Requirements.

PART 3 EXECUTION

3.01 **INSTALLATION**

A. Install in accordance with manufacturer's instructions.

B. Examine the areas and conditions under which work of this Section will be performed. Correct conditions detrimental to timely and proper completion of the Work. Do not proceed until unsatisfactory conditions are corrected.
1. Verify that internal wall blocking is ready to receive work and positioning dimensions are as indicated on shop drawings.
2. Verify flat wall surface

C. Refer to educational specifications for mounting heights of boards in classrooms.

D. Systems Integration:
1. All connections to PGCPS network shall be done in accordance with Section 27 0500 - LAN Wiring Specifications.
2. Verify in field that equipment is installed plum and level.
3. Mounting system shall include all necessary accessories and devices for complete installation and operation. Finch/color shall be coordinated with the architect. Ensure all equipment is hung on manufacturer approved brackets, etc. according to equipment weights. All connections to walls shall be coordinated with wall types outlined in architectural drawings.
4. Connection ports shall be coordinated with in-school staff and PGCPS Information Technology.

3.02 **CLEANING**

A. Clean board surfaces in accordance with manufacturer's instructions.

B. Cover with protective cover, taped to frame.

C. Remove temporary protective cover at Date of Substantial Completion.

3.03 **CLOSEOUT ACTIVITIES**

A. See Section 01 7800 - Closeout Submittals, for closeout submittals.

B. See Section 01 7900 - Demonstration and Training, for additional requirements.

C. Demonstration: Demonstrate operation of system to Owner's personnel.
   1. Use operation and maintenance data as reference during demonstration.
   2. Briefly describe function, operation, and maintenance of each component.

D. Training: Train Owner's personnel on operation and maintenance of system.
   1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
   2. Provide minimum of two hours of training.
   3. Instructor: Manufacturer's training personnel.
   4. Location: At project site.

3.04 **PROTECTION**

3.05 **MAINTENANCE**

A. See Section 01 7000 - Execution and Closeout Requirements, for additional requirements relating to maintenance service.

B. Provide a separate maintenance contract for specified maintenance service.

END OF SECTION

SECTION 06 0573
WOOD TREATMENT

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Site applied termiticide for wood materials.

B. Site applied termiticide for other building materials.

C. Site applied mildewcide for wood materials.

D. Site applied preservative treatment for wood materials.

E. Site applied fire-retardant treatment for wood materials.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions .

B. Section 03 3000 - Cast-in-Place Concrete.

C. Section 06 1000 - Rough Carpentry: Factory treatment for wood products.

D. Section 06 1219 - Structural Insulated Panels: Factory treatment for wood products.

E. Section 06 1323 - Heavy Timber Framing: Factory treatment for wood products.

F. Section 06 1500 - Wood Decking: Factory treatment for wood products.

G. Section 06 1733 - Wood I-Joists: Factory treatment for wood products.

H. Section 06 1736 - Metal-Web Wood Joists: Factory treatment for wood products.

I. Section 06 1753 - Shop-Fabricated Wood Trusses: Factory treatment for wood products.

J. Section 06 1800 - Glued-Laminated Construction: Factory treatment for wood products.

1.03 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide technical data on insulated sheathing, wood preservative materials and application instructions.

C. Warranty: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

1.04 DELIVERY, STORAGE, AND HANDLING

A. General: Cover wood products to protect against moisture. Support stacked products to prevent deformation and to allow air circulation.

B. Fire Retardant Treated Wood: Prevent exposure to precipitation during shipping, storage, or installation.

1.05 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Site Applied Termiticide and Mildewcide: Correct defective Work within a twenty-five year period after Date of Substantial Completion.

C. Provide five year manufacturer warranty for all materials.

PART 2 PRODUCTS

2.01 SITE-APPLIED WOOD TREATMENT

A. Site Applied Termiticide for Wood: Borate mineral salt based, spray applied, penetrating termiticide.

B. Site Applied Termiticide and Mildewcide: Borate mineral salt based, spray applied termiticide, mildewcide and mold growth preventative.

C. Site Applied Termiticide for Wood, Steel and Concrete: Borate mineral salt based, spray applied termiticide formulated for use on wood, steel, concrete and other building materials.

1. Active Ingredient: 40% minimum disodium octaborate tetrahydrate (DOT).

2. Carrier and Penetrant: Proprietary glycol solution.

D. Site Applied Mold Cleaner: Non-bleaching, oxidizer based formula with high-pH tolerant surfactant. Contains no sodium hydroxide or sodium hypochlorite.

E. Surface-Applied Wood Preservative:

F. Surface-Applied Fire-Retardant:

PART 3 EXECUTION

3.01 PREPARATION

A. Remove dust, dirt and other contaminants from treatment surfaces. Remove tarpaulins, dropcloths, strippable protective films, etc., from areas to be treated Move equipment and stored materials that block or prevent product application.

3.02 INSTALLATION - GENERAL

A. Provide temporary ventilation during and immediately after installation sufficient to remove indoor air contaminants.

3.03 SITE APPLIED WOOD TREATMENT

A. Comply with manufacturers written mixing and installation instructions.

B. Termiticide: Apply to foundations, structure and other items as listed.

1. All structural wood and sill plates within 24 inches (610 mm), minimum, of point of contact with foundation.

2. All wood, wood based and cellulosic sheathing within 24 inches (610 mm), minimum, of point of contact with foundation.

3. Concrete foundations 2 inches (51 mm), minimum, from sill plate.

4. Open bath traps and concrete slab within 12 inches (305 mm), minimum, of bath trap.

5. All pipe and plumbing penetrations up to 24 inches (305 mm), minimum, above slab and slab surface within 6 inches (152 mm), minimum, of pipe or penetration.

6. Concrete or masonry crawlspace walls up to 24 inches (610 mm), minimum, from top of soil.

7. Concrete or masonry basement walls up to 24 inches (610 mm), minimum, from top of soil.

8. Six inches (152 mm), minimum, on either side of control joints and construction joints in slabs and joints between slabs and abutting material.

C. Mildewcide: Apply to wood and wood based building materials as listed.

1. All structural wood and sill plates within 24 inches (610 mm), minimum, of point of contact with foundation.

2. All wood, wood based and cellulosic sheathing within 24 inches (610 mm), minimum, of point of contact with foundation.

END OF SECTION

SECTION 06 1000
ROUGH CARPENTRY

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Exposed timber structural framing.

B. Rough opening framing for doors, windows, and roof openings.

C. Subflooring.

D. Underlayment.

E. Roof-mounted curbs.

F. Roofing nailers.

G. Roofing cant strips.

H. Preservative treated wood materials.

I. Fire retardant treated wood materials.

J. Miscellaneous framing and sheathing.

K. Communications and electrical room mounting boards.

L. Concealed wood blocking, nailers, and supports.

M. Miscellaneous wood nailers, furring, and grounds.

N. Wall sheathing with factory applied water-resistive and air barrier sheet.

O. Roof sheathing with factory applied roofing underlayment.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 03 3000 - Cast-in-Place Concrete: Setting anchors in concrete.

C. Section 03 5400 - Cast Underlayment.

D. Section 05 1200 - Structural Steel Framing: Prefabricated beams and columns for support of wood framing.

E. Section 05 5000 - Metal Fabrications: Miscellaneous steel connectors and support angles for wood framing.

F. Section 06 1219 - Structural Insulated Panels.

G. Section 06 1323 - Heavy Timber Framing.

H. Section 06 1326 - Heavy Timber Trusses.

I. Section 06 1500 - Wood Decking.

J. Section 06 1733 - Wood I-Joists.

K. Section 06 1736 - Metal-Web Wood Joists.

L. Section 06 1753 - Shop-Fabricated Wood Trusses.

M. Section 06 1800 - Glued-Laminated Construction.

N. Section 07 2500 - Weather Barriers: Air barrier over sheathing.

O. Section 07 2500 - Weather Barriers: Water-resistive barrier over sheathing.

P. Section 07 6200 - Sheet Metal Flashing and Trim: Sill flashings.

Q. Section 07 7200 - Roof Accessories: Prefabricated roof curbs.

R. Section 09 2116 - Gypsum Board Assemblies: Gypsum-based sheathing.

S. Section 31 3116 - Termite Control: Field-applied termiticide and mildewcide for wood materials.

1.03 REFERENCE STANDARDS

A. ANSI A208.1 - American National Standard for Particleboard 2009.

B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware 2016a.

C. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2017.

D. ASTM C208 - Standard Specification for Cellulosic Fiber Insulating Board 2012.

E. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation 2018.

F. ASTM C1177/C1177M - Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing 2013.

G. ASTM C1396/C1396M - Standard Specification for Gypsum Board 2017.

H. ASTM D2898 - Standard Test Methods for Accelerated Weathering of Fire-Retardant-Treated Wood for Fire Testing 2010 (Reapproved 2017).

I. ASTM D3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber 2016.

J. ASTM E2178 - Standard Test Method for Air Permeance of Building Materials 2013.

K. ASTM E2357 - Standard Test Method for Determining Air Leakage of Air Barrier Assemblies 2018.

L. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

M. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials 2016.

N. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi 2015.

O. AWPA U1 - Use Category System: User Specification for Treated Wood 2017.

P. ICC (IBC) - International Building Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

Q. ICC (IECC) - International Energy Conservation Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

R. ICC-ES AC38 - Acceptance Criteria for Water-Resistive Barriers 2016.

S. ICC-ES AC310 - Acceptance Criteria for Water-resistive Membranes Factory-bonded to Wood-based Structural Sheathing, Used as Water-Resistive Barriers 2008, with Editorial Revision (2015).

T. ICC-ES AC380 - Acceptance Criteria for Termite Physical Barrier Systems 2014, with Editorial Revision (2017).

U. PS 1 - Structural Plywood 2009.

V. PS 2 - Performance Standard for Wood-Based Structural-Use Panels 2010.

W. PS 20 - American Softwood Lumber Standard 2015.

X. RIS (GR) - Standard Specifications for Grades of California Redwood Lumber 2000.

Y. SPIB (GR) - Grading Rules 2014.

Z. WCLIB (GR) - Standard Grading Rules for West Coast Lumber No. 17 2015.

AA. WWPA G-5 - Western Lumber Grading Rules 2017.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide technical data on insulated sheathing, wood preservative materials and application instructions.

C. Structural Composite Lumber: Submit manufacturer's published structural data including span tables, marked to indicate which sizes and grades are being used; if structural composite lumber is being substituted for dimension lumber or timbers, submit grading agency structural tables marked for comparison.

D. ABAA Field Quality Control Submittals: Submit third-party reports of testing and inspection required by ABAA QAP.

E. Manufacturer's Certificate: Certify that wood products supplied for rough carpentry meet or exceed specified requirements.

F. ABAA Manufacturer Qualification: Submit documentation of current evaluation of proposed manufacturer and materials.

G. ABAA Installer Qualification: Submit documentation of current contractor accreditation and current installer certification. Keep copies of all contractor accreditation and installer certification on site during and after installation. Present on-site documentation upon request.

H. Warranty: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

1.05 QUALITY ASSURANCE

A. Air Barrier Association of America (ABAA) Quality Assurance Program (QAP); www.airbarrier.org/#sle:

1. Installer Qualification: Use accredited contractor, certified installers, evaluated materials, and third-party field quality control audit.

2. Manufacturer Qualification: Use evaluated materials from a single manufacturer regularly engaged in air barrier material manufacture. Use secondary materials approved in writing by primary material manufacturer.

1.06 DELIVERY, STORAGE, AND HANDLING

A. General: Cover wood products to protect against moisture. Support stacked products to prevent deformation and to allow air circulation.

B. Fire Retardant Treated Wood: Prevent exposure to precipitation during shipping, storage, or installation.

1.07 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a five year period after Date of Substantial Completion.

C. Provide five year manufacturer warranty for all lumber.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Dimension Lumber: Comply with PS 20 and requirements of specified grading agencies.

1. Species: Douglas Fir-Larch, unless otherwise indicated.
2. If no species is specified, provide any species graded by the agency specified; if no grading agency is specified, provide lumber graded by any grading agency meeting the specified requirements.
3. Grading Agency: Any grading agency whose rules are approved by the Board of Review, American Lumber Standard Committee (www.alsc.org) and who provides grading service for the species and grade specified; provide lumber stamped with grade mark unless otherwise indicated.
4. Lumber of other species or grades is acceptable provided structural and appearance characteristics are equivalent to or better than products specified.

B. Lumber fabricated from old growth timber is not permitted.

C. Provide sustainably harvested wood; see Section 01 6000 - Product Requirements for requirements.

D. Provide wood harvested within a 500 mile (805 km) radius of the project site.

E. Lumber salvaged from deconstruction or demolition of existing buildings or structures is permitted in lieu of sustainably harvested lumber provided it is clean, denailed, and free of paint and finish materials, and other contamination; identify source.

1. Where salvaged lumber is used for structural applications, provide lumber re-graded by an inspection service accredited by the American Lumber Standard Committee, Inc; www.alsc.org.

F. Lumber fabricated from recovered timber (abandoned in transit) is permitted in lieu of sustainably harvested lumber, unless otherwise noted, provided it meets the specified requirements for new lumber and is free of contamination; identify source.

2.02 DIMENSION LUMBER FOR CONCEALED APPLICATIONS

A. Grading Agency: Southern Pine Inspection Bureau, Inc; SPIB (GR).

B. Sizes: Nominal sizes as indicated on drawings, S4S.

C. Moisture Content: S-dry or MC19.

D. Stud Framing (2 by 2 through 2 by 6 (50 by 50 mm through 50 by 150 mm)):

1. Species: Any allowed under referenced grading rules.
2. Grade: No. 2.

E. Joist, Rafter and Small Beam Framing (2 by 6 through 4 by 16 (50 by 150 mm through 100 by 400 mm)):

1. Machine stress-rated (MSR) as follows:
   a. Fb-single (minimum extreme fiber stress in bending): 1350 psi (9,300 kPa).
   b. E (minimum modulus of elasticity): 1,300,000 psi (8960 MPa).
2. Species: Douglas Fir-Larch.

F. Miscellaneous Framing, Blocking, Nailers, Grounds, and Furring:

1. Lumber: S4S, No. 2 or Standard Grade.
2. Boards: Standard or No. 3.

2.03 STRUCTURAL COMPOSITE LUMBER

A. At Contractor 's option, structural composite lumber may be substituted for concealed dimension lumber and timbers.

B. Structural Composite Lumber: Factory fabricated beams, headers, and columns, of sizes and types indicated on drawings; structural capacity as published by manufacturer.

1. Columns: Use laminated veneer lumber, laminated strand lumber or parallel strand lumber with manufacturer's published E (modulus of elasticity): 1,800,000 psi (12,410 MPa), minimum.
2. Beams: Use laminated veneer lumber, laminated strand lumber or parallel strand lumber with manufacturer's published E (modulus of elasticity): 1,800,000 psi (12,410 MPa), minimum.
3. Headers Not Longer Than 48 inches (1220 mm): Use laminated veneer lumber, laminated strand lumber or parallel strand lumber.
4. Manufacturers:
    a. Boise Cascade Company: www.bc.com/#sle.
    b. Weyerhaeuser Company: www.weyerhaeuser.com/#sle.
    c. Substitutions: See Section 01 6000 - Product Requirements.

2.04 CONSTRUCTION PANELS

A. Subfloor/Underlayment Combination: Any PS 2 type, rated Single Floor.
1. Bond Classification: Exterior.
2. Span Rating: 48.
3. Performance Category: 1-1/8 PERF CAT.
4. Edges: Tongue and groove.

B. Subfloor/Underlayment Combination: Oriented strand board wood structural panel; PS 2, rated Single Floor.
1. Bond Classification: Exterior.
2. Performance Category: 19/32 PERF CAT.
3. Span Rating: 20.
4. Edges: Square.
5. Surface Finish: Fully sanded face.
6. Exposure Time: Sheathing will not delaminate or require sanding due to moisture absorption from exposure to weather for up to 200 days.
7. Provide fastening guide on top panel surface with separate markings indicating fastener spacing for 16 inches (406 mm), 19.2 inches (488 mm) and 24 inches (610 mm) on center, respectively.
8. Warranty: Manufacturer's standard lifetime limited warranty against manufacturing defects and that panels will not delaminate or require sanding due to moisture absorption damage from exposure to weather for up to the stated period.
9. Manufacturers:
    a. Weyerhaeuser Company: www.weyerhaeuser.com/#sle.
    b. Substitutions: See Section 01 6000 - Product Requirements.

C. Subflooring: Any PS 2 type, rated Sheathing.
1. Bond Classification: Exterior.
2. Span Rating: 48.
3. Performance Category: 3/4 PERF CAT.

D. Subflooring: Particleboard, ANSI A208.1, Grade M-2 EXTERIOR GLUE waferboard; 3/4 inch (19 mm) thick, square edge.

E. Subflooring: Magnesium oxide board.
   1. Classification: PS 2, Exposure 1.
   2. Panel Thickness: 3/4 inch (19 mm), nominal.
   3. Span: 24 inches (610 mm), maximum.
   4. Fire Resistance: ASTM E84, Class A1; zero flame spread and zero smoke developed.
   5. Mold and Mildew Resistance: Zero growth when tested according to ASTM G21.
   6. Manufacturers:
      a. Extremegreen Building Products, LLC; Extremegreen® Sub-Flooring: www.extremegreenbp.com/#sle.
      b. Substitutions: See Section 01 6000 - Product Requirements.

F. Underlayment: APA Underlayment; plywood, Exposure 2, 1/2 inch (12.5 mm) thick. Fully sanded faces at resilient flooring.

G. Underlayment: Particleboard, ANSI A208.1, Grade PBU.

H. Roof Sheathing: Any PS 2 type, rated Structural I Sheathing.
   1. Bond Classification: Exterior.
   2. Span Rating: 60.
   3. Performance Category: 3/4 PERF CAT.

I. Roof Sheathing: Particleboard, ANSI A208.1, Grade M-3 EXTERIOR GLUE; square edges, with panel clips.

J. Roof Sheathing: Oriented strand board wood structural panel; PS 2.
   1. Grade: Structural 1 Sheathing.
   2. Bond Classification: Exposure 1.
   3. Performance Category: 5/8 PERF CAT.
   4. Span Rating: 40/20.
   5. Edges: Square.
   6. Exposure Time: Sheathing will not delaminate or require sanding due to moisture absorption from exposure to weather for up to 500 days.
   7. Provide fastening guide on top panel surface with separate markings indicating fastener spacing for 16 inches (406 mm) and 24 inches (610 mm) on center, respectively.
   8. Warranty: Manufacturer's standard lifetime limited warranty against manufacturing defects and that panels will not delaminate or require sanding due to moisture absorption damage from exposure to weather for up to the stated period.

K. Roof Sheathing: Oriented strand board structural wood panel, PS 2, with factory laminated roofing underlayment layer.
   1. Sheathing Panel:
      a. Grade: Structural 1 Sheathing.
      b. Size: 4 feet (1219 mm) wide by 8 feet (2438 mm) long.
      c. Performance Category: 5/8 PERF CAT.

d. Span Rating: 40/20.

e. Edge Profile: Square edge.

2. Integral Roofing Underlayment Layer: Medium density, phenolic impregnated kraft paper overlay.

3. Exposure Time: Sheathing undamaged and integral roofing underlayment layer intact after exposure to weather for up to 180 days.

4. Provide fastening guide on top panel surface with separate markings indicating fastener spacing for 16 inches (406 mm) and 24 inches (610 mm) on center.

5. Seam Tape: Manufacturer's standard pressure-sensitive, self-adhering, cold-applied seam tape consisting of polyolefin film with acrylic adhesive.

6. Warranty: Manufacturer's standard 30 year limited system warranty of:

a. Performance: Panel and tape resistance to water penetration; tape adhesion.

b. Material: Free from manufacturing defects and panel delamination.

L. Roof Sheathing: Oriented strand board wood structural panel; PS 2, with factory-applied fire-retardant treatment and fire-resistant cementitious facer.

1. Grade: Structural 1 Sheathing.

2. Bond Classification: Exposure 1.

3. Performance Category: 5/8 PERF CAT.

4. Span Rating: 40/20.

5. Edges: Square.

6. Provide fastening guide on top panel surface with separate markings indicating fastener spacing for 16 inches (406 mm) and 24 inches (610 mm) on center, respectively.

M. Wall Sheathing: Any PS 2 type.

1. Bond Classification: Exterior.

2. Grade: Structural I Sheathing.

3. Span Rating: 24.

4. Performance Category: 5/16 PERF CAT.

5. Edge Profile: Square edge.

N. Wall Sheathing: Particleboard, ANSI A208.1, Grade M-3 EXTERIOR GLUE.

O. Wall Sheathing: Fiberboard, ASTM C208, Type IV, Grade 1 regular, square edges.

P. Wall Sheathing: See Section 09 2116.

Q. Wall Sheathing: Gypsum, complying with requirements of ASTM C1396/C1396M for gypsum sheathing, V-shaped long edges, 5/8 inch Type X fire resistant (16 mm Type X fire resistant).

R. Wall Sheathing: Oriented strand board structural wood panel with factory laminated water-resistive and air barrier layer.

1. Sheathing Panel: PS 2, Exposure 1.

a. Size: 4 feet (1219 mm) wide by 8 feet (2438 mm) long.

b. Grade: Sheathing.

c. Performance Category: 7/16 PERF CAT.

d. Span Rating: 24/16.

e. Edge Profile: Square edge.

2. Integral Water-Resistive and Air Barrier: Sheet material qualifying as a Grade D water resistive barrier; complying with ICC-ES AC310.

3. Water Vapor Permeance of Water Resistive and Air Barrier: 12 to 16 perms (689 to 918 ng/(Pa s sq m)), minimum, when tested in accordance with ASTM E96/E96M Procedure B.

4. Maximum Allowable Air Leakage of Assembly, complying with ASTM E2357:

a. Infiltration: 0.0072 cfm per square foot (0.037 L/s per sq m), maximum, at a pressure differential of 1.57 pounds per square foot (75 Pa).

b. Exfiltration: 0.0023 cfm per square foot (0.012 L/s per sq m), maximum, at a pressure differential of 1.57 pounds per square foot (75 Pa).

5. Provide fastening guide on top panel surface with separate markings indicating fastener spacing for 16 inches (406 mm) and 24 inches (610 mm) on center, respectively.

6. Seam Tape: Manufacturer's standard pressure-sensitive, self-adhering, cold-applied, seam tape.

7. Warranty: Manufacturer's standard 30 year limited system warranty of:

a. Performance: Panel and tape resistance to water penetration; tape adhesion.

b. Material: Free from manufacturing defects and panel delamination.

S. Communications and Electrical Room Mounting Boards: PS 1 A-D plywood, or medium density fiberboard; 3/4 inch (19 mm) thick; flame spread index of 25 or less, smoke developed index of 450 or less, when tested in accordance with ASTM E84.

2.05 ACCESSORIES

A. Fasteners and Anchors:

1. Metal and Finish: Hot-dipped galvanized steel complying with ASTM A153/A153M for high humidity and preservative-treated wood locations, unfinished steel elsewhere.

2. Drywall Screws: Bugle head, hardened steel, power driven type, length three times thickness of sheathing.

3. Anchors: Toggle bolt type for anchorage to hollow masonry.

B. Joist Hangers: Hot dipped galvanized steel, sized to suit framing conditions.

C. Sill Gasket on Top of Foundation Wall: 1/4 inch (6 mm) thick, plate width, closed cell plastic foam from continuous rolls.

D. Termite-Resistant Sill Plate Barrier: Self-adhesive, film-backed barrier with release sheet; adheres to concrete substrates and blocks termite access.

1. Thickness: 68 mils (0.068 inch) (1.7 mm).

2. Termite Resistance: 100 percent when tested in accordance with ICC-ES AC380.

3. Water Vapor Permeance: 0.035 perm (2 ng/(Pa s sq m)), maximum, when tested in accordance with ASTM E96/E96M.

E. Termite-Resistant Sill Flashing: Self-adhesive membrane; polyethylene film bonded to sealant.

1. Thickness: 40 mils (0.040 inch) (1 mm).

2. Termite Resistance: 100 percent when tested in accordance with ICC-ES AC380.

3. Water Vapor Permeance: 0.035 perm (2 ng/(Pa s sq m)), maximum, when tested in accordance with ASTM E96/E96M.

F. Sill Flashing: As specified in Section 07 6200.

G. Subfloor Adhesives: Waterproof, air cure type, cartridge dispensed.

H. Construction Adhesives:

I. Building Paper: Water resistant Kraft paper.

2.06 FACTORY WOOD TREATMENT

A. Treated Lumber and Plywood: Comply with requirements of AWPA U1 - Use Category System for wood treatments determined by use categories, expected service conditions, and specific applications.

1. Fire-Retardant Treated Wood: Mark each piece of wood with producer's stamp indicating compliance with specified requirements.

2. Preservative-Treated Wood: Provide lumber and plywood marked or stamped by an ALSC-accredited testing agency, certifying level and type of treatment in accordance with AWPA standards.

B. Fire Retardant Treatment:

1. Exterior Type: AWPA U1, Category UCFB, Commodity Specification H, chemically treated and pressure impregnated; capable of providing a maximum flame spread index of 25 when tested in accordance with ASTM E84, with no evidence of significant combustion when test is extended for an additional 20 minutes both before and after accelerated weathering test performed in accordance with ASTM D2898.

a. Kiln dry wood after treatment to a maximum moisture content of 19 percent for lumber and 15 percent for plywood.

b. Treat exposed exterior rough carpentry items, including stairways, balconies and covered walkways

c. Do not use treated wood in direct contact with the ground.

2. Interior Type A: AWPA U1, Use Category UCFA, Commodity Specification H, low temperature (low hygroscopic) type, chemically treated and pressure impregnated; capable of providing a maximum flame spread index of 25 when tested in accordance with ASTM E84, with no evidence of significant combustion when test is extended for an additional 20 minutes.

a. Kiln dry wood after treatment to a maximum moisture content of 19 percent for lumber and 15 percent for plywood.

b. All interior rough carpentry items are to be fire retardant treated.

c. Treat rough carpentry items as indicated .

d. Do not use treated wood in applications exposed to weather or where the wood may become wet.

C. Preservative Treatment:

1. Preservative Pressure Treatment of Lumber Above Grade: AWPA U1, Use Category UC3B, Commodity Specification A using waterborne preservative.

a. Kiln dry lumber after treatment to maximum moisture content of 19 percent.

b. Treat lumber exposed to weather.

c. Treat lumber in contact with roofing, flashing or waterproofing.

d. Treat lumber in contact with masonry or concrete.

e. Treat lumber less than 18 inches (450 mm) above grade.

2. Preservative Pressure Treatment of Plywood Above Grade: AWPA U1, Use Category UC2 and UC3B, Commodity Specification F using waterborne preservative.

a. Kiln dry plywood after treatment to maximum moisture content of 19 percent.

b. Treat plywood in contact with roofing, flashing or waterproofing.

c. Treat plywood in contact with masonry or concrete.

d. Treat plywood less than 18 inches (450 mm) above grade.

3. Preservative Pressure Treatment of Lumber in Contact with Soil: AWPA U1, Use Category UC4A, Commodity Specification A using waterborne preservative.

a. Preservative for Field Application to Cut Surfaces: As recommended by manufacturer of factory treatment chemicals for brush-application in the field.

b. Restrictions: Do not use lumber or plywood treated with chromated copper arsenate (CCA) in exposed exterior applications subject to leaching.

PART 3 EXECUTION

3.01 PREPARATION

A. Where wood framing bears on cementitious foundations, install full width sill flashing continuous over top of foundation, lap ends of flashing minimum of 4 inches (100 mm) and seal.

B. Install sill gasket under sill plate of framed walls bearing on foundations; puncture gasket cleanly to fit tightly around protruding anchor bolts.

C. Coordinate installation of rough carpentry members specified in other sections.

3.02 INSTALLATION - GENERAL

A. Select material sizes to minimize waste.

B. Reuse scrap to the greatest extent possible; clearly separate scrap for use on site as accessory components, including: shims, bracing, and blocking.

C. Where treated wood is used on interior, provide temporary ventilation during and immediately after installation sufficient to remove indoor air contaminants.

3.03 BLOCKING, NAILERS, AND SUPPORTS

A. Provide framing and blocking members as indicated or as required to support finishes, fixtures, specialty items, and trim.

B. In framed assemblies that have concealed spaces, provide solid wood fireblocking as required by applicable local code, to close concealed draft openings between floors and between top story and roof/attic space; other material acceptable to code authorities may be used in lieu of solid wood blocking.

C. In metal stud walls, provide continuous blocking around door and window openings for anchorage of frames, securely attached to stud framing.

D. In walls, provide blocking attached to studs as backing and support for wall-mounted items, unless item can be securely fastened to two or more studs or other method of support is explicitly indicated.

E. Where ceiling-mounting is indicated, provide blocking and supplementary supports above ceiling, unless other method of support is explicitly indicated.

F. Provide the following specific non-structural framing and blocking:

1. Cabinets and shelf supports.
2. Wall brackets.
3. Handrails.
4. Grab bars.
5. Towel and bath accessories.
6. Wall-mounted door stops.
7. Chalkboards and marker boards.
8. Wall paneling and trim.
9. Joints of rigid wall coverings that occur between studs.

3.04 ROOF-RELATED CARPENTRY

A. Coordinate installation of roofing carpentry with deck construction, framing of roof openings, and roofing assembly installation.

B. Provide wood curb at all roof openings except where prefabricated curbs are specified and where specifically indicated otherwise. Form corners by alternating lapping side members.

3.05 INSTALLATION OF CONSTRUCTION PANELS

A. Subflooring/Underlayment Combination: Glue and nail to framing; staples are not permitted.

B. Subflooring: Glue and nail to framing; staples are not permitted.

C. Underlayment: Secure to subflooring with nails and glue.

1. At locations where resilient flooring will be installed, fill and sand splits, gaps, and rough areas.
2. Place building paper between floor underlayment and subflooring.

D. Roof Sheathing: Secure panels with long dimension perpendicular to framing members, with ends staggered and over firm bearing.

1. At long edges provide solid edge blocking where joints occur between roof framing members.
2. Nail panels to framing; staples are not permitted.

E. Wall Sheathing: Secure with long dimension perpendicular to wall studs, with ends over firm bearing and staggered, using nails, screws or staples.

1. Use plywood or other acceptable structural panels at building corners, for not less than 96 inches (2440 mm), measured horizontally.
2. Provide inlet diagonal bracing at corners.
3. Place water-resistive barrier horizontally over wall sheathing, weather lapping edges and ends.

F. Communications and Electrical Room Mounting Boards: Secure with screws to studs with edges over firm bearing; space fasteners at maximum 24 inches (610 mm) on center on all edges and into studs in field of board.

1. At fire-rated walls, install board over wall board indicated as part of the fire-rated assembly.
2. Where boards are indicated as full floor-to-ceiling height, install with long edge of board parallel to studs.
3. Install adjacent boards without gaps.
4. Size and Location: As indicated on drawings.

G. Wall Sheathing and Roof Sheathing with Laminated Water-Resistive Barrier and Air Barrier: Secure to studs as recommended by manufacturer.

1. Install with laminated water-resistive and air barrier on exterior side of sheathing.
2. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.
3. Use only mechanically attached and drainable EIFS and exterior insulation with wall sheathing with laminated water-resistive and air barrier.
4. Apply manufacturer's standard seam tape to joints between sheathing panels. Use tape gun or hard rubber roller as recommended by manufacturer.

3.06 SITE APPLIED WOOD TREATMENT

A. Apply preservative treatment compatible with factory applied treatment at site-sawn cuts, complying with manufacturer's instructions.

B. Allow preservative to dry prior to erecting members.

3.07 TOLERANCES

A. Framing Members: 1/4 inch (6 mm) from true position, maximum.

B. Variation from Plane (Other than Floors): 1/4 inch in 10 feet (2 mm/m) maximum, and 1/4 inch in 30 feet (7 mm in 10 m) maximum.

3.08 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Coordination of ABAA Tests and Inspections:

1. Provide testing and inspection required by ABAA QAP.
2. Notify in ABAA writing of schedule for air barrier work. Allow adequate time for testing and inspection.
3. Cooperate with ABAA testing agency.
4. Allow access to air barrier work areas and staging.
5. Do not cover air barrier work until tested, inspected, and accepted.

3.09 CLEANING

A. Waste Disposal: Comply with the requirements of Section 01 7419 - Construction Waste Management and Disposal.

1. Comply with applicable regulations.
2. Do not burn scrap on project site.
3. Do not burn scraps that have been pressure treated.
4. Do not send materials treated with pentachlorophenol, CCA, or ACA to co-generation facilities or “waste-to-energy” facilities.

B. Do not leave any wood, shavings, sawdust, etc. on the ground or buried in fill.

C. Prevent sawdust and wood shavings from entering the storm drainage system.

END OF SECTION

SECTION 06 1323
HEAVY TIMBER FRAMING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Heavy structural timber for posts, beams, joists, purlins and [_____].

B. Connection hardware.

1.02 RELATED REQUIREMENTS

A. Section 03 1000 - Concrete Forming and Accessories: Placement of steel support fabrications.

B. Section 05 1200 - Structural Steel Framing: Steel support fabrications.

C. Section 05 5000 - Metal Fabrications: Steel support fabrications.

1.03 REFERENCE STANDARDS

A. AITC 108 - Standard For Heavy Timber Construction 1993.

B. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products 2017.

C. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware 2016a.

D. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination 2012.

E. AWS D1.1/D1.1M - Structural Welding Code - Steel 2015, with Errata (2016).

F. AWPA U1 - Use Category System: User Specification for Treated Wood 2017.

G. RIS (GR) - Standard Specifications for Grades of California Redwood Lumber 2000.

H. SPIB (GR) - Grading Rules 2014.

I. WCLIB (GR) - Standard Grading Rules for West Coast Lumber No. 17 2015.

J. WWPA G-5 - Western Lumber Grading Rules 2017.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate dimensions, wood species and grades, component profiles, drilled holes, fasteners, connectors, erection details and sequence.

1. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.

2. Include the design engineer's seal and signature on each sheet of shop drawings.

C. Product Data: Submit technical data on wood preservative materials, application instructions.

D. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification within the previous 12 months.

E. Designer's Qualification Statement.

F. Manufacturer's Qualification Statement.

1.05 QUALITY ASSURANCE

A. Designer Qualifications: Design members under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in Maryland.

B. Lumber Grading Agency: Certified by American Lumber Standards Committee.

C. Manufacturer Qualifications: Company specializing in manufacture of heavy timber framing, certified by American Institute of Timber Construction, with three years minimum experience.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

A. Comply with applicable codes for loading, seismic zoning, fire retardant criteria, and other governing load criteria.

2.02 WOOD MATERIALS

A. Wood fabricated from old growth timber is not permitted.

B. Provide sustainably harvested wood; see Section 01 6000 - Product Requirements for requirements.

C. Provide wood harvested within a 500 mile (805 km) radius of the project site.

D. Lumber/Timbers salvaged from deconstruction or demolition of existing buildings or structures is permitted instead of sustainably harvested lumber provided it is clean, denailed, and free of paint and finish materials, and other contamination; identify source.

1. Where salvaged wood is used for structural applications, provide wood re-graded by an inspection service accredited by the American Lumber Standard Committee, Inc.

E. Lumber/Timbers fabricated from recovered timber (abandoned in transit) is permitted instead of sustainably harvested lumber, unless indicated otherwise, and provided it meets the specified requirements for new wood and is free of contamination; identify source.

F. Lumber Grading Rules: RIS (GR).

G. Lumber: Stress group [____]; [_____] species; [____] grade; maximum moisture content of [____] percent.

2.03 FABRICATION

A. Fabricate components in accordance with AITC 108, with joints neatly fitted, welded, and ground smooth.

2.04 WOOD TREATMENT

A. Wood Preservative (Pressure Treatment): AWPA U1, Use Category UC3B, Commodity Specification A, using waterborne preservative to 0.25 lb/cu ft retention (to 4.0 kg/cu m retention).

2.05 ACCESSORIES

A. Connectors: Type weldable steel. Provide [_____] manufactured by [_____] .

B. Bolts, Nuts, Washers, Lags, and Screws, Untreated Wood: Medium carbon steel; galvanized coating per ASTM A153/A153M; size and type to suit application.

C. Bolts, Nuts, Washers, Lags, and Screws, Preservative-Treated Wood: Stainless steel; size and type to suit application.

PART 3 EXECUTION

3.01 PREPARATION

A. Ensure that steel support fabrications are installed in correct locations and anchored securely.

3.02 ERECTION

A. Set structural members level and plumb, in correct position.

B. Make provisions for erection loads, and for sufficient temporary bracing to maintain structure safe, plumb, and in true alignment until completion of erection and installation of permanent bracing.

C. Do not field cut or alter structural members without approval of Architect .

D. After erection, touch-up primed surfaces with primer.

END OF SECTION

SECTION 06 1326
HEAVY TIMBER TRUSSES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Heavy structural timber trusses.

B. Bridging, bracing, and anchorage.

C. Connection hardware.

D. Fire retardant treatment of wood.

E. Preservative treatment of wood.

1.02 RELATED REQUIREMENTS

A. Section 06 1000 - Rough Carpentry: Installation requirements for miscellaneous framing.

B. Section 06 1000 - Rough Carpentry: Material requirements for blocking, plates, and miscellaneous framing.

1.03 REFERENCE STANDARDS

A. AITC 108 - Standard For Heavy Timber Construction 1993.

B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel 2014.

C. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products 2017.

D. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2017.

E. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

F. AWS D1.1/D1.1M - Structural Welding Code - Steel 2015, with Errata (2016).

G. AWPA U1 - Use Category System: User Specification for Treated Wood 2017.

H. RIS (GR) - Standard Specifications for Grades of California Redwood Lumber 2000.

I. SPIB (GR) - Grading Rules 2014.

J. UL (FRD) - Fire Resistance Directory Current Edition.

K. WWPA G-5 - Western Lumber Grading Rules 2017.

1.04 SUBMITTALS

A. Submit under provisions of Section 01 3000 - Administrative Requirements.

B. Shop Drawings: Indicate framing system, sizes and spacing of trusses, loads and truss cambers, and [_____]. Submit design calculations.

1. Indicate species and wood grades, component profiles, bearing and anchor details, bridging and bracing, framed openings, drilled holes, fasteners, connectors, erection details and sequence, and field splices.

2. Indicate welded connections using standard AWS D1.1/D1.1M welding symbols. Indicate net weld lengths.

C. Product Data: Provide data on proprietary connection devices and on wood preservative materials.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, protect, and handle products to site under provisions of Section 01 6000 - Product Requirements.

B. Store trusses in vertical position resting on bearing points and braced to prevent damage.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

A. Comply with applicable codes for loading, seismic zoning, fire retardant criteria, and other governing load criteria.

2.02 HEAVY TIMBER TRUSSES

A. Trusses and Components: Fabricated in accordance with AITC 108, joints neatly fitted and accurately spaced.

1. Surface Texture of Timber: Rough sawn; on four sides.
2. Connectors: Prime except where cast in concrete or in contact with cementitious materials.
3. Minimum Truss Depth To Accommodate Mechanical Ducts:
4. Roof/Ceiling Fire Resistance Rating: 1 hour .
5. Floor/Ceiling Fire Resistance Rating: 1 hour.

2.03 WOOD MATERIALS

A. Wood fabricated from old growth timber is not permitted.

B. Provide sustainably harvested wood; see Section 01 6000 - Product Requirements for requirements.

C. Provide wood harvested within a 500 mile (805 km) radius of the project site.

D. Lumber/Timbers salvaged from deconstruction or demolition of existing buildings or structures is permitted in lieu of sustainably harvested lumber provided it is clean, denailed, and free of paint and finish materials, and other contamination; identify source.

1. Where salvaged wood is used for structural applications, provide lumber re-graded by an inspection service accredited by the American Lumber Standard Committee, Inc.

E. Lumber/Timbers fabricated from recovered timber (abandoned in transit) is permitted in lieu of sustainably harvested lumber, unless otherwise noted, provided it meets the specified requirements for new wood and is free of contamination; identify source.

F. Lumber Grading Rules: RIS (GR).

G. Wood Blocking, Plates, and Miscellaneous Framing: As specified in Section 06 1000.

2.04 CONNECTOR MATERIALS

A. Shop prime all connectors except leave surfaces bare where intended to be in contact with concrete or cementitious materials.

B. Steel Connectors: Structural steel, ASTM A36/A36M; galvanized in accordance with ASTM A123/A123M; size and thickness as indicated.

C. Steel Connector Plates: Hot-dipped galvanized, ASTM A653/A653M SS Grade 33/230, with G90/Z275 coating; size and thickness as indicated.

D. Steel Split Rings: ASTM A36/A36M, galvanized in accordance with ASTM A123/A123M; size and thickness as indicated.

E. Truss Bridging: Type, size and spacing recommended by truss manufacturer.

F. Bearing Plates: Electro-galvanized steel.

G. Bolts, Nuts, and Washers: Medium carbon steel, electro-galvanized; size and type to suit application.

H. Bearing Plate Anchors: Expansion shield type for anchorage to masonry or concrete.

I. Metal Primer: Galvanizing type.

2.05 WOOD TREATMENT

A. Factory Treated Timber: Comply with requirements of AWPA U1 - Use Category System for wood treatments determined by use categories, expected service conditions, and specific applications.

B. Fire Retardant Treatment, Exterior Type: AWPA U1, Use Category UCFB, Commodity Specification H, chemically treated and pressure impregnated, with maximum flame spread index of 25 when tested in accordance with ASTM E84; kiln dried after treatment to maximum moisture content of 19 percent.

C. Fire Retardant Treatment, Interior Type A: AWPA U1, Use Category UCFA, Commodity Specification H, low temperature (low hygroscopic) type, chemically treated and pressure impregnated, with maximum flame spread index of 25 when tested in accordance with ASTM E84; kiln dried after treatment to maximum moisture content of 19 percent.

1. Manufacturers:

a. Koppers, Inc; [_____]: http://www.koppersperformancechemicals.com/#sle.

b. Substitutions: See Section 01 6000 - Product Requirements.

D. Wood Preservative (Pressure Treatment): AWPA U1, Use Category UC3B, Commodity Specification A using waterborne preservative to 0.25 lb/cu ft retention (to 4.0 kg/cu m retention); kiln dried after treatment to maximum moisture content of 19 percent.

E. Wood Preservative (Surface Application):

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that supports and openings are ready to receive trusses.

C. Verify sufficient bearing surface area.

3.02 ERECTION

A. Install trusses in accordance with manufacturer's instructions.

B. Install trusses level and plumb, in correct position.

C. Make provisions for erection loads, and for sufficient temporary bracing to maintain structure plumb, and in true alignment until completion of erection and installation of permanent bracing.

D. Do not field cut or alter structural members without approval of Architect .

E. Install permanent bridging, bracing, and anchors.

F. Install headers and supports to frame openings required.

G. Frame openings between trusses with lumber in accordance with Section 06 1000.

H. Coordinate installation of decking.

I. After erection, touch up primed surfaces with primer consistent with shop coat.

3.03 SITE APPLIED WOOD TREATMENT

A. Apply preservative treatment in accordance with manufacturer's instructions.

B. Brush apply one coat of preservative treatment on wood in contact with cementitious materials and roofing and related metal flashings. Treat site-sawn cuts.

C. Allow preservative to dry prior to erecting members.

3.04 TOLERANCES

A. Framing Members: 1/4 inch (6 mm) maximum from true position.

B. Maximum Gap in Tension Member Joints: 1/16 inch (1.5 mm).

C. Maximum Gap in Compression Member Joints: 1/32 inch (0.8 mm).

END OF SECTION

SECTION 06 1500
WOOD DECKING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Softwood lumber structural wood decking.

B. Plywood structural wood decking.

C. Glued laminated structural wood decking.

D. Composite wood decking.

E. Fire retardant treatment of wood.

F. Preservative treatment of wood.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 03 3000 - Cast-in-Place Concrete: Bearing support.

C. Section 04 2000 - Unit Masonry: Bearing support.

D. Section 06 1000 - Rough Carpentry: Bearing support.

E. Section 09 9113 - Exterior Painting: Field finishing.

F. Section 09 9300 - Staining and Transparent Finishing: Field finishing.

1.03 REFERENCE STANDARDS

A. AITC 109 - Standard for Preservative Treatment of Structural Glued Laminated Timber 2007.

B. AITC 110 - Standard Appearance Grades for Structural Glued Laminated Timber 2001.

C. AITC 111 - Recommended Practice for Protection of Structural Glued Laminated Timber During Transit, Storage and Erection 2005.

D. AITC 112 - Standard for Tongue-and-Groove Heavy Timber Roof Decking 1993 and errata.

E. AITC 113 - Standard for Dimensions of Structural Glued Laminated Timber 2010.

F. AITC A190.1 - American National Standard for Wood Products - Structural Glued Laminated Timber 2007.

G. ASTM D143 - Standard Test Methods for Small Clear Specimens of Timber 2014.

H. ASTM D198 - Standard Test Methods of Static Tests of Lumber in Structural Sizes 2015.

I. ASTM D1761 - Standard Test Methods for Mechanical Fasteners in Wood 2012.

J. ASTM D2559 - Standard Specification for Adhesives for Bonded Structural Wood Products for Use Under Exterior Exposure Conditions 2012a (Reapproved 2018).

K. ASTM D2898 - Standard Test Methods for Accelerated Weathering of Fire-Retardant-Treated Wood for Fire Testing 2010 (Reapproved 2017).

L. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

M. AWPA U1 - Use Category System: User Specification for Treated Wood 2017.

N. NELMA (SGR) - Standard Grading Rules for Northeastern Lumber 2017.

O. NLGA (SGRNL) - Standard Grading Rules for Canadian Lumber 2017.

P. PS 1 - Structural Plywood 2009.

Q. PS 20 - American Softwood Lumber Standard 2015.

R. RIS (GR) - Standard Specifications for Grades of California Redwood Lumber 2000.

S. SPIB (GR) - Grading Rules 2014.

T. WCLIB (GR) - Standard Grading Rules for West Coast Lumber No. 17 2015.

U. WWPA G-5 - Western Lumber Grading Rules 2017.

V. UL (FRD) - Fire Resistance Directory Current Edition.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide technical data on wood preservative materials.

C. Shop Drawings: Indicate deck framing system, loads and cambers, bearing details and framed openings.

1. Include the design engineer's seal and signature on each sheet of shop drawings.

1.05 QUALITY ASSURANCE

A. Designer Qualifications: Perform design under direct supervision of a Professional Engineer experienced in design of this type of work and licensed in Maryland.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with at least three years of documented experience and certified by AITC.

C. Installer Qualifications: Company specializing in performing work of the type specified in this section, with at least three years of documented experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Protect glue laminated members in accordance with AITC 111 requirements for unwrapped material.

B. Fire Retardant Treated Wood: Prevent exposure to precipitation during shipping, storage, or installation.

PART 2 PRODUCTS

2.01 WOOD MATERIALS

A. Wood fabricated from old growth timber is not permitted.

B. Provide sustainably harvested wood; see Section 01 6000 - Product Requirements for requirements.

C. Provide wood harvested within a 500 mile (805 km) radius of the project site.

D. Lumber salvaged from deconstruction or demolition of existing buildings or structures is permitted in lieu of sustainably harvested lumber provided it is clean, denailed, and free of paint and finish materials, and other contamination; identify source.

1. Where salvaged lumber is used for structural applications, provide lumber re-graded by an inspection service accredited by the American Lumber Standard Committee, Inc.

E. Wood fabricated from recovered timber (abandoned in transit) is permitted in lieu of sustainably harvested lumber, unless otherwise noted, provided it meets the specified requirements for new wood and is free of contamination; identify source.

F. Regulatory Requirements:

G. Plywood Decking: PS 1 veneer plywood; APA Rated Sheathing, Span Rating [____]; Exterior grade;1 A interior veneer appearance grade; sanded.

H. Glued Laminated Decking: Softwood lumber of any species fabricated to comply with AITC A190.1 and AITC 113, laminated with adhesive tested according to ASTM D2559 for wet service; beveled edges, single tongue.

1. Appearance: Fabricate to AITC 110 Industrial grade.
2. After end trimming, seal with penetrating sealer.

I. Composite Decking: Hardwood mixed with plastic and molded into standard lumber board sizes and accessory shapes; minimum plastic content of 40 percent.

1. Texture: Molded wood grain finish one side; smooth, matte finish on the other.
2. Color: Select from manufacturer's standard colors.
3. Edges, Field Boards: Tongue and groove.
4. Edges, Perimeter Boards: Tongue and groove one edge; bullnose on the other.
5. Recycled content: 80 percent.
6. Surface Burning Characteristics: Flame spread index of 80, maximum; smoke developed index of 200, maximum; when tested in accordance with ASTM E84.
7. Resistance to Fastener Withdrawal When Tested in Accordance With ASTM D1761:
    a. Nail (8d common wire): 163 pounds per inch (28.5 kN/m).
    b. Screw (#10 wood screw): 558 pounds per inch (97.7 kN/m).
8. Compressive Strength Parallel to Length When Tested in Accordance with ASTM D198:
    a. Design: 550 pounds per square inch (3.79 MPa).
    b. Ultimate: 1806 pounds per square inch (12.45 MPa).
9. Compressive Strength Perpendicular to Length When Tested in Accordance with ASTM D143:
    a. Design: 625 pounds per square inch (4.31 MPa).
    b. Ultimate: 1994 pounds per square inch (13.75 MPa).
10. Tensile Strength When Tested in Accordance With ASTM D198:
    a. Design: 250 pounds per square inch (1.72 MPa).
    b. Ultimate: 854 pounds per square inch (5.4 MPa).
11. Shear Strength When Tested in Accordance With ASTM D143:
    a. Design: 200 pounds per square inch (1.37 MPa).
    b. Ultimate: 561 pounds per square inch (3.87 MPa).

2.02 ACCESSORIES

A. Fasteners and Anchors:

1. Fastener Type and Finish for Composite Decking: Stainless steel, trim head.
2. Screws: Bugle head, hardened steel, power driven type, length three times thickness of decking.
3. Anchors: Toggle bolt type for anchorage to hollow masonry.

2.03 WOOD TREATMENT

A. Factory-Treated Lumber and Plywood: Comply with requirements of AWPA U1 - Use Category System for wood treatments determined by use categories, expected service conditions, and specific applications.

B. Fire Retardant Treatment:

1. Exterior Type: AWPA U1, Use Category UCFB, Commodity Specification H, chemically treated and pressure impregnated; with maximum flame spread index of 25 when tested in accordance with ASTM E84 and with no evidence of significant combustion when test is extended for an additional 20 minutes both before and after accelerated weathering test performed in accordance with ASTM D2898.
    a. Kiln dry wood after treatment to a maximum moisture content of 19 percent for lumber and 15 percent for plywood.
2. Interior Type A: AWPA U1, Use Category UCFA, Commodity Specification H, low temperature (low hygroscopic) type, chemically treated and pressure impregnated; maximum flame spread index of 25 when tested in accordance with ASTM E84 and with no evidence of significant combustion when test is extended for an additional 20 minutes.
    a. Kiln dry wood after treatment to a maximum moisture content of 19 percent for lumber and 15 percent for plywood.
    b. Do not use Type A treated wood in applications exposed to weather or where the wood may become wet.
3. Marking: Mark each piece of wood with producer's stamp indicating compliance with specified requirements.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that support framing is ready to receive decking.

3.02 PREPARATION

A. Coordinate placement of bearing items.

3.03 INSTALLATION - PLYWOOD DECKING

A. Install decking perpendicular to framing members with ends staggered over firm bearing. On sloped surfaces, lay decking with tongue upward.

B. Engage plywood tongue and groove edges.

C. Allow expansion space at edges and ends.

D. Use sheathing clips at unsupported edges of plywood between supporting framing members.

E. Cut decking to accommodate roof drain and flange.

3.04 INSTALLATION - BOARD DECKING

A. Install decking perpendicular to framing members, with ends staggered over firm bearing. On sloped surfaces, lay decking with tongue upward.

B. Fit butt end deck joints occurring between support members with metal splines to maintain tight, aligned joints.

C. Engage decking tongue and groove edges.

D. Secure with fasteners. Side spike planks together, through pre-drilled holes.

E. Maintain decking joint space of 1/16 inch (1.5 mm) maximum.

F. Cut decking to accommodate roof drain and flange.

3.05 TOLERANCES

A. Surface Flatness of Decking Without Load: 1/4 inch in 10 feet (2 mm/m) maximum, and 1/2 inch in 30 feet (12 mm / 9 m) maximum.

END OF SECTION

SECTION 06 1736
METAL-WEB WOOD JOISTS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Joists for roof and floor framing.

B. Bridging, bracing, and anchorage.

C. Framing for openings.

D. Fire retardant treatment of wood.

E. Preservative treatment of wood.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 06 1000 - Rough Carpentry: Installation requirements for miscellaneous framing.

C. Section 06 1000 - Rough Carpentry: Material requirements for blocking, bridging, plates, and miscellaneous framing.

1.03 REFERENCE STANDARDS

A. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

B. AWPA U1 - Use Category System: User Specification for Treated Wood 2017.

C. SPIB (GR) - Grading Rules 2014.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide joist configurations, bearing and anchor details, bridging and bracing .

C. Shop Drawings: Indicate framing system, sizes and spacing of joists, loads and joist cambers, required openings for web penetrations, framed openings . Submit design calculations.

1. Include the design engineer's seal and signature on each sheet of shop drawings.

D. Designer's Qualification Statement.

E. Manufacturer's Qualification Statement.

1.05 QUALITY ASSURANCE

A. Designer Qualifications: Design joists under direct supervision of a Professional Structural Engineer experienced in design of this product type and licensed in Maryland.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section, with minimum three years of documented experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Protect joists from warping or other distortion by stacking in vertical position, braced to resist movement.

B. Fire Retardant Treated Wood: Prevent exposure to precipitation during shipping, storage, or installation.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

A. Comply with applicable codes for loading, seismic zoning, fire retardant criteria, and other governing load criteria.

2.02 MATERIALS

A. Lumber:

1. Moisture Content: Between 7 and 9 percent.
2. Lumber fabricated from old growth timber is not permitted.
3. Provide sustainably harvested lumber, certified or labeled as specified in Section 01 6000.
4. Provide lumber harvested within a 500 mile (805 km) radius of the project site.

B. Wood Chord Members: Single top and bottom chord, Stress Group [____], 19 percent maximum moisture content. Finger scarfing permitted.

C. Connecting Pins: Electrogalvanized structural carbon steel.

D. Joist Bridging: Type, size and spacing recommended by joist manufacturer.

2.03 FABRICATION

A. Fabricate joists to achieve structural requirements indicated.

2.04 WOOD TREATMENT

A. Factory-Treated Lumber: Comply with requirements of AWPA U1 - Use Category System for wood treatments determined by use categories, expected service conditions, and specific applications.

B. Fire Retardant Treatment, Exterior Type: AWPA U1, Use Category UCFB, Commodity Specification H, chemically treated and pressure impregnated, maximum flame spread index of 25 when tested in accordance with ASTM E84; kiln dried after treatment to maximum moisture content of 19 percent.

1. Marking: Mark each piece of wood with producer's stamp indicating compliance with specified requirements.

C. Fire Retardant Treatment, Interior Type A: AWPA U1, Use Category UCFA, Commodity Specification H, low temperature (low hygroscopic) type, chemically treated and pressure impregnated, maximum flame spread index of 25 when tested in accordance with ASTM E84; kiln dried after treatment to maximum moisture content of 19 percent.

D. Preservative Pressure Treatment of Lumber: AWPA U1, Use Category UC3B, Commodity Specification A using waterborne preservative to 0.25 lb/cu ft retention (to 4.0 kg/cu m retention).

1. Kiln dry after treatment to maximum moisture content of 19 percent.
2. Marking: Mark each piece with stamp of an ALSC-accredited testing agency, certifying level and type of treatment in accordance with AWPA standards.

2.05 ACCESSORIES

A. Wood Blocking, Bridging, Plates, and Miscellaneous Framing: Softwood lumber, any species, construction grade, maximum moisture content of 19 percent.

B. Fasteners: Electrogalvanized steel, type to suit application.

C. Bearing Plates: Electrogalvanized, unfinished steel.

D. Metal Primer: .

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that supports and openings are ready to receive joists.

B. Verify that field measurements are as indicated.

3.02 PREPARATION

A. Coordinate placement of bearing items.

3.03 ERECTION

A. Install joists in accordance with manufacturer's instructions.

B. Set members level and plumb, in correct position.

C. Make provisions for erection loads, and for sufficient temporary bracing to maintain structure plumb and in true alignment until completion of erection and installation of permanent bracing.

D. Do not field cut or alter structural members without approval of Architect .

E. Install permanent bridging and bracing.

F. Install headers and supports to frame openings required.

G. Frame openings between joists with lumber in accordance with Section 06 1000.

H. Coordinate installation of sheathing/decking.

I. After erection, touch-up galvanized surfaces with primer consistent with shop coat.

3.04 TOLERANCES

A. Framing Members: 1/2 inch (12 mm) maximum, from true position.

3.05 SCHEDULES

A. Main Roof: 20 inch (500 mm) deep joists, 8 inch (200 mm) end bearing plates for masonry supporting wall.

B. Penthouse Roof: 14 inch (350 mm) deep joists, special chord reinforcement for mechanical duct placement through joist as indicated, 2-1/2 inch (69 mm) end bearing plates for steel supporting frame.

END OF SECTION

SECTION 06 1753
SHOP-FABRICATED WOOD TRUSSES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Shop fabricated wood trusses for roof framing.

B. Bridging, bracing, and anchorage.

C. Fire retardant treatment of wood.

D. Preservative treatment of wood.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 06 1000 - Rough Carpentry: Installation requirements for miscellaneous framing.

C. Section 06 1000 - Rough Carpentry: Material requirements for blocking, bridging, plates, and miscellaneous framing.

1.03 REFERENCE STANDARDS

A. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process 2017.

B. ASTM D2898 - Standard Test Methods for Accelerated Weathering of Fire-Retardant-Treated Wood for Fire Testing 2010 (Reapproved 2017).

C. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

D. AWPA U1 - Use Category System: User Specification for Treated Wood 2017.

E. RIS (GR) - Standard Specifications for Grades of California Redwood Lumber 2000.

F. SPIB (GR) - Grading Rules 2014.

G. TPI 1 - National Design Standard for Metal-Plate-Connected Wood Truss Construction 2014.

H. TPI BCSI 1 - Building Component Safety Information Booklet: The Guide to Good Practice for Handling, Installing & Bracing of Metal Plate Connected Wood Trusses 2015.

I. TPI DSB-89 - Recommended Design Specification for Temporary Bracing of Metal Plate Connected Wood Trusses 1989.

1.04 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on plate connectors, bearing plates, and metal bracing components.

C. Shop Drawings: Show truss configurations, sizes, spacing, size and type of plate connectors, cambers, framed openings, bearing and anchor details, and bridging and bracing.

1. Include identification of engineering software used for design.

2. Provide shop drawings stamped or sealed by design engineer.

D. Designer's Qualification Statement.

E. Fabricator's Qualification Statement.

1.05 QUALITY ASSURANCE

A. Designer Qualifications: Perform design by or under direct supervision of a Professional Structural ten Engineer experienced in design of this Work and licensed in Maryland.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Handle and erect trusses in accordance with TPI BCSI 1.

B. Store trusses in vertical position resting on bearing ends.

C. Fire Retardant Treated Wood: Prevent exposure to precipitation during shipping, storage, or installation.

PART 2 PRODUCTS

2.01 TRUSSES

A. Wood Trusses: Designed and fabricated in accordance with TPI 1 and TPI DSB-89 to achieve structural requirements indicated.

2.02 MATERIALS

A. Lumber:

1. Moisture Content: Between 7 and 9 percent.
2. Lumber fabricated from old growth timber is not permitted.
3. Provide sustainably harvested lumber, certified or labeled as specified in Section 01 6000.
4. Provide lumber harvested within a 500 mile (535 km) radius of the project site.

B. Steel Connectors: Hot-dipped galvanized steel sheet, ASTM A653/A653M Structural Steel (SS) Grade 33/230, with G90/Z275 coating; die stamped with integral teeth; thickness as indicated.

C. Truss Bridging: Type, size and spacing recommended by truss manufacturer.

2.03 ACCESSORIES

A. Wood Blocking, Bridging, Plates, and Miscellaneous Framing: Softwood lumber, any species, construction grade, 19 percent maximum and 7 percent minimum moisture content.

B. Fasteners: Electrogalvanized steel, type to suit application.

C. Bearing Plates: Electrogalvanized steel.

2.04 WOOD TREATMENT

A. Treated Lumber and Plywood: Comply with requirements of AWPA U1 - Use Category System for wood treatments determined by use categories, expected service conditions, and specific applications.

B. Fire Retardant Treatment, Exterior Type: AWPA U1, Use Category UCFB, Commodity Specification H, chemically treated and pressure impregnated, maximum flame spread index of 25 when tested in accordance with ASTM E84 and with no evidence of significant combustion when test is extended for an additional 20 minutes both before and after accelerated weathering test performed in accordance with ASTM D2898; kiln dried after treatment to maximum moisture content of 19 percent for lumber and 15 percent for plywood.

1. Marking: Mark each piece of wood with producer's stamp indicating compliance with specified requirements.

C. Fire Retardant Treatment, Interior Type A: AWPA U1, Use Category UCFA, Commodity Specification H, low temperature (low hygroscopic) type, chemically treated and pressure impregnated, maximum flame spread index of 25 when tested in accordance with ASTM E84 and with no evidence of significant combustion when test is extended for an additional 20 minutes; kiln dried after treatment to maximum moisture content of 19 percent for lumber and 15 percent for plywood.

1. Marking: Mark each piece of wood with producer's stamp indicating compliance with specified requirements.

D. Preservative Pressure Treatment of Lumber: AWPA U1, Use Category UC3B, Commodity Specification A using waterborne preservative to 0.25 lb/cu ft retention (to 4.0 kg/cu m retention).

1. Kiln dry after treatment to maximum moisture content of 19 percent.

E. Preservative Pressure Treatment of Plywood: AWPA U1, Use Category UC3B using waterborne preservative to 0.25 lb/cu ft retention (to 4.0 kg/cu m retention).

1. Kiln dry plywood after treatment to maximum moisture content of 19 percent.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that supports and openings are ready to receive trusses.

3.02 PREPARATION

A. Coordinate placement of bearing items.

3.03 ERECTION

A. Install trusses in accordance with manufacturer's instructions and TPI DSB-89 and TPI BCSI 1; maintain a copy of each TPI document on site until installation is complete.

B. Set members level and plumb, in correct position.

C. Make provisions for erection loads, and for sufficient temporary bracing to maintain structure plumb, and in true alignment until completion of erection and installation of permanent bracing.

D. Do not field cut or alter structural members without approval of Architect .

E. Install permanent bridging and bracing.

F. Install headers and supports to frame openings required.

G. Frame openings between trusses with lumber in accordance with Section 06 1000.

H. Coordinate placement of decking with work of this section.

3.04 TOLERANCES

A. Framing Members: 1/2 inch (12 mm) maximum, from true position.

END OF SECTION

SECTION 06 1800
GLUED-LAMINATED CONSTRUCTION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Glue laminated wood beams and purlins.

B. Preservative treatment of wood.

C. Fire retardant treatment of wood.

D. Steel hardware and attachment brackets.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 09 9113 - Exterior Painting: Field finishing.

C. Section 09 9123 - Interior Painting: Field finishing.

D. Section 09 9300 - Staining and Transparent Finishing: Field finishing.

1.03 PRICE AND PAYMENT PROCEDURES

A. See Section 01 2200 - Unit Prices, for additional unit price requirements.

B. Glue Laminated Structural Column Members: By the unit. Includes unit member shop finished, connectors and brackets, placed and anchored.

C. Connections: By the pound (kg). Includes fabrication, finishing, and installation.

1.04 REFERENCE STANDARDS

A. AITC A190.1 - American National Standard for Wood Products - Structural Glued Laminated Timber 2007.

B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel 2014.

C. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products 2017.

D. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware 2016a.

E. ASTM A563 - Standard Specification for Carbon and Alloy Steel Nuts 2015.

F. ASTM A563M - Standard Specification for Carbon and Alloy Steel Nuts (Metric) 2007 (Reapproved 2013).

G. ASTM D2559 - Standard Specification for Adhesives for Bonded Structural Wood Products for Use Under Exterior Exposure Conditions 2012a (Reapproved 2018).

H. ASTM D2898 - Standard Test Methods for Accelerated Weathering of Fire-Retardant-Treated Wood for Fire Testing 2010 (Reapproved 2017).

I. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

J. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts, Steel and Alloy Steel, Heat Treated, 120 ksi (830 MPa) and 150 ksi (1040 MPa) Minimum Tensile Strength, Inch and Metric Dimensions 2015a.

K. AWPA U1 - Use Category System: User Specification for Treated Wood 2017.

L. AWS D1.1/D1.1M - Structural Welding Code - Steel 2015, with Errata (2016).

M. RIS (GR) - Standard Specifications for Grades of California Redwood Lumber 2000.

N. UL (FRD) - Fire Resistance Directory Current Edition.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide technical data on wood preservative materials, application technique and resultant performance information.

C. Shop Drawings: Indicate framing system, sizes and spacing of members, loads and cambers, bearing and anchor details, bridging and bracing, framed openings.

D. Designer's Qualification Statement.

E. Manufacturer's Qualification Statement.

F. Erector's Qualification Statement.

1.06 QUALITY ASSURANCE

A. Manufacturer/Fabricator Qualifications: Company specializing in manufacture of glue laminated structural units with three years of documented experience, and certified by AITC in accordance with AITC A190.1.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Protect members to AITC requirements for not wrapped.

B. Leave individual wrapping in place until finishing occurs.

C. Fire Retardant Treated Wood: Prevent exposure to precipitation during shipping, storage, or installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Glued-Laminated Structural Units:

1. Substitutions: See Section 01 6000 - Product Requirements.

2.02 GLUED-LAMINATED UNITS

A. Glued-Laminated Units: Fabricate in accordance with AITC 117 Industrial grade.

1. Verify dimensions and site conditions prior to fabrication.
2. Cut and fit members accurately to length to achieve tight joint fit.
3. Fabricate member with camber built in.
4. Do not splice or join members in locations other than those indicated without permission.
5. Fabricate steel hardware and connections with joints neatly fitted, welded, and ground smooth.
6. Welding: Perform welding in accordance with AWS D1.1/D1.1M.
7. After end trimming, seal with penetrating sealer in accordance with AITC requirements.

B. Performance Criteria:

1. Comply with applicable code for loads, seismic zoning, and other load criteria.

C. Fire Rating: Comply with UL (FRD).

2.03 MATERIALS

A. Lumber: Softwood lumber complying with RIS (GR) grading rules with 12 percent maximum moisture content before fabrication. Design for the following values:

1. Provide sustainably harvested lumber, certified or labeled as specified in Section 01 6000.
2. Provide lumber harvested within a 500 mile (805 km) radius of the project site.

B. Steel Connections and Brackets: ASTM A36/A36M weldable quality, galvanize per ASTM A123/A123M.

C. Anchor Bolts: ASTM F3125/F3125M, Type 1 heavy hex high strength bolts and ASTM A563 (ASTM A563M) nuts; hot-dip galvanized to meet requirements of ASTM A153/A153M, matching washers.

D. Laminating Adhesive: Tested for wet/exterior service in accordance with ASTM D2559.

E. Wood Sealer:

F. Bearing Plate Anchors: Expansion shield and lag bolt type for anchorage to solid masonry or concrete.

G. Metal Primer:

2.04 WOOD TREATMENT

A. Factory-Treated Lumber: Comply with requirements of AWPA U1 - Use Category System for pressure impregnated wood treatments determined by use categories, expected service conditions, and specific applications.

B. Fire Retardant Treatment:

1. Exterior Type: AWPA U1 Use Category UCFB, Commodity Specification H, chemically treated and pressure impregnated; maximum flame spread index of 25 when tested in accordance with ASTM E84 and with no evidence of significant combustion when test is extended for an additional 30 minutes both before and after accelerated weathering test performed in accordance with ASTM D2898.
    a. Kiln dry wood after treatment to a maximum moisture content of 19 percent prior to lamination.
2. Interior Type A: AWPA U1, Use Category UCFA, Commodity Specification H, low temperature (low hygroscopic) type, chemically treated and pressure impregnated; maximum flame spread index of 25 when tested in accordance with ASTM E84 and with no evidence of significant combustion when test is extended for an additional 20 minutes.
    a. Kiln dry wood after treatment to a maximum moisture content of 19 percent prior to lamination.
    b. Do not use treated wood in applications exposed to weather or where the wood may become wet.
3. Marking: Mark each piece of wood with producer's stamp indicating compliance with specified requirements.

C. Preservative Pressure Treatment:

1. Preservative Pressure Treatment of Glued-Laminated Structural Units: AWPA U1, Use Category UC3B, Commodity Specification F using waterborne preservative to 0.25 lb/cu ft retention (to 4.0 kg/cu m retention).
    a. Kiln dry lumber after treatment and before lamination to maximum moisture content of 19 percent.
2. Marking: Marked each piece with stamp of an ALSC-accredited testing agency, certifying level and type of treatment in accordance with AWPA standards.

D. Shop treat wood materials in accordance with manufacturer's instructions.

2.05 FABRICATION

A. Fabricate glue laminated structural members in accordance with AITC Industrial grade.

B. Welding: Perform welding in accordance with AWS D1.1/D1.1M.

C. Verify dimensions and site conditions prior to fabrication.

D. Cut and fit members accurately to length to achieve tight joint fit.

E. Fabricate member with camber built in.

F. Do not splice or join members in locations other than those indicated without permission.

G. Fabricate steel hardware and connections with joints neatly fitted, welded, and ground smooth.

H. After end trimming, seal with penetrating sealer in accordance with AITC requirements.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that supports are ready to receive units.

B. Verify sufficient end bearing area.

3.02 PREPARATION

A. Coordinate placement of bearing items.

3.03 ERECTION

A. Lift members using protective straps to prevent visible damage.

B. Set structural members level and plumb, in correct positions or sloped where indicated.

C. Provide temporary bracing and anchorage to hold members in place until permanently secured.

D. Fit members together accurately without trimming, cutting, splicing, or other unauthorized modification.

E. Swab and seal the interior wood surfaces of field drilled holes in members with primer.

F. Field Finishing: Specified in Section 09 9113 and 09 9123.

3.04 TOLERANCES

A. Framing Members: 1/2 inch (12 mm) maximum from true position.

END OF SECTION

SECTION 06 2000
FINISH CARPENTRY

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Finish carpentry items.

B. Wood door frames, glazed frames.

C. Wood casings and moldings.

D. Hardware and attachment accessories.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 06 1000 - Rough Carpentry: Support framing, grounds, and concealed blocking.

C. Section 06 4100 - Architectural Wood Casework: Shop fabricated custom cabinet work.

D. Section 08 1416 - Flush Wood Doors.

E. Section 09 9113 - Exterior Painting: Painting of finish carpentry items.

F. Section 09 9123 - Interior Painting: Painting of finish carpentry items.

G. Section 09 9300 - Staining and Transparent Finishing: Staining and transparent finishing of finish carpentry items.

1.03 REFERENCE STANDARDS

A. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials current edition.

B. ANSI A135.4 - American National Standard for Basic Hardboard 2012.

C. ANSI A208.1 - American National Standard for Particleboard 2009.

D. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings - Safety Performance Specifications and Methods of Test 2015.

E. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2018b.

F. AWI/AWMAC/WI (AWS) - Architectural Woodwork Standards 2014, with Errata (2016).

G. AWMAC/WI (NAAWS) - North American Architectural Woodwork Standards, U.S. Version 3.1 2016, with Errata (2017).

H. AWPA U1 - Use Category System: User Specification for Treated Wood 2017.

I. HPVA HP-1 - American National Standard for Hardwood and Decorative Plywood 2016.

J. PS 1 - Structural Plywood 2009.

K. WDMA I.S. 4 - Industry Specification for Preservative Treatment for Millwork 2015a.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordinate the work with plumbing rough-in, electrical rough-in and installation of associated and adjacent components.

B. Sequence installation to ensure utility connections are achieved in an orderly and expeditious manner.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data:

1. Provide data on fire retardant treatment materials and application instructions.

C. Shop Drawings: Indicate materials, component profiles, fastening methods, jointing details, and accessories.

1. Scale of Drawings: 1-1/2 inch to 1 foot (125 mm to 1 m), minimum.
2. Provide the information required by AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS).
3. Include certification program label.

D. Certificate: Submit labels and certificates required by quality assurance and quality control programs.

1.06 QUALITY ASSURANCE

A. Fabricator Qualifications: Company specializing in fabricating the products specified in this section with minimum five years of documented experience.

1. Company with at least one project within the past 5 years with value of woodwork within 20 percent of cost of woodwork for this project.
2. Accredited participant in the specified certification program prior to the commencement of fabrication and throughout the duration of the project.
3. Single Source Responsibility: Provide and install this work from single fabricator.

B. Quality Certification:

1. Provide labels or certificates indicating that the work complies with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS) requirements for grade or grades specified.
2. Provide designated labels on shop drawings as required by certification program.
3. Provide designated labels on installed products as required by certification program.
4. Submit certifications upon completion of installation that verifies this work is in compliance with specified requirements.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Protect work from moisture damage.

PART 2 PRODUCTS

2.01 FINISH CARPENTRY ITEMS

A. Quality Standard: Custom Grade, in accordance with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS), unless noted otherwise.

B. Surface Burning Characteristics: Provide materials having fire and smoke properties as required by applicable code.

2.02 WOOD-BASED COMPONENTS

A. Wood fabricated from old growth timber is not permitted.

B. Provide sustainably harvested wood, certified or labeled as specified in Section 01 6000 - Product Requirements.

C. Provide wood harvested within a 500 mile (805 km) radius of the project site.

D. Wood fabricated from timber recovered from riverbeds or otherwise abandoned is permitted, unless indicated otherwise, and provided it is clean and free of contamination, identify source; provide lumber re-graded by an inspection service accredited by the American Lumber Standard Committee, Inc. (ALSC).

2.03 SHEET MATERIALS

A. Softwood Plywood, Not Exposed to View: Any face species, medium density fiberboard core; PS 1 Grade A-B, glue type as recommended for application.

B. Softwood Plywood, Exposed to View: Face species as indicated, plain sawn, medium density fiberboard core; PS 1 Grade A-B, glue type as recommended for application.

C. Hardwood Plywood: Face species as indicated, plain sawn, book matched, medium density fiberboard core; HPVA HP-1 Front Face Grade AA, Back Face Grade 1, glue type as recommended for application.

D. Particleboard: ANSI A208.1 Composed of wood chips, sawdust, or flakes of medium density, made with waterproof resin binders; of grade to suit application; sanded faces.

E. Hardboard: ANSI A135.4 Pressed wood fiber with resin binder, Class 1 - Tempered, 1/4 inch (6 mm) thick, smooth one side (S1S).

F. Pegboard: Pressed wood fiber with resin binder, standard grade; 1/8 inch (3 mm) thick, with holes spaced at 1 inch (25.4 mm) on center in both directions.

2.04 PLASTIC LAMINATE MATERIALS

2.05 FASTENINGS

A. Adhesive for Purposes Other Than Laminate Installation: Suitable for the purpose; not containing formaldehyde or other volatile organic compounds.

B. Concealed Joint Fasteners: Threaded steel.

2.06 ACCESSORIES

A. Cellular PVC Trim and Mouldings: Extruded, expanded PVC; UV-resistant, heat-stabilized, and rigid material.

B. Aluminum Edge Trim: Extruded convex shape; smooth surface finish; self locking serrated tongue; of width to match component thickness; natural mill finish.

C. Safety Glass: Laminated glass complying with 16 CFR 1201 and ANSI Z97.1; clear; nominally 6 mm thick.

D. Primer: Alkyd primer sealer.

E. Wood Filler: Solvent base, tinted to match surface finish color.

2.07 WOOD TREATMENT

A. Factory-Treated Lumber: Comply with requirements of AWPA U1 - Use Category System for pressure impregnated wood treatments determined by use categories, expected service conditions, and specific applications.

B. Fire Retardant Treatment (FR-S Type): Chemically treated and pressure impregnated; capable of providing flame spread index of 25, maximum, and smoke developed index of 450, maximum, when tested in accordance with ASTM E84.

C. Wood Preservative by Pressure Treatment (PT Type): Provide AWPA U1 treatment using waterborne preservative with 0.25 percent retainage.

D. Water Repellent Preservative Treatment by Dipping Method: WDMA I.S. 4, with 0.25 percent retainage.

E. Wood Preservative (Surface Application): Colored.

F. Shop pressure treat wood materials requiring fire rating to concealed wood blocking.

G. Provide identification on fire retardant treated material.

H. Redry wood after pressure treatment to maximum percent moisture content as allowed by manufacturer.

2.08 FABRICATION

A. Shop assemble work for delivery to site, permitting passage through building openings.

B. Shop prepare and identify components for book match grain matching during site erection.

C. When necessary to cut and fit on site, provide materials with ample allowance for cutting. Provide trim for scribing and site cutting.

D. Apply plastic laminate finish in full uninterrupted sheets consistent with manufactured sizes. Fit corners and joints hairline; secure with concealed fasteners. Slightly bevel arises. Locate counter butt joints minimum 2 feet from sink cut-outs. (Locate counter butt joints minimum 600 mm from sink cut-outs.)

2.09 SHOP FINISHING

A. Sand work smooth and set exposed nails and screws.

B. Apply wood filler in exposed nail and screw indentations.

C. On items to receive transparent finishes, use wood filler that matches surrounding surfaces and is of type recommended for the applicable finish.

D. Finish work in accordance with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS), Section 5 - Finishing for grade specified and as follows:

E. Back prime woodwork items to be field finished, prior to installation.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify adequacy of backing and support framing.

B. Verify mechanical, electrical, and building items affecting work of this section are placed and ready to receive this work.

3.02 INSTALLATION

A. Install work in accordance with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS) requirements for grade indicated.

B. Set and secure materials and components in place, plumb and level.

C. Carefully scribe work abutting other components, with maximum gaps of 1/32 inch (0.79 mm). Do not use additional overlay trim to conceal larger gaps.

3.03 SITE APPLIED WOOD TREATMENT

A. Apply preservative treatment in accordance with manufacturer's instructions.

B. Brush apply one coats of preservative treatment on wood in contact with cementitious materials. Treat site-sawn cuts.

C. Allow preservative to dry prior to erecting members.

3.04 PREPARATION FOR SITE FINISHING

A. Set exposed fasteners. Apply wood filler in exposed fastener indentations. Sand work smooth.

B. Site Finishing: See Section 09 9113 and 09 9123.

C. Before installation, prime paint surfaces of items or assemblies to be in contact with cementitious materials.

3.05 TOLERANCES

A. Maximum Variation from True Position: 1/16 inch (1.6 mm).

B. Maximum Offset from True Alignment with Abutting Materials: 1/32 inch (0.79 mm).

END OF SECTION

SECTION 06 4100
ARCHITECTURAL WOOD CASEWORK

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Specially fabricated cabinet units.

B. Hardware.

C. Factory finishing.

D. Preparation for installing utilities.

1.02 RELATED REQUIREMENTS

A. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions.

B. Section 06 1000 - Rough Carpentry: Support framing, grounds, and concealed blocking.

C. Section 06 6100 - Cast Polymer Fabrications: Cast plastic countertops.

D. Section 08 8000 - Glazing: Glass for casework.

E. Section 09 9123 - Interior Painting: Field finishing of cabinet exterior.

F. Section 09 9300 - Staining and Transparent Finishing: Field finishing of cabinet exterior.

G. Section 12 3600 - Countertops.

1.03 REFERENCE STANDARDS

A. AWI/AWMAC/WI (AWS) - Architectural Woodwork Standards 2014, with Errata (2016).

B. AWI (QCP) - Quality Certification Program current edition at www.awiqcp.org.

C. AWMAC/WI (NAAWS) - North American Architectural Woodwork Standards, U.S. Version 3.1 2016, with Errata (2017).

D. BHMA A156.9 - American National Standard for Cabinet Hardware 2015.

E. NEMA LD 3 - High-Pressure Decorative Laminates 2005.

F. UL (DIR) - Online Certifications Directory Current Edition.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene a preinstallation meeting not less than one week before starting work of this section; require attendance by all affected installers.

1.05 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate materials, component profiles, fastening methods, jointing details, and accessories.

1. Provide the information required by AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS).

2. Include certification program label.

C. Product Data: Provide data for hardware accessories.

D. Samples: Submit actual samples of architectural cabinet construction, minimum 12 inches (300 mm) square, illustrating proposed cabinet, countertop and shelf unit substrate and finish.

E. Samples: Submit actual sample items of proposed pulls, hinges, shelf standards and locksets, demonstrating hardware design, quality, and finish.

F. Certificate: Submit labels and certificates required by quality assurance and quality control programs.

G. Sustainable Design Submittal: Documentation for sustainably harvested wood-based components.

1.06 QUALITY ASSURANCE

A. Fabricator Qualifications: Company specializing in fabricating the products specified in this section with minimum five years of documented experience.

1. Accredited participant in the specified certification program prior to the commencement of fabrication and throughout the duration of the project.

B. Quality Certification:

1. Comply with AWI (QCP) woodwork association quality certification service/program in accordance with requirements for work specified in this section: www.awiqcp.org/#sle.

2. Provide labels or certificates indicating that the installed work complies with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS) requirements for grade or grades specified.

3. Provide designated labels on shop drawings as required by certification program.

4. Provide designated labels on installed products as required by certification program.

5. Submit certifications upon completion of installation that verifies this work is in compliance with specified requirements.

6. Replace, repair, or rework all work for which certification is refused.

1.07 MOCK-UP

A. Provide mock-up of typical base cabinet, wall cabinet and countertop, including hardware, finishes and plumbing accessories.

B. See Section 01 4000 - Quality Requirements for additional requirements.

C. Locate where directed.

D. Mock-up may remain as part of the Work.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Protect units from moisture damage.

1.09 FIELD CONDITIONS

A. During and after installation of custom cabinets, maintain temperature and humidity conditions in building spaces at same levels planned for occupancy.

PART 2 PRODUCTS

2.01 CABINETS

A. Quality Standard: Custom Grade, in accordance with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS), unless noted otherwise.

2.02 WOOD-BASED COMPONENTS

A. Wood fabricated from old growth timber is not permitted.

B. Provide sustainably harvested wood, certified or labeled as specified in Section 01 6000.

C. Wood fabricated from timber recovered from riverbeds or otherwise abandoned is permitted, unless otherwise noted, provided it is clean and free of contamination; identify source; provide lumber re-graded by an inspection service accredited by the American Lumber Standard Committee, Inc.

D. Hardwood Edgebanding: Use solid hardwood edgebanding matching species, color, grain, and grade for exposed portions of cabinetry.

2.03 LAMINATE MATERIALS

A. High Pressure Decorative Laminate (HPDL): NEMA LD 3, types as recommended for specific applications.

2.04 COUNTERTOPS

A. Countertops are specified in Section 12 3600.

2.05 ACCESSORIES

A. Adhesive: Type recommended by fabricator to suit application.

B. Plastic Edge Banding: Extruded PVC, convex shaped; smooth finish; self locking serrated tongue; of width to match component thickness.

1. Color: As indicated on drawings.

C. Aluminum Edge Banding: Extruded convex shape; smooth surface finish; self locking serrated tongue; of width to match component thickness; natural mill finish.

D. Vinyl Countertop Edge: PVC anchor type tee-molding edging in width to match thickness of countertop, color as indicated, used at locations as indicated.

E. Glass: Type A as specified in Section 08 8000.

F. Fasteners: Size and type to suit application.

G. Bolts, Nuts, Washers, Lags, Pins, and Screws: Of size and type to suit application; galvanized or chrome-plated finish in concealed locations and stainless steel or chrome-plated finish in exposed locations.

H. Concealed Joint Fasteners: Threaded steel.

I. Grommets: Standard plastic, painted metal or rubber grommets for cut-outs, in color to match adjacent surface.

2.06 HARDWARE

A. Hardware: BHMA A156.9, types as recommended by fabricator for quality grade specified.

B. Adjustable Shelf Supports: Standard side-mounted system using recessed metal shelf standards or multiple holes for pin supports and coordinated self rests, polished chrome finish, for nominal 1 inch (25 mm) spacing adjustments.

2.07 SHOP TREATMENT OF WOOD MATERIALS

A. Provide UL (DIR) listed and approved identification on fire retardant treated material.

B. Deliver fire retardant treated materials cut to required sizes. Minimize field cutting.

2.08 SITE FINISHING MATERIALS

A. Finishing: Field finished as specified in Section 09 9300.

2.09 FABRICATION

A. Assembly: Shop assemble cabinets for delivery to site in units easily handled and to permit passage through building openings.

B. Edging: Fit shelves, doors, and exposed edges with specified edging. Do not use more than one piece for any single length.

C. Fitting: When necessary to cut and fit on site, provide materials with ample allowance for cutting. Provide matching trim for scribing and site cutting.

D. Plastic Laminate: Apply plastic laminate finish in full uninterrupted sheets consistent with manufactured sizes. Fit corners and joints hairline; secure with concealed fasteners. Slightly bevel arises. Locate counter butt joints minimum 2 feet from sink cut-outs. (Locate counter butt joints minimum 600 mm from sink cut-outs.)

1. Apply laminate backing sheet to reverse side of plastic laminate finished surfaces.
2. Cap exposed plastic laminate finish edges with material of same finish and pattern.

E. Matching Wood Grain: Comply with requirements of quality standard for specified Grade and as follows:

1. Provide center matched panels at each elevation.
2. Provide sequence matching across each elevation.
3. Carry figure of cabinet fronts to toe kicks.

F. Mechanically fasten back splash to countertops as recommended by laminate manufacturer at 16 inches (400 mm) on center.

G. Provide cutouts for plumbing fixtures. Verify locations of cutouts from on-site dimensions. Prime paint cut edges.

H. Shop glaze glass materials using the Interior Dry method as specified in Section 08 8000.

2.10 SHOP FINISHING

A. Sand work smooth and set exposed nails and screws.

B. For opaque finishes, apply wood filler in exposed nail and screw indentations and sand smooth.

C. On items to receive transparent finishes, use wood filler matching or blending with surrounding surfaces and of types recommended for applied finishes.

D. Finish work in accordance with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS).

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify adequacy of backing and support framing.

B. Verify location and sizes of utility rough-in associated with work of this section.

3.02 INSTALLATION

A. Install work in accordance with AWI/AWMAC/WI (AWS) or AWMAC/WI (NAAWS) requirements for grade indicated.

B. Set and secure custom cabinets in place, assuring that they are rigid, plumb, and level.

C. Use fixture attachments in concealed locations for wall mounted components.

D. Use concealed joint fasteners to align and secure adjoining cabinet units.

E. Carefully scribe casework abutting other components, with maximum gaps of 1/32 inch (0.79 mm). Do not use additional overlay trim for this purpose.

F. Secure cabinets to floor using appropriate angles and anchorages.

G. Countersink anchorage devices at exposed locations. Conceal with solid wood plugs of species to match surrounding wood; finish flush with surrounding surfaces.

3.03 ADJUSTING

A. Adjust moving or operating parts to function smoothly and correctly.

3.04 CLEANING

A. Clean casework, counters, shelves, hardware, fittings, and fixtures.

END OF SECTION
